The authorised capital of the Company, it is proposed, will be increased from Rs. 3 crores to Rs. 10 crores, and a resolution to this effect will be placed before the shareholders for their approval at the annual general meeting on 25th November. As a result of the bonus issue in April 1964 the issued and subscribed capital of the Company has been increased to Rs. 2.67 crores, bringing the total issued capital close to the authorised capital of Rs. 3 crores. The directors state that while there is no immediate intention of calling up fresh funds it has nevertheless been decided that this would be an appropriate time to seek shareholders' sanction for an appreciable increase in the corporation's authorised capital. This would allow for some time to come, for such issues of additional capital as may be required in the light of further ex-

or the expansion of the Company's activities.

Seven Tea Companies to Merge

THERE is to be another big consolidation of interests in the tea plantation industry. Less than a month after the Jokai-Jhanzie based merger, which involved four companies, seven more plantation companies are to come together into one group. Once again, the terms of the merger have been proposed by Baring Brothers, after consultation with the boards concerned. The latest proposals are to be implemented by the formation of a new holding Company, Williamson Tea Holdings, which will have an issued share capital of £2 million, in £1 ordinary shares. The seven companies are Attaree Khat Tea, Bargang Tea, Borbheel Tea, Bordubi Holdings, Koomsong Holdings, Rajmai Holdings, and Tingri Holdings. Aggregate gross assets are about £5.4 million.

Terms proposed for the merger are for an exchange into equity shares, and preference where appropriate, of the new holding company. Four £1 ordinary in Williamson Tea Holding will be exchanged for every three £1 shares in Attaree Khat. There is a straight one-for-one exchange for the equity of Bargang. For Borbheel, Koomsong and Tingri the terms are identical—two £1 ordinary in the new holding Company for each share in the Company named. Five W.T.H. ordinary are offered for every two shares of Bordubi, and 21 W.T.H. shares for every 20 shares in Rajmai.

Two sets of preference capital are involved in Companies in the merger deal. A total of 107 of the 6 percent preference £1 shares of W.T.H. is offered for every 100 preference shares of the same coupon in Bargang; for every 100 preference with a 7 percent coupon in Rajmai, the offer is 119 of the W.T.H. 6 percent preference. Expectations are that the Williamson Tea Holdings £1 ordinary should command a price of around 15s to 17s 6d in the market. The offer documents should be ready to go out by about 17th November.

Cattle Feed Plant from Larsen and Toubro

LARSEN and Toubro Ltd will shortly manufacture cattlefeed processing plants similar to the one installed by the Kaira District Co-operative Milk Producers Union Ltd, Anand. About 75 percent of the components of the mixed feed plants will be made locally in the first year of manufacture. The indigenous content is expected to rise to 90 percent in the third year of manufacture. The Company will offer plants capable of producing ten tons to one ton of finished mixed feed an hour. The Company had supplied the Kaira cattlefeed plant from the works of its principal, Buhler Brothers of Switzerland. This plant is claimed to be first of its kind in India. Modern and incorporating the latest developments in plant design, construction and layout, it gives absolute accuracy in the choice and weighing of ingredients ensuring scrupulous adherence to the feed formula.

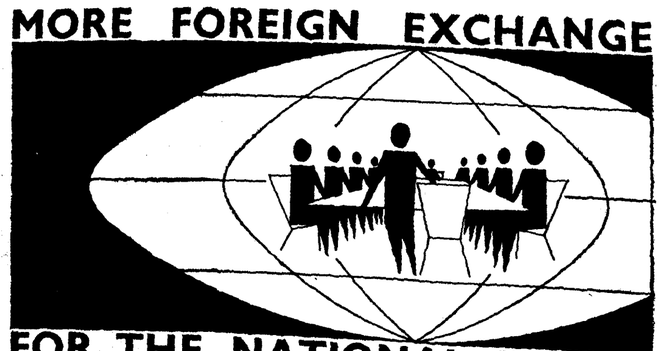
Mixed feed processing plants make possible scientific feeding of cattle and poultry and achieve this at a lower cost Scientific feeding leads to substantial increases in the output of milk and meat products and eggs. The Kaira Union, it is stated, anticipates a rise in milk yield of 45 percent from scientific feeding of cattle. Mixed feed processing plants make cattle and poultry feed at a lower cost because agricultural by-products which would otherwise go waste can be used. With the installation of the Buhler mixed feed processing plant by Larsen and Toubro, oilseeds by-products such as cottonseed cake, groundnut cake with damaged cereals, rice and wheat bran and other agricultural by-products and certain trace (mineral) elements, will be used to make cheaper balanced feed and concentrates.

New Kaiser-I-Hind Mills Disappoints

THE New Kaiser-I-Hind Spinning and Weaving Co. Ltd reports extremely disappointing results for the year ended March 1964, and the dividend on both ordinary and preference shares has had to be skipped. Despite an increase in the sales from Rs. 3.34 crores to Rs. 3.65 crores, the year's working shows a loss of Rs. 21.49 lakhs, against Rs. 26.81 lakhs in the preceding year. These figures have been arrived at without making provision for depreciation. The total deficit carried forward amounts to Rs. 66.94 lakhs, including Rs. 7.72 lakhs being the difference on account of the change in the mode of valuation of stock of goods as at the end of March 1964. Arrears of depreciation add up to Rs. 19.82 lakhs and preference dividends are in arrears since 1957-58 and they amount to Rs. 6.82 lakhs. The directors have attributed the heavy losses suffered during the year to the disposal of large accumulated stocks of the previous years at very low prices, particularly during the first half of the year.

During the second half of the year, there was a change in the manufacturing programme to conventional sorts in order to facilitate the processing of the remaining stocks of loose cloth. The directors state that by the close of the year 1963-64, the stocks with the Company had been brought down to the normal level of eight to ten days' processing capacity of the mills and this level has been maintained during the current year. The Company's mills are now stated to have reached an economic level of working and the directors feel that the Company has turned the corner. In spite of the heavy increase in costs in recent months, estimated at around Rs. 2 lakhs a month, the provisional profit and loss account for the first half of the current year shows a profit of about Rs. 3.75 lakhs before providing for depreciation and bonus to employees. The directors have felt the necessity of renovating and modernising at least some sections of the Company's mills, which will result in considerable saving in labour costs and improved efficiency and production. The scheme has, however, been deferred because of the Company's difficult financial position.

Swastik Rubber to Raise Capital



THE Swastik Rubber Products Ltd proposes to increase its authorised capital from Rs. 1 crore to Rs. 2 crores by creating an additional 50,000 equity shares and 50,000 9.3 percent redeemable cumulative preference shares, both of Rs. 100 each. The new shares will be offered in the first instance to the existing shareholders of the Company. An extraordinary general meeting of the shareholders is being convened on 28th November to approve the increase in the authorised capital.

The authorised capital is being increased in order to raise funds for financing the Company's expanding business. The Company which has received orders for combat boots, ground sheets and other defence requirements proposes to construct new buildings for its factory. It also proposes to invest a sum not exceeding Rs. 7 lakhs in the share capital of the Industrial Glass Fibre Private Ltd, a new Company to be formed in collaboration with Bristol B.T.R.

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service.

With a network of correspondents at all important trade centres of the world the **United Bank** is equipped to render adequate service and give expert guidance in matters of foreign trade.

Parkside Estates Earns Less

A SUBSTANTIAL fall in the crop due to unfavourable weather conditions adversely affected the profit of the Parkside (Neilgherry Hills) Estates Co. Ltd for the year ended June 1964. The directors say that they are recommending a final dividend of 15 percent, as they are of the opinion that the lower working profit for 1963-64 is due to the exceptionally unfavourable weather conditions. With the final dividend of 15 percent, the total dividend for the year, including the interim of 7½ percent, amounts to 22½ percent (against 25 percent). The profit for the year amounts to Rs. 2,58,075, after providing for depreciation and also Rs. 2,40,000 for taxation. This compares with the previous year's profit of Rs. 3,59,117. after providing for depreciation and also Rs. 4,11,000 for taxation. With Rs. 46,177 brought forward from the previous year and Rs. 3,727 being the taxation adjustment relating to the previous year and with Rs. 43,000 being the super profits tax no longer required, the total available for appropriation comes to Rs. 3,50,979.

Out of this, a sum of Rs. 4,828 (against Rs. 3,129) is transferred to development rebate reserve. The interim dividend of 7½ percent absorbed Rs. 1,11,672. The final dividend of 15 percent amounts to Rs. 2,23,344. The balance of Rs. 11,135 is carried forward.

The total tea crop for the year amounted to 322,867 kilograms (against 413,064 kilograms). The estate cost of production amounted to Rs. 1.53 a lb (against Rs. 1.31 a lb). The price realisation amounted to Rs. 2.92 a lb (against Rs. 2.74 a lb). As for the crop for the current season, the directors state that the prospects are promising. During the year, the Company has purchased 9.22 acres of planted tea adjoining the estate.

Milling and Special Machines from Kirloskars

MYSORE Kirloskar Ltd is promoting a new venture in collaboration with James Archdale and Co. Ltd of the U.K. for the manufacture of drilling, milling and special purpose machines. The new Company, which will be registered as soon as the technical and financial collaboration agreement with the British firm is finalised, will have an authorised capital of Rs. 1 crore —all in equity shares of Rs. 10 each. The initial issued capital will b Rs. 60 lakhs, of which 40 percer (Rs. 24 lakhs) will be taken up b the foreign collaborators. Mysor Kirloskar will invest 30 percer (Rs. 18 lakhs) and the balance of 30 percent will be offered for public subscription.

Nonsuch Tea Estates Maintains

IN spite of a lower crop and a fall in the profit for the year ended June 1964, the directors of Nonsuch Tea Estates Ltd have maintained the total dividend for the year at 20 percent. The net profit for the year amounts to Rs. 6,04,101, after providing Rs. 4,68,000 for taxation. The previous year's net profit was Rs. 7,84,932, after providing Rs. 8,77,600 for taxation. With Rs. 28,437 brought forward from the previous year, Rs. 20,000 transferred from special reserve and with Rs. 73,581 being the provision for taxation no longer required, the total available for appropriation comes to Rs. 7,26,119. Out of this, the balance bonus to labour for 1962 amounted to Rs. 3,975 and that to estate staff for 1962-63 to Rs. 2,644. Development rebate amounted to Rs. 35,728 (against Rs. 14,438). Transfer to development reserve amounts to Rs. 1,25,000 (against Rs. 1,00,000). Transfer to contingency reserve gets Rs. 50,000 (against Rs. 1,25,000). The interim dividend of 10 percent absorbed Rs. 2,31,000. The final dividend of 10 percent amounts to Rs. 2,31,000. The balance of Rs. 22,772 is carried forward.

The tea crop for 1963-64 amounted to 648,106 kilograms (against 729,106 kilograms). The cost a kilogram amounted to Rs. 3.27 (against Rs. 2.88). The price realised a kilogram amounted to Rs. 5.55 (against Rs. 5.80). The estimated crop for 1964-65 is placed at 590,000 kilograms at a cost of Rs. 3.39 a kilogram.

American Refrigerator to Diversify

AMERICAN Regrigerator Co. Ltd has declared a taxable ordinary dividend of 10 percent for the year ended April 1964. The shares are being quoted at the par value of Rs. 10 a share. The Company is diversifying its activities to improve the working result. Efforts are being made to increase the export of the Company's products. A sum of Rs. 1.64 lakhs has been spent to construct an additional bay in the existing factory. The profit has amounted to Rs. 9.68 lakhs for 1963-64, against Rs. 3.33 lakhs for 1962-63, after transferring Rs. 1.92 lakhs (against Rs. 1.20 lakhs) to depreciation and Rs. 55,000 (against Rs. 90,550) to development rebate reserve. General reserve is allocated Rs. 1.60 lakhs and taxation Rs. 6 lakhs (against Rs. 2.40 lakhs). The carry-forward is Rs. 2.639. against Rs. 1.442 brought in. Sales rose from Rs. 73.71 lakhs to Rs. 85.52 lakhs.

International Tractor Will Enter Market Soon

INTERNATIONAL Tractor Co. Of India Ltd which has been licensed to manufacture annually 3,500 tractors and matching implements will soon enter the market to raise Rs. 61 lakhs—all in equity shares of Rs 10 each—through public subscription. The project has been jointly sponsored by Mahindra and Mahindra Ltd. Voltas Ltd and the well-known International Harvestor Company, Chicago, U.S.A. The factory is being set up

THE BANK OF BARODA LIMITED

(Estd. 1908) Head Office: Baroda

building is nearing completion and the plant is expected to go into production by the end of the year. The foreign exchange requirements for the import of plant and machinery, estimated around Rs. 95 lakhs ($2 million) will be met by International Harvester's contribution by way of equity participation and long-term loan. The tractors to be produced in India will be marketed under the name of "Mccormic International B-275 tractor".

The Company will pay certain fees to the foreign collaborators for the right to use its patents and its production, engineering and research information. The Company will have an authorised capital of Rs. 4 crores—all in equity shares of Rs. 10 each. The issued capital will be Rs. 1.50 crores. International Harvester, Mahindra and Mahindra and Voltas, will each take up shares worth Rs. 25.50 lakhs. Shares worth Rs. 12.49 lakhs will be taken up by the directors, friends and associates of Mahindra and Mahindra. The balance of 610,050 shares are being offered for public subscription. The entire public issue has been underwritten. The board of directors includes Mr. Keshab Mahindra (chairman), Mr. Brooks Mccormick (executive vice-president of the foreign collaborators). Mr. R. F. S. Talyarkhan, Mr. H. C. Mahindra, Mr. A. B. Parekh, Mr. P. C. Cheryan, Mr. Ivan James Syer (representative in India of foreign collaborators) and Mr. B. R. Sule.

Nil from Osmanshahi Mills

THE working of the Osmanshahi Mills Ltd. for the year ended September 1964, shows a considerable improvement over the previous year. As against a loss of Rs. 19.97 lakhs in 1962-63, the Company has made a gross profit of Rs. 19.15 lakhs during 1963-64. After writing back excess provisions of previous years no longer required, the directors have provided Rs. 7.21 lakhs (against nil) for depreciation and Rs. 52,000 (against Rs. 3,800) for development rebate reserve. The balance of Rs. 13.47 lakhs has been utilised to reduce the loss of Rs. 33.26 lakhs brought forward from the previous year. The Company has not paid any dividend since 1955-56.

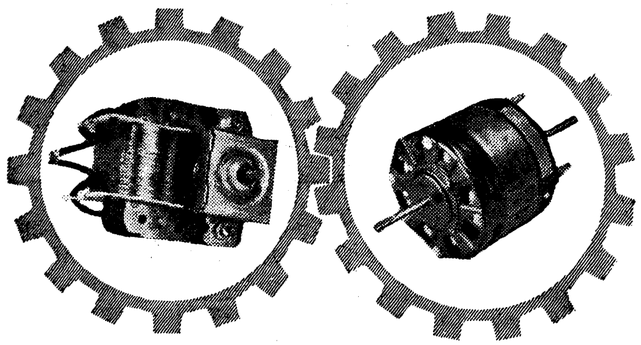
J. K. Chemicals Profit Up

THE working of J. K. Chemicals Ltd for the year ended June 1964 shows a satisfactory improvement over the previous year. Sales have increased from Rs. 1.22 crores to Rs. 1.26 crores, and the gross profit has risen from Rs. 31.77 lakhs to Rs. 35.36 lakhs. Improved results have enabled the directors to resume the payment of preference dividend which had been discontinued after 1955-56. After providing Rs. 13.41 lakhs (against nil) for depreciation and Rs. 9.86 lakhs for arrears of depreciation for 1962-63 and Rs. 10.70 lakhs (against Rs. 10.60) lakhs for development rebate, the directors have paid the preference dividend for 1956-57 which absorbs Rs. 1.47 lakhs. The distribution does not include the dividend on the 5,000 preference shares held by the foreign collaborators who have waived all arrears of preference dividend in terms of the agreement dated 17th June, 1963.

The improvement in the Company's profit is attributed to the higher return on the sale of sodium hydrosulphite and economies in salt recovery. The production of sulphuric acid increased by 16 percent, while tained at the previous year's level of 10,000 tonnes. The production of epsom salt declined by 23 percent, whereas the output of nitric acid increased by 22 percent. The salt recovery plant which had been commissioned in August 1963, produced 3,287 tonnes of pure salt. The sulphate removal plant to be installed in this unit is expected to be commissioned shortly, and this will result in a higher recovery of pure salt. The plant for the manufacture of rangolite and its derivatives has been commissioned. The Government has allowed the Company to import on deferred payment terms a plant for increasing the production of caustic soda and allied products. The Company has completed formalities in connection with the issue of additional debentures of the value of Rs. 40 lakhs in favour of the I.F.C.

Sirpur Paper Pays More

SIRPUR Paper has raised the dividend for the year ended June 1964 from 50 paise to Rs. 1.20 a share (Rs. 10 paid) which follows the marked improvement in the Company's performance during the year. According to preliminary figures, which are subject to audit, the Company has made a gross profit of Rs. 1.046 crores, against a mere Rs. 38.49 lakhs in the preceding year. Out of this, the directors have provided Rs. 40.89 lakhs (against Rs. 32.46 lakhs) for depreciation but development rebate absorbs a substantially larger amount of Rs. 53 lakhs, against Rs. 3 lakhs. The Company has, however, at the same time withdrawn the entire amount of Rs. 41 lakhs lying in the development rebate reserve fund which brings the disposable profit to Rs. 51.73 lakhs. After making provision for the proposed dividends, the directors have been able to plough back Rs. 14 lakhs whereas in the preceding year a sum of Rs. 16 lakhs had to be withdrawn from the reserves for payment of dividends. There is again no income tax liability in view of the carry-forward of unabsorbed depreciation and development rebate of earlier years.



Indian Air Gases: A New Venture

INDIAN Air Gases Ltd is a new Company which progress to set up a plant in Varanasi (U.P.) for the manufacture of oxygen and acetylene gases. The licensed capacity of the factory will be 36 million cubic feet of oxygen and 6 million cubic feet of dissolved acetylene a year. The project is estimated to cost Rs. 61 lakhs, which it is proposed to meet by the issued share capital of Rs. 31 lakhs, a loan of Rs. 25.25 lakhs from the Industrial Finance Corporation and the balance from the Company's present resources. The loan from the I.F.C. is made up of a rupee loan of Rs. 8.09 lakhs and a loan of $357,455 (equivalent of Rs. 17.16 lakhs).

The Company has been granted licences for the import of plant and dissolved acetylene cylinders from the U.S.A. and oxygen cylinders from Poland. The Company proposes to enter into an agreement with the Diesel Locomotive Works in Varanasi for the supply of gases. Land required for the factory has already been acquired and looking to the progress so far made, the promoters are hopeful about starting production by the end of 1965. The issued capital of Rs. 31 lakhs is made up of Rs. 23 lakhs in equity shares and Rs. 8 lakhs in preference shares. The directors and their friends and associates have agreed to take up equity shares worth Rs. 10 lakhs. The balance will be offered for public subscription some time next month. The board of directors includes Mr. Satish Chandra (chairman of B.I.C.), Mr. K. N. Modi,

New Capital Issues

FOUR companies have been authorised to raise capital aggregating Rs. 1.24 crores. Of these, two are issuing bonus shares and two equities plus preference shares. The consent of the Controller of Capital Issues is valid for 12 months in all cases. The following are the details:

The Travancore Sugars and Chemicals Ltd, Trivandrum, is to issue bonus shares of the value of Rs. 6 lakhs on capitalisation of its shares premium account. The bonus shares will be issued in the ratio of one for five shares held.

The Mysore Stoneware Pipes and Potteries Ltd, Bangalore, is to issue further capital of Rs. 60,000 divided into 6,000 equity shares of Rs. 10 each to be issued as fully paid bonus shares to the existing shareholders of the Company in the ratio of one bonus share for every ten equity shares held, on capitalisation of the Company's share premium account to a like extent.

N. and N. Cutting Tools Ltd, Bombay, is to issue Rs. 52.50 lakhs capital —Rs. 37.50 lakhs equity and Rs 15 lakhs preference—in shares of Rs. 100 each. All the shares will be issued for cash at par. The money will be used for the manufacture of twist drills, taps and dies.

Appeejay Structurals Ltd, Calcutta, is to issue capital of Rs. 65 lakhs for cash at par consisting of Rs. 50 lakhs in equity shares of Rs. 10 each and Rs. 15 lakhs in 15,000—9·28 percent cumulative redeemable preference shares of Rs. 100 each. Out of these, such number of shares as will entitle the scrip to be listed on the recognised stock exchanges, will be issued to the public by prospectus. The capital will be used for the manufacture of steel structurals. This is in supersession of an earlier consent.

CONSULT KULJIAN FOR HEAVY FOUNDATIONS AND INDUSTRIAL STRUCTURES

KULJIAN-INDIA

Industrial engineering is our forte. As consultants and constructors for massive industrial projects, our experience in heavy foundations is varied and specialised. The Stock Markets

PRICES FALL: TURNOVER MAINLY IN CLEARING SHARES

Wednesday Evening.

THE Calcutta stock market has closed the past week in a quiet mood. Prices, particularly of clearing shares, have dropped substantially due to heavy selling pressure, combined with short-selling. Operators are nervous because of the move to put a ceiling on urban property. At the A.I.C.C. session in Guntur, an unofficial resolution has been passed asking the Government to fix such a ceiling. The fear may be exaggerated considering that there was no serious discussion on the subject. The details of the proposal have been kept as vague as ever.

The drop in share prices is not surprising considering that there was a sharp rise earlier. A correction was overdue. The decline apart, turnover has dropped considerably and is largely confined to clearing shares. Operators do not want to extend their commitments. So there is a tendency to take profits at every bulge. Lyons Range is getting worried over the food situation which has deteriorated considerably in Kerala. Since the Government has not yet formulated any firm policy to tackle the food problem, shortages and high prices continue to cause deep anxiety.

Lyons Range is taking a cautious view of the outlook. The prospects of tax relief have become uncertain considering that the Government will need substantial funds to finance development and defence. Although the move to bring out unaccounted money and check tax evasion has been welcomed, the stock market fears that harassment by tax authorities will increase.

There has been a great deal of worry over the growing shortage of funds. Due to higher interest rates, investors have tended to shy away from stocks and shares. Operators do not find it worth while to buy shares with borrowed funds. The supply of bank credit for stocks and shares has shrunk because the lending capacity of banks has been affected by the higher liquidity ratio, combined with the restrictive policy of the Reserve Bank.

Indian Iron have slipped back despite the larger production figures for October. The Company produced 85,674 tonnes of steel ingot in October, against 77,244 tonnes in September, while the output of pig iron dropped from 104,733 tonnes to 94,065 tonnes. The output of salable steel rose from 54,671 tonnes to 68,190 tonnes. Despatches improved from 49,826 tonnes to 61,883 tonnes. Among engineering shares, Jay Engineering have recovered on replacement buying due to rumours of a bonus issue. Guest, Keen, Williams, Texmaco and Braithwaite have lost. Jessop are a steady feature.

Prices of miscellaneous shares have tended to decline towards the close due to profit-taking. Dunlop Rubber are about steady since the Company has issued rights ordinary shares. Indian Aluminium have fallen despite the payment of an interim taxable ordinary dividend of 7½ percent. The earlier steadiness in Indian Oxygen, Alkali Chemical, Metal Box and Associated Battery has not been maintained towards the close. Goodyear India and Union Carbide have reacted. National Rolling Mills have met with scattered support due to a good report. India Steamship have been sold freely.

Among new shares, Hindustan Aluminium and Hindusthan Twyfords have been supported. Managing agency shares have weakened because of the move to abolish the system of managing agency in selected industries. Martin Burn and Jardine Henderson are easier. New Asiatic Insurance have attracted support due to the decision of the Company to undertake an industrial or commercial venture. In paper shares, Orient and Titaghur have weakened but Bengal and India Paper Pulp are steady. Sugar shares are weak since the manufacture of bold grain sugar has been prohibited. Bank shares are neglected.

Jute shares are dealt in cautiously and turnover has declined. Birla, Ganges, India and Union have lost fractionally. In cotton mill shares, J. K. Cotton have reacted while Bharat Commerce are steady. Coal shares lack interest due to the accumulation of stocks at pithead. Little business has been transacted in tea shares since the average price of tea tended to decline at the auction held in Calcutta last Tuesday. Government securities are dull and quiet. Turnover has been nominal. Institutional interest is lacking. The 3 percent Conversion Loan 1986 is barely steady around Rs. 62.

Bombay

DULL TREND CONTINUES IN SMALL TURNOVER

NO EARLY FISCAL RELIEF EXPECTED

Wednesday Evening.

DALAL Street is again in a despondent mood. That the Diwali "moorat" trading should have been completely devoid of lustre has added to the feeling of frustration which the market had been struggling to get over somehow. Fond hopes of early fiscal relief have been given up as the Prime Minister, Mr. Lal Bahadur Shastri, is reported to have reminded industrialists in informal chats that February is not far off. In its mood of frustration, the stock market paid little heed to the Prime Minister's assurance to industrialists that the private sector would receive all the encouragement it needed. Nor did Mr. Johnson's landslide victory in the U.S. Presidential election bring any cheer, although the outcome of the election had been awaited with considerable anxiety.

The turnover on the stock market dwindled to a trickle last week. With outside interest virtually absent, the professional operators found little inducement to extend their commitments. Interest continued to be extremely selective with half-a-dozen cleared securities virtually monopolising the operators' attention. Equities moved irregularly lower and showed all-round small losses over the week. The setback was due more to tired bull liquidation and the lack of fresh support than to any important bear selling.

Although the market had staged a moderate recovery during the latter half of October, it had never been very lively, and activity had continued to be predominantly professional. It has now lost all the ground it had gained after 14th October. More disturbing than the setback in prices is the turn in the market psychology. The market is now more responsive to adverse news than to favourable developments. The promulgation of the Essential Commodities (Amendment) Ordinance, providing for the summary trial of delinquent traders and public servants, has been viewed with serious apprehention by the business community. Confidence seems to

M. Ct. Muthiah, Chairman, K. M. Nanjappa, General Manager

have been further undermined by the Government's new measures to trace black money and detect tax evasion. The stock market is not much concerned with unaccounted money directly, but the measures which unnerve the business community cannot but have an unsettling effect on the trading sentiment in the market. It is really the lack of business rather than the fall in prices which is worrying the operators. But activity is unlikely to improve unless there is a revival of confidence which does not seem possible without appropriate changes in the Government's fiscal policy. Recovery is likely to become more difficult if fiscal relief is delayed too long.

Sectionwise, rayon shares continued to be distinctly weak, with Indian Rayon and Baroda Rayon making new lows for the year. National Rayon were well supported for some time, but eased at the week-end with the quotation moving down from Rs. 360 to Rs. 353. Century declined sharply from Rs. 613 to Rs. 591.

Steel shares eased despite higher production figures for October in both Burnpur and Jamshedpur. Engineering shares were easier with Tata Locomotive declining from Rs 267.50 to Rs. 260. The selling in these shares has been provoked by the start of dealings in rights shares. Motorcar shares were weak and Premier Automobiles fell from Rs. 103 to Rs. 97 in spite of the announcement of a dividend of Rs. 4 a share; the dividend had been skipped in the previous year. Sugar shares were quietly steady but chemicals were easier. There was very little activity in bank, insurance and electric shares which maintained a steady tone due to the scarcity of offerings. Shipping shares were subdued with Great Eastern losing a major portion of the rise recorded after the announcement of an increase in the dividend. Cash shares continued to be neglected and interest was extremely selective.

Madras

TURNOVER FALLS APPRECIABLY

SELECTIVE SUPPORT FOR PLANTINGS

Tuesday Evening.

THE Madras stock market has been fairly steady during the past week despite weaker advices from Calcutta and Bombay. Turnover, particularly in clearing shares, has nevertheless dropped considerably. Scattered support has been extended to selected tea, coffee, textile and miscellaneous shares. Investors and operators have been disturbed by the thought that the Government might put a ceiling on urban property in accordance with an unofficial resolution which the A.I.C.C. has passed at its Guntur session.

The stock market is also feeling the shortage of funds. It is feared that the supply of bank credit for stocks and shares will shrink as the busy season advances. Government securities are dull, and only a few transactions have taken place. Most of the State Government loans are available at a discount. Interest has been shown in good preference shares.

Among planting shares, good tea and coffee shares have been favoured following an improvement in the output of these crops. Rubber shares have, however, been dealt in cautiously. Consolidated Coffee have met with support at Rs. 24.75 and Ouchterlony at Rs. 3.50. Blue Mountain are quiet at Rs. 2.23, but Periakaramalai are steady at Rs. 3.64. Nelliampathy have been taken at Rs. 5.27 on paying a taxable ordinary dividend of 25 percent and Nonsuch at Rs. 22.50 on declaring a final taxable ordinary dividend of 10 percent. Rajagiri have been done at Rs. 22.60. Interest has been taken in Peermade at Rs. 20.45. In coffee shares, Bababudin are steady at Rs. 5 and Ossoor at Rs. 2.76. Swinton have been transacted at Rs. 2.68, and the Company is considering to wind up voluntarily. Puthuttotam are quoted at Rs. 2.55 since the Company has sold the Waverley Estate.

In banks, Indian Overseas have hardened to Rs. 150.75 and Indian to Rs. 159. In sugar shares, Deccan are steady at Rs. 11.10 and E.I.D. at Rs. 35.90. Travancore are quoted at Rs. 7.80 ex-rights. The Company has issued bonus shares in the ratio of one share for every five held. Andhra have been taken at Rs. 12.80, K.C.P. at Rs. 24 and Madura at Rs. 9.44.

In textile shares, South India Viscose have reacted to Rs 113.50 and Travancore Rayon to Rs. 19.30. Lakshmi are steady at Rs. 132 and Madura at Rs. 35.65. Bangalore Woollen and Buckingham have been taken at the same price of Rs. 278. Anglo-French are quoted at Rs. 145 and Adoni at Rs. 8.75. Ramakrishna have attracted support at Rs. 199 and Ramnarayan at Rs. 85.

In the miscellaneous section, Aluminium Industries have lost fractionally at Rs. 23.25, but Ashok Leyland are steady at Rs. 7.38. In cement shares, India have been bought at Rs. 5.20 and Dalmia at Rs. 13.20. Mettur Chemical have been maintained at Rs. 14.35. Seshasayee Paper have weakened to Rs. 7.30 and Mysore Paper to Rs. 11.78. Ramaraju Surgical Cotton are quoted at Rs. 100 ex-rights. The Company has issued rights ordinary shares in the proportion of one new share for every two held.

Textool have been taken at Rs. 133 ex-rights. The Company has issued rights ordinary shares in the proportion of one new share for every three held. Kirloskar Electric have attracted attention up to Rs. 20.70, but Madras Rubber have weakened to Rs. 9.30. Parry's Confectionery are steady at Rs. 2.93. Spencer at Rs. 21.50 and T. Stanes at Rs. 28.55.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available. All quotations are in Rs.]

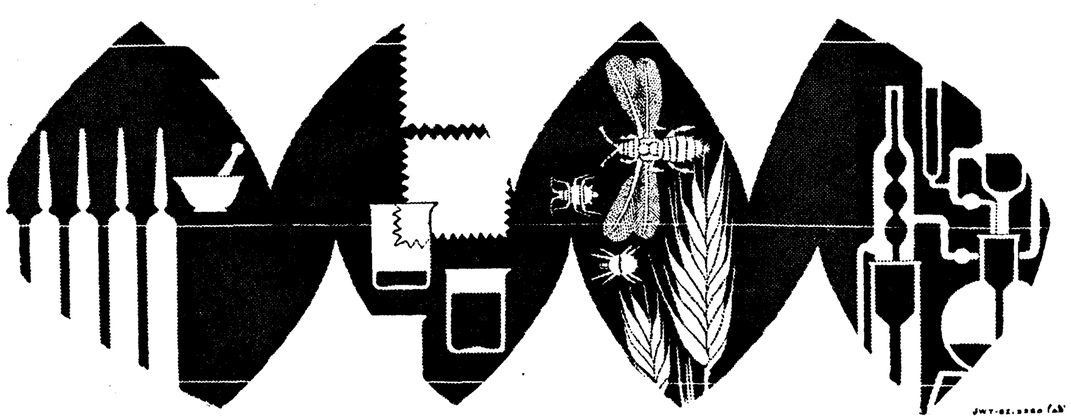
a world of diversification

A growing nation has diverse needs and diversification is the bedrock of modern industrial progress. SANDOZ, a modern research and industrial complex, is constantly alert and alive to the old and new needs of a changing market, a changing India.

The Sandoz enterprise is an integrated unit equipped for mass production, quality control, market and motivational research, planned selling and countrywide distribution. Sandoz is geared to the demands of the new industrial India.

PHARMACEUTICALS: The discovery and development of many new drugs and medicines spring from the extensive research Sandoz carries on in this field. Sandoz explores new pathways in the service of medical science.



DYES AND CHEMICALS: Another important arm of Sandoz activity. The Dyes Research Department concentrates on the problem of dyeing the new synthetic fibres. Special attention is also given to the easy application of dyestuffs of greater fastness to traditional materials like wool and cotton.

AGRO-CHEMICALS: Another established field where Sandoz has made remarkable progress. Sandoz Insecticides, Fungicides, Herbicides and Rodenticides are extensively used in Indian agriculture today, increasing yield by preventing crop destruction.

RESEARCH & DEVELOPMENT: The research knowledge and talent of Sandoz scientists all over the world are pooled to create products that fulfil human needs and contribute to India's industrial and technological progress.

Money

THE CALCUTTA MONEY MARKET

MODERATE INCREASE IN ADVANCES

Wednesday, 11th November.

THE general level of advances has shown a moderate increase in the Calcutta money market during the past week. Most of the increase is accounted for by the jute mills and the iron, steel and engineering industries. The requirements of the cotton mills, the sugar industry, and the foodgrains and seeds trade are unchanged. In the interbank market, the call rate has been fluctuating widely. Starting at 5½ percent, it dropped to 3 percent and has now risen to around 5 percent.

The exchange market has been fairly active, with a good supply of tea bills and a moderate supply of gunny bills. The demand for remittances is fair. In London, sterling has weakened in relation to all the major currencies except the Danish kroner.

SILVER WAS STEADY IN CALCUTTA during the past week and the price advanced from the previous week's level of Rs. 249.50 to Rs. 251.75 a kilogram, quoted today. The price was quoted at 112⅛d in London and at 129.3 cents in New York.

In spite of the rise in silver gold was easier and the price of 14-carat declined from Rs. 69.25 to Rs. 68.25.

DURING THE WEEK ENDED 6TH November, Government of India Treasury bills for Rs. 141,69,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 10th November. The total amount offered was Rs. 2,05,00,000. Tenders at Rs. 99.380 percent were accepted in full, and those at Rs. 99.375 percent were allotted 98 percent approximately. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.499 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 16th November.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 11th November to 14th November at Rs. 99.391 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 4th November to 7th November amounted to Rs. 48.50 lakhs only.

THERE WERE RISES OF RS. 70.31 crores to Rs. 2,467.59 crores in active notes and of Rs. 54.85 crores to Rs. 2,486.27 crores in the total note issue, according to the return of the Reserve Bank of India during the week ended 6th November, 1964. The currency expansion was covered by increasing rupee securities by Rs. 59.97 crores to Rs. 2,181.14 crores in the paper currency reserve. Deposits of the Government of India dropped by Rs. 45.80 crores to Rs. 50.13 crores while those of State Governments rose by Rs. 6.83 crores to Rs. 18.56 crores. Balances of commercial banks at Rs. 96.91 crores showed a rise of Rs. 7.76 crores. Balances held abroad increased by Rs. 2.10 crores to Rs. 10.43 crores. Investments were Rs. 20.81 crores larger at Rs. 125.20 crores. Loans to scheduled banks rose from Rs. 1.68 crores to Rs. 5.88 crores, of which advances against usance bills amounted to Rs. 15 lakhs (nil). Ways and means advances stood at Rs. 33.04 crores, against Rs. 47.27 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 30th October, 1964, shows a rise of Rs. 4.39 crores to Rs. 675.45 crores in total deposits. Investments in Government securities are up by Rs. 20.32 crores to Rs. 320.80 crores, while other authorised investments remain unchanged at Rs. 8.98 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 5.56 crores to Rs. 336.41 crores. Cash and balances are, in consequence, shown at Rs. 24.22 crores, or Rs. 24.83 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 30th October, 1964, shows Demand and Time liabilities at Rs. 1,366.94 crores (Rs. 28.46 crores on account of borrowings from banks) and Rs. 1,396.68 crores (Rs. 15.16 crores), compared with Rs. 1,365.77 crores (Rs. 28.98 crores) and Rs. 1,392.27 crores (Rs. 15.58 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 1.07 crores and Rs. 34.98 crores to Rs. 67.61 crores and Rs. 84.81 crores, respectively. There is a rise of Rs. 34.21 crores to Rs. 873.66 crores in investments. Advances and bills discounted at Rs. 1,729.42 crores show a rise of Rs. 7.49 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.5 percent and 62.6 percent, against 6.8 percent and 63.2 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 13-11-64.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
13-11-64	16-2-65	2,00,00	Rs. 2.499%
6-11-64	9-2-65	2,00,00	Rs. 2.500%
30-10-64	2-2-65	2,00,00	Rs. 2.400%
23-10-64	26-1-65	2,00,00	Rs. 2.500%
9-10-64	12-1-65	2,00,00	Rs. 2.500%
1-10-64	4-1-65	2,00,00	Rs 2.400%
25-9-64	28-12-64	2,00,00	Rs. 2.399%
18-9-64	21-12-64	2,00,00	Rs. 2.386%
11-9-64	14-12-64	2,00,00	Rs. 2.400%
4-9-64	7-12-64	2,00,00	Rs. 2.400%

New Delhi

EXPERTS SURVEY FOOD AND COAL CARGO HANDLING IN CALCUTTA

(FROM OUR NEW DELHI CORRESPONDENT)

TWO important studies have recently been made on the port of Calcutta. One was made by the U.S. firm of consulting engineers, Coverdale and Colpitts, and was confined to the problem of coal transport. The other study, which was confined to the handling of foodgrains, was made by a U.S. A.I.D. team, consisting of Messrs Howard J. Marsden, John F. Arwood, Joseph E. Bailey and Dr. Pierpont B. Buck.

The study on coal transport has pointed to the shortcomings of Calcutta port and has made suggestions for improving the handling facilities. Referring to the bunching of ships, it says that it is caused by the following:

"(1) The concentration of deep draft ships during the twice-a-month periods of high water.

"(2) The restrictions for ships at jetties and moorings during the occurrence of bores and the need to shift them to the docks during the heavy bores.

"(3) The fact that only two deep draft vessels can be taken into a dock and two can leave at the maximum draft of the day and the anchorage restrictions at and near the Uluberia bar jointly account for a bunching of ships in the docks. "A deep draft ship, missing the proper tide, may have to wait a number of days for another suitable spring tide or it may have drastically to restrict its outward cargo. This concentration and bunching in the docks seriously affects both the economy of the port and the ships. Congestion and peak performances alternate with idle periods.

"The coal docks in this section normally occupy six berths consisting of 3,140 feet of the quay length. In addition, there are two general cargo berths of 640 feet and 600 feet, respectively, that are also available, one of which is regularly in use. One berth is fully mechanised, four are equipped with cranes and three are manual loading berths.

Kidderpore Coal Berths

"Although the maximum capacity of Kidderpore coal berths adds up to 14,800 tons, the real maximum capacity is considerably less. As there are no adjacent coal dumps, the capacity of the berths is dependent upon the number of wagons that can be placed and removed per shift alongside one ship's berth. The following are the additional factors affecting the capacity:

"(a) The track length along the quay is limited; (b) the labour force in permanent service at the port is restricted to average outputs; (c) occasional labour is of an inferior quality; (d) insufficient shunting of wagons; and (e) greater distances for manual handling.

"Although the normal capacity a berth can be stepped up to maximum capacity, this is possible only occasionally and for a limited number of berths. In general, it can be said that without special measures, the port can handle 3 million tons of coal a year, and this could be stepped up to 3.5 million tons, without much difficulty.

"The Government of India decided in April 1961 to raise the coastal coal shipments from 1 million to 2 million tons in order to meet the requirements of some of the consumers in west and south India by sea. The present target programme of 2 million tons of coal works out to an average of 30 ships a month with an average load of about 5,500 tons each. The general destinations of these 30 ships is 20 for south India and 10 for west Indian ports.

"Previously only about 1 million tons were moved by coastal ships but due to the limitation in rail transport capacity, particularly in the directions above Mughal Sarai and *via* Waltair, the demand of consumers in north and south India could not be adequately met. The Government, therefore, decided to increase the supply by sea for coastal consumers and to reduce the rail movements from West Bengal and Bihar fields to those areas.

"The rail transport capacity thus released could be used for meeting the unsatisfied demand of consumers who could not be supplied by sea and whose requirements had not been met for want of rail capacity.

"The colliers required for the transport of coal are nominated by the Director-General of Shipping, in consultation with the Coastal Conference in Bombay. The list of colliers thus established is sent monthly to the Coal Controller's organisation in Calcutta which is charged with executing the actual programme from month to month. The following steps comprise the actual loading programme:

"Shipowners or their agents have to declare their vessels to the coal superintendent of Calcutta port not later than seven days before the date of a ship's readiness to be loaded at a coal berth at the Kidderpore docks. They also state the maximum draft with which they want their ships to sail from Calcutta. This is called the presentation of colliers.

Indent for Wagons

"The next step is for the port to draw up the indent for rail wagons according to the permissible draft, declared by shipowners, taking into account the transit time from the pitheads of the various mines to the Kidderpore docks. The coal from the Andal area takes four days from the date of loading at pitheads to the Kidderpore docks, the Asansol area five and Jharia six. Thus, the machinery of the actual transportation is put in action at least five to six days before the declared date of readiness.

"It goes without saying that this programme is vulnerable, especially since there is no buffer stock between ship and land transport.

"There are numerous causes which can overthrow every organisation. Ships may be delayed and not ready for loading on the declared dates, rail wagons may not be available in sufficient quantities at the various pitheads on the loading dates or breakdowns may occur. All these occurrences make it necessary to allow some spare in the loading time of ships and wagons.

"The jammed dock area in Calcutta and the numerous rail tracks in this area offer no possibilities for dumps of any significance close enough to the cargo berths. The nearest space for the dumping of coal is near Garden Reach, about one-and-a-half miles' distance. However, wagons to and from that area have to travel *via* the dock junctions over congested tracks against the direction of traffic flow. The distance *via* the dock junctions can be four miles. Transport will have to be established by Port Trust wagons on, at least, a 48-hour notice and 12 to 24 hour transit time basis. The minimum number of dumps in this area will be six for various qualities of coal. The extra cost of transport from the dock junctions to the dumps, unloading at the various dumps, loading again into wagons and transport dump to the Kidderpore docks is estimated in the port circle at Rs. 6 a ton at the minimum. Apart from the heavy cost and the inconvenience of heavy traffic between the dump area and docks, there are the losses and other risks connected with the extra manipulations and dumping.

"Dumps will offer a feasible solution for the co-ordination between land and water transport only when a direct mechanised transport between dumps and ships is made available. However, the lay-out of the present dock area is such that the opening of large dumps outside the docks and coal moved from there directly to the ship's hold by conveyors or ropeways will not be a practicable propostion.

"As all coal has to be loaded directly from wagons into the ships, the rhythm of loading depends fully on the simultaneous availability of ships and wagons in the required quantities. This also applies to the utilisation of the port installations.

"The backbone of the port capacity is the mechanical coal loading berth, where only open rail wagons of 22-ton capacity can be handled. The system of coal handling is that the empty colliers are first loaded at the tippler or a semi mechanical berth to reduce their height and make them more suitable for manual loading, then they are shifted to a manual berth for further completion or for manual loading from closed wagons.

"A shortage of open wagons thus directly affects not only the use of the tippler installation itself, but also the rate of loading at the manual berths and to a certain extent the general cargo berths with cranes."

Referring to the use of tippler berth during May 1962 and August 1963, the study team says: "Compared with the normal practice of 140 open wagons a day, there was an average under-utilisation of 35.4 percent of the mechanical berth during the last 16 months (63.4 percent of the theoretical capacity).

Surveying the target year 1962-63, the report of the Port Traffic Manager says: "The port berthing capacity has been wasted during the year to the tune of 31 percent at a very moderate estimate. Out of 1,939 berthing days available, excluding six non-working days and allowing for a 10-percent wastage as inevitable due to movements of vessels, 1,343 berthing days have been used in loading, the remaining days having been wasted."

Referring to a recent congestion of colliers, the report of 23rd August, 1963, says: "During the current congestion, it has not been possible for the railway authorities to maintain a supply of block rakes of open wagons, even at a rate of two a day in spite of repeated requests. The congestion of colliers has, therefore, continued.

Loss of Output

"Loss of output at No. 18 berth plant also affects the extent of utilisation of the manual loading berths where vessels cannot load, unless filled up to some extent, due to the height.

"Shortfall in the daily shipment programme at berth No. 19 results almost invariably in a manual berth going to waste on the following day as the movement planned for the vessel has to be delayed or even cancelled.

"The presentation of vessels for ready loading throughout the year is uneven as a result of which congestion of colliers occurs from time to time. Periods of top performances succeed lean periods. The sailing of 334 ships in one year shows an average of 3.87 days a call waiting for a berth.

"An analysis of the movements of incoming colliers shows that during a period of one year for 338 vessels, only 100 were presented at the date of readiness and 238 had been deferred.

"Vessels with inward salt cargo are most affected, especially when a number of salt carrying ships are simultaneously entering the port during the spring tide. This causes a shortage of lighters as salt is lightered. Some degree of co-ordination in the movements of salt from the west coast or the improvement of the lighter position and labour in salt handling is advisable.

"Although the greater part of the coal supply by railways can be diverted to other ships, deferment of date of readiness contributes to the difficulties already experienced in the coal despatch in Calcutta port.

"Due to draft restrictions in the Hooghly, there is a serious under-utilisation of ship's carrying capacity. The great difference in the loading rate a day is due to the fact that all railway coal is handled *via* the tippler system, whereas coal for industry is handled *via* the semi-mechanical and manual berths. The reason is that railway coal is supplied in block rakes of open wagons of 1,500 tons, so that if a sufficient number of open wagons are available, a ship with about 6,000 tons of railway coal can be finished in two days, say, three days including manual trimming.

"The same cargo quantity takes, at a rate of 1,200 tons a day at semi-mechanical and/or manual berths, at least six days assuming that the wagon supply is satisfactory. Coal for industry is carried in closed wagons and they cannot be handled at the tippler berth.

Handling of Foodgrains

The report of the other study team on foodgrains handling at the port says that "grain cargo movement directly from shipside by hand truck to rail wagon or lorry is efficiently managed by the Port Trust and carried out by its labour under a piece work incentive system. Port clearance of lorries and rail wagons is quite adequate.

"A major bottleneck exists in shipboard bagging, stitching, and slinging operations with stevedore contract labour paid on a time basis. The present discharging rate of this shipboard labour is less than 1,000 tons a day a ship and could easily be increased to more than 2,000 tons a day a ship with efficient efforts by labour and management. The present slow rate of grain ship discharge requires twice as many berths as should be necessary to take care of incoming grain ships, thus delaying other vessels significantly.

"The lack of shipboard labour incentive was made evident when th

team observed gangs who refused to sling cargo and also to bag and sew at the same time. We also observed a gang quit work more than half an hour before the end of the shift."

The following are the recommendations of the study team:

"(1) An urgent effort should be made to reach an agreement which will provide shipboard labour with an incentive scheme consistent with that of dockside labour. The need for such a scheme was emphasised by all parties consulted including labour unions, ships' officers, port trust officials, stevedores, steamship agents, and food department personnel.

"(2) In order to provide better working conditions, more spare for baggers and stitchers, and less interference with slingers, consideration should be given to doing bagging and stitching operations on the apron using chute wagons as in Madras.

"(3) Present silos and associated ship discharge equipment should be placed in operation as soon as possible. Because of the limited vertical elevating capacity and the limited automatic bagging capacity, the average tonnage handled through this system can only amount to about 2,000 tons a 24-hour day. Hatches of a ship not being discharged mechanically can be discharged simultaneously in the conventional fashion so that the overall performance at the silo berth should be about 3,500 tonnes a day.

"Consideration should be given to providing the silo system with additional vertical elevating capacity so that silo clearance can proceed without impeding ship discharge rate. This would permit an average clearance of 4,000 tons a day, if bagging and stitching at the silos can also be stepped up or can be aided by some bulk handling into lorries or rail wagons.

"(4) Stevedoring companies should be provided incentive to operate as many hooks as possible on each ship rather than just doubling up on the long hatch. With labour under an effective incentive programme, higher output rates a gang should alleviate any labour, shortage which would prevent the use of more men a ship."

EXTERNAL RESERVES

Decline in October

During the week ended 16th October, India's external reserves were Rs. 212 crores, compared with Rs. 218 crores during the corresponding period in 1963. They were Rs. 217 crores in September 1964. In other words, the seasonal improvement, which has been a normal feature of India's external reserves, did not occur this year. This is notwithstanding a noticeable improvement in Indian exports. One clue to this unsatisfactory position lies in India's policy: "Develop now and pay later." In addition to interest charges of the similar magnitude, India has to make repayments of already contracted loans as follows:

1963-64	Rs. 50 crores
1964-65	Rs. 85 crores
1965-66	Rs. 85 crores
1966-67	Rs. 95 crores
1967-68	Rs. 112 crores
1970-71	Rs. 126 crores

It is evident that the external debt repayment during the current financial year is Rs. 35 crores more than in 1963-64. This was after the extent of the seasonal improvement in external reserves, which has been wiped out by an increase in India's repayment of debts.

ORGANIC CHEMICALS

Project in Bombay

The Hindustan Organic Chemicals project to manufacture intermediates for the dye industry is being salvaged. At a meeting held last week, the Production Committee of Secretaries approved, in principle, the production programme of the project. The plant, as is already known, is being set up at Pauveen, near Bombay.

Enquiries show that there may not be any foreign participation in the equity capital, but certain items of know-how may be acquired on payment. The production programme includes 100 tons a day each of ammonia and caustic soda. The range of chemicals include formaldehyde, benzene hexachloride, anthraguinone and nitro benzene. Dye intermediates include beta Naphthol and monochloro-benzene.

Leaders in Instrumentation

Now Pioneers in Automatic Process Controls

WE LIVE ON THE PAST: Four years ago, we ventured into the manufacture of a wide range of industrial measuring instruments in collaboration with Electroflo Meters Co. Ltd. of U.K. a member of the Elliott Automation Group. ■ WE LIVE IN THE PRESENT: Our present range of measuring instruments has been fully accepted by users as conforming to the rigid specifications required of precision instruments. Some users have done us honour of specifying the brand name 'Mahindra-Electroflo' against their requirement. ■ WE LIVE FOR THE FUTURE: And now we look ahead, with plans under way for the manufacture of a further range of sophisticated pneumatic, electronic, hydraulic process control equipment in collaboration with the same British Group. These instruments will find wide application in industries like... steel, paper, power generation, chemicals, fertilisers etc. where precise measurement and accurate control of Flow, Level, Pressure and Temperature is required.

SMALL CAR

Discussions Planned

Parliament, which reassembles here on 16th November, will hold discussions on the feasibility of manufacturing a people's car. There has hitherto been no encouraging response to the Government's proposals for the amalgamation of three units into one or to take over one of the existing units for the manufacture of a cheap car. On the other hand, each existing unit has put up proposals to manufacture a cheap car, provided the required facilities are made available. The Government is, therefore, left with two alternatives—either to revive the old project for manufacturing a cheap car in the public sector or to expand the defence unit at present manufacturing lorries to make cheap cars as well. A decision, it is expected, will be taken before Parliament holds a discussion on the subject.

FOOD CORPORATION

Bill for Parliament

The Government has also announced its decision to introduce in Parliament a Bill to set up a Food Corporation of India in the first week of the session. It will be a State-owned, State-managed body with Rs. 100 crores as its capital, which is wholly to be subscribed by the Government of India. It will enter foodgrain and if necessary, sugar, vegetable, and *ghee* trades. The corporation will have the power to set up similar bodies in the States. The headquarters of the Corporation will be located in Madras, with regional offices in other States. The Corporation, it is expected, will start functioning from 1st January, 1965.

An ordinance, promulgated last week, will also be placed before Parliament for enactment into law. The ordinance introduces the system of summary trials and takes away the right of appeal from persons convicted under it. It is directed against hoarders and profiteers in foodgrains and other essential commodities, such as sugar and *vanaspati*. Foreign opinion has reacted sharply against this measure, which, it is claimed, will usher in a police State in India. Indian public opinion has, however, welcomed the ordinance.

U.K.

The Import Surcharge

The Government of India, it is believed, has taken a sympathetic attitude towards the 15-percent surcharge levied by the Labour Government on certain imports into Britain. The stabilisation of the British economy, it is felt here, is a pre-condition for India receiving development aid, which is expected to be larger during the fourth plan.

As far as cotton textiles are concerned, India has already exceeded its quota. India has, however, shown some concern over the incidence of the new surcharge on the products of cottage industries, such as handloom fabrics, coirgoods, hand-made carpets, leather goods, and cotton yarn as a raw material. Similar anxiety has been shown in relation to jute goods.

The forthcoming visit of the Prime Minister, Mr. Lal Bahadur Shastri, to London might remove much of India's apprehension.

FOUNDRY—FORGE

Talks on Japanese Help

The representatives of a Japanese firm are discussing with the Government its proposal to put up a foundry-forge at the heavy electricals plant in Hardwar. Discussions are in progress.

KIRIBURU PROJECT

Important Features

The Kiriburu iron ore project will be formally inaugurated by the Vice-president, Dr. Zakir Hossain, on 12th November. The following are its important features:

Proved reserves of iron ore	*(In million tons)*
Kiriburu north block	118
Kiriburu south block	64
Meghahatuburu	132
	314

Mining is confined for the present to two of the three hills in the north block. The output target of the plant is 2 million tonnes of sized ore a year. The capital cost of the project is Rs. 11.22 crores, including foreign exchange. The latter is to be met from the Japanese yen credit of Rs. 2 crores, the second U.S. Export-Import Bank credit of Rs. 1.26 crores, and other sources Rs. 39 lakhs or a total of Rs. 3.65 crores.

The National Mineral Development Corporation has been in charge of the project. The Corporation is also engaged in processing the following projects: the Bailadila iron ore project, Madhya Pradesh; the Khetri copper project, Rajasthan; and the diamond mining project, Madhya Pradesh.

RUSSIA

Help for U.P. Power Station

Four contracts were signed here between the Russian trade organisation V/O Machinoexport, Moscow, and the Uttar Pradesh State Electricity Board, Lucknow, for Soviet assistance for the construction of the Harduaganj "B" power-station. These contracts cover the delivery of the equipment and materials, the preparation of working drawings, training of engineers of the U.P. State Electricity Board in Russia, and deputing Soviet specialists to India for technical assistance in the erection and commissioning of the equipment. The major part of the equipment will be supplied by 1965.

CONCEALED INCOME

Rewards for Detection

The chairman of the Direct Taxes Board, Mr. J. P. Singh, said at a Press conference last week: "One of the important administrative steps decided upon recently for facilitating the detention of concealed income is the liberalisation of the rules concerning the payment of rewards to persons giving information leading to the detection of large-scale evasion. The minimum reward will now be 7½ percent of the additional amount of tax which is realised on the basis of the information supplied by the person concerned or through the assistance rendered by him. The reward can go up to 10 percent of the extra tax realised, depending upon the extent of the help rendered by the person giving the information in the shape of evidence, documents, etcetera, and the risk or sacrifice incurred by him in securing the information. The amount of the reward will not be liable to income tax. The identity of the person furnishing the information will be kept secret if he so desires. Commissioners of Income Tax will be authorised to sanction rewards of up to Rs. 10,000 without reference to the higher authorities. Interim rewards will also be granted in suitable cases.

"It is possible that some of the persons who have concealed their income in the past may now desire to change their ways and to make a voluntary disclosure of their income, but are deterred from doing so due to fear of the levy of heavy penalties and prosecution. But I can say that in the cases of assessees who themselves disclose their concealed income, the department will be appreciative of such voluntary disclosures. If an assessee makes a purely voluntary disclosure of his income and co-operates in the enquiries made during the assessment, the department would be prepared to show due consideration to these facts in levying the penalty; and no prosecution will be launched."

HEAVY STRUCTURALS

New Project for U.P.

Representatives of Voest of Austria have been here discussing with the Government the proposal to set up a heavy structural project in Naine, near Allahabad. The discussions have been fruitful and Voest is likely to participate in the project on a technical and financial basis.

SILICON STEEL

Talks Held

An inter-ministerial meeting held here recently discussed the planning and implementation of a scheme for the production of silicon steel for the manufacture of stamping and lamination for the electrical equipment industry. Special steel, it is expected, is likely to be manufactured either in Rourkela or Durgapur. Stampings and laminations may be made partly in a public sector undertaking and partly by the manufacturers of electrical equipment.

POLAND

Talks on Joint Ventures

A Polish mission is here investigating the fields in which Indo-Polish joint ventures could be set up during the fourth plan. The fields suggested are forge projects, coal mining machinery, cutting tools and chemical projects. Experts in these lines are likely to come to India during the next four weeks.

MANAGING AGENCY

Gradual Abolition Planned

The Central Finance Minister, Mr. T. T. Krishnamachari, said here last week that the Government was considering a proposal for the gradual abolition of the managing agency system in well-established industries. He said that the proposal could be implemented by the Company Law Board next year when a large number of cases for the renewal of the

ISSUE PRICE Rs. 99.75 PER CENT

REDEEMABLE AT PAR ON THE 23RD NOVEMBER, 1976

SUBSCRIPTIONS will be received in cash or cheques. Applications will be received at the head offices of State Bank of India at Calcutta, Bombay, New Delhi and Madras from 23rd November, 1964 to 28th November, 1964 both days inclusive. But the list may be closed earlier without notice if the total subscription is reached.

Copies of loan prospectus and application forms are available at all the offices mentioned above and at the Head Office of the **State Electricity Board, 1, Hastings Street (7th floor), Calcutta-1.**

managing agents would be forthcoming. Mr. Krishnamachari said this while inaugurating a two-day conference of regional directors and registrars of companies.

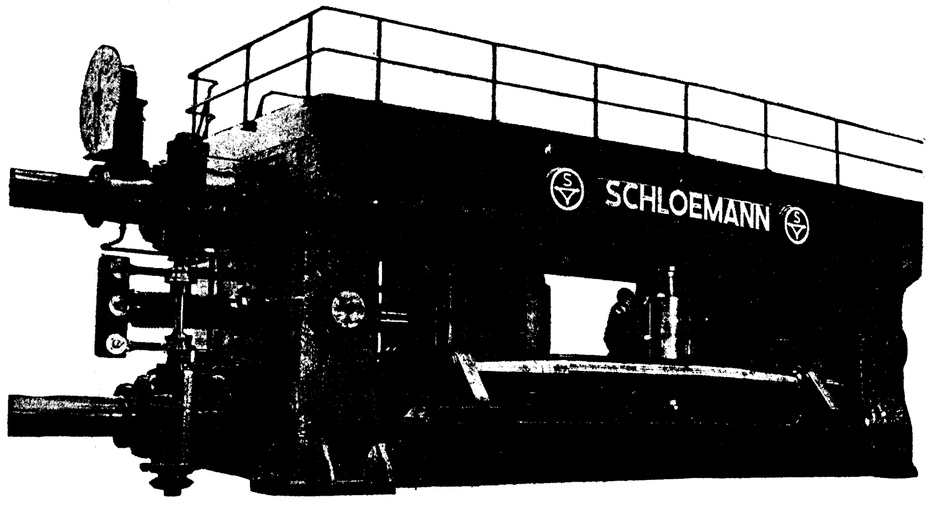
The Central Finance Minister also hinted at the possibility of introducing a scheme for compelling companies to set apart a part of their current reserves for development purposes. It would mobilise resources for meeting the financial requirements of the private sector for its expansion schemes during the fourth plan. He referred to a similar scheme which the Government had initiated in 1957 under which companies were required to deposit a part of their reserves with the Reserve Bank of India. The scheme was subsequently dropped.

Mr. Krishnamachari said that steps should be taken to make the balance-sheet a true index of the financial operations of a company. The balance-sheet should be more informative than it is at present, containing information about stocks, purchases, etcetera. A larger number of auditors should be attached to the Company Law Board for scrutinising balance-sheets and for keeping a greater vigil on the financial operations of companies.

The Main Objective

Referring to the main objective of company law, he said that it should ensure that the joint-stock form of organisation—an important organ of capitalism—functioned efficiently and in the public interest. Company law should not be rigid and should not unduly harass companies. In particular, the Company Law Board should encourage the smaller companies and try to persuade them to rectify their defects and deficiencies rather than prosecute or penalise them for such omission.

The Finance Minister suggested that the Company Law Board should work in close liaison with income-tax officials. This was necessary, and would be helpful to both, for while the company law officials were conversant with the administration of companies, the income-tax officials, with their experience in assessment, had detailed knowledge of the internal mechanics of company operations.



The conference discussed general subjects relating to the administration of the Companies Act, questions related to the proposed amendment of the Companies Act, prosecution for the violation of the Act and the liquidation of the companies in various circumstances.

This edging stand, weighing well over 400 tons, has been installed together with a SCHLOEMANN four-high stand and pertaining auxiliary equipment—in a plate mill at Avesta Jernverk in Sweden. The mill is used to roll slabs and plate from stainless steel. Maximum weight of starting material is 17 tons. As far as we know, this edger is the only one of its size incorporated in a plate mill handling alloy steel only. In 1958 SCHLOEMANN also supplied Avesta Jernverk with an MKW mill for cold rolling high-alloy wide strip.

Roll diameter 41 in., barrel length 35 in. • max. edging load 700 tons • rolls supported at both ends in antifriction bearings • both roll housings traversible with roller suspension • simple roll change from the top

FOODGRAINS

Prospects Discussed

The panel of experts on agricultural administration, which met here recently, had a detailed discussion on the implementation of the foodgrains price policy announced by the Government for 1964-65. Mr. C. Subramaniam, Central Minister for Food and Agriculture, presided.

The panel took note of the fact that with the harvesting of a better kharif crop and the prospects of a bumper crop of rice all over the country, the food situation had generally improved since the last meeting of the panel, although difficulties continued to be experienced in certain areas.

The panel considered the arrangements for the procurement of foodgrains in the surplus States during the interim period until the Foodgrains Trading Corporation starts operating. It was agreed that arrangements would have to be made for the purchase of rice as well as paddy. The purchase organisations being set up by the State Governments for the interim period would be so designed as to facilitate their merger later with the Corporation. In view of the bumper rice crop expected, an effort would be made to build up a sizable buffer stock.

The panel considered a report by Dr. Gilbert Etieene on rural development in India which has focussed attention on the weaknesses in implementing agricultural production programes. The panel came to the conclusion that it was necessary to improve supervision and inspection of development work at the village and block level. It was decided that members of the panel should discuss the conditions prevailing in their respective States with the State officials concerned and prepare a paper for consideration at a special meeting of the panel.

DOCK WORKERS

New Wage Board Set up

The composition and terms of reference of the wage board for port and dock workers at major ports have been finalised. It has been decided that besides the chairman and two independent members, one of whom will be an M.P and the other an economist, the wage board should include three representatives each of the employers and workers.

Of the three labour representatives, two will be nominated by the All India Port and Dock Workers Federation and one by the Indian National Port and Dock Workers Federation.

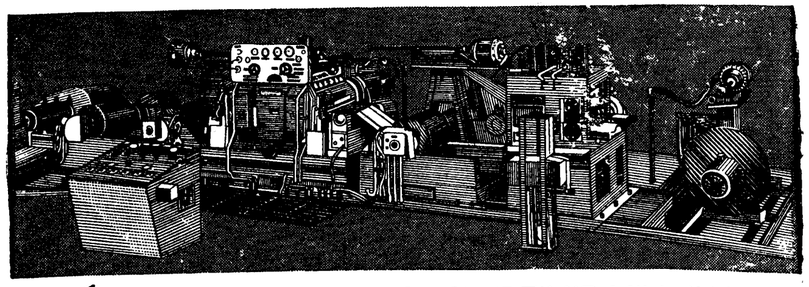
Of the three employers' representatives on the wage board, two will be the nominees of the port authorities. The third employers' representative will be appointed on the joint recommendation of the various associations of stevedores.

RUSSIA

Purchases from India

The Russian trade delegation led by Mr B A Borisov, Deputy Foreign Trade Minister, and his colleagues met the members of the Indian trade delegation and the Central Minister for Commerce Mr Manubhai Shah.

The current year's trade plan was Rs. 85 crores each way, which was 70 percent higher than last year when the trade had touched a figure of Rs. 50 crores each way. The actual purchases on both sides were even higher than these figures.



The composition of trade is also fast improving. The purchase of Indian goods by the Russian organisations is not only confined to traditional goods but also consist of more than 45 percent of manufactured articles and cover a wide range of goods such as cotton textiles, engineering goods, chemicals, pigments, pharmaceuticals, light machinery, handicrafts, coir goods and shoes.

The next year's trade plan which is being drawn up by the two delegations envisages a further rise of about 40 percent over the current year's trade plan, raising the Indian exports to Russia to about Rs. 120 crores, compared with Rs. 85 crores. As it is a balanced trade between the two countries, this also includes in terms of goods the annual repayments of long-term credits which Russia had been extending to different heavy industrial projects being built in India with Russian collaboration.

The Russian delegation has also agreed to purchase larger quantities and more numerous products of light engineering goods and chemicals, paints, pigments and pharmaceuticals next year, compared with those during the current year.

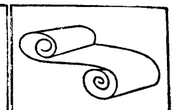
The purchase of Indian textiles next year would be about Rs. 2 crores, engineering goods about Rs. 2.5 crores, chemicals about Rs. 2 crores, tobacco about 35,000 tons and shoes about 1 million pairs. Likewise, India will buy from Russia fertilisers, pig iron, special steel, caustic soda, non-ferrous metals, mineral oil products and heavy machinery and plant in increasing quantities.

BETTER THAN THE BEST IN 50 YEARS

INAUGURATE THE FIRST SENDZIMIR MILL IN INDIA

For a Sendzimir Mill can roll ferrous and non-ferrous metals to thinner gauges while greatly reducing the dimensional tolerance.

Better accuracy and uniformity of gauge, superior finish and appearance of parts acquired by 80% closer micro-inch control, more reduction per pass and the elimination of intermediate annealing are some of the more important advantages of a Sendzimir Mill.



The new U. S. manufactured Sendzimir Mill will be yet another step by Devidayal's - pioneers in India for 5 decades in the manufacture of cold rolled non-ferrous metal sheets and strips - to give the best of their expert knowledge and inside resources to the manufacturing units they feed.

With the commissioning of the Sendzimir Mill - the first of its kind in India and the only one between Yugoslavia and Japan, Devidayal's will be able to meet the demand for high precision metal sheets and strips for radiator core and cylinder head gasket manufacturers, to defence production units and factories making precision parts for use in aircraft and electronic devices.

DEVIDAYAL
METAL INDUSTRIES
REAY ROAD, DARUKHANA, BOMBAY-10

Maintains precise gauge across the width and along the length of strip.

Metal strips can be rolled as thin as the paper in your hand, or less...i.e., 0010 of an inch with tolerance of + or -.0001 of an inch.

TELSTAR-DMI-65A

London

FIRST ECONOMIC MOVES BY THE WILSON GOVERNMENT

(FROM OUR LONDON CORRESPONDENT)

THE Queen's speech at the opening of Parliament, even though it indicated that the Labour Government intended to implement the programme outlined in its election manifesto—or at all events most of it—occasioned no more than a slight flutter in City circles. It was apparent that no concession was to be made to the Government's precarious Commons majority of five, but it was felt, no doubt, that when it came down to detail, there might be room for some sort of compromise and that the final measures adopted would be less severe than the tenor of the election campaign implied.

Strangely enough, this attitude survived the first day's debate of the Address, even though this was enlivened by the new Prime Minister's attack on the Smethwick Conservatives' activities on the question of immigration, which he asked his predecessor in office to condemn without the satisfaction of seeing Sir Alec rising to the bait, although there was a vociferous display of indignation on the Opposition back benches and even talk of a censure motion on the new Premier. More pertinent, from the economic point of view, and therefore of greater import to business men, was the announcement of an interim Budget to be presented this week, not only to give effect to the steps already announced of a duty surcharge on imports and incentives to expand exports, but also to pave the way for the long-term measures to put the economy as a whole on a footing which would finally abolish the danger and fear of recurring crises.

It was the second day of the debate which produced repercussions in the stock markets, set off by Mr. George Brown, Minister of Economic Affairs, outlining the main developments in the Government's plan to strengthen and rationalise the economy. They included severe restrictions on office building in London, to be enforced immediately; discussions with both sides of industry to devise an acceptable incomes policy; nationalisation of the "main part" of the steel industry as soon as possible; the creation of economic Planning Boards in the regions, and the refusal to sanction any major rail closures which might conflict with their plans; and fiscal measures to deal with excessive growth of profits. Briefly, the new developments outlined by Mr. Brown were:

(1) Offices: It will be illegal from midnight on 4th-5th November to start a new office building in London without a permit, which will only be granted "in very special circumstances."

(2) Steel: The Government will "take into public ownership the main part of the iron and steel industry", but will not nationalise the main activities of companies whose predominant interests are clearly in engineering, but which also make steel.

(3) Incomes: Representatives of the unions and employers have agreed to meet Mr. Brown to discuss an incomes policy and the proposed price review body which is likely to have powers to summon witnesses.

(4) Planning: The Government is to establish in each region an economic planning board, consisting of civil servants representing Ministries in London, and an advisory council representing regional interests

(5) Railways: Even if the Government agrees to a closure it may prevent the removal of the track. Mr. Fraser, Minister of Transport, will not consent to any major rail closure which might conflict with regional economic plans.

(6) Fiscal Measures: The Government will use them to deal with what Mr. Brown called "excessive growth of profits and dividends."

Sharp Setback in Shares

Immediately these facts became known, share prices had one of their sharpest setbacks for several months. Millions of pounds were cut off share values as dealers at first lowered their prices and later selling developed, with investors apprehensive of the implications of this week's Budget. Almost every section of the equity market was affected, but engineering shares showed some of the biggest falls. By mid-afternoon the *Financial Times* ordinary share index had fallen 7.8 points to 346.1, but some shares staged a recovery just before the close of dealings, and the index eventually finished 7.2 points lower at 346.7. Although some brokers and jobbers were looking for a "small technical recovery" in dealings in the next few days, few dealers expect any marked development until the Budget discloses what taxes might be in store for industry and the City.

Office building in the Greater London Council area is to be stopped at once, except in special circumstances, and is to be tightly controlled in those areas of the London Metropolitan Region which extend beyond Greater London and which include parts of Oxfordshire, Hertfordshire, Essex, and Sussex, as well as counties between. Mr. Brown told the House that the Government would shortly introduce a Bill under which, in stated areas, any new offices would require, in addition to the normal planning permission, office development permits from the Board of Trade both for new building and for change of use. The Government will take powers in this Bill to designate areas of control by order. The Bill itself will designate Greater London and the London Metropolitan area.

In Greater London, no permits will in general be granted except in very special circumstances. "Permits for new buildings," said Mr. Brown, "will be required even if planning permission has been given, unless a contract to build has been entered into before 5th November Permits will also be required for new office building or change of use of existing buildings to offices in all cases where planned permission has not been given before 5th November. "In the rest of the London Metropolitan Region, a permit will be required for new office building or change of use of existing buildings to offices in all cases where planning permission has not been given before 5th November. The intention is, therefore, that the London Metropolitan Region shall be the first area to be designated, and that, for this region, the Bill shall have retrospective effect from midnight on 3th-5th November. Compensation will not be payable where a permit is withheld."

Within the Metropolitan region, office buildings of less than 2,500 square feet (that is, offices which normally accommodate between 20 and 25 employees) will "initially" be exempt from the control. The Bill is regarded by the Government as a temporary measure, but only in the sense that this particular piece of machinery may ultimately be replaced by something more sophisticated and permanent. It is not intended to give developers any hope that if they are denied permits now, they may get them in, say 12 months' time.

Mr. Brown did not specify in the House the "very special circumstances" in which office development might be allowed in Greater London. The Government intends to apply the new control to Crown property as strictly as it will be applied to private developers. Local authorities will also be encouraged to observe the new code. Several of the new towns—Hemel Hempstead, Welwyn, Stevenage, Harlow, Basildon and Crawley—will be in the new controlled zone for offices.

The Government does not intend to nationalise the engineering activities of iron and steel firms through its Steel Re-nationalisation Bill. Disclosing this, Mr. Brown gave no indication of the timetable for the Bill. There were a few companies, he said, whose predominant interests were clearly in engineering and other activities but who also had substantial iron and steel interests. "The position of these companies is being considered and we do not intend to use the nationalisation of the iron and steel industry to bring the main activities of these companies into public ownership."

It was in the national interest, and in the interest of managements, workers and consumers, that in the period until vesting day, the day-to-day operations of the steel industry should continue smoothly, and that programmes of capital expenditure should continue to be carried out in a normal way. "In the nationalisation measure of the Government," said Mr. Brown, "no person, or company nationalised, will be penalised or prejudiced as a result of reasonable action taken in the normal course of business and in good faith in the interim period." He assured the men and women who worked in steel companies and the central organisations of the industry, that the nationalised steel industry would provide good and ever-improving opportunities of employment for them. The Government, with the Iron and Steel Board, would keep the progress of the industry under review and would be ready at any time to discuss the problems that might arise with the companies concerned or representative organisations of the industry.

The Government intended to take into public ownership the main part of the iron and steel industry, but within the framework of this broad policy would welcome constructive discussions with representative organisations of the industry, the trade unions and with other interested organisations including those representatives of consumers of steel. The Government will bid boldly and urgently for an incomes policy. Mr. Brown is to meet T.U.C. representatives and employers' representatives, and his purpose will be not to appeal for crude short-term restraint but to challenge both sides of industry to participate in a long-term incomes policy. On the basis of private talks that have so far taken place, it is believed that by Christmas it will be known whether there is going to be an incomes policy or not, and, if so, have a fair idea of what sort of policy it will be. The fact that the whole T.U.C. General Council (full strength 34) is going to Mr. Brown's Ministry soon indicates that Government thinking on the incomes question has gone far enough for a specific challenge to be put to the T.U.C. No doubt backstairs soundings have preceded this open move.

Both sides of industry can expect this week to hear more details about the price review body which the Government has stated it will set up. It is understood that it will be a statutory body with power to summon witnesses. It will to some extent incorporate the defunct and despised National Incomes Commission, for employers have been assured that wages will be considered at least as an aspect of prices. It could go further and be empowered to deal with incomes problems as well as prices. It will be the Government's responsibility to carry out the body's recommendations—by what means is not yet known. The N.I.C. has no power to summon witnesses, and the trade unions in fact boycotted all its hearings.

Incomes Policy

After Monday's confrontation, the T.UC. will have to make up its mind clearly whether it accepts an incomes policy as a broad objective. This is the question it has refused to answer so far. How detailed a proposition will be put to the unions and employers remains to be seen. It may not be as detailed at this stage as the more sophisticated exponents of incomes policy both in Whitehall and outside would have liked.

As was suspected, the Labour Party's pre-election thinking on the complicated incomes question turned out to be pretty primitive. A "guiding light" for wages and salary increases will obviously have to be fixed. No figure has been mentioned yet—or so it is understood—but considering that the purpose is to keep incomes growth within the bounds of increasing productivity, it is unlikely to be very different from Mr. Maudling's 3 to 3½ percent, unless the Labour Government anticipates a dramatic upturn in productivity. The Government could either express a view this week on how the proceeds of national productivity should be apportioned between sectors and groups of workers, or, more probably, leave it to the T.U.C. to make suggestions in the first instance.

The employers' bodies will be concerned to see that nothing is intended which penalises the efficient and encourages the inefficient. The Chancellor and the Minister of Labour Mr. Ray Gunter, will be with Mr Brown at both of the meetings. In addition to the drive for an incomes policy, it is believed more likely than not that the Government will decide to go ahead with a wide-ranging enquiry into the collective bargaining system. This could be announced in conjunction with the introduction of the promised Bill to rectify the immediate legal confusion arising from the Rookes Vs. Barnard judg-

Jute

I.J.M.A. SAYS BONUS PROTEST IS UNJUSTIFIED

"IF the unanimous decision of the tripartite Wage Board is allowed to be reversed on one pretext or another, not only will the effectiveness of future wage boards be at stake but the value of tripartite discussions and decisions is also bound to be put in doubt to the detriment of industrial peace and harmony." Thus observes the Indian Jute Mills Association commenting on the threat of jute mill workers to stage a day's token strike on 1st December in support of their demand for bonus as recommended by the Bonus Commission instead of the bonus already paid to them in terms of the award of the Central Wage Board.

A Press note issued by the I.J.M.A. says that jute mill workers have already received payment in 1963 and 1964 on the basis of a scheme of guaranteed bonus as provided in the unanimous recommendations of the Central Wage Board for the Jute Industry. The recommendations will remain effective up to 31st December, 1967, in terms of the award of the Board and also of the resolution, adopted by the Central Government.

Recalling the setting up of the Wage Board in August 1960, the Press note says that one of the terms of reference was "to work out the principles that should govern the grant of bonus, if any, to workers in the industry". The Board took note of the fact that the Government had set up the Bonus Commission to consider the question of bonus on an all-India basis. Initially the Wage Board felt that the question of introducing bonus in the jute industry should be left entirely to the Bonus Commission.

Previous Stand of Trade Unions

But it was at the insistence of the trade unions that the Board evolved the scheme of guaranteed bonus unrelated to profits, irrespective of what might be the recommendations of the Commission. In doing so, the Wage Board recorded in its report the assurance given by the trade unions that "the question of bonus of any other kind could be re-examined later on after the period for which the Board's recommendations would be effective, has expired."

The Press note maintains that the Wage Board made it abundantly clear that the unanimous agreement about the payment of bonus to jute mill workers would remain irrevocable during the operational period of its recommendations "regardless of what might be the recommendations of the Bonus Commission in this connection". This is also evident from the fact that the Board made no stipulation, express or implied, that the formula evolved by it would operate as an interim measure subject to modification or substitution in the light of the recommendations of the Bonus Commission.

The I.J.M.A. says that the unanimous recommendations of the Central Wage Board for the Jute Industry, which were accepted by the Government of India by an official resolution, are to remain in force up to 31st December, 1967. The Bonus Commission itself says that the formula proposed by it will not apply during the currency of any industry-wise or unit-wise agreements, except where such agreements stipulate that the formula recommended by the Bonus Commission should apply in modification or substitution of the existing agreements.

Further Fall in Gunny Stocks

Stocks of jute goods with mills reporting to the I.J.M.A. have dropped further during October from 126,100 tonnes to 117,300 tonnes. Informed circles ascribe the decline to some cut in production resulting from the loss of man-hours due to the Puja holidays, lean labour attendance and other factors, including the shortage and high prices of better-grade fibre required for batching purposes. Stocks of sacking have fallen by 2,800 tonnes to 40,800 tonnes, of carpet-backing cloth by 4,000 tonnes to 20,000 tonnes, of hessian by 1,600 tonnes to 45,900 tonnes and of miscellaneous goods by 400 tonnes to 10,600 tonnes. At the end of October 1963, the stocks were 108,300 tonnes—52,200 tonnes of sacking, 34,500 tonnes of hessian, 13,800 tonnes of carpet-backing and 7,800 tonnes of other goods.

Worry over Fibre Prices

The stickiness of fibre prices, which allow very little margin on the manufacture of hessian, has been the major worry of the jute industry during October, says the latest issue of the *Jute Bulletin* published by the Indian Central Jute Committee. Notwithstanding some increase in market arrivals of jute, Calcutta prices last month ruled at around Rs. 37.50 to Rs. 40 a maund, basis Assam Bottoms. The strength of the fibre section is attributed partly to the buoyancy of the gunny market and partly to mill buying under the maximum quotas which, for the five weeks ended 31st October, totalled 875,000 bales. In some quarters, the relative steadiness of jute prices has been taken as an indication of the size of supplies this year. The compulsory minimum purchase quota issued to mills for October 1963 was 920,000 bales and actual mill buying for the month was higher still, the *Bulletin* concludes.

THE JUTE MARKETS

Manufactured Goods: Despite the absence of new Government tenders or overseas business, steady conditions prevailed in the Calcutta gunny market during the past week. Routine short- and shipper-covering in ready and near-delivery goods, and speculative activity in the hedge market, helped sentiment. Reports of the jute mill workers' decision to stage a day's token strike in India in December and the indefinite continuance of the strike in Pakistani mills were bullishly interpreted. Hessian for November, however, eased in the hedge market on tired long liquidation and some amount of short-selling prompted by the approaching closure of the contract. The ceiling imposed on daily turnover was another factor. But for shortlived steadiness stimulated by bear-covering, the lower October stock figures of the I.J.M.A. mills failed to change the trend on Tuesday. The shortage of ready and near-delivery goods, and the reluctance of mills to extend their commitments, helped spot prices of heavy goods to close the week with sizable gains. A bull squeeze and brisk bear-covering stimulated a rally in heavy goods after wide fluctuations in the hedge market. Hessian also made a minor improvement in the spot market and in February futures in sympathy with the general trend. Turnover was moderate and the undertone firm at the close.

Wednesday's quotations were as follows:

	Nov.	Dec.	Jan.-Mar.	Apr.-June
40in. 7½oz.	38.05	38.30	38.60	38.85
40in. 8oz.	40.75	—	—	—
40in. 10oz.	50.10	50.55	51.40	51.65
B Twills	155.75	153.25	150.25	147.65
Cornsacks	161.00	158.00	153.25	150.00
Heavy Cees (Plain)	155.25	152.75	149.75	147.25
A Twills	183.50	182.50	179.50	178.00
Liverpools	170.00	169.00	166.50	165.00

Raw Jute: With a further increase in raw jute arrivals to around 175,000 maunds a day in the terminal markets, upcountry prices softened during the past week. Deliveries in the Cossipore market also improved appreciably. These factors helped to narrow down the disparity between Calcutta and agency prices. The maximum purchase quota of 175,000 bales for the week ending 14th November was about enough to absorb the total arrivals. But mill preference for the selected grades, in which a shortage of ready stocks was reported, maintained the prices of these grades. Turnover was moderate and the undertone easy at the close.

Wednesday's quotations were as follows:

	Rates a maund		Rates a quintal	
	Mid.	Bot.	Mid.	Bot.
Assam-Agartala Jute	40.50	37.50	108.51	100.47

Bihar Dist	36.50	33.50	97.79	89.75

THE U.K. JUTE MARKETS

EASIER TREND IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

THERE was a much easier trend in the prices of raw jute last week. Some shippers have reduced their rates by £3 a ton. There is a feeling here that this downward trend in prices will continue for some time yet. As a result of this, Dundee spinners are not showing much buying interest at present.

Offers being made here are well below the current E.P.C. levels, and it is some of the larger shippers who are willing to accept the lowest rates. Dundee spinners have already secured a substantial portion of their requirements from the present crop. It is estimated that about 30,000 bales of jute, which are still unsold to spinners, are afloat between Pakistan and the U.K. at present. This is a "bear" factor on the market here.

Offers were made at £149 10s for Mill Firsts, at £136 for Export Firsts, at £120 for Export Lightnings and at £113 for Export Hearts, c.i.f. U.K., for November-December shipment. Grade Tossa-2/3 was available at £149 10s and Grade Tossa-4 at £133 15s. Dacca Tossa-6 was also at £113 15s. Outport Tossa-2/3 was now available at £119 and Outport Tossa-4 at £110 for November-December shipment, and a small business was transacted at these price levels. The afloat market was very weak. If bids were made for these near-at-hand supplies, it is possible that £3 to £5 a ton less than the above rates would be accepted in some instances.

Cuttings were also quieter. There were sellers at £88 10s for S.N.C., at £85 for D.T.C. and at £79 for N.C. Mesta was also at a lower level with offers at £110 for A, at £100 10s for B, at £92 10s for C and at £74 10s for cuttings, c.i.f. U.K., November-December. Prices of Siam jute were at an attractive level, but not much interest was shown here. Grade A was named at £83 10s, grade B at £78 10s, grade C at £74, Tangles at £72 and Cuttings at £71, delivered mill Dundee for November-December shipment.

The Calcutta goods market became quieter. A fair amount of buying interest was shown despite the levy of 15 percent surcharge on imports. Prices were at 81s 11d for 40in. 10oz. and at 62s 3d for 7½oz. a 100 yards c. and f. U.K. for November shipment, at 82s 3d and 62s 4d December and at 83s 3d and 63s 1d January-March. Prices of sackings were still high with B Twills at 253s 2d, 249s 3d and 245s 6d for the respective shipment periods.

Dundee spinners were very busy. They have orders in hand for delivery well forward. A small business is taking place, but this is limi-

I.J.M.A. STOCK FIGURES FOR OCTOBER

The Indian Jute Mills Association reports the stocks of jute goods at the end of October as follows:

Description	31st October, 1964		30th September, 1964		Increase over (+) or decrease from (−) last month		31st October, 1963	
	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)
Hessian cloth and bag	14,61.64 (15.98)	45.9 (45.2)	15,10.44 (16.52)	47.5 (46.8)	−48.80 (−54)	−1.6 (−1.6)	11,15.41 (12.20)	34.5 (33.9)
Sacking cloth and bag	9,55.97 (10.45)	40.8 (40.1)	10,17.15 (11.12)	43.6 (42.9)	−61.18 (−67)	−2.8 (−2.8)	11,56.90 (12.65)	52.2 (51.4)
Carpet-backing	1,61.57 (1,77)	20.0 (19.7)	1,91.76 (2,10)	24.0 (23.6)	−30.19 (−33)	−4.0 (−3.9)	1,15.81 (1,27)	13.8 (13.6)
Others		10.6 (10.5)		11.0 (10.8)		−0.4 (−0.3)		7.8 (7.7)
Grand Total		1.17.3		1,26.1		−8.8		1.08.3
(000 Tonnes/Tons)		(1,15.5)		(1,24.1)		(−8.6)		(1,06.6)

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are in British measures.

ted because of the delivery position. The carpet trade continues to make regular deliveries. Despite the quieter raw jute position, prices of yarns and cloth in Dundee are firm and the quoted rates have to be paid in all instances.

With the exception of the heavy end of the trade, manufacturers are well supplied with orders and there is nothing to indicate any change in the position in the near future. The 15 percent import duty being levied on goods coming into the U.K. is a benefit to Dundee producers.

THE PAKISTANI JUTE MARKETS

FIBRE WEAKER

(FROM OUR DACCA CORRESPONDENT)

PRICES even in the loose jute sector at last began to slide last week. Despite small imports, buyers were so few that business in loose jute was being transacted at daily lower prices. In some areas, the sellers in the origin have stopped bringing in jute, but at this time of year, is not easy to tell whether this is because they find prices being offered for their jute unattractive or whether this is due to transport difficulties with the rivers drying up.

In the pucca bale sector, there was little or no activity except for a little bit of covering business in Export Hearts and Export Lightnings. Lightnings and Hearts were reported to be changing hands at about £96 f.o.b. for Hearts and £113 f.o.b. for Lightnings. Cuttings were also neglected with small transactions at about £70 f.o.b. ready and about £78 f.o.b. forward. Unfortunately, some moisture is beginning to appear in jute and it was mainly apparent in the Jessore and Daulatpur area.

In the overseas market, buyers continue to wait for lower prices. Although E.P.C.s have not been reduced, the weight of spot and afloat jute and the shortage of finance has forced some balers to liquidate some of their holdings at prices well below E.P.C.s. Logically, E.P.C.s should come down and this would encourage more business and a healthier market. For the time being, trading conditions in raw jute can only be described as depressed, but if the mills' strike ends, there may well be a revival of activity.

Books

CARRIAGE BY AIR

Cargo Liabilities and Immunities of Air Carriers. By V. N. C. Narichania. (Published by V. N. C. Narichania and Co., Publication Division, Bombay I (B.R.). Price Rs. 10, pages 268.)

This appears to be the first publication of its kind in this country. An attempt has been made to explain in simple language the various provisions of the Carriage of Air Act as applicable to international carriage and carriage other than international. Carriage by air is of comparatively recent origin, but it has assumed such importance that international conventions have been adopted for the standardisation of the rules governing the traffic.

The Warsaw Convention is an international agreement governing the liabilities of the air carrier in case of damage caused to passengers, baggage and cargo carried from one country to another. This Convention has been modified by the Hague Protocol. The law dealing with international carriage by air based on the Warsaw Convention was passed in India in 1934, but it was only in 1964 that the said law was made applicable, with modifications, to all carriage by air between places situated in India.

This book deals with the problems of carriage of goods by air, losses during such carriage and liability of the carrier for such losses. The decisions of courts arising out of the Indian Carriage by Air Act, 1934, are discussed. Parts of the Act are reproduced bringing out the differences between international carriage by air and carriage by air not international. The author suggests that the Government should take steps to remove the ambiguity arising out of the interpretation by the Court of the provisions of sub-section 2 of Section 2 of the Indian Carriage by Air Act, 1934.

THE RAILWAYS

Iyer's Handbook of Railwaymen (1964). Fifth Edition. (Published by the Author from 22B, Sirdar Road, Calcutta 29. Price Rs. 10, pages 362.)

In this book, the author, a retired railwayman, has explained what the railways have done for the public and what the railways have done for their employees. He has dealt with in detail the organisation of the railways, the recruitment, training and terms and conditions of employment of railway men as well as the laws that are applicable to labour employed on the railways. The book is based on the lectures that the author delivered to new entrants to railway service. The problems of railway men are lucidly explained and the fund of information that the book contains should be of interest not only to railway employees, but also to those who have to deal with personnel management.

REGIONAL INDUSTRIAL PATTERNS

A Study on Regional Differences in Industrial Pattern, 1960—Occasional Paper No. 10. (Published by the National Council of Applied Economic Research, New Delhi. Price Rs. 4.50, pages 76.)

This paper gives information on the share of individual industries in the total factory employment and output (gross and net) for each of the 15 States considered in the study. Industry-wise estimates of the output-employment coefficient and the input-output ratio are presented for each State. In all there are 35 tables, and the results are discussed for each State. Little space is devoted for inter-State comparison or for appraising the reasons for observed "industrial patterns."

WEEKLY SURVEY

Bank of India Weekly Economic Survey. (Edited and published by C. S. Krishnamurti, 70-80, Mahatma Gandhi Road, Bombay 1. Annual subscription Rs. 5. Single copy 10 paise.)

In keeping with the trend among banks to publish periodical digests of economic information, the Bank of India has embarked on this venture. It seeks to present a weekly review of major economic developments as also notes and articles on a wide range of subjects. The inaugural issue contains a news survey a round-up of stock and commodity markets and select economic indicators It is well produced and should serve a useful purpose in keeping its readers posted with contemporary developments.

It's transparently clear—
HPG sheet glass
is the finest in India

You can be sure that HPG sheet glass is flawless, because it is thoroughly tested for quality at every stage of manufacture. Only HPG sheet glass is manufactured by the exclusive PPG process. ■ This ensures a really smooth surface and minimum distortion of light passing through it. HPG sheet glass is manufactured in full technical collaboration with Pilkington Brothers of UK—people who have been making glass for more than a century. ■ Always specify HPG sheet glass for your home or office !

When you buy HPG you buy Quality and Reliability

Commodity Markets

COMMONWEALTH OUTPUT OF PLANTATION PRODUCTS

(FROM OUR LONDON CORRESPONDENT)

PRODUCTION of tobacco reached a record level in 1963, while that of tea equalled the high figure of the previous year, according to the latest issue of the Commonwealth Economic Committee's useful publication *Plantation Crops, 1964* (H. M. Stationery Office or the Committee, Marlborough House, Pall Mall, London, S.W.1, price 10s). Output of sugar and cocoa continued to fall in 1962-63, while the decline in that of coffee was resumed. Natural rubber did not reach the peak level of 1962, but synthetic rubber output continued to expand. Trade in sugar again fell in 1963; the high levels of shipments of tea and cocoa were, however, maintained, while exports of coffee reached a record figure. There was a recovery in shipments of tobacco and in net exports of rubber, while trade in synthetic rubber increased further. Some seven-eighths of the tea and over three-fifths of the cocoa entering world trade during the year was of Commonwealth origin, while over half of the rubber was shipped from Commonwealth ports.

Output of cane sugar showed a slight recovery in 1962-63, the high level of production in the Commonwealth, particularly in Australia, offsetting the continued fall in Cuban output. The world total for sugar, outside China and Russia, was, however, reduced by the smaller beet crops in both western and eastern Europe. Commonwealth countries continued to account for nearly four-fifths of total production of tea, the large crop in Ceylon in 1963 offsetting some decline elsewhere. More than half of the cocoa produced again came from Commonwealth countries, which, in the aggregate, maintained their output in 1963 as against some decline elsewhere. The small Commonwealth share of coffee production showed a noticeable increase in 1962-63, although the expansion in East Africa did not make good the decline in Latin America. Output of tobacco in the Commonwealth rose in line with that in other countries and continued to account for nearly one-quarter of the total; a record crop was harvested in India, outweighing the fall in the Rhodesias and Malawi. Large rubber crops in the Commonwealth in 1963 were offset by some reduction elsewhere, but synthetic rubber production showed a general expansion.

World trade in sugar again fell in 1963 despite heavier Commonwealth shipments, accounting for over one-quarter of the total; the new high level of world exports of tea largely reflected the expansion of consignments from India, the Commonwealth proportion rising to over six-sevenths. The Commonwealth also contributed to the rise in international trade in coffee. Trade in cocoa was maintained despite a fall in consignments from the Commonwealth, whose share fell to three-fifths of the total. The record level of tobacco exports from India was reflected in the maintenance of the Commonwealth level of trade, although the recovery in the world total was largely due to the increase in United States shipments. The rise in world net exports of rubber, however, was a result of the expansion in supplies from the Commonwealth.

The increase in world sugar consumption reflects in great measure the rising standard of living in Latin America and in parts of Asia and America, but per caput levels of consumption are still rising in some European countries. Consumption of tea has risen not so much in the older markets as in countries of the Middle East and North Africa as well as in the producing countries themselves. Increased supplies of cocoa, too, have been followed by increased grindings, not only in the traditional importing countries and Japan but also in producing countries (though ultimately for the export market also). The increase in coffee consumption in the United Kingdom is attributable to the spread of "instant" coffees, but these appear to have played little part in the expansion of consumption in the United States and continental Europe. Despite temporary checks due to medical reports on lung cancer, individual consumption of cigarettes shows no sign of falling off, although the spread of filter tips has reduced the rate of increase of actual tobacco smoked. Despite the increased use of rubber over the last decade, the amount of natural rubber consumed in the United States, and the industrialised countries of the Commonwealth, had declined, while demand in continental western Europe is levelling off; the demand for rubber in Japan has been met to an increasing extent by synthetic, but Russia has supplemented its synthetic output by large imports of natural.

Details of the working of the International Coffee Agreement are given in an appendix, with a review of the efforts made to negotiate an international cocoa agreement and renegotiate the International Sugar Agreement.

TEA

Enquiry into Plantation Employment

A special correspondent writes:

Employment on plantations is to be the subject of another official enquiry. It is proposed to set up a fact-finding committee to enquire into all aspects of employment on plantations. The report of the committee should be submitted to the Central Government within six months of its appointment. The chairman will probably be a senior officer of the Central Ministry of Labour and Employment. The members of the proposed committee will include representations of labour, employers and the Central and State Governments.

It is understood that some plantation workers complain that the workload has increased, and the present strength of workers is inadequate for the increasing production and acreage.

London Auctions

The high prices recorded in London for several weeks encountered a break last Monday. Some 25,217 packages were up for sale from north India. Although the best Assams continued firm, prices for other qualities were well below the best, sometimes appreciably lower.

Stocks in the U.K. as at end-October are given as 98,356,125 lbs, a small rise compared with 97,234,022 lbs a week ago. Deliveries were slightly below landings at 12,124,810 lbs, but there was a considerable quantity afloat at 42,589,690 lbs of which 31,787,850 lbs were from Calcutta and 969,052 lbs from Cochin. Ceylon had 9,127,750 lbs afloat.

The average of London prices realised for the past week was 60.32d a lb, compared with 65.47d in the previous week. This still compares favourably with 52.57d in the corresponding period in 1963.

RICE

World Output Running High

World rice production is again expected to reach a high level, according to a report published in London by the Commonwealth Economic Committee. The report says that India is expected to produce a record crop, and Japan a bumper crop. Thailand and Cambodia also expect good harvests. A record output in the United States is forecast for the third successive year. The area under cultivation in the United Arab Republic has shown a further expansion. Prospects in western Europe too are very favourable. In Burma, however, the position is much less favourable where flood damage has occurred.

Rice exports for 1964 so far recorded are above those of last year, reflecting the expansion in supplies in some exporting countries and strong demand from importing countries, particularly India, Indonesia, Japan, the Philippines, and Russia. Shipments from the United States in the first seven months of the year were one-quarter larger than a year earlier, while provisional figures for August suggest that exports during January-August totalled almost 1 million tons.

SHELLAC INACTIVE

During the week ended 10th November, the market was inactive. The range of quotations was as follows:

	Rupees a package
A. Shellac, buttonlac and garnet lac

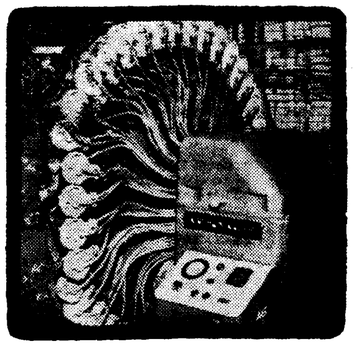
POYSHA IS ONE OF INDIA'S TWO LARGEST CAN MAKERS



Poysha's excellent metal printing results from this modern wet varnishing process unit. Soon a new two-colour printing unit will also be operating.

Quality control is strict! Cans even undergo laboratory check-ups...to meet Poysha's own high standards.

Poysha has advanced automatic machinery. This high-speed bodymaker line, for instance, mass-produces over 300 cans a minute.

This completely automatic air tester checks cans under air pressure to ensure that they are perfectly leak-proof and airtight containers.

WILL SOON GROW LARGER... WITH 3 NEW FACTORIES

By 1965-66, Poysha will be taking its advanced can-making know-how into the heart of the industrial centres of India with 3 new factories. The largest, at Dighe (Bombay), will serve industries in Western and Central India. The second, at Cochin, will serve the fishing, pineapple and other industries in the South. The third, at Ghaziabad (Delhi), will serve vast fruit, vegetable and industrial areas in Northern and Eastern India.

It will mean a capacity increase to one crore cans a month for Poysha...which will raise its Paid-Up Capital from Rs. 25 lakhs to Rs. 110 lakhs shortly.

COMPANY AND PUBLIC NOTICES

BENGAL POTTERIES LIMITED

NOTICE

NOTICE is hereby given that the Fifty-third Annual General Meeting of the Bengal Potteries Ltd. will be held at the Registered Office of the Company at 45, Tangra Road, Calcutta-15 on Monday the 30th November, 1964 at 4 P.M., to transact the following items of business :—

(1) To receive and adopt the Directors' Report, the Audited Balance Sheet and the Profit & Loss Account for the half year ended 30th June, 1964.

(2) To declare a Dividend.

(3) To elect Directors in place of those retiring.

(4) To consider, and if thought fit, to pass with or without modification, the following Resolutions :—

(a) **Special Resolution :**

"That, in pursuance of Section 360 of the Companies Act, 1956, the Company approves the agreements to be entered into between the Company and other concerns which are or may be deemed to be Associates of its Managing Agents, more particularly General Industries Corporation, the material terms whereof are as follows :

(i) The one will supply to/buy from other :—
—their products, as required by the other.
—other goods and things which one can supply and the other may require.

(ii) The price of the products or other supplies will be the suppliers' ruling market price (subject to applicable discounts) at the time of supply.

(iii) Payment of price will be within one month of the receipt of goods.

(iv) The agreement will be determinable by either party at will."

EXPLANATORY STATEMENT U/S 173 (2) :—

The Shareholders' approval is required for sale/purchase transactions between the Company and its Managing Agents/their Associates under Section 360 of the Companies Act, 1956. CLAUSE 5 : Provides for maintenance of Accounts of the Company by Managing Agents.

CLAUSE 6 : Provides that Managing Agents shall fully comply with provisions of Statutes.

CLAUSE 7 : Provides that the Company shall pay to the Managing Agents commission at 10% of net profits computed in accordance with Sections 349-351 of the Companies Act, 1956 subject to the minimum remuneration of Rs. 50,000/-.

CLAUSE 8 : Provides for payment of Guarantee Commission to Managing Agents or their Associates for guaranteeing loans obtained by the Company.

CLAUSE 9 : Provides for facilities to the working members of Managing Agents.

CLAUSE 10 : Provides for compensation to Managing Agents if their Office is determined at any time before the expiry of the period of appointment.

CLAUSE 11 : Provides for :
—Reimbursement of expenses to Managing Agents.
—Indemnification of Managing Agents against all losses and costs suffered by them in the discharge of their duties and obligations to the Company.

CLAUSE 12 : Provides for sub-delegation of powers by the Managing Agents.

CLAUSE 13 : Provides for nomination of working members by the Managing Agents.

CLAUSE 14 : Provides for nominees of Managing Agents on the Board.

CLAUSE 15 : Provides for Managing Agents' lien on assets of the Company.

CLAUSE 16 : Provides that the agreement will be subject to tripartite agreements between the Company, the Managing Agents and the Industrial Finance Corporation of India in connection with the loans taken by the Company from the Corporation.

CLAUSE 17 : Provides for arbitration in case of disputes.

(d) **Ordinary Resolution :**

"RESOLVED that the Members of the Company approve of the appointment and continuation as a Director of Bengal Potteries Limited of Shri D. N. Sen who has attained the age of over 65 years, and declare that his age limit of 65 years as specified in Section 280 of the Companies Act, 1956 shall not apply to him".

Explanatory Statement under Section 173 (2) of the Companies Act, 1956 regarding Ordinary Resolution under Section 281.

Special notice has been received by the Company on 1st November, 1964 of this Resolution from three of its Members under the Provision of Section 281 of the Companies Act, 1956.

Shri D. N. Sen will retire by rotation at the next Annual General Meeting of the Company. He has attained the age of over 65 years. If appointed Shri D. N. Sen will get remuneration from the Company as provided in its Articles of Association, and he is interested to that extent. Save as aforesaid no other Director or the Managing Agents have any concern or interest in the above resolution.

(5) To appoint Auditors for the current year and to fix their remuneration.

The Share Transfer Register of the Company will be closed from 28th

November, 1964 to 1st December, 1964, both days inclusive.

A member entitled to attend and vote at a Meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board of Directors,
BHARAT RAM BHAGAT & COMPANY,
Managing Agents.

45, Tangra Road, Calcutta,
Dated, 2nd November, 1964.

THE NATIONAL ROLLING & STEEL ROPES LIMITED

NOTICE

NOTICE is hereby given that the Twenty-second Annual General Meeting of the Members of The National Rolling & Steel Ropes Limited will be held at the Registered Office of the Company, NICCO HOUSE, Hare Street, Calcutta, on Thursday, the 10th December, 1964 at 10 A.M. to transact the following business:

THE OUTLOOK FOR SMALL SAVINGS SCHEMES

THE modest improvement in collections from the Government's small savings schemes during the first half of the current financial year has given rise to a certain amount of exaggerated cheerfulness. Small savings have reached an all-time record of Rs. 55.33 crores, which represents a rise of Rs. 11.33 crores over the figure for the corresponding period of 1963-64. The point has, however, been forgotten that the collections are no better than the targets set. The target was fixed at Rs. 500 crores for the second plan period, but actual collections fell far short of that figure. For the third plan, a target of Rs. 600 crores was laid down. Despite the improvement in collections during the current year, it is doubtful whether the target will be attained. In view of the importance attached to small savings, the shortfall is regrettable. To the extent that the Government has failed, the reliance on taxation and deficit financing has increased.

The savings deposits of banks have meanwhile tended to increase steadily. In the case of scheduled banks they have already crossed the Rs. 500-crore mark and amounted to Rs. 527.74 crores on 31st August, 1964, compared with Rs. 476.61 crores on 31st March, 1964. Banks have succeeded in attracting more funds than the Government's small savings schemes because the facilities and service they offer to depositors are better. Savings account holders in most banks now enjoy the facility of withdrawing money by cheque, so they consider their funds to be almost as liquid as cash. In view of the uncertain economic outlook, the liquidity preference of the public has greatly increased. This apart, depositors of savings banks have gradually begun to enjoy more or less the same services as are given to current account holders. Savings funds are of great use to banks because they tend to stay with the latter for a longer period. The cost of administering them is also lower, so banks are keen to attract small savers. Their success has been helped by the fact that they have recently opened several new branches. In many areas where banking facilities are not available, the scope for attracting small savings by opening branches is likely to be considerable.

To what extent the improvement in collections under the Government's savings schemes is due to the efforts of the newly-constituted Savings Mobilisation Board, it is difficult to say at the present stage. The Board has launched a concerted publicity campaign to encourage thrift and saving. The discouraging results earlier were partly due to the lack of promotional efforts. The Board has been set up to rectify this deficiency. Among official schemes, National Defence Certificates have brought the largest amount of Rs. 31.34 crores during the first half of the current financial year. The collections from the Ten-Year Defence Deposit Certificates have amounted to Rs. 10.55 crores. Post office savings banks have increased their collections by Rs. 10.01 crores, while the Cumulative Time Deposit accounts have brought in an extra Rs. 3.52 crores.

The increase in collections from National Defence Certificates and Ten-Year Defence Deposit Certificates seems to suggest that small savers have been influenced to some extent by patriotism. The more important reason, however, may be that the returns on these Certificates are attractive—especially when considered on a tax-free basis. The rise in post office savings bank accounts is partly due to the fact that in some places cheque facilities have been introduced. But these deposits would be much larger if the standard of service was improved. Apart from the long delays involved in depositing and withdrawing money from post office savings banks, depositors are generally put to difficulties when their signatures are verified. If the authorities took steps to mitigate such inconveniences, deposits would improve more rapidly. Post office savings banks have the advantage that they enjoy the patronage of the Government, and their offices are also spread out throughout the country. Commercial banks do not have branches in many places where post office savings banks operate, so the latter should be able to attract larger funds. The prospects for mobilising savings in rural areas should be good since much of the increase in prosperity during a decade of rising agricultural prices has gone to the farmers. The earnings of industrial workers have also increased substantially, and they could be encouraged to save through small savings schemes. In particular, a part of the bonus paid to workers should be given in the form of small savings certificates.

The rise in the savings deposits of banks, and the increase in collections from official small savings schemes, look slightly puzzling considering that the capacity to save has generally shrunk due to the rise in the cost of living. The increase in the money supply in recent years has influenced the purchasing power of different people differently. The purchasing power of some has improved or at least has not suffered because their money incomes have risen; the purchasing power of others has suffered since their money incomes have not increased or have not kept pace with the rise in prices. It is possible that small savings schemes have benefited to some extent from the slump in the capital market. Since the support for industrial securities has declined sharply due to the poor outlook for corporate profits, funds have been shifted into small savings schemes which at least yield a fixed return.

But it will be difficult to promote savings in a big way unless the capacity of the people to save improves. Apart from inflation, savings have been eroded by heavy taxation. The fiscal system needs to be modified so as to enable people to save more. Banks and official small savings schemes will face keener competition in the coming months. In view of the recent increase in the rate of interest on bank deposits, the return on official savings schemes has become less attractive than it was. Since the latter generally enjoy tax exemption, it should not be difficult to increase collections, if the rate of interest is raised to a more realistic level. The growing competition from the Unit Trust of India cannot be overlooked either. The units of the Trust should become more attractive

to the extent that the repurchase facilities just introduced will improve their negotiability and liquidity. The main doubt, however, is that the difference between the selling price of Rs. 10.50 for a unit, and the repurchase price of only Rs. 10, is too wide. Some disparity between the two prices is obviously necessary to discourage selling; but the present difference seems excessive and may discourage potential buyers. A jobber in the stock market usually keeps a margin of not more than 10 paise or 12 paise between his buying and selling prices in the case of a share of Rs. 10. The units are attractive because they seem to promise a tax-free return of 6 percent up to a certain level, which is fair by current market standards. Their popularity can be increased if the difference between the selling price and the repurchase price is narrowed.

IRON ORE EXPORT PROSPECTS

THE inauguration of the Kiriburu iron ore mine last week by the Vice-President, Dr. Zakir Hussain, undoubtedly marks an advance in India's position as an exporter of iron ore. Kiriburu has been developed with Japanese aid with the object of supplying that country two million tons of ore a year under a long-term contract. The mine and the ore crushing plant have cost Rs. 11.2 crores, about a third of it in foreign exchange; but it is stated that if the plant is worked at its full capacity for six months, it will be able to earn the foreign exchange expenditure incurred on it. The installation of mechanical ore handling equipment at Visakhapatnam port, which is likely to be completed in mid-1965, will determine Kiriburu's progress to capacity production. Meantime, Japanese steel mills have agreed to buy 35,000 tonnes of ore between June 1964 and January 1965, and the present output at Kiriburu is limited to this tonnage. However, the Government's ultimate objective is to convert Kiriburu into a captive mine of Hindustan Steel, and develop the Bailadila mines to produce six million tons which will be earmarked for export to Japan.

Iron ore has been assigned a crucial position in the Government's plan to step up export earnings to Rs. 5,100 crores during the fourth plan. Experts in Yojana Bhavan and in the Government have pitched the fourth plan iron ore export target at 25 million tons a year, which will bring in about Rs. 95 crores worth of foreign exchange. It is claimed that surveys have confirmed the possibility of an external demand of 25 million tons by 1970-71, of which the offtake by Japan alone may be as much as 14 million tons. It is true that Japan is aiming at a steel production target of 48 million tons by 1970, as against her output of 30 million tons in 1963. Since she depends on foreign ore for over 80 percent of her requirements, there are big opportunities for ore exporters. But it is easy to exaggerate Japan's preference for Indian ore. Recently many new sources of supply have been developed, notably in western Australia, Africa and South America, and Japan has been signing contracts to buy ore from these countries. Substantial quantities will also be bought from Canada. Western Australia, particularly, promises to become a very large producer, and a number of U.S. mining groups are associated with her plan to become a leading exporter.

The Japanese steel industry has understandably sought to diversify its sources of supply, and efforts have been made to keep down imports from any single source to 20 percent of the total. Furthermore, the Japanese have not been satisfied with the price of Indian ore, which is considered rather high. For instance, it was pointed out some time ago that the landed cost of Indian ore in Japan worked out to 26 U.S. cents for a unit of ferrous content, as against the average cost of only 23 cents for all imports. In fact, a member of the Japanese team, which is now in this country in connection with the inauguration of the Kiriburu project, observed a few days ago that if Indian ore was only competitively priced, there would be no limit to increasing the collaboration between the two countries. He even foresaw possibilities of collaborating with India in setting up a steel plant in return for ore shipments.

A major element in the ore price is represented by transport costs, which in India account for as much as 40 percent of the f.o.b. quotation. By lowering internal transport rates and arranging economic sea transport with the help of bulk carriers, Indian ore prices can be made more attractive. But the big question is whether this can be done in time. For instance, the development of Visakhapatnam port, work on which began six years ago, is still unfinished—a factor which is responsible for slowing down Kiriburu and holding back the ore export programme. Other port development projects are being implemented to provide facilities for ships of larger tonnage and for mechanical loading. It is estimated that ports on the east coast will be able to cope with 18 million tons—Visakhapatnam eight million tons, Madras five million tons, Paradip three million tons and Haldia two million tons. Ore-handling facilities are also being developed at Mangalore and Marmagao on the west coast. It remains to be seen whether these schemes, together with plans to link the ore mines with coastal outlets, will materialise in time.

The high quality of Indian ore has been a major selling point, but with the evolution of beneficiation techniques this advantage is wearing thin. The rapid development of ore preparation, especially pelletising, has been particularly welcome for Japan, whose coast-based steel plants are not able to find space to establish processing facilities. So there is a distinct preference for pellets. In fact, Japan has already agreed to buy six million tons of pellets from a U.S. steel firm over a period of six years. The shift away from raw ore towards prepared ore has prompted a firm in Goa to set up a pelletising plant.

Apart from Japan, to whom India plans to sell 14 million tons a year by 1970-71, the other outlets are eastern Europe, whose annual offtake at the end of the fourth plan is estimated at 6 million tons, and western Europe which may lift 5 million tons. Here again, the competition from countries like Brazil, Sweden, Canada and Russia cannot be under-estimated. The success in tapping these markets will mostly depend on being able to quote an attractive price and adhering to delivery schedules. Brazil, in fact, has been able to compete effectively even with Sweden in European markets. Furthermore, in Europe too there is an increasing preference for pellets instead of raw ore.

Thus the implications of a 25-million-ton export programme are far-reaching, and include simultaneous development in several directions. The programme calls for substantial capital investment, a large part of it in foreign exchange, and closer co-ordination of efforts in various fields. A shortfall in any one of the projects can hamstring the entire export programme, as the delay in the work at Visakhapatnam has proved. Nevertheless, the fact remains that iron ore exports will pay an increasingly large part in India's export plan. With iron ore deposits running to 21,000 million tons, which is a quarter of the world's total resources, it is only natural that the country should depend more on this commodity for its foreign exchange earnings.

I.C.I.C.I. FINANCING TECHNIQUES

IN the ten years of its existence, the Industrial Credit and Investment Corporation of India has grown into a big financing institution. It has assisted more than 300 companies, and the total assistance amounts to nearly Rs. 100 crores. Many of the companies are in non-traditional industries. Of the projects assisted so far, 130 have been completed and 110 are being implemented. To determine its investment decisions and to safeguard its investments, the Corporation has evolved its own procedures, and it has been trying constantly to adapt them to meet changing problems. Industrial financing has become more complex and sophisticated; it cannot be a routine or haphazard decision, but involves detailed negotiations, informed consideration and endeavour to meet on a common ground.

Last Friday, the I.C.I.C.I. held in Bombay a conference—the first of its kind—of its constituents in order to secure a better understanding of the various problems that entrepreneurs face and to find ways of tackling these problems. Welcoming the participants, the chairman, Mr. G. L. Mehta, said that industrial enterprises must accept financial planning and discipline with the increased use of development loans for their establishment and expansion. Entrepreneurs seeking assistance from the Corporation often felt that they did not have the freedom to do what they liked. But that was quite natural, for they were handling other people's funds and were, therefore, responsible for the way in which these funds were used. In the West also, industry has become subject to essential financial discipline as it has tried to use institutional funds like those of insurance companies. Mr. Mehta said that "this is a process which is inevitable, and we cannot stop it". The Corporation looked not only to the successful completion of the project, but also to the long-term growth and prosperity of the concern.

Mr. Mehta highlighted the Corporation's methods of appraisal of borrowers' creditworthiness. It insisted on a certain minimum equity-debt ratio, allowances for preliminary and pre-operative expenses and market surveys. The Corporation has received many proposals where the equity of the company is much smaller than the debt proposed for it. The I.C.I.C.I. has always insisted on a strong equity position and exceptions are made only in some rare cases of highly capital-intensive industries such as aluminium. By and large, a company with a high equity-debt ratio finds it less difficult to tide over problems like rising capital costs, delays in taking production to full capacity, a weakening of the market and the consequent need to finance stocks. The chairman said that the Corporation had built up some experience in industrial financing and had learnt from it. Thus, while making cost estimates, many entrepreneurs do not make adequate provision for such items as preliminary and pre-operative expenses. Very often these items rise to as much as 30 percent of the project cost estimates. Where they are not adequately provided for, cost estimates have to be revised: additional financing and the mode of financing them again need to be considered.

Mr. Mehta said that clients did not always find the requirements insisted upon by the Corporation palatable. But the I.C.I.C.I. has a responsibility to shareholders and to the Government. Therefore, it has to have uniform criteria for all projects; flexibility is exercised in relation to, and not at the cost of, these criteria as they aim at ensuring the viability of the project. The I.C.I.C.I. appraisals have gained acceptance and it is necessary that strict standards are followed in the long-term interests of the projects. Most projects need support from more than one financial institution, both as a result of the stagnant capital market and increase in the size of projects. The I.C.I.C.I. welcomes joint financing. Since the procedures adopted by various financing institutions differ, there is need to co-ordinate the approach to these institutions to avoid delays in arranging finance.

The I.C.I.C.I. chairman drew attention to the variety of problems faced by industries. Many projects face teething troubles at the operational level. Some face raw material or skilled labour shortages. Many projects completed in the last two years have come up against marketing problems. In some cases, differences within the management have arisen. As Mr. Mehta said, managements themselves need to be vigilant and efficient in dealing with these problems. The agenda notes circulated at the conference bring out the marketing difficulties faced by certain industries in the country. These difficulties arise mainly from imported stocks, simultaneous entry by a large number of producers and the high cost of production. Certain industries like low-tension cables, electric meters, sanitaryware, hardboard and particle board have suffered from a shortfall in demand as a result of shortages in the production of key industries like cement.

Current News and Comment

Cotton Prices Soar

Cotton prices have risen spectacularly over the past few weeks. The March hedge contract which had been marked down to Rs. 721.50 on 6th October, touched a high of Rs. 760 a 3 quintals on 14th November. Never in the past has the hedge contract been known to have fetched so high a price at this time of the season—not even when the carry-over from the previous season was very poor. The rise has been even more marked in the spot quotations for new crop cottons, the increase ranging from Rs. 50 to Rs. 75 a candy. Nearly all the varieties are quoted Rs. 30 to Rs. 40 a candy above the basic ceilings. The steep rise in prices has intrigued many observers because it has happened despite a record carryover of 2.619 million bales (2.354 million bales Indian and 265,000 bales foreign) from the previous season and prospects of another good harvest.

It is true that there have been some reports of damage to the cotton crop in Khandesh and in certain tracts of Punjab, but according to well-informed observers, the 1964-65 crop is unlikely to be less than 6.2 million to 6.3 million bales, against 6.150 million bales in 1963-64. The flow of new crop arrivals has, however, been rather poor, but this seems due less to any serious damage to the early moving crops in Khandesh and Punjab than to the reluctance on the part of growers to part with their produce because of the general inflationary psychology in commodity markets. Enquiries with the trade indicate that there has been quite a good deal of speculative holding of stocks by traders who had hitherto been engaged in the food-grains business and whose activity has now been severely restricted by Government intervention.

Speculative activity in futures is known to have assumed serious proportions; about half a dozen big speculators are reported to have accumulated long positions to the extent of 350,000 bales. The market has not been faced with any kind of payments difficulty so far. But that does not necessarily mean that the authorities do not need to bother about the situation obtaining in the market. The steep rise in cotton prices in spite of plentiful supply is a matter which needs the market authorities' careful attention. This has become all the more necessary because under the scheme of partial control, cloth prices are linked with cotton. All efforts at making available popular varieties of cloth at reasonable prices will be set at naught if cotton prices are allowed to continue near the ceiling. The rise in prices has brought the export business in Bengal Deshi virtually to a standstill. The abolition of the export duty on Deshi cotton has in no way improved the competitive position of Indian cotton in overseas markets.

Trends in Company Financing

The buoyancy of the new issue market, as portrayed in the article entitled "A study of capital issues based on prospectuses issued by companies during 1963-64" by Messrs S. M. Dugar and Surendra Kumar and published in the October issue of *Company News and Notes*, seems to be exaggerated. Although the total capital raised through 78 prospectuses was Rs. 47.71 crores during the year ended March 1964, it should not be forgotten that the bulk of the issues had to be subscribed by the underwriters themselves. The response of the public thus was poor. The concern is the greater as the underwriting facilities, in particular, offered by the existing financial institutions are likely to be less freely available in the coming months, since a large part of their funds has already been blocked in new shares. It is possible that the Industrial Development Bank, enjoying access to official funds, will take great interest in underwriting. But that will not help solve the basic problem of attracting the savings of the community for productive purposes. The prospect for equities and preference shares has suffered a great deal due to the unrealistic fiscal policy of the Government. Investors cannot be expected to risk their money in industrial ventures unless the outlook for dividends and growth in the corporate sector is improved by abolishing at least the taxes on dividends and bonus shares. The treatment of bonus shares as capital gains is considered iniquitous.

The total capital raised through 78 prospectuses during 1963-64 was larger than the capital raised during any of the previous three years. (During 1962-63 the total was only Rs. 31.12 crores.) During 1963-64 there were as many as 26 big issues. Although there was a small increase in the preference share component of the total capital issued, equity shares predominated as they had done formerly. The participation of foreign collaborators in the total capital issued dropped slightly during 1963-64. But their contributions nevertheless ranked next to subscriptions by the general public, including underwriting institutions. Subscriptions by promoters, directors and their friends ranked next to those of foreign collaborators. The participation of the Government in the total capital issued also showed a small increase.

The bulk of the project costs were financed by capital issues, as in former years, although the contribution from this source was slightly smaller in 1963-64 than in 1962-63. The other important source of finance was represented by long-term loans provided by foreign (particularly American) financial institutions, Indian Government-sponsored financial institutions and Indian banks. There was a sharp rise in foreign institutional loans, which amounted to nearly 15.7 percent of total project costs, compared with 2.8 percent in 1962-63. Indian Government-sponsored financial institutions gave loans of Rs. 16.7 crores, compared with Rs. 6.07 crores in 1962-63. So the aggregate institutional financial assistance in the shape of participation in the share capital and by way of long-term loans amounted to Rs. 18.60 crores, against Rs. 6.30 crores in 1962-63. Foreign collaborators participated financially by subscribing to the share capital of various companies. But their subscriptions were largely made for consideration other than cash—to provide technical know-how, equipment, patents and trade marks, etcetera. In the case of four companies, the foreign collaborators' share in the issued capital varied from 50.2 percent to 60 percent. The loans given by foreign collaborators were very insignificant, although substantial long-term loans were extended by foreign financial institutions. Foreign funds in the form of subscription to the share capital and in the shape of long-term loans, particularly those provided by financial institutions, financed about 25 percent of the project costs.

The average cost of raising capital, as a percentage of project costs, dropped from 1.9 percent in 1962-63 to 1.7 percent in 1963-64. Of the 78 issues, 60 were underwritten. State-sponsored financial institutions contributed to 45.6 percent of total issues underwritten.

Ferrous Scrap Export Policy

The Iron and Steel Scrap Association of India has from time to time made useful suggestions to the Government for encouraging the export of ferrous scrap. The Association's contention that plenty of surplus scrap is available in the country, has never been seriously controverted. Yet, the export policy for ferrous scrap has continued to be extremely restrictive, which has hit scrap collections. At a time when the Government has been trying to boost the export of even essential commodities through all sorts of incentives, the restrictive export policy for ferrous scrap is difficult to appreciate. The policy for the October 1964 to March 1965 period belies hopes that the Government might concede the trade's plea for the removal of restrictions which had been hindering the export of ferrous scrap. The continuance of the restrictions on the export of No 1 sheet cutting, steel turnings and borings and the ban on the shipment of heavy melting scrap, have greatly disappointed the scrap trade.

The policy is considered unhelpful, and totally inadequate for improving surplus scrap collection and export. In addition, the policy has imposed quota restrictions for skull scrap and detinned scrap. It is feared that such a step will force the detinners to keep 40 percent of their capacity idle. The trade feels that the excessive restrictions of the current policy have seriously undermined the prospects of exporting uncollected waste in scrap, and the scope for maintaining the export earning at the level of Rs. 5 crores has been made difficult and uncertain. That a policy based on quotas should omit to state the quantities of such quotas is considered rather extraordinary. The numerous reservations and contradictory enumerations contained in the policy is likely to lead to discrimination.

While welcoming the continuance of barter scrap export, the trade is unhappy over the Government's decision to restrict barters to an export quantity of scrap which is not disclosed. Such a decision is neither in keeping with the Government's admission that large quantities of scrap are wasted uncollected for want of export incentive, nor is it justified in view of the need to import scarce steel items. Imports of the steel items are severely limited because of the foreign exchange shortage, and scrap export has sharply declined for want of incentive to compensate the export loss. The trade points out that by guaranteeing barters against all exports of scrap, both the purpose of promoting scrap export and finding the foreign exchange for importing steel items in short supply would have been served to some extent. Shipments of scrap in October fell to a new low of 18,573 tons, compared with 28,630 tons in September and 37,782 tons in October 1963. The October figure raises the total exports for the ten months of the current year to 261,000 tons, against 285,000 tons in the same period last year.

World Monetary Debasement

The new administrations in the United States, Britain and Russia promised to effect immediate monetary improvements for their bankers or in Moscow's case, for their creditors. They did not forget to "florify" their currency units and, naturally the bonds in which the latter are established. According to the November issue of *Pick's World Currency Report*, this propaganda—uninterrupted for more than half a century—becomes a "joke in retrospect". No currency whatsoever has been able to conserve its value. The *Report* suggests that it would really be a service to humanity if, in every country and on every poster advertising government bonds as the finest investments, a little sticker were to be posted with the following table:

Prices at end of month

Commodity	Listed in	Aug. 1939	Oct. 1964	Percentage increase
Cocoa	London, sh. per swt.	21/6	185/9	764
Coffee	New York, ¢ per lb	5.80	47.50	719
Copper	New York, ¢ per lb	10.50	65.00	519
Wool	British auctions 64's d a lb	20.75	118.00	473
Tin	New York, ¢ a lb	48.75	218.50	348
Cotton	New York, ¢ a lb	8.82	31.80	261
Zinc	New York, ¢ a lb	4.75	16.50	247
Sugar	New York, ¢ a lb	1.90	6.38	236
Corn	Chicago, ¢ a bû	43.63	139.00	219
Lead	New York, ¢ a lb	5.05	15.50	207
Wheat	Chicago, ¢ a bû	67.25	205.00	205
Rubber	London, d a lb	8.25	21.25	158
Lard	Chicago, ¢ a lb	5.45	11.25	107

These most important agricultural and industrial raw materials, expressed in paper dollars of 45 percent and in sterling of only 24 percent of pre-second World War purchasing power, once again show how the unfortunate owner of government bonds of any country has been cheated by the various currency administrations which pretended to protect him. If one would try to establish some sort of an index of these prices, the result would be simple, namely, that for the last 25 years, the paper-quotations of the above-mentioned commodities or metals rose an average of 13.7 percent every year. The *Report* concludes that it is useless to think of any kind of honesty being injected into the treatment of all the unfortunate people who bought bonds, life insurance

policies, annuities and many other items of fixed paper value.

British Bid for Far East Markets

Birmingham business men are planning to join a second working group to the Far East between February and April next year under the wing of the Birmingham and London Chambers of Commerce. This time the "target areas" will be Japan, Hongkong, the Philippines and Thailand. The group from the two Chambers which visited Japan and Hongkong last autumn reported business booked or in prospect of between £2 million and £3 million. The increased number of firms interested in the group next year has made it necessary to fix a ceiling of 20 to 25 on the number to be included for any one territory. The list of companies from which the final selection of group members will shortly be made is now being compiled in Birmingham and London. It is hoped to be able to provide for business men wishing to make the whole tour and for others who intend to visit individual territories only.

The objective of the group will be to help members taking part to book business. Whether or not individual members are new to the market, the prestige which they enjoy as members of a sponsored group from the two biggest British Chambers of Commerce increases very substantially the number and calibre of business contracts and the prospects for new business possible in a few days. The group plans to leave Britain on 25th February for Japan and to be there for 16 days. It will be in Hongkong, the Philippines and Thailand for ten days each. Commenting on the territories chosen, Mr. Robert Booth, Secretary of the Birmingham Chamber of Commerce and adviser to the trade mission to Japan in 1962 under the leadership of Lord Kilmarnock, said: "Each of the four markets shows increasing possibilities for British industry and we have been encouraged by our commercial representatives to take the initiative now in mounting selling groups. Members of the group last year thought that we could increase our sales to Hongkong in many capital and consumer lines by personal visits and by intensive promotion.

Customs and Excise Reorganisation

The Central Finance Minister, Mr. T. T. Krishnamachari, spoke frankly in his inaugural address at the three-day All-India Conference of the Collectors of Customs and Central Excise in Madras last week. Ministers do not usually complain about their own departments in public, presumably because it may have the effect of demoralising the officials and the staff concerned. But when Mr. Krishnamachari criticised the Customs officials at the lower levels, he was undoubtedly voicing the opinion of the general public. He referred to the complaints of discourtesy and harassment by Customs officials and said that while ordinary people were subject to needless annoyance, the real culprits were allowed to escape. An enormous amount of money is lost to the Exchequer due to smuggling activities, especially at the ports, but curiously enough, even confiscated goods disposed of by auction subsequently come back to the profiteers in the trade. Mr. Krishnamachari, therefore, candidly said that the conduct of Customs officials appeared to be not as good as it ought to be, and that something should be done to tone up the administration on the preventive side. But he did not disclose what measures he proposed to take. It is interesting to recall in this context that the Government has done little yet about the recommendations of the Central Excise Reorganisation Committee, although it made several recommendations for streamlining the collection machinery and to rationalise the structure of excise duties.

Mr. Krishnamachari's speech at the conference, however, gave some general hints about how he might go about framing his next Budget proposals. Comparing Customs and excise to "bread and butter in the financial cupboard of the Government," the Minister emphasised the importance of indirect taxes like Customs duties to meet the growing public expenditure. The collection of indirect taxes, the Minister said, was much more difficult than that of direct taxes. And he indicated the following three lines on which Customs and excise reorganisation could be brought about: firstly, the excise duties which have proved unremunerative should be removed from the list. The Minister said in this context that the Government should not levy any duty that would not yield about a crore of rupees. Secondly, the levies should be compounded in as many cases as possible, although the system of compounding may work against the Exchequer. Thirdly, both the Customs and excise administration should be reorganised since there is a "public feeling that wrong-doers are in close touch with the officials. There is something very rotten in the whole system of recruitment of the cadres in the Customs and Excise Services." Mr. Krishnamachari was right when he said that quick Customs clearance would reduce the chances of corruption and that Customs Collectors of Calcutta, Madras and Bombay should meet periodically to evolve uniform procedures for exercising discretion in appraising the value of goods at the ports.

The task of reorganisation is urgent because Customs and excise account for half the aggregate revenues of the Central Government. The 1964-65 Central Budget estimates place the gross revenue receipts from Customs at Rs. 337 crores and from excise duties at about Rs. 770 crores, which make a total of Rs. 1,107 crores. The Minister was obviously worried about the problem of evasion. He did not frankly admit that high taxation is responsible for the growing tendency to evade the duties, but surprisingly was reported as saying that he would be content if the Government could get 65 percent of the taxes due.

Making Cheaper and Better Steel

India was once a low-cost producer of steel. But that distinction she has already lost. It has been a standing complaint of consumers that the landed cost of many items of steel from as far a country as Belgium is cheaper than the corresponding domestic selling prices. The Government steel plants, in particular, are high-cost producers, yet no major effort is being made to bring down their costs. This question provided the main theme of the opening day's speeches at the metallurgists' meeting in Durgapur last week, which was held to observe the Second National Metallurgists' Day. The Central Minister for Steel, Mr. N. Sanjeeva Reddy, who inaugurated the function, said that India was aiming at self-sufficiency in steel in the near future, but she cannot make cheaper and better steel. She should be able to evolve her own techniques to utilise her resources to the maximum extent possible and bring down production costs. India's resources in metallurgical coal and nonferrous metals are, in the light of the current knowledge and experience, somewhat limited, while the demand for them is on the increase. It is hoped to meet the situation by increasing the tempo of exploration and investigation and the development of indigenous resources, but first of all, it is necessary to think in terms of conserving the country's known resources and improving the economics of production, the Minister said. In this effort, the metallurgists have an important rôle to play.

Dr. D P. Antia, who presided, took up the same theme. He emphasised that the efficiency in industry "should be geared up" to reduce cost and increase production. Under present-day conditions, costs are rising, but price increases are becoming difficult to obtain. Either because of competition or Government price control, many organisations are taking firm measures to reduce cost, eliminate waste and increase productivity. It is important that all industries, especially metallurgical enterprises, should keep down their costs, while improving the quality and the rate of their output through better and more scientific techniques. Another important speaker, Mr. D. G. Bell, general manager of the Durgapur steel plant, stressed that intensive research played a fundamental part in the economic production of metals. The development of the steel industry in India started with a limited technological base, while most modern methods of steel-making which yield quick results and mass production, have been adopted. The rate of expansion of the Indian steel industry is comparable with that in postwar Italy or Japan, but this country lacked the strong industrial base which the former had. However, with the stabilisation of production in the three public-sector steel plants and expansion of the two in the private sector, the country has now reached a point where research and training have become more vital. India is far from the stage when she will have to sell her steel in a highly competitive consumer market, which always demands better and cheaper steel, but "a complacent attitude born from a long-prevailing sellers' market will prove harmful to the interests of the industry and the country." A school of thought which emphasised the need for maximising output in order to bring down production costs, as depreciation and overheads account for a fairly large proportion of the cost of steel in India, was also represented, but it did not sufficiently stress that increased production would not necessarily lead to better quality. Research and training are very vital for the development of the steel industry along sound lines. They must be an integral part of any productivity drive concerning the country's metallurgical undertakings.

"CAPITAL" CHRISTMAS TOY FUND

We acknowledge, with thanks, the receipt of the following donations for the 1964 Fund:

Rs. 101 each
Kumari Jayshree Birla, Kumari Manjushree Birla.

Rs. 100 each
J. H. Fenner & Co. (India) Ltd., CME's Office Equitable Coal Co. Ltd, Disergarh.

Rs. 50
Indian Copper Corporation Ltd.

Rs. 25 each
Herbert & Co. Private Ltd, Anonymous.

Rs. 20 each
R.E.H. Nelson, Hercules Insurance Co. Ltd.

Rs. 10 each
J. A. Borthwick, C. Mackertich.

Rs. 5 each
P. Mandal, R. Barendsen.

Total Rs. 572.

SHODDY FIRMS

FROM time to time we have received complaints regarding shoddy firms of a two-fold kind, that is to say, from both the sellers to and the buyers from these firms, and we, therefore, think that the moment is opportune to sound a note of warning on the subject. People in the mofussil are dazzled by advertisements of *something* at a ridiculously low price. In the majority of cases when they get the goods, and in some instances they are not so fortunate as to get anything, disappointment ensues. The goods are not what their fancy depicted and are dear even at the cheap price paid for them. We cannot too strongly advise our readers in the mofussil to be careful with whom they deal. There are a number of old established and respectable trading firms in every large town in India, and if people would confine their dealings to them they would be far more satisfied in the result. There are a number of apparently European firms, the partners in which are general natives. We would advise manufacturers in England to be extremely cautious in dealing with them and never to execute an order unless a substantial remittance accompanies it. The balance can be drawn for with documents attached. It must be borne in mind that though a manufacturer executes an order and sends the Bill of Lading and other documents through a Bank, it does not follow that the man who has ordered the goods will honour his draft, and in that case the goods are thrown upon the market and sacrificed at a small proportion of their cost. An indentor out here, who has paid 25 percent of the price of the goods, will think twice before he refuses to take up the draft drawn in respect of the balance, and this is why we emphatically recommend manufacturers when trading with an unknown firm to require cash deposit or a first class bank reference.

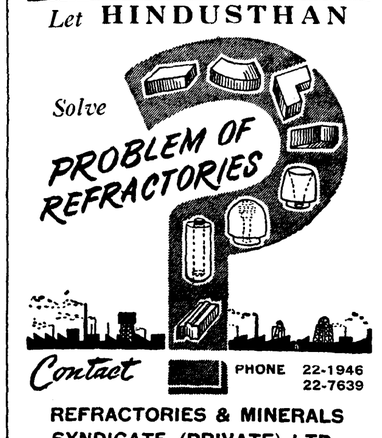
A Ditcher's Diary



IT WAS A VERY MODEST GOVERNMENT THAT FACED Parliament this week—with, as Winston Churchill said in another context, a great deal to be modest about. It had surely been foreseen that food would be the two Houses' first concern. Yet the Rajya Sabha was left to the care of a junior Minister of unknown competence; in the Lok Sabha, candour may have helped Mr. Subramaniam who is unlikely to claim that his speech showed much evidence of preparation. I do hope the Prime Minister himself will soon make a detailed statement on his Government's food policy, if it has one; this is far more important than raising the issue of China's bomb at the United Nations. (What good will that do to man or beast?) Undaunted by the divisions within his Party, Professor Hiren Mukerjee launched his attack in style; it's a pity that Dr. Ram Manohar Lohia had a bad throat and was, in any event, about to leave the capital for campaigning in Phulpur against Mrs. Vijayalaxmi Pandit. On present showing, the session promises to be interesting; it is to be hoped that the Congress benches will also produce some good speakers. According to a report I read somewhere, a German recently told a visiting Indian delegation, "You are good in articulation, poor in implementation". The second part of the statement is incontrovertible; but how good are our parliamentarians in articulation? I have heard of members who never once spoke in five years. An Opposition member of the Lok Sabha, an implacable enemy of the English language which he speaks better than most people, told me the other day, "Well, I heard the English spoken by most of my colleagues and immediately I decided that English must go". Professor Hiren Mukerjee belongs to an earlier generation of Indian politicians. But how good are the others in their own languages? There again, I think, the Opposition is better endowed. Mr. Annadurai of the D.M.K., I am told, speaks excellent Tamil; Dr. Lohia's Hindi can be biting. We want some good speeches at least for our money; and a lot of money it is.

WITHOUT, I'M SURE, WISHING TO BE TAKEN wholly seriously, a friend told me some five years ago, "Just wait a while; and you'll buy your own hydrogen bomb at Woolworths for sixpence a go—unless you decide to make your own in your backyard". There is no reason yet to believe that Indonesia really has an atom bomb or a pile of I.C.B.M.s; Dr. Soekarno has always been good at talking big. But, given time, there is no reason why Indonesia or Ghana should not be able to produce nuclear devices of a sort. The Indonesian claim has already made India's *bombwallahs* scream, "Then why not us? Many of these gentlemen, incidentally, are the ones who shout loudest when there is a fresh tax which, of course, they make every effort to dodge. The other side of the question surely is that, if everybody has nuclear bombs, what superiority will they give India? It is distressing that Mr. Shastri and Mr. Menon keep saying that India will not make a bomb, come what may. Has it never occurred to Indian politicians that, in comparison with their tribe elsewhere, they talk far too much? It is not really necessary for India to have an opinion on every question in the world; far less is it necessary to express views on every question. It was Mr. Shastri who recently pleaded for a meetingless day a week for the bureaucracy. I know it is much more difficult to enforce any such discipline on politicians; but I suggest he set an example by attending as few conferences as possible. Mr. Kamaraj's inadequate acquaintance with the English language makes him agreeably reticent; I understand, however, that even in Tamil he is a man of few words, his usual comment on almost everything being, "Let's wait and see". The fall-out of the current bomb-talk has been so fantastic that the real problems facing the country are already obscured. What, for instance, is going on in Orissa or Kerala? And what is New Delhi doing about it all? Mr. Shastri's "hundred days" have been over for some time; some may soon want to know the score.

NOT HAVING BEEN PERSONALLY AFFECTED, THE MAIN point which struck me about Britain's autumn Budget was that it does not really appear to have been necessary. In saying this I am not seeking to associate myself with the comment made in the House of Commons by the former Chancellor of the Exchequer, Mr. Maudling, that the Labour Government is deliberately exaggerating the country's economic difficulties as an excuse for introducing socialist tax measures. I do think that Britain's predicament is a serious one, and that drastic steps are justified in dealing with it. But what I have not been able to understand is why Mr. Callaghan should have invoked all the drama and background explanation traditionally associated with a full-scale Budget for what in fact turned out to be mainly the formal legal presentation of measures already announced—the 15-percent surcharge on manufactured imports and the export incentives—and a varied assortment of promises for the future. The only definite taxation proposal was the increase in petrol and diesel oil duties, which could certainly have been introduced without so much fuss. All of which, I must confess, adds support to the Opposition claim that Labour's main concern is with the next election, not with correcting the balance of payments or making industry more modern and competitive. So, for that matter, do some of the concessions announced for next April, which the new Government is now explaining away on grounds of elementary social justice. I should not like to commit myself to an opinion on this question, although I have been asked to do so on several occasions. What I will say, however, is that it has taken the Labour Government a remarkably short time to re-establish the image that cost it so many votes in the general election, that of being the Party of austerity and high taxation. Mr. Callaghan might not agree, but I suspect he will find that this impression persists long after the actual tax increases have been absorbed and forgotten. And in the growing atmosphere of liberalism which nowadays characterises the economies of the opulent West, such an image could prove to be a sure-fire election loser when Labour next finds itself at the polls.

IT HAS SADDENED ME RATHER TO LEARN OF THE attitude some in this country are taking towards the proposed visit of Pope Paul to Bombay in December. What, I have been asking myself, is happening to our much-cherished tradition of religious toleration? It is an honour that India should have been chosen for the first visit by a Pope to the East; one cannot imagine his going to, say, Peking. It is also significant that this country, where Christianity established itself even before it had taken hold throughout Europe, should be featured in a new programme of Papal action designed eventually to break with a centuries-old past which has not always been devoid of bigotry and intolerance. One would have thought that India might welcome such distinction; I still hope we shall be broad-minded enough to be worthy of it. Perhaps Pope Paul himself has not made things easier by his reported statement that he is coming here as a missionary, although that does not necessarily mean that his mission is one of conversion. What needs to be understood is that the decision to come at all is a courageous one. The present is the beginning of a new era in Christian thinking, one which dates its origin no earlier than the reign of Pope John, Paul's predecessor. It is a departure in search of wider horizons, greater understanding and, perhaps above all, a more tolerant approach towards spiritual problems the world over. One would have expected that the imagination of people in this country, traditionally the most religious in the world, would have been stirred by such a venture. I can only hope that our attitude towards Pope Paul when he comes here does not serve to convince him that these first tentative experiments in wider Christian understanding of human problems is not worth persisting with. It does seem to me that adherents of spiritual religions throughout the world have a

PRESS NOTE

The Uttar Pradesh State Electricity Board has resolved to float a loan of the nominal value of Rs. 400 lakhs redeemable at par at the end of 12 years. The bonds will carry interest at 5% and will be issued at Rs. 99.75 per cent. The issue will open on November 23, 1964 and will be closed on November 28, 1964 or earlier.

Subscriptions will be received at the Head Offices of the State Bank of India at Calcutta, Bombay, Madras and New Delhi and at all branches of the Bank at district headquarters within the State of Uttar Pradesh. The Head Office of the State Bank of India at Calcutta will be in charge of the issue and management of the bonds. The bonds are fully guaranteed by the Government of Uttar Pradesh in regard to the repayment of the principal and payment of interest. The bonds will be trustee securities under the Indian Trusts Act, 1882 and also approved securities for the purposes of the Insurance Act, 1938 and the Banking Companies Act, 1949. The bonds will also be treated at par with Government Securities for the purpose of advances to Scheduled Banks and State Cooperative Banks under section 17 (4) (a) of the Reserve Bank of India Act, 1934 (II of 1934). The Electricity Board will be providing in each financial year from 1964-65 to 1976-77 (both inclusive) for contribution to the U.P. State Electricity Board Bonds Redemption Fund such sums as, together with interest thereon, will amount to the total nominal value of the bonds by the time the repayment of the bonds becomes due.

2. All sections of the investing public are requested to extend full support to the bonds now under issue.

3. The issue is in terms of the Bond Prospectus, copies of which can be had from the aforesaid offices of the State Bank of India.

B. B. Lal, ICS.,
CHAIRMAN,
Uttar Pradesh State Electricity Board,
Lucknow.

common interest these days in closing their ranks against the encroachments of the essentially materialist dogma of communism.

THE INTEREST U THANT SHOWED IN THE FATE of Mr. Khrushchev after his fall from power struck me at the time as an interesting new departure in international politics. I would respectfully suggest to the U.N. Secretary-General that if he is going to make a habit of this sort of thing, he will soon have no time left for anything else. But it was the kind of gesture which could, if repeated in future whenever necessary, contribute to the spread of more civilised political practices in certain parts of the world where at the moment there is an all-too-noticeable absence of such things. In this case, it might well have saved Mr. Khrushchev from treading the path followed by so many of those at whose downfall he himself connived during the Stalinist era. It is one of the more encouraging aspects of the world scene that in recent years there has been a marked weakening of the old traditions governing the disposal of outed political opponents. I suppose Cuba was the last instance of the really classical blood-bath method being used to eliminate a superseded *regime*. It revolutionary governments are now beginning to cultivate the habit of deferring to world opinion before killing off all potential rivals, then we may have taken a decisive step towards more humane and therefore more democratic, methods of governing nations. I may be wrong here, but I have a feeling there is already a branch of the U.N. whose business it is to look into such matters. If so, it is time we heard more from it. I recall a cartoon in a London evening newspaper published just after the Conservatives had lost the election, and Sir Alec Douglas-Home was busy forming his shadow Cabinet. The scene was a meeting of the Party's leaders in the Conservative Central Office with Sir Alec in the chair and a worried-looking secretary with a telephone in his hand just explaining: "Gentlemen, it's U Thant wanting to know what we have done with Butler". Perhaps that would be going a little too far. But the periodical flashing of political knives is something the world could get on very well without, and if U Thant can do something to stop it, he has my moral support.

MR. JUSTICE TEK CHAND HAD ASKED THE PRESS, meaning me and my colleagues, to promote the cause of Prohibition. I declined, with as much politeness as I could muster on the occasion. My answer is the same to Mr. Santhanam who wants newspaper men to work, as a contemporary has put it, as "an unpaid branch of the secret police". The Press in India, it would appear, is required to do everybody else's job and not its own. As, I imagine, Mr. G. L. Nanda is fast discovering, lack of knowledge is the least of the Government's disabilities in combating corruption. The same goes for Authority's legal powers to punish commercial delinquents; that is why the recent ordinance was treated with such contempt. I once knew a prewar Law Officer of the Government of Malaya; he told me that, whenever the bureaucracy came to him to ask for greater legal powers to do this or that, which was often, his routine answer was, "You already have them". I repeated the story recently to a police officer of some standing and he immediately said, "It's perfectly true of India, truer today than ever before; and I'm not excluding the bad old days of British rule". My friends tell me that, since the recent raids on film stars' hoards and the later invasions in Bagri Market and elsewhere, there is a certain amount of healthy panic in circles believed to be in possession of more money than they can explain. In the United States, however, there is an old saying: "The probe is always worse than the racket". It is not too soon to wonder whether this might not be as true of India. I once heard of an income-tax lawyer who made a good thing out of frightening small traders by telling them that the "Department" would soon be after them. So large is the magnitude of untaxed wealth that almost no enquiring official can be placed above temptation. There may be no sympathy for the men now being terrorised and exploited. Is it possible, however, that corruption is now merely changing its area of operation? A number of politicians and officials will have to answer this one.

THE DITCHER.

Guide for Investors

MORE FROM NATIONAL ROLLING AND STEEL ROPES

THE National Rolling and Steel Ropes Ltd has increased its profit from Rs. 30.01 lakhs for 1962-63 to Rs. 34.15 lakhs for the year ended June 1964, after providing Rs. 5.95 lakhs (against Rs. 3.07 lakhs) for depreciation. The taxable ordinary dividend has been increased from 15 percent to 20 percent. The yield amounts to 8.3 percent at the present price of Rs. 24.12 a share of Rs. 10 each. Taxation is allocated Rs. 26.55 lakhs (against Rs. 21.70 lakhs), development rebate reserve Rs. 58,000 (against Rs. 610), dividend equalisation reserve Rs. 5 lakhs and contingency reserve Rs. 1.50 lakhs. The carry-forward is Rs. 8,895, against Rs. 10,564 brought in. Sales rose from Rs. 1.54 crores to Rs. 1.55 crores.

Although the production of the rolling and wire mills was larger than in 1962-63, the output of flexible ropes was limited because the factory is not equipped to produce more of them. In view of the increased demand for flexible ropes, the directors are considering installing new machinery to increase their production. The supply of billets is short of requirements, and unless there is an adequate supply during the current year, the production of the rolling mill may be interrupted. Meanwhile, balancing equipment have been installed, so the output capacity of the factory has increased. The Company has taken steps to export its products.

Barnagore Jute Cuts Dividend

IN their report for the year ended March 1964, the directors of the Barnagore Jute Factory Co. Ltd say that at the present price of raw jute, it has become difficult to buy fibre and sell manufactured goods at a profit because production costs have risen substantially. So trading in the current year will result in a smaller profit than in 1963-64 unless the price of fibre in the meantime declines further. Manufacturing costs will reflect the incidence of the implementation of the wage board award for a full year in 1964-65, in addition to other increases in production costs under several heads. Because of the competition from the Pakistani mills, it is necessary to maintain the quality of jute goods. Effective steps should also be taken to enable Indian mills and shippers to compete with the Pakistani mills on more equal terms.

The profit has dropped from £510,306 for 1962-63 to £309,475 for 1963-64, after transferring £48,877 (against £53,333) to depreciation. The taxable ordinary dividend has been reduced from 40 percent to 30 percent which works out to a yield of 8.6 percent at the present price of Rs. 230 a share of £5 each. Taxation absorbs £193,000 (against £290,000), general reserve £50,000 (against £132,000) and development rebate reserve £3,214 (against £14,507). The carry-forward is £7,946, against £1,341 brought in.

Ashok Leyland Raises Dividend

THE announcement of a higher dividend of 9 percent by Ashok Leyland for the year ended September 1964 (against 7 percent) was well received in the market. A substantial rise in profit is reported for the year. According to advance figures available, the net profit of the Company, after depreciation, bonus to employees, development rebate reserve and taxation, comes to Rs. 83,53,775, against Rs. 32,02,275 for the previous year. The profit, after deducting depreciation and before bonus, development rebate reserve and taxation amounts to Rs. 2,03,00,792, against Rs. 72,97,577 for the previous year. Development rebate reserve amounts to Rs. 18,50,000 (against Rs. 14,00,000). Provision for taxation gets Rs. 86,40,000 (against Rs. 21,45,402) and general reserve Rs. 36,09,000 (against nil). The proposed dividend at 9 percent (against 7 percent) amounts to Rs. 47,31,196 (against Rs. 32,07,211).

Higher Dividend from West Coast Paper

THE West Coast Paper Mills Ltd has raised the dividend for the year ended June 1964, from Rs. 11 to Rs. 13 a share. This is the second year in succession for which the dividend is being raised; the Company had paid a dividend of Rs. 8 in 1961-62. The increase in the dividend is well justified by the Company's impressive performance during 1963-64. According to the preliminary report, the turnover has increased by about 11 percent from Rs. 4 crores to Rs. 4.44 crores, while the gross profit has gone up by nearly 36 percent from Rs. 1.099 crores to Rs. 1.488 crores. The ratio of gross profit to sales has improved considerably from 27.4 percent to 33.5 percent. It is significant that this improvement has been achieved despite all-round increases in the costs of production due to higher prices of raw materials, essential chemicals like caustic soda and chlorine, and increase in freight, labour, wages, etcetera, while the selling prices of paper continued to be frozen. This became possible because of the increase in production from 27,252 tonnes to 30,213 tonnes, against the rated capacity of 18,000 tonnes.

Appropriations include depreciation Rs. 49.82 lakhs (against Rs. 39.38 lakhs), development rebate reserve Rs. 50,000 (against Rs. 75,000), taxation Rs. 51 lakhs (against Rs. 10 lakhs) and general reserve Rs. 21 lakhs (against Rs. 39 lakhs). Preference dividend absorbs Rs. 7.02 lakhs and equity dividend takes up Rs. 19.50 lakhs (against Rs. 16.50 lakhs), leaving a surplus of Rs. 6,823 to be carried forward, against Rs. 6,096 brought in. Last year, the Company had the benefit under Section 84 of the Income-Tax Act and consequently the taxation liability was less. This benefit is not available this year, which accounts for the larger liability on account of income tax and surtax during 1963-64.

The Company's working during the current year is said to be equally encouraging. Production during July-October is placed at 9,600 tonnes, compared with 8,800 tonnes in the corresponding period of last year. The Company proposes to diversify its production by setting up a balancing equipment for coating, calendering, etcetera, at a cost of Rs. 1.25 crores. The benefit of this diversification will not, however, be available during the current year as the scheme is still in the process of implementation. The Rs. 100-paid share of West Coast Paper is currently quoted around Rs. 170, offering a gross return of about 8 percent.

Tube Investments Pays More

THE working results of Tube Investments of India Ltd for the year ended July 1964, are encouraging. A satisfactory increase in production and sales, coupled with a rise in the dividend, are the bright features of the year's working. The directors' report says that in contrast with last year, the production of bicycles of T. I. Cycles of India exceeded the targeted figure by a small margin. The production of spare parts, however, showed a fair increase over the previous year's output. These satisfactory results have been achieved in face of difficulties arising out of the power shortage and the supply of unsatisfactory raw material—quite often below the required specification.

As for the working of Wright Saddles of India Ltd, the report says that the output during the year was satisfactory and the high quality of the product was maintained, although it had to meet competition from cheaper varieties. As for Tube Products of India, production and sales of tubes showed a considerable increase over those for the previous year. This was possible despite the power cut and the difficulty in securing indigenous raw material of required quality. The production of cold rolled strip in the cold rolling mill showed a substantial increase over the previous year's output. The board is considering a proposal to expand the production capacity of the cold rolling mill. The Government's approval has now been received for doubling the existing capacity.

As for metal sections, the report says that licences for the import of plant and equipment have been received from the Government and orders have been placed with suppliers abroad and in India. Referring to the working of the subsidiary, T.I. Diamond Chain Ltd, the report savs that a substantial quantity of bicycle chains was exported during the year. The prices realised in the export market were well below the cost, even after taking into account the drawback and incentive allowances. The production of industrial chains started during the year. Production and sales, it is hoped, will reach the anticipated levels during the coming year. As for T.I. Miller Ltd, it is said that the production of some of the components of the bicycle dynamo lamp commenced in January 1964. The production of all the components and the assembly of lamps in quantity got going somewhat later. As for general operating results, the directors state that although the turnover has shown an appreciable increase, the profit margin is low in comparison. This is mainly due to an increase in the cost of raw material and stores and to higher wages and salaries.

The net profit of Tube Investments of India Ltd for the year ended July 1964, amounts to Rs. 48,52,954, after providing Rs. 43,20,080 for depreciation and Rs. 51,00,000 for taxation. This compares with the previous year's net profit of Rs. 40,08,091, after providing Rs. 40,43,127 for depreciation and Rs. 45,25,000 for taxation. With Rs. 50,510 brought forward from the previous year and with Rs. 3,13,150 being the excess tax provision for prior years written back, the total available for appropriation comes to Rs. 52,16,614. Out of this, Rs. 22,50,000 (against Rs. 13,00,000) is transferred to general reserve. A sum of Rs. 1,50,000 (against Rs. 200,000) is transferred to dividend equalisation reserve. The proposed dividend of 11½ percent (against 10 percent) will absorb Rs. 28,12,500 (against Rs.

No Shopping List for Reddy!

Venkata Reddy's memory is good at work and at home. Mrs. Reddy never needs to write a shopping list. Just one telling...and the day's shopping list is clear in his head, down to the smallest chilli. Memory matters too in playing cards; the winner of many bridge tournaments, he enjoys the game. The same patience, concentration and an eye for detail that make Reddy a good bridge player, provide him with the basic qualities required as a draughtsman with Burmah-Shell, Madras.

EVERY ITEM MUST TALLY

He helps keep records of the Company assets throughout Madras Branch. Hundreds of details and data collected from blueprints, completion certificates, amendment sheets, items for sanction or disposal. Every item must tally—a plug, a culvert, a godown—description, cost, site. Sometimes his search takes him to 1928 for records; but often the figures he needs are in his head.

TODAY, AS EVER, PEOPLE LIKE REDDY ARE WORKING FOR YOU

Reddy comes from Razampet in Andhra. He has a farm there and when he goes on leave, he relaxes midst orchards and paddy fields, or at leisurely rubbers of bridge.

Reddy and people like him—at all levels of responsibility—are Burmah-Shell. Today, as ever, they are hard at work...working to ensure that vital petroleum products, essential to India's growth and progress, are brought to you at the right place and time, in the right quantities.

BURMAH-SHELL are People in the service of the People

25,00,000). The balance of Rs. 4,114 is carried forward.

Maiden from India Carbon

THE ordinary shares of India Carbon Ltd have attracted attention up to Rs. 12.81 due to the declaration of a maiden ordinary dividend of 6 percent for the year ended June 1964 in the third year of the Company's working. The yield amounts to 4.7 percent at the present price. The net profit has improved from Rs. 1.59 lakhs for 1962-63 to Rs. 13.19 lakhs for 1963-64, after providing Rs. 7.12 lakhs (against Rs. 3.65 lakhs) for depreciation. The arrears of preference dividends have been paid. The net profit amounts to Rs. 2.92 lakhs. Total reserves amount to Rs. 23.36 lakhs, against a share capital of Rs. 49.98 lakhs. The net block stands at Rs. 82.65 lakhs. Dividend will not suffer any deduction of tax because the Company is enjoying tax holiday being a new undertaking. Sales nearly doubled to Rs. 83.45 lakhs.

Indian Hume Pipe Results Impress

THE 1 percent increase in the dividend from 14 percent to 15 percent by the Indian Hume Pipe Co. Ltd for the year ended June 1964, provides little indication of the Company's impressive performance during the year. The turnover has risen by about 25 percent from Rs. 2.999 crores to Rs. 3.748 crores, and the gross profit has shot up by nearly 85 percent from Rs. 48.44 lakhs to Rs. 89.76 lakhs. Appropriations include depreciation Rs. 14.25 lakhs (against Rs. 12.09 lakhs), development rebate Rs. 2.90 lakhs (against Rs. 2.40 lakhs), taxation Rs. 40 lakhs (against Rs. 15.50 lakhs), rehabilitation reserve Rs. 6 lakhs (against Rs. 1.47 lakhs), dividend equalisation reserve Rs. 2.50 lakhs (against Rs. 11 lakhs), general reserve No. 1 Rs. 11 lakhs (against Rs. 4 lakhs), contingency reserve Rs. 5 lakhs (against nil) and debenture redemption reserve Rs. 2.50 lakhs (against nil). After making various appropriations, there remains a balance of Rs. 48,629 to be carried forward, against Rs. 145 brought in. The preference dividend amounting to Rs. 2.50 lakhs (the same) and equity dividend amounting to Rs. 9 lakhs (against Rs. 8.40 lakhs) are to be paid out of general reserve No. 2.

The directors state that three new factories were added during the year, raising the total number to 60. All these factories worked satisfactorily during the year. The prestressed concrete pipe division is making satisfactory progress, and the Company has secured a large contract for supply and laying of prestressed concrete pipe line for Jhansi Babina water supply scheme in Madhya Pradesh. The penstock division also has been making good progress. The work of supply of penstocks for second stage of the Koyna project is nearing completion and the supply of penstocks for Sharavathy project and Bhira Works is in full progress. The Company has secured the outright patents right in India from No-Joint Concrete Pipe Company of the U.S.A. for the process of manufacturing continuous concrete pipe line *in situ*. The Company's proposal for establising a R.C.C. Hume Pipe factory at Benghazi (Libya) has been approved by the Indian and Libyan Governments in principle, and steps have already been taken to register the branch in Libya for starting business. The Company is awaiting formal confirmation from the Libyan authorities concerning concessions which will be available to the Company in that country. It issued during 1963-64 7 percent debentures of the value of Rs. 20.82 lakhs at par, and this issue was oversubscribed.

Neelamalai Tea and Coffee Repeats

A DECLINE in the tea crop resulting in a higher cost of production, higher price realisation for tea due to improved demand for high-grown teas and lower profit feature the working results of the Neelamalai Tea and Coffee Estates Ltd for the year ended June 1964. The coffee crop was higher than that of the previous year and the dividend on ordinary shares has been maintained at 7½ percent. The profit for the year amounts to Rs. 7,23,118, after providing Rs. 1,29,234 for depreciation. This compares with the previous year's profit of Rs. 8,78,002, after providing Rs. 1,33,956 for depreciation. With Rs. 20,273 brought forward from the previous year, the total surplus comes to Rs. 7,43,391. Out of this, provision for taxation gets Rs. 300,000 (against Rs. 4,95,000). The preference dividend at 5 percent absorbs Rs. 99,000. The proposed dividend of 7½ percent on ordinary shares amounts to Rs. 2,70,000. A sum of Rs. 34,000 (against Rs. 11,500) is transferred to development rebate reserve. The balance of Rs. 40,391 is carried forward.

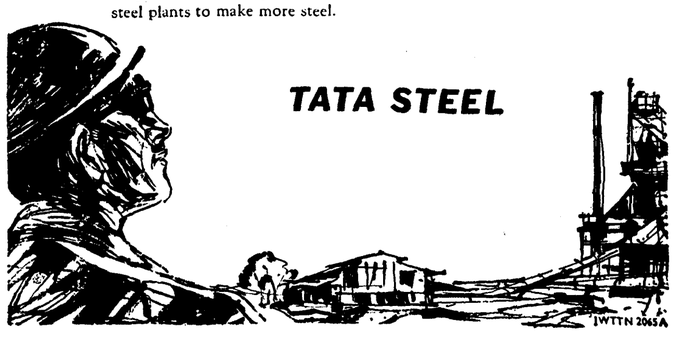
The tea crop for the year amounted to 758,856 kilograms (against 984,000 kilograms). The cost of production for tea was higher at Rs. 4.01 a kilogram (against Rs. 3.44 a kilogram). The average price realisation amounted to Rs. 5.44 a kilogram (against Rs. 5.22 a kilogram). The coffee crop for the year amounted to 206.736 tonnes (against 77.062 tonnes). The estimates for 1964-65 provide for a tea crop of 950,000 kilograms and a coffee crop of 120 tonnes.

New Swadeshi Sugar Pays the Same

THE New Swadeshi Sugar Mills Ltd reports satisfactory results for the year ended June 1964. The dividend has been maintained at 29 percent. The gross profit shows an increase of some 9 percent from Rs. 20.30 lakhs to Rs. 22.25 lakhs. Allocations include depreciation Rs. 3.09 lakhs (against Rs. 2.80 lakhs), development rebate Rs. 32,000 (against Rs. 11,000), taxation Rs. 8.50 lakhs (against Rs. 8.20 lakhs), renovation and renewal reserve Rs. 3.50 lakhs (against Rs. 5 lakhs) and general reserve Rs. 3 lakhs (against Rs. 21,000). The proposed dividend absorbs Rs. 3.94 lakhs (the same), leaving a balance of Rs. 6,000 to be carried forward, against 16,000, brought in. The Company crushed 3.171 million maunds of cane, against 1.761 million maunds in the previous year. The recovery was better at 10.32 percent, against 9.78 percent.

Plastics Machinery from Windsor (India)

THE Rs. 50-lakh plant set up by R. H. Windsor (India) Ltd at Thana (Bombay) for the manufacture of plastics machinery was formally inaugurated by the Central Minister of Supply and Technical Development, Mr. K. Raghuramaiah, on 15th November. The plant has a capacity of 108 injection moulding machines and 60 extrusion machines a year on a single shift basis. The two well-known models of injection moulding machines—SH. 3 Auto (3oz.) and W. 15 (4/5-½oz.) under production were on show after the inaugration. The Company's manufacturing programme has been so phased as to enable it to increase production gradually and introduce larger sizes of moulding machines incorporating screw plasticisers, extrusion machines and



A great beginning...

In 1907, when India could not even produce a decent pin, the House of Tata announced its intention to build a modern steel works in India. There were not a few who doubted that the project would ever be a success.

Yet, shortly afterwards, India's first steel works was set up at Sakchi, as Jamshedpur was then called, and the first steel ingot was successfully rolled in February 1912. This event not only marked the birth of India's steel industry but also proved that India had the necessary potential in terms of iron ore and other raw materials to sustain an ever-expanding steel industry on modern lines.

The steel that has flowed out of Jamshedpur for over 50 years has helped India to take her first steps on the road to industrialization. And Tata Steel will continue to play an important role in our developing economy now poised to produce atomic power and manufacture steel plants to make more steel.

TATA STEEL

IWTN 2065A

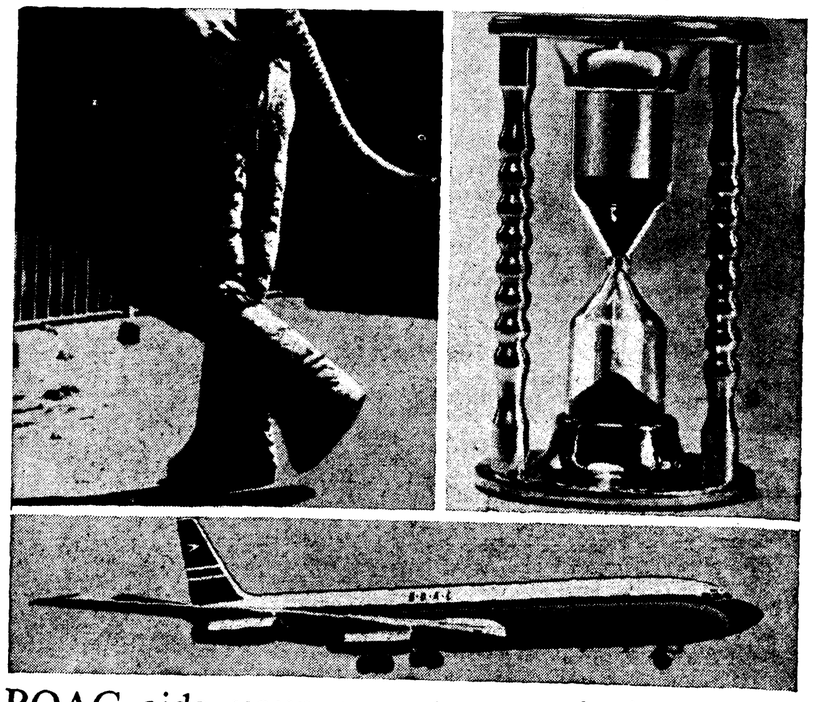
take-off equipment in line with the growth of the plastics industry.

The machines will be built to Windsor specifications and designs and the planning has been kept flexible so as to meet the requirements of the plastics industry as they develop. The Thana factory is equipped with the latest machine tools and heat treatment facilities required for the production of the highly precision components needed for these machines. The present issued capital of the Company is Rs. 30 lakhs, of which 49 percent is held by the Indian partners and 51 percent by R. H. Windsor Ltd of the U.K. which is supplying technical know-how for the project. Besides meeting the growing requirements of the Indian plastics industry, the Company hopes to be able to develop export markets. The terms of the collaboration agreement permit the export of machines made in India to foreign countries.

Share Offer from Sandoz (India)

SANDOZ (India) Ltd, one of the affiliated Companies of Sandoz Ltd, of Switzerland and a leading manufacturer of drugs, pharmaceuticals, dyestuffs, textile chemicals and agro-chemicals, is undertaking further expansion of its activities. The various expansion schemes are estimated to cost Rs. 1.7 crores. The dyestuff plant will entail a total capital outlay of Rs. 80 lakhs; the other expansion schemes will require Rs. 70 lakhs, and the requirements of working capital are placed around Rs. 20 lakhs. The duestuff plant is expected to go into production within the next few months. The Company has secured a licence for the import of plant and machinery for the manufacture of dyestuffs and textile chemicals, and a part of the equipment has already been delivered. The raw materials which are to be imported are expected to be made available under export promotion licence and barter arrangements. The total cost of Rs. 1.7 crores, it is proposed, will be met by the issue of equity capital of Rs. 75 lakhs, a loan of Rs. 35 lakhs from Sandoz of Switzerland and a loan of Rs. 60 lakhs from a financial institution. The loan from Sandoz will provide the foreign exchange requirements to cover the cost of machinery and equipment to be imported. Sandoz (India) has an authorised capital of Rs. 2 crores—all in equity shares of Rs. 10 each—of which the issued and paid-up capital is Rs. 75 lakhs. It is proposed to make a further issue of Rs. 75 lakhs, of which Sandoz of Switzerland will be allotted Rs. 23.60 lakhs, partly for cash and partly in consideration for the planning and development of the Company's medicinal herbs scheme and extraction plant. With this allotment Sandoz of Switzerland will hold 40 percent of the total issued capital of the Company. Shaw Wallace and Co. Ltd, which has been associated with Sandoz for many years, will take up shares worth Rs. 7.50 lakhs. The existing shareholders, directors, employees and friends will be allotted shares of the value of Rs. 13.90 lakhs. The balance of Rs. 30 lakhs will be offered for public subscription at par some time in December.

The working results of the Company for 1964 are expected to be much better than those in 1963; the turnover for the first nine months of the current year shows an increase of over 25 percent, compared with that in the same period last year. The profitability of the Company is expected to increase correspondingly with the anticipated increase in sales.



Hindustan Ferodo Share Offer

JOINTLY promoted by Turner and Newall Ltd, Manchester, and Asbestos, Magnesia and Friction Materials Ltd, Manchester, Hindustan Ferodo which took over from 1st July, 1964, as a going concern the Indian branch of Asbestos, Magnesia and Friction Materials Ltd is undertaking a big expansion programme estimated to cost Rs. 2.915 crores. In consideration for the purchase of the Indian firm, the Company issued to A.M. and F.M Ltd 1,449,992 equity shares of Rs. 10 each at par. Hindustan Ferodo has been licensed to increase its capacity of brake linings from 1.064 tonnes to 2,160 tonnes, of clutch facings from 500,000 to 1 million and of asbestos textiles from 600 tonnes to 775 tonnes. It has also been permitted to undertake considerable expansion of other items like jointings and limpet sheet, locomotive mattresses, Ferobesto flooring sheets and asbestos millboard.

The construction of additional factory buildings has already commenced, and it is expected to be completed by the beginning of 1966. The proposed expansion is expected to be completed by October 1966. The Company has received import licences for machinery. The cost of the expansion schemes estimated at Rs. 2.915 crores is proposed to be met by the share capital of Rs. 2.415 crores, and bank borrowings of Rs. 50 lakhs.

The Company has an authorised capital of Rs. 4 crores—all in equity shares of Rs. 10 each. Its issued capital is Rs. 2.68 crores, of which shares of the value of Rs. 1.983 crores have been allotted to the two British firms which have promoted the venture. The directors, their friends and associates have agreed to subscribe to 150,000 shares of Rs. 10 each at a premium of Rs. 17 a share. The balance of 546,800 equity shares of Rs. 10 each will be offered for public subscription at a premium of Rs. 17 a share some time in December. Turner Newall Ltd has been allotted 533,333 equity shares at par for cash in foreign currency to cover the purchase of plant and machinery to be imported. The Company has entered into technical collaboration agreements with the operating subsidiaries of Turner and Newall, namely, Ferodo Ltd, Turner Brothers Asbestos Co. Ltd, J. W. Roberts Ltd and Turner Asbestos Cement Co. Ltd. The Indian branch of A.M. and F.M. Ltd has shown encouraging progress over the five years ended 31st March, 1964, with sales rising from Rs. 1.292 crores to Rs. 3.425 crores, and the net profit increasing from Rs. 21.76 lakhs to Rs. 48.74 lakhs.

Oudh Sugar Maintains

ALTHOUGH the dividend has only been maintained at 20 percent, the preliminary report on the working of the Oudh Sugar Mills Ltd for the year ended June 1964, shows that the Company has fared much better than in the preceding year. The gross profit has gone up by nearly 43 percent from Rs. 79.39 lakhs to Rs. 1.04 crores. The directors have provided Rs. 12.48 lakhs (against Rs. 10.43 lakhs) for depreciation and development rebate, Rs. 60.79 lakhs (against Rs. 53 lakhs) for taxation, Rs. 40,000 (against Rs. 1.40 lakhs) for contingencies, Rs. 10 lakhs (against nil) for general reserve and Rs. 5 lakhs (against Rs. 3 lakhs) for renovation and renewal reserve. The proposed dividend will absorb Rs. 15.50 lakhs (the same), leaving a sum of Rs. 60,000 to be carried forward, against Rs. 27,000 brought in. The Company crushed 11.765 million maunds of cane during 1963-64, against 8.314 million maunds in the preceding year. The recovery of sugar averaged 10.18 percent, against 10.36 percent. The production of power alcohol and spirit amounted to 1.448 million gallons, against 1.424 million gallons, and of vanaspati 16,900 tonnes, against 17,000 tonnes.

More from Hingir-Rampur Coal

THE Hingir-Rampur Coal Co. Ltd has raised the dividend for the year ended June 1964 from 8 percent to 10 percent—Rs. 4 to Rs. 5 a share. The dividend has been stepped up, although the gross profit is about the same as in the previous year; it is, in fact, slightly down from Rs. 8.75 lakhs to Rs. 8.47 lakhs. What is more, the profit has suffered a slight setback despite a substantial increase in the turnover from Rs. 41 lakhs to Rs. 46.38 lakhs. Allocatons include depreciation Rs. 2.22 lakhs (against Rs. 1.66 lakhs), development rebate Rs. 1.29 lakhs (against Rs. 29,316), taxation Rs. 1.70 lakhs (against Rs. 4.71 lakhs) and general reserve Rs. 2.56 lakhs (against Rs. 1.42 lakhs).

After making these appropriations, there remains a nominal balance of Rs. 927 to be carried forward, against Rs. 635 brought in. The proposed dividend absorbing Rs. 1.67 lakhs (against Rs. 1.43 lakhs) is to be paid out of the general reserve. The directors state that the total coal raisings increased from 174,000 tonnes to 188,000 tonnes, and sales rose from 165,000 tonnes to 180.000 tonnes. The raisings from the Company's No. 5 pit which commenced production during 1963-64 will increase steadily during the current year. Certain initial difficulties which were encountered earlier are being overcome. The Rs. 50-paid share of Hingir-Rampur is quoted around Rs. 52, offering a gross return of about 10.4 percent.

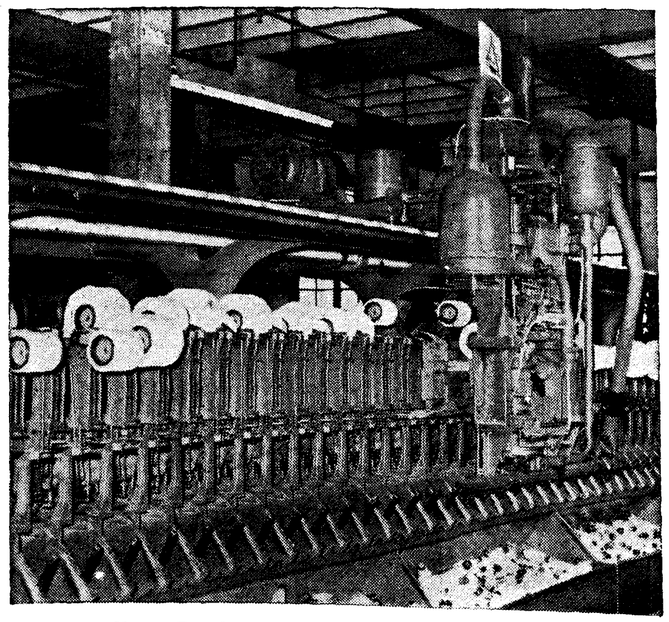
New Capital Issues

FIVE companies have been authorised to raise capital aggregating Rs. 1.92 crores. Four of these are issuing equities, while the fifth has been granted consent to postponement of the date of redemption of debentures and to an increase in the rate of interest. Two companies involve foreign collaboration and one of these is offering part of its shares to the public by prospectus. The new issues include a Union Government undertaking. The consent of the Controller of Capital Issues is valid for 12 months in all the cases excepting one in which it is valid up to 30th April, 1965. The following are the details:

Hindustan Organic Chemicals Ltd, Bombay, a Government of India undertaking, is to issue further capital of Rs. 17 lakhs divided into 1,700 equity shares of Rs. 1,000 each at par. The money will be used for financing the Company during 1964-65.

Philips India Ltd, Calcutta, is to issue further capital of Rs. 40 lakhs (nominal) in equity shares of Rs. 10 each at a premium of Rs. 6 a share. Out of this, 100,000 equity shares will be offered to the Company's foreign collaborators, *N. V. Philips Gloeilampenfabrieken*, the Netherlands, partly for cash and partly for consideration other than cash. The balance of 300,000 shares will be offered to the Indian shareholders for cash in the ratio of three new shares for five shares held. The consent is valid up to 30th April, 1965.

Sandoz (India) Ltd, Bombay, is to issue further capital of Rs. 75 lakhs, divided into 750,000 equity shares of Rs. 10 each, at par. Of this, shares of the value not exceeding Rs. 23.6 lakhs (Rs. 13.6 lakhs for cash and Rs. 10 lakhs for consideration other than cash) will be offered to the Company's foreign collaborators, Sandoz Ltd, Basle (Switzerland). The balance (including shares of a value not less than Rs. 30 lakhs by prospectus) will be offered to the public for cash. The money will be utilised for the Company's expansion scheme.



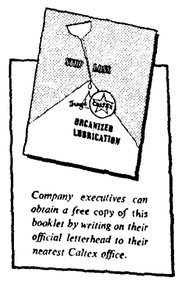
Suraj Textile Mills Ltd, Malout Mandi, District Ferozepur, Punjab, is to issue further capital of Rs. 30 lakhs divided into 15,000 equity shares of Rs. 100 each and 15,000 preference shares of Rs. 100 each. The capital will be used for financing the expansion programme of the Company.

Bharat Collieries Ltd, Calcutta, has been granted consent to the postponement of the date of redemption of debentures of the value of Rs. 20 lakhs from 3rd October, 1964 to 31st October, 1972 and to the increase in the rate of interest thereon from 6 percent to 7½ percent a year effective from 1st November, 1964, subject to the agreement of the debenture-holders and subject to the further condition that such of those debenture-holders who want to be repaid in cash will be so repaid within a period not exceeding three months.

PLAN FOR BOMBAY PORT DEVELOPMENT

Mr. D. P. Bertlin, of the London firm of consulting engineers Bertlin and Partners, has arrived in India on 16th November to discuss with senior officials of the Bombay Port Trust a master plan for the development of the harbour.

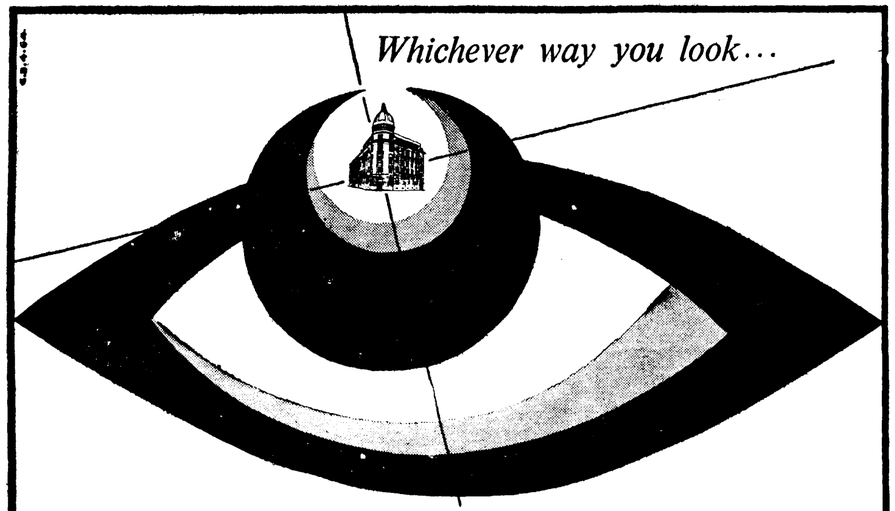
During his ten-day stay in the city, Mr. Bertlin will discuss with the chairman of the Bombay Port Trust questions arising out of the £8-million contract to be awarded for the development of the docks and the International Development Association's financing of the foreign exchange costs.



Keep Production rolling
with Caltex "STOP LOSS" programme

When a machine bearing fails, it's not the cost of replacement that's expensive, it's the lost production. A Caltex "Stop Loss" Programme can virtually eliminate the most common cause of bearing failure—improper lubrication.

HOW "STOP LOSS" WORKS: Caltex Lubrication Engineers help you set up a fool-proof system of lubrication control. From woodyard to shipping platform, they see to it that every piece of equipment gets the right amount of the right lubricant at the right time. The results: maintenance costs down as much as 15%, number of major lubricants required reduced to as few as six, purchasing simplified.



Production is worth a lot of money—keep it rolling with Caltex "Stop Loss" Programme.

Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex office.

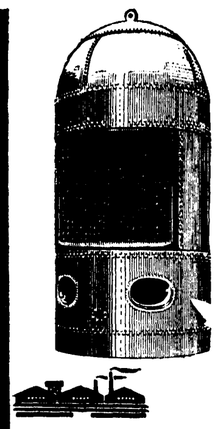
E.R.W. BOILER TUBES

For trouble-free steam raising in all applications calling for rigid specifications, Electric Rasistance Weld tubes are in every respect equal to corresponding seamless tubes. High frequency current ensures efficient welding, and normalising is carried out in controlled atmosphere furnaces to produce a ductile tube with a smooth, blue finish.



LOCO

We supply E.R.W. loco boiler and superheater tubes from our Jamshedpur Works to meet the bulk of the Indian Railway's demand. These tubes meet all the technical requirements of Indian Railways.

MARINE

Our E.R.W. tubes meet all the tests specified by Lloyd's Register of Shipping. Indian Tube is on Lloyd's Register of Shipping's list of approved manufacturers.

LAND

Our E.R.W. tubes for land boilers are accepted by the D.G.S. & D. and comply with the Indian Boiler Regulations. We also carry ready stocks of this category at our Warehouses.

The Stock Markets

SHARE PRICES FALL APPRECIABLY IN LYONS RANGE

Wednesday Evening.

THE Calcutta stock market has weakened appreciably during the past week. Prices of clearing shares have dropped on tired bull liquidation. Taking advantage of the weakness, bears have sold fairly heavily. The settlement on Wednesday passed off uneventfully. Carry-forward charges are almost the same as they were at the previous settlement. Due to the drop in share prices during the past fortnight, holders have become nervous. They are keen on cutting their losses and reducing their commitments. In the meantime, advices from Dalal Street have been unfavourable.

Lyons Range is inclined to take a discouraging view of the outlook, so share prices may decline further. Whatever business is being transacted is largely confined to clearing shares. Although the prices of selected scrip have been about steady, turnover in cash shares has dropped. The absence of support from the Life Insurance Corporation and the Unit Trust of India has served as an additional damper. Operators do not expect fiscal reliefs soon since they think that the Finance Minister will not modify the tax system before the next Budget.

The return of Mr. R. C. Dutt, chairman of the Company Law Board, to New Delhi after studying the working of the New York and London stock exchanges seems to have created fresh uncertainties. It is feared that he may recommend to the Government new measures to regulate the activities of the Indian stock markets. Since the Government intends to terminate the managing agency system in selected industries, investors and operators have been shaken.

Indian Iron have weakened considerably on pressure. Investors are inclined to wait until the Government decides how the advances given by it to the two private-sector steel companies—Indian Iron and Steel and Tata Steel—will be repaid. Unless an extra element is provided in the retention price of steel, the two companies are likely to be financially embarrassed. Among engineering shares, Jay Engineering have met with support due to rumours of a bonus issue. Scattered interest has been shown in J. K. Steel, Jessop, Guest, Keen, Williams, Texmaco, Braithwaite and Indian Standard Wagon have dropped slightly.

In the miscellaneous section, attention centres on clearing shares. They have lost some ground. Despite the prospect of a bonus issue Dunlop Rubber have been sold. Indian Aluminium have not responded to the payment of an interim dividend. Philips India are about steady since the Company has been given the sanction to issue 400,000 rights ordinary shares at a premium of Rs. 6 a share in the proportion of three new shares for every five held. Scattered interest has been taken in Goodyear India, Associated Battery, British Paints and Union Carbide. B. I. Corporation are about steady, while India Steamship have been freely offered. In new shares, Hindusthan Twyfords, Hindustan Aluminium and Woolcombers have attracted attention. Managing agency shares like Martin Burn and Jardine Henderson have weakened.

Despite the prospect of an increase in the "reasonable return" following the rise in Bank rate, electric company shares are neglected. Turnover in bank shares is sluggish, although United Bank of India and United Commercial are steady. Among paper shares, Orient have fluctuated both ways, but Titaghur have dropped considerably. Bengal and Shree Gopal are steady. Sirpur have been sold freely in spite of paying a larger ordinary dividend. Sugar shares are difficult to deal in due to the absence of buyers; investors are disturbed by the Government's decision to prohibit the manufacture of bold-grain sugar.

In jute shares, there has been an appreciable decline in turnover, and prices have tended to drop. Due to the high price of fibre in relation to that of jute goods, the profits of mills have shrunk. Since foreign enquiries for jute goods are sluggish, it is wondered whether the output will be sold easily. Birla have reacted on profit-taking. New Central have fallen on rumours that the dividend may be passed. Anglo-India, Barnagore, Union and Ganges have declined slightly.

Coal shares are being freely offered, but buyers are attracting virtually no interest. The large accumulation of pithead stocks due to the decline in the demand for coal has disturbed sentiment. Burrakur, Bengal, Central India and Equitable have dropped. In cotton mill shares, J. K. Rayon and Elgin have weakened but Dunbar and Bharat Commerce are steady.

The rising trend in the price of raw cotton has called for caution. But it is believed that with a larger domestic crop, combined with fair imports, mills are more or less assured of an adequate supply of raw cotton during the current year.

Stray business has been transacted in tea shares. The decline in the average price of teas at recent auctions in Calcutta has made investors cautious. Interest is largely confined to selected Assam and Dooars gardens. Hasimara, Brooke Bond and Huldibari have fallen.

Government securities are dull due to the absence of institutional interest. The 3 percent Conversion Loan 1986 is barely steady around Rs. 62. Prices of short- and medium-dated stocks are nominally steady. Most of the State Government loans are available at a discount.

Bombay

EQUITIES FALL DESPITE GOOD COMPANY NEWS

PROSPECT OF MORE CURBS DISTURBS OPERATORS

Wednesday Evening.

DALAL Street had a very uneasy time last week. Equities suffered a further setback on light but persistent bull liquidation and virtual absence of fresh support. Losses were fairly widespread and quite heavy in some cases. Century were marked down from Rs 592.50 to Rs. 579.50, Standard from Rs 597 to Rs. 563, T.E.L.C.O. from Rs. 262 to Rs. 256, Premier Automobiles from Rs. 97 to Rs. 92.70, Hindustan Motors from Rs. 16.52 to Rs. 16.12, National Rayon from Rs. 358 to Rs. 346 and Tata Steel from Rs. 147.50 to Rs. 145.25—to mention only a few important counters. Last week's decline took the market well below its important July bottom and quite a few counters struck new lows for the year.

The A.I.C.C.'s decision to accept the unofficial resolution calling for the enactment of suitable legislation to introduce a ceiling on urban property sent a mild tremour through the market. Then followed the Government's decision to include drills in the controlled categories of cloth which brings nearly 52 percent of mill production under statutory control. The increase in ex-factory sugar prices fell short of the market's general expectations. The unsatisfactory food situation continued to weigh heavily on the minds of operators as mass discontent is disturbing the peace in the country.

Sentiment last week further unsettled by reports that the chairman of the Company Law Board, Mr. R. C. Dutt, had recommended to the Government the tightening of control over stock exchange dealings. In its mood of utter frustration, the market was unable to derive any comfort from the Central Finance Mininter, Mr. T. T. Krishnamachari's statement in Madras that unremunerative excise and Customs duties would be done away with in course of time. Nor did the market pay any heed to Indian Hume Pipe's excellent performance during 1963-64 and to the increase in dividend by West Coast Paper. Corporate news, by and large, continues to be encouraging, but it has failed to impart any steadiness to the market.

The crisis of confidence is deepening with time. In spite of the fact that the market has come down very close to its 1964 low and several shares are offering fairly attractive yields, there is little inclination on the part of operators to boost share values. As for investment support, it has been virtually absent for a long while. Altivity on the stock market has shrunk to such proportions that many

brokers are finding it diffilult to meet their normal office expenses and quite a few of them are seriously considering of moving into some other vocation.

The persistent decline in equity prices amidst growing inflationary pressures is a phenomenon peculiar to this country. The view is widely shared that if the Government takes suitable steps to revive confidence in the capital market, it might reduce the flow of funds seeking speculative employment in commodity markets. The Unit Trust scheme is unlikely to become popular with small investors if equity values continue to decline. Meanwhile, the Unit Trust has further raised the selling price of its unit to Rs. 10.50, but it is willing to buy back the units only at Rs. 10. This makes virtual nonsense of the concept of liquidity. The spread between the sale and purchase prices quoted by the Unit Trust is much too wide, compared with the quotations of even the most inactive shares traded in the market.

Sectionwise, textile shares were marked down on the argument that the extension of statutory control to cover 52 percent of mill production would adversely affect millowners' earnings. Morever, cotton prices continue to soar. Rayon shares in the cash list touched new low levels for the year because of the continued depressed conditions in the rayon yarn market. Steel shares came under considerable pressure despite the recent improved production performance. Engineering shares registered heavy losses on tired bull liquidation. While the recent decline in T.E.L.C.O. has been attributed to the selling pressure induced by the need to accommodate the rights, Voltas fell despite the management's decision to defer the rights offer. Motor-car shares were the worst hit, with Hindustan Motors touching a new low for the year. The small setback in sugar shares reflected the market's dissatisfaction over the increase in ex-factory prices. Bank, insurance and electric shares maintained a quietly steady tone but without much activity. Cement share were also steady. Cash scrip continue to suffer from lack of support.

Madras

TURNOVER DECLINES SHARPLY

MARKET WORRIED BY CURBS ON BLACK TRANSFER

Tuesday Evening.

THE Madras stock market has been quiet during the past week. Turnover in clearing and cash scrip has dropped considerably. Due to the absence of buyers, share prices have generally tended to decline. Weaker advices from the Calcutta and Bombay stock markets have made buyers cautious. Whatever interest has been shown is largely confined to selected miscellaneous shares. Investors and operators have been disturbed because of the Government's move to restrict the validity period of blank transfers. The shortage of funds has also been growing since commercial banks have been reluctant to extend credit to the stock market due to the new credit policy of the Reserve Bank. Turnover in Government securities is small, and only a few State Government loans have been dealt in. Selected preference shares have met with support, but sellers are few.

Bank shares are sluggish, although Indian have been maintained at Rs. 159 and State Bank of Travancore at Rs. 83. Sugar shares have tended to drop. Deccan are available at Rs. 11.10 and E.I.D. at Rs. 35.90. Andhra have come to hand at Rs. 12.50 and Madura at Rs. 9.44. Travancore are steady at Rs. 7.90 and Mysore at Rs. 27.75.

In the planting section, Blue Mountain have lost at Rs. 2.23, but Consolidated Coffee are about steady at Rs. 24. Cochin Malabar have been transacted at Rs. 6.12 and Ouchterlony at Rs. 3.50. Business in Periakaramalai has passed around Rs. 3.63. In rubber shares, Mercara are steady at Rs. 7.92 on declaring a taxable ordinary dividend of 15 percent. Interest has been taken in Nilambur at Rs 11.25. In tea shares, Parkside have come to hand at Rs. 25.20, Peermade at Rs. 20.75 and United Nilgiri at Rs. 22.22. Among coffee shares, Badra are steady at Rs. 2.70, Mysore Amalgamated at Rs. 5.05 and Ossoor at Rs. 2.77.

EXPORT FINANCE: A FIELD FOR COMMITTEES

(BY A SPECIAL CORRESPONDENT)

The Chablani Committee was asked the wrong questions and has given the wrong answers. The need for incentives and facilities to increase the supply of export finance has been largely ignored.

IN the field of export finance, three expert committees have reported in three years. Several distinguished and busy people have devoted valuable hours to these compilations. No one ever doubted that the Kapur Committee and the Mathrani Committee made valuable recommendations, many of which have been implemented and a nexus of export credit facilities and incentives concerning the availability as well as the cost of export credit has been created during the last two or three years. The report of the Chablani Committee released last month, the latest in the series, has however a considerably diminished value. This is not because the members of the Committee did not apply their minds to the problem, but because the terms of reference of the Committee were so framed that it could not have said anything new on the subject. The Committee was asked the wrong questions; and if you ask the wrong questions, you get the wrong answers.

Take, as an example, the question of ways and means of reducing the cost of export credit. The Study Group on Export Finance led by Mr. K. P. Mathrani, chairman of the Industrial Finance Corporation, recommended only last year that the Reserve Bank should provide short-term export refinance to banks at 1½ percent below Bank rate for the purpose of providing both pre-shipment and post-shipment credit to exporters and that the Refinance Corporation for Industry Ltd should so regulate its rate that the funds are available to Indian exporters at not more than 6 percent. In order to enable Indian exporters to compete in world markets, the Refinance Corporation was quick to implement this recommendation. Medium-term export refinance has been made available to banks at 4½ percent since the beginning of this year, so that banks could provide such export credits at no more than 6 percent.

Medium-term Export Credit

The attitude of the Refinance Corporation (now merged with the Industrial Development Bank of India) towards the cost of medium-term export credit provided a refreshing contrast to the attitude of the Government and the Reserve Bank towards the cost of short-term export credit. Few progressive men could have disagreed with the specific recommendation of the Mathrani Committee that short-term export refinance should be available to the banks at 1½ percent below Bank rate so that the ultimate users could obtain credit at 4½ percent or 4¾ percent. But the imagination and swiftness of the Refinance Corporation were matched only by the hesitation and delaying tactics of the Reserve Bank and the Government. Instead of implementing what was already suggested by Mathrani Committee beyond all doubt and with crystal clarity, the Government asked another committee headed by Mr. S. P. Chablani, managing director of the Export Credit and Guarantee Corporation, to examine the mechanism of export finance, ways and means of reducing the incidence and cost of credit, and their implications. The Committee was not told what the Government and the Reserve Bank thought of the Mathrani Committee's recommendation. So it had to waste its time and energy in making recommendations once more on the same problem.

What could the Chablani Committee do? It must have realised, —or, more likely, it may have been told by its three Reserve Bank members—that the Mathrani Committee's recommendation about providing refinance below Bank rate was inconvenient to the Government and the Reserve Bank. But the matter was too important to be pigeonholed or ignored: the Chalbani Committee was appointed precisely for the purpose of reversing this part of the Mathrani report. The Chablani Committee, therefore, had the unenviable task of reporting that it saw "many practical difficulties" in endorsing the Mathrani Committee's view, without being able to enumerate any of the difficulties. The analogy given by the Mathrani Committee of preferential rates offered to State co-operative banks was not applicable, according to the Chablani Committee, merely because, unlike commercial banking, the co-operative credit structure was federal and Reserve Bank assistance had to pass through various agencies before it percolated down to the ultimate user. It is not at all clear why the federal structure of co-operatives and the ultimately higher cost of agricultural credit should stand in the way of cheaper export finance for the exporters.

However, once this background is understood, it is easy to see the logic of the Chablani Committee's recommendations. Having ruled out concessional refinance and preferential treatment for the export sector, the only other way of making export credit cheaper was to enforce ceilings on the rates charged by the banks to exporters. The Reserve Bank will provide refinance against short-term export credits at Bank rate and the banks must not charge more than 1 percent above this for post-shipment export credit or 1½ percent above this for pre-shipment export credit. Ceilings based upon similar spreads above the refinance rate of the Industrial Development Bank of India have also been recommended by the Chablani Committee in the case of medium-term export credit. Above all, the ceilings are to apply whether or not the refinance is availed of or obtained from the Reserve Bank or the Industrial Development Bank.

There is no doubt that these ceilings will peg export credit rates between 5¼ percent and 6½ percent and provide comprehensive coverage of both pre-shipment and post-shipment short-term as well as medium-term credit. This may be cheap, but it is not cheap enough compared with the rates visualised by the Mathrani Committee. Moreover, quite apart from the cost of export credit, the question of its availability seems to have been totally ignored. The enforcement of ceilings on export credit rates, without making any real concession in the rate at which refinance could be obtained, will provide no incentive to the banks to enlarge their export credit portfolios. In fact, it will prove a positive deterrent, particularly when the cost of banks' resources has gone up and the rates that can be earned on domestic credit are much higher. Whether or not the Chablani Committee's recommendation makes export credit cheaper, one thing is certain: it fails to liberalise the availability of export finance by recommending a clumsy system of ceilings and by ignoring the need to provide concessional refinance.

Recommendations not Implemented

Where does the Chablani Committee's report take us? We are back again at the beginning. The recommendations will now be processed by the Government and the Reserve Bank, and will most probably be implemented. After a couple of years, another committee will report that not much progress has been achieved in lowering the cost and liberalising the supply of export credit. Meanwhile, even the report of this Committee is not the end of the deliberations: for there are at least five points on which the implementation of the recommendations requires policy decisions from the Reserve Bank and bankers.

The Reserve Bank will have to: (i) formulate a suitable scheme for providing refinance against short-term pre-shipment export credit: (ii) relax its recent exchange control restrictions on the outstanding amounts of foreign loans or overdrafts obtained by authorised dealers abroad: (iii) extend to export credit the guarantee scheme of the Government of India which provides protection to lending institutions against losses on their advances to small-scale industries. Further the banks' associations will have to provide by way of interbank agreements for: (i) enforcing the ceilings on medium-term export credit rates, and (ii) making it compulsory for exporters to take out E.C.G.C. cover.

In fact, the status of the Chablani Committee was clear to itself and to the Government. While the Kapur and Mathrani Committees were designated as Study Groups, the other was only a Working Party. It was fully aware that the findings of the Mathrani Committee on the mechanism of export finance were exhaustive. It was itself doubtful that cost of export finance was in any way a significant element in the cost structure of export commodities. The Chablani Committee itself might well have been doubtful about the value of its labours, knowing that the incidence of cost was not likely to be large, and that a reduction of the cost of export credit was but one of several measures and incentives for export promotion. Above all, the primary concern of the bankers in the Committee, it seems, was with competition between banks *inter se* rather than with producing a cogent and integrated scheme.

The Chablani Committee was, therefore, not really necessary right from the beginning and its labours have been wasted. It has always been clear what ought to be done to reduce the cost and increase the availability of export credit. If a Committee was required, it should have been asked to do precisely those tasks which the Chablani Committee has now left to the Reserve Bank—to formulate a scheme.

THE CALCUTTA MONEY MARKET

CALL RATE DROPS

Wednesday, 18th November.

THERE has been a negligible change in the general level of advances in the Calcutta money market during the past week. The requirements of the jute mills have increased a little. But the sums given to the other major categories of borrowers—the cotton and sugar mills, the iron, steel and engineering industries, and the foodgrains and seeds trade—are unchanged. In the interbank market, conditions have eased considerably, and the call rate has dropped from 5 percent to 1 percent.

The exchange market has been moderately active, with a good supply of tea bills but very few gunny bills. The demand for remittances is fair. Sterling is weak and shows further losses against all the major currencies.

SILVER WAS STEADY IN CALCUTTA during the past week and the price advanced from the previous week's level of Rs. 251.75 to Rs. 254.50 a kilogram, quoted today. The price was quoted at 113½d in London and at 129.3 cents in New York.

Contrary to the rise in silver, gold was easier, although the price of 14-carat showed little change at Rs. 68.25.

DURING THE WEEK ENDED 13TH November, Government of India Treasury bills for Rs. 112,53,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 17th November. The total amount offered was Rs. 4 crores. Tenders at Rs. 99.400 percent were accepted in full. Lower tenders were rejected. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.400 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 23rd November.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 18th November to 21st November at Rs. 99.416 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 11th November, 1964, to 14th November, 1964, amounted to Rs. 11,25,25,000.

ACTIVE NOTES DROPPED BY Rs. 6.86 crores to Rs. 2,460.73 crores, according to the return of the Reserve Bank of India during the week ended 13th November, 1964, while the total note issue was Rs. 8 lakhs larger at Rs. 2,486.35 crores. Notes held in the Banking Department consequently rose by Rs. 6.94 crores to Rs. 25.62 crores. Deposits of the Government of India increased by Rs. 1.59 crores to Rs. 51.72 crores, but those of State Governments decreased by Rs. 11.45 crores to Rs. 7.11 crores. Balances of commercial banks at Rs. 95.89 crores showed a drop of Rs. 1.02 crores. Balances held abroad in the Banking Department were Rs. 29 lakhs smaller at Rs. 10.14 crores. Investments declined by Rs. 95 lakhs to Rs. 124.25 crores. Loans to scheduled banks decreased from Rs. 5.88 crores to Rs. 79.05 lakhs of which advances against usance bills amounted to nil (Rs. 15 lakhs). Ways and means advances stood at Rs. 37.81 crores, against Rs. 33.04 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 6th November, 1964, shows a drop of Rs. 10.29 crores to Rs. 665.16 crores in total deposits. Investments in Government securities are down by Rs. 44.83 crores to Rs. 275.97 crores, while other authorised investments remain unchanged at Rs. 8.98 crores. Advances, including loans, cash credits, overdrafts and bills discounted have risen by Rs 8.31 crores to Rs. 344.72 crores. Cash and balances are, in consequence, shown at Rs. 28.20 crores or Rs. 3.98 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 6th November, 1964, shows Demand and Time liabilities at Rs. 1,364.45 crores (Rs. 28.84 crores on account of borrowings from banks) and Rs. 1,385.22 crores (Rs. 16.89 crores), compared with Rs. 1,366.94 crores (Rs. 28.46 crores) and Rs. 1,396.68 crores (Rs. 15.16 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have risen by Rs. 5.79 crores and Rs. 15.05 crores to Rs. 73.40 crores and Rs. 99.86 crores, respectively. There is a drop of Rs. 60.72 crores to Rs. 812.94 crores in investments. Advances and bills discounted at Rs. 1,744.34 crores show a rise of Rs. 14.92 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.3 percent and 63.4 percent, against 5.5 percent and 62.6 percent.

We can fly you anywhere (on earth)

We can take you to the fountains of Rome or the towers of Paris... to the theatres in New York or the Carnival in Rio. In fact, on a Lufthansa ticket you can fly anywhere on Earth just about any day you want to go. All of Lufthansa's flights from the Far East stop in Europe, which gives you a good opportunity to enjoy some of the old world before going on to the haste and hustle of North America, or the rolling pampas of South America, or the vigorous new nations in Africa.
With all the fabulous places where Lufthansa can take you on Earth, who needs outer space?

New Delhi

HIGH-POWERED FOREIGN TEAMS TO ATTEND I.C.C. MEETING

(FROM OUR NEW DELHI CORRESPONDENT)

THE advanced countries of the world are making great efforts to project a favourable image abroad. It was, for example, freely stated in New York last summer that "the United States has a job to do in informing, not only the American public, but also people abroad on the nature of U.S. capitalism." This followed a special world gallup poll, conducted in major cities in 14 nations of the non-communist world, the typical question being: "What percent of profit would you say the typical American industrial firm makes?" Another question asked was the estimate of profit made by firms in their own countries. In New Delhi, for example, the typical person interviewed guessed that a U.S. firm made a profit of 47 percent.

U.S. business men showed great concern in trying to correct this "misapprehension". The question asked here is whether the Government and some sections of the Indian business community display equal anxiety in presenting a correct image of this country. The question has assumed some importance because of the forthcoming session of the International Chamber of Commerce, which is scheduled to meet here from 7th to 12th February, 1965. About 2,000 delegates, it is expected, will attend the meetings. The British delegation, for example, will be led by Sir Duncan Oppenheim and will include, among others, Sir Jeremy Raisman, Viscount Runciman, the Righ Honourable Lord Shawcross and the Right Honourable Lord Tangley. The West German delegation will be headed by Dr. Herman Abs, who was one of the three experts deputed by the World Bank to appraise the financial feasbility of India's third plan. It will include Mr. Baitz of Krupps. The U.S. French and Italian delegations are similarly expected to include top-ranking people in the field of finance, commerce and industry.

Shortages and Corruption

It is not yet known what efforts are being planned to present a correct image of India to this world assembly, either by the Government or the business community. Some fragments of India's image could be visualised. The delegates, living in five-star hotels in New Delhi, should be thrilled to read the daily coverage provided to the Central Minister of Home Affairs by the Indian Press, as he tries to root out corruption through the Sadachar Samiti, a Vigilance Committee and a Directorate of Complaints. They could also read of foodgrain shortages and the lengthening queues for sugar and musturd oil. Side by side, they will see for themselves the deep roots of democracy through the operation of summary trial-cum-no-appeal system introduced by the food ordinance. The joint responsibility of the Central Cabinet will be demonstrated by Ministers making conflicting statements in public on issues which are not their concern. The solidarity of the Congress in general and the federal structure of the Constitution will be demonstrated by Chief Ministers defying the Centre to protect the interests of their States even at the cost of sister States. The communists and "progressives" within the Congress may launch a timely agitation indicating that "hungry sharks" have invaded the country.

The commercial community could organise a seminar to discuss the inevitability of tax evasion to combat high taxation. An exhibition to demonstrate the technical superiority of India over the nations of the world in adulterating everything—from food and life-saving drugs to manure—would be appreciated.

The cultural shows could include raids organised by the Enforcement Directorate and the Department of Health, the latter to demonstrate the immunity of the Indian system to contaminated water and food cooked in an insanitary condition. Joy rides could include roads with gaping manholes and pavements decorated with heaps of rubbish or washermen's hangings. There are many other possibilities which could make the image real.

These lines are being written neither flippantly nor jeeringly. These things are hghlighted in the national papers every day. The presentation of a correct image of India has rarely been so important as it will be during the forthcoming session of the International Chamber of Commerce.

The Central Finance Minister, Mr. T. T. Krishnamachari, recently went to Japan to attend the meetings of the World Bank. He and his officers probably saw what pains the Japanese took to present a correct image of their country to the delegates. It is time the Government gave serious consideration to this aspect of the problem, for the impression carried away by the delegates will have some effect on private capital investment in this country, the importance of which is fully realised in New Delhi. The success of the fourth plan is largely linked to private foreign investment. It should, therefore, be evident how important it is to present a correct image of India to the foreign delegates.

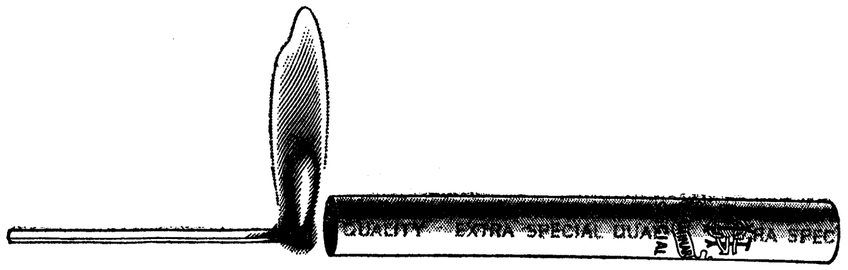
PARLIAMENT

Bills for Winter Session

The four-week winter session of Parliament commenced here on Monday, 16th November. Food, it is expected, will once again dominate the session; the other important topic is the Chinese atom bomb. A discussion on the possibility of producing a cheap car is also expected.

There are 20 Bills pending before Parliament, four of which have been reported on by Select Committees. They include Bills to amend the Indian Companies Act, the Foreign Exchange Regulation Act, the Wealth Tax Act and anti-corruption laws. Fifteen new Bills have been planned for the session. They include the Food Corporation Bill, the Official Trustees Amendment Bill, the Indian Trade Union Act Amendment Bill, the Banking Companies Act Amendment Bill, the Customs Act Amendment Bill, the Patents Bill and the Indus-

A 'FRESHLY PAINTED' LOOK FOR YEARS— with Goodlass NEROLAC paints!



Decades of research have perfected Goodlass Nerolac paints. They go on easily, smoothly... and keep a fresh appearance through the years. Weather-resisting Goodlass Nerolac paints don't easily crack, chip, fade or peel... look as smart as paint... and stay that way!

OVER
20,000
TIMES A
MINUTE...

It works out to nearly 900 million Charminar cigarettes sold every month ! Yes, Charminar is certainly the most popular cigarette in India—by far ! Why ? Because no other cigarette can match Charminar's rich flavour and unique taste. How does The Vazir Sultan Tobacco Company do it ? With quality tobaccos, special processes and expert know-how . . . in the largest cigarette factory in South-East Asia !

Experts choose only the finest tobaccos, developed specially for Charminar. Skilled workers prepare the leaves. Scientists laboratory-check each batch. Connoisseurs blend the tobaccos, which are *triple-matured*. Next, an *extra process* exclusive to Charminar. Only then do the tobaccos go to the automatic machines for rapid, 'untouched-by-hand' manufacture . . . to produce over 20,000 Charminars a minute !

There's nothing like Charminar — India's greatest cigarette!

THE VAZIR SULTAN TOBACCO COMPANY LIMITED

MAKERS OF INDIA'S GREATEST CIGARETTE!

CAS/VS-2

trial Disputes Second Amendment Bill.

A Bill seeking to ensure that fair price shops or co-operative stores should be opened in most industrial and commercial undertakings may also come up for discussion.

WAGES

Part Payment in Kind

The Central Labour Minister, Mr. D. Sanjivayya, was obviously stumped when he recently met the tripartite standing committee on the Industrial Truce Resolution. By a resolution, the Bangalore session of the Indian Labour Conference had agreed in principle that a part of the wages to workers might be made payable in kind, if necessary by legislation. The standing committee on the Industrial Truce Resolution was to work out the scheme. But the committee, which met here last week, rejected the scheme, since it was unacceptable to labour. The workers' representatives, it is reported, quoted the Governor of Kerala, Mr. V. V. Giri, as advising them not to accept it.

This raises a two-fold issue. Firstly, can a Governor engage himself in a political controversy ? If Mr. Giri wishes to guide workers as a trade union leader, he is out of place as a Governor, since by law and convention he should be above controversy. The second issue relates to the attitude of labour. A controversy, it will be recalled, was raised over the decision of the Government on the Bonus Commission's report. Trade unionists claimed that the Government had no right to modify or amend the report, as if it was an award. In this particular case, the Government prepared a scheme for the part payment of wages in kind with the consent and approval of workers. In other words, workers are now unwilling to implement their own decision. They can amend, alter or even repudiate it, while the Government cannot amend even the report of a committee which, in nature of things, is always advisory.

The committee approved the outlines of a Bill seeking to ensure that fair price shops or co-operative stores would be opened in most industrial and commercial establishments in the public and private sectors. Industrial establishments included for the purpose of the Bill are : factory ; any railway ; tramway or motor omnibus service ; dock, wharf or jetty, etcetera; mechanically propelled inland vessel; mine, quarry or oilfield ; plantation ; workshop or other establishment in which articles are produced, adapted or manufactured, with a view to their use, transport or sale ; establishment in which any work relating to the construction, development or maintenance of buildings, roads, bridges or canals, or relating to operations connected with navigation, irrigation or the supply of water, or relating to the generation, transmission and distribution of electricity or any other form of power is being carried on ; banks ; insurance companies ; shops ; and commercial establishments.

Starting Fair Price Shops

It is suggested that in every industrial establishment where 300 or more workers are ordinarily employed, and where at least 200 workers have given their consent in writing in the manner prescribed to buy their requirements from the fair price shops for a stated period of time, a fair price shop shall be provided and maintained for the use of the workers.

Such shops should ordinarily stock at least 50 percent of the requirements of the employees. The price rates of the following kinds are visulised : subsidised rates as for rationed commodities ; controlled rates (both floor and ceiling) fixed by the State Governments ; wholesale rates for pulses, cooking medium and one or two popular varieties of textiles, rates not above the prevailing market rates for other commodities which the employer is not under any specific obligation to supply, provided that all articles shall be sold on a non-profit basis.

A provision for penalty will be introduced in the Bill, which, it is expected, will be brought up during the forthcoming session of Parliament.

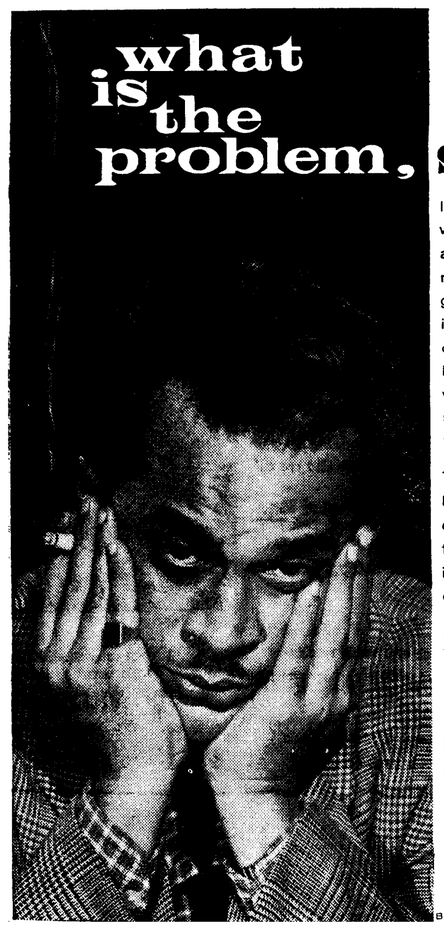
RUSSIA

Help for Indian Projects

January 1965 will mark the tenth year of Indo-Russian co-operation in trade, commerce and industry. The co-operation in the sphere of construction of industrial enterprises and other projects began with the exchange of visits of the late Mr. Jawaharlal Nehru and Mr. N. S. Khrushchev in 1955. As a result of these visits, the heads of the two Governments reached an agreement for the broad development of economic and technical co-operation.

Six projects, built with Russian assistance, are already in operation in India. They are the Bhilai steel plant with the annual capacity of over 1 million tons of steel, Ankleshwar oilfields with a capacity of over 2.300 tons of crude oil a day, the Neyveli thermal power station working on lignite with five units of 50,000 kilowatts each and over. These besides, the heavy machine-building plant in Ranchi and the coal mining machinery plant in Durgapur were inaugurated by the former Prime Minister.

Twenty-four other projects are now being constructed (nine out of them are at the commissioning and pre-commissioning stages) : the expansion of the Bhilai steel plant to a capacity of 2.5 million tons of steel a year, further commissioning of shops and units of the heavy machine-building plant and the coal mining machinery plant, the heavy electrical equipment plant in Hardwar, two oil refineries of 3 million tons' capacity each, hydro-electric and thermal power stations, the coal washery in Kathara with a capacity of 3 million tons of coal a year, two coal mines with the total annual capacity of 1.7 million tons of coal, a coal quarry for 1 million tons of coal a year with further expansion up to a capacity of 2 million tons, plants for producing antibiotics, synthetic chemico-pharmaceutical preparations, surgical instruments and lenses for eye-glasses, etcetera. Ten other projects are at the stage of designing and survey work.



On completion of these industrial projects and the commissioning of their capacities, they will produce annually 2.5 million tons of steel, 6 million tons of petroleum products, 125,000 tons of modern coal mining, metallurgical and other heavy equipment, steam and hydraulic turbines and generators with a total capacity of 2.7 million kilowatts, 145,000 tons of refractories, production and washing of 3 million tons of coal, commissioning of 2.535 megawatts of installed capacity of power stations which constitutes about 35 percent of the total power generating capacities to be commissioned in India during the third five year plan.

Expansion of Bhilai

Under the expansion programme, the Bhilai steel works will have three more coke oven batteries of 65 ovens each in addition to the existing three batteries, two more blast furnaces of 1,719 cubic metres ; each in addition to three existing 1,033 cubic metre furnaces, four more open-hearth furnaces of 500 tons' capacity each. The capacity of open-hearth furnace No. 6 now in operation, will be increased by way of reconstruction from the present 250 tons to 500 tons. Th expansion of rolling mills will take the form of additions to the existing mills and the setting up of a wire and rod mill with an annual capacity of 400,000 tons wil be an entirely new unit.

At present, work on the expansion is being carried out in all the main shops of the Bhilai plant, according

what is the problem, sir?

If it has anything to do with banking services — and particularly if it relates to help and guidance for developing INDUSTRIES or developing IMPORT-EXPORT BUSINESS - we would cordially suggest a reference to us.

to schedule. A number of units are to be put into operation in the current year. Coke-oven battery No. 4 was fired on 13th April, 1964. The battery is expected to turn out coke shortly. Blast furnace No. 4, open-hearth furnace No. 7 and some other units are also planned to be commissioned this year. Russia has agreed to render assistance in the setting up of a large public sector steel plant in Bokaro with a capacity of 1.5 million tons of steel a year, which can be expanded to 4 million tons later.

It is interesting to note that a part of the equipment for the sixth blast furnace complex of the Bhilai steel works and for the Bokaro steel plant will be made completely in India at the heavy machine-building plant in Ranchi, another part will be made in co-operation with Russia which will supply separate units, details and aggregates. The fact that in the near future the principal requirement of mining and metallurgical equipment of India will be met by internal production is an index of the progress the Indian heavy engineering industry is making at present.

The heavy machine-building plant, with a production capacity of 80,000 tons of mechanical items, which is now being constructed in Ranchi, will produce machines and equipment for the metallurgical industry, including the equipment for sintering and by-product coke-shop, blast furnace, metallurgic, rolling, cranes equipment, as well as oil drilling, forging equipment, mine hoists and so on. After reaching the project capacity, the plant will annually produce the metallurgical equipment sufficient for setting up a metallurgical plant with a capacity of 1 million tons of steel a year. The plant will produce about 10,000 tons of equipment in 1964-65.

Another big heavy machine-building plant is the coal mining machinery plant in Durgapur with an annual capacity of 45,000 tons of various machines and equipment, including coal cutting machines, loading machines, conveyers, electro-locomotives, ventilators, pumps, hoists, etcetera. The products of this plant will enable to mechanise mines with a total annual capacity of 8 million tons of coal.

The Hardwar Plant

The Hardwar plant will produce effective power generating units in India. The capacity of turbo-generating units will be up to 200 megawatts and hydro-generators up to 100 megawatts. Besides, the plant will also manufacture the heavy and medium A.C. and D.C. electric motors, and other electrical equipment as well. The plant will be the largest of its kind in south-east Asia.

According to the latest details, the following power stations are being built with Russian economic and technical co-operation in different parts of the country.

Name of the station	Capacity in kilowatts
Neyveli thermal power station (Madras)	400,000
Korba thermal power station (Madhya Pradesh)	200,000
Obra thermal power station (Uttar Pradesh)	250,000
Patratu thermal power station (Bihar)	400,000
Harduaganj thermal power station (Uttar Pradesh)	100,000
Bhakra (Right Bank) hydro-power station (Punjab)	600,000
Mettur hydro-power station (Madras)	200,000
Balimela hydro power station (Orissa)	360,000
Hirakud hydro power station (Orissa)	25,000
	2,535,000

Apart from these nine stations, Russia has built power stations at the Bhilai plant and the Barauni oil refinery. Similar power stations are also going up at the Koyali refinery and at the Hardwar heavy electrical equipment plant. Of the above power stations, Neyveli has already started working to the capacity of 250,000 kilowatts. Some others are under active stages of construction and on the rest work has been begun only recently.

The production of precision instruments is the most important branch of the modern machine-building industry. The first large factory to manufacture a wide range of precision instruments, necessary for industrial development, will be erected in Kotah, which becomes one of the centres of instrument-making industry. One hundred and forty thousand electronic instruments of various types for industrial uses will be produced annually by this plant. The plant will be equipped with the most up-to-date machinery supplied by Russia. The Soviet specialists are preparing working drawings and other project documents for the plant. The precision instruments plant, after it is commissioned, will greatly meet the demand of instruments for Indian industries, thus effecting foreign exchange savings of Rs. 20 crores a year.

Russia is also rendering assistance in the establishment of another mechanical instruments plant in Palghat, Kerala. This plant will meet the requirement of India in mechanical, hydraulic and pneumatic instruments, including pressure, vacuum, flow and level measuring and control instrument as well as automatic and hydrolic control devices, control desk for automatic controllers and various pneumatic devices.

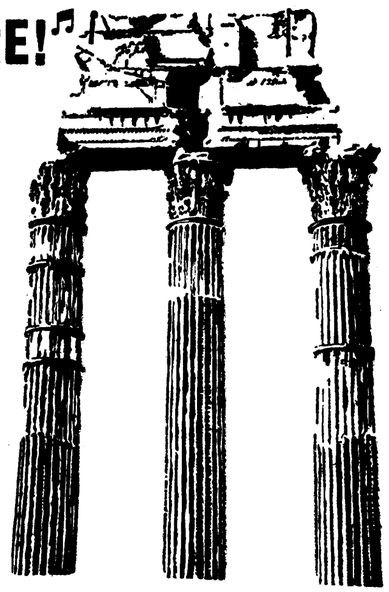
On 28th March, 1964, a protocol was signed in Moscow providing for assistance in the establishment of two big industrial enterprises; one for producing compressors and pumps with a capacity of 16.7 tons a year and the second for producing 10,000 tons of steel castings.

STEEL

Role of Design Organisation

The chairman of Hindustan Steel Ltd, Mr. M. S. Rao, has contributed an instructive article to the special number of *Yojana* from which the following extracts are reproduced:

"The achievement of physical and financial targets is only one aspect of development. The other relates to the question of know-how and the building up of a core of engineers and technicians who not only may man important posts in running the modern steel mills but, in due course, may also prepare designs, project reports and introduce innovations.



"In so far as the basic question of building up a core of engineers who could prepare plan projects and innovate is concerned, the importance of this was realised as early as 1955 when the Indian steel mission to Russia under Mr. S. S. Khera made recommendations on this matter in its report in August-September 1955. The matter was taken up at the level of the Government and later on, the management of H.S.L. pursued it earnestly resulting in the formation of the Central Engineering and Design Bureau (C.E.D.B.) in 1959. At the outset, this organisation under the overall charge of central headquarters consisted only of 13 engineers and now it has gone up to 250. The C.E.D.B. was organised with the following objectives:

"(a) to collect all the drawings of the three plants under construction and make a detailed study of these in this office and at site with a view to understanding the principles and practices that have been used.

"(b) at the earliest date, all planning, designing, manufacture, construction, erection, commissioning and operation should be done in our country and by us 100 percent.

"Although the high ambition of this Bureau for being able to prepare project reports for green field sites has not yet materialised, it is a mat-

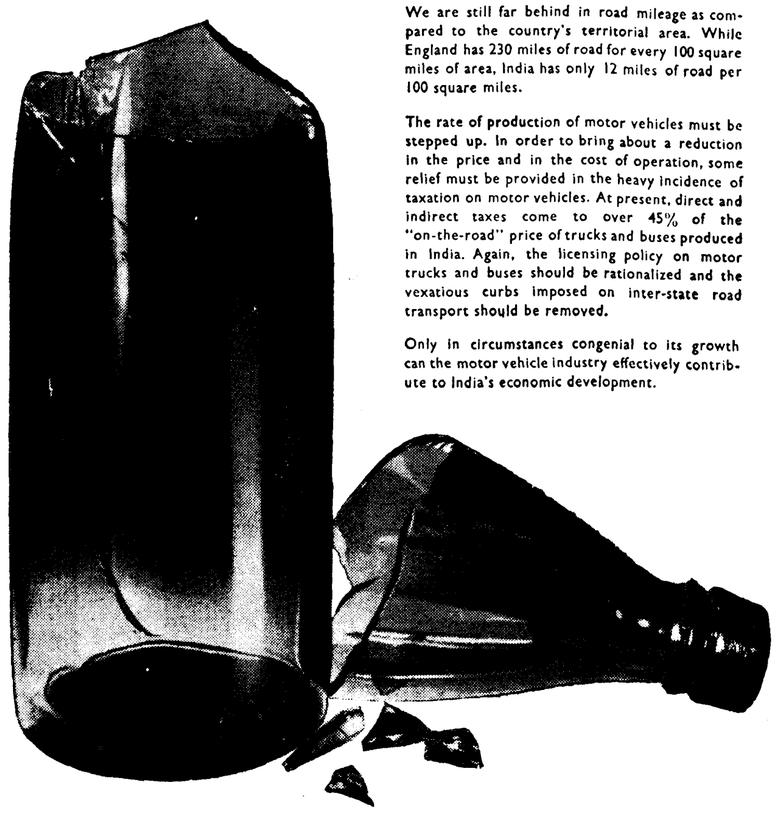
CASA-127 B

THIS BOTTLENECK MUST BE BROKEN

Today the whole country is astir with economic and industrial development. All our Five Year Plans aim at raising the standard of living of the masses. Very often, however, the development programmes in the country are obstructed by a bottleneck in transportation. *This bottleneck must be broken.*



Not all the rail wagons and all the railway tracks we plan to build can put us on the road to economic growth at the desired pace without the adjunct of an efficient system of motorized transport.

Countries in the West have economically forged ahead largely through the development of road transport. In the USA, for instance, some 2.8 million trucks are used in the agricultural sector alone, and the truck transportation industry provides employment to one out of every nine persons.

We are still far behind in road mileage as compared to the country's territorial area. While England has 230 miles of road for every 100 square miles of area, India has only 12 miles of road per 100 square miles.

The rate of production of motor vehicles must be stepped up. In order to bring about a reduction in the price and in the cost of operation, some relief must be provided in the heavy incidence of taxation on motor vehicles. At present, direct and indirect taxes come to over 45% of the "on-the-road" price of trucks and buses produced in India. Again, the licensing policy on motor trucks and buses should be rationalized and the vexatious curbs imposed on inter-state road transport should be removed.

Only in circumstances congenial to its growth can the motor vehicle industry effectively contribute to India's economic development.

Hindustan Motors . . . partners in India's industrial transformation

HM/HM/459

ter of satisfaction that against heavy odds in manning, this Bureau, even during the six years of its existence, has been able to take charge of expansions in Rourkela and Durgapur. Messrs Indian Gemeinsehaft Krupp-Demag, who were consultants for the 1-million-tonne construction of the Rourkela steel plant, have been ably replaced by the C.E.D.B. for the 1.8-million-tonne expansion of the Rourkela steel plant which is already under way. Similarly, in Durgapur, this organisation has replaced Messrs International Construction Company for the expansion of steel plant from 1 million tonnes to 1.6 million tonnes. The work of C.E.D.B. has been commended by such internationally reputed engineering and desiging organisations as Messrs International Construction Company and Messrs Gipromez of Russia.

"The Central Engineering and Design Bureau is now engaged in planning the expansion of Rourkela and Durgapur plants from 1.8 million tonnes to 3 million tonnes and 1.6 million tonnes to 2.5 million tonnes, respectively, for the fourth plan."

The observations recently made by the chairman of the Heavy Engineering Corporation, Mr. T. R. Gupta, therefore, came as a suprise. According to newspaper reports, Mr. Gupta said that the Corporation had decided to set up a central design organisation which would have 400 specialists in designing. He further said that by 1967-68, the Corporation would have about 2,000 graduate engineers, of which about 1,200 had already been appointed.

The question asked here is whether Mr. Gupta's design organisation is being created to design additional heavy engineering units, whether it is intended to meet the requirements of specified projects, such as steel mills, for which there already exists a tried and tested design organisation. In other words, is it intended to start a race between the Central Ministry of Steel which already possesses a design organisation and the Ministry of Heavy Engineering which is planning to set up a parallel organisation? Lastly, how does this planning for design organisations fits into the pattern of the Prime Minister's assurance of maximum economy in expenditure. It is not Mr Gupta but the Central Minister for Heavy Engineering, Mr. T. N. Singh, who may have to offer an explanation to Parliament, if not to the public.

SUGAR

New Ex-factory Prices

In a notification issued here, the Government of India has fixed the new ex-factory prices of sugar in the various regions after taking into account the increases allowed in the cane price and the estimates of duration and recovery for the 1964-65 season. The new prices are:

	(Prices a quintal)
For factories in the Lucknow division of Uttar Pradesh, Maharashtra and Mysore	Rs. 116
For factories in east Uttar Pradesh, Rohilkhand and Agra divisions of Uttar Pradesh, north Bihar, West Bengal, Gujarat and Andhra Pradesh	Rs. 118.75
For factories in Dehra Dun and Saharanpur districts of Uttar Pradesh	Rs. 121.25
For factories in Madhya Pradesh, Orissa, Madras, Pondicherry and Kerala	Rs. 123
For factories in Meerut, Muzaffarnagar and Bulandshahr districts of Uttar Pradesh, Punjab, south Bihar and Rajasthan	Rs. 129.25
For the factory in Assam	Rs. 126

The notification prescribes premiums and discounts for superior and inferior grades of sugar with reference to the price for D-29 grade. The new prices come into effect immediately.

FORD FOUNDATION

New Grants Announced

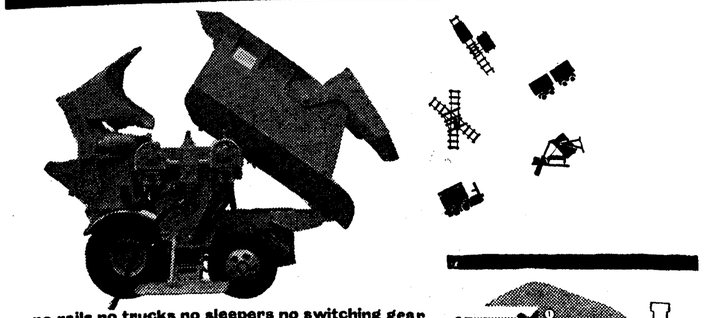
Grants totalling $1,066,000 for assistance to three institutions of higher education in India were recently announced by the Ford Foundation in New York. These grants are to Delhi University, $536,000; the Birla Institute of Technology and Science, $160,000; and for assistance to the Indian Institute of Technology in Kharagpur by the North Carolina State University, $370,000.

The new grants are part of the Ford Foundation's continuing assistance for India's efforts to improve her overall educational programme in keeping with the needs of her developing economy. Since 1951, the Foundation's aid in the educational and research fields in India has totalled almost $17 million. Assistance has been provided at the university level, the secondary school level, and in the technical and vocational fields.

As part of its continuing assistance for India's agricultural and rural development, the Ford Foundation announced a new grant of $163,000 on 15th November to the Allahabad Agricultural Institute. The grant provides funds to assist the Institute in launching a programme for testing and design of small tractors by its Agricultural Implements and Power Development Centre. This grant supplements the ones in 1962 and 1963, totalling $819,500, which aided the establishment of the Centre.

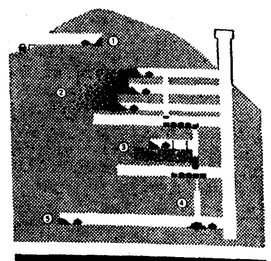
The new award will enable the Centre to test various sizes of tractors-*cum*-implements systems, in the 5 to 15 horse-power range, under different cropping conditions and to develop designs and specifications for tractors-and-implement systems suited to the operating needs in cultivators' fields. In this programme, tractors and associated equipment will be tested in on-farm field operations in three major type of arming areas, namely, in paddy, non-paddy, and "mixed" crop areas where paddy is grown in the wet season and other crops in the dry season. The project is directed to aid the solution of the present farm-power problems of agriculture, notably on medium-sized holdings.

A new grant for $1,246,000 for assistance to India's family planning and health programme was also announced by the Ford Foundation in New York. The grant is to assist the completion of the preliminary organisation and planning phase for operation of five intensive health and family planning districts, the National Institute of Health Administration and Education, and the Central Family Planning Institute.



Extending over a two-year period, the grant covers services of foreign consultants, foreign training of key Indian personnel associated with the programme, purchase of imported equipment and books, and architectural services to guide the planning of joint facilities for the two Institutes named. The grant is to the Central Ministry of Health, Government of India.

Grants by U.S. Government



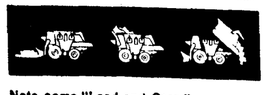
Two research grants totalling Rs. 71,440 have been extended by the U.S. Government to the Institute of Science, Bombay, and the University of Kerala. The grants, announced by the Bureau of Commercial Fisheries, U.S. Department of Interior, are from U.S.-owned rupees generated by the sale of agricultural products supplied to India under the U.S. Public Law 480 (Food for Peace) Programme.

One grant, of Rs. 40,000, will aid

Dump capital investment costs with the Load-and-Carry method

no rails no trucks no sleepers no switching gear no locos no tipping stations – just one man and one Autoloader (and compressed air) to load to carry to dump.

Less capital outlay and greater productivity. That's the end-result of the "Load-and-Carry" technique to offset rising overheads in production and development mining. A method that confines the entire muck-load haul cycle to only one man and one machine, the rubber-tyred Autoloader. A system that gives trackless mechanized handling with 65 per cent effective loading time on 100 ft. runs. And makes hauls of 600 ft. possible.



Unique machines-unique results. Man-hour output up from 4.5 to 13 tons in cut-and-fill stoping and 50% increased advance rate in drifts of coal mines in Central Europe. Mucking costs cut 30 per cent in sub-level caving in North America. Loading and dumping 500 tons of ore per man/shift to Scandinavia. These are authentic "Load-and-Carry" figures from mines. Figures that show how pneumatic Autoloaders keep costs down by performance as well as by equipment-saving design. More than 250 Autoloaders are already working in coal mines. And here are some reasons why:

Reduced development costs. Long haul capacity means fewer ore passes are needed.

Reduced working costs. Three-in-one Autoloader fully utilizes labour, cuts idle time

Increased output. Power assisted steering and speeds of up to 5 ft. a second enable quick hauls in winding drifts. Timber props are no hinderance.

A new "Load-and-Carry" booklet shows on-the-job applications of the method as adopted for various mining and tunelling conditions.

Note some "Load-and-Carry" applications:

1. Adit driving 2. Sub-level caving 3. Cut-and-fill stopping 4. Raise mucking 5. Drifting and tunnelling

IIM
CALCUTTA

INDIAN INSTITUTE
OF MANAGEMENT, CALCUTTA

Established by
The Government of India
in co-operation with The Government of West Bengal
as a National Institute for management
education and research

Collaborators:
The Alfred P. Sloan School of Management,
Massachusetts Institute of Technology, U.S.A.

The Institute has pleasure in announcing its programme of

POST-GRADUATE STUDY IN MANAGEMENT

A comprehensive two-year residential programme expressly designed for mature young people who seek executive careers in industry and Government.

Objective: The course seeks to give the student with a demonstrated interest in management a grasp of its basic concepts and a breadth of view, which will provide a foundation for development toward general management responsibility.

Curriculum: The course will draw on the best patterns of graduate management education in the U.S.A. and will emphasise the fundamentals which underlie sound management decisions. The programme of study will cover existing practices in the conduct of economic affairs, the environment of the enterprise, human factors in an industrial setting and the analytical tools available to management including operational research. The Institute will award a Post-Graduate Diploma in Management to those who successfully complete the two-year programme. However, it has requested powers to award degrees and expects that these powers will be granted.

Qualifying Education: Applicants should hold at least a Bachelor's degree in any subject or any professional qualification considered equivalent to a degree. The medium of instruction is English and a good command over the language is required.

Qualifying Test: An appropriate test for post-graduate study in Management will be administered at different centres in India. There will also be a qualifying interview.

Academic Year: The first year of the two-year programme will run from August 9, 1965 to May 6, 1966.

Fees: Fees for board, room and tuition will be Rs. 1,700/- per academic year.

Location: The programme will be residential, conducted at the Institute campus in Calcutta.

Applications and enquiries: Last date for application is February 1, 1965. Applications and information may be requested from:

The Programme Director
Post-Graduate Programme
Indian Institute of Management, Calcutta
"Emerald Bower"
56-A, Barrackpore Trunk Road, Calcutta-50

a project at the University of Kerala for research on the effects of using hormones from insects to stimulate egg growth in crustacea—a large class of mostly aquatic animals with jointed bodies and limbs and without spinal columns—particularly crabs and prawns.

The second grant, of Rs. 31,440, to the Institute of Science, Bombay, is for a one-year cytochemical investigation of animal tissues. Cytochemistry is the chemistry of cells. This project also includes study of the classification and relationships of common groups of fish and crustacea.

EXPORTS

Rise in September

Total exports from India in September this year were worth Rs. 75.5 crores. This was Rs. 12 crores higher than the total exports of Rs. 63.5 crores in September 1963. Apart from the fact that this is the highest figure for exports in any single month, it reflects a running rate of Rs. 900 crores a year—the most encouraging feature of the export performance.

Total exports during the first six months of the financial year 1964-65 (April 1964-September 1964) were worth Rs. 415 crores. This was Rs. 38 crores higher than the exports in the corresponding six months of 1963-64, which were of the value of Rs. 377 crores.

FOREIGN TRADE

Expert Team Arrives

An international team of experts in foreign trade has arrived here to study India's export efforts and suggest improvements. The study will cover the practice and techniques of foreign trade, working of trade organisations in India and trade representations abroad, commercial intelligence, market survey techniques, product and commodity research, export organisations, product adaptation, quality control and testing, and manpower and training for foreign trade.

The visit of the team has been arranged by the Ford Foundation at the request of the Central Ministry of Commerce. In the group are economic and trade consultants, managers of co-ordination departments of firms of world repute, representatives of associations of manufacturers and members of institutes of marketing and economic affairs. It consists of seven members, two each from the United States, the United Kingdom and Japan and one from Italy. They are Dr. Robert J. Clark, Mr. Masayuki Katoh, Mr. William Thomas Pearce, Mr. Alexander O. Stanley, Dr. Elio Tosarelli, Mr. Herbert William Vallender and Mr. Minora Yoshida. The team will be in India for six to eight weeks.

The counterpart Indian team constituted by the Central Ministry of Commerce is led by Dr. P. S. Lokanathan, Director-General of the National Council of Applied Economic Research. The programme of the team includes discussions with the export promotion councils, commodity boards, prominent exporters, honorary export promotion advisers and officials of the Reserve Bank of India.

UK

Trade Balance with India

India was able to reduce her adverse balance of trade with Britain by £485,000 during the nine months ended September 1964. Both ways, the trade declined. Imports from Britain declined by nearly £7 million for which machinery, non-ferrous metals and textile fibres and their waste were mainly responsible. Exports to Britain also declined by nearly £1 million over 1963 figures, tea and tobacco being the main sufferers. This was notwithstanding the fact that textile yarn, fabric and made-up articles showed a substantial increase, as did textile fibres and their waste.

ALUMINIUM

Hungarian Aid for Plant

A six-man team of Hungarian aluminium experts, headed by the General Manager of Aluex, Mr. Palszakal, was here last week, discussing with the Government the terms of contract to prepare project report for the Korba aluminium plant in Madhya Pradesh.

In 1961, Hungary offered her assistance for the establishment of an integrated aluminium plant to be elected in India. Later on it was decided that Hungarian co-operation will be invited for the establishment of an aluminium plant in Madhya Pradesh. The plant will have a yearly capacity of about 120,000 tons of aluminia. It will probably be situated near the 200-megawatt power station in Korba.

The project report is to be prepared by experts partly of the Hungarian and partly of the Indian organisations, and the work is to be executed partly in India and partly in Hungary.

KHADI

Rebate on Woollen Goods

The Government of India has decided to give an additional rebate of 10 percent on retail sales of all varieties of woollen *khadi* on which a normal rebate of 10 percent is admissible.

The additional rebate will be allowed with effect from 14th November, 1964, for a period of 45 days, which may be split up in two or more periods as decided by the Khadi and Village Industries Commission, on all sales of such woollen goods effected by *khadi* sales emporia, *khadi bhandars* and institutions certified by the Khadi and Village Industries Commission.

MINERALS

New Exploration Programme

The Central Ministry of Steel and Mines has prepared a scheme, "Operation Hard Rock", envisaging a crash programme of mineral discovery and development.

The total cost of the scheme would be about Rs. 2 crores. This includes Rs. 94 lakhs for contractual airborne survey and the salaries of foreign experts who will be appointed by the contractor, about Rs. 47 lakhs for contractual diamond drilling and Rs. 24 lakhs for the purchase of equipment.

The U.S. A.I.D. has indicated its willingness to advance a loan of about $3.5 million to cover the foreign exchange cost of the scheme.

CORRUPTION

Recommendation Accepted

The Government of India has accepted the recommendation of the Committee on Prevention of Corruption (Santhanam Committee) that all complaints and allegations appearing in responsible newspapers should be scrutinised and investigated thoroughly.

London

INTERIM LABOUR BUDGET HAS QUIET RECEPTION

(FROM OUR LONDON CORRESPONDENT)

LABOUR'S first Budget has had a generally quiet reception, for although Mr. Callaghan, the U.K. Chancellor of the Exchequer, emphasised that he had a two-fold aim—to achieve a balance on overseas payments and to adjust the social balance at the same time—it is difficult not to come to the conclusion that his real purpose was to create an atmosphere in which it would be possible to devise an incomes policy acceptable to both employers and the trade unions, for it is along that track that the real solution of the economic malaise really lies, as has been evident for a long time. Insidious, but less drastic than had been feared, was the City's immediate verdict, and share prices actually staged an upward move in unofficial dealings. The full implications of Mr. Callaghan's first bite at the Budgetary cherry, however, still remain to be realised, and second thoughts and a period of hesitancy may well be expected fairly soon. Briefly, Mr. Callaghan's proposals, were as follows:

Income tax: Standard rate to rise by 6d to 8s 3d from 6th April, 1965. Reduced rates of first £300 of individual's taxable income after personal allowances not affected. Estimated yield in a full financial year £122 million.

Petrol duty: Increase of 6d a gollon on petrol, light hydo-carbon oils, and diesel oil for road vehicles. Effective right away. Yield in 1964-65, £32 million. In a full year £93 million. Measure will add one-fifth of a point to the cost of living index, which now stands at 107.8:

National insurance: Contributions to rise from 29th March, 1965, as follows: Employed man: 2s a week; employer: 3s 3d a week: and employed woman: 1s 9d a week; employer: 2s 10d a week.

Pension increases: National insurance and associated benefits to go up from 29th March: Single people: By 12s 6d to £4 a week; married couples: By 21s to £6 10s a week; "Widows": By £1 to 30s a week. Affects some 83,000 women married before 5th July, 1948, and not eligible for benefits under the 1948 Act. Earnings rule for all widows to be abolished. War pensions and industrial injury benefits to be increased, by £1 to £6 15s for 100 percent disability. National assistance rates up by 12s 6d for single people and 21s for married couples.

Reform of taxation: Mr. Callaghan gave warning that he would "look closely in the coming months at the avoidance of tax." He proposed two major tax reforms for next spring:

Capital gains tax: Applicable to gains arising from assets "whenever acquired." Amount liable to tax will be different between value on Budget Day, 1965, and amount realised by subsequent sale. Tax will not be charged against sale of owner-occupied house which is owner's "own or main place of residence."

Company taxation: Corporation tax to replace income tax and profits tax on companies. New tax would mean reduction in current levy on undistributed profits, as total revenue raised would be same as from the present combined tax. Firms would thus have incentive to develop through use of ploughed-back profits. The Chancellor also proposed legislation to give effect to the 15 percent imports levy and tax incentives to exporters, including rebate on petrol and vehicle licence duty, announced on 26th October. Books and periodicals, ships of 80 tons or more and large aircraft exempt from levy.

Effect of Tax Changes

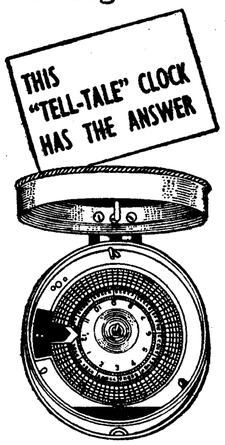
In a full year the tax changes will produce £415 million, comprising £122 million from income tax, £93 million from petrol duty and £200 million from imports levy. National Insurance and National Assistance improvements, with abolition of prescription charges, will cost £130 million. Mr. Callaghan said that allowing for the import charges, export rebate and increased petrol duty, the overall deficit next April might now be between £400 and £450 million, against Mr. Maudling's estimated £790 million.

The Government's main object at this stage seems to have been to balance the books, with sufficient revenue being raised in new taxes to pay for improved social benefits and to permit some reduction in the size of the Exchequer deficit. The net deflationary effect is likely to be quite mild. In terms of strict Budget arithmetic, the overall deficit of revenue against expenditure will be about £100 million less than expected as a result of the changes proposed by the Chancellor. But most of the additional tax charges will fall on companies and taxpayers in the upper and middle income ranges and so, to some extent, may be met at the expense of savings. Most of the increase in social benefits, on the other hand, will be spent by the people receiving them. The amount by which total demand is reduced is likely, therefore, to be small.

Only the increased duty on petrol and diesel fuel, in any case, will take effect immediately. Income tax will not begin to be raised until 6th April next year. This is in keeping with the Chancellor's view that the additional pressure on resources to be expected as imports fall off and exports rise will only make itself felt gradually. The same is true, of course of higher pensions and other benefits, which do not come into force until the spring.

The Chancellor has, moreover, left himself room to take other steps if the pressure of demand appears to need further tightening. It was pointed out in the City that the Budget had made use only of fiscal weapons. A whole range of monetary measures—restrictions on bank lending, for example, and higher interest rates—could still be used to lighten the loan on the economy if that seemed necessary.

Industrial Costs



The least desirable effects of the Budget will be the raising of industrial costs. The higher cost of petrol and disel fuel will impose an additional burden on industry at a time when the Government is anxious that costs and prices should be kept down. The 3s 3d increase in employers' National Insurance contributions will also add heavily to the bills of firms that are large employers of labour.

The Budget has been judged by such a variety of tests that the final assessment upon it may take some time to appear. Budgets in the past have frequently had a delayed action effect, but none seem, in retrospect to have qualified more for it than Mr. Callaghan's.

These are some of the tests: Will Mr. Callaghan's proposals strengthen Britain's competitive position in world trade? Will they make it easier for the Government to secure policies for incomes and prices? Are they "equitable" by the Government's own understanding of the word? Has Mr. Callaghan been as efficient as he should have been? What will the effect of the Budget be on Labour, Conservative, and Liberal stalwarts in the country?

Conservative and Liberal opinion regards the Budget as the first evi-

dence that the Government is to propose a heavy increase in national expenditure and is already being driven, despite statements made during the election campaign, to increase taxation. Sir Alec Douglas-Home made this point in the House. Liberals suspect that the Government has presented the national accounts in such a way as to justify action which might not have been necessary if Labour had not had its own programme of social change to finance.

Part of the difficulty in assessing the effects of the Budget arises from the time-table fixed by the Government. The import surcharge will run until 30th November next year and will be renewable for not more than one year by affirmative resolution of Parliament. Mr. Callaghan told the House that he would make the first review of the working of the surcharge in the spring. If he reduced it then, or took it off, it would not only please the countries which export to Britain, but would alter the yield of the tax to the Treasury.

Incomes Policy

One of the main objects of this Budget is undoubtedly to prepare the base from which the Government can go on to negotiate an incomes policy with the trade unions and with industry. In at least one helpful quarter, the Budget was thought to show the right approach. Mr. George Woodcock, General Secretary of the T.U.C., said: "They have revealed early on their grand strategy. I approve it—I think it is right. I'm surprised they've done so much. I think it is remarkable testimony to the vigour with which they've gone in." But would it actually turn the trick and achieve the almost impossible task of bringing off a working incomes policy? Mr. Woodcock was more reserved about that, pointing out that a Budget was a limited instrument and that its usefulness would depend on its "psychological effects," which are, of course, not easy to predict.

On the other hand, at least one senior trade union leader has already told Mr. George Brown to his face that he wants his (very well-paid) members to be at the top of the list of exceptions to any guiding light, and other leaders have expressed much the same views more privately. Although the Budget may set a proper social context within which the search for an incomes policy should take place—with its emphasis on relief for the worst off and greater burdens for the wealthier—it may prove to be an obstruction to getting the consent of one important part of the working population, the highly paid manual workers. In any incomes policy, their earnings would be expected to advance more slowly than those of workers at the lower end of the income scale, but the 6d on petrol and on the standard rate of income tax, plus the increased insurance contributions, could be just enough to tip the balance against their easing up on wage demands.

TRENDS OF GROWTH IN INDO-U.K. TRADE

By V. Bhanu Koti

The United Kingdom has been a major importer of Indian products, and this country an important market for many British manufactures, especially machinery and producer goods. The economic relations between the two have recently improved, with Britain taking a continuing interest in India's economic progress.

INDIA'S ties with the United Kingdom, both political and economic, are more than two centuries old. The U.K. has all along been and is likely to continue to be an influential factor in India's foreign trade. An attempt has, therefore, been made in the following to make a detailed study of Indo-British trade in the post-independence period on the basis of the monthly and annual statistics maintained by the Department of Commercial Intelligence and Statistics, Calcutta.

The relative importance of the U.K. in India's foreign trade and of India in Britain's foreign trade are brought out in the table below:

Year	The U.K.'s share in India's foreign trade		India's share in the U.K.'s foreign trade	
	Exports	Imports	Exports	Imports
	Percent	Percent	Percent	Percent
1948	22.4	23.7	5.8	4.6
1949	23.3	24.0	6.3	4.3
1950	23.4	20.7	4.3	3.7
1951	26.0	16.5	4.2	3.9
1952	21.5	21.6	4.1	3.5
1953	28.7	26.3	4.2	3.3
1954	32.0	23.4	4.1	4.3
1955	28.1	25.5	4.3	4.0
1956	30.2	24.7	5.1	3.6
1957	24.4	22.9	5.1	3.8
1958	28.4	19.3	4.8	3.6
1959	27.1	19.7	4.9	3.5
1960	27.3	19.4	4.1	3.2
1961	24.7	19.0	3.9	3.2
1962	23.9	16.5	2.9	3.0
1963	22.4	15.6	3.2	2.9

Source: Annual Trade Accounts published by the Indian and U.K. Governments.

It may be observed that India's share in the U.K.'s external trade (both exports and imports) has, for obvious reasons, been very small, and has gradually fallen during the period under review. The U.K.'s share in India's foreign trade has, on the other hand, been considerably large. It is interesting to note that Britain's share of India's exports has gradually increased from 22 percent in 1948 to 30 percent in 1956, but it has, thereafter, returned to the 1948 level by 1963. This indicates the nature of diversification during the period in the direction of India's exports which have been rising steadily in the last few years. In the case of imports, however, Britain's share has, on the whole, undergone a gradual declining tendency, especially in the last few years. The fall is quite considerable, from 24 percent in 1948 to 17 percent in 1962 and to 16 percent in 1963. This clearly brings out the shift in India's reliance on other countries for her requirements of capital goods, iron and steel products and other items of manufacture required for her economic development.

Growth of Trade

The growth of India's trade with the U.K during the period under review is illustrated in the following table at the bottom of columns I and II.

India's exports of the various articles classified under broad groups are given in the table below for selected years.

(In crores of rupees)

Group	1948-49	1953-54	1958	1961-62	1962-63	1963-64
Plantation crops (chiefly tea)	46	73	90	74	76	71
Agricultural and animal products	19	21	22	22	21	22
Minerals	2	5	5	5	4	3
Textile and fibrous products	23	23	23	27	27	31
Other manufactured goods	12	23	24	34	35	33
All others	1	5	1	N	N	1
Total	103	150	165	162	163	161

The above figures clearly bring out the increasing diversification in the commodity pattern of exports. The major group of "plantation crops" constituted about 50 percent of total exports until 1958, but its share declined to 47 percent in 1962-63 and 44 percent in 1963-64. Exports of the allied group of "agricultural and animal products" recorded only small increases until 1958, and were, thereafter, almost stationary. The two groups relating to manufactured goods recorded considerable increases. The rise in the exports of "other manufactured goods" was quite conspicuous, there being, however, a small decrease in 1963-64. The broad trends for the principal export commodities are reviewed below:

Tea: Nearly 60 percent of India's total exports of tea, the most important foreign exchange earner, are sent to the U.K. The exports rose steadily from Rs. 46.2 crores (142 million kilograms) in 1948-49 to Rs. 100.8 crores (147 million kilograms) in 1954-55. While the increase in quantity was marginal, the value more than doubled. In the next year, tea exports fell sharply to Rs. 74.1 crores (126 million kilograms), but picked up considerably in the succeeding two years totalling Rs. 89.4 crores (149 million kilograms) at the end of 1958. In 1959, they declined steeply to Rs. 75.4 crores (126 million kilograms). There was a slight increase to Rs. 77.5 crores in 1960-61 and once again a decrease to Rs. 73.4 crores in 1961-62. After recording a small rise to Rs. 75.6 crores (128 million kilograms) in 1962-63, they registered a considerable fall in 1963-64 to Rs. 70.4 crores (117 million kilograms).

(In crores of rupees)

Year	Exports	Re-exports	Total of exports and re-exports	Imports	Balance of trade (Col. 4 minus Col. 5)
1	2	3	4	5	6
1948-49	102.7	0.6	103.3	153.4	−50.1
1949-50	115.5	2.6	118.1	155.8	−37.7
1950-51	135.2	4.6	139.8	135.3	+ 4.5
1951-52	167.9	1.8	169.7	162.3	+27.4
1952-53	122.4	0.9	123.3	152.4	−29.1
1953-54	150.1	1.3	151.4	161.1	− 9.7
1954-55	187.0	1.3	188.3	164.3	+24.0
1955-56	167.9	1.8	169.7	197.8	−28.1
1957*	160.3	0.9	161.2	244.9	−83.7
1958*	165.1	1.3	166.4	170.5	− 4.1
1959	161.2	4.5	171.7	186.8	− 15.1
1960-61	172.3	1.8	174.1	217.2	−43.1
1961-62	161.6	1.2	162.8	200.2	−37.4
1962-63	163.2	1.0	164.2	185.6	−21.4
1963-64	160.7	0.7	161.4	168.9	− 7.5

* The statistics were maintained on the calendar year basis.

The broad trends discernible from the above figures are:

(a) Both exports (including re-exports) and imports recorded considerable fluctuations from year to year, but on the whole tended to increase.

(b) Exports recorded a relatively more substantial growth than imports. Viewed from the export promotion point of view, however, the position during the last three years is not satisfactory as the exports have gradually fallen and have become more or less static at the level of Rs 162 crores.

(c) While both exports and imports have declined from 1960-61, the fall in imports has been much larger than exports. Consequently, the adverse balance of trade was considerably reduced in the last two years.

The exports thus recorded a rise during the first half of the period (1948-49 to 1954-55), but fell in the other half. The former trend was due to more remunerative prices as reflected in the rise in the unit value (f.o.b. price), from Rs. 3.3 a kilogram to Rs 7 a kilogram. The latter (adverse) trend was apparently due to a fall in the price which stood at Rs. 5.8 a kilogram in 1955-56 and Rs. 5.6 a kilogram in 1962-63. Although the price slightly improved to Rs 6.1 a kilogram in 1963-64, the increase did not produce any favourable effect on the exports which fell substantially in that year, obviously due to a decline in demand.

India has been the chief supplier of tea to the U.K., accounting for more than half of the latter's total imports. Substantial curtailment in the British imports of tea resulting from lower demand seems to be the only reason for the fall in India's exports in 1963-64, compared with the previous year. The U.K. reduced her imports from £117.4 million (562 million lbs) in 1962-63 to £108.5 million (539 million lbs). Ceylon suffered a greater setback than India from the import cut. Her share of British imports fell from £37.2 million to £33.8 million, as against the decrease in India's share from £61.7 million to £59.5 million. The shares of other important exporters, namely, Kenya and Rhodesia and Nyasaland, also fell from £3.7 million to £3.5 million and from £3.5 million to £2.8 million, respectively.

Leather (tanned and dressed): Exports fluctuated considerably until the year 1959, and then showed a falling trend. They increased from Rs. 8.9 crores (12.1 million kilograms) in 1948-49 to Rs. 19.4 crores (18.9 million kilograms) in 1951-52. While the quantity rose by 50 percent the value more than doubled during this period mainly because of the rise in the price from Rs 7.4 a kilogram to Rs. 10.3 a kilogram. In the next year, it declined to Rs. 14.4 crores (18.8 million kilograms), but rose again to Rs. 19.2 crores (22.7 million kilograms) in 1953-54, partly due to the higher price (Rs. 8.5 a kilogram). They started falling from 1954-55 and were at Rs. 12.3 crores (12.6 million kilograms) by the end of 1958, although the price increased further to Rs. 10 a kilogram. In the next year (1959) they, however, shot up to Rs 18.8 crores (17.5 million kilograms), because of a further rise in price to Rs. 10.7 a kilogram. The exports once again started decreasing and touched a low level of Rs. 12 crores (12.5 million kilograms) in 1962-63 when the price fell to Rs. 9.6 a kilogram. In the next year, they improved slightly to Rs. 12.9 crores (12.1 million kilograms), partly on account of a better price (Rs 10.7 a kilogram).

India was also the major supplier of tanned leather to the U.K and accounted for about one-third of her imports in 1962-63 and 1963-64, which rose from £24.7 million to £28.3 million. India's share rose from £9.1 million to £9.7 million. The share of the Irish Republic, the second important supplier, also rose from £2.8 million to £3.2 million. Russia, Australia, France and Canada came next in order of importance. While the share of Australia decreased from £2.0 million to £1.7 million, the shares of Russia, France and Canada increased from £1.7 million to £2.2 million, from £1.3 million to £1.5 million and from £1.1 million to £1.2 million, respectively.

Cotton fabrics: Cotton fabric exports also recorded wide fluctuations. There were no exports in 1948-49. In the next two years, the exports amounted to Rs. 3.3 crores (28 million metres) and Rs 10.7 crores (83 million metres), respectively. They then declined to Rs. 5.5 crores (44 million metres) in 1951-52 and touched the lowest level of Rs. 40 lakhs (3 million metres) in 1952-53. They then began to rise slowly and in 1960-61 totalled Rs 15.2 crores (163 million metres) and again slumped to Rs. 11.4 crores (120 million metres) in 1961-62 and further declined to Rs. 5.6 crores (47 million metres) in 1962-63. These exports, however, picked up substantially in the next year amounting to Rs. 15.4 crores (165 million metres).

India, Hongkong and Belgium were the major exporters of cotton cloth to the U.K. during the two years 1962-63 and 1963-64. Britain's total imports of cotton cloth amounted in these two years to £43.2 million and £47.5 million respectively. While the share of Hongkong in the total imports decreased from £10.5 million to £9 million, India's share rose from £9.1 million to £11.8 million. Belgium's share also rose from £6.6 million to £7.3 million. West Germany was another important exporter and her share rose from £3.6 million to £3.9 million. The Netherlands, Pakistan and China also exported cotton cloth to the U.K., but their shares were comparatively low.

Oilcakes—Non-essential vegetable oilcakes (including

practically did not feature in the export trade during the year 1948-49 to 1953-54. The exports were, however, considerable in 1954-55 amounting to Rs. 1.3 crores (30,000 tonnes) and they almost trebled in the next year to Rs. 3.4 crores (93,000 tonnes). After a fall in 1957 to Rs. 1.6 crores (49,000 tonnes), they shot up to Rs. 7.1 crores (200,000 tonnes) in 1958 and rose further to Rs. 13.4 crores (322,000 tonnes) in 1959. They, however, fell in 1960-61 to Rs. 10.7 crores (320,000 tonnes) but rose in the next year to Rs. 12.3 crores (348,000 tonnes) and to Rs. 15.8 crores (430,000 tonnes) in 1962-63. They again decreased to Rs. 13.2 crores (361,000 tonnes) in 1963-64.

Indian supplies of oilcakes constituted more than one-third of the U.K.'s total imports of the commodity during 1962-63 and 1963-64, which amounted to £40.9 million and £35.5 million, respectively. Canada and Burma were the next in order of importance. While India's share in British imports was reduced from £14.3 million to £13.0 million, Canada's share was £8 million in each of the two years. Burma's share also fell from £6 million to £4.9 million. Argentina and Nigeria were the other less important exporters. While the former's share decreased from £3.5 million to £1.9 million, the latter's rose from £2.2 million to £2.8 million.

Raw tobacco : Exports of raw tobacco, on the whole, recorded a rising trend. From Rs. 3.7 crores (12.2 million kilograms), in 1948-49, they increased to Rs. 8.9 crores (19.4 million kilograms) in 1951-52 and then fell to Rs. 6.5 crores (13.5 million kilograms) in 1953-54. They again picked up gradually and reached the highest level of Rs. 10.9 crores (24.2 million kilograms) in 1960-61, but then once again declined. They decreased to Rs. 9.8 crores (17.3 million kilograms) in 1961-62 and further to Rs. 9.6 crores (16.8 million kilograms) in 1962-63. In the next year, the quantum declined slightly to 16.6 million kilograms, but the value rose by a small margin to Rs. 9.8 crores.

India occupied third place among the exporters of raw tobacco and tobacco manufactures to the U.K. during 1962-63 and 1963-64, the first two being the U.S.A. and Rhodesia and Nyasaland. While the total British imports of the commodity rose from £80.4 million to £104.6 million during these two years, India's share rose only from £8.6 million to £9.1 million. The share of the U.S.A., on the other hand, rose from £36.2 million to £49.7 million and that of Rhodesia-Nyasaland from £23.8 million to £29.4 million. British North Borneo, another important supplier, however, witnessed reduction in its share from £9.6 million to £8.8 million.

Jute goods: A falling trend is noticeable on the whole in the exports during the period. The value decreased from Rs. 17.9 crores in 1948-49 to Rs. 7.2 crores in 1950-51, but in the next year, they recorded an unusual rise of Rs. 43.9 crores. The exports then declined to Rs. 7.3 crores (33,000 tonnes) in 1952-53, but nearly doubled to Rs. 14.2 crores (75,000 tonnes) in the subsequent year. They then started falling and reached the lowest position of Rs. 5.7 crores in 1957. In the next three years, they improved gradually and amounted to Rs. 9.0 crores (48,000 tonnes) in 1960-61. During the remaining three years, they again exhibited the falling tendency and stood at Rs. 7.1 crores (42,000 tonnes) by the end of 1963-64.

Raw wool : Exports on the whole showed a rising tendency, although they were subject to small fluctuations from year to year. They increased from Rs. 40 lakhs (1.4 million kilograms) in 1948-49 to Rs. 4.5 crores (6.8 million kilograms) in 1950-51. They, however, declined to Rs. 3 crores (5.0 million kilograms) in 1951-52. From next year, they started rising and touched the peak level of Rs. 4.9 crores (8.1 million kilograms) in 1955-56. They again began to fall and reached a very low position of Rs. 1.6 crores (2.7 million kilograms) by 1962-63. They, however, picked up considerably in the next year and amounted to Rs. 4.4 crores (4.2 million kilograms), the increase being more in value.

Woollen carpets: Exports exhibited minor variations, but on the whole, recorded a rising trend. They increased from Rs. 1.7 crores in 1948-49 to Rs. 4.5 crores in 1950-51, but fell to Rs. 1.7 crores in 1952-53. Except for a small decrease in 1957 and 1958, they started rising slowly and amounted to Rs. 2.7 crores in 1959. Once again they showed a falling trend amounting to Rs. 1.7 crores in 1962-63. In the next year, however, they improved to Rs. 2.5 crores.

Among the other important items, cotton yarn, cashewnut kernels, coir manufactures, chemicals and manganese ore on the whole recorded, increases. Their exports increased from "nil", Rs. 20 lakhs, Rs. 1.7 crores, Rs. 50 lakhs and Rs. 30 lakhs in 1948-49 to Rs. 2 crores, Rs. 1.1 crores, Rs. 1.9 crores, Rs. 70 lakhs and Rs. 50 lakhs in 1963-64, respectively. Exports of vegetable oils, however, decreased substantially from Rs. 2.8 crores to Rs. 1.1 crores, after recording a high figure of Rs. 10.6 crores in 1955-56. Similarly exports of "towels in piece" which were "nil" in 1948-49, fell from Rs. 2.5 crores in 1949-50 to Rs. 1.3 crores in 1963-64. Declining exports are also noticeable in hides and skins and lac. Exports of the former declined from Rs. 1.7 crores in 1948-49 to Rs. 50 lakhs in 1963-64, and those of the latter from Rs. 2.1 crores to Rs. 60 lakhs. Exports of mica were more or less stationary, especially during the latter part of the period. They amounted to Rs. 1.5 crores in 1963-64, compared with Rs. 1.6 crores in 1962-63 and Rs. 1.7 crores in 1961-62.

Imports from U.K.

The table below gives a broad picture of the imports into India from the U.K. during the selected years.

(In crores of rupees)

Group	1948-49	1953-54	1958	1961-62	1962-63	1963-64
Machinery and transport equipment	83	86	97	110	105	103
Manufactured goods	60	60	60	69	65	58
All others	10	15	14	21	16	8
Total imports	153	161	171	200	186	169

The machinery and transport equipment group accounted for more than 50 percent of the total imports from the U.K. The imports of this group of items gradually increased until 1961-62, but fell in the next two years. The percentage share of the imports, however, increased from 55 in 1961-62 to 56 in 1962-63 and to 61 in 1963-64. The same trend is noticeable in the imports of the "manufactured goods" group, but the percentage shares decreased from 39 in 1948-49 to 34 in 1963-64. The main trends for the principal items are described below:

Machinery (electric and non-electric): Imports increased considerably during the period as a whole, although there were some yearly fluctuations. They amounted to Rs. 65.6 crores in 1948-49 and then moved up and down alternatively until 1957, when they were the highest amounting to Rs. 101.7 crores. They recorded a steep fall to Rs. 79.6 crores in 1958, but showed considerable rises in the years 1959 and 1960-61 amounting to Rs. 84 crores and Rs. 90.7 crores, respectively. They then registered a gradual decline in the remaining three years to Rs. 90.2 crores, Rs. 86.9 crores and Rs. 85.5 crores, respectively.

Transport equipment: This item also exhibited broadly the same trend. The imports at first declined from Rs. 16.9 crores in 1948-49 to Rs. 14.2 crores in 1950-51, but rose later to Rs. 18.8 crores in 1951-52. They then fell to Rs. 17.2 crores in 1954-55 and again increased to Rs. 23.5 crores in 1955-56. During the subsequent 1955-56, but gradually declined to Rs. 2.6 crores in 1959. In the next year they, however, increased to Rs. 6.6 crores. They gradually declined thereafter to Rs. 6 crores in 1961-62, Rs. 4 crores in 1962-63 and to Rs. 3.6 crores in 1963-64.

Textile manufactures : Imports of textile manufactures recorded a very steep fall from Rs. 17.8 crores to Rs. 1.9 crores during the period under review. The large imports of cotton manufactures amounting to Rs. 12.2 crores and Rs. 12.4 crores in 1948-49 and 1949-50, respectively, fell to Rs. 4.4 crores in 1951-52 and to Rs. 3.5 crores in 1955-56, and were more or less static at Rs. 2 crores during the last three years 1961-62 to 1963-64. Similarly, imports of woollen manufactures decreased from Rs. 3.8 crores in 1948-49 to Rs. 1.6 crores in 1952-53, and further to Rs. 20 lakhs in 1958. During the remaining part of the period, they were comparatively low. They were the lowest in 1963-64 (Rs. 2 lakhs). As for art silk goods, the imports first increased from Rs. 1.9 crores in 1948-49 to Rs. 2.8 crores in 1959, and thereafter, fell heavily and were worth only Rs. 1 lakh in each of the years 1962-63 and 1963-64.

Among the less important commodities, the imports of paper and paper-board showed on the whole a fall from Rs. 2.3 crores in 1948-49 to Rs. 1.2 crores in 1963-64, and those of refractory materials and bricks from Rs. 50 lakhs to Rs. 20 lakhs. Scientific and controlling instruments, photographic and optical goods, etcetera, on the other hand, doubled from Rs. 1.5 crores to Rs. 3.3 crores.

three years, they decreased and amounted to Rs. 16.8 crores at the end of 1959. In the next year (1960-61), they once again rose to Rs. 22.4 crores. During the last three years, they, however, fell. They amounted to Rs. 19.9 crores and Rs. 17.7 crores in 1961-62 and 1962-63, respectively, but registered a small increase to Rs. 17.9 crores in 1963-64.

Base metals and metal products : Imports more than doubled from Rs. 13.1 crores in 1948-49 to Rs. 28.2 crores in 1957. In the next year they fell to Rs. 20.2 crores, but again increased in 1959 to Rs. 24.4 crores. In the following year, they further increased reaching the peak level of Rs. 38.9 crores. They started, however, declining in the subsequent three years, amounting to Rs. 29.7 crores, Rs. 26.2 crores and Rs. 22.6 crores, respectively.

Chemicals : The imports underwent marked fluctuations, but on the whole, decreased from Rs. 16.7 crores in 1948-49 to Rs. 14.7 crores in 1963-64. They were the highest in 1957 (Rs. 27.4 crores).

Wool tops : There were no imports during the years 1948-49 to 1950-51, but they amounted to Rs. 5.3 crores in 1951-52. After a fall to Rs. 3.9 crores in 1952-53, they began to rise in the subsequent years and stood at Rs. 8.1 crores in 1957. By the end of 1960-61, they declined to Rs. 4.2 crores and further fell to Rs. 2.2 crores in 1962-63. In the next year, however, they rose to Rs. 5.2 crores.

Petroleum products : Imports nearly trebled during the period under review. They increased from Rs. 1.1 crores in 1948-49 to Rs. 8.4 crores in

Jute

INDIAN MOVE TO GET EXEMPTION FROM U.K. IMPORT SURCHARGE

CIRCLES close to the jute industry have welcomed the Government of India's move to persuade the British Government to exclude jute goods from the purview of the 15-percent import surcharge. They are surprised that the very first step taken by the Labour Government should have revised the trend towards reducing the mark-up on imported hessian. The surcharge, in effect, restores the protection enjoyed by the Dundee industry to the former level. Britain's imports of common hessian in bagmaking widths are being gradually transferred from the Government to private trade. The new surcharge will add to the difficulties of sack sewers and dealers in the U.K. The jute goods promotion plan will suffer since bags will be dearer due to the increase in the prices of hessian.

As the surcharge will also be applicable to imports of jute yarn, the U.K. carpet trade will be affected since large lots of yarn are imported to supplement the output of Dundee. The revival of protection for the Dundee jute industry, it is said, will not materially improve its production or employment potential. Most jute mills in the district have started producing speciality goods. Now the district's annual output of common hessian is about 3 percent of the total. Besides, there is a shortage of skilled labour. As jute packaging becomes dearer in the U.K., its use will shrink, while paper and synthetic containers and bulk handling will get a boost.

U.S. Market Requirements

The markets which are now being explored by the Indian jute industry are far more exacting than its present ones, said Mr. William A. Nugent, representative in North America of the Indian Jute Mills Association in a recent Press interview in New York. The new markets call for fabrics which are lint-free, dust-free, pre-sized, fire-retardant, mildew-resistant, calendered to a smooth finish and with a low oil-content, of uniform width and free from bias. With these essential qualities in view, close attention is being paid to quality control and finishing techniques at the mills in Calcutta, Mr. Nugent added. Once the aims are achieved, the continued advantage of low cost will give an automatic boost to the consumption of the end-products. The I.J.M.A. representative said that the industrial uses to which jute goods have so far been put were meant to strengthen the interior constructions of furniture or bedding; they were also put to heavy-duty uses in construction, mining and other general applications in which a low-cost and high-strength textile quality was deemed adequate for the job. In such uses the presence of loose hairy fibres, dust and high oil-content is no problem.

While burlap piecegoods for industrial uses accounted for 27 percent of the total consumption of the fabric in the U.S.A. last year, the jute industry believes that its share of the industrial textile market can be increased by upgrading the products to meet the exacting demands of a wider range of end-uses. Mr. Nugent referred to the research and development programme launched in the U.S.A. by the I.J.M.A. in collaboration with the Fabric Research Laboratories of Dedham, Massachussets, and said that a team of top-ranking technologists were at present keeping in close touch with consumers to study their specific needs. Although it is in its early stages, the programme has made encouraging progress in certain spheres.

Use as Decorative Fabric

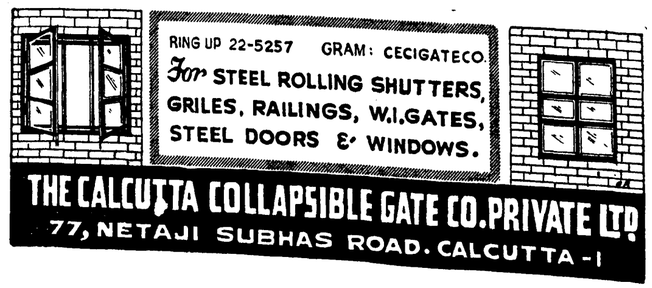
Dyed burlap has long been used as a decorative fabric because of its low cost and the surface interest resulting from its coarse weave. However, it was not widely used in this sphere because the inherent property of jute fabrics to accelerate fading created the difficulty of applying fast dyes. This defect has been removed by the evolution of a new inexpensive bleaching technique. Jute fabrics can now be prepared to take dyes, which will stand exposure for up to 80 hours in the fadometer. This has attracted the attention of converters, thus expanding the erstwhile market of 5 million yards to 50 million yards or more in the future. The process is available to selected dyers and converters. A plan for securing a trade mark is being drawn up to ensure the maintenance of quality by those authorised to use the process.

The coated fabric industry has long been using substantial lots of burlap as a backing fabric for end-products like vinyl-coated fabrics for automobile interiors. So the F.R.L. team of experts have explored the prospects of widening the consumption of burlap by the coating industry. They have developed a finishing process for increasing the utility of burlap as a coating fabric. A new technique has been devised for making a burlap-based product suitable for use in the manufacture of folding doors and partitions. The new product, produced on a pilot-plant scale, has been well-received by the consuming industry, Mr. Nugent said.

Decline in October Output

Working for 192 hours in October, against 200 hours in the previous month, mills reporting to the I.J.M.A. have shown a decline in the output of jute goods from 104,000 tonnes to 98,000 tonnes. Production of hessian has dropped by 3,900 tonnes to 42,700 tonnes, of sacking by 600 tonnes to 42,300 tonnes and of miscellaneous goods by 1,700 tonnes to 5,400 tonnes, while the output of carpet-backing has increased by 200 tonnes to 7,600 tonnes. In October 1963, the mills worked at the maximum level for 200 hours, producing 96,200 tonnes of gunnies—41,800 tonnes of hessian, 40,500 tonnes of sacking, 6,400 tonnes of other goods and 7,500 tonnes of carpet-backing.

Common Trade Policy Urged



The Association of European Jute Industries, which met in Paris recently, has suggested the drawing up of a common trade policy for jute products. It has also referred to the feasibility of negotiating a bilateral agreement between the European Economic Community on the one hand and India and Pakistan on the other. The European Jute Congress, which also met there simultaneously, has expressed the opinion that any further decline in jute processing on the Continent will disturb the world's jute economy. It has stated that Europe produces about 500,000 tons of jute goods a year, representing about 17 percent of the world output, instead of 32 percent ten years ago. The combined output of India and Pakistan has risen from 650,000 tons to 1.6 million tons during the decade. New jute processing factories have been set up and existing ones expanded in other parts of Asia, Africa and Latin America. World consumption of jute goods has also increased considerably during the decade. Bust most of the increased demand is being met by higher production outside Europe. A substantial percentage of the jute products consumed in Europe is imported from India and Pakistan—the U.K. bringing in a third and the E.E.C. a fifth of the total offtake.

A policy resolution adopted by the Jute Congress states that modern production facilities, the large measure of diversification which has already been carried out and the availability of highly skilled labour make the European jute industry an "essential element of equilibrium and progress in the world jute economy. It must be maintained at its present level to help it play its due rôle." The Congress has pleaded for some uniformity in the policies pursued by India and Pakistan in the production of gunnies and the pricing of raw jute.

THE JUTE MARKETS

Manufactured Goods: After ruling easy for the major part of the past week, the Calcutta gunny market picked up strength on Tuesday, erasing a substantial part of the week's losses, on rumours of a huge Burmese Government tender for heavy goods and business with Cambodia in sacking. A softening trend in upcountry fibre prices induced a large number of mills to book sizable orders for all positions on Friday, depressing the prices. The publication of the I.J.M.A. statement showing a large decline in October production failed to halt the drift. The news of the end of the strike in some East Pakistani mills produced a bearish impact. On Monday reports that mills had decided on production at the maximum levels in view of the sharp drop in gunny stocks, combined with the availability of abundant supplies of fibre at lower prices, accentuated the bearish trend, and prices dipped to the week's lowest levels. Indian Government tenders absorbed small lots, while the U.S. offtake was more or less of a routine nature. Short- and shipper-covering helped sustain some interest in heavy goods and corn sacks for the ready and near positions. Although little hessian business was reported during the period, there were good enquiries for wide hessian. In the hedge market, sentiment was generally governed by the trend in the spot market. In view of the forthcoming closure of contracts and the restrictions on daily turnover, transactions in hessian and sacking for November delivery were of a "squaring up" nature. But fluctuations were wide due to last minute bear-covering. There was also a great deal of conversion of such contracts into February ones on payment of bigger contango charges. In February contracts, fluctuations were less wide. The market closed with a modest loss on balance after a seesaw battle between bears and bulls. Turnover was fair in sacking and moderate

A Twills	181.00	180.00	178.00	175.00
Liverpools	167.50	166.50	165.00	162.50

Raw Jute: Easier conditions prevailed in the raw jute market during the past week. The rising prices of foodgrains and other essential commodities induced growers and holders in upcountry markets to dispose of large lots of jute in order to get money. Improved transport facilities helped the movement of huge quantities of fibre from remote areas to the terminal markets, and finally to mill jetties and Cossipore sidings. So sentiment was depressed in the agencies and in Calcutta. As the mills had already completed their maximum purchase quota of 175,000 bales for the week ended 14th November well before the expiry of the period, transactions declined appreciably towards the week-end, accentuating the bearish trend. Even the issue of a larger quota of 200,000 bales for the week ending 21st November failed to help sentiment on Monday and Tuesday. The turnover improved considerably, but the undertone continued to be hesitant at the close.

Wednesday's quotations were as follows:

I.J.M.A. PRODUCTION FIGURES FOR OCTOBER

The Indian Jute Mills Association reports the production of jute goods for October as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	
7,810 tonnes	(7,686 tons)
2,00,19 thousand metres	(2,18.9 lakh yds.)
1,42.1 lakh nos.	
(b) Sacking	
40,843 tonnes	(40,198 tons)
8,83,80 thousand metres	(9,66.5 lakh yds.)
4,28.7 lakh nos.	
2. Gunny cloth	
(a) Hessian	
34,904 tonnes	(34,353 tons)
11,78,14 thousand metres	(12,88.4 lakh yds.)
(b) Sacking	
1,465 tonnes	(1,442 tons)
32,37 thousand metres	(35.4 lakh yds.)
3. Carpet backing	
7,613 tonnes	(7,493 tons)
59,26 thousand metres	(64.8 lakh yds.)
4. Other manufactures	
5,394 tonnes	(5,309 tons)
5. Total production (All kinds)	
98,029 tonnes	(96,481 tons)

Summary

(000 metres and 00,000 yds.)

	Oct. '64	Sept. '64	Oct. '63
Hessian	13,78,33 (15,07)	15,14,20 (16,56)	14,04,77 (15,36)
Sacking	9,16,17 (10,02)	9,42,20 (10,30)	8,81,30 (9,64)
Carpet-backing	59,26 (65)	56,10 (61)	57,92 (63)

(000 tonnes and tons)

	Oct. '64	Sept. '64	Oct. '63
Hessian	42.7 (42.0)	46.6 (45.9)	41.8 (41.1)
Sacking	42.3 (41.7)	42.9 (42.3)	40.5 (39.9)
Carpet-backing	7.6 (7.5)	7.4 (7.2)	7.5 (7.3)
Others	5.4 (5.3)	7.1 (6.9)	6.4 (6.4)
Grand total	98.0 (96.5)	1,04.0 (1,02.3)	96.2 (94.7)
Hours worked	192.0	208.0	200.0

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for two members and two non-member mills. The figures in brackets are in British units.

THE U.K. JUTE MARKETS

FIBRE WEAKER

(FROM OUR DUNDEE CORRESPONDENT)

THERE was a steadier tone in the raw jute market in Pakistan, and some sellers raised their rates. This could be due to prospects of the strikes at the Pakistani mills being settled at a fairly early date, and also to the fact that the Pakistani authorities have been maintaining the E.P.C. values at well above actual offers. It is understood that there is little prospect of any reduction in the official prices in the near future.

Dundee spinners wert still difficult to interest in raw material supplies, but registered sales to the U.K. during the second half of October were over 18,000 bales. Offers are not being quite so freely made in the U.K., but a fair quantity of afloat jute is available. The prices asked for these near-at-hand pracels are under current shipment rates. As spinners are well supplied with raw jute they are reluctant to add to their present stocks.

Offers were made at £150 for Mill Firsts, at £134 for Export Firsts, at £121 10s for Export Lightnings and at £113 for Export Hearts, c.i.f. U.K. for November-December shipment. Grade Tossa-2/3 was named at £151 and Grade Tossa-4 at £132. Outport Tossa-2/3 was at £119 and Outport Tossa-4 at £110. November-December.

Cuttings were quieter at £87 for S.N.C. and at £77 for N.C. Prices of mesta at a lower level with A at £106 10s, B at £97 10s, C at £91 10s and cuttings at £74 10s. c.i.f. UK, November-December. The Siam jute market was quiet, and the easier trend in prices continued. Offers were at £80 10s for grade A, at £76 for grade B, at £72 for grade C and at £70 10s for cuttings, delivered mill Dundee for November-December shipment.

A fair amount of interest is being shown in the U.K. for imported hessians. Business is now taking place with private buyers, and stocks are being built up. This all stems from the changeover from public to private trading in imported goods in bag making widths.

The Dundee jute industry is busy and prices of both yarns and cloth are firm. Although prices of raw jute have declined during the past month, this does not mean that yarn and cloth prices will follow. It must be remembered that when raw jute advanced about £50 a ton in August yarn and cloth prices were raised only £25 a ton and they are now more or less in line with current raw material costs. Demand from the carpet trade for yarns is steady and this takes up a large portion of Dundee's output. Supplies of most descriptions of yarns are only available for forward delivery. The cloth position is also satisfactory and more buying interest has been shown for heavy goods of late.

THE PAKISTANI JUTE MARKETS

FIBRE DULL

(FROM OUR DACCA CORRESPONDENT)

WHILE there was very little change in prices in any sector, the undertone of the market throughout was weak. Unfortunately at this late stage of the season, moisture is beginning to make its appearance. Some jute arrivals have been disgracefully wet, and there have already been complaints from overseas buyers. This is one of the evils of the jute trade, which, it is almost impossible to eradicate. Unfortunately, the balers are as guilty as the middle man.

Registrations for the second half of October were unusually high mainly because they include the Chinese and Russian purchases. Without these purchases, they would be small. China bought 170,000 bales out of the total of 276,471 bales. Russia bought another 14,000 bales and the U.K. 18,000 bales. North Africa, which in this case probably includes the U.A.R., bought 16,000 bales and Belgium 11,000 bales. India bought only 3,750 bales.

If the market is to show any improvement, it should do so within the next few weeks. Heavy shipments will be taking place this month, which will improve the financial position of many balers. With the elections nearly over, the jute mills strike is likely to be settled fairly soon. Furthermore, arrivals, which are scarce at present, will become even smaller because of paddy harvesting. For the time being, however, the market is dull.

Commodity Markets

RICE POSITION IN KERALA IMPROVES

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE food situation in Kerala has started showing some signs of improvement, in scarcity pockets like Trivandrum and Quilon. This is due to the top-priority movement of foodgrains into these areas from different parts of the country at the instance of the Prime Minister. The Central Government which has the ultimate responsibility to feed the people of Kerala took a serious note of the situation only when food riots started in places like Trivandrum. In fact, law and order situation in Trivandrum city and Quilon town vertually collapsed for some time. It was with great difficulty that police restored order in these areas.

The firm handling of the rioters and simultaneous rushing of supplies and assurances from the Prime Minister himself have restored normalcy in the affected areas. There is no assurance that trouble will not crop up in these areas again. Situation might again worsen unless the people are given the promised ration without interruption. The distribution arrangements in areas where informal rationing has been introduced have improved slightly, but they are still far from satisfactory. The entire State is expected to come under rationing by the end of the month.

According to official figures available, 6,000 tons of rice were on the move to Kerala, and some portion of it has already reached the State. Kerala wants for a month at least 60,000 tons of rice and an equal quantity of wheat for providing its 18 million people a 12oz. ration. The stock position in the State is a hush-hush affair. The State Governor, Mr. V. V. Giri, has asked for 100,000 tons of rice immediately, including 40,000 tons for a buffer stock to tide over the present crisis. He told a meeting of newspaper editors that in view of the present precarious stock position, the third week of this month would be "crucial". His hope is that by December things would be easier, provided supplies from outside move in at the promised level.

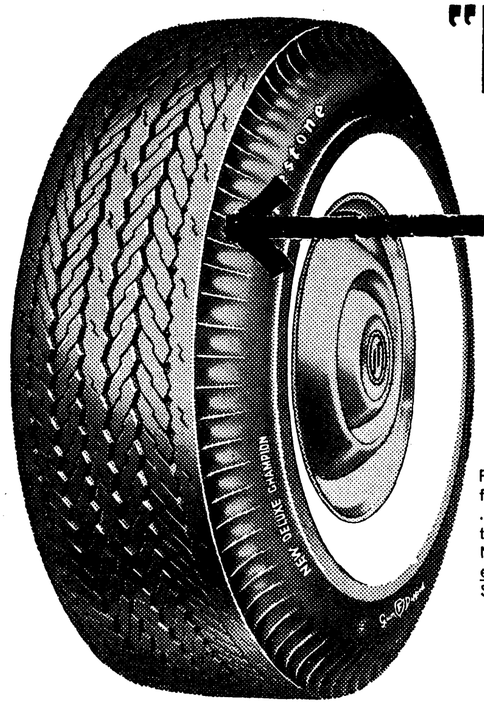
In the meanwhile, a section of workers have already struck work, and others are preparing for a strike to press home to the State and Central Governments the seriousness of the food crisis. Plantation workers in the Munnar area numbering about 45,000 were on strike on 12th November. The cashew workers in and around Quilon also went on strike. A State-wide strike by all sections of the workers has been planned by the different trade unions functioning in the State. The students who initiated the agitation have been immobilised by the Government by closing down educational institutions in the vulnerable areas.

The genesis of the present crisis can be traced to the promulgation of the price control order a few months ago. Not only did it prevent the free flow of rice into Kerala from surplus Andhra and Madras, but also it blocked the chance of prices coming down from the maximum fixed by the Government. It also provided room for black marketing. In a desperate bid to keep the prices down the tottering Government of Mr. Sankar doubled the distribution through fair price shops for the low-income people, and the result was a depletion of the buffer stock to a precarious bottom. Informal rationing was introduced without adequate preparation including the building up of a buffer stock that could keep the supply going. The cordoning of Kerala from the rest of the country and introduction of State-to-State trading had made it virtually impossible for the people to get any supply from the open market and made them completely dependent on the Government which was also not in a position to meet their requirements. This is how the present crisis developed.

The food agitation interferred with the Cochin tea sales as well. The strike in warehouses necessitated the postponment of auctions. The auctions scheduled for the last week of October have had to be postponed due to the impossibility of drawning and distributing samples. The sales have however, been since resumed.

The threatened dock strike in the U.K. and also in the east coast of the U.S.A. in December is giving a speculative twist to tea trading, according to a market report.

The chairman of the All-Japan Black Tea Association, who visited Cochin recently, stated that there was a good potential market for Indian tea in Japan. He hoped that exports of Indian tea to Japan could be substantially increased. It is said that the Tea Board proposes to introduce several long-term promotional schemes for boosting the export of Indian tea to Japan.



Mr. Jil-Morris of the Malayan Rubber Research Institute who has been invited by the Government of Kerala and the planters to advise them on the measures to produce more standardised natural rubber that would satisfy the consumers, is now in India. He will visit rubber estates in Kerala and render the growers as well as the authorities the necessary advice in this direction.

RUBBER

Outlook for Natural

Natural rubber has a bright future in India, in the opinion of Dr. Rama Varma, who has just retired from the chairmanship of the Rubber Board. He has written in a note circulated among the members of the Rubber Board on the eve of laying down his office, that the potential demand for natural rubber is large in this country, which is on the threshold of an industrial revolution. The *per capita* consumption of rubber in an industrially advanced country like the U.S.A. is 18 lbs, while in India, it is as low as 0.3 percent. Still in India, the gap between demand and the indigenous production of natural rubber is at present about 35,000 tonnes. By 1970, the demand is estimated to increase to 167.000 tonnes, while the indigenous production of natural rubber may reach 62.000 tonnes. By adopting better cultural practices including effective plant protection measures, it may perhaps be possible to step up production by 8,000 tonnes more.

Still the gap between the demand and domestic production of natural rubber will remain large. To meet this gap, only one synthetic plant with a capacity of 30,000 tonnes has been established. A letter of consent has been issued to a party to explore the possibilities of establising another plant with a capacity of 25.000 tonnes. The latter plant is not likely to go into full production before 1968, by which time the demand is expected to increase to 148,000 tonnes and the production of natural rubber to 57,000 tonnes. Even if both these synthetic plants are in full production by 1968,

"DRAMATIC NEW TYRE"
with the record mileage
SUP-R-TUF Miracle Rubber
the most advanced tyre ever built to give you EXTRA mileage
Firestone research and development engineers have done it again! They have formulated a new miracle rubber—'SUP-R-TUF'—which gives extra mileage ...at no extra cost! And at the same time, comes the NEW DeLuxe Champion tyre, with its perfected tread design for safer motoring.
Now, every Firestone passenger tyre is built with SUP-R-TUF rubber to give you extra mileage on any road at any speed. And you get greater safety, because SUP-R-TUF is tougher and has more resistance to punctures, bruises and breaks.
Firestone NEW DELUXE CHAMPION TYRE

the gap between demand and production of synthetic rubber will be 93,000 tonnes, whereas the indigenous production of natural rubber would only be 57,000 tonnes. Dr. Varma, therefore, holds the view that there is no need for concern about getting a market for natural rubber in this country.

Apart from certain technical disadvantages, there is also the cost factor. Large foreign capital may be required to import plant and machinery for setting up synthetic plants in this country. As long as the handicaps last, any new synthetic plant which is likely to be put up is going to have a high capital cost, compared with similar plants in the industrially advanced countries. That would reflect on the cost of synthetic rubber. The price of S.B.R. has been quoted by the unit which has come into production at Rs 3.85 a kilogram, while the price of natural rubber produced in the country is Rs. 3.24 a kilogram. Perhaps the manufacturer may be able to reduce had cost when conditions become favourable to produce to its full capacity and if it could get raw materials at a cheaper cost. Still its price is not likely to go down below the natural rubber price. In this connection it is to be remembered that the Indian price of natural rubber is 50 to 60 percent higher than the price in Malaysia and Ceylon.

As the economy of the south-east Asian countries is largely dependent on rubber, it may be difficult to stop imports from those countries completely, without repercussions on India's exports, particularly when natural rubber prices in those countries are gradually declining. At one stage, the economics of expanding the capacity for synthetic rubber at any cost *vis-à-vis* the import of natural rubber at considerably lower prices, will have to be examined more closely. Either from the demand side or from the technical point of view or from the cost angle, the market for natural rubber would appear to be assured in the foreseeable future, Dr. Varma has said in his note.

However, some time ago, the Rubber Board passed a resolution to the effect that the issue of licences for starting new factories or for expansion of existing capacity for the production of synthetic rubber would affect adversely the interest of the rubber planting industry, and would defeat the efforts of the Board to develop it. The Board then requested to the Central Government that such licences should be issued only in consultation with the Board. The Rubber Board also expressed its concern over the Central Government's new policy of linking imports of raw rubber to the purchase of indigenous synthetic rubber by the rubber goods manufacturers. This would affect the future of the rubber growing industry in India, it said.

TEA

Easier Trends in Tea Prices

A special correspondent writes: The current fall in tea prices began about three weeks ago in London, when some Assam grades came down by nearly 6d a lb. At the auctions held in Mincing Lane last week, a sale of 28,277 packages was on offer, of which 22,450 packages were on offer from north India. There was again a fairly good general demand, but at a lower level for all descriptions and Assams, where quality showed a decline, were from 3d to 6d a lb lower, but teas from the Dooars met with fair suport at steady rates. On 16th November, rates were again 1s to 2d a lb lower.

Sale No. 25 held in Calcutta on the same day met with a fair enquiry for leaf teas, but at easier rates. Plain orthodox types were down about 10P. Medium Dooars B.O.P. were taken, but at round 10P to 20P lower. Fannings and orange fannings were easy. C.T.C. were also down, the best selling 50P belw last week, but Darjeelings although generally easier, met with a good enquiry.

As far as Calcutta sales are concerned, about half the crop may have been disposed of. It is clear that the unsold portion will have to go at lower prices. The high prices ruling two months ago were due to fortuitous circumstances, such as diversion of London shipments to continental ports because of trouble in the London docks and elsewhere. The sales this week as well as during the following will probably cover over 100,000 packages each week, and with the full weight of monsoon manufacture to come through the port for another three to four months, the supply is assured. It is not easy to forecast when the present decline in values will steady up.

This correspondent has taken a pessimistic view for a long time past, and still expects difficulties in 1965 but at the moment a careful perusal of the *Annual Bulletin of Statistics* issued by the International Tea Committee suggests that world supply this season may not be seriously out of balance. Nevertheless, the sooner tea producing countries take steps to expand internal consumption in all growing countries, the safer for the future of the industry.

The north Indian crop figures till the end of October 1964, amounting to 546, 840, 940 lbs, compare with 497, 890, 827 lbs last year, and 535, 745, 514 lb in 1961. It will be noted that the last half of October was favourable to growth. A new record will be established this year. The cold weather appears to have set in early, but production this month and in December is unlikely to fall below recent levels, which would allow for another 30,000 metric tons, or something close to 60 million lbs. The 1961 total crop was just under 600 million lbs from north India and if the trade knew its business, such a small increase over the years 1961-64 should not upset the supply-and-demand situation.

SHELLAC DULL

During the week ended 17th November, the tone was unchanged at the beginning of the week, and dull and inactive at the close.

Which way does your profit go?

in come your raw materials. Are you sure the weight is correct ?

out goes your product. Are you invoicing the full weight of everything leaving your factory ?

By receiving too little, or despatching too much you may be losing your hard earned profit. Make sure you get full measure for your money, and maximum return for your labour, by installing a proper weight control system at the entrance to your works. Avery can supply you with the right weighing equipment for your needs. There are many Avery users in your area who have increased profit margins through strict weight control. You can profit by it too. For full details of Avery weight control systems, please write to

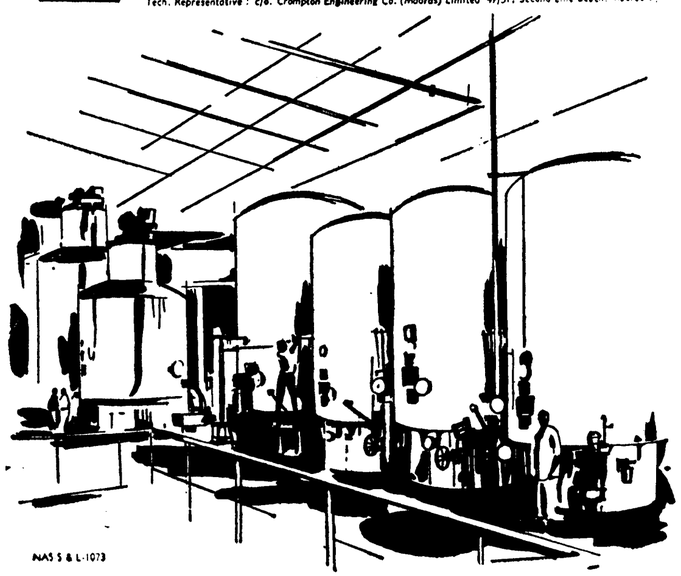
URBAN SAVINGS SURVEY BY N. C. A. E. R.

Attitudes Towards and Motivations for Saving. (Published by the National Council of Applied Economic Research, New Delhi. Price Rs. 10.50, pages 146.)

An All-India urban household savings survey was undertaken by the N.C.A.E.R. in 1960. The study covers all cities with a population of over 10,000 according to the 1951 census. The sample, drawn on a three-stage sampling design, has a size of 4,650 households. A questionaire was issued to collect information on assets and liabilities of the households as also data on attitudes and motives. The data on assets and liabilities were used to estimate savings and investment.

The Council has already published three reports dealing with the technical and the quantitative aspects and the present report—the last in the series based on the urban savings survey—is concerned with the people's evaluation of recent changes in their economic welfare, their expectation as to the future as well as the attitudes towards and motivation for saving among urban households. The reference year is 1960. In this year, the national income at current prices is supposed to have gone up by 5 percent and at 1948-49 prices by 3 percent.

The most important conclusions that have emerged out of the present study are: (1) Those who have experienced income increases in the past are those with high educational attainments. (2) Those who have had favourable experiences in the past are those who have more optimistic expectations for the future. (3) A significant proportion of the households with unchanged incomes say they are worse off. Rising prices and expenditures seem to explain this. (4) A majority of households seem to have no knowledge about the five year plans of India. (5) High income and high education groups more frequently cited the plans as resulting in their individual progress than low income and low education groups. (6) Less than one-third of the urban population seem to save regularly. Households experiencing continuously improving income and material status seem to save a higher proportion than those experiencing constant or declining income. (7) There appears to be ample consciousness and motivation concerning this crucial development variable—saving. (8) The most important investment channel is business. Then come banks, real estate and small savings. (9) There appears to be no abnormal preference for liquidity. (10) Nearly 70 percent of the urban households in 1960 were not aware of the national savings certificates.



The Council has found that provision for emergency, old-age and education of children are the main motivational factors that generally induce people to save. There are three other points that seem to emerge out of the above conclusions. Firstly, it was reported by most of the potential savers that they prefer to invest their savings in business ventures; one can, therefore, expect the Unit Trust of India to gain popularity. Secondly, the ninth conclusion cannot have any serious validity in the light of unaccounted money—the too well-known form of liquidity in this country to require elucidation. Finally, the fourth and the last conclusion seems to confirm that India's plan publicity has been a sheer waste. It may be mentioned here that somewhat similar opinions have been expressed recently by a high-powered committee.

S. & L. AND SUGAR PLANTS

For many years S. & L. have been supplying complete pipework installations for the Sugar Industry, and also supply their annual requirements of pipework. S. & L's reputation in this vital industry is second to none, as mill owners all over India will testify.

Recognised as the leading manufacturers in India of fabricated pipework, S. & L. offer a complete service from design to commissioning, with all materials and workmanship of the traditional high standards associated with S. & L.

REFERENCE ANNUAL

India 1964. (Compiled by the Research and Reference Division, Ministry of Information and Broadcasting, Government of India, and published by the Director, Publications Division, Old Secretariat, Delhi 6. Price Rs. 6.50, pages 480.)

Over the years this publication has acquired the reputation of an authoritative reference book on various aspects of Indian life and activities. Although the emergency does not seem to have been reflected in the other activities and attitudes of the Government, it has affected this publication in that its size has been reduced. The annual is admittedly not exhaustive in its coverage, but its scope extends over a fairly wide field. Much factual material has been collated and presented on such diverse subjects as the country's physical resources, people, national symbols, the constitutional structure, defence, education, cultural activities, scientific research, health, social welfare, mass communication, planning, agriculture, industry, trade and finance. The latest information available from official and other authoritative sources has been included in this handy book.

ANNUAL NUMBER

Annual Number of Company News and Notes. (Published by the Directorate of Research and Statistics, Company Law Board, Department of Revenue and Company Law, Ministry of Finance. Single copy Rs. 3.)

The annual number of *Company News and Notes*, just published, marks the second anniversary of the journal as a priced publication. The contents of each issue have been steadily expanded to cover a variety of subjects relating to the working of the corporate sector in India and abroad. The special number contains a number of articles written from the practical angle. In the article on "The Developing Economy in India and Company Law" written by Mr. R. C. Dutt, chairman of the Company Law Board, the basic object of the company law has been clarified. The latter, it is argued, should induce integrity and efficiency in the business world. It has been rightly pointed out that no standard of behaviour can be imposed by law alone; it can impose its standard by sanction and punishment on the errant minority but it must be socially accepted by the majority for whom it is meant.

UNDER DEVELOPED ECONOMIES

Problems of Underdeveloped Economy. By D. S. Nag. (Published by Lakshmi Narain Agarwal, Agra, 1962 Price Rs. 18, pages 463.)

Based on the author's doctoral thesis, this "big essay" on economic development of underdeveloped countries draws heavily on the numerous studies that have been already made on the subject, but the approach is in a way original. Almost every topic that can come under the broad scope of economic growth (there is hardly a concept today that cannot) is discussed in detail.

The first two hundred pages are devoted for a discussion of the problems that confront underdeveloped nations in general. In the second half of the book, three chapters are devoted for capital formation, priorities in growth and choice of the technique. The conclusion on choice of the technique appears to be, "technological experts from the advanced countries connected with technical assistance to poor countries would be well advised to remember Nurkse's advice that much simpler tools and equipment may be appropriate to the relative factor endowment of over-populated agricultural countries in the early stages of industrial development (p. 341). The last three chapters deal with the theories of development, recent changes in concepts and attitudes about an under-developed economy and orientation of economic theory.

The book runs on lines similar to that of G. M. Meier and R. E. Baldwin (*Economic Development, Theory, History and Policy*), the contrast being the exhaustive reference to Indian economic problems. It is recommended to graduate students who specialise on economic growth with special reference to India. For the research worker and policy maker, the book should be useful as a source of reference.

PETROLEUM

Glossary of Terms Used in Petroleum Industry and Conversion Tables. (Published by the Statistics Division, Petroleum Information Service, 11 Parliament Street, New Delhi. Price Rs. 5, pages 191.)

This publication will be useful to people interested in the oil industry since it explains in simple terms the meanings of technical words used in petroleum technology and trade. The terms have been conveniently grouped according to the stages of production and distribution. This makes for facility of reference. There is also a section on petrochemicals.

PHILIPS INDIA LIMITED

NOTICE

NOTICE is hereby given that a General Meeting of the members of the Company will be held at the offices of the Company's Registrars, Jardine Henderson Limited, 4, Clive Row, Calcutta 1, on Thursday, December 17, 1964, at 11 a.m. to consider and if thought fit to pass with or without modifications the following resolutions which will be proposed as special resolutions:—

(a) That 4,00,000 new ordinary shares of Rs. 10/- each in the authorised capital of the Company be issued at a premium of Rs. 6/- per share, i.e. Rs. 16/- per share payable in full on application on the footing that such new ordinary shares shall rank in all respects pari passu with the existing ordinary shares in the Company save and except that they shall not participate in any dividend which may be declared in respect of any period ended on or prior to December 31, 1964.

(b) That subject to the approval of the Reserve Bank of India, out of the said 4,00,000 new ordinary shares of Rs. 10/- each, 78,125 shares be issued to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Holland for subscription for cash at a premium of Rs. 6/- per share as aforesaid and 21,875 shares (aggregating to a total of 1,00,000 shares) at a premium of Rs. 6/- per share for consideration other than cash in partial conversion of their loan of Rs. 50 lakhs to the Company.

(c) That subject to the approval of the Reserve Bank of India wherever necessary the remaining 3,00,000 new ordinary shares of Rs 10/- each so issued be offered in the first instance for subscription for cash at a premium of Rs. 6/- per share to those members (other than N. V. Philips' Gloeilampenfabrieken, Eindhoven, Holland) whose names are registered on the Register of Members of the Company on December 17, 1964, in the proportion as nearly as circumstances admit of three new ordinary shares for every five ordinary shares held as on that date, fractions if any of a new ordinary share issuable on this basis being disregarded with a right to renounce all or any of the shares so offered to them in favour of any other person and that any question arising in the apportionment of such new shares or any of them amongst members and in the avoidance of fractions shall be determined by the Directors in their absolute discretion.

(d) That the Directors be and are hereby authorised to offer the said 3,00,000 new ordinary shares of Rs 10/- each at a premium of Rs 6/- per share, i.e. Rs. 16/- per share payable in full on application for subscription to the members aforesaid other than to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Holland by a Letter of Rights specifying the number of shares to which they are entitled and providing therein that the offer if not accepted within thirty-one days from the date of offer shall be deemed to have been declined and specifying that the payment for such shares at the rate of Rs. 16/- for each new ordinary share so offered shall be required to be made in full on application.

(e) That any new ordinary shares not taken up by any of the said members or their renouncees in response to the aforesaid offer shall be available for subscription by such of the said members who take up their rights in full under the aforesaid offer and who apply for additional shares.

(f) That the right to apply for additional shares shall not be renounceable in favour of any other person and in the event of applications for additional shares exceeding the number of shares available, the allotment shall be made in such manner as shall be determined by the Directors in their absolute discretion.

(g) That the Company authorises the Directors to dispose of any new ordinary shares not taken up by the said members or their renouncees in accordance with the terms as detailed hereinabove in such manner as shall be determined by the Directors in their absolute discretion.

(h) That no allotment of any new ordinary shares shall be made to a person not resident in India unless he or she has obtained prior approval of the Reserve Bank of India

(i) That the Directors are further authorised to settle any question or difficulty that may arise with regard to the issue and allotment of these shares in such manner as they shall determine in their absolute discretion.

The Register of Members of the Company will be closed from December 3, 1964 to December 17, 1964, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and, on a poll, to vote instead of himself; such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not later than 48 hours before the Meeting.

An Explanatory Statement as required by Sec. 173 of the Companies Act, 1956, is being posted to members.

By Order of the Board,
W. A. C H. BOSSCHAART,
Chairman and Managing Director.

OUTLOOK FOR FOOD IN THE COMING MONTHS

THE acute shortage of foodgrains which has played havoc with the economy for the greater part of the past year shows little sign of easing yet. A couple of months ago, the Prime Minister, Mr. Lal Bahadur Shastri, and the Central Food and Agriculture Minister, Mr. C. Subramaniam, predicted with great confidence that the situation would improve soon. Their optimism was based on two factors. The first was that the new rice crop was going to be a bumper one, and that it would start arriving in the markets from the middle of October. The second was that arrivals of imported foodgrains, particularly of wheat from the United States, were about to be sharply accelerated; during October alone, Mr. Subramaniam said, a record 700,000 tons of wheat would be coming from abroad, with similar large quantities following in subsequent months. The ides of October, however, have come and gone; the ides of November too. But foodgrain prices remain almost as firm as they were. The precautionary selling one might have expected in the case of at least rice and wheat—with a bumper harvest of the first and bumper imports of the second—is hardly noticeable in the major centres. On the contrary, in the bigger cities, prices are still rising in prosperous black markets whose existence the Government's statistical services decline to recognise. In parts of Kerala, Mysore and Madras, acute local scarcities have deepened unrest and led to serious violence.

Against this background, it is understandable that the mood of exasperation is growing, not among the people alone but within the Government too. Popular exasperation was forcefully expressed a few days ago through the widespread rioting in Kerala. Within the Government, the same mood has inspired daily denunciations of the trade, accompanied by a feverish search for scapegoats and threats of drastic penalties. Mr. Shastri reflected the mood faithfully a few weeks ago when he declared that although he was instinctively not in favour of rationing and controls, he had been forced to the belief that they would now be the lesser of two evils. The shift in thinking had been brought about by the conclusion that "traders are not prepared to cooperate with us". The trade, he added, could not be allowed to flout the Government's wishes; people who sold food at prices higher than those fixed by the Government should, therefore, be subject to summary trial and punishment, apart from being deprived to some extent of the right of appeal.

These decisions have since been enshrined in an ordinance which will no doubt be cheerfully ratified by Parliament during the winter session now on. The proposed short-circuiting of established legal procedures may not appeal to everybody; and some of the foodgrain dealers who have been rounded up by the police for passing the wrong resolutions might wonder whether the use of the Defence of India Rules is at times not summary enough already. But it has to be admitted that these are nowadays unfashionable qualms which disturb only a small minority. The more widespread reaction is that the ordinance is not drastic enough, especially as it does not adequately limit the right of appeal; that it confers no greater powers than the Government had already, and which it was reluctant to use; and that the issue of the ordinance, therefore, will bring no practical benefits since the desire to enforce it is lacking. It is perhaps a measure of the despair and demoralisation afflicting the people of this country that the more militant the Government's denunciations, and the more drastic the powers it assumes, the greater is the cynicism and scorn with which they are received.

The situation is a delicate one, and not the least of the dangers is that the entire food policy of the Government may fizzle out in the desperate search for palliatives, scapegoats and red herrings. The basic, elementary and well-known fact for a start is that since 1960-61, according to the Government's own statistics, the country's foodgrain production has, for all practical purposes, not increased by one single milligram. On the contrary, it has declined, and has only recently shown signs of recovering to near-about that year's level. A multitude of excuses can be offered for the stagnation: the weather was bad (for three years in succession?); land was diverted to more remunerative cash crops; fertilisers and pesticides were in short supply; and the irrigation potential was not fully used. But the weather apart (and that is a questionable excuse), all these deficiencies can be traced to one set of factors: the complacency, indifference and inaction of the Government itself. Whether these qualities can be ascribed to its traditional inertia in dealing with agricultural problems, or to the massive P.L. 480 agreement signed in May 1960 amidst a mushroom-cloud of bombast by the then Food and Agriculture Minister, Mr. S. K. Patil, may be a moot point. What seems certain is that the P.L. 480 agreement deepened the complacency which already existed, and to that extent helped India into the mess she is now in. The coincidence of the agreement with a prolonged phase of stagnation in Indian agriculture, in other words, cannot be dismissed as wholly fortuitous.

To say this is not to depreciate the value of the P.L. 480 agreement. On the contrary, much as it may hurt the Government's pride to admit it, the agreement saved India from a phase of starvation that might have been the worst in 20 years. At the same time, it is only fair to add that, apart from generating complacency, the P.L. 480 pact did not serve its purpose in two other ways. The first is that the buffer stocks which were to have been built were never built; on the contrary, even the warehousing and other facilities necessary for holding the stocks were not created. Secondly, by offering the mirage of a large increase in food supplies, it strengthened the Indian Government's easy-going attitude on the question of deficit financing. The complacency which has led to agricultural stagnation, the reckless pace of deficit financing, and the inability to check the inexorable growth of popu-

lation—these are the key factors responsible for the food crisis which India faces today.

Contrary to popular impressions, the origins of the crisis do not date back to the early months of this year, or even to those of last year. The crisis has been incipient much longer. In 1960-61, the final year of the second plan, this country produced 81 million tonnes of foodgrains. The output amounted to 81 million tonnes in 1961-62, 78.5 million tonnes in 1962-63 and 79.4 million tonnes in 1963-64. Imports rose—from 3.5 million tonnes in 1961 to 3.6 million tonnes in 1962 and 4.6 million tonnes in 1963. But the rise was not sufficient to offset the fall in production. The statistics show that in no single year since 1960-61 have total supplies (local production plus imports) appreciably exceeded the level of that year. On the contrary, if it were possible to count in the carryover (for which no reliable figures will ever be available), the conclusion would emerge that total supplies might well have *decreased* quite considerably, since the carryover now is without a shadow of doubt smaller than it was three or four years ago.

Over the same four years, the population has increased by about 10 percent, taking the average rate of growth at about 2½ percent a year. The coincidence of a probable decrease in supplies, with a 10-percent increase in population, provides one clue to the seriousness of the physical shortage of food which India faces. Another clue is provided by the planners' estimate some years ago that the country would be needing approximately 95 million tons of foodgrains annually by this time—as a minimum. The Government may go on talking of a "massive" import programme. But what massive import programme could there conceivably be which would now take the country's total supplies suddenly up to 95 million tons? On one estimate, the recent rate of imports—4 million tons or so annually—would have to be more than doubled if such a programme were to ensure a measure of adequacy. Even assuming that supplies of this order were available from abroad, could the ships be found to carry them? And would India's ports have the capacity to handle them?

The purpose of going over these familiar statistics once again is not to contribute to the nervousness or panic which Ministers, otherwise paralysed by inaction, sometimes find the energy to decry. The purpose is to add a qualification to the breezy optimism sometimes displayed by people like Mr. Shastri, who said towards the end of September that the food crisis would be over by mid-October, then said at the end of October that the millenium would dawn early in December, and has now postponed the happy event to the middle of January. The statistics suggest that there may be several postponements yet of the visions of happiness and plenty, and that the exact number of the postponements will be determined by two things. The first is the size of the new crops; and the second is the willingness and the ability of State Governments to distribute supplies equitably over the whole country.

About the size of the new crops, Mr. Subramaniam continues to display a breezy optimism comparable to Mr. Shastri's: he is sure the rice harvest will be a bumper one, and the wheat harvest will be big too. May heaven help prove him right. But many may recall that the agricultural year still has seven months to go. In earlier years, climatic adversities during these seven months have allegedly been responsible for large shortfalls in production. Furthermore, others may recall, the Government's organisation for making crop estimates is at the stage of reliability where the size of a particular grain crop in a particular agricultural year is not known finally until approximately four months after the year has ended. Here now is Mr. Subramaniam making confident estimates only four or five months after the year has actually begun. Considering the memorable errors made in earlier crop forecasts, especially those for 1962-63, might not his present confidence be a mere 12 months too premature?

Assuming, however, for the moment that Mr. Subramaniam's crop forecasts will prove correct, and that imports will arrive on the scale he hopes, there is reason to expect that foodgrain prices will decline more noticeably in the coming months than they have done so far. But, as things stand, a large decline—even to the levels of a year ago—is hardly expected, considering that the demand-supply situation is such that shortages are likely to continue. Mr. Subramaniam has been frank enough to warn the country that it will need to import foodgrains for the next four or five years; and not just for building buffer stocks, but also for current consumption. A fall in prices during the next few months would, therefore, be of no great significance. It would merely reflect the seasonal pressure of the harvests on the market. The danger of prices starting to rise once again from April-May next year onwards would still remain. It is primarily as a measure to cope with those dangers that his new food policy will be put to its crucial test.

How it is likely to emerge from that test, it is difficult to say. Judging from the limited experience of Kerala in recent weeks, the prospects might seem dismal indeed. The framework of the policy is delightfully neat and tidy to look at. It guarantees certain prices for the major foodgrains to producers: the prices are intended to provide an incentive not only for cultivators to grow more but also to offer more of their supplies to governmental nominees or buying agencies. Precise little margins are proposed for millers, wholesalers and retailers. Finally, prices for consumers are to be fixed too, so that they can get the grains more cheaply than hitherto. There is no doubt that, in a perfect world, such a scheme would work perfectly. Cultivators would get more for their labours. Consumers would pay less for their food. Only the dirty tricksters of the foodgrains trade would be squeezed. But the world is not a perfect one. In the final analysis, at the grass-roots level the scheme would have to be worked by a vast army of petty officials. It is inconceivable that so vast an army of officials with the business acumen, knowledge and integrity required can be created overnight. The major difficulties which have arisen in the effort to enforce price controls and ensure the proper distribution of food in the single compact area represented by Calcutta alone give only a minor idea of the problems that would arise. Those difficulties would be multiplied hundred-fold if the effort were countrywide.

The purpose in pointing to the problems is not to suggest that the Government should not intervene in the foodgrains trade at all. On the contrary, the situation is so serious that greater intervention by the Government is not merely necessary, but inescapable. The main need, however, is to ensure that the scale of intervention is determined by the Government's organisational capacity. From this point of view, the second part of Mr. Subramaniam's food policy seems more rational and workable. It visualises rationing, statutory or informal, in the major cities and in the deficit State of Kerala. It visualises more vigorous procurement, especially in the surplus States. And it visualises the regulated movement of foodgrains from surplus to deficit areas. The difficulties inherent in operating even a simpler and more clear-cut scheme such as this need not be underestimated. As the Kerala riots have shown, rationing can be dangerous if at any time there is a chance that ration or fair-price shops might run out of supplies. Procurement is apt to be sluggish when State Governments have their own vested interests to protect. And the movement of foodgrains from surplus to deficit areas is in danger of being thwarted by political interference or administrative bungling even after a clear schedule of movements has been drawn up and accepted.

But the effort is nevertheless worth making, at least on an experimental basis for a start. And its success will depend, more than anything else, on the political determination to bring recalcitrant States into line. It is not enough simply to leave it to Mr. Subramaniam to carry on interminable discussions with State Chief Ministers. The top leadership of the Government and of the Congress Party—in particular, Mr. Shastri and Mr. Kamaraj—has a joint and direct responsibility in securing compliance with a national food policy. The compliance has to be secured by persuasion if possible, and by compulsion if necessary.

There is one fundamental precondition for the success of the new food policy but surprisingly, it has been discussed very little so far. The sharp rise in prices over the past year or two has created a disastrously inflationary psychology. In other words, since prices have risen steadily and sharply already, there is a widespread conviction that they will go on rising in the future too. This conviction has to be attacked. It cannot be attacked merely by the showy use of ordinances to raid, arrest, prosecute and punish a collection of small fry in the trading community. It has to be attacked at its roots, by changing the fundamental situation where too much money is chasing too little food. Some of the money is undoubtedly of the "unaccounted" variety, and a good deal of it has moved into the foodgrains trade since the share and bullion markets, for example, were struck by paralysis. The Central Finance Minister, Mr. T. T. Krishnamachari, is entitled to try and get hold of such money as best he can; and good luck to him. What is indefensible is that the Government should itself be supplementing the flow of money, "accounted" and "unaccounted", into the foodgrains business by pumping in more money of its own through the process of deficit financing.

A few months ago, Mr. Krishnamachari sensed the danger, and took a step in the right direction by deciding to cut the Government's expenditure by Rs. 70 crores during the current year. No one knows whether the expenditure has been cut by that amount; but even if it has been, subsequent trends show that the reduction has been extremely inadequate. A far more drastic cut is, therefore, necessary. The figure of Rs. 70 crores was reportedly chosen in order to bring the Central Government's revenue and capital Budgets, taken together, into fairly close balance, by almost eliminating the overall deficit. But the point was perhaps forgotten that the expenditure to begin with was increased by nearly Rs. 200 crores beyond the level of 1963-64 (which was itself inflationary). If a paltry cut of Rs. 70 crores is made now, it cannot be of much use—when the supply of the main consumer goods, especially foodgrains, has hardly increased. The increase of Rs. 200 crores was unjustified from the very start. It gives some idea of the sort of reduction that is now necessary.

There is a widespread myth in India that Budgets which are "balanced" simply cannot be inflationary. The corollary to this myth is that a Government has done its duty by way of checking inflation if it has virtually eliminated the overall deficit in its Budget. The truth, however, is that balanced Budgets too can lead to a sharp rise in prices. In particular, if the balancing is done by imposing stiff new taxes, costs increase and prices tend to go up as a result. This has indeed been the case in this country. It is incorrect to assume that taxes are "disinflationary" merely because they "take away purchasing power from the hands of the people" The fact is that they take away purchasing power only to the extent that they raise costs and ultimately the selling prices. The effect of the taxes, then, is that purchasing power is shifted from the hands of the people to those of the Government. If this purchasing power is then neither neutralised nor used in the form of investments which would yield an early increase in production, its inflationary impact remains largely unchanged. In other words, the Government may have to reduce its expenditure very substantially; alternatively, the expenditure has to be such that it yields a quick increase in production. The Government needs to bear these points in mind while framing its budgetary policies, and in assessing their impact on the food situation.

In India, the Government could also do with the reminder that even after a Rs. 70-crore cut in expenditure, its Budget will not be balanced in the real sense of the term. This is because much of what is described as "borrowing from the public" is in fact deficit financing. For example, in recent years, whenever the Government has floated loans, a large part of the loans have had to be taken up by the Reserve Bank. The Reserve Bank, in effect, prints new currency notes and hands them over to the Government in exchange for the securities it receives. The result is that the "borrowing" does not come out of genuine savings; in its economic effects it is indistinguishable from deficit financing.

The implication of all this is that the budgetary policies of the Central and State Governments, despite cuts in expenditure here and there, are inherently such as to push prices up. At a time when food shortages are acute and widespread, the tendency for prices to go up is already strong. It is clearly wrong to strengthen the tendency further through budgetary and monetary policies that are inflationary. In a country like India, where the main consumer expenditure is on food, the effect of such policies, and especially of an increase in Government expenditure, will inevitably show itself mainly in a rise in food prices. Budgetary policies have done as much as the physical inadequacy of food to generate the inflationary psychology. The first byproduct of this psychology is that not just traders, hoarders and profiteers, but millions upon millions of farmers and consumers too, have become hoarders of food. The distribution "pipelines" have thus got clogged all along the way. The actual physical shortage of grains, as the Government reportedly believes, may be only 6 percent; but to pretend that a 6-percent shortage should lead to no more than a 6-percent rise in prices is simple-minded nonsense. The fact is that since hoarding has become a countrywide phenomenon, the physical shortage in terms of marketable supplies is much greater. It is this shortage that the rise in prices reflects.

A drastic cut in Government expenditure as part of a genuinely disinflationary budgetary policy would not increase the overall supply of food. But it would serve two crucial aims. One is that it would help to remedy a situation where too much money is chasing too little food, and thus promote the effort to bring prices down. The second is that if the decline in prices can be sustained long enough, the inflationary mood would change; hoards, big and small, would begin to be disgorged; and marketable supplies would increase. The decision calls for political courage. It remains to be seen whether the courage can be found.

WRONG POLICIES ON SUGAR

THE Central Food Minister, Mr. C. Subramaniam, indicated in his address at the annual meeting of the National Federation of Co-operative Sugar Factories in New Delhi recently the Government's decision to license an additional sugar capacity of 800,000 tonnes a year. The move is welcome in principle because the supply of sugar has been short, particularly during the past couple of years or so. But the public is eager to know whether adequate steps have been taken to increase the sugar output during the 1964-65 season which has just begun. The worry has been the greater because the Government has failed to attain the targeted production during the 1963-64 season. Although a target of 3.3 million tonnes was set for this year, the output amounted to only 2.6 million tonnes. Since internal consumption has meanwhile risen considerably, the shortage has been aggravated. Due to the faulty system of distribution, combined with inefficient administration of controls, consumers have been forced to buy sugar at prices much higher than the controlled rates. This apart, exports have also dropped considerably as a result of the smaller output.

In view of the small carryover from the 1963-64 season, it has become urgent to step up production right from the beginning of the current season. To encourage sugar factories to produce more early in the season, the Government has announced an incentive scheme. Any excess of production during the current month will enjoy a rebate in the basic excise duty. Although most of the factories have started crushing from the very beginning of the current season, the overall output may not show much improvement because similar incentives did not produce results in the past. Furthermore, the Government has not yet indicated whether the rebate on excise duty will also be available on the excess of output during the rest of the current season. However, judging from indications, it seems the Government will continue the concession throughout the current season. The factories would have been encouraged to take steps to raise production had the Government announced in advance that the incentive scheme would be applicable for the whole season.

True, the Government has also increased the prices of sugarcane and sugar during the current season. But it is doubtful whether a higher cane price by itself will ensure an adequate supply of raw material to factories by preventing the diversion of cane for the manufacture of *gur* and *khandsari*. The latter are attracting a bigger supply of cane because their producers can well afford to pay higher prices than factories since the prices of *gur* and *khandsari* are ruling at a high level. Because of political pressure, the Government has not been able to subject *gur* and *khandsari* to the controls which have been imposed on sugar. So it is difficult to say at the present stage whether factories will benefit from a larger output of sugarcane during the current season. Unless the prices of *gur* and *khandsari* drop, a good deal of cane supplies will continue to be diverted for the production of these commodities. This apart, the increase in sugarcane price has not been entirely welcomed because it has been linked to weight rather than to quality. It is strange that the principle of basing the cane price on the sucrose content is not being followed during the current season.

As for the increase in the price of sugar sanctioned during the current season, it is likely to be of only marginal benefit to factories since it will not fully cover the rise in production costs. Consumers will, in the meantime, be obliged to pay more for sugar. The main difficulty of sugar factories does not arise from the low price of sugar. It arises from the fact that the bulk of the machinery in sugar factories is outmoded. Unless the factories are modernised and their production processes rationalised, it will not be possible to produce sugar economically.

Mr. Subramaniam hinted that the additional capacity will henceforth be licensed only in the co-operative sector. The co-operative sugar factories have, by and large, helped to expand employment opportunities. They also enjoy the advantage of having modern machinery since most of them have been set up only recently. But in encouraging the development of co-operative factories, a precaution needs to be taken. Experience shows that many members of these co-operatives have also interest in manufacturing *gur* and *khandsari*. This tendency has to be checked. Efforts should also be made to ensure that new factories are viable from the very beginning. To achieve this, it is necessary to establish new factories of sufficiently large size. Formerly, a factory with a 5-ton cane crushing capacity was considered an economic unit. But a viable unit should now have at least a crushing capacity of 1,250 tonnes to 1,500 tonnes.

This apart, the Government's recent move to prohibit the manufacture of bold-grain sugar will tend to restrict output during the current season. Several factories have installed machinery which is suitable for manufacturing this kind of sugar. The Government should appreciate that it will not be possible to adjust the equipment of these factories quickly to produce small-grain sugar. Since the changeover has necessarily to be slow, the output of the factories will suffer if they are not allowed to manufacture bold-grain sugar. Since the latter kind of sugar is essential for several purposes and it cannot be easily adulterated, it is hoped that the Government will not insist on prohibiting the production of bold-grain sugar—at least for the time being.

THE U.K. LONG-TERM ACCOUNT

THE difficulties of sterling this year have focussed the world's attention on the short-term resources (additional to the gold and currency reserves) available to support the currency. These resources cannot be calculated precisely, as they are partly subject to negotiation. It can be estimated, however, that the $1,000 million standby credit that the U.K. arranged with the International Monetary Fund last July is only about a third of the international credits that would be effectively available in an emergency. Even on that reckoning (including the ordinary reserve, which is even now not much below £1,000 million), the U.K.'s short-term liabilities exceed her available resources by a considerable margin. But full cover is unnecessary, as a substantial proportion of the liabilities is stable.

The balance-sheet of longer-term liabilities and assets is not directly relevant to the defence of the currency and, therefore, attracts less attention, but it is essentially a truer measure of the country's financial strength. The Bank of England published in a recent *Quarterly Bulletin* an assessment of this longer-term account that showed the U.K.'s overseas assets to be much more than her overseas liabilities. The figures relate to the end of 1962. The incursion of foreign, particularly U.S. capital, is a subject of controversy in Britain, as in many other countries. This item appeared in the survey at £2,800 million, representing private long-term investment in Britain, including a little from sterling countries. Traditionally, of course, Britain is an exporter of private long-term capital, but in the war and postwar period her activities in this field have been restricted. The Bank of England caused some surprise, therefore, when it showed a total of British private investment abroad as high as £8,000 million—not much less than three times the total of foreign investment in Britain.

Both these items include portfolio investment, and here again, in view of the massive direct investment—in both directions—by companies, the size of the estimates was surprising: £735 million of overseas holdings of British company securities, as much as £3,000 million of British holdings of overseas company securities—nearly 60 percent of it outside the sterling area. Of the above-mentioned total of £8,000 million of British overseas investment, likewise, nearly 60 percent is attributed to non-sterling territories. The survey separated banks, insurance companies and oil companies from ordinary industrial and trading companies. It then showed a total of £3,500 million British-owned abroad and £1,400 million foreign-owned in Britain, in the ordinary category. Figures for financial institutions, which are known to be large among British assets abroad, are regrettably imprecise, but the survey showed the first estimates of investments by oil companies; in terms of book value of net assets, the figures are £1,000 million for British investments abroad and £700 million for foreign investments in Britain.

The public sector's external account presents, as everyone knows, a very different picture. The last World War and the subsequent (not wholly successful) rehabilitation involved external borrowing, particularly from the United States, on a huge scale. The survey showed the British Government's net long-term indebtedness to overseas governments at somewhat over £1,500 million. But other official long-term liabilities and assets (the latter included the British Government's important holdings of dollar securities, compulsorily acquired from British companies early in the war) are approximately in balance. The most significant fact that emerges from the total figures is that Britain occupies a strong net creditor position, even when official debts are taken into account. It is difficult to imagine circumstances in which a substantial proportion of the net long-term assets would be realised to fortify the short-term position, even if such action were practicable, but the long-term creditor position should certainly facilitate negotiations for short-term aid.

The income that will gradually accrue from the massive long-term investment abroad by British companies (only partly counterbalanced by the payments on foreign companies' long-term investments in Britain) is one of the most important factors in the prospective balance of payments. It seems to have been recognised more clearly in the U.S.A. (in relation to the U.S. balance) than in Britain (concerning the British balance). Admittedly, the big payments deficit that Britain has incurred this year confirms that other factors—mainly the excess of imports over exports in physical trade and the Government's "political" spending abroad—are temporarily more important. B...

income from overseas assets will make a strong impact on Britain's current account. The financial institutions of the City of London are not, in principle, sympathetic to restrictions (on either side) on long-term investment of British capital abroad. They recognise that the present circumstances are inopportune for such investment, and that it is unreasonable to ask foreigners to lend money to stabilise a position that is temporarily weakened by such investment. But they argue that if past long-term investment has made Britain's present position stronger than it appears to be superficially, then the strengthening process requires more, not less, long-term investment abroad.

Current News and Comment

Colombo Plan Annual Report

Aid on a large scale would continue to be necessary to enable countries in south and south-east Asia which are members of the Colombo Plan to finance development programmes, the Consultative Committee of the Plan reported at the end of its annual meeting in London last week. Ministers representing the 22 member-countries attended the meeting. The annual report of the Committee declared that "it would be unrealistic" to suggest that progress in solving the major problems of the region was "in more than the early stages". With this assessment came the announcement that the Colombo Plan, which took shape in 1950, is to be extended for another five years until 1971. Its further renewal after that will be considered in 1969.

The themes of development, aid, and trade—enunciated at the recent U. N. Conference on Trade and Development in Geneva—formed the background to the deliberations of the Consultative Committee. Its annual meeting was the first major international conference on this theme to be held since the Geneva conference. The *communiqué* issued at the end of the meeting and the annual report both stress the undiminished need for aid, and also emphasise the necessity for the developing countries to be given "softer" terms of aid. The Committee also underlined the special value of aid to be made available for general purposes and not specifically tied to particular projects. It drew attention to the fact that the *per capita* food production in the region is only just keeping abreast of population growth, and underlined the importance of expanding agricultural output, although it considered that this should be in balance with other sectors of the economy. The *communiqué* said that substantial increases in development expenditure had occurred in many countries during 1963. Other expenditures also rose, particularly on defence. Continued efforts would be necessary to pursue policies which would maintain financial stability while not inhibiting investment in essential development.

The total aid provided by Britain, Australia, Canada, Japan, New Zealand and the United States to recipient countries since 1950 had risen to $14,864 million. The value of aid contributed in 1963-64 had been $2,165 million. In addition, regional members were providing an increasing amount of aid to each other and had also invested substantially in the region. The Committee also showed its awareness of the problems relating to terms and conditions of aid. It said some members had taken steps to make aid available on easier terms during the past year, and the resources of the International Development Association (which includes several members of the Colombo Plan among its major contributors, and which has contributed largely to financing development in the region on easy terms) had been increased. Most aid, however, continued to be tied to purchases from the donor countries, although there had been an increase in the proportion of aid not tied to specific projects.

Boom in Oilseeds

Oilseeds prices continue to soar. The gains recorded since about the beginning of November have indeed been quite spectacular. The spot quotation for groundnut (Khandesh variety) has shot up from Rs. 49 to Rs. 59 (a 50 kilograms); groundnut oil has risen from Rs. 21 to Rs. 25 (a 10 kilograms) and linseed oil has gone up from Rs. 20.50 to Rs. 23.75 (a 10 kilograms). During the same period, the January hedge groundnut contract in Bombay shot up from Rs. 94.45 to Rs. 102 (a 100 kilograms), castor March rose from Rs. 182 to Rs. 189 (a 250 kilograms), cottonseed January improved from Rs. 106 to Rs. 112 and linseed March went up from Rs. 39.91 to Rs. 44.81 (a 50 kilograms). The steep rise in futures over the past fortnight or so has evoked considerable discussion in market circles. Futures trading was unofficially suspended in 20th and 21st November and efforts are being made to tide over a possible payments difficulty. It is quite possible that ceilings might again be fixed for oilseeds futures in order to discourage bull manipulation.

The spurt in oilseeds prices has intrigued many observers. This is because the assessment of the overall supply of oilseeds during the current season indicates a reasonably comfortable position. The new crop of groundnut is expected to set a new all-time record although it is difficult to say whether the optimistic estimates of a crop of 4 million tons will be realised. The export of groundnut oil remains banned, and it is quite possible that the ban might not be lifted if oil prices continue to rise. The U.S. has agreed to supply 75,000 tons of soya-bean oil and 50,000 tons of mutton tallow under P.L. 480, and these are expected to reach India by about the end of March or April. The supply position of edible oils last season had been effected by large exports of groundnut oil and a serious short-fall in the output of rapeseed and mustardseed crop. The new rapeseed and mustardseed crop is reported to be making good progress. If the weather continues to oblige, the crop might turn out to be around 1.5 million tons, against 900,000 tons last season.

Never in living memory has groundnut oil ready been known to be quoted around Rs. 25 (a 10 kilograms) at this time of the season, when the new crop movement normally gets well under way. And yet groundnut oil looks cheap when compared with rapeseed oil which is difficult to secure at around Rs. 40 (a 10 kilograms). Inter-State restrictions on the movement of oilseeds and oils have seriously disturbed the price pattern. In view of the widely different prices in different States, it is no longer possible to make a good assessment of the demand and supply equation on an all-India basis. The decision taken recently by the State Chief Ministers at their conference in New Delhi to do away with restrictions on the movement of oilseeds and oils is welcome. This will naturally tend to smooth out the wide disparities in prices in different States. Much will, of course, depend on how sincerely and effectively the policy decisions are implemented. While the Uttar Pradesh Government is reported to have removed all restrictions on the movement of oilseeds and oils, except mustardseed and mustard oil, the Government has still to restore complete freedom. Exports of groundnut and groundnut oil from Gujarat had been banned until 10th November and even at present, exports are being allowed only on permits.

That the 1963-64 season had ended with a negligible carryover of oilseeds and oils is common knowledge. Even so, the prevailing high prices, particularly of groundnut oil, cannot be explained away in terms of an acute physical shortage. In order to have a good idea of how high oil prices are it will be useful to compare current prices with the prices prevailing at this time last season. Groundnut ready Coromandel variety which is currently quoted around Rs. 58 was quoted at Rs 44 (a 50 kilograms) last year. Groundnut oil is quoted at Rs. 23 (Rs. 17), linseed Rs. 55 (Rs. 37.50), linseed oil Rs. 23.50 (Rs. 15), castorseed Rs. 42 (Rs 32.50), castor oil commercial Rs. 18 (Rs. 13.50) and niger-seed Rs. 47.50 (Rs. 36.50). Enquiries with the trade indicate an unusually large volume of speculative activity which is by no means confined to the futures market. About half a dozen big speculators are reported to have accumulated huge "long" positions in oilseeds futures, and they are in a position to make the market dance to their tune.

There are also reports of stocks of ready groundnut being gradually built up by those who had hitherto been engaged in the foodgrains trade. If the Government does not act promptly and firmly to discourage speculative holding and hoarding of stocks, there is a danger that edible oils might go out of the reach of the common man because of their high prices. Oilseeds prices are already very high and this is just the beginning of the season. It is time the Government fixed maximum prices for oilseeds and oils as in the case of foodgrains, cotton and jute. The price of *vanaspati* will need to be strictly controlled and it will need to be fixed at a level which makes purchase of oil at above a certain price unremunerative. Restrictions should be placed on the quantity of oil that a *vanaspati* manufacturer can purchase and stock during a given period of time. *Vanaspati* prices should be stamped on every tin along with the date of manufacture, and the goods must be disposed of within a prescribed time limit. This will enforce a measure of discipline on the manufacturers and also educate the consumer.

Mills Plead for Cotton Imports

With nearly 45 percent of its production under statutory control—the percentage will rise to around 52 percent with the inclusion of drills from December—the cotton mill industry is naturally much perturbed over the steep rise in cotton prices, which, in most cases, have pierced the ceilings. The Indian Cotton Mills Federation has urged the Government to take immediate steps to supply cotton to the industry at prices below the ceilings. Or, alternatively, the ruling prices of cotton should be taken into account in fixing the prices of controlled varieties of cloth. It has also made a plea for larger imports of cotton to bridge the gap between supply and the industry's requirements, and also stabilise the prices of Indian cotton. The Federation says that the basic idea of having a ceiling on cotton prices is negatived when the prescribed ceiling, even when raised, is often pierced. Therefore, if the phenomenon of prices chasing the ceiling is to be avoided, it would be necessary to ensure sufficient production by the abolition of ceilings and prescribing only a floor price.

Since realisation multipliers are linked with the price of cotton, the industry's plea for revision of cloth multipliers in order to accommodate the changes in cotton prices, cannot be questioned. The Federation is justified in asking the Government either to make available cotton within the ceiling prices or to refix controlled prices of cloth on the basis of existing ceilings. If the Government does not wish to see any increase in the prices of controlled varieties of cloth, then it must ensure that cotton prices are not allowed to rise beyond the levels which form the basis for determining the existing prices of cloth. In any case, it is the responsibility of the Government to guarantee that cotton prices do not rise above the ceilings. Of what use is any control over prices if the administration is not competent to implement it? But to give up control on the plea that it cannot be implemented successfully is perhaps a counsel of despair. Controls, where necessary, must be strictly enforced. The Federation's plea for doing away with price control over cotton in order to encourage cotton production does not convince because past experience does not show any close link between the prices and production of cotton; agricultural production is not very price-elastic.

Fortunately, the supply position of cotton this season is not so tight as the current high prices of the commodity seem to suggest. The rise in cotton prices is largely speculative. It should not be difficult to curb speculative tendencies if the authorities really mean business. Strong measures are necessary to discourage undesirable speculation. Early import of large quantities of cotton, as suggested by the Federation, will also go a long way in producing a significant impact on cotton prices.

Apart from pleading for large imports, the supply of cotton at the ceiling rates and revision of cloth prices in order to accommodate the rise in cotton prices, the Federation has also decided to represent to the Government that the special tax concessions allowed to certain industries of national importance should also be extended to the cotton mill industry in order to enable it to carry out its programme of rehabilitation, modernisation and expansion. The Federation is preparing a detailed representation against the recommendations of the Powerloom Enquiry Committee to freeze the cotton mill industry's capacity and to assign an additional cloth output target in the fourth plan to the powerloom sector. The Federation says that the Committee's recommendations are against the interests of the public exchequer, the consumer, the export trade and labour.

Advantages of A National Grid

There is likely to be a shortfall of one million kW in the third plan power target of 12.5 million kW. In view of the rapid increase in the country's power requirements, the fourth plan target has been tentatively fixed at 22 million kW. Side by side with the move nearly to double the power output in five years, greater consideration is being given to the question of installing a national power grid so that economies can be made in standby capacity and annual operating and maintenance charges. There are other important advantages too. Firstly, it would be possible to build large power stations at places where it can be most economically located, and secondly, an integrated national grid would inter-connect the hydel and thermal systems with definite benefit to both. Considerable uncertainty arises at present in areas served by hydel systems. There would, therefore, be greater stability of supply for the country as a whole once the various systems are interlinked, as the power systems can come to each other's help in times of emergency.

The Central Ministry of Irrigation and Power has already taken steps to install regional grids in different parts of India. For this purpose, the country has been divided into five regions: (1) northern region covering Jammu and Kashmir, Himachal Predesh, Punjab, Delhi, Uttar Pradesh and Rajasthan; (2) eastern region consisting of West Bengal, Bihar, Orissa and the Damodar Valley Corporation; (3) north-eastern region covering Asam, Manipur, Tripura, Nagaland and the N.E.F.A.; (4) southern region with Andhra Pradesh, Madras, Mysore and Kerala and (5) western region including Gujarat, Maharashtra and Madhya Pradesh. Regional electricity boards have already been set up in the northern, southern and western regions. In the remaining two, similar bodies will be shortly set up. The function of these regional boards is to plan the production of power and its transmission *via* the regional grid, and to ensure that the integrated systems are efficiently run.

The trend all over the world is towards such integration, because of the obvious advantages. As the load factor varies from place to place and from region to region (in points of nature, quality and time of demand), an integrated system should require less generating capacity. Russia has a vast territory, but it has been taking measures to create a single grid for the country as a whole. The European part of it, at least, will have a grid within three years. It is reported that eight European countries, namely, France, Italy, West Germany, Switzerland, the Netherlands, Luxemburg, Belgium and Austria, have already made arrangements for the inter-change of power among them. The east European countries have also reached an agreement for a similar mutual inter-change of energy.

In India, the main obstacle to creating a national power grid at present is the high cost involved. There is considerable controversy as to the technological feasibility of long-distance transmission of high voltage electricity at a reasonable cost. The equipment for high voltage transmission is very costly and has to be imported. The cost may become prohibitive unless there is continuous transmission of power, and the load factor remains correct throughout. This would naturally require considerable advance planning taking into account the difficulties which may immediately arise. There has also to be sufficient co-operation among the States. It is encouraging to find from a report of the Central Water and Power Commission that with the regional integration of the power systems in certain parts of the country, there is likely to be a saving of Rs. 45.57 crores in the eastern and southern regions in 1965-66; Rs. 19 crores in the Punjab-Delhi and Chambal-Satpura systems in 1966-67; Rs. 19.60 crores in the western region in 1967-68; and Rs. 10.26 crores in the Chambal-Bhakra system in 1968-69. The savings in capital outlay and annual running charges add up to a total of Rs. 94.37 crores; and the total saving in installed capacity in all the regions would be impressively large. Both the Central Water and Power Commission and the Central Ministry of Irrigation and Power are anxious that the national power grid project should go through as early as possible. With the completion of the regional grids, which will make enough experience available in the running of inter-connected systems, it should be possible to make a balanced assessment of the immediate cost and the many advantages which can be derived from a national grid.

Furore over H.E.C. Affairs

The furore over the affairs of the Heavy Engineering Corporation in the Lok Sabha last Saturday was slightly unexpected. It is to be hoped that the debate will help create a greater sense of responsibility in New Delhi about the country's expanding public-sector projects. The fire in the Ranchi plant in January last and the report later submitted by the Mukherji Committee created a big sensation. The facts of the situation would have remained unknown to the public had not a thorough probe been made into the H.E.C.'s administrative set-up in general and its Ranchi plant in particular. Because of the Government's claims about building a socialist pattern of society, the public-sector industries are expected to be model employers, who can provide guidance to private enterprises. But this expectation has hardly been fulfilled. As the report of the Mukherji Committee has shown, the authorities of the public-sector projects seem to honour the labour laws more in the breach than in the observance. The Committee's report has strongly condemned the administration of the Ranchi plant as "corrupt from top to bottom." Corruption has bred nepotism and factionalism. It is no wonder, therefore, that there has been a growing discontent among workers, which has affected both production and efficiency. Under the circumstances, the Committee did not find it difficult to sift the available evidences to conclude that the fire damage at the H.E.C. plant in Ranchi was clearly an "act of sabotage". But the growing indiscipline among workers has not been peculiar to the Ranchi plant alone. Lawless elements have also fomented trouble at the Bhopal heavy electrical plant. Mr. B. C. Mukherji, chairman of the Fertiliser Corporation of India, pointed out a few months ago that rowdy elements, coupled with wrong leadership, were responsible for many a sabotage in public-sector projects in July-August this year.

Admittedly, rowdy elements exist in both public and private-sector projects: and it is the task of good management to keep these elements under restraint by maintaining good working conditions and reducing discontent to the minimum. It is a pity that these considerations of maintaining harmonious industrial relations have not received much attention from the Ranchi plant authorities. There were personalities, as the Mukherji Committee's report has shown, who were bent on showing their own strength in relation to their rivals and formed petty groups or cliques even though they were well aware that this game of politics in the administration of a plant might lead to corruption, nepotism, inefficiency and worse. The security of the plant, therefore, was the first casualty of the intrigues. When the plant was first set up, the authorities hoped that it would meet the needs of future steel plants in the country. But it would now appear that this would remain only wishful thinking unless the administration of the plant is improved on the lines suggested by the Committee.

Apart from the recommendations concerning personalities, the Mukherji Committee made four important suggestions. Firstly, the Government should have some sort of a Central security force for all public-sector undertakings. This is a very important suggestion considering the risk of damage to costly public-sector plants. Secondly, the Committee suggested that there should be separate labour laws for public undertakings. The Government has been slow in taking a decision on it presumably because it may lead to many complications. Thirdly, the Committee recommended the reorganisation of the H.E.C. into a holding company with managing directors for each subsidiary unit. Lastly, it urged closer co-ordination between the State Government and the project authorities for more efficient working of the plant. Unfortunately, the Government has been unable to take a decision on these recommendations. The recent furore in the Lok Sabha would have served its purpose if it had removed the complacency of the Central Ministry of Heavy Engineering over the H.E.C. affairs.

Cloth Exports Maintained

Shipments of mill-made cotton piecegoods from Bombay port during October are provisionally placed at 31.33 million yards, valued at Rs. 2.723 crores, against 29.77 million yards worth Rs. 2.68 crores in the preceding month and 37.42 million yards valued at Rs. 2.86 crores in October 1963. The October figure raises the exports during the first ten months of the current year to 378.59 million yards, valued at Rs. 32.75 crores, compared with 380.88 million yards, valued at Rs. 28.803 crores in the same period last year. Thus while the quantity of cloth exported is slightly less, there has been a considerable increase in the foreign exchange earnings which is attributable mainly to the increase in exports of better quality goods, with a higher unit value. Variety-wise, exports of grey goods during January-October 1964 amounted to 205.0 million yards (Rs. 17.331 crores), against 211.68 million yards (Rs. 15.073 crores) in the corresponding period last year. White cotton piecegoods totalled 64.62 million yards (Rs. 5.665 crores), against 68.20 million yards (Rs. 5.36 crores) and coloured piecegoods amounted to 108.97 million yards (Rs. 9.855 crores), against 101 million yards (Rs. 8.594 crores). There has been a substantial increase in the exports of apparel from Rs. 37.5 lakhs to Rs. 1.549 crores, during the period under report. Shipments of other textiles were also higher at Rs. 82.22 million, against Rs. 65.27 million. Zonewise figures of exports of mill-made cotton piecegoods from India during January-August 1964, show that out of the total exports of 390.99 million yards, the Asian zone took 101.90 million yards, European zone lifted 192.78 million yards, Africa accounted for 51.91 million yards and Oceania took 22.92 million yards.

No Deficit Financing in Fourth Plan

The Central Finance Minister, Mr. T. T. Krishnamachari, is obviously trying to prepare the country to accept his forthcoming Budget proposals in good grace. He pointed out in Madras recently that the cost of collection of indirect taxes was generally greater than that of direct taxes, and that the taxes or duties which yielded less than Rs. 1 crore should be removed from the list. The Finance Minister stated in the Lok Sabha on Saturday that the Planing Commission had "completely abrogated" deficit financing from its consideration of steps to raise resources for the fourth plan. Although the statement was made in reply to a question as to what steps the Government intended to take to check inflationary pressures, Mr. Krishnamachari did not say whether the Cabinet had approved this policy, which the Planning Commission had suggested. But if the gap between the proposed outlay of about Rs. 22,500 crores for the fourth plan and the resources available for it is Rs. 3,000 crores, the Government will have to depend on increased taxation and public borrowing if deficit financing is to be abjured. Since Mr. Krishnamachari has himself stated that the cost of collection of indirect taxes is greater than that of direct taxes, one may not be surprised if the rates of direct taxes are further raised in the forthcoming Budget Meanwhile, the effect of these statements from Mr. Krishnamachari on the country's stock exchange has definitely been bearish, although it was hoped that

Finance Minister would try to encourage optimism in the market before February.

The Planning Commission's decision not to undertake deficit financing in the fourth plan is welcome in principle because it shows its eagerness to check the inflationary pressures. But because of the considerable gap between the planned outlay and the resources available, the Government may willy-nilly have to resort to concealed deficit financing. On this reckoning, one may expect ambitious public borrowing programmes under the fourth plan to raise the required resources. Inflationary pressures, the Finance Minister should appreciate, cannot be curbed unless unproductive public expenditure is reduced to the minimum. There is little hope that this will be done. It is good to learn from Mr. Krishnamachari that a cell to formulate a co-ordinated policy on national income, prices and consumption has been formed with the co-operation of the Reserve Bank, the Planning Commission and the Central Finance Ministry. The newly-formed cell will find good scope for research and to turn out scholarly reports on the subject; it is to be hoped that it will be able to influence the Government much in taking correct decisions on its monetary and fiscal policies.

The I.S.O. Meeting in India

At the invitation of the Indian Standards Institution of India, the International Organisation for Standardisation held its sixth triennial assembly in New Delhi last week. The Governing Council, the seven administrative bodies and 27 of its technical committees also held their meetings simultaneously. (The International Standards Organisation is the successor body to the International Federation of the National Standardisation Association, and came into being in 1946 with the object of promoting development of standards in the world "with a view to facilitating international exchange of goods and services and to developing mutual co-operation in the sphere of intellectual, scientific, technological and economic activity.") How does the I.S.O. achieve its ends? In other words, how does an international standards body make itself effective in the affairs of its 50 or so member-nations? The I.S.O. does this by the following means: (a) It takes action to facilitate co-ordination and unification of national standards and issues necessary recommendations to member bodies for this purpose; (2) sets up international standards with the unanimous approval of its member bodies; (3) encourages and facilitates, as occasion demands, the development of new standards having common requirements for use in the national or international sphere; (4) arranges for exchange of information on the work of its member bodies and of its technical committees; and (5) co-operates with other international organisations interested in related matters, particularly, by undertaking, at their request, studies relating to standardisation projects.

The membership of the I.S.O. consists of national standards organisations such as the Indian Standards Institution. At present 50 such organisations from 50 countries constitute the membership. As for the methods of its operation, the I.S.O.'s work is carried out mainly through numerous technical committees. These are set up from time to time as new fields of industry or commerce are taken up for international standardisation. The secretariat of each technical committee is entrusted to one of the member-bodies designated by the Council. At present, there are 108 technical committees and working groups, dealing with many branches of industry. India has taken a close and consistent interest in the activities of the International Standards Organisation since 1948. This country's national standards organisation, the I.S.I., is represented on 78 of the 108 technical committees. This is mainly because the growing industrial economy of India requires standards in various fields, and also because it will help expand India's foreign trade if international standards developed on lines corresponding to this country's needs. The I.S.O. deliberations in India, therefore, attracted wide interest from commercial and industrial circles. It provided an opportunity to Indian scientists, technicians and engineers to come in useful contact with their counterparts from more industrially advanced countries. Perhaps symbolic of the Organisation's growing interest in the developing economies of Asia, the new president for the current three-year term is Sir Jehangir Ghandy, who succeeds Mr. A. V. Viatkine of Russia.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following donations for the 1964 Fund:

Rs. 25

Governor of Assam.

Rs. 51

Indian Finance.

Rs. 10 each

A. K Gupta, N.B. Ghosh.

Rs. 5 each

A. L. Mayadar, S. M. Scott.

Rs. 3

S. Mehta.

Rs. 2 each

L. K. Swami, O. P. Chopra, P. K. Basu, A. Bachchan.

23 children's books have been received from Oxford University Press, Calcutta, for the Fund.

Total Rs. 117.

Previously acknowledged Rs. 1,902.71.

Grand Total Rs. 2,019.71.

THE JUTE INDUSTRY

THE reports of the Budge-Budge and National Jute Mills for the half-year ended 31st October, and of the Kinnison Jute Mills for the year ended 30th September show a very marked improvement on their predecessors. The management has evidently pulled itself together and taken advantage of the present good times. Thus the Budge-Budge Mills have earned a profit of Rs. 3,08,502 against Rs. 2,39,809 for the preceding half-year and Rs. 1,81,107 for the corresponding half of 1903. The National Jute Mills have earned Rs 1,25,057 against Rs 60,667 for the preceding half-year and Rs. 54,033 for the corresponding half of 1903. There is room for still further improvement in this concern. The Kinnison Jute Mills have earned Rs. 2,71,247 for the year ended 30th September against Rs. 1,11,039 for the preceding year. This is a very marked improvement and it is to be hoped that it will be maintained. It should be if the management have secured their jute. The present jute season is a somewhat perplexing one. The arrival so far into Calcutta would seem to point to a very large jute crop, but there are persistent reports that the crop is nearly exhausted and that it will be below normal. The shipments to Europe to the end of October are 120,000 bales ahead of last season, while the arrivals in Calcutta are equal to about 3,600,000 bales. The bulk of the local mills have secured fully six months' consumption of jute and sold their production at very profitable rates. But the market has been driven slowly up and Rs. 40 per bale has been spoken of. Last year at this time the price was Rs 29. The Marwari speculator has entered upon the scene and is engineering a little corner. This may be very disastrous for the Dundee and Continental Mills, but the local mills are mostly well supplied. We cannot bring ourselves to altogether believe in the short crop theory, because past experience shows that when there is a short crop, there is no desire to rush the fibre on the market as has been the case this season. We are inclined to think that the jute is here, but that it will be held in the interior to keep up rates. Within the last few days there has been a sensible fall in prices.

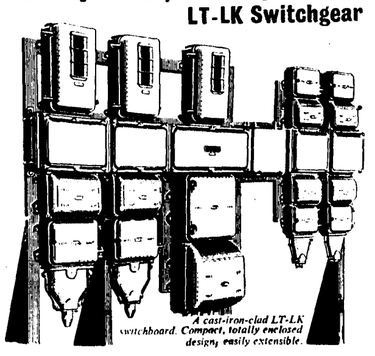
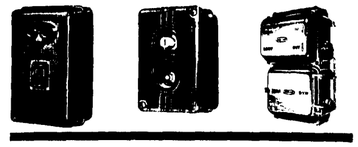
A Ditcher's Diary



MRS. VIJAYALAKSHMI PANDIT WOULD BE AN ADORNment in any legislative assembly anywhere in the world. As I learned, with little surprise, of her victory in the Phulpur by-election, I tried to picture her in the House of Commons in Britain; then I remembered that it is now possible for women to be in the House of Lords. There she fits, absolutely pat. For good or ill, India has no such hereditary House; and Mrs. Pandit will have to "make do" with the Lok Sabha. To what extent did the name of Nehru help Mrs. Pandit retain her brother's constituency for the Congress? It is impossible to know for certain; but I think she would have won even without the connection. I have seen it suggested that Dr. Lohia's campaigning for the Samyukta Socialist Party candidate proved a handicap for Mr. Jaiswal. Again, I am not so sure. The things the doctor says about Nehru are far from nice; they are offensive and worse. But Dr. Lohia has made Indian poverty his theme song; and there he is absolutely right. Poverty is at the centre of the Indian situation today; and anybody who speaks of anything else like peace or external danger is fooling the people. Yet the people of Phulpur voted for the Congress and Mrs. Pandit overwhelmingly. Is this just a habit of pre-independence days; or is there genuine, positive confidence in the Congress? Disillusionment with the Party is, I think, considerable in the urban areas where poverty generates bitterness; the rural electorate in India is so used to poverty that it has ceased to believe that things could be different and better. In any event, there is no warrant at all to believe that a non-Congress *régime* would be noticeably better; it could conceivably be worse. Is Mrs. Pandit going to be just a Member of Parliament, or has Mr. Shastri got a Cabinet job for her? She was not a bad Minister for Health in the prewar U.P. Government; but most of her experience since has been international. India has had enough of a world rôle; today her problems are strictly domestic and earthy.

IN BOTH DIPLOMACY AND JOURNALISM VAGUENESS is permissible, even legitimate—but, I submit, only up to a point. When, however, Mr. Swaran Singh says that there has been no "cease-fire" in Nagaland but only "a cessation of operations", I begin to wonder. I have heard of semantics; and I am not a stranger to Weldon's *A Vocabulary of Politics*. But what does Mr. Swaran Singh mean? If there was a cessation of operations, operations must have preceded it. What kind of operations? The country has never been told. The Government itself has allowed an international "peace mission" to work in Nagaland. Why should there be a peace mission unless there has been war? Let us be frank about it; the Government of India has been no more honest about affairs in Nagaland than the British were about what went on in the North-western Frontier Province in days gone by. I have heard it said quite cynically that the N.-W.F.P. was "a bit of all right" because it provided a useful training ground for British troops. It will not surprise me to be told that once similar thinking prevailed in the Ministry of Defence over Nagaland. But I am inclined to think that the new politicians in power now are a very different tribe; it also seems more than likely that even the G.H.Q. takes the view that a "military solution" for Nagaland is undesirable and perhaps impracticable. As Mr. J. P. Narayan has pointed out, the recent high-voltage reaction to statements by the "rebel" Nagas and Mr. Michael Scott were wholly inappropriate; neither party had said anything which should not have been known long ago. Many are hot under the collar because Mr. Narayan has suggested an amendment to the Constitution to accommodate the Nagas. All I can say, in the absence of concrete details, is that the Constitution has in the past been amended for more frivolous reasons. Having said all this, I am entitled to tell the Nagas that they fool themselves in thinking that any Government in New Delhi will ever concede their thesis that they are a separate people with a right to a sovereign State. Mr. Scott has taken it upon himself to explain this to the Nagas; and he had better start work on these lines.



I HAVE A FIRST-CLASS SCOOP. BETWEEN NOW AND the second Bandung conference in Algiers in March next year there is going to be a large increase in the number of imported transistor radio sets, lipsticks, tape-recorders and such other things in this country. Is the Government of India, then, relaxing import restrictions on these items? Nothing of the sort. All that will soon begin is what is being called "advance planning for second Bandung". China will be there; and so South Block is going into action in a big way. The predictable perfidy of China must be forestalled, which means various I.F.S. men must pack their bags—not overfull, because things are really going to be bought abroad—and visit all capitals to persuade them how cast-iron is the Indian case on the Sino-Indian border, Kashmir and what-have-you. I am by now quite convinced that almost every Indian delegation abroad is what the Americans vividly call "a fix". I can see a Secretary telling an Additional Secretary, "Look, don't grudge my trip to Belgrade; I've organised one for you next month, perhaps to Tokyo; Japanese cameras are excellent; I bought one myself last time I was there; and I understand your fifth son is crazy about photography". I am not being facetious but dead earnest. It is perhaps already too late; but Mr. Shastri still has time to ask himself just what India expects to achieve at Algiers. The old gramophone record will be played again that India has been wronged, that China has betrayed India's faith in peace. And the Indian representative, be it Mr. Shastri himself or his *alter ego*, will see the same bored faces of a multiplicity of hues. Everybody will tell the Indian representative, "Let the dead past bury the past. It's no use sulking indefinitely. Make it up with the Chinese". I shall say nothing about the sensibility of the advice; but I do object to the offensive, patronising manner in which it's going to be served. The Secretaries will be busy buying perfumes for their wives; it's Mr. Shastri who will have to take the peace-patter. "Nothing like home" is not a good motto for a Foreign Service; yet that's the only one I can think of at the moment for South Block.

ARTHUR MILLER'S *Death of a Salesman*, presented last week by the Dramatic Club of Calcutta at the New Empire in aid of N. R. Iyer Memorial Education Society, made in many ways an interesting piece, although somewhat slow-moving in parts. The story of Willy Loman has made its way round the world as a universal modern tragedy ever since it became a hit in the American theatre 16 years ago. This was mainly because Miller compressed all the anxieties of this competitive era into his ageing hero. Willy's dread was superannuation by the society to which he belonged. A similar play by John Osborne, *Inadmissible Evidence*—where the hero-victim, a middle-aged solicitor, is portrayed in the hour of his ultimate estrangement from society—has recently made quite a mark on the London stage. Xerxes Mehta has done a fairly good job in putting on the boards Loman and his little world of hopes and frustrations. The dream sequences, which are somewhat difficult to reproduce on the stage, were well done, something for which Tapas Sen's lighting contributed in no small measure. In fact, imaginative lighting and a virtually constant stage were relied on to put the entire story across. Terence Rochford gave a fine performance as the disillusioned hero, a rôle that is punishingly long and concentrated. It was, however, left to his understanding wife Linda, played by Sheila Maunder, to bring out—in spite of the little cruelties Willy inflicts on her and his two sons—the poignancy of the agonising moments through which he was passing. She sees him as a human being, who is being slowly push-

For Guaranteed Quality and Dependability insist on LT-LK Switchgear

A cast-iron-clad LT-LK switchboard. Compact, totally enclosed design, easily extensible.

Type MK1, 15Amps automatic direct-to-line motor starters for motors up to 7.5 h.p.

Type MF1, 15 Amps manually operated motor starters for motors up to 7.5h.p.

Switch-fuse gear — available as switch unit, fuse unit, and combined switch-fuse unit in ratings of 60/100 to 1000 Amps, 500 Volts

It is false economy to buy inferior switchgear. Of the finest quality, LT-LK is made in India in collaboration with the leading European manufacturers of switchgear — Laur Knudsen Ltd. of Denmark.

L&T also manufactures control panels (floor mounted, wall mounted or console type) for India's power generating and distribution stations and industrial installations.

CONSTANTLY

every minute.....

Life tells different stories at different times. Millions suffer from undeserved want, and suffer from Poverty, Hunger and Disease.

Each one of us has a duty for them. The expressions of this human urge and this social realisation took shape in the setting up of Organisations like the Red Cross.

Constantly, every minute, the Red Cross Relief is helping some people somewhere. It is your contribution that makes it possible.

And, alas, the minimum needs of many more still remain unmet. Your money—your donation—can work miracles. IT CAN SAVE AND SOOTHE LIVES.

Donation to the Red Cross Fund are exempt from Income Tax in accordance with the provision in the relative Act.

ed towards his grave. The dialogue was well exploited for characterisation. Derek Roberts as Biff did a good piece of acting.

MEMORIAL LECTURES HAVE NOT YET BECOME AN established feature of Indian intellectual life, although I hope they will before long. In Britain they are rapidly increasing in importance as opportunities for the expression of new and authoritative thoughts on contemporary topics, the latest series of B.B.C. Reith Lectures, on "The Age of Automation", is an honourable example. So it is welcome news to me that one of the objects of the Nehru memorial appeal, which was sponsored by Lord Mountbatten in London on 15th November, is to institute an annual Nehru memorial lecture. It is intended the lecture should be delivered in Cambridge by a distinguished scholar, scientist or administrator on some aspect of Commonwealth or international relations. The appeal itself is for £100,000, which may not be a particularly large sum, but which is considerably greater than the so-far-unsuccessful request for £12,000 to erect a statue of Mahatma Gandhi in London. Oddly enough, though, I suspect the Nehru appeal will enjoy a more enthusiastic response, if only because its aims seem so much more in tune with modern ideas on what is appropriate in the field of memorials. I remarked in this diary some months ago that statues have little relevance to the thinking of our times, and even less to the needs. Apart from the lectures, it is intended that the rest of the Nehru memorial fund should be spent on scholarships for Indian students in British universities. If it is not too late, I should like to suggest to the organisers of the Gandhi memorial appeal that perhaps the response would be greater if they abandoned the idea of a statue and proposed something on similar lines. Hard stone may be suitable for commemorating proud kings and successful generals. But for essentially human beings, something to help humanity seems far more appropriate.

A FRIEND RECENTLY IN SIKKIM WRITES: "HERE in Gangtok you just open your window and you see the Kanchanjunga as you have never seen it before from either Kalimpong or Darjeeling, however gloriously clear your days there may have been." My friend is a little prone to exaggeration in both praise and denunciation; I have no intention whatsoever of telling the tourist where he should go. What follows is rather more serious: "Several roads in this part of the world are now being broadened and generally improved; and you know that I am all for improvement. However wonderful the future, the process in the present can be unpleasant in the extreme and I should know what I am talking about. (All you have to do is to recall the experience of the five year plans; perhaps, let's hope, our great-great-great-grandsons will think differently, although my doubts on the score are not a few.) But at the moment driving from anywhere to anywhere in northern Bengal is not funny, even when someone else is doing the driving. Diversions are two an hour, when one is lucky. Unmanned level crossings abound; and delays at others can be exasperating. Worst of all, there are the countless Shaktimans, the weapon carriers or whatever they are called, which go in convoys from somewhere in India to somewhere in Sikkim or somewhere else. (That many go virtually empty, the mission being to purchase a couple of fags fifty miles away, is a proven happening delighting the hearts of pacifists whose chief interest is to show how wasteful wars are. Little do they know that emergencies are far more culpable on the score of wastefulness.) Authority does not begin to have realised that bad roads are bad economics. My irritations over delays are easily dismissed; except in unspeakable patches, the bumps were barely bearable. But think of the damage done to thousands of cars traversing these roads daily: the repairs mean not only wasted time, which we may or may not have to spare, but also wasted foreign exchange for parts which everybody knows we haven't got. If this is planned road building, give me unplanning any day." All I need to add is that my correspondent is far from an uncritical admirer of the private sector.

THE DITCHER

Guide for Investors

SCINDIA STEAM EARNS SLIGHTLY MORE

THE preliminary report on the working of the Scindia Steam Navigation Company for the year ended June 1964, belied the hope that since the dividend had been stepped up from Re. 1 to Rs. 1.25 a share, the Company must have fared much better during the year. The gross profit had recorded only a nominal increase from Rs. 3.31 crores to Rs. 3.33 crores. This had no doubt been achieved in spite of a small decline in the turnover from Rs. 18.22 crores to Rs. 17.65 crores, but then the setback in turnover had been contrary to general expectations. The Company's full accounts show that freight and passenger earnings are lower at Rs. 17.13 crores, against Rs. 17.69 crores in the preceding year. Since the figures concerning freight carried by the Company's steamers on the various routes are known, it is difficult to say how exactly the Company earned less by way of freight and passage income, especially when there was a general improvement in the freight rates.

The directors state that there was a sustained improvement in the general level of overseas tramp freight rates during the year. In the Company's liner trades, there was an increase of 10 percent in the rates from India to the U.K.—the Continent and from east coast of India to the U.S.A. effective from October 1963; that from west coast of India to the U.S.A. being effective from March 1964. In the eastbound trade, there was an increase of 10 percent from the U.S. ports to India as from July 1963. While the voyage results partly reflect the improvement consequent upon these increases, continued upward trend in operating costs tends to offset the benefit flowing from these increases. It has been possible to retain to some extent the advantage consequent upon these freight increases by sustained rationalisation.

Overseas liner services from India to Great Lakes were inaugurated in 1964, and while this service is operating during a season of about seven months, the directors seem confident of obtaining the good support of shippers both in India and the United States and Canada to this service. As for coastal services, the improvement noted earlier in the year due to better Hooghly drafts and despatch to ships was offset by delays consequent on disturbances in Calcutta, sudden shoaling of the bar in the Hooghly and reduction in the availabilities of coal cargoes in the latter part of the year. The directors state that unless there is an adequate upward revision of the freight structure, coastal operations will continue to be unremunerative.

Out of the three 17-knot fast motorvessels of Mitsubishi type ordered with the Hindustan Shipyard, the first vessel is scheduled to be delivered shortly. The second vessel, launched in April, will be delivered in the second quarter of 1965 and the third vessel is expected to be launched early next year. In addition to the construction of these three vessels, order has been placed for the construction of one 3,800 D.W.T. motor cargo vessel with Fergusson Brothers, Port Glasgow. The ship is expected to be delivered by about the middle of 1965, and is intended for trading on the west coast of India. Orders have also been placed with Lithgows Ltd, Glasgow, for the construction of three 15,000 tonner cargo vessels. During 1963-64, the Company obtained one second-hand motor cargo vessel of 11,700 D.W.T. on a deferred payment basis, and this has been put on the overseas run. A smaller second-hand cargo vessel of 3,800 D.W.T. has been purchased for trading on the west coast. In addition, six turbine second-hand vessels built in France with 7,700 D.W.T. each have been acquired by the Company for the coastal run. The Company laid up eight steamers during the year for disposal. Out of these four were sold at a profit of Rs. 25.67 lakhs. In the current year, two steamers have been sold at a loss and the remaining two are expected to be sold shortly.

In his statement to the shareholders circulated with the directors' report, the chairman, Mr. Dharamsey M. Khatau, says that "the Company's year under review has been good and, as far as I can see, we expect to maintain this improvement". Much will, of course, depend on the Government's policy towards the shipping industry, particularly in freight rates. Mr. Khatau says that unless the freight rates are designed to cover the total costs of operation of shipping companies, they cannot work on an economic basis. This involves nothing more than making the freight rates as fair to the companies as to the shippers adjusting them expeditiously so as to enable the companies to cover their increasing costs all-round. Mr. Khatau has expressed the view that the Maritime Freight Commission should be charged with the responsibility of making a periodic assessment of costs of operation and thereafter, permitting the shipping companies appropriate increases from time to time.

He has emphasised the need for an adequate increase in the coastal freight rates. Referring to the suggestion that no overall increase is justified in coastal freight rates because the industry has some "uneconomic ships" and that the return on capital would be adequate if these ships were eliminated, the chairman of Scindia Steam says that there are basic difficulties in eliminating uneconomic units even when the industry is desirous of eliminating them. Replacement or expansion of tonnage engaged in coastal shipping is by no means a simple matter. The number of uneconomic units with Indian shipping lines cannot be readily reduced unless the Government finds it possible to allow sufficient foreign exchange for purchasing as many efficient coastal ships as are required. Moreover, the efficiency of coastal shipping cannot be secured unless at least 2 or 3 percent of the total cargo carried by the Indian railways is guaranteed to set route. Mr. Khatau has urged that conditions of wasteful competition should not be allowed to be developed between national lines by some of them being permitted to go into routes already adequately served by existing national lines.

It is also imperative that the burden of delays in the ports in India, which has increased alarmingly, must be kept under close control. There is no reason why such delays should be countenanced. In any event, they tend to increase costs and anything that increases costs must be watched with care and eliminated appropriately. Mr. Khatau has rightly emphasised that the Government should take active interest in requiring Port Trusts to maintain efficiency at ports at the highest level possible, and to make labour more productive through the introduction of incentive schemes and the adoption of other suitable methods.

Share Offer from Indian Explosives

INDIAN Explosives Ltd, which is a joint venture of the I.C.I. Ltd. and the Government of India, proposes to set up a new plant for the manufacture of plain and electric detonators. The plant, which is under construction, is expected to make commercial supplies available in early 1966. The total capital outlay on the project is estimated at Rs. 1.215 crores, which is proposed to be met by a fresh capital issue of Rs. 94.60 lakhs, including the premium of Rs. 51.60 lakhs, a sterling loan of Rs. 21.46 lakhs from the Hongkong and Shanghai Banking Corporation and local bank borrowings. The authorised capital of the Company is Rs. 4 crores and the issued capital is Rs. 3 crores—all in equity shares of Rs. 10 each. It is now proposed to issue 430,000 equity shares of Rs. 10 each at a premium of Rs. 12 a share. Out of these, 57,000 shares are to be reserved for directors and employees of Indian Explosives Ltd and its associate companies. The balance of 373,000 shares will be offered to the public for subscription early in January 1965 at a premium of Rs. 12 a share.

After the present issue, I.C.I. Ltd will hold 70 percent of the total issued capital, the President of India 17.5 percent and the public 12.5 percent. The present issue will rank in all respects with the existing equity shares, except that the new shares will rank for dividend only from the final dividend to be declared for the year ended 30th September, 1965. The Company had a turnover of Rs. 6 crores in 1962-63, on which it earned a gross profit of Rs. 165.8 lakhs, and paid a dividend of 15 percent. It has declared an interim dividend of 9 percent for 1963-64. The Company's factory in Bihar is licensed to manufacture 40 million detonators a year, besides essential accessories of blasting explosives.

Ballarpore Paper Cuts Dividend

THE ordinary shares of Ballarpore Paper and Straw Board Mills Ltd have dropped to Rs. 16 due to the reduction in the dividend from 14.5 percent to 7.5 percent for the year ended June 1964. At the present price, the yield works out to 4.7 percent. The profit has dropped from Rs. 18.73 lakhs for 1962-63 to Rs. 23.58 lakhs for 1963-64. Taxation absorbs Rs. 8 lakhs, against Rs. 11.75 lakhs. The directors are keen on conserving resources in view of the heavy expenditure incurred on the expansion schemes which are nearing completion.

India Paper Pulp Debenture Offer

INDIA Paper Pulp Co. Ltd is offering 7-percent debenture stock 1967-77 for Rs. 40 lakhs. The underwriters and their friends will be allotted stock for Rs. 20 lakhs and the balance of Rs. 20 lakhs will be offered to the public for subscription at par. Application must be made for multiples of Rs. 1,000 with minimum of Rs. 1,000. The list opens on 30th November, 1964. (Fuller details appear on a later page in this issue of *Capital*.) The managing agents of the Company are Messrs Andrew Yule and Co. Ltd.

In view of the attractive interest offered, the issue should be subscribed without any difficulty. The Company is running a paper mill for the past 42 years and its performance has been satisfactory. The mill is situated near Naihati, West Bengal. The output of paper and paper board amounted to 16,636 tonnes in 1963-64. The Company has obtained an industrial licence to increase its pulp capacity by using jute sticks as a raw material. The new jute sticks pulp plant will be functioning in the first half of 1965. With the existing production of bamboo pulp, the total pulp output will rise to 23,000 tonnes a year. The Company has also obtained an industrial licence to increase the paper-making capacity to 23,000 tonnes a year by renovating and improving the existing three paper-making machines by 1967. So it is hoped that the mill will have a balanced unit with an output of at least 23,000 tonnes of pulp and paper each year after the expansion is completed.

Deccan Sugar to Expand

THE expansion programme of the Deccan Sugar and Abkhari Co. Ltd has been highlighted by Mr. H. V. R. Iengar in his statement circulated to the shareholders. (A fuller version appears on a later page in this issue of *Capital*.) The expansion of the production capacity of the Pagalur factory from 1,000 tonnes to 1,250 tonnes of cane a day has been completed, and the new capacity will be operating fully from next month. The Company has applied to the Government to expand the capacity further to 1,500 tonnes a day. This apart, it is intended to modernise the equipment of the factory. The cost of further expansion and rehabilitation may amount to Rs. 60 lakhs. The programme to expand the output capacity of the Samalkot Factory from 800 tonnes to 1,000 tonnes of cane a day has been undertaken and the new capacity will function from the beginning of 1965. The equipment of the factory will also be replaced at an estimated cost of Rs. 25 lakhs.

The distillery is also in urgent need of rehabilitation. The replacement may cost about Rs. 8 lakhs. Mr. Iengar pointed out that a total sum of Rs. 90 lakhs would be required during the next five years or so for expansion and rehabilitation. Although the Company has built up rehabilitation reserve to the extent of Rs. 14 lakhs, this, together with depreciation normally allowed for tax purposes, will be far too inadequate to meet the cost of replacements. In view of the sharp increase in the price of machinery, the Government should allow sugar companies an element in the price of sugar to cover replacement costs. The Tariff Commission, which has been asked to investigate the problems of the sugar industry, should, therefore, recommend a more realistic price structure.

The Company has earned a net profit of Rs. 15.18 lakhs for 1963-64, which is Rs. 3 lakhs larger than that of 1962-63. A taxable ordinary dividend of 18 percent has been maintained, but the share capital meanwhile has been increased by a bonus issue. The output of sugar by the Pugalur factory rose from 17,537 tonnes to 24,654 tonnes, but the average

It's 9.30—let's listen to the National Programme

Long before the power cables brought electricity to India's villages it was possible to listen to the radio —thanks to the battery-operated set.

Union Carbide India were the first to manufacture radio batteries in India. And they were the first to make special batteries for transistor and electronic equipment.

Electrical appliances need no longer depend exclusively on mains plug points because of these versatile 'Eveready' radio and transistor batteries. Their exceptionally compact construction and capacity to recover power between uses make them ideal for portable radios, gramophones, tape-recorders, electric shavers and a whole range of electrical equipment.

Union Carbide India's battery manufacturing plants are but a few of the seeds of industry that the Company have sown in India. The variety and value of products made by Union Carbide India today show how the resources and know-how of a world-wide organisation can serve the needs of a developing economy.

INTUC 1198

UNION CARBIDE

sowing the seeds of progress

UNION CARBIDE PRODUCTS FOR INDIA'S HOMES, INDUSTRIES, AGRICULTURE:

EVEREADY Torch Batteries, Torches, Torch Bulbs, Radio Batteries, Transistor Batteries, Photoflash Batteries, Hearing-Aid Batteries, Dry Cells, Telephone Cells, Railroad & Industrial Cells, Mantles, NATIONAL Arc Carbons.

UNION CARBIDE Polyethylene Resins, Polyethylene Film, Polyethylene Pipe, Acetic Acid, Butyl Alcohol, Butyl Acetate, Ethyl Acetate, Agricultural Chemicals, Plastics, Zinc Addressograph Plates, EMMO Photo-engravers' Plates, UNION CARBIDE Carbon and Graphite products, LINDE Welding and Cutting Equipment.

recovery dropped from 10.34 percent to 9.25 percent, mainly due to the extension of the season. The Company hopes to produce 27,000 tonnes during the current year. The Samalkot factory chushed 154,413 tonnes of cane, against 105,993 tonnes. The recovery dropped from 10.66 percent to 9.7 percent.

India General Navigation

ALTHOUGH the £10 ordinary stock of India General Navigation and Railway Co. Ltd are sluggish around Rs. 36.50. the encouraging factor is that the arrears of preference dividends up to 1963 will soon be paid. The Company ceased to be a trading firm since February 1963 and is now a holding company. It holds ordinary and preference shares and debentures in Pakistan River Steamers Co. Ltd and preference shares in the Rivers Steam Navigation Co. Ltd following the sale of Indian assets to the Rivers Steam Navigation Co. Ltd.

The accounts of the Company for 1963 have been split up. The first part relates to the period of two months ended February 1963 and the other part concerns ten months ended December 1963. The Company has incurred a loss of £71,401 for the earlier period, after providing £17,019 for depreciation. After bringing the previous loss of £339,202, the total debit balance amounts to £410,603. It has been adjusted against the revenue reserve which amounts to £996,323. In the latter period, the Company has earned a profit of £37,042, out of which £35,872 has been paid towards paying the arrears of preference dividends. Preference dividends for 1962 and 1963 will be paid in December 1964.

Offer for Assam Frontier Tea Shares

FOLLOWING Assam Frontier Tea's offer to acquire Budla Beta Tea, R. G. Shaw has made an offer to purchase at 24s a £1 unit the whole or any part of the cumulative preferred stock in Assam Frontier to which any stockholder of Budla Beta becomes entitled as a result of accepting the Assam Frontier offer.

Bogawantalawa Tea Dividend

BECAUSE of the remittances embargo imposed by the Ceylon Government, Bogawantalawa Tea Holdings is unable to pay a final dividend on its ordinary shares for the year ended March last. An interim of 2¼ percent was declared in February and that becomes the total for the year. For 1962-63, a total of 22½ percent was paid. Group profits were £123,863, against £106,203, although because of a sharply increased tax charge, the net figure is down from £40,819 to £24,553.

Bharat Bijlee to Raise Additional Capital

THE preliminary report on the working of Bharat Bijlee Ltd for the year ended June 1964 indicated that the Company had done fairly well during the year, in that the gross profit has registered a slight increase from Rs. 14.21 lakhs to Rs. 14.38 lakhs, even though the turnover had suffered a modest setback from Rs. 1.08 crores to Rs. 1.07 crores. The dividend had been maintained at 8 percent on the increased capital, the new 10,000 shares being entitled to a proportionate dividend of Rs. 7 a share. The Company's order position for the current year is reported to be satisfactory, and sales during 1st July to 31st October, have shown a rising trend. Material shortages which affected margins in the preceding year are, however, still a difficulty to be contended with.

The expansion scheme of the Company is making satisfactory progress. It has taken possession of the land in Kalwe and development work will commence shortly. Agreements have been finalised to obtain a foreign exchange loan of a little over Rs. 30 lakhs from Siemens Schuckertwerke, A. G., the Company's foreign collaborators, for the import of plant and machinery required for the expansion of the motor and transformer departments. The proposal to offer 20,000 equity shares of Rs. 100 each to the foreign collaborators has not been approved by the Government of India. The Company proposes to raise additional funds to finance its expansion schemes.

It is proposed to offer additional equity shares as rights to the existing shareholders in the proportion of one

new share for each one already held. The present equity capital of the Company is Rs. 30 lakhs. In addition to the equity shares, it is also proposed to issue 30,000 9.3 percent cumulative preference shares, which will be redeemable after 12 years from the date of issue, but not later than 15 years. These shares will be offered to the public through prospectus without being offered to the existing equity shareholders. The Rs. 100-paid share of Bharat Bijlee is currently quoted around Rs. 137.50.

South India Shipping Share Offer

INCORPORATED in January 1964 with the main object to establish, maintain and operate shipping, air transport services and all ancillary services, the South India Shipping Corporation Ltd. will soon be in the market to raise Rs. 70 lakhs through public subscription. The Company proposes to construct, hire-purchase and work steamships and other vessels of any class and to establish and maintain lines or regular services of steamships. It will also enter into contracts for the carriage of mails, passengers, goods and cargo by its own vessels and railways.

The Company has an authorised capital of Rs. 5 crores—all in equity shares of Rs. 100 each. The issued capital is Rs. 2 crores. Shares worth Rs. 70 lakhs are being taken up by the P. and O. Steam Navigation Company of Britain and shares of the value of Rs. 10 lakhs will be taken up by the Anglo-Norness Shipping Company. The signatories to the memorandum, directors and their friends will subscribe for shares worth Rs. 50 lakhs. The balance of Rs. 70 lakhs will be offered for public subscription. The entire public issue has been underwritten. The list opens on 2nd December. (Details of the issue appear on a later page in this issue of *Capital*).

The Corporation has already placed an order with the Bremen Vulkan Shipyard for five 38,000-ton bulk carriers for carrying foodgrains and other bulk cargoes. These vessels will be built to the design and specification approved by Sir Joseph W. Isherwood and Co. Ltd, London, one of the world's most renowned firm of naval architects and consultants, especially in ship design and supervision of construction of ships. The first bulk-carrier is expected to be delivered by the end of 1965, and others at an interval of three months each thereafter. The board of directors of the company includes Mr. A. D. Shroff (chairman), Lord Kenneth James William, Mr. J. H. Tarapore, Mr. T. S. Narayanaswami, Mr. K. Palani, Mr. K. M. Campbell, Mr. C. S. Loganathan, Mr. J. W. Anson and Mr. V. S. S. Dempo.

The offer of shares for subscription by South India Shipping Corporation Ltd is of interest because it is the first issue since the Indian Government has permitted foreign participation in the share capital of an Indian shipping company to the extent of 40 percent.

Outlook for Golden Hope Plantations

A CONFIDENT report is made by Mr. F. W. Harper with the latest accounts of Golden Hope Plantations. Crops are continuing to rise and rubber output is expected to reach 20 million lbs in the current year, flanked by 18,000 tons of palm oil and 7,800 tons of copra. There has been some recovery in the price of rubber and prices of palm oil, kernels and copra are expected to remain firm in the light of a lower level of exports from the producing countries. In the year ended 31st May, 1964, the lower selling price of rubber was more than offset for the Company by increased crops.

The Company is grouping estates into larger management units so as to cut overhead costs. The liquid position was strong at the year-end, with over £1 million in cash, Treasury Bills and short-term deposits, but this is regarded as "no more than adequate" for the relatively big development programme.

Mandya Paper Incurs Loss Again

THE working of the Mandya National Paper Mills Ltd for the year ended June 1964 shows a loss of Rs. 12.34 lakhs, without providing for depreciation amounting to Rs. 21 lakhs. This, however, is an improvement over the previous year's performance when the Company suffered a loss of Rs. 28.48 lakhs without providing for depreciation amounting to Rs. 20.76 lakhs. Its turnover during 1963-64—the second year of operation—showed a considerable increase from Rs. 1.13 crores to Rs. 1.76 crores. This was due to the rise in paper production from 6,018 tonnes to 10,114 tonnes, which is very near its rated capacity of 10,800 tonnes.

The working results of the Company during 1963-64 were adversely affected by the rise in the cost of production, resulting from an acute shortage of bagasse. The position concerning the supply of bagasse is expected to improve during the current year and it is hoped that the supplies will be adequate to enable the mill to eliminate working losses and, possibly, cover part of the depreciation. Since August 1964, the Company has been able to get the supplies of bagasse and has been able to produce paper with more than 70 percent bagasse on average. It has also produced satisfactorily paper with 100 percent bagasse which represents a technological achievement of the first order.

The recently granted concession—a 15 percent rebate in excise duty on production by new paper mills and a rebate of 5 paise a kilogram for paper units producing paper with more than 40 percent bagasse—will also help the Company improve its earnings. The Company is going ahead with its expansion plans. Up to the end of September 1964, it had withdrawn a sum of Rs. 1.17 crores from the loan granted by A.I.D. leaving a balance of Rs. 35 lakhs set apart to meet a part of the expansion cost. The Industrial Finance Corporation of India is expected to grant to the Company a loan of Rs. 1 crore to meet the cost of machinery for expansion as well as a refinancing loan of Rs. 96.66 lakhs. During 1963-64, the Company repaid three instalments of deferred payments amounting to Rs. 61.08 lakhs to the A.I.D. The Rs. 10-paid share of Mandya Paper is quoted around Rs. 4.68. The shareholders will have to wait for quite some time before their investment begins to bear fruit. The Company's accumulated losses exceed Rs. 40 lakhs and depreciation is in arrears to the tune of Rs. 41.76 lakhs. The arrears on preference dividend as at the end of 1963-64 amount to Rs. 22.42 lakhs.

"Someone should tell him about State Bank Travellers Cheques!"

Armed guards can cost a lot of money. Why not carry all the cash you want in the form of State Bank Travellers Cheques? They're absolutely safe, and much more convenient.

The State Bank of India issues its own Rupee Travellers Cheques in denominations of Rs. 50/- and Rs 100/-. These can be cashed at any of the 1700 Offices of the State Bank of India and its Subsidiaries. They are also encashable at encashing Agents at airports, and hotels and shops; in India and abroad. They're good anywhere, anytime, even after banking hours.

No irksome formalities. No risk. If lost, these cheques can easily be replaced.

Don't take risks.
Take State Bank Travellers Cheques.

STATE BANK OF INDIA

The Stock Markets

DULL CONDITIONS PREVAIL IN LYONS RANGE

Wednesday Evening.

DULL conditions have prevailed in the Calcutta stock market during the past week. Operators are generally inclined to keep their commitments light, so turnover has been small. Bulls have tended to take profit at every rise, while bears are cautious because share prices have dropped considerably. Attention has been largely confined to clearing shares which have fluctuated within a narrow groove. Business has been small, although the prices of selected cash scrip have been well maintained.

The impact of the rise in U.K. Bank rate was first bearish, but the market has recovered since. It is felt that the flow of funds from Britain into India will tend to decline as a result of the increased rate. Since the Reserve Bank of India has already placed restrictions on the expansion of bank credit, the interruption of the flow of funds from the U.K. will aggravate the credit shortage during the current busy season. Prices of various machinery bought from the U.K. under deferred payment terms will tend to rise as a result of the increase in Bank rate. But it is not certain whether general imports from the U.K. will become costlier, since the latter is keen to promote exports by holding prices down. Meanwhile, the increase is unlikely to influence the Indian monetary policy. Since the Reserve Bank rate was only recently raised, any further increase is unlikely.

Indian Iron have fluctuated narrowly. Among engineering shares, Jessop and Jay Engineering have received scattered support. Binani Metal are steady. Guest, Keen, Williams, Texmaco, Braithwaite and Indian Standard Wagon are more or less maintained.

In the miscellaneous section, clearing shares attracted the most attention. Dunlop Rubber, Indian Aluminium, Indian Cable and Indian Copper are prominent. Although prices dropped earlier, they have recovered towards the close. Scattered support has been forthcoming for Goodyear India, Philips India, Union Carbide, Alkali and Chemical and Associated Battery. British India Corporation are steady. Among new shares, Hindusthan Twyford, India Carbon and Woolcombers have attracted attention. Managing agency shares have weakened because the Government may terminate the managing agency system in selected industries. Martin Burn and Jardine Henderson are easier. Electric company shares are sluggish, and there has been a small turnover in Calcutta Electric. Paper shares have recovered towards the close due to replacement buying. Ballarpore are weaker on paying a smaller dividend. Titaghur have improved while Orient Paper have fluctuated both ways.

Birla have been a prominent feature in jute shares and have gained smartly. The price has nevertheless reacted towards the close due to profit-taking. Turnover in jute shares has, on the whole, been restrained, since investors are waiting to see whether the 15-percent surcharge is removed by the U.K. Government. There is also a great deal of concern due to sluggish foreign enquiries for hessian. The increased output will be difficult to absorb unless overseas purchases rise in the near future. Scattered business has been done in Anglo-India, Barnagore, Kamarhatty, Howrah and Union.

Coal shares are neglected and prices have tended to drop. A small turnover has passed in Central India, Burrakur and Western Bengal. Investors are worried over the large accumulation of pithead stocks. The demand for coal shows virtually no sign of improvement. Cotton mill shares are about steady, but activity is restricted. Investors are still examining the impact of the partial control of cloth on mill profits. The outlook is nevertheless encouraging because the supply of raw cotton, including foreign cotton, is expected to be larger during the current year than in 1963-64. J. K. Rayon have recovered on short-covering. Scattered interest has been shown in Dunbar and Bharat Commerce. Elgin have, however, weakened.

Except for a few transactions in selected Assam and Dooars gardens, tea shares continue to be neglected. The poor marketing outlook for teas is a major restraining factor. Despite a larger crop, the profits of tea gardens during 1964 are not likely to be any better than in 1963 due to the smaller average price of teas realised so far during the current season. Among Dooars scrip, Hassimara and Huldibari have dropped. Among Assam gardens, Teloijan and Betjan have attracted attention.

Government securities are dull and quiet and turnover has shrunk to almost a trickle. Institutional interest is conspicuous by its absence. The 3 percent Conversion loan 1986 has been quoted around Rs. 62. Prices of short and medium-dated stocks are nominally steady, and most of the State Government loans are available at a discount.

rumours of an increase in the retention price of steel. Among engineering shares, Premier Construction have hardened on the payment of a higher dividend by Hindustan Construction, a subsidiary of the Company. Tata Engineering have reacted on profit-taking. Larsen and Toubro and Alcock Ashdown have lost fractionally. Among motor-vehicle shares, Hindustan Motors have reacted due to selling from outside sources, but Premier Automobiles have been sluggish.

In cotton mill shares, Century, Standard and Svadeshi have lost towards the close due to profit-taking. Simplex, Kohinoor and Tata Mills have also moved down.

Turnover in miscellaneous shares has been small. In mining shares, Shivrajpur Syndicate have dropped due to pressure, while Be Be Petrol have attracted support because of favourable corporate rumours. Scindia Steam are well held on prospects of improved working during the current year. Sugar shares are sluggish and small business has been transacted in Belapur. National Rayon have dropped on fears of a cut in imports of rayon yarn. Voltas and Tata Oil are about steady.

Prices of bank shares have been maintained despite little turnover. Bank of India and Dena Bank have been done. Electric company shares have been sluggish, although Tata

SHARES FALL IN SMALL TURNOVER

STEELS STEADY ON RUMOURS ABOUT RETENTION PRICE

Wednesday Evening.

THERE has been a substantial drop in turnover in the Bombay stock market during the past week, although prices of clearing shares have fluctuated widely following alternate bouts of buying and selling. Earlier, the rise in the U.K. Bank rate had a bearish impact, but the adverse effects were soon overcome in the belief that the increase would not influence money rates in India. Although news has on the whole been favourable, prices have tended to drop towards the close due to the absence of buyers.

Dalal Street is inclined to await the outcome of the meeting between the Prime Minister, Mr. Lal Bahadur Shastri, and spokesmen of trade and industry due to be held in New Delhi next Thursday. The success of the Congress Party at the Phulpur by-election has been welcomed. The modification by the Reserve Bank of the liquidity ratio formula for commercial banks has helped to abate selling pressure.

Tata Steel ordinary have been steady around Rs. 144.75 due to

Power have met with scattered support.

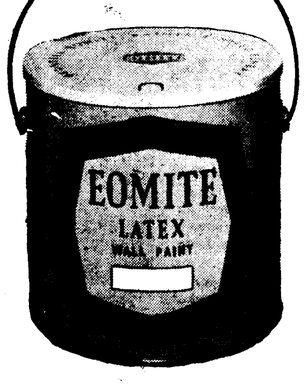
Madras

REPLACEMENT BUYING LEADS TO RECOVERY

STATE LOANS SOLD AT DISCOUNT

Tuesday Evening.

THE Madras stock market has recovered towards the close of the past week after an easier spell. Lower advices from the Calcutta and Bombay stock markets depressed sentiment first. Towards the close, replacement purchases have helped improve prices, particularly of planting shares. Good crop reports, combined with improved prospects for tea marketing, attracted support for selected tea and coffee shares. Textile shares have weakened on pressure. Selected miscellaneous shares have also been fairly steady. In spite of good enquiries for preference shares, turnover has been small due to the absence of sellers. Business in Government securities has shrunk, and almost all State Government loans are available at a discount.



Bank shares are sluggish, and scattered business has been done in Indian at Rs. 158 and in Indian Overseas at Rs. 150. In electric companies, Karaikkal are steady at Rs. 10.70 and Vellore at Rs. 15.55. Sugar shares have tended to be easier. Deccan have dropped to Rs. 10.70 and E.I.D. to Rs. 35.60. Jeypore are about steady at Rs. 16.50 on declaring a taxable ordinary dividend of 15 percent. Travancore have been maintained at Rs. 7.77, but Kothari have been sold down to Rs. 6.20.

In planting shares, Cochin Malabar are steady at Rs. 6.12 and Consolidated Coffee at Rs. 24.75. Blue Mountain have, however, reacted to Rs. 2.20 on paying a taxable ordinary dividend of 8 percent. Business has passed in Ouchterlony at Rs. 3.44 and in Periakaramalai at Rs. 3.70. Nelliampathy have come to hand at Rs. 5.45 on paying a taxable ordinary dividend of 25 percent. Coorg have been done at Rs. 4.85 on declaring a taxable ordinary dividend of 5 percent. Waterfall have dropped to Rs. 2.40 on paying a taxable ordinary dividend of 10 percent. Mysore Amalgamated are steady at Rs 5.05 and Wartyhully at Rs. 2.64.

In textile shares, South India Viscose have declined to Rs. 104, while Lakshmi are steady at Rs. 132. Travancore Rayon have reacted to Rs. 18.62, but Madura are steady at Rs. 35.25. Buckingham have been taken at Rs. 278, and Bangalore Woollen at Rs. 281. K. Rajendra are weaker at Rs. 74 and Cannanore at Rs. 99. Ramkrishna have been bought up to Rs. 199 and Ranga Vilas have been done at Rs. 51.50.

In miscellaneous shares, Ashok Leyland have hardened to Rs. 7, but Aluminium Industries have reacted to Rs. 23.20. In cement shares, Dalmia are available at Rs. 13.20, and India Cement at Rs. 5.09. Mettur Chemical have lost fractionally at Rs. 14.25. Seshasayee Paper have been transacted at Rs. 7.25 and Mysore Paper at Rs. 11.78. Parry's Confectionery are steady at Rs. 2.96 on paying a final taxable ordinary dividend of 9 percent, making 27 percent for the year. Kirloskar Electric have attracted support at Rs. 20.60 on prospects of a bonus issue in the ratio of one bonus share for every

A LOW-COST PAINT THAT GIVES A MILLION-DOLLAR FINISH!

Here is a paint that gives your walls a superb matt finish at an unbelievable low cost! Supplied in an economical paste form, Blundell's 'Eomite' Latex Wall Paint is so easy to apply. In more ways than one...

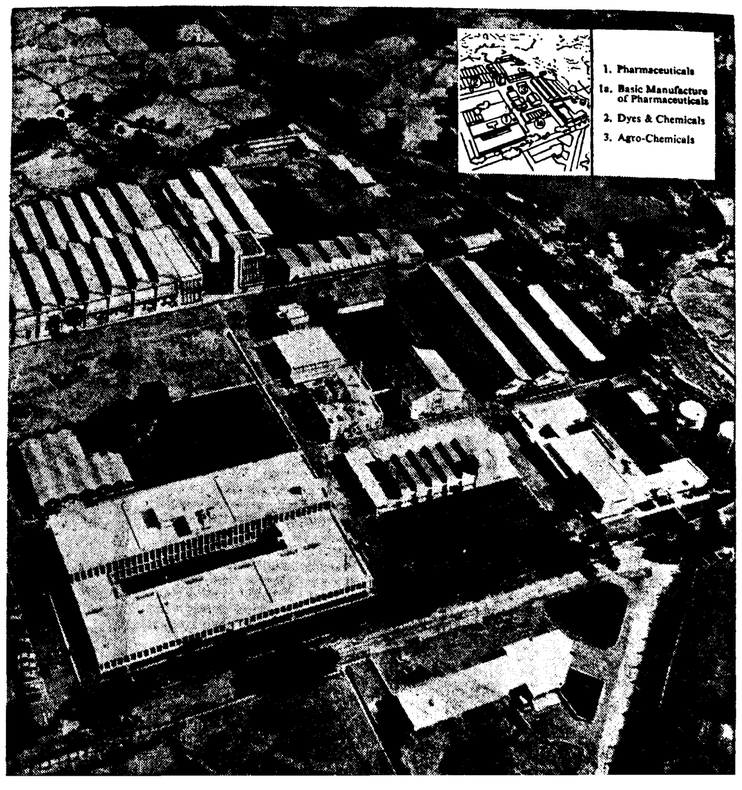
This is an aerial view of the Sandoz industrial complex. The site covers more than 70 acres. The plant and machinery incorporate the most modern manufacturing techniques, including a high degree of automation. All Sandoz products are manufactured, processed or formulated here, many from the basic stages. Each manufacturing wing has its own Product Development and Quality Control laboratories.



It is here that Sandoz works for national progress in more ways than one...

Pharmaceuticals:
On 4th February, 1961, Dr. S. Radhakrishnan, then Vice-President of India, formally inaugurated the Pharmaceutical and Chemical Plants. The pharmaceuticals manufactured represent established names in therapeutic use and are the result of continual and progressive research in Sandoz Laboratories all over the world.

Dyestuffs and Textile Chemicals:
A complete range of specialised dyes and chemicals is available for the requirements of the textile, leather and paper industry. Most of the dyestuffs licenced for manufacture will be produced for the first time in India. A pilot plant is in operation since last year and capacity production will start early in 1965.

Agro-Chemicals:
The product range in this line has a vast market in India where agriculture on a scientific basis is just beginning to take shape.

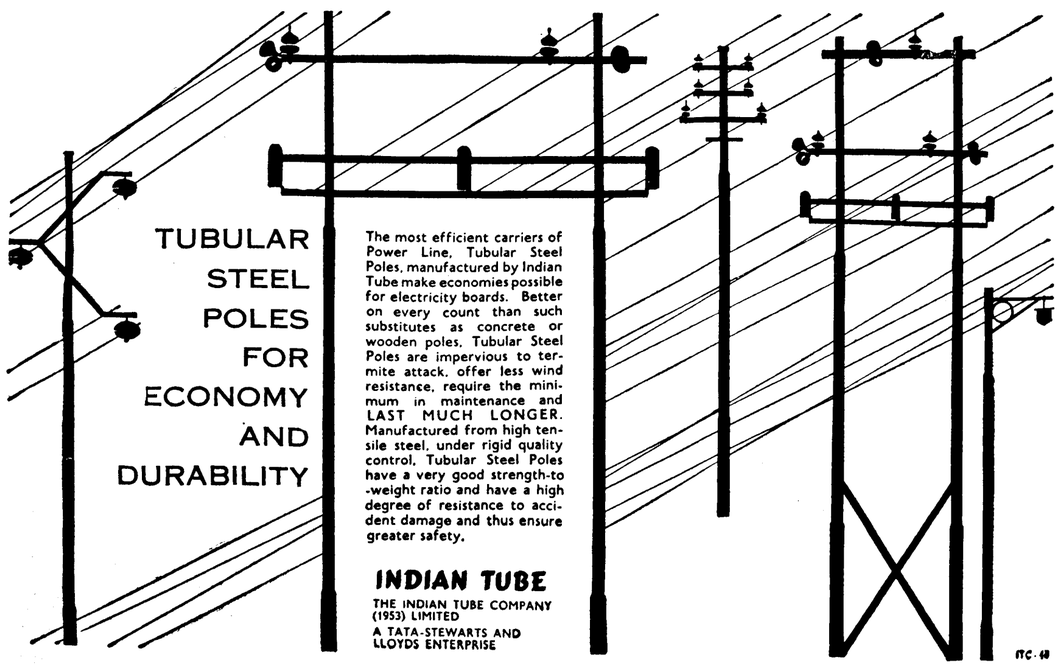
London



SHARP FALL IN SHARES ON BANK RATE NEWS

STEELS RESIST TREND

London, 25th November.

IT was a grim week in the stock market. Prices fell every day on persistent selling and then tumbled on Monday when the 2-point increase in Bank rate to the crisis level of 7 percent was announced. Prior to the Bank rate move, the fall in the market reflected the continuing uncertainty concerning the Government's tax policies. Buyers were holding off, and selling, while not heavy, was persistent. Some improvement from the lowest levels reached after the Bank rate news was recorded, but on the week, widespread and substantial losses were recorded. Gilt-edged were hard hit by the Bank rate news, and although there was some recovery, falls on the week ranged to well over a point.

The rally in industrials did not go very far, and heavy falls were recorded. Losses extended to several shillings in places while the leaders are widely 1s to 2s lower. Steels resisted the trend on the view that the latest moves reduced the likelihood of nationalisation. Hire-purchase, insurance, property and investment trust shares recorded sharp losses, but banks were a firm market. Gold shares went ahead after the Bank rate news and earlier losses were more than recovered. Coppers and tins lost ground. Oils suffered severe falls on tax uncertainties and rubbers lost ground for the same reason. Dollar stocks moved irregularly, and on balance, the premium showed little change.

Money

THE CALCUTTA MONEY MARKET

SHARP INCREASE IN CALL RATE

Wednesday, 25th November.

THERE has been a small increase in the general level of advances in the Calcutta money market during the past week. This is due to a small rise in the accommodation given to jute mills. The requirements of all the other major categories of borrowers—the cotton and sugar mills, the iron, steel and engineering industries, and the food-grains trade—remain more or less unchanged. In the interbank market, the call rate jumped from 1 percent to 4½ percent because of investment in Treasury bills, but later it has dropped to 2 percent.

The exchange market is active, with a fairly large supply of both gunny and tea bills. The demand for remittances is moderate. In London, sterling has strengthened against all important currencies following the 2-percent increase in Bank rate.

SILVER WAS QUIETLY STEADY IN Calcutta during the past week. The price closed at Rs. 254.75. It was quoted at 113-1/8d in London and at 129.3 cents in New York.

Gold was quiet. The price of 14-carat was quoted at Rs. 68.25.

DURING THE WEEK ENDED 20TH November, Government of India Treasury bills for Rs. 24,32,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 24th November. The total amount offered was Rs. 2,05,00,000. Tenders at Rs. 99.410 percent were accepted in full. Lower tenders were rejected. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.360 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 30th November.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 25th November to 28th November at Rs. 99.426 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 18th November to 21st November amounted to Rs. 16,56,50,000.

THERE WERE DECLINES OF Rs. 33.21 crores to Rs. 2,453.14 crores in the total note issue and of Rs. 27.79 crores to Rs. 2,432.94 crores in active notes, according to the return of the Reserve Bank of India during the week ended 20th November, 1964. The currency contraction was adjusted by reducing rupee securities by Rs. 35 crores to Rs. 2,146.13 crores in the paper currency reserve. Deposits of the Government of India dropped by Rs. 88 lakhs to Rs. 50.84 crores and those of State Governments by Rs. 62 lakhs to Rs. 6.49 crores. Balances of commercial banks at Rs. 101.60 crores showed a rise of Rs. 5.71 crores. Balances held abroad dropped by Rs. 71 lakhs to Rs. 9.43 crores. Investments at Rs. 120.77 crores were Rs. 3.48 crores smaller. Loans to scheduled banks rose from Rs. 79.05 lakhs to Rs. 1.24 crores, of which there was again no advance against usance bills. Ways and means advances stood at Rs. 39.56 crores, against Rs. 37.81 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 13th November, 1964, shows a rise of Rs 1.17 crores to Rs. 666.33 crores in total deposits. Investments in Government securities are up by Rs. 11.23 crores to Rs. 287.20 crores, while other authorised investments remain unchanged at Rs. 8.98 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have dropped by Rs. 2.34 crores to Rs. 342.38 crores. Cash and balances are, in consequence, shown at Rs. 24.13 crores or Rs. 4.07 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 13th November, 1964, shows Demand and Time liabilities at Rs. 1,366.64 crores (Rs. 25.89 crores on account of borrowings from banks) and Rs. 1,388.84 crores (Rs. 15.95 crores), compared with Rs. 1,364.45 crores (Rs. 28.84 crores) and Rs. 1,385.22 crores (Rs. 16.89 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have dropped by Rs. 3.09 crores and Rs. 3.22 crores to Rs. 70.31 crores and Rs. 96.64 crores, respectively. There is a rise of Rs. 6.64 crores to Rs. 819.58 crores in investments. Advances and bills discounted at Rs. 1,739.56 crores show a drop of Rs. 4.78 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.1 percent and 63.1 percent, against 6.3 percent and 63.4 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 27-11-64.

Issue Date	Maturity Date	Amount (('000's Rs.)	Average Acceptance Rate

OBJECTS AND PROPOSED ACTIVITIES

The Company proposes to engage in the world-wide tramping and coastal trade. With this end in view, the Company has, in the first instance, ordered five bulk carriers of about 38,100 DWT each from Bremer Vulkan Schiffbau und Maschinenfabrik, Bremen, West Germany, suitable for carriage of bulk cargoes, from light grains to heavy ores. The vessels are to be built to the design and specification approved by Sir Joseph W. Isherwood and Company Ltd., London, one of the world's most renowned firm of Naval Architects and Consultants, specially in ship design and supervision of construction of ships. The first bulk carrier is expected to be delivered about November/December 1965 and others at an interval of three months each thereafter.

APPLICATIONS

Copies of Application Forms and Prospectus can be obtained from the Company's Registered Office, from any of the above mentioned Underwriters, Brokers and Bankers to the issue named in the Prospectus or any of their main branches at the addresses given in the Prospectus.

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON 2.12.1964 AND WILL REMAIN OPEN UNTIL THE CLOSING OF BANKING HOURS ON 9.12.1964 UNLESS CLOSED EARLIER OR LATER AT THE DISCRETION OF THE DIRECTORS BUT NOT BEFORE 7.12.1964.

THE DECCAN SUGAR AND ABKHARI COMPANY LIMITED

STATEMENT BY THE CHAIRMAN, MR. H. V. R. IENGAR

The following statement has been circulated to Shareholders of The Deccan Sugar & Abkhari Company Limited by the Chairman, Mr. H. V. R. Iengar.

Since we last met, the country has suffered an irreparable loss in the death of Jawaharlal Nehru. Millions of words have been written about him—his courage and sacrifice, his intense patriotism, his humanism, and his contribution to world peace. I am sure shareholders would wish to have recorded, in this statement, their grief at his passing away and their determination, in so far as they are concerned, to see that they make such contribution as they can to the carrying on of the great work which he launched as the first Prime Minister of India.

Profits & Dividend

Whilst the operating Profit for the year has been maintained more or less at the level of the previous year, the Net Profit after Taxation at Rs. 15.18 lakhs has recorded an increase of Rs. 3.00 lakhs. This was the result largely of the lower Bank and other Interest Charges during the year under review consequent upon a generally favourable cash position and the larger Profit Adjustments relating to previous years.

Shareholders will have received Allotment Letters in respect of the recent issue of Bonus Shares by capitalisation of the sum of Rs. 6.64 lakhs available in the Share Premium Account.

It will be seen from the Allotment Letters and from the Directors' Report and the Accounts for the year under review that the final dividend of 11.5 per cent when declared, making a total of 18 per cent for the year, will be payable on the Ordinary Share Capital as increased by the Bonus Issue.

Rehabilitation & Expansion

The expansion of the Pugalur factory from 1,000 to 1,250 tonnes cane per day has been completed and the new capacity will come into full effect from December 1964. The cost of the expansion was originally estimated at between Rs. 25 and Rs. 30 lakhs but because of the installation of two oil-fired boilers by Seshasayee Paper & Boards Limited it was not necessary to instal a boiler which had been previously ordered and therefore there will be a saving of about Rs. 7 lakhs so far as Pugalur is concerned. The boiler was transferred to Samalkot where it was required for the expansion from 800 to 1,000 tonnes. Your Directors do not think that the capacity at Pugalur should remain stabilised at 1,250 tonnes per day. Experts are now veering round to the view that an economic plant should have a minimum crushing capacity of 2,000 tonnes cane per day. Moreover, the Fourth Plan which is now in draft appears to contemplate a target production of 45 lakh tonnes sugar as against 35 lakh tonnes at the end of the Third Plan. It appears to the Directors that the Company should embark on a further expansion, but the extent of expansion is necessarily governed by the availability of finance on the one hand and adequacy of cane supplies on the other. Taking a view of all the factors concerned, your Company has applied to the Government of India for expanding the Pugalur factory from 1,250 to 1,500 tonnes. In addition to this expansion project, the Company would also have to find finance for rehabilitation as sections of the plant at Pugalur have reached or are reaching the end of their useful life. For example, the existing milling plant was originally installed at Nellikuppam in 1932/33 and added to in 1936; it is already obsolescent and is fast reaching the end of its life. Altogether, it is expected that the expansion of capacity together with the rehabilitation of machinery would cost Rs. 60 lakhs, the main item of expense being a new 15-roller milling plant costing Rs. 44 lakhs.

At Samalkot the rehabilitation of the plant and machinery has been proceeding apace with the factory's expansion from 800 to 1,000 tonnes. The new capacity will come into effect from January 1965. While, therefore, the rehabilitation and expansion programme as envisaged five years ago may be said to have been completed with a total expenditure of Rs. 40 lakhs so far, shareholders will realise that replacement of plant and machinery is a continuous process and it is desirable that a forecast of further replacements over, say, the next five years be made. Such a re-appraisal has now been made and it is estimated that a sum of Rs. 25 lakhs spread over the next five years will be required for this purpose. In addition, the distillery is in urgent need of rehabilitation and, unless its efficiency is improved, its working will prove uneconomical at the present controlled price of industrial alcohol. It is estimated that this will cost nearly Rs. 8 lakhs.

It will be seen that the order of expenditure envisaged at Pugalur and Samalkot over the next five years is likely to reach the very high figure of a little over Rs. 90 lakhs. Proposals for financing this large expenditure are under active consideration of the Board. In the meanwhile, it has been thought prudent to strengthen the Rehabilitation Reserve by the transfer of Rs. 5.30 lakhs from the profits of the current year and it now stands at Rs. 14 lakhs—a modest figure compared with our requirements of plant and machinery at current high costs. I have referred later on in this speech to the need for Government conceding, in the controlled price of sugar, an allowance for rehabilitation of worn-out machinery.

Sugar Production

The Pugalur factory produced, during the year under review, 24,654 tonnes of sugar compared with 17,537 tonnes in the previous year. Shareholders will recall that production in the latter year was lower than the normal output of 20,000 tonnes on a crushing capacity of 1,000 tonnes cane per day because of the restriction imposed by the Government of India in 1962. The production of 24,654 tonnes was achieved by crushing all the available cane in the area; thereby the season, which normally ends in the first week of May, had to be extended till 12th June. As a consequence, the average recovery dropped from 10.34 per cent for the previous season to 9.25 per cent. The consolation is that at a time of countrywide sugar shortage the factory produced an extra 7,117 tonnes of sugar over the previous year and nearly reached the record figure of 24,795 tonnes achieved in 1960/61. It is hoped to produce 27,000 tonnes sugar in the current financial year.

A new record was established at your Samalkot factory with a crush of

THE BANK OF INDIA LTD.

T. D. KANSARA, General Manager

1,54,413 tonnes cane against 1,05,993 tonnes in the previous year. 8,500 tonnes raw sugar was produced for export and 6,784 tonnes white sugar for internal consumption, but here again the recovery fell to 9.7 per cent from the previous year's figure of 10.66 per cent. A good crop is in prospect for 1964/65.

Cane Price

Pugalur: The Government of India fixed a cane price of Rs. 52.20 per tonne from 1st November, 1963, the start of the official sugar year. The controlled cane and sugar prices for the previous season were Rs. 48.60 per tonne and Rs. 111.20 per quintal respectively. With the cane price increased by Rs. 3.60 per tonne the corresponding sugar price, to take into account the full incidence of the additional cane cost, should have been at least Rs. 116.00, but Government allowed only Rs. 115.00. Thereafter, Government raised the cane price by another Rs. 1.90 per tonne without any increase in the sugar price. The claim of the industry for the difference of Rs. 2.00 per quintal of sugar was rejected on the ground that there was an adequate cushion in the existing sugar price. However, seven months later—by then a major portion of the output had already gone into consumption—the sugar price was increased by Re. 1/- per quintal. Similarly, at Samalkot the cane price which was Rs 51.80 for the 1963/64 season was increased to Rs. 53.70 without a corresponding increase in the sugar price. Shareholders will have noticed with satisfaction, however, that the sugar prices for the current season which have just been announced appear to make adequate provision for the additional cost of cane.

Depreciation

Reference has already been made to the need for further replacements and modernisation at Samalkot and expansion of your Pugalur factory. In an era of more or less stable prices it is possible to replace an asset at the end of its life from the accumulated depreciation on the assets, but when new plant and machinery cost three to four times the original cost it is obvious that the extra expenditure cannot be met from the Company's internal resources and we have to have recourse to fresh capital or loans. The amount of depreciation allowed in the controlled sugar price calculated according to income-tax rules can hardly cover the present-day cost of replacement. It is for serious consideration whether replacement costs should not be taken as the basis for calculating depreciation or, if this is not practicable, whether a special rehabilitation allowance of adequate magnitude is not a fair charge to be included in the cost structure of sugar. Now that the Tariff Commission has been asked to conduct a fresh enquiry, it is to be hoped that a fresh approach will be adopted in tackling the problems of the sugar industry which is the country's second biggest industry, contributing to the exchequers of the Central and State Governments nearly Rs. 95 crores per year.

Distillery

The distillery at Samalkot fared much better than in the previous year. Most of the production was diverted to Defence requirements. The distillery is more than fifty years old and for this reason the cost of production is high. As mentioned earlier, your Board is giving careful consideration to the question of modernising the plant.

Staff and Labour

I am glad to report that our staff and labour relations continued to be cordial during the year under review. This has undoubtedly helped in the Company having what I hope the shareholders will consider another successful year.

The above statement is not a report of the proceedings of the Annual General Meeting, which will be held on the 30th November, 1964.

This is only an announcement and not a Prospectus and persons interested are requested to apply for a copy of the Prospectus for full details.

ISSUE OF RS. 40,00,000 7% DEBENTURE STOCK 1967/77

INDIA PAPER PULP COMPANY, LIMITED

EXISTING AND PROPOSED ACTIVITIES

The Company has been carrying on the business of paper and paper board manufacturers for the past 42 years in its Mill at Hazinagar near Naihati, West Bengal. The Company has three Paper Making Machines, and production of paper and paper board during the year ended 31st March, 1964 was 16,636 tonnes.

Following on successful experiments carried out by the Mill in 1960/61 when it was proved that a satisfactory pulp for paper making could be produced from jute sticks, the Company obtained an Industrial Licence to expand its pulping capacity using jute sticks as the raw material. The new Jute Sticks Pulp Plant which is in course of erection will be commissioned in the first half of 1965 and, together with the production of bamboo pulp from the existing plant, will give a total pulp production of 23,000 tonnes a year.

The Company has also obtained Industrial Licences for expansion of its paper making capacity to 23,000 tonnes a year to be brought about by the renovation and speeding up of each of its paper making machines progressively from mid 1965 until 1967.

After completion of these projects the Mill will be a balanced unit with a production of at least 23,000 tonnes of both pulp and paper a year.

LOCATION

The Company's Mill is situated at Hazinagar near Naihati, West Bengal.

DATE OF OPENING AND CLOSING OF SUBSCRIPTION LIST

The subscription list will open at the commencement of banking hours on the 30th November, 1964 and will close at the close of banking hours on the 9th December, 1964 or earlier at the discretion of the Directors of the Company, but not in any case earlier than the close of banking hours on the 2nd December, 1964.

COPIES OF THE PROSPECTUS AND APPLICATION FORMS WILL BE AVAILABLE FROM THE REGISTERED OFFICE, UNDERWRITERS, BANKERS AND BROKERS NAMED IN THIS ANNOUNCEMENT.

New Delhi

OIL COMBINE CLARIFIES TERMS FOR MADRAS REFINERY

(FROM OUR NEW DELHI CORRESPONDENT)

THE Iranian-American combine consisting of the American International Oil Company and the National Iranian Oil Company, which has been finally selected to build the Madras refinery with a capacity of 2.5 million tons, has elucidated the three points raised by the Government It has given an unequivocal guarantee on the refineability of the Darius crude which would be used at the refinery. As for the Indian demand for the most-favoured-nation treatment in relation to the discount, the combine has assured the Government of India such treatment as long as comparable terms for the sale of crude are recognised. The combine has expressed its desire to make the loan flexible, the amount of which could be stepped up, say, by $5 million. The Government wanted an additional foreign exchange loan of $10 million for financing the fertiliser plant, the credit offered having been regarded inadequate. Under the original proposal, the N.I.O.C.-A.I.O.C. investment in the project was to amount to $58.4 million, $14.9 million in equity and the remainder $43 5 million as a loan. The foreign exchange cost of the refinery, which will include the desulphurisation plant, a hydro-cracker and a lubricating plant, is placed at $17 million, of the ammonia plant at $6.4 million and the fertiliser-*cum*-petrochemical complex at $25 million.

The combine has committed itself to finance the aromatic-based petrochemical project. It is, however, explained that the proposed refinery capacity with the fertiliser plant would have no room either for a naphtha cracker or for an aromatic-based petro-chemical complex. It is also explained that the A.I.O.C. has specialised itself in establishing aromatic complexes. A complex of this nature, it is suggested, should be located elsewhere, say, in Gujarat. The Government is presently engaged in examining the proposals to finalise the deal. Under the draft agreement, the Government of India, at its own instance, wanted to have 64 percent in equity capital, against 51 percent originally offered by the combine. The remaining 26 percent would be shared by the two foreign partners. In the nature of things, with a reduced share in the equity of foreign collaborator, the requirements of foreign exchange shall have to be met through loans. The combine's share in the equity capital will partly finance the plant and equipment for the refinery. The balance will be financed through a loan of over $40 million to be advanced to India by the two American banks whose representatives were here last month. Carrying an interest of 5 percent, the loan will be repayable in 25 half-yearly instalments starting from one year after the refinery goes on stream. The refinery will be based on 34 gravity Darius crude from the offshore Iranian oilfield jointly owned by the N.I.O.C. and the A.I.O.C and will include a sulphur treatment plant, producing 16,000 tons to 18,000 tons of the much-needed sulphur. The Darius crude price will be $1.35 a barrel. The two Companies agreed to allow 180 days' credit on crude supplies for the first five years, followed by 150 days' credit for two and a half years, 120 days' credit for the subsequent two and a half years, and 90 days' credit thereafter. Initially, there will be a joint venture company owning and operating the fleet of tankers which, over the course of years, will become India's property.

No More Negotiations

Two things emerge from the Government's decision. Firstly, there will be no further negotiations with other oil companies on the refinery or the reopening of negotiations with the N.I.O.C. and the A.I.O.C. Secondly, the Government is anxious to clinch an agreement which, with some give and take, should be signed in a final form during the month. Enquiries show that there would be no imports of crude other than Darius for blending purposes. The hydro-cracker is being included in the project at the request of the Government. The cracker will convert furnace oil into kerosene and H.S.D. and thereby reduce the lack of balance in the demand structure of the oil products. India has to import these products in large quantities at present. Under the proposed scheme, the fertiliser plant will be financed from the loan which, in the nature of things, would be paid out of profits. This will accelerate the fertiliser production programme. Darius crude without credit facilities, as reported earlier, is priced at $1.35 a barrel, against Aghajari crude priced at $1.57 a barrel and used by some private-sector refineries in India. The first year's saving in crude prices should pay for the desulphurisation plant. Pending the creation of a joint tanker company, the combine has offered to secure most favourable tanker rates.

INDUSTRIES

Policy Being Reconsidered

There has been fresh thinking in New Delhi on the principles which should guide India's industrial expansion. So far the planning for industrial growth was linked with internal demand. On the twin basis of the rise in population and the average yearly increase in demand, a production target, say, for 1966 was determined. Additional capacity was planned after considering the existing installed capacity. According to present thinking in New Delhi, some industries will be selected, which have an export potential. Capacity for these industries will be so created as to compel the entrepreneur to seek avenues for export with or without State assistance. The case of tyre and tube industries should illustrate the point. Under present conditions, the units manufacturing these items are compelled to export.

Such capacity, it is suggested, should be created in identified sectors and the existing rigidities should be relaxed for their expansion. As the profit motive, as distinct from the earning of foreign exchange is a dominating feature of the private sector, an expanding rôle for the State in export-oriented industries has been emphasised. It is largely for this reason that a State-owned fisheries corporation has been set up. Textiles and shoes could be some other items which could be produced by public undertakings.

The Prime Minister, Mr. Lal Bahadur Shastri, it will be recalled, recently suggested the setting up of some textile mills in the public sector to meet the demands of the home market. Another view is to entrust the export trade in textiles to the public sector and leave the private sector to meet the demand of the home market.

RURAL ELECTRIFICATION

Fourth Plan Target

The Central Ministry of Irrigation and Power has decided to electrify all villages in Delhi State. Opinion is gaining ground that the electrification of villages is of paramount importance. So far 45,000 villages have been electrified in India, about 2,500 being in the third plan. There are more than 500,000 villages in India; and at the present rate of progress, it may take about 100 years to supply electricity to every village for domestic, industrial and irrigation purposes. The Ministry has planned to electrify 100,000 villages at a cost of Rs. 300 crores during the fourth plan.

The fourth plan target for power generation is placed at 22 million kilowatts, against 12.5 million kilowatts during the third plan, while the capacity actually created amounted to 10.5 million kilowatts.

A 500-megawatt station is planned for the Delhi, Punjab, Rajasthan and U.P. grid, eventually to be raised to a capacity of 1,000 megawatts. It will be operated by a central generating authority.

EASTERN EUROPE

Trade Prospects

The following is the review and prospects of India's trade with Czechoslovakia, Rumania, Bulgaria and Hungary:

Czechoslovakia: The trade figures of imports and exports for the first ten months of 1964 are about Rs. 15 crores each way. The likely target of trade for 1965 are placed at Rs. 24 crores each way. Under the 1965 trade plan, Czechoslovakia has agreed to use all funds available in India for the purchase of goods in the country. Secondly, the purchase of components and spare parts for tractors has been considerably increased with a view to raising the production of tractors in India The intake of capital goods in 1965 is likely to be more than in 1964. The sale of tyres and tubes, tea and tinned fruits from India has risen. Czechoslovakia is interested in placing fairly large orders for railway wagons, and a delegation from that country is already here to work out the details. They are also interested in buying vitamin and hormone intermediates.

Rumania: The trade for 1964 did not come up to expectations. Arrangements, however, have been made to step up trade during the remaining period of 1964. A-15 percent increase in the trade is envisaged for 1965 or a trade of Rs. 8 crores each way. Rumanians have agreed to buy a fairly heavy quantity of iron ore for their Galatz steel plant in spite of competition from Brazil and Egypt in the iron ore trade. India has also agreed to export Rs. 1.50 crores worth of textiles, of which handlooms will account for Rs. 5 lakhs. As for imports from Rumania, India has been promised 10,000 tons of caustic soda and a similar quantity of heavy and light soda ash. She has also been promised Rs. 40 lakhs worth of urea and axle oil worth Rs. 90 laks required for the Indian railways.

Bulgaria: The trade target for 1964 is about Rs. 4.5 crores each way. For 1965, the trade each way is placed at about Rs. 5.5 crores. This, on the import side, includes Rs. 60 lakhs worth of zinc and some additional quantities of caprolactum.

Hungary: The target for 1964 is about Rs. 12 crores each way. Its implementation during the first ten months of the current year has been of the order of Rs. 10 crores each way. The trade for 1965 is envisaged at Rs. 14.5 crores each way. Indian exports for 1965 are to be increased for such commodities as cotton textiles, leather footwear, chemical products and engineering goods. Hungarians have also shown interest in railway wagons and a delegation is here to work out the details. Side by side, India has reduced the import of wheels and wheel sets since these are being produced in Durgapur. This is offset by the increased imports of chemicals and various kinds of drugs in bulk, including sera and vaccines.

Trade with Western Europe

Of the west European countries, India has the biggest adverse balance of trade with West Germany which is partly due to the fact that she is importing essential machinery and equipment under credit. In the case of other west European countries, the trend of exports from India for the period April-August 1964-65, compared with the corresponding period in 1963-64, shows an improvement. India's intensive export promotion drive to west European countries, including efforts to export minerals and ores especially to West Germany, is expected to minimise her adverse balance of trade in 1964-65.

The trend of exports to most of the countries of Asia and Africa in the first five months of 1964-65, compared with the corresponding period of last year, shows a great improvement. It is expected that the adverse balance of trade with many of the countries in these two regions will be considerably reduced in 1964-65.

India's big adverse balance of trade with the U.S.A. in 1963-64, largely due to heavy imports of food under PL-480 and other imports under U.S. A.I.D. it is expected, will be somewhat reduced this year as indicated from the trend of exports in the first five months of 1964-65.

Attention is also being paid to increasing the favourable balance of trade with the Latin American countries in the current year. An Indian trade delegation visited Latin America recently to explore the possibility of increasing the total turnover of trade with the countries in this region.

At the present rate of exports, total exports in 1964-65 are expected to reach the record level of over Rs. 810 crores.

FOREIGN TOURS

Results of Ministerial Visits

Two Ministers of State and one Deputy Minister have lately been touring abroad. The Deputy Minister of Commerce, Mr. S. V. Ramaswamy, was doing eastern Europe last month. India had made five-year trade arrangements with all countries of eastern Europe, except East Germany, last year. Annual trade plans are made under them. So far, they were negotiated by the Joint Secretary to the Central Commerce Ministry, Mr. Vohra. This year, Mr. Ramaswamy took out a team to do this work. Speaking at a Press conference after his return, Mr. Ramaswamy claimed that his efforts

would help increase India's trade with these countries by 25 percent. A similar claim was also made when the agreements were signed last year.

As far as the current year is concerned, Mr. Ramaswamy admitted that trade figures with Czechoslovakia were about Rs. 15 crores each way, but "there are still two months to go." Trade with Rumania in 1964 was not up to the mark and with Bulgaria 75 percent of the targeted figure. Trade with Hungary was Rs. 2 crores below the expectation which, he said, was "quite a satisfactory percentage". All these shortfalls would be converted into an additional turnover in 1965, thanks to the persuasive efforts of Central Commerce Ministry officials.

The Minister of State for Oil, Mr. O. V. Alagesan, did one better. On his return from the U.S.A., Canada and Japan, he made the announcement that a joint "Anglo-American" proposal had been received for setting up a naphtha cracker and a petro-chemical complex in Gujarat. The programme included the manufacture of synthetic rubber plastics. Details of this offer were, however, received by the Central Oil Ministry during Mr. Alagesan's absence from India.

Earlier this year, I.C.I. had secured the Government's permission to form a consortium in June this year. I.C.I. was able to reach an agreement with Phillips Petroleum of the U.S.A. to form two companies, one with the Government to set up a 400,000-ton naphtha cracker and the other a public limited company in the private sector, which is to manufacture later ethylene, polythylene, vinyl acetate, vinyl chloride, P.V.C. products, high-density polythylene by the Phillips method, synthetic rubber, carbon black and man-made fibre. The estimated cost of the project is placed at Rs. 53 crores, half of which will be in foreign exchange. I.C.I. and Phillips Petroleum will hold a 50-percent share in the equity capital of the naphtha cracker company, the Government holding the balance of 50 percent. They will form a second company in the private sector for the end-products. The foreign exchange cost of the two schemes will be met partly by the contribution to the equity capital of the Anglo-American combine and partly from loans. The scheme was submitted to the Government early this month. Incidentally, Mr. Alagesan did not disclose the results of his talks in New York with Dow Chemicals which had asked for the details through diplomatic channels.

Meanwhile, the Minister of State for Finance and Planning, Mr. Baliram Bhagat, has been touring Russia and Britain. His achievements are also being eagerly awaited.

RUSSIA

Trade with India

Letters were exchanged here last week, embodying the trade arrangement for 1965 between India and Russia. It is estimated that the volume of Indo-Russian trade this year will amount to about Rs. 80 crores to Rs. 85 crores each way, India's exports to Russia being about Rs. 80 crores to Rs. 85 crores in 1964.

It has been agreed to increase the trade further by about 50 percent during 1965 to reach the level of about Rs. 125 crores each way. This will mean an increase of about Rs. 40 crores in India's exports to Russia, compared with those for 1964. As the trade between the two countries is a balanced one, imports from Russia and credit repayments will be equal to India's exports. Thus the trade targets, which were agreed to between the two countries for 1966 under the long-term trade agreement, will now be reached in 1965.

About 40 percent of the total exports from India in 1965 will consist of manufactured goods. Russia has shown interest in engineering products, particularly new items such as electric transformers, air-conditioners (indoor), water-heaters (household), accumulators, textile machinery, knitting machines, twist drills, and among chemicals and other products, specially B.H.C. powder, zinc phosphide, mercurial seed dressings, calcium carbide, bleaching powder, detergents, chrome pigments, wire enamel, rosin, woollen knitwear, men's shirts, spectacle frames, linoleum, sports goods, sheets and turkish towels, dyed handkerchiefs and tarpaulins besides other products.

The percentage of tanned and semi-tanned goatskins to be purchased by Russia in 1965 will be increased to 55 percent, the tanned skin being in larger quantities than the raw goatskins.

Imports from Russia will include machinery and equipment and spares and components for such important projects as Harduaganj, Pathratu and Balimela powder stations, irrigation projects, and various Indo-Russian projects like Bhilai, Ranchi, and Hardwar. In addition, Russia will supply essential materials like mineral oil products, ammonium sulphate, non-ferrous metals, pig iron, tinplates and rolled steel products.

AUSTRALIA

Expanding Trade with India

A nine-member delegation of Australian business men led by Mr. A. J. White, now in the capital, had a meeting with the Central Minister of Commerce, Mr. Manubhai Shah, during the past week.

The talks mainly concerned the expansion of trade and economic co-operation between India and Australia and the establishment of joint ventures by Australian entrepreneurs in India. The scope for increasing the export from India of such items as tea, coffee, jute, black pepper and manufactured goods and the import from Australia of tallow, wool, raw hides and skins was discussed.

The starting of joint enterprises in India making use of raw hides and skins and of Australian tallow and the import of wool for commission combing and commission spinning for re-export were considered. Various other aspects of India's policy of welcoming foreign capital and technical know-how in approved enterprises within the framework of the country's Industrial Policy Resolution and five year plan programmes were also discussed.

The Australian team expressed its appreciation of India's policy and indicated that it would explore the possibilities of expanding economic and trade relations between the two countries.

FOOD CORPORATION

Bill Introduced

The Central Food Minister introduced in the Lok Sabha last week a Bill to set up the State-owned and State-managed Food Corporation of India. It will undertake the purchase, storage, movement, transport, distribution and sale of foodgrains and other foodstuffs. With the previous approval of the Central Government, the Corporation may also promote, by such means as it thinks fit, the production of foodgrains and other foodstuffs. It may also set up or assist in setting up rice mills, flour mills and other undertakings for the processing of foodgrains and other foodstuffs.

The capital of the Corporation, which will be wholly subscribed by the Central Government, will be Rs. 100 crores. It will be empowered to borrow money from the scheduled banks and other banks or financial institutions for the purpose of carrying out its functions under the Act. Such loans may be guaranteed by the Central Government. The Corporation may lend or advance money to any person engaged in the production of foodgrains, on the security of foodgrains or other approved securities. The Corporation, it is expected, will commence functioning from 1st January, 1965. The Bill empowers the Central Government to set up, after consulting the State Government concerned, a State Food Corporation for that State. The capital of such a State Corporation shall not exceed Rs. 10 crores. The ceiling is subject to an increase from time to time and to the extent and in such manner as the Central Government may determine. The capital of the State Corporations shall be provided by the Central Government and the Food Corporation of India in such proportion and subject to such terms and conditions as may be determined by the Central Government.

PETROLEUM

Duties Raised

The effective rates of additional excise duties leviable under the Mineral Oils (Additional Duties of Excise and Customs) Act, 1958, on the major petroleum products were raised from 6th October, 1964, for appropriating amounts accruing in the account of the oil companies in favour of the Government. However, even at the increased rates, it will take a fairly long time to adjust the entire amount standing in favour of the Government. To facilitate the quick recovery of this amount, it has been further decided to increase the rates of additional excise and Customs duties with effect from 19th November, 1964.

As in the past, this increase will be borne wholly by the oil companies and will not result in any increase in the wholesale or retail prices of the affected petroleum products.

AIR-INDIA

Arrangement with U.K.

The U.K. Government is prepared to permit the picking up of traffic from Moscow by Air-India if there is an intermediate halt between Moscow and London. This does not suit Air-India which wants a direct flight to save time and attract through passengers. The U.K. Government alternatively wants that, in order to protect the interests of the British European Airways, which has developed the Moscow-London route, and until the British Overseas Airways Corporation provides service to India through Moscow, Air-India should carry only stop-over traffic between London and Moscow. This suits Air-India better than the original permission to lift traffic with an intermediate stop and has been agreed to.

SHIPPING

Cess on Passengers

In terms of Section 261 of the Merchant Shipping Act, 1958, it is proposed to levy a passenger welfare cess on overseas passengers carried by unberthed passenger ships departing or proceeding from any port or place in India.

The passenger welfare cess will be applicable to the following routes where unberthed passenger ships are now being operated, namely, the India-Pakistan, India-Persian Gulf, India-east Africa, India-Red Sea ports (when Mogul Lines' pilgrim ships are employed for the carriage of unberthed passengers), and the India-Malaya routes.

The proposed rates are as follows: (a) for every unberthed passenger Re. 1, (b) for every saloon of cabin class passenger Rs. 2 and (c) for every child for whom half-ticket is issued half the rate specified for class (a) and class (b) as the case may be. The fund collected is proposed to be used for providing amenities and assistance to unberthed passengers such as rest houses, medical aid and financial assistance to needy and distress passengers. The estimated annual yield from the cess is placed at Rs. 1 lakh.

Loan for Methanol Plant

The U.S. Government has granted a $7.8-million loan for a methanol plant in India. It is repayable in dollars in 61 semi-annual instalments over a period of 40 years, inclusive of a grace period of ten years from the date of first disbursement under the loan. Interest is payable semi-annually in dollars at the rate of three-quarters of 1 percent a year during the first ten years and thereafter at the rate of 2 percent a year for the remaining 30 years. Interest would accrue from the date of respective disbursements under the loan and the first instalment is to be paid six months after the first disbursement.

R. S. N.

Financial Assistance Wanted

Messrs Rivers Steam Navigation Co. Ltd has submitted a "plan" requesting for financial assistance to the extent of Rs. 5.65 crores. Its request is being examined by the Government.

TRACTORS

Imports Planned

Arrangements have been made for the import of 2,303 tractors from Russia, Poland, and Czechoslovakia and 412 power-tillers from Japan during the current year. For the next year, arrangements have been made for the import of 1,500 tractors from Russia and 546 power-tillers from Japan.

IRRIGATION

Third Plan Potential

At the time of the mid-term appraisal of the third plan, the irrigation potential likely to be created was placed at 23.16 million acres. As a result of a recent review of the progress of projects by the Central irrigation teams, this potential by the end of the third plan would be 19.62 million acres.

FOREIGN BANKS

Deposit with Reserve Bank

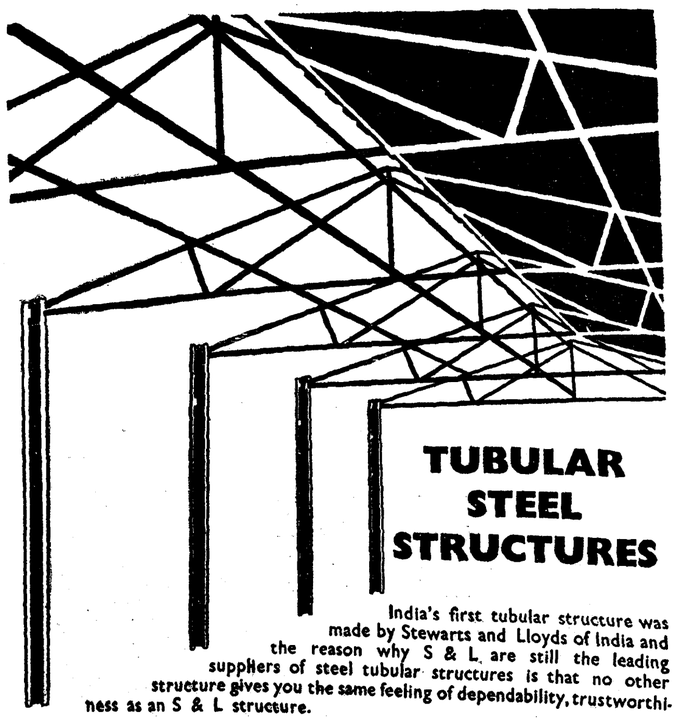
Foreign banks which are now operating in India are required to deposit with the Reserve Bank, either in cash or in the form of approved securities (a) an amount of Rs. 20 lakhs in each case and (b) a sum equal to 20 percent of the profits of each bank for each year in relation to the business transacted in India. The total amount required to be deposited with the Reserve Bank as at the end of December 1963 was Rs. 3.12 crores. The face value of the approved securities actually deposited was Rs. 4.84 crores.

The net profit earned in India during the calendar year 1963 by the branches of the 14 foreign banks operating in India amounted to Rs. 1.87 crores.

I. D. A.

Loan for Schemes

The International Development Association, which is an affiliate of the World Bank, has indicated its willingness to consider the financing of the further stages of the U.P. tubewells scheme and the Punjab drainage and flood protection scheme, it is disclosed here.



CABINET SECRETARY

Mr. Khera Retires

A great civil servant, Mr. S. S. Khera, retired during the past week. He was the Cabinet Secretary and served under three Prime Ministers, the late Mr. Nehru, Mr. Gulzarilal Nanda and Mr. Lal Bahadur Shastri. Soon after the Chinese invasion, he became the Principal Secretary for Defence at a time when the Central Defence Minister had resigned, the Defence Secretary had retired, and the Chief of the General Staff for the Army had followed suit.

The Cabinet Secretary is regarded as the head of the Civil Service and, in that capacity, he can play an important rôle in stabilising the administration. Two definite gains were achieved during Mr. Khera's tenure. It was decided that each Secretary should send a weekly report to the Prime Minister. Here again, the men, who have been picked up by the Ministers concerned, may not make reports which might expose their chiefs. Under the present structure, the innovation has, therefore, only limited utility, so long as civil servants are not assured of some protection for differing with their Ministers.

The second gain is the briefing of the Press by the Cabinet Secretary about decisions taken by the Cabinet. So far these decisions leaked out from Ministers, who had taken a solemn oath to maintain secrecy.

TUBULAR STEEL STRUCTURES

India's first tubular structure was made by Stewarts and Lloyds of India and the reason why S & L are still the leading suppliers of steel tubular structures is that no other structure gives you the same feeling of dependability, trustworthiness as an S & L structure.

All S & L roofing structures are delivered complete in every respect with trusses, purlins, columns, hook bolts for roofing and all necessary studs, nuts and washers.

Write today for your requirement of these sturdy and dependable tubular steel structures.

LABOUR SEARCH FOR AN INCOMES POLICY IN BRITAIN

(FROM OUR LONDON CORRESPONDENT)

FOLLOWING on the Budget, the battle over which continues but with less impact on the public than the importance of the subject demands, it is possible to turn one's attention to the real purpose behind Mr. Callaghan's efforts at adjusting the social balance. For the next few months, the Labour Government's economic strategy will be devoted to furthering its search for an incomes policy. In the process, both sides of industry are being hustled by Mr. George Brown.

When the Minister of Economic Affairs met the General Council of the T.U.C. last week, he told the members of the Government's determination to establish a relationship between increasing productivity and all forms of incomes. According to Mr. Brown's timetable, the first stage of the operation—the acceptance by unions and employers of the main objectives—should be reached before Christmas and completed by the end of this year. So far as Mr. George Woodcock, the T.U.C. General Secretary, represents the views of his colleagues, it may be said that the Unions' response was not unsatisfactory. What Mr. Woodcock said was: "It was still a general discussion, but a more workmanlike discussion than we have had for some while". He thought Mr. Brown's performance in outlining the Government's ideas was "not bad," which is fairly high praise coming from him. But it will be up to the full General Council to decide whether it can jump the first hurdle—that is, agree to work with the Government and employers towards a long-term incomes policy. The process of decision has already begun, but more talks between the T.U.C. and the Government are anticipated before even this first hurdle is taken.

It can now be said that the T.U.C. has been challenged in the sense Mr. Woodcock has been using the word—it has been asked a specific question which demands a specific answer. But according to accounts of the meeting, the Government has not spelled out in detail any view of how priorities should be worked out between sections of workers or by what machinery the incomes policy should be administered. Agreement will be sought on these problems—all of them riddled with pitfalls—in subsequent phases of the policy, culminating, it is the Government's hope, by next summer, in an arrangement which will be at least plausible.

Price Review Council

Indications are that the Price Review Council, or whatever it may be called, will play an important part in the overall scheme. It may be given two wings, one to cover administered prices, the other to cover wages and salaries. To be effective it will have to be able to do more than look at these questions in retrospect, which was all the powerless National Incomes Commission could do. The Government will wish to win the agreement of the T.U.C. and the employers to the body's terms of reference. The T.U.C. objected to the N.I.C. and boycotted all its work on the grounds that it was operating in a vacuum, charged with defining the "national interest" and seeking to impose its view on the unions. These objections might vanish if criteria for judging wages and prices could be agreed: the criteria would in effect be the criteria of the incomes policy itself.

Some form of guiding light was an implied part of the incomes policy as broadly envisaged by the Government, but the phrase, so it is understood, was not used at the meeting. As the whole object of the exercise is to keep all incomes within the bounds of productivity, the amount of permitted overall increase will depend on the new Government's success in stimulating production and productivity.

The National Economic Development Council's 4 percent growth plan is, to all intents and purposes, redundant, except as a useful reference book for the Ministry of Economic Affairs, charged with drawing up the new plan. If the new plan aims at a higher growth target than N.E.D.C. under the Conservatives, then incomes could be permitted to rise by more than the Maudling 3-3½ percent a year margin. The Government intends to write off past failures and will not expect the incomes policy to penalise workers for the inability of the economy this year to keep up with the N.E.D.C. target.

There was one definite outcome of the Government-T.U.C. meeting. The T.U.C. agreed to participate in the new N.E.D.C., which will be reconstituted by the Government as quickly as possible. Although the Government has assumed responsibility for planning the economy, an important rôle is seen for the N.E.D.C. and the T.U.C. appears satisfied that this will be the case.

It is being emphasised that no planning functions have been removed from the National Economic Development Office in that it never had any, in the sense understood by the Government; in Labour thinking, drawing up projections and submitting papers does not amount to planning. Although staff has gone over to the Ministry of Economic Affairs, Sir Robert Shone's office will retain an economic staff equipped to participate in the formulation and appraisal of Government plans. The new N.E.D.C. will be expected to place more emphasis on the removal of obstacles to economic growth, especially those within the competence of employers and unions.

Mr. Brown linked the Government's determination on an incomes policy with the problem of restrictive practices on both sides of industry, to which both he and Mr. Gunter referred in speeches in the House of Commons recently. An attack on restrictive practices is seen as part and parcel of the search for an incomes policy. But for the sake of convenience, restrictive practices may have to be tackled separately in discussions between the Government, unions, and employers. In this field the Government, if all else failed, could contemplate legislation along the lines of its intended legislation on monopolies.

Budget Proposals

The second step in the search for an incomes policy came in Mr. Callaghan's Budget proposals, so far as these related to social adjustment and were in accord with trade union suggestions of the past in this respect. The third step followed immediately in Mr. Brown's meeting with the representatives of the employers' organisations. This was essentially the same exercise as the same Ministers conducted the General Council of the T.U.C.—and it seems to have achieved much the same limited degree of guarded acceptance. There has not, of course, been much to accept yet and the first real test will not come until both employers and unions have considered the draft declaration about an incomes policy which Mr. Brown promised them.

The T.U.C. and the employers may want to have a further meeting with Mr. Brown to discuss points in the draft with which they may disagree before they give their consent to its publication in their names. An agreed declaration bearing the imprimaturs of the Government, employers, and trade unions could emerge from the next meeting of the National Economic Development Council, due on 2nd December.

On one subject, however, Mr. Brown seems to have secured the co-operation of the others already. This is agreement to continue to serve on the N.E.D.C. in the slightly new shape Mr. Brown is devising for it. Mr. Brown appears to have moved a little on his original conception of the respective rôles of his Ministry of Economic Affairs and the N.E.D.C., no doubt when he saw how much store both the unions and employers set by the latter. There remains a difference of emphasis; the employers, for example, see the National Economic Development Office playing a rather more positive part in the initiation of plans than Mr. Brown appears to do.

Attitude of T. U. C.

The general outline of the Government's declaration of intent on incomes policy became a little clearer. All three parties—Government, unions, and employers—will be expected to make commitments. For its part, the Government will endorse economic expansion and to give some indications of its social, fiscal, and economic policies. Unions and employers would be expected to go on record about productivity and efficiency, holding and reducing prices, and keeping profits in check. Agreement on this preliminary declaration may be reached without recourse to Neddy, but the later stages of incomes policy are expected to be negotiated through the N.E.D.C. This, presumably, would include the establishment of machinery for running the incomes policy, of which the only item that has been mentioned publicly is the Government's price review body. Although no new "guiding light" on incomes is expected to emerge as such, one may appear as a sort of by-product of the Government's new plan for growth.

Jute

FIBRE ARRIVALS RISE: BIGGER PURCHASE QUOTA ISSUED

FIBRE prices have been sluggish during the past two weeks because of the increasing pressure of arrivals in upcountry markets. With reduced holding capacity as a result of the high prices of foodgrains and other essential commodities, both growers and traders have been inclined to sell jute at lower prices. Easier transport facilities too have helped in the movement of fibre to terminal markets. In order to relieve the pressure, the Jute Commissioner has increased the maximum weekly purchase quota of 175,000 bales which has been in force up to 14th November to 200,000 bales a week for the last two weeks of November. But even the higher quotas have failed to absorb the increased offerings, although since Monday prices have hardened by Re. 1 a maund to Rs. 36 for Assam Bottoms, ready, f.o.r., Calcutta. With the completion of the latest quota, mills will have absorbed 1.975 million bales, against the weekly maximum purchase quotas issued between 7th September and 22nd November.

Taking into account the quantity lifted by mills in July and August, the total fibre purchases by mills up to October amount to 2.48 million bales—2.357 million bales of Indian origin and 123,000 bales of Pakistani origin. The corresponding offtake for the previous season was 2.74 million bales—2.722 million bales of Indian origin and 18,000 bales of Pakistani origin. In spite of some adjustment in production during September and October, fibre consumption during the first four months of the current season has been higher at 2.496 million bales, against 2.363 million bales during the comparable period last year.

The higher offtake is ascribed to an increase in the output of jute goods from 412,500 tonnes to 431,200 tonnes. The closing stocks at the end of October have been 2.032 million bales—1.452 millions bales in mill godowns and 580,000 bales undelivered against purchases made so far. They were 2.898 million bales—1.575 million bales in mill godowns and 1.323 million bales undelivered—a year ago. Besides these, the buffer stocks held 675,000 bales at this time last year. From the trend of offtake and consumption this year, there are chances that the season may close with a smaller carryover. The major worry of the industry seems to be the high prices of fibre and not shortage of supplies. The spurt in fibre prices has squeezed the manufacturing profits to Rs. 175 a ton in sacking and around Rs. 100 a ton in hessian.

Bonus Issue to be Examined

The West Bengal Government has requested the Central Government to call a meeting of the Industrial Committee on Jute to examine the bonus issue, it is reliably learnt. Tripartite talks, held recently among representatives of the I.J.M.A., jute mill workers and the Deputy Labour Commissioner, have failed to produce a settlement.

At the discussions, the I.J.M.A. rightly pointed out that the workers were not justified in claiming a higher bonus in terms of the Bonus Commission's recommendations during the operative period of the Wage Board award. Even a token strike over the issue would be unwarranted and illegal. Besides, it would set a bad precedent if the decision of the tripartite Wage Board were allowed to be reversed since that would impair the effectiveness of future wage boards and tripartite discussions.

Meanwhile, a deputation from the All-India Jute Textile Workers Federation has submitted a memorandum to the Central Labour Minister in New Delhi seeking his intervention.

Enquiry into Jute Fires

The West Bengal Government has set up the Jute Fires Enquiry Committee with Mr. R. Banerjee, commissioner, Presidency Division, as chairman. Among the members, Mr. C. L. Bajoria will represent the I.J.M.A., Mr. K. P. Modi the insurance interests, Mr. W. S. Wood and Mr. H. R. Scott the fire-fighting equipment manufacturers, and Mr. S. K. Bhattacharyya the Jute Commissioner. Mr. Prasad Bose, D.I.G., C.I.D., and Mr. S. C. Chatterjee, director of West Bengal Fire Services, are also members of the Committee representing the police and the fire brigade authorities. The terms of reference include measures to check the incidence of fires in jute warehouses and the prevention of damage to jute caused by water used in fire-fighting operations.

The Committee has also been asked to suggest ways and means of stocking jute in a scientific manner and draw up new regulations governing the warehousing of the fibre, if necessary. It may be mentioned that the Calcutta Regional Council of the Insurance Association of India had recently made a representation to the Central Home Ministry seeking an investigation into the incidence of jute fires, which, it has been stated, have increased several times in West Bengal in the past few years. Research carried out at the I.J.M.A.-R.I. and other laboratories has discounted the theory that the fires may have been caused by spontaneous combustion or natural and semi-natural causes. Both insurance interests and the jute industry are believed to feel that a large majority of such outbreaks are man-made.

Drop in U.S. Burlap Consumption

Burlap consumption in the U.S.A. has sharply declined from 81.3 million yards in September to 72.6 million yards in October. The consumption was 79.1 million yards a year ago. The total offtake for the ten-month period ended October is 734.6 million yards, against 759.9 million yards for the same period of 1963. The monthly average so far comes to 73.46 million yards, against 75.99 million yards in the previous year.

U.S. stocks at the end of October also fell to 268.8 million yards from 274.5 million yards in the preceding month. Of these, 132.4 million yards (against 150.1 million yards) were spot stocks and 136.4 million yards (against 124.4 million yards) afloat. In October 1963, the stocks were 277.9 million yards—154.1 million yards spot and 123.8 million yards afloat. At the October rate of consumption, the stocks will last 3.7 months. The corresponding stock duration at this time a year ago was 3.51 months on the same basis.

Exports of Carpet-backing Rise

There has been a sizable increase in the export of carpet-backing cloth from 6,600 tonnes in September to 11,600 tonnes in October. However, the total despatches of jute goods from mills reporting to the I.J.M.A. have declined from 109,100 tonnes to 105,800 tonnes during the period. Of this, despatches of hessian have dropped by 600 tonnes to 44,600 tonnes, of sacking by 4,200 tonnes to 44,300 tonnes and of other goods by 3,500 tonnes to 5,300 tonnes. Exports have declined by 2,200 tonnes to 72,700 tonnes—by 900 tonnes to 39,500 tonnes in hessian, by 2,400 tonnes to 20,000 tonnes in heavy goods and by 3,900 tonnes to 1,600 tonnes in miscellaneous goods. Internal consumption too has dropped by 1,100 tonnes to 33,100 tonnes. While heavy goods offtake has fallen by 1,800 tonnes to 24,300 tonnes, consumption of hessian has risen by 300 tonnes to 5,100 tonnes and of other goods by 400 tonnes to 3,700 tonnes.

In October 1963, the total despatches were 95,000 tonnes—40,600 tonnes of hessian, 43,200 tonnes of sacking, 6,200 tonnes of carpet-backing and 5,000 tonnes of other goods. Exports absorbed 36,900 tonnes of hessian, 21,900 tonnes of sacking, 6,200 tonnes of carpet-backing and 1,900 tonnes of miscellaneous goods, making a total of 66,900 tonnes. Internal consumption amounted to 28,100 tonnes—3,700 tonnes of hessian, 21,300 tonnes of sacking and 3,100 tonnes of other goods.

Microbial Processing of Ramie

The Jute Agricultural Research Institute has developed a process of degumming ramie, the strongest vegetable fibre known. From the technical point of view, ramie is four times stronger than silk and is hardly damaged by water and atmospheric humidity. The fibre is used for making hose-pipes and rot-proof textiles. Blended with other fibres like nylon, rayon, cotton and wool, it can produce attractive fabrics. It is lustrous, absorbs dyes well and retains colour better than other fabrics.

The soil, rainfall and topography of certain parts of India are ideally suitable for the development of ramie plantations. But any large-scale cultivation of the plant has been discouraged because of the inability to process the fibre from the stem. Unlike jute, the ramie fibre is mostly cellulose with a gummy coating which has to be removed by microbial or chemical action. The usual jute-retting microbes can, no doubt, remove the gum partly. But in the process they affect fibre layers as well as some of them secrete *enzyme cellulase*. The J.A.R.I. has shown that a strain of *bacillus subtilis* largely removes the gummy coat without affecting ramie fibre. The remaining traces of gum can be cleared by alkali extraction. The economic aspects of the process are to be assessed soon in a pilot project.

THE JUTE MARKETS

Manufactured Goods: Steady conditions marked trading in the Calcutta gunny market during the past week. The stalemate in the Pakistani jute industry prompted a large number of foreign countries to take keen interest in the Calcutta market. It was learnt that the Burmese Government tenders totalled about 80,000 bales of heavy goods, Cambodia's 12,000 bales, and Syria's 5,000 bales. Bumper crop prospects in Australia, Argentina, Egypt and the U.S.A. aroused expectations of a satisfactory offtake of jute goods by those countries. Argentina lifted substantial lots for November shipment. Russia and Egypt were also in the market. Australia booked handsome orders for cornsacks and woolpacks for ready and near positions. The allotment of the Indo-China tender for about 15,000 bales for mid-December shipment was also keenly awaited. Although U.S. business in the spot market was more or less of a routine nature, market circles believed that some mills booked sizable lots of direct hessian business with that country. A sharp increase in carpet-backing offtake and hardening burlap prices in New York produced a bullish impact in spite of the decline in despatches during October and a setback in the consumption of burlap in the U.S.A. during the same month. Hardening gunny prices and the threat of a token strike on 1st December in the Calcutta mills led to a lot of short- and shipper-covering in both heavy goods and hessian. In the hedge market, conditions continued to be firm in line with the trend in the spot market. There was, however, intermittent profit-taking at the bulges but all offers were well-absorbed. The November contracts were closed on Saturday uneventfully. All outstanding transactions were squared up without difficulty. Fluctuations were wide. Turnover was fair and the undertone firm at the close.

Wednesday's quotations were as follows:

	Nov.	Dec.	Jan.-Mar.	Apr.-June
40in. 7½oz.	39.00	39.00	39.00	39.00
40in. 8oz.	41.75	—	—	—
40in. 10oz.	50.35	50.80	51.60	51.85
B Twills	154.40	156.15	151.75	147.25
Cornsacks	163.00	161.25	154.75	149.75
Heavy Cees (Plain)	155.50	155.25	151.25	146.75
A Twills	183.00	183.00	180.50	177.00
Liverpools	170.50	170.50	168.50	165.50

Raw Jute: Easy conditions prevailed in the raw jute market during the major part of the past week due to an increase in the pressure of arrivals. With the issue of a maximum purchase quota of 200,000 bales for the week ending 28th November on Monday, prices hardened by about Re. 1 for Assam Bottoms as mills started lifting their allotments. A large percentage of the arrivals comprised lower-grade fibre. Selected qualities, being in short supply, enjoyed a premium. Brisk arrivals at Cossipore and the mill jetties softened prices in Calcutta and holders of bottom grades were inclined to discount rates to dispose of their stocks. Upcountry prices continued to rule above the Calcutta parity levels. Turnover was moderate, and the undertone steady at the close.

Wednesday's quotations were as follows:

	Rates a maund		Rates a quintal

THE U.K. JUTE MARKETS

FIBRE STILL WEAK

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market became firmer in Pakistan during the past week. It was understood that E.P.C. values would not be reduced and the authorities there would take strict measures against any shippers

selling at under the official rates. This resulted in offers being made in Dundee becoming very irregular. A considerable quantity of jute was registered for export to the U.K. some time ago, but that remains still unsold to spinners.

Demand for raw jute in the U.K. is relatively small at present, and mainly confined to spot and afloat parcels which are available at under shipment prices. It is estimated at least 75,000 bales will be coming to the U.K. which are still unsold to spinners. This is a "bear" factor on the Dundee market, and as a result, prices will remain below the values quoted in Pakistan.

Offers made in Dundee were £136 for Export Firsts, at £121 for Export Lightnings and at £114 for Export Hearts, c.i.f. U.K. for November-December shipment. Grade Tossa-2/3 was at £150 and Grade Tossa-4 at £134/10. There were still sellers of Outport Tossa-2/3 at £121 and of Outport Tossa-4 at £113, November-December. Cuttings were steady with prices at £87 10s for S.N.C. and at £79 for N.C. Mesta prices were more or less unchanged at £106 10s for A, at £97 10s for B, at £90 10s for C and at £68 for cuttings, c.i.f. U.K., for November-December shipment.

The Siam jute market became firmer and most sellers raised their rates. Offers were lowest at £83 for grade A, at £78 for grade B, at £73 for grade C and at £70 for cuttings, delivered mill Dundee for November-December shipment.

The Calcutta goods market became quieter at the beginning of the week, but later there was a firmer tendency. Some buying interest was shown in ordinary hessians. Quotations were at 80s 11d for 40in. 10oz. and at 62s 4d for 7½oz. a 100 yards c. and f. U.K. for November shipment, at 81s 8d and 62s 9d December and at 82s 11d and 63s 1d January-March. B Twills were at 256s 3d, 253s 3d and 248s 7d for the respective shipment periods. It is expected that prices of Calcutta goods will remain at the present level because of the strikes at the mills in Pakistan.

Dundee jute spinners are very busy. They are not in a position to accept further business for early delivery. This shortage of yarn has been noticeable for some time. It is impossible to increase production because of the scarcity of skilled labour. The carpet trade continues to take regular supplies. There is every indication that this will continue.

With the exception of the heavy end of the trade, Dundee jute manufacturers are busy. Prices are firm and the quoted rates have to be paid in all instances. Demand for sackings has been rather poor for some time, and more orders are required for this type of cloth so that full production can be maintained.

REPORTED IMPORT BAN ON RAW RUBBER

The Government of India is reported to have decided not to allow raw rubber imports in the second half of 1964-65, on the basis of a recommendation of the Rubber Board. Manufacturers of rubber products are perturbed over this decision. According to them, this is a premature step and will result in an acute shortage and high prices of rubber.

The manufacturers' requirement of natural rubber and synthetic rubber in 1964-65 is estimated by certain quarters at around 81,000 tons. They will require about 9,000 tons of reclaim rubber also, bringing the total consumption to 90,000 tons. In addition to this, the industry has to maintain a stock of about 28,000 tons, equivalent to about three to four months' consumption. The aggregate annual requirement of rubber in the country is thus placed at 108,000 tons. As against this, the opening stock of rubber in the country on 1st April, 1964, was around 20,000 tons while imports during the six months from April to September 1964, were of the order of 7,500 tons. Indigenous production of natural rubber this year is estimated at 46,000 tons, bringing the total supply of natural rubber to 73,500 tons. Further, according to a directive issued by the Government, all rubber factories together will consume about 15,000 tons of locally produced synthetic rubber. This brings the estimated supply to about 88,500 tons, leaving a gap of about 19,500 tons between demand and supply.

COMPANY MEETINGS AND DIVIDENDS DECLARED OR PROPOSED

Name of Company	Date	I.S.T. Hours
Dhelakhat Tea Co. Ld. ..	21-11-64	9 a.m.
Bombay Burmah Trading ..	25-11-64	4-30 p.m.

DIVIDENDS DECLARED OR PROPOSED.—Smith, Stanistreet & Co. Ltd.—25 p.c. (o), subject to tax; Delhi Cloth & General Mills Co. Ltd.—17 p.c. (o), including a Jubilee dividend of 2 p.c.; Bengal Flour Mills Co. Ltd.—10 p.c. (Int), subject to tax.

HIDES AND SKINS

The market ruled steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 17th November and 23rd November, 1964)

Cowhides: Wet salted (Ord.) 7,500 pcs. on the basis of Rs. 8.25 to Rs. 9.75; Wet salted (Slaughtered) 32,500 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19 to Rs. 28; Wet salted (Ord.) 1,000 pcs. on the basis of 90 P. a lb.

Goatskins: Wet salted (Patna, Daissee, Kustia) 48,200 pcs. on the basis of Rs. 330 to Rs. 350, Rs. 420 to Rs. 430 and Rs. 470 to Rs. 480; Wet salted (he-killed) on the basis of Rs. 6 and (she-killed) on the basis of Rs. 5.75 a piece: Assam-Dinajpur 49,000 pcs. on the basis of Rs. 255 to Rs. 285 and Rs. 300; Purneah-Kissenganj 71,400 pcs. on the basis of Rs. 315 to Rs. 325; Pakur 4,000 pcs. on the basis of Rs. 280; Patna-Muzafferpore 18,000 pcs. on the basis of Rs. 290 to Rs. 300 and Rs. 315 to Rs. 320.

Bazaar Stocks

(23rd November, 1964)

Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 54,500 pcs.; Assam-Dinajpur 95,000 pcs.; Muzafferpore-Patna - Pakur - Purneah-Kissenganj 2,31,000 pcs.

The Bank of Baroda has been handling foreign business for many years. Today, the Bank has branches in London, East Africa, Fiji Islands, Mauritius and East Pakistan.

The Bank of Baroda through any of its foreign branches or its correspondents is fully equipped to offer all the services needed in foreign trade and to handle every type of foreign exchange business—including opening Letters of credit, the negotiation/collection of export bills, clean bills and cheques, foreign remittances, credit information, etc., and is always willing and prepared to assist you in solving your problems concerning imports, exports and foreign travel with prompt and efficient service.

THAT EXPERT TOUCH COMES WITH EXPERIENCE

THE BANK OF BARODA HAS BEEN HANDLING FOREIGN BUSINESS FOR YEARS & YEARS

Branches in London, Nairobi, Mombasa, Kampala, Dar-es-Salaam, Moshi, Mbale, Mwanza, Jinja, Kisumu, Narainganj (East Pakistan), Port Louis (Mauritius), Suva and Lautoka (Fiji Islands) and correspondent banks all over the world.

Commodity Markets

TOO MANY TAXES HAMPER TEA PROGRESS

(BY A SPECIAL CORRESPONDENT)

At the annual meeting of the Assam Branch Indian Tea Association held in Jorhat, last week, the chairman, Mr. S. G. B. Brown, pleaded for freedom from the multiplicity of taxes to enable the tea industry—the country's second highest earner of foreign exchange—to expand. He referred to the Bonus Commission's recommendations, a further increase in the Assam agricultural income tax, increase in sales tax and impositions on tea estates visualised in the Panchayat Act.

"Before enumerating the various ways in which a multiplicity of Government departments have seen fit to pluck yet further the already balding apocryphal Golden Goose," Mr. Brown continued, "it would seem appropriate to point to the disastrous state into which Ceylon seems likely to be plunged by overzealous taxation, and hope that the lesson will not be lost on India. For an industry to remain viable and progressive, it is essential that it be left with a reasonable amount, after taxation, to cater for maintenance and improvements. After a period of near stagnation in the realms of manufacture, the tea industry appears to be facing an era of modernisation with a number of new machines appearing on the market. Encouraging departures from the earlier stereotyped methods of processing leaf are becoming available. For the industry to be able to take advantage of the progress in technology, companies must be left with sufficient finance."

The Tea Board requires the industry to play a big part in its coming plans. The extension of areas and replanting both cost money: increases in crops inevitably pose strains on factories and in many cases necessitate enlargement of buildings and the purchase of new machinery. For the industry to shoulder the responsibilities that are required of it in the Tea Board's plans, finance must be left with companies.

Unless there was to be an end to increasing taxation in the very near future, the industry will be unable to progress, Mr. Brown added. Agriculture could rarely mark time. It went forward or it went backwards, and one had only to visit Cachar to see what could happen if tea stagnated.

Former branch chairmen had spoken of the need to channel taxation into one department. At the moment, tea tries to please the tax collectors of the Central and State Governments, and it was often felt that what the right hand was doing the left was only too ready to know nothing about. Multiplicity of taxes led to a number of departments all striving, apparently, to show bigger and better incomes and there was little opposition to more and more mushroom departments leaping on to the tax bandwagon.

With reference to a second interim wage increase, Mr. Brown said: "Increases in wages must be related to output". As for the inclusion of coal in the list of new taxable items, he felt that it would mean an increase of approximately Rs. 7 lakhs to the cost of production. Moreover, tea estates would now be expected to finance projects from which they would gain no benefit under the Panchayat Act. "These new impositions", Mr. Brown continued, "will add substantially to the already over-burdened cost of production hindering still further planters' efforts to sell teas at a competitive figure in the world's markets". In view of this burden and the spiralling price of the major items in the cost of production, the formation of the Committee on Tea Finance was most welcome. Mr. Brown hoped that the much-needed relief would be forthcoming.

The Association is opposed to any attempt to impose on the industry a minimum labour ratio an acre. It was the management's fundamental right to use whatever amount of labour for each acre that it deemed necessary, and it was "incorrect of the Government to legislate in this matter. To enable the management to use new technology, it should not be forced to keep on its books superfluous labour."

Referring to the difficulties in procuring foodgrains during the year, Mr. Brown said that twice appeals had to be made to the Centre for release of Government stocks to avoid a complete breakdown in supplies. Government allocations were of varying quantities from a variety of mills and frequently subject to sudden curtailment. In this connection, he urged the reintroduction of *khet* assessment, which would save tons of rice. "The logic which permits a man to raise a crop of rice on company land—to harvest and retain this rice and yet allow him to obtain, at concession prices still more rice, is one that baffles common sense".

Describing labour-management relations during the year as good, the chairman emphasised the need for discipline among labour and felt that removal from the estate of persons dismissed for serious offences would go a long way to establishing peace. He appealed to the Assam Government to absorb the growing number of young unemployed in the estates into alternative projects. "The innate disinclination of tea garden labour to move must be overcome; for a country to advance, labour must be prepared to move freely from surplus to deficit areas".

He also requested the Assam Government to take a realistic view of the housing situation and to heed the advice given in the working group's report, which recommended that the difference between the cost of the present worker's house and that built to the new specification should be met in the form of a subsidy by the Assam Government. Mr. Brown repeated his appeal to the Coal Controller to provide good coal to the estates for the production of good tea. He complained that in Assam mines produced low quality coal and these mines were being protected, as estates in proximity to these mines were being compelled to accept part of their requirements from them.

Progress of Output

Output continues to make good progress. Crop figures from the major producing countries this season amount to 1,223,317,000 lbs, against 1,178,392,000 lbs, an increase of 44,925,000 lbs. The break-down of these figures is as shown in the table in the middle of this page:

With the rising standard of living in most underdeveloped countries added to the fact that Pakistan absorbs the bulk of its own production (60 million lbs this year), this small increase from established producers should not knock commodity prices too severely. According to statistics compiled by Messrs J. Thomas and Co. Private Ltd, output from the major producing countries between 1948 and 1962-63 increased from 446,010 metric tons to 667,895 metric tons. To this has to be added tea from China, Japan, Formosa, Russia, Iran, Turkey and South America. In the same period, the main producers exported in 1948 354,271 metric tons and 501,672 metric tons. The difference presumably went into local consumption. So whereas output improved by approximately 50 percent, offtake in established markets was around 42 percent. These results emphasise the importance of propaganda to expand internal consumption in all growing countries, because it is now clear that some of the countries visited by the Tea Board delegation have not so far increased their imports much.

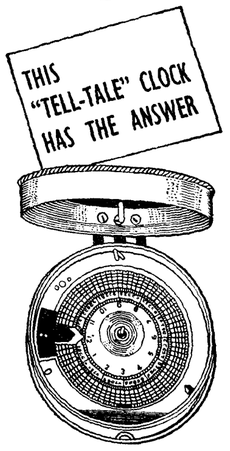
It is necessary to improve salesmanship propaganda nearer home. Over the period 1948 to 1962-63, the major producing countries have increased internal consumption by 121 percent, namely, 120,278 metric tons to 235,866 metric tons. India and Japan have been the principal consumers, and it is time for Ceylon, Africa and Indonesia to take a hand in the very important matter of providing a local market. The year 1963 may well prove to be a difficult year, but if the trade can operate a few years longer, the tide should rise again because the present cost of planting around Rs. 4,000 an acre in India is prohibitive and artificial fertilisers will not improve quality in the long run.

Countries		Total up to	1964 (In thousand lbs)	1963
North-East India	...	October	546,841	497,891
South India	...	September	126,036	143,261
Pakistan	...	October	52,080	44,910
Ceylon	...	September	369,400	374,739
Indonesia	...	May	41,559	28,435
East Africa	...	August	69,365	63,092
Mozambique (P.E.A.)	...	July	18,036	16,064
		Total	1,223,317	1,178,392

The commodity prices continues to give ground which is largely seasonal. On the London market after satisfactory prices in August-September in 1960, 1962 and 1963 rates fell during November-January. In 1961, the tendency was not so marked because rates never advanced to high levels. In Calcutta, the early manufacture usually secures good prices and in 1962 and 1963, average prices opened around Rs. 6.12 and Rs. 7.06 a kilogram, but by the end of the season, teas were selling for Rs. 4.05 and Rs. 3.94 a kilogram. So the present easiness seems to be following a normal trend.

PEPPER

Good Outlook



Our South Indian Correspondent writes:

India's new pepper season has started on an encouraging note. The new crop that has started flowing into the market is being absorbed at prices which are higher than the end-of-season rates a few weeks ago. Alleppy which gets the first harvest is now reporting a daily arrival of 100 to 150 candies (one candy=3 quintals). This quantity is candy equals a quintals). This quantity is being readily absorbed at prices ranging between Rs. 950 and 975 a candy.

The market has firmed up recently in view of some business done with Russia and Bulgaria. They are reported to have bought together about 2,000 tons recently. America continues to be a cautious buyer, although there has been a slight improvement in the New York quotation. The small improvement in the New York price of black pepper is attributed to smaller imports from Indonesia in the past two months brought about by the action of the Indonesian Government in fixing the minimum export price at 40 cents a lb. In spite of the improvement, there is still a disparity of about 3 cents between the Indian and American prices. This difference continues to be a hindrance for carrying on business with that country.

Indonesia has recently revised downwards its check price from 40 cents to 38½ cents a lb. There is a feeling among the American buyers that there would be further reductions in the official price. Therefore, they are very cautious in entering into fresh commitments with Indonesian as well as Indian shippers. The exporters in India are at present banking more on the orders from communist countries. Their feeling is that there would be a regular flow of orders from these countries for some time to come. If the expectation does not materialise, and there is no compensatory buying by the U.S.A., prices are bound to fall from

LEMONGRASS OIL

Liquidating S.T.C. Stocks

There is a report that the State Trading Corporation is negotiating a barter deal with a view to liquidating 500 to 700 tons of lemongrass oil stock with it. The Lemongrass Oil Development and Export Advisory Committee is opposed to such barter deals as in its opinion such deals would lead to a further weakening of the export demand for Indian lemongrass oil. The barter deal under negotiation contemplates the sale of S.T.C. stocks at a price lower than (Rs. 11 to 12 a kilogram) the price at which it is buying oil from the producers according to this report. As the S.T.C. is buying only a limited quantity under the price support scheme of the Government of India, the producers are finding it difficult to sell their surplus stocks even at a handsome discount to the buyer. The S.T.C. will withdraw from the market by next month, after fulfilling its commitment to lift about 700 tons out of the current season's production, according to indictations available from the market. The current crop is estimated at 1,000 tons, against last season's 1,500 tons. Many growers have lost their enthusiasm in the production of lemongrass oil on account of the difficulty in disposing of their product. Growers are apprehensive about the future also. They have serious doubts about the future of the price support scheme. They also doubt whether the S.T.C. which has been buying up stocks in the last two seasons, would continue this operation in the next season also.

TAPIOCA

Starch Making Banned

In view of the critical food situation in Kerala, the State Government has prohibited the manufacture of tapioca starch, tapioca flour or any other similar industrial or manufactured product of the tapioca tuber except under a permit issued by the Civil Supplies Commissioner. Their export also has been prohibited except under Government permit. Tapioca is an important subsidiary food of the people of Kerala. The ban on export does not apply to export of tapioca not exceeding 2 kilograms by *bona fide* travellers as part of their luggage or export on Government account or under military credit notes.

Kerala which produces about 2.5 million tons of tapioca a year is the premier producer of this crop in India. Almost 50 percent of this is exported, of which 700,000 tons is in the form of industrial products.

the present rate of about Rs. 350 a quintal.

Trade circles in Kerala currently estimate the new Indian crop at 27,000 to 29,000 tons which is not much different from the previous season's harvest. Certain quarters, however, think that this estimate is on the liberal side and the actual harvest may be less than last season's in view of the unusually prolonged drought that the pepper growing belt of India had to suffer early this year.

Although the final figures for the season which ended with October 1964 are not yet available, the feeling in trade circles is that India's pepper exports during that season might have been down to the tune of about 2,000 tons, when compared with that of the previous season. This fall was largely due to a lower offtake by the U.S.A. which was attracted by the sell-away prices at which Indonesia was offering her pepper.

COMPANY AND PUBLIC NOTICES

THE BENGAL FLOUR MILLS CO. LTD.

* These Debentures are registered and are transferable by transfer Deeds.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends. T means that dividend tax is deducted at source.

STERLING CRISIS AND THE DIFFICULTIES AHEAD

IT is an interesting, and not insignificant, thought that no agreement had been committed to paper when the Bank of England last week announced the biggest supporting operation in financial history, the 11-nation credits aggregating $3,000 million to stabilise the pound. The negotiations, ranging from the United States and Canada, through Europe, to Japan, had been conducted in a few hours entirely by telephone. Such was the urgency; and such is the camaraderie and mutual trust among central bankers. The circumstances of this emergency operation are well known. The world was losing confidence in sterling. A rise in Britain's Bank rate, deferred too long, had failed to restore the confidence—indeed, had seemed to accentuate anxiety. No action that Britain could take alone (except blocking funds, which would have destroyed the world's faith in Britain as a banker) could have stopped the outflow of foreign funds. As the readily withdrawable funds were far in excess of the gold and currency reserves, the authorities, forced to choose between devaluation and insolvency, would inevitably have devalued the currency. There was not enough time for Government-to-Government discussions. The British Government, temporarily helpless, appealed to the Bank of England to avert disaster; and the Bank of England arranged the massive credits through the international banking system.

Ordinary people might ask why foreigners, who had so abused Britain for her clumsy actions in preceding weeks, should suddenly come to her rescue. In fact, of course, it was not sterling in particular but the monetary system of the world in general that the central bankers were defending. Devaluation of sterling would have been an act of compulsion, not of deliberation, and its consequences, most bankers believe, would have been much worse than those that followed the devaluation of 1949. It has been said that devaluation in the circumstances of 1964 might have repeated the catastrophe of 1931. The counterattack by the central banks (and the Bank for International Settlements and the U.S. Export-Import Bank) demoralised the speculators against sterling, and it seemed that in one devastating manœuvre not only a battle but a whole campaign had been won. But the mood of serene confidence did not last long. When it was realised that the term of the credits was measured in months, not (as had at first been falsely reported) years, doubters asked how Britain could regain her independent equilibrium in so short a time. "A stable currency". Mr. James Callaghan, U.K. Chancellor of the Exchequer, truly said, "is the product of a strong economy." Strengthening an economy whose weakness is partly structural is a long-term process.

The search for an answer cannot be regarded purely as an internal matter concerning Britain only. Sterling is an international currency, and there is no need to point out the impact which the earlier 15-percent surcharge on manufactured imports ostensibly introduced to protect the British balance of payments, has had elsewhere in the world. It is of crucial importance that the right conclusions be drawn as to whether or not the actions the Government has taken will be effective in safeguarding the pound and can, in the long run, maintain an adequate flow of imports into Britain's home market. The key to the situation lies in the effect the measures are likely to have on British exports, because unless these can be expanded the chances of sustaining a rapid rate of economic growth, and thus of import demand, are slight. Unfortunately, the most obvious criticism of the varied assortment of provisions embodied in the "interim" Budget presented four weeks ago was that they contained very little which might be identified as deliberate encouragement to Britain's export trade.

The sole exception was the promised remission of certain indirect taxes to exporting companies, a benefit which is calculated at between 2 percent and 3 percent of the price of the article exported. This is not excessively generous, and amounts to little more than what other countries are already doing for their exporters, a fact which probably accounts for the virtual absence of serious criticism of the measure among Britain's trading partners. In itself, it is useful, but there is considerable doubt about whether it can even partly offset the increased attractions of the domestic market, and the boost to manufacturing costs which the other provisions of the Budget seem likely to lead to. The general verdict on Labour's measures was that they may prove to be inflationary, and if this turns out to be correct, it will take more than a marginal incentive to exporters to protect the British balance of payments from even more serious erosion than has so far been sustained.

The 15-percent surcharge on manufactured imports, together with the Bank rate increase, is intended only as a temporary measure for controlling the payments side of the current account until receipts can catch up. But while it lasts it is bound to have undesirable consequences, such as leaving a portion of unsatisfied demand in the internal market which could divert goods otherwise earmarked for export, and providing British industry with more protection than is good for its long-term competitive efficiency. Apart from the loss of goodwill which Britain has suffered abroad as a result of this surcharge, it is extremely doubtful whether the internal impact can be anything other than damaging to British exports. There is, in fact, good reason for concluding that the longer the surcharge lasts, the less likely it is that the Government will be able to remove it without causing the bout of internal deflation for which it was originally devised as an alternative. Measures of this kind are widely understood to be double-edged, and there is every indication that Whitehall fully appreciates the fact. Yet it remains true that the competitive spirit, which is what British industry is reputed to lack, cannot be fostered by gratuitous protection, and that to damage other countries' export trade is not the best way of increasing one's own. A good case could have been made out for reducing tariffs, not increasing them, and accepting the short-term consequences in higher unemployment and general deflationary pressure on the economy. Certainly the competitive character of British in-

dustry, which alone can guarantee the long-term buoyancy of the country's exports, would benefit.

The same unsatisfactory verdict could be passed on the other provisions of the "interim" Budget, both immediate and promised. The increase in excise duties on petrol and diesel oils was clearly designed to divert foreign criticism that Britain was seeking the solution of her economic problems exclusively at the expense of her trading partners, and only incidentally to mop up any on-balance inflationary pressure exerted by the import surcharge. But it is bound to raise internal prices—60 percent of the impact will fall on industrial costs—and thus complicate the problem of persuading the trade unions to accept an effective incomes policy. The same may be said of the promised increase in the standard rate of income tax. This will fall on the higher-paid manual worker as well as on the middle- and upper-income groups, and the net effect must inevitably be to feed the chronic cost-push inflation in the British economy as those affected exert their bargaining power to increase their incomes. Even the redistributive aspect of the tax will be inflationary because it is intended to take money from one section of the community which might have saved at least a proportion of it, to give to another section which will almost certainly spend it all on current consumption.

This provision of the "interim" Budget for increasing social security benefits, while laudable enough from the point of view of social justice, has raised doubts about the Labour Government's true motives. Improved social security, especially when financed out of inflationary tax increases and fresh insurance burdens on industry, is irrelevant to the solution of Britain's export problems. Here Labour has laid itself open to the charge that it is taking advantage of the country's economic difficulties, indeed of deliberately exaggerating them, in order to justify the use of taxpayers' money for buying votes at the next general election. The force of this accusation is not necessarily diminished by the fact that the moves will obviously alienate more floating votes than they attract; such consequences might not have been foreseen. The fact must be accepted that the entire complex of measures has worn an unhealthy tinge of socialism; they do not even appear to be directed at the roots of the export problem. This is particularly true of the promise to introduce a corporation tax and a capital gains tax in the coming April Budget. Such a forecast, although unprecedented in British budgetary history, could perhaps be justified as providing some inducement for the trade unions to reach an early agreement on an incomes policy. But there is no ignoring the disturbing effect it has had on plans for promoting industrial efficiency through greater investment. The apparent determination of the Labour Government to propitiate the trade unions at the expense of industry, the reputation of the economic advisers the Governments has chosen, and the inherent contempt of socialists in general for the interests of shareholders, have all contributed towards a cautious, indeed pessimistic, attitude in the City of London.

The prospects would now seem to depend on whether the incentives for increased investment tacitly promised in the April Budget are large enough to offset the damage to confidence which has already been done, or which might result, from the new corporation and capital gains taxes. Of equal importance is the chance of being able to agree on an incomes policy that is effective enough to curb inflationary forces. The prospects are not promising. The contents of the April Budget are within the competence of the Government, and if they are not adequate to the circumstances there will be no difficulty in deciding where the blame must lie. But the proposed incomes policy is not so simple a matter; with the best will in the world Labour might fall at this hurdle. Without in any way under-rating the staggering difficulties inseparable from persuading a multitude of jealously-independent unions to accept what must inevitably involve a limitation of wages, it will probably prove impossible in a general atmosphere of inflation to prevent industry from increasing its payments to workers simply in order to attract them in sufficient numbers. It is risking no accusations of excessive gloom to predict that an incomes policy, even if accepted by the unions, which seems unlikely, must remain totally ineffective.

The considered judgment on Labour's economic policies so far, then, is that they offer little hope of proving able adequately to safeguard the health of sterling. Indeed, many say it is reasonable to enquire whether, under the circumstances, a better line of approach would not have been to devalue the pound altogether and start again at the beginning with measures to curb internal inflation and promote the competitive efficiency of British industry. Such a move would have had disruptive consequences throughout the world economy. But it would have combined a breathing space for Britain, such as the import surcharge is explicitly designed to provide, with the maximum incentive to British exporters. One important point the Labour Government appears all along to have over looked is that the prospects for British exports are not exclusively affected by the purchasing power of foreign markets, or even by the availability of reasonably-priced substitutes. They also depend on Britain's international goodwill.

The future is never absolutely sure, and the possibility of further trouble for sterling in the first half of 1965 cannot be excluded. This possibility raises an important question of principle. Does the massive defence of sterling in the crisis of 1964, in circumstances in which even some influential Britons argued that the currency should be devalued, imply that monetary stability is paramount and that realignment of currencies is permanently impermissible? If, particularly, Britain's payments deficit is a result of structural imbalance of the economy, must the economy be painfully forced to conform with the existing exchange rates? The theoretical arguments for flexibility, in both the economy and the exchange rates (of any country), are strong. But, unfortunately, what is desirable in theory may not be feasible in practice.

A deliberate devaluation, following a calm assessment of relative values, would be a very different matter from an involuntary devaluation in a crisis, but devaluation of a currency in which many countries hold part of their reserves is in any circumstances a very disturbing operation. Earlier this year the central banks underpinned the Italian lira with big credits, and they will naturally support even more resolutely a reserve currency. Some economists and politicians in Britain have raised again, after the recent crisis, the demand that Britain be relieved of the obligations of international banking, regardless of its monetary rewards. But until some fundamental rearrangement is devised sterling will continue as a reserve currency. If the monetary authorities and bankers cannot allow it to be devalued in 1964 they can surely not allow it to be devalued in 1965; and that thought should deter speculation. But many economists are dissatisfied with this rigidity. Somehow, they say, it is necessary to combine stability and flexibility in one system.

RAISING EXPORTS

INDIA'S exports have been unusually buoyant so far, and this has given rise to a great deal of optimism in the Government. In fact, exports in September this year amounted to Rs. 75.5 crores, which is considered a record for any single month. During the recent Rajya Sabha discussion on the Export Credit and Guarantee Corporation, the Central Commerce Minister, Mr. Manubhai Shah, pointed to the expansion in exports by drawing flattering comparisons. He said that Indian exports in the past few years had increased much faster than the world's total export trade; in fact, the Indian growth rate was thrice the world rate and 2.5 times the rate of advanced countries like Japan. As Mr. Shah pointed out, the growth is all the more remarkable because the terms of trade in world markets have been moving against the developing countries, and the prices of all commodities except sugar have fallen during the period. But this is no reason for complacency since the rise in India's exports is to a large extent due to fortuitous circumstances. Exports of the two largest foreign exchange earners, jute goods and tea, are no doubt buoyant, but their future prospects depend considerably on India's competitive ability *vis-à-vis* Pakistan's sacking and Ceylon's tea. Unmindful of this fact, the Indian Government's fiscal policies, as well as labour welfare measures, have been progressively adding to the cost burdens of these export industries.

The planners are visualising an export target of Rs. 5,100 crores for the fourth plan. Perhaps one of the most formidable obstacles to the fulfilment of the target will be the conflicting claims of the internal market. In a country with a vast home market and a fast expanding population, it will be difficult to ensure big exportable surpluses. In the case of commodities like sugar, cotton textiles and vegetable oils, restraints on domestic consumption will be difficult and unpopular, particularly when the economy is suffering from serious shortages as at present. Nevertheless, the need to curb the consumption of goods having a large export potential is engaging the planners' attention and measures towards this end are being formulated. Official opinion seems to favour introducing an element of compulsion whereby new industries or existing ones seeking permission to expand their capacity will be asked to earmark a fixed portion of their output for export. But the danger here is that the obligation to export can become so rigid as to hamstring industrial development. In fact, this happened recently in the case of welding electrodes; new manufacturers were obliged to export part of their output at a time when the country was experiencing an acute shortage of electrodes and industrial output was slowing down as a result. In the case of consumer goods, restraints on domestic consumption may prove politically embarrassing. So it remains to be seen how sufficient export surpluses are going to be built to support the ambitious fourth plan export target.

India has recently concluded an agreement with Russia for stepping up the trade between the two countries by 50 percent. Under this pact, Indo-Soviet trade will be increased to Rs. 125 crores each way by the end of 1965 from an estimated figure of Rs. 80 crores in 1964. A noteworthy point is that Russia has agreed that 40 percent of her total purchases from India should consist of non-traditional manufactures. In fact, a trade agreement signed last year stipulated that the ratio of manufactured goods to total exports from India should be raised from about 30 percent to 40 percent or 45 percent in the following three years. It is obvious that the increase will be possible only with a big expansion in India's exports of engineering goods, and the agreement does in fact list a number of such items.

Viewed as an earnest of Russia's desire to maintain and strengthen the economic ties between the two countries initiated during Mr. Khrushchev's *régime*, it is a happy development. However, it has also been suggested that the sharp rise in trade within a short span of one year is being planned chiefly because of Russia's anxiety to balance trade between the two countries. A rise on this scale is likely to have far-reaching repercussions both on the price level in India and on her trade with other countries. So far as Soviet offtake of non-traditional manufactures is concerned, the increase may not affect this country much since her export of these items to the convertible currency areas is not large. But where the increase in offtake relates to traditional items, like tea, gunny, tobacco and cotton fabrics—which will account for 60 percent of the export—a different picture emerges. The output of these items cannot be stepped up quickly. Furthermore, they are big earners of convertible currencies. It is possible that a substantial rise in the shipments of these items to Russia will affect India's exports to her Western trading partners.

India's trade with other countries of the communist bloc too has been developing fast, mainly because of the rupee payment agreements. The east European countries have offered good outlets for many non-traditional items produced in this country. An official trade delegation, which recently returned after a tour of eastern Europe, has drawn a very optimistic picture of the prospects. India's exports to the east European countries have risen sharply to Rs. 109 crores in 1963-64 from Rs. 92 crores in the previous year. Trade statistics for April-June 1964 indicate a further improvement—an annual export rate of Rs. 144 crores; furthermore, the trade deficit of Rs. 15 crores in 1963-64 has turned into a surplus of Rs. 6 crores during this period. By cultivating the east European markets there are fair prospects of India offsetting possible shortfalls in her trade with other countries. But as the trade with the communist bloc expands, difficulties may be experienced by India in balancing her trade with the individual countries. One method that has been suggested to overcome these difficulties is to devise a multilateral system for the rupee payment countries, and to make the rupee transferable among them, as the rouble is transferable within the communist bloc.

CREDIT POLICY AMENDED

THE Reserve Bank of India has just modified the formula for computing the net liquidity ratio of banks under the new credit policy announced on 25th September, 1964. Hitherto, the net liquid assets position of banks was calculated on the basis of their holdings of cash, balances with the Reserve Bank, balances in current accounts with the State Bank of India, notified banks and other banks, and investments in Central and State Government securities, *minus* borrowings from the Reserve Bank and the State Bank. Investments in "other approved securities" were not included while computing the net liquidity ratio; now they will be included. The earlier exclusion was illogical, especially since trustees were allowed to invest in all approved securities. Banks could even borrow money from the Reserve Bank under Section 17(4) (a) against these "other approved securities". But the latter were not to be taken into account for the purpose of determining the amounts which banks could borrow from the Reserve Bank at different rates under the credit policy.

The distinction was unjustified since Government securities are hardly different from Government-guaranteed securities. The latter might in fact seem theoretically a safer investment, besause while the Government is solely responsible for its securities, Government-guaranteed securities are the responsibility of both the issuing authorities and the Government. It is clear that the Reserve Bank has received strong representations from banks and from the authorities whose issues were classified as "other approved securities". Banks have been reluctant to subscribe to bonds falling in this category. In fact, some banks were keen to dispose of their holdings of such securities after the new credit policy was announced towards the end of September. Although "other approved securities" will now be included in computing the net liquidity position of banks, the Reserve Bank has decided to exclude from the liquid assets of banks their borrowings from the Reserve Bank and the State Bank. This change has clearly been made so as to maintain the purpose of the credit control formula, which is to restrain the growth of credit.

The modifications are welcome in so far as they rectify a major anomaly. But they show that the credit control policy was originally formulated in a hasty and slipshod manner. The overall effect on the supply of credit is likely to be small. This is partly because the re-lending facilities offered to commercial banks other than the State Bank will in practice probably not prove as large as they might seem. For instance, it appears at first glance that even without counting in "other approved securities", commercial banks could have borrowed Rs. 280 crores at Bank rate from the Reserve Bank (as against the maximum amount of Rs. 107 crores actually borrowed at the peak of the 1963-64 busy season at various rates of interest). But out of the Rs. 280 crores, half would have been available to the State Bank alone (whose need for such re-lending facilities is rarely great); and only the remaining half would have been available to private banks.

The latter amount might seem to be somewhat greater than what the private banks borrowed during the last busy season. But their borrowing capacity generally has at the same time been restricted by the fact that they will not be able to replenish their resources by selling Government securities, as they did to the extent of about Rs. 145 crores during the 1963-64 busy season. In calculating the net liquidity ratio, the addition now of about Rs. 75 crores of "other approved securities" held by banks will be offset to some extent by the exclusion of borrowings from the Industrial Development Bank from the net assets of banks. The main advantage of the inclusion of "other approved securities" is that local authorities and public utilities should now find it easier to raise money from the market through bonds. They need to borrow substantial sums to finance their development programmes.

During the 1963-64 busy season, bank credit expanded by about Rs. 377 crores. Although the demand for credit during the current busy season has not yet gathered momentum, it is unlikely to be smaller than in the last one. The credit needs of the private foodgrains trade will tend to diminish with the Government's entry into the field, but requirements otherwise should increase in view of the growth of industrial activity. Agricultural production is also expected to be larger. The amount of money required for building inventories has increased due to the sharp rise in the prices of almost all commodities. The pressure on bank funds is likely to be accentuated by the measures taken to trace unaccounted money. Financial circles are, therefore, wondering whether banks will have enough resources to satisfy credit demands adequately.

The credit policy of the Reserve Bank apart, the flow of funds from the U.K. to India will be strongly discouraged by the increase in the British Bank rate from 5 percent to 7 percent last week. The higher rate will mean that larger funds will be required to finance India's foreign trade. In any case, restrictions have been imposed by the Reserve Bank on banks bringing funds from abroad. The facility under which commercial banks can borrow money from the Reserve Bank against usance bills has also been restricted; the currency of such borrowings has been reduced to only nine months, from 12 months. Although interest rates on deposits have been raised, it is difficult to say to what extent deposits will grow during the current busy season. If the supply of bank credit is restrained, deposits will tend to increase at a slower pace. The growth of deposits will suffer because the savings of the people have been squeezed by heavy taxation and inflation; furthermore, an appreciable part of the savings, particularly of the middle income groups, are tending to flow to the Unit Trust of India.

Current News and Comment

Expansion of Port Capacity

India has won considerable notoriety in international shipping circles for inefficiency and delays in the operations of her ports. But in his address to the Consultative Committee of Shipping Interests in Overseas Trades in New Delhi on Monday, Dr. Nagendra Singh, Special Secretary to the Ministry of Transport, declined to be deterred by the facts: despite recent experience, he found it possible to announce that, "by and large, the measures taken by the Government and the port authorities in the successive five year plans have helped to keep the recent spells of congestion under a very large degree of control." Dr. Singh was good enough to suggest that "we should not grow complacent and be satisfied with the present conditions". Complacency, however, was the keynote of his own address.

Nobody denies that the capacity of Indian ports has increased appreciably since 1951-52. As Dr. Singh pointed out, the total traffic handled in that year by the five major ports of Bombay, Calcutta, Madras, Cochin and Visakhapatnam was 22 million tons, including 18.5 million tons of dry cargo. By 1962-63, the traffic handled by the major ports, excluding Mormugao, rose to 37.5 million tons, the dry cargo being 23.4 million tons. But the significance of these figures, in relation to the problems of today, is purely historical. The more pertinent questions are: Has expansion proceeded at the pace that was planned? If not, is the inefficiency of the Government and the port authorities responsible for the delays? Finally, is port capacity at present anywhere near adequate even for the country's essential needs? These are among the crucial questions which Dr. Singh chose not to discuss in any detail.

The inadequacy of port capacity has in recent months been sharply highlighted by two major developments. The first is the food crisis, which has necessitated large-scale imports of grain. The second is the delay suffered by the iron ore export programme, especially the part connected with the development of the Kiriburu mines. In their different ways, both are of crucial importance to the economy. While the country is heading for a foreign exchange crisis which may prove to be the worst for at least six years, ore exports are badly handicapped by the inadequacy of port facilities. And in the midst of a food shortage that is probably the worst in 13 years, the smooth inflow of grains has from time to time been hampered by trouble at the docks. The Transport Ministry can claim some credit for the fact that the amount of foodgrain imports passing through the ports has increased substantially this year. On Dr. Singh's figures, the total by the end of November 1964 should be almost 5.7 million tons, against 4.6 million tons in the whole of 1963. But, as he is aware, to a large extent this increase has been possible not through a striking improvement in efficiency, but simply at the cost of general cargo traffic. Furthermore, cases have been frequent where (as in Kerala a month ago) people have been clamouring for food, while grain ships have been lying at the docks waiting to be unloaded at the Government's (or labour's) sweet convenience.

The Transport Ministry cannot claim that the shortage of money is responsible for the disappointing rate of port expansion. On Dr. Singh's own evidence, the total financial outlay visualised for the major ports under the third plan is about Rs. 110.8 crores. Out of this, Rs. 38 crores have been spent in the first three years, Rs. 21 crores will be spent this year and another Rs. 40 crores during 1965-66—giving a probable total of Rs. 99 crores. The outlay target will thus not be reached. It is not suggested that there is some inherent virtue in simply spending the money even though little is achieved in the process. But, on the face of it, it appears that the incapacity of the Transport Ministry rather than a shortage of funds may have been the more important factor responsible for the disappointing pace of port expansion.

Pricing of Power

The Central Ministry of Power and Irrigation, it is reported, is now studying the implications of the report of the Power Tariff Committee, which has recommended an increase in the rates charged by State Electricity Boards to their consumers, especially industries. The committee's report, it is said, has suggested that at least a minimum return of 6 percent to 7 percent should be ensured for the boards at first; and it should be later raised to 12 percent or 13 percent, so that by the end of the fourth plan they may make enough profit to finance their expansion projects. The finances of most of these boards are in an unsatisfactory state. Some have been running at a loss. With the State entering the power field in a big way, these boards have to perform a vital job, which they cannot efficiently do with inadequate resources. For instance, they are required to undertake rapid rural electrification so that by 1965, the centenary year of Mahatma Gandhi's birth, at least 100,000 villages get electricity, against the third plan target of 35,000. The boards are also required to supply power for minor irrigation projects and small rural industries.

How can they do this without earning enough profit?

At the moment, most of their capital expenditure is met from loans. But they cannot depend on market borrowings indefinitely without burdening themselves with heavy interest obligations. The World Bank experts who enquired into the economics of power production in India found the present rates of return rather unremunerative. (Previously, the Second Finance Commission had made the general suggestion that power rates should be raised to make the operations of State Electricity Boards economic, in view of the large investments made by them.) The World Bank experts have emphasised that power supply undertakings should earn at least a return of 12 percent to 15 percent. The Power Tariff Committee is fully in agreement with their view, although it would like the increase to be phased out in two instalments. The Power Ministry officials must be examining these alternatives too. But the issue is of such far-reaching importance that the approval of the Planning Commission as well as of the Central Cabinet will be necessary before a final decision is taken. All industries will be affected and their costs will rise with the increase in power rates for the Government cannot raise the rates only for its own undertakings without extending the benefit of revision to private concerns, as well as to corporations like the D.V.C. Their case for an increase is no less strong. Moreover, with the creation of regional grids, which may eventually lead to a national grid, it will be difficult to exclude private undertakings from any scheme of rate revision. If the ensuring of a higher return becomes an essential condition for expansion in the power sector, then the increase could be justified on economic grounds. But before a general increase is granted, the authorities will have to make sure that the State Electricity Boards are observing the maximum economy, not only in construction costs, but also in the expenditure on routine operations. It is also necessary to ensure that the projects undertaken by them are in fact the most economical ones.

Planning Proposals Criticised

The presidential speech of Mr. Lalchand Hirachand at the annual general meeting of the Maharashtra Chamber of Commerce, held in Bombay last week, touched on most of the economic problems facing this country. The Government's visions of a grandiose fourth plan in spite of the shortage of resources and the inflationary pressures that may be generated by a mammoth outlay of Rs. 21,500 crores (which may be raised by Rs. 1,000 crores later) during the next quinquennium has caused considerable anxiety. Joining the chorus of protests, Mr. Hirachand claimed that even the third plan outlay would not exceed Rs. 10,000 crores, against the target of Rs. 11,600 crores. So it would be rash and unrealistic to expect the outlay to jump from Rs. 10,000 crores to Rs. 21,500 crores in the next five-year period. Although a large volume of money has been poured into the economy, industrialists are finding it difficult to obtain risk capital for new projects and for the expansion of the existing ones because of the Government's fiscal policy and the credit squeeze. Rapidly rising prices are pushing up industrial costs and things which could be formerly managed with a small outlay now need much bigger sums. Mr. Hirachand also drew attention to the fact that the growth of credit was due mainly to the accommodation extended by banks to the public sector. Even the Reserve Bank's central board of directors have hinted at the lack of harmony between fiscal and monetary policies.

Mr. Hirachand pointed out that there was a correlation between inflationary finance and unaccounted money. He wanted to know why the evil of unaccounted money on such a large scale existed only in countries like India, Ceylon, Burma and Indonesia, and not in Japan or the Western democracies. The chief motives for tax evasion in this country are provided by heavy taxation, controls and inflation. While the honest taxpayer has suffered, those who evade taxes have gained in every way. Mr. Hirachand said that the burden of taxes could be realised from the fact that the ratio of duties and taxes to the ex-factory prices of commodities worked out to as much as 40 percent in paper, 55 percent in steel, 60 percent in cement, 65 percent in sugar and 40 percent to 65 percent in cotton textiles. His plea for a dispassionate study of the fiscal system and the introduction of rational rather than piecemeal *ad hoc* measures will be widely endorsed. In his view, the amount of black money would be only Rs. 300 crores and not Rs. 3,000 crores as has been estimated by some.

Referring to the Prime Minister's charge that the private sector had failed in the field of consumer industries like cement, fertilisers and sugar, Mr. Hirachand pointed out that private entrepreneurs were subject to several controls which made it impossible for them to expand production rapidly. Giving the example of cement, where the Government has decided to set up a cement corporation in view of the private industry's failure to achieve the third plan target, he said that the shortfall was entirely of the Government's own making. The existing cement units were denied permission to expand. They were not allowed foreign exchange to import even their requirements of sare parts and equipment. Furthermore, the unrealistic pricing policy had greatly reduced the profitability of the cement industry. The Government's desire to give a chance to newcomers to set up factories led to the cancellation of many industrial licences, since the licensees had neither the resources nor the expenience to start a cement factory. Mr. Hirachand, however, welcomed the Government's decision to enter the field of consumer goods manufactured in competition with the private sector. Fair competition, he said, was after all the basis of efficiency.

Need to Modernise Hosiery Units

The hosiery industry in West Bengal is facing many difficulties, those relating to outdated machinery being the main ones. The latter have kept the cost high, and hindered the production of quality goods. The industry has not been able to modernise its equipment due to lack of foreign exchange and the indigenous hosiery and knitting machinery industries have not developed sufficiently. Discussing these problems, Mr. A. K. Choudhury, said in his presidential speech at the annual general meeting of the West Bengal Hosiery Association in Calcutta this week, that the industry had good export prospects, but because of high costs and indifferent quality, Indian hosiery manufacturers were unable to compete in foreign markets. The Government should help the industry to modernise its machinery, he urged. Hosiery manufacture is a small industry, and lacks adequate financial facilities. Its long-term capital requirements cannot be met by commercial banks or financial institutions like the Industrial Finance Corporation or the Life Insurance Corporation since their terms of lending are rigid. The security acceptable to them is either real property or liquid assets, which small industries cannot provide. This question has been dealt with by various official bodies in the past, including the Working Group for the Hosiery, Knitting and Embroidery Industries. In spite of their recommendations, the hosiery industry continues to be handicapped for lack of finance and the necessary managerial skill. Another difficulty which hampered the industry's operations was inadequate supply of suitable grades of yarn. This pushed up costs also. Addressing the meeting, the deputy chairman of the Planning Commission, Mr. Asoka Mehta did not hold out any promise that the authorities would consider the hosiery manufacturers' problems sympathetically. He advised them to "take up methods of adaptation, imitation and improvisation in order to modernise their machinery and improve their efficiency instead of depending on imports".

Revolutionary New U.K. Textile Fibre

A new fibre of high strength and low cost has been produced at the Shirley Institute, Manchester, the research centre of the cotton industry, it has been disclosed recently by Dr. D. W. Hill, the Director, who described the development as a "major breakthrough" with which the Institute had beaten the world. During fundamental studies on fibres and plastics, it was noticed that, under certain conditions, some chemical materials such as polyethylene and polypropylene in the form of sheets split into fibres directly when stretched. After considerable investigation, a textile fibre of a new character had been produced.

The polymer sheets, when heated and stretched under certain conditions—which at present remain secret—split up into fibres which were found to possess qualities of strength equal to the best ever found with fibres produced from the same chemicals by the spinneret method. The new material had been given the name of "split-fibre". The production of "split-fibre" is compared with the production of flax used for making linen textiles. With flax, the fibres are separated from a sheetlike array in the plant stem and with "split-fibre" the fibres are eventually separated from a sheet of plastic. The actual starting material is not unlike the familiar polythene bags used for packing foodstuffs and other items in shops. The main advantage of the new fibre is claimed to be its very high strength and low cost.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following for the 1964 Fund:

Rs. 20

Dr. S. Radhakrishnan, President of India.

Rs. 50

Governor of Orissa.

Total Rs. 405

Previously acknowledged, Rs. 2,019.71

Grand Total Rs. 2,424.71

PETROLEUM IMPORTS

WE gather from the report of the Port Commissioners for the year ended 31st March, that 86 vessels discharged oil at Budge-Budge in the year made up thus:—

No.	From	Gallons
4	America	1,291,811
13	Russia	14,778,214
62	Burma	26,603,934
7	Borneo	6,615,004
86		49,288,963

The American oil all come in cases, the Burma, and nearly all the Borneo oil in bulk—8¼ million gallons of the Russian oil were in cases. The imports of oil were below those of the two pre-eding years, but otherwise they were the highest on record. It is noteworthy that up to 1896-97 Russia and America divided the oil trade within them. In 1896-97 Burma and Sumatra made their appearance. Burma has steadily advanced from 1 per cent of the total in 1896-97 to 53 per cent in 1903-04. America in 1893-94 supplied 83¾ per cent of our consumption but has since declined, until in 1899-1900 she only sent us 14¼ per cent. Since then there has been a smart drop, and last year only 2¼ per cent came from that quarter, quite a negligible quantity. Russia having advanced to 79 per cent in 1899-1900 has declined to 30 per cent, the lowest figure for the past ten years. Borneo last year came on the scene and supplied us with 13¼ per cent. Sumatra has dropped out. It seems clear that Burma will shortly be able tc meet all our requirements for Petroleum oil and this is a matter for congratulation, it is one more step towards making India self-contained.

A Ditcher's Diary

I WAS SO ABSORBED IN VISUALISING THE SPECTACLE of a mob of African students screaming and shouting outside foreign embassies in usually very correct and quiet Moscow that, for a moment, I quite forgot what the demonstrations were about. Ah yes, Belgian paratroopers had landed in Stanleyville to rescue more than a thousand hostages in the hands of the anti-Tshombe rebels. Anything Mr. Tshombe does is suspect in Afro-Asian eyes, not without reason. The Belgian record in the Congo does not exactly shine. Yet I do not see what else the Belgians could have done in the circumstances created by Christophe Gbenye and his men. Did the Nairobi talks have a sporting chance of succeeding? I doubt it; and at stake were many lives. There would have been no political complications if the International Red Cross had handled the affair; but it is Gbenye who made that impossible. Much too much can be made of the legality of Mr. Tshombe's Government in Leopoldville; but there is none other in sight. He is so unpopular with most African Governments that he has had to fall back upon hired white mercenaries to maintain any kind of law and order and to consolidate his *régime*. The Belgians and their allies, the British and the Americans, may yet be wise to think of an alternative to Tshombe—someone who would be able to secure military help from other African States so that the mercenaries may again be excluded from the Congo. President Kasavubu might be the man. The trouble is that he is said to take little interest in anything not directly concerned with his own tribe, the Abako. Will there be peace with the expulsion of the mercenaries? They should certainly be out; but scepticism persists because in more than four years of freedom the Congolese have failed utterly to evolve any kind of acceptable political organisation. I have no sympathy at all for Tshombe; I have less time for the rebels who, being totally unorganised, indulge in the most shocking atrocities against their own people. African nationalists, especially those safely away from their own countries, are greatly annoyed when this aspect of Africa is mentioned; but the truth must be told.

SEVERAL COMMENTATORS HAVE BEEN SAYING THAT Mr. Chavan's recent visit to London came at a bad time for the new British Government, since it was engaged on a review of its own defence policy. I cannot see why this was really relevant to the consideration of a request for facilities to build a few frigates to replace outdated hardware, and it is no surprise to me that in this matter Mr. Chavan seems to have got what he wanted. But I can understand that it might have had some effect on the decision concerning India's request for a submarine. Even the Labour Government, I am told, remains largely unconvinced that a submarine would be anything other than an unnecessary counter-weight to the one owned by Pakistan. That is why I was so interested in the argument Mr. Chavan is reported to have used in London that India's policy is now designed not only for protection against the Chinese, but against Indonesia as well. Now this is something I have mentioned often enough, but it is the first time I know of that it has been heard from an official Indian spokesman. Does it mean, I wonder, that this country is at last officially aware of the growing danger from this quarter? If so, then it has come not a moment too soon. The Australians have just introduced conscription and are justifying it on the grounds of increasing Indonesian expansionism, while Britain and the United States are contemplating the establishment of an Indian Ocean base, although the latter still, unaccountably, goes on supplying arms to Dr. Soekarno. He, for his part, has shown an unhealthy tendency to draw closer to China now that his Russian friends are becoming less obliging and the Chinese themselves possess the bomb. I have myself always regarded Dr. Soekarno as a sort of eastern Mussolini, dangerous because of the trouble he can stir up but ineffective when it comes to a showdown. If India is now in earnest about wanting to resist Indonesian ambitions, I suggest the first matter to be put in hand should be the purely diplomatic one of extracting from Ceylon a promise that under no circumstances will the Trincomalee naval base be leased to either Indonesia or China. I saw this possibility mentioned in a newspaper report the other day, and it almost made my blood run cold.

"DEFENCE OF WHAT?"—ASKED THE *Statesman* sombrely on Tuesday morning. Time too, I say. It was certainly extraordinary conduct on the part of a not very senior police officer to arrest a couple of men just because they were said to have circulated rumours against him; and this under the Defence of India Rules too. Discreet withdrawal of the case at the first opportunity spared the officer concerned and the police generally the severe strictures that might well have fallen from magisterial lips if the matter had been pursued. But the fact remains that two men against whom the prosecutor could produce no evidence had to spend several hours in police custody entirely because of the arbitrary manner in which an officer had chosen to use D.I.R. to protect his reputation. There must have been many abuses of D.I.R.: but this Calcutta case is perhaps unique in its blatancy. The Defence of India Rules were framed under a Central enactment; and I invite Parliament to ponder how and why they are being used. I have no means of knowing whether the West Bengal Assembly will discuss the case; but, as I have already implied, the Centre is involved because the Act is that of Parliament. Mr. G. L. Nanda, the Home Minister, probably has enough on his plate, what with charges and replies concerning Messrs Patnaik, Mitra, Nijalingappa and others; yet the Defence of India Rules are the care of his Ministry and their abuse makes his Ministry answerable even if a State Government's is the direct responsibility. After dealing with the particular case, Mr. Nanda must address himself to the larger question: is the emergency necessary? When Mr. Chavan says that the concentration of Chinese troops on the border in now larger than in the autumn of 1962 and that violations of the ceasefire line in Kashmir by Pakistan continue, I must confess I am not greatly impressed. What are China's and Pakistan's intentions? This, surely, is the crucial question. I cannot say that India has made a serious attempt to assess these intentions.

The Poker Session PRESENTED BY THE AMATEURS on the stage of the Hindi High School last week, was a vivid portrayal of the frustrations, petty jealousies and intrigues of a lower-middle-class family. Hugh Leonard's play is remarkable not only for the insight it affords into human nature; the deft handling of crises and conflicts creates an atmosphere of tenseness and realism that is the strength of what might otherwise have seemed too humdrum a theme. The title of the drama is inspired by the fact that poker is a game of bluff; and bluff is indeed the hallmark of a family torn by selfishness and intrigue, where accusations and counter-accusations are part of the eternal game of life. The success of the play calls for unusual histrionic talent, and from this point of view the producer, Dilip Sirkar, took on a difficult assignment, especially since some members of the cast appeared to be newcomers to the stage. Ranjit Mathur, in the central rôle of Billy, gave a pedestrian performance which might have been improved by greater attention to voice and accent. Anjali Malik, as Mrs. Beavis, did rather well, and so did the other feminine members of the cast, such as Eslyn Melhuish, in the rôle of Irene. Gitanjali Ambegaokar might have been more memorable as Fran if she had not been so memorable for her constant batting of the eyelids. The credit for the success of the play, however, goes mainly to those two old pillars of the Amateurs, Jasbir Malik (as Teddy) and Ernani Giambuzzi (as Kelvin); their confidence and liveliness on the stage did much to sustain the interest of the audience till the end. The stage and lighting arrangements were simple, but appropriate; and the Amateurs are to be com-

plimented on an enterprising if not uniformly successful effort. Many apart from the Rotary Club of Calcutta, which is to receive the proceeds of the performances, will be grateful to the group for its determination to save the local English theatre from vestigial decline.

THE TROUBLE WITH PLACING AN EMBARGO ON ALL trade with South Africa, as the Labour Government is being urged to do by some of its more extreme supporters now that the nettle of arms supply has been grasped, is that it would involve a number of irritating contradictions. For instance, refusal to trade with a country of whose internal policies one disapproves means, by implication, that one does approve of the internal policies of all those countries one continues to trade with. The argument being used in this case, of course, is that the South African Government is unique in practising an openly racialist policy. What this means, in effect, is that people with black faces are being oppressed. But so are they in places like Ghana, although there, it must be admitted, the oppressors are themselves the same colour. Why, then, single out South Africa for disapproval? And why is it right to refuse to trade with a country whose black citizens are being victimised and continue to do business with one which oppresses its white ones? Or its yellow ones? Or those of any other colour for that matter? And by those of any other colour? The logical development of such a policy of selective trading would, I fear, eventually reduce world commerce to a trickle. I remember pondering these points some years ago when India decided not to supply South Africa with jute goods, thus presenting Pakistan with a ready-made market for her growing industry. As it is, it would appear that India disapproves of the treatment of the black, or brown, inhabitants of South Africa and condones that meted out to people of Indian origin in, say, Burma or Ceylon. The supply of arms, of course, is another matter, and no doubt Britain deserves credit for deliberately closing a lucrative channel of trade at a time when she dearly needs all she can get. But it does strike me that to follow this with a full-dress trade embargo would be carrying moral disapprobation too far.

BEING NEITHER DR. VERWOERD NOR MR. ATULYA Ghosh, we in *Capital* do not consider it our business to look closely into the whiteness or otherwise of such money as comes into our Christmas Toy Fund. We shall never need to, for we believe that donors, by the very act of choosing to support so worthy and humane a cause, show themselves to be individuals impeccable both in conscience and in generosity. On our part, it seems enough to be able to offer the assurance that every paisa given is judiciously spent for the traditional purpose of the Fund: buying toys for children of any caste, creed or colour who might otherwise get none during the festive season. Few charities anywhere in the world are administered at such nominal cost; distribution is in the hands of institutions of proven probity who have cared for children for decades. In spite of the fact being known to everyone, I have to add that if the prices of whisky or wheat have gone up, so have those of toys; nor is the number of needy children going down. Although a fair number of old donors maintain their contributions even after retirement and departure from these shores (and to them we are most grateful), I am sorry to have to say that many of the younger generation in Netaji Subhas Road and elsewhere seem indifferent to appeals for charity. May I make a special appeal to them? There are only three weeks left between now and Christmas Day: it takes a little time to buy the toys, pack them and despatch them. So will readers and their friends very kindly hurry and send their gifts, big or small, to the *Capital* Christmas Toy Fund at 5 Mission Row, Calcutta 1.

ASIDE, AFTER BEING INTRODUCED TO A TYCOON, "What a revolting man, can't think how anybody tolerates him."

"I think I know the reason. You see, his net income exceeds his gross habits."

THE DITCHER

Guide for Investors

DELHI CLOTH EXPANDS AND MODERNISES

THE Delhi Cloth and General Mills Co. Ltd has done well for the year ended June 1964. Sales rose from Rs 41.77 crores to Rs. 46.78 crores. Although gross profits have been higher, the net profit has dropped due to substantial provisions for depreciation and development rebate reserve. The net profit has amounted to Rs. 21.37 lakhs, against Rs. 77.43 lakhs, after increasing depreciation from Rs. 1.49 crores to Rs. 1.71 crores and development rebate reserve from Rs. 1.10 crores to Rs. 2.41 crores. Taxation absorbs Rs. 15 lakhs (against Rs. 85 lakhs) and taxation in Pakistan Rs. 12 lakhs (against Rs. 20 lakhs). The taxable ordinary dividend has been raised from 13 percent to 17 percent, including a jubilee dividend of 2 percent. At the present price of Rs. 46.81 a share, the yield amounts to 9.08 percent. Development rebate for a previous year is allocated Rs. 3.51 lakhs, depreciation concerning the triple shift for 1962-63 is Rs. 21.79 lakhs, dividend reserve Rs. 73.90 lakhs and jubilee dividend reserve Rs. 8.80 lakhs. The proposed dividends will be paid out of the two latter reserves. The carry-forward is Rs. 2.80 lakhs, against Rs. 1.47 lakhs brought in.

In his address from the chair at the annual general meeting of the Company held recently in Delhi, Dr. Bharat Ram has said that all departments are working successfully, but he has pointed out that the sugar factories are not likely to produce satisfactory results during the current season. They suffered in the 1963-64 season due to the shortage of cane supplies and their poor quality. The working of the P.V.C. plant which has begun to operate fully may be interrupted by the cut in the supply of electric power by the Rajasthan Government. The impact of the introduction of the partial control on cloth remains to be assessed. The Hisar textile mills have begun to manufacture mixed fibre yarn. The export of the Company's products has been maintained. The new spinning unit of the Hisar textile mills with 28,000 spindles has begun to operate. The new waste spinning plant of the Swatantra Bharat mills has also started functioning. The equipment of the Delhi Cloth Mills is being modernised. The cane-crushing capacity of the Mawana sugar factory has been increased from 1,500 tonnes to 3,000 tonnes a day. The rayon tyre cord project is expected to begin production by the end of 1964. The directors have decided not to issue fresh shares for the time being. They will consider the question of issuing shares when necessary.

Commenting on the depression in the capital market, Dr. Bharat Ram has mentioned that heavier taxation has tended to mop up the savings of the people. The response to new issues has been poor. The establishment of various financial institutions by itself will not solve the basic problem of the industry to attract savings. The fiscal and monetary policies of the Government should be modified to encourage savings. (A fuller text of the speech is printed on a later page in this issue of *Capital*.)

Ballarpur Paper Cuts Dividend

THE Ballarpur Paper and Straw Board Mills Ltd has earned a profit of Rs. 15.25 lakhs for the year ended June 1964, against a profit of Rs. 47.98 lakhs for 1962-63, after increasing depreciation from Rs. 7.92 lakhs to Rs. 43.37 lakhs. Sales rose from Rs. 2.74 crores to Rs. 3.99 crores. The taxable ordinary dividend has been reduced from 14.5 percent to 7.5 percent. The yield amounts to 4.8 percent at the present price of Rs. 15.69 a share of Rs. 10 each. Development rebate reserve is allocated Rs. 43.50 lakhs (against Rs. 90,000). A sum of Rs. 50,902 has been transferred from excess dividends provided earlier.

The directors, it is stated, have temporarily reduced the dividend to conserve funds for the expansion scheme which is estimated to cost about Rs. 9 crores. The major part of the expansion has already been completed. The output of paper rose from 13,225 tonnes to 19,611 tonnes. The stationery department has produced satisfactory results. The new pulp mill has begun to function. Although manufacturing costs have risen, steps have been taken to offset them as far as possible by increased efficiency and operational control. The market for paper has become more competitive, but the Company is selling more paper because of its attention to quality.

Smith Stanistreet Pays More

COMMENTING on the prospect of Smith, Stanistreet and Co. Ltd in their report for the year ended June 1964, the directors say that several pharmaceutical specialities and quality cosmetics have been introduced. The Company has opened many new branches to increase sales. The research division is developing a number of pharmaceutical specialities to attract sales which rose from Rs. 2.22 crores for 1962-63 to Rs. 2.49 crores for 1963-64. The profit has risen from Rs. 13.17 lakhs to Rs. 13.73 lakhs, after transferring Rs. 1.81 lakhs (against Rs. 1.41 lakhs) to depreciation. The taxable ordinary dividend has been raised from 22.5 percent to 25 percent, which works out to a yield of 9.1 percent at the present price of Rs. 13.69 a share of Rs. 5 each. Taxation absorbs Rs. 6.40 lakhs (against Rs. 6 lakhs), development rebate reserve Rs. 24.000 (against Rs 60,000) and general reserve Rs. 1.37 lakhs (against Rs. 1 lakh). The carry-forward is Rs. 481, against Rs. 19,167 brought in.

Kusum Engineering Raises Dividend

ALTHOUGH gross profits of Kusum Engineering Co. Ltd for the year ended March 1964 have increased, compared with those for 1962-63, the net profit has dropped from Rs. 73,265 to Rs. 55,144 due to the larger provision for depreciation. The latter absorbs Rs. 1.42 lakhs (against Rs. 85.701) and development rebate reserve Rs. 35.565 (against Rs. 11,556). The taxable ordinary dividend has been raised from 6 percent to 7 percent. A sum of Rs. 22.500 has been transferred from excess provision for income tax. Taxation is allocated Rs. 40.908 (against Rs. 13.747). The carry-forward is Rs. 65,514, against Rs. 28,777 brought in. Sales rose by Rs. 3.24 lakhs to Rs. 20.22 lakhs. There has been considerable expansion in the productive capacity. The capacity of the cast iron foundry has been increased. New machinery has been installed. The Company spent Rs. 2.94 lakhs to finance development during 1963-64.

Share Offer from Sandoz India

SANDOZ (India) Ltd is offering 300,000 ordinary shares of Rs. 10 each for public subscription at par. The list opens on 14th December, 1964. (Details of the issue are printed on a later page in this issue of *Capital*.) Applications for shares must be made for a minimum of 25 shares or multiples thereof. The subscribed and paid-up capital amounts to Rs. 75,00,000, divided into ordinary shares, out of which 664,000 shares are held by Sanoz Ltd of Switzerland. The present issue consists of 750,000 ordinary shares, out of which 100,000 shares will be subscribed by Sandoz Ltd of Switzerland in other than cash and 136,000 shares will be subscribed in cash. 75,000 shares will be taken up by Shaw Wallace and Co. Ltd and 139,000 shares will be allotted to the existing shareholders. directors, employees and their friends.

Sandoz India is an affiliate of Sandoz Ltd of Switzerland and is engaged in manufacturing a wide range of pharmaceuticals, dyestuffs, chemicals and pesticides. It also produces basic pharmaceutical chemicals. The Company uses several trade marks of the parent Company. It has begun manufacturing since 1959 and has steadily expanded the range of products. The Company is also exporting part of its output. It is establishing a modern dyestuff factory and expanding its agrochemical and auxiliary plants. It proposes to manufacture some basic agrochemicals in the near future. It will produce dyes for synthetic fibres. The dyestuff plant will begin to function in 1965. The manufacturing plants of the Company are situated near Thana, Maharashtra State.

International Tractor Share Offer

INTERNATIONAL Tractor Co. of India Ltd is building a factory in Kandivli, near Bombay, to manufacture 3,500 tractors and matching implements a year on a single-shift basis. The Company has been promoted jointly by Mahindra and Mahindra Ltd. Voltas Ltd and International Harvestor Company of the U.S.A. Import licences for the necessary equipment have been obtained. The Company has also obtained licences for tractor components valued at Rs. 30 lakhs Production will begin early in 1965. Mahindra and Mahindra Ltd has been appointed Secretaries and Treasurers of the Company for ten years.

The subscribed capital amounts to Rs. 76.50.100 divided into ordinary shares of Rs. 10 each. The major subscribers are International Harvestor Company, Mahindra and Mahindra Ltd and Voltas Ltd. Ordinary shares numbering 124,940 will be privately subscribed by Mahindra and Mahindra Ltd, its associates and friends. The Company is offering 610,050 ordinary shares for public subscription at par. The list opens on 7th December, 1964. The entire public issue has been underwritten. (Details of the issue are printed on a later page in this issue of *Capital*.)

New Capital Issues

THE Controller of Capital Issues has authorised four companies to raise capital totalling Rs. 5.16 crores. Of these, one is a new company with equity participation by the International Finance Corporation. Two are public-sector undertakings. The consent is valid for 12 months in all the cases. The following are the details:

Struthers Wells (India), Bombay, a new Company incorporated in the State of Maharashtra, is to issue capital of Rs. 1.5 crores, divided into 120,000 equity shares and 30,000 preference shares, both of Rs. 100 each, to be subscribed as to Rs. 40 lakhs (Rs. 9.5 lakhs for cash and Rs. 30.5 lakhs other than cash) in equity shares by Struthers Wells International Corporation of New York, Rs. 17 lakhs in equity shares by the International Finance Corporation, Washington (in cash) and out of the balance of Rs. 38 lakhs in equity and the entire preference issue of Rs. 30 lakhs will be offered, for cash at par, for public subscription and balance Rs. 17 lakhs in equity to be subscribed by the promoters, directors, etcetera. The Company will manufacture items of chemical machinery and processing equipment, etcetera.

Hastings Mill Ltd, Calcutta, having a subscribed and paid-up capital of Rs. 65 lakhs, is to issue 7 percent debentures of the value of Rs. 50 lakhs in units of Rs. 1,000 each for cash at par. The proceeds of the issue will be used for financing expansion of the silk unit and for setting up a new unit for the manufacture of coir products in West Bengal.

Singarani Collieries Co. Ltd, Hyderabad, is raising further capital of Rs. 1.66 crores divided into 166.000 equity shares of Rs. 10 each to be subscribed privately for cash at par. The capital will be used for financing the expansion programme of the Company.

Hindustan Machine Tools, Bangalore, a Government of India undertaking, is issuing further capital of Rs. 1.5 crores, divided into 15,000 equity shares of Rs. 100 each to be subscribed privately by the Government of India. The money is required for meeting the capital expenditure on the fifth machine tools factory in Hyderabad in 1964-65.

The Stock Markets

DULL CONDITIONS PREVAIL IN LYONS RANGE

Wednesday Evening.

THE Calcutta stock market has been dull during the past week. Prices, particularly of clearing shares, have tended to drop due to tired bull liquidation. Selling pressure has also been light because bears think that present prices have discounted almost all adverse factors. Turnover in cash shares has been poor although prices of selected scrip are on the whole steady. Holders are not keen to sell at current prices since their holdings show appreciable depreciation. Lyons Range is disappointed with the outcome of the meeting between the Prime Minister, Mr. Lal Bahadur Shastri, and spokesmen of trade and industry. The impression is that the Government is not in a mood to modify the fiscal policy for stimulating activities in the capital market until the next Budget in February 1965.

Turnover has dropped considerably and operators are inclined to take profit at every opportunity. The clearing on Wednesday passed off uneventfully. Carry-forward charges are slightly smaller than in the previous settlement. Birla Jute have been an active feature among clearing shares, and their price has tended to harden due to a shortage of the scrip. The shortage of funds in the stock market is growing. Operators and investors are inclined to wait until a decision is taken about the currency of blank transfers. If it were to be unduly restricted, activity, particularly in clearing scrip, would diminish to a great extent. A great deal of uncertainty also prevails due to the belief that the Government will take further measures to regulate the activity of stock exchanges.

Indian Iron are sluggish, and limited business has passed. There were temporary rallies in the hope that the Company would soon declare an interim dividend. But steadiness has not been maintained due to the absence of follow-up support. Rumours of an early increase in the retention price of steel are circulating, but investors think that the rise will not be sufficient to increase the profitability of steel companies. Engineering shares like Guest, Keen, Williams, Texmaco, Jessop and Braithwaite are quiet. J. K. Steel are steady on repeating the dividend. Kumardhubi are easier, but Binani Metal have met with interested buying. Jay Engineering are steady on rumours of a bonus issue.

In the miscellaneous section, attention is concentrated upon clearing shares which have tended to drop due to selling pressure. Hindustan Motors, Dunlop Rubber, Indian Copper and Indian Aluminium have weakened. Despite limited turnover Philips, Goodyear and Indian Oxygen are steady. Alkali and Chemicals have reacted due to profit-taking. B. I. Corporation are steady, but India Steamship have been freely sold. Among new shares, Hindusthan Twyford and Hindusthan Aluminium are steady.

Managing Agency shares like Martin Burn and Jardine Henderson have dropped. Electric Company shares are sluggish and small business has passed in Calcutta Electric. Bank shares are neglected. Scattered business in United Bank and United Commercial Bank has been transacted. Sugar shares have become almost impossible to transact due to the absence of buyers. Although the output of sugar in October is slightly larger than that in the corresponding period of 1963, it is feared that the total production during the current season will be much short of the targeted figure of 3.3 million tons. At current prices of sugar and of cane, profits of factories are unlikely to improve due to rising production costs.

Except for Birla which are steady, jute shares have attracted little attention. Union, Kamarhatty, India and Barnagore have tended to drop. The strike of mill workers last Tuesday has resulted in a loss of production to the extent of about 4,000 tons. It remains to be seen whether it will be made up if workers agree to work extra hours. The dispute is due to the claim of the workers that the recommendations of the Bonus Commission should decide the payment of bonuses. But bonuses to workers are regulated by the award of the wage board. It will be wrong to abrogate the award of the Wage Board during its pendency. Investors are also getting worried over sluggish overseas enquiries, particularly in hessian.

Except for Central India and Western Bengal, which have been transacted at lower prices, there has been very little interest in coal shares. The absence of any improvement in the demand for coal is a major restraining factor. The repetition of a taxable ordinary dividend of 13 percent by Burrakur Coal has had little influence. The profit of the Company has also been almost maintained. The Company has earned a pretax profit of Rs. 40.44 lakhs for the year ended June 1964, against a profit of Rs. 41 lakhs for 1962-63 after providing Rs. 21.30 lakhs (against Rs. 15.56 lakhs) for depreciation.

Cotton mill shares are about steady, although turnover has dropped. J. K. Rayon have recovered on short-covering. Bharat Commerce and Dunbar have met with scattered support, but Elgin have tended to be easier. Tea shares are sluggish although the Tea Finance Committee is reported to have made some useful recommendations to improve the working of the industry. Investors are disappointed since the marketing outlook during the next few months looks poor. The average price of tea has been short of the figure for the corresponding period of 1963. Attention has largely centred on some Dooars gardens.

Government securities are dull and quiet. The 3 percent Conversion Loan 1986 has been quoted around Rs. 62. Although prices of short- and medium-dated stocks are steady, turnover has been nominal. Institutional interest is lacking.

Bombay

EQUITIES FALL DESPITE GOOD COMPANY NEWS

PROSPECT OF MORE TAXES WORRIES OPERATORS

Wednesday Evening.

DALAL Street last week beat a further retreat and it reached close to its 1964 low. Losses were widespread, with some of the speculative scrip, namely. Century, National Rayon, Standard Mills and Hindustan Motors, establishing new low levels for the year. The decline was due less to any aggressive bear pressure than to light but persistent tired bull liquidation. Intermittent short-covering failed to produce any worthwhile rally because of the lack of follow-up support. The declining trend in equity prices reflected the deterioration in sentiment, the encouraging corporate news notwithstanding.

The stock market had scarcely got over the jolt caused by the 2-percent rise in the British Bank rate when President Radhakrishnan said in his inaugural address at the State Governors' conference that India's balance of payments position was gradually worsening. This implies that the country will have to put up with continuing shortages of imported raw materials and machinery which have already led to large idle capacity in some important industries. Then came the Central Finance Minister, Mr. T. T. Krishnamachari's statement emphasising the need for stricter economic discipline for the mobilisation of resources for the fourth plan and for increasing savings. His hint that the advance action concerning the mobilisation of resources for the fourth plan might be reflected in the February Budget was interpreted to indicate the possibility of further additional taxation. This caused considerable uneasiness in the market which had all along been thinking in terms of some fiscal relief.

The market's disappointment increased as the representatives of the Federation of Indian Chambers of Commerce and Industry, who recently discussed the economic situation and the continuing slump in the capital market with the Prime Minister returned without any promise of the generally anticipated fiscal relief. Reports that New Delhi is reconsidering the policy of progressive decontrol of industrial products because the trend of prices after decontrol has adversely affected the industrial cost structure have not been received favourably.

In its mood of utter despondency, the stock market took hardly any notice of the encouraging corporate news—Standard Batteries, Premier Automobiles, Ashok Leyland, Sirpur Paper and Hindustan Construction, all these had fared better than in the preceding year—and of the improved technical position as indicated by the slightly lower carryforward charges at the end of the settlement. The recommendations of the tea Finance Committee about substantial relief to the industry also did not attract much attention. Reports hinting at a possible overhaul of the Government's industrial policy allowing existing units to become economically viable either through modernisation or by adding balancing equipment also failed to please the market. Confidence has been so rudely shaken that neither speculators nor investors are inclined to lend big support to the market in spite of the fact that several scrip have declined to attractive levels. Even institutional investors have been keeping off the market for a long while.

Cotton textile shares are being marked down on the argument that the industry's profitability will be adversely affected by the record high prices of cotton and the rising labour costs. Rayon shares registered new lows for the year. South India Viscose is known to be doing extremely well, but the shares go virtually abegging at par. The Rs. 100-paid shares of Baroda Rayon and Indian Rayon are currently quoted around Rs. 61 and Rs. 51, respectively.

Among steels, Indian Iron held fairly steady on expectations of a good interim dividend. Tata Steel continued to sag and the current quotation around Rs. 143.50 is only a little higher than the lowest recorded during the year. Engineering shares seemed to ease mainly in sympathy with the rest of the market; net losses over the week were negligible. Voltas, in fact, recorded a small improvement over the week. Motor-car shares were subdued and the performance of shipping, dyes and chemical shares was no better. Sugar shares were inactive but steady. Bank, insurance and electric shares maintained a quietly steady tone. Among miscellaneous issues, Premier Construction were in the limelight and recorded a spectacular rise from Rs. 207 to Rs. 219 on sustained support based on ideas of a higher dividend and rights issue. Cash shares continued to be neglected but prices kept sagging due to the lack of fresh support.

Madras

BOMBAY ADVICES KEEP MARKET SUBDUED

SELECTIVE INTEREST IN PLANTINGS

Tuesday Evening.

THE Madras stock market has been quiet towards the close of the past week due to easier advices from the Bombay stock market. Turnover even in clearing shares has declined. Interest from outside centres is virtually negligible. Investors are worried over the observation by the Central Finance Minister, Mr. T. T. Krishnamachari, that the economic situation is grave. The deterioration in foreign exchange reserves has called for caution.

Rising prices of essential commodities have led to labour unrest. It is feared that if emoluments of workers are increased to make up for the rise in living costs, the unit cost of production will increase. Except for scattered interest in selected planting shares, turnover has been negligible. In Government securities, State loans are freely available at a discount. Scattered business in selected preference shares has been transacted.

Except for K.C.P., which are steady at Rs. 24 due to the declaration of a taxable ordinary dividend of 15 percent, sugar shares are dull. E.I.D. are available at Rs. 35.80 and India at Rs. 8.90. Cauvery have been transacted at Rs. 100 on payment of a taxable ordinary dividend of 7 percent. Jeypore have paid a taxable ordinary dividend of 15 percent and are being quoted at Rs. 16.50. Madura have been bought at Rs. 9.44 since the Company has declared a taxable ordinary dividend of 6 percent. Bank shares are sluggish, and a small turnover has been done in Indian Overseas at Rs. 150.

In the planting section, Consolidated Coffee have hardened to Rs. 26.50 on declaring a taxable ordinary dividend of 27½ percent. Blue Mountain have reacted to Rs. 2.70 and Cochin Malabar to Rs. 6.12. Ouchterlony are maintained at Rs. 3.40 and Periakaramalai at Rs. 3.75. In coffee shares, Anaparai are quoted at Rs. 3.10 on declaring a taxable ordinary dividend of 20 percent. Ossoor are steady at Rs. 2.80 and Rajendra at Rs. 12. In tea shares, Nelliampathy have been bought at Rs. 5.55, Peermade at Rs. 25.75 and United Nilgiri at Rs. 22.25.

In textile shares, South India Viscose dropped below par at one stage, but have recovered to Rs. 100 towards the close. Travancore Rayon have lost at Rs. 18. Lakshmi are nevertheless steady at Rs. 132 and Madura at Rs. 35.15. Business has passed in Buckingham at Rs. 278 and in Bangalore Woollen at Rs. 281. Mettur have lost at Rs. 225 on profit-taking, but Ramakrishna have been maintained at Rs. 199.40.

In the miscellaneous section. Aluminium Industries have reacted to Rs. 23.10 and Ashok Leyland to Rs. 7.05. Cement shares are quiet. Dalmia are available at Rs. 12.90 and India Cement at Rs. 5.03. Mettur Chemical have dropped to Rs. 14.20. Seshasayee Paper are maintained at Rs. 7.20 and Mysore Paper at Rs. 11.78. Parry's Confectionery are steady at Rs. 2.96 and Kirloskar Electric at Rs. 21.85 on prospects of a rights issue. Business has passed in Spencer at Rs. 21.50 and in Textool at Rs. 128. In electric company shares, Vellore are steady at Rs. 15.55 on prospects of a rights ordinary share issue in the proportion of one new share for every four held, at par.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available. All quotations are in Rs.]

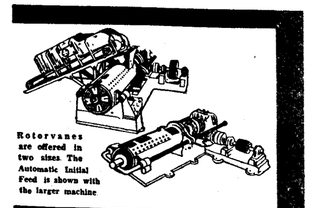
London



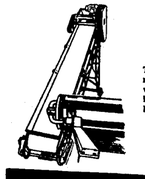
TRADING QUIETER AT CLOSE

GILT-EDGED DECLINE SHARPLY

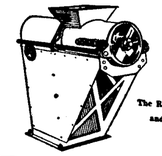
London, 2nd December.

THE sterling situation and the rescue operation dominated all other factors in the stock market over the past week. Tax uncertainties have to some extent been cleared up by the various Government statements concerning the corporation and capital gains taxes, but any buying that has been seen was mainly of a short-term speculative character and the long-term investor is still waiting for a clearer investment outlook. The gold reserve figures, due to be out soon, are keenly awaited, but more important are the November trade figures which will be published midway through December when it is hoped that the import picture will show some improvement. The rise to 7 percent in Bank rate has left its mark on fixed interest stocks and gilt-edged securities are sharply lower. Equities, on the other hand, were mostly better than a week ago, but a downward drift appeared in much quieter trading. Dollar stocks lost ground in sympathy with the Wall Street trend after the rise in U.S. interest rates. Gold shares met with strong support early in the week, but buyers held off later.

Rotorvanes
GIVE YOU A POWERFUL MECHANIZED GRIP ON tea



Rotorvanes are offered in two sizes The Automatic Initial Feed is shown with the larger machine



Growing good tea isn't enough. You have to show quality after manufacture—and at an economical cost! The key of course lies in mechanising to a continuous system of manufacture.

THE McTEAR ROTORVANE CONTINUOUS TEA ROLLER gives you the stronger liquors and briskness that buyers are now looking for. Add to this negligible expenditure on spares and small power consumption and you have the machine which you have long been waiting for.

The Rotorvane will help you make good tea.

The Portable intermediate feed conveys leaf to another Rotorvane or to a Ball Breaker.

The Rotorvane Ball Breaker and Aerating Machine.

ANOMALIES IN PRICING POLICY OF THE UNIT TRUST

(BY A SPECIAL CORRESPONDENT)

The wide divergence between the sale and repurchase prices of the Unit Trust of India has come in for criticism. The repurchase price seems reasonable, but the sale price of the units is too high.

THE Unit Trust of India at present sells its units at a price of Rs. 10.50 for every unit of the face value of Rs. 10, the sales being in minimum lots of ten units. The course of prices since the Unit Trust began its operations is shown in the table below. It will be observed that sales at par continued for the initial period of 45 days after which the price suddenly jumped to Rs. 10.35, a level which ruled for 16 days. The next price of Rs. 10.40 was current for the longest period so far—56 days; Rs. 10.45 lasted for 19 days and the latest price of Rs. 10.50 was announced simultaneously with the repurchase price of Rs. 10 on 16th November, 1964.

SALES PRICES OF UNITS OF THE U.T.I. UNDER THE UNIT SCHEME OF 1964

1964	Sale Price	No. of days
1st July to 14 August	Rs. 10 for a unit of Rs. 10	45
16th August to 31st August	Rs. 10.35 -do-	16
1st September to 26th October	Rs. 10.40 -do-	56
27th October to 14th November	Rs. 10.45 -do-	19
16th November	Rs. 10.50 -do-	

The Wide Divergence

The wide divergence between the sale and repurchase price, the lack of any pattern in the progression of sale prices and the fixing of the repurchase price at the par value of Rs. 10 require some explanation, for the pricing policy of the Unit Trust of India has come in for criticism. A savings bank deposit for a minimum period of one month would have earned 3-percent interest: a 91-day fixed deposit from 17th August could have fetched 3¾ percent and matured by now. The current rate for 91 days' is fractionally higher at 4 percent. Yet a needy unit-holder, who is forced to liquidate his investment, would, it is argued, get no return over a period of 150 days and may even suffer a loss if his investment was made after the initial period of par sales. What is wrong with the pricing policy of the Unit Trust of India?

The criticism is justified, but it is being made for the wrong reasons. The wide margin of 50 paise between the sale and repurchase prices is unreasonable despite the feelings of the Unit Trust. There is nothing wrong with the repurchase price of Rs. 10, but everything is wrong with the sale price of Rs. 10.50, contrary to the popular belief which blames the low repurchase price of Rs. 10, and accepts the high sale price as reasonable, reflecting capital appreciation.

The rise in the sale price from Rs. 10 to Rs. 10.50 does not, in fact, reflect any degree of capital appreciation, but is made up almost entirely of the accrued interest on Unit Trust investments and of the costs and expenses of investment and management. It is obvious to any observer of stock market trends that the only period of 1964 when equities displayed some semblance of buoyancy was the third quarter between July and September; the depressed condition throughout February-June and again in October-November reflected a complete lack of investor confidence in the fiscal and economic policies of the Government. During this period, even the preference shares, debentures and Government securities were just able to maintain their position. Under the circumstances, unit prices, which are largely based upon stock market quotations, could hardly be the result or reflection of capital appreciation.

That unit prices would go up by an interest element of 5 paise every month should have been apparent right from the beginning, in view of the provision in the unit scheme of 1964 to the effect that all units will rank *equally* for the distribution of dividends, *irrespective* of the date of their sale. This means that whether a unit holder acquired a unit on 1st July, 1964, or whether he may do so on 29th June, 1965, he will be entitled to the dividend at the same rate of, say, 6 percent. The significant absence of the words *a year* must be noted; it is immaterial whether a unit is held for a day or for a year. In view of this, it is but fair that the dividend for the period prior to the date of purchase should be returned by a subsequent purchaser of the units to the Trust through a higher unit price. In simple terms, the sale price of the units must rise by at least 5 paise every month until it reaches Rs. 10.55 on the eve of dividend declaration in June 1965, on the assumption that the dividend payable will be 6 percent, on the basis of which the Unit Trust is itself working.

Inescapable Conclusion

But the unit prices had already reached Rs. 10.50 in mid-November 1964; the conclusion is inescapable that a substantial part of this increase represents investment and management costs and expenses. It is a well-recognised principle of unit trust operations that the sale price of a unit should at any time correspond to the cost and other expenses in relation to the acquisition of assets. The concept of the unit trust is that of a mutual society of existing unit-holders. Those who join at a later date should, therefore, be prepared to share the costs and expenses already incurred, in addition to the interest element which they have to pay, as explained in the previous paragraph.

The principle cannot be challenged: what eludes comprehension, however, is the erratic rise in the sale price of the units. The interest element in the sale price of the units cannot but follow a regular progression: why should the cost element go on rising so steeply at one period and so slowly at another? What is the basis on which management and investment costs have been computed and over how many units have they been distributed? It becomes clearer with every rise in unit prices that the cost element has been unduly inflated and given undue weightage in determining the sale prices of the units. Overhead and variable costs ought to have been divided equally among the block of units which should have been kept sufficiently large to make for a lower cost unit, and should have followed the same even progression as the interest element. In fact, in the absence of any capital appreciation, the sale price consisting of the interest accrued and expenses incurred should not have been fixed at such a high level of Rs. 10.50 in mid-November—only four-and-a-half months after the unit sales began.

The repurchase price of Rs. 10 should be regarded as reasonable, particularly because there has been no capital appreciation since the Trust's investments were made. True, any seller of units must be entitled to a share in the accrued interest during the period of his investment, but it is equally necessary that he must also take his share of the expenses incurred. What is unreasonable is the wide margin between the sale and repurchase prices: if the logic of these arguments is correct, the sale price of units in November ought not to have gone beyond Rs. 10.25.

The entire trouble arises because the unduly high sale price of units sets a wrong perspective. A margin of 25 paise a unit, *i.e.*, 2.50 percent between the selling and buying prices would have been reasonable by all standards. Moreover, it must be realised that an investor in equities would have himself made capital losses between February and November, apart from the expenses of brokerage, commission, stamp duty, etcetera, and whatever dividend he may have earned would have just compensated him for these losses and expenses.

High Sale Price

The criticism against the Unit Trust that its repurchase price is low, therefore, misses the real point, which is that the sale price is rather high. Complaints about points of no return or about losses in unit sales ignore the fundamental fact that while the Unit Trust may be able to spread the risk of losses, it cannot eliminate the losses altogether.

Furthermore, quite independent of these factors and principles, and of the efforts of the Unit Trust to hold the balance even between the past, present and future unit-holders of the Trust, five months is too short a period to provide a really long-term perspective for an evaluation of the rights and wrongs of the Unit Trust's pricing policy, especially in the context of the depressed stock market.

Having said all this, however, there are a couple of points on which the Unit Trust needs to evolve and follow a realistic policy. Transfers of units except to banks are prohibited till 30th June, 1965. The rationale behind this prohibition is difficult to understand. In fact, if a free market were allowed in the units, the market price would have fully vindicated the pricing policy of the Unit Trust and avoided some of the heart-burning of unit-holders. Moreover, some of the small brokers who have felt that the Unit Trust has deprived them of their business with small investors would have found a new opening.

Secondly, the delay in issuing unit certificates is getting rather abnormal now. The chairman has attributed the delay to the lack of facilities for the mechanical processing of 125,000 applications in Bombay: he should have anticipated the difficulties and made alternative arrangements at other centres in advance. In fact, 125,000 applications (the actual figures, not yet ready, will be published in due course!) are much below the original anticipation, and one wonders what would have happened if the response had been better. In any case, it is stated that officers and staff are working overtime to finish the job (but it was not mentioned that they are running up the bill of expenses at the cost of new purchasers of units). Is this the reason for a sharp increase in the unit sale price?

Thirdly, the broad details of the Trust's investments, it has been said, will be published at the appropriate time. Meanwhile, one has to be content with the chairman's assurance that in underwriting as well as investment operations of the Trust, the interests of the unit-holders are the primary consideration. How far the claim is justified will be known only when any analysis of the investment portfolio of the Unit Trust of India is possible.

I.O.B. is big enough to serve you...

I.O.B. is an international bank with offices throughout India and South-east Asia and correspondents the world over. It offers a wide range of services to suit the needs of varied customers. Indeed, I.O.B. is big enough to serve you.

We asked our customers, thousands of them at random, what they thought of our service. They replied: "We are pleased". They also made several helpful suggestions which we are implementing. Indeed, I.O.B. is small enough to know you.

Range of I.O.B. services: Savings and Current Accounts—Recurring and Fixed Deposits—Personal and Business Loans—Bills Payment Service—Gift Cheques—Travellers Cheques—Safe Deposit Lockers—Trade and Export Information and Advice—and whatever other specialised help you may need.

...and small enough to know you

THE CALCUTTA MONEY MARKET

CALL RATE RISES

Wednesday, 2nd December.

THERE has been no change in the general level of advances in the Calcutta money market during the past week, indicating that the busy season has yet to get into full swing. The requirements of each of the major categories of borrowers—the cotton, iute and sugar mills, the iron, steel and engineering industries, and the foodgrains and seeds trade—are approximately the same as they were a week ago. In the interbank market, conditions have become tighter because of tax payments, and the call rate has risen from ½ percent to 4½ percent.

The exchange market has been fairly active, with a good supply of both tea and gunny bills. The demand for remittances has been small. In London, sterling has improved in relation to the major currencies since the massive support operation was launched last week.

BULLION WAS STEADY IN CALCUTTA during the past week. Silver rose from the previous week's level of Rs. 257 to Rs. 257.50, quoted today. It was quoted at 113½d in London and at 129.3 cents in New York.

In sympathy with the rise in silver gold was also steady and the price of 14-carat advanced from Rs. 68.25 to Rs. 68.50.

DURING THE WEEK ENDED 27TH November, Government of India Treasury bills for Rs. 40,44,25,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 1st December, 1964. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.400 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.400 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 7th December.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 2nd December to 5th December at Rs. 99.416 percent subject to the conditions previously announced that sales can be stopped at any time without notice, if the Government thinks it necessary. These bills sold from 25th November to 28th November amounted to Rs. 52 lakhs.

THE RETURN OF THE STATE BANK OF India for the week ended 20th November, 1964, shows a rise of Rs. 6.60 crores to Rs. 672.93 crores in total deposits. Investments in Government securities are down by Rs. 7.12 crores to Rs. 280.08 crores, while other authorised investments remain unchanged at Rs. 8.98 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have increased by Rs. 1.64 crores to Rs 344.02 crores. Cash and balances are, in consequence, shown at Rs. 30.90 crores or Rs. 6.77 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 20th November, 1964, shows Demand and Time liabilities at Rs. 1,375.82 crores Rs. 29.01 crores on account of borrowings from banks) and Rs. 1,402.03 crores (Rs. 15.79 crores), compared with Rs. 1,366.64 crores (Rs. 25.89 crores) and Rs. 1,388.84 crores (Rs. 15.95 crores), respectively, in the previous week. Cash has declined by Rs. 3.28 crores to Rs. 67.03 crores, while balances with the Reserve Bank have increased by Rs. 36 lakhs to Rs. 97 crores. There is a rise of Rs. 9.24 crores to Rs. 828.82 crores in investments. Advances and bills discounted at Rs. 1,733.97 crores show a drop of Rs. 5.59 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.9 percent and 62.4 percent, against 6.1 percent and 63.1 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 4-12-64.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
4-12-64	5-3-65	2,00,00	Rs. 2.400%
27-11-64	2-3-65	2,00,00	Rs. 2.360%

ANNOUNCEMENT REGARDING THE PROPOSED ISSUE OF CAPITAL

This is NOT a Prospectus. Persons interested in full details may obtain copies of the Prospectus from the Registered Office of the Company or from all Offices of Bankers to the Issue in towns or cities mentioned against each Bank, Managing Brokers, Brokers and Registrars named hereinafter.

SANDOZ (INDIA) LIMITED

(Incorporated under the Companies Act, 1913)

Registered Office: 3, Wittet Road, Ballard Estate, Bombay 1.

EXISTING AND PROPOSED ACTIVITIES OF THE COMPANY

Under licence from SANDOZ Limited, Basle Switzerland, of which it is an affiliate, the Company carries on manufacturing of a wide range of Pharmaceuticals, Dyestuffs, Textile Chemicals, Pesticides, etc. It also manufactures basic pharmaceutical Chemicals, like Calcium Gluconate, Ferrous Gluconate, etc., Optical Whitening Agents known as "Leucophors" and a wide range of Textile Chemicals. Arrangements exist with SANDOZ Limited, Switzerland, for the use of a number of trade marks registered under their name in India, provided the products meet quality control standards internationally set for SANDOZ products.

The Company has commenced manufacturing in 1959 and has expanded the range of the various lines of production mentioned above in general and pharmaceutical products in particular, by virtue of continuous technical assistance and information received from SANDOZ Limited, Switzerland, regarding new processes and products developed by them in their Research Laboratories.

The Company is exporting pharmaceuticals, dyestuffs and textile chemicals to a number of countries and is considering extension of these activities.

The Company is in the process of establishing a modern Dyestuffs Factory and expanding its Agrochemical and Auxiliary Plants. It also has a scheme to start basic manufacture of certain Agrochemicals in the near future. The Dyestuffs manufacturing programme includes a number of dyes for all fields of application and some well introduced specialities for the processing of wool and synthetic fibres. The Dyestuffs Plant will go into full operation in 1965.

LOCATION OF THE FACTORY

The Company's manufacturing plants are located at a distance of 25 miles from Bombay on a 77 acre site at Kolshet, Dist. Thana, Maharashtra State. The new Dyestuffs Plant has also been constructed on the same site.

DELHI CLOTH AND GENERAL MILLS CO., LTD.

CHAIRMAN, DR. BHARAT RAM'S ADDRESS

Speech by DR. BHARAT RAM, Chairman, Board of Directors, Delhi Cloth & General Mills Co., Ltd., delivered at the 76th Annual General Meeting of the shareholders of the Co. on the 24th November, 1964, at Bara Hindu Rao, Delhi-6.

Friends,

It is a great pleasure for me to welcome you all to this 76th Annual General Meeting of your Company. Since we met last year a great tragedy overtook the country. We lost our respected Prime Minister, Pandit Jawaharlal Nehru. Indeed few people in any country at any time have contributed so much to enrich the lives of their countrymen. He was not a man of the moment, but an architect who shaped the destiny of India. He conceived things in a big way, and it is his farsightedness that made India embark upon a massive programme of social and economic development. Let us pay our humble homage to this great son of India and observe silence for a minute.

We are gratified that the void created by the loss of such an eminent personality has been repaired by exemplary democratic means. We now have as our Prime Minister, Shri Lal Bahadur Shastri. With his great attachment to social values, devotion to the cause of the common man and personal integrity, I have every hope that he will lead the country to greater and greater prosperity.

Sharp Rise in Prices

At the moment, however, the problems appear to me to be getting out of hand. In a single year, prices rose by more than 15 per cent, though this rise is mainly confined to agricultural commodities. There is no doubt that the spurt in the price level was occasioned, on the one hand, by short falls in agricultural production, and on the other, by excessive spending on the part of the Government on non-productive uses. The food shortage evinces rather clearly that our agricultural policy has not been working in the right manner. There have been failures in the administration of policy at village and block levels and incomplete coordination between different departments in Government. The impact of these shortages has been exaggerated by restrictions on free movement of foodgrains imposed by State Governments. An artificial scarcity has been created in so-called deficit areas.

Thus, to a large extent the present rise in prices has been self-imposed and can be very much improved by removal of restrictions. We have been helped by timely assistance from foreign countries particularly the U.S.A. While such assistance is of great importance to overcome temporary difficulties, we cannot depend on such assistance for all time It is absolutely necessary for the country to become self-sufficient in food production and the administrative structure and policy to be reoriented towards this goal. It is no use diverting the public attention by placing blame at the door of one section of the community or the other. No system of distribution will be effective if production itself remains at a low level. There should be adequate incentives for the farmer to produce more and he should be provided with adequate facilities at the right time. Uptil now industrialists have not taken direct interest in agriculture. I feel that such interest is absolutely necessary : at least by those who run industries primarily based on agriculture. If I may say, it should be possible to impart to agriculture the techniques that make the successful running of industries. Our experience will be useful in this behalf.

The food shortage has created many problems not only in the economic sphere, but in others on which the very social order depends. Mischievous elements in society have taken advantage of the explosive sentiments and aggravated what would appear to be minor handicaps. There are disturbances everyday in some part of the country or the other. Scenes of lawlessness in which even students are participating have become common. Strikes are organised at vital points like docks which have to clear food imports.

Faster Growth Planned

All this is happening when we are programming the Fourth Plan with a comparatively faster growth. It is reported that the Fourth Plan will be designed in a manner which will help rapid growth of agricultural and industrial output. The problem, however, is not one which merely calls for greater expenditures. Unless effort is concentrated on specific factors which promote productivity directly, it is difficult to see how it would be possible to increase production and control the price level. So in the Fourth Plan outlays must be such that they will augment productivity. A balance has of course to be secured between short-term and long-term yields. It will be dangerous to dissipate resources in non-productive fields.

There is a contradiction in the present economic situation. While on the one hand there is a rapid increase in prices of commodities, there is on the other almost a continuous decline in the level of share prices. It is more natural to expect that prices of shares provide hedge against inflation. But not only have they failed in this respect, but have even declined by a substantial margin. This shows that there is certainly something wrong in the financial policy which has tended to divert larger parts of investible funds from the people to Government. This aspect is again revealed in smaller contributions to now issues. Even good companies are finding it difficult to raise rupee resources. A great many of the new issues are underwritten and a large part of the issue is held by the underwriters themselves. This situation is not conducive to rapid industrial development. Unless there is a free flow of finance from people to industry it is not possible for industry to secure the necessary balance between different types of finance consistent with considerations of risk and profitability.

The major factor which led to freezing of the flow of finance from the public was additional taxation, particularly in the Budget for 1963-64. Considering the measures adopted in the last four years the yield from additional taxation will be about Rs. 2,500 crores over the Third Plan period—Rs. 800 crores more than the Plan provision. This unprecedented draft on private income has naturally depleted the investible funds in the hands of the private sector. What is worse is that a large part of the resources mopped up by additional taxation was dissipated by Government over uses which did not increase the productive capacity of the country. In the first three years of the Third Plan alone over Rs. 600 crores have been absorbed by purposes unrelated to the Plan. To this extent the growth in national income was suppressed and the generation of investible finance was lessened. It would have been more proper for the Government to secure finance for investment by borrowing on the capital market. This would have not only promoted better use of resources but indicated the urgency of the investment in different sectors of the economy. But to replace taxation by borrowings would again require the revival of the market for Government securities. Thus, on the whole it would appear that fiscal and monetary policies have tended to mitigate the growth of private industry by creating scarcity of finance. Establishment of newer financial institutions will, if anything, deter the growth of normal channels which alone can sustain development. Industry cannot be made to depend only on financial institutions in which case these institutions will virtually assume an unhealthy dominant position. Looked at from any angle, it is imperative that savings in the hands of the individual must be encouraged.

Unaccounted Money

In this connection, I would like to refer to the much talked about 'unaccounted money'. This has been made to appear the principal villain in the present crisis. Let me be clear that I would not justify any wrong business practices, but at the same time, I would not like the business community to be wrongly blamed. Government have organised raids to unearth this unaccounted money, but often the raids have not resulted in any tangible results. They have only created an atmosphere of suspicion which does no one any good. On the contrary, the tensions which follow and the distrust which is shown lead to inaction and only hamper the growth of industrial activity. I, therefore, hope that Government will show greater understanding and ensure greater security and individual freedom. The punishment of the guilty, I feel, cannot be justified by harassment of the honest.

I must here refer to the tacit assumption of Governmental thinking that in proportion as the State interferes more and more with established institutions, it will approach nearer and nearer to perfection. Only this can explain the plethora of laws, rules, regulations and directives. I submit that this idea that the problems of the country can be solved by the exercise of political power should be abandoned. It is time that Government adopted a purposive policy which will evoke from the community at large wholehearted, instinctive, spontaneous response to programmes of development. Unless, we are able to solve the problems quickly by releasing productive forces, I venture to express the fear that the democratic way of life itself will be in jeopardy.

I feel that the greatest handicap from which we are suffering is the way in which policies are implemented—or rather not implemented. When it comes to the stage of implemention, there is so much of vacillation and delay. It appears as if our administrative machinery is loathe to move. Everyone is only too painfully aware of the gap between programmes and performance. I am of the view that this state of affairs could be remedied if only the Government would see that in all areas of activity those who do not produce results will not be tolerated, whether at the ministerial or administrative level.

I have briefly referred to some of the economic problems facing the country, and if immediate steps are not taken, the danger is that these problems may become even more difficult of solution.

Special Dividend

Coming to the Company's affairs, as you are aware, the Company has completed 75 years of its successful and progressive working. To mark this happy occasion, your Directors have recommended a special dividend of 2% on Ordinary shares. It is not necessary for me to review in detail the progress of the Company : but suffice it to say that starting from a very small beginning today we are ranked among the seven biggest companies in the country. This fine record of progress and good name of the Company has been made possible by the co-operation and dedicated efforts of generations of our team of workers and Managers who have been, and will continue to be, the Company's most valuable asset. It is also not necessary for me to recall again the part played by the late Lala Shri Ram who in fact has been the chief architect of D.C.M.

As you will observe from the Balance Sheet while the gross profits of the Company have increased from Rs. 3,39,22,290 to Rs. 3,94,00,334, the net profits have gone down. This phenomenon is not unusual or unhealthy and may continue as long as the Company continues to invest large amounts of money in new industries because of the heavy initial depreciation and development rebate on new investments.

All the units of the Company have done well in the last year except the Sugar units which like all other Sugar mills in our area have suffered due to shortage and low quality of cane. Even in the current year, the prospects do not appear to be very bright for the Sugar industry. You will be pleased to know that the P.V.C. Plant of the Company is now in full production and the Rayon Tyre Cord Plant is expected to start very shortly. Unfortunately, there is a danger of the P.V.C. Plant having to reduce its production due to a cut in the electricity by the Rajasthan Government. However, the Company is making efforts to find an alternative solution.

In the end, I would like to place on record our sincere appreciation of the wonderful work of all our workers and staff whose efforts have enabled us to achieve such good results during the year.

Note :—This does not purport to be a record of the proceedings of the Annual General Meeting.

1. P. R. SUBRAMANYAM & SONS, "Shree Siva". 24, Fourth Street, Benson Cross Road, Bangalore 6.
2. NANJAPPAIAH JAHGIRDAR, 181, Cavalry Road, Bangalore 1.

AHMEDABAD :
1. NARENDRABHAI LALBHAI SHETH, Manek Chowk, Ahmedabad.

LIFE INSURANCE CORPORATION OF INDIA

THE CHAIRMAN, MR. B. K. KAUL'S REVIEW OF OPERATIONS

Statement by Mr. B. K. Kaul, I.C.S., Chairman, at the Hundred and Second Meeting of the Life Insurance Corporation of India held in Bombay on 30th November, 1964.

The draft of the Annual Report and the Statement of Accounts for the period 1st April, 1963 to 31st March, 1964 have been circulated and are now before us for consideration.

The country suffered an irreparable loss in the sad and sudden demise of Jawaharlal Nehru. At its meeting held on 29th June, 1964, the Corporation passed a resolution placing on record its deep sense of sorrow at the passing away of our beloved Prime Minister. The Corporation was proud to recall the privilege of having him on 26th December, 1963 in Bombay to declare open its new headquarters, 'Yogakshema', and his inspiring words on that occasion which would guide the Corporation in carrying on such activities from 'Yogakshema' as would contribute its humble share in the various tasks of national reconstruction so dear to him.

New Business

During the year under review, our new business amounted to Rs. 703 crores under 16.46 lakhs policies as against Rs. 746 crores under 17.68 lakhs policies in the previous accounting period. As that period comprised of 15 months while the period under review covered 12 months only, a direct comparison of the figures is not possible. However, the new business performance during the year under review may be evaluated by comparison of business completed in the period 1st April 1962 to 31st March, 1963. During this period the Corporation completed a business of Rs. 708 crores. There has thus been a slight reduction in new business.

The rise in the cost of living during the year under review as also the introduction of the Compulsory Deposit Scheme, which affected the tax-payers, had their inevitable repercussions on our business. In addition to this, natural calamities like famine conditions in some parts of the country and excess rainfall in others also had their adverse effect on our business. The shortfall in business is only marginal and, in the context of the prevailing conditions, the achievements should be considered as fairly satisfactory.

First Insurances

As many as 11.54 lakhs policies, forming 70.5% of the total policies issued during the year, were taken by persons who were insuring for the first time. The corresponding figure for the previous accounting period of 15 months was 12.22 lakhs policies, being 69.5% of the total policies issued. This confirms the trend of growing insurance consciousness and gives satisfaction that the message of insurance is being taken to more people who have hitherto not availed of life insurance protection for their families.

Rural Business

5.85 lakhs policies assuring Rs. 209.40 crores were issued to people in rural areas. The corresponding figures for the accounting period of 15 months ending 31st March, 1963 being 6.77 lakhs policies assuring Rs. 233.45 crores. The classification of urban and rural areas is the same as adopted in the 1961 Census.

The scheme for collection of premiums through selected Post Offices in rural areas, where banking facilities do not exist, which was operating in Jaipur District of Rajasthan, has since been extended to the whole State of Rajasthan. The Postal authorities have also agreed to extend the scheme to the States of Andhra Pradesh, Kerala, Madras and Mysore, and the details are being settled.

Offices

As on 31st March, 1964, we had offices in 251 out of the 316 districts and in 5 out of 10 Union Territories in India. We also had Development Centres in 32 of the remaining districts and in one of the Union Territories. The programme for 1964-65 is to open 2 Branch Offices, 3 Sub-Offices and 17 Development Centres.

Non-Medical Business

During the year 7.21 lakhs policies assuring Rs. 164.87 crores were issued under the Non-Medical Schemes : 2.38 lakhs policies assuring Rs. 36.36 crores being under the Non-Medical General Scheme and 4.83 lakhs policies assuring Rs. 128.51 crores under the Non-Medical Special Scheme. It may be mentioned that under the Non-Medical Special Scheme, proposals are entertained for amounts up to Rs. 10,000 from special categories of persons in civil employment and also category A-1 of commissioned officers in the Armed forces.

Salary Savings Scheme

Under the Salary Savings Scheme, we issued during the year under review 2.71 lakhs policies assuring Rs. 81.47 crores as against 1.93 lakhs policies assuring Rs. 61.03 crores during the previous accounting period of 15 months. I am glad that the scheme is proving popular with the employees and employers in general. More and more employees are coming forward to make the premium deduction a first charge on their salaries, thus ensuring insurance protection for their families with least inconvenience to themselves.

I am happy that in addition to the existing scheme for employees of Kerala State Government, satisfactory arrangements were made with the Governments of Rajasthan and Punjab for introducing the Salary Savings Scheme amongst their employees. In July, 1964, similar arrangements have been made with the Government of Orissa.

Group Insurance and Group Superannuation Schemes

New Business amounting to Rs. 12.30 crores was written during the year under the Group Insurance schemes and under the Group Superannuation Schemes Life Annuities of Rs. 2.86 lakhs per annum were granted. The comparative figures for the previous 15 month-period were Rs. 10.49 crores and Rs. 5.05 lakhs respectively.

Business in Goa

The policies issued by the erstwhile Portuguese Companies to Indian citizens resident in Goa, Daman and Diu vested in the Corporation as from 8th June, 1962, which has been fixed as the Appointed Day while applying the Life Insurance Corporation Act to these territories vide notification issued on 29th February, 1964 by the Government of Goa, Daman and Diu. How to meet the deficit in respect of this business is being discussed with the Central Government.

Foreign Business

During the year the Corporation issued 8,532 policies assuring Rs. 10.21 crores in the foreign countries where it is operating, as against 9,498 policies assuring Rs. 11.24 crores during the previous accounting period of 15 months. For the sake of comparison, it may be mentioned that during the period 1st April, 1962 to 31st March, 1963 the Corporation issued 8,885 policies assuring Rs. 10.58 crores. The slight set-back in the business is due to a shortfall in business in Mauritius and East Africa. At other places there was satisfactory progress.

Business in Force

The total business in force as at 31st March, 1964 was Rs. 3,571 crores under 103.28 lakhs policies as against Rs. 3,165 crores under 95 lakhs policies as at 31st March, 1963, thus recording 12.8 per cent increase during the year under review. I may mention that the business in force as at 31st March 1964 is almost three times the business in force of all the Insurers taken together as at 31st December, 1955.

Lapse Ratio

The ratio of lapses to mean business in force was 8.2% during the year as against 8.1% during the period 1st January, 1962 to 31st March, 1963. The impact of the general economic conditions and of the Compulsory Deposit Scheme on the saving capacity of the insuring public would be expected to have an adverse effect on the lapse ratio. From the very slight increase in the lapse ratio, it appears that the various steps which the Corporation took to control lapses are bearing fruit and the rising trend has been arrested.

Valuation

During the year the Fourth Valuation of the Corporation's business as at 31st March, 1963 was completed. Usually the Corporation's business is valued biennially but consequent upon the change in the accounting year of the Corporation, it was decided that the Fourth Valuation should cover the 15 month period ending 31st March, 1963. As a result of this Valuation, Rs. 25.03 crores were allocated to the participating policies. The rates of reversionary bonus allowed to the policies issued by the Corporation were increased from Rs. 16 per thousand sum assured per annum to Rs. 17.50 per thousand sum assured per annum in the case of Whole Life Policies and from Rs 12.80 per thousand sum assured per annum to Rs. 14 per thousand sum assured per annum in the case of Endowment Policies. In the case of policies issued by the erstwhile insurers corresponding increased bonuses were allowed in accordance with the scheme of differential bonuses.

Underwriting of Female Lives

As a result of the review of the conditions for grant of assurances to female lives, a new categorisation for grant of such assurances has been adopted and Joint Life Assurances on the lives of husband and wife have been re-introduced, subject to the condition that both should be earning and the amount of insurance should be commensurate with their separate incomes.

Premium and Other Income

The premium income for the year under review amounted to Rs. 146.32 crores against Rs. 150.38 crores in the previous accounting period of 15 months.

The total income for the year under review was Rs. 179 crores as against Rs. 185 crores during the previous accounting period of 15 months.

Life Fund, Investments and Total Assets

The Corporation's Life Fund as at 31st March, 1964 was Rs. 808.36 crores, registering a handsome rise of Rs. 88.80 crores over the adjusted Life Fund at the beginning of the year.

Of the total investments in India of Rs. 707.60 crores, the Public Sector accounted for 75.5%, Co-operative Sector 4.3%, the Joint Sector 1.0% and the Private Sector 19.2%. During the year, 70 new issues were agreed to be underwritten to the extent of an aggregate sum of Rs. 13 crores.

The total assets of the Corporation as at 31st March, 1964 amounted to Rs. 880.57 crores as against Rs. 785.94 crores as at 31st March, 1963. The net increase in the assets of the Corporation, since its inception, amounted to Rs. 466 crores.

Rate of Interest

The income from interest, dividends and rents before dduction of income-tax was Rs. 38.25 crores as against Rs. 39.38 crores during the 15 months ended 31st March, 1963. The gross rate of interest realised on the mean Life Fund was 5.11% per annum as against 4.76% per annum during the previous accounting period.

The net rate realised was 4.07% per annum against 4.08% per annum during the previous accounting period. The net rate of interest has not increased commensurately with the increase in the gross rate due to the fact that a refund of tax of about Rs. 4.04 crores in respect of the previous accounting period had not been received in the year as the income-tax assessment of the Corporation had not yet been finalised. If this refund of tax of Rs. 4.04 crores had been received in the year, then the net rate of interest would have been 4.61%.

Expense Ratio

The overall expense ratio for the year has come down to 27.5% from 29.3% in the previous accounting period of 15 months. The Renewal Expense Ratio has also come down from 14.13% to 12.46%. This is gratifying because the reduction has been achieved in spite of the increase in salaries and allowances of employees in Classes II, III & IV.

Claims

During the year the claims inclusive of bonus additions amounted to Rs. 33.86 crores under matured policies and Rs 10.80 crores under policies becoming claims by death. The total claims for the year amounted to Rs. 44.66 crores as compared with Rs. 43.96 crores in the previous accounting period of 15 months. The outstanding claims as at 31st March, 1964 amounted to Rs. 14.91 crores as against Rs. 13.55 crores as at 31st March, 1963.

The percentage of outstanding claims as at the end of the accounting period to claims arising during the period has been gradually coming down. It was 49.9% for the year 1959, 40.8% for the year 1961 and 33.4% for the year under review. We are constantly endeavouring to reduce delays in settlement of claims. During the year a "Service to Claimants Campaign" was initiated and our Branch Managers and Assistant Branch Managers called on a large number of claimants personally to render them assistance for early settlement of claims. This form of service to the claimants will be rendered as a part of the normal settlement procedure hereafter. I hope that our efforts will bear fruit and with the co-operation of the public we shall be able to speed up claim settlement.

Building Activities

During the year, apart from the Divisional Office at Varanasi and buildings at other places, our Central Office building "Yogakshema" was completed and was opened at the hands of the late Prime Minister, Jawaharlal Nehru.

Mortgages

As I mentioned in the last Report, the "Own Your Home" Scheme came into operation from the 1st of January, 1964 at 26 centres. It has since been extended to further 49 centres and it is proposed to extend it to two more centres from the 1st January, 1965. The earlier scheme for grant of loans

on immovable properties which was in operation in 26 centres was extended to 10 more centres.

In addition to the schemes mentioned above, we are advancing loans to State Governments for financing the Middle Income Group Housing Schemes, the Rental Housing Schemes, the Village Housing Project Scheme, the Low Income Group Housing Scheme, the Plantation Labour Housing Scheme and Land Acquisition & Development Scheme. Loans are also granted to Co-operative Societies formed by employees of the Corporation and a scheme has been introduced for grant of loan to individual employees of the Corporation for purchase or construction of houses. The total assistance given by the Corporation to housing development under these various schemes up to 31st March, 1964 amounted to Rs. 62.78 crores.

Publicity

The Corporation continues to do vigorous publicity work both in the urban and rural areas, using a wide variety of media. Emphasis is being placed on outdoor publicity and use of audio-visual media in the shape of films, slides, and slide-ons exhibited in 2,500 theatres throughout the country and through the Corporation's publicity vans and projection units in the outlying rural areas. I am proud to mention that the total publicity effort has won for the Corporation the I.S.A.-Khatau Gold Medal awarded by the Indian Society of Advertisers. The presentation is being made today at the hands of Smt. Indira Gandhi, Union Minister for Information and Broadcasting. I am also happy to mention that the Corporation's House Magazine, 'Yogakshema' was awarded the first prize in the category of English periodicals (other than Annuals) at the Ninth State Awards instituted by the Ministry of Information and Broadcasting.

General Insurance

Implementing the decision taken during the year under review, with the approval of the Central Government, the Corporation has started transacting all kinds of General Insurance business from 1st April, 1964. We can now look forward to giving complete and comprehensive insurance service to the public to suit their varying needs. I may mention that although the Corporation is not a member of the Tariff Committee of the Insurance Association of India, we have adopted the tariff rates for the present. It is, however, open to us to revise the rates in due course in the light of our own experience.

Electronic Data Processing

The Corporation has decided to install two Computer Systems, one at Bombay and the other at Calcutta. These machines will ultimately replace the existing Adrema and Punch Card machines and are expected to do the job more efficiently yielding more information to the management to bring about an improvement in the servicing to policyholders and agents. I may reiterate that this decision will not lead to any retrenchment in the existing staff.

Organisational Set-up

A re-organisation scheme was prepared during the year and it was to be implemented in stages. Since representations were received from members of the public, from institutions and other bodies, further steps in the implementation of the scheme have been deferred. In the meantime, a review of the scheme, in the light of the points raised in the representations is being made.

I have always received sincere co-operation and valuable advice from my colleagues on the Board and on the Investment Committee. I offer my grateful thanks to them. I take this opportunity to record my appreciation of the services rendered by the officers and staff at all levels. It is their services which have solely contributed to the fine results achieved by the Corporation. Finally, I thank all the agents who have done such excellent work in spreading the message of insurance to the people.

(The above does not purport to be a report of the proceedings of the Annual General Meeting).

INDIAN OIL CORPORATION LIMITED

ANOTHER YEAR OF PROGRESS AND ACHIEVEMENTS

The following is the speech of Mr. P. A. Gopalkrishnan, I.C.S., Chairman, Indian Oil Corporation Limited, delivered at the Annual General Meeting on 24th November, 1964, held in Bombay.

Gentlemen,

The Balance Sheet and Profit and Loss Statement of the Indian Oil Company are in front of you for your ratification. These documents throw a flood of light on the transactions of the Company but I shall confine myself in this statement only to certain salient features.

Sales

1. The sale of oil products has gone up to 1.17 million kilolitres as against 6,29,639 kilolitres in 1962-63. The sale of Petroleum Coke was 11,498 metric

Mr. P. A. Gopalkrishnan, I.C.S.

tons in 1962-63 but it is 26,488 in 1963-64.

Operational Cost

2. The operational cost per kilolitre has come down to Rs. 29.21 as against Rs. 30.16 in 1962-63 and Rs. 31.68 in 1961-62.

Profits

3. The profit before taxation is Rs. 104.77 lakhs as against Rs. 62.41 lakhs in the previous year. The return on equity capital is 21.1% as against slightly less than 20% in the previous year.

Unavoidable Expenditure

4. The profit would have been very much higher but for two important items of expenditure which the Company had to bear. One is the under recovery of railway freight of Rs. 55.77 lakhs on account of the location of the Gauhati Refinery. Government have fixed ceiling selling prices for all oil products on the basis of import parity and companies are allowed to charge only up to these ceiling prices plus freight to the consuming point from the relevant port.

Since many of the consuming points are situated farther away from Gauhati than from the port, the Indian Oil Company had to bear the excess railway freight which it could not recover from the consumers. Burmah oil Company's share of this unrecovered freight has been taken as Rs. 19 lakhs in our accounts as approximately this amount is due to us from them.

The second item of expenditure is the under recovery of Central Sales Tax amounting to Rs. 26.92 lakhs. This is collected at the rate of 2% on sales outside Assam but accrues to the State Government, as it has not exempted inter-company transactions on oil products from sales tax as some other State Governments have done. The State Governments who have exempted such inter-company transactions from sales tax are Maharashtra and Andhra Pradesh Kerala has also agreed to grant this exemption.

A word of explanation is necessary in respect of both the items. They refer to all the Gauhati products sold by the Indian Oil Company either to consumers or to other oil companies. The latter have refused to pay their share of the under-recovery of freight as well as of central sales tax, on the ground that these are not recoverable from the consumer and they are allowed to sell products only at the ceiling selling prices fixed by the Government on the basis of import parity. References have been made to Government on these two matters for the last two years but to no effect. The Company had therefore no alternative but show these amounts as reductions from the profit made.

In spite of the two serious handicaps mentioned above, the Indian Oil Company has made a handsome profit in 1963-64 and the net profit (after taxation) gives a return on equity capital of 16.8%.

Increased Tankage

The increase in sales has been made possible because the Company increased its tankages at installations and depots and built many new depots during 1963-64. The facilities of the Company have grown enormously and it can tackle a sale of more than two million kilolitres at the present time.

Merger

By an order of the Government, the Indian Refineries merged with the Indian Oil Company on 1st September, 1964 and now the combined organisation is known as the Indian Oil Corporation Limited.

The Indian Refineries include the refinery at Gauhati and the one which has now gone on stream in Barauni. The third refinery at Koyali in Gujarat which is under construction by the Oil & Natural Gas Commission will also merge with the Indian Oil Corporation shortly.

The Corporation has at present two divisions, the Refineries Division and the Marketing Division. It will have two more divisions in future, the Pipelines Division and the Petro Chemical Division.

As I have already mentioned more than once in the statements that I have made before, this Corporation is likely to become the biggest oil organisation in the country in six or seven years.

Finally I thank all the Directors of the Board for their co-operation and advice and thank all those officers and staff who have worked hard to make the year successful.

(The above does not purport to be a report of the proceedings of the Annual General Meeting).

EXPERT BODY PREDICTS BIG DEFICIT IN OIL SUPPLY

(FROM OUR NEW DELHI CORRESPONDENT)

THE Central Minister of Petroleum and Chemicals, Professor Humayun Kabir, has placed the 1968-69 oil refining target at about 22.5 million tonnes, including 8 million tonnes for the private sector. He has added that the expansion of the refinery capacity in the private sector is not likely to be considered before 1968, when the Government will examine whether there is need for further expansion of the refining capacity by 1.5 million or 2 million tonnes.

Meanwhile, the Energy Survey Commission, whose final report is expected shortly, has examined the country's requirements of oil products. The report says: "There is a strong trend towards greater dependence on oil as a source of energy. It will be desirable to explore all possible ways in which India's oil supplies can be increased. Much is already being done to explore the possibilities of further indigenous supplies. But unless discoveries are made on a scale wholly different from any hitherto, a very large proportion of Indian oil supplies will have to be imported. It is of great importance to explore all possible ways, by trade agreements and otherwise, of increasing and making more certain India's power to purchase these necessary supplies.

Production Potential

"We hesitate to be dogmatic about anything so uncertain as India's ultimate oil potential. We think that it may be reasonable to hope that the annual output may reach perhaps 6 million to 10 million tonnes by 1975-76. There are those who hope that the figure may even reach 15 million tonnes by 1980-81. But we would not regard it as safe to assume for the time being for purposes of our calculation any figure larger than 10 million tonnes unless some startling new discovery is made of oil resources on a wholly different scale from those now known.

"If that is, in fact, a reasonably optimistic estimate of indigenous supplies, it means that India would need, on the basis of our estimates, to be importing some 17 million tonnes of crude and products in 1970-71, about 28 million tonnes in 1975-76 and perhaps 50 million tonnes in 1980-81. These are very formidable amounts. They mean, in the first place, that India will depend for something approaching 30 percent of her commercial energy supplies on the goodwill and political stability of her oil suppliers: this is, of course, true of most European countries today. They mean, secondly, that India must find each year around 1975-76 some Rs. 200 crores to meet these imports alone. On the basis of estimates that have been made of Indian exports at that time, such oil imports might absorb one-third of the total import capacity.

"We are informed that the proved and inferred natural gas reserves, as estimated on the basis of present explorations, are 31,500 million cubic metres or only about 50 million tonnes of coal equivalent determined on a calorific equivalent basis. We have not attempted to estimate how, if important fields were discovered, they might fit in detail into the Indian energy economy. It is immensely to be hoped that such discoveries may be made and there are reasonable hopes that that will happen, particularly in Rajasthan.

"There are possibilities also that if political relations become easier, India might draw on the ample supplies of natural gas just across the border. There are further possibilities that ways may be found of making gas from the oilfields of the Middle-East countries available to the Indian markets. But we have regarded all these possibilities for the moment at least as too uncertain for immediate planning calculations. If circumstances change, it might considerably modify the prospective energy economy of the western and central regions of India.

"At the present relative costs of coal and oil, the use of oil is more economic in the highly industrialised regions of western and southern India. There is a likelihood that demand may increase in those and other regions, even beyond India's capacity to finance imports, and it may at some stage prove necessary to take measures which will make the use of indigenous fuels more attractive.

"The principal increases of demand for energy in the form of oil seem likely to arise in transport (where both the growth of road transport and the proposed dieselisation policy of the railways will substantially increase the demand) and in the domestic sector (if the shortage of firewood that we foresee leads to increased dependence on kerosene). The longer-term repercussions of a dieselisation policy on the balance of payments will need to be considered in advance.

Pattern of Consumption

"The pattern of Indian consumption of oil products does not accord easily with the potential outturn of Indian refineries from the most easily available crude oils. In the past, India has been short of kerosene. In future India seems likely to be short of middle distillates generally as a result of the prospective growth of demand for diesel oils. On the other hand, India is likely, on the present and prospective pattern of demand in the absence of policy changes, to have surplus supplies of gasoline and naphtha at one end and possibly of fuel oil at the other, even when the outturn of refineries has been adjusted so far as possible to meet the changing pattern of demand.

"It may not be easy to export the surplus gasoline at reasonable prices to neighbouring markets or to acquire considerable additional supplies of middle distillates. Thus, more consideration needs to be given to the wisdom of present taxation policies, which tend to discourage the consumption of gasoline and encourage the consumption of diesel oils.

"The net effect of the continuation of the present taxation structure is likely to be an increase rather than a decrease of the total required net cost of imports of oil and oil products, even when allowance is made for the lower consumption per kilometer of road transport using diesel oils. It is probably in the national interest to encourage gasoline consumption in all forms of transport that can reasonably use it to take advantage of the cheaper initial cost of internal combustion engines designed to use gasoline.

"There is also likely, in the absence of changes of policy, to be a surplus of naphtha. This can probably be absorbed without great difficulty by suitable planning of fertiliser production and possibly by use to economise coke in the iron and steel industry.

"If there is not to be a surplus of fuel oil, it is desirable to encourage its consumption in those areas adjacent to refineries and distant from coalfields where it is likely to be an economic source of energy in industry or the generation of thermal electricity."

STEEL

Fifth Plant in Public Sector

The members of the Anglo-American consortium, Messrs Vance Brand and Gordon Cox of Koppers and Mr. W. S. Hindson of Wellman-Smith arrived here on Sunday to resume their discussions with the Central Ministry of Steel on financial and technical collaboration for building the fifth steel plant in the public sector. The consortium has already submitted to the Government the heads of agreement which will form the basis of negotiations. The consortium will have to recommend a suitable site or sites for the location of the steel plant. Its recommendation is likely to be confined to those sites on which preliminary reports have already been made. The agreement will assure the consortium that it can mobilise the required financial resources, on the understanding that subject to the final agreement, it will be entrusted with the commissioning of the project.

BOILERS

Permit Issued to A.V.B.

A.V.B. of Durgapur has been permitted to manufacture boilers to suit 120-megawatt thermal turbines, which are concurrently being manufactured by the Heavy Electricals in Bhopal. The Company is bidding for ten such boilers. The capacity sanctioned for A.V.B. will be in addition to that of a similar unit in the public sector, which is being set up with Czech collaboration in Tiruchi.

Wagner-Buro of Austria has applied for a license to manufacture industrial boilers in India. Its application is being considered by the Government. The firm will have a suitable Indian collaborator.

CZECHOSLOVAKIA

Report on Machine Tool Units

Following an agreement with Czechoslovakia to set up two machine tool units in India with financial and technical collaboration from that country, a preliminary report has been received by the Government, indicating the feasibility of locating the units in four different places. The Government, it is expected, will select two sites. A Czech team is expected here shortly to discuss the range of machine tools to be manufactured in each unit, with a phased programme of production.

PETROLEUM ADDITIVES

New Unit Planned

Orbis Ltd of the U.K. is planning to set up a unit in India with a suitable Indian collaborator to manufacture petroleum additives. This may create some competition for similar units, the discussion on which is being carried on with U.S. firms.

BALL BEARINGS

Project Report from Russia

A Russian team of experts is discussing with the Government of India an agreement for a project report for a ball bearing plant. The latter is to be set up in the public sector with Russian credit.

POLAND

Talks on Coal Washeries

A Polish team was here last week, discussing with the Government the proposal to set up a separate unit for the planning, drawing and designing of coal washeries. The unit will be financed with Polish credit. Poland is already assisting India in coal mining operations. The proposed unit will work in close co-operation with the National Coal Development Corporation and the Fuel Research Institute. The manufacture of coal washeries will be shared by the Heavy Engineering Corporation in Ranchi and the coal mining machinery plant in Durgapur, both of which are being set up with the Russian financial and technical collaboration. The Polish team, meanwhile, has gone to visit Ranchi and Durgapur.

FOODGRAINS

Policy Clarified

The Central Minister of Food, Mr. C. Subramaniam, made the following statement in Parliament last week: "A conference of the Chief Ministers was held in New Delhi on 17th and 18th November, 1964. The present food supply position in the country was reviewed and the policy to be followed during the coming months was discussed. After detailed discussions, the following decisions were taken:

"(i) the present zonal restrictions on the movement of wheat may be allowed to continue and the position reviewed in March 1965 when the prospects of the next wheat crop would be known.

"(ii) Each State may be constituted into a separate rice zone except that the northern zone comprising the State of Punjab and the Union Territories of Delhi and Himachal Pradesh may continue as at present.

"(iii) Rice will be purchased on Government account in the surplus States for supplying to the deficit States on a Government-to-Government basis. The States concerned have agreed to the following quantities being procured during the period from 1st November, 1964 to 31st October, 1965, for supply to the deficit States:

	(In 00,000 tonnes)
"Andhra Pradesh ...	... 8
"Madras ...	... 2
"Madhya Pradesh	... 4
"Punjab ...	... 2.5
"Orissa ...	... 3

"Over and above these quantities, such additional quantities will be procured as are necessary to meet

ROAD TRANSPORT
DESERVES
A BETTER DEAL

Addressing recently a meeting of the Indian Road & Transport Development Association, the Deputy Chairman of the Planning Commission emphasized that our transport facilities should be developed in step with, in fact a step ahead of, other economic developments which depend on them. It is time that all concerted efforts are made to achieve this goal.

The country's road network must be developed rapidly. Equally important is a rapid expansion in the production of commercial vehicles.

The automobile industry is stepping up its production capacity. However, the extent of the increase in the future demand for commercial vehicles will depend mainly on two factors : whether the cost to the transport operator can be decreased through a reduction in the taxation ; and whether the licensing policies on inter-state road transport are rationalized.

For instance, the "on-the-road" price in Calcutta of a Bedford 167" diesel truck chassis in the 5-ton range comes to Rs. 35,280. Out of this amount, direct and indirect taxes absorb Rs. 15,940 or over 45% of the total cost. This calculation applies to the bare chassis, excluding the cost of cab and body and items like maintenance costs and hire-purchase charges. Curbs on inter-state road transport further hamper the growth of the industry.

The automobile industry urgently needs speedy relief from excessive taxation and vexatious restrictions to help the expansion of road transport and thereby accelerate the tempo of our economic growth.

Hindustan Motors . . . partners in India's industrial transformation

ASP/HM-95

the internal requirements of the States.

"(iv) The main objective of the procurement and import policy is to enable a sizable buffer stock of rice and wheat to be built up. This implies restraint on issues from Government stocks during the post-harvest period.

"(v) Statutory rationing will be introduced in Calcutta on a date to be fixed by the State Government. As for other cities with a population of 1 million and over, State Governments have been given the option to introduce such regulatory measures as they may consider necessary and the Central Government would make available such supplies as are necessary for meeting the commitments in these cities. The informal rationing introduced in Kerala will continue.

"(vi) State Governments may be permitted to prohibit the export of coarse grains from their respective States except that surplus States which have traditionally been exporting coarse grains to other States should continue to allow such export on a regulated basis.

"(vii) All restrictions on the movement of pulses may be removed immediately except that the existing restrictions on the export of gram may continue till the arrival of the next crop and the States concerned shall allow export of 50 percent of the stock of gram held by traders.

"(viii) All restrictions imposed by State Governments on the movement of oil and oilseeds may be removed immediately except that the existing restrictions on the movement of mustard seed from U.P. may be allowed to continue till the arrival of the next crop.

"The quantity of foodgrains imported in 1962, 1963 and 1964 is much higher than the quantity imported in 1945, 1946 and 1947.

Increase in Imports

"The main reasons for increase in imports are : (1) The increase in demand for foodgrains due to the rise in population, increase in money supply as a result of large-scale developmental and defence expenditure, rise in general standard of living, growth of urbanisation and influx of refugees ; (2) non-fulfilment of the anticipated targets of foodgrain production in 1962-63 and 1963-64, mainly because of adverse weather conditions.

"Foreign exchange spent on foodgrains during the financial years 1961-62 to 1963-64 is as follows :

"1961-62	28.4
"1962-63	30.1
"1963-64	22.0

"The following quantities of rice have been imported from 1st January, 1964 to 15th November, 1964 :

Country	Quantity
U.S.A.	284.0
Burma	150.6
U.A.R.	28.8
Pakistan	63.7
Thailand	9.5
Cambodia	9.6
Total	546.2

"The Government has decided to set up six new modern rice mills in the public or co-operative sector for the purposes of pilot study and evaluation :

"Four mills to be set up in the co-operative sector will be located in Tiruvarur (Madras), Tadepalligudam (Andhra Pradesh), Mandya (Mysore), and Raipur (Madhya Pradesh).

"The other two mills to be set up in the public sector will be located in Garh-Nokha (Bihar), and Burdwan (West Bengal).

COAL

Developing Asnapani Mine

A general agreement was reached here last week between the representatives of the British National Coal Board and the Government of India on the British collaboration for the development of Asnapani drift mine, one of the three drift mines in the Jarangdih (East Bokaro) field. The British National Coal Board was represented by its chairman, Lord Robens and Mr. M. V. Sheppard, Director-General of Production of the U.K. National Coal Board.

The agreement was reached on the administrative set-up of the project, use of indigenous machinery and equipment, training programme of Indian technicians and the facilities for the British experts.

Lord Robens will have further discussions with the representatives of the National Coal Development Corporation in Jarangdih. He will also visit the project site and the East Bokaro coalfields.

The development of Asnapani drift mine is expected to cost Rs. 7 crores and provide employment to about 1,300 persons. The Board has prepared a project report for the Asnapani drift mine, one of the three drift mines in the Jarangdih (East Bokaro) field. Each of these drift mines is being planned for an annual output of 750,000 tonnes. The Asnapani project is the first of the three drift mines.

TEA

Joint Commission Planned

It has been tentatively agreed that a joint commission of the officers of the Government of India and the Government of Ceylon should be set up for taking such measures as may be appropriate for the development of tea sales of the two countries and for formulating promotion campaigns in different regions of the world. Formal acceptance of the Government of Ceylon is awaited.

MOTOR-CARS

Raising Production

The main possibility of achieving substantial economies in the production of motor-cars is to maximise the scale of production, it is explained here. With this end in view, the Government had placed the following alternative proposals before the three car manufacturers :

(i) The existing car manufacturing facilities may be integrated into a common unit to produce one or at the most two makes of cars making a rational use of the existing facilities and undertaking expansion in the most economical manner.

(ii) One of the existing manufacturers may be selected for substantial expansion, the selection being made on a competitive basis with reference mainly to requirements and arrangements for foreign exchange and assurance on price reduction.

The response from the manufacturers to these alternatives has not been encouraging. Two of the manufacturers stated that even if their capacity were stepped up to 50,000 cars a year, the reduction in price from the current level would not be more than about Rs. 750.

One of the reasons for the high prices of cars is the higher cost of locally purchased ancillaries. This matter is under investigation with a view to taking remedial steps, where necessary.

Fresh alternatives for increasing the production of cars, including the one for the revival of the small car project, are being explored. Talks are being held with certain Indian parties as well as some foreign parties on the likely projects. As these talks are in early stages, it is difficult to spell out the details.

The total amount of foreign exchange allocated to manufacturers of "Hindusthan", "Fiat" and "Standard" cars for 1963-64 and 1964-65 has been Rs. 4.04 crores and Rs. 4.31 crores, respectively. While making the foreign exchange allocation, no manufacturing quota is fixed, but it is expected that about 21,000 cars will be made during 1964-65. The number of cars manufactured in 1963-64 was 18,077.

The total amount of Customs and excise duties realised on the import of car parts has been as follows :

Period	Amount (Rs.)
1963-64	166,92,883
April-September 1964	84,06,852

excluding the September figure for "Fiat car parts.

HALDIA PROJECT

World Bank Wants Data

Before agreeing to a loan for the Haldia port project, the world Bank has asked for detailed economic data on the project, including a commodity-by-commodity projection of the traffic that might be handled at each of the Indian ports including Calcutta and Haldia in 1970-71, an analysis of the coal traffic with a detailed study of individual markets, points of final consumption, quantities and types of coal involved, uses for which coal is required, reasons for not obtaining coal from nearer coalfields, type of ships to be used in the coal trade, an evaluation of alternative methods of shipping wheat to Calcutta, an analysis of the likely requirements for the import of rock phosphate and sulphur in the Calcutta area, etcetera, and the quantities of general cargo traffic that might be economically diverted from Calcutta to Haldia. A study group was constituted in September 1964 to conduct the studies required by the World Bank and collect the requisite data. The team has been asked to complete its work in about four months.

DIESEL LOCOMOTIVES

U.S. Firm Gets Order

The Government has placed an order with a U.S. firm for the supply of 54 diesel electric locomotives at an estimated cost of Rs. 5.83 crores, which will be met from the U.S. A.I.D.

INDIAN INSTITUTE OF MANAGEMENT COURSE

The Indian Institute of Management, Calcutta, has begun to accept applications for the sixth in its series of executive development programmes on the subject of "Financial Planning and Control". The duration of the course is four weeks, from 31st January to 27th February, 1965. The course, which is fully residential, will be held in Jaipur and is directed primarily towards managers who use accounting information rather than the accountants who prepare it. Organisations interested in the programme are requested to write to the Director (Programmes), Indian Institute of Management, Calcutta "Emerald Bower", 56-A Barrackpore Trunk Road, Calcutta 50.

MASSIVE INTERNATIONAL SUPPORT SAVES THE POUND

(FROM OUR LONDON CORRESPONDENT)

THE immediate sterling crisis is over, and with it any danger that the British Government might have been forced into a devaluation. The massive international support operation that has now been staged means that the authorities have ample resources to deal wtih any short-term pressures in the exchanges. The $3,000 million credit that has been arranged—all the Paris Club's countries are taking part and also the Bank for International Settlements—is in addition to the $1,000 million I.M.F. standby which will be now drawn and used to repay existing central bank loans. The United States share in the new credit will be $1,000 million made up of $250 million from the Export-Import Bank and $750 million from the Federal Reserve to take the place of the existing swap.

In face of such formidable co-operation by all the leading central banks, further speculation against the pound will clearly become profitless. Thus, the Government has gained the breathing space it wants in which to tackle the fundamental problems of economic policy. The task now will be to fashion means of bringing about a lasting improvement in the balance of payments. This is unlikely to be achieved without further domestic measures, including further restraint of home demand, as the National Institute's latest *Review* suggests.

If the 15 percent import levy is maintained until the end of 1965, it should bring the overall balance of payments deficit down to a tolerable level of around £100 million next year, states the Institute's *Economic Review*. But as soon as the levy is removed, the *Review* goes on, imports are likely to swing back to their trend—and to rise temporarily well above the trend as stocks are rebuilt. If nothing else has been done in the interim, therefore, a substantial deficit is likely to reappear.

The Institute's calculations suggest that if no action had been taken, the deficit in 1965 on current and long-term capital account might have been £450 million, against £700-£750 million this year. This estimate assumes an average rise in exports and some reduction in stockbuilding. The forecasts in the *Review* were completed before the rise in Bank rate. But the Institute thinks the effects of this are likely to be more on the flow of short-term international funds than on the level of internal activity.

It thinks the Budget will, on balance, have "hardly any effect on demand one way or the other." This excludes the effect of the import levy, which is expected to increase demand for home output by ½-percent within a year. Demand will be reduced by the price effect of the levy working through: but home output, the Institute thinks, will probably be increased a great deal more by the substitution of home-produced for imported goods.

Thus "the problem of policy is to find some more permanent way of shifting some £500 million of resources into the balance of payments." On this the Institute's conclusion is that even assuming optimistically a 3½ percent increase in productive capacity during next year, not enough room has been left for an adequate increase in exports. Even if more room is made by holding back the rise in home demand, further action will be necessary, it considers, to see that exports become competitive enough, and profitable enough, to fill the gap left for them.

Borrowing from I.M.F.

The Institute estimates that the whole of the initial borrowing from the I.M.F. will be needed to cover the deficit in the second half of this year—that is, to repay the loans from overseas central banks and to restore the reserves to their end-June level. The levy should keep the deficit next year down to a level which could normally be met from reserves. But a substantial withdrawal of funds, either because of speculation or because the sterling countries were running down their balances to pay for imports, would create a need for further borrowing to defend the present exchange rate.

What do the "experts" think about Britain's prospects? Even with a 4 percent growth rate, the need to find £500 million worth of goods to fill the trade gap means that annual increases in consumption will have to be limited to 2½ percent in the next few years. And wages may need to rise by even less than this if Britain's export prices are to be made competitive. These are among the conclusions reached by Sir Roy Harrod in a report prepared for a leading firm of London stockbrokers. Given the present high propensity to save, he says, a 2½ percent rise in consumption might be consistent with allowing incomes to rise by about 3 percent a year.

But reducing the pressure of demand by the amount required to siphon off £500 million worth of goods will merely lead to stagnation if people abroad do not want to buy those goods. Hence, if the trade gap is to be elimanated and the economy is kept active, Britain will need lower prices, not only on goods for exports, but also goods sold in the home market. This could mean that incomes (and costs) will have to rise by less than 2½ percent. The problem might be more easily solved if the country could have a very mild devaluation of the £, Sir Roy adds. "But that is entirely out of the question owing to our external liabilities and the use of sterling as a reserve currency. Thus we have to face the harder task of solving the problem by an incomes policy."

On the measures taken to reduce imports, Sir Roy says further procrastination would have been disastrous. He would have preferred quantitative restrictions to the import surcharge, but accepts that speed was the overriding consideration. On the other hand, he thinks it would be a mistake to regard import restraint merely as an expedient to tide the country over a passing phase. In Sir Roy's view, the underlying deficit in the trade can be traced back to 1960 or even before, although it has since been masked at times by special circumstances. Imports of manufactured goods, he says, rose by no less than 150 percent between 1955 and 1960, and there has since been another increase of almost equal magnitude. Fundamental adjustments, he says, are needed to get the underlying balance right.

Incomes Policy

Sir Roy thinks the emphasis in incomes policy should be on keeping down dividends rather than profits. Since investment needs to rise at a steep rate in order to permit faster growth, he says, it is desirable that profits should increase their share of the national cake. If they fail to do so, medium and small firms especially will suffer from lack of finance to expand their business in line with growth targets. A pessimistic view of the possibility of achieving a 4 percent growth rate in the economy is also put forward by Professor Alan Day in the *Westminster Bank Review*. Even though Britain is now halfway through the N.E.D.C.'s first five-year period, he says, the underlying growth of capacity is substantially less than 4 percent, although it is substantially more than the average experiences of the 1950s. On the evidence available, Professor Day says, a reasonable estimate of the underlying annual growth of capacity at the present time would be 3.3 percent.

To this may be added an extra 0.2 percent a year, to be activated by a regional policy designed to use underemployed labour in the north. But such a policy, he warns, could lead to great inflationary pressures by stimulating faster wage drift in the North. Further, the upward trend in the ratio of investment to g.n.p. appears almost to have levelled out since 1961 and Britain can perhaps, therefore, expect a slowing down, or halt, in the underlying annual productivity rise—with this possibly becoming stabilised at about 2.7 percent a year.

"Nor is this necessarily an unduly gloomy assumption in the absence of drastic Government action to switch resources from current use (either by customers or the Government) to investment. A major part of the explanation of the relative ease with which the investment ratio rose in the 'fifties lies in two things—the release of resources from defence expenditure and the rise in voluntary savings. It is not easy to foresee as favourable circumstances in the future."

Rise in Labour Force

Professor Day also foresees a slower rise in the labour force than in the past decade. "All told, the best estimate I can make on the basis of evidence now available, assuming no substantial further rise in the investment ratio, assuming that regional unemployment can be reduced significantly without accelerating inflation, assuming a slow continuation of the trend towards a shorter working week, and assuming that nothing else happens or is done to accelerate growth, is that output over the next five years can grow at something like 3¼ percent a year—a rather depressing conclusion for an expansionist, which I am."

Professor Day criticises the N.E.D.C. for failing to justify its claim that 4 percent can be achieved. "Britain could achieve 4 percent growth, if we were to will the means —including, no doubt, a big increase in the ratio of investment to national income, at the price of a severe though fairly temporary setback to the growth of current spending."

CO-ORDINATING RESEARCH OF GUNNY PRODUCERS

THE Jute Research Conference, held in Calcutta this week, is the first occasion when those responsible for research in the three major jute goods producing countries have met with a view to examining the spheres in which research work might be co-ordinated. This will help evolve a well-knit programme of long-range research through an inter-change of ideas and experience. This observation was made by Mr. R. H. Morrison, chairman of the Indian Jute Mills Association, while inaugurating the Conference last Monday. Research directors from the jute industries of the United Kingdom, Pakistan and India, Dr. Fox and Mr. Burr of the Fabric Research Laboratories, Dedham, Massachussetts, Dr. Subramanian, director of the Ahmedabad Textile Industry's Research Association and directors of agricultural and technological research of the Indian Central Jute Committee took part in the deliberations. Besides, senior representatives of the major jute mill machinery manufacturers of the world and experts in other fields connected with the jute industry attended the Conference.

Mr. Morrison referred to the useful discussions held at the triennial congress in Paris of the Association of European Jute Industries and at the F.A.O.-sponsored meeting on Jute and Allied Fibres in Rome earlier this year. He appreciated the ready response from various countries to the invitation of the I.J.M.A. Pointing out that cost occupied a place of peculiar importance in the price of the finished jute product, Mr. Morrison emphasised that "most searching investigations are required to find means not only of retaining price levels for the fibre which will at one and the same time encourage its production by the cultivator and its consumption in the form of finished goods, but also of deciding just what qualities in the various strains produced are most desirable from the industry's point of view". The industry must give the agronomist a clear-cut picture of what is required. He also mentioned the importance of developing by-products from the jute stick, which accounts for a large proportion of the plant's weight. There was scope for more intensive investigation and exploitation in this sphere.

Mr Morrison referred to the threat of competition from substitutes and synthetics, and underlined the need for equipping the industry with the latest machinery so that it could produce better goods to meet the exacting demands of consumers. Machinery manufacturers had to play a special rôle in evolving machinery with greater productive capacity and incorporating automation to the maximum extent. Regretting the apathy of the industry in not making full use of the fruits of research, he pleaded for a lively interest and exchange of ideas between the laboratory and the production floor.

Market Research

The I.J.M.A. chairman laid emphasis on the need for market research and product development efforts. The East suffers from the disadvantage of catering to remote markets, which makes the easy flow-back of information from consumers difficult. The Indian industry had in a modest way tried to overcome this difficulty by employing a leading U.S. research laboratory in the field of product development. Mr. Morrison, however, felt that a much bigger effort covering a much wider area was necessary. He made an appeal for a joint effort by the jute industries of the various countries.

In spite of the competition from synthetics and other new materials, Mr. Morrison was sure that "if we keep our heads and apply our talents" jute would still be in fashion a hundred years from now. However, the threats from the new competitors cannot be ignored by "seeking refuge in the continuing growth of demand for our standard goods" from the developing countries. Both in packaging and in industrial fields, jute must sell on its own merits and not in default of something better to use", he said.

Welcoming the representative, Dr. W. G. Macmillan, Research Director of the I.J.M.A., outlined the scope of the discussions at the Conference. In view of the recent trends in the development of packaging techniques, it was essential that all jute interests should keep abreast of the times. In order to meet competition, the resources of the jute industry as a composite world body should, in research and allied matters, be co-ordinated to an acceptable degree, he said. He felt that substantial economies in money, time and effort might result from the co-ordination of scientific research and the pooling of knowledge. This could lead to a speedier application of research to commercial or industrial purposes and ensure more tangible returns on the money invested.

The subjects discussed at the Conference covered the more important facets of the industry, particularly in the sphere of research and its application. The discussion centred on the raw material, uses of jute, product development, alternative materials, methods and processes, collaboration in textile research, quality control and standardisation and processes of manufacture.

Mill Workers Strike

Jute mill workers in West Bengal staged a day's token strike on Tuesday, causing a stoppage of work in 80 out of about 82 mills. Two mills worked with skeleton staff. The strike caused a production loss of 4,000 tons of jute goods worth Rs. 1.2 crores. The loss of wages to operatives has been estimated around Rs. 12 lakhs. In going on strike to press their demand for a higher bonus, workers ignored the last-minute appeal of the Central Labour Minister, Mr. D. Sanjivayya. The bonus issue has already been referred to the tripartite Industrial Committee on Jute, which will meet in New Delhi on 19th December. Meanwhile, the West Bengal Labour Directorate has failed to bring about a conciliation.

THE JUTE MARKETS

Manufactured Goods: Steady conditions prevailed in the Calcutta gunny market during the past week. Sentiment was stimulated by reports of business in heavy goods with Cuba and enquiries from Syria and the Philippines. The continuance of the strike in Pakistani mills and due-date covering by shorts and shippers since the week-end were additional stimulants. Mills booked sizable business in both hessian and sacking for short and near positions, and their prices hardened appreciably. Rising fibre prices induced mills to be reserved. Hessian continued to be steady in line with the general trend. In the hedge market, bulls lent support to sacking for February and bears were obliged to cover their open positions in haste at higher prices. Fluctuations were wide and the market closed with sizable gains over the previous week's closing levels. Hessian for February also firmed up to a minor extent after narrow fluctuations, closing with a smaller gain. Turnover was fair in heavy goods and moderate in hessian. The closing undertone was firm.

Wednesday's quotations were as follows:

	Dec.	Jan.-Mar.	Apr.-June
40in. 7½oz.	39 40	39.35	39.25
40in. 8oz.	42.10	—	—
40in. 10oz.	51.10	51.85	52.05

A Twills	184.50	182.00	177.00
Liverpools	172.00	170.50	166.00

Raw Jute: Firm conditions prevailed in the raw jute market during the past week. Upcountry prices hardened somewhat due to a decline in daily arrivals to around 100,000 maunds because farmers were busy harvesting paddy. Higher paddy prices realised by them also made them less inclined to sell jute at prevailing prices. Agency prices influenced the trend and the quantity of offerings in Calcutta although upcountry rates continued to hover above Calcutta parity. Mills completed their maximum purchase quota of 200,000 bales for the week ended 28th November by midweek. From Monday they started buying against their current week's quota. Their preference for selected-grade fibre, in which offerings were small, raised the prices of better quality jute more than proportionately. Reports of a steep rise in fibre prices in Pakistan also induced mills to purchase sizable lots of high-grade jute in that country against their import licences. Turnover was moderate and the undertone firm at the close.

Wednesday's quotations were as follows:

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption during October was 8.7 million yards less than during September 1964 and 6.5 million yards less than during October a year ago. Bag cut-up was 51.5 million yards and piecegoods deliveries 21.1 million yards, compared with 58 million and 21.1 million yards, respectively, in October 1963. Consumption for the first ten months of 1964 is 25 million yards less than during the comparable period a year ago. U.S. spots and afloat stocks at the end of October decreased from the end of September by 5.7 million yards. At 268.8 million yards, 132.4 million yards were spots (down 17.7 million yards) and 136.4 million yards were afloats (up 12 million yards). Stocks represent about 3.6 months' supply.

THE U. K. JUTE MARKETS
FIBRE STILL WEAK

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market was firm in Pakistan last week. Some shippers asked higher prices. Imports of loose jute from upcountry were very small for the time of year, and this resulted in higher prices being asked. The E.P.C. values are being maintained at unchanged levels and these may be kept in force for some time.

Despite the firm position in Pakistan, offers of raw jute being made in the U.K. were well below the current official prices. This was due to a substantial quantity of jute coming to Dundee which is still unsold to spinners. Holders of these parcels will now be more anxious to dispose of their stocks because of the increase in the British Bank rate. On the other hand, spinners will be reluctant to add to their stocks for the same reason. This could make the market here very irregular.

Offers were made at £151 for Mill Firsts, at £138 10s for Export Firsts, at £123 for Export Lightnings and at £116 for Export Hearts, c.i.f. U.K., for December-January shipment. Grade Tossa-2/3 was available at £150 and Grade Tossa-4 at £136. There were sellers of Dacca Tossa-5 at £161 and of Dacca Tossa-6 at £138. Outport Tossa-2/3 ranged from £122 10s and Outport Tossa-4 from £115, December-January. Cuttings were firm at £90 for S.N.C. and at £88 10s for N.C. Mesta was steady at £110 for A, at £100 10s for B, at £90 10s for C and at £74 15s for Calcutta, c.i.f. U.K., December-January.

The Siam jute market was firmer in Thailand due to a fair amount of business taking place at the end of the week. Japan was buying and Dundee spinners were also in the market for supplies. The prices paid here ranged from £82 to £84 for grade A. Offers were now being made at £85 5s for grade A, at £81 5s for grade B, at £76 5s for grade C and at £74 5s for cutings, delivered mill Dundee for December-January shipment.

The Calcutta goods market was firm and sackings prices were now at a high level. This is due to strikes at the mills in Pakistan which has reduced supplies. A fair amount

buying interest was shown in the U.K. Prices were at 82s 1d for 40in. 10oz. and at 64s 4d for 7¼oz. a 100 yards c. and f. U.K. for November shipment, at 83s 1d and 64s 4d December and at 84s 1d and 64s 4d January-March. B Twills were at 263s 10d, 258s 7d and 252s 5d for the respective shipment periods.

Dundee jute spinners were very busy, and they had orders in hand for delivery well forward. Supplies of most descriptions of yarns were very difficult to obtain and prices were firm. Due to a shortage of skilled labour, it is impossible to increase output.

With the exception of the heavy end of the trade, manufacturers are well supplied with orders. A steady business is taking place for delivery several weeks ahead, and prices are firm. Demand for sackings is poor and this has been the case for some time. However, prices are being maintained at unchanged levels.

THE PAKISTANI JUTE MARKETS

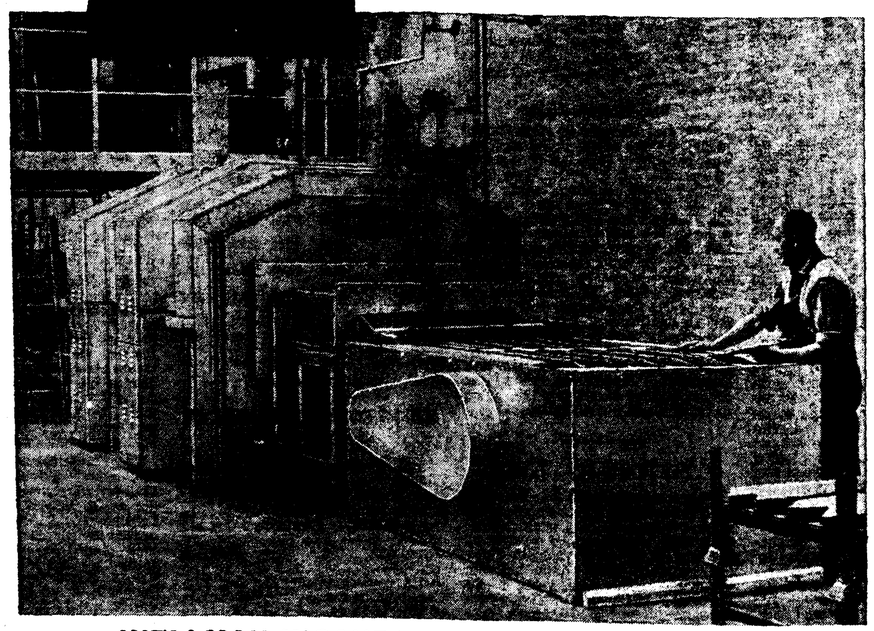
FIBRE RISES

(FROM OUR DACCA CORRESPONDENT)

ARRIVALS continued to be small, during the past week, and the market in the interior was irregular. In some areas, prices rose by as much as £6 a ton. In others, there was no change, but nowhere was there an increase in arrivals. In fact, sellers were now so careful that instead of, as traditionally, unloading the jute into buyers' godowns and then discussing prices, they are leaving the jute in the boat and discussing prices before unloading. The general undertone of the loose market, however, was firm.

In the pucca bale market, covering by the three large balers, who sold to China, continued. That gives the impression that they have not sold from a long position. Most sales reported to them are in reasonably small lots, which also indicate either a continued belief in a higher market or else a long position rather smaller than most people believed it to be.

As a result of this buying activity, some balers asked for higher prices locally, but these were only payable on premium markets. There was slightly more interest from overseas in limited quantity, but there was no great rush to buy.



Registrations for the first half of November total 38,570 bales of which the lion's shares went to India with 14,425 bales. The U.K. bought 9,910 bales and north Africa, probably the U.A.R., bought 3,360 bales. France bought 1,575 bales and the U.S.A. 1,500 bales. Registrations for the second half of November will probably be larger.

WELLMAN INCANDESCENT ELECTRIC FURNACES

A wide range of Electric Furnaces for industrial use are now being manufactured in India by Wellman Incandescent in collaboration with Metalectric Furnaces Ltd., of Smethwick, England.

Electric furnaces for heat treatment, enamelling, induction heating, dialectric heating, wire and strip annealing as well as furnaces for light alloys, non-ferrous metals and the ceramic industry can be supplied against order. Special furnaces can also be designed to meet the customers requirements.

Specialists in industrial heat engineering, Wellman Incandescent are also experts in the manufacture of mechanical handling equipment, much of which will shortly be made in India.

WSC-9

Commodity Markets

CASHEW PRICES FALL DUE TO POOR DEMAND

(FROM OUR SOUTH INDIAN CORRESPONDENT)

IN the absence of foreign demand, cashew prices have been sinking since the middle of November. Although the Indian shippers have reduced their price up to 63 cents a lb for January-March shipments, American buyers are showing no interest, it is said. December shipment is unwanted even at 65 cents a lb. This is no mean loss as far as the Indian exporters are concerned because cashew kernel was fetching as much as 72 cents a lb until very recently.

Withdrawal from the market of the U.S.A. which is the largest buyer of this commodity is the main reason for this price landslide. U.S. buyers' lack of interest is attributed mainly to the threatened strike of the dock workers in their country from the middle of December. Another reason mentioned in trade circles is the belief that the new African crop which is processed and exported from India is a good one.

There is a fall in the price of African raw nuts too. This has come down to Rs. 920 a ton from the recent peak of Rs. 950. The new crop has started reaching India. One steamer with 7,000 tons of raw cashewnuts from British East Africa has already reached Quilon, the main processing centre in India. Many of the cashew factories in and around Quilon which have been closed recently when they exhausted their rawnut stocks are expected to resume work shortly with the fresh stocks they are getting from Africa. Estimates now available place the African crop at a total of about 230,000 tons; 80,000 tons from British East Africa and 150,000 tons from Portuguese Africa.

Cashew kernel exports from India during the first ten months of 1964 is estimated at about 1.9 million cases of 50 lbs each, which was 75,000 cases less than the export during the same period of 1963. The fall which was only nominal was due to the poor quality of the rawnuts. This is likely to be made good by the end of the year. Even if the export fails to catch up with last year's figures of 2.35 million tons in terms of quantity, the money earned thereon will be higher than that of last year because the prices were comparatively high this year. The export earning on cashew will in all probability touch a new high in 1964 if the present trend is maintained. The U.S.A. has taken about 1.2 million cases and Russia 500,000 cases during the ten-month period ended October 1964. These compare well with last year's figures.

Russia and east European countries who recently bought about 1,500 tons of processed kernel at 70 to 73 cents a lb, are also keeping away from the Indian market. All the buyers seem to think that the prices will come down with the opening of the new season.

CARDAMOM

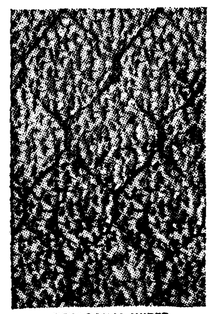
Better Export Prospects

The ceiling rates on the exports of cardamom from India have been withdrawn. Cardamom prices have been displaying a hardening tendency due to prospects of lower outturn of the crop in the current season and to the reserved attitude of growers and exporters. Prices registered a gain of Rs. 5 to Rs. 10 a kilogram over the previous week in the Cochin auctions last week. The sale average of Rs. 30.54 a kilogram compares with Rs. 22.25 a kilogram of the previous week and Rs. 16.06 a kilogram of the corresponding sale of last year. Bombay also reports an increase to the tune of 50 percent over a fortnight. The market now stands at the highest level seen over the past few years. As the current prices are much above the ceiling levels fixed by the Government for different varieties, it is felt that they have ceased to serve the purpose for which they have been introduced.

It has been clarified on the part of the Kerala Government that the real purpose of the notification it had issued recently on tapioca is to prohibit the "indiscriminate" export of tapioca, particularly in its raw form, from the State, in view of the present difficult food situation. The Civil Supplies authorities are assessing the requirements of these units engaged in the manufacture of starch, flour, manioc meal, etcetera, from the raw tuber with a view to giving them permits which are necessary for both the manufacture and export of these products. There are 26 units in Kerala, manufacturing industrial products from tapioca and they together convert 15 percent to 20 percent of the State's total production of 1.5 million to 1.6 million tons (in dried form) of tapioca a year. Tapioca starch has a good demand from the textile industry for sizing and finishing purposes. A small portion of raw tapioca is made into monioc meal and exported as pig and cattle feed to West Germany and Holland. The internal demand has been increasing also. This is due to the rise in the price of oil-cakes and other traditional cattle feed.

The Sizing Materials Manufacturers and Dealers Association in Bombay has suspended the trading in tapioca futures temporarily in the light of the Kerala Government's ban order and the shooting up of prices. The trading in tapioca chips futures was started in Bombay in 1954. The Association has decided to approach the Kerala Government for the release of tapioca to the Bombay market. The Kerala Government which says that it has no intention to hurt the actual users of the industrial products from tapioca, may grant this request.

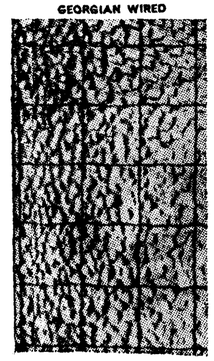
RAW RUBBER



Import Allowed

The Central Government is reported to have revised its decision not to import raw rubber in the current half of 1964-65, and has taken a decision some days ago to import 13,000 tons of natural rubber for this period. The synthetic rubber manufacturing interest in India is perturbed over this report. If import of this order is allowed, not only would the country have to spend a few crores in foreign exchange, but also would result in the under-utilisation of the indigenous synthetic rubber manufacturing capacity, it is argued.

India's one and the only synthetic rubber manufacturing plant at Bareilly in U.P. is said to be working under the double handicap of operating at about half the rated capacity and obtaining its raw materials at high prices. It is argued on behalf of the owners of this plant that the vicious circle of high costs leading to low offtake, which in its turn leading to high costs due to under-utilisation of the capacity, can be broken only if rubber goods manufacturers are made to absorb the full capacity production at the Bareilly plant and raw materials are supplied to it at a reasonable cost. These circles are not happy about the reports that the Government is encouraging new schemes for producing synthetic rubber of even types not used in this country.



Within a couple of months from now, the Agricultural Refinance Corporation is expected to start implementing its scheme to finance rubber cultivation in India. The Corporation's loans would be available for all

HEXAGONAL WIRED

GEORGIAN WIRED

HPG WIRED GLASS for safe glazing in factories

The built-in safety of HPG wired glass comes from the steel wire netting inserted into the semi-molten ribbon of glass during the rolling process. This ensures perfect safety. For should the glass break, the pieces are held together — no flying splinters to injure workers or cause damage to property. HPG wired glass has proven fire-retarding characteristics. It may crack in an intense blaze but holds together — thereby reduces draughts which spread flames. ■ You can depend on HPG wired glass. It is manufactured by Hindusthan-Pilkington Glass Works Ltd. in full collaboration with Pilkington Brothers of UK — people who have been making glass for more than a century!

JWTHP 1837

planters who cultivate rubber in 15 acres or above. The loan scheme is intended to finance the cost of planting alone. This comprises the first year cost of planting and also its upkeep and maintenance for the succeeding six years. The cost to the plant an acre up to the stage of bearing has been worked out to be Rs. 1,600 for an individual and Rs. 2,100 for a company. Those planting new rubber are eligible for loan to cover the entire cost of planting at the above rates, and those who have already planted rubber in an area of 15 acres or above and where such area has not yet reached the bearing stage, are entitled to get loans equal to such instalments due for the remaining part of the pre-bearing period and also an amount to clear away debts, if any, incurred during the prior years for planting and maintenance.

The total loan would not exceed the maximum of Rs. 1,600 and Rs. 2,100 an acre as the case may be. The initial payment will be Rs. 442 an acre in the case of individual planters and Rs. 510 in the case of companies. The remaining six instalments will be at the rate of Rs. 193 for individuals and Rs. 265 for companies. During the first seven years, the borrower need pay only interest on the amounts disbursed and outstanding at the end of each year. The rate of interest will depend upon the nature of the security offered, the soundness of the party, etcetera. The repayment will start from the eighth year of planting. The total duration of the loan is restricted to a period of 15 years.

The physical target fixed under the scheme is 50,000 acres in five years with 10,000 acres each year. The scheme is to start operation from the current financial year and to end in 1978-79, both years inclusive. The necessary technical advice at all stages of implementation of the scheme will be given by the Rubber Board. The loans are to be channelled through the scheduled banks operating all over the country. The Refinance Corporation is holding a meeting of all scheduled banks shortly in Bombay to give final shape to the routing of assistance. India had a total of 377,938 acres under rubber towards the end of 1963-64. Of this, 234,222 acres were small holdings of 50 acres and below and the number of small holdings amounted to 70,150. Estates above 50 acres numbered only 698.

SPICES

Campaign to Promote Exports

There was an increase of about Rs. 2 crores in the export earnings from spices during 1936-64 over those of 1962-63. Cardamom, chillies and ginger mainly accounted for the increase, while earnings from black pepper, coriander seed, garlic and some minor spices declined by less than Rs. 1 crore. Mr. V. K. Srikumaran Nayar, chairman of the Spices Export Promotion Council, who stated this at the recent annual general meeting of the Council in Ernakulam, said that the pattern of pepper trade had undergone a considerable change, in that there had been a decrease in exports to the American continent by nearly 4,400 tons, while export to east European countries had shown an increase of about 2,700 tons. He said that the Council had made arrangements with the American Spice Trade Association for a $10,000 pepper film publicity programme and they hoped to complete the market survey for all spices in the E.C.M., countries with the help of a Government grant of Rs. 35,000. The production of a film in curry powder, which was now under way and the organisation of a "spice week" in Sweden were some of the activities, which the Council would undertake as part of its promotional efforts to popularise Indian spices abroad. He further revealed that the Spices Export Promotion Council was trying to evolve an arrangement with India's main competitor—Guatemala—as well as the American Spice Trade Association, for maintaining the international prices of cardamom at a remunerative level and also to increase publicity activities for cardamom.

TEA

Need to Increase Home Sales

Propaganda for increasing consumption of tea by producing countries needs stepping up, writes our special correspondent. Pakistan, with an estimated output of one million lbs this season, is only allowing an export of 4 million lbs because of the high internal demand.

There is no point in India exporting this commodity at a loss. By consuming more internally, prices can be maintained and world buyers will be compelled to compete at fair rates for their imports.

If the Tea Board of India could be persuaded to push salesmanship of Indian tea in this country, the outlook for the industry would improve. With future extensions costing Rs. 4,000 an acre, prices must be encouraged to move to higher levels.

Considering the crop position in north India, the price situation at the mid-season is fairly sound. The north Indian crop up to 15th November at 591,077,058 lbs, compared with 529,788,899 lbs on the same date a year ago, showing a rise of 61,288,159 lbs. The 1961 record to the same date was 570,618,952 lbs, so the increase over 1961-64 is only about 21 million lbs, or, say, 5 million lbs. With less tea from the south and Ceylon, the trade should not be worried by India's small increase. But the world outlook for 1965 is unhappy, because consumption is hardly keeping pace with the supply, and the sooner more attention is given to internal salesmanship, the better for the long-term interest of all producing interests.

.2 .234 & .254mm

2 3 1mm 1mm 25

Associate these numbers with Pure Protection. Why ? Because "point-two", "point-two-three-four" and "point-two-five-four" millimetre represent the gauge thicknesses of aluminium foil from which Pilfer-proof Closures and Vial Caps are made. Extensively used by Pharmaceutical Manufacturers and other industries which market products in which purity is not merely desirable but absolutely vital. An Alfoil closure virtually guarantees the contents. Further, it protects the consumer from the spurious re-use of a pharmaceutical container.

COMPANY AND PUBLIC NOTICES

THE NORTHBROOK JUTE COMPANY LIMITED

NOTICE is hereby given that a General Meeting of the holders of Rs. 20,00,000 four per cent Bearer Debentures of Rs. 1,000 each of the abovenamed Company constituted and secured by a Trust Deed dated the 30th day of June, 1945 will be held at the Registered office of the Company at Chartered Bank Buildings Calcutta on Tuesday the 22nd day of December, 1964 at 11-20 a.m. to consider, and if thought fit, to pass with or without modification, the following Resolutions which will be proposed as Resolutions as required by Clause 59 of the said Trust Deed.

"That this General Meeting of the holders of 2,000 four per cent Bearer Debentures (hereinafter called "the said Debentures") of The Northbrook Jute Company Limited (hereinafter called "the Company") constituted and secured by a Trust Deed (hereinafter called "the said Trust Deed") dated the 30th day of June, 1945 and made between the Company of the one part and Sir George Bond Morton and Hugh Clough Waters as Trustees of the other part hereby assents to and sanctions :

1. (a) the date of redemption of the said Debentures being postponed from the 31st day of December, 1964 to the 31st day of December, 1979 with liberty to the Company to purchase at any time in the market at or under par (exclusive of accrued interest but inclusive of costs of purchase) all or any of the said Debentures for the time being outstanding and with further liberty to the Company to redeem at par the said Debentures or any part thereof (in the latter case by drawings) on the 30th day of June, 1975 or any subsequent half-yearly date of payment of interest on giving not less than one calendar month's notice of such intention by advertisement once at least in two newspapers circulating in the district of the Registered office of the Company—Provided that any debentureholder present at the meeting or if he has not attended the meeting, has in writing before the due date of the redemption expressed his wish to have his holding of debentures repaid before the 31st December, 1964, he shall be paid in cash on or before that date ;

(b) subject to the approval of the Controller of Capital Issues the rate of interest payable on the said Debentures being increased from four per cent per annum to seven and half per cent per annum as from the 1st day of January, 1965.

2. That the said Trust Deed be further amended so as to provide that—

(a) a fixed charge be created by the company—

(i) on all its land (in addition to the fixed charge created on the lands referred to in the First Schedule to the said Trust Deed) and other immovable properties as may be or may have been acquired at any time during the continuance of the said Trust Deed ; and,

(ii) on its plant and machinery both existing as well as future in lieu of the floating charge created by the said Trust Deed ; and,

(b) the Company do establish a Cumulative Sinking Fund on the following terms and conditions :

(i) during the year ending the 31st day of March 1967 and during every succeeding year ending the 31st day of March whilst any of the said Debentures remains outstanding the Company shall set aside out of the distributable profits (as hereinafter defined) of the Company's financial year ending on the 31st day of March of each such year, as and by way of a Sinking Fund, a sum not less than Rs. 1,00,000 PROVIDED THAT the Company may in any year credit to the Sinking Fund a sum in excess of the foregoing annual instalment and the amount of such excess may be applied by the Company in reduction pro tanto of its obligations under this condition in any subsequent year or years ;

(ii) the Company may at any time and from time to time apply the whole or any part of the amount for the time being standing to the credit of the Sinking Fund in the purchase of the said Debentures in the market at any price not exceeding par exclusive of accrued interest but inclusive of costs of purchase ;

(iii) the amount for the time being standing to the credit of the Sinking Fund may be applied by the Company in redemption of the said Debentures but any accrued interest on the Debentures so redeemed shall be payable by the Company otherwise than out of the Sinking Fund ;

(iv) such part of the amount to the credit of the Sinking Fund as shall not be applied in or towards the purchase or redemption of the said Debentures shall be deposited in the name of the Company with a Bank to be approved by the Trustees or may at the option of the Company be invested in Trustee Securities with full power for the Company to vary and transpose such investments. The expenses of the purchase of such investments shall be borne by the Sinking Fund and the net profits of sale thereof and all income accruing therefrom shall belong to the Sinking Fund ;

(v) all Debentures purchased or redeemed out of the Sinking Fund shall be cancelled and the Company shall not be entitled to keep the same alive for the purpose of re-issue nor to re-issue the same ;

(vi) for the purposes of this condition the expression "distributable profits" shall unless otherwise agreed by the Company and the Trustees for the time being of the said Trust Deed mean the profits of the Company in respect of the Company's financial year ending on the 31st day of March excluding any profit carried forward from a previous year and after providing for Income-Tax, Super Tax, Sur-tax and any other tax as may be payable by the Company but before setting aside any sum to reserve. The amount of such profit shall be certified annually by the Company's auditors.

3. That for the purpose of effecting the foregoing modifications of the said Trust Deed the present Trustees thereof namely Cockwood Trustee Company (Private) Limited and Dalhousie Holdings Limited be and are hereby authorised to concur with the Company in execution of a Supplemental Trust Deed in the form of the draft submitted to this meeting and for the purpose of identification initialled by the Chairman hereof subject to such amendments, if any, as the said Trustees may require or agree".

By Order of the Board,

BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Registered Office :

Chartered Bank Buildings,

Calcutta 1.

Dated the 28th November, 1964.

NOTES :

1. Holders of the Bearer Debentures wishing to attend or vote at this meeting are required to produce the original Debentures or a Certificate in original issued by any of the Trustees namely Dalhousie Holdings Limited and Cockwood Trustee Co. (Private) Limited or by any Scheduled Bank stating that the bearer of such Certificate is the holder of one or more Bearer Debentures and specifying the same in number. Such Certificate must be lodged at the Registered Office of the Company not less than seven days before the date of the meeting.

2. An Explanatory Statement has been prepared with reference to the subject matter of the Resolutions to be proposed at the meeting and a copy of this statement will be supplied on application to the Registered Office of the Company.

3. The draft Supplemental Trust Deed referred to in the Notice may be inspected at the Registered Office of the Company and will also be available at the meeting.

THE KINNISON JUTE MILLS COMPANY LIMITED

NOTICE is hereby given that a General Meeting of the holders of Rs. 25,00,000 five per cent Registered debentures of Rs. 1,000 each of the abovenamed Company constituted and secured by a Trust Deed dated the 30th day of December 1949 will be held at the Registered office of the Company at Chartered Bank Buildings Calcutta on Tuesday, the 22nd day of December, 1964 at 11-00 a.m. to consider, and if thought fit, to pass with or without modification, the following Resolutions which will be proposed as Resolutions as required by Clause 58 of the said Trust Deed.

"That this General Meeting of the holders of 2500 five per cent Registered Debentures (hereinafter called "the said Debentures") of The Kinnison Jute Mills Company Limited (hereinafter called "the Company") constituted and secured by a Trust Deed (hereinafter called "the said Trust Deed") dated the 30th day of December, 1949 and made between the Company of the one part and George Reid Crooks and Hugh Clough Waters as Trustees of the other part hereby assents to and sanctions:

1. (a) the date of redemption of the said debentures being postponed from the 31st day of December, 1964 to the 31st day of December 1979 with liberty to the Company to purchase at any time in the market at or under par (exclusive of accrued interest but inclusive of costs of purchase) all or any of the said Debentures for the time being outstanding and with further liberty to the Company to redeem at par the said Debentures or any part thereof (in the latter case by drawings) on the 30th day of June, 1975 or any subsequent half-yearly date of payment of interest on giving not less than six calendar months' notice in writing of such intention to the Registered holders of the said Debentures or their legal personal representatives Provided that any debentureholder present at the meeting or if he has not attended the meeting, has in writing before the due date of the redemption expressed his wish to have his holding of debentures repaid before the 31st December, 1964 he shall be paid in cash on or before that date;

(b) subject to the approval of the Controller of Capital Issues the rate of interest payable on the said Debentures being increased from five per cent per annum to seven and half per cent per annum as from the 1st day of January 1965.

2. That the said Trust Deed be further amended so as to provide that—

(a) a fixed charge be created by the Company—

(i) on all its lands (in addition to the fixed charge created on the lands referred to in the First Schedule to the said Trust Deed) and other immovable properties as may be or may have been acquired at any time during the continuance of the said Trust Deed; and,

(ii) on its plant and machinery both existing as well as future in lieu of the floating charge created by the said Trust Deed: and

(b) the Company do establish a cumulative Sinking Fund on the following terms and conditions:

(i) during the year ending the 31st day of March 1967 and during every succeeding year ending the 31st day of March whilst any of the said Debentures remains outstanding the Company shall set aside out of the distributable profits (as hereinafter defined) of the Company's financial year ending on the 31st day of March of each such year, as and by way of a Sinking Fund, a sum not less than Rs. 1,00,000 PROVIDED THAT the Company may in any year credit to the Sinking Fund a sum in excess of the foregoing annual instalment and the amount of such excess may be applied by the Company in reduction pro tanto of its obligations under this condition in any subsequent year or years;

(ii) the Company may at any time and from time to time apply the whole or any part of the amount for the time being standing to the credit of the Sinking Fund in the purchase of the said Debentures in the market at any price not exceeding par exclusive of accrued interest but inclusive of costs of purchase;

(iii) the amount for the time being standing to the credit of the Sinking Fund may be applied by the Company in redemption of the said debentures but any accrued interest on the Debentures so redeemed shall be payable by the Company otherwise than out of the Sinking Fund:

(iv) such part of the amount to the credit of the Sinking Fund as shall not be applied in or towards the purchase or redemption of the said Debentures shall be deposited in the name of the Company with a Bank to be approved by the Trustees or may at the option of the Company be invested in Trustee Securities with full power for the Company to vary and transpose such investments. The expenses of the purchase of such investments shall be borne by the Sinking Fund and the net proceeds of sale thereof and all income accruing therefrom shall belong to the Sinking Fund:

(v) all Debentures purchased or redeemed out of the Sinking Fund shall be cancelled and the Company shall not be entitled to keep the same alive for the purpose of re-issue nor to re-issue the same;

(vi) for the purposes of this condition the expression "distributable profits" shall, unless otherwise agreed by the Company and the Trustees for the time being of the said Trust Deed, mean the profits of the Company in respect of the Company's financial year ending on the 31st day of March excluding any profit carried forward from a previous year and after providing for Income-tax, Super-tax, Sur-tax and any other tax as may be payable by the Company but before setting aside any sum to reserve. The amount of such profit shall be certified annually by the Company's auditors.

3. That for the purpose of effecting the foregoing modifications of the said Trust Deed the present Trustees thereof be and are hereby authorised to concur with the Company in the execution of a Supplemental Trust Deed in the form of the draft submitted to this meeting and for the purpose of identification initialled by the Chairman hereof subject to such amendments, if any, as the said Trustees may require or agree."

THE BENGAL PAPER MILL CO. LTD.

Registered Office : 14, Netaji Subhas Road,
CALCUTTA-1

NOTICE is hereby given that the Register of Share Holders of Preference, 'A' Preference and 'B' Preference Shares will remain closed from 21st December, 1964 to 30th December, 1964, both days inclusive for the purpose of payment of Interim Dividend for the year ending 31st December, 1964.

By Order of the Board.
THE BENGAL PAPER MILL COMPANY LIMITED,
H. P. DHANUKA,
Director.
30th November, 1964.

'Impossible!' they said

But P & W has done it at Mandya!

It's always good news when the neglected potential of a valuable raw material is rediscovered. This was recently done for bagasse in an Indian paper mill designed, supplied and operated under the direction of Parsons & Whittemore.

Two hundred sixty tons of paper, possessing excellent strength characteristics, has been continuously produced from 100% bagasse pulp at The Mandya National Paper Mills Limited, Belagula, Mysore State.

The bagasse pulp used for this paper was produced by P&W's Pandia continuous digestion system —a system which is firmly established as most economical for cooking agricultural residues. High yields upto 47% bleached bagasse pulp were obtained with comparatively low steam, power and chemical consumption.

This achievement demonstrates clearly that, with the right equipment and proper technical control, production of paper with 100% bagasse pulp is a practical reality.

THE PARSONS & WHITTEMORE-LYDDON ORGANIZATION
World leaders in the development of pulp and paper mills for the use of local fibers

CLOSER LOOK AT THE FOURTH PLAN PROPOSALS

THE memorandum on the fourth five year plan presented to Parliament last week is essentially the same as the one prepared by the Planning Commission and endorsed by the National Development Council towards the end of October. After more than a month of discussion and criticism, there are almost no changes, except that an additional chapter and a summary of the comments made at the N.D.C. meeting have been appended to the original document. It is perhaps true that no major changes were to be expected, since the presentation of the memorandum to Parliament is mainly in the nature of a formality. The hope nevertheless remains that wider discussion and criticism will now follow on the purpose and pattern of the fourth plan. The assumptions on which the plan is based are highly questionable, and so are the targets it proposes. The time has, therefore, come for Parliament to join vigorously in the effort to bring the Planning Commission closer to reality. The Commission cannot pretend any more that scepticism about the feasibility of the plan is confined to congenital pessimists, or to the timid and conservative advocates of financial orthodoxy. As it well knows, the scepticism exists at important levels of the Government too. It is for Parliament to insist that doubts should no longer be swamped simply by a flood of exhortations. The Commission has to concentrate its attention on what can be done, instead of warbling aimlessly about what it thinks ought to be done.

In fairness to the planners, it has to be admitted straightaway that their preliminary ideas about the size of the fourth plan have already been cut down quite substantially. As the memorandum recalls, the working groups set up by the Planning Commission originally made interim recommendations which would have involved an outlay in the public sector alone of over Rs. 24,000 crores; to this would have been added an investment of Rs. 7,000 crores in the private sector, raising the total outlay under the plan to over Rs. 30,000 crores. After some chopping and changing "in order to avoid duplication and to secure internal balance and consistency", the figure for the total outlay (including investment in the private sector) was reduced to between Rs. 24,000 crores and Rs. 25,000 crores. All these estimates were based on 1960-61 prices. It has, however, now been decided to frame the fourth plan on the basis of "a minimum outlay" of between Rs. 21,500 crores and Rs. 22,500 crores at 1963-64 prices (including Rs. 7,000 crores of investment in the private sector). Assuming that prices rose by about 8 percent between 1960-61 and 1963-64, the cut has been sharper than the difference of Rs. 2,500 crores or so might indicate. An outlay of Rs 21,500 crores at 1963-64 prices would be the rough equivalent of an outlay of less than Rs. 20,000 crores at 1960-61 prices. That is broadly the measure of the extent to which the planners have been forced to trim their original ambitions.

The point for Parliament to consider, however, is not that so much trimming has been done already. The more important point is that, even after the trimming has been done, the plan does not look like a realistic projection of what the country can achieve. The memorandum prepared by the Planning Commission does not give even a rough breakdown of the sources through which the money is going to be raised. Considering that a host of minor details, such as the output of handloom cloth or of bicycles, are offered with great precision, the omission is an odd one; it gives the impression that the Commission does not have any clear idea about where the money will come from. Subject to certain major qualifications, it is stated that tax revenues, at present tax rates, will rise by 8 percent a year. The *non-tax revenues* of the public sector as a whole will also rise at the same rate. No figures are given, but a "substantial" increase is assumed in receipts from market loans, small savings, provident funds, annuity deposits and miscellaneous capital receipts. Credit is taken for Rs. 2,500 crores of budgetary receipts corresponding to external assistance. But, at the end of it all, there remains a gap of Rs. 2,500 crores or Rs. 3,500 crores in rupee resources alone.

The Planning Commission has given no precise indication of how the gap might be covered. It says broadly that "these additional resources will be secured through increased taxation, reduction of tax avoidance and evasion, and adjustment of prices charged by public-sector undertakings". It is a little more specific when it says that taxation of agricultural income could be raised, especially if the receipts could be linked to local developmental works: sales taxes on non-basic consumer goods could be increased; urban property could be subjected to "proper valuation" and further taxes levied on increments in its value; and the pricing policy of most Government undertakings could be adjusted so as to bring a return of 12 percent on invested capital. The Commission, however, shows no awareness of the fact that some of these ideas have been canvassed before, and half-heartedly implemented or quietly dropped. Heavier taxation of agricultural income, for instance, has been restrained by the political cowardice of State Governments and the Congress Party. Increases in sales taxes, and in taxes on urban property, have already got to the stage where not much can be secured by way of additional revenue from these sources. As for the pricing policy of Government undertakings, the Commission cannot be unaware of how its worthy nostrums on this point have been forgotten during the third plan: an improvement in the returns from such undertakings, furthermore, has to be sought through greater efficiency rather than higher prices if it is not to be inflationary.

In any case, it is inconceivable how a gap of Rs. 2,500 crores or Rs. 3,000 crores can be covered by measures of the sort the Commission has vaguely outlined. That gap, it needs to be remembered, has already been reduced on paper by a host of optimistic assumptions. One is that the growth of the economy will be rapid enough to generate an adequate increase in production and incomes. Another is that the increase in administrative and non-plan expenditure will be severely restricted. A third is that the outlays on defence, or food subsidies, or refugees, will not rise beyond the levels visualised at present. The

these assumptions, however, is indicated by the fact that prices are already approximately 15 percent higher than they were a year ago. To manage to control expenditure strictly, in the way the Planning Commission visualises, would in the circumstances be a miracle. The rise in prices highlights another fundamental weakness of the fourth plan proposals. It is that the outlay of Rs. 21,500 crores or Rs. 22,500 crores is based on 1963-64 prices. At current prices, the figures would have to be a good deal higher. The gap in resources would then be even larger. Neither the Government nor the Planning Commission has said specifically as yet that the intention is to bring prices back to the levels of a year ago. On the contrary, the price support scheme for foodgrains alone, if it is a success, is likely to ensure that the price levels of 1963-64 will not be seen again. The Government's attitude, in fact, seems to indicate that while it would welcome a limited decrease in prices, it would not welcome a decrease of around, say, 15 percent. In considering the fourth plan proposals, therefore, one of Parliament's main interests might well be to ask bluntly whether this is the case. If it is, a fundamental re-calculation of the figures concerning resources and outlays would clearly be necessary.

The Government's hopes and intentions concerning the future trend of prices are crucial not only to the question of finding rupee resources for the fourth plan; they are equally crucial to the question of finding the foreign exchange resources too. The planners have assumed that the main contribution by way of external resources will come from commodity exports; they will bring Rs. 5,100 crores over the five-year period. As the requirements of commodity imports, excluding P.L. 480 imports, will amount to Rs. 7,200 crores, the deficit on merchandise account will be Rs. 2,100 crores. To the latter figure will be added Rs. 1,100 crores for meeting foreign debt obligations—Rs. 500 crores of repayments and Rs. 600 crores of interest. The total amount of foreign aid and private foreign capital required will, therefore, be Rs. 3,200 crores. A number of important question-marks, however, limit the value of these projections. The first is that the calculation of import requirements, described as only tentative, seems to be a serious underestimate, as has been the case during the third plan. (On few points, in fact, has the Planning Commission in the past been guilty of more damaging errors—errors which it now seems determined to repeat.) The second question-mark is represented by the impression that the expectations concerning export earnings are highly fanciful. India's exports have shown an encouraging increase within the past couple of years, and the rise still continues. But there is no real reason for assuming that the increase will be as sharp and steady as the Commission believes. On the contrary, as current inflationary pressures exert their influence more fully on the costs and prices of exportable commodities—which they have not done yet—there is a serious danger that the growth of exports may be sharply retarded.

The third question-mark arises from the estimate of the Finance Ministry, which understands these things better than the Planning Commission does, that the total amount of foreign aid offered for the fourth plan is unlikely to exceed Rs. 2,500 crores. The remaining Rs. 700 crores will, therefore, have to come in the form of private foreign capital. As things stand, it is inconceivable that so large a sum will come in this form. The inflow of private foreign capital hitherto has been much less; it has fluctuated sharply from year to year; and there is no evidence that the modest concessions offered to foreign investors in the last Budget have done anything to increase the inflow. The Government is hoping that substantial amounts of private foreign capital will be obtained by inviting its participation in a few giant ventures, such as those relating to steel, petroleum, petrochemicals and fertilisers—often in partnership with the Government itself. The progress of these efforts, however, remains to be seen. The difficulty, furthermore, is that the participation of private foreign capital in other smaller, but almost equally vital, projects—especially those belonging to secondary or tertiary industries—will still remain to be ensured in the interests of balanced industrial growth. The stagnation in the Indian capital market has already done a great deal to discourage the inflow of private foreign investment; conditions will almost certainly worsen if the general scheme for financing the fourth plan proposed by the Planning Commission is maintained. The instability of the economy, as reflected by the sharp rise in prices, has also done much to discourage investors from abroad. The fourth plan proposals threaten to accentuate the instability, and to that extent make the prospects for raising external resources as dismal as those for raising internal ones.

PROGRESS OF L.I.C.

THE traditional image of life insurance in India has been undergoing a change since it was taken over by the Government. The latest symptom of the change is that, since early 1964, the Life Insurance Corporation has emerged as a general insurer. In a brief reference to this development, Mr. B. K. Kaul, chairman, has in the course of his statement issued along with the annual report for the year ended 31st March, 1964, expressed the hope that a complete and comprehensive insurance service to the public will be provided by the L.I.C. to suit varying needs. Although the Corporation is not a member of the Tariff Committee of the Insurance Association of India, it has adopted the tariff rates for the present, but the chairman pointed out that it is open to it to revise the rates in due course in the light of experience. The L.I.C., which has been a monopolist in one field, has thus become an unfair competitor in another. It is an unfair competitor because as a general insurer it is not bound by the regulations governing the business transactions of other general insurers. The attack of the Government on private general insurers is now two-pronged. On the one hand, Oriental Fire, as a subsidiary of the L.I.C., is ostensibly bound as others are, by the terms of the Insurance Act, but takes as a compulsory cession 75 percent of all the Government and semi-Government business processed by the Indian Insurance Companies Association pool. On the other hand, the attack comes from the L.I.C. itself as a general insurer; it is not a member of the pool, but has the authority and power to take any business from the pool that it thinks fit. Such a policy hardly fits in with the Government's professed aim of providing equal opportunities to both the sectors.

The burden of Mr. Kaul's statement, however, does not relate to general insurance. He has taken pains to highlight the achievements of the L.I.C. in the sphere of life insurance. His apologetic explanations are themselves proof that all is not well with the Corporation. The frequent references to outside forces hampering the Corporation's activities are not very convincing. They can hardly explain away the failure in certain significant features of trading. New business registered a fall in comparison with the year 1962-63, which Mr. Kaul attributes to the rise in the cost of living and to the introduction of the compulsory deposit scheme. Apart from the factors having their inevitable repercussions, the chairman has remarked, natural calamities like famine conditions in some parts of the country and excess rainfall in others have also had an adverse effect. As for the rise in the lapse ratio from 8.1 percent to 8.2 percent, the chairman considers this to be the result of general economic conditions and the effect of the compulsory deposit scheme on the saving capacity of those insured. It is worth recalling that the lapse ratio in 1958 was only 5.8 percent.

The wisdom of introducing the compulsory deposit scheme has been widely debated. It was a fiscal measure which soon had to be relaxed, and then revised in the form of the annuity deposit scheme covering a smaller section of income taxpayers. But life insurance in India does not depend all that much on fiscal measures, on the cost of living or on the vagaries of the weather. It remains, by and large, a forced sale. Barring the educated urban class, people in India are by tradition fatalistic, and are scarcely in a position to appreciate the protection which life insurance affords. The steady shift in income from the urban middle class to skilled and semi-skilled labour, artisans and agriculturists, in rural as well as urban areas, is too strong a factor to be ignored. This new class of earners could be tapped by the Corporation through, for example, an industrial life insurance scheme such as is in force in the U.K., where premiums are collected from weekly wages. Climatic adversities in India are frequent. It is hardly fair of the L.I.C. chairman to moan over the vagaries of the weather, floods and near-famine conditions. Insurance planning which does not take account of these factors, or of the price rise in a developing economy, ignores realities. Despite the inevitable shortcomings, the potential for life insurance in this country is immense, if only the L.I.C. would depart from its traditional hidebound methods of doing business and introduce imaginative schemes to cover the increasing number of wage-earners.

The 1.15 million or so policies representing 70.5 percent of the total policies issued during the year were taken by persons who were insuring for the first time. The corresponding figure for the previous accounting period of 15 months was 1.22 million policies. The chairman sees in this trend a growing consciousness of insurance and feels satisfied that the message is being carried to more and more people who had hitherto not availed themselves of life insurance protection. In a population of about 450 million, and even taking into account all the categories that are uninsurable, 1.15 million new first insurance policies is a poor total. The figure could have been many times larger had there been a new orientation in the underwriting policy and field service. The most satisfactory feature of the L.I.C. chairman's review is the reduction in the expense ratio. The overall expense ratio has come down to 27.5 percent, from 29.3 percent in the previous accounting period of 15 months. The renewal expense ratio has also come down from 14.13 percent to 12.46 percent. As the chairman observes, this is gratifying considering that the reduction has been achieved in spite of increases in the salaries and allowances of the employees.

The fourth valuation, as at 31st March, 1963, has been completed. According to the figures provided by the chairman, the rate of the reversionary bonus allowed on policies issued by the Corporation was increased from Rs. 16 a Rs. 1,000 of sum assured a year to Rs. 17.50 in the case of whole life policies, and from Rs. 12.80 a Rs. 1,000 of sum assured a year to Rs. 14 in the case of endowment policies. Ignoring the interests of policyholders, the Corporation is required to invest heavily in the development projects of the Government, which provide comparatively small returns. Were the Corporation free to invest in accordance with business principles—as specifically provided in the Life Insurance Corporation of India Act, 1956—the returns would be higher and would compare favourably with those earned by some of the former companies on their investments. This trend is indeed unfortunate. The L.I.C., at one stage, protested against the injustice and presented a sound case to the Central Finance Ministry on behalf of the policyholders. Private-sector industries account for 19.2 percent of the Corporation's investments, the balance going to public and semi-public undertakings. This explains the Corporation's comparatively poor showing over bonus disbursements.

U.K. GROWTH PLAN FAILING

INTO the controversy arising from Britain's financial and trading policies intruded a startling new factor. The all-industries index of production, which had been static throughout this year at 127, receded in September to 126. As the figure for January 1963 was 110, the rise to the beginning of 1964 was unusually rapid, and the subsequent stagnation was disappointing. But no one imagined, until the (seasonally-adjusted) figure for September was published that in the third quarter the trend had turned downward. Observers had argued previously that, as many big companies were reporting increases in production, the official calculations that production was

static must be wrong; but when the index declined they admitted that the lethargy was serious. It was against this background that the new Government presented an emergency Budget and, soon afterwards, raised Bank rate. The Budget was only moderately deflationary (and foreign observers saw inflationary implications in the promise of social benefits in the next regular Budget). But the two-point rise in Bank rate to the recognised crisis level, 7 percent, could turn the business trend downward even if it were rising and would certainly accelerate a decline.

The rise in Bank rate, more than any other development, showed that the Government's plans had gone wrong; for Ministers had assured the business community at home and the monetary authorities abroad that a rise in Bank rate was not a part of these plans. It became necessary—almost inevitable—because foreigners were withdrawing their money from Britain on a big scale, but for internal reasons it was very inopportune. It was strictly a short-term measure, and if industrialists are rational it will not affect their investment plans. But industrial confidence is a tender plant that withers quickly when the wind of crisis blows. It is not forgotten that the recession of 1962 followed the rise in Bank rate to 7 percent in 1961. The circumstances are in various ways dissimilar. Although the payments deficit is much bigger in 1964 than it was in 1961, the withdrawal of foreign funds has been less. Credit is not being officially squeezed in 1964 as it was in 1961; but for some months past the banks have voluntarily restricted their advances. The present Government will try to isolate the effects of the rise in Bank rate by instituting a two-tier structure of interest rates; but such manipulation of the monetary system will not be easy. A repetition in 1965 of the recession of 1962 is not unimaginable.

Such a recession, or even a continuance of the level trend of 1964, would disintegrate the philosophy of continuous economic growth that is basic in the Government's policy. And it happens that the current quarterly *Westminster Bank Review* contains a somewhat pessimistic study, by Professor Alan Day of the London School of Economics, of "The Myth of Four Percent Growth". He uses the word "myth" not in the "popular" sense but in the "sophisticated" sense of "a belief . . . . . which plays an important rôle as an expression of the collective feelings" of society. He suggests that "the British belief in the myth of 4 percent growth" is based partly on misleading comparisons with other countries. Anyway, he doubts that that growth rate, embodied in the policy of both the last Conservative Government and the present Labour Government, will be achieved. In an interesting aside, Professor Day observes that Britain's balance-of-payments crises have been "stupidly unnecessary" but "cannot be demonstrated to have had more than a minor effect in slowing down the country's underlying rate of growth". He focusses attention on "the question which is still far too little understood by economists (or anyone else)", the relation between investment and growth. The ratios of investment, both net and gross, to national income have been much lower in Britain than in continental Europe; but even in Britain the ratio of investment to the gross national product has risen considerably through the 1950s and early 1960s, and there is evidence that at the same time the underlying growth of productivity has been increasing steadily.

The main reasons why the investment ratio rose relatively easily in the 1950s were, the professor says, the release of resources from defence expenditure and the rise in voluntary savings; but "it is not easy to foresee as favourable circumstances in the future". His highest estimate of the growth of output over the next five years is 3¼ percent a year—"a rather depressing conclusion" for an expansionist such as himself. If Professor Day rejects the idea that crises have appreciably retarded growth (he says, too, that "it is very difficult to adduce hard evidence for the often-repeated view that stop-go . . . . . has had any substantial effect on the underlying rate of growth of the economy"), he is presumably not much worried (in this matter) by the crisis that burst soon after he completed his study. But the idea that crises and stop-go policies do not retard growth is one of the professor's more debatable propositions. It is arguable that, though they may not reduce a nation's average demand for capital goods over a period of years, they reduce its effective investment by concentrating demand in limited periods, during which it cannot be satisfied, and leaving the capital industries underemployed at other times.

The British Government has not yet reverted to a stop-go policy, but the crisis has caused anxiety and doubt in British industry at a time when industry should devote its single-minded attention to development and structural change, so that crises will not recur and stop-go policies will be unnecessary. Steady progress is surely more desirable than a high average rate of progress. A 4-percent average growth rate is high by British standards, and Britons are losing faith in "the myth of 4 percent growth". But this loss of faith is no reason to grieve, if Britain can perform her international functions adequately at a lower growth rate. A merchant banker, Mr. R. F. Medlicott, a director of Kleinwort Benson, in a paper presented to the Institute of Cost and Works Accountants in London recently, said that in an economy "comparatively glutted with gadgets and material satisfactions" material growth was not necessarily the main objective of policy.

Current News and Comment

Reviving Cheap Car Project

The Government has been toying with the idea of producing a low-cost car for over five years, but it is a pity that so far it has done nothing to implement the scheme. The recent furore in the Lok Sabha over the delay in producing a cheap car provoked Mr. B. Mishra, Central Deputy Minister for Industry and Supply, to announce that the Government would take up the project in the not-too-distant future. Since similar assurances have been given in the past, there is no certainty that the latest one will bear fruit. It will be recalled that when Mr. C. Subramaniam was the Central Minister of Steel, Mines and Heavy Engineering, he made an effort to revive the small car project. He said in March this year that the Government was trying to pool the capacity of the existing car manufacturers in order to reduce production costs, although on his own admission, the idea "bristled with difficulties". Subsequent developments showed that Mr. Subramaniam was unable to convince the three car manufacturing companies about the need for pooling capacity. So he put forward two alternative proposals. The first was that the Government might select one of the existing car manufacturing units for producing low-cost cars; assistance would be provided to the unit selected for the purpose. Alternatively, a new unit could be set up in the public sector in case there was no response from the existing car manufacturers. But Mr. Subramaniam did not go ahead with the scheme, presumably because he was unable to get much support from the Planning Commission or the Cabinet.

The recent debate in the Lok Sabha indicated that members were suspicious of the existing car manufacturers who, they said, had sabotaged the low-cost car project. True, cars produced in India are costly and of poor quality. But the Government itself has been responsible for this. Manufacturers have pointed out time and again that high taxes and the exorbitant prices of spare parts and components have been responsible for the high prices of cars. The member who said in the Lok Sabha that a Fiat was selling at over Rs. 14,000 (against the "normal" price of about Rs. 9,000), a Standard at over Rs. 14,000 (against Rs. 9,500) and a Hindusthan at Rs. 17,000 (against Rs. 11,000), obviously did not bear these points in mind. Another member went a step further in suggesting that the Government should nationalise the existing car manufacturing firms. He said that the payment of compensation would not pose any problem because it might be given in the form of long-term bonds. A drastic suggestion came from Dr. Ram Manohar Lohia who made the astonishing proposal that "the Government should insist that no manufacturer produces any car, but produces only buses and lorries for another 15 or 20 years." But if this is not possible, he added, the Government should not hesitate to undertake the manufacture of a cheap car in the public sector.

The Government has not yet indicated its reactions to these ideas. There is no denying that the heated discussion on the low-cost car project in the Lok Sabha was occasioned by the Government's inability to make up its mind. Although the Jha Committee had indicated that a cheap car could be produced, the Government has done nothing so far. Nor has it implemented the suggestions of the Pandey Committee; worse still, it has not even published its report. That Committee, it is reported, indicated that it was possible to manufacture a "people's car" in the public sector. The report was considered by the secretaries of the departments concerned in July 1961, and they were said to have given "tacit approval" for the project. But after issuing a statement in September 1961 that the manufacture of a small car was feasible in the public sector, New Delhi has only indulged in pious homilies and has done nothing either to reduce car prices or to manufacture a low-cost car.

Cotton Price Rise Unwarranted

Cotton prices have of late continued to rise. The March hedge contract in Bombay was marked up on 23rd November to Rs. 775 a 3 quintals, which is the maximum price permissible during the pre-delivery period. The statutory ceiling for Moglai fine 25/32in., which forms the basis of the hedge contract, is, however, higher at Rs. 798. In ready, the rise has been far more pronounced and almost all varieties (in new crop) have been commanding sizable premiums over the statutory ceiling rates for the past few weeks, which reduces price control over cotton to a complete farce. The current prices of cotton are higher than the maximum recorded during the past few years. Prices have risen to fantastic levels—Indian cottons are now costlier than comparable foreign cottons by about Rs. 200 to Rs. 250 a candy—even when the overall supply position is known to be far from being uncomfortable. In the past, the market authorities are known to have taken drastic measures to check the rising trend in prices in situations which were far less disturbing. The Government, too, has chosen to be a silent spectator, which is rather intriguing.

Commenting on the situation obtaining in the cotton market a spokesman of the Central Commerce Ministry is reported to have remarked recently that the rise in cotton prices was entirely unwarranted. The total supply of cotton, he pointed out, is likely to be more than sufficient for meeting the requirements of the cotton textile industry. Taking domestic production at 6.05 million bales, imports at 950,000 bales and a carryover of 2.6 million bales, the total availability of cotton in the current year at 9.6 million bales will be the highest for any single year so far. Few will seriously dispute the official spokesman's assessment of the supply position, especially if the Government is able to secure all the 950,000 bales of foreign cotton it intends to. The official spokesman has expressed the confidence that "with the co-operation of the mills, the trade and growers, conditions in the cotton market would settle down soon". If the various conflicting interests offered their fullest co-operation, any difficulty could be tided over. Cotton prices would not have skyrocketed the way they have done recently if the various interests had shown necessary co-operation. It is common knowledge that a few prominent speculators have been controlling the futures market, and that farmers have been sitting tight over their produce, with the result that the arrivals have not been sufficient to satisfy current demand. The big question is what is to be done when co-operation is not forthcoming from various quarters because of their conflicting interests. It is here that

the authorities have to intervene and enforce discipline when certain interests try to exploit the situation. It is pertinent to ask the Government why spot cotton prices have been allowed to pierce the ceilings and why the authorities have not cared to introduce compulsory survey and requisitioning. Can it be that the Government does not wish to incur the displeasure of agriculturalists, in spite of the fact that they have been withholding supplies from the market even when their produce is salable at the ceiling prices and even higher. The Forward Markets Commission, too, has been extraordinarily patient with bulls who have been playing havoc with the market. Cotton futures have risen by about Rs. 53 a 3 quintals in a matter of seven weeks and such a rise has rarely taken place in the past without attracting the Commission's intervention.

It might be that the Commission has come to accept the view that there is no need to interfere with the market when it is not threatened with any kind of payments difficulty. Normally this view has much to commend itself, but not when speculators push up prices to the ceiling under conditions of reasonably comfortable supply. The Commission's decision, announced on 26th November, to do away with the facility of free limit for the payment of margin when the hedge contract rises above Rs. 775 is simply an eyewash. In a way, it is mischievous and it is likely to mislead public opinion. Where is the sense in withdrawing this concession which can become operative only during the delivery month of March because trading above Rs. 775 is not permissible during the predelivery period? If the Commission feels that speculation has assumed sizable proportions, even though the market's solvency and liquidity are not endangered, and that a measure of discipline needs to be enforced, it should devise a scheme of stiff margins operative at substantially below the prevailing prices. Fortunately, the supply position of cotton is not uncomfortable. If the authorities make up their mind to discourage speculative activity in futures as well as in the ready market, it should not be difficult to bring down prices to reasonable limits. The authorities cannot depend entirely on the willing co-operation of the mills, trade and growers. What is needed is firm action.

Rise in Small Savings

Although collections from official small savings schemes have improved during the past couple of years or so, the Government has achieved little success so far in attracting savings from small-income groups. Addressing the National Savings Central Advisory Board in New Delhi early in December. Mr. B. R. Bhagat, Minister of State for Finance, said that out of the collection of Rs. 127 crores during 1963-64, Rs. 51 crores came from provident funds and Rs. 16 crores from the interest on post office savings bank deposits. It is true that collections during the current year have been satisfactory. They amounted to Rs. 62 crores up to the end of October 1964, showing a rise of about Rs. 10 crores over those of the corresponding period of 1963. But the disconcerting feature is that collections have largely been made from the high-income groups, which are taking advantage of the tax concessions offered under various small savings schemes. So the main object of encouraging thrift among the small-income groups has not been fulfilled.

The growth of deposits in post office savings banks is disappointing. Although the latter are located throughout the country, they have not succeeded in promoting the banking habit among the rural population. Substantial incomes have, meanwhile, flowed into rural areas due to the rise in the prices of agricultural commodities. So measures should be taken to attract savings, particularly from the low-income groups. Since the prize bonds scheme will be stopped from the end of December 1964 and the sum of Rs. 20 crores or so collected against these bonds will be repaid in April 1965, strenuous efforts should be made to mop up the funds in small savings. Rules relating to savings certificates are being modified to allow the conversion of prize bonds into small savings. The State Bank of India will undertake the sale of savings certificates in the near future. Although the certificates sold by the former would be identical with those sold through post offices, they would constitute a distinct series. Mr. Bhagat thinks that the third plan target of Rs. 600 crores for small savings will be attained. They contributed about Rs. 240 crores during the first plan and nearly Rs. 400 crores in the second.

Controls Hamper Production

The Indian economy is confronted with shortages of almost all essential commodities. The shortages have led to high prices which have inevitably caused hardship to consumers. But instead of making sincere efforts to increase production, the Government is busy imposing controls in almost all spheres of economic activity. In his presidential speech at the quarterly general meeting of the Indian Chamber of Commerce in Calcutta last Friday, Mr. Sookamal Ghose gave some concrete examples to prove that the mere imposition of controls would not help reduce prices. To remove the growing shortage of houses in the country, the solution does not lie in imposing a ceiling on urban property but rather in creating conditions and giving incentives for the construction of more houses. Similarly, when the country faces a sugar shortage, the Government should not think in terms of stopping the manufacture of sweets. Rather, the emphasis should be on increased production in order to meet the growing needs of the economy. Mr. Ghose was, therefore, right when he suggested that more restrictions and controls would not help solve the country's economic problems; rather they would create more problems and cause hardship to consumers. It is unfortunate that when there is a need to provide more positive incentives for a rapid industrial growth, the climate for business in India is not improving. Nobody should mind legitimate restrictions to ensure the healthy growth of business and industry, but the Government should see to it that it does not create a fear complex among business men.

The Income Tax Department has now been vested with enormous discretionary powers to enter any premises, make a search, seize cash, jewellery and ornaments and other assets, and impose penalties. A fundamental change has been made in the income-tax law so that the onus of proving that there has been no concealment of income is now upon the assessee. Principles of natural justice and fair play require that the department should first prove that an assessee has concealed his income. Throwing the burden of proof on an accused person before the offence itself has been legally confirmed is contrary to the fundamental principles of jurisprudence. Furthermore, as a result of the exercise of the wide powers of search and seizure by the income tax authorities, the seeds of mutual distrust and suspicion have been sown in society. The Government, meanwhile, has been oblivious of the fact that business and industry cannot thrive in a climate of distrust and suspicion. Nothing could be more harmful if it affects the inflow of foreign capital to India.

CORRESPONDENCE

CONTRACT FOR BOKARO STEEL PLANT

(To The Editor of "Capital")

Sir,

I have read with misgiving recent reports in newspapers about the growing uncertainty of Indian participation in the engineering of the Bokaro steel plant. We appear to have travelled a long way back from the proud day in November 1963 on which Mr. C. Subramaniam, the then Central Minister for Steel, made the announcement that the Bokaro contract had been given to an Indian firm of consultants, indicating thereby that Indian technical skill and know-how had reached maturity. Subsequent statements in Parliament and the Press as also over the radio by responsible spokesmen all confirmed this view. However, since the Russian offer of aid for the plant was made, there appears to be a shift in Government thinking and policy. I do hope that this does not result in a revision of the earlier decision. The Government's eagerness to close the Bokaro deal is justifiable, but we hope it will not be at the cost of complete surrender of initiative and control over policy and planning to foreign hands, particularly at a time when we are endeavouring to attract back our scientists from abroad and stopping the "brain drain".

Scientific and technical talent is as important a resource as any other material in the development of a country and it should be the Government's endeavour not only to preserve and acknowledge it but also to develop it by giving it scope to function. By now there has been quite a literature on the subject of Bokaro, and it appears to be nobody's case that Indian talent is lacking in potential or material. Let then no Indian be guilty, morally even if not legally, of causing it to stagnate by frustration.

Calcutta, 4th December. Yours etcetera, Indian Citizen.

"CAPITAL" CHRISTMAS TOY FUND

We acknowledge, with thanks, the receipt of the following donations for the 1964 Fund:

Rs. 100
W.R.J.D.
Rs. 51
Senior staff of Octavius Steel and Co. Ltd.
Rs. 50
T.I. and M. Sales Ltd.
Rs. 25 each
D. T. Eldred, Anonymous.
Rs. 20
G.W.M.
Rs. 16
Staff of Hindustan Lever Ltd, Bombay.
Rs. 10 each
Miss Ranak Patel, Anonymous.

We are particularly grateful to Jan Michalewicz, aged 4½, of Glatten bei Freudenstadt, Schwarzwald, West Germany, for toys sent for the Fund.

Total Rs. 307
Previously acknowledged Rs. 2,424.71
Grand Total Rs. 2,731.71

JUTE TRADE AND INDUSTRY

The present state of the Jute market with its sudden and rather violent fluctuations in price, is one which is causing considerable perplexity in the trade both of the shipper and the consumer. The price for first marks jumps up to £16 5s. per ton one day, jumps down again to £15 5s. the next, and again springs up 10s a ton on the third, so that the shipper and the consumer can never gauge how the market will be on the fourth day. If "short crop" were an ascertained fact, and did not exist (where it is for the present) merely in the imagination of those who shout it, that certainly would be cause for a legitimate and steady rise in price, but a belief in "short crop" is no reason why the course of prices should resemble a fly walking over a corrugated iron roof. The fact is the condition of the trade this season convert Jute into the sport of the speculator and the gambler and they are not slow to avail themselves of the opportunity. The Calcutta manufacturer is enjoying splendid trade; is looking forward to large extensions, and is in the mood for securing his raw material, and as much of it as he can carry no matter at what price, if he can only see a profit in it. This makes summer weather for the speculator until the frost comes. The large prospective increase in the machinery for the production of gunnies, which bids fair to come into effect within the course of the next twelve months, arouses a speculative enquiry as to the various probabilities likely to happen next year with a productive power twenty-five per cent. in excess of the present machinery. and in view of this fact we may ask, amongst other questions:—Are the consuming markets likely then to be in a state to take off twenty-five per cent. more goods than they do now? If the present crop of the raw material is just sufficient to satisfy the consumption of the year and leave a small margin over for stock. Is it probable that the crop next year will meet the sudden demand upon it for another eight lakhs of bales which the increased machinery will require? And not least in importance there is the third question—Will one year be sufficient to produce the 30,000 new workers required for the new mills and extensions?

A Ditcher's Diary

Mr. Lal Bahadur Shastri gave every appearance of enjoying himself thoroughly on his first trip to Europe. And why not? I remembered how refreshed Mr. Nehru always looked after a few days abroad. It may be some time before any Prime Minister in New Delhi learns to combine rest with work: I am told that there is no possible Chequers near Delhi. It may well be that an Indian Prime Minister has some rest only when he goes to another country where a crowd of Congressmen is not always waiting in his drawing room. Sir Ian Jacob wrote in the *Observer* the other day that during the war Winston Churchill rarely saw anyone in the morning: those hours were reserved for going through the "box" with its different compartments according to priority; nor did he ever allow the direst crisis to interfere with his post-lunch sleep. I recommend the routine to Mr. Shastri, who does not talk too much but sees and listens to too many people; both can be tiring and, in any event, leave too little time for thinking. In a democracy a Prime Minister cannot altogether neglect the political part of the job; yet his first duty is to take administrative decisions on particular matters. This cannot be done without carefully reading the files; and I have found it difficult to believe in recent weeks that Mr. Shastri had read Dr. Homi Bhabha's notes on India's nuclear capability very carefully. With his usual bite, C. R. recently wrote in *Swarajya*: "Scientists have not told us that nuclear fall-out has a deleterious effect on the brains of men. But one may not be sure of it, seeing how some people have begun to speak in Delhi ever since the Chinese explosion". This nuclear thing, I find, was one of the subjects Mr. Shastri discussed with Mr. Wilson in London; and there have been suggestions since that in his turn Mr. Wilson is to talk about it with President Johnson. Under uninformed pressure Mr. Shastri once seemed to hint that, though not immediately, India might some day make a bomb. I hope Mr. Wilson impressed upon Mr. Shastri the total futility of an independent deterrent even for a country like Britain. Mr. Shastri once said that India needed to take another look at her stances on both China and Pakistan. If this was followed up with action, I cannot remember to have come across any evidence of it.

This newspaper, whenever the occasion has arisen, has never hesitated to point out to the Indian Government the appalling consequences which a low state of business confidence can have on a country's economy. So I am hoping New Delhi has learned something from what happened in Britain recently, the full significance of which we are only beginning to understand. It seems the Labour Government might already have done so because, among other things, a precedent has had to be created by releasing details of promised tax changes well in advance of the annual Budget in order to quieten the fears of the City of London. India does not perhaps run quite the same risks by ignoring the confidence factor as does Britain; we are not the centre of an international currency system and the world's finger is not constantly on our business pulse. Yet we would do well to note the extent to which Mr. Wilson's socialist intentions are now being tempered in deference to the feelings of mere capitalists both in Britain and elsewhere. Somebody the other day described confidence as the fourth dimension in economics. I believe he was not far wrong; the longer I live, the more I come round to the view that essentially economic problems are psychological ones. Take what has been happening to the pound, for example. Now that the slide down into devaluation has been checked for the time being, the eyes of international financial interests, private and official, whose control of the world's supply of foreign exchange is as crucial a factor in the future of the pound as it is in the success of India's five year plans, will remain fixed on the behaviour of the London Stock Exchange as the only barometer available of the health, stability and progress of the British economy. Thus Mr. Wilson, whatever the temptations and pressures to which he might be subjected, has to ensure that nothing his Government may seek to do will damage sentiment in the manner of a fortnight ago. The lesson for the Indian Government is obvious. If we want to convince financial opinion abroad that India is a good credit risk, then we must do what Mr. Wilson is being forced to do. Our stock markets, too, must be permitted to remain confident and healthy. It is simply no use expecting foreign financiers and business men to have faith in the future of your economy if your own refuse to show any.

When Lord Denning with his wife visited this country, not very long after his best-selling report in England, he was a guest of the Government of India. I wondered why. Was there, by any chance, a Profumo in the offing or was he going to advise the Government of India on security and the secret service? I didn't bother to find out: but I was reminded of it all when I recently saw a report that Mr. Shastri and Mr. Nanda would shortly be discussing reorganisation of Indian intelligence, civil as well as military. The subject is so rarely discussed. Intelligence, military or civil, has naturally to do with secrets: it may well be, however, that a secret service's topmost secret is its frequent incompetence. (In India, of course, everything is a little more secret than in almost any other country, if it has the remotest connection with defence.) As the Chinese swooped down in 1962, almost everything seemed to take India by surprise; and the total failure of intelligence could no longer be hidden. The country has never been told the whole truth about the episode in which an intelligence official of the army disappeared in Pakistan. I have heard it said that for years after independence there was no such thing in India as military intelligence; the whole business was left in the hands of a civil, police, department in the Home Ministry. Lord Denning it was who discovered with considerable surprise that the secret service in Britain, which had always been the special care of the Prime Minister, had at some point been transferred to the Home Secretary. What the present position in India is I do not know; but there seems ample room for misgivings. Seventeen years after independence, Parliament has a right to know what the Government has done with the special and intelligence branches of the police that the British left behind; their functions today cannot possibly be the same as in the old days. To what extent has there been a reorientation? Have their new functions been defined and laid down? Do the old officials know that Mr. Lal Bahadur Shastri, certainly a political suspect of years gone by, is now the Prime Minister? Intelligence anywhere is nine-tenths nonsense; it would be good to know that the tenth in India knows what it is about.

It is scarcely possible in these days of estate duties to decide how successful a man has been from the size of the fortune he leaves behind. So often do final figures merely represent the quality of the expert advice he obtained when alive on how to protect the interests of his intended beneficiaries from the rapacity of the tax collector. I do not, therefore, attach all that much significance to the fact that whereas Sean O'Casey, the Irish dramatist, who died recently at the advanced age of 84, left estate totalling £1,575, Ian Fleming, whose premature death at 56 occurred round about the same time, left £289,170 plus. For one thing, Fleming wrote exclusively for money, and I believe he was not entirely without access to that desirable commodity even before he began; it has been said that he married seldom but wisely. O'Casey, on the other hand, became one of the world's leading dramatists through single-minded dedication to his art. But the contrast remains all the same; and for those who still need to be reminded, it does provide an interesting indication of the differing value the public is apt to place on the works of literary men. One rather wonders how much Ian Fleming would have left had he reached 84; even now his estate is growing and will continue to do so for many years yet. At 56 a man does not usually feel old enough to devote the necessary attention to arranging his affairs to the least advantage of the tax people. I suspect that the greatest literary

fortune of all time might be the achievement of Miss Agatha Christie. The fortune she has amassed in the course of arranging the murders of countless members of the British upper middle class is believed to run well into seven figures, in pounds sterling, of course. Her books still sell on a scale which must gratify her publishers and delight the Chancellor of the Exchequer, while her play, *The Mousetrap*, now holds the all-time record for London theatre performances and looks like going on for many years yet. It could, of course, be a fitting tribute to Miss Christie's genius for mystery if she continued to fox the revenue men as she has so often done her readers.

A CORRESPONDENT IN LONDON WRITES: MR. LAL Bahadur Shastri made one of his most important conquests within a few hours of his arrival in London last Thursday. He met and completely disarmed what is traditionally a most difficult and critical audience, namely, a gathering of seventy or eighty business men and industrialists at the Council Chamber of the Federation of British Industries, by whom the affair was organised. In the short space of an hour he left the very distinct impress of his personality—modest, sincere, determined and honest. He spoke from carefully prepared notes and employed none of the polite evasions to which politicians are prone: India had, he said, benefited substantially from the unrestricted access to the U.K. market provided by Commonwealth preferences and he hoped it would be possible to restore the *status quo* soon—a clear reference to the 15 percent import surcharge. She also welcomed and wanted more collaboration from those who knew her intimately, as did the British. Britain's present balance-of-payments difficulties might well be of a temporary character, but he could hold out no hope that India's foreign exchange stringency would be short-lived. Mr. Shastri stood up well to the volley of questions that followed from such experienced cross-examiners as Mr. Paul Chambers of I.C.I., Sir Duncan Oppenheim of British-American Tobacco and Sir Geoffrey Eley of British Drug Houses. As a closing question he was asked whether it was true (as reported) that he swam the Ganges every day when a boy to get to school. He replied "No, sir". It was true that he had swum the river once when he could not pay to be rowed across, and he had recounted the affair on one occasion to some foreign newspaper correspondents, who had promptly attributed to him more swimming prowess than he really possessed. The story was told with the same disarming modesty as characterised his few public pronouncements and appearances throughout the all-too-short week-end he spent in London. But without any doubt at all, he scored an immense success. The British public may not know where to place Mr. Shastri in the, to them, complicated spectrum of Indian politics. They know for certain, however, that he is quite different from Mr. Nehru who walked with kings and emperors and was at ease with the intellectuals of two hemispheres. But I suspect they feel that in his down-to-earth way this Prime Minister is nearer to them and their problems.

A FORMER COLLEAGUE TELLS ME THAT HE RATHER enjoyed the little story I related in the last paragraph of my diary of 5th November. He thinks, however, that he can cap it with one of his own. A woman driver was first in the queue of cars when the traffic lights changed to green and on looking in her mirror she saw that immediately behind her was a police car. She promptly stalled her engine and a shrill chorus of hoots went up from the cars lined up behind the police car. The policeman switched on his loudspeaker and in those patronising, bantering tones which men always reserve for the subject of women drivers, said: "Gentlemen, let's be patient, we have all had to learn". The lights changed back to red and the hooting subsided. When green reappeared, the unfortunate woman driver, by now in complete panic, put her car into gear, let up on her clutch and reversed straight back into the radiator of the police car. Loud and clear, over the noise of the traffic, from the loudspeaker which the policeman had obviously forgotten to switch off, floated the immortal comment: "God, and what's the silly bitch going to do next?"

THE DITCHER

Guide for Investors

BURRAKUR COAL MAINTAINS DIVIDEND

THE Burrakur Coal Co. Ltd has produced satisfactory results for the year ended June 1964. The profit has risen from Rs. 13.33 lakhs for 1962-63 to Rs. 14.08 lakhs for 1963-64, after providing Rs. 21.30 lakhs (against Rs. 15.56 lakhs) for depreciation, Rs. 9.30 lakhs (against Rs. 20.77 lakhs) for taxation, Rs. 18.46 lakhs (against Rs. 6.95 lakhs) for development rebate reserve. A taxable ordinary dividend of 13 percent has been repeated. The yield amounts to 8 percent at the present price of Rs. 16.19 a share of Rs. 10 each. The carry-forward is Rs. 5,063, against Rs. 10,459 brought in.

Raisings moved up from 1.29 million tonnes to 1.34 million tonnes, but despatches dropped from 1.33 million tonnes to 1.32 million tonnes. Under the World Bank loan, the Company has received licences of Rs. 82.32 lakhs in c.i.f. value. Very little equipment under this loan remains to be shipped. The Company is expected to use all the licences by the beginning of 1965. The Loyabad coke plant has produced 101,546 tonnes, against 105,207 tonnes. The directors point to the improved transport situation, so most of the collieries are carrying low stocks.

Indian Oxygen Repeats

THE preliminary results of Indian Oxygen for the year ended September 1964 have been published. The pre-tax profit has risen from Rs 1.40 crores for 1962-63 to Rs. 1.59 crores for 1963-64. Taxation is allocated Rs. 86 lakhs, against Rs. 69.34 lakhs. A sum of Rs. 43.68 lakhs is transferred from general reserve. Development reserve is allocated Rs. 10 lakhs (against Rs. 19 lakhs), general reserve Rs. 63 lakhs (against Rs. 69 lakhs) and fixed assets replacement reserve Rs. 57,000 (against Rs. 32,000). A taxable ordinary dividend of 12 percent has been repeated which offers a yield of 5.1 percent at the present price of Rs. 23.75 a share of Rs. 10 each.

Orissa Minerals Pays the Same

THE Orissa Minerals Development Co. Ltd has maintained the taxable ordinary dividend at 10 percent for the year ended June 1964. At the present price of Rs. 20..03 a share of Rs. 10 each, the yield amounts to 5 percent. The profit has amounted to Rs. 2.88 lakhs, against Rs. 2.78 lakhs for 1962-63 after providing Rs. 5.31 lakhs (against Rs. 6.01 lakhs) for depreciation, Rs. 2.60 lakhs (against Rs. 7.03 lakhs) for taxation. General reserve is allocated Rs. 20.000 (against Rs. 80.000), development rebate reserve Rs. 47.500 (against Rs. 4.000), leaving a carry-forward of Rs. 4.767, against Rs. 5.266 brought in.

Raisings of iron ore dropped from 407.336 tonnes to 263,995 tonnes and despatches from 386,749 tonnes to 283.032 tonnes. The output of manganese ore declined from 57.528 tonnes to 49,598 tonnes, but sales rose from 54,031 tonnes to 62.521 tonnes. The offtake of iron ore dropped because blast furnaces of steel companies were relined. Normal despatches have been resumed since and sales during the current year are expected to improve. It is difficult to say whether the improvement in exports of manganese ore will be maintained. The supply of iron ore to Durgapur from Bolani Ores Ltd remained at the level of 1.6 million tonnes. Satisfactory arrangements have been made for the expansion schemes. The expansion should be completed by the end of 1967.

Bengal Rolling Mills Earns More

BENGAL Rolling Mills Ltd has earned a profit of Rs. 3.58 lakhs for the year ended April 1964, against one of Rs. 3.51 lakhs for 1962-63, after providing Rs. 1.91 lakhs (against Rs. 3.27 lakhs) for depreciation and Rs. 46.510 (against Rs. 9,164) for development rebate reserve. A taxable ordinary dividend of 10 percent has been declared. Contingency reserve is allocated Rs. 1.40 lakhs (against Rs. 1.70 lakhs) and general reserve Rs. 1.70 lakhs (against Rs. 1.85 lakhs). The carry-forward is Rs. 5,004, against Rs. 3,747 brought in. Sales amounted to Rs. 1.01 crores, against Rs. 1.03 crores. The working of the Company has suffered due to the shortage of billets, so the production capacity could not be fully used.

Birla Sugar Group Results Impress

THE results of the sugar companies under the management of Birla Brothers for the year ended June 1964 have been published. The directors say that during the current season, the sugar production target has been fixed at 3.3 million tonnes, against an actual output of 2.6 million tonnes in the 1963-64 season. The rebate of 50 percent on the basic excise duty on the excess production during October-November 1964, has been announced but it is thought that the concession should be extended throughout the entire season for encouraging a bigger output. The Tariff Commission has been asked to investigate the cost structure of the sugar industry and recommend a fair price for the commodity.

The profit of New India Sugar Mills Ltd has risen from Rs. 10.75 lakhs for 1962-63 to Rs. 29.79 lakhs for 1933-64, after transferring Rs. 2.25 lakhs (against Rs. 2.22 lakhs) to depreciation and Rs 274 (against Rs. 16.844) to development rebate reserve. A taxable ordinary dividend of 36.5 percent has been maintained, which offers a yield of 12.2 percent at the present price of Rs. 30 a share of Rs. 10 each. Taxation is allocated Rs. 19.50 lakhs, general reserve Rs. 4.25 lakhs (against Rs. 19.877), contingencies reserve Rs. 6.772 (against Rs. 28.481) and renovation and renewals reserve Rs. 2.50 lakhs (against Rs. 50,000). The carry-forward is Rs. 8.485, against Rs. 10.710 brought in. The cane crush dropped from 124,343 tonnes to 112.971 tonnes, but recovery improved from 9.92 percent 10.47 percent. A cane crush of 168,000 tonnes is expected during the current season.

Bharat Sugar Mills Ltd has increased the taxable ordinary dividend from 15 percent to 20 percent. The yield amounts to 13.8 percent at the present price of Rs. 14.50 a share of Rs. 10 each. The profit has improved from Rs. 5.98 lakhs to Rs. 10.83 lakhs, after providing Rs. 1.01 lakhs (against Rs. 90,323) for depreciation and Rs. 320 for development rebate reserve. Taxation absorbs Rs. 7.16 lakhs, contingencies reserve Rs. 42.815 (against Rs. 19,768), leaving a carry-forward of Rs. 8,118, against Rs. 9,429 brought in. The cane crush rose from 57,608 tonnes to 68,621 tonnes and recovery from 9.94 percent to 10.01 percent.

Gobind Sugar Mills Ltd has earned a profit of Rs. 30.99 lakhs, against Rs. 5.87 lakhs, after providing Rs. 4.58 lakhs (against Rs. 2.80 lakhs) for depreciation and Rs. 1.87 lakhs (against Rs. 31,000) for development rebate reserve. The taxable ordinary dividend has been increased from 20 percent to 22.5 percent. The yields amounts to 18 percent at the present price of Rs. 12.50 a share of Rs. 10 each. Taxation is allocated Rs. 20 lakhs, general reserve Rs. 6.50 lakhs, renovation and renewals reserve Rs. 2.70 lakhs (against Rs. 50,000) and contingency reserve Rs. 6.588 (against Rs. 33.417). The carry-forward is Rs. 13.916, against Rs. 3.093 brought in. The cane crush increased from 144,339 tonnes to 172,178 tonnes, but recovery dropped from 10.38 percent to 9.87 percent. During the current season, a cane crush of 200,005 tonnes is expected.

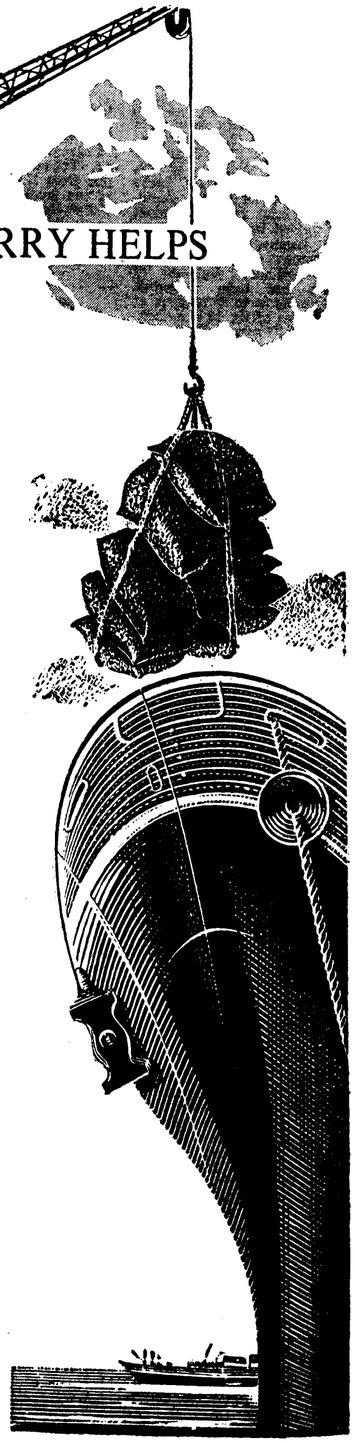
The profit of Upper Ganges Sugar Mills Ltd has increased from Rs. 39.44 lakhs to Rs. 53.79 lakhs, after transferring Rs. 11.60 lakhs (against Rs. 8.16 lakhs) to depreciation and Rs. 4.34 lakhs (against Rs. 67,000) to development rebate reserve. Taxation absorbs Rs. 30.95 lakhs, repairs and renovation reserve Rs. 4.59 lakhs (against Rs. 5 lakhs), general reserve Rs. 10.50 lakhs (against Rs. 29,800) and contingency reserve Rs. 12,035 (against Rs. 5,271). A taxable ordinary dividend of 72.5 percent has been maintained, which works out to a yield of 12 percent at the present price of Rs. 60.25 a share of Rs. 10 each. The cane crush rose from 285.383 tonnes to 367.030 tonnes and recovery from 9.76 percent to 9.84 percent. A cane crush of 466.000 tonnes is expected during the current year.

Premier Automobiles Resumes Dividend

SHAREHOLDERS of the Premier Automobiles Ltd who went without a dividend in 1962-63, have been rewarded with a modest dividend of Rs. 4 a share for the year ended June 1964, and they can look to the future with cautious optimism. The Company fared better during 1963-64, with the turnover up by about 20 percent from Rs. 20.12 crores to Rs. 24.10 crores and gross profit rising by nearly 36 percent from Rs. 1.19 crores to Rs. 1.62 crores. The Company's performance would have been still better but for the higher wage bill, rise in the cost of raw materials and higher rate of interest. The chairman has, however, assured the shareholders that every effort is being made to keep costs to the minimum. He has expressed the hope that the Company will be able to show better working results during the coming year.

The Company sold 4,083 motor-cars and 6,711 lorries and spare parts of the value of Rs. 2.55 crores during 1963-64, compared with 4,350 cars and 5,712 lorries and spare parts of the value of Rs. 1.92 crores in the preceding year. Sales during the first four months of the current year—July to October 1964—consist of 967 cars, 3,648 lorries and spare parts worth Rs. 60.53 lakhs, against 1,325 cars, 1,946 lorries and spare parts valued at Rs. 58.47 lakhs in the same period last year.

After providing Rs. 5.91 lakhs (against nil) for managing agents' remuneration, Rs. 76.95 lakhs (against Rs. 63.47 lakhs) for depreciation, Rs. 17 lakhs (against Rs. 13.75 lakhs) for development rebate reserve and Rs. 33.50 lakhs (against Rs. 19.15 lakhs) for taxation, the net profit for 1963-64 amounts to Rs. 29.07 lakhs, against Rs. 22.44 lakhs in the preceding year. With Rs. 39,392 brought forward from the previous year and including a sum of Rs. 7.35 lakhs being excess provisions, income and claims of previous years, the disposable surplus amounts to Rs. 36.82 lakhs. The directors have provided Rs. 16.04 lakhs (against Rs. 10.90 lakhs) for expenses and claims relating to previous years, Rs. 1,000 (the same) for debenture redemption reserve and Rs. 20.10 lakhs (against nil) for dividend reserve, leaving a balance of Rs. 67,197 to be carried forward. In the preceding year, a sum of Rs. 15 lakhs had been transferred to the general reserve and the dividend had been skipped. The proposed 4 percent dividend for 1963-64, absorbing Rs. 29 lakhs, is to be paid out of the dividend reserve.



In his statement to shareholders, the chairman, Mr. Lalchand Hirachand, says that the heavy capital expenditure of Rs. 5 crores on the Kalyan plant, which has not yet yielded any return, will begin to bear fruit gradually over the years to come. With the commissioning of the Press plant in Kalyan and the installation of balancing equipment in Kurla, the Company has very nearly completed the manufacturing programme which it had undertaken. It has now reached about 90 percent indigenous content in its lorry manufacture, and about 74 percent for the Fiat car. The Company is now ready to launch on its expansion programme for the manufacture of 15,000 commercial vehicles and components including engines, transmissions, axles, and other components a year. The chairman has, however, pointed out that the necessary finance for the expansion can be raised only if the Company is able to earn profits which are sufficient to pay a fair return to the investor and leave enough to plough back as reserves needed for the Company's development.

Mr. Lalchand Hirachand says that the Company has been particularly affected by a lower fixation of prices for its lorries and cars, compared with the prices fixed for other makes. He has expressed the opinion that the lower profitability of Premier Automobiles has been primarily due to a price disadvantage of Rs. 2,000 in the case of P.A.L. lorries and about Rs. 900 in the case a Fiat car when compared with the prices fixed for the other comparable vehicles. The chairman feels that unless this matter is re-examined in the light of the current situation and the injustice from which the Company is suffering is remedied, Premier Automobiles would be much handicapped in making rapid progress in its expansion plans which it is most anxious to carry out. He has urged the Government that the fourth plan should give the due and deserving consideration to the motor-vehicle industry, as it provides the basic sinews for the country's industrial development and economic growth. He has also pointed out that the cost structure of a motor-vehicle cannot be reduced unless the manufacturers are provided with facilities for increasing the production. The working of the Company's subsidiaries continues

1788
THE E.I.D.-PARRY GROUP
1964

SUGAR FOR EXPORT—

E.I.D.-PARRY HELPS

India is now a regular exporter of sugar. The country exported in 1962/63 4.18 lakh tonnes valued at over Rs. 16 crores. The Middle East, Malaysia, Japan, Canada & the U.S.A are her best customers. The production capacity is to be expanded by 5 lakh tonnes. This means more sugar for domestic consumption and export.

The E.I.D.-Parry Group with its five sugar factories at Nellikuppam, Pugalur, Samalkot, Pettaivaythalai and Tiruvalla is contributing to export expansion from its own output which is expected to improve in 1964 significantly to a lakh of tonnes. Export obligations have been met regularly and planned extensions are in progress. Sugar exports are now supplemented by confectionery in which E.I.D.-Parry has been firmly established as manufacturer for fifty years and exporter for twenty-five years.

The E.I.D.-Parry Group helps the South Indian canegrower with fertilisers, (especially super-phosphate) to raise the yield per acre and get the benefit of higher prices. In 1963 the Group supplied 25,000 tonnes of fertilisers to the sugarcane industry alone.

Other manufactures of the Group include sanitaryware, acids, chemicals, carbonic acid gas and industrial and potable alcohol.

Started as a small trading concern in 1788, the Group today comprises nine companies of substance, offering employment to more than 10,000 people, and continues expanding its activities in pace with the nation's march to economic independence.

THE E.I.D.—PARRY GROUP, MADRAS

PLAY YOUR PART IN THE NATIONAL DEFENCE EFFORT

satisfactory and both these companies had a larger turnover during 1963-64.

The chairman told newsmen who visited the Company's Kalyan and Kurla works on 27th November, that the turnover during 1964-65 will rise to around Rs. 30 crores and further to Rs. 36 crores in 1965-66. Against the licensed capacity of 14,400 vehicles, the Company is at present producing 13,000 vehicles. It has recently been permitted to raise its commercial vehicles capacity from 7,200 to 15,000 a year. This expansion programme would cost about Rs. 9 crores including a foreign exchange component of about Rs. 6 crores. The Company will soon be approaching the A.I.D. for its foreign exchange requirements. The expansion programme is expected to be completed within two years after the sanctioning of the foreign exchange loan. The Company's press plant for sheet metal components is expected to reach full production in about two months. With the commissioning of this plant, the Company would be able to save foreign exchange of about Rs. 1,032 on every commercial vehicle and Rs. 673 on every car. The Company's application to increase the capacity of Fiat cars to 25,000 a year is under the consideration of the Government. There are nearly 45,000 applicants on the waiting list for Fiat car. The new applicant for a car would get it after about 15 years, unless, of course, the Company is enabled to step up its production.

Jaya Shree Textiles to Raise Capital

JAYA Shree Textiles and Industries Ltd will soon offer 20,761 redeemable cumulative preference shares carrying a fixed dividend of 9.3 percent and 2,200 debentures of Rs. 1,000 each bearing an interest of 7 percent for public subscription at par. The preference shares now offered constitutes the unsubscribed portion of the 24,590 preference shares earlier offered to the existing shareholders. These shares are redeemable at par on the expiry of 13 years from the date of the issue with the option of the Company to redeem the whole or any part thereof after the expiry of ten years. The debentures are redeemable at any time after 1st January, 1970, but not later than 1st January, 1973. The entire public issue has been underwritten.

The proceeds of the issue will be used to finance the insulator project, the cotton spinning unit in Midnapore, West Bengal, and the expansion of the cotton factory in Rishra, West Bengal. Additional 9,800 spindles will be installed at the latter factory. The Company has been licensed to manufacture 2,000 tonnes of H.T. insulators and bushings a year. Orders for the equipment have been placed with foreign manufacturers, and deliveries are expected towards the end of 1964. The cost of the projects has been estimated at Rs. 2.60 crores.

J. K. Steel Maintains Dividend

J. K. Steel Ltd has maintained the taxable ordinary dividend at 15 percent for the year ended June 1964. At the present price of Rs. 17.75 a share of Rs. 10 each, the yield amounts to 8.5 percent. The profit has amounted to Rs. 27.96 lakhs, against one of Rs. 29.09 lakhs for 1962-63, after transferring Rs. 3.50 lakhs, against Rs. 3.19 lakhs to depreciation. Development rebate reserve is allocated Rs. 2.54 lakhs (against Rs. 6,000). Taxation, including Rs. 1.70 lakhs for previous years, absorbs Rs. 13.44 lakhs. In 1962-63, taxation reserve was allocated Rs. 14.63 lakhs. General reserve receives Rs. 5 lakhs (against Rs. 15.24 lakhs), leaving a carry-forward of Rs. 8,767, against Rs. 2,169 brought in.

Sales dropped from Rs. 1.73 crores to Rs. 1.59 crores mainly due to the fact that in 1962-63 they included disposals of accumulated stocks of jute baling hoops. The recently announced retention price of baling hoops is considered inadequate. So the Company has made representations to the Government to increase the price further. The supply of raw materials, particularly billets, has been unsatisfactory. The restrictions on electric power are continuing. The manufacture of electric hoist and chain pulley blocks has begun. The expansion of the wire rope plant is making progress. Most of the equipment have arrived and installation will begin soon. The Company has obtained foreign exchange loans from the Industrial Credit and Investment Corporation of India for expansion. Other expansion schemes are being considered.

West Coast Paper to Expand

THE preliminary report on the working of the West Coast Paper Mills for the year ended June 1964, showed that the Company had fared much better than in the preceding year. The sales rose by 11 percent from Rs. 4 crores to Rs. 4.44 crores, the gross profit improved by nearly 30 percent from Rs. 1.10 crores to Rs. 1.49 crores and the dividend has been stepped up from 11 percent to 13 percent. Improved results have been achieved in spite of higher costs of production. The directors state in their report that there was a steady increase in the cost of manufacture as a result of the rise in the prices of essential chemicals such as caustic soda, chlorine, soda ash and other materials. While the cost of manufacturing continued to rise, the controlled prices of paper remained unchanged.

The Company was able to do well because of improved efficiency and increased production. The Mysore Government has permitted it to extract 20,000 tons of bamboo from the forest outside the Company's area at a royalty of Rs. 7.50 a ton. Meanwhile, the management has already embarked upon an intensive programme of planting not only of bamboo, but also certain fast-growing varieties of tropical trees. A start has been made with plantation on 10,000 acres.

A spokesman of the Company told newsmen the other day that the Company would soon launch a Rs. 1.20-crore expansion programme, designed to step up production to 40,000 tonnes by the end of 1965-66. The production of paper amounted to 30,000 tonnes during the year ended June 1964, and the target for the current year is placed at 32,000 tonnes. The expansion will enable the Company to diversify production and manufacture new varieties such as art and glaze paper. The expansion programme is being financed out of the Company's retained earnings.

The Company has received the approval of both the I.F.C. and the Central Government to its proposal to invest Rs. 66 lakhs in equity shares of the Andhra Pradesh Paper Mills. West Coast will provide technical assistance to the new unit for a period of eight years on a remuneration of Rs. 4 lakhs a year. Explaining the collaboration agreement with the Andhra Pradesh Government in working the Andhra Pradesh Paper Mills, the Company's spokesman stated that West Coast and the Andhra Pradesh Government will each invest Rs. 66 lakhs and shares worth Rs. 66 lakhs will be issued to the public some time in March 1965.

Good Results from Hindustan Construction

THE Hindustan Construction Co. Ltd—a wholly-owned subsidiary of Premier Construction—has done exceedingly well during the year ended August 1964. Works bills

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service.

THE BANK WITH SERVICE PLUS

amounted to Rs. 19.31 crores and showed an increase of about 40 percent over the previous year's figure of Rs. 13.81 crores. The gross profit has been almost doubled from Rs. 1.84 crores to Rs. 3.56 crores. The dividend has been raised from 20 percent to 50 percent, and this again is covered 2.5 times by equity earnings. After writing back excess provisions amounting to 9.58 lakhs (against Rs. 52.34 lakhs), the disposable surplus amounts to Rs. 3.65 crores, against Rs. 2.36 crores in the preceding year. Appropriations include depreciation Rs. 55.16 lakhs (against Rs. 43.18 lakhs), development rebate reserve Rs. 8.56 lakhs (against Rs. 16.24 lakhs), taxation Rs. 195 lakhs (against Rs. 85.50 lakhs), additional provision for taxation Rs. 25 lakhs (against Rs. 25.25 lakhs), rehabilitation reserve Rs. 8 lakhs (against nil), contingency reserve Rs. 6 lakhs (against nil) and general reserve Rs. 55 lakhs (against Rs. 43 lakhs). Dividends absorbing Rs. 37.56 lakhs (against Rs. 15.96 lakhs) will be paid out of the general reserve. The directors state that during the year the Company secured major works amounting to Rs. 11 crores and further works of the same value have been secured since the close of the year.

Sirpur Paper Results Impress

THE Sirpur Paper Mills Ltd reports excellent results for the year ended June 1964, which more than justify the increase in the dividend from 50 paise to Rs. 1.20 a share of Rs. 10. The turnover has risen by nearly 56 percent from Rs. 4.12 crores to Rs. 6.41 crores, and the gross profit has shot up by about 172 percent from Rs. 39.65 lakhs to Rs. 1.08 crores. The ratio of gross profit to sales has improved from 9.6 percent to 16.9 percent, and this has been achieved in spite of the rise in the cost of raw materials, chemicals, power, fuel, freight, salaries, wages, etcetera. This became possible because of the marked increase in the output of paper from 24,000 tonnes to 36,000 tonnes.

Appropriations include depreciation Rs. 40.89 lakhs (against Rs. 32.46 lakhs), statutory development rebate Rs. 53 lakhs (against Rs. 3 lakhs), contingency reserve Rs. 3 lakhs (against nil) and general reserve Rs. 11 lakhs (against nil). The directors have written back a sum of Rs. 41 lakhs for development rebate reserve. The Company has no liability for taxation as there will be no assessable income in view of the carry-forward of unabsorbed depreciation and development rebate. The interim dividend paid during the year absorbed Rs. 9.56 lakhs. The final dividend will claim Rs. 23.22 lakhs and preference dividend will take up Rs. 5.53 lakhs.

After making various appropriations there remains a surplus of Rs. 77,351 to be carried forward against Rs. 1.08 lakhs brought in. In the preceding year, the directors have had to draw as much as Rs. 16 lakhs from the reserves to meet the dividend liability amounting to Rs. 19.19 lakhs.

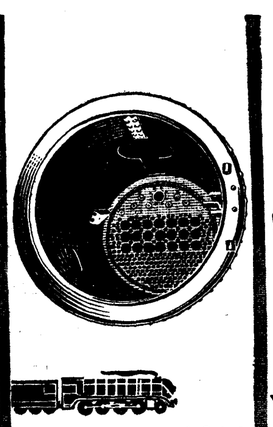
It might be recalled that the Company's working results during the preceding two years were affected mainly by the labour trouble. The directors state that there was a fire in the paper machine section in June 1964 and as a result of that one machine remained closed for about a fortnight. The loss due to the damage and subsequent loss of production, which is covered by insurance, is under scrutiny of the insurers. The Company has placed orders for indigenous machinery for effecting improvement in the existing plant and for the expansion of the pulp plant. The Company has applied to the Central Government for its requirements of foreign exchange for substantial expansion of the paper mills to be effected in collaboration with Kimberly Clark Corporation of the U.S.A. It is learnt that the Government has forwarded the Company's application to the A.I.D. in the U.S.A. and this is expected to be finalised shortly to enable the Company to proceed with its expansion programme. The Rs. 10-paid share of Sirpur Paper is currently quoted around Rs. 12, offering a gross return of about 10.5 percent.

Champarun Sugar Makes Profit

THE directors of Champarun Sugar Co. Ltd say in their report that they have taken steps to encourage cane development. The factories started early crushing during the current season. The Government has announced the rebate of 50 percent in the basic excise duty on the excess sugar production during October and November. The profit of the Company has amounted to Rs. 5.91 lakhs for the year ended June 1964, compared with a loss of Rs. 49,013 for 1962-63, after providing Rs. 4.42 lakhs (against Rs. 2.12 lakhs) for depreciation, Rs. 1.85 lakhs (against Rs. 98,711) for development rebate reserve and Rs. 10,000 for agricultural income tax. The taxable ordinary dividend of 6 percent has been declared, against nil. The yield amounts to 5.2 percent at the present price of Rs. 11.62 a share of Rs. 10 each. The carry-forward is Rs. 17,712. A sum of Rs. 1.44 lakhs has been transferred from general reserve.

The directors say that the implementation of the first phase of the rehabilitation programme could not be fully reflected in the results due to the late arrival of the equipment. The second phase of rehabilitation has been undertaken, and the necessary equipment is being installed.

Calcutta Chemicals Repeats



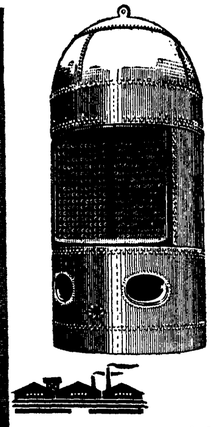
THE profit of Calcutta Chemicals Co. Ltd has risen from Rs. 14.92 lakhs for 1962-63 to Rs. 15.92 lakhs for the year ended June 1964, after providing Rs. 3.90 lakhs (against Rs. 3.79 lakhs) for depreciation. A taxable ordinary dividend of 18 percent has been maintained, which offers a yield of 9.4 percent at the present price of Rs. 19.12 a share of Rs. 10 each. Taxation absorbs Rs. 8.60 lakhs (against Rs. 7.70 lakhs) and reserve Rs. 4.38 lakhs (against Rs. 6.10 lakhs). Sales rose from Rs. 2.25 crores to Rs. 2.34 crores, but profits have been held down by the increased prices of imports and by rising production costs. The cut in the foreign exchange allocation has interrupted the working of the Company.

Rights from Electric Construction

ELECTRIC Construction and Equipment Co. Ltd has obtained the sanction of the Controller of Capital Issues for the issue of 590,660 ordinary shares of Rs. 10 each and 25,500 redeemable cumulative preference shares of Rs. 100 each carrying a fixed dividend of 9.3 percent at par. The directors have decided to issue 254,780 ordinary shares to the existing shareholders in the proportion of one share for every three held. The books of the Company will be closed from 22nd December to 28th December, 1964. According to the balance-sheet for the year ended October 1963, the net profit amounted to Rs. 29.36 lakhs, out of which a taxable ordinary dividend of 10 percent was paid. The ordinary shares are at present quoted around Rs. 13.37. The Company is engaged in manufacturing electrical equipment and various engineering products. The paid-up ordinary share capital stands at Rs. 69.93 lakhs.

E.R.W. BOILER TUBES

For trouble-free steam raising in all applications calling for rigid specifications, Electric Rasistance Weld tubes are in every respect equal to corresponding seamless tubes. High frequency current ensures efficient welding, and normalising is carried out in controlled atmosphere furnaces to produce a ductile tube with a smooth, blue finish.



LOCO

We supply E.R.W. loco boiler and superheater tubes from our Jamshedpur Works to meet the bulk of the Indian Railway's demand. These tubes meet all the technical requirements of Indian Railways.

MARINE

Our E.R.W. tubes meet all the tests specified by Lloyd's Register of Shipping. Indian Tube is on Lloyd's Register of Shipping's list of approved manufacturers.

LAND

Our E.R.W. tubes for land boilers are accepted by the D.G.S. & D. and comply with the Indian Boiler Regulations. We also carry ready stocks of this category at our Warehouses.

INDIAN TUBE THE INDIAN TUBE COMPANY (1953) LIMITED A TATA-STEWARTS AND LLOYDS ENTERPRISE

Standard Batteries Raises Dividend

THE increase in the dividend for the year ended June 1964 from 10 percent to 11 percent by the Standard Batteries Ltd is justified by the Company's improved performance during the year. The sales are up by about 18 percent from Rs. 1.40 crores to Rs. 1.65 crores and the gross profit has gone up by about 30 percent from Rs. 21.69 lakhs to Rs. 28.55 lakhs. After providing Rs. 2.07 lakhs (against Rs. 1.53 lakhs) for managing agents' remuneration, Rs. 6.24 lakhs (against Rs. 4.53 lakhs) for depreciation, Rs. 1.11 lakhs (against Rs. 96,212) for development rebate reserve, Rs. 12 lakhs (against Rs. 9 lakhs) for taxation, Rs. 2.20 lakhs (against Rs. 1.20 lakhs) for general reserve and Rs. 4.95 lakhs (against Rs. 4.50 lakhs) for dividend, there remains a surplus of Rs. 9,676 to be carried forward, against Rs. 12,045 brought in. The directors state that they have taken necessary steps for a substantial increase in the Company's production in order to meet the heavy demand for special types of batteries both for defence and civilian requirements as well as for exports. The production during the current year is expected to show a rise of about 50 percent over the previous year's figure. The management has been receiving proposals for technical collaboration from abroad. The fully equipped research laboratory of the Company is expected to be in operation by the end of the current year.

Progress of Usha Spinning

THE third annual report of Usha Spinning and Weaving Mills Ltd for the year ended June 1964, showed that the Company had fared extremely well, having earned a gross profit of Rs. 8.38 lakhs, against a loss of Rs. 1.39 lakhs in the preceding year. The chairman, Mr. Babubhai M. Chinai's speech holds out the promise of still better results in the current year. The Company has systematically overcome the initial teething troubles within a short time and achieved more than normal production results. The chairman says that the Company has not only steadily maintained its high standard of production but has even improved upon the quantity and quality of production. Besides, it has also implemented its programme of diversifying the quality into doubled yarn and hosiery yarn which are fetching a much better price than reeled yarn.

In view of the fact that the overhead cost of a unit with 12,000 spindles is relatively high in terms of output and profit yield, the Company proposes to install an additional 13,000 spindles at a cost of Rs. 1.05 crores. It expects to raise the amount by way of a further issue of Rs. 45 lakhs comprising Rs. 30 lakhs in equity shares and Rs. 15 lakhs in 9.3 percent cumulative redeemable preference shares. Out of the equity capital of Rs. 30 lakhs, the directors and their friends will take up Rs. 15.30 lakhs and the balance of Rs. 14.70 lakhs and the entire preference capital of Rs. 15 lakhs will be offered for public subscription.

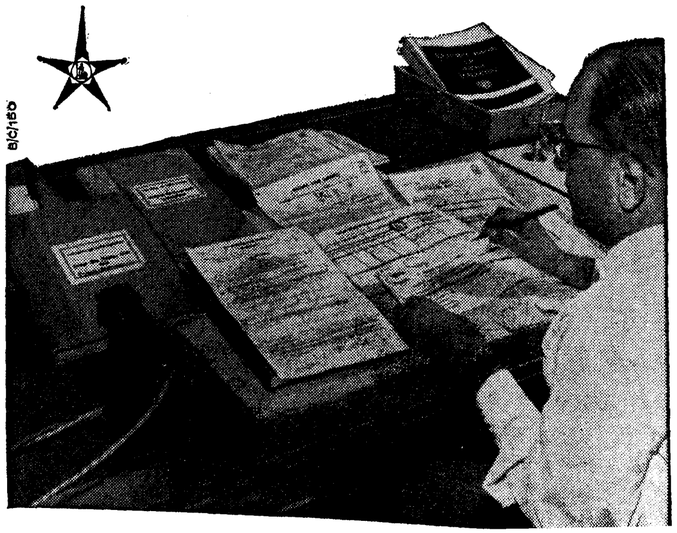
Negotiations are stated to be in progress for having the entire issue underwritten. The Industrial Finance Corporation has agreed in principle to grant the Company a further loan of Rs. 48.41 lakhs, comprising Rs. 40 lakhs of rupee loan and Rs. 8.41 lakhs of D.M. loan. An amount of Rs. 7.6 lakhs is to be met in terms of deferred payment and the balance of Rs. 3.96 lakhs is being brought from the Company's own resources. It has already made substantial progress in the implementation of the expansion programme. The building is nearing completion, the indigenous machinery has started arriving, orders for imported machinery have been finalised and the required yen credit has already been allocated. The Company is expected to go into production with the full capacity of 25,000 spindles during the latter half of 1965. Mr. Chinai has expressed the confidence that as soon as the expansion programme comes into operation, the Company's returns are likely to be much higher in view of the substantial reduction in overhead costs. This assures a very bright and promising future for the Company during the years ahead.

Pulgaon Mills Pays More

THE Pulgaon Cotton Mills Ltd has raised the dividend for the year ended June 1964 from 4 percent to 6 percent—40 paise to 60 paise a share of Rs. 10. The Company has fared much better than in the preceding year. While sales have registered only a small increase from Rs. 1.78 crores to Rs. 1.86 crores, the gross profit has gone up appreciably from Rs. 4.59 lakhs to Rs. 7.04 lakhs. The directors have provided Rs. 3.02 lakhs (against Rs. 2.52 lakhs) for depreciation and Rs. 1.30 lakhs (against Rs. 63,000) for taxation, leaving a net profit of Rs. 2.34 lakhs, against Rs. 1.27 lakhs in the preceding year. After providing Rs. 84,396 for development rebate, Rs. 1 lakh for general reserve and Rs. 50,000 for dividend reserve, there remains a balance of Rs. 5,737 to be carried forward, against Rs. 5,689 brought in. The proposed dividend will be paid out of the dividend reserve.

Central India Spinning Skips Dividend

THE brief preliminary report on the working of the Central India Spinning, Weaving and Manufacturing Co. Ltd. (popularly known as the Nagpur Mills) for the year ended June 1964, shows that the Company has fared much better than in the preceding year. The turnover has risen by about 8 percent from Rs. 6.14 crores to Rs. 6.63 crores, but the gross profit has shot up by over 150 percent from Rs. 17.88 lakhs to Rs. 45.27 lakhs. This, however, has failed to bring any cheer to the market; the quotation for Central India shares has, in fact, declined sharply from Rs. 100 to Rs. 93 after the release of the Company's report. The market's disappointment stems from the directors' decision to skip the preference dividend which had already been in arrears for seven years.



Apparently, the dividend has been skipped because of the large accumulated losses carried forward from the previous years. After providing Rs. 20.45 lakhs (against Rs. 14.29 lakhs) for depreciation, the net profit amounts to Rs. 24.82 lakhs, against

EXPERT ATTENTION TO YOUR EXPORT PROBLEMS

We can help EXPORTERS to expand their business by providing pre-shipment finance. We can advise EXPORTERS of trade enquiries, put them in touch with foreign buyers, and obtain credit information and status reports on foreign buyers.
We can give to EXPORTERS effective Letters of Introduction on our Foreign Branch Managers and Correspondents, provide them with Travellers' Cheques, Foreign Currency Notes, and Letters of Credit—when they travel.
We can collect and negotiate for EXPORTERS all types of foreign bills; give Excise guarantees where necessary and guarantees under Export Promotion Schemes; and buy various foreign currencies, at the finest rates, both "spot" and "forward".
We can advise EXPORTERS on matters concerning import restrictions, duties, etc. in foreign countries.
With our 14 branches overseas and correspondents in almost all parts of the world, we are well equipped to handle FOREIGN EXCHANGE BUSINESS of any description.

THEY ALSO FIGHT WHO WORK AND SAVE

THE BANK OF INDIA LTD.
T. D. KANSARA, General Manager

Rs. 3.59 lakhs in the preceding year. This profit has been used to reduce the accumulated losses from Rs. 54.26 lakhs to Rs. 29.44 lakhs. In addition to these losses, the arrears of preference dividend for eight years ended June 1964 add up to Rs. 26.96 lakhs. Besides, the Company has to provide arrears of depreciation amounting to Rs. 48.69 lakhs up to June 1960. In view of the accumulated losses, arrears of preference dividend and of depreciation, there seems no hope of the Company declaring a dividend on equity shares for some years to come. This partly explains why the Company's shares are quoted below par, despite the appreciable improvement in the Company's performance.

Tulsipur Sugar Pays Again

IN their report for the year ended June 1964, the directors of Tulsipur Sugar Co. Ltd take a fairly encouraging view of the outlook for the current year. The Company is expecting a cane supply of 1.5 million tonnes which is considerably larger than that of the 1963-64 season. During the latter year, the factory had a cane crush of 112,547 tonnes, against 80,020 tonnes for 1962-63. Recovery also improved from 10.14 percent to 10.39 percent. The Company has applied to the Government to increase the crushing capacity of the factory to 1,500 tonnes.

The profit has amounted to Rs. 6.35 lakhs, against a loss of Rs. 2.63 lakhs for 1962-63, after transferring Rs. 3.21 lakhs (against Rs. 2.69 lakhs) to depreciation, Rs. 71,000 to development rebate reserve and Rs. 3.11 lakhs to taxation. The taxable ordinary dividend of 10 percent has been declared, against nil. The yield amounts to 10.8 percent at the present price of Rs. 4.62 a share of Rs. 5 each. Taxation for previous years is allocated Rs. 41,725 and general reserve Rs. 75,000, leaving a carry-forward of Rs. 4,084. An interim dividend was paid earlier.

Balrampur Sugar Makes Profit

THE Balrampur Sugar Co. Ltd has earned a profit of Rs. 2.05 lakhs for the year ended June 1964, compared with a loss of Rs. 1.66 lakhs for 1962-63, after transferring Rs. 1.93 lakhs (against Rs. 1.79 lakhs) to depreciation. Development rebate reserve is allocated Rs. 56,000. A taxable ordinary dividend of 4 percent has been declared, which offers a yield of 6.7 percent at the present price of Rs. 1.50 a share of Rs. 2.50 each. The Company did not pay any dividend for 1962-63. The cane crush rose from 542,710 quintals to 716,900 quintals and recovery from 9.99 percent to 10.28 percent. The prospect for the current year is considered more encouraging in view of the larger cane crop.

Chemicals and Plastics Share Offer

CHEMICALS and Plastics India Ltd is offering 49,500 ordinary shares and 12,500 cumulative redeemable preference shares of Rs. 100 each for public subscription at par. The preference shares carry a fixed dividend of 9.5 percent, free of income tax, but subject to the usual deduction of tax. The present issue consists of 134,993 ordinary shares and 15,000 preference shares of which B.F. Goodrich Co. of the U.S.A., the foreign collaborators, will be allotted 17,212 ordinary shares for consideration other than cash and 17,213 ordinary shares for cash. The founders, directors, managing agents and their friends will subscribe for 51,068 ordinary shares and 2,500 preference shares. The entire public issue has been underwritten. The list opens on 16th December, 1964. Indplast Private Ltd has been appointed the managing agents of the Company.

The Company will set up a factory in Mettur, Madras State, to manufacture polyvinyl chloride and other chemicals. It will install another factory near Bombay for the manufacture of P.V.C. pipes, fittings, other extrusions and mouldings. A technical service agreement with B.F. Goodrich Company has been arranged for a period of ten years. (Details of the issue are printed on a later page in this issue of *Capital*).

Steel and Allied Products Expanding

IN their report for the year ended June 1964, the directors of Steel and Allied Products Ltd say that the expansion scheme to manufacture taps, dies and chasers in collaboration with Vermont American Corporation of the U.S.A. has been finalised. The project may be completed by the end of the current financial year and will cost about Rs. 32.50 lakhs, including Rs. 10 lakhs of working capital. The directors propose to issue rights ordinary shares for Rs. 12.50 lakhs. The remaining funds will be obtained by loans from the Industrial Finance Corporation and other sources. Sales of the Company rose from Rs. 60.62 lakhs for 1962-63 to Rs. 76.68 lakhs for 1963-64. The trading profit has risen from Rs. 9.97 lakhs to Rs. 11.67 lakhs. The ordinary dividend of 12.5 percent has been declared, against 10 percent for 1962-63.

Mysore Acetate Share Offer

THE Mysore Acetate and Chemicals Company Ltd which proposes to set up a plant at Mandya (Mysore State) for the manufacture of about 1,200 tonnes of cellulose triacetate of film quality and 2,400 tonnes of cellulose acetate with expert foreign collaboration is offering 70,000 equity shares of Rs. 100 each for public subscription to raise part of the funds required for the project. Cellulose acetate will be converted into moulding compounds by the addition of plasticizers and fillers. Construction of the factory is expected to commence early in 1965 and completed in stages, reaching full production of all grades of cellulose acetate and moulding compounds by the end of 1966. The location of the factory is ideal. The acetic acid, one of the principal raw materials required by the Company, will be readily available from the distillery of the Mysore Sugar Company. No difficulty is visualised in the supply of cotton linters of required specification.

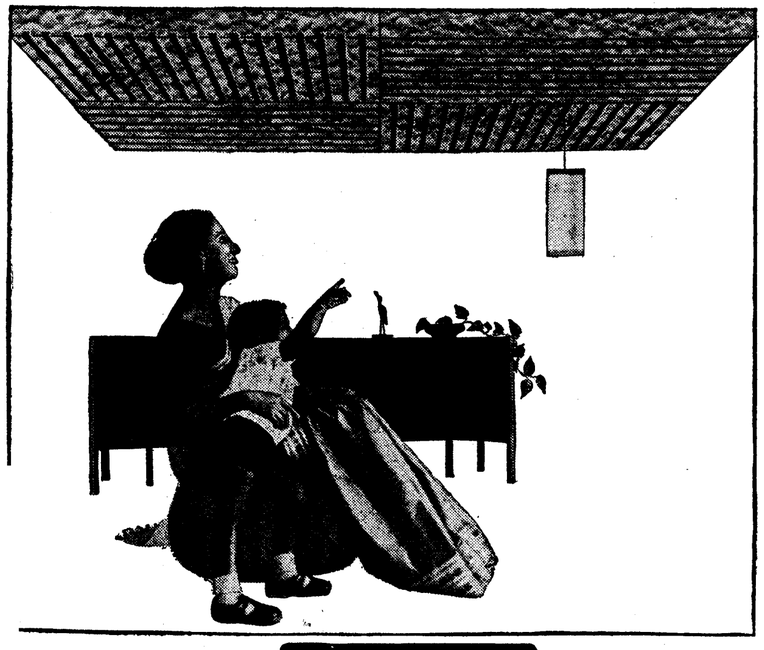
The Hindustan Photo Film Manufacturing Company which will be the biggest consumer of cellulose triacetate is situated fairly close to the factory. The Mysore Acetate's plant, it is claimed, will be the first integrated project for cellulose acetate plastics starting from cotton linters and acetic acid. A target of 10,000 tonnes of cellulose plastics has been proposed for the fourth plan and a substantial part of these requirements will be met by the Mysore Acetate and Chemicals Company. The Company has secured the collaboration of Von Kohorn-Universal Corporation of the U.S.A. and Aktiebolaget Chematur of Sweden for the supply of machinery and equipment for the manufacture of cellulose triacetate, acetate moulding compounds, together with all the required auxiliary facilities.

The Company has also secured the technical know-how of the well-known Belgian firm of Gevaert Photo Production for the manufacture of cellulose triacetate of the quality suitable for use in photographic films. The project is being financed through an equity issue of Rs. 2.25 crores and foreign exchange loans of Rs. 1 crore from the Export-Import Bank of Washington and Rs. 75 lakhs from the I.C.I.C.I. It has an authorised capital of Rs. 5 crores of which Rs. 2.25 crores—all in equity shares of Rs. 100 each—is being issued for the present. Out of this, the Mysore Government is taking up Rs. 50 lakhs, the Mysore Sugar Company Rs. 30 lakhs and the directors and their friends Rs. 7 lakhs. Von Kohorn-Universal Corporation is being allotted shares worth Rs. 58.5 lakhs for consideration other than cash in part payment of the cost of plant and machinery, know-how, blueprints, etcetera. The Swedish firm of Aktiebolaget Chematur will be allotted shares of the value of Rs. 9.5 lakhs for consideration other than cash in payment of the cost of know-how, relevant blueprints, manuals fee, etcetera. The balance of 70,000 equity shares are being offered for public subscription. The subscription list is opening on 10th December and it will close on 22nd or earlier, but not before 12th December. The entire public issue has been underwritten. The board of directors includes Mr. A. M. M. Murugappa Chettiar, Mr. Henry John Cail, General K. S. Thimayya, Mr. Jayanna M. Chigateri, Mr. K. V. Shankara Gowda, Mr. Bahubali Gulabchand and Mr. Venugopal Naidu.

Kutch Salt Profit Down

THE Kutch Salt and Allied Industries Ltd has maintained the dividend for the year ended August 1964, at 7.5 percent, but the Company's working results show a considerable setback, compared with the previous year. Despite an increase in the sales from Rs. 14.08 lakhs to Rs. 26.30 lakhs, the gross profit is lower at Rs. 3.47 lakhs, against Rs. 4.77 lakhs in the preceding year. The poor performance is attributed to certain natural calamities. The Company's salt works in Jakhau suffered serious damage due to the high tidal waves resulting in the loss of production of about 15,000 tons of salt. The extent of the damage caused is estimated at around Rs. 2 lakhs, apart from the estimated loss of production.

The Company produced 150,000 tons of salt. Shipments amounted to 97,297 tons, while despatches by rail amounted to 5,056 tons. After providing Rs. 2 lakhs (against Rs. 85,328) for depreciation, Rs. 2.27 lakhs (against Rs. 4,356) for development rebate, making certain other allocations amounting to Rs. 60,000 (against Rs. 1.78 lakhs), writing back excess provisions amounting to Rs. 1.17 lakhs (nil) and deducting other prior charges, there remains a balance of Rs. 13,498 to be carried forward, against Rs. 21,905 brought in. No provision has been made for general reserve which had been allocated Rs. 1.50 lakhs in the preceding year. The dividend on the equity capital absorbing Rs. 1.01 lakhs (against Rs 84,000) is to be paid out of the general reserve. Plans for achieving a production of about 150,000 tons of salt from the Kandla unit during the current year have been finalised. The Company has received licence for the import of six diesel locomotives from Bulgaria.



Allied International Will Enter Market Soon

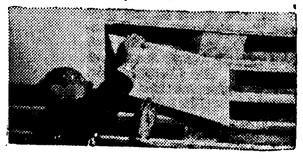
ALLIED International Products Ltd is a new company which has been formed to undertake the manufacture of standard parts for motor-vehicles and aircraft in collaboration with Textron Industries of the U.S.A. The factory is proposed to be located near Moradabad (Uttar Pradesh). The project is estimated to cost about Rs. 1.10 crores, which will be met by the share capital of Rs. 75 lakhs, a loan of Rs. 30 lakhs from the Industrial Finance Corporation of India and Rs. 5 lakhs from banks. The Company has an authorised capital of Rs. 2 crores of which Rs. 75 lakhs is being issued in the beginning. Shares worth Rs. 25 lakhs are being taken up by the foreign collaborators in consideration for the supply of plant and machinery.

The promoters, directors and their friends will take up shares of the value of Rs. 15 lakhs. The balance of Rs. 35 lakhs is being offered for public subscription some time during December. The entire public issue has been underwritten. In addition to supplying machinery, the foreign collaborators will assist the Company in designing the factory and layout and supply technical know-how. When the factory goes into full production, it is expected to result in a foreign exchange saving of about Rs. 1 crore a year.

Tractors (India) Pays Same

ALTHOUGH the dividend has been maintained at Rs. 2.25 a share and that too on the enlarged capital, the working results of Tractors (India) Ltd for the year ended June 1964, show a considerable setback compared with the previous year's

Thermocole



keeps your room so cool, so gay!

THERMOCOLE is foamed polystyrene: the lightest rigid insulation material. It is available in white slabs, as well as in gaily patterned tiles that make attractively gay false ceilings.

THERMOCOLE is efficient. Its closed cells provide an effective barrier against heat, noise and moisture. In fact, one inch of THERMOCOLE insulates better than four feet of concrete.

THERMOCOLE is versatile. It is ideal for insulating roofs, walls and floors in all kinds of buildings. It is also excellent for fabricating light-weight insulating partitions and doors.

THERMOCOLE is feather-light yet strong, durable and easy to work with. It cuts structure and labour costs. Efficiency with economy—that's the insulation THERMOCOLE provides.

DUNLOP OFF-THE-ROAD TYRES

for the toughest job

Here are Dunlop Off-The-Road tyres of great strength and durability—Power Rib, EM. 7 Earthmover and Power Grip. The tread patterns and the especially tough casings of these tyres have been developed after prolonged field trials on many kinds of terrain in many parts of the world. These are tyres that have proved themselves in service at multipurpose projects, like Koyna, Nagarjunasagar, Kosi, Sharavathi, Beas...In the iron ore mines of Bihar Madhya Pradesh, Goa... in the far-flung coalfields of the National Coal Development Corporation and at many other sites all over India.

DUNLOP

LONGEST TYRE MANUFACTURING EXPERIENCE IN INDIA

DOTRC-8

performance. In spite of a considerable increase in the turnover from Rs. 2.18 crores to Rs. 2.80 crores, the gross profit has declined appreciably from Rs. 22.90 lakhs to Rs. 18.16 lakhs. The provision for depreciation amounts to Rs. 1.29 lakhs, against Rs. 1.19 lakhs and taxation claims Rs. 9.18 lakhs, against Rs. 17.40 lakhs. The proposed dividend absorbs Rs. 9.15 lakhs, against Rs. 7.21 lakhs.

The directors state that the Coles Cranes of India which has been in production for three years is operating to its full capacity now. Plans for expansion and diversification of the Company's products are already in hand. The petroleum equipment has also contributed substantially to the 1963-64 results and its progress is expected to continue with the development of the petroleum industry in the country. The Company has booked very good orders for dynacraft since the beginning of the current financial year, and it has now received all-India franchise from Dynacraft Machine Company for its conveyor equipment. The management is actively considering the establishment of a workshop in the heart of the Bengal and Bihar coalfields. This is expected to bring in larger business.

Saurashtra Cement Fares Well

THE Saurashtra Cement and Chemical Industries Ltd reports encouraging results for the year ended June 1964, which have enabled the Company to wipe out its previous losses amounting to Rs. 22.70 lakhs and also clear arrears of preference dividend three-and-a-half years ended June 1960, amounting to Rs. 11.78 lakhs. The Company's sales during 1963-64 are higher at Rs. 2.18 crores, against Rs. 1.90 crores in the preceding year. The gross profit has improved from Rs. 62.31 lakhs to Rs. 70.35 lakhs. After providing Rs. 3.71 lakhs (against Rs. 3.84 lakhs) for managing agents' remuneration, Rs. 33.35 lakhs (against Rs. 23.81 lakhs) for depreciation and Rs. 2.30 lakhs (against nil) for taxation, the net profit amounts to Rs. 30.99 lakhs, against Rs. 34.66 lakhs in the preceding year.

Writing back a sum of Rs. 11.68 lakhs being excess provision of development rebate and adjusting the previous accumulated debit balance of Rs. 22.70 lakhs, the surplus available for disposal amounts to Rs. 19.97 lakhs. From this, the directors have set aside Rs. 1.47 lakhs (against Rs. 3.30 lakhs) for development rebate, Rs. 4.27 lakhs (against Rs. 3.89 lakhs) for rehabilitation reserve and transferred Rs. 12 lakhs to a special reserve representing profits exempt from tax under Sections 84 and 101 of the Income Tax Act, leaving a sum of Rs. 2.23 lakhs to be carried forward. The preference dividend for three and a half years is to be paid out of the special reserve.

The directors state that the production of clinkers fell slightly from 210,000 tonnes to 203,000 tonnes, while that of cement was a little higher at 219,000 tonnes, against 214,000 tonnes. The Company is making satisfactory progress in the implementation of its expansion programme for raising the capacity from 200,000 tonnes to 500,000 tonnes of cement a year. The directors hope to be able to achieve the expanded capacity by the end of March 1965.

PEPPER PRICES IMPROVE

There has been a further improvement, although mild, in the price of pepper, the latest quotation from Cochin being Rs. 360 a quintal for spot delivery, garbled variety, compared with Rs. 350 a quintal a couple of weeks ago. The U.S.A. has bought some quantity in the last fortnight at prices varying between 38 cents and 41 cents a lb. After paying 40 to 41 cents to the Indian shippers the American buyers have reduced their offer to 38 cents. When they met with some seller resistance at this rate, they have raised their price ideas up to 40 cents. Even at this rate the American offer is 1 cent down from the Indian rate. As the disparity is only 1 cent, the exporters do not visualise any serious difficulty for doing business with the U.S.A. Indonesia is not a serious rival at present, as the control price has again been raised to 40 cents a lb by the Indonesian Government. In the meanwhile, arrivals of new crop in the terminal markets of India are picking up. Alleppey is reporting a daily arrival of anything between 800 quintals and 1,200 quintals.

The third forward market for pepper will be inaugurated this week in Alleppey by Kerala Governor's Adviser, Mr. Prasad. The other two markets are located in Cochin and Bombay. Alleppey is the main terminal market in the Travancore side.

COFFEE CURING FACILITIES

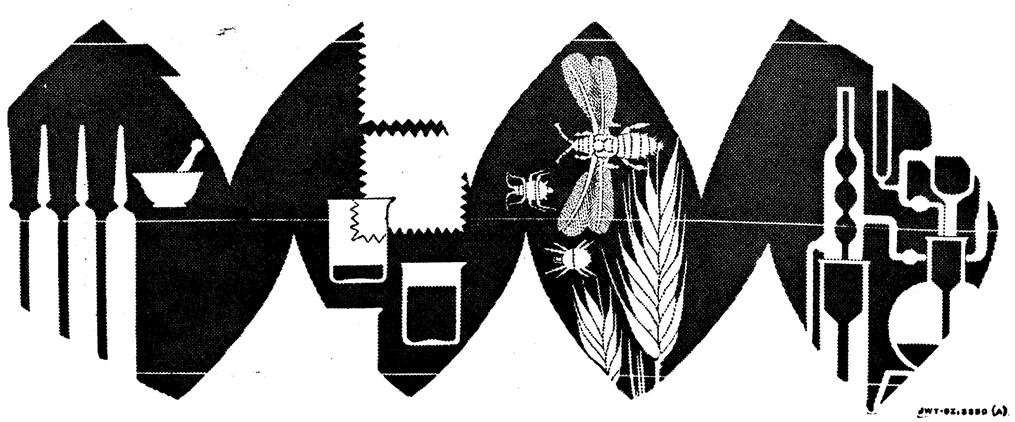
A sub-committee appointed by the Coffee Board to look into the coffee curing needs has recommended an additional curing capacity of about 5 000 tons to 10,000 tons in the inland Mysore area. The Committee found that the existing curing capacity with the proposed increase might be quite sufficient to handle the present production and the possible increase in crop in Madras and Kerala States. The total curing capacity at present in these States is as follows: Mysore 60.650 tons, Madras 15.160 tons and Kerala 13.300 tons in each season. The total number of curing establishments in south India is 30.

a world of diversification

A growing nation has diverse needs and diversification is the bedrock of modern industrial progress. SANDOZ, a modern research and industrial complex, is constantly alert and alive to the old and new needs of a changing market, a changing India.

The Sandoz enterprise is an integrated unit equipped for mass production, quality control, market and motivational research, planned selling and countrywide distribution. Sandoz is geared to the demands of the new industrial India.

PHARMACEUTICALS: The discovery and development of many new drugs and medicines spring from the extensive research Sandoz carries on in this field. Sandoz explores new pathways in the service of medical science.



DYES AND CHEMICALS: Another important arm of Sandoz activity. The Dyes Research Department concentrates on the problem of dyeing the new synthetic fibres. Special attention is also given to the easy application of dyestuffs of greater fastness to traditional materials like wool and cotton.

AGRO-CHEMICALS: Another established field where Sandoz has made remarkable progress. Sandoz Insecticides, Fungicides, Herbicides and Rodenticides are extensively used in Indian agriculture today, increasing yield by preventing crop destruction.

RESEARCH & DEVELOPMENT: The research knowledge and talent of Sandoz scientists all over the world are pooled to create products that fulfil human needs and contribute to India's industrial and technological progress.

The Stock Markets

DULL CONDITIONS CONTINUE: NEW ISSUES DIVERT ATTENTION

Wednesday Evening.

LISTLESS conditions prevailed in the Calcutta stock market during the past week. A limited turnover has passed in clearing shares, while business in cash scrip has been negligible. Share prices fluctuated narrowly on alternate bouts of buying and selling. Lyons range is in a depressed mood since it feels that the Government will not give any fiscal incentives to stimulate activities in the capital market until the next Budget in February. There was a temporary rally during mid-week because Mr. Lal Bahadur Shastri, Prime Minister, said in London that the Government would encourage the flow of private foreign capital into Indian industries.

Attention has been, for the time being, diverted to several new issues recently floated. Some more good issues will be offered in the coming weeks. Except for Sandoz's offer, almost all other issues have been underwritten. Although some new offers are attractive, it is doubtful whether the public response will be good. Confidence of investors has been shaken because of two factors. Firstly, companies are unable to pay attractive dividends due to the heavy tax burden on the corporate sector. Secondly, the growth prospects for shares have suffered due to the difficulty in issuing bonus shares under the present fiscal system.

The shortage of funds in the stock market has been aggravated due to the flotation of several new issues. Operators are also discouraged by the proposed cuts in the allocation of foreign exchange to actual users during October 1964-March 1965. Industries, particularly cables, have suffered a great deal due to the shortage of copper, lead and zinc.

Indian Iron are sluggish and turnover has dropped considerably. The Company produced 99,339 tonnes of pig iron in November, against 94,065 tonnes in October. The production of steel ingots dropped from 85,674 tonnes to 84,242 tonnes and that of salable steel from 68,190 tonnes to 61,337 tonnes. Despatches of salable steel also decreased from 61,883 tonnes to 60,423 tonnes. Except for scattered support in Jessop and Jay Engineering, engineering shares are dull. Guest, Keen, Williams, Texmaco, Braithwaite and Kumardhubi have tended to drop. J. K. Steel and Dalmia Iron are about steady. Burrakur are steady in coal shares due to a good report. The Company has earned a larger profit and repeated the taxable ordinary dividend. Other coal shares are being freely offered without attracting buyers. The drop in the demand for coal is being bearishly interpreted. Western Bengal and Central India have lost.

In the miscellaneous section attention is concentrated on clearing shares. Dunlop Rubber are about steady. Hindustan Motors, Indian Aluminium and Indian Copper have tended to drop in the absence of support. Indian Oxygen have met with scattered support on earning a larger profit, but Associated Battery have lost. Among new shares, Hindusthan Twyfords and Phillips Carbon have declined due to profit-taking. India Carbon are steady on declaring a maiden dividend. Managing agency shares like Martin Burn and Balmer Lawrie have weakened. There is virtually no interest in electric and bank shares. Sugar shares are difficult to transact in the absence of buyers. The outlook for sugar during the current season is not considered encouraging since cane supplies continue to be diverted for the manufacture of *khandsari* and *gur*. Paper shares are quiet. Orient, Sirpur and Titaghur have lost while Sesashayee are about steady.

Birla are active in jute shares due to speculative manipulations. Other jute shares are neglected since the gunny market has reacted due to the calling off of the strike in Pakistani mills. Barnagore are nevertheless steady on replacement buying. Union, Kamarhatty, Anglo-India, Ganges and Kelvin are weaker. Cotton mill shares are sluggish. J. K. Rayon have reacted due to profit-taking. Bharat Commerce and Dunbar are steady, although Elgin have weakened. Investors are inclined to wait until the effects of the partial control of cloth are more fully assessed. Scattered business in Dooars and Assam tea gardens has been transacted, but prices have generally tended to decrease. The decline in the average price of teas is a major restraining factor.

Government securities are dull and turnover is negligible. The 3 percent Converson Loan 1986 is quoted around Rs. 62.05. Prices of short- and medium-dated stocks are nominally steady. There is virtually no support from banks which are busy conserving funds for meeting the busy season's demand. Almost all State Government loans are available at a discount.

Tata Steel Output

The Tata Iron and Steel Company Ltd reports that the approximate production of iron and steel at the steel works in Jamshedpur during November 1964 was: iron 170,600 tonnes; steel ingots 173,200 tonnes and salable steel 135,300 tonnes.

Bombay

PRICES DECLINE IN SMALL TURNOVER

AMENDMENT TO WEALTH TAX ACT DEPRESSES

Wednesday Evening.

DALAL Street is passing through a period of unrelieved gloom. Equities sought new low levels last week due essentially to the lack of support. Selling was never pronounced and most of it was in the nature of distress selling rather than tired bull liquidation. The market struggled hard to tuck up its feet, but the rally that came about during the latter half of the week fizzled out quickly due to the lack of follow-up support. Over the week, equity prices showed only minor variations and the price pattern was a mixed one.

Trading sentiment during the week was further undermined by the amendment to the Wealth Tax Act and the Central Finance Minister, Mr. T. T Krishnamachari's statement that the Government would get very near to solving the problem of black money in a year or two. Some uneasiness was also caused by the announcement of the 10-percent cut in the foreign exchange allocation to actual users for the second half of the current year. Reports that the Government is in no mood to concede the stock exchange authorities' plea for doing away with the proposed restriction on the currency on blank transfers had also an unsettling effect on the market sentiment.

Mr. Krishnamachari's statement that he preferred private foreign investment to foreign Government loans was well received in market

circles as it held out the hope that the Government would do something to improve the economic climate in the country in order to attract foreign capital. The Prime Minister, Mr. Lal Bahadur Shastri's statement in London that the Government was taking measures to deal with the sluggishness in the capital market and that the difficulties in the way of capital formation were being overcome caused a mild flutter. Equities staged a sizable rally from their week's lowest levels but the recovery proved to be an extremely short-lived affair. Operators argued that the Government had long been talking about the need to tone up the capital market but had done little that might revive confidence in the investment market. Conditions have, in fact, continued to deteriorate.

The decline in equity prices does not fully reflect the agony of the stock market. The latter is worried over the continuing shrinkage in turnover. Activity has dwindled to such proportions that the entire week's business can be easily put through in a single two-hour session without causing any great excitement in the market. Outside interest remains conspicuous by its absence and with the flow of outside money virtually dried up, there is little inclination on the part of professional operators to extend their commitments. Bulls have been badly mauled and it will take time before their wounds get healed up. But bears too are in no mood to be aggressive because equity prices have sunk to fairly low levels. The market as a whole is standing within 3 percent of its 1964 low and quite a few scrip have established altogether new low levels. Techanical considerations alone could produce a sizable rally, but only if something happens to change the mood of the market.

After striking a new low in the current downtrend, Tata Steel staged an impressive recovery on short covering and some renewed bull support following the release of the record production figures for November. But the rally turned out to be extremely short-lived. The quotation which had recovered from Rs. 142.75 to Rs. 146.50 receded quickly to Rs. 143.75. Indian Iron followed a like pattern, although the recovery was less marked because of the lower production figures for November.

Sentiment in textile shares continued to be affected by the rising trend in cotton prices and the persistent weakness in rayon shares because of the further setback in rayon yarn prices. The fall in rayon shares has indeed been phenomenal. Despite an element of bull manipulation, National Rayon eased further as there has been no settlement of the three-week old strike.

Engineering shares attracted moderate support at lower levels, but they were unable to sustain the rise due to the emergence of selling pressure induced mainly by the weakness in other sections. Motor-car shares were comparatively steady due to the scarcity of offerings at lower levels. Sugar and shipping shares were barely steady without much activity. Among miscellaneous counters, Premier Construction held firm despite considerable corrective profit-taking. Bank, insurance and electric shares continued to remain inactive. Cash shares were subdued with nominal turnover The investment market being in bad shape, the demand for applications for new issues, currently on offer, is reported to be extremely poor.

Madras

SELECTIVE SUPPORT FOR PLANTINGS

SHORTAGE OF FUNDS MAY WORSEN

Tuesday Evening.

THE Madras stock market has shown mixed trends during the past week. There has been scattered support for selected sugar, planting and miscellaneous shares, while textile shares have tended to weaken on a predominance of sellers. Although easier advices from the Bombay stock market and the lack of support from outside sources have had little influence, turnover has dropped considerably. The near-term trend is likely to be cautious considering that the shortage of funds will be aggravated due to the closing of bank accounts for the year ending December 1964.

Business in Government securities is patchy, and most State Government loans are being freely offered. There are few sellers in good preference shares. Bank shares are sluggish, although prices are about maintained. Indian have come to hand at Rs. 158 and Indian Overseas at Rs. 150. In sugar shares, Deccan have recovered to Rs. 10.57 ex-rights on replacement buying. Mysore are steady at Rs. 27.75 on declaring a taxable ordinary dividend of 15 percent. E.I.D. are available at Rs. 35.65 and India at Rs. 8.90. K.C.P. have been done at Rs. 23.50 and Jeypore at Rs. 16.50.

In planting shares, Consolidated Coffee have hardened to Rs. 25.30, but Blue Mountain have reacted to Rs. 2.20. Cochin Malabar are easier at Rs. 6.12 and Ouchterlony at Rs. 3.40. Periakaramalai have been transacted at Rs. 3.72. Nelliampathy are steady at Rs. 5.58, Peermade at Rs. 20.75 and Parkside at Rs. 24. Among companies producing both tea and coffee, Panchura have come to hand at Rs. 3.35 on paying a taxable ordinary dividend of 15 percent. In coffee shares, Anaparai are wanted up to Rs. 3.10 on declaring a taxable ordinary dividend of 20 percent. Wartyhully are steady at Rs. 2.64, Bababudin at Rs. 5 and Mysore Coffee at Rs. 4.12. In electric companies, Vellore are quoted at Rs. 15.55. The Company is issuing rights ordinary shares at par, in the proportion of one new share for every four held.

In textile shares, South India Viscose are quiet at Rs. 150 and Travancore Rayon at Rs. 17.80. Lakshmi are maintained at Rs. 132 and Madura at Rs. 35.15. Anglo-French have weakened to Rs. 148 and Mettur to Rs. 225. Bangalore Woollen are quoted at Rs. 281 and Buckingham at Rs. 278. Scattered support has been forthcoming for Radhakrishna at Rs. 27.35, but Ramakrishna have been sold down to Rs. 199.40.

In miscellaneous shares, Ashok Leyland are steady at Rs. 7.12, but Aluminium Industries are easier at Rs. 23.15. In cement shares, India have hardened to Rs. 5.08, but Dalmia are weaker at Rs. 12.90. Mettur Chemical are quoted lower at Rs. 14. South India Steel and Sugar have dropped to Rs. 8.85 since the Company has decided to issue 100,000 ordinary shares of Rs. 10 each for public subscription. Seshasayee Paper are maintained at Rs. 7.20, but Mysore are available at Rs. 11.43. Kirloskar Electric are supported up to Rs. 22.25, but Madras Rubber have weakened to Rs. 8.90. Parry's Confectionery have improved to Rs. 3.05, but Spencer have dropped to Rs. 21.50. Textool are quoted at Rs. 128 and Standard Motors at Rs. 10

THE WEEK'S TRANSACTIONS

ANNOUNCEMENT REGARDING PROPOSED ISSUE OF SHARES

This is NOT a Prospectus. Persons interested in full details may obtain copies of the Prospectus from the Registered Office of the Company or from the Bankers or Brokers named hereinafter.

HINDUSTAN FERODO LTD.

A member of the TURNER & NEWALL Group

(INCORPORATED ON 1ST JULY, UNDER THE COMPANIES ACT, 1956)

Registered Office: AGRA ROAD, GHATKOPAR, BOMBAY 77 AS.

EXISTING AND PROPOSED ACTIVITIES OF THE COMPANY

The Company was formed to take over the manufacturing and associated selling activities of Asbestos, Magnesia and Friction Materials, Ltd., Ghatkopar, Bombay 77 AS. Its main activities consist of the manufacture of "Ferodo" woven metallic and moulded brake and clutch linings, "Firefly" brand asbestos yarns, dry and lubricated asbestos plaited packings, asbestos cloth, proofed asbestos sheetings, asbestos tape, asbestos rope lagging and compressed asbestos fibre jointings, and "Limpet" asbestos sheets. The Company has now been licensed by Government to manufacture asbestos millboard and "Ferobestos" flooring sheets in addition to the above listed items.

LOCATION OF FACTORY

The Company's factory is located at Ghatkopar, Bombay 77 AS.

BOARD OF DIRECTORS

Norton Arthur Morling (Chairman) Son of N. E. Morling	Director of: Turner & Newall Ltd., Manchester, England. Director of Asbestos. Magnesia & Friction Materials Ltd. Manchester, England and other Companies within the T. & N. Group.
Henry David Stewart Hardie (Managing Director) Son of J. S. Hardie	Merchant. Managing Director of Asbestos Cement Ltd., Mulund, Bombay 80-NB. Director of Asbestos, Magnesia & Friction Materials Ltd., Manchester, England. Committee Member of: (1) General Committee, Bombay Chamber of Commerce & Industry, Bombay. (2) Executive Committee, Association of Indian Automobile Manufacturers.
Cecil William Hannan Son of W. Hannan	Engineer.
Phillip Anthony King Son of C. King	Merchant. Director of Asbestos, Magnesia & Friction Materials Ltd., Manchester, England.
Percy Charles Barr Son of H. Barr	Merchant. Director of Asbestos, Magnesia & Friction Materials Ltd., Manchester England.

APPLICATIONS: Copies of Application Forms and Prospectus can be obtained from the Company's Brokers or Bankers to the issue or from the Company at their respective Registered Offices. Applications for shares must be for shares or multiples of 10 shares.

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON 16TH DECEMBER, 1964 AND WILL CLOSE AT THE CLOSE OF BANKING HOURS ON 30TH DECEMBER, 1964 OR EARLIER AT THE DISCRETION OF THE DIRECTORS, BUT NOT BEFORE THE CLOSE OF BANKING HOURS ON 21ST DECEMBER, 1964.

REGULATING CLEAN ADVANCES TO CURB PRICE RISES

(BY A SPECIAL CORRESPONDENT)

The Reserve Bank has always regarded clean advances as unclean for some mysterious reason. Contrary to its impression, there is no evidence to suggest that they are generally used to finance speculative activities.

THE next weapon in the Reserve Bank's repertory of anti-inflationary controls is expected to be the regulation of unsecured or clean advances granted by banks. The Reserve Bank has always regarded clean advances as unclean for some mysterious reason. To practical bankers, many clean advances have given far less trouble and caused far less anxiety than the so-called secured advances, for clean advances are not allowed unless the borrower is a first-class party of unquestioned standing, and unless the purpose of the advance and the borrower's ability to repay are clearly established.

But the points of view of practical bankers and those of the Reserve Bank are different. While the former are concerned with the purpose of the advance from the point of the safety and liquidity, the central bank is primarily interested in the purpose from the point of view of credit control. This is not to deny that the Reserve Bank has an equal stake in the safety and liquidity of advances for the purpose of building up a healthy and strong banking system. Clean advances, however, raise for it visions of speculative abuses which dominate its perspective, attitude and philosophy towards such advances.

Selective Credit Controls

In 1960, for example, selective credit controls were in operation. The climate for their operation was more favourable, since they were accompanied by quantitative restrictions such as the variable reserve ratio and penal rates for central bank accommodation. Due to the operation of selective credit controls in relation to a number of commoditites, the Reserve Bank feared that there was some possibility of the circumvention of its directives through a large expansion of clean advances. To deal with this possibility, the Bank prescribed a ceiling on such advances so that the "average ratio of clean advances of individual banks to the total advances in any month in 1960 did not exceed the ratio in the corresponding month of 1959".

The restriction allowed scope for both secular and the seasonal growth in advances over a year. Yet within less than a month, representations from banks and industry forced the Reserve Bank to allow increased limits for clean loans for a temporary period, if it appeared that the prescribed ratios were causing difficulties to clients engaged in productive enterprises or exports. In retrospect, the Bank was of the opinion that, by and large, the controls on clean advances in 1960-61 had a salutary effect on the efficacy of selective credit controls.

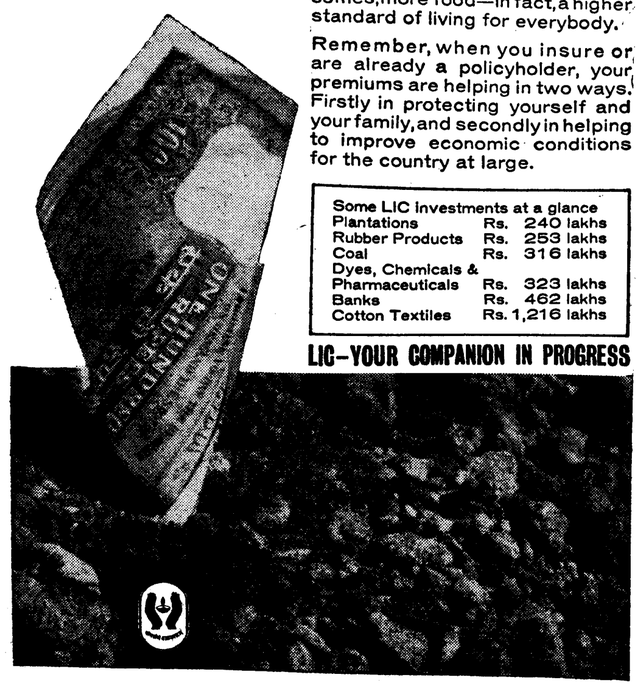
The difficulties of enforcing controls on clean advances are twofold: firstly, it is difficult to differentiate between the speculative and productive, non-productive and genuine, inflationary and legitimate purposes and to restrict advances for the one and to encourage them for the other. In principle, there can be no quarrel with the general statement that bank advances for speculative, non-productive and inflationary purposes should not be allowed : but what is disputed is the unfounded and unsupported assumption that *all* clean advances are of this character. Secondly, with the vast increase in the nature and variety of accommodation provided by banks and in the type and character of securities that are taken, the distinction between secured and clean (*i.e.*, unsecured) advances has become equally blurred. There has been sharp increases in recent years in advances against lorry receipts and against Government supply bills. While the practices of lorry transport companies may sometimes be risky for banks, there can be no better security than Government supply bills.

Yet all these advances are regarded as unsecured. There are numerous instances in the field of export credit and financing of foreign trade where the fine line of distinction is either non-existent or if it exists at all, the distinction lacks any basis of principle or consistency of practice. Pre-shipment advances, bills for collection or negotiation, letters of credit, etcetera, provide ample illustrations of these various distinctions without a difference.

Difficult Tasks

In any scheme of regulation of clean advances, therefore, it will not only be necessary to define clearly the meaning, extent and scope of clean and secured advances, but it will also be necessary to lay down the principles and practices in accordance with which clean advances for speculative purposes can be distinguished from such advances for productive purposes. These are clearly impossible tasks. Control of clean advances is thus bound to remain arbitrary, and any attempt to demarcate the limits arbitrarily will definitely lead to tremendous difficulties.

During the slack season of 1960, clean advances rose by Rs. 2 crores, against Rs. 11 crores in the corresponding period of 1959. They declined by Rs. 5 crores each in the calender year 1960 and 1961, against a rise of Rs. 18 crores in 1959. As a proportion of total credit, they declined from 19 percent at the end of 1959 to 15 percent at the end of 1960 and has remained around that level ever since then, except for the steep rise in 1963.



Rise in Clean Advances

Restrictions imposed in 1960 on unsecured advances were removed in October 1961, following the relaxation or removal of selective controls. In spite of the sharp increase in clean advances in 1962 and 1963, their share in the total credit has remained below the peaks reached in 1959 and early 1960. The Reserve Bank, in fact, recognised that the trend of clean advances during the 1962-63 busy season was in conformity with the spirit of the special request made by the Governor of the Reserve Bank to banks on the eve of the season.

In view, however of the sharp rise of Rs. 66 crores in clean advances during the 12 months preceding February 1964, the Governor again requested the banks to review their portfolios of clean advances. The peak was touched at Rs. 287 crores in March 1964, but the decline thereafter has not been more than Rs. 21 crores between March and August 1964. The ratio of clean advances to the total bank credit is still below the peaks of 1959 and early 1960, and most of the clean advances have been given to industrial borrowers. There is no evidence to suggest that they are used to finance speculative activities. The Reserve Bank's undue attention on clean advances would, therefore, be misdirected, if not misplaced.

LIC PLANTS THE MONEY

L.I.C. sows saplings into the economic soil of the country. Saplings which will grow into a rich harvest of prosperity tomorrow.

L.I.C. invests nearly 3 million rupees a day in industry, agriculture, railways, transport, electricity and many other projects. The growth effect of these investments creates more jobs, more incomes, more food—in fact, a higher standard of living for everybody.

Remember, when you insure or are already a policyholder, your premiums are helping in two ways. Firstly in protecting yourself and your family, and secondly in helping to improve economic conditions for the country at large.

Some LIC investments at a glance	
Plantations	Rs. 240 lakhs
Rubber Products	Rs. 253 lakhs
Coal	Rs. 316 lakhs
Dyes, Chemicals & Pharmaceuticals	Rs. 323 lakhs
Banks	Rs. 462 lakhs
Cotton Textiles	Rs. 1,216 lakhs

THE CALCUTTA MONEY MARKET

MODERATE INCREASE IN ADVANCES

Wednesday, 9th December.

THE general level of advances has shown a moderate increase in the Calcutta money market during the past week. Most of the increase is accounted for by the iron, steel and engineering units. The credit given to the foodgrains and seeds trade is unchanged, but the requirements of the cotton, jute and sugar mills are slightly higher. In the interbank market, conditions have generally been tight. The call rate rose to 6½ percent, but has subsequently returned to the starting level of 5 percent.

The exchange market has been less active. The supply of tea and gunny bills is small The demand for remittances has been poor. In the London market, sterling has shown a mixed tendency but fluctuations have been narrow.

BULLION WAS STEADY IN CALCUTTA during the past week. Silver was quoted at Rs. 252.05. The price fetched 113¼d in London and 129.3 cents in New York. The price of 14-carat gold was quoted at Rs. 68.50.

DURING THE WEEK ENDED 4TH December, Government of India Treasury bills for Rs 2,58,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 8th December. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.375 percent were accepted in full The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.500 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 14th December.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 9th December to 12th December at Rs. 99.391 percent subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 2nd December to 5th December amounted to Rs. 1,29,50,000.

THE STATEMENT OF THE RESERVE BANK of India for the week ended 4th December, 1964, is interesting because the Bank has begun to publish details relating to advances made out of its funds which have been created to finance agriculture and industry. Active notes rose by Rs. 50.51 crores to Rs. 2,472.97 crores and the total note issue by Rs. 36.65 crores to Rs. 2,491.42 crores. The currency expansion was covered by increasing rupee securities by Rs. 40 crores to Rs. 2,186.13 crores. Deposits of the Government of India increased by Rs. 26.16 crores to Rs. 60.14 crores while those of State Governments dropped by Rs. 85 lakhs to Rs. 5.49 crores. Balances of scheduled banks were Rs. 4.72 crores smaller at Rs. 89.23 crores. Balances held abroad rose by Rs. 3.38 crores to Rs. 11.39 crores. Investments decreased by Rs. 93 lakhs to Rs. 117.51 crores. Loans to scheduled banks increased from Rs. 83.05 lakhs to Rs. 18.26 crores, of which advances against usance bills amounted to Rs. 4.26 crores (nil). Loans to State Governments stood at Rs. 44.42 crores, against Rs. 28.15 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 27th November, 1964, shows a drop of Rs. 6.17 crores to Rs. 666.76 crores in total deposits. Investments in Government securities are up by Rs. 9.35 crores to Rs. 289.43 crores, while other authorised investments remain unchanged at Rs 8.98 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have increased by Rs. 1.46 crores to Rs. 345.48 crores. Cash and balances are, in consequence, shown at Rs. 25.46 crores or Rs. 5.44 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 27th November, 1964, shows Demand and Time liabilities at Rs. 1,370.05 crores (Rs. 31.56 crores on account of borrowings from banks) and Rs. 1,399.77 crores (Rs. 15.88 crores), compared with Rs. 1,375.82 crores (Rs. 29.01 crores) and Rs. 1,402.03 crores (Rs. 15 79 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have fallen by Rs. 1.37 crores and Rs. 3.24 crores to Rs. 65.65 crores and Rs. 93.76 crores, respectively. There is a rise of Rs. 10.44 crores to Rs. 839.26 crores in investments. Advances and bills discounted at Rs. 1,734.86 crores show an increase of Rs. 89 lakhs. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.8 percent and 62.6 percent, against 5.9 percent and 62.4 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 11-12-64.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
11-12-64	12-3-65	2,00,00	Rs. 2.500%

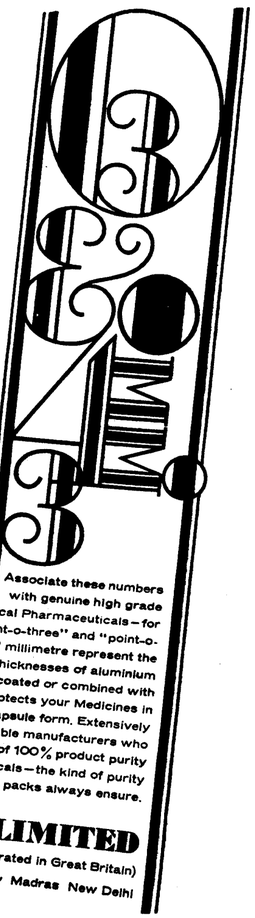
OBJECTS, PROPOSED ACTIVITIES AND LOCATION OF INDUSTRY



The main objects of the Company are as set out in the Memorandum of Association and include inter alia the following: to carry on business as manufacturers of and dealers in polyvinyl chloride polyvinyl dichloride and other chemicals and products of a like nature or otherwise; and also to carry on business as manufacturers and dealers in all other chemicals, plastics/petrochemicals oils, paints, pigments and varnishes and in any similar or allied business and either in connection with the said business or as a distinct or separate business; to carry on business as distillers, gas makers, smelters metallurgists and chemical engineers, manufacturers and dealers in rubber and rubber products, textiles, nylon, rayon and materials of all descriptions connected with the foregoing; to manufacture deal in and manipulate PVC bases into electrical wires leather cloths, lining material and as films, sheets and pipes for general use and for construction material, to construct, maintain and alter any chemical and industrial plants, buildings or works.

The Company has been formed with the object of setting up a factory at Mettur, Madras State for the manufacture of polyvinyl chloride (P.V.C.) and other chemicals and products which may be usefully or conveniently combined with or derived from the same and another factory near Bombay in Maharashtra State for fabricating P.V.C. pipes, fittings other extrusions and mouldings (both rigid and flexible). The Company has entered into a Technical Service Agreement for a period of ten years in the first instance with the B F Goodrich Company of Akron Ohio, United States of America (Goodrich), the largest producer of polyvinyl chloride in the world Goodrich will provide the Company all technical information, know-how, and data and the Company will be licensed to use in India the relevant patents of Goodrich. Goodrich will assist the Company in planning the layout of the factories and provide drawings, designs, blue prints and specifications for the plant, machinery and equipment for the setting up of the factories; besides procuring for the Company trained and competent engineers and technicians and providing in its plants in the U.S.A. training facilities for the Company's technical personnel It is expected that the factory will go into production before the end of 1966.

APPLICATIONS

Copies of Application Forms and Prospectus can be obtained from the Company's Registered Office, from any of the above mentioned Underwriters, Brokers and Bankers to the issue named in the Prospectus or any of their main branches at the addresses given in the Prospectus

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON 16.12.1964 AND WILL REMAIN OPEN UNTIL THE CLOSING OF BANKING HOURS ON 24.12.1964 UNLESS CLOSED EARLIER OR LATER AT THE DISCRETION OF THE DIRECTORS BUT NOT BEFORE 18.12.1964

EXPERT BODIES ESTIMATE COAL PRODUCTION AND CONSUMPTION

(FROM OUR NEW DELHI CORRESPONDENT)

TWO important studies on the problems of the coal industry were recently made at the instance of the Government of India. One was made by the Energy Survey Commission, whose report is expected shortly. The second was the Indian coal transport study, which draws extensively from the Energy Survey Commission's report. In its first report, the Commission says:

"While supplies of non-coking coal are abundant in quantity, supplies of coking coal are not abundant, although probably sufficient to meet needs until the end of this century. Economy of coking coal is most important. At present, only about 40 percent of the coking coal that is in the ground in the seams that are being worked is recovered and brought to the surface; only about 50 percent of what is recovered from the mine is delivered as 17-percent ash content washed coal from the washeries to the coke-ovens. Thus in total only about 20 percent of the potential coking coal is actually available to be used for the purposes for which it is essential.

"It is important that the improvement of this performance should be sought in every way; through economy of coke in the blast furnaces, through acceptance of as large a fraction of the total as is practicable by the coke-ovens from the washeries; but above all through recovery from the mine of a substantially larger proportion of all coal that is available in the seams. We know that this is being actively examined by the Central Ministry of Mines and that there is a hope of a significant increase in the recovery rate. We recommend that any necessary resources be made available to put into practice the improved mining methods that are proposed.

Rising Demand

"Whatever may be done to conserve coking coal, it is clear that with the progressive expansion of the iron and steel industry, there will be increasing demands for washed coking coal and increasing supplies of coking coal by-products. We have examined with care the relative economics of using two-product and three-product washery processes. We are convinced that the two-product process will produce by-product coals which can find an economic market, principally for thermal electricity and that this process is to be preferred.

"We have examined with care the economic problems of transporting these by-product coals and using them economically. We are satisfied that, if suitably priced, a market can be found for all the by-product coals that are likely to be produced.

"These coking coal by-products are likely, however, to find markets principally in uses which are normally met by non-coking coals. Considering the substantial amounts likely to be available, there will be no additional requirement for non-coking coals in the next plan period. By-product coking coals, if suitably processed and transported in closed-circuit train loads, can meet the requirements for coal for thermal electricity stations and other purposes at points as far as and beyond most of the outlying coalfields that it had been proposed to develop. We suggest that the development of some of these outlying coalfields be postponed.

"In addition to the problems created by the by-product coking coals, there are further problems created by the large amounts of slack coal that are produced as part of the process of mining the non-coking coals. More incentive is desirable to encourage mining methods which will reduce the proportion of slack to a minimum. But a considerable output of slack is inevitable. We recommend that this be processed at levels that will encourage its consumption in all uses for which it is suitable. We recommend also the urgent examination by the Central Fuel Research Institute of the possibilities of producing from this slack a domestic fuel that will relieve the present excessive pressure of the demand for firewood.

"If one looks forward post-1970-71, the problems of absorbing coking coal by-products and competing low grade non-coking coals seems likely to continue, but the areas of manoeuvre are greater. It should be possible in the next phases of planning the development of electricity supplies to give even greater consideration to the siting of power plants where they can make full use of cheap by-product coal; consideration can also be given to the possibilities of long distance transmission of electricity rather than the railing of by-product coal on the one hand or the use of non-coking coal from newly opened mines on the other."

Coal Transport Study

The coal transport study concurrently states the following: "Summing up we obtain an aggregate estimated demand for coal of 76.7 million tons in 1965-66 and 108.4 million tons in 1970-71, compared with 51.8 million tons in 1960-61. These estimates imply an average annual growth of coal consumption at the rate of 8.2 percent in the third and 7.2 percent in the fourth plan period, compared with 7.5 percent in the second plan period.

"The total increase in consumption projected from 1960-61 to 1970-71 is almost 57 million tons. Thermal power generation and steel production together account for almost half the projected increase. The complete distribution of the increase is as follows:

	Projected increase in coal consumption, 1960-61 to 1970-71 (In million tons)
"Thermal power generation	15.1
"Steel production	11.4
"Cement production	3.8
"Other industrial production	16.7
"Railways	0.9
"Domestic use	6.4
"Bunker, export and other	2.3
	56.6

"The projected increase in consumption in the eight-year period, 1962-63 to 1970-71, is approximately 45 million tons, distributed as follows:

	Projected increase in coal consumption 1962-63 to 1970-71 (In million tons)
"Thermal power generation	14.2
"Steel production	9.4
"Cement production	3.5
"Other industrial production	13.7
"Railways	0.6
"Domestic use	5.9
"Bunker, export and other	1.3
	47.4

"For the fourth plan period alone, we projected an increase in consumption of approximately 32 million tons. The distribution of the projected increase follows essentially the pattern indicated for the 1962-63 to 1970-71 period. A striking fact is that, according to our estimates, railway coal consumption will decline in this period but other uses continue to increase rapidly.

Estimates of Consumption

"These estimates of coal consumption in 1965-66 and 1970-71 are substantially lower than many of the figures which have been tentatively projected in the course of early discussions of the fourth plan. This appears to be largely due to three factors. Firstly, our estimate that railway consumption of coal as such will decline, principally by reason of the increased reliance on electric and diesel traction, as indicated above. There will be a partial offset in the increased quantity of coal required to generate the additional electric power which will be consumed by the railways. Railway consumption is estimated at 2,800 million kWh in 1970-71, compared with 800 million kWh in 1960-61. If they were to be generated entirely in thermal stations, the additional 2,000 million kWh would probably require the consumption of approximately 1.3 million tons of coal.

"The second factor is that our estimate of the 1970-71 level of output in the iron and steel industry is lower than the one frequently discussed. We have projected this at 15 million tons of pig iron whereas the figure of 18 million tons is frequently discussed. The higher output would require consumption of approximately 4 million tons more of washed coking coal and production of approximately 8 million tons more of raw coking coal.

"The third major factor is that we have made lower estimates than those used in some of the recent discussions of total and thermal electric power requirements in 1970-71, and of the quantities of coal which will be required for the generation of thermal power. Specifically, we have estimated total electric power demand in 1970-71 at 78,000 million kWh whereas some of the estimates under discussion are 20 percent to 25 percent higher and imply growth in power demand in the ten-year period to 1970-71 at the rate of approximately 17 percent a year. They are also in the context of a higher rate of growth of national income and industrial output that we have projected.

"Also we have estimated that some 37,000 million kWh of the total will be generated in coal-fired thermal plants whereas other estimates assume that a much larger part of the total (perhaps 60,000 million kWh) will be generated in coal-fired thermal plants and a much smaller part in hydro-electric plants. Those estimates assume a very high average plant factor (70 percent) for the thermal plants and low plant factors for the hydro-electric plants. It is our understanding, however, that most of the latter have been so constructed that their installed generating capacity exceeds only by very little the capacity which can be operated with the continuously available water supplies. Consequently, failure to operate them at high levels of plant capacity would be simply to waste water and part of the investment the existing generating facilities represent. Consequently, we have assumed higher 1970-71 plant factors in hydro-electric installations and a correspondingly lower 1970-71 thermal generation.

Volume of Production

"The volume of coal production required to meet the projected consumption requirements will be influenced by the extent to which the process of washing of coking coal results in the loss of part of the raw coal input to washeries and the extent to which the by-product coal is used. We have made two assumptions: firstly, that a two-product rather than a three-product process would be used in many of the washeries, and secondly, that all of the by-product coal would be consumed in thermal power generation or other uses and would substitute there for non-coking coal which would otherwise need to be raised. If economic means of using all of the by-product coal or middlings cannot be found, then to that extent additional production of non-coking coal will be required. In so far as the by-product coal can be used, it will obviate the necessity for raising comparable quantities of low grade non-coking coal.

"As indicated, we estimated that in 1970-71 40.7 million tons of raw coking coal will need to be washed to meet the requirements of the steel mills and other consumers for 22.4 million tons of washed coking coal. This will result in output of 15 million tons of by-product coal (after 3.3 million tons of rejects), suitable for use principally in the generation of electric power in thermal plants designed for use of such coal.

"As already indicated total requirements of coal for thermal power generation by utilities in 1970-71 are estimated at 21.9 million tons which is 6.9 million tons more than the indicated supply of by-product coal. There are problems involved in converting some of the older plants to the use of by-product coal, but many of the newer plants are and plants still to be constructed can be appropriately designed for the purpose. Analysis indicates that in 1970-71 this total quantity of by-product coal could be used in thermal electric plants.

"It also indicates that in 1970-71 virtually the total quantity can be used in plants located in the eastern region or the general area where the by-product coal supply will become available. Use of this quantity in the area, however, will require the extra high-voltage transmission of electric power from large washery-located power plants in the Bengal-Bihar area to other power demand areas. In subsequent years, the rail movement of by-product coal to power plants outside the Bengal-Bihar area may also be required to effect full utilisation of by-product coal. Analyses of these possible courses of action suggest that both, in appropriate degree, are economically rational.

"Up to this point we have been primarily concerned with the overall demand for coal by various categories of consumers irrespective of the geographic location of demand. The latter, however, is of vital concern, as is the location of coal supplies, in assessing the problem of coal transport in the future. Inevitably the locational refinement involves additional elements of uncertainty

London

LABOUR PLAN FOR U.K. ECONOMIC GROWTH

(FROM OUR LONDON CORRESPONDENT)

AN ANNUAL rate of economic growth of not less than 4 percent is likely to be specified in the Government's five year plan up to 1970. But until the plan has been worked out, the Government is not prepared to outline its plans in any detail. At the first meeting of the reconstituted National Economic Development Council last week, 4 percent growth was described by the Government as "a feasible and desirable objective"—although, pending the working out of the plan, it was impossible to indicate precisely the nature of the problems involved in achieving this rate of growth.

The Government hopes to be able to present its economic plan in broad outline by the spring and in full detail by midsummer. Meanwhile, the Economic Development Committees—the "little Neddies"—are to continue their industry-by-industry studies of the implications of a 4 percent rate—investment, manpower, increased exports, and competition with imports. The committees will be directly linked with the actual planners by a steering committee—jointly chaired by Mr. Fred Catherwood, Chief Industrial Adviser to the Department for Economic Affairs, and Mr. Tom Fraser, Industrial Director of the N.E.D.C.—and by direct representatives of the Department for Economic Affairs on each committee. In addition, Mr. Frank Cousin's Ministry of Technology is to be directly represented on the "little Neddies" for industries sponsored by his department—machine tools, electronics, telecommunications, and computers.

The rôle to be played by the "little Neddies" was much emphasised at the N.E.D.C. meeting. The Council discussed how their work could reach right down to the level of individual firms (export performance, for example) and the shop floor (manpower utilisation, for example). In its final form, the Government's plan will spell out in some detail the industry-by-industry implications of the agreed growth target. It has not yet been decided, the Council was told, to what extent year-by-year export and production targets will need to be set. The implication is that the growth plan may not be, as before, for an annual rate to be achieved (this was not) on average over a period of time, but for accelerating rates.

The Government began by drawing attention to the present unsatisfactory growth performances of the economy and lamenting the situation it had inherited, which included a public expenditure programme based on wrong economic and social priorities. In the ensuing discussion there was speculation that the actual growth rate of the economy was as low as 2 percent—half the old N.E.D.C. target rate. One member of the Council came away with the view that in the short term, "we'll be jolly lucky to get 3 percent."

Gearing for Growth

Mr. George Brown, Minister for Economic Affairs, who presided for the first time as chairman of the new N.E.D.C., is determined to gear the economy up to at least a 4 percent growth performance, but sees no point in setting global targets in the absence of a plan to achieve them. This is held to be the essential difference between the new and the old *régime:* that the Government has now taken direct responsibility not only for drawing up the plan but also, with the co-operation of industry, for bringing it about. Once again, Mr. Brown appears to have impressed the two sides of industry. A stray comment on the meeting was: "He made a very, very good start as chairman. He gave the Council a sense of urgency and took everybody with him."

This sense of urgency has also secured Mr. Brown fresh co-operation from both sides of industry. It will be remembered that neither side was enthusiastic about the declaration of intent about an incomes policy. Nevertheless, Mr. Brown has so far met their initial objections that there seems to be a reasonable chance of the declaration being signed before the end of the year. The T.U.C. found the draft imprecise and ambiguous; it was concerned that the implications of the declaration should be made quite clear to the members of affiliated unions; but it accepted the need for a declaration as the first step towards an incomes policy and showed a general willingness to sign such a declaration.

The employers' leaders doubted the willingness of their members to accept the implications of the declaration. They are particularly hostile to the proposal for a prices review body. In this, their position has not changed since the Federation of British Industries, the British Employers' Confederation, the National Association of British Manufacturers, and the Association of British Chambers of Commerce jointly studied two proposals for price discipline earlier this year. Both schemes—which emanated from the National Economic Development Council—were riddled with objections.

In view of this holding back on an incomes policy, Mr. Brown must be encouraged by the fact that 12 first-class men from private industry are to be brought full-time, into the Department of Economic Affairs. They will work as a team under Mr. Frank Catherwood, the man from British Aluminium who is now Mr. Brown's Chief Industrial Adviser. Among their duties will be to represent the Department of Economic Affairs directly on the economic development committees—the "little Neddies"—which are being given a vital part to play in the Government's new planning machinery.

New N. E. D. C.

In effect, the National Economic Development Council remains the parent of the "little Neddies"; the Department for Economic Affairs becomes their guardian. This arrangement is to be achieved by the steering committee jointly chaired by Mr. Catherwood and Mr. Tom Fraser. Nine of the 17 "little Neddies" intended by the previous Government are in being. The present Government will push on with setting up the others and may add up to three more. It is understood that Mr. Catherwood's team will be allocated to the economic committees on a functional basis. That is to say it will not be attempted to find necessarily an electronics expert to represent the Department of Economic Affairs on the "little Neddy" for the electronics industry, or a confectioner on the one for the chocolate, sugar and confectionery industry; rather, the Department is recruiting a mixed team of top management men whose speciality—accountancy, labour relations, or whatever—can be employed where it is most relevant. It is believed the team will all be recruited at board-room level and will be paid while on Government duty by their old companies as Mr. Catherwood is.

Co-operating with the "little Neddies," but working in greater depth, will be a number of working parties to be set up by the Minister of Technology, Mr. Frank Cousins. They will be used at points where the application of modern technology could be particularly helpful to an industry or a section of an industry. Certain parts of the engineering industry where export performance has lagged are likely to be the first candidates for Mr. Cousin's attentions. He may also find it necessary to take an urgent look at the technological state of the docks, where antiquated equipment and methods are helping to delay export deliveries.

Work of Technology Ministry

Mr. Cousins gave his first Press conference the other day since joining the Government. He looked as if he had been a Minister all his life and showed an impressive grasp of his new field. He stressed that a very large part of his job was the application to industry of science knowledge already known. There was a need for "missionary propaganda" backed by fiscal measures and co-sponsorship of scientific developments. The job could not be done overnight; if it could be, there would be no need for his Ministry. "We are being created," he said, "for the purpose of improving production levels and assisting in the creation of a sound and solvent economy."

When the reconstituted N.E.D.C. met, the most notable absentee was Dr. Beeching. The official explanation for this is that it was always intended that the representation of the nationalised industries should rotate, but a more likely reason is Dr. Beeching's imminent departure from the British Railways Board to a new transport co-ordination job. The new N.E.D.C., swollen from 20 to 22, by the addition of two extra Government representatives, includes seven new names. A banker comes in for the first time as one of the six management representatives. He is Mr. K. A. Keith, chairman of Philip Hill, Higginson, Erlangers. A management consultant is also on the Council for the first time, he is Mr. W. Coutts Donald, chairman of the Management Consultants' Association, who replaces Lord Franks as one of the two independent members.

Sir Ronald Edwards, chairman of the Electricity Council, joins Lord Robens, chairman of the National Coal Board, to represent the nationalised industries instead of Dr. Beeching. The other new management representatives are Mr. John Davies, Vice-Chairman and Managing Director of Shell-Mex and B.P., Sir Peter Runge, President of the Federation of British Industries, and Sir Denning Pearson, chief executive and deputy chairman of Rolls-Royce.

On the trade union side, the only new face is Mr. Jack Cooper's, who replaces Mr. Cousins. Mr. Cooper is General Secretary of the National Union of General and Municipal Workers. Mr. Cousins continues as a member of the Council as one of the Government team. The others are Mr. Douglas Jay, President of the Board of Trade, Mr. Ray Gunter, Minister of Labour, Mr. Catherwood and, of course, Mr. Brown. The new team has been appointed for two years. Mr. Brown has written to thank the retiring members—Dr. Beeching, Mr. F. A. Cockfield, Lord Franks, Sir Cyril Harrison, Sir John Hunter, and Sir John Toothill—for their "signal service to the nation."

TRADE TEAM ASSESSES GUNNY PROSPECTS IN AFRICA

UNLESS positive steps are taken to enable Indian jute goods to compete with Pakistani products, particularly sacking, the future of Indian exports to the developing countries of northern and western Africa is very bleak. This observation has been made by a trade delegation sent by the Calcutta Jute Fabrics Shippers Association to these countries early this year. Sponsored by the Central Ministry of International Trade, the delegation, consisting of Mr. N. L. Kanoria (leader), Mr. Gordhandass Jerambhai, Mr. S. N. Kanodia and Mr. D. A. Sprigge visited Guinea, Tunisia, Nigeria, Egypt, Ghana, Senegal and the Ivory Coast. It has found a wealth of goodwill towards India in all these countries. But they prefer Pakistani jute goods solely because of commercial considerations like better quality and lower prices. To meet the challenge, the delegation considers it imperative to improve the quality of the raw jute produced in India.

The team observes that trade agreements have helped India's export promotion efforts. It has recommended that such agreements should not only be renewed on their expiry, but as many countries as possible should be persuaded to conclude such pacts with India. These pacts have precluded Pakistan from gaining a foothold in many markets in spite of her best efforts. In cases where direct trade agreements are not possible with certain countries, the delegation suggests the conclusion of triangular trade pacts with a developing country requiring primary produce at the apex.

Need to Give Short-term Credits

As some of the countries visited are experiencing financial stringency, the delegation feels that the offer of short-term credit facilities will enable them to take more jute goods from India. Representatives of one country, in fact, pleaded for deferred payment facilities—50 percent of the price to be paid on the arrival of the steamer and the balance within three months. Another major consumer of Indian gunnies suggested payment of 50 percent cash down and the balance six months after shipment.

The delegation has recommended that every effort should be made to foster good relations with central marketing boards, which regulate the imports and distribution of jute goods in most of these countries, and with the prominent private parties who handle the bulk of such imports in others. Indian consular staff and trade associations should maintain constant liaison and promptly attend to their complaints and advice. Although India is still the largest supplier of jute goods to these countries, Pakistan has emerged as a serious competitor, particularly in heavy goods. The delegation has observed that unless Pakistani competition is effectively met, the expansion of her industry will proceed at an even faster rate.

Setting up Gunny Units Abroad

As for the invitation from some countries to establish jute industries there, the delegation says that the "setting up of such units could be turned to our advantage if Indian industrialists associated themselves with them". It was noticed that in order to adjust the high cost of local manufacture and to meet their additional requirements, they import sizeable lots of jute goods. These imports are handled by the local industry. Indian association with the latter will enhance the possibilities of getting preferential treatment for Indian goods. Referring to the prospects, the delegation holds the view that there will undoubtedly be an increase in the demand for packaging materials in African countries. Even though some of them have jute mills and bulk handling and storage have been introduced in others, the facilities will fail to catch up with the increase in the output of farm products. The import of jute goods in some cases may decline for a time, but the overall demand and offtake of sacking will increase steadily. So the delegation has suggested that "it is of the utmost importance to India that she obtains a large share of this increased demand in these and other developing countries".

Sacking Prices May Fall

The outlook for sacking has to be assessed more cautiously in view of the settlement of the jute mills strike in Pakistan. The *Jute Bulletin* published by the Indian Central Jute Committee says in its latest issue that once the Pakistani mills get going again, a decline in sacking prices would be unavoidable. "It will be difficult in that event for fibre prices to resist a sympathetic drop". The Calcutta raw jute market is being maintained at the present level solely on the strength of sacking prices, which had reached their highest point in the past three years. Jute sellers could see that the size of the current crop is no longer an "unknown quantity". With an increase in the maximum purchase quotas to match the increasing imports of jute, there is now "much less talk of a possible shortage developing towards the end of the season".

The price trend in raw jute during October and the greater part of November, says the *Bulletin*, confirmed that the earlier advance of the market was largely speculative. Were the overall supply position really as tight as the subnormal market arrivals till about the first week of November indicated, the recent developments on the demand side would have taken fibre prices much higher than their Calcutta level of Rs. 36.50 a maund, basis Assam Bottoms. The bullish points favouring an advance of the jute market were: first, mill output of jute goods during September and October, despite reported voluntary cuts, was higher than that for the corresponding months of 1963; secondly, the demand for gunnies remained buoyant with offtake from the mills during January-October this year running 50,300 tonnes ahead of the same period last year at 1.029 million tonnes.

The *Bulletin* adds: "If, in spite of all these props, jute prices tended downward, it could be due to the highly vulnerable position of speculative dealers who had feverishly bought during the August scare in the hope of attempting a squeeze later in the season. Some recklessly high prices were paid for many of these purchases. Now the gamble has not paid off and stockists are anxious to minimise their loss by attracting buyers with offers of discount".

Bonus Legislation

The jute industry has asked the Central Ministry of Labour and Employment to exempt it for the present from the proposed legislation to implement the recommendations of the Bonus Commission, it is reported. The industry's representation to the Ministry has been forwarded through a body constituted by the Employers Federation of India and the All-India Organisation of Industrial Employers.

The Council has pointed out that the workers' representatives at the meeting of the tripartite Wage Board for the Jute Industry had urged that a scheme for guaranteed bonus should be introduced, and that the question of bonus of any other kind could be re-examined later after the expiry of the period during which the Board's recommendations remained effective. On this basis, the Wage Board and the employers' representatives not only agreed on a guaranteed bonus but also on a general wage increase. The Council has, therefore, expressed the hope that the proposed legislation on bonus will make it quite clear that the recommendations of the Bonus Commission cannot apply to the jute industry as long as the Wage Board bonus formula remains operative.

U.K. Import of Second-hand Sacks

The Labour Government's reversal of its predecessor's jute goods import policy has placed the U.K. trade in jute sacks, both old and new, in a dilemma, Mr. C. J. Dowling, chairman of the National Association of Sack Merchants and Reclaimers of the U.K., has submitted a protest to the U.K. Commissioner of Customs and Excise, to the Board of Trade and to the Treasury stating that the 15-percent import surcharge levied since 26th October on both new and second-hand sacks has made the findings of the Jute Working Group a "mockery". Saying that empty second-hand sacks are the "raw material" for N.A.S.M.R. members—who reprocess them completely by fumigating, cleansing, resewing, and some times by chemical treatment—the chairman has pleaded for exempting them from the new impost. As a result of the new levy, he says, the prices of jute sacks—a primary packaging medium—will increase, leading to inflation on a national scale, causing a "further swing to paper substitutes and a subsequent multiple increase in the import of wood pulp to make these 'one-journey' containers". For members of the U.K. Jute Goods Association the new impost has caused an additional setback, nullifying the concessions—in the shape of removal of the mark-up on import bag-making hessian and the return of the gunny business to private trade—secured after years of patient negotiation by the U.K.J.G.A.

THE JUTE MARKETS

Manufactured Goods: Subdued conditions prevailed in the Calcutta gunny market during the past week on prospects of settlement of the jute mill workers' strike in East Pakistan. Barring shortlived steadiness in heavy goods induced by reports of an Indian Government tender for B Twills for December delivery and business in woolpacks with Australia for January-June positions and also with Syria and Burma, interest was poor. In hessian, the trend was about steady during the major part of the week because of the hardening of spot and afloat burlap prices in New York from 12.85 cents to 12.90 cents a yard and some routine transactions with the U.S.A. Last Thursday, there was a squeeze in heavy goods for ready positions, helping their prices harden modestly. Besides, short- and shippers-covering in immediate and near positions helped sentiment to some extent. But spot prices fell after the resumption of work in Pakistani mills from Monday. In the hedge market, selling pressure developed following tired long liquidation and some amount of short-selling. The market closed with sizable losses in both sacking and hessian after wide fluctuations. Turnover was moderate in the spot market and fair in

I.J.M.A. STOCK FIGURES FOR NOVEMBER

The Indian Jute Mills Association reports the total stocks of jute goods at the end of November as follows:

Description	30th November, 1964		31st October, 1964		Increase over (+) or decrease from (−) last month		30th November, 1963	
	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)
Hessian cloth and bag	14,58.89 (15.95)	45.2 (44.5)	14.53.59 (15,90)	45.7 (45.0)	+5.30 (+5)	−0.5 (−0.5)	12,86.93 (14.07)	40.0 (39.4)
Sacking cloth and bag	9,21.57 (10.08)	38.6 (38.0)	9,66.51 (10,57)	41.3 (40.6)	−44.94 (−49)	−2.7 (−2.6)	10,73.95 (11.74)	47.6 (46.8)
Carpet-backing	1,58.33 (1.73)	19.7 (19.4)	1,61.57 (1,77)	20.0 (19.7)	−3.24 (−4)	−0.3 (−0.3)	1.27.21 (1,39)	15.1 (14.9)
Others		10.7 (10.5)		10.8 (10.6)		−0.1 (−0.1)		8.6 (8.5)
Grand Total (000 Tonnes/Tons)		1,14.2 (1.12.4)		1,17.8 (1.15.9)		−3.6 (−3.5)		1.11.3 (1,09.6)

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for one non-member mill. The figures in brackets are in British measures.

the hedge market, and the undertone was hesitant at the close.

Wednesday's quotations were as follows :

	Dec.	Jan.-Mar.	Apr.-June
40in. 7½oz.	38.65	38.50	38.40
40in. 8oz.	40.90	—	—
40in. 10oz.	49.85	50.65	50.95
B Twills	153.75	148.50	144.25
Cornsacks	161.00	152.50	147.25
Heavy Cees (Plain)	151.25	148.25	144.00
A Twills	182.50	178.00	172.50
Liverpools	169.00	166.00	162.00

Raw Jute : Easier conditions prevailed in the raw jute market during the past week. Although the maximum purchase quotas of 200,000 bales for the week ended 5th December and for the current week were adequate to absorb the daily arrivals of around 100,000 maunds in the terminal markets, prices sagged by about Rs. 1.50 a maund from the previous week's levels. The declining trend in the jute goods market following the resumption of work in Pakistani mills produced a bearish impact on the fibre market. Mills became reserved and were not inclined to pay such high prices for the fibre as would squeeze their already narrow profit-margins further. Besides, nervous offerings by holders of lower-grade jute on a falling market depressed sentiment. Selective interest was taken by mills in quality fibres for ready and near positions. Being in short supply, they enjoyed a premium over the Bottom grades. Turnover was moderate and the undertone easy at the close.

Wednesday's quotations were as follows :

	Rates a maund Mid.	Bot.	Rates a quintal Mid.	Bot.
Assam-Agartala Jute	38.50	35.50	103.15	95.11
Northern Jute	37.50	34.50	100.47	92.43
Western Desal Jute	36.00	33.00	96.45	88.41
Selected Daissee	39.00	36.00	104.49	96.45
Assam-Agartala Tossa	39.00	36.00	104.49	96.45
Mesta : Assam-Northern	36.00	33.00	96.45	88.41

THE U.K. JUTE MARKETS

LITTLE INTEREST IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market in Pakistan is firm and the E.P.C. values of Dacca Tossa-5 and Grade Tossa-4 have been raised by £2 a ton this week. The official prices of mesta have also been raised by a similar amount. This has made little difference to the position in the U.K., and there is still a substantial quantity of secured jute available at well under the official prices.

The spinners in Dundee are showing very little interest in either shipment or afloat parcels at present. They prefer to buy ex-warehouse as the quality of the fibre can be examined before a contract is placed. The reason for this is that arrivals of late have contained excessive moisture, and the quality of fibre has also been rather poor.

A fair quantity of jute, which is still unsold to spinners, is coming to Dundee and there is no doubt that holders of these parcels are very anxious for business especially when Bank rate in the U.K. is now standing at 7 percent. This is making the position very irregular and some fairly low prices are being quoted.

Offers are at £150 for Mill Firsts, at £139 10s for Export Firsts, at £124 10s for Export Lightnings and at £116 for Export Hearts, c.i.f. U.K. for December-January shipment. Grade Tossa-2/3 is quoted at £150 and Grade Tossa-4 at £136. Dacca Tossa-5 is at £161 and Dacca Tossa-6 at £139. Outport Tossa-2/3 ranges from £122 and Outport Tossa-4 from £116, December January.

Cuttings are steady with prices at £89 10s for S.N.C. and at £81 for N.C. Although the official prices of mesta have been raised, there are still sellers at £110 10s for A, at £100 10s for B, at £92 10s for C and at £76 for cuttings, c.i.f. U.K., December-January. No buying interest is being shown in mesta by Dundee spinners.

The Siam jute market is quieter and prices are at a slightly lower level. Offers being made are attractive and a fair business has taken place in Dundee during the past week. Offers are at £84 5s for grade A, at £79 5s for grade B, at £75 for grade C and at £73 for cuttings, delivered mill Dundee for December-January shipment.

The Calcutta goods market is firm. Buying interest in imported goods is being shown and a fair business is taking place despite the present high prices. Quotations are at 83s 8d for 40in. 10oz. and at 64s 9d for 7½oz. a 100 yards c. and f. U.K. for December shipment, at 84s 11d and 64s 7d January-March and at 85s 2d and 64s 7d April-June. B Twills are at 261s 3d, 255s and 245s 1d for the respective shipment periods.

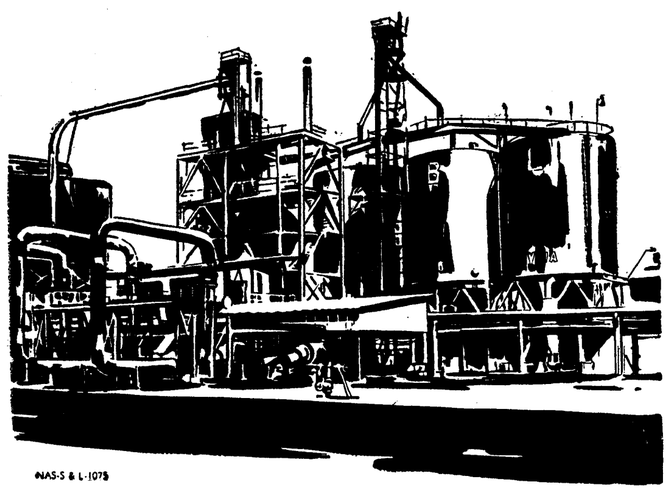
Dundee jute spinners are busy and they are finding it difficult to maintain delivery dates. Supplies are very difficult to obtain and are only available in the forward position. The mills are running to the full capacity of the labour force available. As a result of this, prices are firm, and there is nothing to indicate that any change is likely in the near future.

Cloth production is also being maintained at a high level and a steady demand is noticeable. Hessian weavers have orders in hand for forward delivery, and more buying interest has been shown for sackings and tarpaulins.

S. & L. AND CHEMICAL PLANTS

Even more than in other industries, the modern chemical plant relies on complex piping systems—a breakdown in a simple pipeline could bring the whole plant to a standstill.

S. & L's experience in this field all over the country—at Durgapur, Rishra, Gomia, Bombay, Sindri, Varanasi etc.—places them in a unique position to render an important service to the Chemical Industry.



Recognised as the leading manufacturers in India of fabricated pipework, S. & L. offer a complete service from design to commissioning, with all materials and workmanship of the traditional high standards associated with S. & L.

Commodity Markets

SUBSTANTIAL RELIEF FOR TEA RECOMMENDED

(BY A SPECIAL CORRESPONDENT)

THE Tea Finance Committee, it is understood, has recommended substantial reliefs for the tea industry. All the demands of the industry, it is said have been met. The Committee's recommendations include allowing the cost of replanting and new planting as a revenue charge for tax purposes. Replacement, extension and replanting expenditure too would qualify for an allowance consisting of an excise rebate amounting to 40 percent of the actual costs incurred, if the recommendations of the Committee in this particular matter are accepted in full. It has been further suggested that a development rebate of 20 percent on the "capital" element of the total expenditure incurred by a garden should be granted.

The proposed Tea Finance Corporation will offer medium and long-term development loans direct to producers. Banks will take care of hypothecated finance. Capital for the corporation will be raised from the State Governments concerned, insurance companies, the Reserve Bank and by public subscription. The industry, too, would be required to participate in the share capital. The Agricultural Refinance Corporation might be asked to refinance the Tea Finance Corporation when necessary.

Another important recommendation of the Committee is that an excise rebate of 18 paise a kilogram should be allowed when tea is exported. Another one is that all land suitable for tea expansion should be exempted from Government requisition, except in special circumstances.

The Central Minister for Commerce, Mr. Manubhai Shah, when replying to questions in the Lok Sabha recently expressed the hope that the tea industry would secure substantial relief as a result of the recommendations of the Tea Finance Committee. The tea plantation finance scheme allows interest at 6½ percent with a rebate of ½ percent for timely payments. There is also an irrigation loan scheme, a tea machinery hire purchase arrangement, an irrigation equipment hire-purchase scheme, a plan to assist marginal gardens and loans for the development of co-operative tea factories

The Minister said that "the subject of working credits for export was under consideration". He also said "that the Government of India and the Government of Ceylon had set up a joint commission for taking such measures as may be appropriate for the development of tea sales of the two countries and for formulating promotion campaigns in different regions of the world. Formal acceptance by the Government of Ceylon was awaited."

Tea export circles in Ceylon believe that the proposed additional duty of 10 cents a lb on teas for the London auctions, imposed by the country's Minister of Finance, will have severe repercussions on the price of quality teas. The Minister has estimated that the new tax will bring in new additional revenue of Rs 12 million, but tea traders believe that the imposition of the tax would mean less tea going to London.

The diversion of a large quantity of tea from the London auctions to the Colombo mart is likely to create further complications and it has been estimated that there will be, on the average, an extra 2 million lbs of tea for each sale in Colombo, say, 20 percent more tea. The Ceylon Chamber of Commerce states "that the proposed tax on tea estates will also be disastrous. Many estates cannot bear the acreage tax and may have to close down. Even marginal high-grown tea estates may have economic difficulties."

U. K. Tea Stocks

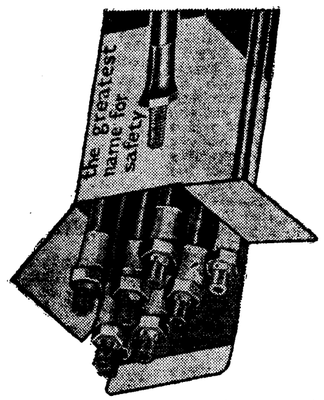
Stocks in the U. K. continue slowly to rise. By 27th November the figure was 105.38 million lbs, compared with 103.87 million lbs, one week earlier. The total afloat was reported at 40.85 million lbs including 30.61 million lbs from Calcutta.

The abolition of Calcutta Entry Tax and the Assam Carriage Tax and their replacement by an additional excise have been recommended. The proceeds would be divided between Assam and West Bengal in proportion to the tea produced adds our South Indian Correspondent.

Co-operative societies and factories which obtained at least two-thirds of their green leaf from other tea estates in 1963 and 1964 have been suggested for placing in the lowest excise zone. Fertilisers from the pool will be sold to the industry at the same rate as that to cultivators.

These recommendations of the Tea Finance Committee and the recent announcement by the Central Minister for Commerce Mr. Manubhai Shah in Parliament that the tea industry will be given some further concessions soon are welcomed in the stock markets and the tea shares are receiving better buying support.

Mr. Manubhai Shah said in Parliament that under the tea plantation finance scheme, an estate could obtain a loan to the expert of Rs. 7,400 a hectare of new plantings for plain gardens and Rs. 9,900 a hectare for hill gardens. This loan would be disbursed in four or five instalments of 50 percent of the admissible amount. It would be repayable over a period of eight years beginning with the seventh anniversary of the disbursement of the first instalment. The rate of interest would be 6½ percent with a rebate of 1½ percent for timely repayment. For hire purchase of machinery and equipment, Rs. 3 crores had been provided. Tea estates might also obtain a loan not exceeding Rs. 1 lakh for sinking tube wells and for constructing reservoirs, etcetera. Loan was also granted to marginal gardens of 300 acres or below in Cachar, Tripura, Kangra and Mandi for carrying out essential repairs, replacement and renovation of their plants and machinery as well as for the construction of factories.



The north Indian tea crop this year up to mid-November at 591 million lbs is ahead of last years to the tune of 61.3 million lbs. This big harvest after a period of continuous crop failures may be a matter for satisfaction and exhilaration for the producers there, but this is creating a problem of disposal. Although the increase in crop which has taken place in the latter half of the season is not big enough to create surplus conditions in an expanding world market, the buyer is getting sufficient opportunity to pick and choose from for some months. This is a luxury that had been denied to him for a year or two. The bigger harvest reported from north India is having its depressing effect on the Calcutta and Cochin auctions. Prices have been falling, particularly in the case of plainer varieties.

The tea trade in Ceylon has urged the Ceylon Government to come to an understanding with India concerning the marketing of Ceylon and Indian teas abroad, pending finalisation of a general commodity agreement. This is one of the suggestions put forward by the representatives of the entire tea trade in Ceylon who met recently to consider the grave situation that has arisen consequent on the sharp decline in low-grown tea prices due to the recent cessation of purchases by Iraq of the low-grown tea from Ceylon.

CASHEW

Big Rise in Exports

India has made Rs. 22 crores through the export of cashew kernels during the first ten months of 1964, according to an estimate of the Cashew Export Promotion Council. This was the highest on record.

PLAN FOR POPULATION CONTROL

Planned Development and Population Growth. By R. A. Gopalaswami. (Published by the Institute of Applied Manpower Research, New Delhi. Pages 57.)

The paper is divided into two sections; the first discusses the consequences of uncontrolled births and the second how to achieve nation-wide birth control. In the section on the consequences of uncontrolled births, Mr. Gopalaswamy, Director of the Institute, discusses the impact of Indian population growth on food supply, compulsory educational programmes for children and employment opportunities. The second section deals with various methods of birth control, their practicability and effectiveness. The author has put forth a long-term plan for national birth control envisaging a decline in the birth rate to 20 or less, compared with the present rate around 40. The reduction is to be achieved by the end of the seventh five year plan.

Sterilisation will be the primary device with induced abortion and contraception as secondary devices. To create the necessary environment, the author advocates an Act by Parliament which will not make family limitation compulsory but will only guide the national policy on population, ceiling on child birth, sterilisation, etcetera, and define the duties of the Central, State and Local Governments in achieving the desired objective.

The paper is a good exercise on a problem of utmost importance to the Indian economy. Since even educated people do not fully know the various methods of birth control, Mr. Gopalaswamy rightly emphasises the rôle of education in such programmes.

COMMUNISM IN VIET-NAM

From Colonialism to Communism: A Case History of North Viet-Nam. By Hoang Van Chi. (Published by Allied Publishers, 13/14, Asaf Ali Road, New Delhi. Price Rs. 16, pages 210.)

The Congress for Cultural Freedom should be complimented for sponsoring the publication by Hoang Van Chi. It gives the chronological picture of Viet-Nam through ages. Dominated culturally by China for centuries, the nation collapsed to the advancing French colonial forces in the nineteenth century, and an arbitrary division of the country was made to suit the conveniences of the ruling power. Most of Viet-Nam was under the French protectorate, but it was in effect ruled by the French Colonial Resident with the help of local feudal chiefs. The arrangement was far from satisfactory, since it inhibited the growth of an organised democratic front.

So after the second World War, all anti-cononial forces came under the same banner to fight all attempts to rehabilitate the old French rule and Ho Chin Minh, the Comintern-trained communist worker, assumed leadership. According to the author, Ho Chin Minh is an outstanding personality and no rival could be found equal to him in Viet-Nam. This explains the continuing success of the communists and the relative weakness of the democratic forces in the south. There are, of course, factors other than leadership and both China and Russia have been consistently helping the Viet-Minh with arms, amunitions and military experts.

The chapters on the land rent reduction campaign and the land reforms campaign are typical examples of the communist way of doing things or shall one say, overdoing things which may excite popular feelings against the richer classes but does not necessarily yield lasting success.

The book should be read by everybody who is interested in the problem of expansion of communism in Asia.

ECONOMIC PROBLEMS

Economic Problems of India. By Yodhraj. (Published by Rajkamal Prakashan, 37 Palli Hill, Bandra, Bombay 50. Price Rs. 4, pages 119.)

Mr. Yodhraj was associated with one of the leading Indian banks for 27 years, and with his varied experiences one would have expected a realistic and coherent analysis of Indian economic problems and their solutions. The book, unfortunately, is a disappointment. His presentation lacks clarity and generalisations have often been made without a proper analysis of the subject matter. The common reader may find it difficult to follow the thread of his arguments.

The author pleads for larger scope for the State Trading Corporation in controlling imports and exports, bigger State enterprises in the capital goods and machine tools industry and more liberal advances to small-scale industries than that envisaged in the present plan. He is correct in saying that local talents have to be pooled and employed in industries and that the country should not depend too much on foreign experts. More emphasis should be given to technical education and the designing of products. The merits of some of these points have been widely recognised whereas some of his views are highly contentious. But his way of approaching the problems is very unconventional.

CEMENT PRODUCTION

Report of the Productivity Study Group on Cement Industry. (Published by the National Productivity Council, 38 Golf Links, New Delhi 3. Pages 62.)

The National Productivity Council constituted study groups for five industries among which cement was one. The group has made an effort to make an intensive study of all aspects influencing productivity of the cement industry. It was asked to suggest measures which will lead to increased productivity, reduce manufacturing costs and pave the way for the growth of the industry on a more rational basis. It has made 39 recommendations. The report contains 15 tables and copies of the questionnaire circulated among producers.

COMPANY AND PUBLIC NOTICES

BALMER LAWRIE & CO. LTD.

NOTICE is hereby given that the Board of Directors has today declared an Interim Dividend of 7% (subject to deduction of Income Tax) on the Ordinary Shares of the Company, in respect of the year 1964. The dividend will be payable on or after 29th December, 1964 to those members whose names are entered in the Register of Members of the Company on that date. Dividend Warrants will be despatched to members and no application to the Company is necessary.

NOTICE is also hereby given that the Register of Members of the Company will be closed from 18th December, 1964 to 29th December, 1964, both days inclusive.

By Order of the Board,
D. MANSON,
Managing Director.

21, Netaji Subhas Road,
Calcutta, 8th December, 1964.

THE BOMBAY BURMAH TRADING CORPORATION LIMITED

NOTICE

NOTICE is hereby given that the One Hundred and First Annual General Meeting of the Shareholders of the Corporation will be held at the Tata Auditorium, Bombay House, 24, Bruce Street, Fort, Bombay 1, on Wednesday the 30th December, 1964, at 4.00 p.m. (S.T.) for the purpose of transacting the following business:

1. To consider and approve the Statement of Accounts for the year ended 31st May, 1964 and the Balance Sheet as well as the Reports of the Board of Directors and Auditors.
2. To sanction the declaration of a dividend.
3. To appoint a Director in place of Mr. M. G. R. Aitken who has attained the age of 67 years and who retires by rotation and, being eligible, offers himself for re-appointment, and to consider and, if thought fit, to pass the following Ordinary Resolution of which special notice as required by Sections 190 and 281 of the Companies Act, 1956 has been received by the Corporation:—

   "Resolved that Mr. M. G. R. Aitken who has attained the age of 67 years and who retires by rotation be and is hereby re-appointed a Director of the Corporation and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."
4. To appoint a Director in place of Mr. Arvind N. Mafatlal who retires by rotation and, being eligible, offers himself for re-appointment.
5. To appoint a Director in place of Mr. Neville N. Wadia who retires by rotation and, being eligible, offers himself for re-appointment.
6. To appoint the Auditors of the Corporation to hold office for the period until the conclusion of the next Annual General Meeting and to fix their remuneration.
7. To appoint Branch Auditors at a remuneration to be fixed by the Board of Directors.
8. To consider, and if thought fit, to pass the following resolution as an Ordinary Resolution:—

   "Resolved that the capital of the Company be and is hereby increased to Rupees Ten Crores (Rs. 10,00,00,000) by the creation of Twenty-eight Lakhs (28,00,000) shares of Rupees Twenty-five (Rs. 25) each."
9. To consider, and if thought fit, to pass the following as a Special Resolution:—

   "Resolved that Article 67 of the Company's Articles of Association be deleted."

By Order of the Board,
WALLACE AND COMPANY,
Secretaries and Treasurers.

Registered Office:
9, Wallace Street,
Fort, Bombay 1.

Dated the 27th day of November, 1964.

Notes: (1) Any member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

(2) In respect of Items Nos. 3, 8 and 9, the Explanatory Statements as required under Section 173 of the Companies Act, 1956 have been posted to the Shareholders.

(3) The Memorandum and Articles of Association of the Company will be open for inspection at the Registered Office of the Company at 9, Wallace Street, Fort, Bombay, on any working day, except Saturdays, between the hours of 3 p.m. and 5 p.m., and on Saturdays between the hours of 11 a.m. and 1 p.m.

(4) The Transfer Books of the Corporation have been closed from the 3rd day of November, 1964 to the 24th day of November, 1964, both days inclusive.

(5) Warrants in respect of dividend, if declared, will be posted to shareholders on the 31st day of December, 1964. Dividend will be payable on and from the 4th day of January, 1965, to those shareholders whose names stand on the Register at the close of business on the 24th day of November, 1964.

GLOOMY OUTLOOK FOR THE CAPITAL MARKET

EXCEPT for brief spells of speculative activity, the Indian stock markets have been sluggish and depressed for the greater part of the past year. At the beginning of 1964, hopes were high that the Budget which the Central Finance Minister, Mr. T. T. Krishnamachari, was due to present would end the long phase of depression which began in the middle of 1962, and was accentuated first by the Chinese invasion and then by the famous Morarji Desai Budget of February 1963. Mr. Krishnamachari's Budget, however, came as a disappointment and a shock; nothing that has happened since has made it necessary to alter first impressions that its effects on the private capital market would be extremely damaging. The fall in equity prices has brought serious losses to genuine investors, and the decline in turnover has affected the marketability of their holdings.

The damage that has been done is not fully reflected by the fact that the Reserve Bank's index for variable dividend industrial securities (base year 1952-53 equals 100) has fallen from 172.3 to 162.8 over the past year. The point has to be remembered that, despite a small improvement, the index was already at a very low level at the end of 1963. The worst effects have been felt in the new issue market. The volume of new flotations offered for subscription by the public has declined, and the response they have got has been extremely poor. Most of the issues have been left in the hands of the underwriters, and with very few exceptions the new shares are quoted below par. The Government has yet to realise that subscription by the underwriters does not solve the basic problem of attracting the savings of the people; the underwriters' resources are not limitless either. But perhaps the worst consequence of the stagnation of the new issue market is that the inflow of foreign capital has been discouraged; several projects involving collaboration from foreign investors have had to be dropped because the rupee capital could not be raised.

Against this background, the presidents of the recognised stock exchanges in India have submitted a thoughtful and timely memorandum to the Central Finance Minister, in which they highlight some of the important fiscal changes that are necessary to review the capital market. In the case of the new issue market in particular, they suggest one main change—that investments in new companies should be exempt from the wealth tax, and also from the capital gains tax. The case for exemption is sound. It rests primarily on the fact that those who invest money in new companies generally do not get a return for at least four or five years, since it takes the companies about that much time to reach a dividend-paying stage. It is wrong to add to the sacrifice implicit in waiting so long by forcing investors to pay wealth tax on their investments in new companies. Furthermore, when compensation for the long wait is forthcoming in the form of appreciation in the value of the new shares, the compensation is unjustifiably eroded by the capital gains tax. A major precondition for the revival of the new issue market, therefore, is that investments in new companies should not be subject to these two levies.

The new issue market, however, cannot flourish on its own; its prospects are inevitably bound with those for the market in older shares. Almost the sole support for the latter in recent months has been provided by such institutions as the Life Insurance Corporation and the Unit Trust of India; public interest has been negligible. From time to time, there has been a minor revival of activity on rumours that the tax structure for companies and for investors is about to be modified so as to reduce the burden on them. But the rumours have proved baseless so far; although several modifications have been made, their net effect has been to make the tax laws stiffer. The stage has now been reached where no relief can be expected until the next Central Budget is presented at the end of February. Investors may not be inclined to sell, since present prices are very low. But the inclination to buy will be strongly restrained by the thought that most shares are already fully valued in relation to their dividend yields. The average yield on ordinary shares at present ranges between 6 percent and 7 percent. This is hardly much at a time when good debentures yield around 7 percent and good preference shares yield more than 9 percent. Even banks pay around 6½ percent on their long-term deposits, and some companies have been paying up to 12 percent on the deposits they have invited from the public. Equity yields, in other words, have not kept pace with the general rise in interest rates. It is unlikely that they can, as long as they are depressed by the tax on dividends. In all fairness, the least that can be done is that dividends of up to 10 percent should be exempt from the tax.

The low level of equity yields might have been more acceptable if the growth prospects for the shares were good. But growth prospects have been undermined by the tax on bonus issues. This year, they have been undermined further by the decision to make bonus shares subject to capital gains tax in shareholders' hands. The Government has paid no attention to protests that the tax on bonus issues is unjustified since such issues are made out of reserves which have already been taxed. The capital gains tax on bonus shares is even more indefensible, especially since it is levied regardless of whether the shares are or are not sold. Apart from discouraging investment, the worst effect of such double or triple taxation is that it is distorting the capital structure of companies. The case for reform is strengthened by the fact that the revenue from all these taxes (including the dividend tax) is small in relation to the damage they have caused.

In the final analysis, a recovery in the stock markets will depend to a large extent on the personal savings of potential investors. The stiff taxes on personal incomes and wealth have reduced such savings drastically in recent years. Personal savings have also been seriously eroded by the rise in prices. As the economic situation is extremely grim and the uncertainties about the future are many, such savings as still exist are tending to go increasingly into investments which bring fixed returns. Among such investments, the choice is more and more in favour of those which carry tax exemption facilities. The success this year of the

small savings schemes and of the Unit Trust of India is in fact due in large measure to the existence of such facilities. In the process, however, the flow of risk capital into industry is suffering. The immediate prospects for the stock markets, therefore, are not particularly promising. The worsening of the foreign exchange situation, it is reported, has already led to a substantial cut in imports, which will badly affect the working of industry. Worried by the inflationary pressures in the economy, the Government is also retreating from the policy of decontrolling the prices of industrial commodities which was tentatively inaugurated a year ago. An improvement in industrial profits thus seems unlikely; a general economic recovery sparked off by a rise in agricultural production, together with major fiscal changes aimed at promoting saving and investment, may prove to be essential prerequisites for an improvement in the capital market.

FUTURE OF THE D.V.C.

SINCE the Central Minister for Irrigation and Power, Dr. K. L. Rao, made a statement in the Lok Sabha recently about reorganising the Damodar Valley Corporation "on functional lines", the future of the organisation has looked uncertain. For that reason, public interest in its affairs has increased. Some Rs. 160 crores of public money has so far been sunk into the D.V.C., from which great things were expected. The move to break it up has come as an anti-climax, and people are naturally anxious to know how the theory of "functional" reorganisation is going to work out in practice. Dr. Rao's statement was later clarified to mean that the D.V.C. would continue to function only as a power producing body, presumably under the Central Government, and the residuary assets would be divided between the two participating State Governments of West Bengal and Bihar as follows: irrigation for West Bengal and soil conservation facilities and fisheries for Bihar. Subsequently, a senior civil servant, who was once chairman of the D.V.C., is said to have been engaged for drawing up a reorganisation plan. When the scheme is finalised and accepted for implementation, the original concept of the unified development of the entire valley cutting across State boundaries will have died an unnatural death, and presumably no second attempt will be made to develop another area in the country on similar lines.

Even while the reorganisation scheme is being drawn up, West Bengal has posed some awkward questions to the Central Irrigation and Power Minister. According to one West Bengal Minister's statement, his Government will not take over the irrigation canals unless their navigability is assured throughout the year. Dr. Rao tried to evade questions about the implications of this statement. He did not clear doubts as to what would happen to the canals if the Water Transport Board which the West Bengal Government has set up to "examine the question of commercial operation" did not recommend the take-over, and in that case, who would have the responsibility for running the canals. West Bengal has not taken over the canals so far, although these would have been useful for irrigation purposes; it does not obviously intend taking them over in the near future.

It is, however, good that the D.V.C.'s power production programme has not suffered on account of the confusion and uncertainty. Its third plan power schemes are going through as scheduled. The first 140 MW unit of the Chandrapura station was recently commissioned. Of the remaining two (of the same capacity), one will go into production in March next year and the other by the middle of 1967. The Corporation already had a total installed capacity of 502 MW, consisting of two thermal and three hydro-electric power stations, the largest power generation capacity for any single system in the country. When all the three units of the Chandrapura station are commissioned (to which three more 140 MW units wil be added during the fourth plan period), and the capacity of the 150 MW Durgapur power station is enhanced by a third unit (of 140 MW capacity) in a few years' time, the D.V.C.'s total installed capacity for power generation will have gone up to 1,482 MW.

It is unlikely that either West Bengal or Bihar will welcome the D.V.C.'s power expansion schemes. They are jealous in guarding the authority of their own State Electricity Boards, but they are not voicing their opposition openly, presumably because the power needs of the region served by the D.V.C. system are growing fast, and neither of the two has a surplus of electricity from their own sources. The Central Ministry of Irrigation and Power is keen on pushing the national grid scheme through as quickly as resources permit, and that could be another reason why the States have not been protesting. A third, and more probable, reason is the prospect of getting a bigger sum as their share from the D.V.C. power undertakings, since the assets they are to inherit under Dr. Rao's scheme are not likely to yield much revenue.

Even if the D.V.C. functions smoothly as an Inter-State power producing agency after the proposed reorganisation takes place, a lot of questions will remain to be settled—about managing the waters of the dams and the control of the Durgapur barrage for example. The requirements of irrigation and flood control can at times become mutually conflicting. (The suspicion lingers that the devastating floods of 1959 were due to the wrong management of the dam waters by D.V.C. engineers.) Even if the control of the dams passes to the Centre, which the latter may exercise through the D.V.C., the problems will not be solved and all sources of friction will not disappear. The anti-soil erosion measures in the upper region of the valley lying in Bihar may have been completed, but the flood difficulties of West Bengal are still there. If the D.V.C. is broken apart and the responsibility for flood control in industrial West Bengal passes to this State, it will have to build embankments on the unprotected side of the lower Damodar. That will involve heavy cost. And those who control the dams or the barrage may not always be in a position, or may not be willing, to release as much water as the canals may require for irrigation or commercial navigation. The break-up of the D.V.C., therefore, does not provide an easy way out which it is made to look. But if the Governments of Bihar and West Bengal cannot agree to participate in a common national enterprise, there is no alternative.

COTTON PRICES RISING

COTTON prices have been rising rapidly for some weeks now. Futures trading in Bombay had to be suspended on Wednesday of last week as the hedge contract rose above Rs. 775 for 3 quintals, the permissible ceiling for the predelivery period; unofficially, the March contract was bid up to Rs. 780. In the ready section, nearly all the varieties are commanding sizable preminus, ranging from Rs. 40 to Rs. 100 a candy above the statutory ceilings Spot prices have risen by Rs. 100 or Rs. 150 a candy from the lowest levels recorded during September-October. Never have cotton prices been so high, certainly not at this time of the season. Some of the varieties are quoted at an all-time record, and, on average, Indian cotton is about Rs. 250 to Rs. 300 a candy costlier than the comparable foreign variety.

That cotton prices should have pierced the ceilings—and so very early in the season—is bad enough, because it reduces the price control scheme to a farce. What makes the situation appear much worse is that prices have been pushed to fantastic levels even when the overall supply of the commodity is regarded as reasonably satisfactory. Despite the downward revision of the crop estimates due to partial damage in certain areas of Khandesh and Punjab, the 1964-65 crop is expected to be not below 6 million bales. With a record carryover of 2.6 million bales and probable imports of 950,000 bales, the total supply should be sufficient even if the consumption of mill increases.

The view is widely shared, in both official and unofficial circles, that the rise in cotton prices is quite unwarranted. While pointing out that there was enough cotton to meet the industry's requirements, the Central Minister of Commerce, Mr. Manubhai Shah, conceded in the Lok Sabha recently that cotton prices had in some cases pierced the statutory ceilings. It is surprising that the Central Minister should have mentioned the fact without saying what action had been taken to make cotton available to the industry within the ceiling rates. Surprisingly, too, the authorities have remained as idle spectators. The Forward Markets Commission can scarcely take credit for having prescribed a heavy margin on all "long" positions above Rs. 775. This margin is practically useless as it will not become operative during the predelivery period, that is, up to the end of February. No business can be officially recorded above Rs. 775 until the end of February. Of course, it is the spot material that really matters, and only New Delhi is competent to take action which can have an impact on the course of spot prices.

It is amusing to find an official of the Central Commerce Ministry stating that "with the cooperation of the mills, the trade and growers, conditions in the cotton market would settle down soon." Any difficult situation could be tided over if all the conflicting interests decided to co-operate. But the important question is: what is to be done when the necessary co-operation is not forthcoming? That cotton prices should have been pushed to fantastic levels in spite of a reasonably satisfactory supply proves that the various interests are unwilling to co-operate. Enquiries from informed sources show that the cotton crop is moving to the market at an extraordinarily slow pace. The crop is not bad, but stocks are being tightly held by growers, co-operative societies and ginning factories It should not be difficult to discourage the holding of stocks if appropriate measures are taken. The margin on advances against cotton could be stepped up appreciably in order to make holding of stocks difficult and costly, and holding of stocks in excess of prescribed limits could be prohibited. Requisitioning and compulsory survey need to be introduced immediately and persons found guilty of contravening the law should be severely punished.

Mills may have to be allotted quotas for buying indigenous cotton, the size of the quotas being determined according to the movement of the crop. Speculative activity will have to be discouraged through a scheme of rigorous margins

made applicable at substantially below the prevailing prices. It is preposterous to suggest that the rise in prices cannot be checked effectively. All that is needed is firm action and honesty on the part of the administration entrusted with the task of implementing price control. Price control has no meaning if it cannot be enforced. The question of keeping cotton prices in check is of particular significance in view of the partial control over cloth production and prices. If cotton prices cannot be held down, it will be difficult to resist the industry's plea for an upward revision of the prices of controlled varieties. It is hardly necessary to emphasise the need for expediting the import of foreign cotton. The Government has done well in releasing a global import quota for 214.000 bales of cotton, including 70,000 bales from Pakistan.

Current News and Comment

Examining Industrial Licensing

The Central Ministry of Industry and Supply has recently set up a study team to enquire into the working of the Directorate-General of Technical Development. The study team is required to examine the organisation, structure, method of work and procedures of the D.G.T.D., particularly with a view to locating the points at which delays occur, where bottlenecks exist and where administrative failures are possible and suggest measures for improvement so that opportunities for corruption are eliminated. Industrial organisations are being asked to express their views on the working of the D.G.T.D. and offer suggestions for its improvement. The memorandum submitted to the study team by the All India Manufacturers Organisation (A.I.M.O.) contains many valuable suggestions, which, if properly implemented, would go a long way in removing several avoidable hardships suffered by entrepreneurs. These suggestions are the outcome of the difficulties faced by the industrial community in setting up and running industrial enterprises.

The A.I.M.O. has rightly urged the Government that a properly phased programme of industrial licensing should be evolved and implemented by the D.G.T.D., keeping in view the expected yearly availability of foreign exchange during a five-year planning period. Experience shows that licences were issued almost to the targeted capacity even before the commencement of a five-year plan period or in the first year of the plan. This led to bottlenecks in foreign exchange, transport and the like by the middle of the plan period, thereby resulting in the imposition of drastic restrictions on imports and industrial licensing. The memorandum has suggested that there should be better co-ordination between the D.G.T.D., Central Ministries of Industry and Supply, Commerce, Finance and the Planning Commission in order to evolve a properly phased programme of industrial licensing. To avoid complaints that entrepreneurs were not given adequate opportunity to submit their applications, it has been suggested that full publicity should be given throughout the country at the commencement of every year to the capacity that would be licensed for various industries during the course of the year. It is also suggested that the D.G.T.D. should have a service department to inform entrepreneurs about the capacity position relating to an industry. This will be possible if the Directorate keeps an up-to-date well-indexed record of the capacities visualised, capacity booked and capacity open for licensing of various items.

Another important work of the Directorate is to assist industries in the procurement of raw materials, essential building materials like steel and cement, capital goods, fuel, electric power, transport facilities, etcetera. The large amount of idle capacity in various industries indicates that the Directorate's work in this matter is not quite satisfactory. The A.I.M.O. has suggested that the D.G.T.D. should be charged with the responsibility of reviewing the problems of each industry every year and of recommending prompt remedial measures. On-the-spot study of important industrial establishments is considered very necessary, particularly in view of the Government's stand that additional industrial licensing capacity should be allowed to be established only when the production required cannot be secured from the optimum working capacity of existing units.

The A.I.M.O. has stressed that the D.G.T.D. should have a separate directory of all products made in the country and make it readily available to actual users; a brief reference to the directory should be adequate to examine the application from the indigenous angle. As the preparation of such a comprehensive directory, product-wise and manufacturer-wise, will take time, it is suggested that in the meantime, the system of block licensing should be extended to every unit registered with the Directorate. On the basis of the value of licences granted to these units in the past, a ceiling of foreign exchange should be allotted from half year to half year and all these units should be permitted to import whatever permissible items they wish within that ceiling, without prejudice to the interests of the indigenous manufacturers. The memorandum has also suggested that letter of intent should be granted wherever licensing capacity exists, not only for key industries but also for other industries and this should be equally applicable whether the industry is large or medium. It is said that some of the technical officers who process the applications are not fully aware of the latest rules and regulations. Even when a request is made for the issue of a letter of intent, the officer concerned insists on having all the detailed information. Thus the very purpose of the issue of a letter of intent is nullified.

Value of the Rupee

The erosion in the purchasing power of the rupee in recent years came in for strong criticism in the Lok Sabha recently. The observation of the Dean of Allahabad University a few months ago that the rupee was now worth only 17 paise, compared with its value 17 years ago, provided much ammunition to critics. Both Congress and Opposition members argued that the rupee had lost as much as 83 percent of its value during this period. The reply from the Treasury benches was notable for its evasiveness and was aimed more at deflecting the argument than at answering critics. The Minister of State for Finance, Mr. B. R. Bhagat, stated that there was no precise measure of the value of the rupee, although in the same breath he added that price indices were used to measure the changes in its value.

While the precise measurement of the loss suffered by the rupee may be left to academicians, it cannot be denied that prices have shot up in recent years, particularly in the last few months. The wholesale price index in mid-November this year stood at 156.8 (base year 1952-53 equals 100), which represents a rise of 22.4 points compared with a year ago. The wholesale price index does not tell the whole story since it understates the sharp rise in the price of essential commodities and does not reflect the much higher level of retail prices. Mr. Bhagat admitted that the index showed a rise of about 100 percent over the past 17 years, but added that nearly half of the increase took place in the postwar and post-partition inflationary phase which lasted until 1951. He claimed that the increase between 1961 and 1963 was small. It may be true that the earlier rise in prices was due to special factors, but can the rise through the subsequent years be explained in such terms? And when the special factors ceased to exist, did prices respond to the change? It is ironical that prices should have continued to rise and established new records during the three plans, which are supposed to be aimed at ushering in an era of plenty. During the year ended June 1964, the increase in wholesale prices, according to the Reserve Bank of India, "was larger than in any previous year, except 1955-56, since the commencement of the five year plans in 1951" There may be a divergence of opinion about the extent of erosion in the value of the rupee, but there can be little doubt that public tolerance of inflation is fast wearing out.

While factors like the stagnation in agricultural output for three successive years and the big increase in population have undoubtedly been responsible for the pressure on prices, the Government cannot absolve itself of blame. The reckless pursuit of inflationary monetary policies, notably deficit financing, is a major cause of the rise in prices. The safe limit of Rs. 550 crores for deficit finance suggested by the planners for the entire third plan period was crossed when the plan was half-way through. The authorities have been expanding money supply at the rate of 10 percent to 13 percent a year, when the real output has been rising at an average rate of only 3 percent. A rise in prices has thus become inevitable. A greater measure of financial discipline on the part of Governments, both at the Centre and in the States, would have considerably reduced the pressure on prices. Mr. Bhagat mentioned that the prices in many countries had shown an even bigger rise than in India, as if this were an extenuating factor. It may be true that prices in other countries too have risen, but this is poor consolation for the people of India.

Oilseeds Prices Reach New High

Oilseeds prices keep soaring. Castorseed, linseed, cottonseed and groundnut—all were bid up to new high levels for the season. In Bombay, castor and linseed futures rose beyond their respective ceilings (valid up to the end of January) of Rs. 190 (a 250 kilograms) and Rs. 45 (a 50 kilograms) and were bid up to Rs. 192 and Rs. 46.50 in unofficial dealings. Cottonseed futures rose to Rs. 116.50, which is only Rs. 1.50 below the ceiling of Rs. 118 (a 250 kilograms). Groundnut futures crossed the second marginal line of Rs. 103 (a 250 kilograms) and rose to a high of Rs. 108 in kerb dealings; official trading had to be suspended at above Rs. 103.90 because of the limit on the price rise during any week. The rise in oilseeds futures since about the beginning of November has been spectacular. In a matter of some six weeks, groundnut futures have risen by almost the full range in the previous season, and at its last week's high of Rs. 108, groundnut futures are substantially higher than the ceiling prescribed for the 1963-64 season. With castor and linseed quoted above the ceilings, speculative activity is now virtually confined to groundnut and here again, only the big and resourceful operators can afford to trade because of the penal margin of Rs. 10,000 a 25 metric tons—the minimum unit of trading—on all purchases.

Never have oilseeds prices been quoted so high at this time of the season, as they are quoted at present, suggesting near-famine conditions in the market. The phenomenal rise in oilseeds prices has intrigued most observers as the overall supply position of oilseeds this season is considered to be much better than in the previous one. The groundnut crop is reported to be much larger than the 1963-64 harvest, and the outlook for mustardseed and rapeseed and linseed crops is believed to be fairly promising. What is more, the export of groundnut oil has not been permitted this season so far, whereas considerable export sales had been effected by now last year. In spite of a better harvest, marketable supplies of groundnut have continued to be restricted, especially in Bombay. This is because, Gujarat State, which is the main source of supply of groundnut for Bombay, has banned the export of groundnut outside the State. The export of groundnut oil from Gujarat is allowed, but the supply of oil has failed to catch up with demand. This is partly because Gujarat is unable to crush all the seeds that keep flowing to the market.

Apart from the restricted flow of groundnut and groundnut oil in Bombay, bullish sentiment in oilseeds last week was greatly helped by the Government's decision to allow the export of groundnut H.P.S. on the basis of shipping bills. The export of groundnut had never been banned officially, but no shipping bills were being passed by the authorities since the end of June. Export sales in groundnut so far are estimated around 25,000 tons. In spite of the pressing need to augment the scarce foreign exchange resources, the Government's decision allowing the export of groundnut H.P.S. has evoked sharp criticism because even

without exports, edible oil prices have risen to levels which are beyond the reach of the common man.

The current season has run hardly two months and groundnut oil is already quoted around Rs. 23 (a 10 kilograms). Yet another factor which has influenced the course of oilseeds prices in the past week or so is the receding prospect of securing all the 75,000 tons of soyabean oil from the U.S.A. under P.L. 480 at an early date. Latest reports indicate that hardly 25,000 tons are likely to reach the country by March-end, and the remaining 50,000 tons will be spread over a further period of six months. In view of the steep rise in soyabean oil prices over the past few months, it is not unlikely that the *vanaspati* industry might press the Government of India to arrange for the import of cottonseed oil instead of soyabean oil. The Government's export policy for groundnut and groundnut oil and the supply of edible oils from abroad have no doubt a significant bearing on the future trend of edible oil prices in the country. But despite improved supply, there is a distinct danger that edible oil prices might continue to soar if the Government does not take effective steps to discourage speculative tendencies. Holding and hoarding of stocks must be discouraged at all levels—even at the grower's end. There are no indications yet that the Government is willing to act firmly, but if the necessary action is delayed for long, the situation might well get out of control.

Modernising the Cotton Mills

The difficulties of the Indian cotton mill industry relate not only to the restrictions on its expansion and adequate supply of cotton at reasonable prices. They also relate to the problem of building up internal resources for rehabilitation and the modernisation of its old and outmoded machinery. Since the indigenous supply of machinery is limited both in quantity and variety, the industry needs to be assured of adequate foreign exchange for imports. That nearly 50 percent of the machinery used in cotton mills is as old as 40 years or more is common knowledge. If the industry is to hold its own in export markets, and improve its performance, if it is to increase the supply of cloth in the domestic market, and that at cheaper prices, the modernisation and expansion of the mill industry is urgent and imperative.

The Planning Sub-Group on Cotton Textiles has estimated that for the expansion of the spinning and weaving capacity of the industry, Rs. 92 crores will have to be invested during the remaining two years of the third plan and Rs. 225 crores during the fourth plan, making a total of Rs. 317 crores. To this has to be added the requirements for rehabilitation. The industry has actually been spending at an annual rate of Rs. 40 crores on rehabilitation. This requires to be stepped up considerably in view of the rising prices of machinery and the need to accelerate the pace of rehabilitation. But even on the assumption that investment in rehabilitation remains unchanged at the level of Rs. 40 crores a year, the finance required for rehabilitation for the remaining two years of the current plan and the fourth plan period will be Rs. 280 crores. Together with Rs. 317 crores required for expansion, the total financial needs of the cotton mill industry up to the end of the fourth plan will be of the order of Rs. 597 crores. The cost is bound to go up with the rise in machinery prices.

The Indian Cotton Mills Federation has submitted a memorandum to the Central Ministry of Finance seeking specific fiscal relief in the forthcoming Budget in order to enable the industry effectively to implement its programme of modernisation and expansion. The Federation points out that in the present state of the capital market, it is difficult for new textile units to come into being. Even if part of the expansion is entrusted to new units and financed by them through resort to the capital market, the requirements of the existing units for the expansion already allowed and that which may be allowed, as also for rehabilitation, will be substantially in excess of Rs. 400 crores. The Federation says that with the low profitability of the textile industry, it may be possible to raise only a small portion of this amount in the form of fresh capital. The industry, therefore, will have to obtain most of the funds from internal resources and borrowings. But the internal resources are being fast eroded. The Federation has cited figures from its study of a very large number of companies covering the period 1955 to 1959 and 1961 to 1962, to support its contention concerning the depletion of internal resources The Federation has argued that the internal resources should be adequate to meet the growing requirements of working capital. There is an even more important reason why the industry's internal resources must expand. The mills will have to continue to rely heavily on borrowings for financing the bulk of their investment programme. Not only has the cost of borrowing been increasing, but it is becoming increasingly difficult to obtain loans. In the circumsftances, it is all the more necessary for the industry to be able to attract loans by presenting a better picture of its finances. The Federation has told the Central Ministry of Finance that the cotton textile industry should be included in the list of industries of national importance which have been given rebate in income tax and super tax. It has also pleaded for the grant of development rebates on a more liberal scale, as has been done in the case of the coal and shipping industries.

THE INDIAN REVENUES

THE Revenue of India has increased in a remarkable manner during the past quarter of a century, but the expenditure has increased also During the twenty-five years, ended 31st March, 1903, there have been deficits on only nine occasions, but they totalled 12¾ millions sterling; the last five years, however, have all shown a surplus amounting to 15 millions and the remaining eleven years yielded nearly 12 millions more. The net result for the twenty-five years being a surplus of 14¼ millions sterling. The following figures of Revenue and Expenditure are interesting:—

	Revenue	Expenditure
	£	£
1878-79	45,962,977	44,539,912
1882-83	49,353,063	48,903,172
1887-88	53,325,096	54,677,650
1892-93	60.086,914	60,642,522
1897-98	64,257,207	67,830,014
1902-03	77,434,915	74,365,366

The interest paid by India on her ordinary debt is comparatively small, only £1,435,250. For railways it amounts to £4,689,121 and for Irrigation Works £969,105 making a total of £7,093.476, the rupee being taken at 1s. 4d. To the Revenue of £77,434,915, the Land and Railways account for a half, indeed the great increase in revenue is due to railways which contributed a gross revenue of £20.133,900 and the net revenue from which pays the interest on the total public debt. The great item of expenditure is, of course, the Army, which takes £17,346,392 The total public debt at the end of 1902-03 was £209,792.440, but the railways more than pay for all the interest on it.

A Ditcher's Diary

FEW ANY LONGER THINK THAT CHINA IN THE UNITED Nations is more dangerous than China without; the latest explosion, beastly and crude, has only underscored India's old and very sensible policy on the question. It is, however, obvious now that, since the autumn invasion of 1962, there has been some rethinking in New Delhi, mostly, as it appears, on barren lines. Then there appears to have been some re-rethinking. Thinking never did a bureaucracy any harm; but I get worried about New Delhi because thinking is frequently engineered—a process more technological or financial than mental. From the point of view of political morality, there was never any reason to review the stand that Peking should occupy the seat now filled by Formosa, although the active rôle taken by India to seat communist China at the United Nations might quite forgivably be abandoned after what China has done to India. What is suggested by the latest reports from Delhi is that in the Government of India there is in progress a very alarming cold war. One part of the bureaucracy does not much mind identifying itself with the U.S. State Department; and another has vague, perhaps not so vague, sympathies with ideas usually associated with what Mr. Krishna Menon and his group stood for. Mr. Swaran Singh has not been in the External Affairs Ministry long enough to find out; but he does need to sort out his men abroad. For reasons I will not go into on this occasion, Mr. Nehru permitted a kind of dyarchy in the Indian Foreign Service; it was by no means uncommon once to see in an Indian mission abroad two strands of thought and action, frequently to the annoyance of the chief of the mission. This is no longer necessary, for neither Mr. Shastri nor Mr. Swaran Singh is out to lead the world or even Asia. It is now possible to present India as a country which is more worried about itself than about the rest of the world. The world outside, I am sure, will be more appreciative of this modest image. If China behaves differently, why must we weep? During the war I remember a cartoon in which a patient U.S. sergeant sought to be reasonable with the Chinese and told his G.I., "Be tactful with these Chinks; say, 'O.K. China is bigger than Texas'."

WHETHER INDIA REALLY NEEDS A 1,000 KW TRANSmitter, medium-wave, together with two short-wave sisters to keep company, is not a question I want immediately to consider; for some people the only principle apparently is "the more the merrier". What I want to ask is, if India could *afford* to buy three such transmitters, why has it taken New Delhi eighteen months or more to take the simple decision? If all three could be bought just like that, for rupees that few seem to care for, why this delay? There is, I suggest, something wrong in a set-up in which even a choice involving little or no financial commitment takes months and months. The country knows that the original A.I.R.-V.O.A. deal has not to this day been fully explained I simply do not believe that the agreement was reached, like the acquisition of the British Empire in India, in a fit of absentmindedness. Who made those arrangements, and for what considerations? The Russian offer is still vague enough; one can never be certain what the Russians said and what we are being told the Russians did in fact offer. Are there, again, political strings, such as the A.I.R.-V.O.A. deal had? It is all very well for Mrs. Indira Gandhi to say that the transmitters are intended not merely to counter Chinese propaganda but also to project India's image to south-east Asia. What sort of image? This Mrs. Gandhi has not yet spelled out; and I don't blame her at all. There is no such thing as an Indian image, unless one thinks of the Nataraja, which presents several secular difficulties, or of the Air-India Maharajah which has its own limitations. Expansion is by now accepted as an achievement in itself; so it is not surprising that Mrs. Indira Gandhi was cheered when she announced the deal with the Russians. The earlier announcement that A.I.R. was going to broadcast for longer hours at home may also have been welcomed. It remains necessary to ask *what* is going to be broadcast in the extra hours. The new Minister for Information and Broadcasting has evidently brought some new thinking; it will be good to know that it is not exclusively in terms of quantity. An ounce of sense or genuine entertainment remains more valuable than 1,000 kW of gibberish.

THE BEST ADVICE I CAN GIVE BUSINESS MEN IS never to take too much notice of good advice—not unless they read it in *Capital*, that is. No breed is more subject to the well-intentioned sermonising of others, but for all the use most of it is, the best thing to do is to disregard it altogether. In that spirit, then, I offer below, together with a few of my own remarks in brackets, ten commandments for business men drawn up by the Bishop Suffragan of Pontefract, in England, the Right Reverend Eric Treacy. I have taken them from the recent issue of a British newspaper, and I must leave it to my readers to decide the author's qualifications for proffering such advice. One: Thou shalt not flap. It produces nervousness and irritability in persons on a lower level. Two: Thou shalt not put thy business before thy family. Becoming a stranger to one's children is too high a price to pay for commercial success. (Especially at prevailing levels of taxation?) Three: Thou shalt learn the art of delegation. Four: Thou shalt encourage criticism. (I cannot speak for Britain, but in India a business man does not have to.) Five: Thou shalt neither eat nor drink too much, but shalt seek temperance in all things. Six: Thou shalt be without prejudice. Do not dismiss new ideas because they come from a source you do not like. (This is asking too much of human nature; and in any case is probably more applicable to Governments than business men enthused with the profit motive.) Seven: Thou shalt be forward-looking. (Good advice for anybody this.) Eight: Thou shalt not covet thy neighbour's house, car, wife, secretary, works manager, or anything that is his. (Which looks to me like the perfect example of confusing personal ethics with business ones; the coveting of efficient employees and superior facilities and equipment is surely one of the more important forces making for mobility and progress in business.) Nine: Thou shalt not burn the candle at both ends Taking work home is a dangerous habit showing lack of discipline. (For underworked divines, maybe.) Ten: Thou shalt not let another take thy place in staff relations. (Odd this one, after number three.) So there you have them for what they are worth. All rather axiomatic perhaps? I think so; where they are not in fact irrelevant. But I suppose one must be patient. Business is like journalism. Everybody thinks he knows better than the professional how the job should be done.

TWO LIONS, INSTEAD OF ONE, ARE NOW AT LARGE IN Kashmir. If Mr. G. M. Sadiq still seems reasonably unafraid, there may be two reasons. In the first place, Sheikh Abdullah's ten years or so in jail cut him down to size more than somewhat. In the second, Bakshi Ghulam Mohammed was always wearing a mane made in Delhi. It is amazing what a term out of office will do to most politicians, a tribe of "paper tigers" if ever there was one; and in this respect Sheikh Abdullahs differ not at all from Khrushchevs. Yet I cannot shake off the feeling that all is not well in Kashmir. Even as in Punjab Mr. Pratap Singh Kairon has begun to show signs of continuing interest in politics, the Sheikh and the Bakshi in Kashmir retain considerable political support of a sort than can at very short notice create mischief. Then look at Mr. Biju Patnaik and Mr. Biren Mitra of Orissa or Mr. Nijalingappa of Mysore. The more I look at the different States of India in their disarray the more I feel that the Centre's total incapacity to tame the States stems from New Delhi's own lack of cohesion; I am almost convinced that all the

Unit Trust of India

Over 1,25,000 Applications for 'Units' have been received during the initial sale period, July 1 to August 14, 1964 alone, when the units were sold at par.

Applications continue to flow in for 'Units' at Premium

The premium on 'units' includes an element of income accrued to the Trust, which will be returned to unitholders as part of the Trust's income distribution as dividend.

Units are a safe investment, bring in steady income and are liquid enough to realise when you need money. Further, income on unit up to Rs. 1,000/- is exempted from income-tax.

Repurchase operations by the Unit Trust have commenced from November 16, 1964.

Units certificates are being despatched every day. Those who have not yet received their certificates will receive them shortly.

UNITS ARE ON SALE AT ALL BRANCHES OF LEADING SCHEDULED BANKS THROUGHOUT THE COUNTRY

warring factions in the States are able to continue their fighting mainly because they all have their respective backers right there in Mr. Shastri's Cabinet or on its periphery. The time may be fast approaching when Mr. Shastri, or someone else in New Delhi, will have to say that he will stand this nonsense no more and be prepared to go out of politics. Of compromise, leading not to genuine unity but only to public hypocrisy, the country has had quite enough. Mr Atulya Ghosh's recent statement on what for obscure reasons has come to be called the "little A.I.C.C." at Ranchi seemed to me to be another pointer to great schisms at the top; it could be construed as a challenge at once to the Prime Minister and the Congress President; and Mr. Ghosh is not the kind of politician who will attack anyone without being reasonably certain of injuring him. Parliament has lately heard much about integrating Kashmir. How about integrating some other parts of the country which do not live under the supposed shadow of Article 370?

ONE EXPRESSION OF THE MUCH-CHERISHED ASIAN inferiority complex is the old claim that the atomic bomb would never have been dropped on Japan had it been a European country. This has always seemed to me to be the epitome of nonsense, but the only real way to refute an assertion of this kind is to ascertain whether or not it was ever intended to drop the bomb on Berlin if Germany had not surrendered in the meantime. I had always hoped that when the history of the whole affair came to be written it would throw some authoritative light on this point. Well, it has been now, and it doesn't. The official historian of Britain's atomic energy programmes, Margaret Gowing, whose *Britain and Atomic Energy, 1939-45* has recently been published, claims to have found only two documents in the British Government's wartime archives which express doubts about using atomic bombs against Germany and Japan. On the other hand, she does not appear to have found anything which suggests a decision was actually made to drop the bomb on Germany if it had been ready in time. The doubts seem mainly to have centred on whether either country should be given advance warning and offered the alternative of unconditional surrender first. Mrs. Gowing's own verdict on the question is summed up thus: "My opinion from the general flavour of the documents is that the bomb would have been used to end the war against Germany if it had been ready in time". And that, I suspect, is about as near as we shall ever get to the truth. In the event, the decision to use the bomb on Japan was made by the United States, although with formal British approval, Britain having merged her development effort—which was the pioneering one, incidentally—with the Americans to avoid duplication. For myself, I have not the slightest doubt but that the bomb would have been used against Berlin. After what the Allies did to Hamburg and Dresden, to mention only two examples, the obliteration of Berlin, even by atomic means, would have presented no problems of conscience at all.

THE PROFESSOR OF ANATOMY AT THE HOSPITAL was excellent at his job, but he *would* tell racy stories during his lectures. This was all very amusing for the young men, but rather embarrassing for the female interns who finally decided to walk out the next time the Professor overstepped the mark.

The Professor, however, got wind of this plan just before the next day's lecture.

As he took his place on the platform, there was an air of taut expectancy. Removing his pince-nez, he began:

"I heard a rather amusing little story the other day. As you know, or may not know, there is a dire shortage of night-club hostesses in Paris at the moment and so . . . . . ."

The girls in the class exchanged glances and made for the door in a body.

"Ladies, ladies!" called the Professor. "Your enthusiasm is laudable, but the next plane does not leave until tomorrow afternoon."

THE DITCHER

Guide for Investors

METAL BOX PAYS INTERIM ON INCREASED CAPITAL

THE Metal Box Company Of India Ltd has declared a taxable interim ordinary dividend of 6 percent for the year ended March 1965. This interim distribution absorbs Rs. 19.32 lakhs. It absorbed Rs. 14.49 lakhs for 1963-64. The increase is due to the fact that the present interim has been declared on the ordinary share capital which was doubled in February 1964. by the issue of rights shares in the proportion of one new share for each one held at a premium of Rs. 2.50 a share.

The directors have stated that the increase does not imply that there will be an equivalent increase in the final dividend, but is designed to reduce the disparity between the interim and final dividends. Judging by this observation the stock market thinks that the final dividend has been left an open question. It seems to interpret that the intention of the directors is to pay at least the same final dividend as was paid for 1963-64. It was given at the rate of 9 percent on the increased capital and absorbed a sum of Rs. 28.98 lakhs. If the final for 1964-65 were repeated at 9 percent, the total distribution for the year would amount to 15 percent, compared with 18 percent for 1963-64. But in the latter year, the interim of 9 percent was paid on the smaller capital while the final of 9 percent was given on the increased capital. On the basis of a 15 percent dividend the ordinary shares at Rs. 30.25 would give a yield of 5 percent. In that event the shares would look almost fully valued. But it is necessary to bear in mind that the prospect for a bigger final for the current year cannot be ruled out, although it will depend on what the profit for 1964-65 will allow.

Outlook for Scindia Steam Good

IN his statement which has been circulated to the shareholders of the Scindia Steam Navigation Co Ltd along with the report and accounts of the Comany for 1963-64, Mr. Dharamsey M. Khatau, chairman, takes a fairly optimistic view of the outlook for the current year. The results for 1963-64 have been good. Nevertheless, the good effects of various freight increases were more than offset by increased operation costs as freight rises were effective only for a part of 1963-64. The shortage of cargoes on liner services has caused concern. He says there is no point in encouraging new Indian shipping lines in those spheres where the Conference lines are giving adequate service. Commenting on the increase in operation costs, he mentions strikes in ports here and abroad. Delays in Indian ports have been quite serious. There have also been substantial increases in stevedoring costs and cargo-handling charges. Unless the Government takes steps to improve working conditions in various ports, the shipping companies will find it difficult to operate at a reasonable profit. As for coastal shipping, the freight structure is not only unremunerative but the shipping companies have also been not provided with enough cargoes. It is necessary to earmark a certain quantity of traffic for coastal shipping to make it self-supporting.

The Company has added light vessels to its fleet during 1963-64. Scindia Workshop Ltd, a subsidiary, has taken steps to diversify its activities without disturbing its main business of ship-repairing. The factory has begun to undertake considerable orders from outside parties. Bombay Steam Navigation Co. (1953) Ltd, another subsidiary, has resumed its services from 11th October, 1963. (Details of the statement are printed on a later page in this week's issue of *Capital*).

Blundell Eomite Paints to Raise Capital

BLUNDELL Eomite Paints Ltd, which is embarking on a major programme of erecting and equipping an entirely new factory in Thana to replace, modernise and overcome the limitations of its existing factory in Byculla (Bombay), proposes to enter the capital market about the middle of January with a public issue of 124,909 equity shares of Rs. 10 each at a premium of Rs. 8 a share. The Company has been licensed to expand its capacity to 4,000 tonnes of paints and enamels and 1,300 kilolitres of varnishes a year. Its installed capacity for synthetic resins is 486 tonnes a year. The capital outlay on the expansion scheme is estimated around Rs. 89.55 lakhs, of which the Company has already raised Rs. 21 lakhs through a rights issue in October 1963 and Rs. 1.07 lakhs by issuing 5,091 shares of Rs. 10 each at a premium of Rs. 10 a share to the members of the staff in April 1964.

The proposed public issue will provide Rs. 22.48 lakhs, including the premium. The balance of Rs 45 lakhs will be raised by way of a term-loan from the Industrial Development Bank of India for which an application has already been made. The Company has already secured a licence to import Rs. 7.65 lakhs worth of plant and machinery. The Company manufactures and markets an extensive range of well-known paints, including a number of branded products of Blundell Spence and Co. Ltd. The range of products covers a comprehensive range of surface coatings for structural, maintenance and decorative purposes and industrial finishes for a host of specialised purposes.

The authorised capital of the Company is Rs. 75 lakhs and the present paid-up capital is Rs. 42.25 lakhs. Its reserves and surplus aggregated Rs. 25.41 lakhs on 30th June, 1964. The Company has made good progress in recent years. Its sales have risen from Rs. 1.23 crores in 1959-60 to Rs. 2.10 crores in 1963-64, and the gross profit increased from Rs. 14.94 lakhs to Rs. 36.04 lakhs. The gross dividend for 1961-62 and 1962-63 was 80 percent, but no dividend was declared for 1963-64 with a view to conserving resources. The directors believe that in the absence of adverse circumstances it will be possible to declare a dividend of 17 percent on the increased capital for 1964-65. With the new project gradually coming to fruition, the profits in future are expected to show an increase consistent with the growth of the Company. The entire public issue of 124,909 equity shares made at a premium of Rs. 8 a share has been underwritten.

Kirloskar Electric Results Impress

THE working results of Kirloskar Electric Co. Ltd for the year ended June 1964, fully justify the directors' decision to step up the dividend from 10 percent to 12.5 percent. Apart from the increase in the dividend, the directors have also recommended the issue of bonus shares in the proportion of one share for every three shares held by capitalising Rs. 20.45 lakhs from the general reserve. The bonus issue is subject to the approval of the Controller of Capital Issues and the Industrial Finance Corporation of India.

The Company's turnover during 1963-64 at Rs. 5.49 crores shows an increase of about 21 percent over the previous year's figure of Rs. 4.55 crores. The gross profit has increased by nearly 30 percent from Rs. 83.25 lakhs to Rs. 1.08 crores. The ratio of gross profit to sales has gone up from 18.3 percent to 20 percent.

Appropriations include depreciation Rs. 14 lakhs (against Rs. 13.85 lakhs), development rebate reserve Rs. 4.50 lakhs (against Rs. 4.13 lakhs), taxation Rs. 51.75 lakhs (against Rs. 31.35 lakhs), general reserve Rs. 15.12 lakhs (against Rs. 4.25 lakhs), loan redemption reserve Rs. 1 lakh (the same), rehabilitation and modernisation reserve Rs. 2.75 lakhs (against Rs. 2 lakhs) and dividend equalisation reserve Rs. 1.50 lakhs (against nil). The proposed dividend will absorb Rs. 7.67 lakhs (against Rs. 6.13 lakhs), leaving a nominal surplus of Rs. 113 to be carried forward, against Rs. 578 brought in. The directors state in their report that the Company has continued to maintain good progress in the production of electric motors, transformers and alternators. It is expected that the rated capacity of welding generators, the production of which was taken up recently, will be achieved within a year. The Central Government has issued a letter of intent concerning its proposal to manufacture flame-proof motors and alternators up to 1,500 kVA. The Company has negotiated a foreign exchange loan worth Rs. 38.84 lakhs for the import of plant and machinery and steps are being taken to purchase the capital equipment.

North Bihar Sugar Resumes Dividend

NORTH Bihar Sugar Mills Ltd has declared a taxable ordinary dividend of 10 percent for the year ended June 1964, after a long interval. The profit has risen from Rs. 3.72 lakhs for 1962-63 to Rs. 12.81 lakhs for 1963-64, after providing Rs. 2.10 lakhs (against Rs. 1.87 lakhs) for depreciation and Rs. 7.000 (against Rs. 16.000) for development rebate reserve. Taxation is allocated Rs. 6.20 lakhs and general reserve Rs. 1.50 lakhs. The carry-forward is Rs. 1,003, against a debit balance of Rs. 3.60 lakhs brought in. The cane crush amounted to 1.3 million quintals with a recovery of 9.96 percent.

Share Offer by Kalyanpur Lime and Cement

KALYANPUR Lime and Cement Works Ltd is offering 30 250 cumulative redeemable preference shares of Rs. 100 each carrying a fixed dividend of 9.5 percent, free of company's income tax but subject to the usual deduction of tax at source, and 400,000 ordinary shares of Rs. 10 each for public subscription at par. The present issue consists of 30.250 preference shares and 457.500 ordinary shares, of which 57,500 ordinary shares have been subscribed by the directors and their friends. The entire public issue has been underwritten. The list opens on 24th December, 1964. (Details of the issue are printed on a later page in this issue of *Capital*.)

The Company is manufacturing Portland cement and lime, and the present output capacity of cement amounts to 420 tonnes a day. The Company has obtained an industrial licence to install an additional plant with a capacity for 600 tonnes a day. The proceeds of the new issue will be used to finance the new project

for which the Government has sanctioned an import licence for Rs. 80 lakhs. The Company was given a loan of Rs. 65 lakhs by the Industrial Finance Corporation of India for its past expansion. It now proposes to give a further loan of Rs. 1 25 crores for the new project. The Company's limestone quarries are situated in Banjari, Bihar, and its cement factory is situated near the quarries. The directors of the Company are Messrs Chandradeva Prakash Sinha, Ramkrishna Dave, Harinandan Sahaya, Narbada Sankar Ranchodlal Pandya, Madhab Churan Law, Ganesh Prasad, Satyadeva Prakash Sinha and Karuna Kant Dutt.

Raymon Engineering Skips Dividend Again

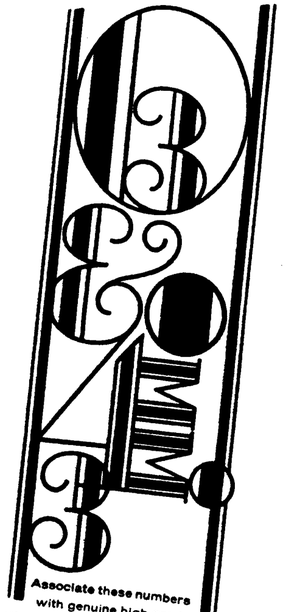
COMMENTING on the loss of Rs. 5.60 lakhs incurred for the year ended March 1964, after providing for depreciation, the directors of Raymon Engineering Works Ltd say in their report that the working was interrupted by the shortage of basic raw materials like matching steel, steel castings, electrodes, forging billets and pig iron. Adequate supplies of power were received from December 1963. Substantial orders for wagons, wagon components and structurals have been received. The construction of the structural shop and the additional assembly bay has been completed. Various collaboration agreements with foreign companies for expansion are expected to be finalised in the near future. The total investment in the expansion project may amount to Rs. 3.33 crores. A large loan may be obtained from P.L. 480 funds. In view of the loss that has been carried forward, dividends have again been passed.

Preference Share Issue by New Swadeshi Mills

THE New Swadeshi Mills of Ahmedabad Ltd is offering 25,000 9.3 percent redeemable preference shares of Rs. 100 each at par for public subscription. The entire public issue has been underwritten. The subscription list will open on 14th December and will close on the 21st or earlier, but not before 16th December. The Company has an authorised capital of Rs. 1 crore, comprising Rs. 60 lakhs in equity shares of Rs. 100 each and Rs. 40 lakhs in redeemable preference shares of Rs. 100 each. Of this, only 26,145 equity shares had so far been issued. The Company owns two textile mills in Ahmedabad, which are manufacturing coarse and medium count cloth and are equipped with up-to-date process houses.

Very recently, the Company has started manufacturing superfine cloth in one of the units. It is holding a licence for the manufacture of steel castings to the extent of 4,800 tons a year. It has also applied for an industrial licence to set up an export oriented mill with 25,000 spindles and 500 looms. The Company's requirements of funds have increased after the purchase in December 1963 of the block assets of the Bharatkhand Textile Manufacturing Co. Ltd and the proceeds of the present issue will be used to meet these requirements. No amount is estimated to be required for payment of the purchase of any specific properties or for meeting any specific expenditure. The preference shares which are now offered for public subscription are redeemable at par at any time after 31st March, 1976, and before 31st March, 1978, on three months' previous notice by the Company.

Phosphate Company Repeats



THE Phosphate Co. Ltd has done well for the year ended June 1964. The output rose to 50,900 tonnes. The licensed output capacity has now been increased to 61,800 tonnes a year, and the directors hope that there will be no difficulty in obtaining enough raw materials. Production costs have tended to increase due to rising prices of stores, packing materials and freight. It is hoped that the Government will give further incentives to stimulate the production of fertilisers for increasing agricultural production.

The profit has risen from Rs. 9.27 lakhs for 1962-63 to Rs. 15.28 lakhs for 1963-64, after providing Rs. 5.24 lakhs (against Rs. 4.70 lakhs) for depreciation and Rs. 27,473 (against Rs. 1.22 lakhs) for development rebate. A taxable ordinary dividend of 15 percent has been repeated which works out to a yield of 8.6 percent at the present price of Rs. 175 a share of Rs. 100 each. Taxation absorbs Rs. 7.50 lakhs (against Rs. 6.50 lakhs) and general reserve Rs. 3.20 lakhs (against Rs. 1 lakh). The carry-forward is Rs. 3,537, against Rs. 11,013 brought in.

Kamani Engineering to Invest in New Venture

KAMANI Engineering Corporation Ltd has promoted a new company jointly with the Andhra Pradesh Industrial Development Corporation for the manufacture of porcelain insulators in Andhra Pradesh. The annual capacity of the factory will be 1,920 tons of H.T. and 480 tons of L.T. insulators. An industrial licence has already been obtained for this purpose. The issued capital of the new Company will be Rs. 60 lakhs, out of which the Andhra Pradesh Industrial Development Corporation and Kamani Engineering have agreed to subscribe 25.5 percent each.

The directors feel that the joint venture will be very profitable for the Company. It will be handling sales of insulators as it is already experienced and established in this line. In addition to the dividend on the investment, the Company will, therefore, earn a profit out of the sales of the products. The insulators will be used by Kamani Engineering in the transmission line contracts undertaken by it. An extraordinary general meeting has been called on 28th December, for the approval of the directors' proposed investment in the new venture.

Central India Shows Better Results

THE working results of the Central India Spinning, Weaving and Manufacturing Co. Ltd for the year ended June 1964, show an impressive improvement over the previous year's performance in that the gross profit has shot up from Rs. 17.88 lakhs to Rs. 45.27 lakhs whereas the turnover has recorded only a small increase from Rs. 6.08 crores to Rs. 6.55 crores. After providing Rs. 20.45 lakhs (against Rs. 14.29 lakhs) for depreciation, the remaining surplus of Rs. 24.82 lakhs has been used towards reducing the amount of revenue losses carried forward from the previous year which will now stand reduced at Rs. 15.38 lakhs. The directors have attributed the increase in the profits during 1963-64 to the improved tone of the cloth market accompanied by changes in the pattern of production and the continuous process of renovation and rehabilitation of the mills.

Referring to the revised textile control order under which popular varieties of cloth have been brought under statutory control, the directors state that while the implications of the new scheme on the working of the Company cannot be ascertained with any degree of accuracy at this stage, it is bound to affect the earnings of the Company adversely, although it is difficult to foretell to what extent. Besides, the increase in the dearness allowance with effect from 1st August, 1964, will impose an additional burden of Rs. 6 lakhs on the Company. On the export side, the Company's performance was affected by restrictions experienced in the U.K. market consequent on the introduction of the quota system.

The directors have expressed the view that the recent overall increase in duty by 15 percent on imports imposed by the U.K. Government will result in further shrinkage of exports. In the U.S.A., Indian cloth continues to be still uncompetitive. The disturbed political conditions in Africa are also likely to reduce the export of blankets and *charsas* there. During the year ended June 1964, the Company installed new and used plant and equipment of the value of Rs. 27 lakhs. These included combing equipment, drawing frames, drying ranges, automatic looms, conversion material for ring frames, drafting system and other miscellaneous humidification, electrical and mechanical equipment. After the close of the financial year, further orders worth Rs. 3 lakhs have been placed for plant and equipment. The directors are hopeful of securing at an early date a long-term loan of Rs. 50 lakhs from the Industrial Finance Corporation to finance further expenditure on new plant and equipment.

Mysore Cements Disappoints

MYSORE Cements Ltd reports disappointing results for the year ended June 1964. After providing Rs. 20.85 lakhs (against Rs. 25.02 lakhs) for depreciation, the year's working has resulted in a loss of Rs. 21.68 lakhs, compared with Rs. 24.89 lakhs in the preceding year. The performance looks all the more disappointing when viewed against the background of a substantial increase in the sales from Rs. 33.40 lakhs to Rs. 57.49 lakhs. Including the losses brought forward from the earlier years, the total loss carried forward amounts to Rs. 46.56 lakhs. The preliminary expenses, underwriting commission, etcetera, to be written off amount to Rs. 3.04 lakhs.

The directors state that production during the year was only 71 percent of the rated capacity due to the non-availability of spares and irregular supply of quality limestone, resulting in intermittent breakdown of the plant. The directors, however, point out that determined steps have since been taken to obtain sufficient stocks of spares and to ensure adequate supplies of limestone. The increase in the retention price of cement from Rs. 77.75 to Rs. 79 a tonne from 1st July, 1964, is expected to have some effect on the current year's working results. The Company's expansion programme for increasing the production of cement is expected to be completed by about the middle of next year. The survey of limestone deposits is in progress.

Baroda Rayon Fares Well

THE Baroda Rayon Corporation Ltd reports encouraging results for the year ended September 1964, which marks the first year of full operation of the rayon plant. The output of rayon yarn amounted to 2,764 metric tons on 100 denier basis, against the licensed capacity of 2,300 metric tons. The sales increased from Rs. 1.37 crores to Rs. 3.46 crores and the gross profit increased from Rs. 9,533 to Rs. 64.15 lakhs. The directors have provided Rs. 54.37 lakhs for depreciation for the previous year. No provision has been made for depreciation for 1963-64 which is placed at Rs. 54.86 lakhs. The surplus of Rs. 11.31 lakhs together with the preceding year's carried over balance of Rs. 2.03 lakhs has been carried forward. A sum of Rs. 5.93 lakhs being the amount of preliminary expenses, brokerage and underwriting commission and further issue expenses has been written off, against the amount of share premium account of Rs. 6.30 lakhs.

The directors state that the rayon plant has now progressively achieved the optimum efficiency and that the quality of rayon yarn produced can compare with the rayon yarn produced by any other competitive manufacturer, and the same has been well received by the weavers all round. The Company had hoped to get better realisation for its yarn after the removal of distribution and price control on rayon yarn in December 1963, but earlier expectations were belied following the heavy increase in the excise duty in the February Budget. Instead, the prices started sagging and the industry was faced with the accumulation of stocks. The market conditions remained sluggish and unfavourable during a considerable part of the year. It was only in the middle of October that the long-awaited relief, although inadequate, was given to the industry. The directors have expressed the hope that the Company would be able to clear off its stocks in the course of two months. They expect the demand to improve and the turnover and working results are likely to show an improvement in the course of the next year. The export promotion scheme under which the industry was required to deliver yarn at a concessional rate has been abolished.

The directors state that though the scheme has been abolished, it will continue to have its impact on the working results till the time the backlog of commitments under the scheme is over. It is felt that after March 1965, the Company will have no further commitments to deliver the yarn at concessional rates. It has applied for a licence for the import of plant and machinery for increasing the capacity of the plant by 1.25 tons a day. The licence is expected to be received in the course of the next few months. The Company received during the year a licence for the import of equipments to convert its boilers from coal-firing to oilfiring. The machinery is expected to be received soon. The Company is expected to receive a weaving capacity of 100 looms for manufacturing rayon fabrics under the Government's incentive scheme for export of fabrics.

K. C. P. Pays the Same

ALTHOUGH the dividend has only been maintained at 15 percent, the working of the K.C.P. Ltd for the year ended June 1964 shows a marked improvement over the previous year's performance. According to the preliminary report, the gross profit is higher by about 33 percent at Rs. 1.41 crores, against Rs. 1.06 crores in the preceding year. Appropriations include depreciation Rs. 64.34 lakhs (against Rs. 49.10 lakhs), development rebate Rs. 10 lakhs (against Rs. 5 lakhs), taxation Rs. 31 lakhs (against Rs. 26.08 lakhs), expenses relating to years other than the accounting year Rs. 17.69 lakhs (against Rs. 33,345), rehabilitation reserve Rs. 6.97 lakhs (against Rs. 9.39 lakhs), gratuity reserve Rs. 75,000 (against nil), general reserve Rs. 2 lakhs (against Rs. 3 lakhs) and dividend reserve Rs. 14.15 lakhs (against Rs. 14.14 lakhs). The directors have written back a sum of Rs. 6.01 lakhs, against Rs. 18.59 lakhs in the preceding year. Equity dividend of 15 percent absorbing Rs. 10.29 lakhs and preference dividend amounting to Rs. 3.85 lakhs are to be paid out of the dividend reserve. The Rs. 10-paid share of K.C.P. is currently quoted around Rs. 24, offering a gross return of about 6.6 percent.

Dandekar Machine Works Pays More

G. G. Dandekar Machine Works Ltd has done well during the year ended June 1964, which happens to be the silver jubilee year of the Company. Apart from maintaining the dividend at 12½ percent, the directors have declared a jubilee dividend of 2½ percent and also proposed a bonus issue in the proportion of one share for every nine shares held by capitalising Rs. 1 lakh from the reserves. The turnover of the Company during 1963-64 amounted to Rs. 19.45 lakhs, against Rs. 17.46 lakhs in the preceding year and it made a gross profit of Rs. 4.89 lakhs, against Rs. 4.26 lakhs. Allocations include depreciation Rs. 78,000, (against Rs. 52,000), development rebate reserve Rs. 44,000 (against Rs. 17,000), taxation Rs. 2.18 lakhs (against Rs. 2.34 lakhs), general reserve Rs. 25,000 (the same), gratuity reserve Rs. 15,000 (the same), dividend reserve Rs. 1.04 lakhs (against Rs. 84,000) and jubilee bonus to employees Rs. 20,000 (against nil).

The directors state that the foundry, the machine and assembly shops are being expanded. The supply position of rice mills has improved and the delivery period has been reduced from 12 months to four months. But buyers are hesitant to accept the delivery of mills because of the frequently changing Government pronouncements concerning the rice milling machinery industry and the distribution of foodgrains. The directors are negotiating with some leading manufacturers for technical collaboration and if collaboration arrangements materialise, the Company may need to issue further capital. Accordingly it is proposed to increase the authorised capital from Rs. 10 lakhs to Rs. 50 lakhs.

Pulgaon Mills Pays More

THE Pulgaon Cotton Mills Ltd reports encouraging results for the year ended June 1964, and the directors have stepped up the dividend from 4 percent to 6 percent, which restores the cut effected in the

preceding year. While the sales have recorded only a smal increase from Rs. 1.78 crores to Rs. 1.86 crores, the gross profit has risen appreciably from Rs. 4.59 lakhs to Rs. 7.04 lakhs. Allocations include Rs. 38,045 (against Rs. 16,931), depreciation Rs. 3.02 lakhs (against Rs. 2.52 lakhs), development rebate reserve Rs. 84,396 (against Rs. 81,640), taxation Rs. 1.30 lakhs (against Rs. 63,000), general reserve Rs. 1 lakh (against Rs. 2.50 lakhs) and dividend reserve Rs. 50,000 (against Rs. 1 lakh).

The proposed dividend is to be paid out of the dividend reserve. After making various appropriations, there remains a surplus of Rs. 5,737 to be carried forward, against Rs. 5,698 brought in. The directors state that the Company is likely to show better working results in future because the implementation of the renovation programme. The working during the current year, however, is likely to be affected by the rise in cotton prices and the scheme of partial control too is considered to be somewhat disadvantageous to the Company.

Andhra Cotton Will Soon Enter Market

ANDHRA Cotton Mills Ltd which proposes to set up a spinning mill with an initial capacity of 12,000 spindles in Lingapuram near Proddatur, will soon be in the market to raise Rs. 19.10 lakhs through public subscription. The project is estimated to cost Rs. 65.39 lakhs which is proposed to be met by the capital issue of Rs. 30 lakhs, a loan of Rs. 20 lakhs from the Andhra Pradesh Financial Corporation and deferred payment credit of Rs. 15.39 lakhs. The construction of the factory building and administrative building has already commenced.

If all goes according to the plans, the mill will go into production in April 1965, initially with 6,000 spindles and the other 6,000 spindles will start production some three months thereafter. The Company has been permitted to install an additional 13,000 spindles to make it a unit of 25,000 spindles. The question of setting up additional capacity will be taken up in course of time. The issued capital of he Company is Rs. 30 lakhs made up of Rs. 20 lakhs in equity shares of Rs. 100 each and Rs. 10 lakhs in 9.5 percent cumulative redeemable preference shares of Rs. 100 each. The promoters, directors and their associates have taken up 10,891 equity shares. The remaining 9,109 equity shares and 10,000 preference shares will soon be on offer for public subscription.

Herdillia Chemicals to Raise Capital

THE Herdillia Chemicals Ltd which has been promoted and managed by Nowrosjee Wadia and Sons (Private) Ltd, will in future function under the management of E.I.D.-Parry Ltd. The necessary resolution will be placed before the shareholders for their approval at the annual general meeting. The change of management follows the desire of the existing management to be released from the responsibilities.

"For personal reasons and due to certain pertinent factors relating to their own organisation." The directors intend to offer the balance of the issued capital of the Company consisting of 4,021,006 equity shares of Rs. 10 each to E.I.D.-Parry and other companies and the investing public. Of these, 2,741,006 shares will be offered to the Distillers Co., London, Hercules Powder Co. of the U.S.A., the Commonwealth Development Finance Co. Ltd., the Finance and Development Corporation of the National and Grindlays Bank, the E.I.D.-Parry Ltd and other parties.

The balance of 1,280,000 shares will be offered for public subscription as soon as arrangements for obtaining loans, underwriting and guarantee facilities for the finance required for the project have been completed. E.I.D.-Parry Ltd proposes to take up in its own name shares of the value of Rs. 41 lakhs, while the foreign collaborators propose to subscribe for Rs. 1.80 crores. The A.I.D. has agreed, in principle, to grant a rupee loan of Rs. 2.65 crores and the Company's application for a dollar loan equivalent to Rs. 1.59 crores from the Export-Import Bank of Washington is expected to be approved shortly. The Company has obtained a lease for land for its factory near Thana (Bombay) and arrangements for the construction of the main plant have been concluded.

CONSULT KULJIAN FOR HEAVY FOUNDATIONS AND INDUSTRIAL STRUCTURES

KULJIAN-INDIA

Industrial engineering is our forte. As consultants and constructors for massive industrial projects, our experience in heavy foundations is varied and specialised. The range of our services includes architectural and structural design, advice on soil evaluation and construction material, site-erection and supervision. We have under one roof civil, mechanical, electrical and construction engineers. We can thus offer industrial engineering at its integrated best. And you can have this service, here in India, on rupee payment.

Model Mills Does Well

THE working of the Model Mills Nagpur Ltd during the year ended 30th June, 1964, shows a marked improvement over the previous year. Although the turnover has registered only a modest increase from Rs. 3.48 crores to Rs. 3.52 crores, the gross profit has gone up substantially from Rs. 10.89 lakhs to Rs. 19.31 lakhs. The ratio of gross profit to sales, however, is still very poor around 5.4 percent. Allocations include depreciation Rs. 4.69 lakhs (against Rs. 3.66 lakhs), bonus for 1962-63 and 1963-64 Rs. 6.57 lakhs (against Rs. 2.34 lakhs), *ex gratia* payment to employees Rs. 90,714 (against Rs. 2.59 lakhs), interest on bank cash credit Rs. 1.71 lakhs (against Rs. 1.65 lakhs), additional depreciation for the third shift Rs. 80,000 (against nil) and development rebate reserve Rs. 75,000 (against Rs. 27,500).

After making these adjustments, there remains a balance of Rs. 3.89 lakhs, which together with Rs. 31.84 lakhs brought in, from the preceding year is being carried forward In his report, the authorised controller, who is now managing the company, says that the Company's performance during 1963-64 would have been still better but for the rise in wages, dearness allowance and provident fund and increase in interest charges. As for the outlook for the current year, he says that it is difficult to forecast the results in view of the uncertainty about the operation of the scheme of partial control over cloth. The soaring cotton prices are likely to affect adversely the Company's working in the current year.

Mysore Sugar Earns More

DESPITE a decline of about 16 percent in the sales from Rs 3.94 crores to Rs 3.30 crores, the gross profit of the Mysore Sugar Co. Ltd for the year ended June 1964, has been more than doubled from Rs. 10.57 lakhs to Rs. 22.26 lakhs. The dividend has been reduced from 30 percent to 15 percent, but the dividend for 1963-64 is payable on the increased capital of Rs. 43.16 lakhs, against Rs. 21 79 lakhs in the preceding year with the result that the total distribution among the shareholders is almost about the same. Despite substantially larger profit, the directors have had to withdraw as much as Rs. 4.29 lakhs from the reserves in order to provide for the payment of the dividend; in the preceding year, a sum of Rs. 5.80 lakhs had been withdrawn from the reserve for dividend payment.

Appropriations include depreciation Rs. 9.58 lakhs (against Rs. 8.54 lakhs), development rebate reserve Rs. 2.70 lakhs (against Rs. 81,000) and taxation Rs. 7.37 lakhs (against Rs. 70,000). The proposed dividend absorbs Rs. 6.47 lakhs (against Rs. 6.54 lakhs).

The directors state that the Company's working results would have been still better but for the expenditure of Rs. 6.6 lakhs on account of *ex-gratia* payment to workers for 1962-63 and the setback in production resulting from the short crushing season. The quantity of cane crushed amounted to 201,000 tonnes, against 260.000 tonnes in the previous season, and the output of sugar fell from 27,390 tonnes to 22,091 tonnes. The recovery was a little better at 10.98 percent, against 10.57 percent. The Company has received a licence for the manufacture of acetic acid. and orders for machinery to be imported from abroad have been placed. It has finalised arrangements for foreign credit to the tune of Rs. 23 lakhs. Additional equiment worth Rs. 23 lakhs was installed during January-June 1964 as part of the expansion programme for sugar. The Company has applied to the Government for a licence to increase the capacity of the distillery from 1.2 million gallons, to 2.4 million gallons.

Hindustan Sugar Pays More

THE working results of the Hindustan Sugar Mills Ltd for the year ended June 1964, show a marked improvement over the previous year's performance. The sales are up by about 27 percent from Rs. 7.51 crores to Rs. 9.58 crores and the gross profit has risen by nearly 67 percent from Rs. 76.39 lakhs to Rs. 1.267 crores. The dividend distribution has been raised from 14 percent to 15 percent, including a bonus of 3 percent against 4 percent in the preceding year. Appropriations include depreciation Rs. 18.07 lakhs (against Rs. 15.28 lakhs), development rebate reserve Rs 95,000 (against Rs 60,000), taxation Rs 67.12 lakhs (against Rs. 32.28 lakhs), general reserve Rs. 25 lakhs (against nil) and rehabilitation reserve Rs. 3.22 lakhs (against Rs. 8.50 lakhs). The directors have set aside a sum of Rs. 1.30 lakhs for taxation for previous years. Preference dividend amounting to Rs. 36.000 (the same) and equity dividend amounting to Rs. 18 lakhs (against Rs. 16.80 lakhs) are to be paid out of the general reserve. The quantity of cane crushed in 1963-64 amounted to 750.000 tonnes against 497,000 lakh tonnes and the output of sugar was 74.096 tonnes against 50,340 tonnes. The Company has plans to increase the capacity of the distillery from 1.53 million gallons to 3 million gallons a year The increase in the capacity of the distillery is expected to be achieved during the current financial year The Company's scheme for setting up a cement factory with a capacity of 400.000 tons a year in Rajasthan has been approved by the Government. The Company has also plans to manufacture chip board from bagasse.

India Forge to Expand

THE fourth annual report of India Forge and Drop Stampings Ltd for the year ended June 1964, indicates that the Company has now overcome its teething troubles. Although the Company's plant began its operations in April, it could not achieve a satisfactory level of production till August 1964. The production of steel forgings since the start up in April to the end of October is placed at 556 tons including the tonnage processed from customers' material. The directors are hopeful that the production having been stabilised, the current year's working will be satisfactory.

Encouraged by the internal demand for forgings, the Company has plans to expand its manufacturing capacity. It has negotiated for the import of one high-speed forging press along with ancillary equipments which, when installed, will bring about a substantial increase in the output of precision drop forgings. The Company is considering proposals for further expansion to achieve the licensed target of 7,200 tonnes of forgings a year. It has got adequate stock of raw materials and other consumable stores. Due to the shortage of indigenous materials. the Company was granted an import licence for steel billets under the A.I.D. programme and the necessary orders have been finalised. Its working during 1963-64 shows a loss of Rs. 63.529, before providing for depreciation and development rebate. After adjustments. the total loss amounting to Rs. 1.03 lakhs has been carried forward. The directors state that out of the foreign exchange loan of Rs. 30 lakhs sanctioned by the I.C.I.C.I., the Company has so far drawn about Rs. 27 lakhs towards imported plant and equipment. It repaid during the year to the I.C.I.C.I. two instalments amounting to Rs. 3.41 lakhs. and a further instalment of Rs. 1.78 lakhs was paid in November.

Malwa Sugar Mills Disappoints

THE Malwa Sugar Mills Co. Ltd has again produced disappointing results for the year ended June 1964. After providing Rs. 5.05 lakhs (against Rs. 5.14 lakhs) for depreciation, the year's working shows a loss of Rs. 9.37 lakhs, against Rs. 11.06 lakhs in the preceding year. A sum of Rs. 1,100 (against Rs. 1.000) has been provided for development rebate. Last year's loss of Rs. 9.38 lakhs together with the earlier years' loss of Rs. 55.61 lakhs, making a total of Rs. 64.99 lakhs, is being carried forward. The output of sugar during 1963-64 totalled 48,686 quintals, against 48,644 quintals. The Company was forced to close down its crushing operations early in February due to insufficient supply of cane as the cane was diverted to *gur*. The area under cane for 1964-65 is reported to be 10 percent larger and crop reports so far have been encouraging. The Company hopes to be able to secure at least 2.1 million maunds of cane during the coming season.

Kelvinator of India Incurs Loss

AFTER providing Rs. 2.63 lakhs (against Rs. 1.84 lakhs) for depreciation, Kelvinator of India Ltd has incurred a loss of Rs. 1.23 lakhs during the year ended June 1964, against a loss of Rs 5.01 lakhs in the preceding year. No provision has been made for development rebate. The Company sold 1,011 refrigerators during the year—the first refrigerator was placed on the market only in January 1964—of which 442 refrigerators were provided with indigenously assembled sealed-in systems. The initial difficulties having been overcome. the Company is now in regular production and since the close of the financial year, production is stated to have been stabilised.

Standard Batteries Raises Dividend

THE increase in the dividend by the Standard Batteries Ltd for the year ended June 1964 from 10 percent to 11 percent is well justified by the Company's encouraging performance during the year. Sales are higher by about 18 percent from Rs. 1.40 crores to Rs. 1.65 crores and the gross profit has gone up by about 31 percent from Rs. 21.69 lakhs to Rs. 28.55 lakhs. Allocations include depreciation Rs. 6.24 lakhs (against Rs. 4.53 lakhs), development rebate Rs. 1.11 lakhs (against Rs. 96.232), taxation Rs. 12 lakhs (against Rs. 9 lakhs) and general reserve Rs. 2.20 lakhs (against Rs. 1.20 lakhs).

After providing for the proposed dividend which absorbs Rs. 4.95 lakhs (against Rs 4.50 lakhs) there remains a balance of Rs. 9,676 to be carried forward, against Rs. 12,045 brought in. The directors state that there was a considerable increase in the demand for the special type of batteries both for defence and civilian requirements as well as for exports. Necessary steps are being taken for a substantial increase in the Company's production which is expected to show an increase of about 50 percent in the current year. It is considering proposals for technical collaboration from the developing countries in Africa and Asia. The fully-equipped research laboratory of the Company is expected to be in operation by the end of the current year.

D. B. R. Mills Skips Dividend

THE Dewan Bahadur Ramgopal Mills Ltd reports a marked improvement in its working results for the year ended June 1964. Sales of cloth, yarn and waste have risen, although only marginally, from Rs. 1.09 crores to Rs. 1.13 crores, but the gross profit has improved considerably from Rs. 3.22 lakhs to Rs. 8.09 lakhs. The ratio of gross profit to sales is, however, still very poor. The dividend has again been skipped. Appropriations include depreciation Rs. 4.68 lakhs (against Rs. 2.90 lakhs), development rebate Rs. 23,000 (against Rs. 31,000), depreciation relating to previous year Rs. 2.15 lakhs (against nil) and debenture redemption reserve Rs. 1 lakh (against nil). After making some minor adjustments there remains a balance of Rs. 18,976 to be carried forward, against Rs. 62,800 brought in. No

New Capital Issues

NINE companies, including two Central Government undertakings, have been authorised to raise fresh capital aggregating Rs. 9.39 crores Of these, seven are issuing their capital in equities and two in debentures. Two of the companies involve foreign collaboration. Four companies are offering part of their capital to the public by prospectus. The following are the details:

Heavy Electricals (India) Ltd, Bhopal, a Government of India undertaking, is to issue further capital of Rs 3.45 crores, divided into 34.500 equity shares of Rs. 1.000 each for cash at par. The money will be utilised for civil engineering works, purchase of machinery and plant, training of engineers, etcetera.

Rehabilitation Industries Corporation Ltd, Calcutta, a Government of

India undertaking, is to issue further capital of Rs. 1 crore divided into 10,000 equity shares of Rs. 1,000 each for cash at par. The capital will be utilised for financing the various projects under its control during the year 1964-65.

Handicrafts and Handlooms Export Corporation of India Ltd, New Delhi, is to issue capital of Rs. 28 lakhs, divided into 28.000 equity shares of Rs. 100 each to be issued privately at par. The capital will be utilised for the promotion of exports of handicrafts and handlooms.

Steelcrete Foundation Ltd, is to issue Rs. 1 crore equity capital in shares of Rs. 10 each for cash at par of which shares of the value of Rs. 40,00,000 will be subscribed by Foundation Overseas Ltd, Canada, or their nominees against supply of construction machinery, etcetera. Out of the balance, Rs. 29,00,000 will be subscribed privately and Rs. 30,00,000 will be offered to the public by prospectus. The money will be utilised in meeting the cost of installation, in connection with the contract of the Yamuna hydel project awarded to the Company by the U.P. Electricity Board.

Indian Explosives Ltd, Calcutta, is to issue further capital of Rs. 43 lakhs, divided into 430,000 equity shares of Rs. 10 each for cash at a premium of Rs. 12 a share. Out of this, shares of the value of Rs. 57,000 will be issued to directors and employees of the Company and of associate companies. The balance shares of the value of Rs. 37.30 lakhs will be offered for subscription to the public by prospectus. The capital will be utilised for the manufacture of detonators.

Larsen and Toubro Ltd, Bombay, will be issuing Rs. 1.75-crore debenture stock carrying 7 percent rate of interest redeemable in 1976 and in units of Rs. 1,000 each. The debentures will be offered to the public for cash at par. The money will be utilised on the expansion programme of the Company.

Modi Industries Ltd, Modinagar, U.P., is to issue capital of Rs. 50 lakhs divided into 5,000 debenture units of Rs. 1,000 each, for cash at par. The debenture will carry interest at a rate not exceeding 7½ percent a year. The capital will be utilised for construction of an electric furnace, re-rolling mill and wire drawing plant.

Star Paper Mills Ltd, Calcutta, is to issue further capital of Rs. 30 lakhs divided into 300,000 equity shares of Rs. 10 each for cash at par. The issue will be made to the existing shareholders and to the public simultaneously on the condition that only shares not taken up by the existing shareholders will be allotted to the public The money will be utilised for financing the expansion scheme.

The Aluminium Industries Ltd, Kundara, Kerala State, is to issue capital of Rs. 67.50 lakhs in 675,000 equity shares of Rs. 10 each for cash at a premium of Rs. 2.50 a share. The capital is required for manufacture of wire-drawing and stranding machines in Ramachandrapuram near Hyderabad in collaboration with a Japanese firm. The shares will be issued to the existing shareholders in the ratio of one new share for every two shares now held.

Automotive Springs are made by The Indian Standard Wagon Company who have 45 years' experience in the manufacture of all types of springs.
Made from the highest quality raw material using the most up to date methods and plant, ISW Automotive Springs are tested quality products.
After considerable research a "Fatigue Resistant" quality of Springs has been developed which will give an extended dependable life under the most trying conditions of service.

The Stock Markets

PRICES IMPROVE ON SPECULATIVE SUPPORT

Wednesday Evening.

THE Calcutta stock market has been steady during the past week. Prices of speculative shares in particular have been marked up on replacement buying. There has also been a fair amount of short-covering. The clearing last Monday passed off smoothly and the carry-forward charges were about the same as they were at the previous settlement. Birla Jute have attracted backwardation charges due to an over-sold position. The rally seems to be mainly technical in character.

Operators are hoping that the Government will soon take steps to stimulate activity in the capital market. The joint memorandum submitted by the presidents of stock exchanges to the Central Finance Minister Mr. T. T. Krishnamachari, has forcefully reiterated the need to modify the fiscal system. Lyons Range seems to think that at the annual meeting of the Associated Chambers of Commerce due to be held in Calcutta next Monday, the Prime Minister, Mr. Lal Bahadur Shastri, may give some indication of the incentives likely to be offered by the Government to revive confidence in the corporate sector. However, the prospect of any modification of the fiscal system before the next Budget, due at the end of February 1965, is remote.

Since support has mainly been speculative, it appears that operators in raw cotton and oilseeds markets have diverted their attention to stock exchanges because futures trading in the former markets has been suspended. Considering that these markets may resume futures trading in the next few days and that the year-end closing of bank accounts is approaching, speculative support is not likely to continue for long. As for cash scrip, the Life Insurance Corporation and the Unit Trust have made scattered purchases. Although prices of selected cash shares have tended to improve slightly in the absence of pressure, support on the whole has been small.

Indian Iron have gained on replacement buying, combined with short-covering. Among engineering shares, Jessop are steady. Guest, Keen, Williams, Braithwaite and Texmaco have improved slightly. Scattered support for Jay Engineering has been forthcoming. Kumardhubi and Britannia Engineering are freely available.

In the miscellaneous section, clearing shares have attracted the maximum attention. Dunlop Rubber, Indian Aluminium, and Hindustan Motors have gained on short-covering. Rohtas Industries continue to be neglected Associated Battery have improved. Metal Box are steady on declaring an interim dividend. The repetition of the interim dividend by Britannia Biscuits has helped to maintain the price of the scrip. British India Corporation are steady, but India Steamship are easier.

Among new shares, Hindusthan Twyfords and India Carbon have attracted attention. Electric company shares are sluggish and have not responded to the prospects of an increase in power rates. Bank shares are dull, although prices are about maintained. In paper shares, Orient are active. Titaghur and Seshasayee have tended to be easier. Shree Gopal and Bengal have met with scattered support Sugar shares are freely available, but investors have been cautious. The improvement in the production of sugar during the current season is likely to be much smaller than was originally hoped for. The cane supply continues to be diverted to the manufacture of *gur* and *khandsari*.

Birla are active in jute shares and the price has hardened due to the shortage of scrip. Barnagore have improved. Business in Union, India and Ganges has passed around previous levels, while New Central have been freely offered without attracting support. In a circular letter to the shareholders, the Company has pointed out the reasons for not being able to publish its annual accounts in time because the books of the Company are lying with the Government.

Coal shares are sluggish and prices have tended to drop in the absence of support. Burrakur, Bengal and Central India have weakened. Investors are worried over the absence of an improvement in the demand for coal. Cotton mill shares have turned hesitant due to the rising price of raw cotton. Unless an adequate supply of raw cotton is available at reasonable prices, profits of mills will suffer since a large part of cloth production has been controlled. J. K. Rayon are about steady due to short-covering. Bharat Commerce and Dunbar have met with scattered buying, while Elgin are weaker.

In tea shares, turnover has been small and is largely confined to selected Dooars gardens. The slight improvement in prices of teas at the auctions held in Calcutta this week has helped to improve the outlook for 1964. If the recommendations of the Tea Finance Committee for providing medium and long-term loans to the industry for expansion are implemented, the prospects should improve.

Government securities are dull and small business has passed. The 3 percent Conversion Loan 1986 has been sluggish around Rs. 62. Prices of short- and medium-dated stocks are nominally steady. Most of the State Government loans are freely available, but institutional interest is lacking.

Bombay

LARGE TURNOVER IN CLEARING SHARES

STEEL SHARES ATTRACT ATTENTION

Wednesday Evening.

THERE has been a substantial improvement in the Bombay stock market during the past week. Prices of selected clearing shares like National Rayon and Standard Mills have hardened appreciably in response to brisk short-covering. Turnover in clearing shares has been fairly big. Operators seem to have been encouraged by the fact that the next clearing has been postponed, and will now take place early in the New Year. Although prices of cash shares have been well maintained, business has been small.

The steadiness is largely due to broadening speculative support. The suspension of futures trading in the raw cotton and oilseeds markets seems to have diverted operators to stock markets. Dalal Street is also inclined to believe that the Prime Minister, Mr. Lal Bahadur Shastri, will deliver an encouraging speech at the annual meeting of the Associated Chambers of Commerce in Calcutta next Monday.

Steel shares are in the limelight. The earlier improvement in Tata Engineering has not been maintained towards the close due to rumours of a strike. Larsen and Toubro have responded to the prospects of a bonus

issue. Premier Construction and Alcock Ashdown are steady. In motor-vehicle shares, Hindustan Motors have enjoyed support from outside centres. Premier Automobiles are sluggish. Prices of selected cotton mill shares have improved. Standard have gained appreciably on replacement buying, combined with short-covering. Bombay Dyeing, Kohinoor and Svadeshi are steady. Morarjee, Simplex and India United Ordinary have gained slightly.

In miscellaneous shares, National Rayon have been a bright feature and have gained considerably due to substantial purchases by a prominent operator. Gwalior Rayon are steady. Voltas have met with support. Tata Oil have gained. Among sugar shares, Belapur and Phaltan have met with scattered support. In steamship companies, Scindia Steam have recovered on short-covering following an encouraging statement by the chairman of the Company.

In cement shares, Associated Cement are steady. Mining shares are quiet, and Be Be Petrol have retreated on producing disappointing results. Bank shares are sluggish, although prices show little change. Electric shares have improved on balance. Support has been forthcoming for Ahmedabad and Tata Hydro.

Madras

BOMBAY ADVICES HELP MARKET

SELECTIVE SUPPORT FOR PLANTINGS

Tuesday Evening.

STEADY conditions have prevailed in the Madras stock market during the past week, although turnover has been restrained due to the holiday on account of "Vaikunta Ekadashi". Higher advices from the Bombay stock market have contributed to the steadiness. Business in clearing shares has been negligible, but selected cash scrip, particularly in the miscellaneous and planting sections, have attracted support. Operators seem to think that the Government may give some fiscal incentives to revive confidence in stock markets.

Government securities have been dull, and only a few State Government loans have been transacted. Good preference shares and debentures have been supported. Bank shares are sluggish, although prices are about maintained. Sugar shares have been neglected. Good tea and rubber shares have met with support due to encouraging crop reports. Coffee shares have nevertheless been freely offered because of the uncertain outlook for exports. Textile shares have weakened following the sharp rise in the price of cotton. Selected miscellaneous shares have been bought on good corporate news.

In banks, Indian Overseas have been done at Rs. 150, and Syndicate Bank A at Rs. 143.50. In electric companies, Negapatam are steady at Rs. 11.25 and South Madras at Rs. 11.86. Among sugar shares, Deccan have reacted to Rs. 10.14 and E.I.D. to Rs. 35.35. Andhra have been sold at Rs. 12.50, but K.C.P. are steady at Rs. 23.50. Mysore have attracted support up to Rs. 27.75 since the Company will issue bonus shares in the proportion of one share for every four held, including the rights issue, which will be made on 23rd December 1964. Madura have been done at Rs. 9.44 on declaring a taxable ordinary dividend of 6 percent.

In planting shares, Consolidated Coffee are steady at Rs. 25.15, and Periakaramalai at Rs. 3.66. Blue Mountain have improved slightly to Rs. 2.22, but Cochin Malabar have weakened to Rs. 6.07. Ouchterlony have come to hand at Rs. 3.40. In tea shares, Parkside are quoted at Rs. 20.50, Peermade at Rs. 20.90 and United Nilgiri at Rs. 22.25. In composite gardens producing tea and coffee, Kil Kotagiri are steady at Rs. 5.10 and Nilgiri at Rs. 8.50. Among coffee shares, Rajendra have been sold at Rs. 12 and Ossoor at Rs. 2.80.

In textile shares, South India Viscose have recovered to Rs. 101.75 on short-covering. Travancore Rayon have hardened to Rs. 17.75, but Madura have weakened to Rs. 35. Lakshmi have been maintained at Rs. 132. Bangalore Woollen have met with support at Rs. 281 and Buckingham at Rs. 277. Adoni are freely available at Rs. 8.75 and Anglo-French at Rs. 148. K. Rajendra have been done at Rs. 74.75 and Loyal at Rs. 40.

In miscellaneous shares, Aluminium Industries have reacted to Rs. 23.20, but Ashok Leyland have hardened to Rs. 7.25. In cement shares, Dalmia are weaker at Rs. 12.90, but India are steady at Rs. 5.10. Business has been done in Mettur Chemical at Rs. 14.30. South India Steel and Sugar are quoted at Rs. 8.85 since the Company will issue 100,000 ordinary shares of Rs. 10 each for public subscription. Seshasayee Paper are maintained at Rs. 7.20 and Mysore at Rs. 11.25. Kirloskar Electric are supported at Rs. 22.25 since the Company will issue bonus shares in the ratio of one share for every three held, subject to the sanction of the Government and the Industrial Finance Corporation. Andhra Scientific have come to hand at Rs. 13.48 on declaring a taxable ordinary dividend of 10 percent. Parry's Confectionery have improved to Rs. 3.05, but Spencer are easier at Rs. 21.50. Textool are steady at Rs. 128 and Tube Investments at Rs. 167.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations. London

TAX STATEMENT CAUSES HEAVY PRICE FALL

CREDIT CURB MOVE HITS GILT-EDGED

London, 15th December.

IT was a week of unsettled conditions in the stock market and business continued to diminish daily. After moving ahead in anticipation of the Chancellor's taxation statement, there was an immediate sharp reaction following it on keen disappointment with the contents. The price slide was the heaviest since that which followed the big Wall Street setback in May 1962. Stocks to suffer most were those of companies with large overseas earnings on consideration of their new tax position and Bowaters, Turner and Newall gained little benefit from the results where the dividend proved disappointing. Dunlops, Hawker Siddeley, Courtaulds, Metal Box and Tube Investments all gave way. Gilt-edged were a confused market with the tax position still uncertain and with the Bank of England request for credit restraint also contributing. Dollar stocks lost ground and there was some selling from this side by investment trusts. Continental issues also weakened. Gold shares were well favoured, following Press recommendations and on the move to obtain a higher gold price. Diamonds also moved up, but sea diamonds were a weak spot. Coppers improved irregularly, but tins fell away. Oils showed fairly sharp falls and rubbers and teas lost ground.

In more ways than one...

This is an aerial view of the Sandoz industrial complex. The site covers more than 70 acres. The plant and machinery incorporate the most modern manufacturing techniques, including a high degree of automation. All Sandoz products are manufactured, processed or formulated here, many from the basic stages. Each manufacturing wing has its own Product Development and Quality Control laboratories.

It is here that Sandoz works for national progress in more ways than one...

Pharmaceuticals:
On 4th February, 1961, Dr. S. Radhakrishnan, then Vice-President of India, formally inaugurated the Pharmaceutical and Chemical Plants. The pharmaceuticals manufactured represent established names in therapeutic use and are the result of continual and progressive research in Sandoz Laboratories all over the world.

Dyestuffs and Textile Chemicals:
A complete range of specialised dyes and chemicals is available for the requirements of the textile, leather and paper industry. Most of the dyestuffs licenced for manufacture will be produced for the first time in India. A pilot plant is in operation since last year and capacity production will start early in 1965.

Agro-Chemicals:
The product range in this line has a vast market in India where agriculture on a scientific basis is just beginning to take shape.

STATE BANK FACING PROBLEMS OF RAPID GROWTH

(BY A SPECIAL CORRESPONDENT)

The State Bank has grown impressively over the past decade. Its share of the country's banking business is to go up from the present 33 percent to 50 percent in the next five years. Consequently, it is now facing the problems of administration inevitable in conditions of rapid growth.

THE working of the State Bank of India during the first decade of its existence reflects the dual rôle and functions of a nationalised commercial bank, which is run according to business principles but within the framework of public policy. There is, however, little new in this tight-rope walking. For 14 years prior to the establishment of the Reserve Bank of India in 1935, the Imperial Bank of India, the State Bank's predecessor, performed an equally difficult and unusual task by combining some central banking obligations with the functions of a commercial bank.

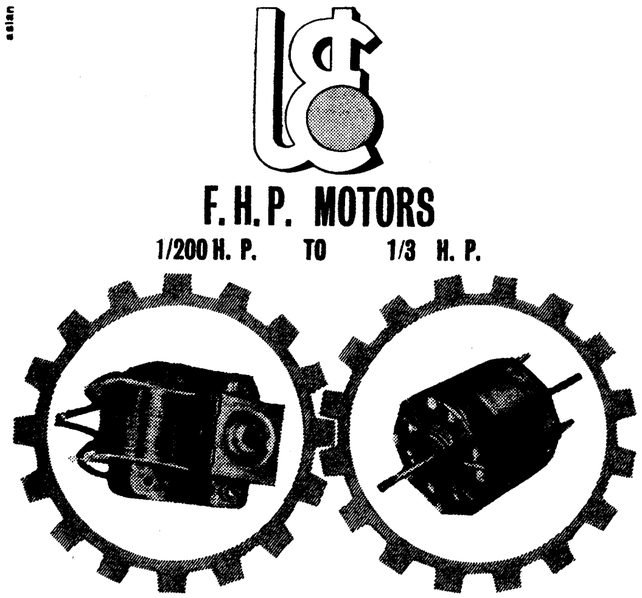
During the last decade, the State Bank has progressed, not only in terms of branches and business, but also in organisation and methods, in techniques and practices of lending and accounting, and in matters which are pertinent to its growth and efficiency such as recruitment and training, premises and housing, personnel welfare and labour relations. The bank, along with its seven subsidiaries, has opened more than 1,000 branches to build a network of 1,728 branch offices spread all over the country. Business has increased three-fold and the staff four-fold; above all, the bank has played a pioneering rôle in extending banking facilities to new and non-traditional small-scale industries, and to the export and co-operative sectors.

Increased Share of Banking

It is clear that with its experience and new initiatives, the State Bank is now poised for undertaking larger responsibilities and for playing a more important rôle in the economy. The Government has already declared its intention that the share of the State Bank in the country's banking system will go up from one-third at present to one-half in the next five years, and the declaration is being followed up by action on various fronts. In addition, the State Bank is making its own efforts to expand business. Under a directive from the Central Finance Ministers, deposits of all public, semi-public and local authorities and of all such institutions as receive Government assistance in the form of grants, aids or advances can be kept only with the State Bank. Under the revised credit control formula, the bank commands more than half of the total borrowing facilities from the Reserve Bank, with the result that borrowers turned down by the commercial banks due to the credit squeeze can be accommodated by the State Bank easily. As a result of a peculiar interpretation given by the Reserve Bank to its own deposit rates directives, all other banks have been compelled to refund their existing 3 percent three-day notice money deposits, but the State Bank continues to pay 3 percent on all its existing three-day notice money.

Nevertheless, despite past progress and future prospects, it is obvious that the State Bank, with its existing organisation, has reached the limits of its expansion. The strains are already reflected in the inadequacy of staff and accommodation and in the gradual deterioration of business and operational efficiency; payments to and from the Government at the State Bank have already become an ordeal, and procedural delays and operational inaccuracies have become exasperating. Problems of size have come along with progress.

Administrative Problems



It has become almost impossible to administer over 1,700 branches and keep in touch with their agents, staff and customers from a single central office. Problems of personnel and premises, and of accounting and business techniques, have increased in number as well as in complexity. The chairman of the State Bank mentioned at the 1963 annual general meeting of the shareholders that a committee of experts had gone into the details of staff, premises and accounting problems of larger size and its report was being implemented, although he did not disclose what the committee's recommendations were, and how they were being implemented.

The central office of the bank is being assisted by four local head offices in Bombay, Madras, Calcutta and New Delhi. The latter were conceived more as regional liaison units than as offices which could lighten the task and burden of the central office. They had so far no powers beyond recruiting and maintaining an establishment in their regions. The 1964 amendments to the State Bank of India Act are, therefore, intended to alter the organisation. They have the two-fold purpose of enabling the creation of a larger number of local head offices and of increasing their authority and autonomy with reference to the powers of granting loans and advances. The aims of these enabling powers are to facilitate delegation and decentralisation of functions within the bank, so that business can be transacted in a more efficient and expeditious manner.

Framework for Future

The State Bank is thus building up a framework and laying guidelines for future progress in three ways. First, its techniques of lending and operational practices are being revolutionised in the light of experience and its desire to finance the economic development of the country. Secondly, an internal expert committee is dealing with the problems of staff, premises and accounting in order to smoothen the process of expansion. Lastly, the statutory changes have provided scope for organisational changes in the bank's set-up. A fifth local head office in Kanpur was created in August even before the new amendment received the President's assent, and a sixth local head office was inaugurated in Ahmedabad on the very day on which the State Bank Amendment Act became effective—1st December, 1964.

With the reallocation of jurisdiction among the six local head offices (yet more to come in 1965) and with their increased powers, the administration of the State Bank will be effectively decentralised. In addi-

tion to the establishment matters, the boards at each of the local head offices can now deal independently not only with the traditional remittance and lending business and with the acceptance and realisation (if needed) of securities, but also with new lines of activities like housing loans, hire-purchase finance and term loans, within the broad policy laid down by the central board of directors of the State Bank.

Decentralisation of Powers

The future is, however, uncertain. Extensive decentralisation and wider discretionary powers for the increased staff of local head offices provide only the framework. Much more will depend on the extent to which increased powers and larger facilities are used. Procedural delays will not be curtailed unless the new local boards feel themselves confident and competent to take risks and responsibilities: operational delays cannot be reduced unless the local boards are able to instil a greater sense of discipline and duty among the staff under their jurisdictions: efficiency and quality of service at the branch counters and managers' desks are unlikely to improve, unless the supervisory and managerial staff are relieved from the sheer voluminous burden of day-to-day routine and hour-to-hour banking.

Moreover, it has not yet been fully realised that the amending legislation, which has facilitated the delegation of wider powers to a larger number of local head offices, has at the same time increased and extended the Government's control over the management of the State Bank by increasing the nominated and official element on the central and local boards.

THE CALCUTTA MONEY MARKET

MODERATE INCREASE IN ADVANCES

Wednesday, 16th December.

THE general level of advances has risen moderately in the Calcutta money market during the past week. This is because the requirements of the cotton, jute and sugar mills are slightly higher. The credit given to the iron, steel and engineering industries, and to the foodgrains and seeds trade is unchanged. In the interbank market, conditions have been easier, and the call rate has dropped from 5½ percent to 4 percent.

The exchange market has been moderately active, with a fair supply of both tea and gunny bills. The demand for remittances is small. In the London market, sterling has shown a mixed trend and fluctuations have been narrow.

BULLION WAS STEADY IN CALCUTTA during the past week due to good support, particularly from upcountry centres. Silver rose from the previous week's level of Rs. 253.50 to Rs. 257.20 a kilogram, quoted today. The price was quoted at 113¼d in London and at 129.3 cents in New York.

In sympathy with the rise in silver, gold was also steady and the price of 14-carat advanced from Rs. 68.25 to Rs. 68.75.

DURING THE WEEK ENDED 11TH December, Government of India Treasury bills for Rs. 55,98,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 15th December. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.375 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.500 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 21st December.

IT IS STATED THAT 91-DAY INTERmediate Treasury bills will be sold from 16th December to 19th December at Rs. 99.391 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 9th December to 12th December amounted to Rs. 1.50 crores.

ACTIVE NOTES ROSE BY Rs. 37.56 crores to Rs. 2,510.53 crores and the total note issue by Rs. 28.81 crores to Rs. 2,520.23 crores, according to the return of the Reserve Bank of India for the week ended 11th December, 1964. The currency expansion was adjusted by increasing rupee securities by Rs. 30 crores to Rs. 2,216.13 crores. Deposits of the Government of India dropped by Rs. 33.25 crores to Rs. 53.05 crores while those of State Governments rose by Rs. 12.33 crores to Rs. 17.82 crores. Balances of scheduled banks at Rs. 93.55 crores showed a rise of Rs. 4.32 crores. Balances held abroad declined by Rs. 55 lakhs to Rs. 10.84 crores but investments were up by Rs. 24.94 crores to Rs. 23.30 crores, of which scheduled banks rose from Rs. 18.26 crores to Rs. 23.30 crores of which advances against usance bills amounted to Rs. 1.41 crores (Rs 4.26 crores). Advances to State Governments at Rs. 28.09 crores showed little change.

THE RETURN OF THE STATE BANK OF India for the week ended 4th December, 1964, shows a rise of Rs. 47 lakhs to Rs. 667.23 crores in total deposits. Investments in Government securities are down by Rs. 5.50 crores to Rs. 283.93 crores, while other authorised investments remain unchanged at Rs. 8.98 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have increased by Rs. 17.24 crores to Rs. 362.72 crores. Cash and balances are, in consequence, shown at Rs. 23.49 crores or Rs. 1.97 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 4th December, 1964, shows Demand and Time liabilities at Rs. 1,349.69 crores (Rs. 28.60 crores on account of borrowings from banks) and Rs. 1,391.48 crores (Rs. 17.09 crores), compared with Rs. 1,370.05 crores (Rs. 31.56 crores) and Rs. 1,399.77 crores (Rs. 15.88 crores), respectively, in the previous week. Cash has risen by Rs. 3 lakhs to Rs. 65.69 crores, while balances with the Reserve Bank have declined by Rs. 1.67 crores to Rs. 92.09 crores. There is a drop of Rs. 36.72 crores to Rs. 802.54 crores in investments. Advances and bills discounted at Rs. 1,784.34 crores show a rise of Rs. 49.48 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 5.8 percent and 65.1 percent, against 5.8 percent and 62.6 percent.

THE CHARTERED BANK IS ACQUIRING a 40-percent interest in the ordinary share capital of the Mutual Acceptance Company Ltd of Sydney, Australia, which is to be increased to A£3,203,725. The total cost of this investment to the Chartered Bank will be A£1,922,235 (£1,537,788 sterling), including a premium of 50 percent. The Mutual Acceptance Company Ltd was incorporated in 1936, and at present is the largest Australian finance company without bank backing. The Company with its subsidiaries provides a full range of hire-purchase and general finance facilities and has offices in Sydney, Melbourne, Brisbane, Adelaide and Canberra.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 18-12-64.

Issue Date	Maturity Date	Amount (('000's Rs.)	Average Acceptance Rate
18-12-64	21-3-65	2.00.00	Rs. 2.500%

THE SCINDIA STEAM NAVIGATION COMPANY LIMITED

CHAIRMAN, MR. DHARAMSEY M. KHATAU'S REVIEW

Summary of the Statement of Mr. Dharamsey M. Khatau, Chairman, The Scindia Steam Nav. Co. Ltd., made at the 45th Annual General Meeting of the Shareholders on Wednesday, the 16th December, 1964, at Scindia House, Ballard Estate, Bombay.

Shri Dharamsey M. Khatau, Chairman of the Scindia Steam Navigation Co., Ltd., referred feelingly to the sad death of our beloved Prime Minister Shri Jawaharlal Nehru who gave national shipping its place of pride in the transport economy. In welcoming the new Prime Minister Shri Lal Bahadur Shastri, he referred to the consolidation and expansion of the shipping industry achieved due to bold and energetic policy pursued by him during his tenure as Transport Minister. While referring to the recent freight increases which were effective only for a period of the year, he stated that these increases were off set by continued increase in costs. He was critical of the entry of other Indian Lines into the Shipping services which were satisfactorily maintained by Indian Lines, Members of the Shipping Conferences, inasmuch as such entry would render a working of the Lines uneconomic. He made special reference to strikes in ports in India and abroad, the berthing and dry-dock delays and the poor despatch, which all went to add to the cargo handling costs. He urged the Government to take active interest in requiring Port Trusts to maintain efficiency at ports at the highest level possible and to make labour more productive through the introduction of incentive schemes and the adoption of other similar methods.

Raising Freight Rates

Regarding the rates of freight on the Coast, he pressed for adequate increase in the background of a detailed reference to the 1962 recommendation of Shri R. G. Abbhi's Commission, which was not fully accepted by the Government and which itself was not considered adequate by the industry. He referred to the costs that have since risen and maintained that the view that the return on capital would be adequate if "some uneconomic ships" were eliminated was not practical. His reason was that apart from the fact that all units of any industry are not economic in operation at all points of time, the Coastal industry suffered from a particular handicap in that though it was keen on eliminating uneconomic units, foreign exchange was not available for purchase of replacement vessels. He insisted that the Coastal vessels should be given adequate quantities of coal, salt and other cargoes which must be continuously assured to enable Coastal shipping to work economically and to develop in a planned manner and at the same time to provide for efficient services.

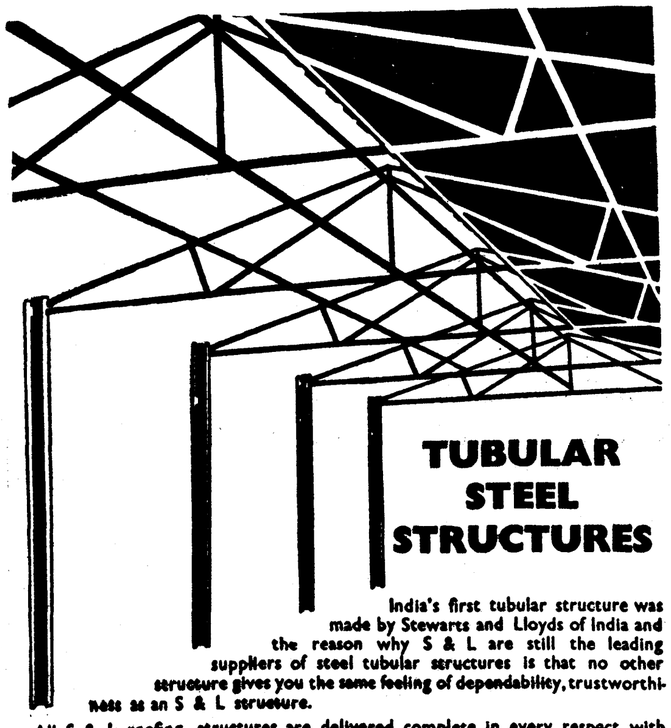
He made particular reference to the urgent need for making continuous and expeditious use of the machinery of the Maritime Freight Commission and observed that this Commission should be charged with the responsibility of making periodical assessment of costs of operation and thereafter permitting the shipping companies appropriate increases from time to time. He requested the Government to take required decision early.

Shri Khatau made reference to the addition of eight vessels to the fleet since the last Annual Meeting. Of these, six are for employment on the Coast of India, one for the West Coast and one for Overseas trade. A further order for three 15,000 ton vessels was placed with Messrs. Lithgows Ltd., Glasgow. There were also on order with the Hindustan Shipyard three vessels and one 3,800 d.w.t. motor vessel was on order abroad.

War Risk Insurance

Regarding War Risk Insurance, Shri Khatau referred to his observations back in 1962. The Indian National Steamship Owners' Association, he had said, have been requesting the Government of India since September, 1959 to evolve a suitable scheme and it was urged that immediate measures be taken to formulate the scheme so as to ensure adequate insurance protection to Indian vessels against war risks. Although the Association were advised that the Government were actively considering the matter, nothing had so far happened. He, therefore, reiterated his appeal to the Government to give this question priority consideration.

Regarding Scindia Workshop Ltd., he referred to the conclusion of the contract with Messrs. Siemens Engineering & Manufacturing Co. of India Ltd., Bombay, for manufacture of cargo winches and to the negotiations with Messrs. Mac-Gregor-Comarin, Paris, for manufacture of Ship's Hatch Covers.



Regarding Konkan services, Shri Khatau observed that the new Committee which was expected to be formed by the Government and to submit its report to the Government had not yet been formed. As a result, no progress had been made in determining the amount payable to the Company for the year 1962-63 and onwards. This was, he said, in the background of the original claim of the Bombay Steam Navigation Co. (1953) Ltd. against the Maharashtra and the Central Governments for the two years 1961-62 and 1962-63 amounting to Rs. 25,68,253. He requested the Government to hold early a Tripartite Conference between the Government of India, the Government of Maharashtra and the Company. In his concluding remarks he said unless freight rates were designed to cover costs of operation, shipping companies cannot work on an economic basis.

Regarding future prospects, his observation was that the Company's year under review was good and, as far as he could see, the Company expected to maintain the improvement.

Shri Khatau welcomed Shri Raghunath Singh, the newly appointed Chairman of the National Shipping Board, and referred to his close knowledge of shipping problems. He said he would look forward to further satisfactory progress of the industry. He also expressed his appreciation of the active assistance of Shri Raj Bahadur, Transport Minister, and Dr. Nagendra Singh, Special Secretary, for their efforts in stabilising and expanding Indian Shipping.

He thanked the shippers, patrons and consignees, here and abroad, and appreciated the services of the Management, Officers and Staff and the Company's Agents.

Note :—This does not purport to be a record of the proceedings of the Annual General Meeting.

TUBULAR STEEL STRUCTURES

India's first tubular structure was made by Stewarts and Lloyds of India and the reason why S & L are still the leading suppliers of steel tubular structures is that no other structure gives you the same feeling of dependability, trustworthiness as an S & L structure.

All S & L roofing structures are delivered complete in every respect with trusses, purlins, columns, hook bolts for roofing and all necessary studs, nuts and washers.

Write today for your requirement of these sturdy and dependable tubular steel structures.

OBJECTS AND PROPOSED ACTIVITIES

The main object for which the Company has been established is, inter alia, to carry on the business as manufacturers of and dealers in 'Forgings" of various types. The Industrial Licence from the Central Government authorises the manufacture of 5,000 tons annually of mild and alloy steel forgings. The indigenous production of forgings is inadequate to meet the present, as also the growing demands from the expanding industries and for the Defence requirements in all its phases from Ordnance to aircraft and missiles. The tariff policy of the Government of India gives encouragement to the forging industry and the Company hopes to establish itself in a short period as one of the premier manufacturers of quality forgings in mass scale.

FOREIGN COLLABORATION

The Promoters, viz., Messrs. B. K. Khanna & Co. Private Ltd., entered into an agreement dated 1st August, 1963 with Messrs. Kropp Forge Company of Chicago, U.S.A. who, having 66 years experience in forging industry are among the largest manufacturers in U.S.A. of forging from various ferrous and non-ferrous metals. The said collaborators have agreed to make available their extensive experience in the manufacture of mild and alloy steel and other metal forgings, to assist in the layout of the plant and erection of factory, to train Indian personnel at their Works and to provide men with technical experience This agreement has been assigned in favour of the Company by the promoters. The duration of the Agreement is ten years.

LOCATION

The Plant will be located at Bhopal in Madhya Pradesh where land has been acquired.

FINANCIAL ARRANGEMENTS

The Company has arranged loans from Industrial Finance Corporation of India for Rs. 26,40,000/- (foreign exchange loan of Rs 23,34,000/- and rupee loan of Rs. 3,06,000/-) and United States Agency for International Development ("A.I.D.") for Rs. 47,50,000/-.

APPLICATION FOR SHARES

Application for shares must be for a minimum of 25 equity shares of multiples thereof and/or for a minimum of 5 preference shares or multiples thereof, and must be on the prescribed forms accompanying the prospectus, which can be had from the Company's Registered Office, Underwriters, the Bankers and Brokers to the Issue

All application forms duly completed must be lodged together with the amount payable on application with the UNION BANK OF INDIA LIMITED, Connaught Place New Delhi or THE NATIONAL AND GRINDLAYS BANK LIMITED H-Block, Connaught Circus, New Delhi or THE CENTRAL BANK OF INDIA LIMITED, National Insurance Building Parliament Street New Delhi, or at principal branches of any of the said Banks at Agra, Ahmedabad, Ajmer, Allahabad, Ambala, Amritsar, Bangalore, Baroda, Bhopal, Bombay, Calcutta Chandigarh, Coimbatore, Cuttack, Dehra Dun, Delhi, Ernakulam, Gauhati Hyderabad, Indore, Jaipur, Jammu, Jamshedpur, Jullundur, Kanpur, Kotah, Lucknow, Ludhiana, Madras, Madurai, Meerut, Mysore, Nagpur, New Delhi, Patiala, Patna, Poona, Ranchi, Shillong and Surat.

DATE OF OPENING AND CLOSING OF SUBSCRIPTION LIST

The subscription List will open both in respect of Equity and Preference Shares, at the commencement of banking hours on 28th December, 1964, and will remain open until the close of 12th January, 1965, unless closed earlier or later at the discretion of the Directors but not before the close of the banking hours on 2nd January, 1965.

INTERADS

New Delhi

PACT ON MADRAS REFINERY WILL BE SIGNED SHORTLY

(FROM OUR NEW DELHI CORRESPONDENT)

THE Government of India and the Iranian-American combine, consisting of the American International Oil Company and the National Iranian Oil Company, have reached an agreement to build the Madras refinery with a capacity of two-and-a-half-million tons. Three outstanding issues—the guarantee on the refineability of Darius crude, the most favoured treatment for India in relation to the price of the crude and a larger dollar loan to finance the fertiliser-*cum*-petrochemical complex to the extent of at least $5 million—have been satisfactorily settled after mutual discussions, followed by the exchange of letters incorporating the basic principles of the agreement. Lawyers are now engaged in giving legal shape to the agreement which, it is expected, will be signed shortly.

According to official sources, oil has been struck in the Lokhoa area, a few miles from Jorhat in Assam. Preliminary estimates place the oil reserves at 20 million tonnes. The area is in the vicinity of an existing oilfield. Meanwhile, the Oil and Natural Gas Commission has announced its 1964-65 drilling programme. It proposes to drill 151 wells deploying 40 rigs. The drilling areas include Ankleshwar, Ahmedabad and Cambay in Gujarat; Rudrasagar, Kakwa and Teok in Assam; Hoshiarpur in Punjab; Port Canning in West Bengal; Purnea in Bihar; and Tihar, Tanakur and Mohando in U.P. In addition, the O.N.G.C. plans to drill a series of shallow wells in the Godavari delta where gas seepage is believed to exist.

Meanwhile, led by Mr. Galloway of Union Carbide, the representatives of Dow Chemicals and the American International Oil Company—forming a consortium—have offered to build a petrochemical complex in Koyali, Gujarat, at an estimated cost of $50 million in foreign exchange. Last month, the I.C.I.-Phillips Petroleum combine also submitted detailed proposals for setting up the complex. Phillips Petroleum of the U.S.A. is at present building the Cochin refinery in partnership with the Government while I.C.I. is engaged in a number of projects in India, including explosives and terylene. Union Carbide similarly holds a licence to set up a naphtha cracker unit in Bombay and has applied for its expansion. The A.I.O.C. is now becoming a partner of the Government in building the Madras refinery. The Government is presently examining both proposals. It proposes to set up industries for the extraction of aromatics (benzene and xylene) and for the manufacture of butadiene and acrylonitrile in the vicinity of the Barauni refinery in Bihar. The A.I.O.C., it will be recalled, told the Government that the Madras refinery with a capacity of two-and-a-half-million tons will not be able to sustain both the fertiliser and the petrochemicals complex. It has also told the Government that it specialises in aromatic extraction industries. The use of the technical and financial assistance to be provided by the A.I.O.C. in the aromatic extraction industries in Bihar cannot, therefore, be ruled out.

AGRICULTURE

The Shanker Report

The former Secretary to the Central Ministry of Food, Mr. V. Shanker, it is believed, has recommended in a report that all agricultural activity at the Centre, including co-operative credit and Panchayati Raj, should be brought under one Minister of State. This would involve a partial, if not complete, liquidation of Mr. S. K. Dey's "empire". The Chief Ministers of Gujarat and Rajasthan recently declared that the two programmes have not benefited the people for whom they were launched. This "storm in a tea-cup" may not worry Mr. Dey who, contrary to the Prime Minister, has been defending the use of jeeps in development blocks. He said that the number of jeeps in "normal" community development blocks was 3,411. But he did not disclose their number in "abnormal" blocks.

Novel Ideas

The Minister pretends that he has never been in the wrong. It is sometimes the politician and sometimes the serviceman who is responsible for the "unfounded" allegation that the programmes sponsored by his Ministry have failed. In earlier, years, he caught the late Mr. Nehru on the soft side by making community development blocks organise village schools. He also put forward a proposal for organising the village defence force two years ago to drive the Chinese back to Peking. Mr. Dey told the Lok Sabha during its July session that the village level workers had "now" been instructed to give first priority to agricultural production.

The father of the concept of the welfare State, Lord Beveridge, stated in his well-known book, *Employment in a Free Society:* "Idleness is not the same as want, but a separate evil. Men must also have the chance of rendering useful service and of feeling that they are doing so. This means that employment is not wanted for the sake of employment, irrespective of what it produces. Employment which is merely time-wasting, equivalent to digging holes and filling them up again will not serve the purpose. Employment must be productive and progressive." The issue which the Government and the Planning Commission have to face is whether, and to what extent, employment-oriented planning has been productive. Such an examination is extremely necessary for the community development programme.

Various committees have evaluated the usefulness of the community development programme for raising production in agriculture. The findings have not been complimentary to the Ministry. A fresh examination in the light of the Shanker report has now become necessary, particularly because of the economic crisis. The examination might show how much unproductive employment has been provided by the community development organisation.

COAL

Study on Transport Needs

According to reports in a section of the Press, the coal transport study undertaken at considerable cost has "already become obsolete" for the obvious reason, that the demand for both coal and transport has declined. If these reports are correct, the conclusion so reached should be confined to people who are not planners but panic-mongers.

A look back to the transport crisis which faced this country two years ago, and the shortage of cement which is now accepted as a normal phenomenon, like the contamination of drinking water supply in Delhi, is called for. A similar slackness in the railway transport position some four years ago led the Planning Commission to a decision to reduce the production of railway wagons. The result of this "hand-to-mouth" policy was that not enough wagons were available when the economy, recovered. As for cement, at one stage its shortage led to the appointment of a committee to suggest alternatives to cement as a medium for construction. Then there was a sudden glut, followed by a season of shortages.

The issue is a straight one, namely, whether the present economic crisis is regarded as a permanent feature of the Indian economy. If it is, there is no need for the fourth plan or for the Planning Commission. If India has to have the fourth plan, which envisages a growth rate of 6.5 percent, it follows that the present economic crisis is a temporary phenomenon and the tempo of economic activity has to be accelerated. The slack demand for rail transport system should then be regarded as a passing phase, and the transport system should be geared to meet the additional demand arising from the planned growth of production. From this broader viewpoint, the coal transport study cannot be regarded as obsolete.

FOODGRAINS

Rice and Wheat Production

Production figures gathered from official sources show that the production of rice was 34,807,000 tons in 1961-62, 31,914,000 tons in 1962-63, and 36,489,000 tons in 1963-64. Imports of rice during the same period were 390,000 tons in 1962, 483,000 tons in 1963 and 519,000 tons in the ten months ended October 1964, or about 14 percent of home production.

The production of wheat was 12,039,000 tons in 1961-62, 10,829,000 tons, in 1962-63, and 9,708,000 tons in 1963-64. Imports of wheat were: 3,250,000 tons, in 1962, 4,071,000 tons in 1963 and 4,346,000 tons till October 1964.

Imports of wheat are almost 50 percent of the home production. This should be a matter of some concern to those responsible for India's food policy. The area under rice can perhaps be stepped up to make India self-sufficient in the commodity. The same is not true of wheat for which the import bill is already big. As it is, the rice-eating people are subsidising the wheat-eating population of India.

FOREIGN LOANS

Statement from T. T. K.

In a statement in the Lok Sabha last week, the Central Finance Minister, Mr. T. T. Krishnamachari, gave details of the loans granted to India by the aid-giving countries during the first three years of the third plan, the amounts used and interest paid on them. The following is a summary of the statement:

(In Rs. crores)

Country	Amount of loan	Amount used up to 31st August, 1964	Interest paid up to 31st August, 1964
A. Loans payable in foreign currency:			
U.S.A.	555.59	298.52	2.36
United Kingdom	166.66	98.12	7.87
West Germany	220.58	119.61	10.13
Canada	7.35	2.84	Negligible
Japan	84.94	32.27	0.28
Switzerland	3.25	—	—
Poland	15.50	—	—
France	38.09	—	—
Italy	47.04	3.54	0.02
Austria	4.21	1.52	—
Belgium	9.52	—	—
Netherlands	13.15	0.26	—
	1161.88	556.68	20.66
B. Loans payable in rupees:			
Denmark	1.03	—	—
U.S.A.	46.18	25.80	0.92
Total	47.21	25.80	0.92
Totals A and B	1,209.09	582.48	21.58

SOUTH AFRICA

Trade with Communist Bloc

Last year, the Security Council voted in favour of arms sanctions against South Africa. The Council's resolution was phrased in the form of a recommendation. Britain stated that she was willing to ban those arms "which would enable the policy of apartheid to be enforced". The U.S.A. said she was willing to ban the sale of arms to South Africa, but not the sale of other commodities, such as petroleum and its products. France made a clear distinction between strategic equipment and material required for internal and external defence purposes. A vote by the General Assembly had called on all countries to stop the sale of arms military equipment and to cease supplying petroleum in all its forms to South Africa.

Apart from arms traffic, African countries also increasingly called for a total trade boycott of South Africa so as to bring the Verwoerd Government to its knees. The U. N. Special Committee on Apartheid, in its report to the General Assembly published recently, recommends that countries should ban the export of a large number of items to South Africa. But this has not stopped communist countries from actually increasing their trade with South Africa in 1963. According to trade figures issued by the South African Government, the increase was in many cases substantial, even though none of these countries have signed trade or payments agreements with the South African Republic.

	(In £ 000)
East Germany	893
Czechoslovakia	1,746
Hungary	476
Poland	384

Many allegations about South African trade with communist China have appeared in the Press this year. They seem to be largely borne out by the facts as far as they are available. According to official Chinese data, China imported from South Africa goods valued at £3 million and exported goods to that country to the value of £700,000. The trade is being intensively continued and, according to a U.N. report on international trade, China supplies explosives to South Africa.

Most of China's imports from South Africa are believed to have been maize, both white and yellow. In 1964, the South Africa maize crop

has apparently been poor, so there is probably no export surplus. But canned foods make up a portion of South Africa's exports to China. South Africa buys pig bristles and sacking from China, among other items.

CHEMICALS

New Unit Planned

The representatives of the Chicago Bridge Company were here last week to discuss with the Government a proposal to set up an undertaking to manufacture pressure vessels and allied equipment required for the chemical and petro-chemical industries. The planned capacity of the unit is 15,000 tons a year on a two-shift basis. The Government has suggested two alternatives for financial and technical collaboration or merely for technical collaboration.

INFORMATION MINISTRY

Enquiry into Working

In order to evaluate the work at present being done by the various units of the Central Ministry of Information and Broadcasting in the light of the high professional standards required of them, and with a view to suggesting measures both on a short-term and long-term basis, the Government of India has set up a ten-member committee consisting of Mr. Asok K. Chanda (chairman); Messrs Nath Pai, M. S. Gurupadaswamy, Dr. L. M. Singhvi, Shrimati Kamala Chaudhri, Mr. V. C. Shukla, all members of Parliament and Messrs Hasan Zaheer, Asok Mitra, M. Chalapathi Rau, and Dr. Hazari Prasad Dwivedi. Kumari Mehra Masani, Director of Programmes, Directorate-General, All India Radio, will act as secretary to the Committee.

The Committee will avail itself of the services of experts in different fields of mass communication as consultants. The terms of reference of are: (1) to determine and define the rôle of the Ministry of Information and Broadcasting in terms of the Government's responsibility and functioning in mass communications; (2) to examine and evalute the operation, policies, programmes and productions of the various media units of the Ministry; (3) to examine and assess, in general terms, the current and projected activities of the other Governmental agencies engaged in mass communications; (4) to indicate the extent to which these operations, policies, etcetera, in each of the units meet the standards of an efficiently functioning unit in terms of the present objectives of the unit, and the objectives of such a unit as determined in terms of the Government's responsibility and functioning in mass communications; (5) to recommend appropriate changes, where necessary, to be made in the various media units; (6) to determine the desirability and feasibility of instituting a system of co-ordinating all Government activities in mass communications and specify what form such co-ordination should take, and (7) to draft a specific practicable programme of mass communications, with detailed reference to the media, facilities, personnel, funds and time required for implementing the programme.

Hang out the mistletoe and take just one convenient stop for all your shopping: the nearest Bata store. Here you'll find a cosy selection of footwear—right for everybody, for your family and your friends. Bata shoes make the most welcome of gifts, for they give comfort and pleasure the whole year round.

INDIAN TEXTILE EXPORTS

U.S.A. and U.K. Seek Restraint

The U.S.A. and the U.K. have asked India to restrain her textile exports to specified levels. Canada has not asked India to apply restraints in the same manner, but exports to that country meet with tariff barriers. Because of these restraints it has become difficult for India to increase the export of her textiles to these countries. On the whole the overall export of all categories of cotton fabrics as well as mill-made cotton textiles has been steadily increasing, and the value of export of cotton fabrics has risen from Rs. 51 crores in 1962-63 to Rs. 58 crores in 1963-64. In the first six months of this year also, this steady increase is being maintained.

HEAVY ELECTRICALS

New Company

With the formation of a new Company under the name and style of Bharat Heavy Electricals Ltd, the Heavy Electricals (India) Ltd has been bifurcated. The new Company has taken over the heavy electrical equipment plant, Hardwar, the heavy power equipment, Hyderabad, and the high pressure boiler plant, Tiruchirapalli. The Hardwar plant will manufacture steam turbo sets, with a total annual capacity of 1.5 million kW, hydro turbo sets with a total annual capacity of 1.2 million kW, heavy and medium size A.C. and D.C. electric motors with a total capacity of 515,000 kW a year, and starting and control apparatus, for completing the turbines, turbo generators and electric motors. The Hyderabad plant is designed to manufacture annually 800 MW of steam turbines and turbo alternators in sizes up to 100 MW each. The production programme of the Tiruchirapali plant is as follows): (1) manufacture of high-pressure boilers with a total capacity of 750 MW a year; (2) manufacture of boiler fittings not only to meet its own requirements but also to the extent of 1,800 tonnes a year for meeting the needs of other enterprises; and (3) manufacture of ten packaged boiler units.

COALMINING

U.S. Aid Sought

Loan assistance from the U.S.A. has been sought by India for developing an open-cast coking coal mine with a capacity of 1.5 million tonnes, and for a washery to beneficiate the coal at Ramgarh and for three developing non-coking coal mines with a total capacity of 5.05 million tonnes and a coking coal mine with a capacity of 1.50 million tonnes.

WAGON SUPPLY

Stabling for Lack of Traffic

There has been some stabling of wagons during the current year on the Indian railways. The daily average number of wagons stabled for want of traffic during the first seven months of 1964-65 is as follows:

	Broad Gauge		Metre Gauge	
	Number of wagons stabled	Percentage of stabling to total holding	Number of wagons stabled	Percentage of stabling to total holding
1964	592	0.2	379	0.4
1964	45	0.02	276	0.3
June 1964	773	0.3	556	0.5
July 1964	7,672	2.7	2,264	2.2
August 1964	15,039	5.3	3,482	3.4
September 1964	19,240	6.8	4,694	4.5
October 1964	17,897	6.3	4,289	4.1
Average:	8,751	—	2,263	4.1

In November and December 1964, the number and percentage of wagons stabled have come down further on the broad gauge and the metre gauge. The shortfall in wagons loading compared with anticipations during the seven months, April 1964 to October 1964, for want of traffic, amounted to 10.21 million tonnes. The commoditywise breakdown of this shortfall is shown below:

Coal	7.10 million tonnes
Raw materials to steel plants	1.05 million tonnes
Finished products from steel plants	210,000 million tonnes
Iron ore for export	310,000 million tonnes
Other goods	1.54 million tonnes
Total	10.21 million tonnes

PULP-MAKING

Public-sector Projects

The Central Minister of Heavy Engineering, Mr. T. N. Singh, told the Consultative Committee of Parliament that the Government was considering the setting up of one or more pulp making plants in the public sector, for meeting the needs of small paper plants and for filling the gap in the fourth plan demand and production. For newsprint, it was proposed to have one large unit with an approximate annual capacity of 60,000 tonnes in the public sector. The National Industrial Development Corporation had been entrusted with the work of preparation of a preliminary project report, which was expected by the end of this month.

STATE CONCERNS

New Bureau Planned

The Government of India is examining a proposal to set up a bureau of public enterprises to act as a service and evaluation centre for all public enterprises. The details are being worked out and the bureau is likely to be set up in the near future.

COAL WASHERY MACHINERY

Polish Collaboration

A Polish delegation recently visited India to finalise the terms of a collaboration agreement with the Heavy Engineering Corporation for the fabrication of machinery for washeries. Discussions with the Polish team are in progress. The team is at present engaged in making a study of the requirements and preparing a feasibility report.

Manufacturing Firms

Four firms have been granted licences for the manufacture of coal washeries with foreign collaboration. They are:

Name of the firm	Name of foreign collaborators
Messrs McNally Bird Engineering Company Ltd, Calcutta	Messrs McNally Pittsburgh Corporation, U.S.A.
Messrs Britannia Engineering Company Ltd, Calcutta	Messrs Simon Carves Ltd., U.K.
Messrs Tata Robins Fraser Ltd, Jamshedpur	Messrs Hewitt Robins Incorporated U.S.A. and Fraser and Chalmers Engineering Works of the U.K.
Messrs Argent Engineers Ltd, Calcutta	Messrs Roberts and Schaefer Company, U.S.A.

HIGH INCOME GROUPS

Publication of Names

As soon as the information is collected, the Government of India is thinking of publishing the names of individuals having an income of Rs. 2 lakhs and above and the names of firms having an income of Rs. 10 lakhs and above.

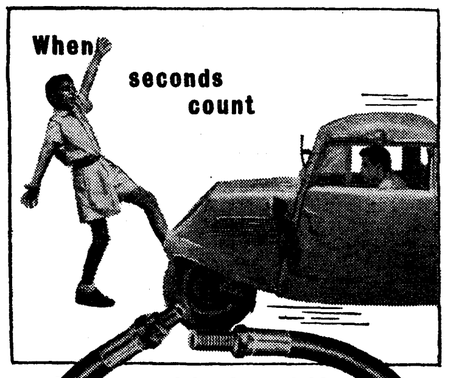
PUMPS AND COMPRESSORS

Russian Aid for Projects

A team of Russian experts has arrived here during the past week in connection with the pumps and compressors and steel foundry projects, which it is proposed to set up in the public sector with Russian assistance. The Russian specialists will assist the Government of India in the collection of initial data relating to technical, economic and locational project details with a view to preparing the detailed project reports.

The preliminary techno-economic report on the pumps and compressors project prepared by the Russian authorities visualises a capacity of 16,000 tonnes of equipment in ranges, not generally covered indigenously. The steel foundry, it is proposed, will be established with a capacity of 10,000 tonnes of steel castings required by the railways. The foreign exchange requirements of these projects are proposed to be met under the credit agreement signed on 21st February, 1961, between the Governments of India and Russia.

ELECTRONICS INDUSTRY



Report on Development

In an interim report on the production and investment necessary for a balanced electronics industry in India, the Electronics Committee has placed an expenditure of the order of Rs. 659 crores for 1963-73 for electronic equipment required by the defence services. Adding Rs. 70 crores for replacement parts, defence requirements come to Rs. 730 crores. The requirements of All India Radio, the departments of Civil Aviation and Light Houses and Light Ships, the Indian Railways, the Meteorological Department, Overseas Communication Services and internal security force, as estimated for the period up to 1973 by the respective Ministries, add up to a figure of Rs 90 crores. The Posts and Telegraphs Department is likely to use about Rs. 70 crores worth of electronic equipment in the same period. Miscellaneous items of entertainment equipment, such as phonograph amplifiers, tape-recorders and public address systems will form a sizable portion of the electronic apparatus produced. Based on the production and sales trends in other countries, a total of Rs. 100 crores can be taken as a reasonable figure. Similarly, in the field of industrial electronics, where a beginning was yet to be made in India, it is estimated that at least Rs. 200 crores worth of goods will be produced by the time the Indian electronics industry reaches full stature by 1973. It is further estimated that a minimum of Rs. 100 crores worth of electronic computers would be absorbed in the country in the next ten years. Taking all the above figures and those for the radio receivers, a total production figure of over Rs. 1,600 crores by 1973 is indicated for a balanced electronics industry in India.

The size of the existing industry is negligible compared with the task ahead. If new annual production capacity of Rs. 33 crores is established every year during the next ten years, a total production worth Rs 1,600 crores by 1973 will be achieved. The resulting production capacity will be Rs. 330 crores a year by 1973.

Raw materials required for the electronics industry cover a very wide range of metals and non-metals. Tungsten, molybdenum, nickel, chromium, gold and various alloys are widely used in vacuum tubes and transistors. Germanium, silicon and many other semi-conducting materials are needed in a purity not known in other fields of technology. Quartz and special glasses are used not only in components directly, but also in the equipment producing them. Insulators such as plastics, paper, laminated products, mica, special dry process electrical porcelain, varnishes and silicones and a very wide variety of chemicals are essential. A Rs. 330 crore a year electronics industry to be built up in ten years will require approximately Rs. 24 crores worth of raw materials every year.

Accessories such as connectors, cables, switches, knobs, relays, and solonoids will need common production facilities. The turnover in these items will be of the same order as in resistors or capacitors. There are many different types of resistors such as carbon composition, carbon film, metal film and wirewound resistors. There will be need for an annual production worth Rs. 7.5 crores. Almost an equal capacity is required for capacitors of all types. The investment required for such a production of resistors, capacitors and electronic accessories of an aggregate value of some Rs. 24 crores, would be of the order of Rs. 11 crores. An additional investment of approximately Rs. 15 crores will be required for

....brakes must be dependable

Safety on the road depends on the efficient working of your brakes. Jay-walkers, children, animals, cause unexpected hazards. Your brakes must therefore be absolutely reliable to stand up to any emergency any time, any number of times. Davis & White, a name synonymous with road safety, specialize in the manufacture of complete range of brake components for trucks, cars and scooters. Davis & White brake components ensure safety, hardwear and dependability on the road.

DAVIS & WHITE
the greatest name in safety

DAVIS & WHITE INDIA PRIVATE LTD.
'KUNDAN MANSION'
2A/3, Asaf Ali Road
New Delhi-1.

• Completely overhaul your
BRAKES EVERY 10,000 MILES
Rs. 25.00 MAY SAVE A LIFE.

Distributors for Davis & White Products

Messrs. Republican Automobiles, For WEST BENGAL, BIHAR, ORISSA & ASSAM.
14, Bentinck Street, CALCUTTA-1.

JWT-DW 3015 R

the production of a wide variety of hardware and panel instruments of a total cost of Rs. 30 crores a year.

According to the Committee, total capital investment of Rs. 180 crores will have to be made over the coming ten-year period. The assumption made earlier that new production capacity of a value of Rs. 33 crores a year will be established every year during the next ten yars is equivalent to the assumption that new capital investment valued at roughly Rs. 18 crores, will be made in the electronics industry a year during the same ten-year period.

COTTON PRICES

Unwarranted Rise

The Central Minister of Commerce, Mr. Manubhai Shah, in a statement he made in the Lok Sabha said: "There has been an increase in the prices of Indian cotton in recent weeks and prices at present ruling are around the appropriate ceilings, and in some cases, have pierced the ceilings. The increase has been partly attributed to the reported damage to the crop in certain areas and to the anticipated increase in the mill consumption of cotton in the current season. Some of the increases are also due to rush in purchases by the mills. There has been also slight delay in the movement of new crop in Vidarbha and Khandesh areas. However, the total current crop is a record one and is estimated at 6.05 million bales.

"Imports of cotton in the current cotton year are expected to be about 950,000 bales, including the imports under P.L. 480 from the U.S.A. and under M.M.T.C.-C.C.C. barters from the U.S.A. This overall total includes India's immediate commercial commitments of imports from the traditional suppliers of cotton, namely, the U.A.R., the Sudan, Kenya, Tanganyika, East African countries and others. Already under this global commitment, quotas for import of 220,000 bales for this half-year are under issue; and purchase authorisations for 150,000 U.S. bales (180,000 Indian bales) from the U.S.A. under P.L. 480 are expected soon. Also, the import of 11,000 bales of Egyptian cotton lying in the U.S.A. stockpile has been allowed; the spillover of extended licences from the previous year is expected to be 22,000 bales being received in the current half-year; and under the M.M.T.C.-C.C.C. barters, physical deliveries of 125,000 bales are exected to be received at the minimum during the current half-year. Thus, before March-April 1965, more than 500,000 to 600,000 bales of imported cotton will be received out of the total 950,000 bales to be imported in the whole year.

"The large crop of indigenous cotton and above imports along with the usual carry-forward from the last year would be adequate for the increasing production of cloth. In the last ten months of the current year, there has been a continuous increase in the production of cloth and yarn of the cotton textile mills as well as cloth production in the handloom and powerloom sectors If the mills arrange their buying with some self-discipline, the situation should become normal and satisfactory.

CEMENT

Plans to Raise Output

There is an overall shortage of cement in the country. The present production in the industry is of the order of 9.5 million tonnes a year, while the demand is estimated at about 12.5 million tonnes. There are at present 37 cement factories in production with an annual installed capacity of 10.5 million tonnes. Additional capacity has been licensed for setting up new units and expanding existing ones to the extent of 4.47 million tonnes. Advance approval has also been given for a capacity of 8.9 million tonnes. On the basis of the progress made so far by these schemes, it is expected that by the end of 1964-65, additional capacity of 750,000 tonnes will be commissioned for production bringing the industry's total capacity to 11.25 million tonnes. In the year 1965-66, further augmentation of capacity by about 1.75 million tonnes is expected to be achieved. The Government is keeping a close watch on the progress of these schemes.

In order to stimulate the maximum utilisation of the existing capacity, an incentive by way of extra price is payable on the excess production achieved in the year 1965 over the best annual production for the three years ending 1962. This incentive scheme was in force in the year 1963 as well and was responsible for increase in production of about 500,000 tonnes.

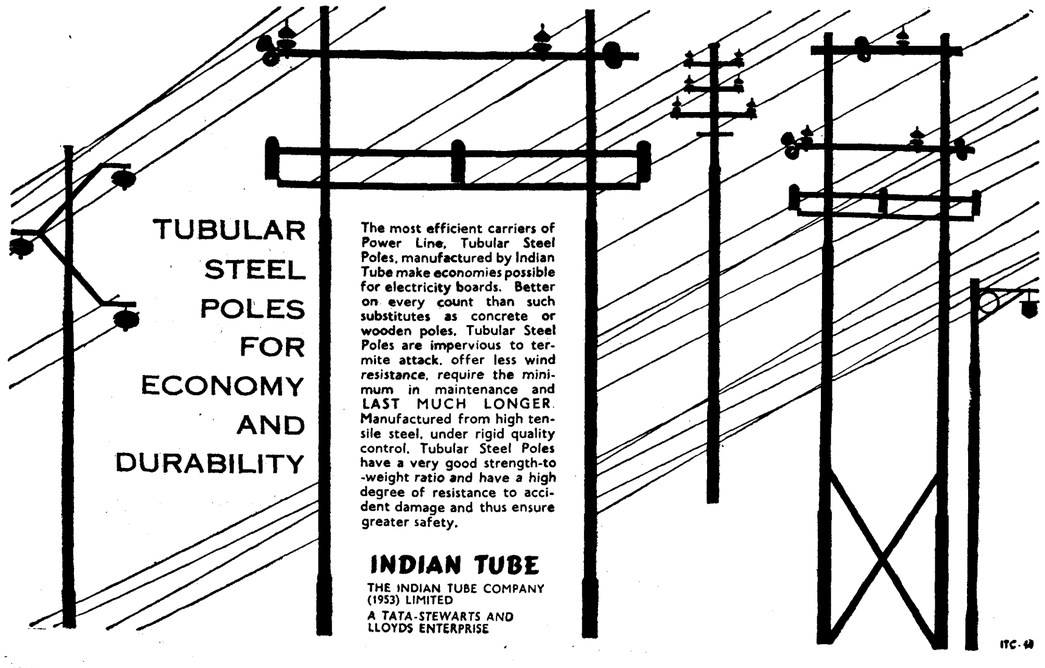
Proposals for the import of balancing equipment by the existing factories for maximising the utilisation of capacity are under examination. Augmentation of production is also being achieved by the utilisation of blast furnace slag and pozzalanie materials. A new slag cement factory with an annual capacity of 290,000 tonnes has just gone into production. In order to promote the steady growth of the cement industry, the Government expects to set up shortly the Cement Corporation of India, a private limited company fully owned by the Government and entrusted with the following three principal functions: (1) survey, prospecting and proving of limestone deposits in the country; (2) establishment of capacity for manufacture of cement; and (3) all ancillary and supporting activity for building up the cement industry in the country, including the development of expertise.

NON-COKING COALS

Experiments on Conversion

A firm in the U.S.A. carried out preliminary laboratory tests on the samples of Indian coals from Kothagudem (Singareni), Kurasia and Bisrampur (Madhya Pradesh) to explore the possibility of converting these non-coking coals into metallurgical coke. The firm has reported that the preliminary results are sufficiently encouraging to support the belief that metallurgical coke can be produced from these coals. Further clarification is being obtained to ascertain whether there is a possibility of the process being tried on a commercial scale.

FORD FOUNDATION



Grants to Indian Concerns

During the period from 1951 to January 1964, the Ford Foundation has authorised grants totalling $68 million (Rs. 32.3 crores) to various public and private institutions in India. The Ford Foundation holds prior consultation with the Ministries or Departments of the Government of India before making grants to various public and private institutions. The responsibility of implementing the aided programmes rests with the recipient institutions and not with the Foundation.

CANADA

Credit for India

Canada has extended a credit of $ (C) 1.96 million to India. It is repayable in 33 semi-annual instalments commencing from 1st November, 1968. The rate of interest is 6 percent a year. Interest is to be paid on 1st May and 1st November of each year, commencing on the first of these dates subsequent to the first disbursement. Repayment of principal and payment of interest will be in Canadian dollars. The credit will cover the foreign exchange cost for the import from Canada of industrial furnaces and related engineering services for the Durgapur alloy steel project of Hindustan Steel Ltd.

POLYETHYLENE

Steps to Overcome Shortage

There has been a shortage of polyethylene in the country during the last one year. The requirements and availability of polyethylene during 1963-64 and 1964-65 (April-July 1964) have been as follows:

Period	Requirement	Availability (Indigenous production and imports)
1963-64	10,000 to 11,000	8,100
1964-65	11,000 to 12,000	5,000 (April-July 1964).

The shortfall in indigenous production is attributable to short supply of alcohol to one of the two factories producing polyethylene. Arrangements have been made for the supply of adequate quantities of alcohol from indigenous sources and by imports, to this factory. Arrangements have also been made to import about 2,000 tonnes of polyethylene from rupee sources through the State Trading Corporation.

ROAD DEVELOPMENT

Suggestion for a Fund

The Informal Consultative Committee of Parliament for the Ministry of Transport has recommended the creation of a rural roads fund for expeditious construction of highways in the countryside. It also urged that more funds should be made available for this purpose in the fourth five year plan.

POWER LOAD SURVEY

New Committee Appointed

The Government of India has constituted the Third Electric Power Survey Committee to guide the load survey of the country during the year 1965. The 14-member Third Electric Power Survey Committee, the constitution of which has just been announced, is headed by the chairman of the Central Electricity Authority and includes Mr. K. B. Mathur, chairman, Heavy Elecricals (India) Ltd, and Dr. P. S. Lokanathan, Director-General, National Council of Applied Economic Research. The Planning Commission, State electricity boards and electricity undertakings in the private sector are also represented on the Committee.

SHIPPING

Italian Vessels Acquired

The State-owned Shipping Corporation of India has acquired three Italian ships built in 1956-57. These are second-hand ships which are only seven to eight years old as against their income tax life of 20 years. Their cost is placed at Rs. 413 crores.

INDUSTRIAL RAW MATERIALS

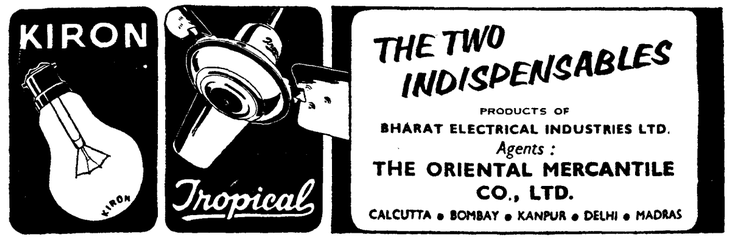
Cut in Imports Planned

In order to ease the balance of payments position, the Government of India is likely to impose a 10-percent cut on imports of industrial raw materials and components.

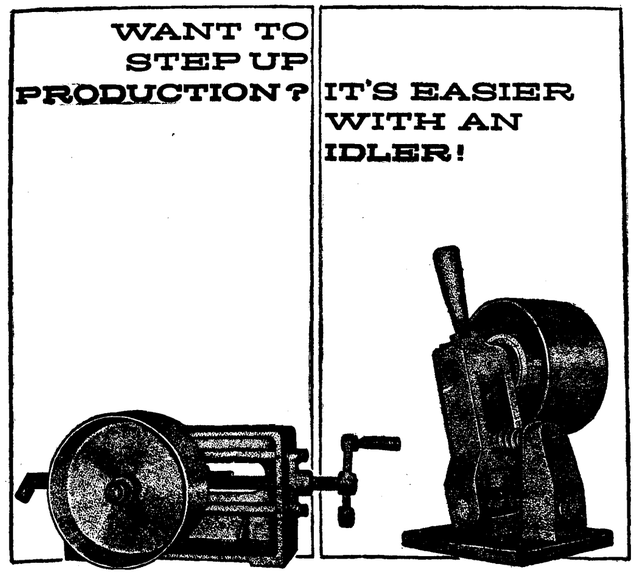
LORRY-MAKING

Self-contained State Unit

It is proposed to set up a self-contained unit for the production of Shaktiman and Nissan vehicles. The factory is proposed to be located in Jabalpur and will have a planned capacity for the production of 500 Shaktiman lorries and 600 Nissan vehicles a month.



STEEL



Talks on Fifth State Plant

The remaining hurdle for the Anglo-American collaboration to build the fifth State steel plant is expected to be removed this week, leading to the signing of the agreement. The representatives of the Anglo-American consortium, who were here last month, left behind the draft agreement which has been the basis of discussion between their lawyers and the Government of India. The remaining hurdle, it may be explained, relates to taxation. According to the draft agreement, the Government will ask the consortium to recommend the site or sites for the fifth State steel plant along with the engineering schemes for the project. This will be followed by the Government of India's decision to select the site finally, on the basis of which the consortium will be asked to prepare the project report. The Government will assure the consortium that subject to a mutually satisfactory agreement about the final terms of the contract, it would prefer unified responsibility in building the steel plant. For this purpose, the consortium could start mobilising financial resources forthwith. As soon as the project report is approved, the Government will ask the consortium to submit its financial plan for the project.

Durgapur Steel Plant Expansion

As far as the second expansion scheme of the Durgapur steel plant is concerned, the British Minister of Overseas Aid, Mrs. Barbara Castle, is expected here by the middle of January next year to finalise the deal. Contrary to earlier anticipations, the Secretary to the Central Steel Ministry, Mr. Wanchoo, was unable to leave India last week. Mr. Robert Fell of the British Trade Commission was, however, in London to iron out some minor differences.

London

U.K. CHANCELLOR EXPLAINS PROPOSED TAX MEASURES

(FROM OUR LONDON CORRESPONDENT)

THE City had rather a shock last week. Mr. Callaghan, the Chancellor of the Exchequer, endeavoured, in a written reply to a question in the House of Commons, to offer some explanation of the incidence of his tax measures to be introduced next April—the corporation and the capital gains taxes. He was undoubtedly right in announcing his intention to include these moves in his next Budget when he presented his autumn Budget, but in not specifying their scope he introduced an uncertainty that was hardly beneficial to his aim to restore the economic balance. Some clarification, it was soon evident, would be essential.

Unfortunately, now that this calarification is available far from setting minds at rest, it appears to have made confusion worse confounded. Industrial ordinary shares have taken a nasty toss on the Stock Exchange. Investors were apparently not impressed by Mr. Callaghan's "elucidation" of his proposed tax measures. City markets were also upset by the directive from the Governor of the Bank of England to the banks to clamp down on loans for property development and for "personal and professional" purposes. As a result of these cumulative setbacks, the *Financial Times* ordinary share index suffered a drop in one day which has not been exceeded for 2½ years, and gilt-edged stocks also went weak.

Indicating the exemptions from the proposed corporation and capital gains taxes, and the special provisions to cover special cases, Mr. Callaghan said that these were outline proposals, concerned with the ordinary conduct of business affairs. Special provisions might be necessary for special types of corporations, such as life assurance companies. The principal exemptions and special provisions are these :

Capital gains tax—Exemptions : saving certificates, development bonds maturing, or life insurance policies surrendered ; premium bond prizes, pools dividends, betting winnings where there is no disposal of an asset ; gains realised by charities on super-annuation funds that are already exempt from income tax ; gains by non-residents in the U.K. unless the sale is part of a permanent business in the U.K. ; owner-occupied house property. Any capital gains tax paid will be deductible for death duties. There will be an exemption limit of £1,000 on the price realised on the disposal of personal effects, such as cars.

Corporate Taxation

Corporation tax—(a) Investment and unit trusts and companies which get a dividend from subsidiaries should get a substantial reinsurance against double taxation of the same dividends. (b) Building societies are expected by the Government to find an advantage quickly in the new tax over their present liability to income tax plus profits tax on their surpluses. (c) Charities and superannuation funds exempt from income tax will not themselves have to pay corporation tax, and will continue to be exempt from income tax.

The capital gains tax will apply only to gains realised after next Budget day, and will not be restrospective. Gains will be liable to tax whenever the underlying assets were acquired, but the gain to be taxed on disposal will not exceed the difference between the value of the asset on the 1965 Budget day and the amount realised when disposed of later. Realisation for tax purposes will include disposal by sale, long lease, exchange, forfeiture, and the transfer of ownership by gift or death, and in the case of transfer, the asset will be treated as realised at its market value.

The tax will be charged on net gains realised in the year to the extent that those gains are not already subject to income tax. Relief for realised losses will be given primarily against any gains realised in the same year, with excesses or losses carried forward without a time limit and set against future gains. Relief for assets acquired before next Budget day will be given only for the proportion of the loss suffered after that day.

A company with overseas income that has been taxed abroad will be credited for that overseas tax only against the corporation tax to which it is liable at home : personal income in dividends will be subject to income tax and surtax.

Mr. Callaghan says ; "I realise that this will create special problems for certain companies, and I am considering whether, while adhering to the principles set out above, these problems could be eased by some transitional arrangement." First City reactions to the Chancellor's statement, which came after market hours, were mixed. The pattern proposed for the new corporation and capital gains taxes is much as expected. But on a number of specific points where the Chancellor's elucidation had been eagerly awaited by the market—such as the treatment of gilts, investment trusts and overseas income—the Government seems to be taking a tougher line than was hoped.

No Exemption for Gilts

Gilts : The fact that Government securities are not to be exempted from capital gains tax caused some consternation in the gilt-edged market. If individuals who buy low coupon stocks below par for the sake of the capital profit on redemption have in future to pay tax, one big support for the short-medium gilt-edged market will be knocked away. Closer study of the statement suggests, however, that the blow may be softened in a number of ways. Charities and pension funds, which are large investors in gilts, will be exempt on their gains ; and there are to be "special provisions" covering life assurance companies, which may also help. Moreover, "no tax will immediately be chargeable" where stocks are realisable as part of a conversion operation which could mean, in practice, that some redemption profits are exempt. The situation, however, remains unclear and as it seems that the switching which kept the market active may be regarded as liable to tax, gilts look like being subdued between now and the Budget.

Investment trusts : The promise not to subject investment trusts to double taxation appears not to be completely borne out. Income from investments in U.K. companies will be free of corporation tax in the trusts' hands only if it is passed on to shareholders in the form of dividends. This seems to imply that money retained for reinvestment will not be treated as "franked" income. To this extent, investors in unit trusts, which pay out all their income, will fare better. Again nothing is said on whether capital gains will be taxed twice. If shares only appreciate post-tax and shareholders are taxed again on their gains, the investment status of rusts must suffer.

Overseas income : Subject to possible transitional arrangements, credit for overseas tax will be given only against the corporation tax to which a company is liable. In other words, where the foreign tax paid is greater than (presumably) 35 percent, the excess will not be available to give relief for the tax on dividends. It looks, therefore, as if companies like Shell and B.A.T. with no U.K. tax bill will be faced with a choice between cutting into retentions to pay tax on dividends or reducing the net dividend. On the other hand, this would also mean that once prices were adjusted to the new situation the "net U.K. rate" companies would become more attractive investments for pension funds and others who can reclaim tax on dividends.

Preference shares : The Chancellor confirms that no relief from corporation tax will be given for preference dividends. Since these will now become more costly more companies are likely to propose schemes for repayment of preference capital.

Gifts : Capital gains tax will apply where ownership of assets is transferred by gift or on death. This seems to be a major departure of principle since it suggests that gifts *inter vivos* which have hitherto escaped duty if made five years before death will now be caught by capital gains tax. Capital gains tax paid will be deducted from the amount of an estate for death duty purposes, thus avoiding double taxation.

Life assurance : Capital gains tax will not be charged on sums received on the maturity or surrender of normal policies of life assurance. Since tax relief will presumably continue to be given on premiums the relative attractions of life policies as investments will become even greater.

PRE-SHIPMENT INSPECTION TO START FROM NEW YEAR

FROM 1st January, 1965, there will be compulsory pre-shipment inspection of jute goods before they are exported. The order has been issued by the Central Ministry of Commerce in implementation of the Export Inspection Council's recommendations. Hessian and heavy goods of certain specified categories will be subject to quality control and pre-shipment inspection. The Indian Standards Institution has already finalised and published specifications for a large number of jute goods. It is proposed that goods will not be allowed to be exported unless they bear the I.S.I. certification marks.

This step is expected to stimulate exports, although it will be difficult to assess the precise benefits. The enforcement of pre-shipment inspection is not likely to affect the traditional contracts between Indian exporters and overseas customers, who send their own surveyors to approve of the goods before they are shipped. However, it is admitted on all hands that an assurance of quality, officially stamped on a product, will win more customers. This step has been deemed necessary in view of the frequent complaints about the quality of goods supplied by some exporters.

India will be the first country to enforce statutory quality inspection before shipment of jute products. On behalf of the industry, the I.J.M.A. has lent its active co-operation to the Government in the matter and tripartite bodies have been set up to enforce these measures at all stages of production and shipment.

Demand for Jute Mill Machinery

Sufficient capacity exists to meet almost the entire fourth plan demand for jute mill machinery from indigenous sources, says a study made by the Planning Commission Panel on Textile Machinery Industry. But as machines are being modified and improved due to changes in design and shifts in the industry's choice of equipment from time to time, the Panel feels it necessary to reallocate the permitted capacity among the different units. It has also recommended the scrapping of unused licensed capacities.

Analysing the production trend of the main items of jute mill machinery, spare parts, accessories and stores, the Panel has estimated the demand during the fourth plan period around Rs. 69 crores. By the end of that period, imports of finished machinery are likely to be confined to specialised items, costing about Rs. 1 crore a year in foreign exchange. The Panel observes that the increasing loss of markets for conventional types of jute goods due to Pakistani competition will compel the Indian industry to diversify its production, and manufacture more coated, non-woven, chemicals—and dyes-resistant fabrics and yarn. For the manufacture of these special products, the industry may have to import foreign machinery and equipment worth Rs. 50 lakhs a year.

Against India's annual demand for jute mill machinery valued at about Rs. 9.18 crores, the capacity licensed so far, or likely to be licensed shortly, is estimated at Rs. 16.94 crores. But a section-wise analysis shows that 53.4 percent of the licensed capacity is not being used as some of the designs and techniques have become obsolete due to new developments. If the installed capacity is fully used for the manufacture of items acceptable to mills, the annual capacity licensed for preparatory and spinning machinery may produce items worth Rs. 9.65 crores, as against a demand of Rs. 6.74 crores. Similar capacity for post-spinning machinery is about Rs. 7.29 crores, against the average annual demand of Rs. 2.44 crores. Most of the items of post-spinning machinery are expected to be produced in India by the beginning of the fourth plan. The annual output of carding machines, it is expected, will increase from 228 at present to 310. As for copwinders, it will be possible to raise production from 72 to 160. This increase will be effected by expanding the existing units or by setting up new capacities.

The Panel observes that it should be possible to fill up the demand-supply gap of about 33 percent in the manufacture of preparatory and spinning machinery by the formation of a consortium of the three major units. In case such an arrangement is not possible, the shortfall should be covered by expanding the units which produce items well received by the industry.

Record Output in West Bengal

West Bengal, it is expected, will produce a record jute crop of 3.67 million bales, excluding mesta, during the current season, against 3.20 million bales in the 1963-64 season, according to the final estimate prepared by the Agricultural Directorate of the State Government. The average yield an acre has also improved from 2.97 bales during the last season to 3.21 bales this season. Between 1947-48 and 1964-65, the acreage under jute has increased by 197 percent, from 1.1 million to 3.27 million.

Rise in Gunny Output

Working at the maximum level for 200 hours in November, against 192 hours in the previous month, mills reporting to the I.J.M.A. have shown a sizable increase in the output of jute goods from 98,000 tonnes to 104,500 tonnes. Production of sacking has increased by 4,500 tonnes to 46,800 tonnes, of hessian by 800 tonnes to 43,500 tonnes, and of carpet-backing and miscellaneous goods by 600 tonnes each to 8,200 tonnes and 6,000 tonnes, respectively. The increase in output during November is attributed to the discontinuance of the voluntary cutbacks in production by some mills, and an increase in working hours.

In November 1963, the mills produced a total of 103,800 tonnes working at the maximum level for 208 hours. Of this, 45,400 tonnes were hessian, 42,900 tonnes sacking, 8,100 tonnes carpet-backing and 7,400 tonnes other goods.

Further Decline in Mill Stocks

Another I.J.M.A. statement shows that stocks of jute goods with the reporting mills have declined during November by 3,600 tonnes from 117,800 tonnes to 114,200 tonnes—in spite of the large increase in output. The lower stock figures indicate a comfortable clearance of cargo during the month. Inventories of heavy goods dropped by 2,700 tonnes to 38,600 tonnes, of hessian by 500 tonnes to 45,200 tonnes, of carpet-backing by 300 tonnes to 19,700 tonnes and of miscellaneous goods by 100 tonnes to 10,700 tonnes. At the end of November 1963, total stocks were 111,300 tonnes—47,600 tonnes of sacking 46,000 tonnes of hessian, 15,100 tonnes of carpet-backing cloth and 8,600 tonnes of other goods.

Dundee Explores New Uses

Several Dundee firms have been trying to explore new uses for jute products. A new type of woven jute mat produced by a firm has been successfully used to check soil erosion on roadsides, river banks, hillsides and shore-lines in the U.K. The mat permits vegetation to grow on it. Planting under jute mats in ditches and the use of mats for shore-line stabilisation have produced good results. The firm is now carrying on extensive tests to widen the applicability of the product. The use of hessian as wall covering is gradually becoming popular in interior decoration as a result of the drive made by a number of prominent jute goods manufacturers of Dundee. Leading building contractors, architects and interior decorators have extended their support to the campaign.

THE JUTE MARKETS

Manufactured Goods : Easy conditions prevailed in the Calcutta gunny market during the past week. Sentiment was depressed due to tired long liquidation in the hedge market and the emergence of some mills as keen sellers for all positions in the spot market. There was some setback to shipments dut to the congestion of vessels at the Sandheads. Earlier in the week, there was a squeeze in sacking for ready delivery, so prices rose. But the improvement proved to be short-lived and prices drifted to new lows thereafter, while hessian escaped with minor losses. Towards the close, operators became cautious awaiting the outcome of the strike threat by longshoremen on the east coast of America. The publication of the I.J.M.A. gunny stock figures for November failed to help sentiment. The higher output of gunnies during the month also produced a bearish reaction. The week's completed business included fair contracts for woolpacks with Australia for all positions up to June, some Indian Government tenders for B Twills for December delivery and scattered hessian business with the U.K. and the U.S.A. Besides, there was short- and shipper-covering for ready positions. Fluctuations were wide in heavy goods and narrow in hessian. Turnover was fair in the hedge market and moderate in the spot market. The undertone was hesitant at the close.

Wednesday's quotations were as follows :

	Dec.	Jan.	Jan.-Mar.	Apr.-June
40in. 7½oz.	38.60	38.55	38.50	38.35
40in. 8oz.	41.10	—	—	—
40in. 10oz.	49.60	50.05	50.45	50.95

Cornsacks	159.00	156.00	151.75	146.00
Heavy Cees (Plain)	150.75	149.00	147.25	142.50
A Twills	182.50	180.00	177.50	172.50
Liverpools	169.50	168.00	166.00	160.50

Raw Jute : Dull conditions marked trading in the raw jute market during the past week in spite of the issue on Monday of a maximum purchase quota of 200,000 bales for the week ending 19th December. A bearish trend in the finished goods market induced nervousness among holders. The quota seemed to be inadequate to absorb the accumulated stocks in Cossipore and in the agencies although daily arrivals at the terminal markets were low around 100,000 maunds. A major percentage of the fibre on offer was of the lower grades, so mills showed little interest. But prices were about maintained in the Tossa and Daissee areas due to greater mill demand for better-grade jute. Turnover was moderate and the undertone hesitant at the close.

Wednesday's quotations were as follows :

THE U.K. JUTE MARKETS

FIBRE QUIET

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market was quiet but steady in Pakistan during the past week, and some shippers reduced their rates by small amounts. There is a feeling here that this downward movement may continue over the next month. Sellers are anxious for business and discounting of the official rates is still taking place. Dundee spinners have been buying small quantities but these have been mainly ex warehouse. A substantial quantity of jute will be arriving in Dundee before the end of the year and a portion of this is still unsold to spinners. Registered sales of jute to the U.K. are now 463,000 bales which is approximately 62 percent of the annual consumption of the mills in Dundee and district.

There are still complaints about excess moisture in shipments of white jute arriving here, and this is the main reason for most buying interest being shown in spot parcels at present. Reports indicate that the Tossa crop will be of fairly good quality.

Offers made in Dundee were still very irregular with the lowest prices at £150 for Mill Firsts, at £138 15s for Export Firsts, at £123 10s for Export Lightnings and at £115 for Export Hearts, c.i.f. U.K., for January-February shipment. Grade Tossa-2/3 was available at £151 10s after business being placed at 10 a ton more. Grade Tossa-2/3 was at £135. Dacca Tossa-5 was offered at £157 15s and Dacca Tossa-6 at £137 15s. Outport Tossa-2/3 was available at £123 10s and Outport Tossa-4 at £115 10s, January-February.

Cuttings were quieter and offers are being made at £87 for S.N.C. and at £80 for N.C. There was no change in mesta and the official rates were being asked in all instances. Prices are at £ 110 10s for A, at £101 10s for B, at £92 10s for C and at £76 5s for cuttings, c.i.f. U.K., January-February.

The Siam jute market was again tending easier and little movement took place in this type of fibre. Offers were at £83 10s for grade A, at £77 10s for grade B, at £73 10s for grade C and £72 for cuttings, delivered mill Dundee for January-February shipment. There was an easier trend in the Calcutta goods market since the strikes at the mills in Pakistan were settled. Quotations were at 81s 7d for 40in. 10oz and at 63s 8d for 7½oz. a 100 yards c.i.f. and U.K. for December shipment, at 81s 11d and 63s 5d January-March and at 83s 3d and 63s 2d April-June. B Twills were at 255s 8d, 348s and 240s 9d for the respective shipment periods. A

fair amount of buying interest has been shown in the U.K. of late.

Dundee jute spinners are still very busy and supplies of yarns are only available for forward delivery. Prices are firm and there is nothing to indicate that any change is expected in the near future. The carpet trade continues to take regular supplies and this satisfactory position will continue. A fairly steady business is taking place in hessian cloth and certain descriptions are only available for delivery two months ahead. However, there is still a shortage of orders for heavy goods and very little demand is shown for sackings and tarpaulins.

THE PAKISTANI JUTE MARKETS

FIBRE DULL

(FROM OUR DACCA CORRESPONDENT

LOOSE jute prices have scarcely moved, although there has been an attempt to raise prices by the sellers. This was mainly because of the expected rise on account of the settlement of the mills' strike. The mills have not come out to buy and balers have, if anything, reduced their purchases. The former have stocks of something like three and a half months' jute with them as well as in their agencies. They also have contracted jute to be delivered, which will carry them for at least another month. So there is no urgency for them to buy.

As a result of this, the holiday period and the continuing shortage of finance, it is possible that loose jute prices may fall before they rise again. Certainly the first bearish factor has been seen, namely, that there is a slight improvement in the condition of the jute. In the pucca bale market transactions have been once again restricted and even cuttings have not moved very much.

From overseas, litle or no business is reported, although registrations for the second half of November amounted to 168.498 bales, bringing the total this year to slightly less than last year. The U.K. was the biggest buyer with 32,425 bales, followed by Poland with 23,380 bales. India bought 19,530 bales and Japan 16,025 bales. East Africa bought 12,230 bales.

What little business is reported overseas, has been largely done well below E.P.C. prices. The market is still controlled in this sector by the discounted prices at which afloat unsold jute is still available. Until this jute is disposed of, it will be difficult for prices to rise, however short the crop may be. There are of course no accurate figures about the quantity available, but reports vary from 50 bales to 80,000 bales.

With the end of the year drawing near and with the appearance for practically the first time this season of divergent market views it would perhaps be opportune to revise the situation and to study the expected size of the crop and consumption.

Statistics are at the best of times misleading and even more so in the jute trade, where they refer to a crop from thousands of small holdings. The P.J.M.A.'s statistics have, however, been produced regularly and generally after the crop has been harvested, so that even if not accurate, they are consistent.

According to these statistics, last year's production was 5.9 million bales, leaving a carryover into this season of 700,000 bales. Even as late as this, one can only get an estimate of what the current crop will be. Basing it on a fair average consensus of opinion of the trade, the current crop should not exceed 5 million bales, which, with a carryover of 700,000 bales, gives an availability of 5.7 million bales for consumption.

The Pakistani jute mills' consumption last season was 2.1 million bales. This season, although there are more looms in operation, there has been a strike for about three months. Before the strike, mills had reduced their working hours and although it only takes about a week for the mills to start producing properly again, there is no doubt that normal efficiency is not achieved for at least a month. The consumption by the mills this season will, therefore, be reduced by 600.000 bales to 1.5 million bales. Rural consumption remains unchanged at 200,000 bales, and the mills will almost certainly carry-over as they normally do, about 400,000 bales. This is only just over two months' consumption in a normal working year.

As will be seen from the figures given below, only 3.1 million bales are available for export overseas, out of which at least 500,000 bales will go to India.

	(Lakh bales)
Crop availability ...	57
Consumption by mills	15
Rural consumption ...	2
Carryover ...	5
Mills' carryover ...	4
Overseas consumption	31
Total	57

Total E.P.C. registrations to-date amount to 2,044,589 bales as opposed to 2,056,595 bales at this time of the last season.

I.J.M.A. PRODUCTION FIGURES FOR NOVEMBER

The Indian Jute Mills Association reports the production of jute goods for November as follows:

Description	Quantity
1. Gunny bags	
(a) Hessian	
8,925 tonnes	(8,784 tons)
2,48,90 thousand metres	(2,72.2 lakh yds.)
1,91.4 lakh nos.	
(b) Sacking	
44.747 tonnes	(44,040 tons)
9,60,25 thousand metres	(10,50.1 lakh yds.)
4,84.5 lakh nos.	
2. Gunny cloth	
(a) Hessian	
34,550 tonnes	(34,004 tons)
11,69.50 thousand metres	(12,79.0 lakh yds.)
(b) Sacking	
2,037 tonnes	(2,005 tons)
46.24 thousand metres	(50.6 lakh yds.)
3. Carpet-backing	
8,246 tonnes	(8,116 tons)
63.77 thousand metres	(69.7 lakh yds.)
4. Other manufactures	
5,984 tonnes	(5,889 tons)
5. Total production	
(All kinds)	
1,04,489 tonnes	(1,02,838 tons)

Summary

	Nov. '64	Oct. '64	Nov. '63
	(000 metres and 00,000 yds.)		
Hessian	14,18.40	13,78.33	15,22.63
	(15.51)	(15.07)	(16.65)
Sacking	10,06.49	9,16.17	9,22.34
	(11.01)	(10.02)	(10.09)
Carpet-backing	63.77	59.26	62.87
	(70)	(65)	(69)
	(000 tonnes and tons)		
Hessian	43.5	42.7	45.4
	(42.8)	(42.0)	(44.7)
Sacking	46.8	42.3	42.9
	(46.0)	(41.7)	(42.2)
Carpet-backing	8.2	7.6	8.1
	(8.1)	(7.5)	(7.9)
Other	6.0	5.4	7.4
	(5.9)	(5.3)	(7.4)
Grand total	1,04.5	98.0	1,03.8
	(1,02.8)	(96.5)	(1,02.2)
Hours worked	200.0	192.0	208.0

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for one non-member mill. The figures in brackets are in British units.

Goodlass NEROLAC Paints

ONE STEP AHEAD OF PROGRESS

Paints and surface coatings must keep pace with the changing and unceasing demands of industry ☐ We at Goodlass Nerolac welcome the challenge of remaining ahead in technology, quality and production. . .of meeting these ever widening demands ☐ We accept the challenge in a characteristic way by adopting new methods of manufacture... by conducting constant research into new qualities... by giving you today the paints for tomorrow's needs.

Goodlass NEROLAC Paints the best you can buy

RECORD CROP, BUT TEA PRICES WEAKEN

ADDRESSING the latest annual general meeting of the Calcutta Tea Traders Association from the chair, Mr. J. C. Brock said that there was no difficulty in disposing of the remainder of the last season's crop at satisfactory prices, and within a reasonable time as supply seemed to be more or less in line with demand. Considering that the last season's crop was disappointing in size, the relative export figures were fairly good.

Referring to the talk suggesting that India is not doing well enough relative to Ceylon in the field of tea exports, Mr. Brock said that many ingenious ideas have been advanced for this, but he felt the only serious reason that India had not done better was the shortfall in the north Indian crop for two consecutive years prior to this present season. Comparatively, Ceylon has had good crops and thus had been able to show a better performance.

It had been suggested that one reason for the lack of better progress in India's tea exports might be something to do with comparative quality. Such suggestions were totally unfounded. India produces most of the finest tea in the world. Also the general standard of tea produced by the majority of the poorer quality gardens has noticeably improved in recent years.

The new season's sales up to the end of October proceeded very smoothly, and prices were maintained at a satisfactory level. Two important factors helped to maintain a good demand, firstly, that there was little carryover stock from the last season's small crop and secondly, that go-slows and threatened strikes in the London docks decreased the quantities which would normally have been offered there and thus prices for the smaller quantities available were temporarily inflated.

"It now seems" Mr. Brock said, this season's north Indian crop will easily reach a record level. This is particularly encouraging in the context of the Government's desire to attain higher targets of production." Most of this record crop has to be disposed of. From the weaker trend in the November and December auctions it was obvious that traders had some fear that the increased supply might be in excess of actual demand. This had caused a general weakening of the present demand and prices had fallen.

Referring to the Government's desire to increase export earnings, the current north Indian crop and recent lower prices should show that increased production did not automatically lead to increased export earnings. If there was an oversupply of tea, it was likely that lower levels of prices would then prevail and this in turn could mean that the quantity exported might rise, but export earnings could easily decrease. In fact, export earnings were only likely to be increased with a larger crop if the world demand had increased sufficiently to meet the larger supplies available at reasonable prices.

As the United Kingdom is by far the largest consumer of Indian tea, Mr. Brock suggested any joint promotional activity should be primarily concentrated on that country. This was very important if the younger generation was to be persuaded to drink more tea. At present, they apparently drank noticeably less than their elders. The same consumption trends were noticeable in the other traditional heavy tea drinking countries. The best results were, therefore, likely to be obtained if promotional activities were largely concentrated on the youth of such countries.

The present policy of not actively encouraging India's internal consumption might prove to be unwise, if increased supply was in excess of world demand in the future. Last year, internal consumption appeared to have shown little change and might have even slightly declined. This could be a serious matter. The demand from internal consumption is the producers' safety valve to prevent prices from declining to unattractive levels. In Mr. Brock's opinion, at the same time as the policy of increasing crop was being pursued every possible means should be used to promote the consumption of tea in this country as well as abroad.

Bigger North Indian Crop

The crop from north India will probably be over 70 million lbs above the 1963 output, and may exceed the 1951 record by 25 million lbs, writes a special correspondent. Here are the figures up to the end of November 1964: 619,423,362 lbs, compared with 548,934,361 lbs up to the same date last year, or an increase of 70,489,001 lbs. In 1961, the figure on the same date stood at 595,268,53 lbs.

Allowing for a normal December, the current year will yield about 25 million lbs more than 1961, showing an average increase of 4¼ million lbs a year for 1961-64, that is, an increase of 4 percent. Considering the growth of population and the improving standard of living, this moderate growth should not upset the market, but it has already knocked down prices.

Although south India has not done very well and Ceylon will finish the season below last year, the weight of tea from the north has depressed commodity prices for some time, but it has already been pointed out by this correspondent that prices tend to fall at this time of year when rains teas and end-of-season manufactures arrive in Calcutta for disposal.

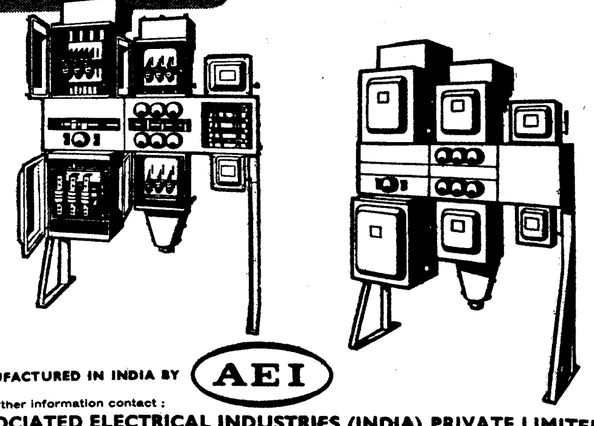
The price range from December to April has been as follows (Rs. a kilogram).

	1960-61	1961-62	1962-63	1963-64
December	5.06	3.90	5.06	4.72
March-April	4.76	3.91	4.52	4.20

An easier tendency is also reported in Mincing Lane auctions where north Indian and other miscellaneous growths were included in the total offerings of 79,224 packages last week. Assams opened at 2d to 4d a lb lower than previous rates, and most other sorts by 2d, but later, a better tone developed.

The better quality high-grown and good colour medium teas from Ceylon met with a ready sale at around the previous week's levels, but the remainder received only modest support with values mostly 1d to 3d a lb easier. African grades were in fair request with the best invoices holding fully steady and other irregularly lower by up to 2d a lb, while the smaller quantity of south Indian teas available also recorded declines of about 1d. The price indication for plain tea was 2s 6d to 3s 7d, against 2s 6d to 3s 8d previously.

COFFEE



Fourth Plan Output Target

A production target of 85,000 tons in the fourth plan is being recommended for the coffee planting industry in south India. This is not an over-ambitious goal, writes our

B2/AEI-38

South Indian correspondent. For the past few years, the industry has been showing a heartening trend of steady increase in its output, although there has been seasonal variations due to vagaries of the climate. During the current plan, production has gone up from 48,000 tons to 68,500 tons.

The upward trend in production has been made possible due to the adoption by the planters of the improved and disease-resistant seed material evolved by research, intensive methods of cultivation and protective measures against coffee pests and diseases. Increasing production of more and more quantities of coffee are becoming available for export. At the present moment, India is handicapped by the limitation of her export quota at 21,600 tons under the International Coffee Agreement. This quota is insufficient for India not only in the context of the progressive increase in production, but also from the pressing requirements of foreign exchange. India has already applied for an enhancement of the basic quota from 21,600 tons to 50,000 tons. A decision on this request now appears to be pending on the recommendations of the technical mission of the International Coffee Council which is to visit India.

Last season's harvest at well over 68,500 tons was the highest on record. Allocation for export was also the largest on record at 35,000 tons. The Coffee Board has done the biggest marketing operation in its life so far in the disposal of the 1963-64 crop. During this year, the largest quantity of coffee has been sold for export within the shortest possible time. It fetched fairly high prices compared with the previous year. The world shortage for coffee was the main factor that helped producing countries like India to realise an attractive price for their produce. There was a fall in the world production due to crop failure in Brazil. Consequent on the quick and heavy disposals, the Indian Coffee Board has been able to pay exceptionally quick returns to the growers as compared with the previous years. As against Rs. 1.30 a point made up to the end of August during the previous two seasons, the payment this year came to Rs. 2. Another 20 paise were paid in November making the total payment Rs. 2.20 a point.

For the coffee year 1963-64, the International Coffee Council has allowed so far an export quota of 22,431 tons for India as against the basic quota of 21,600 tons, taking into consideration the shortfalls in exports notified by other producing countries. India has not only shipped this entire quota of 22,431 tons, but actual shipments may even exceed this quota. In view of the restrictions placed under the International Coffee Agreement on exports to traditional markets, the need has risen for cultivating a large market for Indian coffee in the non-quota countries like the Middle East and Japan. Proposals are under way to send trade delegations to these two areas. India has been elected a member of the World Coffee Promotion Committee set up recently by the International Coffee Council. India is one of the producing countries who are in need of fresh outlets for their production which is on the increase.

The 1964-65 crop which has just started reaching the pool is currently estimated at about 63,000 tons, some 5,000 tons less than the previous crop. The prolonged drought in South India experienced earlier this year and the inadequate blossom showers are believed to have affected crop prospects adversely, particularly in the case of robusta which, due to consistent propaganda carried out by the Coffee Board, is becoming popular in this country.

ASSOCHAM REVIEWS A YEAR OF ECONOMIC INSTABILITY

FEW years in Indian economic history since independence have been marked by a more suffocating atmosphere of gloom, uncertainty and frustration than the one now ending. If in the circumstances anxiety was the keynote of the two main speeches delivered at the annual general meeting of the Associated Chambers of Commerce and Industry in Calcutta on Monday, the fact can hardly be surprising. The president of Assocham, Mr. A. D Ogilvie, in a thoughtful and carefully-worded address took great pains to place the crisis of the present in perspective by recalling the achievements of the past. The Prime Minister, Mr. Lal Bahadur Shastri, in turn spoke of "the remarkable transformation that has taken place in this country since independence"; of the five year plans having given millions "the first glimmer of hope for a better future"; of "a new dynamism on our farms and factories"; and, most surprisingly, of "a commendable display of mutual goodwill between labour and management, between industry and Government, and indeed between different sections of our ancient community." But if at the end of it all a feeling of uneasiness and uncertainty remained, nobody could perhaps be held to blame for it, for the hardships of the present could not have been soothed by pleasant reveries about the past.

The economic situation, as the senior economist in Mr. Shastri's Cabinet recently put it, is "extremely grim". The deterioration started around the time of the Chinese invasion two years ago. Defence expenditure was increased sharply. On top of it there was a large increase in plan outlays. The result was that, since there was no corresponding increase in production, prices shot up. As Mr. Ogilvie pointed out, the rise in wholesale prices during the last 12 months was, with a single exception, much greater than in any year since 1951. Because of the price rise, human suffering has been deep and widespread. The Government's budgetary and economic planning has been seriously upset. In commerce and industry, labour unrest has grown, productive efficiency has suffered, costs have risen, financial problems have become more acute and efforts to promote exports have been seriously handicapped. As the Assocham president declared, nothing is more urgently needed now than "a long, cool look at the position of the economy and the immediate and also the distant objectives which are in mind". In other words, a fundamental change in economic policies is necessary.

The most disappointing feature of Mr. Shastri's address was that it did not indicate precisely the sort of changes that he considered possible. He acknowledged the dangers of inflation, and the need for measures to check it. "Some of these (measures) may seem somewhat irksome to Government departments who have been called upon to curtail expenditure, as well as to the private sector. But the steps necessary to check inflation are far less painful than the consequences of persistent inflation". However reassuring the words may have sounded, the truth is that very little has been done to cut back expenditure so far. The Government said some time ago that it would spend Rs. 70 crores less during the current financial year than it had originally intended to. Mr. Shastri did not care to explain on Monday whether the Rs. 70-crore cut would be adequate, considering that the total expenditure to begin with was budgeted to increase by over Rs. 200 crores in comparison with 1963-64. The inadequacy of the cut has meanwhile been demonstrated by the fact that prices, after a brief decline in October and November, have once again started rising—at a time when the seasonal decline precipitated by the arrival of the harvests should have been accelerated. The Prime Minister might in the circumstances have been expected to say whether the Government was prepared for a still bigger reduction in its outlays, so as to demonstrate the firmness of its intention to check the rise in prices. But Mr. Shastri did nothing of the sort.

As Mr. Ogilvie pointed out, the causes of the inflation in India are mainly two. The first is that "large additional amounts of purchasing power" have been pumped into the economy. And the second is that agricultural production has stagnated, while the growth of industrial output has slowed down. The stagnation in agriculture has been extremely serious at a time when the population has been increasing rapidly, and when the demand for raw materials to sustain industrial production and the export drive has been rising. Thanks to the shortage of food and the increase in prices, the Government has in recent months shown somewhat greater awareness of the need to raise the output from the farms. But it would have been more reassuring if the awareness had been demonstrated in practical rather than in mainly verbal terms.

Mr. Shastri, for instance, offered a prolonged and exhortatory dissertation about many of the elementary things that need to be done: yields and productivity ought to be raised, better seeds, manures, irrigation and credit facilities should be provided. State Agricultural Departments should be more active, "a special spirit" should be generated, and so on. But many among his audience might forgivably have wondered who on earth the exhortations were being addressed to, if not to Mr. Shastri himself and to the Government over which he has the honour to preside. In brief, it might have been more heartening to hear the Prime Minister say what *has* been done, and what *will* be done, rather than what he along with millions of others thinks *ought* to be done. Mr. Ogilvie had made two useful points which offered Mr. Shastri the opportunity to be more specific. The first was that the Government should be more flexible in its attitude to ceilings on land holdings, so as to leave scope for investment in modern, progressive and large-scale farming operations. The second was that the rise in the prices of agricultural commodities had probably raised cultivators' incomes by anything between Rs 300 crores and Rs. 500 crores; measures should be devised to get part of the increase invested in new methods and equipment. On the first of these points, Mr. Shastri's answer was wishy-washy. As for the second, he did not choose to discuss it at all, although one might have thought that devices to secure the rein-

vestment of agricultural incomes are among the most crucial needs of the country today.

Many people had expected that the Prime Minister, possibly worried by slow-down in industrial growth, would use the opportunity of the Assocham meeting to indicate broadly the sort of remedies and incentives the Government was thinking of trying. A detailed indication was, of course, not to be expected: to the extent that the incentives would have to be fiscal in nature, they could hardly have been announced at an Assocham meeting held in December, with Parliament still in session and with the Budget only a couple of months away. But, even after due allowance is made for such limitations, it seems the Prime Minister seemed more eager to prescribe watery old nostrums than to analyse present problems. The burden of his remarks was that private enterprise was not a bad thing, and the Government was rather fond of it in some ways. The sluggishness of the capital market of course was there, and not many new industries had come up during the last two years. But the matter was receiving the Government's "serious" attention. The need to stimulate the inflow of private foreign investment "in appropriate fields, particularly in industries where we are seeking to introduce new techniques", was also recognised.

In this way, the crucial problems relating to the acceleration of industrial growth were largely bypassed. Some of these problems arise from the shortage of essential inputs, such as power and imported materials. If the power shortage has eased a little in certain parts of the country, the scarcity of imported materials is worsening. There is a clear need, therefore, for diverting more of the foreign aid India gets to maintenance imports. But Mr. Shastri, instead of acknowledging the need, merely reiterated the urgency of increasing exports. He did not show any great awareness of the fact that costs have to be kept down in the interests of export promotion, and also of internal stability. On the contrary, he decided to excuse the damage done by the Bonus Commission without a qualifying murmur, and to defend the establishment of the Monopolies Commission for the flimsiest of reasons. The Assocham president's plea for greater understanding and assistance in developing the traditional export industries too was not answered. This was in spite of the fact that Mr. Ogilvie made an excellent point when he highlighted, on the basis of a study prepared by the U.N. Economic Commission for Europe, the enormous export opportunities which would arise in the coming years in western Europe alone. The scope for Indian industries to exploit those opportunities, together with the Government's approach to problems of costs, prices and incentives, could have been usefully analysed.

A factor which is of crucial importance to the promotion of exports, and to the revival of the economy generally, is taxation. Mr. Ogilvie rightly emphasised that corporate and personal taxation now represents "a crushing burden"; it has led to "a sense of discouragement", "some feeling of inertia" and "a disturbing lag in performance". A substantial reduction in taxes is necessary to generate the confidence, and to promote the saving and investment, without which a rapid increase in production cannot occur. A cut in tax rates might lead to a temporary decline in the Government's revenue; but the fall would very soon be made up through the resulting increase in economic activity. A serious effort, therefore, has to be made to reduce Government expenditure to a level where sizable tax cuts would be possible. Mr. Ogilvie mentioned in addition the need to check tax evasion, to which Mr. Shastri, perhaps significantly, responded by talking of the need for eliminating "tax evasion and avoidance". What was left largely unsaid on both sides was that the high level of taxes itself provides the strongest incentive for evasion; the Government's relentless search for revenue has thus over the years placed bigger and bigger premiums on dishonesty. The economic stagnation and the moral decline which the present fiscal system has precipitated has proved ruinous, and cannot be cured by authoritarian measures alone. A radical reorientation of the Government's ideas and attitudes may first be necessary so as to assure the honest of fair rewards for their labours. Such a reorientation, supported by evidence that justice is done at the political level too, would be of incalculable value in promoting the "sense of social responsibility" which Mr. Shastri, in a slightly different context, talked about.

TAXES AND FOREIGN CAPITAL

THE Indian economy has tended to stagnate since the last Central Budget, although the fiscal measures it introduced were intended to promote economic growth and investment. The resolution on taxation passed by the Associated Chambers of Commerce and Industry highlights the adverse effects of heavy taxation. The increase in direct taxation has hit honest assessees most, since a large part of the total income has evaded taxation. So the anti-evasion measures of the Government need to be tightened. The other disturbing feature is the uncertainty that has been introduced by frequent changes in the tax structure and tax rates. Mr. D. W. Law (Madras Chamber) pointed out that since business plans are generally made for five to 15 years, industrialists need to be given a measure of security relating to taxation for a much longer period than is now the case.

Although the Finance Act, 1964, gave some tax reliefs, their benefits have been almost offset by new levies. The increase in the rate of super-tax applicable to Section 104 companies has tended to hinder development. The levy of capital gains tax on bonus shares in the hands of shareholders is inequitable, particularly when these shares are not sold. Since the levy does not take into account the drop in the value of existing holdings due to the bonus issue, the tax becomes payable on notional gains without any set-off for notional losses on existing holdings. Mr. R. N. Sen (Bengal Chamber) mentioned that foreign investment will naturally be discouraged, because a foreign investor may be required to bring in more funds than he thought of investing just to pay the tax on bonus shares for retaining his share in the equity of an Indian company.

The dividend tax of 7½ percent is for all practical purposes an additional levy of super-tax on corporate bodies. So it has tended to depress the capital market. The abolition of the super profits tax was welcome, but the benefits were undone by the imposition of the surtax on profits. The most disturbing aspect is that efficient companies will have to pay more than others in the same industry under this levy. As far as Indian nationals are concerned, the benefit of the reduction in income tax rates has been largely offset by the introduction of the annuity deposit scheme.

As for the restrictions imposed on the admissibility of expenditure, the relevant provision of the Finance Act, 1964, needs to be administered in such a way that the normal conduct of business is not interrupted. If the incidence of corporate and personal taxation were reduced, expansion and growth would be encouraged. The yield from direct taxation would also increase in the long run. The Government should take steps to encourage the plough-back of profits in the corporate sector for promoting development. Allowances on account of development rebate and depreciation given to companies so far have been used for investing in the business and have not been frittered away.

The Assocham resolution on international investment forcefully points out the importance of encouraging the flow of foreign private capital into Indian industry. Since the country's repayment liabilities on account of interest and principal may amount to about Rs. 1,100 crores during the fourth plan, on top of the large amount of foreign exchange that will be needed to finance development plans, the importance of attracting foreign private capital cannot be exaggerated. Official aid will, it is true, be larger than the inflow of foreign private capital, but the advantages of the latter are conspicuous. Official aid cannot harness self-interest as effectively as when a foreign investor puts his money into a joint venture. Apart from obtaining equipment from foreign countries, foreign private capital brings with it technical and managerial know-how. Despite the willingness of the Government to attract foreign capital, the flow is still small. Foreign investors have been discouraged by various factors. Firstly, taxation in this country is too high. As a result, the return of investments is not very attractive. Secondly, the prevailing depression in the Indian capital market has made it difficult to attract matching Indian capital. So it is necessary to take steps to revive confidence in the local capital market.

Mr. H. K. S. Lindsay (Bengal Chamber) pointed out that the Government is taking measures to remove obstacles in the way of foreign capital. Following the recommendations of the Swaminathan Committee on licensing and the V. K. R. V. Rao Committee on the use of external assistance, steps have been taken to simplify procedures to eliminate delays. But there is still some discrimination against foreign capital which calls for closer examination. There are certain industries in which foregin capital is not normally allowed because equipment and technical knowledge are available within the country. Since the growth of many of these industries has been far too slow, it is time to consider whether the participation of foreign capital will not be in the interests of the economy. Private foreign capital can help promote India's exports by offering export know-how and trade connections. Mr. H. P. Nanda (Punjab and Delhi Chamber) mentioned how private-sector companies entering into collaboration agreements with foreign companies for the manufacture of essential products, which are at present imported, could procure these commodities from the foreign collaborators' own factories until actual production starts in this country. This would save a considerable amount of foreign exchange. Under collaboration agreements, the Indian company could stipulate that payment for such commodities would be made with the products manufactured in India and not in foreign exchange. In the process, India's exports would be boosted.

CHECKING THE PRICE RISE

ASSOCHAM'S resolution on prices makes a succinct analysis of the causes of inflation, and suggests the only sensible remedy in a situation of shortages, namely, creating the conditions to increase output. While proposing the resolution, Mr. P. L. Tandon (Bombay Chamber) pointed out that unless the rise in prices was checked, the growth of the economy would suffer and planning itself would become infructuous. Basically, the inflationary bias in the economy originates from the stagnation in agricultural output in the context of a fast-growing population. The pull exerted by rising food prices on the prices of other goods has been so strong as almost to dislocate the economy. The setback in agriculture has not only caused widespread distress among the people, but has also starved many farm-based industries of raw materials.

The task of increasing agricultural production has to be conceived in strictly practical terms. As Mr. Tandon pointed out, small-scale industries and co-operatives may be encouraged, but this should not stand in the way of the larger producers who are in a position to harness superior skills and equipment for stepping up output. At present the Government's obsession with land ceilings has dislodged the large cultivator from the field, but with him have also gone the advantages of large-scale production and technological resources. The Government's land reforms, which may be fully justified in theory, have eliminated the landlord, who used to be the farmer's financier. Thus the cultivator has lost his source of credit, and has not been able to do his job efficiently except in the few places where co-operative credit societies function usefully. Obviously, in the present situation, the aim should be to increase agricultural production quickly, and the agency which can do it most efficiently should be permitted to function.

Assocham's resolution on food and agriculture, while urging the Government to treat the problem as being of urgent national importance, has rightly emphasised that the present policy on land holdings should be reconsidered in the interests of agricultural efficiency. Sponsoring the resolution, Mr. P. K. Sahgal (Upper India Chamber) pointed out that the scope for extensive cultivation was very limited, since in the opinion of experts there was hardly any sizable area of land left to be brought under the plough. So the food production programme has to be based mainly on intensive cultivation, and methods which give quick results have to be adopted. This, Mr. Sahgal said, would mean concentrating on such factors as irrigation, fertilisers, plant protection and pest control. Major irrigation schemes, like heavy industry, are slow to mature. A much larger return on the outlay can be obtained from minor rather than major irrigation works. Furthermore, efforts should be directed towards using the existing irrigation facilities fully instead of going in for big new projects.

While the raising of farm production should undoubtedly become the major plank of economic policy, concerted efforts are necessary for stimulating the output of consumer goods. As Mr. Tandon stressed while speaking on prices, in a large number of industries production can best be stimulated by relaxing or removing the controls that serve no productive purpose, but act as brakes upon growth. Controls have in fact rendered many important industries, such as cement and sugar, unattractive for the investor. They have also severely curtailed the internal resources needed by companies for expansion or modernisation. Controls are at best palliatives, which may have temporary justification during a period of shortages, but they cannot be viewed as an integral part of the pricing system. Making a forceful plea for giving priority to consumer goods industries in the fourth plan, Mr. Tandon said that their capital requirements, in terms of both rupees and foreign exchange, were small, while their yields were large. The bigger yields can help the economy as well as the tax-collector. With their quicker and better profitability, consumer goods industries can permit larger savings and enlarge the pool of investible funds. Encouraging these industries can thus make a significant addition to the gross national product, help restrain the pressure on prices and "offer incentives to produce more by giving more things to buy".

On the question of starting consumer goods industries in the public sector, an idea which has gained currency in view of the current shortages, Mr. Tandon posed a series of important questions. The shortages of consumer goods have not arisen because the private-sector units were unwilling to produce more. The shortages are primarily due to the stifling effect of controls on prices (as in the case of cement), inadequate supplies of raw materials (as in the case of sugar) and the Government's dogmatic approach (as was reflected in its restrictive policy towards the textile industry in its anxiety to aid the decentralised sector). Given these difficulties, even State industries would not work well. As Mr. Tandon rightly observed, to stimulate production in consumer goods industries, they should be given a proper chance—and this applies to any industry, whether in the private or the public sector.

INDUSTRIAL GIANTS IN CONFLICT

OVER most of Europe the rate of increase of production and trade seems to be slowing down and industrialists foresee intensified competition. Many of these industrialists are reviewing the organisation of European industry against the background of a similar situation—slower growth, more competition—that may be developing in the United States; and many of them doubt that European industry, as now organised, can effectively resist American penetration. In the Common Market (most obviously in France but not only there) this penetration is a big political issue. It is useless to speculate at the present stage how European industry would have been organised if Britain and the other countries of the Free Trade Association had been embodied in the Common Market. Some industrial units would have been bigger than they are now; others would have lost their separate identity or been eliminated. But it is not certain that a bigger market would have been more securely "European" than the Common Market and the Free Trade Association are now. Americans have more experience than Europeans in organising large-scale production and trade, and the European subsidiaries of American corporations would probably have been no less successful—they might have been more successful—in a larger market than they are in the present groupings.

The problem of adjustment is more complex in the Community than in the Association, because among the nations of the Community industry is more widely dispersed. In the Association it is mostly concentrated in Britain, though there are big industrial units in Sweden and Austria. In this grouping, expanding the size of industrial units involves, mainly, merging of British companies. In the Common Market it may involve either merging within one country or merging across national borders; but the Community's half-formed legal system (among other factors) has impeded the wider regrouping of industry. The amalgamation of Pechiney and St. Gobain in the French chemical industry is characteristic of many national mergers in the Community, but the more complex combination of German Agfa and Belgian Gevaert in the photographic industry is, at present, exceptional. The biggest German motor-car company, Volkswagen, has tentatively proposed association with its counterparts in Italy and France, Fiat and Renault respectively; but the division of markets envisaged in the idea—each company confining its production to a specified range of vehicles—seems to conflict with the Community's rules against cartels.

The intrusion of General Motors and Ford into Continental Europe seems to have worried Volkswagen, the biggest European motor firm, more than their parallel intrusion into Britain has worried British Motor Corporation. However, both these European firms have recently become associated (very loosely in the British case) with another strong company (each in the high-quality range of products)—Volkswagen with Mercedes-Benz, B.M.C. with Rolls-Royce. The biggest British companies are no more than medium-size by American standards, but at home and abroad most of them—companies such as Royal Dutch-Shell and Unilever (which are Anglo-Dutch), Imperial Chemical Industries, British Motor Corporation, Courtaulds, International Computers and Tabulators, Plessey—are effectively combating their respective American competitors. However, even in Britain, more accustomed than the Continental countries to the presence of American subsidiaries (which have inclined towards Britain partly because her language is, more or less, intelligible), the deepening penetration of these subsidiaries causes varying anxiety. Recently, for instance, a survey by David Rayner Associates, publisher of "American Electronics and Instruments Interests in the United Kingdom", has shown that as many as 150 electronic and instrument companies in Britain are owned or controlled by American corporations, and this firm has estimated that in the next 20 years half of this most vital technological industry in Britain will fall under American control. But the British industry has formed a research association which will stimulate and co-ordinate research and eliminate duplication of effort in this field.

In general, despite the (to some minds rather disappointing) changes in the Common Market, the scale of industry is still bigger in Britain than in Continental Europe. The latest assessment by the U.S. business magazine, *Fortune*, based on companies' sales in 1963, showed that of the 200 biggest companies outside the U.S.A., 54 were British, 33 were German, 25 were French. (Incidentally, as many as 37 were Japanese.) But a national study by the corresponding French magazine, *Entreprise*, showed a decided concentration of French industry in the bigger companies, the biggest 50 accounting for nearly half of the total sales of the biggest 500. However, size is not the only, nor the safest, criterion of strength. Most big European companies have been drastically reorganised in the last few years, but there are still some whose efficiency is much below the average, whereas many smaller companies, lean, not overweight, are more efficient than the average. Economies of scale are less important—indeed, less practicable—in technological than in mass-production industries; whereas quality of management, ability to organise, are important in any company, regardless of its size. Americans still have confidence in size. The biggest sewing-machine plant in the world, Singer's, in Scotland (where most American companies in Britain are concentrated), is being further expanded to meet Japanese competition (for competition is not all one way). American corporations are earning good profits in Europe, and their importance in the balance of world payments will probably grow.

Current News and Comment

Raising Port and Transport Capacity

In a resolution on ports and transport, the Associated Chambers of Commerce has rightly expressed its concern over the Government's failure to exploit fully the potential which exists for the co-ordinated development of all forms of transport and to ensure the maximum use of existing equipment and facilities. Apart from increasing the capacity of the railways, it has urged the Government to provide adequate incentives to road transport operators and to expand and modernise port facilities. Moving the resolution, Mr. J. W. Anson (Bombay Chamber) said that the Government now appeared to realise the need to develop ports and transport more clearly than was perhaps the case in the first two plans. The Deputy Chairman of the Planning Commission said earlier this year that there would be planned and co-ordinated development of all forms of transport. The Central Finance Minister also stated in Parliament in September that high priority would be given to organising the country's transport system. The railways have made substantial progress during the current plan: wagon capacity has increased; electrification has been carried out on a number of routes; and new lines have been constructed in a number of areas. But, in most cases, these steps for enlarging capacity have either been long overdue—as on the east coast of India—or have been planned to meet urgent regional needs—as in Kandla port's hinterland or in Assam for defence purposes. While it is necessary to continue to increase the capacity of the railways from year to year, the extent of investment should at all times be related not only to the additional load which the railways have to move, but also to the norms of efficiency they must attain.

The Government has discriminated against road and inland water transport. If the mileage and standard of Indian roads is poor, poorer still is the vehicle population of the country. As for the inland waterways system, rivers in India could well form mainstreams of traffic and commerce. A study of the waterways system in Holland, France and Germany would show how great the potential is and to what extent it can be tapped in a country of India's size. Seconding the resolution, Mr. A. D. Murton (Tuticorin Chamber) devoted his attention to the port and transport system in south India, and said that port development there had deceived considerable attention in recent years. This year has seen not only the commissioning of the new dock in Madras, but also the start of work on both the Mangalore and

Tuticorin harbour projects. Of equal and possibly of far-reaching importance is the Sethusamudram scheme to cut a navigable canal to connect the Gulf of Munnar with Palk Bay. The scheme will be taken up in the fourth plan. But the lack of a unified track gauge on the railways is a serious handicap for optimum efficiency and economy in operation. Supporting the resolution, Mr. H. F. Whithouse (Bengal Chamber) concentrated on the problems of Calcutta port. He said that the draught graph of the port indicated in 1961-62 that it would be out of action within two years. A precarious and partial recovery has been achieved since then, but the draughts available are still far short of those required to operate a ship economically from Calcutta. Apart from dredging and river training, the solution, it is said, lies in the Farakka barrage scheme. It is hoped that enough headwater will be forthcoming from the barrage to "rehabilitate" the river Hooghly, after meeting irrigation needs.

Increasing Power and Water Supplies

Power production capacity in India has increased considerably in recent years. At the beginning of the first plan, the installed capacity was only 2.51 million kW ; it rose to 3.42 million kW at the end, and went up further to 5.39 million kW at the end of the second plan. But the third plan target of 12.5 million kW (in terms of installed capacity) is not likely to be realised ; in fact, according to the latest statistics published a few months ago, by the Central Electricity Authority, there will be a shortfall of about 1.6 million kW. In official quarters, the gap is not regarded as a major one, but as Mr. P. A. A. Majeed (Cochin Chamber) stressed at the Assocham annual meeting, the failure to achieve the target can pose awkward problems.

The capacity target for the fourth plan is 25 million kW, or double that for the third. This doubling is justified on the ground that in industrial economies, power demand almost doubles itself every few years, and India must bear their experience in mind while planning for increased power production. The suggestions made in this connection at the Assocham meeting were very relevant. It was said that large thermal plants should be installed to supplement hydro-electric energy ; the country definitely needs nuclear power stations ; and the possibility of utilising ocean tidal waves for generating electricity should be explored. Electricite de France is already building a Rs. 43-crore tide-powered hydro-electric plant in France, and it might be worth taking advice for a similar project in India. Generating electrical energy through the use of ocean tides would eliminate the heavy dependence in certain parts of this country on a timely and successful monsoon. Some of these suggestions are already being implemented, but what is lacking is a definite long-term plan to build adequate power resources to meet the growing needs of rural and urban development. Those who favour a short-term plan argue that it is safer in view of the uncertain elements in planning in relation to industrial growth and other unpredictable economic factors. They overlook the limitation that it does not go far enough in dealing with a continuous process like power development. A 15-year plan could cut the time involved in project construction and generation of power and ensure that energy availability keeps as close, and is adjusted as nationally and as nearly as possible, to an ever-growing demand.

As with power, so with water. There has no doubt been great progress in harnessing turbulent rivers and in using them for the production of hydro-electricity. Yet there has been a continuous and serious shortage of water in certain States ; there the gap between the demand for domestic, industrial and navigational needs, and the actual availability, is constantly increasing. Typical examples are provided by Greater Bombay and the cities of Madras and Delhi, where water deficits run into millions of gallons. In many rural areas too, there is an almost perennial water shortage, especially in the summer months. In view of the fact that water, like power, is the life line of the nation, the Ministry of Health should recast its recent allotment of Rs. 600 crores for national water supply schemes in the next plan, and recalculate the urban and rual requirements on a forward basis.

Outlook for Sugar Output

Doubts about achieving the output target of 3 million tons of sugar during the current season persist in view of the fact that two factors have held down production. Since the Government prohibited the manufacture of bold grains, the output of carbonation factories in particular suffered. In switching their equipment over to the production of small grains, these factories are producing much less than they did in the past season. Secondly, the present strike by canegrowers around Meerut and Muzaffarnagar, U.P., which are big sugar-producing districts, has interrupted the working of several factories. Production in the two districts amounts to about 10 percent of the total Indian sugar output. The factories operating in these areas are producing only up to 50 percent of their capacity. The canegrowers' strike seems to have been caused because of the high price of *gur*. So canegrowers are finding it more profitable to use cane for producing *gur*. In the circumstances, immediate measures should be taken to bring down the price of *gur* to the parity level in order to stop diversion. The production of *gur* and *khandsari* is wasteful since the recovery is only half of what it is in the case of sugar.

Factors Retarding Growth

The planners and politicians are worried about India's economic malaise, although their diagnosis differs according to their personal predilections and ideological beliefs. Dr. V. K. R. V. Rao, member of the Planning Commission, frankly admitted in his speech at the meeting of the Merchants Chamber of Commerce in Calcutta last week that the present setback in the nation's economic growth was attributable to the sudden rise in defence expenditure. In 1962-63, the defence budget was about Rs. 330 crores, and it rose to Rs. 850 crores in 1963-64. To finance this increased expenditure, the Government had to increase taxes, causing a fall of 2 percent in the national income. Dr. Rao stated that the Chinese attacked India not to grab territory, but only to upset the economic balance of the country so that its progress would be retarded. It would now appear that their purpose has been fulfilled, although the planners strongly proclaimed at the time of the Chinese aggression that both defence and development should be accorded the same priority. Dr. Rao did not develop this theme, but being a member of the Planning Commission, he should have appreciated that resources being limited, the same priority could not have been given to both defence and development programmes. The slogan that was raised to this effect in the wake of the Chinese aggression was no doubt politically captivating, but was economically impracticable.

The above limitation apart, the coincidence of a number of adverse economic developments has accentuated the economic crisis. As Dr. Rao himself admitted, the real trouble started when the agricultural output was far below the target in 1963. This, together with the increased defence budget, sent the prices of essential commodities soaring. Dr. Rao, however, indulged in only pious platitudes when he said: "This situation will not continue for long ; the prospects of increased production are much more than the prospects of it remaining constant." Along with the shortfall in farm production, industrial output also did not "reach the target fixed under the present plan period." Meanwhile, the provision in the draft report of the Planning Commission for raising the fourth plan budget by an extra Rs. 2,500 crores has given rise to misgivings. It has been stated that the money required for the purpose will be raised by increased taxes and by stopping the flow of unaccounted money. Dr. Rao did not discuss in detail to what extent the Government can be optimistic on this account, mainly because of the slow progress in detecting unaccounted money. But he pointed out that tax evasion was still considerable. People are more interested in dealing in cash than in cheques, for cash can be easily concealed.

Dr. Rao did well to stress the need for quick-yielding projects for reducing the inflationary pressures generated by development expenditure. However, the draft of the fourth plan does not give an indication that the planners are inclined to accept quick-yielding projects, although the latter require less resources.

Family Planning in West Bengal

The population of West Bengal increased by 33 percent from 26.3 million to 35 million during the decade 1951-61, compared with a rise of 21 percent (from 361 million to 438 million) in India as a whole. The growth in West Bengal was partly on account of the refugee influx and migration from other States, but it was mostly due to the high birth rate in the State. With the exception of Kerala, West Bengal has the highest population density in the country There are 1,032 persons to a square mile here, compared with the all-India average of 373, that is, about three times as many. The average conceals worse congestions in Calcutta district, where the density is placed at 73,000 persons to a square mile. It is natural that the industrial belt should have a high density, but even in agricultural north Bengal, the number of persons to a square mile is rarely less than 600, and in the comparatively inaccessible and infertile Darjeeling district, it is 539. It is a well-known fact that the man-land ratio here is the lowest for any State. There is not much scope for expanding cultivation, and anything that the State can do to raise agricultural production is only to encourage the intensive cultivation of land.

The National Council of Applied Economic Research, which surveyed the economy some time ago, estimated that the average rate of *per capita* income growth in West Bengal in the second plan period was lower than the all-India rate of 1.57 percent. Therefore, it recommended that the State should achieve an annual overall growth rate of 7.4 percent between 1961 and 1971, in order to attain a *per capita* annual income rate of 3.7 percent. The corresponding investment proposed is Rs. 2,015 crores at 1955-56 prices. But the suggested increase in *per capita income* would not depend on investment alone, even if adequate resources can be mobilised on the scale recommended by the Council ; it would depend as much on checking the rise in numbers. The West Bengal Government, therefore, is doing right in promoting family planning consciousness among the people, a drive which it is just intensifying through observing a family planning week throughout the State.

In keeping with the all-India policy, the accent of the West Bengal programme is on sterilisation, of the male in particular. Since contraceptives are rather expensive for most people and the "rhythm" method has not been convincingly successful, sterilisation is considered the best course to adopt. It is reported that even in the countryside, men in increasing numbers have been going in for vasectomy, although the number of operations is still very much below the target fixed by the Planning Commission to reduce births from around 45 a 1,000 at present to something like 20 to 22 a 1,000 by the sixth plan period. The West Bengal Government has now increased the facilities for the operation ; all hospitals will do it free of charge. The State has also launched an educational campaign in the villages to make people realise the urgent need for limiting their families.

Oilseeds Futures at Standstill

Trading in oilseeds futures in Bombay has been almost at a standstill for the past few weeks. Except for cottonseeds, the little activity that has been reported in other seeds from time to time has been in the nature of kerb deals because castor and linseed futures have been quoted higher than the ceilings fixed for them and groundnut futures have kept above the prescribed weekly range. All the outstanding positions in groundnut January, castorseed March and linseed March were squared up on Monday, 14th December, at rates suggested by the special committee nominated by the president of the Bombay Oilseeds and Oils Exchange. The rates recommended by the committee were: groundnut Rs. 110.50 (a 100 kilograms), castorseed Rs. 192.50 (a 250 kilograms) and linseed Rs. 46.25 (a 50 kilograms). The committee's proposals to square-up outstanding positions were made with a view to averting a payments crisis in the market. But strangely enough, the rates proposed by the special committee and subsequently endorsed by the Exchange were the highest rates recorded up to that time. Not only that. The rates for castor and linseed were even higher than the maximum prices that had been fixed by the Exchange up to the end of January—Rs 190 for castor and Rs. 35 for linseed. That the Board of the Bombay Oilseeds and Oils Exchange should have decided to accept the committee's proposals for squaring-up the outstanding positions at prices higher than the maximum prices fixed by it, betrays a complete lack of sense of fairness and responsibility on the part of the market authorities. The Forward Markets Commission, too, cannot escape the blame for allowing such a thing to pass on the plea that it does not wish to interfere in the normal working of the exchanges.

The squaring-up of outstanding positions in groundnut January, castorseed March and linseed March has been followed up by the Board's decision to remove the ceilings on castor and linseed for new transactions. The Forward Markets Commission, however, has fixed the ceiling of Rs. 110 (a 100 kilograms) for groundnut. Prospects of resumption of normal trading in oilseeds futures seem remote as prices have scored further spectacular gains. Within just one week Castor March has shot up from Rs. 192.50 to Rs. 206, linseed has moved up from Rs. 46 to Rs. 56 and groundnut January has gone up from Rs. 110 to Rs. 116. The rise has been even steeper in ready groundnut and groundnut oil. Groundnut ready Karad bold is currently quoted around Rs. 130 (a 100 kilograms) and groundnut oil is available around Rs. 24.20 (a 10 kilograms). Never have oilseeds prices been quoted so high at this time of the season. Little comfort can be derived from the Central Commerce Minister's recent statement in the Lok Sabha that the anticipated rise in internal production together with proposed imports would result in near self-sufficiency in oilseeds and oils. If prices have been pushed to record high levels despite a reasonably satisfactory supply position, it shows that the authorities have completely lost control over market forces. The situation prevailing in the oilseeds market is by no means an isolated phenomenon. Chaotic conditions prevail in most of the commodity markets. The prices of grains, pulses, spices, *gur*, vegetables and metals have risen by 50 to 300 percent over the year Cotton prices have long been quoted much above the ceilings and the authorities have yet to take firm action to keep prices within the ceilings.

Scrap Trade Pleads for Freight Cut

The scrap industry does not just represent huge piles of discarded and unserviceable iron and steel items. It is a big industry with a vast unexploited export potential. Unfortunately, only about one-third of total scrap arisings, which are conservatively estimated around 1.5 million tons, are being collected and put to use at present. The rest is being allowed to go waste due to lack of a proper export outlet. The trade has long been urging the Government to remove various export restrictions, but still there seems no realistic export policy in sight. At present, only inferior varieties of ferrous scrap are being allowed to be exported, and these have a limited and widely fluctuating demand in the world market. In addition, the cost of collection of scrap is high which renders exports unremunerative. From 375,000 tons in 1961, the export of scrap fell to 132,000 tons in 1962. Exports rose to 341,000 tons in 1963 because of the export incentive scheme. The incentive having been withdrawn since the middle of this year, scrap exports have again been declining and the figure for 1964 is unlikely to exceed 300,000 tons.

Speaking at the first annual general meeting of the Iron and Steel Scrap Association of India in Bombay on 19th December, the president, Mr. Sultan A. Nathani, urged the Government to remove all restrictions on exports, and allow suitable export incentives to compensate for the heavy loss on the export of scrap. He said that exports had fallen with the withdrawal of export incentive and warned that if the situation worsened further, not only the industry and trade will face inactivity, but the collection machinery, which takes a pretty long time to get organised, will be paralysed. Mr. Nathani said that the Government's restrictive export policy had been dictated by influencial domestic furnace owners even though they required no more than 150,000 tons of scrap a year. The curtailment of export outlet was beneficial to furnace owners as it assured their supplies at low prices, but as rightly pointed out by Mr. Nathani, the country has been losing foreign exchange to the tune of about Rs. 8 crores to Rs. 10 crores because of the restrictions on exports. Mr. Nathani contended that if the export of all the surplus of over 1 million tons of scrap was encouraged, the domestic furnace owners would have to pay a higher price—not exceeding 15 percent—for their supplies.

Mr. Nathani made a strong case for a substantial reduction in railway freight rates for scrap. The scrap collection in the country at present is confined to the port towns of Bombay, Calcutta and Madras This is because the high incidence of railway freight is discouraging scrap collection from the outlying areas. Scrap is a low-priced commodity, but the freight rates charged on it are equivalent to the freight on pig iron which had a base price twice that of scrap. Besides, the incidence of freight on scrap is high also because the actual quantity of scrap loaded in wagons averages 18 tons, against the standard load capacity of 24 tons a wagon. The short-loading of wagons is necessitated by the lack of processing facilities at upcountry destinations. Losses on transit are also believed to be not less than 10 percent. Mr. Nathani expressed the view that if the railways offered reduced freights as was done in the case of other exportable commodities, the collection of scrap would increase and the country could earn extra foreign exchange of the order of several crores of rupees.

The trade's plea for concessional freight rates had already been examined by the Central Ministry of Commerce and the Railway Board in July 1963 and the Board is reported to be of the view that the trade's demand is justified. Mr. Nathani also suggested that the railways, the biggest contributor of scrap in the country, should sell their scrap by auctions or through tenders and that the practice of making supplies to nominees of the Iron and Steel Controller should be abandoned. The Central Minister for Railways, Mr. S. K. Patil, who inaugurated the meeting, assured the scrap trade that its demand for reducing freight rates for the movement of scrap would be considered "very sympathetically". Mr. Patil confessed that he was not quite aware of the vital rôle played by the railways in the scrap trade and industry.

Mill Cloth Output Up

The output of cloth and yarn from Indian cotton mills in October is provisionally placed at 442 million yards and 183 million lbs, respectively, raising the totals for the first ten months of the current year to 4,239 million yards and 1,747 million lbs, compared with 4,017 million yards and 1,621 million lbs in the same period last year. While yarn production this year is likely to set a new all-time record around 2,100 million lbs, cloth production might not exceed 5,100 million yards, which is not only far behind the plan schedule, but is considerably short of the industry's past achievements. Mills are known to have produced a little over 5,300 million yards of cloth as far ago as 1956. With the increased supply of cotton over the years, the total output of cloth has been rising, but the increase has been only in the decentralised sector. On current reckoning, the latter is likely to achieve the target of 3,500 million yards in 1965-66, but it seems doubtful whether the mill sector will be able to reach even the revised target of 5,500 million yards ; the original target had been fixed higher at 5,800 million yards. It has been the standing complaint of the mill industry that it has been unable to step up its production because its weaving capacity has been frozen at the level of 200,000 looms. But this is not convincing. The mills are known to have produced 5,300 million yards in 1956 and 1957, and there exists scope for better utilisation of the existing loom capacity. Recently, however, mills have also been permitted to install additional looms, although to a limited extent.

The structure of the Indian cotton textile industry is likely to undergo a significant change if the recommendations of the Powerlooms Enquiry Committee are fully implemented. The Committee has recommended that additional production of cloth in the fourth plan should be exclusively in the decentralised sector, and that mills should not be given any additional loomage, but mills which have already been licensed to set up additional looms may be allowed to install them. Reports from New Delhi indicate that the Asoka Mehta Committee's report on powerlooms is not likely to be accepted in full. The Central Minister for Commerce, Mr Manubhai Shah, told the Rajya Sabha recently that if all the recommenda-

The Annual is being published along with this issue of CAPITAL, and will be available at Rs. 5 a copy (postage extra). Registered subscribers will receive their copies free, but others should write for their copies immediately to the Commercial Manager, CAPITAL, 5 Mission Row Calcutta 1. Please place your orders early. No copies can be sent by V. P. Post.

tions of the Committee were accepted, it would lead to a virtual extinction of the handloom sector. *He assured the House that whatever may be the* Government's decision, there would be built-in safeguards for the handloom and the *khadi* sector as the Government was wedded to protecting the handloom industry which gave employment to nearly 50 million people. Mr. Shah stated that there was a move to produce an additional 100 million yards in the *khadi* sector to provide uniforms for school children and for the N.C.C. and the A.C.C. He said that in the expansion of the textile industry, all steps would be taken to ensure that powerlooms were given their due share and handlooms were well protected. The expansion of loomage in the mill sector would be allowed, but on a limited scale. While the Government has still to take a final decision on the Powerloom Enquiry Committee's report, the draft outline of the fourth plan has assigned a relatively small rôle to the organised mill sector. The targets of cloth production have been tentatively fixed at 6,000 million yards for the mill sector and at 5,000 million yards for the decentralised sector. Thus the additional capacity which is proposed to be created during the fourth plan is merely 500 million yards for the mill industry, against 1,500 million yards for the decentralised sector.

Industrial Activity

Corrected for seasonal fluctuations, *Capital*'s Index of Industrial Activity increased by 11.1 points during April 1964. There were rises in tea, tyres, bicycles and railway tonne-kilometres. Sugar, jute, yarn, cloth, cement, coal, pig iron, finished steel, paper, motor-cars and electricity declined.

NOTICE

There will be no issue of CAPITAL on 31st December, 1964, because of the Christmas holidays. The first issue of the New Year will be published on Thursday, 7th January, 1965.

CORRESPONDENCE

DESIGN ORGANISATION

(To The Editor of "Capital")

Sir,

I have seen your comments in your esteemed issue dated 19th November, 1964, on page 743 under the caption "Steel—Rôle of Design Organisation". I would like to clarify the position.

The H.E.C. does not propose to set up any design organisation whose functions will either compete or overlap with that of the Central Engineering Design Bureau of the Hindustan Steel Ltd. There have been discussions between the H.S.L. and the H.E.C. in this connection. The functions of the C.E.D.B. are quite distinct in relation to preparation of project reports, layouts, planning and procuring plant and equipment for expansion or new steel units, and the C.E.D.B. is well equipped for this purpose. Take the case of the sixth blast furnace complex being set up at Bhilai. The design and planning department of the Bhilai steel project will be the general designers, and as such, will be approving all designs and drawings procured or prepared by the H.E.C. As a matter of fact, the detailed project report has been supplied by the C.E.D.B. to the general suppliers, and it would be too much if the H.E.C. was to take up this function.

On the design side, the H.E.C. has been able to oragnise on a fairly satisfactory basis design cells for product design and preparation of details thereof, for various metallurgical equipment and plant they will be manufacturing in the heavy machine building plant. On the other hand, we have also a central design organisation for civil and foundation designs, design of structures, design of layouts for water mains, sewerage, electrical and other utilities. We have also developed these facilities during the period of our construction of our units and this organisation will be useful for such turn-key jobs as we shall be accepting as principal equipment suppliers.

In our coalmining machinery plant at Durgapur, we have set up a good design cell for designing machinery and equipment for coalmining and other material handling purposes. We are also negotiating for foreign collaboration for setting up a design cell for the preparation of project reports, layouts and design of equipment for coal washeries for which the country so far depends upon foreign technical know-how. The training of designers and creating efficient design cells for product designs, for detailed drawings, for projecting and planning, is a slow process and with the assistance of our foreign collaborators, we have been largely successful in our efforts. I may again repeat that in so doing, there is and will be absolutely no effort on the part of the H.E.C. to duplicate.

As there appears to be some misunderstanding in connection with what I mentioned on the subject, I thought I should clarify the position.

Yours etcetera,
T. R. Gupta
Chairman,
Heavy Engineering Corporation
Ranchi, 21st December.

"CAPITAL" CHRISTMAS TOY FUND

We acknowledge, with thanks, the receipt of the following donations for the 1964 Fund:

Rs. 106

Management Staff of The Imperial Tobacco Co. of India Ltd, Kidderpore Branch.

Rs. 105

Mr. C. E. Cargin and other members of the staff of Jessop and Co. Ltd.

Rs. 50 each

Dhanuka Industries Ltd. Anonymous.

Previously acknowledged: Rs. 2,827.71

Grand Total: Rs. 3,138.71.

THE CALCUTTA MUNICIPALITY

We are not sure that the Municipal Commissioners have been well advised to make so much fuss about the Resolution of the Government of Bengal on the administration of the Municipality. It is evident that Sir Andrew Fraser endeavoured to steer a middle course and to tread upon nobody's toes if he could avoid it. The reference to the supposed bias of the Committee that drew up the original review was, we think, a mistake. It was not a question of bias, but of fact. Were the matters brought to light, true or untrue? The report of the Committee was very voluminous, far too much so in our opinion; business men will not spare the time to read pages of foolscap, they want things put before them in a nutshell; the amended review, which was, we hear, really the original one with a large portion of it deleted by Mr. Allen with blue pencil and then reprinted and passed on to Mr Gupta, was a far more readable production, and the only difference between the two was in the concluding paragraph. Thus the matters brought to light by the Special Committee were fully admitted by the responsible executive, and in our issue of October 6th we showed how damaging they were. The Bengal Chamber of Commerce, the Trades Association, and the Local Press have virtually endorsed the action of the Special Committee, though they have not agreed with the radical suggestions made; and this being so, it seems only beating the air for the Commissioners to assail Sir Andrew's Resolution. *Litera scripta manet.* The public are convinced that the Municipality is in sad need of improvement; the Government, we suspect, is of the same opinion, but we all know that the ostrich hides its head in the sand and fancies that then no one can see it; the result proves disappointing.

FROM

CAPITAL

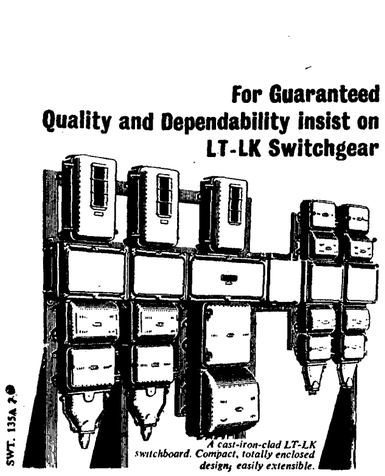
A Ditcher's Diary



Those who expected the Prime Minister to make a major statement of policy at the Assocham meeting on Monday were disappointed, and no doubt deserved to be. There is nevertheless, I presume, some consolation to be derived from the fact that, after a year during which business men have been subjected to more than their routine share of criticism, the session turned out to be a very polite and pleasant affair indeed. The mellowing influence of the Calcutta cold-weather season is not to be underestimated, but the credit goes chiefly to the two main speakers: to Mr. A. D. Ogilvie for a presidential address that was as restrained as it was constructive, and to Mr. Shastri for a painstaking reassembly of some of the nicer, if well known, remarks he has made about business, industry and the economy in six months of Prime Ministership. If the debate in the process proved to be largely inconclusive at most points, the experience, for the audience, could not have been an unexpected or even an uncommon one. It has been argued, not always with conviction, that the chief significance of such exchanges derives not so much from the details of criticism or defence, since those are familiar enough, but from the shades of emphasis on the broader issues raised in the course of the discussion. From that point of view, it might be said that Mr. Shastri's speech showed him to be a moderate and reasonable man, perhaps a little fonder of pleasant generalisations than of precise answers or positive decisions. Business men are entitled to draw some solace from the fact that he spoke, on the whole, not unfavourably of them, although he did invite them to cultivate a greater "sense of social responsibility". The private sector was blessed with a reference to its "important rôle", and industry with another reference, albeit brief, to its difficulties in raising capital for expansion. I am assured that many discerning gentlemen have been greatly cheered by remarks such as these, and not in Lyons Range or Dalal Street alone. But what they all add up to, in terms of policy decisions for the future, I should not care or dare to guess. The result of previous equations composed of similar polite generalisations has, as the condition of the economy shows, so far been by and large nil.

Let it be said straightaway that, all in all, India is one of the freest countries in the world. Some of the freedom we owe to ministerial inadequacies and official incompetence; many Ministers dare not get nasty because they are themselves frequently vulnerable and many things are not enforced because the officials don't bother to. The greatest source of our freedom was, of course, Nehru, who really believed in what we call democratic decencies. Yet in the national character there is a streak of illiberalism which, fed by a certain type of newspapers and politicians, occasionally rears its truly ugly head. The row over Sheikh Abdullah's passport seemed one such instance. I think Sheikh Abdullah's idea of an independent Kashmir is so much nonsense; India won't have it and nor will Pakistan. But, let it be admitted, India's record with the Sheikh is far from flawless. First, the man is arrested; then the trial just goes on and on, with more than one counsel resigning. Then the whole farce of the trial has to be called off. After that ordeal, without ultimate sanction from the law, the Sheikh is entitled to some courtesy from this country. Time was when you didn't need a passport to travel as you liked; the original passports were requests for protection rather than permits to leave the country. And now some apparently believe that before an Indian citizen obtains his passport he must give sundry undertakings to Authority. I have had occasion to tell more than one Indian diplomatist abroad, "You represent the Government of India, I don't. I'm travelling as a free citizen of a free country and do not expect me to support everything my Government has done". When Sheikh Abdullah goes abroad and says things contrary to India's official policy, he will be an excellent advertisement for the freedom enjoyed by Indian citizens. Thanks largely to President Nasser, Pakistan has totally failed to stir up the Middle Eastern countries over Kashmir. If the Sheikh now tries to excite them over the question, he will discover with dismay how bored they are.

Dr. Ram Manohar Lohia does not make things easy for anyone; and he probably deserved what he got from the Speaker on Monday. Yet, make no mistake, he will be missed in the House, for he is the only member in the Opposition whose opposition to the Government is total, uncompromising and not at all based on invective alone. He does his home work; few others do. But what became painfully clear on Monday was that the Government does not give Parliament the sense of urgency it should; the Treasury benches give the impression of thinking that there is all the time in the world to solve the country's problems. More important is procedure. Dr. Lohia, as Shaw said of Wells, is not a gentleman, so far as parliamentary manners go. Parliament itself may go if its proceedings do not reflect not Westminster manners but the desperate urgency of the country's political and economic crises. If most people are beginning to treat the emergency as a joke, it is because Ministers themselves have forgotten all about the Chinese attack, except for the purpose of public speeches. Mr. Hem Barua recently spoke of some M.P.s letting out their quarters at fantastic rents; there was only embarrassment all round, not a sense of shame. I yield to nobody in my respect for Parliament. That is my title to speak of it frankly. It was a member of Parliament who told me recently that a large number of M.P.s, irrespective of their Party affiliations, consider themselves as belonging to a club; members must settle their differences without the people being let in on club secrets. The people, who pay, may not enjoy a pantomime indefinitely. Parliamentary democracy is not a parlour game; its purpose must always be manifest to the people who have a right to know what they are paying for. They certainly will not pay for a new caste called M.P.s with privileges galore. Dr. Lohia's maiden speech—that three-anna explosion—was the most effective exposure Parliament ever heard of Indian poverty. That, for me, is enough reason why his voice should not be stilled for the rest of the current session; Dr. Lohia himself should walk his way back into the Lok Sabha.

Of course Mr. Lal Bahadur Shastri, when in London, never used the phrase "nuclear shield"; what I want to know is who did. Of course Mr. Shastri will accept a guarantee—an "umbrella"?—only if it is underwritten by both East and West; what I want to know is how on earth he thinks he is going to get such a joint undertaking. Then Mr. Shastri said at Santiniketan on Monday that armed might could never be the basis of India's foreign policy; what I want to know is just what his Government is doing with the 800-odd crores of rupees, which is India's defence budget. It will have been clear by now that I am a little sick and tired of all this talk on the bomb; perhaps the whole country is too. Half the time, I suspect, New Delhi just hasn't a clue what it is talking about when the subject is nuclear bombs; and Dr. Bhabha, chastised by Mr. Krishna Menon, was not very forthcoming when he addressed members of Parliament recently. It was revealed recently that the Cabinet had never discussed the Chinese explosion; I am not sure that the Cabinet discusses anything of importance these days. The Prime Minister spoke of withdrawing jeeps from the community development projects; within days Mr. S. K. Dey let it be known that he was going to do nothing of the kind. To adapt the immortal remark of Commodore Vanderbilt, "This is one helluva way of running a Government". Mr. Shastri has given up the External Affairs Ministry. This apart, he has retained every other office Mr. Nehru held. So it was that Mr. Shastri was at Aligarh University recently; and a few days later he addressed the Visva-Bharati convocation as Acharya. And, of course, he holds the portfolio of atomic energy, as Mr. Nehru did. Mr. Shastri was the first man to admit that he was no Nehru. Can it be that the Prime Minister has

For Guaranteed Quality and Dependability insist on LT-LK Switchgear

A cast-iron-clad LT-LK switchboard. Compact, totally enclosed design, easily extensible.

Type MK1, 15Amps automatic direct-to-line motor starters for motors up to 7.5 h.p.

Type MF1, 15 Amps manually operated motor starters for motors up to 7.5h.p.

Switch-fuse gear — available as switch unit, fuse unit, and combined switch-fuse unit in ratings of 60/100 to 1000 Amps, 500 Volts

It is false economy to buy inferior switchgear. Of the finest quality, LT-LK is made in India in collaboration with the leading European manufacturers of switchgear — Laur Knudsen Ltd. of Denmark.

L&T also manufactures control panels (floor mounted, wall mounted or console type) for India's power generating and distribution stations and industrial installations.

since changed his mind on the subject, that he thinks he can give himself the same sort of routine as Mr. Nehru and pull it off? On the bomb, as on so many other things, Mr. Shastri needs to think hard and deeply and quickly. How can he, if he is making speeches all the time? Meanwhile I notice that the West Bengal Fire Service could not handle a fire adequately because it had not asbestos suits. And we talk about nuclear shields!

IT HAS ALWAYS SEEMED LIKELY THAT THE REASON Sir Phillip Francis was appointed in 1773 to be one of the British Government's representatives on the Council of Bengal—with such disastrous results for Warren Hastings—was that his identity as the notorious "Junius" had become suspect, and it was considered expedient to entice him out of the country. It has never been quite so obvious why Francis should have accepted, unless indeed he was persuaded by the £1,000-a-year salary which went with the job. This was a great deal of money in those days and must have been much more than he was getting as chief clerk at the War Office. It is said that one of the first things he did on being appointed was to borrow £2,500 from the East India Company, a fact which suggests he had pressing debts to settle. But according to a new theory, outlined in the *Sunday Times*, the reason Francis may have been as anxious to leave Britain as it appears the British Government was to get rid of him, could have had some connection with his being a spy in the pay of Louis XV : an eighteenth-century James Bond, as the newspaper picturesquely puts it. The theory that Francis was "Junius", whose letter in the *Public Advertiser* between 1769 and 1772 had so upset the Government of George III, has never been conclusively proved. But it is based on a number of significant coincidences. It is also a fact that Francis took great care to mutilate his private documents in a way that suggested not so much that he wished to hide from posterity his identity as "Junius", about which, given his character, he might reasonably have been expected to be posthumously proud, but that he was really anxious to obscure his rôle as a spy. Further investigation is awaited ; perhaps some day we shall know. In the meantime it is interesting to reflect what a difference it would have made to Warren Hastings and his plans for Bengal if some breath of this had got about while Francis was making such an insufferable nuisance of himself on the Council. For one thing, that ridiculous duel between them would probably never have been fought. And Hastings himself might ultimately have been spared the agony of his impeachment.

THE INCREASE IN PRICES AND TAXES HAS NOT affected the stock markets alone ; it seems also to have told on nobler enterprises, such as the one represented by *Capital*'s Christmas Toy Fund, which each year brings a little cheerfulness into the lives of poor children in this traditional season of generosity. I note, to my dismay, that contributions to the Fund have amounted to only Rs. 2,869 this year, as against Rs. 3,988 last year and Rs. 4,410 in 1961. The collection is the poorest for several years, and the position is worsened by the fact that the price rise has not bypassed toys ; they are now costlier than ever before. The net result is that several hundred poor children may have to go without the little happiness which toys from the Fund formerly brought them. There are, no doubt, good and sound reasons for the disappointing response this year ; the young ones who have to forgo their moments of happiness, however, are not likely to be consoled by economists' explanations or by the arithmetic of the market-place. Still I do not despair, and sincerely hope that next year will bring better things—both for the children and for the contributors to the Fund. It is said that a pessimist is one who sees his glass as half-empty, while an optimist prefers to describe the same glass as half-full. I should like to be an optimist, and to say that the Toy Fund kitty is half-full. To those who filled it to this level in spite of the many demands on their purse, I offer my sincerest thanks. And to all of *Capital*'s readers I wish a merry Christmas and a very happy and prosperous New Year.

THE DITCHER

Guide for Investors

RIGHTS ISSUE FROM GOODYEAR INDIA

THE ordinary shares of Goodyear India have dropped to Rs. 17.44 because the shareholders are getting sceptical about the rights issue. The Company is issuing rights ordinary shares in the ratio of eight new shares for every five held at a premium of Rs. 7 a share. The disappointment of the shareholders seems justified because while the ordinary share capital will be greatly expanded, the Company has been unable to pay any dividend since it sold shares to the Indian public in April 1961. At that time the ordinary shares of Rs. 10 each had to be subscribed at a premium of Rs. 7 a share. Apart from the fact that the dividend has been skipped during the past four years or so, the value of the shares has now gone down to almost the subscribed price.

It is true that the Company is doing better during the current year ; gross sales have amounted to Rs. 10.6 crores for the first 11 months of 1964, compared with Rs. 8.4 crores for the corresponding period of 1963. The net profit has amounted to Rs. 30 lakhs, against a net loss of Rs. 53 lakhs. The directors anticipate an overall net profit in excess of Rs. 40 lakhs for 1964. But the important question is : Can the Company pay any dividend for 1964 ? Since it has already undertaken an expansion scheme to increase the production capacity of the Ballabgarh factory from 210,000 tyres to 310,000 tyres a year, the directors will be more inclined to conserve resources rather than pay dividends.

The prospect for issuing bonus shares by capitalising the share premium account has rightly been overlooked by the shareholders, at least for the time being. Considering the poor performance of the Company during the past four years, it is doubtful whether the Government will allow it to capitalise reserve at the present stage. In any case, the further expansion of the share capital is unlikely to improve the outlook for the shares. Meanwhile, the profit of the Company needs to be improved substantially before it is possible to take an encouraging view.

A section of the Calcutta stock market has raised the following interesting question. The Indian shareholders had to subscribe for 400,000 ordinary shares at a premium of Rs. 7 a share in April 1961. With their subscription the paid-up share capital amounted to Rs. 2 crores. The present rights issue will also be subscribed by only the Indian shareholders because the parent Company, the Goodyear Tire and Rubber Company of the U.S.A., has not been offered any rights shares. Under the circumstances, it is wondered whether bonus shares, if and when they are issued by capitalising the share premium account, will be allotted to only the Indian shareholders who have contributed to the share premium account.

Associated Battery Fares Well

THE ordinary shares of Associated Battery Makers (Eastern) Ltd have improved slightly to Rs. 24.75 due to the declaration of a larger dividend of 16.5 percent, subject to tax. During the previous three years, a dividend of 15 percent had been paid. At the present price, the yield amounts to 6.7 percent. The net profit has improved slightly from Rs. 64 lakhs for 1962-63 to Rs. 68.54 lakhs for the year ended August 1964, after providing for depreciation but before taxation. The modernisation programme implemented earlier has begun to show. The Company is the largest producer of storage batteries in India. It has greatly extended its production over the past few years to cover batteries for railway coaches. It is also producing stationary accumulators for power stations, telephone exchanges and other electrical installations. It is also making efforts to increase the export of its products.

The outlook for the shares is fairly encouraging considering that the ordinary share capital of Rs. 1.18 crores is backed by impressive reserves of more than Rs. 98 lakhs, including the share premium account of Rs. 28.63 lakhs. In January 1960, the Company issued 680,000 ordinary shares of Rs. 10 each at a premium of Rs. 5 a share. Fixed assets amount to Rs. 54.62 lakhs and investments to Rs. 20.41 lakhs.

Philips India to Issue Rights

AT a general meeting of the shareholders of Philips India Ltd held on 17th December, the resolution authorising the issue of 400,000 ordinary shares of Rs. 10 each at a premium of Rs. 6 a share was passed. Out of these shares, 100,000 shares will be taken by N. V. Philips Gloeilampenfabrieken, Eindhoven, and the remaining 300,000 shares will be offered to the other shareholders on a rights basis in the proportion of these new shares for every five held. The letters of rights offering the new shares will be posted on 8th January, 1965, to all shareholders registered in the books of the Company as on 17th December, 1964.

Waverley Jute Skips Dividend

WAVERLEY Jute Mills Co. Ltd has passed dividends for the year ended May 1964. The profit has amounted to Rs. 2.20 lakhs, against Rs. 2.93 lakhs for 1962-63, after providing Rs. 26,091 (against Rs. 23,805) for depreciation and Rs. 4 lakhs (against Rs. 7 lakhs) for taxation. Income from various sources, including the sale of loom hours, dropped from Rs. 14.81 lakhs to Rs. 10.08 lakhs. A sum of Rs. 7.10 lakhs has been provided for taxation relating to previous year. The carry-forward is Rs. 7,499, against Rs. 57,655 brought in. The directors mentioned that the scrapping of the Working Time Agreement has deprived the Company of the sale of loom hours. They have leased out some buildings and land to the Kelvin Jute Co. Ltd. They are also considering a proposal to amalgamate the Company with Kelvin Jute in due course.

Kelvin Jute Cuts Dividend

THE Kelvin Jute Co. Ltd. has halved the taxable ordinary dividend to 10 percent for the year ended May 1964, which works out to a yield of 7.2 percent at the present price of Rs. 139 a share of Rs. 100 each. The directors do not take an optimistic view of the prospect for the current year. The production of carpet-backing cloth has been cut due to the decline in demand, so the full output capacity has not been used. The modernisation and replacement of old equipment continued throughout 1963-64. The profit has dropped from Rs. 23.65 lakhs for 1962-63 to Rs. 5.98 lakhs for 1963-64 after providing Rs. 24.74 lakhs (against Rs. 9.82 lakhs) for depreciation, Rs. 1.24 lakhs (against Rs. 9.82 lakhs) for managing agents' remuneration, Rs. 5 lakhs, including Rs. 2.07 lakhs for previous years, for taxation (against Rs. 9 lakhs). Development rebate reserve is allocated Rs. 5.3 lakhs. The carry-forward is Rs. 10,554, against Rs. 94,936 brought in. Sales improved from Rs. 3.47 crores to Rs. 4.68 crores.

Outlook for Great Eastern Shipping

THE annual general meeting of the Great Eastern Shipping Corporation held in Bombay last week was quite a stormy affair. The manner in which the board of directors had recommended a dividend of 70 paise a share and subsequently raised it to Rs. 1.08 a share had left a bad taste in market circles because of the wide fluctuations in the price of the scrip which is on the forward list. The angry shareholders did not hesitate to question the motive behind the revision of the original dividend, although it had been effected after a strong representation by the Bombay Shareholders' Association and the rise had been welcome.

The chairman, Mr. A. H. Bhiwandiwalla, while conceding that there had been an "error of judgment" on the part of the board of directors, assured the shareholders that neither the board nor the managing agents of the Comany had any ulterior motive in the declaration of the dividend and its subsequent revision. Mr. Bhiwandiwalla said that the board was rather conservative in declaring a dividend of 70 paise a share initially as the Company's working during the first three months of the current year was not quite encouraging. Subsequently, however, the representatives of some big shareholders approached the board with a plea for a higher dividend. Instead of raising the quantum of dividend, the board had initially intended declaring an interim dividend for the current year and it tried to persuade the shareholders' representatives. But since they insisted on raising the dividend, the board finally agreed to step up the dividend, especially because the Company's working during the second quarter of the year had registered an improvement.

Replying to shareholders' questions, the chairman said that he could not commit whether the dividend would be maintained at Rs. 1.08 a share for the current year. It would be maintained if the profits were maintained and the Company did not have to bear any additional burdens. Mr. Bhiwandiwalla informed the shareholders that the Company had earned Rs. 3.37 crores by way of freight during the current half year compared with Rs. 3.06 crores in the same period last year. But he was quick to add that while this figure looked much higher than that of last year, actual earnings showed only a nominal increase as the current year's earnings included the carryforward amount of Rs. 78 lakhs, against Rs. 51 lakhs in the previous year. Besides, this increase had been achieved with larger fleet and, therefore, reflected poor turnround of ships in India. It was heartening to hear Mr. Bhiwandiwalla say that instances of delay in the ports had declined during the last few months, and that if this improvement continued, the second half of the current year would be able to show much better financial results. Moreover, the Company had a larger carry-forward freight and this would yield some profit, and this together with the recently profitable tramp operations, had encouraged the chairman to look forward to hopeful conditions for the current year.

Mr. Bhiwandiwalla said that the management did not expect any tax liability for the current year. While two ships from the Company's fleet were recently scrapped, five were added to it. Replying to various enquiries by the shareholders, Mr. Vasant J Sheth, a director, said that the Company possessed a fairly modern fleet and that it was trying to pull out of the coastal trade which was unremunerative. Out of the pre-

sent earnings of about Rs. 5 crores, coastal operations accounted for about Rs. 2 crores. Mr. Sheth said that the Company could be lucky if its earnings could reach the Rs. 6-crore mark. He emphatically denied the allegation made by certain shareholders that the managing agents had disposed of any shares out of their holdings; on the contrary, their holdings had increased. Mr. Sheth disclosed that while the Life Insurance Corporation held only 100 fully-paid shares and 33 bonus shares of Great Eastern Shipping, the Unit Trust of India held 4,575 fully paid shares.

Vazir Sultan Tobacco Raises Dividend

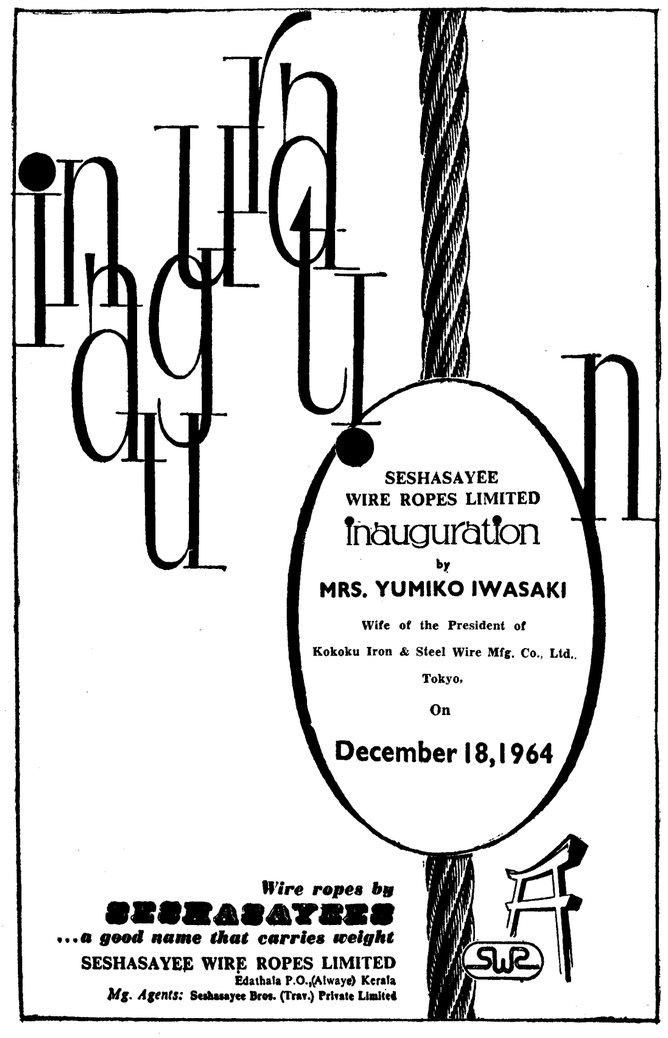
THE 5 percent increase in the dividend from 20 to 25 percent (this simply restores the cut) for the year ended September 1964 by the Vazir Sultan Tobacco Co. Ltd, is well justified by the Company's imported performance during the year. The sales have gone up by about 30 percent from Rs. 13.48 crores to Rs. 17.57 crores and the gross profit has risen by nearly 21 percent from Rs. 1.218 crores to Rs. 1.472 crores. Appropriations include depreciation Rs. 9 lakhs (against Rs. 8.27 lakhs), development rebate Rs. 86,152 (against Rs. 93,637), taxation Rs. 98.38 lakhs (against Rs. 90.68 lakhs), general reserve Rs. 7 lakhs (against nil), gratuity reserve Rs. 2.41 lakhs (against nil), reserve for assets and stock replacement Rs. 2.50 lakhs (against Rs. 2 lakhs), preference dividend Rs. 1.72 lakhs (the same) and equity dividend Rs. 25 lakhs (against Rs. 20 lakhs).

After making some minor adjustments, there remains a surplus of Rs. 23,712 to be carried forward, against Rs. 1,417 brought in. The working results of the Company would have been still better but for the increase in the excise duty and the rise in costs of production. The directors state that although the management wanted to defer a price revision necessitated by the increase in excise duty in March 1964, it had to revise upward in August the price of "Charminar", the popular brand of the Company's cigarettes. The provision for taxation has been on the assumption that the liability will be assessed at 60 percent, but it may turn out to be smaller.

Parry's Confectionery Fares Well

PARRY'S Confectionery Ltd, which has changed its accounting period from March to September in order to bring it in line with E.I.D.-Parry, reports encouraging results for the 18-month period ended 30th September, 1964. The total dividend for 1963-64 (18-months) amounting to 27 percent works out to 18 percent for a 12-month period, against 16 percent in the 12 months ended March 1963. The results for 1963-64 and 1962-63 are not comparable as the former covers a period of 18 months, as against 12 months of 1962-63.

The Company's sales during 1963-64 set a new record at Rs. 2.77 crores, against Rs. 1.48 crores in 1962-63. The gross profit amounts to Rs. 26.88 lakhs, against Rs. 15.21 lakhs. Appropriations include depreciation Rs. 2.99 lakhs (against Rs. 1.80 lakhs), development rebate Rs. 10,000 (against Rs. 2,500), taxation Rs. 14.71 lakhs (against Rs. 8.15 lakhs) and general reserve Rs. 1.60 lakhs (against Rs. 65,000). The proposed dividend absorbs Rs. 5.40 lakhs (against Rs. 3.20 lakhs), leaving a surplus of Rs. 3,895 to be carried forward, against Rs. 2,705 brought in. The directors state that the Company purchased during the period plant and machinery of the value of Rs. 7.25 lakhs for purposes of replacement and rehabilitation. The costs of production continued to rise due to severe import restrictions and the high prices of indigenous raw materials.



The Company was obliged to increase the prices of its products which, however, did not fully cover the increase in production costs. The chairman of the Company, Mr. H. V. R. Iengar, says in his annual statement to the shareholders that there exists considerable scope for exporting the Company's products. But he has added that it is difficult to achieve a satisfactory volume of export business in face of competition from other countries because of the high cost of production here. It will not be possible to build up substantial export business until considerable assistance by way of supply of sugar and glucose at international prices is forthcoming and imports of other essential raw materials are liberalised. Mr. Iengar has urged the Government to view the industry's problems more sympathetically and extend the necessary help for the development of exports.

Modella Woollens Does Well

MODELLA Woollen did well in the year ended June 1964. With its gross profit up by about 26.5 percent from Rs. 18.11 lakhs to Rs. 22.91 lakhs, the Company was able to step up its dividend from 6 percent to 7 percent and that too on the enlarged capital. From what the chairman, Mr. C. C. Desai, stated at the Company's annual meeting on 18th December, the shareholders can look forward to the future with a measure of optimism. The Company has booked sufficient commission, combing jobs for the next six months which has enabled it to start the third shift at the Chandigarh plant from 7th December. The wool combing plant of Chandigarh is expected to reach its expanded annual rated capacity of 5 million lbs by about the middle of next year.

Mr. Desai stated that the shoddy plant in Thana continued to run satisfactorily and that the sales of this unit for the first five months of the current year amounted to Rs. 20.9 lakhs, against Rs. 23 lakhs in the corresponding period of the previous year. Since the two carding sets were not sufficient to feed 2,000 spindles, steps were being taken to install a third carding set for which it had received the essentiality certificate for the import of necessary plant from Italy. This third carding set is expected to be commissioned by the end of 1965.

Mr. Desai told the shareholders that the Company was suffering from the raw material shortage as the Government had reduced annual import ceiling from Rs. 9 crores to Rs. 5 crores. He urged the Government to restore the cut imposed on the import of woollen rags and said that the country should avoid at all costs any cut in the import of raw materials required for the production of shoddy yarn which was used in the manufacture of cheap varieties of woollen fabrics and blankets needed by the common man. The chairman

indicated that the Company had plans to set up an integrated plant having both spinning and weaving capacity. The scheme is at present under the consideration of the Government. The chairman informed the shareholders that the income tax authorities had exempted the entire dividend of 7 percent for 1963-64 from tax. Replying to a question, Mr. Desai disclosed that the Company had 5,331 shareholders of whom 65 held more than 500 shares each. The Life Insurance Corporation holds 79,150 shares in the Company.

Share Offer by Shama Forge

SHAMA Forge Company Ltd which proposes to set up a factory at Bhopal (Madhya Pradesh) for the manufacture of mild and alloy steel forgings will soon be in the market to raise Rs. 33.77 lakhs through public subscription. (Details of the issue appeared in last week's *Capital*.) The Company has been licensed to manufecture 5,000 tons annually of forgings required in civil and defence industries. The indigenous production of forgings is inadequate to meet the present demand which is bound to grow with the expansion of industries. The Company has secured the technical and financial collaboration of Kropp Forge Company of Chicago, U.S.A., which is among the largest manufacturers in the U.S.A. of forgings from various ferrous and nonferrous metals.

Shama Forge has an authorised capital of Rs. 1 crore made up of Rs. 70 lakhs in equity shares of Rs. 10 each and Rs. 30 lakhs in preference shares of Rs. 100 each. The issued and subscribed capital is Rs. 19.58 lakhs. The present issue consists of 356,450 equity shares and 19,775 9.5 percent redeemable cumulative preference shares. Out of this, equity shares of the value of Rs. 21.64 lakhs are reserved for allotment at par to Kropp Forge Company against the price of equipment to be supplied by it to Shama Forge. The remaining 140,000 equity shares of Rs. 10 each and 19,775 preference shares of Rs. 100 each are now being offered for public subscription.

The entire public issue has been underwritten. The list will open on 28th December and will close on 12th January or earlier, but not before 2nd January. The Company has been granted a loan of Rs. 47.5 lakhs by the A.I.D. (U.S.A.) and Rs. 26.40 lakhs by the Industrial Finance Corporation.

Structural Engineering Earns More

STRUCTURAL Engineering Works Ltd reports encouraging results for the year ended June 1964. The sales are up by about 21 percent from Rs. 1.29 crores to Rs. 1.57 crores, and the gross profit has risen by nearly 40 percent from Rs. 14.17 lakhs to Rs. 18.97 lakhs. The ratio of gross profit to sales has improved from 10.9 percent to 12.1 percent. The dividend has been maintained at 6 percent, but it is on the increased capital, the new shares being entitled to a proportionate dividend. The distribution among the equity shareholders is larger at Rs. 4.73 lakhs, against Rs. 4.06 lakhs in the preceding year. Appropriations include depreciation Rs. 6.58 lakhs (against Rs. 6.15 lakhs), development rebate Rs. 27,000 (against Rs. 50,000), taxation Rs. 5.75 lakhs (against Rs. 97,000), general reserve Rs. 1.20 lakhs (against nil), contingency reserve Rs. 1.36 lakhs (against nil) and gratuity reserve Rs. 15,000 (against nil). A sum of Rs. 4.40 lakhs (against Rs. 1.35 lakhs) has been withdrawn from the deferred taxation reserve. After providing for the proposed dividends absorbing Rs. 6.94 lakhs (against Rs. 6.27 lakhs), there remains a balance of Rs. 3,559 to be carried forward, against Rs. 5,683 brought in.

The directors state that the Company's working results would have been even better but for certain unexpected difficulties. Its Dhamangaon unit, which was set up to fabricate and lay reinforced concrete pipes for the duct line project of the Bombay Municipal Corporation, remained idle during the second half of the year for want of cement. The pipe plant remained inactive during the first half of the year and it could go into full swing only in the latter half. There was also a considerable increase in the cost of production due to the rise in the cost of labour, materials, etcetera, and higher dearness allowance paid to the Company's employees.

Although the work on the reinforced concrete pipe project is still at a standstill and it cannot be resumed unless adequate supply of cement is made available, the directors are inclined to take an optimistic view of the future. The pipe plant is expected to reach full production in about two months' time when the Company hopes to be able to go in for three shift working. It has been actively implementing its expansion programme which is estimated to cost Rs. 1.73 crores. The Muland plant for the manufacture of Cochran boilers and pressure vessels is expected to go into production in March 1965, and it will get into full swing a few months thereafter. The capacity of the factory is 168 boilers a year on a single shift basis. The Company has on hand orders of the value of over Rs. 5 crores excluding orders for boilers worth Rs. 30 lakhs to Rs. 40 lakhs and these are expected to keep the Company's establishment fully engaged during the current year. Its operations during the current year have been better with the output during the first four months amounting to 4,000 tons, against 2,000 tons in the corresponring period of the previous year. The directors are hopeful of maintaining the dividend for the current year on the existing capital. The Company has secured its financial requirements for the expansion programme. The I.C.I.C.I. has granted a long-term loan of Rs. 60 lakhs and the entire amount has been drawn to meet the needs of the projects undertaken with foreign collaboration.

Mysore Coffee Maintains Dividend

THE Mysore Coffee Curing Works Ltd has maintained the dividend for the year ended June 1964 at 10 percent. The working results, however, show a considerable improvement over the previous year, the gross profit having gone up from Rs. 2.47 lakhs to Rs. 3.50 lakhs. Allocations include depreciation Rs. 30,075 (against Rs. 33,114), taxation Rs. 1.66 lakhs (against Rs. 1.10 lakhs), general reserve Rs. 21,274 (against Rs. 13.086), dividend equalisation reserve Rs. 25,000 (against Rs. 10.000) and contingency reserve Rs. 9,500 (against nil). The proposed dividend absorbs Rs. 98,731 (the same) leaving a sum of Rs. 1,379 to be carried forward, against Rs. 2,032 brought in.

Andhra Scientific Earns Less

DESPITE an increase of about 20 percent in the sales from Rs. 35.18 lakhs to Rs. 42.38 lakhs, the gross profit of the Andhra Scientific Co. Ltd for the year ended June 1964, is

IIM
CALCUTTA

INDIAN INSTITUTE
OF MANAGEMENT, CALCUTTA

Established by
The Government of India
in co-operation with The Government of West Bengal
as a National Institute for management
education and research

Collaborators:
The Alfred P. Sloan School of Management,
Massachusetts Institute of Technology, U.S.A.

The Institute has pleasure in announcing its programme of

POST-GRADUATE STUDY IN MANAGEMENT

A comprehensive two-year residential programme expressly designed for mature young people who seek executive careers in industry and Government.

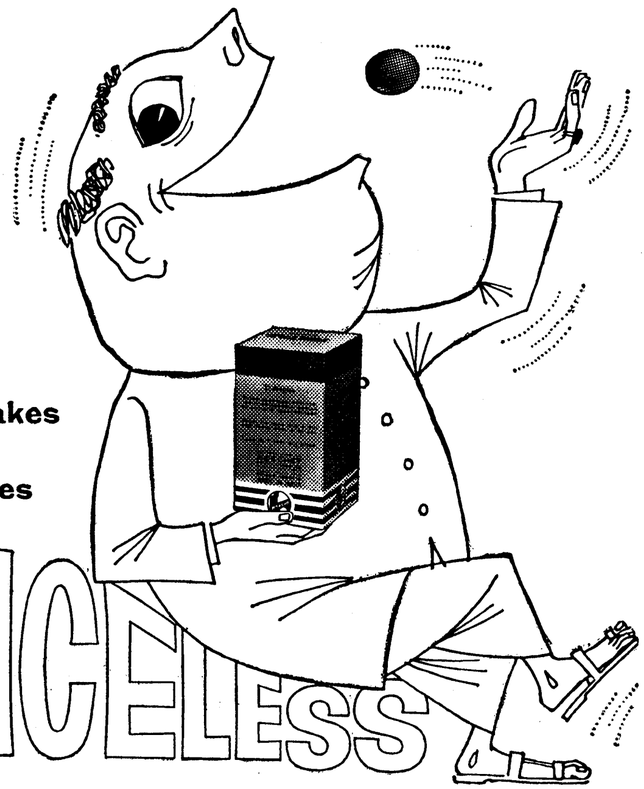
Objective: The course seeks to give the student with a demonstrated interest in management a grasp of its basic concepts and a breadth of view, which will provide a foundation for development toward general management responsibility.

Curriculum: The course will draw on the best patterns of graduate management education in the U.S.A. and will emphasise the fundamentals which underlie sound management decisions. The programme of study will cover existing practices in the conduct of economic affairs, the environment of the enterprise, human factors in an industrial setting and the analytical tools available to management including operational research. The Institute will award a Post-Graduate Diploma in Management to those who successfully complete the two-year programme. However, it has requested powers to award degrees and expects that these powers will be granted.

Qualifying Education: Applicants should hold at least a Bachelor's degree in any subject or any professional qualification considered equivalent to a degree. The medium of instruction is English and a good command over the language is required.

Qualifying Test: An appropriate test for post-graduate study in Management will be administered at different centres in India. There will also be a qualifying interview.

Academic Year: The first year of the two-year programme will run from August 9, 1965 to May 6, 1966.



Fees: Fees for board, room and tuition will be Rs. 1,700/- per academic year.

Location: The programme will be residential, conducted at the Institute campus in Calcutta.

Applications and enquiries: Last date for application is February 1, 1965. Applications and information may be requested from:

What makes HOECHST medicines

PRICELESS

TESTING?

I'm not trying to pry, but what—

Well, this testing involves every ingredient in a HOECHST preparation. The finished product, too, undergoes some pretty exhaustive tests. And, hourly samples are tested during manufacture.

Quite a job.

It is. But our quality control experts are stern task masters. They reject anything that's not perfect, without worrying about cost.

Appreciate that, you know.

Of course, besides testing there's research. And up-to-date automatic equipment and high standards and (would you mind not fidgeting) experience. A century of worldwide experience goes behind every medicine we make in India or elsewhere. This is what makes HOECHST medicines priceless.

Perfectionists—that's what you are.

Well, doctors know this and they prescribe our medicines with confidence. So now, up with that elbow, down with that pill...

HOECHST

HOECHST PHARMACEUTICALS

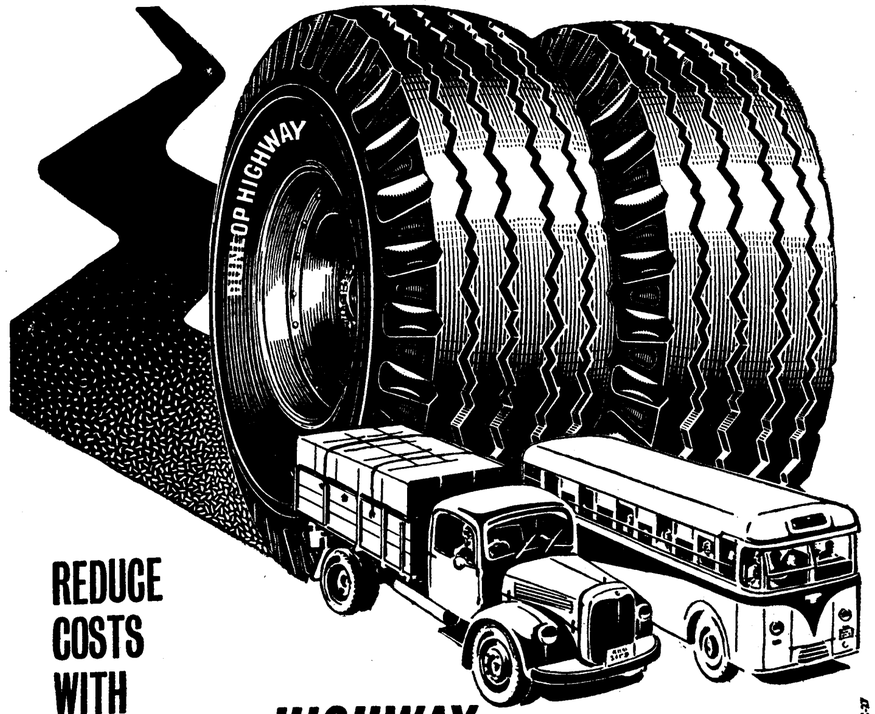
HOECHST generally pronounced HEXT

HP. 78 (R)-280

slightly down from Rs. 6.29 lakhs to Rs. 6.09 lakhs. The dividend has been maintained at 10 percent. Allocations include depreciation Rs. 2.41 lakhs (against Rs. 1.87 lakhs), development rebate reserve Rs. 32,000 (against Rs. 96,000), taxation Rs. 1.09 lakhs (against Rs. 1.93 lakhs), machinery rehabilitation reserve Rs. 30,000 (against nil) and dividend reserve Rs. 1,39 lakhs (against Rs. 1.01 lakhs). A sum of Rs. 30,000 (the same) has been transferred from the dividend equalisation reserve. After making some minor adjustments, there remains a surplus of Rs. 372 to be carried forward, against Rs. 6,561 brought in. The proposed dividends absorbing Rs. 1.39 lakhs (the same) are to be paid out of the dividend reserve.

Share Offer by Kalyanpur Lime and Cement

KALYANPUR Lime and Cement Works Ltd owns two cement manufacturing units in Banjari, Bihar State. The factory has been built adjacent to its limestone quarries, so the cost of raw materials is low. The aggregate capacity of the present units is 420 tons of cement a day. The Company is expanding its works and is going to put up a third unit of 600 tons a day. The estimated production, after expansion, may amount to 350,000 tons after 1966. The Company paid a dividend of 8 percent on its equity shares for 1963 and has recently declared an interim dividend of 5 percent for six months ended 30th June, 1964. It expects to continue to pay dividends at 10 percent during the period of construction of the third unit. The Company is importing the main cement plant from the U.S.A. and Germany and is also getting technical assistance from the foreign machinery manufacturers for erection and commissioning of the third unit. An import licence of the value of Rs. 80 lakhs has been granted by the Government for imported machinery. The proposed expansion is estimated to cost Rs. 2.65 crores. The Company's new issue comprises 9.5-percent cumulative redeemable preference shares of Rs. 30.25 lakhs and of equity shares of Rs. 45.75 lakhs. (Fuller details appeared in last week's issue of *Capital*.)



Hindustan Oxygen Incurs Loss

AFTER providing Rs. 1.25 lakhs for depreciation and Rs. 3.10 lakhs for development rebate, the working of the Hindustan Oxygen Gas Co. Ltd for the year ended June 1964, shows a loss of Rs. 5.57 lakhs. In 1962-63, the Company had suffered a loss of Rs. 37.807 after providing a sum of Rs. 14,187 for depreciation. The total deficit carried forward at the end of June 1964, amounts to Rs. 5.97 lakhs. The Company started production of oxygen and acetylene gases in January 1964, and the sales up to the end of June amounted to Rs. 77,713. The sales are reported to be gradually picking up.

The capital expenditure incurred during 1963-64 amounted to Rs. 12.76 lakhs, which includes the expenditure of Rs. 2.22 lakhs during construction and Rs. 1.94 lakhs as advances given to contractors and engineers during the previous year now capitalised. The net value of the fixed assets at the end of June 1964 is Rs. 31.59 lakhs, against Rs. 20.21 lakhs a year ago. The directors point out that the factory could not work to the rated capacity in the initial stages, but efforts are now being made to augment production.

Gobind Sugar Earns More

THE increase in the dividend from 20 percent to 22.5 percent by the Gobind Sugar Mills Ltd for the year ended June 1964, provides little indication of the Company's improved performance during the year. The sales have gone up from Rs. 1.55 crores to Rs. 2.56 crores and the gross profit has shot up from Rs. 9.60 lakhs to Rs. 40.42 lakhs. Allocations include depreciation Rs. 4.58 lakhs (against Rs. 2.80 lakhs), development rebate Rs. 1.87 lakhs (against Rs.

31,000), taxation Rs. 31 lakhs (against Rs. 3.70 lakhs), renovation and renewals reserve Rs. 2.70 lakhs (against Rs. 50,000) and general reserve Rs. 6.50 lakhs (against nil). After providing for the proposed dividend absorbing Rs. 1.63 lakhs (against Rs. 1.50 lakhs), there remains a surplus of Rs. 13,916 to be carried forward, against Rs. 3,093 brought in. The cane crushed during the year amounted to 172,000 tons, against 144,000 tons in the preceding year.

Tecalemit (Hind) Share Offer

TECALEMIT (Hind) Ltd is offering 98,000 ordinary shares of Rs. 10 each for public subscription at par. The list opens on 6th January, 1965.

(Details of the issue are printed on a later page in this issue of *Capital*). The present issue consists of 400,000 ordinary shares out of which 112,000 shares will be allotted to Tecalemit Ltd of the U.K., for the supply of machinery, and 100,000 shares partly for cash and partly for consideration other than cash. The directors and their friends have subscribed for 90,000 shares. The directors are His Highness Marthanda Varma Elaya Raja of Travancore, Messrs Francis James Grandison, Sylvester Govett Gates, Robert George Edwards, Nigel Jack Bennett, Harry Jeavons, Kaladaikurichi Ramasubbier Sundaram Iyer, Seshu Iyer Narayanaswamy, Tharumapuram Srinivasaiyer Narayanswami, Subroto Ghose, Shankar Lall Agarwala and Rajendra Kumar Jain.

The Company incorporated on 4th December, 1963, has taken over the Indian business of Tecalemit (India) Ltd and has entered into an agreement with Tecalemit Ltd of the U.K. concerning the licence to manufacture the products concerned. It has acquired a space for a factory in Calcutta, which has been operating since April 1964. It is negotiating for the construction of another factory in Bangalore. It is engaged in the manufacture of a wide variety of garage servicing equipment, industrial lubrication equipment, motor-vehicle accessories, etcetera.

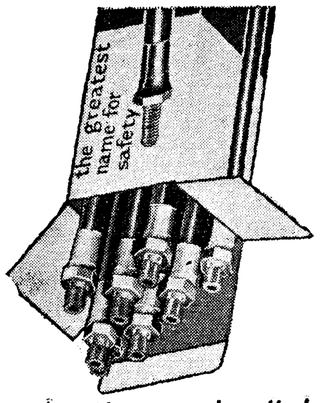
Central Pulp Will Soon Enter Market

THE Central Pulp Mills Ltd which has been licensed to set up a pulp mill with a daily capacity of 75,100 tonnes of different grades of paper pulp, will soon be in the market to raise Rs. 1.725 crores through public subscription to meet part of the capital requirements of the project. The factory will be located near Surat (Gujarat). Nearly 80 percent of the Company's requirements of bamboos will be met from the nearby forests. The project is estimated to cost Rs. 6.54 crores, of which Rs. 2.625 crores will be provided by the equity and preference capital issue, Rs. 3.25 crores by a loan from the Export-Import Bank, Rs. 37.50 lakhs by term loans from banks and Rs. 29.30 lakhs from short-term bank borrowings.

The Company has an authorised capital of Rs. 5 crores made up of Rs. 4 crores in equity shares of Rs. 100 each and Rs. 1 crore in 9.3 percent redeemable cumulative preference shares of Rs. 100 each. It has already issued equity capital worth Rs. 10 lakhs and it is proposed to make a further issue of equity capital amounting to Rs. 1.713 crores and preference capital amounting to Rs. 81.25 lakhs. The promoters, directors and their associates have already taken up equity shares worth Rs. 80 lakhs. The balance of equity capital and the entire preference capital will soon be offered for public subscription. The entire public issue has been underwritten. The Company has applied to the Government of India for licence to import machinery from the United States under the Eximbank financing scheme. The Export-Import Bank has approved in principle a loan of Rs. 3.25 crores in U.S. dollars for the import of machinery from the U.S.A. The Company hopes to be able to complete the erection of the mill and commence production by March 1967.

Anup Engineering: New Venture

KASTURBHAI Lalbhais have promoted a new company known as Anup Engineering Ltd for the manufacture of chemical machinery which will include semi and fully automatic centrifuges, pressure vessels, dryers, evaporators, heat exchangers, crystallisers, mixers, condensors, water purification plants required by chemical, pharmaceutical and food industries and equipment for laundry and hospitals. The Company has been licensed to manufacture chemical machinery worth Rs. 97 lakhs a year. Hind Laboratories (Private) Ltd, belonging to the Kasturbhai Lalbhai group and engaged in the manufacture of chemical machinery, has been merged with Anup Engineering which has secured the collaboration of Machinefabriek Reineveled N.V. Delft, Holland.



The foreign collaborators will provide the technical know-how and also participate in the capital and will be allotted shares worth Rs. 3 lakhs—Rs. 2.5 lakhs in consideration of know-how and Rs. 50,000 for cash. The factory will be located in Ahmedabad and it is expected to be commissioned by about the middle of 1966. The project is estimated to cost Rs. 45 lakhs. The Industrial Finance Corporation has agreed to give foreign exchange loan of Rs. 18.39 lakhs for the import of machinery. The Company has an authorised capital of Rs. 2.50 crores—all in equity shares of Rs. 100 each. The issued capital will be Rs 30 lakhs of which only Rs. 14 lakhs will be offered for public subscription towards the end of January or early February. The board of directors of the new Company includes Mr. Chinubhai Chimanlal (chairman), Mr. Narottam Shrenik Kasturbhai, Mr. Chinubhai Manibhai, Mr. Arun Pratapsinh, Mr. Nayan Nanavati and Mr. A. Bolsterlee and Mr. P. Van Riel (special directors).

Fit Tight Nuts Pays More

FIT Tight Nuts and Bolts Ltd has raised the dividend for the year ended September 1964 from 9 percent to 15 percent. The directors point out that a substantial portion of the dividend is likely to be exempt from tax under Section 84 of the Income Tax Act as the Company started the manufacture of new items during the year. The increase in the dividend is fully justified by the impressive performance. The sales have risen by about 90 percent from Rs. 31.82 lakhs to Rs. 60.21 lakhs, and the gross profit has increased by about 92 percent from Rs. 14.21 lakhs to Rs. 27.23 lakhs. The ratio of grass profit to sales works out to 45.2 percent, against 44.6 percent in the preceding year.

Allocations include depreciation Rs. 6.24 lakhs (against Rs. 5.38 lakhs), development rebate Rs. 3.67 lakhs (against Rs. 5.38 lakhs), taxation Rs. 8 lakhs (against Rs. 75,000), general reserve Rs. 2.50 lakhs and dividend reserve Rs. 4.50 lakhs (against Rs. 2.75 lakhs). After making various appropriations, there remains a balance of Rs. 44,360 to be carried forward, against Rs. 4,343 brought in. The proposed equity dividend absorbing Rs. 4.50 lakhs (against Rs. 2.70 lakhs) is to be paid out of the dividend reserve.

The Company has provided full depreciation and development rebate. It has received a licence for importing machinery worth Rs. 8 lakhs for development and manufacture of highly specialised items of fastenings and also the necessary foreign exchange loan from the I.C.I.C.I. Orders for machinery have been placed and the plant is expected to go into production by March 1965. The Government has agreed in principle to grant a licence for the import of balancing equipment worth Rs. 4 lakhs. The Company has entered into a collaboration agreement with a well-known West German firm for the manufacture of various types of tungsten carbide dies. The Rs. 100-paid share of Fit Tight Nuts is currently quoted around Rs 192, offering a gross return of about 8.3 percent.

The Stock Markets

PRICES OF CLEARING SHARES IMPROVE

Wednesday Evening.

THERE has been a fair improvement in the prices of clearing shares in the Calcutta stock market during the past week due to brisk short-covering. It looks as if bears are busy covering their short positions in view of the forthcoming holidays. Higher advices from Dalal Street have also been a helpful factor. The observations made by the Prime Minister, Mr. Lal Bahadur Shastri, at the Associated Chambers of Commerce and Industry have had little effect since he did not indicate any concrete measures which the Government proposes to adopt for stimulating activities in the capital market. Beyond expressing his concern over the sluggishness of stock exchanges, Mr. Shastri did not say much.

Lyons Range seems to think that the memorandum submitted by the presidents of stock exchanges is receiving the attention of the Central Finance Ministry. Whether the Government will accept any of the remedies recommended by the presidents is anybody's guess. Since investment confidence will not revive until the fiscal system is suitably modified, no striking improvement is expected to take place in the stock market until February end when the Budget will be presented. For the time being, activity may decline and fluctuations may be narrow. Holders are not inclined to sell since prices are considered low. Investors will not also care to extend their commitments until the outlook for equities improves.

Indian Iron have gained mainly in response to short-covering Engineering shares are on the whole dull. Jessop have met with scattered buying. In clearing miscellaneous shares, attention has centred on Dunlop Rubber, Indian Copper, and Hindustan Motors. Associated Battery are steady on paying a higher dividend. Indian Oxygen have retreated due to profit-taking, but Philips India are maintained on the prospect of a rights issue. Goodyear India, Union Carbide and British Paints have been sluggish. Rallis are fractionally higher due to the declaration of a higher taxable ordinary dividend of 11 percent, against 10 percent last year. Electric company shares lack interest.

Managing agency shares like Martin Burn and Jardine Henderson are quiet. British India Corporation are steady, while India Steamship are being freely offered. Among new shares, India Carbon have met with scattered interest. Hindustan Aluminium have reacted due to profit-taking. Bank shares are sluggish, although prices show little change. Sugar shares are neglected due to no prospects of substantial improvement in the output of sugar during the current season. The shortage of cane supplies, particularly in U.P. has caused concern. In paper shares, Orient have fluctuated both ways. Titaghur and Seshasayee have tended to drop. Shree Gopal and Bengal are steady.

Turnover in jute shares has shrunk. Investors are holding off due to the drop in the prices of jute goods. The resumption of work in Pakistani mills after the strike is being bearishly interpreted Birla and Barnagore are steady, but Ganges, Union, India and Cheviot have tended to be easier. Coal shares have dropped in the absence of support. Burrakur, Bengal and Central India are available at lower prices.

Cotton mill shares are being dealt in cautiously due to the sharp rise in the price of raw cotton. Since the Government will not increase the price of controlled cloth, profits of mills will shrink unless the rise in the price of raw cotton is restrained. J. K. Rayon have recovered on short-covering. Bharat Commerce and Dunbar are steady, while Elgin are weaker. Although selling pressure in tea shares has abated due to the improvement in prices of teas at recent auctions held in Calcutta, investors are chary of buying these shares. They like to wait until the recommendations of the Tea Finance Committee are implemented by the Government. Stray business in selected Dooars and Assam gardens has been transacted.

Government securities are sluggish and a small turnover has been done. The 3 percent Conversion Loan 1986 is hovering around Rs. 62. Prices of short- and medium-dated stocks are nominally steady. Due to their preoccupation with meeting the demand of the busy season, banks are taking virtually no interest in securities. State Government loans are on the whole easier.

Bombay

EQUITIES RISE IN BIG TURNOVER

L.I.C. BUYING HELPS SENTIMENT

Wednesday Evening.

FOR the first time in several weeks, Dalal Street presented a somewhat lively appearance last week Equities, which had started rallying towards the previous week-end, pushed their way further up and despite considerable intermittent profit-taking and tired bull liquidation, the market wound up the week with a sprinkling of further small gains More significant than the recovery in prices was the improvement in market sentiment which was reflected in a marked expansion in turnover With the suspension of forward trading in certain important commodities, some of the operators there seem to have turned their attention to the stock market. The operators are reported to have accumulated sizable bull positions in certain popular scrip.

The entry of new bulls appears to have scared bears who had been dominating the market for long. Equity prices had been marked down to levels which seemed to discount all the known adverse factors. Persistent bear selling and nervous bull liquidation over the past several weeks had rendered the technical position of the market vulnerable. Bears, therefore, rushed for a cover when they found that the market was offering resistance to further pressure and operators from commodity markets had turned their attention to the stock market.

While the recent recovery seems essentially technical, sentiment last week was aided by reports that the Life Insurance Corporation had made further purchases of selective scrip. Sentiment was further helped by Mr. Lal Bahadur Shastri's statement at the annual meeting of the Associated Chambers of Commerce and Industry that the Government would do all it can to assist the private sector in fulfilling the plan targets. He stated that the private sector had an important rôle to play in the country's economic development.

The recent recovery in equity prices has been brought about primarily by short-covering. It is difficult to say how far the current recovery phase might go. Whether this recovery will mark the beginning of a change in the underlying trend in equity prices will depend on the next Central Budget. Will the Central Finance Minister heed the various suggestions put forward by the stock exchange presidents in their joint memorandum for reviving the capital market?

Steel shares displayed a distinctly firm undertone on renewed bull support. With bears anxious to cover their sales, occasional profit-taking was well absorbed. Engineering shares were in good demand. Tata Locomotive held firm despite the announcement of a lock-out. Voltas were marked up on expectations of a higher dividend.

Cotton textile shares were also steadier despite reports indicating that the Government was in no mood

T. R. BHAGAVAT, General Manager

to revise the realisation multipliers to compensate for the rise in cotton prices. Hopes that the Government *was likely to take firm action to* bring down cotton prices induced bear covering in textiles. The recovery *was particularly marked in* rayon shares which had been the weakest in the declining trend. *National Rayon recovered* sharply on strong bull manipulation. Baroda Rayon firmed up on buying based on *the Company's encouraging* performance.

Motor-car shares showed marked strength. Hindustan Motors improved on reports that the L.I.C. had made sizable purchases of this scrip. Cement shares were quietly steady. Sugar shares were steadier due to the scarcity of offerings. Dyes and chemical shares firmed up in sympathy with the general trend. Selected counters in the miscellaneous section evoked fair enquiry. Bank, insurance and electric shares were dull but steady.

Cash shares which had been neglected for long evoked good enquiry and recorded sizable gains. Sandvik Asia, S.L.M.-Maneklal, Colour-Chem, Fit Tight Nuts, A.B.C. and Hindustan Wired Glass were some of the outstanding bright spots.

Madras

BOMBAY ADVICES HELP SENTIMENT

SELECTIVE SUPPORT FOR PLANTINGS

Tuesday Evening.

THE Madras stock market has been steady during the past week. Prices of clearing shares, in particular, have improved due to short-covering, combined with replacement buying. Support has also been forthcoming, from outside sources. *The improved trend in the Bombay* stock market has helped to impart steadiness. Operators and investors think that the Government will carefully consider the memorandum which the stock exchange presidents have submitted to the Central Finance Minister, Mr. T. T. Krishnamachari. Towards the close, turnover has tended to decline in view of the long holidays; the stock market will remain closed from 25th December, 1964 to 3rd January, 1965, for Christmas and New Year.

Business in Government securities has been negligible. A fair turnover has been seen in good preference shares. In bank shares, State Bank of Travancore have been supported up to Rs. 82.50. Indian Overseas have been quoted at Rs. 152. In the sugar section, Deccan have hardened to Rs. 10.60 on replacement buying. E.I.D. have gained fractionally at Rs. 35.75. Andhra are quoted at Rs. 12.60 and Mysore at Rs. 27.75. Travancore have reacted to Rs. 6.95 due to profit-taking.

Selective support has been forthcoming for planting shares. Consolidated Coffee are fully steady at Rs. 25.37 and Periakaramalai at Rs. 3.70. Blue Mountain are barely steady at Rs. 2.22, and business has been done in Cochin Malabar at Rs. 6.07. Ouchterlony have come to hand at Rs. 3.37. Among rubber shares, Kailas have attracted support up to Rs. 6.30 on prospect of a bonus issue in the ratio of one bonus share for every two held. In tea shares, Haileyburia are steady at Rs. 12.40, Nelliampathy at Rs. 5.20 and Peermade at Rs. 20.90. In composite gardens, producing both tea and coffee, Waterfall have been done at Rs. 2.40 on paying a taxable ordinary dividend of 10 percent. Devon have been taken up to Rs. 12.35 and Coorg at Rs. 4.77. Among coffee shares, Anaparai are steady at Rs. 3.75 on paying a taxable ordinary dividend of 20 percent. Swinton have come to hand at Rs. 2.52 and Mysore Coffee at Rs. 4.12.

In textile shares, South India Viscose have recovered to Rs. 102 and Travancore Rayon to Rs. 17.75. Madura are steady at Rs. 35 and Lakshmi at Rs. 132. K. Rajendra have reacted to Rs. 74.75 on the prospect of a rights issue in the proportion of one new share for every four held, at par. Bangalore Woollen are quoted at Rs. 279.50. Buckingham at Rs. 277, Mettur at Rs. 225 and Ramnarayan at Rs. 85.

In the miscellaneous section, Ashok Leyland are wanted up to Rs. 7.25 and Aluminium Industries are about steady at Rs. 23.70. In cement shares, India are weaker at Rs. 5.10 and Dalmia at Rs. 12.75. Mettur Chemical have met with support at Rs. 14.25. Seshasayee Paper have improved to Rs. 7.20, but Mysore are sluggish around Rs. 11.25. Parry's Confectionery have improved to Rs. 3.03 on paying a final taxable ordinary dividend of 9 percent, making 27 percent for the year. Ruby Rubber have been done at Rs. 4.33 on declaring a taxable ordinary dividend of 9 percent. Kirloskar Electric are wanted at Rs. 22.25, but Madras Rubber have softened to Rs 9.06. Spencer are maintained at Rs. 21.50 and Textool at Rs. 128.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations. Highest for the week. Lowest for the week. Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available. All quotations are in Rs.]

London

BUYERS RESTRAINED BY ADVERSE NEWS

SELECTIVE BUYING IN EQUITIES

London, 23rd December.

IT was another disappointing week in the stock market. There was nothing to induce buyers to open commitments while there was no lack of adverse influences, including the November overseas trade figures. Gilt-edged passed through a very difficult period and still had the capital gains tax uncertainty to contend with. The support given to the Funds by the authorities on Thursday seemed to have shocked many people outside the market, but this was by no means a new thing as the Government broker was always prepared to steady the market in times of stress. Indeed conditions were a good deal steadier for his action, although prices were somewhat lower than a week ago. Equities drifted lower, but there was small selective buying in the past two days. Bear covering also helped to some extent. Dollar stocks met with a good demand, following the upward trend on Wall Street. The dollar premium moved up to over the 10 percent mark again. Gold shares were in the forefront and substantial gains were recorded, but the market appeared to have boiled over and the gains were pared. Coppers lost ground, while tins moved irregularly. Oils fell away on tax uncertainties, but were steadier now. Plantation shares were inclined to ease.

Money

THE CALCUTTA MONEY MARKET

SLIGHT INCREASE IN ADVANCES

Wednesday, 23rd December.

THERE has been a small increase in the general level of advances in the Calcutta money market during the past week. It has occurred almost entirely because the requirements of the cotton mills are higher. The credit given to the other main categories of borrowers—the jute and sugar mills, the iron, steel and engineering industries, and the food-grains and seeds trade—is unchanged. In the interbank market, conditions have eased a little, and the call rate has dropped from 4¾ percent to 4 percent.

The exchange market has been less active. The supply of tea bills is fair, but there are very few gunny bills. The demand for remittances has been moderate. In London, sterling has shown a somewhat weaker trend in relation to most of the major currencies, although fluctuations have been narrow.

BULLION WAS STEADY IN CALCUTTA during the past week. There was a shortage of supplies. Silver rose from the previous week's level of Rs. 257.20 to Rs. 269.50 a kilogram. The price was quoted at 113¼d in London and at 129.3 cents in New York.

In sympathy with the rise in silver, gold was steady and the price of 14-carat rose from Rs. 68.75 to Rs. 69.50 a 10 grams.

DURING THE WEEK ENDED 18TH December, Government of India Treasury bills for Rs. 56,53,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 22nd December. The total amount offered was Rs. 2,15,00,000. Tenders at Rs. 99.380 percent were accepted in full and those at Rs. 99.375 percent were allotted 93 percent approximately. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.499 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 4th January.

IT IS STATED THAT 91-DAY Intermediate Treasury bills will be sold from 23rd December, 1964 to 2nd January, 1965 at Rs. 99.391 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 16th December to 19th December amounted to Rs. 2.65 crores.

ACTIVE NOTES DROPPED BY Rs. 3.07 crores to Rs. 2,507.46 crores while the total note issue rose by Rs. 86 lakhs to Rs. 2,521.09 crores, according to the return of the Reserve Bank of India for the week ended 18th December, 1964. Notes held in the Banking Department consequently rose by Rs 3.94 crores to Rs. 13.64 crores. Deposits of the Government of India increased by Rs. 1.26 crores to Rs. 54.31 crores, but those of State Governments dropped by Rs. 7.03 crores to Rs. 10.79 crores. Balances of scheduled banks were Rs. 3.46 crores smaller at Rs. 90.09 crores. Balances held abroad at Rs. 9.86 crores showed a decline of Rs. 98 lakhs. Investments rose by Rs. 30 laghs to Rs. 142.74 crores. Loans to scheduled banks declined from Rs. 23.30 crores to Rs. 22 81 crores, of which advances against usance bills amounted to Rs. 2.28 crores (Rs. 1.41 crores). Advances to State Governments stood at Rs. 39.04 crores, against Rs. 31.63 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 11th December, 1964, shows a drop of Rs. 6.04 crores to Rs. 661.19 crores in total deposits. Investments in Government securities are down by Rs. 26.87 crores to Rs. 257.06 crores, while other authorised investments remain unchanged at Rs. 8.98 crores. Advances including loans, cash credits, overdrafts and bills discounted and purchased have improved by Rs. 7.86 crores to Rs. 370.58 crores. Cash and balances are, in consequence, shown at Rs. 30.27 crores or Rs. 6.78 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 11th December, 1964, shows Demand and Time liabilities at Rs. 1,345.73 crores (Rs. 29.90 crores on account of borrowings from banks) and Rs. 1,394.48 crores (Rs. 13.46 crores), compared with Rs. 1,349.69 crores (Rs. 28.60 crores) and Rs. 1,391.48 crores (Rs. 17.09 crores), respectively, in the previous week. Cash has declined by Rs. 83 lakhs to Rs. 64.86 crores, while balances with the Reserve Bank have increased by Rs. 5.83 crores to Rs. 97.92 crores. There is a drop of Rs. 36 67 crores to Rs. 765.87 crores in investments. Advances and bills discounted at Rs. 1,804.70 crores show a rise of Rs. 20.36 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.9 percent and 65.9 percent, against 5.8 percent and 65.1 percent.

INCHEK TYRES LIMITED

A SATISFACTORY BEGINNING

SIR A. RAMASWAMI MUDALIAR PREDICTS GROWTH FOR TYRE INDUSTRY AND COMPANY

Addressing the Shareholders of Inchek Tyres Ltd., at its 4th Annual General Meeting on December 22, 1964, at Calcutta, Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon.), Chairman, said :

Ladies and Gentlemen :

I have great pleasure in extending to you a hearty welcome to the Fourth Annual General Meeting of your Company. The Directors' Report and Audited Accounts for the year ending 30th June, 1964, have been in your hands for sometime now and with your permission I shall take them as read.

The working of the Company during the first year of its commercial operation ending June 1964 resulted in a loss of Rs. 5,29,140/- which, after providing for depreciation to the extent of Rs. 3,65,355/-, amounted to Rs. 8,94,695/- and your Directors have recommended that the said amount be carried forward. Considering the fact that commercial production and selling operations commenced at the end of the first half of the year under review, the loss incurred is neither heavy nor unusual and it compares favourably with the performance of similar tyre manufacturing units established in India in the recent past.

Exports Encouraging

You will have noticed from the Directors' Report that the Company has already embarked upon a programme of progressively raising its exports to a number of countries so soon after the introduction of its products in the internal market. The orders received from these countries are indeed encouraging.

Production Rationalisation and Quality

Your Board of Directors undertook during the year under review a programme of rationalisation and balancing of types and sizes of tyres and tubes to effectively meet popular demand. You will be gratified to learn that the quality of the Company's products has been highly appreciated by customers all over the country and abroad and the retreading performance of the tyres has also been very satisfactory. I am confident that consequent on your Board's policy of maintaining a high standard of quality and rationalisation of production according to the pattern of demand, there may not be much difficulty in selling the products manufactured by the Company. The present production programme of the Company comprises 350 tyres per day and there are plans for progressive increase in this number. Your Directors expect that the working of the Company during the current year will be better.

Expansion

The scheme of second stage expansion referred to in my speech last year has been unavoidably delayed due to the time lag in selecting plant and machinery and finalising other details. An application has already been submitted for a licence valued Rs. 93 lakhs for import of plant and machinery from Czechoslovakia and the issue of the licence is awaited. Implementation of this expansion will be made through a phased programme commencing from 1965. Financial planning for the expansion programme is presently under the active consideration of your Directors. On completion of this scheme the Company's installed capacity will rise to 1000 tyres per day.

I am optimistic about the future prospects of the tyre industry in India in general and of your Company in particular. The index of production of rubber manufactures including tyres and tubes during the first eight months of 1964 was 195.2 as against 186.9 for the whole of 1963. The output of automobile tyres (other than tractor and aero tyres) in 1964 is expected to be more than 20 lakh Nos. as against 19.25 lakh Nos. in 1963. There was significant expansion of production of transport equipments during the first-half year of 1964, registering an increase of nearly 30 per cent as compared with the corresponding period of 1963 The trend of production of automobiles, motor cycles, three-wheelers, etc. has been steadily improving. The auto-vehicles production target for the Fourth Plan is likely to be double that of the Third Plan and there is a proposal for the manufacture of 11-ton vehicles. The progress in this sphere together with the road development schemes likely to be undertaken during the Fourth Plan period will substantially increase the demand for tyres, tubes and accessories. Consequently the tyre industry will have good scope for development and expansion.

Rising Prices of Raw Materials

A redeeming feature of the 1964 Budget was the extension of certain concessions in respect of excise duty on tyres and tubes particularly to the newly established units. It is, however, rather disquieting to note that this welcome fiscal assistance is being largely offset by the continuously rising prices of indigenous raw materials which the industry has to consume in an increasing measure. I hope, in consideration of these circumstances, the Government would provide for further fiscal concessions to the industry, particularly to the new and smaller units.

Development of Indian Talents and Cordial Labour Relations

With the increase in the strength of trained Indian personnel, the number of foreign technicians deputed by the collaborators has been progressively reduced and at present there are only three senior foreign technical personnel, who will stay in India for some time more according to the terms of the collaboration agreement.

In pursuance of its policy of achieving higher productivity, the Company has recently negotiated and settled a suitable system of labour payment linked with productivity. The scheme has been well received by the labour union and workers. The relation between the Management and labour has been cordial.

Before I conclude, I take this opportunity to express our sincere appreciation of the co-operation and assistance offered by the technical collaborators Messrs. Technoexport Foreign Trade Corporation, Praha, Czechoslovakia and the loyal and devoted work of all officers and staff of the Company throughout the year under review.

NOTE :—This does not purport to be a record of the proceedings of the Annual General Meeting.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS.

Persons interested in full details regarding the proposed issue of Capital are requested to apply for a copy of the Prospectus from the Registered Office of the Company, or from the Bankers to the Issue and Brokers mentioned hereinafter

TECALEMIT (HIND) LIMITED

(Incorporated on 4th December, 1963, under the Companies Act, 1956)

Registered Office: **8 & 12, Chittaranjan Avenue, Calcutta-13.**

EXISTING AND PROPOSED ACTIVITIES OF THE COMPANY

The Company, which has been promoted by Tecalemit Ltd., U.K. is engaged in the manufacture of a wide variety of Garage Servicing Equipment, Industrial Lubrication Equipment, Automobile Accessories, Lubricating Oil Dispensing Equipment, Grease & Oil Guns & Pumps, Adaptors, Special Lubrication Assemblies, and Pipe and Pipeline Fittings. The Company has plans to increase the range of products to include Nylon Tubes and Hoses, Low & High Pressure Grease and Hydraulic Hoses, Automobile Filters and Filter Elements, Oil Firing Equipment for ceramics and other uses, Fire Fighting Appliances and Vehicle Lubrication Systems.

The Company was incorporated on 4th December, 1963, and has taken over the Indian business of Tecalemit (India) Limited, a Company incorporated in the U.K., including the Sales Offices and Godowns situated at Calcutta, Bombay, Madras and New Delhi, and has entered into a Trade Mark User Agreement and an Agreement covering Licence to Manufacture with Tecalemit Ltd., U.K.

LOCATION OF INDUSTRY

The Company has also acquired, through an arrangement, a factory space and stores in Calcutta (West Bengal) which has been in operation since April, 1964, and is negotiating for the construction of a further factory in Bangalore (Mysore).

ASHOK LEYLAND LIMITED

CHAIRMAN, SIR A. R. MUDALIAR'S SPEECH

The following is the speech delivered by Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon.) Chairman, Ashok Leyland Limited, to the Shareholders at the Sixteenth Annual General Meeting of the Company held on 17th December, 1964 at Ennore, Madras.

Gentlemen,

I have great pleasure in extending to you a cordial welcome to the Sixteenth Annual General Meeting of your Company.

The Directors' Report, audited balance sheet and profit and loss account for the year ending 30th September, 1964 have been circulated to you and, with your permission, I shall take them as read.

As the Profit and Loss Account shows, the sales for the year 1963/64 at nearly Rs. 17.38 crores were a little over 59% in excess of the corresponding figure for 1962/63. This result was achieved by an increase in the average output of Comet chassis per month from just over 200 in 1962/63 to 315 in 1963/64; and by a substantial increase in the sale of spare parts, arising partly from a larger allotment of foreign exchange providing for the manufacture of more spare parts in your factory. The surplus available after provision for taxation has enabled your Directors to propose a dividend of 9% subject to deduction of tax and to transfer to general reserve a sum a little in excess of Rs. 36 lakhs.

Your Factory's ability to increase its output by over 50% in one year must be accepted as unusual, being in excess of what could normally be expected. In January 1964, in my speech at the last Annual General Meeting, I enumerated the reasons which had made the results for the 1962/63 year disappointing. I also advised you that it was possible to anticipate an improvement with some confidence; and I indicated that the re-establishment of a flow of materials adequate to sustain the Factory's output, the more rapid installation of plant and machinery after a period of delay in machine tool deliveries and other steps which your Company had taken to overcome the difficulties faced during 1962/63, would make 1963/64 a more satisfactory year from the financial point of view. By the end of 1963, production had been re-established at a satisfactory level; and it is to the credit of all concerned that throughout the year which ended on the 30th September, 1964 there was a steady improvement.

Smooth Progress

A study of the graph of output from 1954 to 1964 included in the Balance Sheet, will show that a smooth upward curve could be drawn, on which the actual output figures would lie approximately, with the exception of actual output figures for 1961/62 and 1962/63, the former being above the smooth curve and the latter below it. This indicates that in the year 1961/62 we produced more chassis than was justified by the foreign exchange available for imported materials, this fact contributing among others which I have previously enumerated to the very serious drop in production in 1962/63. I would not wish to be over-optimistic on the basis of the 1963/64 results, but it is very satisfactory to note that they indicate a reversion to the previous steady increments in yearly output, the actual 1963/64 output being approximately equal to what the curve would indicate. It is interesting to record that your Company anticipates an output in the 1964/65 year of not less than 4,500 "Comet" chassis and that this figure is close to the one which would be obtained from the curve to which I have referred, if it were plotted from an equation satisfying the actual outputs from 1954/55 to 1963/64, excluding the figures for 1961/62 and 1962/63. It is to be noted that if the 1964/65 target is achieved, the increase in production will be approximately 20% in comparison with the 1963/64 year.

It is necessary for me, at this point to emphasise that all forecasts of future developments assume the maintenance of good relations between Management and employees. While, on the whole, these relations have remained cordial since your Company started production in 1954/55, there have recently been indications of some restlessness amongst employees, leading to a regrettable tendency for workmen deliberately to reduce output on several occasions, with a view to induce Management to make concessions. The temporary shortage of rice, which has faced employees with domestic worries, has contributed to some deterioration in their readiness to co-operate in achieving full output from the Factory. It is hoped, however, that better counsels will prevail and that the Company's employees will revert to a tempo of work which will maintain the steady increase in output which must be achieved for economic working.

Expansion Programme

I am happy to be able to inform you that the expansion programme initiated in 1960 with a view to increasing the production of Comet chassis to not less than 5,000 per annum, with adequate provision for spare parts manufacture is nearing completion. Within a month or two all the plant and machinery, including jigs and special tooling, will have been installed; and steps taken some time ago to train artisans will make it practicable for full utilisation of the installed capacity to become effective. Based on the output achieved during the 1963/64 year, it is possible to hope that actual production will in due course considerably exceed the planned figure. This arises from the fact that, assuming your employees will work with a will, their efficiency will be at a higher figure than was anticipated, so that in future years it will not be at all impossible to achieve outputs considerably in excess of 5,000 per annum without further capitalisation. At the same time, it will become increasingly practicable to produce in your factory spare parts adequate to meet the demand.

I have referred to the production of spare parts as one of your Company's important activities. In recent years, the supply of spare parts to your customers has been, for reasons beyond control, far from satisfactory and too many vehicles have been temporarily unserviceable for prolonged periods because essential replacements parts were not available. In common with other Automobile Manufacturers, your Company faced the difficulty that insufficient foreign exchange could be made available for the import of spare parts, while factory facilities remained inadequate to provide for the level of output necessary to meet the demand not only for current production but for the servicing of the large number of vehicles already in service. Another disability has been that the ancillary industries, manufacturing in India a wide range of components which manufacturers purchase in the finished condition, were unable to meet the demand for spare parts additional to supplies made to manufacturers for inclusion in the chassis and engine. The position has already greatly improved and will continue to do so. More foreign exchange has been made available for importing spare parts not available from Indian factories; and improved output facilities in the factories is enabling manufacturers increasingly to produce components, additional to those required for chassis manufacture, for sale as spare parts. If the present improvement can be maintained, it is anticipated that your Company will soon be in a position to meet all spare parts demands within a reasonable period from the receipt of orders.

I have referred to the general expansion programme which was inaugurated in 1960. More recently, in 1963, with a view to increasing the indigenous content of the Comet chassis, it was decided to add to components being manufactured in your factory differential wheels, pinions and trunnions; engine cam shafts; and engine timing gears. Your Directors decided that it would be undesirable to risk over capitalisation by making a capital issue to cover the expenditure which would have to be incurred on the import of plant and machinery for the manufacture of these new components. Accordingly, a loan of Rs. 60 lakhs was negotiated with the Commonwealth Development & Finance Company, which became available from August 1964. All the plant and machinery required for this expansion of the Factory's manufacturing facilities is currently being ordered and it is hoped that it will be installed so that actual production will commence in 1965. With the inclusion of this additional range of components to be manufactured in your Factory and your Company's ability to purchase additional bought out finished components, for example brake assemblies, from new manufacturing concerns established more recently in India, it is anticipated that it will be possible to increase the indigenous content of the Comet chassis to 90% before the end of 1965, compared with a figure of 82% at the present time.

New Models

In my speech to you in January 1964, I informed you that the Government of India had approved the inclusion of new models in your Company's range of products, based on the Leyland Beaver chassis; and I enumerated the types of vehicles it was proposed to manufacture. You will be pleased to know that during the 11 months which have elapsed since the last Annual General Meeting, considerable progress has been made with planning for the

DATE OF OPENING AND CLOSING OF THE SUBSCRIPTION LIST

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON 6TH JANUARY, 1965 AND WILL CLOSE AT THE CLOSE OF BANKING HOURS ON 16TH JANUARY, 1965 OR EARLIER AT THE DISCRETION OF THE DIRECTORS BUT NOT BEFORE THE CLOSE OF BANKING HOURS ON THE 8TH JANUARY, 1965.

introduction of the heavier duty chassis. The provision of funds for the construction of new buildings for the first phase of the "BEAVER" project has been included in the Company's 1964/65 Capital Budget. Building plans are nearing completion and work will be commenced in the near future. Provisional estimates have been completed with a view to assessing the expenditure which will have to be incurred on plant and machinery for the new project. These estimates indicate that about Rs. 330 lakhs will be required for the purchase of machine tools, jigs, etc. which will have to be imported. Additionally, a sum exceeding Rs. 200 lakhs will be required for buildings and for plant and machinery to be purchased in India. Your Directors are giving their active consideration to the most advantageous manner in which finance can be made available to meet the very high level of expenditure involved. In this connection, it is with pleasure I am able to inform you that the Leyland Motor Corporation has indicated its readiness to provide the amount of Rs. 330 lakhs (approximately £2.5 million) which will be required for imported plant and machinery, subject to satisfactory arrangements being approved by the Government of India. Your Company is engaged in ascertaining as closely as possible the amount of money in rupees which will become available from internal resources, so that it will be possible to calculate the balance which will have to be provided by a capital issue. As far as work on this problem is concerned, it appears that it will not be necessary to raise capital to cover the total estimated expenditure of approximately Rs. 550 lakhs (the sum of the amount required for imported plant and machinery and that required for buildings and plant and machinery to be purchased in India). It is probable, therefore, that the necessary finance will be raised partly by a capital issue and partly by a loan from the Leyland Motor Corporation, subject to the Government of India approving such a loan and its terms. Certainly, however, some additional capital will have to be raised and an application to the Controller of Capital Issues has been made for a new issue of Rs. 221 lakhs, of which Leyland Motor Corporation will take approximately Rs. 133 lakhs and the balance be subscribed by Indian shareholders.

Until such time as the heavier duty chassis have 100% indigenous content, it will, of course, be necessary for your Company to obtain an allotment of foreign exchange to cover the import of components from the United Kingdom. It is possible that such an allotment will not be made earlier than the 1st April, 1965, so that the first of the heavy duty chassis for sale may not be available until after June 1965. Market surveys indicate that there will be a demand for the heavier duty chassis which will justify your Company's decision to include the new models in its range of products. In this connection, it is anticipated that by 1968 when production of the heavier duty chassis will be fully established, with a high indigenous content such restrictions on gross vehicle weights as might at the present time inhibit sales in a number of States will have been amended, so that it will be practicable for road transport users to take full advantage of the greatly increased payload capacities of the new model.

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research

- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,

  - economic indices
  - business research.

P. O. Box 14, Calcutta-1 or 5, Mission Row, Calcutta, India.

Ennore Foundries

The increase of your Company's demand on Ennore Foundries Ltd. and additionally the increase in the demand for iron and aluminium castings by other manufacturers has necessitated steps being taken to ensure that Ennore Foundries can meet this demand. Plans are nearing completion and orders have already been placed for plant and machinery to enable Ennore Foundries to increase its output to 200 tons per week. Looking to the future, provisional plans are already in train, so that when the demand arises the Foundry output can be increased to something over 400 tons per week.

You will be interested to know that your Company recently prepared a Five-Year Plan with a view to forecasting the probable increase of its turnover, the capital expenditure necessary to achieve it and the likely profitability each year. Calculations made in relation to this Five-Year Plan indicate that by 1967/68 the Company's turnover may reach a figure of about Rs. 33 crores, with a reasonably fair profit on capital employed at that time, after taxation. Data utilised for the preparation of this Plan were conservative, revenue being calculated on the low side and the expenditure on the high. However, the figures must necessarily be treated with reserve because the assumptions on which they have been based may prove incorrect with the passage of time. Any unexpected or abnormal increases in material costs, reductions in foreign exchange available for the Automobile Industry, loss of production due to labour disputes, etc. would obviously reduce the turnover and at the same time the Company's profitability. The plan will, nevertheless, be useful, as representing reasonable annual targets at which the Company can aim and indicating that subject to reasonably normal conditions being maintained, output of your Company's products may increase steadily with satisfactory profitability.

I have considered it necessary to give you a fairly detailed account of the programme of expansion which the Board has decided upon and which I trust will have your general approval.

Changes in Board and Top Management

Let me now refer to the changes in the constitution of the Board itself and to the changes in the Company's top management. It is with deep regret that I have to report the loss that the company has sustained by the sad demise of Sir Henry Spurrier, Chairman of Leyland Motors, and a Director of your Company since the collaboration agreement was arrived at by the Indian Company with Leyland Motors. Sir Henry took the keenest interest in the development of the Indian company and we were fortunate to have more than one visit from Sir Henry, to your factory and offices. It was his vision which enabled us to undertake the expansion of this company, after its formation as Ashok Leyland Ltd. The Directors have placed on record, their deep sense of loss at the passing away of Sir Henry and I am certain that you as shareholders, will join in expressing your great appreciation of his contribution to the success of the Company and, your regret at his demise.

Mr. W. West, Chairman and Managing Director, West Yorkshire Foundries Ltd. and a Director of Leyland Motors, has been co-opted as a Director in the place of Sir Henry.

I referred to changes in the top management of the Company. Mr. A. E. L. Collins, who has been Managing Director of the Company since its reconstitution, is shortly leaving us to take a place in Leyland Motors, London. His services to your Company have been invaluable. His devotion to duty, his concern for the growth and prosperity of your Company, his intimate knowledge of Indian conditions, his suave manners and his tact in dealing with the staff, particularly with the workers in the factory cannot be exaggerated. Mr. Collins has set a pattern of conduct as Managing Director which can be paralleled by only a few examples. As this will be the last meeting of the shareholders which Mr. Collins will be attending as Managing Director, I am sure you would like to place on record, a Special Resolution of appreciation of his unique services.

To remove any deep feelings of disappointment at his departure which you may feel at this juncture, I should hasten to state that he will still be available to us for advice and consultations in India over a long period. In the projects that we are undertaking, the expansion that we contemplate, it is essential that Mr. Collins, who has been associated in the planning and has such intimate knowledge of it, should be available, particularly in the initial stages. I said that Mr. Collins will be joining the Leyland Motor Company in London, but he has kindly agreed to visit our Company at least once a quarter to see the progress we are making and give us the benefit of his advice. We are extremely thankful to Mr. Collins for this gesture of his deep interest in our Company—a gesture which entails not a little trouble, labour and time on his part. We are also thankful to Leyland Motors for not merely agreeing to this proposal, but actively supporting it. As you will see from the Notice, Mr. Collins will be retiring at the end of March from the services of your Company.

From the notice of the Meeting before you, you would have seen that the Board of Directors has decided to appoint Mr. J. C. Watson as Managing Director of the Company for a period of five years from the 1st April 1965. Mr. Watson has been the Factory Manager from the 1st October 1963. His work has been quite satisfactory and much of the credit for the improved production in the factory during 63/64 is largely due to him. The Directors have no hesitation in recommending to you, for approval, the resolution which is before you, to appoint him as Managing Director for the period mentioned therein. With your approval, the Company will approach the Government for its sanction.

Thanks

It only remains for me now to thank the Management, Officers, Clerical Staff and the Workers at the Factory for their enthusiastic co-operation which has helped the Company to progress steadily during the years. I trust that this co-operation on the part of the workers, particularly, will continue in the future and even as they are proud of the place that Ashok Leyland occupies in the automobile industry in India now, they will be even more proud in the near future, of its position —a position which will be due in no small measure to the co-operation of Officers, Staff and Workers.

I should like to thank both the Central Government and the State Government for the advice, help and assistance that we have received from them.

Finally, I should like to thank you all—the Shareholders of the Company for the continued support that you have extended to us, which has enabled the Board to go confidently forward with its plans for enlarging the scope of your Factory.

NOTE :—This does not purport to be a record of the proceedings of the Annual General Meeting.

J. K. STEEL LIMITED

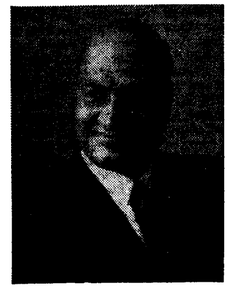
CHAIRMAN, MR. LAKSHMIPAT SINGHANIA'S ADDRESS

The following is the Chairman's address by Mr. Lakshmipat Singhania at the 11th annual general meeting held in Calcutta on Monday, December 21, 1964.

Gentlemen,

I have pleasure in welcoming you to the 11th annual general meeting of the company. The annual report and accounts for the year ended June 30, 1964, together with the directors' report have already been circulated.

During the year, a number of far-reaching changes have taken place in our country and abroad. We have lost our most beloved leader, Pandit Jawaharlal Nehru, who showed us the way for economic uplift of the country. He was a worldwide figure and was recognized as a unique personality of the time. The lead given by him in the economic, social and political fields will be of invaluable guidance to us for the future in building up the Nation. We have been fortunate to have Mr. Lal Bahadur Shastri as country's new leader and Prime Minister. He hails from the masses and, therefore, understands the difficulties of the common man much more than anybody else. There can be no doubt that his leadership will be of immense benefit to the country.



The country is facing at present difficult problems, such as very slow rate of economic development, shortage of essential commodities like food and consumer goods, and slowing down of the rate of production in many spheres. The result is that the real value of rupee has been going down and, due to the incidence of extraordinary heavy taxation on the people who form a small minority of the total population, the economic condition of these people has been greatly affected. Shifting the blame from one place to another is not going to solve the problem. The wholesale dislocation of normal channels of trade and foisting blames on certain people, who create the wealth, is not going to help. I have always believed that, taking the nation as a whole, there cannot be anything wrong in the country. It reminds me of a saying "You cannot divide nothing. Wealth is production and the more you produce the more there is to divide but if you won't produce anything above bare subsistance and no matter how you divide, it is still nothing".

Production Hindrances

I have always emphasized that, under no circumstances, production should be hampered. Unfortunately, what is happening in our country today is that there are more hindrances to production, and those, who produce, meet with more of discouragement and obstacles than of encouragement and help. The fundamental basis of production is cooperation between the Government, the producer and the worker, and unless and until it is viewed in this perspective, it is not possible to step up production, no matter whosoever is blamed. Without production no problem can be solved and, therefore, all emphasis should be laid on more production instead of laying stress on certain theoretical and political aspects, which tend to retard production.

Coming to the affairs of the company, sales have slightly gone down and gross profit is less by about 2½% as compared to last year. This can be mainly attributed to the fact that last year's sales included substantial portion of carried forward stocks. The margin of profit on sales was also affected on account of higher prices of raw materials and increased cost of labour and stores. Further, continued restrictions on power and difficulty in getting raw materials affected production. I hope, in the coming year, we will not only make up this leeway but also increase our sales, as we have started the manufacture of new products and also expect the supply of raw materials to improve.

The supply position of billets, which is the raw material for production of jute baling hoops, continues to be very difficult. Further, the main producers are reluctant to manufacture and supply 2" square billets, which the company has been getting from the very inception and for which your mills are designed and equipped. We are now asked to take and roll bigger size billets which are more than 50% in weight and which will result in lowering of production. Probably the reluctance of the main producers to supply 2" square billets, which they have so far been

Mr. Lakshmipat Singhania

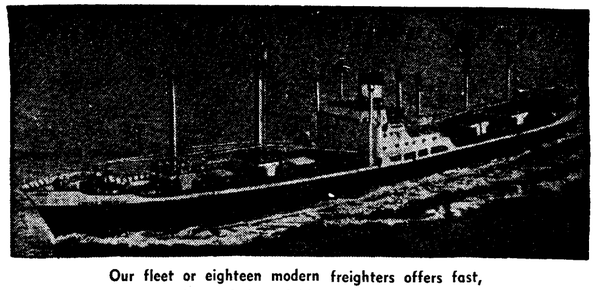
doing, is due to the fact that the price of 2" square and bigger size billets being the same leaves them with lesser margin of profit when rolling 2" square billets. We have suggested to the Government that it should examine this matter and allow suitable increase in the price of small sized billets so that the rolling industry is not made to suffer. It is an irony of fate that the rolling industry, which is rendering important service to the nation, has not been looked after properly. It was expected, that after the public sector plants would come into operation and after the expansion of the existing private sector plants, there would be enough supply of billets to the rolling industry. Unfortunately, however, the situation has worsened rather than improved, and at present billet supplies to the rolling industry is not even half of their total requirements, resulting in continuous national loss due to idle capacity.

Wire Rope Plant

As mentioned by me last year, the project for doubling the capacity of your wire rope plant has made good progress. The foreign exchange requirements were arranged through the help of the Industrial Credit & Investment Corporation of India Limited. The machinery has started arriving, the building is practically ready and, it is hoped, that in a few months, the plant will be put into commission. Although it was hoped that we would be able to start this plant earlier, there has been some delay due to the delays in getting the import licence and going through other formalities. The Government has already licenced production capacity for steel wire ropes to the extent of 40,000 tonnes whereas the present consumption in India is very much less. Several new wire rope factories have recently come into operation and it will be some time before production and demand will adjust themselves. However, a significant development is the change in the pattern of demand of wire ropes from mining to engineering because of considerable reduction in the production target of the coal industry, which is the largest single consumer of wire ropes in India.

During the year the company commenced production of electric hoist blocks and chain pulley blocks. These products of the company are of good quality and have been well received in the market. I hope that this new line of manufacture of your company will, in course of time, develop further with the growing demand in the country for such goods.

The company is also finalising the arrangements for the manufacture of electric overhead travelling cranes and it is hoped that in not too distant future we shall be able to commence their manufacture.



The labour situation in the State is unfortunately not conducive to an atmosphere of higher production and has been a constant source of worry and disturbance. The labour leaders do not adopt helpful and constructive policies but encourage new and unreasonable demands about which there is no finality. They frequently advise go-slow tactics which means not only a loss to the nation but also a great loss to this State as entrepreneurs are losing faith in the establishment of new industries in this State. I have always viewed this development with great pain, particularly when there is so much unemployment in this State and the prime need of the State is increased opportunities for more employment, which can be generated only by establishing new industries and by expanding existing industries. I hope that the State Government will give this matter very serious consideration at an early date and take steps to improve the situation.

It is unfortunate that the Bonus Commission recommendations and the subsequent Government decisions on it have not led to better industrial relations between employers and workers. On the contrary, more confusion and difficulties have been created in resolving the bonus problem. Unless the situation is cleared, it will have an adverse effect on production. I only wish that while taking decisions on this matter the Government would keep in mind the ultimate burden on the consumer and the requirements of industrial development.

Gentlemen, as I have said earlier, I wish to repeat that prosperity of the country depends upon greater production with greater efficiency and I earnestly appeal to every one, who is interested in the welfare of the country, particularly of this State, whether he is a worker or belongs to management, to do his utmost to increase the production.

On your behalf I must express my appreciation for the good work done by all sections of the company's employees. Our thanks are also due to the managing agents for the very valuable services rendered by them and to our customers for their continued patronage of our products.

ASSOCHAM ANNUAL MEETING

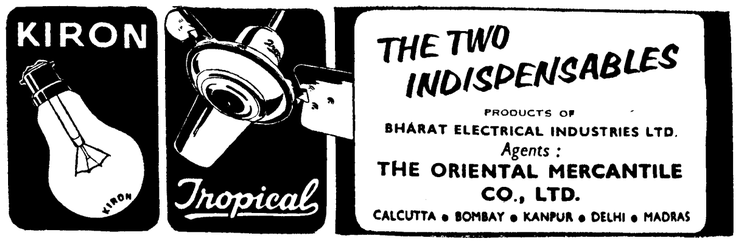
TEXT OF RESOLUTIONS ADOPTED

AT the annual general meeting of the Associated Chambers of Commerce and Industry of India, held in Calcutta on Saturday and Monday, the following resolutions were unanimously adopted:

Prices: *Bombay Chamber of Commerce and Industry.* The unprecedented increase in the general level of prices during the current year is, perhaps, the biggest economic challenge the country's economy has had to face since independence. In their attempts to bring down prices, the Government has resorted to controls and rationing, procurement of foodgrains, zonal restrictions on their movements, tightening of bank credit and exhortation to the public and trade. These do not, however, offer a long-term solution. Controls and rationing are, at best, palliatives; procurements, merely a form of redistribution; and exhortation, only an appeal to emotions; they do not produce more. Growing shortages of agricultural and consumer goods on the one hand, and mounting nonproductive public expenditure and increasing money supply on the other, have brought about an inflationary situation. The remedy surely lies in stimulating agriculture and production, particularly of consumer goods, a rigorous pruning of non-productive expenditure, and in according priority to investments of shorter gestation, though in no way ignoring the need for building the industrial base. Happily, the Government keenly appreciates the need to combat boldly the problems of production and the problem of containing inflation. The Associated Chambers in welcoming this, would urge that a certain freeing of the economy and a more pragmatic approach will help to produce the greater flow of food and consumer goods which is required to stabilise prices.

Food and Agriculture: *Upper India Chamber of Commerce.* The Associated Chambers have observed with growing concern the inability to achieve a substantial and steady increase in agricultural output, particularly of foodgrains. They consider that a solution of the food problem by increased production and efficient distribution is vital to the country's economic stability and the successful implementation of its development plans. The Associated Chambers, therefore, urge the Central and State Governments to treat the problem as of the most urgent economic and national importance and, as a means of achieving a prompt, substantial and lasting improvement in the food situation, suggest—(a) that intensified cultivation and increased crop yields should be stimulated by greater adoption of such measures as the supply of improved seeds, fertilisers, pesticides, better cultivation methods and the use of modern implements, and the provision and utilisation of more irrigation facilities; (b) that in the interest of improving agricultural efficiency the present policy on land holdings should be reconsidered; (c) that the administrative machinery and personnel connected with agricultural services, particularly at State and district levels, should be strengthened; (d) that short-term agricultural credit to cultivators should be extended and improved; (e) that minimum prices for foodgrains should be fixed at the beginning of the season with a guarantee of purchase from the agriculturists at such prices at any time; (f) that the free movement of foodgrains throughout the country should be permitted at all times.

Taxation: *Madras Chamber of Commerce.* The laudable intention of the Government of India as expressed in the Finance Minister's speech introducing the 1964 Budget to get taxation policy to the paramount task of promoting economic growth was noted with much satisfaction by the Associated Chambers. They observe, however, that the overall picture that has emerged since the Finance Act, 1964, is that, while the reliefs granted under the Act were not insignificant, the new levies on bonus shares and equity dividends, the limitations on admissible expenditure and the application of an increased rate of super tax to a particular category of companies added to the severity and complexity of direct taxation. The Associated Chambers would, therefore, urge that in consonance with the object of promoting economic growth through modifications in taxation policy, the Government should give consideration to further bold and imaginative reductions in the heavy incidence of corporate and personal taxation which would have a stimulating effect on the economy, revive investment and schemes for development, and in so far as they improve the rate of growth of the economy, would increase rather than reduce the yield of direct taxation.



International Investment: *Bengal Chamber of Commerce and Industry.* The Associated Chambers believe that increased private international capital investment can play a major part in reducing economic and industrial disparities between the nations, and that in the present stage of Indian industrial and agricultural growth such capital can have a particularly stimulating effect on the expansion and diversification of the economy. They, therefore, welcome the positive steps which have been taken by the Government of India to provide incentives to foreign enterprise which can make a contribution to the national interest and to remove obstacles in implementing schemes of collaboration. The increasing interest shown by foreign investors in Indian projects is gratifying, but the response is still incommensurate with Indian investment and economic possibilities. The Associated Chambers recommend that even more intensive study of this problem is necessary in order that effective proposals may be made to deal with existing deterrents and to ensure that there are sufficient incentives to attract foreign capital on the scale necessary.

Ports and Transport: *Bombay Chamber of Commerce and Industry.* While acknowledging the action taken by the Government of India to deal with the various aspects of the transport problem, the Associated Chambers are concerned at the Government's failure to exploit fully the potential which exists for a co-ordinated development of all forms of transport and to ensure the maximum utilisation of all existing equipment and facilities. They urge that (a) greater attention be paid to centralised, co-ordinated and effective planning for the continuing development of all forms of transport in order to maximise the combined transport capacity of the country within the limits set by available resources; (b) continuing attention be devoted to increasing the capacity of the railways; to extending routes, replacing narrow gauge with broad gauge, and single tracks with double tracks in selected areas, with a view to maximising benefits to industries and trade; to introducing modern methods of operation in order to increase overall efficiency; (c) road transport be recognised as an important and, in an expanding economy, in increasing measure an inevitable supplement to rail transport; the development of roads and road transport be accorded urgent and greater attention by the Government; an equitable and uniform procedure be evolved to encourage road transport operators and to eliminate the difficulties and imposts which impede successful operation; (d) the planned development of ports be pursued with all possible vigour both as regards extension and modernisation of the major ports and enlargement of selected minor ports into major ports; (e) while ensuring equitable treatment to labour in general in all spheres, labour relations be handled with greater promptitude and firmness to avoid costly stoppages at a time of national emergency; and (f) bearing in mind the importance of transport in the context of the plans, and the urgency attached thereto, all possible efforts be made to implement policy decisions with the utmost vigour.

Labour and Production: *Punjab and Delhi Chamber of Commerce and Industry.* Having regard to the inherent limitations in the availability of resources in India and the alarming decline in the rate of growth of the national economy notwithstanding the vastly increased input of resources, it is the manifest duty of every section of the community to ensure the fullest utilisation of the existing facilities for achieving maximum production. In ensuraing such maximum utilisation, the labour force has a vital rôle to play; but in the opinion of the Associated Chambers, a fundamental change in the mood and motivation of the labour force which is essential for the attainment of maximum production can only be achieved if the Government will (a) orientate its labour policy uncompromisingly towards increasing production; (b) emphasise the national community needs as against industrial labour's own self-interest in the solution of labour problems; (c) take effective steps to raise the standards of labour discipline; and (d) differentiate between labour unrest based on industrial problems and labour agitation generated by politically-oriented trade unionism.

Power and Water: *Cochin Chamber of Commerce and Industry.* The Associated Chambers welcome the considerable improvements in the supply of electric power in many regions of the country and appreciate the relief which as a result has been given to industrial development and industrial production. They would emphasise however that crisis conditions have been experienced in certain areas and much remains to be done before all existing inadequacies and shortages are eliminated. Immediate attention appears to be required to the problem of supplementing hydro-electric sources with thermal generating stations and the need to spread resources by the development of State and regional grids. Further, there is reason to believe that schemes for the expansion of generating and distributing capacity are still not satisfactorily adjusted to the probable growth in long-term demand and the Chambers urge that the plans for the increase in power generation in relation to existing and potential industrial and consumer demand should continue to receive the highest priority.

While recognising that certain States have taken steps to utilise the water available for the expansion and extension of hydro-electricity, there has not been the same urgent alertness in expanding the supply of water required for domestic, industrial and agricultural consumption. All of these, in their various ways, are basic requirements for the future development of the health and prosperity of the country. The Associated Chambers would accordingly urge that future planning should devote considerably more attention and financial assistance to the provision of reservoirs, wells and other methods of supplying water for the numerous purposes for which it is a fundamental prerequisite.

NEED FOR A BOLDER EFFORT DURING THE FOURTH PLAN

By Tarlok Singh
(Member, Planning Commission)

Economic growth in the early years of the third plan has been disappointing, mainly because of agricultural stagnation and bigger defence spending. If such conditions are allowed to persist, they will do serious harm to the country. So a breakthrough is urgently needed.

TO pull a nation of more than 450 million out of the depths of poverty calls for sustained and almost superhuman effort. Under the best conditions, this effort would have caused deep stresses and strains. The task has been rendered even more difficult by the inadequate performance of the Indian economy over the past three years, specially in agriculture, by the great burdens which the country has had to bear because of the emergency, by the recent rise in prices and by the loss of a great leader of men who had for long embodied and inspired the national will.

While the basic impediments to rapid economic progress remain, such as the high rate of growth of population, lack of capital and foreign exchange resources, social conflicts not yet fully resolved and numerous problems of organisation and implementation, the negative aspects of the prevailing mood are a cause for real concern. They militate against a correct approach in the present critical period and to the next phase in India's development. If allowed to continue, they will do untold harm to the prospect of growth and stability during the coming years. Therefore, the key to a fourth plan capable of supporting a breakthrough in economic development lies in determined and relentless effort to deal with causes which have held back progress in recent years and to stimulate at every level the necessary zest and unity of endeavour. This is the central task of leadership at the national and State levels and in every sector of the economy.

If there is less public debate at present on the basic objectives and strategy of the fourth plan than occurred when the second or the third plan was formulated, this is to be explained by two circumstances. First, the broad approach to planned development set out in the earlier plans is now widely accepted. There is in fact no serious alternative to it. Rapid growth of the economy, increase of agricultural production and reorganisation of the rural economic structure, building up of basic and heavy industries, expansion of employment opportunities, securing of a minimum for the bulk of the people and diffusion of economic power are rightly regarded as essential aims. In this background, limitations of resources, including internal savings and foreign exchange, are recognised as constraints on the extent of advance that can be achieved in any direction during a given period. The second reason for lesser interest in discussions of a fundamental nature is the fact that problems of implementation have come to the fore in a manner not previously witnessed. These problems are now better understood. The factors which come in the way of substantial results being obtained in relation to any given effort or investment have been more closely identified.

In each field one can see how, given the necessary resources in personnel and materials and concentration of effort, substantial results, even exceeding targets set in the plan, are in fact achievable. For this reason, in the closing period of the third plan and in relation to the fourth plan as a whole, within the scheme of the agreed objectives and approach, the main accent has to be on action, on execution and on devising effective means. This is not to under-estimate the importance of goals of development. For, national plans are sustained both by vision for the future and by success in the present. Since tens of millions of persons are engaged in carrying out vital tasks, the perspectives of development, the aspirations of the people and the achievement of a just social order are a necessary condition for securing the best that each individual and each group can give towards the fulfilment of the plans.

Popular Co-operation

Although there have been many shortcomings in practice, a feature of India's development plans has been the attempt to involve large numbers of persons, groups and institutions in their preparation and execution. Five year plans have been thought of as a framework of action within which a great deal of activity would be generated, both directly and indirectly. Allocations of resources under the plans are essentially a means for stimulating widespread activity, for carrying greater awareness to the community as a whole and invoking from it a steadily increasing response. To the extent this process has remained incomplete, there has been a smaller measure of success than could have been attained.

Nevertheless, it would be proper at this juncture for every group in the economic life of the country to ask itself whether, on its part, it had done all or even a considerable part of what was expected of it under the third five year plan, and to propose the means by which it would more speedily eliminate the gaps which remain. Latterly, the most common attitude has been one of criticism and complaint rather than of deliberate effort to deal with the elements which account for slower progress. Too many have tended to speak, as it were, from the outside; too few as partners in a common undertaking. At this stage, therefore, earnest efforts, based on an approach of confidence in the nation's capacity and complete involvement from within, to repair the damage done to the third plan and to build up the future on stronger foundations constitute by far the most important and urgent aspect of work on the fourth plan.

In earlier plans, the factors which caused the greatest uncertainty related to the mobilisation of resources and securing the necessary foreign exchange. In these matters, experience in the third plan is encouraging. On the whole, despite the emergency through which the country has passed, the Centre and the Stages together would mobilise over the plan period about Rs. 700 crores more than the initial target. Although there will be strains, the Indian economy is capable of raising progressively larger resources for its development. In the matter of raising internal resources, this capability is likely to improve steadily. There is less assurance in the matter of external resources, but, within a margin, it is possible to reckon on sizable amounts of external aid and credits. At the same time, the performance of the economy in realising the third plan target for exports represents a distinct advance on the first decade of planning and holds promise for the future. At the beginning of the third plan, pressures on transport and power inhibited industrial effort and economic growth. Now there are slacks in the economy, specially in transport, and there is scope for accelerating the total effort. Thus, in a number of directions, despite setbacks in agriculture and the moderate rates of growth in industry, the fourth plan will start under more favourable conditions than the third.

The main causes of disquiet in relation to the fourth plan arise from the price situation of recent months and from factors bearing on organisation, administration and implementation. Success in the period immediately ahead in dealing with prices and implementation and in pushing the economy to a higher level of performance would greatly alter the outlook for the fourth plan. In relation to prices, the country is doubtless passing through a period of painful transition. The memorandum on the fourth plan has pointed out that during the second plan, prices rose by about 30 percent, but much of the increase was in industrial raw materials and manufactured articles. Between March 1961 and September 1964, prices rose by about 25 percent, but the rise in the price index of food articles was over 44 percent, while in that of manufactured articles it was about 6 percent and in industrial raw materials about 7 percent.

Recent measures to fix producers' prices at remunerative levels take into consideration the facts of the present situation as well as the need to ensure an adequate price incentive to the farmer. The first exercise on the fourth plan has been undertaken in terms of the price levels of 1963-64. How far this will call for revision when work on the preparation of the fourth plan reaches its final stage depends on developments in the intervening period. It is obvious that without an enormous amount of social discipline and of restraint of anti-social elements, it will be extraordinarily difficult to achieve a statisfactory price equilibrium. The problem of prices, therefore, is currently the most crucial factor in the formulation of the fourth five year plan.

Administrative Challenge

The very scale of efforts to be undertaken in the fourth plan makes a compelling and inescapable demand for higher standards of administration and organisation. Unless the administrative challenge is met, the larger dimensions of the fourth plan will be whittled down in practice and the investment will yield a much smaller return than the country is entitled to expect. The challenge runs through every facet of activity. Even where the main elements of the problem of implementation in any field have been discerned and their inter-connections noted, it is not in practice easy to eliminate completely the gap between planning and execution. But it is within the range of practical action greatly to narrow this gap by creating the conditions for sound organisation and team work, integrated effort, assured supply of materials and other inputs, appropriate delegations of authority, avoidance of delays and the necessary motivations and incentives.

In the past, planned development was often thought of as being largely a matter of framing the right economic and social policies, formulating investment plans, harnessing resources and enabling those responsible, whether at the Centre or in the States or in the private sector, to carry out the tasks assigned to them. The problems of implementation have proved in fact to be much more obdurate. They now call for more detailed strategies, for a better and sharper tools, for a more complete and unremitting pursuit of specific objectives than was allowed for in the past. This may be illustrated by a few examples drawn from tasks visualised in the memorandum on the fourth plan, recently approved by the National Development Council.

Investment Planning

The fourth plan is reckoned at present to involve as an outer limit a total investment of about Rs. 20,000 crores and current outlays amounting to about Rs. 2,500 crores. To the extent current outlays rise disproportionately, the volume of investment will be affected. Therefore, the plan must have a built-in scheme of expenditure control, of parformance budgeting and of performance evaluation. In turn, this will call for a review in fundamental terms of the existing system of maintaining public accounts. Of the total investment of about Rs. 20,000 crores, about Rs. 7,000 crores falls within the private sector.

Allowing for inherent difficulties in assessing private savings and of chanelling these into given directions, it will be necessary to determine much more accurately than in the past the sources and extent of savings in different parts of the economy and to devise various institutional and other means for directing savings into various planned investments, both in the corporate and in the household sectors. The existing data in this field need to be probed deeply. Again, considering investment programmes in the public sector, it is apparent that within each sector of the plan, there must be a careful study of alternatives, appraisal of costs and benefits and stricter application than in the past of the criterion of return on investment.

Successive five year plans mark important phases in the country's development. There is real justification for this approach in as much as each plan sets signposts to be reached and prescribes tests which must be accomplished over a given period by the nation as a whole. Yet, a five year plan is in a sense only a symbol and a framework. Planning and development have to be continuous and have to go on all the time. At each stage, one gathers in the harvests of the past and takes a fresh look at the future. This notion of continuity has to become more organically a part of our planning techniques and practice than has been possible thus far.

This implies, firstly, a carefully worked out plan of long-term economic development for at least ten or 15 years, which is reviewed from time to time; secondly, a view each year of the growth of the economy as a whole over the succeeding five-year period; and, thirdly, in relation to all major projects, a forward view each year of the physical programmes and the financial forecasts for the next four to five years. Moreover, since India's development takes place in the context of an expanding and rapidly changing international economy, with all its tensions and problems, as part of the planning

process itself, there must also be a constant effort to interpret international developments and to relate them to national and regional objectives and policies. National economic planning in a setting such as India's is based on internal as well as on external assumptions, and these must be continuously tested and recast to the extent necessary.

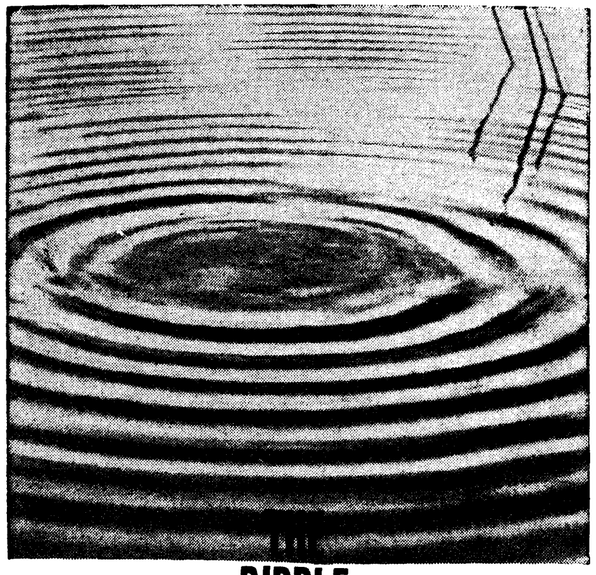
Intensive Agricultural Areas

Over the past eight years, it has been recognised that the largest promise of increased agricultural production and higher yields lay in areas with irrigation and assured rainfall. At one stage, it was proposed that community development projects should be established as a matter of priority in areas in which conditions of agricultural growth were more favourable. This did not happen in practice. Therefore, by a series of steps, following the mid-term appraisal of the third plan, the approach of intensive areas has been accepted as a matter of agricultural policy. It has been agreed that about 1,500 development blocks, covering roughly 20 to 25 percent of the cultivated area, should be slected for intensive agricultural development and taken up over the three years, 1964-65, 1965-66 and 1966-67. The slection of areas for intensive agricultural development and working out of detailed area plans for development of resources, extension, adoption of scientific practices, marketing and credit constitute an enormous administrative and technical task. Only if this task is carried out with the necessary thoroughness and organisation will the larger inputs of personnel and materials and investments contemplated for these areas bear fruit.

Side by side with the question of stimulating rapid agricultural growth in the more favourable areas, much more attention has to be given under the fourth plan to the problem of accelerating growth in those parts of the country which have remained markedly backward. It is in these areas that mass poverty is to be found in its extreme and concentrated form. Some of these areas have the natural resource potential for economic growth. But there are others in which conditions of development are not inherently favourable. Each such area has to be identified, its conditions carefully studied and an appropriate scheme of development devised for it.

Allied to this problem of backward areas is that of the backlog of unemployment and under-employment. The fourth plan will add about 23 million to the labour force. Within the third plan period itself, the backlog of unemployment will have increased by 4 million. The rough reckoning of additional employment opportunities arising from investment programmes in the fourth plan is 20 million to 21 million. Growth in employment of this order will fall short of the minimum needs of the economy. The fourth plan, therefore, needs critical scrutiny from this aspect. A large rural works programme, sufficiently intensive and directed specifically towards areas with large pockets of unemployment and under-employment becomes, therefore, an essential component of the fourth plan.

Private Sector Plans



In earlier plans, it could be assumed that industrial development programmes assigned to the private sector were likely to be implemented fully, roughly over the period of the plan. After the experience of recent years, this is not a safe assumption. Government and financial institutions established by it have now a larger responsibility in guiding private investment, both foreign and indigenous. It is not enough to be able to prevent private investments in directions not envisaged in the plans. A more positive approach has to be developed. Both for capital investment and for supply of raw materials and components, detailed planning has become as essential in the private sector under the plan as it is in the public sector. Where private industry is unlikely to carry out its share in the plan, it has become necessary to ensure that public agencies will step in and undertake larger programmes. It has also become a matter of public interest and policy to ensure that as the private sector expands, on the one hand, considerations of scale and costs are borne in mind and, on the other, there is a wider spread of industrial opportunity to small and medium-sized units and the co-operative sector and to less developed areas, and concentration of economic power is avoided.

To take one more example; for many years, attempts have been made to undertake planning at the district and block levels. Local plans have a vital rôle, specially in the acceleration of development in rural areas and, to an increasing extent, also in urban areas. They are the means by which, at the level of the community, the people can be drawn into the planning process, can assume larger burdens for their own development and can mobilise local resources. In the fourth plan, there has to be a close and systematic approach in formulating and implementing district, block and village plans as well as in relation to city development plans. Through these plans, planning becomes a national movement, involving popular institutions and leadership and leading the mass of the people into a scheme of intensive effort for rapid development. This task is as inspring as it is one of formidable proportion. Yet, thanks to the institutions of democracy which have been established and the national consensus which exists, this undertaking is within the nation's capacity. Its successful accomplishment has revolutionary significance for India's future.

Management and Organisation

These examples and the analysis given earlier suggest that in their wider sense management and organisation have to be the keynote of the fourth plan. Although there have been many deficiencies, the country's institutions, administrative apparatus and enterprise have already succeeded in achieveing substantial progress. A great deal of objective evaluation of the factors of success and failure in different activities have been identified.

The fact that the rate of progress achieved during the past three years is smaller than had been hoped for makes some of the tasks of the fourth plan more difficult than they need have been. In the course of development such setbacks will occur from time to time. They should strengthen our resolve and lead to greater effort. Our approach of planned development and the basic objectives of democratic socialism derive from the needs of India's economy and her social structure. The fourth plan cannot but reaffirm them. It is primarily in the sharpness of the tools for carrying through economic and social policies, in the efficiency and vitality of the organisations through which development plans are implemented, in the quality of planning and in the intensity of the effort undertaken at every level, that the fourth plan must mark a major break from the past.

RIPPLE

The LIC is at the centre of a ripple whose widening impact is felt throughout the land.

On the one hand, LIC's operations are far reaching. They cover about 729 centres, a number which is steadily increasing. So is the number of new individuals in India being covered with Life Insurance.

On the other hand, the LIC invests nearly 3 million rupees a day in industry, agriculture, railways, transport, electricity and many other projects. The radiating effect of these investments creates more jobs, more incomes, more food—in fact, a higher standard of living—for everybody.

ASP/LIC/PR-9

STATE FINANCE CORPORATIONS NEED MORE RESOURCES

By A. Raman

State Finance Corporations are too conservative and strict in their lending policies. They may be of greater help to medium and small industries if their resources are increased and the lending policies liberalised.

WHEN the Industrial Finance Corporation of India was established in 1948, the need was felt for a suitable agency in order to provide capital for medium-sized and small-scale industries and thereby supplement the activities of the Corporation. Besides, only public limited companies and co-operative societies could get financial assistance from the Corporation. So some other new agencies had to provide financial assistance to the private-limited concerns and other private enterprises. Thus the State Financial Corpoations' Act was passed on 28th September, 1951, which made provision for the establishment of the State Financial Corporations.

By and large, there is a close resemblance between the provisions of the Industrial Finance Corporation Act and the State Financial Corporations Act. According to the latter, the functions of these Corporations are to "(a) grant loans or advances to, or subscribe to the debentures of industrial concerns repayable within a period of 20 years; (b) guarantee loans raised in the market by industrial concerns and repayable within 20 years; (c) underwrite the issue of stock, shares, bonds or debentures by industrial concerns, subject to the condition that any part of the issue taken upon in accordance with the underwriting arrangement is disposed of within seven years. It is also stipulated under the Act that the maximum amount of the share capital of the State Financial Corporations would be Rs. 5 crores and the minimum Rs. 50 lakhs.

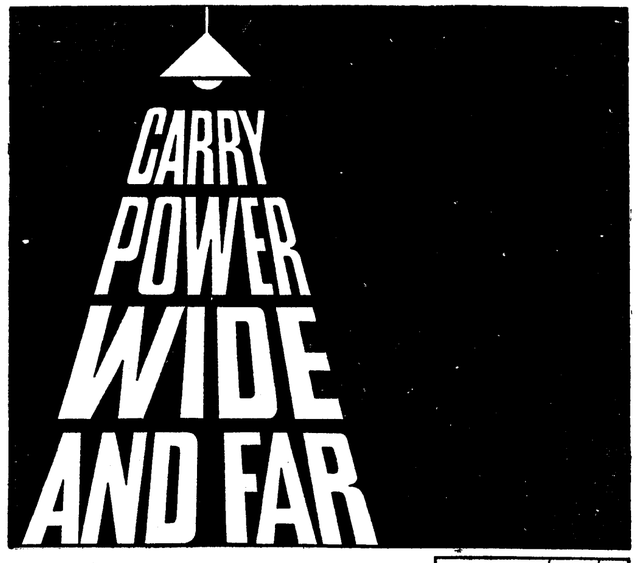
Share Capital

As a result of the passing of the Act, State Financial Corporations have been established in many States. There are at present Financial Corporations in 15 States, namely, Andhra Pradesh, Assam, Bihar, Maharashtra, Gujarat, Kashmir, Kerala, Madhya Pradesh, Madras, Mysore, Orissa, Punjab, Rajasthan, Uttar Pradesh and West Bengal. Their paid-up capital as at the end of 1962-63 was as follows:

Name of the State Financial Corporation	(In Rs. crores)
Andhra Pradesh	1.50
Assam	1
Bihar	1
Maharashtra	1
Kashmir	0.50
Gujarat	1
Kerala	1
Madhya Pradesh	1
Madras	1.32
Mysore	1
Orissa	1
Punjab	1
Rajasthan	1
Uttar Pradesh	1
West Bengal	1
	15.32

Generally speaking, the authorised capital of each State Financial Corporation varies from Rs. 2 crores to Rs. 4 crores; but the majority of the Corporations have Rs. 2 crores as their authorised capital; and the paid-up capital of these Corporations ranges from Rs. 50 lakhs to Rs. 1.50 crores. The respective State Governments, the Reserve Bank of India, financial institutions such as scheduled banks, co-operative banks and insurance companies and the general public have contributed to this paid-up capital. The share capital of the Corporations enjoys the guarantee of the State Government concerned for the repayment of the principal and the payment of dividends.

Loans Sanctioned



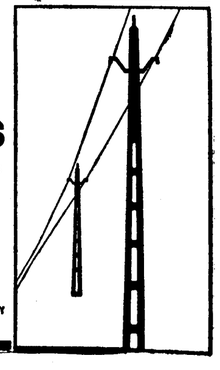
In 1953-54, there were only two State Financial Corporations; and they sanctioned and disbursed loans amounting to Rs. 70 lakhs and Rs. 30 lakhs, respectively. In 1954-55, there were eight State Financial Corporations; and the loans sanctioned and disbursed by them stood at Rs. 2.1 crores and Rs. 1.3 crores, respectively. The 12 State Financial Corporations functioning in 1955-56 sanctioned loans amounting to Rs. 4.05 crores; and the amount actually disbursed was Rs. 1.9 crores. Between 1956-57 and 1963-64, loans sanctioned and disbursed by the Corporations are as follows:

Amount sanctioned	Amount disbursed (In crores of rupees)
1956-57	4.43	2.86
1957-58	4.77	3.71
1958-59	4.99	3.33
1959-60	5.88	3.94
1960-61	9.16	4.75
1961-62	12.91	8.07
1962-63	18.33	11.33
1963-64	17.9	

The total amount of loans sanctioned by the various State Financial Corporations till the end of 1963-64 comes to Rs. 85.2 crores.

The progress of the State Financial Corporations was not much in the beginning. The volume of loans sanctioned was low during 1953-54 and 1954-55. During 1955-56, the amount sanctioned rose slightly which might have been due to the increase in the number of these Corporations; but the increase was not significant. There was no marked improvement in the operations of these Corporations till 1959-60. However, during 1960-61 to 1962-63, there was a substantial increase in the loans sanctioned by the Corporations. The amount of loans sanctioned so far reached the maximum in 1962-63. The activities of the Corporations, however, stood at a lower level during 1963-64 and not only was there no increase in their lending activities but there was even a slight decline in the amount of loans sanctioned.

In examining the working of these Corporations, one has to consider the following questions: (1) What is the rôle of the State Financial Corporations in the provision of funds for industrial development? (2) What is the nature of their lending policy? (3) For what types of industries have they provided capital?



on ih

Prestressed Poles

40% more economical than RCC Poles

IHP Prestressed Poles have several competitive advantages over conventional concrete or steel poles —40 to 50 per cent less cost, high insulation properties, absence of permanent cracks, low maintenance cost. They are slim and elegant— yet strong and durable!

(4) What is their attitude towards the financing of small-scale industries? (5) Have the State Financial Corporations adequate resources? and (6) What is the future rôle of these Corporations?

Rôle of the Corporations

The progress of the Corporations during the last 11 years has already been discussed. In the beginning, the level of activity of these Corporations was rather low; perhaps, it was due to the fact that they had just started working. Till 1959-60, the lending activities of the Corporations were not much. But during the last three or four years, the working of these Corporations has assumed some importance. Nevertheless, the operations of the Corporations have not increased to the extent they should have. If one takes into consideration the needs of small-scale and medium-sized industries, one may observe that the Corporations are meeting only a part of their needs and that there is scope for offering more financial assistance by them.

The question naturally arises as to whether this trend is due to the strict lending policies of the Corporations or whether it is due to a smaller number of applications. As far as the lending policies are concerned, it may be mentioned that the Corporations generally keep a margin of 50 percent and give half of the value of the security pledged as loan. They also give loans on the guarantee of one of the following agencies, namely, the State Governments, the scheduled banks and the State co-operative banks. All the loans are usually given for periods of ten to 12 years, although the Corporations can give loans up to a miximum period of 20 years.

The lending policy of the Corporations has come in for criticism. It is felt in some quarters that they could be more liberal in granting loans. In its memorandum on the State Financial Corporations, the Indian Merchants Chamber has urged that loans should be given against fixed assets, both industrial and non-industrial, and that they can be granted for a maximum period of 20 years. The margins kept can also be lowered. Furthermore, the procedures and methods of lending stand in the way of borrowers availing themselves of the credit facilities provided by the Corporations. So the Chamber has suggested that the procedures of borrowing should be simplified and the costs of borrowing reduced.

It is gratifying to note that the terms of borrowing have been liberalised by some of the Corporations. For instance, the Andhra Pradesh State Financial Corporation lends at present up to a maximum of 60 percent of the cost of construction of buildings, inclusive of service charges and 75 percent of the cost of machines; and the Rajasthan State Financial Corporation grants loans up to three-fourths of the value of imported machines, apart from Customs duty. The other Corporations can also liberalise their lending policies. The charges to be paid by way of stamp duty, registration charges, etcetera, for borrowing are quite high, so they should be reduced.

Attempts have also been made to enlarge the scope of working of these Corporations through suitable legislation. As a result of the passing of the State Financial Corporations (Amendment) Act of 1956, the number of industries eligible for assistance from these Corporations has increased. Furthermore, the Corporations can take up agency functions on behalf of the Government of India, the State Governments or the Industrial Finance Corporation "in the transaction of any business with an industrial concern in relation to loans or advances granted, or debentures subscribed by anyone of them". The State Financial Corporations (Amendment) Act of 1962 has further increased the scope of the working of these Corporations and has laid down that the Corporations can guarantee (a) "deferred payments due from any industrial concern in connection with the purchase of capital goods within India and (b) loans raised by industrial concerns from scheduled and State co-operative banks". The Corporations can also function as the agent of the Industrial Credit and Investment Corporation of India in relation to the loans sanctioned by it or its subscription to the debenture-capital of a concern. Besides, the lending limits of these Corporations have been increased, and they can now give loans up to Rs. 20 lakhs for public-limited companies and co-operative societies. Furthermore, they can also lend for financing industries along with the State Bank of India, and the other Corporations such as the Industrial Finance Corporation, the Industrial Credit and Investment Corporation and the National Small Industries Corporation. These measures—taken with a view to increasing the usefulness of the State Financial Corporations—would no doubt be helpful to industrial units. The increase in the amount of financial assistance provided by the Corporations in recent years must have, to some extent, been due to the increase in the scope of their activities. In spite of these, as we have already stated, it is necessary that the Corporations play a more important rôle.

Some Suggestions

As has already been noted, the Corporations are thought to be unduly conservative and strict in their lending policies. They have no doubt to pursue sound lending policies; but this does not mean that they should be unduly cautious. They can follow a flexible lending policy and while lending, they need not attach importance only to security but can also take into consideration the soundness of the projects, their capacity to earn profits and their importance from the point of view of the economy of the country.

Furthermore, though a few of the Corporations are taking an interest in the underwriting of industrial issues, the rôle of the State Financial Corporations has not so far been significant in this field. It is, therefore, necessary that the Corporations should take more interest in this line of activity. They should also participate in providing equity capital to industrial units.

So far, the Corporations have been generally providing fixed capital only and working capital in exceptional cases. In the future, they can continue to provide fixed capital. They need not supply working capital to industry, for industrial units are able to meet their requirements from commercial banks.

A number of industries have received financial assistance from the Corporations. But the industries which have been dependent on the resources of these Corporations have varied from State to State. The Corporations have so far provided capital for units manufacturing sugar, glasswares, confectionery, wood and machine screws, hardware materials, engineering goods, electric fans, house-hold utensils, surgical dressing goods, cycles and cycle-parts, plastic goods, radio parts, matches, locks and padlocks, bricks and tiles, chemicals, paper and strawboards. Apart from those mentioned above, some other units like those of hosiery, steel rolling, textile processing, cotton ginning, rice husking, cashewnuts, oils, jewellery, cigarettes, printing and stationery and paints and varnishes have also received financial assistance from the Corporations.

So the Corporations have helped both medium-sized and small-scale units; but when one takes into consideration the amount of assistance given to them, one finds that while the rôle of the Corporations in financing medium-sized units is significant, they have provided comparatively little assistance for small-scale industries. The low level of financial assistance to the small-scale units may be due to the incomplete and vague nature of the applications submitted by them, the absence of adequate and reliable data on the demand for and the supply of their products, the inadequacy of assets to offer as security and the non-maintenance of adequate accounts or records concerning their true financial position. Furthermore, small business men are usually not well known, so it is not easy to get adequate information on their financial standing. Lending against personal guarantee is also not possible in these cases. Moreover, the provision of loans by the Government to these units at concessional rates and the assistance of the National Small Industries Corporation might also have contributed to the low level of financial assistance to small-scale units.

More Resources Needed

The State Financial Corporations get financial assistance from various sources. As has already been mentioned, the share capital of the Corporations enjoys the guarantee of the respective State Governments concerning the repayment of capital and the payment of dividends. In order to enable the Corporations to declare the minimum guaranteed dividend, namely, 3½ percent, the State Governments give subventions to the Corporations. In the beginning, the Corporations were generally dependent to a great extent on subventions as their business and turnover were not much; but subsequently, with an increase in their activities, the Corporations depended to a lesser degree on subventions. During the last two or three years, some Corporations have been able to dispense with the subventions of the State Governments, since there has been an appreciable improvement in their business and earnings; and in the case of the other Corporations, the amount of subventions drawn has generally declined considerably. It may be expected that the Corporations would be able to do away with the subventions of the State Governments altogether after some time.
