THE BIG HURRY IN THE WORLD OF SURGERY

"Impossible!" all the surgeons said. "You'd have to still the heart to repair the damage". And stilling the heart would kill the patient! ■ Thus the problem remained for a long helpless decade, till in 1953, a brilliant English surgeon invented the "heart and lung" machine. Now it could be done! ■ The machine temporarily took over from the damaged heart the massive yet delicate business of blood-circulation while the surgeon sewed up the hole. ■ Oxygen was on the scene. It always is on the scene when the best surgeons of the world perform such surgical feats, making the "impossible" operations of yesterday a common-place occurence today. ■ But today is always a day too late when countless lives are at stake. ■ We of Indian Oxygen are alive to our responsibility of keeping Indian Medicine and Surgery supplied with medical gases, and will continue to try and keep pace with the big hurry.

FOOD SHORTAGE CONTINUES BUT NO FIRM POLICY YET

THAT after more than 13 years of economic planning, India's food policy continues to be determined by improvisations designed to meet particular emergencies, he who runs may read. During all these years it has been the habit of Food Ministers to talk extensively of intensive cultivation and intensively of extensive cultivation, but the promised age of abundance is still as remote as mythology's Isles of the Blest. The main reason for it is the alarming increase in population at the rate of about 2.4 percent a year—an increase which has thrown into insignificance the rise in food production from 50.02 million tons in 1950-51 to about 79 million tons in 1962-63. The result is that the country today is still largely dependent on food imports from abroad. This year the food crisis is particularly severe. The prices of food articles during the week ended 13th June, 1964, show a sharp rise of 18.7 percent when compared with the corresponding period of last year. Official wholesale prices in fact do not reflect the even bigger jump in retail prices. The severe impact of the steep price increase in a country where the vast majority of people live at subsistence levels and its likely political repercussions, if allowed to continue too long, are obvious. The pressure on food prices, particularly on cereal prices, is rather intriguing because rice production in 1963-64 is estimated at 36.4 million tonnes, against only 32 million tonnes in the previous year, and wheat production has dropped only marginally from 11.1 million tonnes to 11 million tonnes.

The Chief Ministers' conference held in New Delhi last week discussed those aspects of the price problem, which have by now become current coin in economic discussions in the country. The Chief Ministers have gone back to their States with assurances of larger assistance from the Centre, thanks to prospects of importing more rice and wheat from abroad. The U.S.A. has agreed to step up the despatch of wheat considerably so that more than 400,000 tonnes will be arriving every month. As for rice, the U.S. Government has assured supplies from its summer harvest, and Pakistan may supply 100,000 tonnes immediately and possibly another 100,000 tonnes later. Steps are also being taken to import rice from other countries like Thailand. Thus satisfied that the immediate pressure has been relieved, the conference has wound up tamely without taking any long-term measures to evolve a national food policy. The familiar appeal to strengthen the control machinery to prevent profiteering, hoarding and other malpractices has been voiced—which is rather surprising since it is a tacit admission that although controls in one form or other have been in force for over two decades, the administrative apparatus continues to be inadequate and ineffective.

The States where the food scarcity is particularly acute are Kerala, West Bengal, Maharashtra and Gujarat. The rise in prices in the deficit areas has encouraged hoarding in other States as well, and thus affected the entire economy. The difficulty in Kerala has been created partly by the compulsory procurement of rice at unattractive prices in Andhra Pradesh and Madras—a loss which the rice millers have made up by selling their remaining stocks at higher prices elsewhere. This also led to smaller arrivals of rice in Kerala. The discontinuance of procurement and levy in the surplus States of Andhra Pradesh and Madras, although belated, is a step in the right direction and may help relieve the pressure on food prices in Kerala. In West Bengal, the next important deficit State, arrivals of rice from neighbouring Orissa, which is the traditional supplier, have been inadequate mainly because producers and traders have been holding out for a higher price. As for Maharashtra and Gujarat, the movement of rice from Madhya Pradesh, which is at present arranged on Government-to-Government account under a quota system, has been very limited since the prices at which the Madhya Pradesh Government has been trying to buy rice have not been attractive. So the Central Government decided that the movement of rice from Madhya Pradesh to the two western States should be freed from restrictions and normal trade channels be restored. But this decision had to be called off soon after because the Chief Minister of Madhya Pradesh strongly opposed it on the ground that unrestricted movement of rice would push up prices in all the three States. Thus, excepting in the case of the southern States, the problems remain as they were before.

The Chief Ministers' conference has also left undecided the proposal of the Central Food and Agriculture Minister, Mr. C. Subramaniam, to set up a foodgrains trading corporation. The rôle visualised for this corporation was to buy grains, initially rice, from producers at prices announced ahead of the season and sell them to retailers at specified rates. It would thus have functioned as a price stabilisation board, and made for orderly development of farm production. Strangely enough, this proposal has been shelved. There is also silence over another suggestion by Mr. Subramaniam to establish a technical agency for determining producers' prices on an all-India basis, although the conference has agreed that a scientific study should be undertaken to fix the maximum prices of rice and wheat in various States. Mr. Subramaniam announced at the conference the Government's decision to enter the rice milling industry in a big way. Here there is a distinct dilution of the Bhubaneswar mandate to nationalise the rice processing industry in that what is sought to be done is not to take over the existing rice mills, but to set up new units in the public sector. It also signifies an abandonment of the stand against expanding milling capacity on the plea of encouraging the hand-pounding of rice. It, however, remains to be seen whether public-sector rice mills will be able to attract sufficient quantities of paddy from widely scattered places in rural areas in competition with the existing private mills.

As for increasing agricultural output, the Centre has asked the States to provide facilities for storing seeds and fertilisers at the rate of one godown for every four or five villages. The Central Finance Minister has promised a sum of Rs. 10 crores immediately for the purpose. The Chief Ministers have stressed the importance of rural credit and pointed out that its non-availability to the "weak

est" farmer is a major cause of low production. The land reforms introduced by various States, while being admirable in theory, have eliminated the landlord, who was also the farmer's financier. Having lost the source of credit, the farmer's work has been seriously hampered except in the few places where co-operative credit societies function well. Likewise, the imposition of land ceilings has made the use of tractors and other agricultural machinery difficult. The much-vaunted "package programmes", which aim at intensive cultivation by supplying the cultivators all the things they need, have not achieved much—a fact which the Prime Minister, Mr. Lal Bahadur Shastri, himself candidly admitted in his inaugural address to the Chief Ministers. Even the existing irrigation potential, created at a huge cost, has not been used fully.

Perhaps the most significant step for curbing inflationary pressures was contained in the announcement which the Central Finance Minister, Mr. T. T. Krishnamachari, made at the conference. He has promised a cut of Rs. 70 crores in the Central Government's expenditure, and has urged the States to curtail their outlay on those items which do not help economic growth. Huge Government disbursements on prodigal schemes, many of them of doubtful economic value, have pumped large sums of money into the economy. The Centre has found the wherewithal partly by resorting to reckless deficit financing. This is one of the major causes of inflation in the country. Although the saving contemplated by Mr. Krishnamachari is just a fraction of the annual civil expenditure, it should prove to be effective, particularly if the measure evokes a response from the States. The Prime Minister has, in fact, suggested to the Centre and the States to slash expenditure by 25 percent. But whether the States will take the cue from the Centre remains to be seen. Their wasteful policies have already put them in the red despite the buoyancy of their revenues. In fact, in his last Budget speech, Mr. Krishnamachari referred to the States' indebtedness with considerable concern, and indicated that the assistance given by the Centre to the States should be related to capital expenditure on projects which are economically sound. Whether the States will accept a stiffer financial discipline implicit in cutting down their expenditures is a big question mark.

UNIT TRUST: CONDITIONS FOR SUCCESS

THE commencement of the sale of units by the Unit Trust of India from 1st July, 1964, is a landmark in the development of India's capital market. In principle, the aim of the institution is unexceptionable since it seeks to mobilise the community's savings for investment in trade and industry. The funds pooled by the Trust through the sale of units in the denomination of Rs. 10 each will be invested in diverse types of securities, including Government loans, industrial debentures and shares. So the unit-holder will get an opportunity to participate in the nation's economic prosperity. Although there is a general desire to spread the ownership of shares in various industrial and commercial concerns, no concrete measure has so far been taken to implement it. The Trust is the best medium through which the share-ownership in trade and industry can be widely diffused.

The Trust has started selling units under favourable circumstances. Its initial capital of Rs. 5 crores has been contributed by the Reserve Bank of India, the Life Insurance Corporation and the State Bank and its subsidiaries, scheduled banks and other specified financial institutions. The initial capital has been used to build up a balanced portfolio of sound securities. On this basis, the units are now being issued to the investing public. The proceeds of the sales will provide the unit capital. Apart from the confidence the Trust enjoys as a public-sector enterprise, the Government has given it special tax concessions. It has been exempted from the payment of income tax, super tax, and other taxes on income. It is entitled to receive its dividend and interest income without tax deduction at source. Furthermore, an income of up to Rs. 1,000 received from the Trust by any unit-holder is exempt from income tax. Such income is also exempt from super tax in the case of a unit-holder who would not have been liable to pay super tax but for this income. The Trust will distribute its income to individuals without making any deduction of income tax at source.

The liquidity of investment in the units is being ensured by the stipulation that the units will be freely bought and sold by the Trust itself. The safety of capital is more or less guaranteed by the fact that it is a public-sector enterprise, so its management will be under the Government's control. As far as the Trust's investments are concerned some broad guide lines have been laid down. Firstly, investments in any one company will not exceed 5 percent of the total investible funds of the Trust or 10 percent of the value of the securities issued and outstanding of such a company, whichever is lower. Secondly, not more than 5 percent of the investible funds should be invested in the initial issues of securities of new industrial undertakings. The Trust aims at building up a balanced portfolio of securities yielding an overall return of more than 6 percent a year.

The Trust's success will depend on how readily the investing public will buy the units. Although New Delhi has taken a facile view of mopping up funds totalling Rs. 100 crores through the Trust's operations, the target is too ambitious to be achieved in a short time. Whether the units will attract prospective buyers is likely to be governed by three main factors. Firstly, the yield from the unit will constitute about the most decisive consideration. Unit-holders have, for the time being, been assured of a tax-free yield of at least 6 percent. This has been done on the basis that 90 percent of the income of the Trust—after deducting all expenses—will be distributed to unit-holders. A large part of the Trust's funds is likely to be invested in industrial equities which at present give a yield of up to 6½ percent to 7 percent on average. Investments in debentures and preference shares offer a return of slightly more than 9 percent on average. But these higher returns will be neutralised to some extent by the Trust's investments in Government securities which offer smaller yields. Whether the Trust will earn an average return of more than 6 percent on its investments will depend on how successful it will be in holding down its expenses. Unless the expenditure is kept down to the minimum from the very beginning, it will find it difficult to get an average yield of more than 6 percent under the present circumstances. Although the prospect of giving a tax-free return of 6 percent to the unit-holders fairly reasonable, it is by no means highly attractive in view of the Government's dearer money policy. Meanwhile, there has been some disappointment over the 6-percent return because it was indicated earlier that unit-holders would be assured of an yield of 8 percent to 10 percent.

Secondly, the attraction of the units will depend on the prospects of appreciation in their value. The appreciation will take place if the investment portfolio of the Trust itself increases in value following a rise in the prices of securities that are held. However, the rise in the value of the units, for the time being, will be checked since capital gains made by the Trust will not be passed on to unit-holders. The move has nevertheless been wise in the initial stage because it will help the Trust to build reserve funds for coping with any loss which may occur in the future. Since the Trust's initial capital of Rs. 5 crores was invested at a time when share prices were depressed, its investment portfolio should show appreciation in the near future. Thirdly, the units in the present depressed condition of the capital market look fairly attractive in comparison with industrial equities, since they enjoy many tax concessions, combined with an assured yield and liquidity. Although the Trust will buy and sell units freely, steps should be taken to ensure that these transactions are not hindered by procedural difficulties.

The stock market has greeted the sale of units by the Trust by marking up share prices all round. But in the short term, the impact may not be as bullish as has been made out. Since the units will mop up considerable savings of the community, the flow of funds into stocks and shares will diminish. But in the long run, the Trust will help stimulate activity in the capital market. Since it will invest heavily in industrial equities, debentures and preference shares, it will automatically absorb a large part of the floating stocks in the market. But this by itself may not be an unmixed blessing since al good scrip may steadily find their way into the portfolios of the Life Insurance Corporation and the Unit Trust. The Trust should, however, supplement the activities of the stock market and no supplant the market. In the long run, the successful sale of the units will depend upon healthy trading in the capital market. Unless the trend in industrial equities, debentures and preference shares remains steady, it will be difficult to attract support for the units. Whether the value of the units will appreciate in due course depends upon the buoyancy of the market.

The units are expected to appeal most to the middle and low-income groups rather than to the richer classes. People belonging to the latter are well acquainted with the intricacies of the investment market, so they can invest their funds on their own. Since only an income of up to Rs. 1,000 from the Trust has been exempted from income tax, the units may not be very attractive to people of high incomes. Even the tax concessions on the units will be neutralised if an individual makes large capital gains due to the appreciation of his investment portfolio. The low and middle-income groups are usually very shy in investing their funds, so the Trust should take vigorous steps to popularise the units among them. Although scheduled banks and stock-brokers have been engaged to stimulate the sale of the units, it is yet difficult to say whether they will lend their wholehearted support. As far as banks are concerned, they will tend to be rather cautious in selling the units, lest deposits are siphoned off from them. There is little doubt that many people will have to buy the units out of their deposits or by selling their present investments, because the scope for new savings is very limited in view of inflationary pressures. The adverse impact of the sale of the units will be felt not only by banks but also by the Government which will find it difficult to make its various small savings schemes a success. It is almost certain that the interest on small savings schemes and postal savings accounts will have to be raised if they are to attract funds from the public. Attention, meanwhile, should be given to ensuring that the units succeed in mobilising new savings. The units can attract small savers, so it will be a good idea to popularise their sale among industrial workers. Since farmers and industrial workers have enjoyed a fair share of economic prosperity in recent years, the Trust should endeavour to mop up savings from these classes.

U.N. TRADE AND DEVELOPMENT TALKS—2

THE DEBATE ON AID AND TRADE

By Dinesh Babl

The U.N. Conference on Trade and Development in Geneva made somewhat greater progress on questions of foreign aid and financial policy than on trade problems. Some aspects of the discussions are analysed in this article, the second of a series on the Conference.

GENEVA

BEFORE a somewhat more detailed assessment is made of the achievements of the U.N. Conference on Trade and Development in Geneva, a brief recapitulation may be useful of the economic trends and the thinking which inspired it. The first important factor influencing the deliberations of the Conference is that the economic growth of the richer nations has been faster than that of the poorer ones; the disparity between the two is, therefore, increasing. The conviction is gaining ground that without a radical change in the international economic system, the increase in the disparity cannot be corrected. Deliberate and powerful intervention in the present relationship between the developed and the developing economies is necessary if the gap—often referred to as the North-South gap—is to be narrowed.

As a first step towards narrowing the gap, the members of the United Nations decided that a target should be set for the Development Decade, whereby the developing countries would be given the facilities for raising their rate of economic growth to at least 5 percent a year by 1970. Considering that the rate of growth during the 1950's was about 4.4 percent, the target seems a modest one; it is still more modest when considered in per capita terms, since the population of the developing countries is growing too and the rate of population growth, furthermore, appears to be accelerating. Even so, the 5 percent target looks like nowhere near being achieved.

The basic reason the target is not being achieved is that the developing countries lack the resources—financial, managerial and technical. The assumption is that, as things stand, they are never likely to be able to get the resources they will need. The resources, therefore, have to be diverted through radical changes in the international economic mechanism undertaken as a matter of policy. The developing countries insist that this does not mean that they are simply a bunch of beggars. On the contrary, one of the heartening features of the Conference is that rather more emphasis was placed on trade (i.e., on earning the resources) than on aid (i.e., on securing simple or disguised gifts).

The developing countries have a strong point when they say that the international trading system, as at present organised, is heavily weighted against them. For or against whom it is weighted may at first glance seem a matter of opinion. But the proof of the pudding lies in the eating, and the trends in international trade clearly demonstrate that, relatively speaking, they have been steadily losing ground. During the past ten years, their share in world trade has fallen from over one-third to less than one-fourth. Their exports have increased, but their imports have risen even faster. Furthermore, the prices of their exports have not increased, whereas the prices of their imports are appreciably higher. What was once an external trade surplus has thus become a major trade deficit, the deficit having been accentuated by the adverse movement in the terms of trade. Added to the trade deficit is a large outgo on account of "invisibles"—mainly capital servicing and shipping. The overall payments deficit of the developing countries has thus become huge, and shows every sign of becoming even bigger. Complicating the whole situation is the fact that the prices of the developing countries' exports fluctuate sharply from time to time; foreign exchange shortages thus increase suddenly and unexpectedly, and tend to thwart the efficient implementation of development plans.

The general ideas of the ways in which these problems might be attacked, as they have emerged at the Conference, are not exactly original. But the advance which has been registered consists in the fact that only a few years ago many of these ideas would have been summarily dismissed as theoretical nonsense, as the idle pipe-dreams of sundry professors, economists, administrators, politicians and garrulous eccentrics. Now they have been seriously discussed at a high-level international conference, and become the warp and woof of a continuing economic dialogue. What is perhaps more important in practical terms, they are to be seriously investigated by groups of hard-headed experts—with the consent of the developed as well as the developing countries. Many of the ideas will no doubt drop by the wayside, either because they do not make economic sense, or because they take no account of the politico-economic realities of our time. But it is perfectly on the cards that from the rest there may germinate in the coming months and years not only specific measures, but also important shifts in policy, that will be of major significance for the developing countries.

Although foreign aid and investment have received less of the Conference's attention than trade, the most important of the proposals emerging in relation to the former is that the developed countries should aim at devoting at least 1 percent of their national income—net of repayments—for the benefit of the developing countries. It is important to emphasise that this is mainly a recommendation, not a decision, as indeed it could not be. But its significance lies in the calculation that, if and as it comes to be implemented, the total flow of resources under aid and investment programmes to the developing countries could rise from the present level of about £1,900 million to £3,000 million annually. The definition of financial resources included under this item covers official cash grants and grants in kind (including grants for technical assistance); sales of commodities against local currencies; government lending for periods exceeding one year (net of repayments of principal); grants and capital subscriptions to multilateral aid agencies, and net purchases of bonds, loans and participations from those agencies. It also includes private capital on the basis of net long-term movements, originating with residents of the capital-exporting countries. They are thus net of repatriation of principal, disinvestment, and retirement of long-term loans, portfolio assets and commercial debt. They are not net of reverse flows of capital originating with residents of the less developed countries, nor of investment income. It is of some significance that, in Committee 3, where the question was discussed, so far-reaching a recommendation was accepted with 72 countries voting for, none against, and ten abstaining.

On the question of easing the debt servicing burden of the developing countries, many interesting ideas have been aired, although the progress cannot be described as positive or striking in practical terms. The developed countries have indicated that they are prepared to accept the general proposition that loans to developing countries should be for longer periods and at lower rates of interest, the initial grace periods for repayment also being extended; that there should be a shift towards "untied" loans; that the proportion of short-term and medium-term credits should be reduced; that debts should be re-scheduled or consolidated with a view to reducing the burdens of repayment and servicing; and that repayments should increasingly be used to buy the products of the developing country which has taken the loan. One of the specific recommendations made was that the repayment of loans should be spread over a period of 20 years, with a certain grace period. Another was that the interest rates on State loans and development loans should not normally exceed 3 percent a year. Although both the recommendations were pushed through with the developing countries' majority, they met with fairly stiff resistance. The main virtue of these figures relating to loan repayments and interest rates, therefore, is not that they will henceforth be binding; they will not. The main virtue is that they may in the coming years begin to constitute in some sense a target and a criterion, which the richer countries will try to reach and against which the reasonableness of their loan terms will be judged.

On the question of the richer countries increasing their imports from the developing countries, the progress has been rather nebulous. The communist countries have scored a minor propaganda hit by issuing precise projections about how they expect some of their imports from the developing countries to increase by 1970 and by 1980. But the point has been emphasised that these are only projections, not promises or commitments. If it were merely a question of issuing projections, any country could draw them up according to its private tastes and political convenience, without any of them necessarily meaning very much in the end. The developed countries of the West, however, have in contrast left the impression that they are dragging their feet badly on this question. The developing countries' plea was, in some particulars, fairly specific. For primary products, for instance, they originally said that the developed countries should abolish all tariff and non-tariff barriers by the end of 1965; internal charges and revenue duties should also be abolished. But, not surprisingly, although the suggestion was later watered down, no precise commitment at all has been made.

For the exports of manufactured and semi-manufactured products from the developing countries, the main recommendation originally was that the developed countries should not raise existing tariff or non-tariff barriers for such exports. In fact, they should eliminate some of these tariffs immediately, and cut the remainder by 50 percent straightaway, the idea being that all tariffs on such products should be abolished within five years. Non-tariff barriers, it was said, should also be eliminated immediately. Not surprisingly, again, here too it is certain that nothing so far-reaching will be done so quickly. The richer countries are afraid mainly of the socio-political consequences if their domestic industries are destroyed by such liberalisation. They also feel that the reduction of the tariff and non-tariff barriers for imports from the developing countries cannot be considered in isolation; it has to come as part of the world-wide move to liberalise trade, such as is hoped to be achieved during the Kennedy round of the G.A.T.T. negotiations.

The tangible gains are perhaps fundamentally two. The first is the growing, albeit still limited, acceptance of the principle that the developing countries should not have to reciprocate with concessions when measures for liberalisation of trade are taken by the developed countries. The second is the further corollary to this idea—that imports from the developing countries should receive special preferential treatment as compared with imports from other countries. The idea has met with strong resistance, because it would imply discarding the most-favoured-nation principle that has hitherto been at the basis of international trade; the only favoured nations under the developing countries' proposal would be the developing countries themselves. But a gradual change in thinking on these two principles may be under way, and in course of time it could yield important results.

(To be concluded)

EXPANDING POWER CAPACITY

IN power, it is none too early to consider now what needs to be done to meet the requirements in 1970-71. This is so because it takes as long as five years to build a thermal plant and twice that time to commission a hydro-electric project. The proposals now being put forward for the fourth

plan, therefore, call for close study even if some of the major assumptions underlying the demand estimates must remain open to question until the broader issues about the size and objectives of the plan are settled. The first thing to note is the magnitude of effort required if the generating capacity is to be raised from the 12.5 million kW expected to be in commission by 1965-66 to 23.8 million kW in 1970-71. This would imply adding over 2 million kW each year, against 1.4 million kW yearly during the thind plan. Investment will have to be stepped up to Rs. 2,480 crores over the five-year period, more than double the outlay during the current plan. The difficulties in accomplishing this large task will be the greater because of the lower foreign exchange component assumed—one-sixth against almost one-third of the total investment required in the present five-year period.

Neither the size of the task nor the cost should, in this case, be held against the planners. Adequacy of power supplies is crucial to the whole process of growth. Power benefits not only large industry, which indeed cannot exist without it, but also the small man both in the city and the village. The transformation of small industry from the primitive and highly uneconomic stage of cottage crafts to modern units working independently or as ancillaries to large-scale enterprise cannot be accomplished without power. Nor can productivity on the small farms improve without the assured water supply that electrically-operated tube wells can provide at a very attractive price. In short, the building of a modern, viable economy starts with power, of which there can never be too much in a developing country.

Even if investment in power is *ipso facto* worthwhile, there is no denying the need to make the most of whatever resources India can afford to allocate for this purpose. This calls for an examination of several issues of policy, the most important among them being the choice of generating methods. In areas like Gujarat, where natural gas or that arising from producing oil wells is waiting to be utilised, the choice is obvious. Much in the same way, one can unhesitatingly opt for thermal plants in the Madras area where the hydro-electric potential is approaching exhaustion. But there are regions where a decision is not so easy to make, as for instance in eastern India. There is need to harness rivers like the Kosi or the Gandak in north Bihar or the Mahanadi and its tributaries in Orissa not merely to generate power but also to control floods and provide year-round irrigation.

But eastern India also happens to be the country's principal source of coal supplies. Given the nature of coal resources, 40 percent to 50 percent of run-of-mine coal will have to be discarded to meet the quality or size specifications of industry. Unless the discarded middlings or slack coal—by-product coal—are put to some economic use, the cost of fuel to industry will become intolerably high as is already the case with clean coal from Hindustan Steel washeries supplied to steel plants. Since the by-products can be used best in large power plant boilers specially designed for the purpose, it follows that power generation in areas close to coal should as far as possible be based on this resource; for purpose of national planning, this can be assumed to have zero cost. A recent study suggests that the eastern region should depend wholly upon thermal plants to carry base loads and use hydro-electric power only to meet peak-hour requirements. In the next plan, however, the study sees no reason to add to hydro-electric capacity and suggests that the entire addition should come from thermal plants.

This is not to suggest that hydro-electricity does not offer the cheapest power in the conditions for which it is best suited. At lightly-loaded plants —for example, in areas where demand is still building up—hydro-power is incomparably superior. But this is not so in industrialised regions where demand is large and sustained enough to operate thermal plants at high load factors and where the delivered costs of coal are low. A choice has to be made not only between coal and water power but nuclear energy also would have to be taken into account in areas where the use of coal is expensive because of high transport charges and water resources are absent. Madras and Rajasthan are cases in point, and a decision has already been taken to instal nuclear plants in those States. Technological considerations make it necessary, however, that nuclear plants should be of a substantial capacity, and must operate at high load factors to bring generation costs to an economic level. This implies using nuclear plants to supply the base load and establishing inter-connections to provide a large enough demand.

These considerations regarding attractive methods of generation are no doubt being kept in mind by those on whom the responsibility rests for preparing detailed plans. But their ability to make rational choices will depend upon how effectively future requirements are mapped out through periodic surveys. No State Board can work out a plan of action in isolation from its neighbours because the balance between generating capacity and demand will otherwise be very difficult to maintain. Load surveys have begun—the first was completed only a few months ago—but its value remains uncertain unless one can be sure that both users and suppliers of electricity have been honest in their estimates. Injecting realism is not easy in a situation of shortage with generating authorities inclined to inflate local load estimates to pre-empt larger resources for expansion than they might otherwise get.

The establishment of grids is another issue on which the settled policy requires to be translated into a detailed programme. In most advanced countries, a high degree of inter-connection between different generating systems is now the rule even where this involves exchange of power across national frontiers. The advantages of doing so are that the total load can be met at the lowest cost by working the most efficient units of the inter-connected system and relying upon the less efficient to meet peak loads. Equally important is the saving in stand-by capacity. An isolated system will need in most cases to keep as a stand-by a generating set equal in size to the largest in use—a large part of the total installed capacity will thus have to be held in reserve whereas the same spread over an inter-connected grid would work out to a much smaller proportion. In West Germany, a margin of 6 percent is now considered adequate, against 15 percent to 20 percent optionally required in India.

A connected question is that of investment on transmission. As the draft report of the Energy Survey points out, a large proportion of new generating capacity will necessarily have to be based on by-product fuels. This implies building large central power plants as close to the source of fuel as possible and transferring power to users over extra-high-voltage transmission lines. A careful study of the costs of transmission of energy show that this will be more economic than transporting the fuel itself. This indicates that future plans should, as far as possible, move away from market-oriented to resource-oriented generation. This will not be easy because few areas exist with sufficient volume of unallocated demand to justify building extra-high-voltage transmission systems immediately, but a beginning must indeed be made now to achieve a more rational dispersal of capacity in the long-term.

Current News and Comment

Developing Road Transport

The need for rapid development of transport facilities can hardly be over-emphasised. Past experience has shown that transport bottlenecks have disrupted production schedules in specific industries and projects and acted as a major brake on the economy. The Planning Commission seems fully seized of this problem, and it has decided that transport facilities in the country should be developed in step with and, if possible, a little ahead of developments in the economy as a whole. A series of studies are under way to determine transport requirements in the context of growth over the next ten years and a separate division has been set up in the Commission to suggest application of scientific and technological methods in road construction to reduce the cost of road building and maintenance.

Addressing the annual general meeting of the Indian Roads and Transport Development Association in Bombay last week, the deputy chairman of the Planning Commission, Mr. Asoke Mehta, pointed out that the cause of developing backward regions would be best served by co-ordinating road development and economic activities. The Planning Commission has estimated the outlay on transport and communications in the fourth plan around Rs. 4,000 crores, of which Rs. 850 crores are being earmarked for road transport. Outlining the approach towards the transport problem, Mr. Mehta said that development programmes for different modes of transport have to be formulated with the objective of ensuring, firstly, that the total task is carried out, and, secondly, that investments and current costs are kept down to the minimum. To plead for a *laissez-faire* approach to road transport in a planned economy would be a retrograde step. It would be more logical to co-ordinate and regulate transport in such a way as to serve the interests of the economy as a whole. Suggesting a reorganisation of the road transport industry Mr. Mehta said that it was necessary to safeguard the interests and opportunities of small units and to bring them together into appropriate associations and other functional organisations.

The development could be that private carriers would form the transport arm of individual industries and the co-operative transport societies could handle products of farms, fisheries, forests and orchards. He also envisaged the possibility of an extension of the existing pattern of municipal transport services to more towns. Mr. Mehta said that a successful drawing up and implementation of a co-ordinated transport plan would depend on the enthusiasm and co-operation of the interested parties. Mr. Mehta drew attention to the slow growth of the motor-vehicle industry in the country which hampered the expansion of road transport. As against the target of 60,000 commercial vehicles set under the third plan, the production for 1965-66 is not expected to rise beyond 42,000 vehicles. There has also ben a marked lag in the industry in achieving the target for indigenous content, thereby causing a serious strain on the country's scarce foreign exchange resources. Mr. Mehta expressed the hope that manufacturers would not only cut their production costs, but also reduce their foreign exchange dependence.

In his presidential address, Dr. F. P. Antia made a fervent plea for freeing road transport from the existing restraining shackles in order to encourage its speedy development. He suggested that allocation during the fourth plan for road transport should be around Rs. 1,700 crores. Further, he wanted the road budget to be separated from general revenues. Recounting the advantages of road transport over rail, Dr. Antia remarked that about Rs. 10 lakhs would have to be spent on every one mile of rail track constructed. But it would cost only Rs. 3.5 lakhs to build a two-lane road. Apart from lowering construction costs for roads, the carrying capacity was double that of rail and in some cases even three times. As for speed also, rail transport made an average of 5 miles a day while road transport was three to six times quicker. And the yield on capital investment in the railways was only 5 percent whereas on road it was around 10 percent. Moreover, road had a greater employment potential. Operating costs a ton-mile were also lower. Dr. Antia pleaded that the tax burden on the road transport industry should be reduced, octroi abolished, and harassment at various check posts for sales tax collection removed. He also wanted the issue of permits to operators to be liberalised and distance restrictions to be done away with. In order to reduce costs and increase the volume of traffic Dr. Antia suggested that trailers should be introduced on all national highways. These trailers with payload of 13 to 25 tons could reduce costs by 40 to 70 percent.

Mustard Oil Scarcity

Despite the official measure to fix the wholesale and retail prices of mustard oil, the commodity continues to be scarce in Calcutta markets. As the oil is an essential cooking medium in this State, the scarcity has caused great inconvenience. Some of the major mills are reported to have been making direct sales to consumers. They do not, however, sell oil loose, but sell it in containers for which an extra 81 paise is charged. This way they appropriate the retailer's margin of 16 paise, and possibly, make something on the container too. (The officially fixed retail price for the oil is Rs. 3.25 a kilogram; ex-mill, it is Rs. 3.09). Nobody seems to grudge the mills their profit, some not directly affected may even admire their ingenuity in managing things in their own way, but the point is that it is not helping the distribution of the commodity in the way it ought to be done. Not all families can spare the time or men to stand in long queues before the mills' retail counters. Meanwhile, unscrupulous retailers and hawkers are selling adulterated stuff at high prices. The Government has been unable to do anything more useful than just fixing prices, and occasionally catching a few minor offenders through its enforcement staff.

The explanation offered, of course, is the usual one of supply falling short of demand. It is true that West Bengal depends on outside sources for 75 percent of its mustard requirements, and naturally, the prices in the State are governed by the rates ruling in major production centres. Moreover, the mustard crop in 1962-63 was lower than in the previous year, the index number maintained by the Economic and Statistical Adviser to the Central Ministry of Food and Agriculture showing a drop from 102.2 to 99.7. The crop is said to have declined further this year. Mustard is one of the 14 commodities, in which futures trading has been banned, but that has not led to any fall in its price. Yet these do not explain why a crisis should have developed in the local trade so suddenly. It has been alleged that the seed dealers in West Bengal are charging much more than what the ruling rates in production centres justify. This the dealers have denied; but they have agreed to sell seed at prices which the mills consider reasonable. Yet the mills are reported not to be working at full capacity, one of the grounds being that dealers are selling inferior mustard seed at prices fixed for superior varieties. Thus the situation continues to be confusing. The State Government is said to be considering measures to increase mustard oil supplies in the city and ensure adequate availability for all consumers. What these measures will be, remains to be seen. Meanwhile, the consumer suffers.

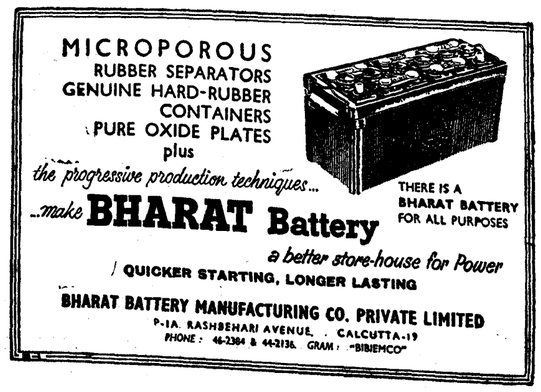
Oilseeds Prices Soar

The upward trend in oilseeds prices continues unabated. Since about the beginning of June, groundnut ready (Karad bold) has risen from Rs. 57.50 to Rs. 60.50 a 50 kilograms, linseed from Rs. 44.50 to Rs. 47 a 50 kilograms, castorseed from Rs. 34.25 to Rs. 35.50 a 50 kilograms, groundnut oil from Rs. 22.40 to Rs. 24.30 a 10 kilograms, linseed oil from Rs. 18 to Rs. 19.20 a 10 kilograms, castor oil Commercial from Rs. 13.50 to Rs. 14.60 a 10 kilograms, groundnut expeller from Rs. 465 to Rs. 505 a tonne and groundnut extraction from Rs. 405 to Rs. 426 a tonne. The current prices of groundnut, groundnut oil, groundnut expeller and linseed are all-time highs. There is no knowing yet how far the upward trend might go. Market sentiment has not yet been the least affected by the fairly satisfactory weather reports from the groundnut-producing areas. This underlines the inherent strength in the market. As futures trading in various oilseeds and oilcakes, including the highly speculative groundnut and groundnut expellers has been banned, the rising trend in oilseeds prices can no longer be attributed to speculative activity.

Basically, the rising trend in oilseeds prices reflects the chronic lack of balance between supply and demand, resulting from a virtually static production and a steadily growing demand. Output of five major oilseeds during 1963-64 is unlikely to exceed 7 million tons, which is still far short of the second plan target of 7.6 million tons. Apparently, various steps taken by the Government to step up oilseeds production have failed to yield concrete results. Judged by past performance, it would be simply wishful thinking to expect that production during the next two years could be raised to reach anywhere near the third plan target of 9.8 million tons, which can by no means be considered ambitious when viewed in the context of the country's growing domestic needs, apart from building up of export surpluses.

The rise in oilseeds prices is a part of the general price upsurge in the country. When one compares oilseeds prices with those of cereals and foodgrains, oilseeds look rather cheap. In the past, groundnut have been known to have fetched a much higher price than wheat. However, the sudden spurt in oilseeds prices over the past few weeks has been due to sustained keen demand for groundnut as well as groundnut oil from *vanaspati* manufacturers, both for their own consumption and for meeting sizable export commitments. Control over *vanaspati* prices has been given up since the beginning of June and in view of the keen demand for this commodity, manufacturers are willing to pay almost any price for the raw material. The 1963-64 groundnut crop is known to have been better than in the previous season, but the increase in groundnut production has been more or less offset by the fall in rapeseed production. The overall production of oilseeds is not expected to improve noticeably during 1963-64. Apart from the steadily growing domestic demand, there has been a marked increase in the exports of groundnut oil which are expected to rise to around 100,000 tonnes in 1964. *Vanaspati* manufacturers who are now the main exporters of groundnut oil, are reported to have sold sizable quantities of oil for deliveries as distant as November-December. Business has been made possibly by the spectacular rise in groundnut oil prices abroad. Within a month or so, the quotation for groundnut oil in the U. K. has shot up by about £22 a ton.

The recent steep rise in groundnut oil abroad is attributed to very large purchases of Nigerian oil by Burma. Sentiment has also been helped by the marked rise in the price of groundnut extractions overseas. The latest U. K. quotation of around £39 a ton is a record high for many years. India's exports of groundnut extractions are expected to set a new record of 900,000 to 1 million tons this year. Sustained overseas demand for extractions has pushed the price of groundnut expellers to an all-time high because of the keen bidding by a large number of solvent extraction plants. The supply of oilcakes has failed to keep pace with the increase in extraction manufacturing capacity. The scarcity of expeller cake is being more acutely felt by the plants located in port towns, especially in Bombay, as they are far removed from the areas of supply.



The prices of oilseeds as also of other farm products can be brought down only through a significant increase in production. To the extent to which the rise in prices is exaggerated by the hoarding of stocks by anti-social elements, it should be possible to produce an impact on the market through short-term measures which can be implemented successfully provided the administration is honest and efficient. If exports are to be encouraged at any cost and domestic production cannot be stepped up to cope with the expanding demand, the Government should make arrangements for securing substantial quantities of soyabean oil from the U.S.A. under P.L.480. This can have a significant impact on internal prices of vegetable oils and at the same time, release larger quantities of high-priced groundnut oil for export.

Shift in Petroleum Policy

India's oil policy is headed towards a new pattern of direct collaboration with the producing countries of the Middle East. It was learnt recently that the Central Minister of Petroleum and Chemicals, Professor Humayun Kabir, was delaying the award of contracts for two new refineries until "new" Asian offers—in hand or in the offing—had been weighed. With yet another delegation from Kuwait expected shortly, one may safely presume that an arrangement for the direct supply of crude is likely to be worked out. The crude may be no cheaper—the Kuwait National Oil Company is not itself a producer and there are in any case O.P.E.C. objections to discounts—but the possibility of Kuwait agreeing to accept payment partly in non-convertible rupees is attractive to India because of her perpetual balance-of-payments problem. The rupee may be used to finance the purchase of such Indian goods and services that Kuwait may be persuaded to buy, and the remainder credited to a fund to finance joint ventures, including perhaps further refineries in India.

In that case, the entire foreign exchange cost of refinery construction will have to be borne by India, but that is expected to be taken care of in one of several ways. There is perhaps a possibility that an oil producer like Kuwait with very large foreign exchange balances may provide a long-term loan to India. Alternatively, India may get refinery equipment on long-term credits from either east or west European countries. The Rumanians have let out that they have been approached for help, but that apart, there are also outstanding Italian credits waiting to be used.

Yet another move towards direct collaboration is the Indian proposal to participate in offshore exploration in the Persian Gulf. India is not herself eligible to do so since she did not take part in the

P. Post.

pre-exploration seismic surveys, but she hopes to go in along with Italy's E.N.I. and the American independent, Phillips Petroleum in a tripartite venture. Their interest in associating with India lies in the fact that the country provides a ready market for any oil that may be found— a factor of considerable importance in the context of the present world surplus. Offshore drilling has its hazards even in a promising area such as the one in view, and oil in any substantial quantities may not materialise. There was, therefore, a body of opinion in New Delhi which was reluctant to commit resources —all of it in foreign exchange—to a gamble. If apprehensions on this score have now been overcome, it may be because of fading hopes of finding large oil deposits within the country. The Energy Survey of India, in the draft report now being discussed, places likely oil production at no more than 10 million tons during the 'seventies, deflating the exuberant optimism of the Oil and Natural Gas Commission.

If India does go into offshore drilling—the bid the O.N.G.C. puts in along with E.N.I. and Phillips Petroleum will be only one of many before Iran to consider—it follows that any oil found as a result would have preferential claims on the Indian market. This explains the pressure now being brought to bear upon the existing refineries to treat offshore crude accruing to the O.N.G.C. at par with indigenous supplies. Under the present refinery agreement, indigenous crude has to be used by them to the extent available in preference to imports. The oil companies are naturally not keen because their basic purpose in building refineries has been to ensure outlets for the crude their associates produce. But they also recognise India's need to save foreign exchange which prompts her to embark on the offshore venture. They may, therefore, give in after the formality of consultations with their shareholders has been completed. Once they do, the last remaining hurdle to the renewal of the refinery agreements will be out of the way.

For the new refineries still to be built, the offshore venture has even larger implications. Even if new "Asian" offers do not immediately decide the choice, it is obvious that the contract for Madras and Haldia will include in all likelihood the obligation to use crude raised under Indian aegis within the country or outside. For the two organisations, E.N.I. and Phillips Petroleum, included in the offshore trio, the stipulation will be the least difficult to accept. If so, the prize of the two new refineries may elude the majors of international oil.

Hindrances to Hire-purchase

In his speech from the chair at the annual general meeting of the Hire Purchase Association in Calcutta last week, Mr. R. P. Patodia discussed how hire-purchase could help improve the standards of living of middle class people. Such expensive consumer goods as washing machines, refrigerators, radios and household furniture are now available on hire-purchase. So people with limited purchasing power are able to buy these items. The growth of hire-purchase in India has not been rapid so far since consumers have looked upon it with suspicion. Besides, the companies doing this business in India have received little support from the Government. A few years ago, hire-purchase in India was restricted to commercial vehicles and motor-cars, but since then it has spread to other items, such as electrical and household goods. In contrast to the situation in India, the value, variety and the bulk of hire-purchase transactions are nowadays regarded as a barometer of an industrially advanced country. In Britain, the hire-purchase and credit debt exceeds £1,000 million and the figure in the U.S.A. is even higher. Although no authoritative data are available on the total investment in the hire-purchase business in India, Mr. Patodia felt that it would easily exceed Rs. 50 crores; this works out to Re. 1 *per capita*. In contrast, during the short period of nine years, 1952-61, the hire-purchase debt in the United Kingdom rose four-fold from £250 million to £1,000 million.

Discussing the difficulties of the business, Mr. Patodia says that although credit is backed by a tangible asset, the latter is always in the custody and control of the user. Cases are not rare when the hirer abuses his liberties and disappears with the security. Since the asset is mostly mobile, it can be removed from one part of the country to the other involving the seller in huge expenses to recover it. Furthermore, banks are not generally inclined to grant advances against hire-purchase documents, although a few of them have done so in recent years. But the rate of interest charged by the latter, including the cost of insurance guarantees, amounts to 10 percent, which is higher than the rates on comparable advances. So the Reserve Bank of India should enunciate a clear policy on hire-purchase advances. Litigation is another hazard for hire-purchase companies and it involves them in heavy cost and harassment. Referring to the Hire Purchase Bill, Mr. Patodia said that some drastic changes were necessary if the Bill was to be passed into law. It is a pity that no member having a thorough knowedge of the business was asked to assist the expert body which was appointed to draft it.

The Central Minister for Law and Social Security, Mr A. K. Sen, said at the meeting that people engaged in the hire-purchase business should provide useful gadgets to farmers and other villagers on a hire-purchase basis. But the Minister did not mention that the risk element in such transactions would be high and that farmers and villagers who are mostly poor, might not always be able to pay the instalments according to schedule. But it is reassuring to hear from him that if the hire-purchase companies explore this new field, the Reserve Bank and the State Bank may assist them with funds. But the Minister has rightly cautioned the companies not to follow the practices in advanced western countries since the conditions there are basically different from those in India.

Industrial Activity

Corrected for seasonal fluctuations, *Capital's* Index of Industrial Activity increased by 0.2 points during May 1963. There were rises in tea, yarn, cloth, coal, finished steel, paper, motor-cars, bicycles and electricity. Sugar, jute, cement, pig iron and tyres declined.

CHECKING ELECTRIC METERS

"THE electric meter is of little use in telling you what you consume in Calcutta; it only indicates the quantity for which you have got to pay." This is the remark said to have been made by a meter inspector not long ago to an aggrieved consumer who thought his bills were about treble the amount they ought to be. And new complaints are getting to be so loud and numerous from all quarters that it is high time those who use electric light and electric fans should combine and form a Consumers' Association for the protection of their own interests. The Government, having given a practical monopoly to the Calcutta Electric Supply Corporation Company for their business in Calcutta, ought to provide effective safeguards for the consumers against possible overcharges. It is quite true the Supply Company say to the consumer: "If you are dissatisfied with the amount of your bill and think it is too much, you can have your meter tested by paying the prescribed fee, but it must be tested by our man, and you must abide by the result of his test." This is not at all fair to the consumer. What is wanted in these circumstances is an altogether independent test, and by far the most satisfactory plan for all parties would be for the Government of Bengal to empower their Electrician for a prescribed fee to supervise the testing of meters by members of his own staff when called upon by either the Company or a consumer to do so, and the Government Electrician's certificate to be authoritative and binding on both the Company and the consumers. One gentleman whose bills for electric lighting and fans have suddenly mounted up to Rs. 100 a month—about three times what he thinks they ought to be—wished to have an independent expert to examine his meter. "Not so," says the Company, "we will test it by our own man and you must abide by his verdict". This is not at all good enough. A Consumers' Protection ought to be formed, and the Government ought to be asked to furnish a competent officer to be meter inspector. We invite communications from aggrieved consumers.

A Ditcher's Diary

THE QUESTION MUST BE ASKED: MUST THE COUNTRY kill all its Prime Ministers? There is a corollary: Must all our Prime Ministers kill themselves? Mr. Shastri's mild illness is a reminder—to himself and to the country—that men at 60 will do well to take things a bit easy. What maddens me is that roughly 70 percent of what our Ministers do need not be done at all, by themselves or anyone else. Of the remaining 30 percent, 20 can be done by moderately competent lieutenants. Only the final 10 percent requires and deserves the chief's personal attention. Between Mr. Nehru and every other Indian there was a natural, built-in, distance; the distance grew as old colleagues died one by one. Even so, he saw too many people. Mr. Shastri's doors have always been wide open to all. This folksiness or togetherness or whatever else the Americans might call it is all very well—until one becomes Prime Minister. I have often wondered whether politicians like Mr. Shastri or Mr. Nanda ever get a moment to themselves, whether they ever have time to read a book or think about something quietly. I knew a business man who had telephones in his bathroom. Could that be true of our politicians too? (Incidentally, democracies have only politicians, in office or outside; never "leaders".) Mr. Shastri's mistake is the greater because not only has he overworked himself with the problems of the Government but he has also devoted a great deal of his time and energy to the problems of the faction-ridden Congress Party. One should have thought Mr. Kamaraj could have handled the latter quite competently. Then there is the question of rest and regular holidays. If Mr. Shastri's servant is entitled to his annual leave and week-ends, so, I suggest, is Mr. Shastri himself. Whenever I see anyone working too hard I conclude that the man is a victim to what I call the doctrine of indispensability; the world, or at least the office, would stop without him. I really think India's Prime Minister deserves his Chequers. Is there no place, reasonably cool and within reasonable distance from Delhi?

SO, AFTER ALL, THE HOUSE IN TEEN MURTI MARG in New Delhi is going to be a museum. I am not such a philistine as to argue that what the country needs is houses, not museums; and I am certainly glad Mr. Shastri has not moved into that monster of a place. The more I see and think of New Delhi the less I approve of its existence. The capital was built for satisfying the vanity of a set of rulers with whom their successors have nothing whatever in common. That the Russian communists occupied the Kremlin on their seizure of power is no reason why the Congress in India should have done likewise. But the temptation was great; and I can see the Congressmen's point of view. After all, these gentlemen had spent years in gaol; when power came they were all getting on in years; and at that age a little bit of comfort, even luxury and pomp, is not altogether unwelcome. Yet it would have been an excellent gesture to turn over the various Raj Bhavans and other similar buildings to the people as hospitals or libraries. In Calcutta it was once seriously considered that Government House should become the home of the National Library instead of its going all the way to Belvedere. (To disclose the source of the successful resistance to the idea would be unfair; the gentleman concerned has always lived very simply, still does and yet was addicted to the house.) In the matter of housing, as in so much else, Mr. Nehru's case was unique. He had spent his childhood in Anand Bhawan; for him to take over the former Commander-in-Chief's house was no very novel experience. But if I moved into one of those colonial-style enormous bungalows in New Delhi from my small flat in Calcutta, I should think I would be distinctly uncomfortable. (One never knows, though.) I have no intention of taking out the sole agency for Nehruism; but I do think Mr. Nehru would not have approved of a Nehru museum. If he did agree, he would object to filling it with bric-à-brac from his mantelpiece. If a museum we must have, let us stock it with things he loved—pictures, books and other things not necessarily connected with Nehru. The man was so dynamic; and a museum sounds so dead.

FREDERICK II, KING OF PRUSSIA, HAD BY THEN HAD enough of Voltaire's nagging over the persecution of himself and his companion at Frankfurt. On 12th May, 1760, the angry king wrote: "People talk of Molière's servant, but nobody will talk of Voltaire's niece". I have better news for Mr. Pratap Singh Kairon. I think people will talk of his sons, long after Mr. Ram Kishan has settled down in his uneasy office. Nothing, apparently, can happen these days without a "consensus", which means nothing more exalted than that a vague majority in a group or party has been talked or bullied into agreeing on something or somebody; then comes the "unanimous" election of a leader or passing of a resolution. If the Congress High Command cared to take a consensus of public opinion on the whole sordid Punjab tangle, it would be left in no doubt that the affair should not end with the official view that nothing more need or can be done about Mr. Kairon and his sons. What is obvious is that some people have made money in ways held improper or illegal by the Das Commission; this money should visibly return where it belongs. It is none of my business to suggest how this is to be done; done it has to be, unless the people are to be left with the impression that the sins of the children shall be visited upon the father but the sons shall get away and live happily thereafter. In the matter of taxing incomes of a variety of assessees, the family is regarded as a unit. I suggest that the principle be extended to cases of corruption. It is simply not good enough to say that a Minister cannot be held responsible for the profitable misdeeds of his relations. It is in some ways a pity that the Kairon affair should have blown up within a few days of Mr. Shastri's succession; but this can also be an opportunity. Mr. Shastri may be bound by non-alignment and all that—basically sound policies, I still think—but he is not committed to all those personal loyalties which led Mr. Nehru into endless and inexplicable difficulties. Mr. Ram Kishan has promised a clean administration. He cannot begin to give one until an example has been made of the people, officials and politicians, arraigned by the Das Commission.

IT IS DIFFICULT TO INTERPRET PRESIDENT JOHNSON'S announcement that the U.S.A. will, if necessary, commit its fighting forces to the defence of Laos and South Vietnam, as anything but a last desperate attempt to postpone until after the Presidential elections the inevitable public acknowledgment that the war there has been lost. It is surely not intended to be taken seriously, unless the Pentagon is anxious to prove the Chinese claim that American military power is merely a "paper tiger". I cannot see that the U.S. army would enjoy any more success against the communist guerillas than the French did. And any attempt to invade North Vietnam, from where the mischief springs, would only bring the Chinese in as it did under similar circumstances in North Korea. These would no longer enjoy Russian support, but then the Americans would not have the backing of their allies through the United Nations, and justly or otherwise, would certainly stand condemned by the rest of the world. That might not be so bad if victory could be assured. But the lesson of Korea was that the United States' democratic set-up makes long wars virtually impossible; all that the adversaries have to do is to hold on, and eventually the U.S.A. must come pleading for peace, as she did in Korea. In these circumstances it would be disastrous for countries like India, who depend on U.S. power for holding up the advance of Chinese domination in south-east Asia, if the Americans get themselves involved in another serious military defeat on this continent. Better, perhaps, to be beaten in argument than in battle; and I suspect this is what President Johnson is reluctantly reconciling himself to—after the election, of course. I have suggested before that the only way to win against communist guerilla warfare is to

PRESSMAN

carry it back into communist territory. If the apathy of the local inhabitants makes this impossible in south-east Asia, then I have just one other proposal to make. It is that the case be presented to the Russians that it is not in their interests that the Chinese should dominate this vital region. I think it is already accepted that their intervention, in various forms, is what has halted the Chinese attack on India. "Set a communist to catch a communist" might well become a workable principle for the second half of the 1960s.

IT CAME AS QUITE A SHOCK TO ME WHEN I READ the other day that the man who, more than any other single individual, was responsible for touching off the first World War, is still regarded in Yugoslavia as something of a national hero. That is because his assassination of the Archduke Franz Ferdinand, heir to the throne of the Austro-Hungarian empire, and his wife, the Duchess of Hohenberg, led eventually to an independent Yugoslavia. It also resulted in the death of over five million fighting men, untold misery throughout the world, and eventually, of course, to the second World War. That is quite a price to pay for any one nation's independence, and I hope the Yugoslavs will forgive me if I wonder whether it was really worth it. The man concerned—he was a boy of only 19 in fact—boasted the unremarkable name of Gavrilo Princip, and the date he chose for the deed was exactly half a century ago this week, on 28th June, 1914, to be exact. He was too young to be executed, and by the time he died in prison in 1918 he had lived long enough to appreciate some of the damage his action had caused. It is probably unfair to heap all the blame for the subsequent holocaust on those young shoulders. The European powers had been preparing for a long time; all that was necessary was a single spark to ignite the powder barrel. Yet there must have been several occasions during the past few years—the Cuban crisis was one—when much the same circumstances prevailed and the world was not plunged into war. Whether that was because there was no Princip to pull the trigger, or because the nations concerned were not as eager for a showdown as they were in 1914, must remain a matter of opinion. Anyway, there can be little doubt that the outcome of those famous shots fired 50 years ago in Sarajevo was much suffering and only a limited amount of good. To reverence the memory of Princip as a great patriot, then, is on a par with celebrating Adolf Hitler as the founder of the United Nations.

BRITAIN, I SEE, HAS BECOME ALARMED AT WHAT appears to be her counterpart of Calcutta's student rioting. There, it is earning the general title of "teenage hooliganism", and is taking the form of fighting between the picturesquely designated "mods" and "rockers". Their main distinguishing feature is that they are letting off a little youthful steam, and inevitably tangling themselves with the police in the process. And, of course, they are earning the stern disapproval of their elders, which, no doubt, is one of the chief aims inspiring their efforts. I frequently wonder why such youthful escapades always attract so much public disapprobation. Certainly they often cause damage to property and the inconvenience is sometimes distressing. But the energy of youth must have its outlets, and whether we like it or not, the complications and tight regulations of modern life, especially as it is lived in the West, do not always offer suitable opportunities for self-expression. I think many of those in Britain who are now loudest in their condemnation of teenage hooliganism can look back on a youth which, if they were lucky, was interspersed with riotous bonfire-night celebrations at Oxford, or, if they were not, with some very violent episodes in a bomber over Berlin or in a tank in the western desert. As one commentator has pointed out, the uniform leather jacket of the rocker bears a striking symbolic resemblance to the flying clothes of the Spitfire pilot. In fact, the same spirit of youthful adventure enthused both of them, and it is the task of society to ensure that it is able to find its outlet in constructive ways.

Guide for Investors

METAL BOX EXPANDS ACTIVITY

THE Metal Box Co. of India Ltd has produced satisfactory results for the year ended March 1964. The profit has improved from Rs. 1.24 crores for 1962-63 to Rs. 1.54 crores for 1963-64, after transferring Rs. 20.04 lakhs (against Rs. 16.86 lakhs) to depreciation and Rs. 7.88 lakhs (against Rs. 5.08 lakhs) to provision for gratuity. A taxable ordinary dividend of 18 percent, including an interim of 9 percent, has been declared.

Although the interim dividend was paid on the original capital, the final dividend of 9 percent has been paid on the increased share capital. It was raised in March 1964 by the issue of 1.6 million new ordinary shares of Rs. 10 each to the existing shareholders at a premium of Rs. 2.50 a share in the proportion of one new share for each one held. The yield amounts to 5.8 percent at the present price of Rs. 31.25 a share of Rs. 10 each. A dividend of 19 percent, subject to tax, was paid for 1962-63 on the old share capital. The ordinary share capital now stands at Rs. 3.22 crores, against Rs. 1.61 crores. Taxation absorbs Rs. 92.50 lakhs (against Rs. 79 lakhs), development rebate reserve Rs. 8.50 lakhs (against Rs. 2.50 lakhs) and general reserve Rs. 9 lakhs (against Rs. 39.50 lakhs). There was a profit of Rs. 50,914 (against Rs. 4,757) on the disposal of fixed assets. The carry-forward is Rs. 2,480, against Rs. 38,785 brought in.

Capital expenditure on fixed assets amounted to Rs. 83.07 lakhs of which Rs. 57.21 lakhs was spent on plant and machinery. The work in the Bombay factory No. 2 in Deonar has been completed and the machinery has been installed. The new paper group has begun carton and level production in the Bombay factory No. 1.

Calico Mills Results Impress

THE Ahmedabad Manufacturing and Calico Printing Co. Ltd, popularly known as the Calico Mills, has done exceedingly well during the year ended March 1964. Sales, profit, dividend—all are higher. The preliminary report does not mention the actual turnover during 1963-64, but it is stated to have set a new all-time record. The gross profit, after providing Rs. 52.44 lakhs (against Rs. 52.48 lakhs) for interest charges and Rs. 15.16 lakhs (against Rs. 16 lakhs) for bonus to employees, has recorded an impressive rise from Rs. 1.405 crores to Rs. 2.288 crores, which again is an all-time high. The final dividend has been raised from Rs. 18 to Rs. 21 a share, bringing the total dividend to Rs. 35 a share, against Rs. 32 a share in 1962-63. What is more, one-third of the final dividend is exempt from tax under Section 84 of the Income-tax Act, and the dividend is payable on the increased capital as raised by the one-for-34 bonus issue made in 1962-63. In spite of the marked improvement in the profit, the directors have had to withdraw Rs. 42 lakhs from the general reserve in order to meet part of the dividend liability: in 1962-63, the directors had transferred Rs. 43.50 lakhs from the general reserve for the payment of dividend.

Appropriations include depreciation Rs. 1.561 crores (against Rs. 84.38 lakhs), taxation Rs. 18.32 lakhs (nil) and statutory development rebate reserve Rs. 19.14 lakhs (against Rs. 40.43 lakhs). The proposed dividend absorbs Rs. 61.25 lakhs, against Rs. 54.40 lakhs. The equity dividend is on 175,000 shares, against 170,000 shares in the preceding year. The directors state that additions made to the Company's gross block during 1963-64 amounted to Rs. 1.369 crores, against Rs. 3.389 crores in 1962-63. The plant for making printed, embossed and laminated plastic sheets of P.V.C. for rain coats, curtains, bags, gift articles, etcetera, started production during the latter part of the year. The production of polyvinyle acetate is expected to start towards the end of the current year. The Company's textile, chemical and plastic products continued to be in good demand during the year.

Elphinstone Mills Sales Up, Profit Down

DESPITE an increase of about 15 percent in the sales from Rs. 2.98 crores to Rs. Rs. 3.43 crores, the gross profit of Elphinstone Spinning and Weaving Company for 1963 at Rs. 29.08 lakhs was nearly 21 percent lower than the previous year's figure of Rs. 35.24 lakhs. The profit margin has been squeezed because production costs have continued to rise whereas cloth prices have been pegged at the 1961 level. The chairman, Mr. N. K. Jalan, has assured the shareholders that every effort is being made to rationalise, modernise and improve the efficiency of the mills. (A fuller version of the speech appears on another page of this week's *Capital*).

The Company's working during the first five months of the current year has been satisfactory and the directors have every hope that the dividend will be maintained at 18 percent. Mr. Jalan has urged the Government suitably to revise cloth prices in order to compensate for the rise in the cost of production due to factors beyond the industry's control. In accordance with the policy of modernisation, the Company installed additional machinery of the value of Rs. 15 lakhs during 1963. The Company's equipment of automatic looms has steadily increased, thereby improving the quality of its cloth production and its capacity to export its goods. The working of the leather cloth division which was affected last year due to acute shortage of basic raw materials is expected to do well in 1964.

The Company has installed modern machines in this division and has also introduced foam P.V.C. and profile jet qualities. All these are expected to produce leather cloth of very high quality and new varieties, apart from improving the existing quality of products. The Company has been availing itself of the services of foreign technical consultants to advise it on the latest techniques in the field of leather cloth manufacture. It has been allowed to effect expansion of its spinning and weaving capacity. The Cotton Textile Loan Advisory Committee has recommended an additional loan of Rs. 37 lakhs to the Company from the N.I.D.C. for the purpose of equipping the Company's Moon Mills unit with the latest types of spinning and other machinery. It is now trying to finalise negotiations for placing orders for the second unit. Mr. Jalan has urged that the Government should allow liberal imports of certain textile machinery because of the inadequate supply from indigenous sources.

Lower Profit for Burn

THE preliminary results of Burn and Co. Ltd for the year ended April 1964, show a profit of Rs. 1.07 crores, against Rs. 1.43 crores for 1962-63. The taxable ordinary dividend of 15 percent has been declared on the share capital which has been doubled by issuing bonus shares in the proportion of one bonus share for every one held. The yield works out to 5.5 percent at the present price of Rs. 274 a share of Rs. 100 each. The Company declared a dividend of 25 percent subject to tax for 1962-63, on the old share capital.

Outlook for Orissa Cement

IN his chairman's statement at the annual general meeting of Orissa Cement Ltd in Rajgangpur, Orissa, last Monday, Mr. J. Dalmia said that the unsatisfactory results had been largely due to the decline in the demand for silica and basic refractories, combined with rising production costs, particularly of cement. (A full text is published on a later page in this issue of *Capital*.) The present price of cement fixed by the Government does not cover production costs adequately since there have been substantial increases in railway freight, coal prices and labour emoluments.

Referring to the outlook for the refractory industry, he says that not only has there been excessive capacity in this industry, but this problem is going to continue for many years. The installed capacity amounted to 828,980 tonnes at the end of 1963, and is expected to rise to 1.1 million tonnes in 1964 and to 1.3 million tonnes in 1965. These capacities have been planned in the expectation that the steel output capacity will reach 10 million tonnes by 1966. Since steel production has fallen short of the target, a substantial part of the output capacity for refractories has been rendered idle. Besides, the demand for refractories from the steel industry has tended to decline due to technological changes in the manufacture of steel. The steel industry has steadily reduced the consumption of silica refractories; its demand for basic refractories has also been reduced by the adoption of the L.-D. process. Mr. Dalmia has, therefore, made the point that the present capacity in the refractory industry will be adequate to meet all requirements up to 1971, even if the output of steel reaches the 18-million tonne level. He hopes that the Government will regulate the expansion of the refractory industry. Mr. Dalmia also points out that while the installation of any new capacity in the steel industry takes five to six years, it is possible to effect expansion in the refractory industry within a much shorter period.

The Company is now paying more attention to refractory exports. But the move has been hindered by the high freight rates which Indian exports have to bear. The Company has also taken steps to overcome the growing cut of excess refractory production by diversifying the range of products. He also mentioned the difficulties of obtaining mining leases and prospecting licences.

Amar Dye-Chem Cuts Dividend

AMAR Dye-Chem fared badly during 1933. Despite a small improvement in the sales from Rs. 1.43 crores to Rs. 1.50 crores, the gross profit fell from Rs. 36.59 lakhs to Rs. 30.38 lakhs. The dividend had to be reduced from 9 percent to 8 percent and even for the payment of the reduced dividend, the directors have had to withdraw a large sum from the reserves. Several factors contributed to the Company's poor performance last year. These included large imports of naphthols and bases against unused licences, shift in the consumption pattern, accumulation of stocks leading to slowdown in production, reduction in selling prices, cut in raw material licences necessitating purchases of export promotion licences at huge premiums and the general rise in manufacturing costs.

Prospects for the current year, however, seem to be quite promising. The chairman, Mr. A. K. Doshi, assured the shareholders at the latest annual meeting that the Company's working during the current year has considerably improved and that they could look forward to better results. Production during the first five months is placed at 362 tonnes, valued at Rs. 81.41 lakhs, against 247 tonnes valued at Rs. 53.36 lakhs in the same period last year. Due to improved sales, most of the accumulated stocks have been cleared and the financial position of the Company has become easy. It is now able to finance its expansion programme through its own resources, besides the capital of Rs. 30 lakhs raised in December last.

The installation of the T.P.M. plant has been completed and all the items

FORBESFLEX

FLEXIBLE SHAFT EQUIPMENT

MANUFACTURED IN COLLABORATION WITH B.O. MORRIS, COVENTRY.

Armstrong Smith Ltd.

P-17, MISSION ROW EXTN., CALCUTTA-13

are ready for marketing. There is a keen competition in this line of products and it will, therefore, take some time before the sales pick up. However, the sales of reactive dyes, a new range of products, are satisfactory and will contribute to the sales and profits of the Company in 1964. Little progress is reported to have been made in the installation of the intermediate plant. Only the new bon acid plant has started functioning since last March. The delay is due mainly to the Government's indecision on the subject and the Company has been compelled to buy more and more of import entitlements at a premium of 60 percent as the licence for raw material allotted to the Company is insufficient.

The Company's exports are slowly but steadily increasing. In 1963, it exported goods worth Rs. 3.45 lakhs, but the figure for the first five months of the current year is placed at Rs. 2.73 lakhs. Exports during the current year are expected to show a substantial improvement over the previous year's performance.

Less from Bengal Potteries

THE profit of Bengal Potteries Ltd has declined from Rs. 12.74 lakhs for 1962 to Rs. 11.79 lakhs for the year ended December 1963, after transferring Rs. 12.14 lakhs (against Rs. 10.51 lakhs) to depreciation and Rs. 53,024 (against Rs. 2 lakhs) to development rebate reserve. Sales rose from Rs. 2.16 crores to Rs. 2.34 crores, but the profit has been held down by the rising production costs since the Company has not raised the prices of finished products in proportion to the increased production costs. The taxable ordinary dividend has been reduced from 12 percent to 11 percent in view of the larger provision for depreciation. The yield amounts to 5.5 percent at the present price of Rs. 5 a share of Rs. 2.50 each. Taxation absorbs Rs. 5.50 lakhs (the same), and dividend reserve Rs. 6.30 lakhs. Out of the latter reserve, the proposed dividends will be paid. The carry-forward is Rs. 2,054, against Rs. 3,208 brought in.

The production of dinnerware improved by about 30 percent in comparison with that for 1962. The production of fine China has begun. High tension insulators up to 33,000 volts have been produced. Steps have been taken to increase the product of high and low tension insulators. The Company has decided to change its accounting year to July-June, so the balance-sheet and the profit and loss account for the half-year ended 1964, will be drawn up in due course.

Tata Oil Cuts Dividend, but Offers Bonus

THE Tata Oil Mills Company Ltd has fared badly during the year ended March 1964. Despite an increase of a little over 7 percent in the turnover from Rs. 12.89 crores to Rs. 13.80 crores, the pre-tax profit, after providing for managing agents' commissioon and depreciation which have not been mentioned in the preliminary report, has declined by as much as 74 percent from Rs. 50.74 lakhs to Rs. 29.12 lakhs. The profit for 1963.64 is the lowest since 1957-58, when the comparable figure was Rs. 20.6 lakhs, but that was on a much smaller turnover of Rs. 6.41 crores. In view of the sharp setback in the profit, the directors have been obliged to reduce the dividend from Rs. 5.50 to Rs. 3 a share (Rs. 25-paid). The dividend for 1963-64 is on the increased capital as the 139,920 new equity shares which had received a proportionate dividend of Rs. 1.73 a share in 1962-63 have been entitled to the full dividend of Rs. 3 a share in 1963-64. In order to mitigate the disappointment of the shareholders, the directors have recommended a one-for-three bonus issue by capitalising Rs. 35.04 lakhs out of the share premium account of Rs. 35.95 lakhs.

The provision for taxation has been reduced from Rs. 23.03 lakhs to Rs. 9.39 lakhs, but the amount set aside for development rebate reserve is higher at Rs. 5 lakhs, against Rs. 3.15 lakhs. No provision has been made for general reserve and plant modernisation and development reserve which had received Rs. 2.40 lakhs and Rs. 2.75 lakhs, respectively, in the preceding year. A sum of Rs. 75,000 (against nil) has been used to write off debenture issue expenses. After setting aside Rs. 13.98 lakhs (against Rs. 19.50 lakhs) for dividend reserve, there remains a surplus of Rs. 1,299 to be carried forard, against Rs. 1,187 brought in. The proposed equity dividend absorbing Rs. 12.61 lakhs (against Rs. 17.84 lakhs) and preference dividend of Rs. 1.34 lakhs (the same) are to be paid out of the dividend reserve. Tata Oil shares which had been sold down to Rs. 56 on expectations of poor working results and a cut in the dividend stood around Rs. 58 on the eve of the dividend announcement. These shares were marked up to Rs. 62 after the divident announcement, as the shareholders had been compensated for the dividend cut by the issue of bonus shares which, as usual, is subject to the sanction of the Controller of Capital Issues. The sharp setback in the Company's profit is quite in line with the market's general expectations.

Tezpore Tea Repeats

TEZPORE Tea Co. Ltd (an Assam garden) has repeated the taxable ordinary dividend of 12½ percent for the year ended December 1963. The yield amounts to 8.5 percent at the present price of Rs. 14.69 a share of Rs. 10 each. The profit has amounted to Rs. 8.42 lakhs, against Rs. 8.37 lakhs for 1962, after transferring Rs. 2.49 lakhs (against Rs. 1.81 lakhs) to depreciation. Taxation is allocated Rs. 4.96 lakhs (against Rs. 4.81 lakhs), general reserve Rs. 1.35 lakhs (against Rs. 50,000) and development rebate reserve Rs. 2,434 (against Rs. 72,318). The carry-forward is Rs. 4,556, against Rs. 20,902 brought in. The crop rose from 28,763 maunds to 31,516 maunds, but the average sale price dropped from Rs. 2.62 to Rs. 2.41 a lb. The 1964 crop has been estimated at 29,250 maunds at a cost of Rs. 47.56 lakhs. Capital expenditure for 1963 amounted to Rs. 6.56 lakhs and the estimate of capital expenditure for 1964 amounts to Rs. 5.69 lakhs.

Lukwah Tea Profit Falls

LUKWAH Tea Co. Ltd has declared a taxable ordinary dividend of 10 percent for the year ended December 1963 to absorb Rs. 80,000. The profit has dropped from Rs. 9.14 lakhs for 1962 to Rs. 2.44 lakhs for 1963, after providing Rs. 1.13 lakhs (against Rs. 1.03 lakhs) for depreciation. Taxation absorbs Rs. 1.15 lakhs (against Rs. 5.65 lakhs) and development rebate reserve Rs. 9,025 (against Rs. 4,580). The carry-forward is Rs. 88,155, against Rs. 78,851 brought in. The crop amounted to 549,318 kilograms, and the average sale price to Rs. 5.28 a kilogram. It is proposed to build a new factory in the garden to produce 8,000 maunds of tea. Steps have been taken to go in for large-scale re-plantation and new plantation.

Krishnabehari Tea Earnings Drop

THE profit of Krishnabehari Tea Co. Ltd has amounted to Rs. 64,622 for the year ended December 1963, against Rs. 1.14 lakhs for 1962, after transferring Rs. 64,032 (against Rs. 67,076) to depreciation. The taxable ordinary dividend of 6 percent has been declared to absorb Rs. 30,000. Taxation is allocated Rs. 30,000, leaving a carry-forward of Rs. 5,433, against Rs. 2,721 brought in. The crop for 1964 has been estimated at 180,000 kilograms, and the crop prospect is considered good.

New Samanbagh Tea Skips

THE profit of the New Samanbagh Tea Co. Ltd (a Sylhet garden) has dropped from Rs. 11.93 lakhs for 1962 to Rs. 7.47 lakhs for 1963, after reducing depreciation from Rs. 1.48 lakhs to Rs. 86,688. The usual preference dividends have been paid, but the ordinary dividend has been passed. Taxation absorbs Rs. 4.18 lakhs (against Rs. 9.84 lakhs), general reserve Rs. 5 lakhs and development rebate reserve Rs. 38,800 (against Rs. 2,200). The carry-forward is Rs. 5,570, against Rs. 2.07 lakhs brought in. The directors have been making efforts to transfer funds from Pakistan to India. The crop amounted to 14,257 maunds, against 14.351 maunds and the average sale price dropped from Rs. 3.34 to Rs. 2.74 a lb. The crop for 1964 has been estimated at 13,800 maunds at a cost of Rs. 21.66 lakhs. Capital expenditure amounted to Rs. 5.76 lakhs. The estimate for capital expenditure for 1964 is Rs. 3.39 lakhs.

Rajahbhat Tea Pays Less

RAJAHBHAT Tea Co. Ltd (a Dooars garden) has earned a profit of Rs. 1.08 lakhs for the year ended December 1963, compared with Rs. 2.15 lakhs for 1962, after providing Rs. 60,381 (against Rs. 57,116) for depreciation. The taxable ordinary dividend of 6 percent has been repeated, which works out to a yield of 5.9 percent at the present price of Rs. 10.12 a share of Rs. 10 each. Taxation is allocated Rs. 45,500 (against Rs. 75,500), general reserve Rs. 35,000 (against Rs. 45,000) and development rebate reserve Rs. 2,774. The crop dropped from 391,886 kilograms to 368,115 kilograms, but the average sale price was maintained at Rs. 4.70 a kilogram. The crop for 1964 has been estimated at 366,500 kilograms at a cost of Rs. 15.39 lakhs.

Progress of Bharat Steel Tubes

BHARAT Steel Tubes Ltd is building its factory in Ganaur, Punjab, for manufacturing pipes. Technical and financial collaboration arrangements with Abbey Etna Machine Co. of the U.S.A. have been completed. The Company has been permitted to import capital equipment for Rs. 1.41 crores and the necessary import licence has been obtained. Orders for equipment have been placed with Abbey Etna Machine Co. The first instalment of capital equipment should arrive in the near future and trial production may begin by the end of 1964. The account for the year ended December 1963, shows a loss of Rs. 1,649. The Company has arranged loans for Rs. 1.55 crores, including Rs. 93.90 lakhs in U.S. currency from the Industrial Finance Corporation of India and the U.S. Agency for International Development. The loan of Rs. 1.30 crores, including the dollar loan, obtained from the Industrial Finance Corporation is repayable in 20 half-yearly instalments commencing from 20th December, 1966. The loan of Rs. 25 lakhs from U.S. A.I.D. is repayable in five equal instalments starting from 1st January, 1966.

Chaparmukh Silghat Railway Earns Less

THE Chaparmukh Silghat Railway Co. Ltd has earned a gross profit of Rs. 3.80 lakhs for the year ended March, 1963 which is about Rs. 22,466 smaller than that for 1961-62. The net profit amounts to Rs. 75.540, after making all adjustments. Bringing in Rs. 1,480, the available distributable balance amounts to Rs. 77,020. The dividend of Rs. 2.40 a share of Rs. 100 each has been declared to absorb Rs. 74,400. The carry-forward is Rs. 2,620. Capital expenditure amounted to Rs. 35.46 lakhs.

Great Pyramid Insurance Earns Less

THE Great Pyramid Insurance Co. Ltd has declared a taxable ordinary dividend of 15 paise a share of Rs. 10 each on which a sum of only Rs. 2.50 has been paid up. The profit has amounted to Rs. 85,346, against Rs. 99,536 for 1962, after making all adjustments. Reserve funds are allocated Rs. 25,000 and dividend absorbs Rs. 60,000. The carry-forward is Rs. 6,290, against Rs. 5,942 brought in. The Company did not transact any insurance business during 1963.

S.L.M.-Maneklal Fares Well

THE preliminary report on the working of S.L.M.-Maneklal industries Ltd for the 15-month period ended March 1964, is full of promise for the future. It appears that the shareholders will not have to wait long before their investment begins to bear fruit. The Company went into production in October 1963 in Vatwa near Ahmedabad. The products manufactured by the Company, namely, rotary air compressors, vacuum pumps, exhausters, roots blowers and water vacuum pumps have been well received in the market. It has undertaken the production of diesel engines and these are expected to be placed on the market by the end of this year. The first phase of construction of the main factory has been nearly completed, and all the machines so far received have been put into operation. The administrative building will be ready by the third quarter of 1964, so that full working of all the departments in the Company's own building can begin by the end of this year.

Machine tools worth about Rs. 36 lakhs have been erected and commissioned, and the balance machine tools of the value of about Rs. 15 lakhs are expected to arrive shortly. The installation programme is expected to be over by the end of this year, and the Company will go into full production soon thereafter. To meet the increasing demand for its products, the Company has applied for an expansion licence for watering pumps from 100 to 960 units a year and for rotary air compressors from 100 to 600 units a year. The Company has received an expansion licence for roots blowers, raising the capacity from 100 to 300 units a year. Apart from the growing internal demand, there are bright chances for exporting these items and necessary steps are being taken in that direction. Besides, the Company has set up an agency department to handle the sole concessionaire rights in India for the products of Sulzer Brothers of Switzerland. The products to be handled are diesel engines of all kinds, gas and steam turbines, pumps for various applications, rotary air compressors, weaving machines. etcetera.

The Company's sales during the 15 months ended March 1964, are placed at Rs. 35.74 lakhs, compared with Rs. 6.09 lakhs for the previous period from 18th November, 1961, to 31st December, 1962. The gross profit amounts to Rs. 6.56 lakhs, against Rs. 4.05 lakhs. The directors have provided Rs. 1.53 lakhs (against Rs. 20,514) for depreciation, Rs. 1.40 lakhs (against Rs. 2,112) for development rebate, Rs. 48,912 (against Rs. 10,740) for directors' remuneration and Rs. 1.30 lakhs (against Rs. 2.30 lakhs) for taxation. After wiping out the loss of Rs. 1.76 lakhs brought forward from the previous period and making some minor adjustments, there remains a balance of Rs. 10,827 to be carried forward. In view of the negligible surplus available for disposal, the directors have not recommended any dividend for the period under report.

Bagalkot Cement Resumes Dividend

THE directors of Bagalkot Cement Co. Ltd have recommended a dividend of 7.5 percent for 1963. The Company has thus returned to the dividend list after three years. It was in 1959 that it paid a dividend of 8 percent. According to the very brief preliminary report on the Company's performance during 1963, the production of cement has risen from 178,240 tonnes to 201,000 tonnes and the gross profit has gone up from Rs. 22.52 lakhs to Rs. 24.62 lakhs. This is the first time that the Company's plant has attained the full rated capacity. The provision for depreciation is substantially lower at Rs. 10.46 lakhs, against Rs. 20.95 lakhs, and allocation to the statutory development rebate reserve is also slightly lower at Rs. 1.20 lakhs, against Rs. 1.50 lakhs. A sum of Rs. 7 lakhs has been transferred to the general reserve, out of which the proposed dividend will be paid. The Rs. 10-paid share of Bagalkot has long been quoted at a big discount. At its latest quotation of Rs. 8 50, the share offers a gross return of about 9.5 percent.

Jaipur Metals Does Well

JAIPUR Metals and Electricals Ltd has done well for 1963. Turnover rose from Rs. 2.33 crores to Rs. 2.69 crores, and the profit has improved from Rs. 23.79 lakhs to Rs. 30.24 lakhs. Taxation absorbs Rs. 5.65 lakhs (against Rs. 6.85 lakhs), depreciation Rs. 10.89 lakhs (against Rs. 7.38 lakhs) and development rebate reserve Rs. 4.92 lakhs (against Rs. 3.50 lakhs).

Addressing the annual general meeting of the Company recently held in Jaipur, Mr. R. H. Kamani, chairman, mentioned that the replacement of the super profits tax by the surtax on profits had generally benefited the corporate sector, although the levy of the dividend tax had neutralised the good effect to some extent. (A fuller version of the speech is published on a latter page in this issue of *Capital.)* Although the tax concessions given to the Company have been welcomed, he stressed the need for greater stability in fiscal policy in the interest of future planning and development of industries. A taxable ordinary dividend of 6 percent has been declared, and a sum of Rs. 3.61 lakhs has been transferred to general reserve to increase the capital base of the Company for participating in the benefit of the surtax on profits.

The production and sales of meters and metals rose substantially. The output of A.C.S.R. has begun and its demand is likely to increase since the allocation of copper for the conductor industry is being discouraged. In meter, competition has increased due to the installation of many factories. The Company has taken steps to become self-sufficient in meter components. The equipment to manufacture magnet has been installed. As soon as the technical experts from Japan arrive, the production of magnet will begin. The manufacture of enamelled copper wire, cotton, silk and paper-covered wire and strips will be undertaken in the near future.

Sri Ramnarayan Mills to Issue Rights

THE working of Sri Ramnarayan Mills Ltd for the year ended 31st December, 1963, shows a profit of Rs. 2,94,321, after providing Rs. 2,39,694 for depreciation. The previous year's profit was Rs. 3,51,245, after providing Rs. 2,68,250 for depreciation. Out of the year's profit of Rs. 2,94,321, provision for taxation amounts to Rs. 1,60,000 (against Rs. 2,08,000). Provision for unabsorbed development rebate of previous years amounted to Rs. 10.045 and income tax for 1961 to Rs. 16.776. The equity dividend at 10 percent (the same) absorbed Rs. 100,000. Provision for dividend tax on the equity dividend amounts to Rs. 7,500. The above appropriations have absorbed the year's profit.

Sales of yarn during the year amounted to Rs. 29,50,483 (against Rs. 28,21,577). During the year, the mills worked for 292 days in double shifts with an installed capacity of 12,384 spindles. The power cut, although for a short period, affected production adversely. The directors have decided to avail themselves of the opportunity given by the Government to increase the installed capacity of the mill. The installed capacity of the mill will be 25.000 spindles when the present licence is used. Consequent on the decision to take up the expansion scheme, the directors have decided to issue rights shares, subject to the provisions of Section 81 of the Companies Act, 1956. of the face value of Rs. 10 lakhs, consisting of 5,000 cumulative preference shares of Rs. 100 each and 5,000 equity shares of Rs. 100 each.

Prospects for International Computers

INTERNATIONAL Computers and Tabulators Indian Manufacturing Co. Ltd which was recently commissioned is expected to reach full production by about the middle of 1965. The installation work of the plant and machinery at the factory has reached an advanced stage and a major portion of the machinery has been commissioned. Presiding in the absence of the chairman, Mr. Murarji J. Vaidya, over the first annual general meeting, the managing director, Mr. A. M. Richford, told the shareholders that the Company would be in a position to earn enough profit in 1965 for paying dividend on equity shares. The present programme is to produce 50 tabulators, 150 sorters, 700 hand punches and 700 verifiers as also cards, spares and accessories. The percentage of imported components and used in the plant would be gradually reduced from 66⅔ percent in the first year to 33⅓ percent in the second year and 5 percent in the third year. The products currently being manufactured or rebuilt include tabulators, sorters, punches, verifiers and other ancillary machines in both the 40-column and 80-column range. The manufacture of cards for the export market to be used with data processing machines will commence in the near future. The Company's production represents only a fraction of the demand in the country. The market for its products is, therefore, assured. The Company's new factory in Poona was formally inaugurated by Mr. S. K. Wankhede, Finance Minister of Maharashtra, on 27th June. The factory has a floor area of 60,000 square feet and when in full swing, it will employ 300 persons. Out of the Company's issued capital of Rs. 50 lakhs, Rs. 30 lakhs has been taken up by International Computers and Tabulators of London and Rs. 20 lakhs has been raised in India.

Name of Isaac Holdens (India) Changed

ISAAC Holdens (India) Ltd has changed its name to Woolcombers of India Ltd, with effect from 23rd June, 1964. This change of name confirms the Company's association with Woolcombers Ltd, Bradford, U.K.

Prima Particle Board to Enter Market Soon

PRIMA Particle Board Corporation Ltd is a new Company which has been formed to undertake the manufacture of particle boards. The factory is proposed to be set up in Billimora (Gujarat). The major raw material required will be wood which can be easily had in sufficient quantity from the nearby Dang forests. The Company has secured the technical collaboration of Macdonald Associates Inc. of the U.S.A. The project is estimated to cost about Rs. 65 lakhs, which is proposed to be met by the issue of share capital of Rs. 40 lakhs and a loan of Rs. 25 lakhs from the I.C.I.C.I. The foreign exchange component is placed around Rs. 16 lakhs. The Company has applied to the I.C.I.C.I. for the necessary foreign exchange loan.

The plant which will have an annual capacity of 7,200 tons of particle board on a three shift basis is expected to go into production some time during the first quarter of 1966. The promoters hope to be able to pay preference dividend from the third year of operation, and a maiden dividend of 6 percent is likely to follow a year later. The authorised capital of the Company is Rs. 1 crore, of which Rs. 40 lakhs made up of Rs. 30 lakhs in equity shares of Rs. 10 each and 10,000 9.3 percent redeemable cumulative preference shares of Rs. 100 each is being issued to begin with. The directors and their friends will take up equity shares worth Rs. 10 lakhs. The balance of Rs. 20 lakhs of equity capital and Rs. 10 lakhs of preference capital are being offered for public subscription. The Company is likely to enter the market shortly. Arrangements are being made to get the entire public issue underwritten.

Sri Sarada Mills Earns Less

THE working of Sri Sarada Mills Ltd for the year ended December 1963 shows a profit of Rs. 1,77,195, after providing Rs. 35,896 for depreciation. This compares with the previous year's profit of Rs. 2,41,233, after providing Rs. 29,850 for depreciation. Adding to the year's profit a sum of Rs 116 being the provision for doubtful debts no longer required, the total comes to Rs. 1,77.312. Out of this, the directors have declared the preference dividend at 9.1 percent for the year ended 31st December, 1959, amounting to Rs. 10,055.50. This leaves a balance of Rs. 1,67,256. After adjusting this profit against the brought-forward loss of Rs. 6,32,197, there is a loss of Rs. 4,64,940, which is carried forward.

New Capital Issues

SIX companies have been authorised to raise fresh capital aggregating Rs. 5.15 crores. Of these, one is a Central Government undertaking and two are companies floated by the States. Four companies are issuing equities and two equities plus preference shares. Two of the companies are offering part of their capital for public subscription by prospectus. The consent of the Controller of Capital Issues is valid for 12 months for four companies. For two companies, it is valid up to 28th December, 1964, and 21st May, 1965 only.

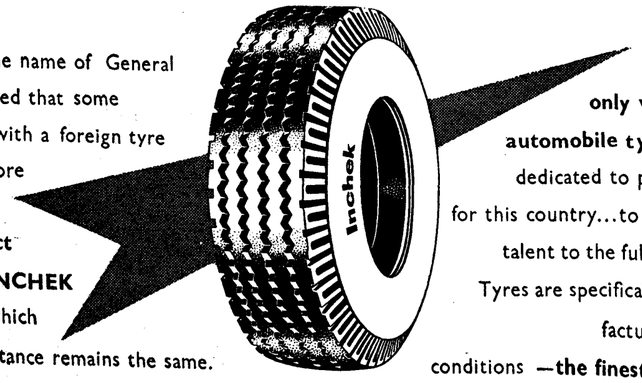
South Indian Shipping Corporation Ltd, Madras, is to issue capital of Rs. 2 crores divided into 200,000 equity shares of Rs. 100 each to be issued for cash at par. Out of this, shares of the value of Rs. 1.5 crores will be offered for public subscription by prospectus. The capital will be used for meeting part of the cost of five bulk carriers, to be ordered by the Company.

Instrumentation Ltd, Jaipur, a Government of India undertaking, will be issuing capital of Rs. 35 lakhs divided into 3,500 equity shares of Rs. 1,000 each to be issued privately for cash at par. The money will be used for the manufacture of electronic and electromagnetic instruments, etcetera.

Assam Gas Company, a Government of Assam undertaking, is to issue further capital of Rs. 50 lakhs divided into 50,000 equity shares of Rs. 100 each to be issued privately for cash at par. The money will be used in financing the Naharkatiya Namrup Gas Pipeline and for meeting other expenditure.

The Orissa State Commercial Transport Corporation Ltd, a Government of Orissa undertaking, is to issue capital of Rs 50 lakhs dividend into 5,000 equity shares of Rs. 1,000 each to be issued privately for cash at par. The money will be used for developing an efficient system of road and water transport for facilitating construction and the development of traffic to Paradeep port.

Indo French Forges Ltd, Calcutta, was given consent in 1963 for the issue of capital of Rs. 1 crore consisting of Rs. 75 lakhs in equity and Rs. 25 lakhs in preference for setting up a forge and heavy structural plant in Panchet, Purulia. To enable the Company to meet increased capital requirements, the amount of the consent has been enhanced to Rs. 1.5 crores for cash at par consisting of Rs. 1 crore in equity shares of Rs. 10 each and Rs. 50 lakhs in 9.5 percent cumulative redeemable preference shares of Rs. 100 each. Out of these, such number of shares of each kind will be issued to the public by prospectus as would qualify each kind of scrip to be listed on the recognised stock exchanges. The consent is valid up to 28th December, 1964 only.



Andhra Cotton Mills Ltd, Prodatur, (Andhra Pradesh), is to issue share capital of Rs. 30 lakhs divided into 20,000 equity shares of Rs. 100 each and 10,000 cumulative redeemable preference shares of Rs. 100 each carrying a dividend of 9.3 percent free of Company's tax, but subject to tax at source at the prescribed rate. All the shares are to be issued for cash at par. This is in supersession of an earlier consent for the issue of capital of Rs. 25 lakhs. The consent is valid till 21st May, 1965 only.

General Tyres Limited

WILL NOW BE KNOWN AS

Inchek

Tyres Limited

After we had announced the name of General Tyres Limited, we discovered that some people were confusing us with a foreign tyre company. We have therefore renamed our company and product. **Our product will now be known as INCHEK** but the superior quality which earned countrywide acceptance remains the same.

Our Company is the **only wholly Indian owned automobile tyre company.** We are dedicated to produce the best tyres for this country...to use and develop Indian talent to the fullest extent. **INCHEK** Tyres are specifically designed and manufactured to suit Indian road conditions —**the finest choice for economy**

Inchek Tyres Limited

ITL/G/21

The Stock Markets

SHARES STEADY ON RELAXATION OF MARGIN SYSTEM

Wesnesday Evening.

THE Calcutta stock market has been steady during the past week, and a fair volume of business has been transacted. The support has been sustained because of a number of favourable developments, and the selling pressure has declined. The clearing on Wesnesday passed off smoothly and carry-forward charges have been moderate. The prospects of higher dividends from the steel companies for 1963-64 have influenced operators. The optimism stems from the higher output during 1963-64, combined with the impression that the tax changes in the last Central Budget have not greatly affected the steel producers.

The commencement of the sale of units by the Unit Trust of India from Wednesday is being bullishly interpreted, since it is thought that the Trust will invest substantial funds in industrial equities. The decision of the Government of India to repay the compulsory deposits collected from small-income groups has had a good effect. Originally, repayment was to take place after the lapse of five years.

Operators have been encouraged by the relaxation of the margin system. This will undoubtedly stimulate speculative activity. So precaution should be taken to ensure that unhealthy trading does not overpower the market.

The advent of the slack season, combined with a bigger flow of funds into the banking system, has been welcomed. The banking community has, in fact, been investing considerable funds in Government securities during recent weeks. The support for short-dated Government loans is strong and their prices have increased. Medium-dated loans are steady. The 3 percent Conversion loan 1986 is quoted around Rs. 63.75. The Reserve Bank of India has suspended its open market operations with a view to grooming the market for the forthcoming Government loans. It is thought that the Government may announce the new loan issue within the next few days.

Indian Iron have closed around Rs. 25.18, after touching a higher peak. Although profit-taking has taken place at every bulge, the undertone is steady. All offerings have been absorbed without much difficulty. In the engineering section, Burn have been a smart feature due to the payment of a satisfactory dividend on the increased capital. Interest has been shown in Texmaco, Guest, Keen, Williams and Jessop. Bhartia Electric Steel have been steady.

In miscellaneous shares, attention centres on clearing scrip of which Hindustan Motors, Indian Aluminium, Kesoram Industries, Indian Copper and Rohtas are prominent. Metal Box have been a steady feature on producing good results. Support has been forthcoming for Union Carbide, Indian Oxygen, British Paints and Associated Battery. Alkali and Chemical have been firm on declaring a good interim dividend. Among new shares, Hindustan Aluminium have enjoyed support due to the prospects of expansion. Among managing agency shares, Martin Burn, Jardine Henderson and Balmer Lawrie have been bought. Electric company shares have been selectively bought. U.P. Electric and Calcutta Electric have been transacted. Paper shares have improved on hopes that the price of paper will be increased in the near future. Orient, Bengal, Seshasayee and India Paper Pulp have met with support. Sugar shares are neglected and buyers are difficult to attract even by discounting the present prices.

Selected jute shares are steady. In spite of poor enquiries for jute goods from abroad, the statistical position is considered fair. Birla, Champdany, Barnagore, Kinnison, Auckland, India and Ganges have been prominent. Coal shares attract little attention. Stray business has been done in Burrakur, Bengal and Central India.

Cotton mill shares have been supported in the belief that the price of cloth will soon be raised. J. K. Rayon have recovered on short-covering. Elgin have met with replacement purchases. Bharat Commerce, Dunbar and Jay Shree Textiles have been steady. Business in tea shares is limited due to the disappointing dividends declared by many companies for 1963. Attention has largely been confined to selected Assam and Dooars gardens.

Bombay

SHARES RISE ON SHORT-COVERING

BIGGER DIVIDEND HOPES BOOST STEEL

Wednesday Evening.

BUOYANT conditions have prevailed in the Bombay stock market during the past week. Share prices have scaled new peaks on sustained support because of nervous short-covering. Although attention has been largely confined to clearing shares, the prices of selected cash scrip have also advanced considerably on replacement purchases. Dalal Street has been cheered by the hope that Mr. T. T. Krishnamachari, Central Finance Minister, will indicate the steps which he is likely to take to stimulate economic growth during his impending visit to Bombay. The relaxation of the margin system has been bullishly interpreted.

The improvement has taken place under the lead of steel shares which have met with hectic support due to hopes that steel companies will pay bigger dividends for 1963-64 in comparison with what they paid for 1962-63. Selected cotton mill shares have improved considerably as it is thought that at the forthcoming meeting of the Textiles Consultative Board due to be held shortly, a decision to increase the price of cloth will be taken. In the meantime, corporate news has been excellent. The latest reports of many companies show rising turnover and increased profits.

Tata Steel ordinary have closed at Rs. 152.75. Among engineering shares, Tata Engineering have been active on talk of a bonus issue. Premier Construction, Mukand Iron and Alcock Ashdown have been supported. Among motor-vehicle shares, Hindustan Motors have been steady on support from outside sources, while Premier Automobiles have been sluggish.

Coton mill shares have showed widespread gains. Century have recovered sharply on short-covering. Interest has been shown in Bombay Dyeing, Kohinoor and Svadeshi. Standard have improved greatly due to short-covering in view of the diversification of activity. Gokak, Morarjee, Tata Mills and India United ordinary have been steady.

Although turnover in miscellaneous shares has been restrained, the undertone has improved. In cement scrip, Digvijjay have been supported on prospects of further expansion. Associated Cement have been steady. In sugar shares, Belapur and Walchandnagar Industries have met with support. Scindia Steam have been a bright feature in steamship company shares. Great Eastern Shipping have gained in sympathy with the general trend. Be Be Petrol have been prominent in mining shares, but Shivrajpur Syndicate have reacted on profit-taking.

Chemical shares have been fully steady. Tata Chemical have been bought on hopes of a higher dividend. Polychem, Amar Dye and Indian Dyestuff have improved. In fact, the latter scrip have attracted a margin on purchases since the price has risen by more than 10 percent over that in the previous settlement. In rayon shares, National have been firm and have gained due to short-covering as well as replacement buying. Tata Oil have been steady on bonus issue prospects. Selected electric companies have been firm. Ahmedabad and Tata Power have been conspicuous. Scattered business has been transacted in bank shares. Central Bank, Bank of India and Bank of Baroda have been done.

Madras

SHARES RISE ON FIRMER BOMBAY ADVICES

BUT TURNOVER RESTRAINED ON POWER CUT FEARS

Tuesday Evening.

THE undertone in the Madras stock market has improved during the past week, mainly due to firmer advices from Dalal Street. Although turnover has been restrained, the prices of clearing and selected cash scrip have hardened due to the shortage of sellers. Sentiment has improved on the relaxation of the margin system. Although investors have been encouraged by easier money conditions, they have tended to be cautious in view of the possibility of a further cut in power supply.

Government securities have been steady and support has been forthcoming for selected State Government loans. Interest has been shown in selected preference shares. Bank shares have been steady. Canara have been transacted at Rs. 77 and Indian Overseas at Rs. 142. In electric companies, Salem-Erode have been steady at Rs. 14.37 and Vellore at Rs. 15.62. Sugar shares have been neglected. Deccan have been available at Rs. 11.20 in spite of the prospect of a bonus issue. E. I. D. have been done at Rs. 34 despite the payment of an interim taxable ordinary dividend of 7 percent. Business has passed in Madura at Rs. 9.44 and in Travancore at Rs. 7.20.

Selected planting shares have been steady, but turnover has been limi-

THE CALCUTTA MONEY MARKET

SLIGHT DECLINE IN ADVANCES

Wednesday, 1st July.

THE general level of advances has decreased slightly in the Calcutta money market during the past week. The requirements of all the major categories of borrowers are down. The credit given to the cotton and jute mills and to the foodgrains and seeds trade has declined nominally, while the advances to sugar mills and the iron, steel and engineering industries have fallen slightly. In the interbank market, conditions were easy and the call rate dropped to 1¼ percent, but towards the close has firmed up to 2¼ percent.

The exchange market has been quiet, with a poor supply of gunny bills and a small supply of tea bills. The demand for remittances is moderate. In London, sterling suffered a setback against all important currencies, excepting the Dutch guilder and the Swedish krona.

BULLION WAS QUIET IN CALCUTTA during the past week due to the lack of demand, especially from upcountry. Silver dropped from the previous week's level of Rs. 248.25 to Rs. 247.75 quoted today. The London and New York prices stood at 111⅛d and 129.3 cents.

In sympathy with the fall in silver, gold ruled quiet and the price of 14-carat dropped from Rs. 74.75 to Rs. 73.25.

DURING THE WEEK ENDED 26TH JUNE, Government of India Treasury bills for Rs. 229,77,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 29th June. The total amount offered was Rs. 4,50,00,000. Tenders at Rs 99.256 percent were accepted in full, and those at Rs. 99.250 percent were allotted 38 percent approximately. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.994 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 6th July.

IT IS STATED THAT 91-DAY Intermediate Treasury bills will be sold from 1st July to 4th July at Rs. 99.266 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 24th June to 27th June amounted to Rs. 7.60 crores.

DECLINES OF Rs. 33.16 CRORES TO Rs. 2,484.12 crores in active notes and of Rs. 7.61 crores to Rs. 2,536.06 crores in the total note issue were notable features of the return of the Reserve Bank of India for the week ended 26th June, 1964. The currency contraction was adjusted by reducing foreign securities by Rs. 4 crores to Rs. 89.46 crores and rupee securities by Rs. 6.24 crores to Rs. 2,226.04 crores in the Issue Department. Deposits of the Government of India rose by Rs. 14.31 crores to Rs. 79.71 crores, while those of State Governments dropped by Rs. 79 lakhs to Rs. 14.05 crores. Balances of scheduled banks at Rs. 97.67 crores showed a rise of Rs. 8.46 crores. Balances held abroad declined by Rs. 24 lakhs to Rs. 7.15 crores despite a transfer of securities from the Issue Department to the Banking Department. Investments at Rs. 273.90 crores showed a drop of Rs. 10.12 crores. Loans to scheduled banks declined from Rs. 4.03 crores to Rs. 1.14 crores, of which advances against usance bills amounted to Rs. 56.15 lakhs (Rs. 1.67 crores). Ways and means advances stood at Rs. 53.34 crores, against Rs. 49.69 crores.

THE RETURN OF THE STATE BANK of India for the week ended 19th June, 1964, shows a rise of Rs. 5.88 crores to Rs. 622.32 crores in total deposits. Investment in Government securities are up by Rs. 1.72 crores to Rs. 230.65 crores, while other authorised investments remain unchanged at Rs. 9.44 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have fallen by Rs. 7.27 crores to Rs. 359.37 crores. Cash and balances are, in consequence, shown at Rs. 25.15 crores or Rs. 2.05 crores higher.

THE STATEMENT OF THE POSITION of scheduled banks for the week ended 19th June, 1964, shows Demand and Time liabilities at Rs. 1,262.34 crores (Rs. 44.19 crores on account of borrowings from banks) and Rs. 1,329.30 crores (Rs. 11.14 crores), compared with Rs. 1,255.74 crores (Rs. 49.22 crores), and Rs. 1,313.58 crores (Rs. 10.61 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 66 lakhs and Rs. 1.05 crores to Rs. 63.81 crores and Rs. 85.06 crores, respectively. There is a rise of Rs. 13.60 crores to Rs. 633.46 crores in investments. Advances and bills discounted at Rs. 1,796.11 crores show a drop of Rs. 25.38 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.7 percent and 69.3 percent, against 5.1 percent and 70.9 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 3-7-64.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
3-7-64	3-10-64	2,00,00	Rs. 2.994%
28-6-64	3-10-64	2,00,00	Rs 2.995%

ORISSA CEMENT LIMITED

CHAIRMAN, MR. J. DALMIA'S REVIEW

The following is the summary of the speech of the Chairman, Mr. J. Dalmia delivered at the Fourteenth Annual General Meeting of the Company held at Rajgangpur (Orissa State) on 29th June, 1964.

Gentlemen,

I welcome you to the 14th Annual General Meeting of your Company.

Although more than a month has passed since that fateful 27th day of May, we are still burdened with the sense of our heavy loss and great sorrow at the sad and sudden passing away of our great leader, Pandit Jawaharlal Nehru, who, as the first Prime Minister of India, has guided and shaped the destinies of our country since independence. His passing away has been mourned by the world at large for he was not only the architect of modern India but an acclaimed and accepted leader in the international sphere. His devotion to the ideals of peace and brotherhood of man stands out like a beacon to guide the path of mankind through the years ahead. Let us, in tribute to his memory, resolve to move forward together to achieve his dream of a peaceful, prosperous and united India.

We are indeed fortunate that the leadership of our country is now in the hands of Shri Lal Bahadur Shastri, who took up the onerous burden of the Prime Ministership of the country on the 9th June. Shastriji, as he is commonly and affectionately known throughout the country, can best be described as the great commoner. Of humble birth, he has risen to the leadership of the Nation. A conciliator and negotiator par excellence, he was relied upon by Pandit Jawaharlal Nehru in many a difficult situation. During his tenure as Home Minister, Shastriji amply demonstrated his acumen and firmness. His services to the Nation and to the common man are too well-known to need repetition. In his devotion to the ideals of the Father of the Nation, Mahatma Gandhi, handed down to him by Panditji, and his pragmatic approach to national and international problems, we must find hope again to move forward to the goal of a prosperous India and a peaceful world. In offering our respectful felicitations to Shastriji, let us also pledge ourselves to strive, each within his own sphere, to help in the immense task of nation building.

Your company has suffered a grievous loss in the untimely death on the 27th of April, 1964 of Shri N. C. Roy, who was a member of your Board and also served the company as its Technical Advisor. In the course of his long association with our Organisation extending over 30 years, Shri Roy had rendered dedicated service and was held in high esteem for his deep knowledge of the industries with which he was associated. He made valuable contributions to the work of various Technical Committees and the Panels on the cement and refractories industries set up by the Government of India. I was closely associated with Shri N. C. Roy throughout his service with our organisation and his sad demise is a great personal loss to me. I am sure you will join me in placing on record our deep appreciation of his manifold services to the company and expressing our heartfelt sympathies and condolences to the bereaved family.

The major reason for the set back to the working results has been the shrinkage in demand for both silica and basic refractories. Last year I had warned against the creation of excess capacity in the refractory industry. My fears have come true and the despatches of Silica and Basic refractories have suffered during the year under review on account of lack of orders. Factors beyond the control of the producers, such as increases in the coal price, surcharge on railway freight, etc., have resulted in increases in production costs of cement. The industry has reported the incidence of these various levies to the Government of India and has represented that the retention prices payable to the producers be increased but it is regretted that till date no decision has been taken by the Government. Compensatory increases in the retention prices in respect of actual increase in production cost due to Governmental action had been recommended by the Tariff Commission and agreed to by the Government. It is only fair that these assurances should be implemented and the increase in retention prices expedited.

Both in my address in June 1962 and last year I had emphasised the need for a careful appraisal of the future demand for refractories for planning increase in the capacity of the industry. Last year, I also drew attention to the demand for refractories falling short of the growing capacity and consequent increase in idle capacity with the industry. The position has deteriorated further and the industry is faced with a crisis, which is likely to continue for sometime, due to its production capacity, existing and to be implemented by 1965-66, far exceeding the demand which until 1967-68, is unlikely to increase substantially over the 1963-64 requirements.

As derived from discussions at recent Refractories Panel meetings, the installed capacity of refractory industry (excluding mortars and dead-burnt magnesite) at the end of 1963 was 8,28,980 tonnes which, at the end of the years 1964 and 1965, will rise to 11,04,380 and 12,81,320 tonnes, respectively. Though additional capacity of 3,26,700 tonnes has been licensed, I am not taking that into consideration for presenting the present plight of the industry, as foreign exchange has not yet been provided for it. The expansion of refractories industry, just mentioned by me, was planned and is being implemented on the basis of annual production target of 10 million tonnes of the steel ingots by the end of 3rd Five Year Plan. According to the revised forecast, this target can be achieved only by 1967-68, and ingot steel production for the earlier years is estimated at 5.92, 6.32 and 7.16 million tonnes for 1963-64, 1964-65 and 1965-66, respectively.

Based on steel production of 6 million tonnes during 1964-65 and 7 million tonnes during 1965-66, estimated demand of refractories—Firebricks, Silica Bricks and Basic Bricks—during these two years will be about 56% and 54%, respectively, of the capacity available with the industry. This confirms my forecast last year that by 1964-65 about 50% of the industry's capacity would be idle. These figures are based on consumption pattern in 1963. With the introduction of an all basic open hearth furnace, the consumption of Silica refractories has steedily declined and before long the steel industry may consume very little silica bricks, except for the construction of new Coke Oven Batteries. The capacity released will of course be available for the production of other products. But with the switch over to all basic construction and with the supply of increasingly better quality materials, as well as greater operational experience by the steel industry, the consumption of refractories has shown and will show a marked downward trend. As against the estimated overall consumption of refractories at the end of the 2nd Five Year Plan of 90 Kg. per ingot tonne for open hearth process using Silica roof, the present official estimation is only 57 Kg. per ingot tonne, comprising of 35 Kg. for firebricks, 14 Kg. for basic and 8 Kg. for silica. The corresponding consumption figures for highly advanced steel producing countries are now approximately 7.5 Kg., 7.3 Kg. and 2.8 Kg. per ingot tonne, respectively. The steel industry will no doubt make efforts to reduce the consumption further due to the emphasis by the Government on cost reduction. This trend cannot, therefore, be ignored by the Refractory Industry in the planning for its future growth. When these factors are taken into consideration, it is conceivable that the refractory industry may find itself with well over half of its capacity idle by the end of 3rd Five Year Plan.

According to the data furnished to the Panel on Refractories the production pattern in regard to the target of 18 million tonnes of steel by 1970-71 will be—Open Hearth 7.35, L.D. 9.70 and Electric Steel 1 million tonnes, respectively. Thus, ingot steel production by open hearth process by 1970-71 will be only little more than the anticipated production by this process at the end of 1965-66, and bulk of the additional steel production, when the 18 million tonnes target for 1970-71 is achieved, would be by L.D. process in which Dolomite replaces conventional refractories to a large extent. As such, growth of the demand for refractories in relation to the growth of the steel industry will be at a much lower rate than hitherto. In regard to rate of consumption of refractories for the conventional open hearth process and electric steel process there is divergence of opinion even within the steel industry and the studies by the Indian Refractory makers Association support the view of those who hold that the consumption will be very much less than that put forward by the protagonists of high consumption. This divergence has been reflected in the discussions of the Refractories Panel where a clear picture has not emerged partly due to want of adequate data from some of the steel plants. We hope they will furnish the required data for which they have been requested.

At a recent meeting of the Refractories Panel, revised firebricks consumption at a level of 18 million tonnes of steel production has been placed at 8,61,600 tonnes which, according to the industry, is very much on the higher side. The requirement for repairs for blast furnaces has been placed at too high a figure, while the future off-take of firebricks by non-steel consumers is likely to be around ½th of the total consumption instead of ⅓rd. A more correct estimate would, thus, be 7,26,000 tonnes. By the adoption of continuous casting process by the steel industry and the repairing of the entire blast furnace linings by gunning and not by shaped and fired bricks, the consumption of firebricks will fall further substantially. By 1966 the industry will have a capacity to produce over 10 lakh tonnes of firebricks, which will be sufficient to cover the demand for such refractories even when the steel production target of 18 million tonnes is achieved. I would refer here to what has been described as steel plant quality brick to support the contention that the entire capacity of the industry is not suitable for the manufacture of refractories for the steel plants. Not all refractories indented by the Steel plants are of this quality as at least one-third of the total indent by a steel plant is of IS 6 and IS 8 variety which are being made by almost every firebrick maker in the country. The remaining demand for high quality bricks can easily be catered to by the major refractory works. The conclusion is inescapable; there is no deficit of firebrick production, nor will there be in 1970-71, when the steel production capacity of 18 million tonnes is targetted for. On the contrary, there may still be even an excess capacity of nearly 2 lakh tonnes.

In the case of basic refractories the issue is even more controversial. At the meeting of the Refractories Panel in March last, a total figure of 1,36,103 tonnes of basic bricks was arrived at for a level of steel production of 18 million tonnes according to open hearth, L.D. and Electric Steel processes. This figure has been questioned not only by the Indian Refractory Makers Association but by some of the steel producers as being unnecessarily high. As indicated by various steel plants, their consumption of basic bricks by open hearth process per million tonnes of ingot steel is—Rourkela, 6,000, TISCO 7,270, IISCO 9,090, Durgapur 12,100 and Bhilai 20,000 tonnes. An average consumption rate of 13 Kg. per tonne was derived from these figures, which, however, does not give a true picture as four out of the five plants show substantially less consumption and their average comes to about 8.5 Kg. per tonne. The corresponding consumption figures by major steel producing countries in the world ranges from 4 Kg. to 9 Kg. per tonne. Bhilai Steel plant has been requested to furnish details for such a high consumption of refractories in their modern plant for proper assessment of their future requirements. It is felt that if this question is examined properly the consumption rate of basic bricks at Bhilai would not be more than at Durgapur, that is, 12,000 tonnes per million tonnes of ingot steel, which would reduce the total requirement of basic refractories for the open hearth process plant by 20,000 tonnes on Bhilai's projected capacity of 2.5 million tonnes of ingot steel. For the manufacture of electric steel the Panel assumed tentatively a consumption rate of 10 Kg. of basic bricks per tonne of steel. The consumption pattern of existing smaller electric furnace steel units is very much less than this. The authoritative figure of basic brick consumption in electric furnaces given by DEBENHAM of US steel is only 5 Kg. per tonne. As the new and large electric steel furnaces which are to be put up for the production of one million tonnes of electric steel will doubtless incorporate the latest technological improvements, it would be safe to assess the consumption of basic refractories for such production at 5 Kg. per tonne of steel. Furthermore, in the total figure of basic bricks consumption, arrived at tentatively by the Refractories Panel, there is a provision of 10% of the total consumption of basic bricks by the steel industry for other consumers. In 1963 only about 3.5% of the total despatches of basic bricks went to consumers other than the steel plants. With the doubling of the production of basic bricks over the 1963 level, the percentage of supplies to other consumers as against those to the steel plants will fall further and it would be more than adequate if a provision of 3% for other consumers is made instead of 10%. After allowing for these three factors, the total requirement for basic bricks by 1970-71 is placed around 101,700 tonnes, about 30% less than that arrived at by the Refractories Panel. By 1966 the industry will have a capacity of 135,000 tonnes for basic bricks which would be more than adequate to cater to this demand particularly when allowance is made for further reduction in the rate of consumption of basic refractories due to further improvements in the quality of indigenous refractories and due to the increasing experience in steel technology which the Indian steel industry will doubtless have. Introduction of

the "gunning" process for repairing of open hearth furnaces instead of by relining with shaped bricks will also reduce basic brick consumption.

I have referred earlier to the virtual elimination of silca refractories by the steel industry in future. The silica bricks capacity, a great part of which is already idle, would be available for switching over to basic brick manufacture, should that be necessary. There is therefore already a substantial built-in reserve available to the industry for further production of basic refractories without having to seek any extension in its capacity.

I therefore submit that, for the reasons stated earlier, the 3rd Plan target for the refractory industry should be considered as having been converted into the 4th Plan target to cater for an 18 million tonnes steel industry. Any further expansion of this industry therefore cannot be justified at present and if created must lead to chaotic conditions forcing some of the existing units to the wall with the unhappy consequences of unemployment, industrial unrest and waste of rupee and foreign exchange resources already employed. I believe that government would be glad to utilise the country's limited financial, material, and trained man-power resources in other sensitive sectors of the economy instead of permitting further expansion in an industry where such expansion is not only unnecessary but would be injurious to the industry itself. It is pertinent to add here that whereas a new steel plant takes 5 to 6 years to go into operation, much can be accomplished by the refractory industry within a short space of time and at a fractional cost. If, therefore, it is found that for any reason the demand for refractories is likely to exceed the forecasts made, additional capacity, as required can be created well in time to meet the additional demand. This is, therefore, another reason why any proposals for further major expansions of the industry should be deferred for some years until it can be definitely established by pragmatic approach to the problem that there are reasons justifying creation of further capacity.

It is a paradox that while the industry today is burdened with idle capacity, imports of Refractories of the type manufactured in the country have been continuing, generally in the guise of package deals, even though Government had informed the Indian Refractory Makers' Association in June 1963 that imports of such Refractories would be allowed only after very careful screening. I would like to refer here to the recommendations of the Rao Committee on the "Utilisation of External Assistance" and Government's decisions thereon. Two of these recommendations which have been accepted are likely to increase the imports of Refractories as items of major plants and particularly by the public sector projects. I would earnestly appeal to Government to ensure that in the implementation of these recommendations the policy restricting the imports of Refractories should be strictly enforced until and unless it has been established, in consultation with the industry that suitable material is not available indigenously.

With idle capacity as discussed by me, the Refractory Industry must explore possibilities for export. Your company is alive to this need and, at the invitation of the Government of India, is participating in the New York World Fair as one of the two exhibitors from India of Silica and Fireclay Refractories and the sole exhibitor of Basic Refractories. During 1963 the Indian Refractory Makers' Association had suggested to the Government of India to include refractories in all their trade agreements with other countries and in their trade journals as one of the main commodities which can be exported in accordance with international standards. Africa, Middle East and South East Asia should be natural outlets, but, unfortunately, ocean freight rates discriminate unfavourably against Indian exports. The Association is collecting data regarding the ocean freight rates in comparison to those from European and Japanese ports and will shortly submit to Government their recommendations to enable the Indian refractory industry to meet competition more effectively.

I had referred last year to your Company having developed the manufacture of certain special types of refractories such as Silica Coke Oven Bricks, Forsterite Bricks, etc. Efforts continue to be made to achieve further diversification of production as a possible method of meeting to some extent the difficulties arising from over production in the industry. While such diversification will doubtless assist the industry, its salvation must lie in controlling its further growth as the bulk of the requirements and hence of the production is for the conventional types of Refractories which are already produced.

Refractory industry continues to face the problem of multiple specifications regarding quality, shape and size adopted by the steel plants. The Indian Standard Specifications formulated with the help of steel industries' representatives still remain unaccepted in many cases. We hope Government will take further action to ensure universal adoption of the Indian Standard Specifications for refractories by the steel plants. This would help to restrict unnecessary imports and facilitate the manufacture and supply of refractories to the steel plants at short notice.

Delays continue to be experienced in the disposal of Mining Lease and Prospecting License applications, although there are indications of some improvement in this direction. I would like to repeat here the suggestion which I had made last year that rules and regulations should be devised whereby the legitimate claims of manufacturers and actual users of certain raw materials which are extremely scarce are recognised and upheld to prevent good properties, while being evaluated, passing into the hands of speculators thereby making it extremely difficult to programme the manufacture of heavy duty products such as Refractories on a regular basis.

Before I conclude, I would like to express our appreciation of the services rendered by the officers, staff and workers of the Company during the year.

JAIPUR METALS & ELECTRICALS LIMITED

CHAIRMAN, MR. R. H. KAMANI'S SPEECH

The following is the summary of the speech of Mr. R. H. Kamani, Chairman, Jaipur Metals & Electricals Ltd. delivered at the 20th Annual General Meeting of the Shareholders on the 25th June, 1964, at the registered office of the Company at Jaipur.

Extending a cordial welcome to the Shareholders of the Company, Shri R. H. Kamani referred to the great national tragedy created by the passing away of our beloved Prime Minister. In a moving reference he solemnly stated that all-out efforts would be made by the Company to realise the dream of Jawaharlalji for a prosperous India through industrialisation. He prayed for the peace of the departed soul.

Shri Kamani then presented the Directors' Report, Audited Profit & Loss Account and Balance Sheet and proposed them to be adopted.

Accounts

The working of the Company, Shri Kamani stated, had shown quite satisfactory progress with the total turnover and the profits touching new heights viz from Rs. 2,32,76,000 to Rs. 2,69,39,000 and from Rs. 23,79,000 before providing for depreciation and the Managing Agents' remuneration to Rs. 30,24,000 respectively ; being 16% higher.

He then recounted the allocation and stated that the amount provided for taxation was less at Rs. 5,65,000 including the dividend tax on last year's equity dividend as against Rs. 6,85,000 in the previous year ; while the Managing Agents' remuneration was Rs. 1,72,000 as against Rs. 1,48,000 in the previous year. Depreciation rose from Rs. 7,38,000 to Rs. 10,89,000 as also the Development Rebate from Rs. 3,50,000 to Rs. 4,92,000. He also referred to the abolition of Super Profit Tax and the introduction of Sur Tax and the Dividend Tax calculated at 7.5% on the amount of dividend on Equity Capital distributed by the Company. He stated that while the net effect of the abolition of Super Profit Tax and introduction of Sur Tax was beneficial to the Corporate Sector, the introduction of tax on Equity Dividends has whittled down the reliefs so obtained.

He welcomed a rebate of 10% of Income Tax and Super Tax and a rebate of 20% in Sur Tax in case of certain key industries to which category the Company also belonged, as also the withdrawal of Super Tax on inter Corporate investments. He expressed his opinion that frequent changes in the fiscal policy of the Government was a disturbing factor, which would result in uncertainty of future planning and development of industries. He, therefore, emphasised the need for a stable policy on the part of the Government for at least a certain minimum period.

Shri Kamani then dwelt upon the salient features of newly introduced Companies (Profits) Sur-Tax Act, 1964 and emphasised that in order to avail of the full benefits under the Act and to meet the expenses of the development and expansion schemes, it was very necessary that the Company should have a strong Capital base. He added that it was for this purpose that the Board of Directors recommended Dividends at 6% each on Preference and Ordinary Shares and have recommended to transfer a sum of Rs. 3,61,00 to the General Reserve. By doing this, the Capital resources of the Company would increase on one hand while on the other, liability on account of Sur-Tax would decrease.

Factory Working

The Chairman informed the Company that the production tempo has been maintained and the production and sales—both in the Meter and Metal Divisions—were the highest ever reached. He also expressed satisfaction at the timely commencement of the production of A.C.S.R. and All Aluminium Conductors more especially when the allocation of copper for Conductor Industry was discontinued by the Government. He stated that with the ever increasing production of electricity in the country, the prospects for the manufacture of A.C.S.R. and All Aluminium Conductors were bright.

In the sphere of Meter production, he cautioned a note of warning that since recently many meter manufacturing units had come into existence in the country, as a result of which there was a very stiff competition in price. The Company was fully conscious of this position and was, therefore, taking all the necessary measures to face the situation.

Expansion and Development

Shri Kamani informed the Company that efforts were afoot to make the Company self sufficient in the manufacture and procurement of meter components. He was happy to state that except for Jewel Bearings, Magnet and a small percentage of sub parts of the Cyclometer unit which were presently imported, all other parts and components were either made in the factory or indigenously obtained. He stated that all the machineries required for the manufacture of Magnet were installed. The Company was now awaiting the arrival of technical experts from our collaborators in Japan and no time will be lost to commence the production of Magnet. The Company will also be able to manufacture the remaining small percentage of sub parts for the cyclometer unit during the course of the current year.

Shri Kamani sounded a note of optimism that the Company, in the near future, will also be able to manufacture Enamelled Copper Wires and the Cotton, Silk and paper covered wires and strips.

Research

Shri Kamani stated that with a view to improve the quality of products as also to reduce the cost of production, all-out efforts were made by the Company and added that this was very vital for the economical development of the industry.

The Chairman attributed the good working results to the efforts and co-operation of the workers and members of the staff as also to the encouragement and backing of the shareholders received from time to time. He thanked them all.

NOTE : This does not purport to be the proceedings of the Annual General Meeting.

THE METAL BOX COMPANY OF INDIA LTD.

REVIEW BY THE CHAIRMAN, MR. M. K. VELLODI

The Thirty-first Annual General Meeting of The Metal Box Company of India Ltd. will be held on Wednesday, the 22nd July, 1964 at 59C Chowringhee, Calcutta.

The following is a copy of the Review by the Chairman, Mr. M. K. Vellodi, which has already been circulated to members.

Sales

I am glad to be able to report another year of fruitful endeavour particularly as, in my review last year, I struck a somewhat pessimistic note based on the assumption that the greatly increased taxation, both direct and indirect, including such impositions as the compulsory deposit in the last year's budget was bound to curb the purchasing power of the consumer. Happily this assumption proved incorrect, and our Product Sales in the year ended 31st March, 1964 increased by 17% to Rs. 13.85 crores.

Sales in all significant product groups increased, and during the second half of the year the new Paper Group commenced production. The encouraging volume of our order book for paper products at the year end is an indication that this addition to our packaging service will be widely welcomed.

Throughout the year and especially during the second half, the irregularity in the supply of raw material and, with certain products such as tubes, capacity considerations affected the service we were able to give our customers. In spite of these difficulties, ingenuity and good planning by the Company's managers again resulted in increased productivity, and generous long-term credit arrangements with our associates in England are now enabling us to undertake long overdue modernization programmes. The sales of non-tinplate products will be promoted vigorously during the coming year and with Calcutta No. 2's difficulties in tooling up for Defence work largely overcome, the sale of industrial components should be particularly strong. However, the availability of raw materials, especially tinplate and polyethylene, also capacity to produce certain products will continue to determine the extent to which we can meet this year's strong demand.

Of late, Government has become increasingly aware of the important function of scientific packaging in the preservation of goods packed and the protection of the consumer. This is reflected in current plans for new manufacturing capacity for such essential packaging materials as tinplate, aluminium and polyethylene. A time lag is, however, inevitable before new capacity can be brought on stream. In this interim period the packaging needs of the Third Plan must be serviced without interruption. Failure to do so will have an immediate and severe inflationary effect. In the case of tinplate, for example, Rs. 1 lakh spent on imports generates the distribution of over Rs. 22 lakhs of essential consumer goods. In this connection, it is worth while considering the growth of all packaging over the years of the Third Plan. We reckon that in 1960-61 the producion of consumer packages valued at Rs. 107 crores, and employing 100,000 men enabled the distribution of Rs. 2,870 crores of consumer products. This amounts to 12% of the aggregate value of the country's supplies in that year. By 1965-66 it is estimated that the planned growth in production of essential consumer commodities will require packaging materials valued at Rs. 213 crores and made by 150,000 men for the distribution of goods worth Rs. 6,620 crores.

If these statistics have been seldom considered in past Plans, it is perhaps because packaging as a service industry must of necessity operate behind the scenes. Our contact with the public is indirect. It is therefore all too easy for the proper consideration of our contribution and our problems to go by default. The consequence of apathy can be serious. It is, for example, essential that the country maintains an international standard of packaging and presentation if its consumer products are to succeed in world markets. Every well-packaged item of consumer goods may be a potential export already some Rs. 28 crores of packaged consumer goods are exported annually from India to almost 60 countries all over the globe. The packaging service essential to the effort to diversify India's exports is a specialised one, requiring technology of a very high order. Fortunately, both Government and Industry recognise this need. We therefore welcome Government's move to establish an institute of packaging in the country to assist Indian exporters with packaging and marketing know-how.

Package manufacture the world over is located substantially in the organised section of industry requiring as it does precision mass-production methods ; investment in complex machinery ; long-term research and development ; and close scientific collaboration both with packers and the suppliers of raw material. Export requirements demand that India must have access to the mainstream of world packaging technology. Your Company serves this role and, by maintaining laboratories and development facilities in Calcutta and Bombay, makes sure that new techniques and product improvements are developed in consonance with India's own particular requirements and material availability.

In view of the current interest in the scale of industrial operations, it is relevant to mention that as in the case of your Company, far from being prejudicial to the development of the small-scale sector, large-scale enterprise can be of vital assistance to its development. Metal Box, for example, establishes research facilities and develops new packages and packaging systems, builds up markets for them, establishes raw material supplies available to all, trains technicians and supplies for unrestricted sale previously imported packing machinery. Whether we like it or not we have in a most effective way brought up competition in our wake. In addition, we provide a direct stimulus to small industry from which our purchases each year exceed Rs. 60 lakhs. More important, the majority of our 1,500 customers belong to the small-scale sector. All of our customers, large and small, have access to our research and technical resources and a fund of technological and marketing know-how particularly valuable to the small packer. To take one example, our precision packages and advisory services have helped enterprising prawn canners on the West Coast—all of them relatively small-scale in comparison with their competitors overseas—to export over Rs. 73 lakhs worth of canned fish last year to markets as competitive as the U.S.A. Our Cochin Factory was established particularly to provide these canners with on-the-spot can cervice. We also evolved a 'flattened' system of can despatch to reduce the freight cost factor for canners all over the country. For small canners in North and South India, we have set up reforming installations at Delhi and Madras which assemble, at cost price only, flattened Open Top cans made on high-speed lines in Calcutta and Bombay. We have supplied similar equipment to the Uttar Pradesh Government to serve the needs of small-scale canners in the rural areas of the U.P.

Defence

Sales of ordnance supplies were below forecast during the year, owing to unexpected problems in equipping ourselves and in meeting the standards required by the ordnance inspection authorities. Your Company has so far invested more than Rs 6 lakhs in plant, equipment, tools and dies for Defence work. As our difficulties appear largely to have been resolved, we anticipate a substantial increase in sales during the year ahead.

Exports

After the previous year's export sales went ahead again, increasing by 33% to a new level of Rs. 28 lakhs. Extensive overseas touring by senior sales staff to reinforce the work of our agents secured notable gains in Burma, Ceylon and East Africa in particular. Our exports of domestic hardware and publicity materials increased by approximately 55% and, to our great satisfaction, machinery sales again rose by more than 100%.

Experience last year has made it abundantly clear that in the face of intense international competition it is far from easy to achieve and maintain the extremely high quality standards required in markets abroad. Your Company's efforts will be further intensified during 1964-65 although we anticipate problems arising out of political developments in Burma and in Ceylon.

I have already referred to our main contribution to the country's foreign exchange earning : the provision of packages made to international standards. In the past year our customers have earned more than Rs. 8 crores in foreign exchange through the export of goods packed in our containers.

To stimulate the growing awareness of scientific packaging, both for home and export markets, we organised over the year a series of seminars on consumer packaging for senior executives from amongst our customers, advertising agencies and Government. The seminars aimed at providing a comprehensive background on the subject of packaging to those concerned with the distribution and marketing of consumer products. This effort has been very well received.

Raw Materials

Throughout the past year, and especially during the last four months, the procurement of raw materials presented difficulties. Owing to delays in licensing procedures and the failure of the Russian authorities to fulfil commitments and a disappointing performance by Rourkela, tinplate stocks were very low during the last quarter.

The unfortunate communal disturbances at both Rourkela and Jamshedpur further reduced your Company's tinplate stocks and although the authorities were reasonably appreciative of our difficulties, arrivals against import licences cannot be expected in time to prevent further difficulty in meeting our customers' requirements. Increasingly we are being directed to import tinplate from sources which involve AID or Government-to-Government trading. While the need for this is accepted, the result for your Company is a loss of control over specifications and an unsatisfactory timing of deliveries through repeated procedural delays : also a general increase in tinplate prices.

The strongest possible representations have been made to persuade Government that India requires a minimum importation of 75,000 tons of tinplate during 1964-65. The demand for tinplate is now rising sharply and to the extent that it is not met a broad range of essential consumer products will not reach the markets. Every effort is being made, and must continue to be made, to develop substitute packs, but the climatic conditions, the rough handling and extended shelf-life to be expected in our country set a severe limit to the use of substitutes. For a long time to come therefore tinplate alone, for a majority of packs, will be able to meet these exacting requirements.

The foreign exchange bill for 75,000 tons of tinplate would be a little more than Rs. 8.60 crores ; while the problems of financing importation at this level are not underrated, it is a relatively small price to pay in terms of the health of the consumer economy when set against the fact that this tonnage means the marketing of consumer goods including foodstuffs and many household necessities worth more than Rs. 190 crores at retail prices. Failure to import at this level must mean shortages which can only have a highly inflationary impact on retail prices.

Aluminium supply scarcely balanced demand through the past year but availability in 1964-65 is likely to improve and advantage will be taken of this to push sales of non-tinplate products.

Polyethylene supply virtually dried up during the second half of 1963 : the national sugar shortage led to an inadequate supply of industrial alcohol to the two polyethylene producers and the situation is not expected to improve much during 1964. Bearing in mind that to an extent polyethylene, either alone or when laminated with other materials, can for certain packs be a substitute for tinplate, it is regrettable that this shortage has been allowed to develop when adequate capacity for indigenous polyethylene production is either available or about to be commissioned.

With the starting of your Company's new Paper Group, we became for the first time buyers of board and paper on a substantial scale. It is clear that the quality of indigenous board leaves a great deal to be desired. However, our buyers, technical staff and research people are cooperating with the suppliers in endeavouring to improve the quality available to us.

Research, Design and Development

Paper Group. Modern high speed equipment has been installed at Worli in Bombay for the manufacture to international standards of paper packages : treated and laminated paper and boards, cartons made therefrom, wrap-around labels, labels for cans and punched labels for bottle. The low quality of boards at present available will continue to give rise to scientific and mechanical problems, but they have not stood in the way of a successful start. We already have a nucleus of highly skilled personnel and the training of staff has continued throughout the year.

Bombay No. 2. The new factory at Deonar was completed on schedule and the entire Open Top operation was transferred from Worli to these new premises. The transfer of tin printing has been slightly delayed due to the late arrival of imported balancing equipment. Deonar has been built to allow room for Paper Group at Worli and to enable the re-laying of our can-making equipment. When the transfer is completed the congestion at Worli will be considerably eased resulting in the more efficient utilisation of plant and machinery.

Flexible Packaging. During the year under review the Government sanctioned the expansion of our manufac-

ture of Flexible Packages. Currently new equipment is being specified which will permit the expansion of our product range. A new laminate has been developed as a tamperproof diaphragm for tinplate containers combining the protective properties of foil, polyethylene and paper. This material has already been introduced for some packs and its functional properties are being examined for a wide range of other products.

Calcutta No. 2. Throughout the year Industrial Components section has been heavily engaged with ordnance supplies: technical resources have been fully stretched and the Technical Development Division played a major role in the design and manufacture of press tools required for this work. Several heavy presses have been installed and the Factory now has a balanced press shop for a wide range of components for the electrical and automotive industries and components for munitions.

Machinery Building. Our plans for developing the Machinery Building Section of your Company have been affected by the defence requirements. Nevertheless the supply of closing machinery to customers has continued undisturbed. A valuable export order for production equipment was received from our overseas associates and here again the resources of the Technical Development Division were used to complete the project on time. Further export orders for similar equipment are currently under manufacture.

Research Division. A Customer Research Canning Laboratory is being established at Research Division to augment our advisory services to the industry. In this laboratory we will be able to reproduce cannery conditions and experiment directly with the canning of new products. Throughout the year the Research laboratories in conjunction with suppliers have continued to develop wholly indigenous materials.* Their field of operation has extended to cover the new Paper Group.

Visits from Associates

During the year we had the pleasure of welcoming Mr. C. E. Sutton and Mr. A. L. Stuchbery, Directors of The Metal Box Company Limited. Mr. Sutton, who is in charge of the Home Company's Administrative Services, was able to apply to your Company's problems his very considerable experience, particularly that in the field of raw material procurement. Mr. Stuchbery, heading Research and Technical Engineering, apart from being one of the world's leading canmakers, is Chairman both of the Council of the Institution of Production Engineers in the U.K. and the Production Engineering Research Association. He was therefore in an unrivalled position to give us help in the planning of our defence production and the development of our Machinery Building and Industrial Component operations. Needless to say we welcome such visits which are both pleasant and useful.

Employee Relations

During the year under review, labour relations in the country deteriorated and the cordial atmosphere generated by the Emergency and the Industrial Truce Resolution unhappily began to disappear. This was most evident in the engineering industry of which we are a part: it particularly affected our employee relations in Bombay and North India.

If, as we are asked to believe, we are living in a state of emergency, and if the country's paramount needs are increased productivity to strengthen its defence and its export trade and at the same time raising the living standards of the people, then it is essential that there should be on the part of labour an adequate realisation of its responsibilities in this matter and on the part of the Government a determination to ensure that unreasonable demands and indifference to the common weal either by employers or by labour are not given any encouragement.

In Bombay, where over the last 10 years we had successfully negotiated with representative committees elected by our employees, a concerted attempt was made by an outside trade union to create unrest and disturbance. As a consequence our relationship with our employees there during the last few months of the year was under considerable strain. Charters of demands were presented to the Company by three separate unions, all pressing for formal recognition by the Company. Acting in accordance with the Code of Discipline, we have not recognised any union so far. We have, however, concluded an agreement on dearness allowance and gratuity with a union which represents a majority of the monthly-rated staff as certified by the Maharashtra State Labour Commissioner. The demands made by the other two unions were taken to conciliation which was infructuous. However, a bipartite agreement was reached with one of the unions representing the daily-rated employees.

Signs of tension were noticed in Faridabad throughout the year, which culminated in a four-day strike in March. This strike entirely unjustified, since the issue on which it was called was already under investigation by the Conciliation Officer of the Punjab Government. The issue has now been referred to the Labour Tribunal.

After protracted negotiations, a comprehensive agreement covering terms and conditions of service was concluded with the daily-rated employees at Calcutta No. 1, Calcutta No. 2 and Technical Development Division. I am happy to report that with the signing of this agreement (operative till December 31, 1967) the restlessness which I mentioned amongst our daily-rated employees in the Calcutta establishments last year and in 1962 has largely disappeared.

Your Company continued to emphasise training at all levels within the organisation. Five officers and one Research Associate underwent training by Metal Box in the U. K. One senior manager was sent to the Administrative Staff College at Henley-on-Thames, and another attended the Advanced Management Programme organised by the All India Management Association at Bombay. We sponsored a candidate to the nine-month Junior Management Development Course of the Indian Institute of Management, Calcutta. A further thirty-seven managers have undergone the Company's residential Management Course in Calcutta at which we continue to welcome the participation by managers from our Malayasian and Pakistani associates.

Courses for supervisors were organised in the units in man management, safety and work study. Forty-one apprentices were recruited under the Apprentices Act, in addition to seventy-three currently receiving training under the Company's apprenticeship schemes.

It is a pleasure for me to record the valuable cooperation of the Company's employees in our widespread activities and I thank them and the Management for yet another year's splendid performance.

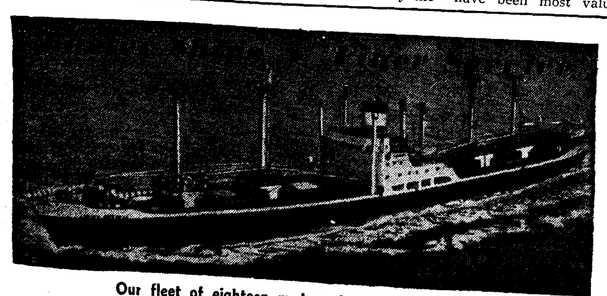
Board Changes

It was only last year that I paid tribute to the services of Mr. K. C. Mahindra who served as Chairman of our Company for five eventful years. Unhappily he was not destined to enjoy for long the rest from all his labours in the interest of industry in general and our own Company in particular. His death on 31st October 1963 was deeply mourned by all of us in Metal Box and to his family who survive him, we sent our sympathy in their bereavement.

It was with real regret that your Board agreed to release Mr. John Cochrane-Barnett from the Board. His services to the Company during the last seventeen years and more—the last three as Deputy Managing Director—have been most valuable. His drive and determination, backed by his intimate knowledge of production and marketing in India have contributed in a substantial way to the continued growth of your Company's sales. His tactful and painstaking advocacy of our own and the packaging industry's needs for raw materials have been as much respected and appreciated by officials in the Government as have his loyalty and breadth of vision by his colleagues on the Board. We shall miss him: and I should like on your behalf and also mine to convey our thanks and good wishes to him.

We have lost another valuable colleague by the resignation of Sardar H. S. Malik from the Board. After a very distinguished career in the Indian Civil Service, Sardar Malik joined our Board as a Director in 1957. During the last seven years he has, by his wide experience of men and affairs, and by his ability in presenting our problems to the Government, been of the greatest assistance to the Company. On your behalf and also on mine I should like to convey our thanks and good wishes to him.

Conclusion



As a comparative new-comer to your Company I have been doing a certain amount of research into its fortunes. The graphs reproduced at the beginning of this report bear eloquent testimony to the Company's growth and prosperity which have been attained by hard work and by the application of progressive methods of production and management.

The smooth and effective manner in which the Company was able successfully to float in March 1964 a Rights Issue of over two crores of rupees is proof of both the soundness of your Company and the confidence that it enjoys in the country.

The speech of the Chairman at the Annual General Meeting of a company has become an occasion in this country and elsewhere for a review of the important events of the year or for the exposition of one facet or another of industrial philosophy. Sometimes these speeches include criticism—mild or otherwise—of the policy of the Government, and in particular of its Finance Minister. The temptation to join this chorus is great for the simple reason that I find myself in agreement with most of what has been said, and will continue to be said by others in the same position as myself. But I have often wondered what one would do if one were to find oneself in the unenviable position of the Finance Minister of the Government of India. Given the conditions that exist in our country today, namely the need to finance successive five year Plans of increasing dimensions and defence budgets of staggering proportions, has a Finance Minister much of an alternative? His business is to raise the necessary finance. He cannot do so without hurting someone. All taxes, by whatever name they are called, are an abomination of the Lord: no one likes to pay taxes; but taxation of some kind or another in a civilised and democratic country is the most approved and legitimate means of raising money. All this does not mean that I do not share the views of far more experienced Chairmen of Companies than myself on the Budget and all that it implies: but it is just as well to remind ourselves that all of us—Parliament, Government and Industry—are labourers in the same vineyard: as we sow, so shall we reap.

I cannot conclude this report without referring to the untimely death of our beloved Prime Minister on 27th May 1964. All our units closed on the afternoon of that day and all the following day in token of our grief. Our management and staff met together to mourn their and the country's loss. We "shall not look upon his like again".

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

THE ELPHINSTONE SPG. & WVG. MILLS CO., LTD.

CHAIRMAN, MR. N. K. JALAN'S ADDRESS

The following is the Chairman's Address by Mr. N. K. Jalan at the Annual General Meeting of The Elphinstone Spg. & Wvg. Mills Co. Ltd. held on 25th June, 1964.

Gentlemen,

It gives me great pleasure to welcome you all to this Fortyfifth Annual General Meeting of the Company, and with your permission I shall take the Report and Accounts for the year 1963, which have been in your hands for some time now, as read.

We are meeting under the shadow of the greatest catastrophe that has fallen on the country in the loss of our beloved Prime Minister, Pandit Jawaharlal Nehru, who was the jewel of India and the guiding star of the Country's destiny for a pretty long period. He had been a source of great strength to the country and the loss to the nation in his sudden demise is irreparable. He was the architect of the modern industrial India in that the progress of economic development of the nation can be directly attributed to him. The people will remember him for giving more than anything else, the most stable Government to the nation and laying sound foundations for establishing the largest democracy in the world. It was he who strove hard throughout his life to further the cause of peace in the world and no doubt he will go down in history as one of the wisest among the senior statesmen and leaders devoted to the advancement of human civilisation.

The choice of a successor has fallen very wisely and unanimously on Shri Lal Bahadur Shastri who is known for his quiet disposition, moderation, integrity, tolerance, mature judgement, yet dynamic ability and a flair for finding solutions to the most complicated problems. Shri Shastri has always identified himself with the hopes and aspirations of the people. I am sure, his election would ensure political stability in the country and he will have the enthusiastic and whole-hearted support of the entire nation. His unanimous election as our leader goes to prove that the teachings of Mahatma Gandhi and Jawaharlal Nehru for taking united action in times of emergency have been faithfully pursued.

Coming to the affairs of the Company for the year under review, the gross trading profit was Rs. 29,07,662/-. The working results of the year, I hope, will be considered satisfactory especially in the light of higher costs on all counts and low realisation.

Taxable dividend on ordinary shares has been proposed at 18%, same as for the last year.

Production of Cloth

There has been no improvement in the output of Cotton Textile Industry during the past few years. Production of cloth during the year under review was only 4837 million yards as against 4987 and 5142 million yards during 1962 and 1961 respectively. The existing units were not ordinarily allowed to increase their capacity and the Government was banking more on the power loom production. The uneconomic cost of production also proved a positive deterrent to the increased output in the mill Sector.

It is however, a happy augury that the Government has at long last recognised the necessity of allowing the existing units to increase their capacity and with this end in view has allowed extension of 7½% in spinning and 10% in looms.

Cotton

There was record production of homegrown cotton since independence during 1962-63 season, the total yield turning out to be as much as 57 lacs bales. The Crop in 1963-64 is expected to be still better and the outturn is likely to be in the region of 60 lacs bales. Still however, there is a very great need for raising the production of cotton to meet the ever expanding demand of the Cotton Textile Industry and further so on account of the expansion of capacity permitted by the Government—but the results achieved so far in this direction are far from satisfactory. In spite of the fact that the ceiling prices for 1962-63 season crop and the floor prices for 1963-64 season were substantially raised, mills were not in a position to procure cotton to the extent required by them and at reasonable prices. It is strongly urged that the traditional methods of farming should be discarded and scientific methods of cultivation be developed and adopted to improve the productivity. Incidentally it may be

Mr. N. K. Jalan

noted that production per acre in India is still the lowest compared with other principal cotton producing countries of the world.

In order to arrest the heavy drain on the country's valuable foreign exchange resources, as a result of importation of long staple cotton, it is necessary to take some decisive steps to increase the cultivation of this quality inside the country.

It will also be necessary to arrange for the imports of cotton on a systematic basis for the production of finer fabrics to make good the shortfall in the domestic production and to avert any consequences of possible cloth shortage.

Cloth Exports

Although our country was able to export a total of 534 million yards of cloth in 1963 as against only 508 million yards in 1962—thanks to the industry's compulsory export obligation scheme—the country's export performance cannot be said to be satisfactory being much below the export target of 850 million yards. Your mills were able to export approximately 15% of the production of the year as against about 14% in the preceding year.

Bonus

Bonus for the year 1962 was paid in December 1963 at the rate of 25% of the basic earnings of the staff and workers, which was at the maximum rate under the Agreement arrived at between the Millowners' Association and the Rashtriya Mill Mazdoor Sangh.

Bonus Commission has already submitted its recommendations to the Government long back and it is still under the consideration of the Government. The main defect of the formula as suggested by the Bonus Commission lies in that the payment of bonus is made to be absolutely unrelated to performance and not in any way linked with the quality and quantity of work that the worker puts in. In other progressive countries such payment is directly related to productivity. Besides, the recommendations are calculated to especially hit the Cotton Textile Industry inasmuch as the special requirements of rehabilitation of this industry would not constitute a prior charge for the calculation of bonus under the formula.

It is paradoxical to find that the Bonus Commission has not allowed any amount for rehabilitation as a prior charge for computation of bonus as also the development rebate and surtax. The return at 7% on capital and 4% on reserve used as working capital is much low in the present financial condition of the market. Preference shares give a return of 9½ to 10%. Even debentures give a return of 7½%. The Semi-Government loans fetch a return of 4½%. In such a state of market. it is ill-conceived to determine a return of 4% on reserve and 7% on capital, while providing nothing for rehabilitation.

In the Textile Industry a Rehabilitation Enquiry Commission was set up to enquire into the life of the machinery and the amount of money required for rehabilitation. The amount so determined was colossal to wit Rs. 66.4 crores. If no allowance is considered for rehabilitation, how, at a time when the costs of plant and machinery are going up every day, it will be possible to rehabilitate such an old industry.

Rising Cost

In the last few years I had occasions to refer to the continuously increasing cost of production of this industry. The pressure of higher cost has exerted itself in all directions. The prices of cotton have gone up sharply. The wage bill of the industry has also gone up considerably as a result of the steep increase in the Dearness Allowance and the increments in the basic wages of the workers awarded in the years 1960 and 1962. Social costs have risen considerably. Employers' contribution to the health insurance scheme of the workers and to the Provident Fund have been raised. Fringe benefits for workers have been enhanced substantially by the grant of extra casual and privilege leave with wages. Prices of stores, colours and chemicals have also increased. Various new Central. State and Municipal taxes have been imposed on the Bombay cotton mill industry since 1960.

As against this relentless and continuous increase in the manufacturing expenses on all counts, the mill cloth prices have been pegged to the same since January 1961 when the voluntary price control system was adopted by the industry by way of its contribution to the stabilisation of prices. It will, however. be clearly seen that the old formula of fixing the prices of cloth as supplied in 1961 has completely outlived its utility and thus needs immediate reorientation.

This prices-and-cost inflation has become an institutional feature of our economy and unless positive steps are taken to check the upward thrust of prices and the prices of cloth are allowed to be suitably revised, it would in due course become more and more difficult for mills to face the competition in overseas markets and even to operate on a profitable basis.

Provision of Last Budget

The Finance Act, 1964, has placed several fresh burdens on the corporate sector.

I would especially like to refer to the dividend tax which has sought to curb not only excessive but any distribution by companies by way of dividends on risk capital. This is not reasonable and I would at least urge for a minimum tax exemption for dividends on equity capital. The incidence would act as a deterrent to companies declaring even normal dividends and the provisions would therefore come in the way of savings and investments. The Companies (Profits) Surtax, replacing Super Profits Tax, with dividend tax and the bonus tax would together place a heavy burden on companies. It is also urged that the Cotton Textile Industry of the country which is facing a mighty problem of modernisation and expansion should be brought within the purview of the specified industries to be entitled to the rebate of super-tax like other specified industries.

Leather Cloth Division

The working of this division was hampered considerably during the year under review owing to acute shortage of basic raw materials. And although in the latter part of the year the required raw materials could be procured from indigenous manufacturers, these were available only in restricted quantities and besides the quality was not uniform with the result that the quality of the finished products could not come up to the required standards. During the current year, however, we have installed one of the most modern and upto date machines in this division and have also introduced Foam PVC and Profile Jet qualities. All these are expected to produce leather cloth of very high quality and new varieties apart from improving the existing quality of products. We have also been availing the services of foreign technical consultants to advise us on the latest techniques in the field of leather cloth manufacture.

Expansion

You might have observed from the Director's Report that the Cotton Textile Loan Advisory Committee has

TRAVELLING?

THE LONDON & LANCASHIRE INSURANCE Co LTD

THE LIABILITY OF MEMBERS OF THE COMPANY IS LIMITED.

(INCORPORATED IN ENGLAND)

INSURE YOURSELF AND YOUR LUGGAGE

Calcutta Office:

Post Box No. 245.

recommended for an additional loan of Rs. 37 lacs to the Company from the National Industrial Development Corporation Ltd., for the purpose of equipping the Company's Moon Mills unit with the latest types of spinning and other machinery. We are now trying to finalise negotiation for placement of orders for the Second Unit.

Modernisation and Renovation

Inspite of the various difficulties confronting the working as enumerated in the preceding paragraphs. the management has been continuously putting all its efforts to rationalise, modernise and increase the efficiency all round to enable us to look forward to the future with optimism.

In accordance with this policy, several useful items of machinery valued at about Rs. 15 lacs were installed in the various departments during the year under review in addition to the amount spent towards extension of factory buildings.

The Company's equipment of Automatic Looms has steadily increased thereby improving the quality of its cloths production and its capacity to export its goods.

In this context, I would like to point out that the machinery available from indigenous sources are not sufficient for the cotton mill industry to meet its expansion and rehabilitation requirements in the next few years. Until, however, the capacity of the indigenous industry is expanded sufficiently to enable it to make prompt deliveries, the Government should allow liberally some imports of textile machinery, especially ring frames and carding engines, etc. even though such import entail foreign exchange spending. Since several aid-giving countries are reported to have agreed to make available to India united credits, a part of it should be allotted to the cotton mill industry for importation of the badly needed items of machinery.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

THE NATIONAL TANNERY COMPANY, LIMITED

CHAIRMAN, MR. SANJOY SEN'S REVIEW

At the Annual General Meeting of the above Company held in Calcutta on 29th June, The Chairman, Mr. Sanjoy Sen said:

It gives me pleasure to welcome you to this Annual General Meeting. The Directors' Report and the Statement of Accounts for the year ending December 31, 1963, have been circulated and with your approval, I shall take these as read.

Our production still continues to rise and our over-all sales have increased by approximately 19 lacs. Our working results for the year may be considered satisfactory having regard to the general rise in costs of materials and a lowering of the finished leather selections. This was a result of a lowering of the quality of raw hides owing to a strike at the Factory and the exceptional and unforeseen delay in the arrival of a very large consignment of hides from overseas.

We, once again, thank the Ministry of Commerce and Industry for maintaining our quota of imported raw materials under the difficult foreign exchange position.

We have fully utilised the loan of 5 lacs that was taken by us from the West Bengal Financial Corporation and we are pleased to advise you that a further loan of 8.25 lacs has been sanctioned to us. We shall be utilising this loan principally in expanding our capacity for manufacture of chrome tanned goat-skins. We feel that with the progressive restrictions on export of raw goat-skins, creation of a substantial capacity for tanning goat-skins in our factory in order to cater to the growing demand of this item would be of advantage to the Company. At the moment of writing, we have achieved a capacity to chrome tan nearly one million goat-skins per annum. It is our intention to utilise the second loan from the West Bengal Financial Corporation to raise our capacity to 5 million goat-skins per annum.

Fresh Contract

We have signed a fresh contract with M/s. Centrotex of Czechoslovakia on 17-10-63 for supplying 8,00,000 goat-skins by 31-12-64. We would like to record that though this business started only last year it is running very smoothly and there is utmost co-operation between them and us. As mentioned in my previous report, we are shortly sending one of our technical personnel to Prague to obtain a better understanding of the problems involved in finishing the chrome tanned goat-skins that we are manufacturing for them in our Factory. It is our hope that it will be possible for us to negotiate a larger contract with Centrotex during the coming year.

With regard to exports of our finished leather, we must admit that we have not been very successful due to the depressed conditions of the finished leather market prevailing all over the world during the year under review. A disquieting feature affecting the future of the leather industry is the introduction of reconstituted leather in the United States. As yet, however, such substitutes are still too costly to drive leather out of the market, though it is true that the more uniform properties of these new products may appeal to shoe manufacturers only in view of better productivity of raw materials. In my opinion, however, leather will always hold its own and if necessary it will be possible to change the usage pattern of leather to keep its world level of sales. With a limited production of hides and skins all over the world, it should not create a problem to sell all the leather that the world produces.

Your Company has also decided to participate in the forthcoming "Semaine Internationale due Cuir"—Paris Leather Fair—to be held during September 10-15, 1964, as one of the participants in the pavillion taken by the Export Promotion Council for Finished Leather and Leather Manufactures. Since the Paris Fair is the International show room displaying leather from all over the world, we feel that it is necessary for us to display our finished leather at this gathering where leather merchants from all over the world congregate annually for arranging their future purchases. Our participation in the fair will also give us the opportunity of studying the latest developments in leather making in the different parts of the world and enable us to obtain new ideas to our benefit.

India has in the past been an exporter and producer of hides and skins. Over the past decade, however, we are progressively becoming a hide importing country as we lack the very heavy type of hides meant for industrial leathers. Our growing internal leather market also calls for greater imports of hides. The cheapest hide markets, namely, Argentina, United States, Australia and New Zealand are at a distance of six weeks from us. As the hides have to go through varying weather conditions some times resulting in a high percentage suffering from putrefaction, it is necessary that the Indian Steamer companies should arrange for cold storage in the cargo boats transporting these hides. Foreign Steamship companies offer this facility for shipments to Europe and Japan but not to India.

Demand for Products

The demand for our products continues unabated and at the moment we are unable to take further orders. We have had to divert a substantial part of our sole leather capacity to Government orders catering to Defence requirements and though this has restricted the supplies to our valued customers, we hope they appreciate that this sacrifice has been made in the larger interests of the country. We feel, however, that there will be an easing off in this situation in the near future when we shall again be in a position to satisfy our regular customers.

Our sale of saddle leather is fairly steady but we find it extremely difficult to obtain the desired thickness in the hides. This problem has become more difficult as Italian hide prices at the moment are uneconomic for our working and we have to look for other sources. We have tapped and experimented with a large number of hides from cheaper sources and we hope it will be possible for us to substitute a substantial part of our Italian buying.

Now that we shall be shortly embarking on our Fourth Five Year Plan I feel that a reassessment of the entire tanning industry should be made by the Planning Commission in the light of the export possibilities of the Indian leather and shoe making industry to the rest of the world. The restrictive policy of not allowing fresh capacity for tanning and shoe making should be reviewed and a number of mechanised leather finishing plants and shoe making units should be sanctioned to enable quality products to be made for exports. Our greatest handicap in exporting shoes from India is the non-availability of good quality finished leather in quantities. The poor quality of the Indian hides stands in the way of overcoming the hurdle. Importing good quality raw material from abroad is no answer as it tends to make the leather too costly for use in export orders. A solution to this problem could open out unlimited prospects for marketing Indian shoes abroad.

General repurcussions of the Central Budget have been to enhance the rate of excise and import duties on a number of chemicals that we use as raw material. This is making it very difficult for the industry to hold its price line in the face of higher input costs.

Increase in Duties

Calculations of duty draw back for export becomes so difficult and involved in leather due to the use of a large number of dutiable and excisable items throughout the process that very few tanners have been able to take advantage of it. It may be necessary for the Excise Department to evaluate a common rate of duty draw back for different types of leather for export and publish it for the leather industry.

Before concluding, I would like to thank the technical personnel and the workers for smoothly carrying out production under very trying conditions of building reconstruction and relocation of plant. I also take this opportunity of thanking our customers, my colleagues, staff and workers for another year of unstinted support.

N.B. This does not purport to be a report of the proceedings of the Annual General Meeting.

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.

- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.

- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains a number of cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in

  - consumer market surveys
  - industrial prospecting
  - readership analysis
  - economic indices
  - business research.

P.O. Box 14, Calcutta-1, or 5, Mission Row, Calcutta, India.

THE BENGAL PAPER MILL CO. LTD.

CHAIRMAN, MR. N. D. BANGUR'S SPEECH

The following is the speech of Mr. N. D. Bangur, Chairman, the Bengal Paper Mill Co Ltd., delivered at the Annual General Meeting of the Shareholders held on 29th June, 1964 in Calcutta.

Gentlemen,

I have great pleasure to welcome you to this Annual General Meeting of your Company. The Directors' Report and Audited Statement of Accounts for the year have been in your hands and, with your permission, I take the same as read.

Before anything, it is my painful duty to refer to the sad and sudden passing away of our beloved leader and Prime Minister Shri Jawaharlal Nehru on 27th May, 1964. Shri Nehru, the architect of modern India, was a source of strength and security to the teeming millions of the country. He was acclaimed a world statesman and his name became almost a legend in his own life time. There would be no better tribute to the memory of the great champion of liberty and peace than our determined efforts towards fulfilment of his dream of a peaceful, prosperous and united India.

On this occasion I offer my respectful congratulations and best wishes to our new Prime Minister. His unanimous election has been universally acclaimed and I have no doubt that under his wise guidance our country will swiftly march forward to prosperity.

Economic Situation

The signs of vigorous growth which ought to be there in a planned economy are not visible. I would particularly like to invite the kind attention of the Government to the conditions in the Capital Market. Only two years ago the climate for investment was so healthy that the public, belonging to every level of income group showed tremendous interest in investing in industrial shares. The new issues were heavily over-subscribed. But the steep increase in taxation has dampened the enthusiasm of the investing public. Little savings are left in the hands of the public and consequently entrepreneurs are finding it increasingly difficult to raise funds barring the financial institutions. Friendly foreign countries have been generous in giving us assistance in various ways but unless the climate for investment in India is made attractive it will not be possible to take full advantage of the foreign aid.

Immediate attention therefore has to be given to measures for reviving the climate for investment so that once again the capital market can become active and investors and entrepreneurs may vie with one another in their efforts to develop the economy. I have no doubt that the Government will give serious thought to the present situation and adopt appropriate measure to give a big push to our economic progress so that the much needed production targets may be achieved. It is therefore essential that a growth oriented fiscal policy should be followed.

So far efforts made by the Government through L.I.C. Unit Trust and establishment of Development Bank towards reviving the confidence in Capital market are appreciated, yet it would have been much better had a liberal atmosphere been created by reviewing personal tax structure which is complicated and high at all levels of income group. I may mention that all personal taxes taken together at a stage even accounts more than total earning of an individual which amounts to expropriation of capital. A liberal revision of personal tax structure will open way for wider investment out of personal savings from all classes of people throughout the country which, in turn, will give birth to new enterprises in different lines, solve unemployment problem and boost up production leading to prosperity in the country. Time has come for mass education through publicity drive by institution and Stock Exchanges to educate the urban and rural population to bring home the benefits of more and more investment.

Third Five Year Plan & Price Policy

In the Third Five Year Plan the Planning Commission has fixed a target of 7,00,000 tonnes of actual production of paper. At the end of 1963, the production of paper and Board was 4,65,000 tonnes with an installed capacity of 5,50,000 tonnes. Taking into account the increased capacity, production in 1965-66 is estimated to be 6,00,000 tonnes, leaving a gap of 1 lac tonnes between the estimated demand of 7 lac tonnes and the actual production. To meet this shortfall, the Government recently have invited schemes from all the existing units for increasing production by adjustments and modifications of their machines and installing balancing equipments with the least foreign exchange expenditure and in quickest possible time. Additional installed capacity of 1,20,000 tonnes is expected to materialise by these schemes. If all these schemes are put in commission by 1966, the Third Plan target's capacity may be achieved. But, it is doubtful whether the production of 7 lac tonnes will be achieved, because a part of the installed capacity may not become productive and may be delayed.

The Industry has submitted a detailed representation for an upward revision of the prices. The cost of production has gone up due to various reasons beyond the control of the Industry. The prices are governed by the provisions of Tariff Commission allowing a meagre 12% return on Capital including interest charges, etc. Even this small 12% return on capital employed is not available now due to the continuous rise in costs. In this situation, if the question of price is not given due consideration, the effect will be a retarded growth of the Industry. It is not a happy feature that an increase in the selling prices of end products should become possible only after a long drawn process. I am of the view that price increase should be automatic and it should not be difficult to evolve a formula in terms of which paper prices could be revised as soon as costs of production tend to vary beyond agreed limits. As matters stand, the representations now pending before the Government for price increase have already become out-dated because there have since been further substantial increases and it is hoped that Government will give due consideration to the matter of price increase at an early date.

Raw Materials

There has been no improvement in the difficult situation faced by the Industry in respect of its requirements of raw materials. It is being found that some of the States favour local development of industries and are reluctant to continue giving raw materials to industries situated in other States. When industries have been set up banking on the availability of raw materials from neighbouring States, the above trend is causing serious anxiety in the minds of enterpreneurs. The Central Government should immediately consider this matter and formulate a policy by which traditional sources of raw materials to the industries are not disturbed.

By recent research it has been found that hardwood could also be utilized as a substitute raw material in India and I am glad to inform you that your Mill is using a considerable quantity of hardwood by mixing with bamboo and other conventional raw materials. In this view, so far as your Company is concerned, the raw material position is assured.

In my last year's speech I had referred to the necessity on the part of the Government of West Bengal to allocate sufficient waste lands to the paper industry for development of plantation. We have found that eucalyptus can be grown in the district of Midnapore and if proper arrangements for supply of manure and nurseries are made, eucalyptus can be grown in a shorter time than what bamboo normally takes and it will be another raw material for the industry. I will therefore again appeal to the West Bengal Government to take an early decision.

Some time ago the Development Council for Paper, Pulp and Allied Industries recommended to the State Governments to grant long-term leases of forests to the paper mills and a specific basis for determination of royalty was suggested. I am not aware of any State having considered and adopted this basis.

The present allotment of foreign exchange for import of wires, felts and spares hardly makes it possible for the Mills to meet emergencies and quite often mills have to resort to air-freighting. If the paper Industry has to produce to the maximum extent of installed capacity, it is of utmost importance that the mills are allowed to build buffer stock of consumable stores. I would therefore urge that a liberal policy is followed in the matter of releasing foreign exchange to the mills for import of these materials.

Considerable difficulties are still being experienced by the Industry in getting at reasonable prices its full requirement of chemicals. The prices of chemicals have gone up and the Paper Industry finds it difficult to meet with the fixed selling prices of paper.

Sales

Since the commissioning of the multi-stage Bleaching plant, the shade of our paper has improved and is being liked by the consumers. It is the constant endeavour of the Mill to improve the quality of the paper and also to go in for manufacture of special qualities such as, the paper for Formica and Melamines, wrapping paper for Photo Films, etc. for industrial use, the demands of which in the country are being met by imports. We urge the Government to gradually restrict the import of these qualities to provide an incentive to indigenous industry and save foreign exchange most needed by the country.

We have supplied to one of our customers Cable Insulating paper manufactured from imported pulp and thus have seen that we can produce this quality provided the import of the required type of wood pulp is allowed. We feel it will be in the interest of the country if import of pulp is allowed to us for manufacture of such qualities of paper rather than to allow their import. The Government have been approached for this purpose and we hope they will take a realistic view of the position. We do not feel any justification of the installation of new units to produce such qualities when the existing units have adequate equipment and experience for their production.

I welcome the concession granted in the excise duty to the new units as well as to the mills which have expanded their existing capacities by installing new machines since 1st March, 1964. The Joint Committee of the Paper Industry immediately represented the case to the Government that other new units and expanded units which have already come into production before 1st March 1964 should also be entitled to such concession. On this representation the Government has agreed to grant the concession on excise duty to the new units which came into production between 1-4-61 and 1-3-64. The Government has not considered the case of those units which have expanded their capacities during this period and a further representation has already been made to clarify this position and I hope the Government will take due cognizance and allow the same concession to those units. After all they have also incurred heavy expenditure on installation of new machines like the new units and there seems to be no justification to deny this concession to the units expanded after 1st April 1961.

Operation

The production and the gross profit during the year were 22,567 tonnes and Rs. 64,75,025 compared to 21,588 tonnes and Rs. 60,02,630 during the previous year. The nett profit, however, declined to Rs. 3,52,330 during the year compared to Rs. 15,18,412 during the previous year. The decline in the nett profit has been due to increased provision for depreciation and development rebate. In view of the increasing cost of production and fixed selling prices, the above profit should be considered satisfactory. After considering the various aspects, your Directors have recomended the same dividend of 20% on Equity Shares for the year under review.

Expansion & Modernisation

The Shareholders will be pleased to know that the Gompany has been able to complete the first phase of the expansion and modernisation programme. The new Paper Machine No. 6 was commissioned on the 13th November 1963 as per schedule. This is the machine having the highest running speed of all the machines so far installed in this country. Along with this machine your Mill is able to produce 100 tons of paper a day.

The Stock Preparation Plant, Multi-stage Bleaching Plant and Coal Fired Boiler were commissioned during the year according to schedule, as indicated by me last year. The new Turbo Generator was commissioned in January, 1964 and the Recovery Boiler in May 1964. There were however teething troubles, and especially a serious interruption took place in the power generating unit which was recommissioned at reduced speed by the help of foreign Technicians. Additional arrangements have also been made with the power supply companies by which the Mill would be able to keep up the production programme. The full utility of the Company's power plant will be available as soon as the delivery of the turbine shaft is received from U.S.A. The Government of India invited the Paper Industry to submit such schemes which by modification, adjustment and by adding balancing equipment, would increase the paper production in the country within a short time and involving a minimum foreign exchange. Your Company also submitted a scheme to increase the capacity by another 21,000 tonnes at an approximate cost of Rs. 1.5 crores. I am glad to inform you that our scheme was approved by the Government and we have been granted an Industrial Licence for this increase in the capacity. Necessary steps for implementation of the same will be taken in due course.

The relation with staff and workers continued to be cordial and I would, on your and on my behalf, like to express our appreciation of their sincere services rendered to the Company.

Note: This does not purport to be the proceedings of the Annual General Meeting of the Company.

THE ORIENTAL FIRE AND GENERAL INSURANCE CO., LTD.

CHAIRMAN, MR. B. K. KAUL'S ADDRESS

Speech delivered by the Chairman, Mr. B. K. Kaul, I.C.S., at the Sixteenth Annual General Meeting of the Shareholders on Tuesday, the 30th June, 1964.

The Report, Accounts and Balance Sheet for the year ended 31st December 1963 are already in your hands and, with your approval, I propose to take them as read. Before we proceed to consider these for adoption, I would like to review some of the points which had a bearing on your Company's working during the year.

Mr. Jawaharlal Nehru, suddenly passed away on Wednesday, 27th May 1964. Mr. Nehru's death is a stunning blow to the entire nation. An anguished Nation has been mourning the sudden passing of her most beloved son, an illustrious fighter for freedom, an outstanding statesman, a world leader. He occupied a place in the hearts and hopes of hundreds of millions of our

Mr. B. K. Kaul

countrymen. He was the architect and symbol of modern India. By his death our country in particular and the world in general has suffered a grievous loss. The best tribute we can pay to our departed leader is to work hard and do our duty well so that our country may prosper.

As I mentioned last year, your Company was appointed by the Government as its sole Agent in connection with the administration of the Emergency Risks Insurance Schemes (Goods & Factories). During the year 1963 the Company received over 4,24,279 applications under these Schemes at 163 centres all over India. I am glad to say that the Company was able to cope up with the enormous work connected with the applications in a satisfactory manner. The work was done by the Company entirely on a non-profit basis.

In the foreign field, the Governments of Ceylon and Burma restricted the writing of general insurance to State Institutions from 1st January and 1st February 1964, respectively. In both these territories we had been doing modest but profitable business for a number of years. As the unexpired business is not being taken over, we are required to run off the existing risks and, therefore, have to keep a skeleton staff for some time to come.

In Kuwait a new agency was established in 1963 and their results have been satisfactory.

Operations in Pakistan

Whilst our operations in Pakistan gave us cause for concern in earlier years, we have been able to take effective measures to put the business on an even keel by setting up a regional office at Dacca exercising better control on underwriting and claim and by exploring fresh avenues of profitable business.

In Africa, a Union of the Republic of Tanganyika with Zanzibar was recently announced. We have been operating in East Africa including these two territories for a number of years and I have no doubt that the Union shall provide increased opportunities for expansion of our business.

I had stated last year that we were progressing in the matter of expansion of our foreign business with caution. Whilst this policy has continued we have explored the possibilities of expansion in the Middle East and other Arab countries. It may perhaps be possible to make a beginning in some of these areas during this year, as our negotiations in some cases are quite far advanced.

Turning now to the results of the year's working, the net profits for the year of the Company after making provisions for taxation is Rs. 17.11 lacs as against Rs. 19.40 lacs for the year 1962. The slight fall in the net profits has been due to an increase in claims and in the salary and allowances paid to the staff under the revised agreement.

The Gross Premium Income of the Company in 1963 was Rs. 1,014.93 lacs as compared to Rs. 878.62 lacs in 1962. After fulfilling the statutory obligations and making other cessions the net premium of all departments increased from Rs. 492.29 lacs for the year 1962 to Rs. 583.88 lacs for 1963 showing an increase of Rs. 91.59 lacs,

RUBY GENERAL INSURANCE COMPANY LIMITED

CHAIRMAN, MR. M. L. SHAH'S REVIEW

The following is the speech delivered by Mr. M. L. Shah at the Twenty-eighth Annual General Meeting on Monday, the 29th June, 1964.

Gentlemen,

It gives me great pleasure to welcome you to the Twenty-eighth Annual General Meeting of the Company.

We are meeting under the shadow of a national tragedy, Shri Jawharlal Nehru, our beloved Prime Minister and Leader, who guided the destinies of the nation since independence, is no more with us. Not only India but the whole world mourns his loss. Such great personality is seldom born and it is impossible to replace him. However, it is gratifying to note that Shri Lal Bahadur Shastri has been appointed our new Prime Minister with promise of all round support and I am confident our country will continue her onward march of progress under his able guidance.

The Statements of Accounts of the Company for the year 1963 have been with you for some time and you must have noted with satisfaction that the Company has again shown good results.

Your Company has been making steady progress since its inception, and particularly during the last few years has shown very good results. As compared to the premium income of Rs. 1,85,12,084 for 1962, the premium income for 1963 has been Rs. 1,89,85,871/-, and the capital and Funds during the same period have increased from Rs. 1,67,75,481/- to Rs. 1,81,05,006/-

Fire Department

The Premium income for the year has increased from Rs. 78,21,379/- in the year 1962 to Rs. 83,36,101/- and Profit from Rs. 16,43,000/- to Rs. 18,40,247/-.

Motor and Miscellaneous Department

The Premium income for the year has been reduced from Rs. 93,07,083/- in the year 1962 to Rs. 88,52,631/- due to reduction in foreign Motor business which has not been profitable. The Profit increased from Rs. 4,17,262/- in the year 1962 to Rs. 4,48,283/-.

Marine Department

The Premium income for the year has increased from Rs. 13,83,622/- in the year 1962 to Rs. 17,97,139/-. The working of the Department shows a loss of Rs. 3,99,290/- as against a profit of Rs. 1,30,940/- in the year 1962, mainly due to the increase in the Premium Reserve from Rs. 13,83,,622/- to Rs. 17,97,139/-.

The Net Profit after taxation has increased from Rs. 13,35,783/- in the previous year to Rs. 13,85,873/-.

The Directors have recommended a Dividend of Rs. 1.25 Paise per share as before. The Directors have also decided to take steps to capitalise Rs. 6,40,000/- out of the Premium on Shares and issue One fully paid Bonus Share of Rs. 8/- as against 5 existing Shares.

The most important event in the Indian Insurance Industry during the year under review has been the decision of the Government to permit the Life Insurance Corporation of India to write General Insurance business. The L.I.C. has commenced business from 1st April, 1964 and decided to follow the Tariff Rates for the present. The L.I.C. should not disturb the existing business of the private insurers but should open new avenues and look for fresh business

The voluntary Code of Conduct has proved very useful in improving the tone of the industry and I hope the encouraging results achieved so far will be continued.

Before I conclude I would like to place on record my sincere appreciation and thanks to our patrons for their continued support and to the Executives, Staff, Field-workers and other representatives in India and abroad for their co-operation and devotion to duty which has enabled the Company to achieve good results.

Thanking you, gentlemen.

Note: This does not purport to be the proceedings of the Annual General Meeting of the Company.

(Continued from previous column)

i.e., 18.60% over the previous year's figure. This increase is made up of Rs. 74.25 lacs from business transacted in India and Rs. 17.34 lacs from business transacted out of India. Considering the market conditions this rise may be considered quite satisfactory.

The overall claims ratio of net claims to net premiums has shown an upward trend i.e., 59.71% for 1963 as against 56.09% for 1962.

In the Fire Department the claims ratio for the year 1963 was 46.31% as compared to 34.83% for the year 1962. The increase in the claims ratio was mainly due to adverse experience on our Foreign acceptances. On the Miscellaneous side the claim ratio has increased from 57.79% for the year 1962 to 61.22% for 1963, largely on account of continued adverse claims experience in Motor Department in India and out of India. On the Marine side the claims ratio for the year 1963 has registered a fall to 90.34% as compared to 93.26% for 1962.

The overall ratio of commission and expenses of management to net premiums is around 32.4% which is considered satisfactory.

Departmental Reserves

As a result of the year's working the Departmental Reserves have shown an impressive increase of Rs. 44.53 lacs at Rs. 328.69 lacs for the year 1963 as compared to Rs. 284.16 lacs for the year 1962 showing an increase of 15.67% over the previous year's figure.

Our Investments as at 31st December 1963, aggregated to Rs. 457 lacs and the total depreciation thereon was around Rs. 4.50 lacs and is more than adequately covered by the Investment Reserve. Considering the magnitude of the total investments and the general fall in the prices of shares and securities, it will be seen that the depreciation of 0.98% is nominal.

Your Directors have recommended dividend at the rate of 8% (subject to deduction of tax at prescribed rates) on the paid up value of shares as compared to 6% for the year 1962.

The General Reserves has been further augmented by an appropriation of Rs. 3.75 lacs.

The year's working has resulted in a substantial increase in the funds of the Company from Rs. 454.14 lacs in 1962 to Rs. 504.60 lacs in 1963 registering an increase of 11.11% over the previous figures.

In conclusion, I take this opportunity to express my thanks to our clients and well-wishers both in India and abroad who have continued to extend us their support. I also thank the officers, staff and development officials of the Company for their loyalty and good work.

N.B. This does not purport to be a record of the proceedings of the Annual General Meeting.

New Delhi

DECISION ON STATE TRADING IN FOODGRAINS DEFERRED

(FROM OUR NEW DELHI CORRESPONDENT)

STARTING on a promising note with the Central Food and Agriculture Minister, Mr. C. Subramaniam, making some short- and long-term suggestions for tackling the food problem, the State Chief Ministers' Conference, held here from 24th to 26th June, petered out to a tame end. Although it discussed measures to check the rising spiral of food prices and to boost agricultural production, it remained content with only a short-term programme for checking a further rise in the prices. Decisions on measures to bring down foodgrain prices through State trading and other such steps were deferred, presumably in view of the wish expressed by the Congress Working Committee to consider them before they were finalised.

The conference asked the State Governments to strengthen immediately the administrative machinery for the enforcement of control measures and for preventing profiteering, hoarding and other anti-social practices in the foodgrains trade. It endorsed the Central Food Ministry's decision to abolish rice procurement in Andhra Pradesh and Madras and to restore free movement of rice in the four southern States—Andhra Pradesh, Madras, Mysore and Kerala. A similar decision of the Ministry on the movement of rice from Madhya Pradesh to Maharashtra and Gujarat, however, failed to receive support from the three State Chief Ministers concerned. The existing arrangements under which the export of rice from Madhya Pradesh to Maharashtra and Gujarat is undertaken on Government-to-Government account on a quota basis is, therefore, to continue.

The wheat zones—as constituted at present—are also to be maintained as no agreement could be reached between the surplus producing States and the deficit States on the abolition of the zones or their enlargement. The maximum control prices and the modified system of foodgrains distribution in West Bengal is to continue as well. There would, however, be no restrictions of any kind on the movement of course grains and pulses, except gram, from one State to another or within a State. All such restrictions that might have been imposed by any State Government would be withdrawn immediately. The movement of gram, it was felt, should continue to be regulated.

Reducing Public Expenditure

The Central Finance Minister, Mr. T. T. Krishnamachari, advised the State Governments to cut their expenditure with a view to reducing money supply with the public. He announced that the Central Government had decided to reduce its expenditure by Rs. 70 crores during the current financial year.

The Government also decided to take the following two steps immediately: (i) the setting up of some modern rice mills in the public sector, including the co-operative sector, and (ii) the establishment of two funds for the benefit of farmers. The setting up of rice mills in the public sector amounts to State trading on a limited scale. The two funds to be created are: (i) the Relief Guarantee Fund, to be built up through contributions by the Centre and the State Governments, to help agriculturists in periods of natural calamities and to ensure the supply of funds to them from the Reserve Bank in times of crisis, and (ii) the Credit Stabilisation Fund, to be created by the Reserve Bank to enable the peasantry to convert short-term loans into medium-term ones.

The setting up of new modern rice mills in the public sector was preferred to the taking over of the existing units because the modern plants yield a higher output. A 3-tonne modern rice mill capable of processing 20,000 tonnes of paddy a year, it is claimed, can yield an output of 13,200 tonnes of rice, against only 11,600 tonnes from the same quantity of paddy by the existing units which are mostly primitive and uneconomic. Each new unit, it is estimated, will save the country at least Rs. 11 lakhs in foreign exchange, whereas the foreign exchange cost of setting up such a unit would be about Rs. 1.62 lakhs. Initially, efforts are proposed to be concentrated on installing new State-owned rice mills in the package programme areas.

The States of Madras, Kerala, Mysore and West Bengal have asked for more rice supplies from Central stocks. To meet their demand and to replenish stocks, the Central Government is making arrangements to import rice from the United States and Pakistan. The U.S.A. is understood to have agreed to supply about 200,000 tonnes of rice from her present crop and another 200,000 tonnes later. Imports from Pakistan may be of the order of 100,000 tonnes. These supplies are expected to start coming in from July.

New Corporation Proposed

As a long-term measure to tackle the food price problem, Mr. Subramaniam has suggested the setting up of a high-level technical agency for determining fair and economic prices for producers and the establishment of a Government Foodgrains Trading Corporation. Both these proposals were well received by the State Chief Ministers. They, however, suggested that the States' representatives should be associated with the proposed high-level technical agency. As for the proposal to set up the Foodgrains Trading Corporation, some Chief Ministers wanted that the State Governments should set up such corporations and a Central corporation may be established as an apex body. Some Chief Ministers favoured four or five regional foodgrains trading corporations. The Minister for Community Development and Co-operation suggested that the proposed corporation should make use of the services of co-operative societies.

According to the plan outlined by Mr. Subramaniam, the proposed corporation would buy foodgrains from producers at prices announced in advance of the season and sell to retailers at specified prices. To begin with, the corporation would deal only in rice. It would take out a licence like any other private trader. The Government, however, would reserve the right to call upon any wholesaler to hand over to the corporation any portion of his stocks as might be considered necessary in public interest. The corporation would pay for these stocks at declared prices, subject to the allowed margin of profit.

The State Chief Ministers laid great stress on increasing foodgrains production. But their suggestions were the same as one hears so often.

FARM CREDIT

New Programme Outlined

A seven-point programme has been suggested by the Planning Commission experts for making available adequate credit to agriculturists during the fourth plan period. It takes into account the fact that since the creditworthiness of the majority of small farmers is not high, they are unable to obtain adequate finances for improving their age-old farming techniques. The programme is as follows:

(1) Subject to eligibility qualifications, up to 75 percent of the short-term credit requirements for agricultural programmes in an area should be provided by co-operatives or the Government, assuming that private finance would account for the balance, namely, 25 percent. In case, however, private finance is expected to exceed this figure in any particular area, the share of co-operative and Government finance may be adjusted accordingly. Short-term requirements for agricultural programmes are estimated at Rs. 1,070 crores. The Working Group on Co-operative Credit has estimated that total advances of short-term loans in the last year of the fourth plan would be about Rs. 560 crores. This means that a provision of Rs. 240 crores for short-term loans will be necessary by way of *taccavi* loans outside the plan.

(2) According to the estimate of the working group, long-term loans will be of the order of Rs. 300 crores, including Rs. 50 crores from out of the provision made for *taccavi* loans in the State plans. A sum of Rs. 125 crores out of this amount has been taken into account towards the minor irrigation works. It is difficult, at this stage, to apportion the balance among different agricultural programmes. It may be ensured at the time of preparing the State plans that the necessary provision for long-term loans is made in the State plans over and above what may be available in the co-operative sector.

(3) The system of crop loans should be introduced and short-term credit should be available to meet the full production requirements of different crops.

(4) The agricultural and co-operative programmes should be fully dovetailed. Credit and supplies should be advanced in the areas where the system of village, block and district plans is introduced only on the basis of these plans.

(5) Loans for supplies of material inputs, such as seeds. manures, fertilisers, implements, pesticides, etcetera, should be advanced only in kind.

(6) Credit should be linked with marketing and, subject to necessary exceptions, recovery through marketing should be insisted upon.

(7) Rules for *taccavi* loans should be liberalised by suitably increasing the multiple for estimating the status of the borrower and taking into account the increase in the value of land on account of the improvement to be carried out with the help of the loan.

A decision is understood to have been already taken to advance credit to agriculturists in the areas selected for intensive cultivation, on the basis of crops instead of against land.

LUBRICANTS

New Units Planned

In view of the heavy drain caused on foreign exchange resources by the growing imports of lubricants, it is proposed to set up during the fourth plan period four more lubricating oil plants, besides the two already planned—one at the State-owned Barauni refinery and the other as a joint venture of the Government of India and Esso Standard Eastern at the latter's Trombay refinery. At present, only the Assam Oil Company's Digboi refinery produces some small quantities of lubricants. The Barauni and the Trombay units will raise the lubricants output in the country to about 350,000 tonnes. The requirements of oils by 1970-71 are expected to go up to about 1 million tonnes.

Progress of Oil India

Oil India Ltd—a 50:50 partnership between the Central Government and the Burmah Oil Company—has shown satisfactory results for 1963. Its profit and loss account shows a net surplus of Rs. 3.36 crores, after providing for depreciation, taxation and development rebate. This is indeed creditable in view of the fact that due to the delay in commissioning the Barauni refinery, the exploitation of the Company's proved crude reserves could not be undertaken according to expectations. A tax-free dividend of 9 percent has been declared for the year which is the minimum under the partnership agreement.

In spite of the difficulties faced in acquiring land for drilling sites, the Company was able to achieve its drilling targets. An average of 74,154 cubic feet a drilling rig was achieved during the year, which compared favourably with similar drilling efforts made elsewhere in the world. The improvement in drilling operations enabled the Company to offset the increased cost of material and labour and also the heavy expenditure incurred on exploratory drilling in the new concession area.

The Company successfully undertook two new experiments in drilling in 1963 in the shape of dual completion wells to produce oil from more than one horizon and deviational wells to tap oil resources under the river bed. The exploration activities in the new concession area also progressed well. As against the target of about 700 line miles of seismic reflection survey, over 900 miles were shot. The progress would have been even more rapid but for the fact that the permits to enter the N.E.F.A. area were received late and by the time work could be started early monsoons had set in. Exploration drilling in the new concession area was taken up side by side with the survey work. The survey and test drilling programme, involving a total cost of about Rs. 2 crores, is to be continued throughout 1964 and early 1965.

With the drilling programme proceeding according to the schedule, the Company is confident of meeting the crude oil requirements of the Digboi, Nunmati and the Barauni refineries in full. By 1965-66, the Company will be producing more than half of the expected 6 million tonnes of crude oil output in India. This, when refined at the Digboi, Nunmati and Barauni refineries working to the rated capacities, will save

the country nearly Rs. 40 crores in foreign exchange.

In his annual statement to shareholders of the Company, the chairman, Mr. Khandubhai K. Desai, has assured the Centre and the Assam Government that all the surplus natural gas from the Company's oilfields—in excess of the present commitments to various projects—would be available for sale at a price which would be sufficient to enable the Company to compress and store gas to the extent necessary to provide for uninterrupted supplies over the period required by consumers. Apart from about 10 million cubic feet of natural gas which is required for use in oilfields the Company's present commitments include the daily supply of nearly 45 million cubic feet to various industrial projects, 18 million cubic feet to the Assam State Electricity Board, approximately 10 million cubic feet to the Assam Gas Company, 8 million cubic feet to the Assam Oil Company, 8 million cubic feet to the Namrup fertiliser plant and some small quantities to brick kilns and tea gardens.

The actual cost of the Company's Nahorkatiya-Barauni pipeline project has amounted to Rs. 45 crores, against the original estimate of Rs. 46 or Rs. 47 crores.

CEMENT

Crash Programme

The Central Government is understood to be considering a crash programme for stepping up cement output. The plan includes an upward revision in the ex-factory prices of cement and the import of a few complete cement plants by the proposed public sector venture—the Cement Corporation of India. The private sector may also be allowed to import some complete cement plants if it is found to be inevitable.

Another proposal which the Government of India is considering is the relaxation of the limit on the standard size of cement plants. At present, plants of 200,000 tonnes-a-year capacity are considered to be of standard size. This limit may be raised to 400,000 tonnes. The largest plants, however, would be allowed to be located only at places where sufficient limestone deposits are available.

If the Government finally decides to allow the import of complete cement plants, it will be a reversal of the present policy under which the creation of new capacity in the cement industry is linked with the indigenous manufacture of cement machinery. This stipulation has been a hindrance in the way of expanding the cement manufacturing capacity, as apart from the prices of the indigenously fabricated plants being higher than of the imported units, considerable delay is being encountered by the industry in receiving supplies from indigenous manufacturers.

Although there is a good case for an upward revision in cement prices since the cost of raw materials and transport has gone up considerably, the decision on this matter will not be an easy one and will have to take cognisance of the anxiety of the Central Government to hold the price line.

GENEVA CONFERENCE

Results Achieved

While New Delhi considers the acceptance by the developed nations of the principle to set up a continuing machinery to implement the decision of the Geneva Conference on Trade and Development as a good beginning to tackle world trade problems, it is disappointed at the fact that nothing concrete could be decided at Geneva on the trade in commodities and on the question of granting preferential treatment by developed countries to the developing ones.

Two other decisions of the Geneva Conference have been welcomed here. One of these is the acceptance of the principle that the developed countries should transfer 1 percent of their national income for the uplift of the economies of the under-developed countries. The second relates to shipping. The agreement reached is to set up an international forum in the form of the Standing Committee on Finances and Invisibles. It is hoped that with the creation of this body, it will be possible to keep watch on shipping freights and the acquisition of merchant fleets by different nations from the point of view of world trade as a whole.

The Trade and Development Board recommended to be set up by the Geneva Conference is likely to have its headquarters in New York. Any other location, it is felt, will entail a higher budget for it and may make the co-ordination between the Trade and Development Board and the other U.N. agencies, such as the economic and Social Council and the U.N. Special Fund, difficult and cumbersome.

The decisions of the Geneva Conference are subject to ratification by the U.N. General Assembly. No difficulty is of course anticipated here in the way of the major decisions being adopted by the General Assembly in November. As decided by the Geneva Conference, the U.N. Secretary-General would set up a small expert committee to decide on alternate procedures for the functioning of the Trade and Development Board. This, it is learnt, was the concession made to the western nations, some of which wanted special weightage in voting procedures.

COCHIN SHIPYARD

Brighter Prospects

Reports reaching here suggest that the Central Minister for Transport, Mr. Raj Bahadur, has been successful in his mission to Japan. During his visit to that country, an agreement is understood to have been reached with the Mitsubishi group of industries on the broad heads of the collaboration arrangement sought for building the second State-owned shipyard in India at Cochin. The final agreement on the project is expected to be signed in the near future after details are worked out. A delegation from the Japanese concern will be visiting New Delhi for this purpose.

The immediate annual capacity of the Cochin shipyard will be to build two ships of 15,000 tons each and another two of 30,000 tons each. The first ship from this shipyard is expected to come out in 1968.

The project will cost about Rs. 10 crores. The Mitsubishi group will be providing all the foreign exchange component of the cost.

STEEL

Training for Technicians

The Department of Steel is reported to be considering establishing special institutions in the neighbourhood of the steel plants to offer diploma courses in subjects related to the steel industry. It is tentatively estimated that nearly 62,000 technical workers will be needed to man the expanded steel industry during the fourth plan period. Of these, about 6,000 will have to be graduate engineers, approximately 11,000 diploma-holders and nearly 45,000 skilled and semi-skilled workers.

A special committee has already been set up to study the manpower requirements under the fourth plan programme for steel. The report of the committee is expected to be available well before the fourth plan is finalised.

The committee has also been asked to make recommendations on the methods of securing personnel for the steel industry during the fourth plan period and consider the question of introducing steel technology in the syllabus for the degree course in mechanical engineering and in the diploma course in order to save time during in-service training. It will as well examine the question of setting up polytechnics in industrial centres.

Hindustan Steel, it is learnt, has already initiated action on training technical personnel for the Bokaro plant.

C.D.S.

Announcement on Refund

The Central Governmnet has decided that persons whose contributions under the compulsory deposit scheme do not exceed Rs. 150, should be repaid their deposits immediately on demand, instead of at the expiry of five years as was the case hitherto. This covers all persons with incomes up to Rs. 5,000 a year.

Persons of 70 years in age and above and foreigners who are leaving India with no intention of returning have also been allowed to withdraw their deposits prematurely irrespective of the amount involved. This facility has as well been extended to cases where the depositor is dead and his/her nominees or heirs want to withdraw the amount deposited. In all, about 4.2 million depositors are expected to benefit from these concessions.

The deposit offices have been authorised to sanction repayment of the deposits made by the abovementioned categories of persons without any further reference to the Government India.

EXPORT-IMPORT BANK

Untied Credit Offer

The U.S. Government recently announced extension by the U.S. Export-Import Bank of a new non-project $25 million (Rs. 11.9 crores) line of credit in favour of the Government of India. The credit will be used to finance purchases of American capital equipment and services required by the public or private sectors engaged in development programmes in India.

This brings the total non-project credit made available by the U.S. Export-Import Bank to the Government of India to $250 million (Rs. 118.9 crores). The three earlier non-project loans provided to the Government by the Bank—$150 million in February 1958, $50 million in December 1960, and $25 million in August 1962—were used for importing from the United States such capital goods as mining and construction equipment, transportation and earth-moving equipment, communications equipment and machinery for the textile, aluminium, chemical and motor-car industries.

In addition to these non-project loans, the Bank has extended credits to a number of Indian enterprises engaged in the manufacture of diesel locomotives, fertilisers, aluminium, rayon, chemicals, plastics and forgings. The U.S. Export-Import Bank credits have also been used by Air-India for purchasing its all-jet fleet. The total amount of assistance extended by the U.S. Export-Import Bank to India now aggregates $368 million (Rs. 175 crores). The Bank's assistance is part of the U.S. Government aid programme to India, which now totals $5,348 million (Rs. 2,547 crores). The loan recently announced is repayable over a period of 12 years commencing in 1967, and bears an interest charge of 5½ percent.

HOUSING

Talks in September

The Central Minister for Works and Housing, Mr. Mehr Chand Khanna, has called a conference of the State Housing Ministers to discuss measures for stepping up the housing programmes in the remaining years of the current plan and to finalise the basic approach for the fourth plan. The conference will be held on 3rd and 4th September, 1964, in New Delhi.

The progress in housing is considered very poor. Out of the total allocation of Rs. 80.59 crores included in the third plans of the State Governments, an expenditure of Rs. 27.02 crores had been incurred during the first three years of the plan. For the fourth year, a provision of Rs. 12.85 crores has been proposed by the State Governments. Even if this provision is actually made and used, the total expenditure on housing programmes during the first four years of the third plan, i.e., up to 1964-65, will be Rs. 39.87 crores—49.5 percent of the total outlay of Rs. 80.59 crores. According to the phased programme indicated by the Planning Commission, the expenditure in these four years should have been 76 percent of the total outlay.

At present, a team of officers from the Central Housing Ministry is touring the States to determine the factors responsible for the slow progress of housing schemes. The team's report is expected to be finalised before the September conference. Its recommendations will be considered by the State Housing Ministers.

The conference will also discuss measures to ensure that the funds earmarked for housing programmes are used for this purpose only and not diverted to other development projects. It has been found that even the meagre allocations for the housing programmes are not used by the State Governments but are diverted to other schemes.

Another subject which is expected to come up for discussion at the State Housing Ministers' Conference is the possibility of tapping private resources to supplement the plan allocations and L.I.C. funds provided for housing. The State Ministers will also review the working of the different housing schemes and consider whether the machinery set up for implementing these projects is adequate and, if not, what measures should be taken to implement it.

Loan Ceiling Raised

Meanwhile, the Central Ministry of Works and Housing has raised the maximum amount of a loan admissible under the low income group housing scheme from Rs. 8,000 to Rs. 10,000.

The decision, it is explained, has been taken in view of the recommendation made by the Working Group on Housing Co-operatives. The loan assistance would continue to be restricted to 80 percent of the cost of a house (including the cost of land), the ceiling admissible now onwards will be Rs. 10,000.

The low income group housing scheme is meant for persons whose income does not exceed Rs. 6,000 a year. The Central Government advances funds to the State Governments who, in turn, grant loans to individuals and co-operatives up to 80 percent of the cost of a house. Loans can also be given to non-Governmental hospitals, educational trusts, charitable institutions and local bodies for the construction of houses for their low-paid employees.

From 1954, when the scheme was introduced, to 31st March, 1963, the Central Government provided a total of Rs. 52.3 crores under the scheme. In addition, Rs. 1.82 crores were advanced by the Life Insurance Corporation for this purpose. The Budget provision under the scheme for the current year is Rs. 3.68 crores. The total number of houses constructed under the scheme up to 31st March, 1964, was about 840,000.

LAND REFORMS

Removing Defects

Reviewing the progress of land reforms at a meeting here last week, the Land Reforms Implementation Committee felt that although in some directions progress had been made during the past ten years, there were deficiencies in others. In several areas, rents were still high and the security of tenure which the law conferred on tenants was not observed in practice.

In view of the intimate bearing of the land reform programmes on agricultural production, the Committee expressed the view that early steps should be taken to complete the land reform programme as speedily as possible so that the tiller was ensured security of tenure and enabled to reap fully the benefit of the investment made by him in agricultural production.

The Committee emphasised that share-cropping should be abolished and rents converted into cash rents so that the tenant-cultivator is assured the full benefit of increased production as a result of his efforts and State investment. The Committee made the following other recommendations:

(1) Each State should appoint a special officer assisted by such staff as may be necessary to implement the programme according to a fixed schedule to be drawn up by the State Government.

(2) There should also be a high level committee in each State which should review the progress of implementation periodically, say, every six months.

(3) The States should be requested to report to the Government of India every six months the progress made in the implementation of land reform measures.

(4) It should be ensured that the tenant-cultivators are provided necessary financial assistance to enable them to participate fully in the production programmes.

(5) As a large number of tenants are cultivating land on oral leases, they are frequently not able to assert their rights as they cannot prove their possession. It is desirable that early steps should be taken to prepare record of tenancies where this is not being done at present and to revise it where it obtains to remove the deficiencies.

It was also pointed out at the meeting that quite a sizable area which was being claimed under personal cultivation was in practice cultivated through informal tenancies and the actual cultivators were not in a position to avail themselves of the improved practices for raising agricultural production. It was felt that norms of efficient management and cultivation should be laid down. The land-owners should be required to observe these norms for lands claimed under personal cultivation. Where the norms are not fulfilled, the States should have the right to take over management of such lands. The Committee recommended that this suggestion should be tried out in a few selected areas with a view to gaining experience and that a technical committee should be appointed to examine the entire question in detail and submit its recommendations by 1st August, 1964.

ELECTRIC LOCOMOTIVES

Raising Production

The Chittaranjan Locomotive Works, which turned out the first A.C. electric locomotive in November last, is expanding its production capacity to manufacture 72 A.C. locomotives a year by the end of the third plan. The plant and machinery as well as additional covered accommodation, costing about Rs. 2.5 crores, are being provided so that a compact self-contained unit for turning out electric locomotives at the targeted rate is ready by April next year.

The present plans provide for the future expansion of production, when necessary, to over 100 electric locomotives a year. The works expects to produce 91 A.C. electric locomotives by the end of the current plan.

Most of the mechanical equipment of the electric locomotives is being manufactured at Chittaranjan itself. The manufacture of locomotraction gears and axle boxes, which at present are imported, is also expected to be taken up in due course. For the manufacture of electrical equipment in India the electrical equipment accounts for nearly half of the total cost of an A.C. locomotive—a collaboration agreement has been entered into with a consortium of European firms, known as the Group for Study and Electrification of the Indian Railways.

In order to cope with the rising tempo of freight traffic, particularly in the steel-coal belt of the country, the railways are progressively switching over from steam to electric or diesel traction. About 70 percent of the extra tractive effort required in the third plan is to be provided by electric and diesel locomotives.

SHIPPING

Oil Tanker for Jayanti

The Jayanti Shipping Company last week acquired a 54,350-ton super oil-tanker *Vikram*. Built at the Mitsubishi shipyard at Nagasaki, Japan, the tanker cost Jayanti approximately Rs. 3.25 crores.

With its overall 754 feet length and 108 feet breadth, *Vikram* is today the largest vessel on the Indian registry. It has a capacity to carry nearly 52,000 tons of oil and requires a 36 feet draft. *Vikram* has already been time-chartered for a period of 12 years, on very favourable terms. to Esso Standard Eastern Tankers Ltd.

With the addition of *Vikram*, Jayanti's tonnage now aggregates 450,000 d.w.t. The Company now owns, besides the new super tanker, 12 10,000 to 11,000 d.w.t. cargo vessels, seven bulk carriers, (totalling 231,000 d.w.t.) and one other oil-tanker acquired about two years ago. Jayanti's eighth bulk carrier, *Samudragupta*, which was recently launched in Nagasaki by Prince Mukarram Jah Bahadur, is due for delivery towards the later part of this year. The future plans of Jayanti include the building of three combined oil and ore carriers, each of 21,000 d.w.t. These are expected to be ready for delivery next year.

FOAM-COMPOUND

Product Developed

The Defence Research Laboratory (Materials), Kanpur, has developed the know-how for the manufacture of a foam-compound. It has been found very effective in controlling fires involving inflammable liquids. Foams for fighting fires are produced by chemical or mechanical devices. Chemical foams are effective only against small fires, but mechanical foams have been found serviceable against any fire.

A good foam should float on the burning liquid surface, spread quickly to seal off the surface against air, and be stable at high temperatures. The foam-compound should remain serviceable after storage.

The foam developed in the defence laboratory meets most of these requirements. It uses shorns and hoofs as basic material which are easily and abundantly available in the country. The manufacture of this compound will also save considerable foreign exchange. The laboratory is also rendering technical advice to private firms for improving similar products made by them.

KHANDSARI

Compounded Levy Reduced

The Government of India has decided to reduce the existing rates of compounded levy on *khandsari* production by one-third for the four-month period, 1st July to 31st October, 1964. The step follows a representation made by *khandsari* manufacturers to the effect that during the "Galawat" period when the recovery of sugar is low, the existing compounded levy rates operate to their disadvantage.

The compounded levy procedure for *khandsari* was introduced in 1960 to enable the producers of this commodity to maintain their accounts and to discharge their obligations under the Central Excise Act.

CASTORSEED

Checking Rise in Futures

With a view to arresting the unnatural rise in castorseed futures, September 1964 delivery, the Forward Markets Commission decided last week to impose a limit of Rs. 2 a 250 kilograms on the weekly rise in the prices of castorseeds, June and September deliveries, on the Bombay Oilseeds Exchange. The restriction would come into force whenever the prices rule at or above Rs. 180 a 250 kilograms. Similar restrictions have also been imposed on trading at the Ahmedabad Seeds Merchants Association.

CONSTITUTION

New Amendment

The Constitution (Seventeenth Amendment) Bill, 1964, which was passed by the two Houses of Parliament during their special sessions held four weeks ago, received the assent of the President on 20th June.

The Act amends the definition of "estate" in article 31A of the Constitution by including in it lands held under the ryotwari settlement and also other lands for which provisions are normally made in land reform enactments. The amendment has retrospective effect from 26th January, 1950.

The Act also provides that, "where any law makes a provision for the acquisition by the State of any estate and where any land comprised therein is held by a person under his personal cultivation, it shall not be lawful for the State to acquire any such land as is within the ceiling limit applicable to him under any law for the time being in force or any building or structure standing thereon or appurtenant thereto, unless the law relating to the acquisition of such land, building or structure provides for payment of compensation at a rate not less than the market value thereof."

The Act further amends the Ninth Schedule to the Constitution by including in it 44 State enactments relating to land reform in order to remove any uncertainty or doubt that may arise concerning their validity.

NEPAL

New Wireless Circuit

The Government of India and Nepal have signed an agreement providing for the opening of a direct wireless circuit between Delhi and Kathmandu and a direct radio-telephone circuit between Calcutta and Kathmandu. The two services are expected to be started soon.

Tele-communication contact between India and Nepal has so far been through the telegraph office within the Indian Embassy in Kathmandu. At present, the existing wireless telephone and telegraph links terminate at the Indian Embassy and are not extended to the tele-communication network of Nepal.

The Kathmandu-Calcutta radio-telephone service will enable calls from Nepal to be received directly in Calcutta. From Calcutta, the Overseas Communication Service will provide connections for destinations beyond India. Nepal will thus have a direct tele-communication link with the rest of the world through India.

The equipment for both the Calcutta-Kathmandu tele-communication link and the Delhi-Kathmandu wireless circuit has been supplied by the United States of America under the tripartite agreement between the Government of India, His Majesty's Government of Nepal and the U.S. administration which was signed in 1958.

DISPLACED PERSONS

New Concession Announced

The Central Board of Direct Taxes, Central Ministry of Finance, has announced concessional treatment to displaced persons who have migrated from East Pakistan after 1st January, 1964, in relation to their income tax assessments in India. The Board has instructed the Income Tax Department that such displaced persons need not be required to produce documentary evidence in support of their claims for the transfer of moneys from East Pakistan if the following conditions are fulfilled:

(1) that the person concerned had no source of income in India or in any foreign country other than Pakistan prior to his migration;

(2) that he had sufficient resources in Pakistan to which the moneys brought by him to India could be traced; and

(3) that an intimation about the moneys brought over and the date of their introduction in the books of account has been given to the Income Tax Officer concerned within two months of the date of his arrival in India (31st July, 1964, in the case of persons who have already migrated to India).

In case, however, the amount of moneys brought into India exceeds Rs. 50,000, the assessees will be required to establish the availability of sufficient resources in Pakistan to cover such moneys.

London

A CHARTER FOR WHITE-COLLAR WORKERS IN BRITAIN

(FROM OUR LONDON CORRESPONDENT)

STANDARDS for the safety, health and welfare of over eight million British workers in offices, shops and certain railway premises are set out in a new white-collar workers' charter which starts to operate in about a month's time. This is the effect of the Order which named 1st August as the day on which most of the requirements of the Offices, Shops and Railway Premises Act, 1963, come into force. From that date, owners and occupiers of about 1 million premises will be legally responsible for seeing that their premises comply with the requirements of the Act. The Order also fixed 1st May as the day on which occupiers had to start to register their premises. A few provisions which enable certain preliminary actions to be taken, including the appointment of inspectors to advise local authorities on their administration of the Act, became effective last February.

So that owners and occupiers could have as long a period as possible to study in detail how their premises and those who work in them will be affected, the Ministry of Labour published a general guide which explains the provisions of the Act. Although addressed primarily to owners and occupiers, it is also useful to employees and members of the public, for readers can see at a glance which sections of the Act relate to a particular item of guidance. Called *The Offices, Shops, and Railway Premises Act, 1963: a General Guide*, the booklet can be obtained from H. M. Stationery Office or through any bookseller or at local employment exchanges, price 2s 6d net. Supplements are issued free explaining regulations which are in preparation, including regulations on sanitary conveniences, washing facilities, and first aid.

Registration of Premises

The *Guide* points out that employers occupying premises covered by the Act on 1st May had from 1st May to 31st July to register their premises with the enforcing authority. Premises in which it is intended to employ anyone after 1st May, must be registered before the employment begins. Application forms for registration were available from the appropriate enforcing authorities from the second half of April onwards. The Act requires reasonable precautions to be taken against fire risks in all premises within its scope. Attention is drawn in the *Guide* to the need to have a fire certificate relating to means of escape in premises employing more than 20, or more than ten other than on the ground floor. Applications for the issue of these certificates had to be made to the appropriate fire authority as soon as possible after 1st May, and from 1st August, it will be unlawful to employ anyone in such premises unless a fire certificate has been granted, or application for one has been made. The means of escape will have to be properly maintained, kept free from obstruction and be clearly marked. A fire alarm must be installed and tested or examined at least once every three months. From 1st May, owners and occupiers were also able to apply, if they desired, for exemption from some specified requirements. The *Guide* explains how this was to be done, and the necessary forms were ready in the latter part of April.

The Act will apply generally to all offices and shops, even if they are only a small part of buildings used for other purposes, such as offices or shops in factories, hospitals, schools, clubs or places of entertainment. It will extend not only to rooms in which people work, but may cover such parts of a building as stairs, landings, store-rooms and entrances. It will also apply to canteens which cater wholly or mainly for people employed in particular offices, shops or railway premises, and the workers in the canteen are given the same protection as the office, shop and railway workers it covers.

Some premises, which might otherwise be within its scope are, however, excluded. The most important are places where only self-employed people work, businesses where the only persons employed are immediate relatives of the employer, or places where the total number of hours worked each week by all employees is normally not more than 21. Other premises which are, in effect, excluded are those which are occupied for purposes that are accomplished within short periods—six weeks for a permanent structure or six months for a movable one.

The general provisions of the Act include requirements that all premises shall be kept clean, have effective means of ventilation, suitable and sufficient lighting, sufficient lavatories and washing facilities, and have all dangerous parts of machinery securely fenced by a fixed guard or automatic safety device. Drinking water must be provided, floors, stairs, steps, passages and gangways must be soundly made, properly maintained, and kept free from obstruction, and the open sides of staircases must have handrails.

The Act also lays down minimum standards of space for each employee and of temperature in rooms where people work. A room in which people work must not be so overcrowded as to cause risk of injury to health. For this purpose, regard must be paid not only to the number of people in the room, but also to the amount of space occupied by furniture, fittings, machinery and other things. In addition, after the relevant data, a room where people work must be of such a size that there is 40 square feet of floor space for each person habitually employed to work at one time in the room, or where the ceiling is lower than 10 feet, 400 cubic feet for each such person. This does not mean that everybody must have his own space of 40 square feet. But it does mean, for example, that if you are employing three people in a room, the total floor space must amount to at least 120 square feet, or if the ceiling is lower than ten feet, the cubic capacity of the room must amount to at least 1,200 cubic feet. Suppose the ceiling were only 8 feet high, the minimum cubic standard of 1,200 cubic feet for three people would require a minimum room area of 150 square feet, or 50 square feet for each person. For this purpose, the size of the room is measured without regard to the space occupied by furniture, fittings, machinery and other things.

Unhealthy Overcrowding

These numerical space standards do not apply to a room to which members of the public are invited to resort—for example, most parts of a shop—although such rooms will still be subject to the general prohibition of unhealthy overcrowding. Premises which were used for purposes covered by the Act on 31st July, 1963 (when the Act was passed), will not be subject to the numerical space standards until 1st August, 1967—that is, three years after section 5(2) comes into operation. Premises which were not so used on 31st July, 1963 (including those which first come into use after that date), must conform to these standards as from 1st August, 1964 (that is, as soon as section 5(2) comes into operation), or from the date when they are first used if later.

The owner must ensure that a reasonable temperature can be maintained in every room in which people are employed other than for short periods. For rooms where a substantial proportion of the work does not involve severe physical effort, the Act states that *a reasonable temperature* shall be not less than 16 degrees Centigrade (60.8 degrees Fahrenheit) after the first hour. It also prohibits methods of heating likely to cause injurious or offensive fumes. This minimum standard of temperature is not required in office rooms used by the public where its maintenance is not reasonably practicable; or in rooms in shop or railway premises where its maintenance is not reasonably practicable or would cause deterioration of goods. In these cases, employees must have access to means of warming themselves and the employer must give them reasonable opportunities to do so. A thermometer must be provided in a conspicuous place on each floor if there is on that floor a room or rooms in which a reasonable temperature has to be maintained. Employees must be permitted to use the thermometer to check the temperature of the room in which they work.

Washing Facilities

The suitable and sufficient washing facilities which must be provided include a supply of clean, running hot and cold water or clean, running warm water, and soap and towels or other suitable means of cleaning or drying. The place where such facilities are provided must have effective lighting and be kept clean and in orderly condition, and all apparatus must be kept clean and properly maintained. Regulations will be made laying down standards for the provision of washing facilities, including the number of wash-basins to be provided in relation to the number of people employed. As with sanitary conveniences, arrangements may be made for employees to use washing facilities provided primarily for the use of others, if all the requirements of the Act and regulations are met. In all cases they must be conveniently accessible to the workers.

An adequate supply of wholesome drinking water must be provided. If not piped, the water must be kept in suitable containers, renewed at least daily and preserved from contamination. The supply must be provided at suitable places conveniently accessible to employees. Drinking vessels must be supplied and, unless these are of a kind designed to be discarded after use, there must also be facilities for raising them in clean water. Drinking vessels are not required, however, where water is provided through a jet from which people can conveniently drink. As with sanitary conveniences and washing facilities, the occupier may make arrangements for his employees to use facilities provided for others as long as all the requirements of the Act are met.

All premises will be visited in time by inspectors appointed to enforce the provisions of the Act. But owners and occupiers are urged not to wait for their premises to be visited before taking action to bring them into line with its requirements. They will be legally responsible for complying with these requirements from the date the Act comes into operation. Anyone who is in doubt whether his premises will be covered can get advice from the appropriate authority.

In most premises, the Act will be enforced by inspectors appointed by local authorities, but offices and shops in places subject to the Factories Act, 1961, will be inspected by H. M. Factory Inspectorate, who will also deal with railway premises and those occupied by local authorities. They will also have responsibilities in premises owned or occupied by the Crown. H. M. Inspectors of Mines and Quarries will enforce the general provisions if the Act in offices and shops in mines and quarries. The fire provisions will be enforced by two authorities—the fire authorities and H. M. Factory Inspectorate—according to the type of premises.

PROSPECTS FOR COMMONWEALTH CONFERENCE

By Robert W. Brock

The Commonwealth Prime Ministers' Conference, scheduled to be held in London in July, should discuss economic expansion and collaboration within the Commonwealth rather than beyond its boundaries. The possibility of obtaining more aid from the U.K. should also be explored.

WILL the Commonwealth Prime Ministers' Conference in July prove as frustrating and fruitless as the 1962 gathering or as the international trade conferences which limped along in Europe? In 1962, the visiting Prime Ministers were restricted rigidly to a diet of badly cooked "Brussels sprouts" served by Ted Heath in the Cafe Macmillan. If the July menu is to include dishes more palatable and nutritious, Commonwealth leaders would be well-advised to bring their own politico-economic food supplies, namely, in the form of programmes of economic expansion and collaboration more easily attainable inside the Commonwealth than beyond its boundaries.

The first necessity is to jettison, completely and unreservedly, the pretentious and patronising assumption that, apart from outright grants, in terms either of finance or commodities, "aid" (a very misleading designation) is anything but mutual aid. According to the Biblical text "it is more blessed to give than to receive". Certainly it is—as between developed and developing nations—at least as profitable to give as to receive. To avoid any implication of anti-Americanism, let the spokesman on this theme be that great American, Paul Hoffman, of Marshall Aid fame, who says in his book *World without Want*:

> "Some 'foreign aid' is, in effect a subsidy for a country's export goods sent to the under-developed countries. They mean jobs for workers in the industrialised nations. They mean greater profits through increased trade. They mean absorption of surplus commodities with a consequent firming of prices. They mean that, because of economic expansion, more taxes can be collected without a corresponding increase in the tax rates. In short, the betterment of business that results from aid to the under-developed countries serves to make the actual out-of-pocket cost of such a programme substantially less than the book cost . . .
>
> "An equivalent of more than 4.5 million jobs in the United States now depend on foreign trade. Of these more than 1.75 million jobs depend on U.S. exports to the under-developed countries of the world".

Enlightened Self-interest

This is as it should be. *Enlightened* self-interest is the most powerful driving force among nations: the trouble being that all too often it is not conspicuously enlightened! And that comment applies most clearly to the postwar policy of the United Kingdom in which Party politics have become pre-eminently a competition in terms of public expenditure as an instrument of electoral bribery. The financial incidence of this "you have never had it so good" tactic is that the United Kingdom, once the world's most potent contributor to global economic progress, has ceased to make any significant financial stimulus to overseas development. As summarised in the current issue of the *Barclays Bank Review*: "The capital formation of £4,600 million in Britain in 1962 compares with a net investment abroad in that year of under £100 million. Without doubt the major concern of the British capital market in the years to come will be to provide the funds to meet this large domestic demand for new capital".

This is a saddening deterioration in as much as the five most fruitful development decades in modern history preceded the first World War when British industrialists pioneered economic development in four Continents, building railways, ports, every kind of infra-structure, initiating new industries, including in India jute, tea and cotton (still leading export staples and contributors to foreign exchange resources) and analogously in other countries literally from China to Peru. That wide-ranging development was practicable only because it was financed by investors as enterprising and resourceful as the industrialists who made Brtiain the first "workshop of the world".

In 1912, the U.K. overseas investment total had risen to £220 million at a time when the purchasing power of the pound was five times its present level. This means that in 1962 the amount invested by Britain overseas was equivalent to only one-tenth of the sum invested 50 years earlier. Not because there is less money available for investment, but because, as the figures attest, under the misguided leadership of myopic politicians, the British people have lost their former sense of "mission", as more than one American statesman has pointed out, including a former Secretary of State.

The "Affluent State" could make an adequate financial contribution to Commonwealth development if it wasted less of its considerable resources in becoming an "Effluent State," not only in economic terms. The "war on want" campaign symbolises the right approach; but as it is based on charitable contributions it is economically fatuous and politically soporific. The largest aggregate of underfed people outside the communist *bloc*, located inside the Commonwealth, cannot achieve "freedom from hunger" by collecting conscience money on Flag Days.

That supreme objective demands one of the most massive financial and economic campaigns in history, and the impending Commonwealth Conference should initiate it by organising, by a phased programme, the elimination of hunger within its own wide-flung boundaries. Action will be taken only if Commonwealth leaders take the initiative and refuse to be "sent empty away" as they were at the last conference when the Macmillan Government was manoeuvring to reduce the U.K. to the status of one unit in an all-white, all western industrial colossus which, in ecclesiastical terms, would then have become, along with other members of the E.F.T.A., a paradise for big industries, purgatory for small industries, and hell for primary producers, especially outside Europe.

Instead of being attacked for vetoing that defeatist programme, General de Gaulle merited the Order of the British Empire for giving the Commonwealth another opportunity, under more enlightened and dynamic leadership, to achieve its full economic and political "potential"!

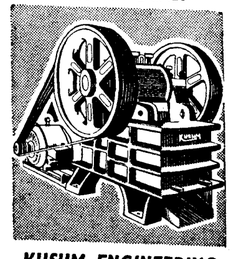
Hopes Deferred

The international trade conferences, held in Geneva, reflected, at best, hopes deferred. The Commonwealth Conference, under the co-operative leadership of India and Pakistan as its two largest units, could be made fully harmonious and productive in terms of both immediate constructive co-operation and of long-term objectives. A down-to-earth programme has become equally essential to large and small Commonwealth countries—to those who have been applying development plans for ten years or more, and equally to those who have only just acquired political autonomy. In pursuing such a programme, U.K. and Commonwealth interests are identical and inseparable.

The U.K. Government and the National Economic Development Council are both worried because exports lag. In India and Pakistan agricultural production lags. And only farm mechanisation will supply the stimulus to crop yields needed to reach full productivity, and, ultimately, to replace deficits in both food and cash crops by adequate surpluses alike for domestic and export needs.

In preceding articles, this author has adduced arguments for the mass-production of peasant tractors both in India and Pakistan with the minimum delay. At present, apparently, car production in India has been given a higher priority. At best, tractors' manufacture will take years to materialise. Meanwhile, in the U.K., Government-built factories in Scotland, north-east England, and northern Ireland await tenants; investment allowances are the world's highest; the machine tool industry has spare capacity: and, according to the Agricultural Engineering Association, exports of tractors are beginning to sag (and probably have passed their peak). To the writer, the availability in the U.K. of latent industrial capacity and the concurrent need in all the new Commonwealth States for agricultural mechanisation, presents an opportunity for an economic marriage which the Commonwealth Prime Ministers should promote both collectively and individually.

As the inward-looking capital investment programme of the U.K. Government cannot be reversed, the constructive alternative would be to supplement the present niggardly allocation of loans and grants by mass-produced peasant tractors available to all developing Commonwealth States as the most productive and speedily available form of "economic aid" it would be possible to devise. Under India's third plan, as announced in Parliament on 4th May, the leading contributors in order of priority have been the U.S.A., Russia, the World Bank and its associates, Germany, and the U.K.



That low priority reinforces the suggestion that the shortfall in U.K. financial assistance should be offset by a form of agricultural subsidy to the developing Commonwealth States which, in the long run, would enable them to *buy* U.K. factory products by easing, or eliminating, the strain imposed on their scarce foreign exchange resources by current food deficiencies. When, later on, India and Pakistan become mass-producers, the projected U.K. industry would still find plenty of scope in non-Commonwealth countries around the globe where peasant farming predominates and may be expected to do so indefinitely.

Formidable Menace

Certainly, little optimism survives among the Commonwealth delegates to the international trade conferences. Nor are the conflicting and obstructive policies of the developed nations the sole reason for pessimism. A more formidable menace is the increasing application of automation techniques in industry and agriculture alike. If, for example, textile manufacture in the U.K. is "automated" to any appreciable extent, will eastern textiles still retain their present relative cheapness, or will their advantage in that matter quickly fade into history? The Labour leader, who may soon be Labour Prime Minister, declared recently that the U.K. balance of trade would become more favourable by manufacturing in domestic factories the £1,000 million worth of manufactures now imported. Already more man-made fibres are being used by U.K. manufacturers than natural fibres and the rapid movement into textiles of firms of the calibre of I.C.I. and Courtaulds foreshadows the shape of things to come. The second Industrial Revolution, as automation is described, by revolutionising manufacturing processes must also, sooner or later, disrupt many traditional concepts relating to international trade.

Meanwhile, mechanisation of crop production in all the new Commonwealth States, based on co-operative cultivation, should be the principal economic target of the Commonwealth Conference assembling only a few weeks hence. In this sphere, if in few others, Commonwealth interests are completely identical, the down-to-earth programme adumbrated in this and preceding articles should command unanimous support.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The *Capital* Index of Indian Industrial Activity (Base: 1953) has now been brought up to May 1963. Compared with the preceding month, there were rises in tea 48.48 points, yarn 4.24 points, cloth 2.58 points, coal 0.74 points, finished steel 2.82 points, paper 9.83 points, motor-cars 53.19 points, bicycles 42.73 points and electricity 0.35 points, while decreases occurred in sugar 86.24 points, jute 0.69 points, cement 0.44 points, pig iron 3.04 points and tyres 15.44 points.

Combining all the factors, the *Capital* Index of Indian Industrial Activity rose by 0.2 points during May 1963.

PROVIDING FOR DEPRECIATION OF FIXED ASSETS

By R. M. Mitra

The usual methods of writing depreciation—straight-line or written-down value—are now found wanting on account of steady price increases and rapid technological changes. The cost of an asset is usually much higher at the time of replacement than what it was originally, and industrialists find it difficult to provide adequately for depreciation because of existing income tax rules. In the author's view, a way out may be found by taking to insurance as a source of finance.

THE question of depreciation of fixed assets as an element of production costs has acquired a new dimension. The traditional methods of computing depreciation and providing funds for replacement of worn-out assets, are being rendered ineffective by rapid technological developments and spiralling price increases. The report of the Bonus Commission published in January 1964, has served to bring into focus the ideas revolving round this growing problem. The National Council of Applied Economic Research in a report submitted to the Central Ministry of Labour and Employment in September 1960 had discussed the issue in concrete terms before the Bonus Commission.

Cost accountants and fiscal authorities agree that the use of fixed assets forms part of the cost of production, and that this cost should be spread over the estimated period of the effective life of each separate asset. The differences of opinion that generally arise among accountants, industrialists and fiscal authorities, relate mainly to (i) the question whether an asset gets fully exhausted at the end of its effective life or yields a scrap value and (ii) the question whether the charge of depreciation should be at a uniform rate over the whole period of the effective life or rationally adjusted in accordance with scales of earning or usefulness. (The straight-line method is based on an application of a uniform rate while the declining balance method (also known as "written down value" method) is based on an allowance for the diminishing usefulness of assets).

The changing economic factors and continuous technological progress have, however, unfolded two new aspects of the problem. The method of calculating the effective life of an asset and the basis of real cost of an asset, represent these new facets. It had hitherto been conceded that the capacity for production at a minimum level would set the limit of life of a fixed asset and that the original or actual cost of acquisition would be the basis of allowance for depreciation. The rates of depreciation prescribed by the income tax rules were generally accepted as fair assessment of the effective life of different assets mentioned in the appropriate part of the Rules. And the "written down value" method provided in the Income Tax Act, was regarded as a reasonable solution of the questions of "scrap" or "residual" value and proportionateness of the charge of depreciation.

Disturbing Developments

The general acquiescence in these methods has been disturbed by new developments. Postwar experience has shown that machines in their original condition are, more often than not, not available, partly because of changes in design and partly because of improvements in technique. Moreover, the original or actual cost has ceased to have any practical relation to the monetary requirements of replacement (even in original form) in an economy where price rises have become endemic.

Again, it has become economically unsound to calculate the effective or useful life of a machine merely on the basis of its capacity for physical performance. It is the cost of the product of a machine as compared with the price of the product which determines the usefulness of the machine. When improved machines go into production, the consequently reduced cost of their output influences prices downwards; and a point is reached where the cost of interest on the amount represented by the written down value of an old type of machine may exceed the difference between the price of the output and the cost of other inputs. As far as the industrialist is concerned, the economic life of the machine comes to an end at this stage.

The N.C.A.E.R. report has taken these factors into consideration and suggested that the appropriate departments of the Government should organise the compilation of index numbers of the prices of different classes of capital goods and that depreciation should be allowed to be charged each year on the basis of adjusted price levels. It has also been suggested that a proper application of this rule of depreciation will be ensured by the adoption of the straight-line method. Although the report lays particular emphasis on the necessity of calculation of the effective life of a machine on the basis of a realistic assessment of its economic usefulness, it fails to throw much light on the problem of an acceptable method of such calculation except to say that the "assessment of the working life of an asset has necessarily to be left to intelligent guess work" and that "we have to depend in this matter on the judgment of expert engineers with experience and foresight".

Mathematics of Formula

The mathematics of a formula designed to provide for replacement fund, involves several variables, namely, (i) the period of the economic life of the asset, (ii) availability of the asset in its original form, (iii) price of the asset in the original or a comparable form at the time replacement becomes due and (iv) rates of interest obtaining over the period of the economic life of the asset.

It has been observed that a technical precision is not attainable in the first two variables. As for the price factor, the method of annual adjustment may be reasonably accurate if annual price indices are constructed under the advice and guidance of economists and engineers. It is common knowledge that actual calculation of a future fund or asset postulates a probable rate of interest entering into the growth of the fund. As interest rates have been showing increasingly uncertain trends, fluctuations of interest rates would also appear to require to be adjusted annually in the acturial assumptions. (But as stated below, both the N.C.A.E.R. and the institutes of accountants seem prepared to ignore the element of interest).

The absence of arithmetical accuracy in the economic life of an asset, the difficulty of a correct forecast of the impact of changes in design of technical improvements on the form of the asset at the time of replacement and the changes in prices and rates of interest, need not, however, outwit the industrialist or the accountant. "Notional" rates have acquired respectability and become a normal mathematical magnitude.

Notional Rates of Depreciation

But even if the formulation of "notional" rates of depreciation and a provision for their annual adjustment can be found on a satisfactory and workable basis, the vexed question remains as to whether the whole amount of such annual depreciation should be deducted from "gross profit" in order to arrive at "net profit" or whether a part of the amount representing provisions for fluctuations in prices and interest rates and for changes in design or technical improvements (as distinguished from technological advances), should not be met by appropriation of "net profit" or from external resources as in the case of modernisation or expansion.

Both the Institute of British Chartered Accountants and the American Institute of Accountants hold that "gross profit" should bear only that part of the charge of depreciation which provides for replenishment of the "original cost", while the N.C.A.E.R. has expressed the view that the additional charge relating to price rises "is as much a part of a cost as the accountant's depreciation is". It would appear that the accountant's argument is that in calculating "net profit" the basis of "charge" should be the original cost of fixed assets as in the case of current assets, and that changes in prices may reasonably be allowed to be set off against changes in interest rates. The view of the N.C.A.E.R. would seem to be that price rises have been running out of step with rises in interest rates. It might also be argued by the N.C.A.E.R. that the cost of replacement will contain an element which is not related to the price index, but is the result of the non-availability of the asset in its original form occasioned by design changes or technical adjustments: this element of higher price could be allowed to be equated with increases in interest rates.

It remains to be seen whether a consensus can be evolved on how depreciation rates should be calculated and what part of it should be a charge on "gross profits" for the purpose of income tax assessment or what part of it should be a "prior charge" for the purpose of determining the amount available for staff bonus.

Although the N.C.A.E.R. has pleaded in favour of allowing depreciation on the basis of adjusted price levels, both as a "cost" for income tax purposes and as a "charge" prior to labour claims, it is not unlikely that the statutory provision of "development rebate" will be used by the opponents to argue that provisions for depreciation relating to the rising cost of replacement has already been anticipated and suitably made in Sections 33 and 34 of the Income Tax Act.

Meanwhile, it may be worth while to realise that, even a generally accepted solution to the above questions will leave unanswered the question as to how the annual provisions (whether from gross profits or net profits) should be maintained in a form readily available for use when the need for actual replacement arises. If it is agreed that the entire cost of replacement of the asset in its original or comparable form should be financed by internal resources (whether tax-free or tax-paid) and that external resources should not be depended upon except for modernisation or expansion, it will not be enough to make provisions in accounts and to allow them to be merged in the general resources employed in business. It may yet be necessary to develop a practicable and efficient method to get the fund readily available when the occasion arises.

The creation of a sinking fund and its investment outside the business has sometimes been recommended as a suitable method for the above purpose. A system of long-term insurance policy under which the insurer will provide the replacement fund in consideration of payment of annual premiums has also been advocated. But this system of insurance as formulated differs little from the system of sinking fund except that the risk of loss on realisation of the investment is avoided.

It would seem that in a developing economy subject to the powerful influence of technological advances and changing economic patterns, the question of availability of replacement fund will fail to be effectively dealt with merely by prudent appropriations of profits and their investment outside business, particularly, in view of the growing dependence on "depreciation" as a source of working finance.

Insurance as a Source of Finance

It is, therefore, suggested that the prevailing system of insurance against fire and other risks may be adapted to the system of life insurance, so that schemes of insurance may be offered under which a long-term contract for replacement will provide for payment of the insurance value at the expiry of the period of the policy irrespective of whether any of the risks mentioned in the policy materialises, while in the event of loss or damage arising from the enumerated risks during the currency of the policy, the insurance amount will be paid at the time of such occurrence.

It is true that the system as suggested above, will call for an upward revision of premium rates. But this will not be a burden on the industrialist; on the other hand, it will combine fruitful investment with protective insurance against contingencies. The necessity for such rationalisation of insurance schemes has also arisen because of the increasing insistence by the financial institutions on insurance on the basis of replacement cost as against depreciated cost. While premium on the basis of replacement cost entails a higher charge on operational cost, no benefit accrues under the present system to the industrialist unless a loss pertaining to the insured risk occurs. A long-term contract of insurance based on suitably adjusted rates of premium may prove advantageous not only to the insurer and the insured, but to the financial institutions as well.

PROMOTING EXPORTS OF DRUGS AND PHARMACEUTICALS

By A. Gupta

India's exports of drugs and pharmaceuticals have remained stationary at about Rs. 1 crore for the past five years. It clearly shows that the country will have to change its traditional export promotion methods and also adopt strict quality control so that exports may increase.

AN export promotion council was set up in Bombay last year to promote the export of chemicals, drugs and pharmaceuticals. The drugs and pharmaceutical industry in India has made such a rapid progress that the country is expected to achieve self-sufficiency in drugs and pharmaceuticals in the near future. The present annual output of the industry is worth about Rs. 95 crores, of which the imported component is only about 10 percent to 15 percent. The third plan investment target has been placed at Rs. 40 crores, including the private sector share of Rs. 10 crores and the production schedule of Rs. 150 crores.

In addition to meeting India's domestic demands, the industry is exporting today about Rs. 1 crore worth of drugs and pharmaceuticals, thereby earning valuable foreign exchange for the country. In 1957, India exported Rs. 1.01 crores, 1958—Rs. 89 lakhs, 1959—Rs. 83 lakhs, 1960—Rs. 94 lakhs, 1961—Rs. 1.05 crores and 1962—Rs. 93 lakhs of drugs and pharmaceuticals. The panel on pharmaceuticals, drugs and fine chemicals, formed under the study group of the Board of Trade for the export of chemicals and allied products, has set up an export target of Rs. 8 crores for the industry for 1965-66.

Important Items

A few of the important items of pharmaceuticals and drugs with their export figures for 1960-61, 1961-62 and 1962-63 are given in the table on this page.

Recently, the export promotion council organised a delegation to visit the near east and east African countries to study the export possibilities of India's drugs, pharmaceutical and fine chemicals in those countries. It is a noble purpose, but to justify the expenses incurred a sincere attempt should be made to achieve the objective. This will only be possible by studying the problem thoroughly and approaching it in a planned and rational manner.

From the export figures it can be seen that India's exports of drugs and pharmaceuticals have been almost stationary at about Rs. 1 crore for the last five years. It clearly shows that the traditional export promotion methods are not bearing fruit, so the country has to change to new and rational approaches to the problem.

Keen Competition

To an industrially developed country, there is hardly any possibility of exporting the finished pharmaceutical goods. In a developing country, India's drugs and pharmaceuticals have to face keen competition from the traditional producing countries of chemicals and pharmaceuticals. Moreover, India's cost of production is generally higher because she is not yet self-sufficient in her pharmaceutical raw materials. Besides, the value of imported components along with the import duty paid on them enhances the cost. Secondly, even if the country can establish its ready-made pharmaceutical and proprietory preparations at the cost of heavy advertisements and sales promotion expenses, the market will be rather temporary because every developing country will soon be trying to become self-sufficient in its pharmaceutical requirements.

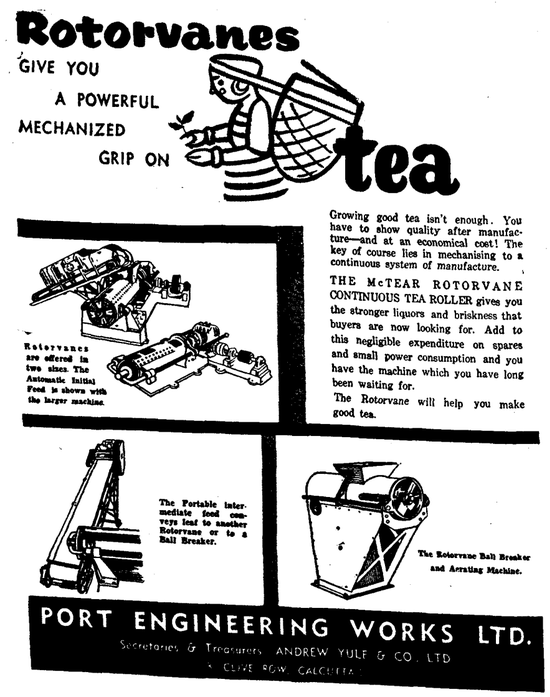
In most of the under-developed countries of the Middle East and east Africa, who have recently acquired their political independence, the problem of public health and preventive medicine is very great due to the prevalence of endemic tropical diseases and malnutrition. So one of the first items on the agenda of development programmes will be to start pharmaceutical manufacturing units in the countries concerned to supply the necessary drugs to the suffering community at competitive rates. Another important point is that capital investments in a pharmaceutical and drug processing industry is much lower than other basic industries, and sufficient results are obtained within a short space of time.

A practical approach to India's export promotion problem will be first to study the development programmes of each country and formulate a long-term policy to supply them with necessary pharmaceutical raw materials, intermediates and semi-finished products, also light capital goods wherever possible, for the implementation of the programmes. For instance, the pharmaceutical chemicals which are derived from raw materials available in India—mainly of the vegetable origin such as alakolids, glycosides and active principles extracted from natural products—will have a good export market, because not many countries are blessed with such natural resources of crude drugs as India. From the table, it can be seen that India has already got a good market for products like strychnine, brucine and *Rauwolfia Serpentina*, alkoloids, etcetera. Other products of a similar nature could also be developed.

Secondly, the semi-finished basic drugs and pharmaceutical chemicals produced by India could be exported conveniently to feed the development programmes and processing units in the developing countries on a manufacturer-to-manufacturer basis or on Government levels. For instance, penicillin, which has got a universal market will be in surplus production when all the third plan projects come into production. The total production capacity, including the new public-sector project the Rishikesh (U.P.) by the end of the third plan period, will be about 215 M.M.V., compared a demand target of about 120 M.M.V.

The Rishikesh Plant

In the case of streptomycin, with the completion of the plant in Rishikesh, the total installed capacity would be over 190 tons a year, compared with a demand target of 150 tons. Similarly, the country will have a surplus production of other important drugs like tetracycline, sulpha drugs and other anti-tubercular, drugs in the near future. Thirdly, India has got an excess production of certain other ancillary raw materials needed for the pharmaceutical industry, such as empty glass ampoules, vials, glass bottles and straw boards for packing materials which can be exported at a competitive price.



The problems of tropical and endemic diseases in these countries are similar to India's. The latter has been fortunate enough to develop preventive and prophylactic medicine quite early, compared with other tropical countries. So the sale of vaccines and seras has got a good potential market in these countries, as also the chemicals needed by public-health organisations such as D.D.T. and B.H.

From the table it can be observed that important medical stores like absorbent cotton wools, lints and bandages, etcetera, had got a potential market abroad. India is a cotton producing country with a well-developed textile industry. It will not be difficult for her to compete successfully in export markets as far as the above items are concerned.

The export promotion of drugs and pharmaceuticals is quite an uphill task, but with a planned and rational approach to the problem, India can still achieve appreciable results provided she cares to sustain the confidence of the market by sticking to strict quality control.

DUTIES AND RESPONSIBILITIES OF A PERSONNEL MANAGER

By D. K. Dutt

The Personnel Manager should be conscious of labour costs and advise management on the economic use of labour. But to top management, line managers and workers, he should be a sincere adviser without caring much for his personal popularity.

DURING the Annual Conference of the Indian Institute of Personnel Management held in Jamshedpur, a short report on which appeared in *Capital* of 12th March, 1964, reference was made to certain significant comments made by Sir Jehangir Ghandy concerning the rôle of Personnel Managers. Sir Jehangir's comment that Personnel Managers should be cost-conscious deserves special attention in these days of planning when costs need to be controlled. Nevertheless, a Personnel Manager should not aspire to exchange position with a Cost Accountant. Perhaps what Sir Jehangir meant was that during the present era when much attention is being paid to managerial problems, the Personnel Manager should not isolate himself in a shell cutting himself away from the rest of the problems of management.

With that end in view, the Personnel Manager should certainly be conscious of labour costs and advise management on optimum and economic use of labour. He should also help labour at the same time to be cost-conscious in an attempt to eliminate the possibilities of unused or less used man-hours. It cannot, however, be left to the Personnel Manager alone to determine the allocation and use of labour, without the concurrence of the line managers. The whole thing boils down to the fact that the Personnel Manager will have to work in close collaboration with the rest of the line managers in the organisation.

Guardian of Staff Morale

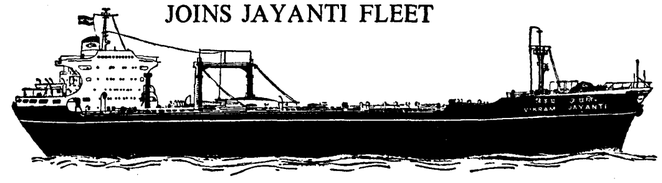
In the above context, it was also emphasised by one of the speakers at the conference (also referred to in *Capital* of 12th March, 1964) that a Personnel Manager should win the co-operation of line managers and the confidence of the management, acting as the guardian of staff morale. How the Personnel Manager can achieve these laudable objectives cannot be determined by the "rule of thumb", dependent as they are on individual tact, discretion and experience. Towards the early days of development of personnel management in this country, the Personnel Manager in some cases, was viewed with some awe and enigma, if not with suspicion, that he was the "nosey parker" who only interfered with others' business. These obviously did not help the Personnel Manager in getting active co-operation from line managers. In some cases, on the other hand, the line managers were put in a superior position than that of the Personnel Manager, which did not make the job of the Personnel Manager easy.

As a result, the Personnel Manager was at times forced to live in a "closed shop" much against his will. That was, however, in the early days of development of this particular branch of management. But today's Personnel Manager has come out of the "closed shop" in an attempt to meet the requirements of line managers as well as of labour. In trying to effect this compromise between conflicting requirements of line managers and that of labour, the Personnel Manager may on occasions have to do a bit of tight-rope walking, instead of playing a partisan rôle. It is, however, the final results which often establish him as a specialist.

Impartial Approach

The Personnel Manager also ensures humanitarian treatment of all employees—not necessarily of industrial labour alone. In doing so, he is again called upon to act as a specialist. His specialised knowledge in this field is again to be shared with line managers, the latter in turn sharing his experiences and difficulties. In ensuring humanitarian treatment, he may come across a colleague who may temporarily refuse to see reason. The erring colleague may even show poor judgment in assessing the feelings of labour under him. In such a case, the Personnel Manager has to help his colleague in seeing the problem in its proper perspective, instead of just sitting in judgment over his colleague. Only through this process of "trial and error" can personnel management develop, with line managers as well taking a hand in it, at which stage the latter also become part and parcel of personnel management.

Sincere Advice



The Personnel Manager must be in a position to absorb shocks and then ensure impartial approach to problems without being guided by any personal bias. To top management, to line managers, as well as to labour, he must establish his *bona fides* as a sincere adviser, who does not care for his personal popularity. He must continue to advise people on top or below him or those who are his colleagues, even though his advice may not, for the time being, be liked by one or the other. On any occasion when his advice is not accepted by line managers, he should not make a personal issue out of it. Even when circumstances prove that he was right, he must not retort back saying, "I told you so".

The Personnel Manager's function does not finish with giving advice only, but he proves himself effective by delivering goods at the hours of crises. How he delivers goods is left entirely to him and to his personal tact and discretion, there being no set rules for the same. It is not his qualification, background or education that matter so much as his approach to the problems. He thus combines in him the elements of a seasoned administrator with a shrewd insight into the problems, and the reasonableness of a capable adviser to look beyond his time. There cannot, however, be any final word in personnel management, it still being a growing science in this country and elsewhere. No doubt every manager in his own field has also to be a bit of a Personnel Manager, and the Personnel Manager a bit of a line manager to understand each other's problems. It is only when such a happy compromise is effected that an organisation can be proud of an effective personnel management.

VIKRAM JAYANTI

54,350 TON SUPER OIL TANKER

JOINS JAYANTI FLEET

VIKRAM JAYANTI, Jayanti Shipping Company's 54,350 Ton Super Oil Tanker, now joins Jayanti's fast growing fleet.

The vessel, built by Mitsubishi Shipbuilding & Engineering Co. Ltd., was delivered to Dr. J. Dharma Teja, Chairman, Jayanti Shipping Co. Ltd., in Japan.

VIKRAM JAYANTI, with its overall length of 754 feet and its breadth of more than 107 feet, will be the largest vessel on Indian Registry. It has a capacity of carrying more than 52,000 tons of oil when fully loaded and requires a 36 feet draft.

VIKRAM JAYANTI will start earning valuable foreign exchange for India the moment it leaves the Shipyard as the vessel has already been Time Chartered for a period of 12 years by ESSO Standard Eastern Tankers Ltd.

With the addition of VIKRAM JAYANTI to Jayanti's fast growing fleet, the Company's tonnage touches the high mark of 4,50,000 DWT. The Company now owns, besides the new Super Tanker, twelve 10,000/11,000 DWT cargo vessels, seven Bulk Carriers, totalling 2,31,000 DWT, and the Oil Tanker Adi Jayanti.

WORLD CURRENCY PLANS: AN EVALUATION

International Currency Plans and Expansion of World Trade. By K. Venkatagiri Gowda. (Published by Asia Publishing House, Calicut Street, Ballard Estate, Bombay 1. Price Rs. 18, pages 216.)

Sterling and the dollar have in post-war years emerged as the two principal monetary units of the world. Apart from being the national currencies of two of the more important countries of the western world, they are used as international exchange reserves by other countries and for the settlement of balance of payments. It is the twin character, the international and national, of these currencies that has kept the world moving from crisis to crisis in the monetary field.

While the sterling was responsible for the annual crises earlier, since 1961 the dollar has also been subjected to strain due to a steady drain on the gold reserves of the U.S.A. as European banks have been offering the dollar balances they hold for conversion into gold at the U.S. pegged price. The author suggests that the revaluation of gold in terms of the dollar will stop this flight and provide the liquidity necessary for expanding world trade, but surely any revaluation now will be construed as a prelude to subsequent and repeated revaluations at convenient intervals in the future.

The author examines the various plans for international currency management put forward by a formidable array of professional, theoretical and practical economists like Keynes, Triffin, Bernstein, Jacobsson, Stamp, Roosa and Maudling. For good measure, he also raises a discussion on the practicability of a return to the gold standard. While one cannot but admire the author for tackling such a difficult subject, one is soon exhausted wallowing in the mass of information and the bewildering number of names and plans.

Keynes suggested the creation of an International Clearing Union having a monetary unit, Bancor, into which the foreign exchange earnings of the credit countries would be converted and then lent to debit countries. This plan was not accepted and the International Monetary Fund was brought into being to make short-term lendings to member-countries in temporary disequilibria in their balance of payments. The approach of the I.M.F. was conditioned by the strength of the only two widely accepted monetary units in the world—sterling and the dollar—and has been conveniently labelled as the key-currency approach.

Events in the past few years are beginning to cast doubts on the adequacy of sterling and the dollar as international reserves, and point to the need for the creation of adequate reserves for international trade without key-currencies which are subject to speculative flights and national economic policies. The Triffin plan has as its central theme the need to increase international liquidity by "internationalising" foreign exchange reserves now held in the form of dollars and sterling. Triffin, however, opposes the raising of the price of gold which will certainly slow down the present speculative flight of gold from the U.S.A. and provide ample liquidity for expansion of world trade. While the Triffin plan aims at easing the burdens shouldered by the key-currencies, the other plans formulated by Bernstein. Stamp, Jacobsson and Roosa preserve the key-currency approach and aim at providing a cushion against any massive shift.

The author has waded bravely into the various plans and attempts to evaluate them critically. In the last few pages of the book, he concludes that the proposals formulated by Maudling, the U.K. Chancellor of the Exchequer, are a logical extension of the Roosa plan and intended to multilateralise international payments through a mutual currency account designed to stop the drain on gold reserves and safeguard the two reserve currencies from sudden strain.

All these plans underline the need for more effective international monetary control and insulation of key national currencies from sudden international swings, as long as they function as reserve currencies. Recent events have clearly shown that the I.M.F. may not be able to deal with pronounced international swings satisfactorily and Britain has resorted to arrangements direct with the U.S.A. to strength their currencies mutually.

A supra-national agency is needed, but can it enforce views on national governments who have to, at periodic intervals, face electorates who may not be willing to forgive restraints on wages and purchasing power in the interests of international monetary stability?

CEYLONESE PLANTATIONS

Ceylon, 1889-1958. By N. Ramachandran. (Published by the Central Bank of Ceylon, P.O. Box 590, Colombo. Price Rs. (C) 12.50, pages 200.)

The book presents a masterly survey of sterling tea and rubber companies in Ceylon since the last century. It was first written as a doctoral thesis which was accepted by London University. Taking into account the financial experiences of selected companies, the author discusses in detail the effects of double taxation on the expansion of sterling companies, the consequences of international restriction schemes and the process of capital investment and disinvestment since 1939.

In course of his research, the author has brought out a startling fact that due to faulty accounting practice or window dressing, many rubber and tea companies did not adequately provide for depreciation of assets. This practice exaggerated the profitability of these companies. In many cases, dividends have indeed been paid out of capital, particularly in the case of rubber companies which were confronted by restriction schemes during the 'thirties.

The author has only touched the issue of nationalisation of foreign plantations which was examined by such visiting economists as Professor Nicholas Kaldor and Mrs. Joan Robinson. This has been discouraged in view of the high cost of compensation to be paid and the consequent loss of foreign exchange.

Dr. Ramachandran's contention is that the sterling companies in general are high-cost producers due to the system under which they operate. Their aim is the maximisation of output rather than the maximisation of profit which is the motive of indigenous producers. This fact is often overlooked, so many arrive at incorrect conclusions on the working of Ceylonese estates *vis-à-vis* sterling estates.

It would, therefore, follow that sterling companies on the whole cannot earn adequate profits. Their shareholders would have obtained a better return on their investments had the sterling estates been sold and they were paid in cash to enable them to invest in gilt-edged or other sterling securities. There are, however, few Ceylonese concerns who can possibly afford to pay the high price for acquiring foreign estates.

This is a valuable study which should appeal to the Indian investors since they face similar problems in this country.

ECONOMIC SURVEY OF BOMBAY

An Indian Metropolis. (Compiled and published by Bombay University. Price Rs. 36.50, pages 863.)

Bombay University has made a determined attempt to remove a major obstacle for research work, namely, the lack of statistical data, which confronts a student belonging to the faculty of economic and social science. On the basis of census reports from 1872 and the survey conducted during 1954-57 of just over 13,000 tenements, the publication brings out an enormous volume of facts and figures on the socio-economic life in Bombay city. The comparison of sex-ratio, age groups, religious groups, composition of migrants, functional classification of workers are some of the topics covered by the survey. It is interesting to note that the proportion of female workers is steadily declining; it was 24.2 percent in 1911 but 11.3 percent in 1951. As one would expect, employment in commerce appreciably increased—a 57-percent rise over the last census figure, and the importance of processing and manufacturing as a source of employment continues to increase both in relative and absolute terms. Domestic servants are fewer whereas workers employed in hotel services have doubled within a decade. One of the new features of migration to the city is that the number of people coming from U.P. and Kerala have increased considerably.

The process of urban expansion may have the initial impulse from an increase in export base activities but the "multiplier" effect of induced expansion is quickly reflected as local business units draw the fillip from a rise in consumer demand.

The survey will no doubt prove to be of considerable importance to students and research workers. The massive facts and the trends indicated will also help social planners and administrators to counteract evil tendencies which result from unplanned and haphazard growth of a city.

ECONOMIC PLANNING

Problems of Economic Planning in India. By O. K. Ghosh. (Published by Kitabistan. Allahabad. Price Rs. 10.50, pages 274.)

This book is written in the form of a textbook of planning in the context of India's economic development but it is primarily intended for the layman. Several new chapters have been added in the second edition to make it acceptable in a wider circle.

The first few chapters deal with the theory of planning and its political aspects and present a discourse on national income accounting. The author then proceeds to discuss planning in India. He is more descriptive than critical and appears to approve the allocation of resources in the successive five year plans. According to him, India has well established the basis for the "take off" stage.

While discussing agriculture and population, the author elaborates his idea of agro-urban township which, although not original, has not been taken seriously by many economists. He visualises the extension of multipurpose scheemes on a comprehensive scale accompanied by decentralisation of administrative machinery and suggests that the cost involved which will undoubtedly be high, should at least in part be recovered through local levies. In course of time, these agro-urban centres will serve as an outlet for the surplus population in big and congested cities and ensure diversification of industries throughout the country

SPECIAL NUMBER

Finance and Commerce, Vol. II, Part I, January 1964. (Published by M. C. Bhandari, 134/1, Mahatma Gandhi Road, Calcutta 7. Price Rs. 3, pages 98.)

This special number contains articles on board-room practices and procedures, agenda and minutes, holding of an annual general meeting, etcetera. The secretarial knowledge section is meant to be a forum for the views and opinions held by various sections of the public on the provisions of the Companies Act, 1956. There is also an employment service section. The journal will be of use to company secretaries for whom it is intended.

SUGAR ANNUAL

Indian Sugar Annual Number, 1964. Edited by J. S. Mehta. (Published by the Indian Sugar Mills Association, India Exchange, Calcutta 1. Price Rs. 3, pages 132.)

The latest annual number of *Indian Sugar* contains, as usual, some authoritative articles. It covers a wide range of subjects—from cane growing to sugar distribution. There is a topical article on the controls on the sugar industry by Mr. D. R. Narang who argues that the laws of economics are stronger than man-made laws and urges the Government to provide greater incentives to producers. There is an informative article on the economics of the sugar industry in east U.P. and Bihar by Mr. T. Kanoria.

The annual contains a section on sugar technology which includes information on important advances in this sphere in India and abroad. It also has an up-to-date statistical section with data on various aspects of the industry. The journal is well-edited and attractively presented.

BOOKS RECEIVED

Annual Company Reports. By S. K. Bhattacharyya. (Sponsored by the Department of Company Law Administration, Ministry of Commerce and Industry, Government of India, New Delhi. Price Rs. 2.40, pages 44.)

Rights, Duties and Obligations of Company Directors. By N. K. Petigara. (Published by M. R. Pai for the Forum of Free Enterprise, 235 Dr. Dadabhai Naoroji Road, Bombay 1. Pages 27.)

Air Miscellany, Vol. IV. (Published by the Director, Publications Division, Delhi 6. Price Rs. 2.50, pages 160.)

Industrial Psychology (Revised Edition). By Thomas W. Harrell. (Review copy received from Oxford Book Company, 17 Park Street, Calcutta 16. Price Rs. 9, pages 398.)

Financial Institutions: National and International. (Prepared by the Economic Adviser to the Government of Pakistan, Ministry of Finance, Rawalpindi. Pages 278.)

DEVELOPING PETRO-CHEMICALS MANUFACTURE IN INDIA

(BY A SPECIAL CORRESPONDENT)

With the development of the oil industry in India, the use of petroleum as a raw material for chemicals is being actively considered and plans have been drawn up for establishing petro-chemical complexes in suitable areas. Their foreign exchange costs being high, it is a good augury that many well-known international concerns are showing a keen interest in India's projects.

THE generic term "petro-chemicals" covers both inorganic and organic chemicals derived from petroleum raw materials which use techniques typical of the petroleum processing industry. The bulk of the petro-chemicals are, however, organic and in the present context in India, the term petro-chemicals refers to the large volume of end-products in the general categories of plastics, synthetic rubber, fibres and detergents.

The use of petroleum as a significant source of raw materials for synthetic organic chemicals started in the U.S.A. about 40 years ago and in western Europe and Japan after the second World War. Till then, the so-called "traditional" sources, namely, coal-based chemicals, calcium carbide and fermentation products were the providers of raw material for the organic chemical industry. Western Europe, particularly Germany, has had a long history of the organic chemicals industry based on coke-oven by-products and calcium carbide. The entrance of petroleum into this field, at least in the U.S.A., can be termed fortuitous, in as much as large quantities of by-products from the growing petroleum refining industry were available. A similar situation obtained in western Europe and in Japan after the second World War when the refining industry began to make much headway.

Development of Chemical Industry

The development of the chemical industry has contributed largely to the growth of other industries in these countries. Once started, their individual growth has been the result of constant feed-backs, each one deriving from and contributing to the growth of the other. The development of the chemical industry has been faster than that of other industries, and with rapid industrialisation, a situation soon arose in which the availability of "traditional" raw materials could not sustain its burgeoning growth. From this point, petroleum was looked upon more as an essential rather than as a desirable raw material source. Cracking units designed specifically to produce olefins, which are the basic building blocks of petro-chemistry, were established to supplement the available natural and refinery gases. At present, the share of petroleum-derived chemicals is about 85 percent of the total organic chemicals produced in the U.S.A. In western Europe, the percentage approaches 40. Considering that the petro-chemical industry started in western Europe about 25 years later than in the U.S.A., its growth is remarkable even by comparison with the high general growth rates in postwar years.

It must be understood, however, that production from plants based on traditional raw materials has not declined in terms of the absolute quantities produced. These plants exist in their own right in the face of competition from petroleum because of a combination of factors which make the plants based on traditional raw materials still viable. Thus the growth of the petro-chemical industry has not been at the expense of other raw materials but as a supplement.

In India, the foundation for the organised development of the chemical industry was laid during the second five year plan, but the accent on development has been, in the main, on the inorganic chemicals sector and on fertilisers. A significant development of the organic chemical industry has yet to begin.

The Final Products

The necessity and scope of organic chemicals, based on petroleum, with reference to the trends of development in western countries, are examined below. These final products which we now refer to as petro-chemicals have been considered.

Plastics: The plastic industry in general has grown up hand in hand with the development of the petro-chemical industry and its growth has been one of outstanding achievement. The U.S.A. is by far the biggest producer of plastics. In the decade 1950-60, production has trebled to an estimated figure of 2.8 million tons. Of this, about 21 percent is polythylene, 20 percent is P.V.C. and 18 percent polystyrene. Each one of these general types is more suited than the others for certain applications; polyethylene finds its chief application in films and moulded articles; P.V.C. in extruded articles such as pipes, rigid sheets for panelling and other constructions and wire coatings; polystyrene in refrigerator and electrical appliances and other domestic wares. Other types of plastics, although smaller in volume, are no less important. These include phenolic resins, urea and melamine resins, and epoxy resins.

Polypropylene is a newcomer to this field and bids fair to complete favourably with other plastics. Of interest also is polyurethane which has shown tremendous growth in the U.S.A. in recent years because of its application as a light-weight rigid and flexible foam insulation. The relative proportions of the individual types of plastics in western Europe show a similar distribution as in the U.S.A. Newer application of plastics has been the subject of constant research, and there is little doubt that further major expansion in the production and use of plastics is in the offing.

In India, the presently operating plastic plants are based on fermentation alcohol and carbide acetylene. The estimated production of ethyl alcohol by 1971 is about 75 million gallons. As will be seen later, the available quantities of ethyl alcohol for plastics manufacture can only meet a fraction of the required quantity. P.V.C. manufactured from calcium carbide is very expensive, since power costs in India are high, and high-grade limestone required for carbide manufacture is hard to obtain. India is already facing a situation when the availability of traditional raw materials has fallen short of requirements for the organic chemical industry. Various estimates of the demand for plastic during the third and fourth plan periods have been made.

One such estimate has been arrived at by taking into consideration the growth rates in west European countries and Japan. Taking the example of polyolefin resins, production in the U.K. increased from about 18,000 tons in 1954 to about 15,000 tons in 1962. Japan's production increased from about 10,000 tons a year in 1958 to 135,000 tons in 1962. Consumption in France rose from about 5,000 tons in 1956 to about 200,000 tons in 1962. A similar growth rate is seen for other plastics also. Comparing with these rates of growth, the targets set for India which seek to increase the production from 20,000 tons in 1965 to about 100,000 tons in 1971, is conservative. The recommended targets for production from petroleum sources are as follows:

	Tons
Polyethylene	80,000
Polypropylene	5,000
P.V.C resin	48,000
Polystyrene	15,000
Methacrylate resins	8,000
Polyacetals	6,000
Vinyl Acetate (non-fibre)	7,000
Polyurethane	10,000
Polyesters	3,000
Nylon	2,000

Rubber: All over the world, reliance is being increasingly placed on synthetic rubber to meet the growing requirements. It has been estimated that the total world demand by 1970 will be about 6.5 million tons, against a production of less than 2.5 million tons of natural rubber. The share of synthetic rubber in the total rubber output in the U.S.A. is around 70 percent while in western Europe it is about 40 percent. In India, against an estimated requirement of 225,000 tons of rubber by 1971, the production of natural rubber is expected to be 72,000 tons and that of reclaimed rubber 24,000 tons. Part of the deficit of 117,000 tons will be met by the S.B. type of rubber manufactured in Bareilly (based on fermentation alcohol) leaving a large gap of 90,000 tons a year to be met by establishing new synthetic rubber plants.

Important Categories

Having set the targets, the question arises as to what types of rubber should be made. The more important categories of rubber, if one excludes neoprene and nitrile rubbers which can be classified as speciality products, are S.B.R., butyl rubber, polybutadiene and polyisoprene. Each of these has a field of application where it is superior to the others. Butyl rubber in unsurpassed for the manufacture of inner tubes because of its low permeability. Polyisoprene is closest to natural rubber and can meet about all the fields of application of natural rubber, S.B.R. is the earliest general-purpose rubber of importance and the bulk of synthetic rubber made in the U.S.A. is still S.B.R., although its growth rate is less than that of other polydiene types Polybutadiene rubber shows superior abrasion resistance and is most favoured for tyre treads. The growth of polybutadiene rubber in the U.S.A. has been much higher than that of polyisoprene or any other types in the past three years.

The bulk of the rubber requirement in India is for the manufacture of giant tyres. Thus apart from a quantity of butyl rubber required for inner tubes, the major portion of synthetic rubber production in the country has to be polybutadiene and to some extent polyisoprene. A new type of rubber called E.P., which is a copolymer of ethylene and propylene, is in the development stages in Italy and America, but it is unlikely that it will prove a serious contender for tyre manufacture. The manufacture of synthetic rubbers will not only fill the gap between the total demand and availability of natural rubber, but will also help in stabilising prices.

Synthetic fibres: The introduction of synthetic fibres in the market has been the result of the need to supplement natural and reconstituted fibres and because the new synthetic fibres exhibited superior wear characteristics. The particular type of synthetic fibre favoured in a country is a matter of production costs and climatic conditions. However, nylon is by far the most important category, especially in the U.S.A.

The targets suggested for the production of natural and reconstituted fibres in India by 1971 are as follows:

	Tons
Cotton yarn	1,210,000
Rayon filament	100,000
Staple fibre	400,000
Woollen and worsted yarn	40,000

To meet the target of 23 metres of cloth a head by 1971, it is necessary to plan for the manufacture of about 88,000 tons a year of synthetic fibres. The recommended types and respective quantities are as follows:

	Tons
Tyre cord	13,000
Filament and staple	15,000
Nylon total (for fibres)	28,000
Polyester	20,000
Polyacrylonitrile	20,000
Miscellaneous	20,000

Detergents: The large-scale manufacture of synthetic detergents started in Germany during the second World War and was necessitated by the shortage of fatty acids for making soap. The shortage of raw materials for making soap and the increasing demand for detergent agents in general, required all industrialised countries to base synthetic detergents manufactured on petroleum. Presently about 80 percent of total detergents made in the U.S.A. are based on petroleum. In western Europe, the percentage is about 40. The major part of the detergents manufactured is of the alkylaryl sulphonate type. However, in view of serious foaming problems because it is not bio-degradable, this type is being supplanted by the so-called "soft" detergents of the long chain paraffinic type.

India is already importing about Rs. 40 crores worth of raw materials required for soap manufacture. A modest target to manufacture 20,000 tons of synthetic detergents a year has been recommended. To begin with, the alkylaryl sulphonate type of detergent is expected to be manufactured since the main market for it will be in the coastal towns where the sewage disposal problem will not be so acute, but long-term planning has to be based on biodegradable or the "soft" type of detergents.

While the need for developing the petro-chemical industry in India is easy to understand even on approximate estimates of demand and supply of alternate raw materials, the detailed plan for establishing manufacturing units is fraught with a number of problems of varying degrees of complexity. As with other developing countries, India is faced with the difficulty of fixing reliable target figures, obtaining process and engineering know-how and getting

the finances to build up plants; besides, there are the problems of balanced regional development.

Fixing Reliable Targets

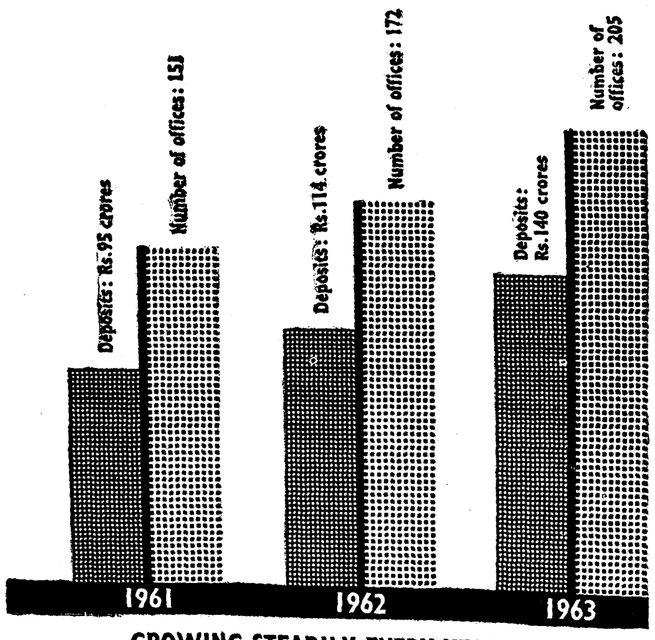
The problem of fixing reliable targets arises from the fact that consumption figures in the past years do not in any way reflect the maximum capacity of the market to absorb the products. With import restrictions and high taxes and duties, the imported petro-chemical intermediates end up as finished products of high prices quite out of proportion to what would have been the case if these materials were available freely in the country and at competitive international prices. This is one of the reasons why plastics are still regarded in many quarters as a luxury item. Taking the example of plastics, their impact has been in the consumer sector and hardly any in the industrial sector. Plastics provide a suitable and in many cases superior substitute for a number of applications; these include the lining of bags for packing cement, fertilisers, etcetera, containers for corrosive liquids, machine parts which are normally fabricated of brass, zinc, bronze, etcetera, which are scarce in the country, construction materials such as panelling and floor to replace timber, cement, etcetera.

The projection of previous years' consumption is thus virtually valueless. Correlating possible consumption with the industrial development index, detailed end-use anlyses taking into account the possible and desirable areas of substitution, are generally used as guide lines for establishing targets; but in all cases these are to be tempered by cold commercial "horse-sense".

The readiness with which traditional materials are substituted by petroleum-derived ones will to a large extent depend on the price of the latter; how far they are lower in price will help to overcome the initial reluctance of the prospective user. The petro-chemical industry, in general, is highly capital-intensive and susceptible to the economies of scale of manufacture. For example, ethylene from a cracker producing 100,000 tons a year will cost about Rs. 520 a ton while if production were 15,000 tons a year, the cost will be as high as Rs. 925 a ton. Petro-chemical plants normally take three years to construct. In the initial period, the plants usually have to operate at a rate lower than the rated capacity to enable the market to catch up with production. A period of two to three years normally elapses before the plant can reach its designed capacity. This means that the plants will have to be at least of the size which would be obtained in competitor countries in three years from now and that even during the initial period of operation, the product prices will be competitive with traditional materials obtainable from elsewhere. Crackers producing 100,000 tons a year of ethylene are even now not uncommon in western countries.

Economies of Scale

Apart from the advantages of economies of scale, it is highly important that the petro-chemical plants are built and operated under a common "umbrella", so to speak. Significant economies can be achieved by this because of better rationalisation of utilities such as steam, power, water and sewage.



The question of phasing the construction of petro-chemical complexes also enters the picture. The establishment of a single large complex which will meet the requirement of all or most of the estimated production requirement by a future date, say, 1971, suggests itself as a desirable solution. However, the economies of scale of one large complex will be apparent only by 1969 or so, because the complex has to operate at far below its rated capacity during the first three or four years, resulting in very high production costs. It is easy to see that such a situation will have deleterious effects in discouraging prospective users to switch to petro-chemical substitutes.

Again, by having two plants of half the above size, certain advantages of the economies of scale will be lost, but the product prices in the initial stages will be comparatively low; relative time phasing of the two complexes should then be such that the products put out by both the plants show a smooth rate of increase; at no time should there be a glut of products in the market. A balance has, therefore, to be struck between these two factors in establishing the minimum economic size of a complex and relative time phasing.

The need for a dynamic sales research and customer services organisation in this context cannot be overstressed. Taking the example of synthetic rubber, many of the varieties of synthetic rubber require different processing techniques to make finished products. Apart from finding different fields of application, whether new or as substitutes, the processing know-how has to be extended to the finished goods fabricaters. This process know-how emanates from the research organisation. Constant research in the field of petro-chemicals has resulted in the discovery of new products which are superior or cheaper than the existing ones. While production envisaged for synthetic rubber, detergents and fibres can be considered as a necessity and that major plastics may be considered as bread and butter item, so to speak, dynamic research for new products will no doubt contribute to a more rapid industrial growth sector.

The cost of engineering of petro-chemical plans runs as high as 20 percent or 25 percent of the capital outlay. The country has been relying entirely on foreign assistance for this work. However, a start has been made for establishing a design and engineering company in India for petroleum, petro-chemical fertiliser and allied industries.

The plans for developing the petro-chemical complexes in the country envisage an outlay of about Rs. 295 crores and a like amount for the fabrication of finished products. The foreign currency component will be 50 percent or 60 percent of the total outlay. Finding the necessary finances, although not insurmountable, is a difficult task especially when one considers that the expenditure is to be spread over a short span of years. The response from several internationally reputed petro-chemical firms expressing interest both in extending process engineering know-how and financial assistance augurs well for the realisation of the plans.

GROWING STEADILY EVERY YEAR—

THE BANK OF BARODA

Established as a local bank with about 20 employees, the Bank of Baroda is now one of the leading banks in the country, with 205 branches. These are spread all over India and abroad and collectively employ over 5,000 people. Deposits total more than Rs. 140 crores. This dramatic and dynamic growth has been the result of meticulous planning and courteous service. Moreover, the Bank of Baroda has on its Board of Directors, men who are eminent in the industrial and financial world—thereby enhancing the bank's stability and prestige.

PAKISTAN SCRAPS MINIMUM EXPORT PRICE OF FIBRE

IN pursuance of its policy to encourage a steady export of raw jute, the Government of Pakistan has abolished the minimum export price of the fibre with immediate effect. Announcing the jute policy for 1964-65, a Government Press note says that the Pakistani Government will not hesitate to reimpose the minimum export price, if necessary. The check on export prices will continue. The quota system will be maintained and linked with the phased purchases in the internal market by shippers and jute mills. Exports of mesta will continue as at present. The new internal minimum prices of loose jute, basis the lowest or Bottom grades, will be: Rs. 20 a maund for Northern, Rs. 22 a maund for the Districts and Rs. 23 a maund for Jats. In view of the difficulty of having a precise estimate of the crop before August, the Government has decided not to fix the export quota at this stage.

It may be recalled that the Pakistani Finance Minister had announced a 50-percent cut in the export duty on raw jute, while presenting his Budget proposals three weeks ago. These inducements might have been prompted by the concern felt by the authorities over the decline in fibre exports and the prospects of a bumper crop. The total exports of fibre during the ten months ended April 1964 declined to 3.45 million bales from 3.88 million bales for the comparable period of 1962-63. Shipments to India dropped from 254,785 bales to 67,759 bales, to the U.K. from 760,686 bales to 662,288 bales and to other countries from 2.88 million bales to 2.72 million bales.

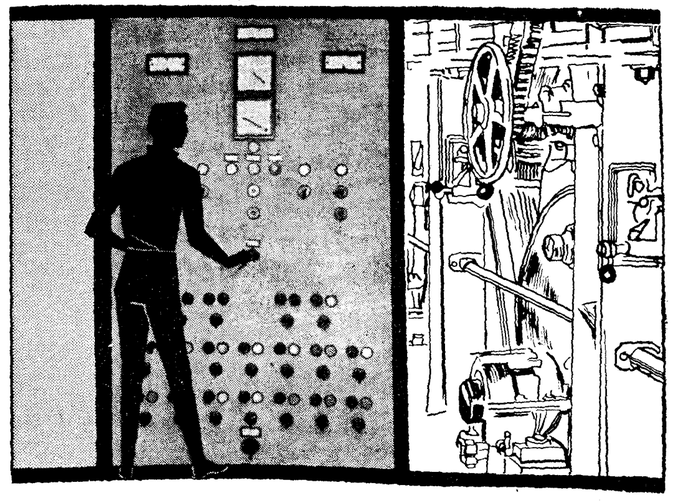
Sluggish Trend in Fibre

A sluggish trend has been persisting in the raw jute market during the past six weeks or so due to the lack of mill interest. The soft undertone has induced some nervous selling of mesta and low-grade jute around lower-than-derivative levels. Hitherto both mills and sellers have shown very little interest in the new crop, presumably because of their reluctance to extend commitments at this stage. Both the industry and the trade expect that the entire 1964-65 crop will be disposed of in a regulated manner by the Jute Commissioner by the issue of compulsory monthly purchase quotas, as in the current season.

With the completion of the latest quota of 190,000 bales for the period ended 27th June, mills have lifted 6.93 million bales and the J.B.S.A. 150,000 bales out of the 1963-64 crop, estimated around 7.5 million bales. In fact, all the usable jute and better-grade mesta have been absorbed. The balance of the season's output, totalling about 420,000 bales, comprising low-grade fibre may have to find alternative uses in rope and twine-making.

The mills have already got an adequate stock of raw jute on their own and buffer stock accounts. Another factor behind the present slackness is the dealers' anxiety to close their old crop accounts in order to prepare for business in the new crop. The latest issue of the *Jute Bulletin* issued by the Indian Central Jute Committee, thinks that the most important reason for the present subdued trend in the fibre market is the "casual whim of a group of influential operators to ignore the effects of the month-long drought on the crop in Murshidabad, Nadia, 24 Parganas, Hooghly and Howrah districts of West Bengal, falling within the predominantly Tossa belt". Although sowing in these districts was rather late, the total acreage planted was estimated around the previous year's level. But it is reported that the seeds did not germinate at all in some fields. In many others, where they did, the plants have been patchy, of a stunted growth and wilted due to dry heat. A softer trend in white jute prices during the season had discouraged the sowing of such fibre in the low-lying fields of the Daissee districts. The late rains this season with the possibility of water-logging of fields made Tossa sowing in these areas impracticable. The latest reports of heavy showers and inundation of early-sown low-lying areas in lower Assam valley and northern Bengal have also worried the trade and the industry. Although no large-scale damage to the crop has been reported so far, detailed information from the affected zones is not yet available.

Plea for Incentives to Sacking



An earnest plea for granting export incentives to sacking in order to help the Indian industry to compete with Pakistan was made by Mr. R. P. Goenka last week in his presidential address to the annual meeting of the East India Jute and Hessian Exchange Ltd. He said that the industry could do nothing to meet the situation unless the Government realised the need for some form of assistance. The demand for export incentive was justified by production statistics as also by the continuing decline in heavy goods exports, he added.

Admitting that the I.J.M.A. Working Time Agreement did have an element of control and that the scrapping of the agreement was a step in the right direction, Mr. Goenka said that its sudden termination had, however, introduced avoidable bearish tendencies into the market. He would have preferred a gradual termination of the agreement. For the Exchange, the President said, the year had been relatively peaceful, with trading in hedging and T.S.D. contracts going on smoothly with narrow price fluctuations. The highest and the lowest levels touched during the year were: Rs. 58.18 and Rs. 49.12 a hundred metres in hessian, Rs. 117.20 and Rs. 107.45 a hundred bags in B Twills and Rs. 84.23 and Rs. 80.23 a quintal in Upper Assam White Bottoms. The Vigilance Committee set up by the Exchange became effective only towards the latter half of the year and produced a sobering effect on many speculative dealers. Besides the limits imposed on the daily range of fluctuations during the breakdown of a generator in the Cossipore Power House in May 1963, intermittent warnings were issued to members against unduly large outstandings in hessian and sacking. These were heeded to promptly, thus facilitating deliveries in the normal manner.

Compulsory Pre-shipment Inspection

The Export Inspection Council of India has decided to introduce compulsory pre-shipment inspection of jute goods by 1st December, 1964. The maintenance of rigorous quality control, backed by compulsory pre-shipment inspection, has been considered to be an important step for

WORLD'S FASTEST

increasing exports. It will also check the tendency to overinvoice or underinvoice the consignments, it is stated. The Council expects to set up its own super-inspection establishments at important export centres to keep a constant watch on the activities of the inspection agencies. It has adopted a four-tier system of central and regional laboratories, technical universities and research institutes. Besides, it will also use the services of private specialised test houses and agencies for implementing quality control and pre-shipment inspection. The Council will extend liberal financial aid to these institutions. The Jute Commissioner will soon be requested to make arrangements for pre-shipment inspection of gunnies in co-operation with the industry.

Cambodian Jute Delegation

A three-man delegation of the Cambodian Jute Society visited Calcutta and New Delhi last yeek. It discussed the prospects of concluding a technical collaboration agreement with a leading gunny manufacturer in Calcutta. It intends to set up a jute mill in Cambodia with Indian technical know-how. During their stay in the city, the members visited a number of jute mills in the suburbs. They also evinced keen interest in new lines of production, including poly-vinyl or plastic-coated fabrics, carpet-backing cloth and jute draperies.

Joneja Delegation Returns

Three members of the five-man Indian Jute Delegation to western Europe and North America returned to Calcutta during the week-end. Besides participating in the European Jute Congress in Paris, the team visited London, Brussels, the U.S.A. and Canada to explore possibilities of stimulating gunny exports. The delegation was led by Mr. G. C. L. Joneja, Jute Commissioner.

THE JUTE MARKETS

Manufactured Goods: Divergent trends prevailed in the Calcutta gunny market during the past week. Heavy goods hardened on reports of Indian Government tenders for about 15,000 bales of B Twills for July-August delivery. The firm trend in sacking and reports of scattered business of a routine nature with the U.S.A. and Argentina could not help hessian, which eased somewhat at the close after minor fluctuations. Earlier in the week, mills emerged as sellers for all positions and booked handsome business in heavy goods and odd constructions at higher prices. Later, they became cautious when top gains were partially trimmed on profit-taking in the hedge market. Shorts and shippers had to cover their open positions in haste at a premium. Conditions in the Calcutta port deteriorated further due to the tidal bore in the Hooghly. There was a congestion of vessels in the dock area and quite a large number of incoming ships were waiting at Sandheads. Gunny shipments were to some extent affected by the shortage of lighters. Overseas interest in immediate space for jute cargo was rather thin. In the hedge market, the trend was governed by the spot market. With the firming up of spot sacking prices, bears rushed to cover their open positions in panic, pushing up the price. Bulls indulged in precautionary liquidation at the bulges. But all offers were absorbed after wide fluctuations. Hessian ruled quiet, fluctuating between narrow limits and closing with a nominal loss, on balance. Turnover was heavy in sacking and odd constructions, and moderate in hessian. The closing undertone was firm in the former and easy in the latter.

Wednesday's quotations were as follows:

	Ready	July	July-Sept.	Oct.-Dec.
40in. 7½oz.	33.65	33.70	33.75	33.85
40in. 8oz.	36.25	—	—	—
40in. 10oz.	44.40	44.60	44.85	45.25
B Twills	115.75	116.05	115.65	115.75
Cornsacks	117.00	117.50	118.00	117.75
Heavy Cees (Plain)	117.00	116.35	115.85	115.65
A Twills	136.25	137 25	138.25	139 30
Liverpools	129.00	129.00	129.00	129.00

Raw Jute: Steady conditions prevailed in the raw jute market during the past week. The selling pressure among holders of lower grade jute and mesta subsided appreciably with the lifting of sizable lots by mills against their quota for the period ended 27th June. Later on, holders became cautious on reports of heavy showers and inundation of some early-sown low-lying areas. Reports of drought damage to the crop on the predominantly Tossa belt of West Bengal also induced caution. Besides, both the mills and the fibre traders were awaiting the issue of the compulsory purchase quota for July. So, turnover declined considerably and prices hardened somewhat in the spot market. Small lots of the new crop were also transacted at levels slightly higher than the operational minima. In the hedge market, Upper Assam White Bottoms for September hardened further on brisk buying. Opening on an optimistic note on renewed support, the price fluctuated between wide limits on alternate bouts of realising and bear-covering. All offers were well absorbed and the market closed with a moderate gain. Turnover was fair and the undertone steady at the close.

Wednesday's quotations were as follows:

	Landed at Mills (Basis Bottoms) 1963-64 Crop		1964-65 Crop	
	Rs. A Qtl.	Rs. A Md.	Rs. A Qtl.	Rs. A Md.

THE U. K. JUTE MARKETS

LIMITED OFFERINGS OF FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

IT was announced by Pakistan that the export duty on raw jute was reduced by £4-4 a ton on 13th June, but since then, the position in Dundee has been very obscure. However, the latest statement from that country says that no rebate can be given on export duty on contracts placed before 13th June, but not shipped by that date. The attitude adopted by Pakistan is that these contracts were placed at minimum export rates, therefore, it is impossible for a rebate to be granted. On the other hand, all jute is bought by Dundee spinners on a contract which states that any alteration in export duty will be on buyer's account. In the past when export duties were raised, the spinners had to pay the extra amount.

No doubt further discussions will take place on the above subject, but it is now quite obvious that no benefit will be given to buyers on contracts placed after 13th June. In other words, the export duty on raw jute was reduced by £4 4s a ton, but the actual price was raised by a similar amount.

With so much uncertainty at present it is not surprising that most sellers have withdrawn from the market for the time being. Only a few offers were made last week with Mill Lightnings at £108 10s, Mill Hearts at £95 and Grade Hearts at £83, c.i.f. U.K., for June-July shipment. Grade Tossa-2/3 was named at £119 10s and Grade Tossa-4 at £105 10s. Outport Tossa-2/3 was at £93 15s and Outport Tossa-4 at £83 10s, June-July. Cuttings are at £58 10s for S.N.C. and at £52 for N.C.

Offers of new crop were scarce, and most sellers were asking current E.P.C. levels which are of no interest to spinners. No statement has been made about official Pakistani prices for next season, and until these are known, little or no business will take place in the fibre. The Siam jute market was quiet with new crop prices at £75 for super A, at £69 15s for grade A, at £65 15s for grade B and at £61 for grade C, delivered mill Dundee for October-November shipment.

The Calcutta goods market was quiet and only a small business interest was shown. Quotations were at 67s 5d for 40in. 10oz. and at 51s 5d for 7½oz. a 100 yards f.o.b. Calcutta for June shipment, at 67s 11d and 51s 5d July and at 68s 6d and 51s 6d August-September. B Twills were at 175s 11d, 175s 5d and 175s 2d for the respective shipment periods.

Dundee spinners are busy and have orders in hand for forward delivery. Some buying interest is still shown and the position is satisfactory. With the exception of the heavy end of the trade, manufacturers are well placed for the time of year and further orders are being received. Although there has been some enquiry for sackings, very little actual business has taken place so far and short time working is still in force.

THE PAKISTANI JUTE MARKETS

EXPORT DUTY CUT NOT TO BENEFIT BUYERS

(FROM OUR DACCA CORRESPONDENT)

JUDGING by weather conditions now, the new jute crop should be good. On the other hand, since the crop has not been early (in fact, very few balers have made their "lucky day" purchases, one is inclined to doubt whether the outturn of the crop will be as good as weather conditions suggest. Without being too technical, it has proved in past years that if the crop is sown early and not ready for harvesting early, there is a tendency to early flowering and poor outturn. From the point of view of the quality once again, the district crop promises to be good but the Mymensingh area of jat jute does not look so promising. It is too early to report on the northern and soft and hard district areas.

In the pucca bale market, the big problem is the reduced export duty. When this was reduced by £4 4s a ton for long jute and £2 2s a ton for cuttings, etcetera, it was clearly understood by the trade that according to the terms of the contract, this reduction in duty would go to the buyers subject to clauses in the contract for all shipments of jute made after 12th June, provided the contract had been entered into before this date. The authorities, however, have decided that this is to be so. They maintain that the reduction in export duty is for the benefit of the growers and they say that since the minimum price is statutory and fixed by the Government, the law fixing minimum prices automatically nullifies any clause in the contract, which may contradict this law. The fact that the L.J.A. contract, revised edition, has been approved by the P.J.A. and the Jute Board, which is a branch of the Ministry of Commerce, is not taken into consideration.

There is no doubt that the London agents and buyers will dispute this interpretation and it is reported that documents submitted for negotiation pertaining to shipments effected after 12th June, where the reduced export duty has been paid, have not been accepted for payment by the buyers since the balers under the rules of the State Bank of Pakistan, may not give the buyers the benefit of the reduction. The vice chairman of the Jute Board and the chairman of the P.J.A. were recently in Rawalpindi discussing the matter. As this is election year, it is unlikely that the Ministry of Commerce will give in to the buyers' claim. It has been suggested that one way out of the impasse is to formulate the law concerning reduced export duty, which has not yet been published so that the wording reads that the export duty is reduced on all contracts made on or after 13th June. This, of course, would mean that contracts made before 13th June, but shipped after, will have to pay the old rate of export duty. Unfortunately for this argument, the Customs authorities started to charge the export duty at the new rate on all contracts shipped on or after 13th June, irrespective of the date of the contract.

Some buyers maintain that since it is the minimum price which fixed statutory and not the P.J.A.'s daily E.P.C. price, a refund on some or all of the duty should be possible on contract registered at E.P.C. prices provided these E.P.C. prices were above the minimum, as has been the case with many contracts of cuttings and Export Firsts, etcetera. They also argue that since there is no statutory minima for habijabi and cut ropes, export duty should be refundable on these. For the time being, however, the authorities are not agreeing to this claim. It is expected that during the first few days of July, the Commerce Minister will come to Dacca and will clarify the matter finally at the same time as the jute policy is announced.

Overseas buyers have had a good season this year, in that raw jute was cheap and they sold their manufactures profitably. This is satisfactory in so far as the mills abroad were able to sell, but more recently, especially in Belgium and West Germany, it has been extremely difficult for mills to sell against Indian and Pakistani competition, so that many mills have reduced their working hours. Although there are reports about heavy stocks in Europe, this correspondent wonders whether this is actually true because in Antwerp, Bremen and Genoa, it is difficult to buy goods ex warehouse as the stocks are so low. In Dundee, stocks are probably a little higher, mainly because of the clearance sale by Ralli Brothers early in the season.

Here in Pakistan, the total carryover including buffer stock jute, mills' stocks and balers' stocks, is not likely to exceed 900,000 bales. Of this some 450,000 bales is the standard carryover with the jute mills so that the effective carryover is 450,000 bales. The carryover at the end of the season 1962-63, was anything from 1 million to 1.6 million bales, excluding jute mills' stocks. Since the 1964-65 crop is not likely to exceed the size of the 1933-64 crop and since the carryover at the end of 1963-64 was a minimum of 550,000 bales less than the previous season, it follows that there must be a squeeze at the end of 1964-65 unless there is a considerable reduction in world consumption.

Commodity Markets

SHARP RISE IN CASHEW KERNEL PRICE

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE export price of Indian cashew kernel has sky-rocketed to 63 U.S. cents a lb. The exporters do not consider this as the ceiling. It will be no wonder if the price goes up by another 3 or 4 cents, because, according to the processors in Quilon, there is not enough in the market to meet the overseas demand. The raw nuts imported from Africa this season were of inferior quality, so much so the outturn of kernel from them is below normal. Consequently, the total availability of processed kernels in 1964 is not likely to exceed 2.1 million cases of 50 lbs each, representing a fall of 200.000 cases, when compared with the 1963 output. As against this trend in production, there is at present a keen demand from ths buyers abroad, and this explains the present buoyant mood of the market, according to the exporters.

The chief buyer, the U.S.A., is said to be very active in the market at present. She is reported to have bought about 10,000 cases at 63 cents a lb recently and is said to be asking for more. The U.K. and the Middle East also are showing interest at current prices. But shippers are reported to be reluctant to enter into substantial commitments due to paucity of stocks and also in the light of their past experience. Several of them had burnt their fingers by selling forward earlier this year at the then prevailing prices which were far short of the present price. The year started with 47 cents and in the course of the past six months, the kernel price has advanced by as much as 20 cents. It is estimated that almost 50 percent of this year's production has already been exported. It is said that in spite of the handsome prices at which kernels are now sold, the average exporter is not likely to make a big profit this year in view of the loss sustained on forward contracts entered into earlier this year.

Unlike in the past, the smart advances in the kernel price is not fully reflected in the raw nut market. It is said that raw nut price used to show an advance of Rs. 25 a ton, with every one cent increase in the price of processed kernel. But now the advance in raw nut price is so small as Rs. 5 to 10 a ton for a one-cent increase in the kernal price. The top quality African nut is now quoted at Rs. 860 a ton. Import from Africa so far this season is estimated at 136,000 tons. Importers say that a maximum of another 15,000 tons may be available from Africa this year. The indigenous crop which is estimated by the processors at about 65,000 tons has been almost fully absorbed by the processing industry.

He said that the Coffee Board had implemented the system of certificates of origin according to the decision of the International Coffee Council with effect from April this year. India's initial contribution to the International Coffee Organisation has been fixed at $(U.S.) 4,671 at the rate of $(U.S.) 389.25 a vote on the 12 votes allotted to India. This amount had since been remitted by the Government of India in two instalments. Mr. Reddy said that actual receipts into the Coffee Board's pool from the 1963-64 crop had exceeded the Board's estimate of 65,000 tonnes. At one time during the periodical review of the receipts, it was thought that the receipts might touch 70,000 tonnes. The receipts up to 11th June, 1964, were 66,950 tonnes. This was subject to revision in the light of further arrivals.

Mr Reddy said that the prospects for 1964-65 season were generally hopeful in the beginning of the year, and the estimates were placed at 70,000 tonnes. But the marketing committee of the Board has now recommended that the estimates may be placed at 67,500 tonnes tentatively, and this also is subject to revision later. Releases in the internal market during the first five months of 1964 were to the tune of 13.389 tonnes. The Coffee Board chairman estimated the internal consumption in 1964 at 33,000 tonnes. Prices realised in the pool sales were fairly steady, the chairman said.

COFFEE

India Wants Higher Quota

India has asked for a grant of a waiver or an increase in the basic export quota for her under the International Coffee Agreement. This was disclosed by the Coffee Board chairman, Mr. Sitarama Reddy, at the 59th meeting of the Board on 21st June. He said that in this connection the International Coffee Council has also been requested to send a technical mission to make an on-the-spot study of the coffee problem in India. This subject would come up before the next session of the Council to be held in July-August next and every effort would be made to get the quota increased, Mr. Reddy added.

CARDAMOM

Good Export Prospects

According to Mr. Sitarama Reddy, who is also chairman of the Cardamom Development and Marketing Advisory Committee, the Directorate of Cardamom Development and Marketing has been able to dispose of so far one quarter of the cardamom procured by the Directorate under the price support scheme for cardamom growers introduced by the Government of India some time ago at fairly satisfactory prices. He is hopeful that if the present conditions continue, the marketing of the balance should not be a problem. It has been reported that the total procurement was of the order of 30,000 kilograms. Some trade sources have been expressing the fear that the quality of this cardamom might have deteriorated due to ageing. But the Cardamom Directorate had pointed out that all safeguards were being taken to see that there was no deterioration in quality and that the trade should have no fear on this account. All the same, Mr. Reddy had said that the experience gained by the Directorate in the field of marketing underscored the vital need for improving the method of processing fresh cardamom.

Cardamom exports this year have been showing an encouraging trend. Shipments during the first five months of 1964 amounted to 1,120 tonnes, compared with 910 tonnes in the corresponding period of last year. This was a continuation of the trend which started last year. Export earnings from cardamom during the last financial year was to the tune of Rs. 3.20 crores with an export of 2,306 tonnes. Export during the previous year was 2.258 tonnes. India's cardamom crop during 1964-65 is expected to be smaller than last year's 3,300 tonnes in the light of extensive damage to plants caused by drought which was unusually severe and prolonged this year. This fear is shared by the Cardamom Development and Marketing Advisory Board too.

Cardamom is at present commanding a fairly high price and this is attributed to fears about the new crop and the operation of the Cardamom Directorate and also to the strong overseas demand. The average quality is now quoted at Rs. 17.50 to 19.50 a kilogram.

TEA

Another Interim Award

There are reports that the Central Wage board for the tea industry has agreed to recommend a second interim increase of Rs. 10 to Rs. 22 for the south Indian tea estate workers. Workers drawing less than Rs. 100 a month are to be given Rs. 10, those drawing between Rs. 100 and Rs. 200 are to get Rs. 16, and Rs. 22 for all others drawing above Rs. 200. The plantation labour in Mysore are to be given the same increase as has been given to the daily rated workers in Madras and Kerala. The Board is reported to have also generally agreed to recommend a second interim increase to north Indian labour. It is likely to be finalised at the Board's next meeting in Calcutta. There is, however, some hitch over the manner in which the recommendation is to be made, according to these reports. As soon as the question of interim increase to the north Indian plantation labour is finalised, the Board is expected to send its recommendations to the Central Government. The date on which the recommendations are to be given effect to, will be decided by the Central Labour Ministry.

Acreage under Tea

A special correspondent writes: With their annual review of the past tea season, Messrs. J. Thomas and Co Private Ltd have circulated a very interesting booklet of statistics. In trying to understand the failure of the north Indian gardens to increase production since 1961, a reference to figures for area under tea shows that the planted area is less today than before the second World War, namely, in 1938 there were 271.452 hectares under tea while in 1962 the acreage fell to 259.462 hectares. However, in 1948 it was 243,659 hectares, so there has been a rise of 15,803 hectares. The all-India figures were: in 1938 337,038 hectares; in 1962 334.093 hectares: in 1948 310,896 hectares. So there is an increase of 23.197 hectares.

The relative figures for Ceylon were: in 1938 224,783 hectares, in 1962 239,216 hectares and in 1948 224,634 hectares. Thus there was an increase of 14.582 hectares.

On these extended areas, the relative crop yields have been (in metric tons): north India—in 1938, 170887; in 1948 312.370; and in 1963 257,179. All India in 1938 204,960; in 1948 262,089: in 1965 344,772. Ceylon in 1938 112,006: in 1948 135,529: in 1963 219,798. It will be noted Ceylon is up by about 100 percent over the 1938-63 period. And these statistics suggest the answer to the riddle is climatic conditions.

The planted area in East Africa has gone up from 18,117 hectares to 67,215 hectares of which about 25,000 hectares have been added in the last ten years. A further jump in the supply, therefore, looks probable and as more planting is being taken in hand still more tea is in sight provided stable economic and political conditions can be maintained.

It has frequently been noted in this column that in spite of propaganda, old consumers do not buy more, partly because tea is the poor people's drink and prosperity increases consumption of more exciting beverages. This possibility would seem to be an additional reason for stepping up propaganda favouring tea drinking in the producing countries. Going all out for exports regardless of profits to the producing interests will soon be shown to be bad for India as well as the individual grower. Surely, business commonsense shows clearly any seller profits by finding more buyers, to concentrate on old customers already filled to saturation point with a common product is not likely to produce profits in the long run. Meanwhile, in addition to world producers turning out more tea new fields of supplies are opening in the world and Russia. Turkey and Australian protectorates are working on export drives and many of the trade's original buyers are working on the "do it yourself" plan by growing their own requirements, Sikkim being the latest.

The Company reports for 1963 of Calcutta concerns show disappointing results. Dividends are generally lower and unless tax adjustments, if and when made, are retrospective for 1964 this year's results will be worse than for 1963.

Offerings at Auctions

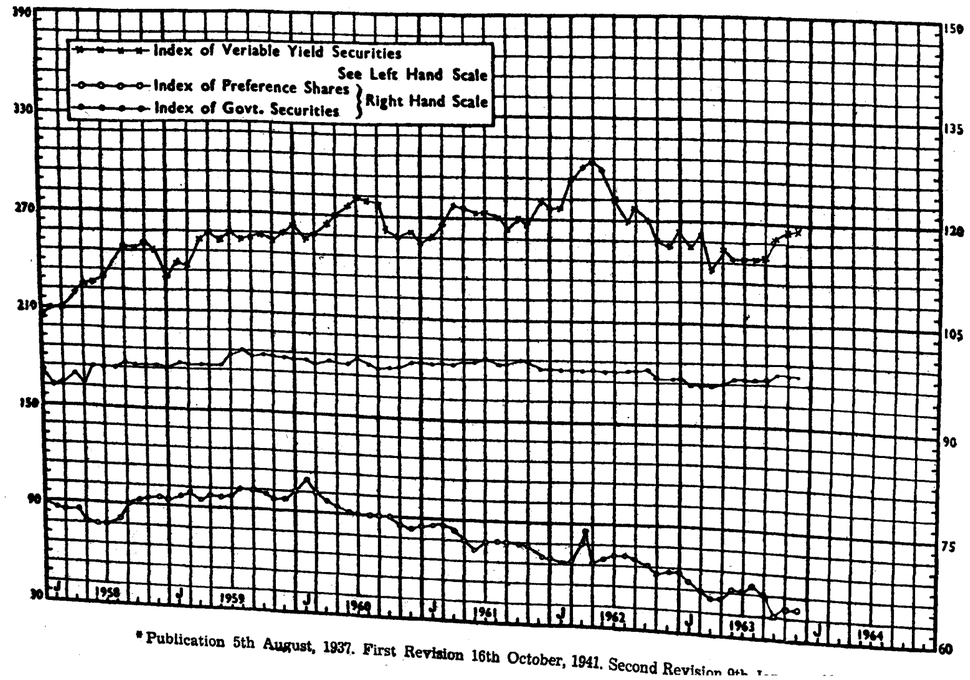
Messrs Carritt Moran Co. Private Ltd have issued their May report which states that the first flush from Darjeeling was somewhat heavier than last year, and quality was fully up to average standard. Teas from Assam and the Dooars called for no special comment. Calcutta auction honours go to 12 chests of Sungma G.F.O.P. (Golden Flowery Orange Pekoe) at Rs. 27 a kilogram. Sales of Dust were continued and although the month met with a fair demand at generally easier rates and at the last auction, C.T.C. descriptions were generally 15 paise to 20 paise lower. Prices at opening sales were below last year's level. Teas are arriving more promptly than in the early part of 1963, and shipping is reported fairly active Other markets show no sales at Chittagong. Cochin has sold less because south Indian crops are lower this year, but even so, the tendency is towards easier prices. Dust sales also opened slightly easier and the trend continued throughout the month. but later advices report a stronger enquiry.

Ceylon worked full steam ahead and disposed of nearly 33 million lbs during the month. Quality showed a decline and prices for many grades were correspondingly lower. Teas for Middle East met with quite good support, and the last two sales registered a good market with some strong competition.

London advertised only three auctions as there was no sale during Whitson Week. Good teas were firm and plain sorts ended easier.

Africa now has its own sales and Nairobi advertised two auctions totalling 22,962 packages.

Imports into the U.S.A. during April 1964 were given as 12,853,200 lbs, compared with 14,060,183 lbs in the same month of 1963. Total imports for 1964 were about 1 million lbs less. Imports to the U.K. are also short but a fair comparison is not possible as the Pak River Steam Strike caused dislocation and subsequent heavy shipments.



"CAPITAL" STOCKS AND SHARES INDEX*

The *Capital* Stocks and Shares Index (Base: 1939) has now been brought up to November 1963. As compared with October, the November index for Government securities shows a drop of 0.1 point, while that for preference shares remains unchanged at 64.5 points.

There were decreases in minings and oils 8.0 points, cements 3.9 points, engineerings 7.7 points and tea 5.1 points, while increases occurred in banks 5.7 points, cottons 1.2 points, coals 1.5 points, jutes 0.8 points, papers 17.9 points, sugars 3.4 points and miscellaneous 12.4 points.

Combining all the factors, the *Capital* variable yield securities index declined by 0.4 points during November 1963.

Dated: 24th June, 1964.

THE ATTOCK OIL COMPANY, LIMITED

(Incorporated in England)
(Liability of the Members is limited)

THE Directors announce the results for the year ended 31st December, 1963.

	1963	1962
	£	£
Profit for the year (net)	580,432	629,445
Taxation	825,485	907,991
Depreciation	263,127	278,549
Brought forward from 1962	168,520	100,742
Available	748,952	730,187
Transferred to General Reserve	125,000	175,000
Dividends (free of United Kingdom Income Tax)		
Interim of 1s. 0d. per £1 of Stock paid 12th March, 1964	£ 145,000	
Proposed Final of 1s-8d. per £1 of stock	241,667	386,667 386,667
Unappropriated Profit carried forward	237,285	168,520

The Annual General Meeting will be held at Winchester House, London, on 29th July, 1964.

If approved the Final Dividend will be payable on 1st September, 1964, to Stockholders on the Registers at 13th July, 1964.

THE METAL BOX COMPANY OF INDIA LIMITED

Notice of Annual General Meeting

NOTICE is hereby given that the Thirty-first Annual General Meeting of the Company will be held at the Registered Office, 59C Chowringhee, Calcutta, on Wednesday, the 22nd day of July, 1964 at 12-30 p.m. for the following purposes:

1. To receive and consider the Statement of Accounts for the year ended 31st March, 1964 and the Reports of the Directors and Auditors thereon.
2. To declare a Dividend.
3. To elect Directors.
4. To re-appoint and fix the remuneration of the Auditors.
5. To transact any other ordinary business of the Company.

Special Business

The consideration of the following Resolution which will be proposed as a Special Resolution:

"That the consent of the Company be accorded by this Special Resolution to the holding by Mr. T. M. Rama Aiyangar, who is an Alternate Director of the Company, of the office or place of profit of General Commercial Manager".

Explanatory Statement and Note

The consent of the Company by Special Resolution is requisite to the holding of his office or place of profit by an Alternate Director of the Company.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member. Proxies, in order to be effective, must be received by the Company not less than 48 hours before the Meeting.

NOTICE is hereby given that the Ordinary Share Register of the Company will be closed from 6th to 22nd July, 1964, both days inclusive.

By Order of the Board,
B. BARKER,
Secretary.

59C Chowringhee, Calcutta,
27th June, 1964.

THE GENERAL INVESTMENT & TRUST COMPANY LIMITED

THE Board of Directors has decided to recommend to the forthcoming Annual General Meeting of Shareholders, the following Final Dividends for the year ended 29th February, 1964, subject to deduction of tax—

(W) After giving six months' notice.
(X) Rs. 5,00,000 will be redeemed each year from and after 1964.

* These Debentures are registered and are transferable by transfer Deed.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against *names of companies* indicate approximately times of payment of dividends. T means that dividend tax is deducted at source.

COAL COMPANIES

O., Po., F. and Dd Indicate Ordinary, Preferred Ordinary Founders and Deferred Shares respectively. 'P' next to the name of the company indicate that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

STERLING BEFORE THE U.K. ELECTION

BY the beginning of July the pound sterling has fallen to its lowest dollar value in three years. The decline, originally attributed to credit stringency in Continental centres, especially Paris, has been in process for more than a month, and doubts were indeed expressed about the ability of the authorities in London to prevent the quotation from falling below the official parity limit without massive drafts on the sterling area's gold and convertible currency reserves. Fears have also been heightened by other factors. The period of maximum seasonal strain on the pound is now beginning. The British economy is approaching that stage in the trade cycle when costs are rising and the growth in imports, hitherto accounted for chiefly by the raw material requirements of expanding industries, may soon be supplemented by increased demand for foreign consumer goods and perhaps capital equipment as well. And, of course, Britain's general election cannot now be postponed longer than October. With all these points to be taken into account, it would not be surprising if suspicions were confirmed that the fall in the value of the pound, at least during the last two or three weeks, is not solely to be accounted for by a tightening of money conditions in Europe. In other words, speculation too may have had a hand in it.

It would indeed be surprising if it had not. It is scarcely necessary to take much of a view concerning Britain's short-term economic and political future to be impressed with the need to tread cautiously regarding sterling commitments during the next three months or so. Even at a time when the main alternative currencies, excluding the deutschemark but including the U.S. dollar, are steadily declining in attractiveness, it is hardly to be expected that the pound should enjoy confident support. Until the election is out of the way and the current trends in Britain's internal economy can be more accurately assessed, the continued weakness of sterling is probably inevitable. At any time the British Government is in a fairly strong position to lend support by selling gold: the reserves are at present slightly below the £1,000-million mark, but borrowing rights with the I. M. F. amount to nearly as much again. The deficit in Britain's balance of payments, which could draw the reserves down appreciably over the next 12 months, has so far been entirely offset by the increased earnings of the sterling area's primary producers and by other accruals, and although this trend may be reversed any day, there are no signs of it happening yet. But even taking into account such favourable factors, there is no avoiding the unpleasant fact that the future is replete with uncertainties.

Economically speaking, these are by no means as numerous as they have usually been at corresponding stages of previous booms. Britain's trade figures for the first five months of this year have been a strangely mixed bag, with alarming increases in the payments gap alternating sharply with encouraging declines. But taken over the whole period, the evidence appears to indicate that exports are still increasing, although perhaps at a slower rate than six months ago, whereas the rise in imports has levelled off. The figures suggest an overall balance-of-payments gap for the year of about £200 million, which is large, but not vastly in excess of early expectations. Export prospects, according to the recent Bank of England forecast, remain reasonably good and opinion in British industry itself appears to confirm this view. Imports are less predictable, but the inevitable restocking which accompanies the early stages of all trade cycles now seems to be ending, while the existence even yet of some spare industrial capacity holds out hope that growing consumer demand will be satisfied without too large an increase in the purchase abroad of durable goods and investment equipment.

In fact, the internal demand may already have stopped rising with the speed recorded at the beginning of the year. This was the expectation behind the Chancellor of the Exchequer's decision last April to increase his taxation levies by only half the amount advocated by the bulk of independent economic advice, and it gains some confirmation from the comparative stability of the industrial production index over the first four months of the year. It seems likely that output has increased since April, and there is every possibility that for reasons connected with the way the index is constructed statistically, the picture presented may not be exactly the correct one. But there is no escaping the conclusion that so far signs of a demand-induced inflation are not abundant in the British economy, and that on present showing there will be no need for Mr. Maudling to supplement his Budget measures either by monetary ones or by fresh taxes later this year. The main danger at the moment comes from the cost side of British industry. Here, the evidence of wages rising in line with falling employment is too great to be altogether ignored. Only to a limited extent does this trend indicate a failure of the income policy for which Britain has been striving during the past few years. Much more is it the result of local wage and salary increases made by individual employers anxious to secure what workers are available in the general atmosphere of labour shortage. This is certainly distressing; but it would be unwise to over-rate its importance at present if only because British industry itself seems to be firmly of the opinion that the main brake on its activities is a lack of orders, not of workers. The danger for the future, however, is too obvious to ignore in any balanced assessment of Britain's economic progress.

Politically the prospects are perhaps less reassuring for sterling. An election is rarely good for the stability of an international currency, and when a left-wing victory is more or less inevitable, as it appears to be in Britain's case, the consequences could be doubly disruptive. They would not necessarily constitute a correct interpretation of the position, however. For example, there is not the least evidence that a Labour Government must inevitably lead the economy rapidly into an uncontrolled inflation. It will certainly strive to maintain the current rate of economic growth; but it has been accepted for some years now that industrial stagnation in Britain has more often

been the cause of high prices than the consequence. Certainly the various threats of nationalisation and of tax changes may disturb business confidence for a time. But there is nothing to suggest that Labour will be less keen on keeping trade union wage demands in check, and there is every possibility, provided its plans for a scientific revolution in industry get off the ground, that business men will eventually learn to live with it in at least as easy a state of harmony as they do with the present Conservative Government. It is, after all, the shareholders and rentiers who can expect to suffer most under Labour, not professional industrial and commercial managements. This suspicion might well be behind the comparative indifference which is at present being shown in many sections of British industry, especially those not threatened with nationalisation, towards the prospects of a Labour win.

A Conservative victory at the polls, would, of course, touch off a substantial boom on the London Stock Exchange, and might inspire a more confident mood among Continental speculators in sterling. But it is unlikely that it would have much impact on the internal economy one way or the other, except perhaps to encourage a spate of pent-up wage demands from those unions which are at present restraining themselves from strike action in order not to jeopardise Labour's election chances. In the broad field of short-term economic policy at home, there is surprisingly little difference in the approach of Britain's two main Parties. Both are committed to expansion; neither is anxious to endanger the country's trading opportunities; and in each case there is an explicit dedication to the principles of modernisation and greater efficiency. Where genuine differences do exist—on the question of nationalisation and whether or not Britain should continue to seek membership of the Common Market, for example—the issues are so far divorced from the immediate circumstances that the threat to sterling can be safely ignored. With an economist at its head, a Labour Government in Britain, no matter what might have been said in its election appeal to the voter, can surely be expected to pay proper regard to the realities of economic life.

Provided industrial costs are held down, the prospects facing British exports need not at present be considered depressing. The buoyancy in trading conditions throughout the sterling area is accounting for much of the improvement in current shipments, although increased buying from the E.F.T.A. is also playing its part. The North American market remains something of a question mark, and the expansion which took place during 1963 has probably levelled off completely by now. But, after a short period of stagnation, sales to the all-important E.E.C. appear to be on the increase again. This is significant, because it is this market which probably has the best potential for expansion during the next few years, notwithstanding the steady increase in the tariff barrier. Britain's exports to this area will face accumulating difficulties as time goes on, and little relief may be expected in the forseeable future from tariff cuts negotiated during the "Kennedy Round" of the G.A.T.T. now going on in Geneva. But if British prices can remain competitive, and the E.E.C. countries such as France and Italy continue to be plagued with inflation, there is no immediate reason why British exports to the Common Market should not go on increasing.

The verdict on the prospects for sterling, therefore, is not altogether discouraging. Without the incidence of a general election this autumn, it could be an exceptionally good one, bearing in mind the rather more favourable outlook for the British economy at this crucial stage in the present boom compared with that which existed last time. Everything now depends on whether economic growth can be maintained without inflation. Compared with this problem, the political factors are of secondary and ephemeral importance. So far, as already stated, there are few signs that inflation will develop in exactly the same manner as it has done before. It is even possible that the pace of labour-saving investment in the British economy is now such as to be able to run permanently ahead of wage-induced cost inflation. But this is perhaps a slender hope, although there is some evidence in the West at present, and especially in the United States, that such a stage has been reached. The steady increase in the proportion of investment to national income which has been taking place in Britain over the past few years may mean that it has in her case too. If so, the recent prediction of Sir Alec-Douglas Home, that Britain is set for a long period of expansion without inflation, could well prove to be true.

INVESTMENT CONFIDENCE LOW

THE stock market has not taken a constructive view of the observations made by Mr. T. T. Krishnamachari, Central Finance Minister, at the inauguration of the Development Bank in Bombay last Friday. Except for stressing the importance of stimulating a greater flow of savings to industrial equities, he has not suggested any concrete measures for reviving the confidence in the capital market. Anyone acquainted with the conditions in the capital market will not see eye to eye with him about the causes he has given for the prevailing stagnation. Investment has been small mainly because of two factors. Firstly, private savings have shrunk during the past couple of years as a result of inflationary pressures and heavy taxation. Secondly, part of the savings has shied away from industrial investments to evade taxation. Both these factors are the result of high taxes.

The recent improvement in the stock market should not lead to complacence. Apart from speculative activities, the rally has taken place because of the prospect of bigger dividends from the steel companies. In sympathy with steel shares, the prices of other clearing scrip have risen. Although the prices of some selected cash scrip have also improved, the turnover has been limited. Business is in the main concentrated on clearing shares. Indeed, the relaxation of the margin system has spurred speculative activities. But the depression in new issues shows that investment confidence is at a low ebb. Because of the poor response to several new issues in recent months, a large part of these shares have had to be taken up by the underwriters themselves. No doubt, a few rights and new issues have been successful, but this does not prove that the market is healthy. In fact, the very fact that entrepreneurs have greatly to rely on underwriters for floating new issues shows that investors are shy.

Mr. Krishnamachari has reiterated the importance of increasing corporate savings. He has indicated that out of a total private-sector investment of Rs. 2,000 crores during the third plan, corporate savings are expected to contribute about Rs. 750 crores. The trend in corporate savings has improved due to the increased profitability of companies during 1963-64. But in view of the heavy tax burden which companies have to bear, it is doubtful whether the target for corporate savings, which is being fixed for the fourth plan, will be achieved. It has been estimated that out of an investment of about Rs. 3,200 crores in the private sector during the fourth plan, corporate savings will contribute about Rs. 1,500 crores. In the last Central Budget, some measures were, no doubt, announced to stimulate industrial growth. The reduction of the tax on inter-corporate investments, for example, has been a step in the right direction. Besides, specified industries have been allowed tax concessions and the debt-equity ratio for companies has been liberalised. The move to introduce an element of stability in allowing development rebate for new industries is again commendable. Because of its importance, the Government has assured companies that if the rate of development rebate is revised, the modification will be subject to three years' notice. In the case of concerns which have already placed orders for a substantial part of the plant and machinery, the benefit of the rebate will be available even if the projects take more than three years to be completed. But the beneficial effect of these measures has been greatly reduced by other fiscal innovations.

The establishment of the Development Bank will, no doubt, help industries. As a State-owned enterprise, the Bank will strengthen the institutional framework that already exists to canalise Government funds into private enterprises. It will subscribe to stocks, shares, bonds and debentures and guarantee the underwriting obligations of various financing institutions. Its main feature is that it will not be trammelled by any statutory requirement about the security that it must take against its advances. It will be largely guided by the personal integrity of the borrower rather than by his creditworthiness as adjudged by modern banking standards. So far many worthwhile enterprises have been forced to borrow funds from sources other than Government-sponsored institutions because of their rigid security and margin requirements. The Development Bank seeks to come to the rescue of sound projects which are not in a position to furnish adequate security or margin. The Central Finance Minister has emphasised that the safety of investment is primarily governed by the soundness of a project, combined with the ability of those who implement it. The security by itself should not be the sole guiding factor in granting advances.

But a word of caution is necessary in this context. With the setting up of the Unit Trust and the Development Bank, the Government has added to the number of its financing institutions. But the danger is that it may have to reinforce the resources of at least some of these financing institutions by resorting to further taxation. New Delhi should remember that institutional credit, combined with corporate savings, will not be a substitute for individual savings. If industrial growth is to be accelerated, it is important to promote individual savings. In spite of some good features, the last Central Budget led to a depression in the share market because of the new fiscal measures it introduced. The tax on bonus shares and dividends, for instance, has affected the outlook for equities. The replacement of the super profits tax by the surtax on profits has been a half-hearted attempt to improve the profitability of companies. The increase in estate duty and gifts tax has told on individual savings. The introduction of the annuity scheme will mop up the savings of the middle- and high-income groups. In the circumstances, the creation of the Development Bank and the Unit Trust, cannot, by themselves, achieve much in stimulating economic growth. They need to be backed by fiscal reliefs to the individual.

U.N. TRADE AND DEVELOPMENT TALKS—3

TARIFFS, PREFERENCES AND COMPENSATORY FINANCING

By Dinesh Bahl

The third in this series of articles on the U.N. Conference on Trade and Development analyses the trend of the discussions on trade, preferential tariffs and compensatory financing.

GENEVA

FOR expanding the exports of the developing countries to the richer countries, the most important achievement of the U.N. Conference on Trade and Development in Geneva is that the two basic principles governing international trade—the most-favoured-nation principle, and the principle of reciprocity—may have begun to be dented. It is true that the process of denting these principles began some time ago under the auspices of the General Agreement on Tariffs and Trade, and minor progress was recorded in that body's action programme. But now at the U.N. Conference the idea has been pressed forward much more strongly that the developing countries should not have to reciprocate the tariff or other concessions which the developed countries might extend to them. Furthermore, the concessions given to developing countries should not always have to be extended to other countries too on the basis of the most-favoured-nation principle. In other words, for many products, in practical terms, the most favoured nations would be the developing countries only. The reciprocity principle seems likely to be eroded a little less slowly than the most-favoured-nation principle.

An important sign of the trend in thinking is that Britain has offered to extend her Commonwealth preferences to all developing countries if other developed nations make a similar extension with their preferences. It was feared that a major complication here would be that the European Common Market countries would not like to extend the special preferences they give to their Overseas Associated Territories to all developing countries since it might inspire the break-up of the E.C.M. associate system itself. But the E.C.M. has in fact given the impression that it might be prepared to accept this idea in general terms. To protect the interests of its overseas associates, however, it has made three main qualifications. The first is that any extension of preferences should be done after proper examination and on a commodity-by-commodity or country-by-country basis. The second is that some attempt should be made for the organisation of markets to ensure adequate access for the overseas associates' exports. The third is that special arrangements would be necessary for the transitional period so that the overseas associates' foreign exchange receipts do not suffer.

The general idea is that the overseas associates should be able to offset the fall in their exports to the E.C.M. by an increase in their exports to other developed countries—the increase resulting from the latter participating in the general extension of preferences to the developing countries. To the extent that the overseas associates cannot make up for the fall, they may be given special financial aid to help them over their difficulties during the transitional period. The main opposition to the idea of doing away with the reciprocity principle and the most-favoured-nation principle has come from the Americans. This is partly because their psychological commitment to these two basic principles of international trade is very deep. But it is thought that another important reason why their attitude is stiff is because the U.S. Presidential elections are approaching. After the elections, and particularly if President Johnson wins, the U.S. attitude might soften. The Americans could in that case become less hostile to the proposition that special preferences should be given to imports from all developing countries, and that in giving these concessions the richer countries should not ask for compensating concessions in return.

In considering the general problem of preferences for developing countries, a major complication arose when the suggestion was put forward that all developing countries should not be treated as equals; the special preferences should be bigger for the less developed of the developing countries than for the more developed among them. The less developed of the developing countries were understandably prominent in supporting the idea; so also, notably, was France. India's attitude to it, however, was by no means enthusiastic. The complication has fortunately been sorted out for the time being. The point has been appreciated that to differentiate between countries at different stages of development would introduce innumerable new complications on the subject of preferences—a subject which is already far too complicated. To decide whether one country is more underdeveloped than another would be difficult; a dozen different criteria could be used for arriving at conflicting classifications. Thereafter to decide what the difference in the special preference should be between developing country A and developing country B would create even more complications.

All these difficulties together would give rise to conflicts between the developing countries themselves, and could seriously undermine the unity of the 75. The point has been accepted, therefore, that the important thing for the time being is that special preferences should be extended on a uniform basis to all developing countries; further refinements may be attended to later in the light of experience. It is not denied that the less developed of the developing countries should be given special help in addition to what the more developed among them get. But it is felt that this help should be given in the form of direct financial aid. In other words, the new trade policy should be generally and uniformly appicable to all developing countries; the differentiation between them, according to the stage of development they may have reached, should be through the instrument of the aid policy.

An interesting point which has emerged in this context is that the granting of special preferences to the developing countries will not only help their exports, but will also stimulate the flow of foreign private investment to them. The communist countries, as expected, have made plain their hostility to foreign private investment. The American view, on the contrary, has been that the developing countries must do much more than they have done so far to stimulate its inflow. The Americans have, therefore, now been told that the granting of special preferences to the developing countries can be an important way of stimulating the inflow. Because of special preferences, international investors may be more inclined to invest in the developing countries, which would qualify for these preferences, than in the developed ones, which would not. Among the developed countries, France in particular has appreciated the point; she has no doubt been impressed by the experience of the E.C.M., where the inflow of U.S. investment has been greatly stimulated by the E.C.M. countries' decision to grant what in effect are special preferences to one another.

This broad trend of thinking on the question of tariffs and preferences, as it has emerged at the Conference, applies in the main to semi-manufactures and manufactures, but it applies in some ways to primary commodities too. In relation to primary commodities specifically, however, much of the discussion has centred on two points. The first is that the developed countries are not buying enough of them, partly because they are producing these themselves at an uneconomic cost. The second point is that the developed countries are unnecessarily encouraging the invention of synthetic substitutes, and so restricting the growth of their markets for natural primary products. It is recognised that complex political, social and military factors are involved in the adoption of these policies. For example, the rural vote in western Europe is an important one, and no Government can afford to sell its farmers down the drain by the large-scale import of cheaper agricultural products from the developing countries. The social implications of displacing farmers and rehabilitating them in other occupations would be extremely serious too. Finally, there seems to be a deep-seated conviction that for military and strategic reasons some measure of self-sufficiency in essential supplies, like those of food, has to be maintained.

The American view is that the growth of synthetics which compete with primary products cannot be discouraged. To discourage it would amount to discouraging invention and technical progress. The developing countries, however, have forcefully expressed their sneaking suspicion that much of this growth is indirectly and unnecessarily subsidised. The chemical manufacturers, for instance, may profit greatly from military programmes, and then use those profits for inventing and subsidising the use of, say, synthetic fibres which displace cotton. Still, the force of the argument against discouraging technological advance has been widely recognised at the Conference. The new view, therefore, is that the main emphasis should be on expanding the markets for primary products as such, rather than deliberately discouraging the growth of synthetic substitutes. The French say that the best way of doing this is to give guaranteed access to primary products from the developing countries, and to support their prices. The French are already doing this themselves for many of their former African territories, and have given the impression at the Conference that they would not mind extending the system on a worldwide basis. The Americans and the British, however, are not in favour of the idea. The rough compromise which has been evolved at the Conference, therefore, is that it is necessary to reduce import barriers as well as to organise markets. In what proportion one or the other should be done, it is for each country to decide for itself.

Many delegations are disappointed that no firm commitments have been made at the Conference about the developed countries reducing their barriers against imports from the developing countries. But, in fact, firm commitments on so delicate and complex a subject were hardly to be expected at so large and unwieldy an international conclave. The developing countries first suggested a specific programme of action. In relation to primary products, they said, broadly, that all tariff and non-tariff barriers against the import of these products into the developed countries should be abolished by the end of 1965. According to the compromise finally evolved, the recommendation now is that the developed countries should abolish such barriers as far as possible by 1970. For semi-manufactures and manufactures, the original proposal made by the developing countries to the developed countries was that: (1) import tariffs of up to 10 percent should be abolished straightaway; (2) certain other import tariffs, such as those on cottage industry products, should also be abolished straightaway; (3) all other import tariffs should be cut by half immediately, and abolished completely in phases by 1970. This proposal has not been accepted, but is to be studied in greater detail by a committee. The idea that tariff and non-tariff barriers against imports from the developing countries should be reduced has been endorsed in general terms. But no specific promises have been made. The proposal about granting preferential tariffs to imports of semi-manufactures and manufactures from the developing countries has been put forward as essentially an extension of the "infant industry" argument into the field of international trade. Preferential tariffs, it is pointed out, can be an important way of stimulat-

ng industrialisation in these countries, especially during the first and most crucial years of growth.

Among the proposals which have come in for a great deal of attention at the Conference is one for compensatory financing. The developing countries have made the point strongly that their export earnings are liable to fluctuate sharply from time to time. As a result, they are compelled often to cut back suddenly and unpredictably on their development programmes. Some sort of insurance is, therefore, necessary so that sudden shortfalls in export earnings will be made up by special assistance in the form of compensatory financing. The International Monetary Fund has in fact introduced a scheme for this purpose recently which would provide short-term accommodation. The developed countries have now indicated at the Conference that they agree the scheme should be liberalised.

The developing countries feel that a major drawback of the I. M. F. scheme is that it is only short-term in nature. Something more is, therefore, necessary to deal with falls in export earnings that are of a long-term nature. In response to the plea, Britain and Sweden have put forward the idea of supplementary financial measures; they say that a long-term fund could be established to provide compensatory financing facilities for the use of a developing country after it has used all the facilities provided by the I M F. The World Bank has now been asked to formulate a scheme for such a fund, the idea being that the fund would be operated by the International Development Association. This is regarded here as a major step forward: the hope is widespread that such a fund will in due course be established.

India, along with other developing countries, suggested at the Conference that the developed countries should go yet another step forward. The compensatory financing should not be restricted to shortfalls in export earnings, but should be related to "reasonable expectations" of export earnings; in other words, the assumption would be made that a country's export earnings would increase at a certain rate each year, and any shortfall for the purposes of compensatory financing would be calculated, not in relation to the base year's earnings, but in relation to the expected increase. The compensatory financing would thus be on a bigger scale. The suggestion is to be studied by the World Bank, but it cannot be claimed that it has been accepted even in principle. Yet another suggestion which has not been accepted is that compensatory financing, apart from covering shortfalls in export earnings, should also cover adverse movements in the terms of trade of a developing country. But this suggestion too is to be examined by a U.N. committee, in association with the World Bank and the I. M. F. Throughout the discussions, the developing countries have placed strong emphasis on the point that compensatory financing should be treated as a "contingent transfer"; in other words, it should be additional to development aid proper, and should not be mixed up with the latter.

Among the major benefits from the Conference's discussions is the acceptance of the principle —perhaps for the first time by Governments at a world forum—that international trade policy is an integral part of national development aims; in other words, if the developing countries are to develop, the international trade policy has to ensure that their export earnings are enough so that the development does actually take place. If precise decisions in support of this principle have so far not been clearly identifiable, there is no reason to suppose that they will not come in course of time. The Conference itself, and the continuing machinery born of it, have provided a forum for confrontation and discussion of ideas. The forum has no legal force, but over the years it could nevertheless become a powerful and lasting influence. Not the least of its merits would be that the influence of the ideas will now be confined to conclaves of solitary economists and theoreticians barking in the wilderness of orthodoxy. The influence will be felt in the quarters where major practical decisions are born—at the top policy-makers' level.

GOVERNMENT OF INDIA

4 PER CENT LOAN 1970—ISSUE PRICE RS. 99.00 PER RS. 100 (NOMINAL)—REPAYABLE ON 15TH APRIL 1970

4¾ PER CENT LOAN 1989—ISSUE PRICE RS. 100 PER RS. 100 (NOMINAL)—REPAYABLE ON 15TH APRIL 1989

SUBSCRIPTIONS to further tranches of the above loans will be received in the form of cash/cheque from 13th of July 1964 to 15th of July 1964 but the subscription list may be closed earlier without notice as soon as the total subscriptions amount to Rs. 150 crores.

2. Interest on the new loans, which will be subject to tax under the Income-tax Act, 1961, will accrue from 13th July 1964. Interest will be paid on 15th October 1964 for the period 13th July to 14th October 1964 inclusive and thereafter payments will be made half-yearly on 15th April and 15th October.

3. Applications for the new loans will be received at:—

(a) Offices of the Reserve Bank of India at Bangalore, Bombay (Ford and Byculla), Calcutta, Madras, Nagpur and New Delhi;

(b) Branches of the subsidiary banks of the State Bank of India conducting Government Treasury work; and

(c) Branches of the State Bank of India at other places in India.

For full particulars apply to any of these offices or branches.

Current News and Comment

New Central Government Loans

The issue of two Government of India loans—4 percent 1970 at a price of Rs. 99 and 4¾ percent Loan 1989 at par—is in line with market expectations. The Reserve Bank groomed the market for the new flotation early last week when it suspended its open market operations. The terms and conditions of the two loans are exactly similar to those which were issued in April for conversion. Although the prices of those two loans were quoted at a slight premium since they were issued in April, they have now returned to their issue prices. The redemption yield on the 4 percent Loan 1970 amounts to 4.19 percent and the running yield to 4.04 percent. Judging by current market standards, the yields are not very attractive, although they are more than the interest which the banks pay on deposits.

The timing of the loan is appropriate. Due to the advent of the slack season, considerable funds have already returned to the banking system. Loans and advances of scheduled banks have dropped since the beginning of May by Rs. 79.97 crores to Rs. 1,784.99 crores. Their investment portfolio stands at only Rs. 655.03 crores. Money conditions have become very easy and the call rate has fallen below 2 percent. Apart from earning some interest on idle funds which have accumulated in their till, the banks have been keen to shift money into securities with a view to complying with the increased liquidity requirements by September 1964. They have been lending strong support to Government securities, to short-dated loans in particular So gilt-edged securities have been buoyant in recent weeks. Under these circumstances, full subscription to the loans is assured. The short-dated loan 1970 is likely to be popular with the banks. The Life Insurance Corporation of India, provident funds and other institutions will find the long-dated 1989 issue attractive. It is also possible that the Unit Trust of India will invest some funds in the new issues.

The list opens on 13th July and closes on 15th July, but it may be closed earlier without notice as soon as the total subscription amounts to Rs. 150 crores. The Government, however, reserves the right to retain subscription up to 10 percent in excess of the notified amount. When the subscriptions are completed, the Central Government will have fulfilled its borrowing target of Rs. 295 crores for 1964-65. The conversion offer in April attracted subscriptions amounting to Rs. 188 crores. So maturing securities for about Rs. 46.9 crores had to be repaid in cash. After the Central list is closed, various State Governments are expected to enter the market for borrowing. In 1963, the Central Government borrowed on their behalf. Despite the many advantages of combined borrowing, it has been abandoned this year. The States are likely to borrow about Rs. 100 crores. In view of the rise in interest rates, they may have to borrow on higher terms than they did previously, especially as other financing institutions are likely to enter the market at the same time as the States.

Problems of Shipbuilders and Repairers

The first annual meeting of the Ship Building and Repairing Section of the Indian Engineering Association, held last week in Calcutta, provided an opportunity for a thorough review of the present conditions of the shipbuilding and repairing industry in India. Mr. R. M. Willoughby, president of the Section, in his address pointed out that the industry was passing through difficult times. Mr. Willoughby's speech was read by Rear Admiral A. Chakrabarti in the former's absence. The Indian Engineering Association has submitted a report to the Central Government, detailing the difficulties which have arisen on account of inadequate port facilities, material shortages, import-licence problems and above all, rising costs. (The report was prepared on the basis of background information and statistics provided by individual members of the Section.) One of the main points of the document is that the established shipbuilding industry has been neglected in the planning era and there is not even a reference in the plan to the ship repairing industry. Due to lack of sufficient orders, ship repairers are turning to more general engineering work in order to stay in business, and it appears as if the skills and experience of a century-old industry is going to be lost altogether. At the same time, with its increasing tonnage of deep vessels, the country is obliged to look abroad for repair facilities—not merely for voyage repairs, but for major surveys involving the expenditure of large sums of foreign exchange. What is worse, Indian ships go to the very ports which represent the strongest competition for them.

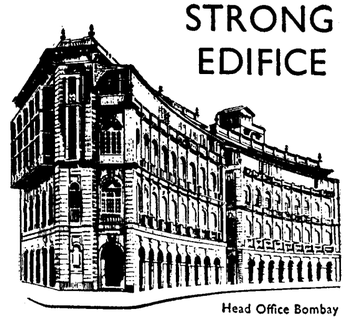
The brochure of a Hongkong yard, which Mr. Willoughby has sent to the Central Transport Minister, shows work which includes major survey and repair required by three Indian vessels at a cost of probably Rs. 1 crore. Two of these vessels, however, were refused accommodation as dock facilities and the materials for the repairs were not available. This emphasises the urgency of ensuring repair facilities in the country itself. However, since the Association's report was submitted to the Minister, certain concrete steps have been taken to remedy the industry's grievances. Licences for importing essential raw materials and components are now being speeded up, and more important, a decision has been taken to set up an all-India advisory council for the shipbuilding and repairing industry.

Mr. Willoughby made a brief reference to the achievements of countries like Spain, Yugoslavia, Hongkong, which not many years ago were buying their tonnage from other countries, but today, win overseas tenders in competition with much older and better established shipyards of the world. Japan's achievement, in particular, has been the most spectacular of all: in 1963, she launched a greater tonnage of shipping than the output of Britain, West Germany and the U.S.A. put together. India has unlimited raw materials and thousands of miles of seaboards. Yet it is unfortunate that increasing tonnages of ocean-going vessels, coasters, tugs and pilot vessels, dredgers and hoppers have to be purchased from foreign yards. The Government has a major responsibility for the maintenance and growth of this industry. The builders and repairers, on their part, should take some initiative by planning for development ten or even 20 years ahead. This is the advice Mr. Willoughby has given to the industry.

Shortage of Edible Oils

In his address from the chair to the annual general meeting of the Central Organisation for Oil Industry and Trade, Mr. Ratilal M. Gandhi has urged that the export policy for edible oilseeds and their products should be revised so as to decide the quantities to be exported from the country without violently disturbing their price structure. Mr. Gandhi says that exports are, no doubt, a must, but they should fit in with the broad pattern of the national good and a judicious balance should be struck between the needs of exports, domestic consumption and industrial development. The problem arises because of the chronic unbalance between supply and demand. Oilseeds production has remained virtually stagnant for some years whereas consumption has been growing rapidly because of the increase in population and improvement in the standard of living. Oilseeds production has still to reach the second plan target of 7.8 million tons, let alone the third plan target of 9.8 million tons. Little wonder, therefore, that oilseeds prices continue to soar. Groundnut and its products and linseed have risen to all-time highs. The real answer to the problem of high prices lies in stepping up production which has to be brought about mainly through higher yields. It is encouraging to find that the Vanaspati Manufacturers Association has undertaken some pilot projects to improve the yields of groundnut and some industrial units are extending this constructive work. This is a step in the right direction, and it is to be hoped that other leading industrial units will also take up similar projects in different parts of the country, thereby helping to raise oilseeds production.

Whatever effort has been made in the past to step up oilseeds production, has been virtually confined to the five major oilseeds, more particularly, groundnut. Little attention has been paid to the development of copra which is an important source for oils and fats and to the vast potential wealth in the form of a number of minor oilseeds and oil-bearing materials. Mr. Ratilal M. Gandhi has done well in drawing attention to this aspect of the problem of augmenting edible oils supplies. India's vast coastline extending to about 4,000 miles offers good scope for planting coconut trees. If a well-planned effort is made to exploit the potential for growing the trees, it should be easily possible for the country to achieve self-sufficiency in copra and coconut oil. The supply of vegetable oils can also be considerably augmented by properly tapping minor oilseeds and oil-bearing materials.



It is comforting to know that the Indian Central Oilseeds Committee has recently undertaken some surveys of potential areas for the availability of *mowrah* seeds, *pilu*, *khakan*, etcetera. The committee would do well to carry out similar surveys for other minor oilseeds also. While the need for making every possible effort to increase the supply of vegetable oils can never be over-emphasised, serious attention also needs to be paid to the question of using the available supply as profitably as possible. Considerable quantities of edible oils are being consumed by the soap manufacturing industry. A planned and systematic establishment of a soap fatty acid industry in the country can play an important rôle in providing the soap industry with some of its raw materials which in turn will release sizable quantities of edible oils now being consumed by soap manufacturers.

Man-made Fibre Output Rising

The man-made fibre industry in India has made good progress over the past 13 years. The output of viscose rayon yarn, which was barely 4.5 million lbs in 1951, reached 68.57 million lbs in 1963. Production of staple fibre increased from 6.80 million lbs in 1954 to 71.24 million lbs last year. The number of rayon manufacturing units, which was just two in 1951, increased to 26 in 1963 with varying capacities. The output of acetate rayon yarn has gone up from 2.30 million lbs in 1955 to 4.30 million lbs in 1963. And lately, nylon yarn production has also started in the country and it amounted to 1.58 million lbs last year. An important angle from which the industry's contribution to the national economy could be viewed is the extent of foreign exchange saving made possible by facilitating reduction in rayon imports. Imports of rayon filament yarn have declined sharply from 46 million lbs in 1957 to 16 million lbs in 1963.

Presiding over the tenth annual general meeting of the Association of Man-made Fibre Industry, in the absence of its chairman, Mr. Rasiklal J. Chinai, Mr. Babubhai M. Chinai, emphasised the need for further expansion of the industry. With the best of intentions and efforts, natural fibres alone cannot satisfy the entire clothing requirements of the country in the foreseable future. This, he said, would be evident if one takes into account the tempo of the growth of man-made fibre industry here and elsewhere, and the rising trend in population and the possible rise in the standard of living of the people in the next five years as a result of the likely increase in national income. It is significant to note that the share of the man-made fibre industry in the world textile output has increased from a mere 1 percent

in 1921 to 25 percent in 1963. Mr. Chinai disclosed that the Association had recommended to the Government a target of 271 million kilograms of cellulose and 53 million kilograms of non-cellulose man-made fibres for the fourth plan. He urged that from the viewpoint of conservation of foreign exchange and continuing shortage of cotton, the planners should think in terms of expanding the regular staple fibre industry and that the question of producing polynosic staple fibre should be taken up when the country would have sufficient foreign exchange.

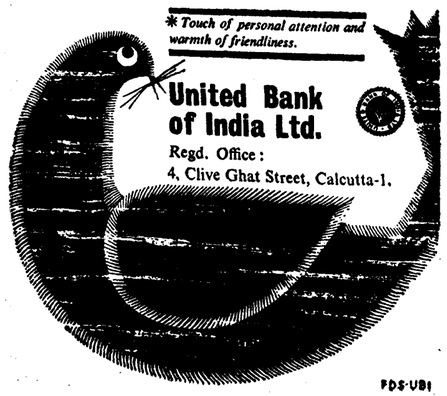
Referring to the various problems and difficulties facing the man-made fibre industry, Mr. Babubhai M. Chinai spoke very critically of the excessive burden resulting from the heavy increase in the excise duty in the last Budget. This has led to the sudden fall in the disposal of their production by various units and the consequent accumulation of stocks with them. He pleaded for early relief from this heavy burden. He also urged the Government to release spinners from the obligation to supply yarn at concessional rates against the backlog of cards issued under the earlier export promotion scheme for rayon fabrics. Mr. Chinai also suggested that the Government should try to meet the industry's requirements of rayon-grade caustic soda from imports since the various units have been finding it increasingly difficult to have reasonable reserves of this basic raw material. The quantities allotted to the industry by the Government are stated to be inadequate and irregular. Referring to the reported move of the State Trading Corporation to import Rs. 90 lakhs worth of caustic soda, Mr. Chinai suggested that the Government should try to meet the requirements of the man-made fibre industry from such imports.

Congestion at Calcutta Port

The Central Transport Ministry does not apparently feel the same concern as the shipping lines over the recent congestion at Calcutta and Bombay ports. So the shippers have been compelled to make a representation to the Ministry pointing to official apathy and negligence. The congestion at the Calcutta port—stated to be the worst in recent years—has slowed down the turnround of vessels and caused heavy losses to the shipping companies. Bore tides no doubt have compelled a large number of ships to wait at the Sandheads, but this could have been avoided had there been sufficient berthing facilities. Although many food ships were belatedly given berthing facilities, the question now being asked is why the port authorities, anticipating the bore tides, did not take steps for phasing the arrival of ships or diverting them to other ports, which could have taken prompt measures for unloading the cargoes. As it happens, none of these steps was taken, so the 30 odd food ships which arrived in Calcutta in June could be unloaded only after much delay. As a result, the Central Government has had to pay demurrage in foreign exchange at the rate of $1,000 or about Rs. 5,000 a ship for a day's delay. The loss on this account has been considerable. Although the situation has now reportedly improved, a fresh spell of congestion and detention of ships at the Sandheads is feared by shipping circles due to the commencement of a strong bore tide period in the near future.

Since 1949, the heavy shoaling of the Hooghly in the port's upper reaches as well as its changed hydraulic conditions have led to strong bore tides. When the tide rises over 14 feet, it becomes necessary to move the ships into docks for berthing. It is futile now to raise a debate whether during the latter phase of the recent congestion, food ships were given more berthing facilities than general cargo ships. But the inadequate berthing facilities which have hindered quick unloading point to the need for improving them. It augurs well that the Calcutta port authorities are now planning to extend the berthing facilities at King George's Dock. But this work should have been taken up long ago since the port authorities knew that the Farakka barrage, which aims at reducing the intensity and frequency of bore tides in the Hooghly by maintaining regulated upland water supply from the Ganges throughout the year, and the Haldia port, which will lessen the pressure on the Calcutta port, would take more time to be completed. The Press note issued by the port authorities frankly admits that inconvenience caused to shipping companies due to the congestion at the port has become an annual affair. Dredging apart, no worthwhile steps have been taken so far to arrest the deterioration in the Hooghly.

Labour has also been blamed for the slow turnround of vessels. The main reason for the congestion, according to the Port Commission, is that stevedore labour was "deliberately going slow" in unloading food ships. The volume of unloading in June averaged 800 tons a day, against as much as 2,500 tons a month some time ago. Stevedores, meanwhile, are reported to have made a representation to the Central Food Minister, Mr. C. Subramaniam, to raise the rates for unloading food ships by 50 percent. A special officer of the Port Commission is in fact studying this question. If the report is to be believed that the authorities are inclined to accept the piece rate system, in preference to the time-rate one, one may well ask why the scheme was not given a fair trial before the recent congestion at the port assumed alarming proportions.



THE BANK WITH SERVICE PLUS*

Even birds have the saving instinct. They know that a little at a time adds up into a store that helps in future. More than birds men need saving although it is not always an easy matter.

Saving with the United Bank is a pleasant habit.

AGRICULTURE IN INDIA

AT the risk of being monotonous we would again draw your attention to the fact that India is essentially an agricultural country, entirely dependent on her crops for her well-being; and that the proper cultivation of the land is the question of paramount importance before which all the other questions of the day sink into significance. Agriculture, Irrigation, Railways are all three kindred subjects, which may well engage the attention of the Government. Good crops mean prosperity, failure spells ruin. The total exports of merchandize from India last year were valued at 149,83 lakhs of rupees, made up chiefly thus—

Grain	30,66	lakhs
Tea	8,80	"
Oilseeds	14,38	"
Cotton	24,37	"
—do— Manufactures	10,32	"
Jute	11,71	"
—do— Manufactures	9,41	"
	109,65	

These five items of Grain, Oilseeds, Tea, Cotton and Jute totalled, it will be seen, 109,65 lakhs; and if we add Opium (10,47), we arrive at 120,12 lakhs out of a total 149,83 lakhs directly obtained from agriculture, so that ruin agriculture and you ruin India, develop it and prosperity will result. There is also another aspect of the question. Out of total imports valued at 84,80 lakhs, cotton yarn and piece-goods figured for 29,60 lakhs. The great bulk of this might be manufactured in this country, and the 594 lakhs of sugar might also be grown here. Similarly the 338 lakhs worth of Mineral Oil might be drawn from the Burmese oil fields instead of from foreign sources; and, indeed, if we had an agricultural and peaceful Government, imbued with the desire to promote the moral and material progress of the country, India would prosper exceedingly. Instead of this we covet other nation's possessions and neglect to develop our own. The vineyard of Naboth, the Jezreelite has attractions even in the Twentieth century, and Ahab has imitators down to the present time.

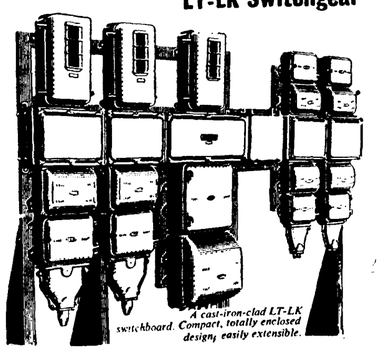
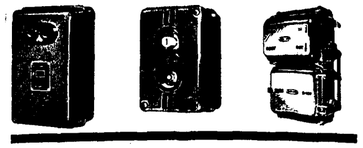
A Ditcher's Diary



I REMEMBER THE TROUBLE OFFICIALS IN INDIA HAD when Mr. Khrushchev and Marshal Bulganin visited this country in 1955. Two chairs of equal splendour had to be found on every occasion; in no way was one of the pair to appear more equal than the other. In deciding to send Mr. Krishnamachari and Mrs. Indira Gandhi to the Commonwealth Prime Ministers' conference Mr. Lal Bahadur Shastri may have presented the host with a similar problem. The wisdom of the decision may be questionable on other counts too. Implied in it is the unwarranted suspicion that neither of the two was considered quite adequate to represent India; to add is often to subtract—in politics. Many have advised Mr. Shastri to shed the portfolio of foreign affairs. Is it possible that Mrs. Indira Gandhi will eventually find herself in that ministry? While the Prime Minister must lighten his burden, I am not at all sure that this is the best way of going about it. Where he can easily cut down his load is to let others handle Party work; with a competent Minister of State, the departmental work in the Foreign Affairs Ministry can also be shared—leaving the Prime Minister free to deal only with policy and other essentials. Meanwhile I have been wondering whether the general *solicitousness* about the Prime Minister's health is not being carried a little too far. If we do not want an overworked Prime Minister, we certainly don't want an underemployed Prime Minister either. It is important, I think, not to make Mr. Shastri feel that he is a sick man; he is only tired. We all feel a little ill without our quota of the day's work; Mr. Shastri should get his. A foreign correspondent who was recently in New Delhi tells me that in some circles they are already talking, and not in whispers, about Mr. Shastri's possible successor. I hope the story is incorrect. For myself, I find such speculation in bad taste. Mr. Shastri is too good a patriot to stick to the job when he feels he is not fit enough to do it. I find it difficult to believe that the reported search for a successor is altogether motiveless.

THE MORE THE COMMUNIST PARTY OF INDIA TRIES to repair its battered unity the more damage it does to itself. What the split is about only dialecticians may follow; I certainly can't, although I am less than certain that it is all ideological. My sympathy for the cause of communism is very limited indeed. Yet it was once impossible not to admire the organisation of the C.P.I. At one time the communists seemed, at least in Calcutta, the only people in the Opposition who could bring out really impressive processions and carry out other specific programmes. The discipline in the Party was in sharp contrast with that of any other, not excluding the Congress. It is dangerous, I know, to admire efficiency without closely looking into what ends it was meant to serve; at a certain level, one could say several good things of even Hitler and Mussolini. But even as the Congress began to look more like a platform and less like a well-knit political party with shared objectives and emphases, the communists gave India an organisation that could be called a party in its real sense. All that is gone now. The C.P.I. has not been divided into two factions, usually but inaccurately called pro-Peking and pro-Moscow. The divisions, I suspect, are many more; and some at least may be personal. But I never cared for unity by equivocation; and I almost welcome a split when contenders define their views clearly. This is what is not happening. If a group of communists feel that India should make her peace with China, they should be neither ashamed nor afraid to say so. If another section takes the view that the C.P.I. should be more firm in its opposition to the Congress, it should be able to speak and act accordingly. Differences are not only natural in a free society; they are necessary in a democracy. I didn't believe the communists when they claimed what they call "inner democracy"; now I do. And if the international communist movement is split, as it openly is, it was bound to have its effects on the movement everywhere. If Mr. Mao Tse-tung and Mr. Khrushchev can publicly swear at each other, why can't Mr. Dange and Mr. Jyoti Basu?



THE CANKER OF COMMUNALISM IS ADMITTEDLY eating into the vitals of the nation. The recent communal disturbances were a sharp reminder of this fact. If I remember aright, it was Beverly Nichols who said that in this country he came across so many people bearing provincial labels but few Indians. What he wrote about provincialism is equally true of communalism and that too after more than thirteen years of secular democratic existence. Politicians have not been slow, particularly during election time, to capitalise on this weakness of the Indian people. But I cannot quite see how this warrants a total ban on communal parties since the remedy will obviously be worse than the disease. Yet this is what a committee headed by the former Central Food Minister, Mr. Ajit Prasad Jain, had recommended. Incidentally, this body was set up in 1960 by the executive committee of the Congress Parliamentary Party and had submitted its report in 1961, but it was released to the public only last week. That the Congress Parliamentary Party should salvage it after three years from the limbo of forgotten things seems to suggest that a move to ban communal parties is now going to be considered. The dangers implicit in such a measure are obvious. Under the guise of banning communal parties, it should be easy for the ruling Party to stifle the Opposition. In fact, communalism is deeply entrenched in the Congress itself and elections have been won by trading on this weakness. The Congress has also not hesitated to transact odd marriages of convenience with manifestly communal parties, like the Muslim League in Kerala, to get success at the polls. I think if the Congress is keen on banishing communalism from the Indian scene, it must first wield the reforming broom within its own house. A ban on communal parties may not, in fact, achieve much and may merely bring the parochial elements into the folds of the secular parties themselves.

THE MORE MR. TEK CHAND EXPRESSES HIMSELF ON Prohibition the clearer it becomes how unfortunate it was that he headed the study team set up by the Planning Commission. If I remember, the team was asked only to find out how Prohibition was working in the various States and how legal and other procedures could be improved to make Prohibition more effective. Then Mr. Tek Chand asked the Press to do propaganda against drink, having attributed to it all sorts of motives for not being ardent enough in denouncing alcohol. The Press gave him the answer he deserved. Now he appears to have taken up the job himself. In Patna on Monday he delivered himself of this gem: "Modern civilisation faces a double erosion of values at the hands of topless beauties and bottomless bottles". I have seen only bad photographs of topless beauties; pictures which showed the bared bosom not at all. (Has Mr. Tek Chand by any chance seen more than I?) But topless beauties are not a menace here yet; whether the *tight salwar-pyjamas* are, I do not know. But what on earth does Mr. Tek Chand mean by claiming to prove in his second volume that drink is disastrous for the Armed Forces? In his first volume he had declared the commission not competent to pronounce on drinking among soldiers. As far as I can see, the second volume is devoted to doing what it had said it was not competent to do. Mr. Tek Chand is also reported to have said that he had looked at the problem of drink entirely from a legalistic point of view and that he had no bias. No bias, indeed! And the legal provisions he recommended for making Prohibition effective were such as could come from the most illiberal of men. That a former judge should

For Guaranteed Quality and Dependability insist on LT-LK Switchgear

A cast-iron-clad LT-LK switchboard. Compact, totally enclosed design, easily extensible.

Type MK1, 15Amps automatic direct-to-line motor starters for motors up to 7.5 h.p.

Type MF1, 15 Amps manually operated motor starters for motors up to 7.5h.p.

Switch-fuse gear — available as switch unit, fuse unit, and combined switch-fuse unit in ratings of 60/100 to 1000 *Amps*, 500 Volts

It is false economy to buy inferior switchgear. Of the finest quality, LT-LK is made in India in collaboration with the leading European manufacturers of switchgear — Laur Knudsen Ltd. of Denmark.

L&T also manufactures control panels (floor mounted, wall mounted or console type) for India's power generating and distribution stations and industrial installations.

have suggested investing the executive, the police in particular, with such extensive authority over citizens invites comment of a kind I am unable to make. But there is hope. The Government of Bihar has already told Mr. Tek Chand that it has no intention whatsoever of introducing Prohibition. Mr. Naik of Maharashtra has made no secret of what he thinks on the subject. But common sense has yet to fight its battle with Messrs Morarji Desai, G. L. Nanda and Shriman Narayan.

THE RETURN OF MR. TSHOMBE TO THE CONGO makes a depressing postscript to the chapter of United Nations intervention there. How many Indian soldiers, I have been wondering, will read the news and decide the work they have done has not been wasted? I only hope the outcome of the Cyprus action will be a happier one; and I cannot envy General Thimayya for the task he is being faced with. Perhaps the arrival of General Grivas on the island will help to some extent. The main problem which has been facing the U.N. forces so far has been the lack of leadership and discipline among the Greek irregulars; Grivas should be able to supply that. Whether it is his intention or not, I suspect the responsibility for governing Cyprus will slowly pass to the General and away from President Makarios. The latter, thanks to his having taken too great a gamble with the political issues, has clearly lost whatever control he had over the situation. The kind of stability represented by such a soldier as Grivas might, too, be more acceptable to the Turks, whose threats have all along been justified by the inability of the Cypriot Government to protect the lives of the Turkish minority even if it had a mind to. So General Thimayya might have an easier passage than what his predecessor, General Gyani, enjoyed. If he does, then perhaps some moves can soon be made towards solving the Cyprus question once and for all. It seems now that this can only be done on the basis of direct agreement between Greece and Turkey, both of whom have acted with commendable restraint in the face of much provocation. I wrote some time ago that partition seemed the only practicable solution in the long run. Nothing that has happened since then has persuaded me to think otherwise, although provided Turkey were given the necessary guarantees, there is still some chance that *enosis* might be acceptable. Either way I hope the answer comes quickly and the settlement proves a permanent one. After the long-drawn-out fiasco in the Congo, the U.N. deserves some triumph to bolster its morale.

TO THOSE WHO BELIEVE THAT TOPLESS EVENING dresses and bikinis will never catch on, let me say this: If a handful of fashion dictators in Paris say they are good, then women will wear them. From this it is easy to conclude that my attitude to the whole thing is that the sooner we reconcile ourselves to the inevitable, the less trouble we shall be letting ourselves in for. There are historical precedents for bare bosoms; not all ages have been as decorous as this one. And there is compensation in the flagrant honesty of it all; not many years ago the advent of "falsies" seemed to threaten life with a multitude of fresh uncertainties. But I do hope that at least some measure of discretion will be exercised by those who decree what our womenfolk should wear. It is, after all, only a small proportion of the sex who can adopt such a fashion and expect to get away with it—from an aesthetic point of view, I mean. The remainder, it must be acknowledged with regret, owe it both to themselves and the general public not to be too eager to move with the times. It would not do either to spread the style too widely; what might be tolerable, even intriguing, by the swimming pool or at the cocktail party, is surely out of place during a morning's shopping in the New Market or seated behind a typewriter in the office. I only wish I had faith that common sense restraints will be observed; but where women's fashions are concerned I have long since learned to expect the worst as the only way to avoid disillusionment. Perhaps a popular myth at the moment is that husbands will not permit it. Let me point out right away that husbands are not going to be consulted, they never are in these matte

THE DITCHEI

Guide for Investors

BURN EARNS MORE, EXPANDS ACTIVITY

IN their latest report for the year ended April 1964, the directors of Burn and Co. Ltd have said that a new Company has been formed by Burn and Co. in collaboration with A. Reyrolle and Co. Ltd of the U.K. to manufacture electrical equipment. Burn and the collaborators have participated equally in the new Company's shareholding. Production has already started and it is expected to increase steadily. The Howrah works has done well and the order-book has been satisfactory. There has been an improvement in the supply of matched steel, and it is hoped that the trend will continue. The various mines and refractory works have been working well, but it has been extremely difficult to secure adequate remunerative work. There was a small increase in the value of magnesite exported.

The profit has amounted to Rs. 32.56 lakhs, against Rs. 31.55 lakhs for 1962-63, after providing Rs. 42.94 lakhs (against Rs. 32.46 lakhs) for depreciation, Rs. 64.50 lakhs (against Rs. 98.25 lakhs) for taxation, Rs. 9.59 lakhs (against Rs. 12.68 lakhs) for statutory development rebate reserve and Rs. 21,128 (against Rs. 22,038) for capital profits reserve. A taxable ordinary dividend of 15 percent has been declared on the share capital which has been raised from Rs. 72 lakhs to Rs. 1.56 crores by issuing bonus shares through the capitalisation of reserves. The yield amounts to 5.5 percent at the present price of Rs. 273 a share of Rs. 100 each. A taxable ordinary dividend of 25 percent was paid on the smaller capital for 1962-63. General reserve is allocated Rs. 7,398, and works reconstruction and expansion reserve Rs. 4.93 lakhs.

T.E.L.C.O. Repeats, Offers Rights

THE Tata Engineering and Locomotive Company has maintained the dividend for the year ended March 1964 at Rs. 14.50 a share, but since it is on the increased capital following the one-for-four rights issue made in January 1963, at a premium of Rs. 50 a share, the total distribution among the equity shareholders will be higher around Rs. 1.35 crores, against Rs. 1.16 crores in the preceding year. The new shares rank for dividend in proportion to the amount paid and the period for which they were paid up during the year. And, as in the previous year, the dividend for 1963-64 is subject to relief under Section 84 of the Income Tax Act, the proportion of tax-free profit to the total dividend distribution being 23.4 percent, against 21.2 percent. The tax-free dividend in the hands of shareholders works out to 12.28 percent, against 11.07 percent in the previous year. The directors have again recommended the issue of 200,000 equity shares of Rs. 100 each at such premium not exceeding Rs. 50 a share as the Controller of Capital Issues may prescribe and as may be agreed to by the Company. These shares will be offered to the existing shareholders in the proportion of one new share for every five held. While announcing the rights issue along with the dividend, the directors have expressed the hope that the current dividend of Rs. 14.50 a share will be maintained on the increased capital.

The preliminary report on the working of the Company during 1963-64, shows an impressive improvement over the previous year's performance. Its turnover and profit have set new records. Sales are up by about 18 percent from Rs. 43.64 crores (including excise duty recovered amounting to Rs. 3.76 crores) to Rs. 51.51 crores (including excise duty recovered amounting to Rs. 4.89 crores). The gross profit has risen by about 21 percent from Rs. 5.50 crores to Rs. 6.65 crores. After providing Rs. 2.61 crores (against Rs. 2.23 crores) for depreciation, Rs. 68.10 lakhs (against Rs. 27.47 lakhs) for development rebate and Rs. 2 crores (against Rs. 1.85 crores) for taxation, the disposable surplus amounts to Rs. 1.362 lakhs, against Rs. 1.115 crores. A sum of Rs. 8 lakhs (against Rs. 6 lakhs) has been transferred from general reserve No. 1. After providing Rs. 1.44 crores (against Rs. 1.25 crores) to the dividend reserve, there remains a balance of Rs. 30,000 to be carried forward, against Rs. 15,000 brought in. The equity dividend absorbing Rs. 1.35 crores (against Rs. 1.16 crores) and preference dividend amounting to Rs. 8.33 lakhs (the same) are to be paid out of the dividend reserve. The share of Tata Locomotive which had been subdued around Rs. 275 even after the news of dividend and rights issue shot up to Rs. 295 after the release of the Company's impressive results the same evening.

Bright Prospects for Metal Box

DISCUSSING the growing prosperity of the Metal Box Co. of India Ltd in his chairman's review, circulated along with the report and accounts of the Company for 1963-64, Mr. M. K. Vellodi takes an optimistic view of the Company's prospects. (A full text of the review was published in last week's *Capital*.) The successful issue of rights shares for more than Rs. 2 crores in March 1964, shows the confidence which the Company enjoys. In spite of various difficulties relating particularly to the supply of raw materials, the Company's performance has been excellent. Sales rose by 17 percent to Rs. 13.85 crores.

He has outlined the importance of scientific packaging in the growing industrial economy of India. He thinks that by 1965-66, the production of essential consumer commodities will require packaging materials valued at Rs. 213 crores for distributing goods worth Rs. 6,620 crores. Scientific packaging is essential for marketing consumer goods within the country smoothly, and it helps to curb inflation. It is also important for exports. Unless commodities are scientifically packed, they are difficult to sell in foreign markets.

Metal Box has been of help to all producers, big and small alike. The precision packages and advisory services given by the Company have helped prawn-canners on the west coast, all of them relatively small-scale producers to export more than Rs. 73 lakhs worth of canned fish to a highly competitive market, like that the United States.

Referring to the Company's modernisation programmes, Mr. Vellodi says that the new paper group has begun production. Modern high-speed equipment has been installed at the Worli Works in Bombay for manufacturing paper and various other packages. The new factory in Deonar in Bombay has been completed. The Government has sanctioned the expansion in the manufacture of flexible packages. The No. 2 factory in Calcutta has been preoccupied with ordnance supplies. Since the difficulties in tooling up for defence work have been largely overcome, the sale of industrial components is likely to increase. The machinery-building section has made progress, and valuable export orders have been received.

Efforts are being made to increase the export of the Company's products. Mr. Vellodi has referred to the difficulties in procuring raw materials. Tinplate, in particular, has been difficult to obtain. The Company has been forced to import tinplate from sources which involve less control over specifications, and generally higher prices have had to be paid. The supply of aluminium in 1964-65, it is expected, will improve, and efforts will be made to push sales of non-tinplate products. The supply of polythylene has been short because the producers of this material have been experiencing a shortage of industrial alcohol. In order to improve the packaging made by the paper section, attempts are being made to improve the quality of paper and board supplied by the indigenous producers.

Progress of Bengal Paper Expansion Project

DISCUSSING the progress of the expansion and modernisation programmes undertaken by the Bengal Paper Mill Co. Ltd in his chairman's address at the annual general meeting of the Company, held recently in Calcutta, Mr. N. D. Bangur said that the first phase of expansion and modernisation had been completed. (A full text of the speech was printed in last week's *Capital*.) The mill is at present producing 100 tones of paper a day. The stock preparation plant, the multi-stage bleaching plant and the coal-fired boiler have begun production. The Company has been permitted to raise the output capacity by further 21,000 tonnes a year at a cost of Rs. 1.5 crores. The necessary industrial licence has been obtained and steps are being taken to implement the expansion scheme. The Company produced 22,567 tonnes for 1963 and earned a gross profit of Rs. 64.75 lakhs, against Rs. 60.03 lakhs for 1962. The net profit is, however, smaller at Rs. 3.52 lakhs due to the larger provision for depreciation and development rebate. The taxable ordinary dividend of 20 percent has been repeated.

Mr. Bangur said that the total production of paper in India amounted to only 465,000 tonnes at the end of 1963. By 1965-66, the output is not likely to be more than 600,000 tonnes. So the output target of 700,000 tonnes for the third five year plan will not be reached. Although attempts are being made to increase the output capacity of the existing units by installing more balancing equipment, not more than 120,000 tonnes of output capacity is likely to be achieved by 1966. The main factor which has hindered the expansion of the industry is the unrealistic price of paper fixed by the Government. Although it has been fixed on the basis that the industry will receive a gross return of 12 percent, including interest and other charges, in fact, the industry earns much less at the present price. Considering that production costs have risen substantially in the meantime, the Government should increase the price of paper without delay.

The supply of raw materials to the industry has been unsatisfactory. The tendency of various State Governments to allocate sources of raw material to only mills situated within their territories, should be discouraged. The Company has used hardwood as a substitute raw material with success. It is thought that in West Bengal eucalyptus should be grown extensively since it will serve as a suitable raw material. As far as the import of various chemicals are concerned, the industry should be allocated foreign exchange liberally. The paper mills have found it difficult to get their chemicals at reasonable prices. The Company has meanwhile taken steps to diversify the range of its products. It has successfully produced cable-insulating paper from imported pulp.

Shell International in Petro-chemical Venture

SHELL International Chemical, one of the Companies in the Royal Dutch-Shell Group, is taking a major part in a £22.5-million scheme to set up a big petro-chemicals complex near Bombay, the first of its kind in India. Shell will have a one-third share of £2.5 million in the equity of National Organic Chemical Industries, the Company which will own and operate the installation, and it will also provide £8.5 million on long-term loan. The Mafatlal Group is subscribing £2.5 million for shares in the venture, and shares worth another £2.5 million are to be offered to the public. The installation will be capable of processing 225,000 tons of naphtha a year from the Burmah-Shell refinery in Bombay. Naphtha cracking will yield ethylene, propylene, benzene, butadiene, and other products for the manufacture of chemicals and plastics "on a scale hitherto not under-

taken by any other chemical company in India."

Many of these chemicals, with an estimated value of £15 million a year at full output, will be manufactured directly by National Organic Chemical Industries. Its products will be used in the manufacture of plastics, paints, lacquers, plasticisers, brake fluids, anti-freeze, detergents, explosives, synthetic fibres, synthetic rubber, pharmaceuticals and antibiotics. The Company will occupy 300 acres of a 500-acre site. Other producers operating from the same site will include Hoechst Dyes and Chemicals, Indian Dyestuff Industries, and Polyolefins Industries (a new Company with a capital of £2.6 million equally subscribed by National Organic, Farbwerke Hoechst of West Germany and the Indian public). Polyolefins Industries will make high density polyethelene and catalysts. Hoechst will use ethylene to make vinyl acetate monomer and it will also expand its polyvinyl acetate production, and Indian Dyestuff will produce chlonine which will be used by National Organic for the manufacture of P.V.C. Construction of the plant is to begin in September if the Government of India approves the scheme. The work will be carried out by Stone and Webster Engineering, of the United States, and Bataaf Internationale Chemie Maatschappij, of Holland.

Digvijay Cement Fares Well

SHREE Digvijay Cement did extremely well in 1963, with its turnover up from Rs. 4.64 crores to Rs. 6.18 crores and gross profit rising from Rs. 77.15 lakhs to Rs. 1.296 crores. The chairman Mr. G. L. Bangur's speech (delivered by Mr. B. D. Somani) at the Company's annual meeting holds out the promise of still better results during the current year. The 200,000 tonne expansion plant in the cement division has been in production since November 1963 and its working will be reflected in the current year's results. The Company has approached the Government for an industrial licence for additional 200,000 tonnes expansion. The chairman says that if the Government sanctions adequate foreign exchange and gives the import licence for the import of certain essential portion of the plant and equipment, the new capacity of 200,000 tonnes may be expected to be achieved by 1965. The Company has taken up in hand the construction of deep water jetty at Sikka Port which would link the factory by ropeway and provide for the direct loading of steamers.

The Government of Gujarat has agreed to allow some concession in wharfage for a period of ten years for cargo cleared from the proposed deep water jetty. The Company has also approached the Government for an industrial licence to expand the capacity of the asbestos products division by another 40,000 tonnes a year for manufacturing asbestos cement sheets and pressure pipes. The Company has very recently effected two shipments of asbestos cement sheets and pressure pipes to Iran and Pakistan. An agreement has been made with International Johns Manville Corporation of Beirut, an associate of the Company's American collaborators, to promote the sales of asbestos cement products of the Company in the Middle East and African countries. Mr. Bangur has, however, sounded a note of warning that if the Government does not allow adequate increase in retention prices in order to offset the risings costs of production, the cement industry will find it extremely difficult to bring about the much-needed increase in production. He has complained that the subsidy for coal movement by the sea-cum-rail route falls short in the case of Digvijay Cement by Rs. 4 to 5 a tonne, compared with the extra cost involved. Besides the Government has still to allow proper compensation for the extra cost involved in the compulsory switching over from coal to oil in the case of factories located in the southern and western parts of India.

Baghmari Tea Skips

THE crop of Baghmari Tea Co. Ltd (an Assam garden) has declined from 3,209 quintals for 1962 to 2,927 quintals for 1963, and the average sale price dropped by 25nP to Rs. 5.74 a kilogram. The crop for 1964 has been established at 3,629 quintals at a cost of about Rs. 16.07 lakhs. The Company has incurred a loss of Rs. 45,000 for 1963, against a pre-tax profit of Rs. 1.88 lakhs for 1962. The ordinary dividend has been passed. A taxable ordinary dividend of 7.5 percent was paid for 1962. A debit balance of Rs. 24,000 has been carried forward.

Dibrugarh Tea Maintains

DIBRUGARH Tea Co. Ltd (an Assam garden) has maintained the taxable ordinary dividend at 30 percent for the year ended December 1963. The yield amounts to 9.4 percent at the present price of Rs. 32 a share of Rs. 10 each. The trading profit dropped from Rs. 7.10 lakhs for 1962 to Rs. 5.48 lakhs for 1963. Depreciation absorbs Rs. 92,000 (against Rs. 90,000) and taxation Rs. 2.23 lakhs (against Rs. 2.59 lakhs). Reserves are allocated Rs. 39,000 (against Rs. 1.48 lakhs). The crop rose from 3,019 quintals to 3,204 quintals, but the average sale price dropped from Rs. 6.88 to Rs. 5.87 a kilogram. The crop for 1964 has been estimated at 3,339 quintals at a cost of Rs. 13.69 lakhs.

Margaret's Hope Tea Pays Less

MARGARET'S Hope Tea Co. Ltd (a Darjeeling garden) has reduced the taxable ordinary dividend from 15 percent to 6 percent for the year ended December 1963. The yield works out to 5.1 percent at the present price of Rs. 11.81 a share of Rs. 10 each. The pre-tax profit has amounted to Rs. 37,000, against Rs. 2.24 lakhs for 1962. Taxation absorbs Rs. 13,000 (against Rs. 1.13 lakhs), development rebate reserve Rs. 5,000 (against Rs. 2,000) and reserves Rs. 1,000 (against Rs. 1.31 lakhs). The crop declined from 1,780 quintals to 1,750 quintals and the average sale price from Rs. 8.18 to Rs. 7.14 a kilogram.

Sungma Tea Cuts Dividend

SUNGMA Tea Co. Ltd (a Darjeeling garden) has produced disappointing results for the year ended December 1963. The pre-tax profit has dropped from Rs. 4.82 lakhs to Rs. 2.66 lakhs, after providing Rs. 72,000 (against Rs. 66,000) for depreciation. The taxable ordinary dividend has been reduced from 20 percent to 15 percent. The yield works out to 10.6 percent at the present price of Rs. 14.19 a share of Rs. 10 each. Taxation absorbs Rs. 1.22 lakhs (against Rs. 2.19 lakhs) and reserves Rs. 66,000 (against Rs. 1.82 lakhs). The crop rose from 1,894 quintals to 1,937 quintals, but the average sale price declined from Rs. 9.58 to Rs. 8.18 a kilogram. The crop for 1964 has been estimated at 2,068 quintals at a cost of Rs. 12.76 lakhs.

Jagatjit Cotton Mills Expanding

THE expansion programmes of Jagatjit Cotton Mills Ltd have made satisfactory progress. The mercerising plant and the hot-air stenter have been installed. The semi-continuous bleaching plant has started production and the continuous dyeing plant is almost ready. Firm orders have been placed for a waste plant, felt calendar, printing plant and preparatory machinery. Orders for 10,000 spindles have already been given. The Company has approached the Industrial Finance Corporation for a foreign exchange loan of Rs. 46 lakhs to import automatic machinery from foreign countries. Legal formalities have been completed for the acquisition of the Banaras Cotton and Silk Mills.

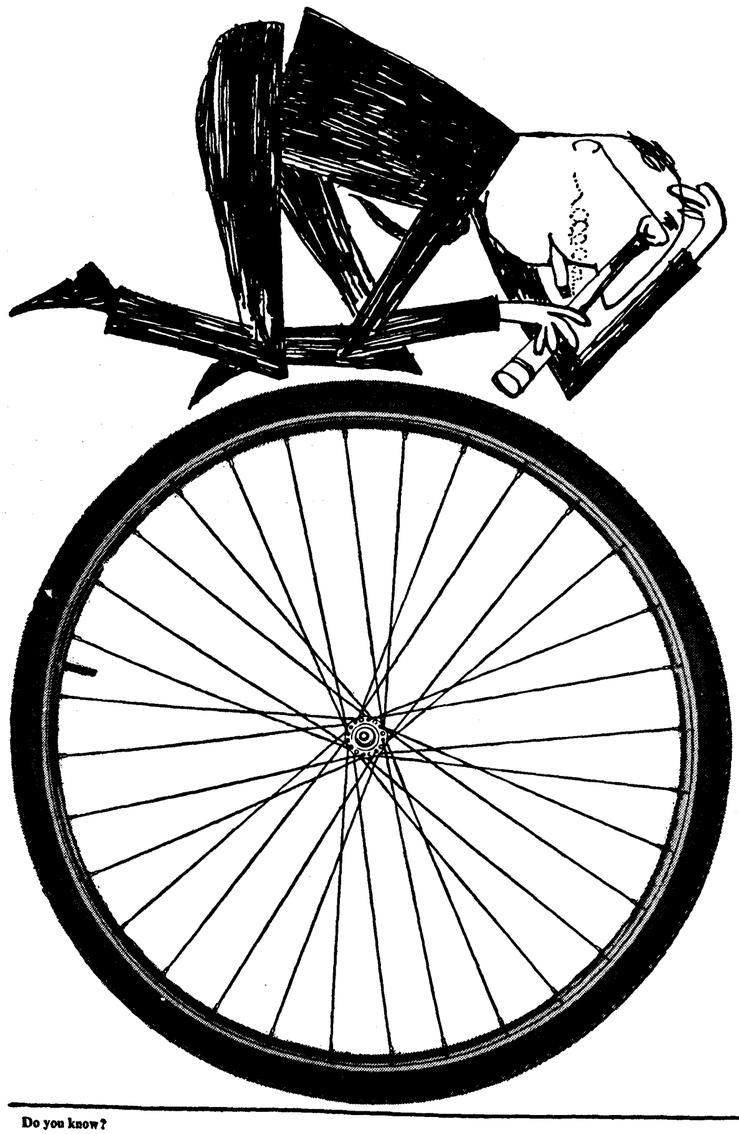
The gross profit has amounted to Rs. 79.91 lakhs for the year ended January 1964, compared with Rs. 78.77 lakhs for 1962-63. Depreciation is allocated Rs. 23.34 lakhs (against Rs. 17.68 lakhs), taxation reserve Rs. 25.50 lakhs (against a tax provision of Rs. 33 lakhs for 1962-63) and other reserves Rs. 10.80 lakhs (against Rs. 12.71 lakhs). A taxable ordinary dividend of 15 percent has been repeated. The yield amounts to 10 percent at the present price of Rs. 15 a share of Rs. 10 each. Sales rose from Rs. 3.70 crores to Rs. 4.16 crores.

National Ekco Sales, Profit Up

THE National Ekco Radio and Engineering Company did reasonably well in 1963, in that both sales and profit were a little higher than in the previous year. Sales increased from Rs. 1.24 crores to Rs. 1.28 crores and the gross profit was higher at Rs. 25.73 lakhs, against Rs. 25.33 lakhs. The dividend has been maintained at 15 percent. From what the chairman, Mr. A. D. Shroff, stated at the Company's annual meeting, the shareholders can look forward to better results during the current year. The Company's working during the first five months of the current year is reported to be very satisfactory. The chairman says that if this progress is maintained, there is a possibility of a higher dividend. National Ekco and its associates have under consideration a project for the manufacture of radio components on an elaborate scale, and the Government's approval of the project is awaited.

The Company has taken to the manufacture of transistor radios. Two table models and a portable model are due to be released shortly. The Company intends to broaden the range subject to limitations of import licence and component availability. Mr. Shroff says that competition in the radio trade has increased enormously. Consumers have become very choosey and they are preferring more sophisticated designs on the continental pattern. In order to cater to changing consumer tastes, the Company intends to start its own industrial design section. Its associates in England have merged with Pye Ltd. This will enable the Company to manufacture Pye radios in India. The initial development work is already in progress and these radios are expected to be put on the market by the end of the year.

The Company's production last year accounted for nearly 17 percent of the total production of radios in the country. It has started exporting radios; a small quantity has been exported to West Asian countries and further enquiries have been received. Referring to the possible introduction of television in India in the near future, the chairman said that National Ekco and its associates would be in a position to put on the market a wide range of T. V. sets. Mr. Shroff has suggested that the manufacture of T. V. sets would be better entrusted to a consortium of radio manufacturers instead of each manufacture trying to put up his own plant. The Company is closely considering the issue of debentures worth Rs. 10 lakhs to finance its expansion programme. The existing shareholders will be given a preference in subscribing to debentures. At a later stage, the management will consider a rights issue under suitable circumstances.



Parasea Collieries Modernises

IN their report for the year ended December 1963, the directors of the Parasea Collieries Ltd refer to the rising production costs. The recent rise in the price of coal sanctioned by the Government has not adequately covered the increased production costs. In view of the decline in the demand for coal, competition to sell the commodity has increased. The Kenda seams could not be fitted with electrical wiring, so raisings from this pit fell short of the annual target. Arrangements have been made for depillaring the Jambad bottom seam. The output is expected to increase with the completion of the project on hand. A further sum of Rs. 5 lakhs out of a total loan of Rs. 20 lakhs sanctioned by the Industrial Finance Corporation has been received. The balance of Rs. 5 lakhs is expected to be received soon to complete the development scheme.

Arrangements for operating the open quarries on a bigger scale could not be made due to the non-delivery of heavy earth-cutting machinery. Work on opening a mine in Chakdala Mouza on about 1,000 *bighas* of coal-bearing land has been undertaken. The output is expected to improve when the schemes are completed. The gross profit rose from Rs. 2.74 lakhs for 1962 to Rs. 6.23 lakhs for 1963. Depreciation is allocated Rs. 2.60 lakhs (against Rs. 1.92 lakhs), taxation Rs. 19,000 (against Rs. 21,000) and reserves Rs. 1,000 (against Rs. 21,000). The Company has paid a taxable ordinary dividend of 12 percent, against nil. The yield amounts to 8.6 percent at the present price of Rs. 14 a share of Rs. 10 each. Raisings improved from 130,000 tonnes to 226,000 tonnes.

Ruby Insurance Earns More

REVIEWING the good results achieved by Ruby General Insurance Co. Ltd for 1963 in his chairman's address at the annual general meeting of the Company recently held in Calcutta, Mr. M. L. Shah said that the voluntary code of conduct had proved very useful in improving the tone of general insurance. (A full text of the speech was printed in last week's *Capital*). Referring to the general insurance business started by the Life Insurance Corporation of India, he suggested that the Corporation should try to open

HARVEY FABRICS ARE THE FIRST CHOICE OF LEADING CYCLE TYRE MANUFACTURERS

Tough, durable Harvey cotton tyre fabrics provide the sinews for the finest cycle-rickshaw and cycle tyres. That's why they are the first choice of leading tyre producers such as Dunlop, National Rubber Manufacturers, Oriental Rubber Industries and Cosmos India Rubber Works. Harveys' Cotton Cycle Tyre Cord Warp Sheet, Cotton Cycle-Rickshaw Warp Sheet and Cotton Cycle Bead Wrapping Sheet are extensively used by the industry.

Harveys' Madura Mills are today India's largest producers of Industrial fabrics. Through the years they have built up a world-wide reputation for consistently high quality. They have the men, machines and knowhow to produce a wide range of industrial fabrics like Tyre Cords, Belting Ducks, Light and Heavy Canvases and Filter Cloths.

What's more, Harveys can weave industrial fabrics to *your* specifications—however rigid. Recent expansion at Madura Mills, with the installation of up-to-date high speed looms and precision machinery, have further increased Harveys' weaving capacity. They can now meet all your requirements in industrial fabrics... to your complete satisfaction.

Do you know?
The average annual wage of a cotton mill employee is nearly Rs. 2,000.

new avenues for fresh business instead of disturbing the existing business of the private insurers.

The premium income of the fire department rose from Rs. 78.21 lakhs for 1962 to Rs. 83.36 lakhs for 1963 and a profit of Rs. 18.40 lakhs, against Rs. 16.43 lakhs was earned. The premium income of the motor and miscellaneous department dropped from Rs. 93.07 lakhs to Rs. 88.53 lakhs due to the reduction in foreign motor business. But the profit rose from Rs. 4.17 lakhs to Rs. 4.48 lakhs. The premium income of the marine department increased from Rs. 13.84 lakhs to Rs. 17.97 lakhs, but a loss of Rs. 3.99 lakhs was incurred, against a profit of Rs. 1.31 lakhs. The net profit, after taxation, rose from Rs. 13.36 lakhs to Rs. 13.86 lakhs. The taxable ordinary dividend of Rs. 1.25 a share has been repeated. The Company has decided to issue bonus shares by capitalising reserves out of the share premium account. These shares will be issued in the proportion of one bonus share for every five held.

National Tannery to Expand

THE National Tannery Co. Ltd has done well in 1963. Production and sales rose. In his chairman's statement at the annual general meeting of the Company held recently in Calcutta, Mr. Sanjoy Sen said that the loan of Rs. 5 lakhs from the West Bengal Fniancial Corporation had been fully used. (A fuller version of the speech was published in last week's *Capital*). A further loan for Rs. 8.25 lakhs had been sanctioned and it would be largely used to expand the capacity for the manufacture of chrome-tanned goat skins. The present capacity is for tanning nearly 1 million goat skins a year. It is intended to raise the capacity to 5 million goat skins a year. A fresh contract with Centrotex of Czechoslovakia for supplying 800.000 goat skins has been finalised. Another contract is expected in the coming year.

As for exporting finished leather, Mr. Sen said that competition in the field was growing. The introduction of reconstituted leather in the U.S.A. is posing a threat to leather, but under the present circumstances, leather is unlikely to be substituted fully. Since India has to import a large quantity of hides, the steamship companies should take steps to import hides in cold storage for preserving their quality. The demand for the Company's products continues to be good. The sale of saddle leather has been good, but production has been hindered by the high price of foreign hides. Mr. Sen mentioned that in the fourth plan, the Government should provide for the installation of many mechanised leather-finishing plants and shoe-making units. If this is done, the quality of Indian finished leather and shoe will improve. Since excise and import duties on various chemicals have been raised, the Government should take suitable measures to ensure the refund of these duties when these chemicals are used for producing goods for export.

Kamala Sugar Does Better

THE working of Kamala Sugar Mills Ltd, Udamalpet, for the year ended December 1963, has resulted in a profit of Rs. 34,020 after providing Rs. 1,74,107 for depreciation. After adjusting the brought-forward loss of Rs. 13,240 against the year's profit, there is a balance of Rs. 20,780 which is used for further writing off depreciation on machinery for deficiency in prior years. The directors' report says that from about August 1963, a change was effected in the process of utilising raw materials. This yielded increased recovery of finished goods.

The directors add that on account of restrictions on the supply of sugar, the production of confectionery goods was much affected. It is encouraging, however, to note that since the close of the year, during the five months sales to the value of Rs. 9 lakhs have been effected on account of increased production. The directors expect that with increased output, it will be possible to earn sufficient profits to write off arrears of depreciation.

Bharat Line Pays Again

IN spite of a decline in the total freight earnings from Rs. 1.78 crores to Rs. 1.55 crores, the Bharat Line Ltd has a made a slightly higher gross profit of Rs. 25.21 lakhs during 1963, against Rs. 24.23 lakhs in the previous year. However, after providing Rs. 20.24 lakhs (against Rs. 23.58 lakhs) for depreciation, and Rs. 40 lakhs (against nil) for development rebate reserve, the year's working shows a net loss of Rs. 35.53 lakhs, against a small surplus of Rs. 15,249 in 1962. After taking credit for Rs. 12.42 lakhs (against nil) being profit on the sale of ships and Rs. 32.09 lakhs (against nil), being insurance claim on the total loss of a ship, the Company's accounts show a profit of Rs. 8.98 lakhs which has been used for reducing the carried forward loss from Rs. 77.10 lakhs to Rs. 68.12 lakhs. The 5 percent dividend which has been declared after a lapse of four years and is to be paid from the dividend equalisation reserve will absorb Rs. 5 lakhs.

The directors point out that the Company's operating results have failed to reach a level which can be considered reasonable. This is attributable to an all-round increase in operating costs and unremunerative freight rates. The increase in the freight rates allowed from 1st June, 1962, was, according to the directors, below the requirements of the trade. Besides, the Company has been called upon to shoulder higher charges on almost all supplies and services. The directors have expressed the view that the freight rates should be suitably revised upwards for providing fair return to shareholders on the capital employed and for providing necessary finance for replacement and expansion.

The Company proposes to take up the question of expansion of the coastal fleet only after its finances are put on a sound footing. Expansion of the fleet will depend on whether or not the Government favours an increase in coastal freight rates. In view of the representations from the coastal operators following mounting costs, the Government has appointed another committee to examine the economics of the freight rates on the coast. The committee's recommendations and the Government's decision on them are awaited. The Company paid during 1963 instalments on loans which were overdue for payment to the Central Government and the Shipping Development Fund Committee.

Tensile Fastners from Sikands

SIKANDS Ltd is a new Company which proposes to set up a factory in Faridabad, near Delhi, for manufacturing 1,200 tons of high tensile fasteners a year—bolts, nuts, screws, rivets, etcetera. The Company has secured the technical collaboration of Rubbery, Owen and Company, Stafford, England. The project is estimated to cost Rs. 54 lakhs which is proposed to be met by the share capital of Rs. 30 lakhs, a loan of Rs. 15 lakhs from the Punjab Financial Corporation and bank borrowings amounting to Rs. 6 lakhs. The issued capital will be Rs. 30 lakhs made up of Rs. 20 lakhs in equity shares and Rs. 10 lakhs in 9.3

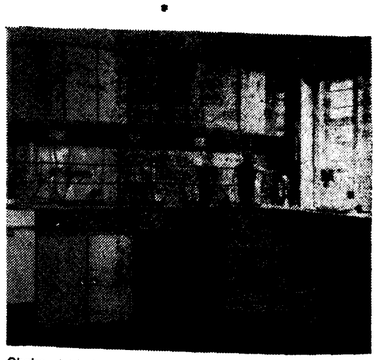
JWAS-PC-1122

WESTERN INDIA PLYWOODS LIMITED
are the largest suppliers of marine plywoods in India



Different industries need different types of specialised plywoods. In ship-building, for instance, plywood processed to resist the rotting influence of moisture, salt water and destructive insects, is required. Western India Plywoods are the largest suppliers of such plywoods in India. ■ Western India Plywoods are, in fact, the largest manufacturers of processed woods in India. They make numerous varieties of plywoods to meet the industrial, architectural and defence needs of our country. They also manufacture 'WESTON' Hardboards, 'WIPEX' Paper laminates, Flushdoors and Block Boards.

Specially processed 'Westindply' marine plywoods are unusually tough, resist the rotting influence of salt water and fungi.

Special aircraft plywoods engineered to meet the demands of lightness and strength, go into the gliders and other aircrafts built in India.

Chairs, table tops, panels, shelves, cup-boards, flooring—Infinite is the scope of 'Westindply', 'Weston' and 'Wipex'.

THE WESTERN INDIA PLYWOODS LIMITED
P. O. BALIAPATAM, CANNANORE DISTRICT, KERALA STATE

WIL-WIP-36166

percent preference shares. Of this, the directors and their associates have subscribed equity shares worth Rs. 4.50 lakhs, and the Punjab Government has taken up preference shares worth Rs. 6 lakhs. The balance of Rs. 19.50 lakhs of equity shares and Rs. 4 lakhs of preference shares are being offered for public subscription very shortly.

The entire public issue has been underwritten by the Punjab Government, Industrial Finance Corporation and the Life Insurance Corporation. If all goes well, the plant is expected to go into production before the end of the current year. The Company has already been licensed to import machinery of the value of Rs. 17.5 lakhs and orders for machinery have been placed in the U.S.A. The Company is unlikely to experience any difficulty in marketing its products, provided, of course, the goods are of quality, as the existing capacity for the manufacture of high tensile fasteners is considerably short of the country's requirements which are fast expanding.

Pankaja Mills Skips Dividend

THE directors of the Pankaja Mills Ltd have passed the dividend for the year ended December 1963. The year's working shows a net profit of Rs. 4,20,659, after providing Rs. 2,03,188 for depreciation. The previous year's net profit was Rs. 2,35,217, after providing Rs. 1,94,909 for depreciation. After providing Rs. 79,850 for bonus for previous years and Rs. 5,117 for donations and Rs. 4,288 to meet the previous year's expenses, there is a balance of Rs. 3,31,404. After adjusting this against the brought-forward loss of Rs. 17,90,350, there is a loss of Rs. 14,58,946 which is carried forward.

In spite of the rising cost of raw materials, the directors say that the year's working has been satisfactory. They add that no dividend can be declared to the shareholders until the debit balance in the account is completely wiped out. Sales of finished goods during the year amounted to Rs. 84,24,811.

Indian Mercantile Pays More

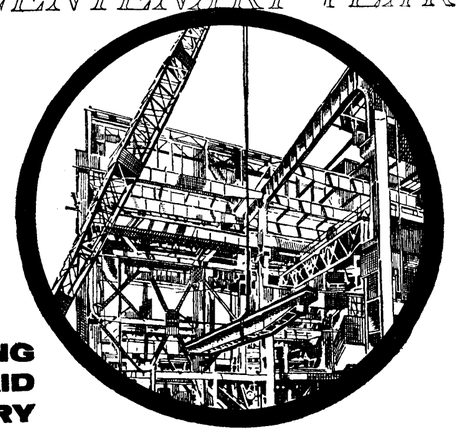
THE Indian Mercantile Insurance Co. Ltd has stepped up the dividend for 1963 from 15 percent to 16 percent—that is, from Rs. 7.50 to Rs. 8 a share. This follows the Company's improved performance during the year. It wrote a gross premium income of Rs. 56.50 lakhs during 1963 which showed an increase of about 10 percent over the previous year. The net premium income increased from Rs 46.52 lakhs to Rs. 48.90 lakhs. The net premium income of the fire department increased from Rs. 25.15 lakhs to Rs. 25.73 lakhs, net claims paid and outstanding amounted to Rs. 9.41 lakhs, against Rs. 8.49 lakhs; the net commission and expenses of management totalled Rs. 10.33 lakhs (against Rs. 11.12 lakhs).

The net premium income of the miscellaneous section amounted to Rs. 16.18 lakhs (against Rs. 14.56 lakhs). Net claims paid and outstanding were Rs. 7.01 lakhs (against Rs. 6.34 lakhs) and net commission and expenses of management amounted to Rs. 6.85 lakhs (against Rs. 6.76 lakhs). In the marine department, net premium income was Rs. 6.98 lakhs (against Rs. 6.82 lakhs); net claims paid and outstanding amounted to Rs. 4.48 lakhs (against Rs. 5.25 lakhs) and net commission and expenses of management amounted to Rs. 2.14 lakhs (against Rs. 2.11 lakhs). The combined results of all the departments resulted in a profit of Rs. 7.80 lakhs, against Rs. 5.73 lakhs. After taking credit for Rs. 3.45 lakhs (against Rs. 3.33 lakhs) by way of interest and dividends and making some minor adjustments, the total profit amounts to Rs. 10.84 lakhs, against Rs. 8.26 lakhs in 1962.

The directors have transferred Rs. 5 lakhs (against Rs. 3.51 lakhs) to dividend equalisation reserve and Rs. 5.75 lakhs (against Rs. 4.25 lakhs) to taxation reserve, leaving a sum of Rs. 37,539 to be carried forward, against Rs. 28,755 brought in. As a result of the year's operations, the funds of the Company have gone up by Rs. 5 lakhs to Rs. 77 lakhs.

Sri Balasubramania Mills Pays the Same

THE working of Sri Balasubramania Mills Ltd for the year ended December 1963. has resulted in a profit of Rs. 5,43,497 after providing Rs. 2,89,605 for depreciation. The profit during the previous year was Rs. 5,11,936, after providing Rs. 3,06,865 for depreciation. With the amount of Rs. 8,740 brought forward and with Rs. 15,707 being excess provision for dividend in the prior years, the total surplus comes to Rs. 5,67,944. Out of this the provision for taxation comes to Rs. 2,75,000 (against Rs. 3,16,000). The equity dividend at 12 percent (against 12 percent) amounts to Rs. 1,53,457. The proposed dividend tax on equity shares amounts to Rs. 11,509. A sum of Rs. 1,25,000 is transferred to general reserve (against Rs. 75,000). The balance of Rs. 2,978 is carried forward. Sales of yarn amounted to Rs. 68,56,191 (against Rs. 62,95,769). The directors' report says that the cost of raw materials continued to go up without a corresponding increase in yarn prices. The directors propose to acquire 2,400 additional spindles offered by the Textile Commissioner, and have placed firm orders for the purchase of necessary spinning frames.



Less from Travancore Rubber

A RECORD rubber crop and a reduction in the equity dividend to 8 percent, feature the working results of the Travancore Rubber and Tea Co. Ltd for the year ended December 1963. The directors say that the drop in the profit is mainly on account of the fact that during 1963, the general expenses incurred on immature rubber have been charged to "revenue" and the receipt from the sale of standing rubber trees amounting to Rs. 5,99,903 has been treated as a "capital receipt".

The net profit after taxation for the year amounts to Rs. 2,88,940, after providing Rs. 6,50,000 for taxation, compared with the previous year's net profit of Rs. 6,94,572, after providing Rs. 3,66,600 for taxation. Adding to the year's net profit a sum of Rs. 32,283 brought forward, Rs. 1000,00 transferred from general reserve and Rs. 2,68,000 transferred from dividend equalisation reserve, the total available for appropriation comes to Rs. 6,89,223. Out of this, transfer to development rebate reserve comes to Rs. 71 (against Rs. 715). A sum of Rs. 2,41,073 is transferred to replanting expenses account (against Rs. 1,95,506). The preference dividend at 6.129 percent amounts to Rs. 98,064. The proposed ordinary dividend at 8 percent (against 10 percent) will absorb Rs. 3,28,000. The balance of Rs. 22,015 is carried forward.

The rubber crop for the year amounted to 7,09,205 kilograms (against 687,642 kilograms). The average sale price was 310nP a kilogram, against Rs. 309.97. The estimated crop for 1964 is put at 650,000 kilograms. The tea crop for the year amounted to 571,535 kilograms (against 531.842 kilograms). The estate expenditure amounted to 318.72nP a kilogram (against 351.47nP a kilogram). The average sale price was higher at 460nP a kilogram (against 439.55nP a kilogram). The estimated tea crop for 1964 is put at 560,000 kilograms, at an estate expenditure of 277nP a

BIRD'S CENTENARY YEAR

ENGINEERING TO AID INDUSTRY

The expansion of industry depends largely on the timely supply of engineering products and services. The Bird-Heilgers Group, with water treatment, coal washeries, castings and structurals, refractories, pneumatic equipment, springs and research, is playing a significant role in providing basic requirements for a wide variety of industries.

Deploying the skills acquired over a hundred years, the Bird-Heilgers Group is making important contributions to the economy . . . through planned diversification and expansion.

kilogram. The directors' report says that the Company's policy of increasing year by year the total acreage planted with high yielding rubber is progressing.

Bombay Nylon Spinners: A New Venture

BOMBAY Nylon Spinners Ltd is the name of a new company which is being promoted by Arthur Import Export Co. of Bombay to undertake the manufacture of nylon yarn. Mr. Ram Khanna, director of Arthur Import Export, told newsmen the other day that the Company had entered into a collaboration agreement with Invest Export of East Germany which has agreed to supply the latest plant and equipment valued around Rs. 2 crores for the manufacture of nylon yarn. The foreign collaborator has agreed to receive Rs. 2 crores on long-term deferred payment terms. The project is estimated to involve a capital outlay of about Rs. 4 crores, and the plant is proposed to be set up at Thana or Malad—suburbs of Bombay. Shipments of machinery are likely to commence by the end of 1965 or early 1966 and will be completed within six months thereafter.

The plant is expected to go into production by the end of 1966. The East German firm which is collaborating in the project will provide all the technical know-how and ensure smooth running of the plant. Caprolactum, the main raw material, will have to be imported until such time as it becomes available from indigenous sources following the development of the petro-chemical industry. The market for nylon yarn is assured becouse domestic production continues to be far short of the country's requirements. The third plan target for nylon yarn has been fixed at 10 million lbs and the present capacity is hardly 2 to 3 million lbs. Plans for raising the resources required for the project are being worked out, and the Company is unlikely to enter the market with a public issue before the end of this year.

The architect of today builds with glass ...specifies **HPG GLASS**

Discerning architects everywhere insist on HPG glass for today's homes and offices, factories, schools and hospitals. They know that HPG glass is made according to the strictest standards of quality. And HPG glass is manufactured by Hindusthan-Pilkington Glass Works with the technical know-how of Pilkington Brothers of U.K.—people who have been making glass for more than a century!

When you buy HPG you buy Quality and Reliability

The Stock Markets

STEADY TREND CONTINUES DESPITE PROFIT-TAKING

Wednesday Evening.

THE Calcutta stock market has closed on a steady note during the past week in spite of profit-taking towards the close. Since the prices of clearing shares have risen sharply during the past week, it is time that the gains were consolidated. The improvement has taken place under the lead of steel shares because the Indian Iron and Steel Company is shortly expected to announce the dividend for 1963-64. But whether the Company will pay a bigger dividend is still anybody's guess. Meanwhile, the Company's output figures for June have been published. The production of pig iron has declined from 108,073 tonnes for May to 99,003 tonnes for June and that of steel ingot from 81,394 tonnes to 79,845 tonnes. The output of salable steel too has fallen from 61,337 tonnes to 52,274 tonnes and despatches from 59,630 tonnes to 54,791 tonnes.

Apart from hopes of a larger dividend from Indian Iron, the cheerfulness in Lyons Range has emanated from a few favourable developments. Although in his address at the inauguration of the Development Bank in Bombay last week, Mr. T. T. Krishnamachari, Central Finance Minister, has not indicated any concrete measure to stimulate the capital market, he has reiterated the importance of sustaining the investment morale. Reports that the Unit Trust of India has attracted good response have been welcomed because it is thought that it will invest considerable funds in industrial equities.

Corporate news has been good in the meantime. In spite of the fact that companies have earned a larger profit for 1963-64 than for 1962-63, investors are inclined to be cautious. Although the turnover of companies has tended to increase, their profits have not improved in proportion because of the rise in production costs. There is also concern about increasing labour unrest and demand for higher wages due to soaring prices. Unless vigorous measures are taken to check the rise in the prices of essential commodities, the working of industries will suffer.

The move of banks to increase their lending rates has disturbed trade and industry. True, banks have been forced to raise their lending rates to compensate themselves for the rise in the interest on deposits. But there is no doubt that the increased rates on advances will tend to inflate production costs. Since some of India's major export commodities are being steadily priced out of foreign markets, any further rise in production costs will be harmful.

Indian Iron have reacted slightly towards the close due to profit-taking. Among engineering shares, Burn have been a steady feature due to a good report. Interest has been shown in Texmaco, Jessop, Braithwaite and Guest, Keen, Williams. Paper shares are steady in the belief that the price of paper may be raised in the near future. The prices of selected jute shares have hardened, although turnover in these shares is limited. Investors like to wait until the sales of jute goods improve. Coal shares continue to be neglected because the demand for coal has not yet shown any sign of improvement. Stray business has been transacted in Burrakur, Bengal, Central India and Western Bengal.

In the miscellaneous section, attention centres on clearing scrip. Although they have lost slightly towards the close, there is little selling pressure. Rallis are a prominent feature due to substantial buying on investment account. Among managing agency shares, Martin Burn and Jardine Hendersonn have attracted attention. Electric company shares are sluggish and small business has been done in Calcutta Electric. Selected bank shares have met with stray support. United Commercial Bank will not issue bonus shares as reported earlier, since the Controller of Capital Issues has not given his consent to it. Among new shares, Hindustan Aluminium enjoy support due to expansion prospects. Sugar shares have been freely offered without attracting support. Selected cotton mill shares have been bought in the belief that cloth will be partially decontrolled. Cement shares have not responded to the recent increase in the price of the commodity sanctioned by the Government because the rise is inadequate to compensate for the increased production costs. Limited business has been done in tea shares and support is confined to selected Assam and Dooars gardens.

Government securities have been steady. The 3 percent Conversion Loan 1986 has been quoted at Rs. 63.75. The attention of the market has been diverted to the new loans which have been floated by the Government of India for cash subscription. (Details of the new issues have been discussed in the Current News and Comment section of this week's *Capital*.)

Tata Steel Output

Messrs Tata Industries Private Limited, managing agents for the Tata Iron and Steel Company Limited, report that the approximate production of iron and steel at the steel works in Jamshedpur during June 1964 was: iron 152,700 metric tonnes; steel ingots 158,400 metric tonnes and salable steel 120,100 metric tonnes.

Bombay

BULL SUPPORT LIFTS SHARE VALUES

TATA STEEL DIVIDEND BELOW EXPECTATIONS

Wednesday Evening.

THE Bombay stock market has been very steady during the past week. The new account began last Monday on a cheerful tone. The prices of almost all clearing shares have been substantially marked up due to sustained bull support followed by brisk short-covering. But there has been a reaction towards the close due to profit-taking.

The main incentive was provided by hopes of a higher dividend from the Tata Iron and Steel Company. Dalal Street optimistically believed that the Company would try to increase the dividend for 1963-64 in order to reach the target of a net dividend of Rs. 10.50 a share eventually, as had been indicated by the management before. Now that the benefits of the expansion scheme have begun to show, the output of the Company for 1963-64 is bigger than that for 1962-63. But the dividend just declared by the Company, although slightly higher, has fallen short of market expectations.

The corporate news has been encouraging. It is also believed that the Textile Consultative Board will soon recommend to the Government to decontrol cloth partially. The decision of the Government to increase the spindles in the mill sector has been welcomed. Investors are nevertheless cautious in view of the decision of banks to increase their lending rates.

Tata Steel have been in the limelight and the ordinary scrip have risen to Rs. 156.25. Indian Iron have reacted towards the close due to profit-taking. Tata Engineering have been a firm feature although it is reported that the rights issue will be made at a premium. The cheerfulness is based on hopes that the dividend will be maintained on the increased capital. Zenith Steel Pipes have met with strong support due to good results, raising the taxable ordinary dividend from 6 percent to 8 percent. Mukand Iron, Alcock Ashdown and Premier Construction have enjoyed support. Hindustan Motors have improved due to buying from outside sources. Premier Automobiles have been about steady.

Selected cotton mill shares have shown widespread gains due to the prospect for a partial decontrol of cloth. Century have gained on replacement purchases. Bombay Dyeing, Kohinoor, Svadeshi and Standard have risen. India United ordinary, Simplex, Tata Mills, Gokak and Morarjee have been steady.

In miscellaneous shares, sugar scrip have been selectively bought. Belapur and Walchandnagar Industries have scored gains. Digvijay have been a steady feature in cement shares due to the prospect for expansion. Associated Cement have been taken. Be Be Petrol have been firm among mining shares. Scindia Steam have recovered on short-covering. Great Eastern Shipping have been steady.

Chemical shares have been buoyant. Interest has been taken in Tata Chemical, Polychem and Indian Dyestuff. National Rayon have improved on short-covering. Gwalior Rayon have gained. Voltas and Tata Oil have been taken on investment account. Turnover in bank shares has been limited. Dena Bank have been steady on making a bigger profit for the half-year ended June 1964. Electric company shares have met with strong support. Ahmedabad Electric and Tata Hydro have improved.

Madras

MARKET IMPROVES ON GOOD COMPANY NEWS

TURNOVER IN CLEARING SHARES INCREASES

Tuesday Evening.

THE Madras stock market has shown considerable improvement during the past week due to good corporate news, combined with better support from outside sources. The

commencement of the sale of units by the Unit Trust has been viewed bullishly. It is thought that in the long run the Trust will help to relieve the burden of floating stocks because it will invest heavily in industrial equities. The restoration of the power cut has been welcomed. Turnover in clearing shares has increased. In cash scrip, support is largely confined to selected sugar, textile and coffee shares.

Business in Government securities has been small, and selected State Government loans have been taken. Bank shares have been very steady. Canara have been done at Rs. 68.80 and Indian at Rs. 153.50. In insurance shares, Cochin State have been steady at Rs. 12.42 and West Coast at Rs. 13.50. Sugar shares have recovered after a long interval. Deccan have improved to Rs. 12.60 on the prospect of a bonus issue in the proportion of one bonus share for every six shares held. Travancore have been done at Rs. 7.20 on the decision to issue bonus shares in the ratio of one bonus share for every five shares held, subject to the consent of the Controller of Capital Issues. E.I.D. have recovered to Rs. 35.37 and Mysore to Rs. 28.33.

In the planting group, Blue Mountain have been steady at Rs. 2.38, but Cochin Malabar have been sluggish at Rs. 6.35 in spite of declaring a taxable ordinary dividend of 12 percent. Consolidated Coffee have been done at Rs. 21.85 and Ouchterlony at Rs. 3.55. Periakaramalai have come to hand at Rs. 3.44. Nenmeny have been taken at Rs. 22.55. Interest has been taken in Rajagiri at Rs. 21.75. Travancore Rubber have been done at Rs. 11.35. In tea shares, Devashola have been steady at Rs. 24.08 due to the payment of an interim taxable ordinary dividend of 7 percent. Parkside have changed hands at Rs. 25.73 and Peermade have been bought up to Rs. 20.37. Among composite gardens producing both tea and coffee, Balanoor have been steady at Rs. 12.12 on declaring a taxable ordinary dividend of 10 percent. In coffee shares, Ossoor have been steady at Rs. 2.75 on paying a final taxable ordinary dividend of 10 percent. Coffee Lands have been bought up to Rs. 16.75 and Lingapur have been done at Rs. 5.17.

In textile shares, South India Viscose have recovered to Rs. 120.50 and Travancore Rayon to Rs. 22.62. Lakshmi have improved to Rs. 137 and Madura to Rs. 33.40. Rajapalayam have been done at Rs. 154 on declaring a taxable ordinary dividend of 20 percent. Ramnarain have come to hand at Rs. 85 on deciding to issue rights shares in the proportion of one new share for each one held. Bangalore Woollen have been steady at Rs. 263 and Buckingham at Rs. 267. Dhanalakshmi have met with support up to Rs. 183 and Kadri have been done at Rs. 120.20.

In the miscellaneous section, Aluminium Industries have gained at Rs. 19.95 and Ashok Leyland at Rs. 6.50. In cement shares, Dalmia have been steady at Rs. 12.62. The Company has converted its deferred shares into ordinary ones in the proportion of one ordinary share for every four deferred shares. India Cement have been wanted up to Rs. 5.65. Mettur Chemical have reacted to Rs. 13.90 towards the close due to profit-taking. F.A.C.T. have improved slightly to Rs. 5.25. Seshasayee Paper have been steady at Rs. 7.15 and Mysore Paper at Rs. 12.50. Standard Motors have been transacted at Rs. 10.12. Parry's Confectionery have risen to Rs. 2.95 and Spencer to Rs. 21.65. T. Stanes have been steady at Rs. 30.50 and Textool have been bought at Rs. 145. Madras Rubber have been sluggish at Rs. 11.37, but McDowell have been supported at Rs. 22.22.

another order for CELCON® came the other day

®
Celcon is the new engineering material which has excited interest of buyers from the automobile industry, the electrical industry, the building materials industry, the hardware industry, the packaging industry, the office equipment industry and the weapons-making industry. Celcon was developed after many years of research by the Celanese Corporation of America, one of the world's major producers of formaldehyde and trioxane.

Celcon is fast displacing iron, steel, brass, zinc, aluminium, magnesium, thermosets, laminates and wood in the manufacture of many articles. As contrasted with many die-cast metals, Celcon components require little or no finishing when they emerge from the mould and may almost immediately be put to use. Considerable amounts of money are thus saved when Celcon is used. Celcon maintains its high mechanical strength, stiffness, toughness and resistance to impact force over a long period and through broad ranges of temperature and environment.

Celcon is available in natural translucent white and 18 standard colours; it is easy to fabricate; has excellent frictional characteristics; it can be readily sawed, drilled, turned, milled, filed and threaded. It can be fabricated by injection moulding, extrusion, blow moulding and other high volume thermoplastic processing techniques. Processing ease and economy are its greatest advantages.

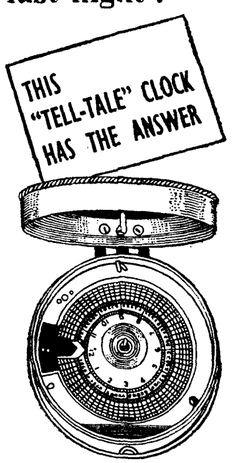
London



ELECTION PROSPECTS TONE UP SHARES

INDUSTRIALS RISE ON GOOD CORPORATE NEWS

London, 8th July.

GENERALLY firm conditions persisted in the stock market over the past week, and although business was restrained by holidays and by election uncertainties, buyers showed more interest each day with the institutions playing a more important rôle. At one time, the *Financial Times* ordinary share index reached its highest of the year. Demand was stimulated by the growing belief that a Labour victory at the polls is a good deal less certain, a view which has been backed up by the "ships for Spain" attitude of the Labour Party. Good company results again contributed considerably and the excellent statement from G.E.C. and the encouraging annual review by the chairman of Metal Box were particularly helpful.

Did the Watchman perform his duty last night?

MODEL CL-120
Six-Station 'Tell-Tale' Clocks available at Rs. 345/- each. Useful for Banks, Factories, Mills and Companies. Full particulars can be had from

anglo-swiss watch co.

Money

THE CALCUTTA MONEY MARKET

CALL RATE DECLINES FURTHER

Wednesday, 8th July.

THE general level of advances in the Calcutta money market has remained more or less unchanged during the past week. The credit given to the cotton and sugar mills is slightly down, while the advances to the iron, steel and engineering industries has increased slightly. The requirements of the jute mills and of the foodgrains trade remain unchanged. In the interbank market, conditions have been easy and the call rate has dropped to 1 percent.

The exchange market has been moderately active, with a slight increase in the supply of tea bills. Gunny bills have been in moderate supply. The demand for remittances is moderate. In London, sterling has shown nominal losses against most of the important currencies excepting the Canadian dollar and the Swedish krona.

BULLION WAS QUIET IN CALCUTTA IN the past week due to the absence of demand following the close of the marriage season. The price of silver fell from the previous week's level of Rs. 247.75 to Rs. 243.25 a kilogram, quoted today. The London and New York prices stood at 111⅞d and 129.3 cents.

In sympathy with silver, gold ruled quiet and the price of 14-carat declined from Rs. 73.25 to Rs. 71.50.

DURING THE WEEK ENDED 3RD JULY, Government of India Treasury bills for Rs. 184,32,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 7th July. The total amount offered was Rs. 4.50 crores. Tenders at Rs. 99.375 percent were accepted in full. Lower tenders were rejected. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.500 percent a year

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills will be received at all centres up to the close of business on 20th July.

IT IS STATED THAT THE SALE OF 91-DAY intermediate Treasury bills is suspended until further notice. These bills sold from the 1st July, 1964, to 4th July, 1964, amounted to Rs. 6,70,25,000.

THE RISE OF RS 17.42 CRORES TO Rs. 2,501.54 crores in active notes was a notable feature of the return of the Reserve Bank of India for the week ended 3rd July, 1964, but the total note issue dropped by Rs. 16.57 crores to Rs. 2,519.49 crores. The currency contraction was adjusted by reducing rupee securities by Rs. 15.02 crores to Rs. 2,211.02 crores in the paper currency reserve. Deposits of the Government of India dropped by Rs. 19.16 crores to Rs. 60.55 crores and those of State Governments by Rs. 1.25 crores to Rs. 12.80 crores. Balances of scheduled banks at Rs. 92.07 crores showed a decline of Rs. 5.60 crores. Their loans from the Reserve Bank decreased from Rs. 1.14 crores to Rs. 30.50 lakhs, of which there was no advance against usance bills (Rs. 56.15 lakhs). Balances held abroad again declined by Rs. 9 lakhs to Rs. 7.06 crores. Investments were Rs. 1.46 crores larger at Rs. 275.36 crores. Ways and means advances stood at Rs. 36.29 crores, against Rs. 53.34 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 26th June, 1964, shows a rise of Rs. 3.18 crores to Rs. 625.50 crores in total deposits. Investments in Government securities are up by Rs. 7.14 crores to Rs. 237.79 crores, while other authorised investments remain unchanged at Rs. 9.44 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have risen by Rs. 1.08 crores to Rs. 360.45 crores. Cash and balances are, in consequence, shown at Rs. 27.79 crores or Rs. 2.64 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 26th June, 1964, shows Demand and Time liabilities at Rs. 1,267.99 crores (Rs. 40.59 crores on account of borrowings from banks) and Rs. 1,353.16 crores (Rs. 17.14 crores), compared with Rs. 1,262.34 crores (Rs. 44.19 crores) and Rs. 1,329.30 crores (Rs. 11.14 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 2.68 crores and Rs. 8.54 crores to Rs. 66.49 crores and Rs. 93.60 crores, respectively. There is a rise of Rs. 21.57 crores to Rs. 655.03 crores in investments. Advances and bills discounted at Rs. 1,784.99 crores show a drop of Rs. 11.12 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.1 percent and 68.1 percent, against 5.7 percent and 69.3 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 10-7-64.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
10-7-64	13-10-64	2,00,00	Rs. 2.500%
3-7-64	6-10-64	2,00,00	Rs. 2.994%
26-6-64	29-9-64	2,00,00	Rs 2.995%
19-6-64	22-9-64	2,00,00	Rs. 3.000%
12-6-64	15-9-64	2,00,00	Rs. 3.000%
5-6-64	8-9-64	2,00,00	Rs 3.000%
29-5-64	1-9-64	2,00,00	Rs. 3.000%
22-5-64	25-8-64	2,00,00	Rs. 3.000%
15-5-64	18-8-64	2,00,00	Rs 3.000%
8-5-64	11-8-64	2,00,00	Rs 3.000%
1-5-64	4-8-64	2,00,00	Rs. 3.000%

New Delhi

FOOD TRADING BODY: DETAILS BEING WORKED OUT

(FROM OUR NEW DELHI CORRESPONDENT)

THE Central Food and Agriculture Minister, Mr. C. Subramaniam, said at a Press conference here last week that he would soon submit concrete proposals to the Central Cabinet for setting up a Foodgrains Trading Corporation and an agency to fix grain prices. These two long-term measures for tackling the food problem were generally hailed by the State Chief Ministers at their conference here some time ago, although they refrained from taking formal decisions on them.

Mr. Subramaniam said that the details of the two proposals were now being worked out in the light of the discussions at the recent Chief Ministers' Conference. As for the proposed Corporation, New Delhi is considering whether there should be one corporation for the whole country or several regional or State corporations. Furthermore, it is being examined whether one corporation should deal in all the foodgrains or there should be separate corporations for each of the principal foodgrains.

Mr. Subramaniam ruled out the proposal for associating farmers or consumers' representatives with the agency to be set up to fix foodgrain prices. The proposed agency will consist of only technical experts. It will recommend minimum prices for producers and reasonable maximum prices for consumers.

Increased Production Needed

Mr. Subramaniam reaffirmed that the only long-term solution to the food problem was increased production. This can be achieved by giving suitable incentives to the farmer and by arranging timely supplies of credit and such essential prerequisites for raising output as fertilisers, improved seeds, and pesticides in adequate quantities. The cardinal principle to be followed while fixing foodgrain prices will be the payment of remunerative prices to the agriculturist. A preliminary report from the Price Fixation Agency, it is understood, will be available before the next rice crop.

Mr. Subramaniam also announced an ambitious programme for setting up modern mechanised rice mills in the public and the co-operative sectors. His plan is to put up 2,000 such rice mills by the end of the fourth plan period—1,000 units with a capacity of 3 tonnes an hour and 1,000 units with a capacity of 2 tonnes an hour. These units would be capable of milling nearly 20 million tonnes of rice. Six units are immediately proposed to be set up. A delegation of officials will leave for Italy and West Germany on 16th July to negotiate the purchase of machinery for these mills. It will later visit Japan. Three of the six mills will be set up in Thanjavur, Madras, West Godavari, Andhra Pradesh and Shahabad, Bihar. The location for the other three has, however, yet to be decided.

Mr. Subramaniam said that no licences would be given in future for setting up new rice mills in the private sector. No provision has as well been made for the modernisation of the existing private-sector units.

Allaying fears entertained in some quarters that his programme of setting up new rice mills in the public and the co-operative sectors ran counter to the Bhubaneswar resolution of the Congress Party since the new policy did not envisage the taking over of the existing private-sector rice mills, Mr. Subramaniam said that he had not ruled out control over the existing mills and if any controls were found necessary to regulate their working, they would be imposed.

Banning Export of Pulses

Mr. Subramaniam also said that the export of pulses, although meagre at present, might be altogether banned if the Central Ministry of Commerce agreed to it. This he considered necessary for stabilising the pulses market. Mr. Subramaniam added that the short-term measures decided upon by the State Chief Ministers had yielded perceptible results and that foodgrain prices had come down at various places. He hoped that prices would fall further in the near future.

SOIL CONSERVATION

Programme Outlined

Considering the national loss from soil erosion and the significant increase in the productive capacity that soil conservation measures including dry farming and the proper use of land and water and better management practices can bring about, the experts of the Planning Commission have recommended that the soil conservation programme should be taken up in future on as large a scale as might be feasible on the basis of technical and administrative arrangements, without being constrained by the non-availability of financial resources.

Soil conservation is a highly labour-intensive programme and does not require any foreign exchange or scarce material resources. In all, about 200 million acres of unirrigated area require soil and water conservation measures, including 120 million acres needing erosion control measures. The Planning Commission's Working Group on Agriculture has suggested a target of 20 million acres for this programme for the fourth plan.

So far, soil conservation programme has remained confined, by and large, to erosion control measures and cultivated lands and that too in scattered areas. The programme as practised at present does not include the measures and practices necessary for efficient management of soil in a co-ordinated manner. In order to make the programme fully effective and fruitful, it has been suggested that the programme should be streamlined as follows:

(1) Soil conservation programmes should be taken up on a complete water-shed basis in a composite and comprehensive manner to tackle not only soil erosion but all factors associated with proper soil and water conservation and management, including field drainage, sediment control, flood prevention, conservation farming, land levelling for the efficient use of irrigation water, afforestation, pasture management, etcetera. The targets should be defined by areas for each water-shed.

(2) Before framing any scheme of soil conservation, it will be necessary to carry out a "standard" soil survey of the area as an essential pre-requisite. This would include detailed soil survey of agricultural land and reconnaissance of forest and pasture areas from the viewpoints of soil and land use, geological, hydrological and engineering.

(3) In selected areas, technical assistance should be provided to the revenue authorities engaged in consolidation of holdings to ensure that the soil and water conservation needs of these areas are adequately met.

(4) Training of staff being the most important single limiting factor, advance action should be taken to build up additional capacity and to use and expand the existing capacity fully. A concrete plan of operation should be drawn up in consultation with the State Governments.

(5) The soil conservation organisation in the States should be strengthened to provide adequate and competent guidance in planning, implementation and evaluation of various aspects of the soil conservation programmes.

(6) Now that the village level workers are to devote themselves exclusively to agricultural programmes in soil conservation areas, this would be the first and foremost programme for them. The village level workers and extension officers (agriculture) should be utilised for soil conservation programme. The cadre of sub-assistants for soil might be merged with that of village level workers. This would not only provide a large umber of workers at the village and block levels, but also eliminate the problems in most of the States.

(7) Primary emphasis should be on people's participation in local institutions by *Panchayats* and block *samitis* and the programme should be taken up on an area saturation basis.

LAND REFORMS

Suggestions of Expert Body

Several suggestions have been made on the land reform programme under the fourth plan by the Advisory Committee for Land Reforms which met here last week. The Committee felt that quite a sizable area was held by absentee owners. This is an obstacle to higher agricultural production. It recommended that the expression "personal cultivation" should be carefully defined to ensure that the owner of land not only resided in the village but also he or a member of his family contributed his labour to farming. It also suggested the setting up of Land Boards in each State.

The Committee expressed the view that absentee owners of agricultural lands should be required to lease or sell their farm lands to the Land Board. The latter would, in turn, lease or sell these lands to the landless agricultural workers and small holders, preferably on a co-operative basis, at a stipulated price payable in suitable instalments.

It was, however, felt that some relaxation would be desirable in the case of small land-holders who might be permitted to lease their lands directly (subject to necessary safeguards for tenants) so that they might be able to take up some non-agricultural occupation to supplement their incomes.

The Committee further suggested that the programme of transfer of ownership to tenants should be accelerated. In this direction, the Land Boards could play an important rôle by assisting tenants to get necessary loans through Land Mortgage Banks to pay for the acquisition of ownership rights.

The Committee emphasised the need for regulation of "voluntary surrenders" and transfers which widen the scope for resumption and, therefore, ejectment of actual tillers. The abolition of share-cropping and conversion of rents into cash was also recommended.

The Committee felt that fairly progressive legislation had been enacted in several States during the past ten years, but some benefit which would have accrued to cultivators had been lost, in some cases, due to defects in implementation. In view of its close bearing on agricultural production, the Committee stressed that the progress in land reforms should be reviewed in each State by a high-powered body with a view to filling the existing gaps and in order to strengthen the administrative arrangements and to expedite the building up of land records.

CAPITAL ISSUES

Debt-equity Ratio

The Controller of Capital Issues has been asked to relax the debt-equity ratio of 2:1 in suitable cases of new issues. The step has been taken because a new company in the present-day conditions may not be able to attract as much equity investment from the public as a company which has already gone into production can do.

The Central Ministry of Finance would also be prepared to allow projects which have already placed orders for a substantial part of the plant and machinery required by them, to get the current benefit of development rebate even if they took more than three years to complete. The development rebate concession for any industry, according to the last Central Budget, could be reduced or abolished by giving a notice of three years.

ALLOY STEELS

Capacity of Durgapur Project

The Durgapur alloy steels plant is expected to go into partial operation by the end of the current calendar year. It is hoped that one of the four reheating furnaces to be installed at the plant would go into production by that time.

Designed for a capacity of 100,000 tonnes of alloy and special steels ingots, it will turn out finished products at the rate of 60,000 tonnes a year—14,500 tonnes of high-speed tool and die steels, 27,500 tonnes of alloy construction steel and 18,000 tonnes of stainless steel. The cost of setting up the plant is estimated at Rs. 65 crores.

A major portion of the main plant and equipment is being supplied by a consortium of Japanese steel manufacturers under an agreement signed in September 1963. Three reheating furnaces are being made available by Messrs A.M.C.O. of Canada and the fourth one by Messrs Wellmann Incandescent. Messrs Atlas Steel Ltd, a Canadian firm, are the consultants to the project. The engineering consultancy

services are being provided by Messrs Dastur and Company.

STEEL PLANT

Hospet Area Preferred

The Technical Experts Committee appointed by the Central Steel Ministry to scrutinise the feasibility report on the steel plant to be set up in the Goa-Hospet iron ore belt, is understood to have preferred Hospet for the location of the plant to Goa. The Committee feels that production cost would be cheaper if the plant is located there.

Th only advantage of locating the plant in Goa, the Committee says is the likelihood of basing it on imported coal. But this advantage may not be there in actual practice. The coal supplies from Bihar and Orissa, the Committee thinks, can be available in Hospet at prices comparable to those of imported coal. Hospet has the added advantage of being close to limestone resources and non-alkaline water. The iron ore in this area is also said to be richer in ferrous content than the one available in Goa.

The Central Ministry of Steel is expected to take a decision on the issue in August or September. Efforts then will be made to secure foreign collaboration for the project. Japan and Poland, among others, are understood to have shown interest in assisting the establishment of the plant as well as another in Vishakhapatnam or Bailadila.

Whether the Goa-Hospet plant will be the fifth public-sector steel manufacturing unit, it is yet difficult to say. It has an edge over the proposed Vishakhapatnam-Bailadila unit. But the chances of either to be included in the fourth plan as a steel-making unit are understood to be now even. One of the two plants is to be set up during the fourth plan period up to the steel-making stage and the other only up to the pig-iron manufacturing stage.

The Secretary to the Central Ministry of Steel, Mr. N. N. Wanchoo, is leading a delegation to Moscow on 17th July for talks with the Russian authorities on the Bokaro plant. The delegation will include Mr. K. M. George, Managing Director of Bokaro Steel Ltd. It will spend about two weeks in Russia discussing the changes needed in the Dastur and Company's project report for the plant. The report has been with the Russian authorities for quite some time now. Some changes may be necessary as the Russian specifications might be somewhat different from those of the U.S.A. with an eye on whose collaboration the project report was prepared by Dastur and Company.

RUSSIA

Pig Iron Supplies

Pig iron supplies from Russia under an agreement reached recently are expected to start soon. Russia is to supply under the agreement 100,000 tonnes of pig iron by the end of the current calendar year.

CEMENT

Price Raised

The selling price of unpacked cement, free on rail destinations, has been refixed at Rs. 99.75 a tonne with effect from 1st July, 1964. The price had hitherto been Rs. 97.75. The excise duty and the additional surcharge and the packing charges have to be paid separately. Announcing this, a notification issued by the Central Ministry of Industry and Supply said last week:

"In the Government resolution of 31st October, 1961, on the report of the Tariff Commission on the revision of fair prices payable to cement producers, it was stated that the prices then fixed would be in force till 31st March, 1966, subject to adjustments whenever called for, for variations consequent on Governmental action, including escalation for fuel and power.

"On a representation from the cement industry, the Government examined the incidence of such variations on the cost of production of cement and granted an increase of Rs. 2.75 a tonne in the ex-works price paid to producers with effect from 1st June, 1963. There have since been further increases in the cost of production arising from increases in costs of coal, power and railway freight on coal, and after a fresh examination of costs, the Government has decided that with effect from 1st July, 1964, the ex-works price to be paid to cement producers should be increased by Rs. 1.25 a tonne.

"Besides the ex-works cost, the distribution cost of cement has also risen on account of increases in railway freight since 1st June, 1963. With a view to minimising the increase payable by the consumer, the Government has reduced the remuneration payable to the State Trading Corporation as the sole selling agents. The f.o.r. selling price has been raised by Rs. 2 a tonne. This will mean an increase of about 10 paise a bag of cement."

COMPANIES ACT

Tribunal Formed

The Central Government has constituted under Section 10A of the Companies Act, 1956, a two-member tribunal, consisting of Mr. B. N. Gokhale, a retired High Court Judge (chairman) and Mr. G. Mathias, a senior officer of the Indian Audit and Accounts Service, to enquire into the cases against managerial personnel of companies which may be referred to it by the Central Government, and also to exercise and discharge, with effect from 1st July, 1964, all or any of the powers and functions conferred on the courts by or under Sections 155 and 203 in so far as they relate to the granting of leave under that section as well as Sections 240 and 397 to 407 of the Act. These powers and functions relate to the following matters:

(1) Rectification of the register of members and the register of debenture-holders of a company;

(2) granting of leave to persons to manage companies in cases where they have been restrained from doing so by orders of the Court;

(3) compelling certain persons to produce documents and requiring them to appear before an inspector appointed by the Central Government to investigate the affairs of a company, and ordering examination on oath of a person whom the inspector has no power to examine on oath; and

(4) the granting of relief in cases of oppression of any member or members of a company or mismanagement of the affairs of a company or where the affairs of a company are being conducted in a manner prejudicial to public interest.

The District Courts or the High Courts, as the case may be, shall not henceforth exercise these powers and functions. By virtue of sub-section (5) of Section 10A of the Act, however, these courts shall continue to exercise the powers and functions in relation to any proceedings arising out of these matters pending before them immediately before 1st July, 1964.

All applications or references required to be made to the District Courts or the High Courts, as the case may be, concerning matters for which the powers and functions of the Courts have been transferred to the Tribunal are now required to be made to the Tribunal whose office is located in New Delhi.

EMERGENCY INSURANCE

Schemes Modified

The Emergency Risks (Goods) Insurance Scheme and the Emergency Risks (Factories) Insurance Scheme have been modified so as to provide for the automatic extension by a further period of three months with effect from 1st July, 1964, of the policies already issued under the two schemes. No premia are, therefore, to be charged on these policies and no fresh applications are necessary for their renewal.

As for the property which becomes insurable for the first time on or after 1st July, 1964, applications are required to be made to the Oriental Fire and General Insurance Company, in the prescribed manner, but without Treasury chalans, for the issue of policies as provided for under the schemes. The question whether any premium should be levied in these cases at any later date will be decided at an appropriate stage. For the time being, no premium will be due and no payment is, therefore, to be made.

I.M.F.

Repayment of Credit

The Government of India has arranged to refund to the International Monetary Fund a sum of $25 million as the second instalment of repayment of the credit of $250 million (Rs. 119.04 crores) drawn from the Fund on 1st August, 1961. The first instalment of a similar amount was repaid to the Fund on 20th February, 1964. The balance of $200 million has to be repaid in suitable instalments before the end of July 1966.

The International Monetary Fund had provided the $250-million credit in six currencies—$110 million (Rs. 52.38 crores) in U.S. dollars, $60 million (Rs. 28.57 crores) in pound sterling, $45 million (Rs. 21.43 crores) in deutschemarks, $15 million (Rs. 7.14 crores) in French francs, $15 million (Rs 1.14 crores) in Italian liras and $5 million (Rs. 2.38 crores) in Japanese yen.

CONSULTANCY FIRM

U.S. Collaboration

The Government of India and the Bechtel International Corporation of Sanfrancisco (U.S.A.) signed here last week a memorandum of understanding for setting up a company in India to render designing, engineering construction and management services for a broad range of industrial projects both in the public and private sectors. The Government of India will have 51 percent share in this company and Bechtel International 49 percent. The Company is to be known as Indian Engineers Ltd.

In the first instance, the services of Indian Engineers Ltd are proposed to be utilised for setting up petroleum refineries, development of oil and gas fields, construction of oil and gas pipelines, establishment of facilities for the manufacture of chemical intermediates and the putting up of petro-chemical industries.

Bechtel International is engaged on a worldwide basis in performing engineering services for similar projects. It will be contributing to the Indian Company a wide range of technical resources and personnel. Indian Engineers Ltd will employ engineers from India as well as the United States. The U.S. firm has undertaken to train selected Indian personnel of Indian Engineers Ltd at its offices in the United States and elsewhere.

TEXTILE MACHINERY

Imports from U.K.

A delegation, consisting of Mr. B. P. Patel, chairman of the State Trading Corporation, as the leader, and Mr. A. V. Venkateswaran, Joint Secretary to the Ministry of Commerce, and Mr. M. M. Gupta, Joint Divisional Manager of the S.T.C., members, left for the United Kingdom on 2nd July for finalising arrangements for the purchase of textile machinery valued at about Rs. 10 crores from Messrs Platt Brothers (Sales) Ltd.

The purchase is being financed out of a ten-year credit made available by the Midland Bank Ltd, London, and other financing institutions in the U.K. to the State Trading Corporation under the guarantee of the Export Credits Guarantee Department of the Governments of Britain and India. The purchase agreement for the machinery has already been concluded between the State Trading Corporation and Messrs Platt Brothers (Sales) Ltd. The financial agreement will now be finalised between the State Trading Corporation and the Midland Bank for the extension of credit to the tune of about Rs. 8 crores, repayable in half-yearly instalments over the ten-year period.

The machinery to be imported will be used by five mills in the private sector, 11 co-operative mills in U.P., Gujarat and Maharashtra, and a public-sector mill in West Bengal. All the mills to be set up with the imported machinery will be new units which will make use of indigenous machinery in the prescribed proportion. The delegation also proposes to conclude arrangements for the import of woollen and worsted textile machinery from the United Kingdom on deferred payment terms for about Rs. 2 crores.

Mr. Patel is also simultaneously heading a tobacco delegation which will visit the United Kingdom and other west European countries for establishing contacts with organisations and firms concerned with the import of tobacco in these countries. The United Kingdom is India's traditional market for flue-cured Virginia tobacco and the other west European countries are also purchasing Indian tobacco in varying quantities. The delegation will explore the possibilities of increasing tobacco exports to these countries and will conclude spot sales to the extent possible.

The Government of India recently appointed an *ad hoc* committee under the chairmanship of Mr. Patel to review the existing position and suggest improvements in the financing and marketing practices for flue-cured Virginia tobacco. The committee is expected to submit its report shortly.

I. F. C.

Loan for South Indian Firm

The International Finance Corporation—an affiliate of the World Bank—has agreed to join Indian and Swiss interests in providing loan and share capital to Lakshmi Machine Works Ltd, a new Company which will build and operate a cotton textile machinery plant in Coimbatore, south India, at an estimated cost of about $12.5 millon.

The loan and equity capital investment commitment of the Corporation in Lakshmi Machine Works is $1,380,000. It is being shared by the Continental International Finance Corporation—a subsidiary of the Continental Illinois National Bank and Trust Company of Chicago.

The Company is being established with an issued capital of Rs. 2.50 crores, all in equity shares. Its share capital will include subscriptions to the tune of Rs. 87.50,000 by a sponsoring group of Indian industrialists, Rs. 30 lakhs by Rieter Machine Works of Switzerland, Rs. 20 lakhs ($490 000) by the I.F.C. and Rs. 1.25 million by another Indian Company, Voltas Ltd. The remainder of the stock issue, amounting to Rs. 1 crore, was offered for public subscription in February last. It was fully subscribed.

The loan capital is being made available to the Company by the I.F.C. and three privately-owned financial institutions in India. The International Finance Corporation is lending $960,000, repayable in 16 semi-annual instalments beginning in 1967. The Bank of Baroda and the Indian Bank are each lending Rs. 32,50,000. The Industrial Credit and Investment Corporation of India is providing the equivalent of $840.000 in foreign exchange and an additional loan of Rs. 15 lakhs. Short-term borrowings, advances from customers and the Company's cash generation, amounting to a total of about Rs. 1.83 crores will provide the remainder of the finances required for the project.

The Indian sponsors of the Company are a group of industrialists, headed by Mr. G. K. Devarajulu. The Swiss sponsor and technical collaborator, Rieter Machine Works, is a leading manufacturer of high quality cotton textile machinery for the international market and an important overseas supplier of this machinery to India. Besides participating in the equity capital of the Company, Rieters will provide technical assistance for the planning and construction of the plant, draw up the designs for the machinery to be produced, furnish technical advice on the methods of manufacture and, in the initial years, supply key technical personnel for the operation of the plant. It will also provide training facilities for Indian staff in Switzerland.

The Coimbatore plant will eventually produce the entire range of cotton textile machinery now manufactured by Rieters in Switzerland. Production is planned in two phases. The first phase—expected to be in operation by 1965 and in full production by 1967—will include the manufacture of high-speed draw frames, speed frames and ring spinning frames. In the second phase, for which finances will be arranged at a later date, production will be extended to cover the manufacture of blow-room lines and combers with their associated silver and ribbon lap machines. It will be the only plant in India to manufacture a complete line of cotton spinning equipment.

AIR CORPORATIONS

Revising Wages

In accordance with the announcement made in the Lok Sabha by the Central Minister for Transport, Mr. Raj Bahadur, on 24th March, 1964, the Government of India has decided to set up a high-powered Commission to examine and evolve, among other things, a rational wage structure for all employees of the two Air Corporations—Air-India and the Indian Airlines Corporation—with due regard to all relevant factors, such as nature of duties, skills, qualifications, experience, and service conditions of the various grades of employees.

A retired High Court Judge is being appointed as the chairman of the Commission. It is proposed to have two other members on the Commission, one with extensive knowledge of labour matters and the other with the necessary background of financial problems. The Commission is expected to start functioning from 1st August, 1964, and is being asked to complete its work in about six months.

The Commission will also look into such demands of the unions of the employees of Air-India and the Indian Airlines Corporation as may be pending when the Commission starts functioning. It would as well be open to the Commission to recommend interim relief in appropriate cases.

U.S.A.I.D.

Local Currency Loans

The U.S. Agency for International Development (U.S.A.I.D.) has announced that the equivalent of about $94 million is now available in 22 countries throughout the world for local currency loans to private enterprises under the Cooley amendment to P.L. 480. With Rs. 22,95,84,000 available as of 30th May, 1964, India heads the list of the 22 countries.

The Cooley loans are available to (1) U.S. firms or their branches, subsidiaries or affiliates for business development and trade expansion in the local countries, or (2) either U.S. or local firms for expanding markets for U.S. agricultural products. They are repayable in local currencies. Specific applications for the Cooley loans are to be addressed either to the A.I.D. mission in the country involved or to one of the four A.I.D. regional bureaus located in Washington.

Exide Batteries still keep going when the rest have stopped

Silver Exide are the strongest, most reliable batteries under the sun. They are quality tested at every stage of production .... that's why you're sure of a long and trouble free life. Silver Exide Batteries are obtainable from dealers everywhere. So don't delay—and you'll still keep going when the rest have stopped.

TRADE UNION THINKING ON U.K. ECONOMIC PROBLEMS

(FROM OUR LONDON CORRESPONDENT)

TRADE union leadership has recently been giving more thought than usual to the rôle it has to play in the economy of the country. It has given attention to a variety of aspects, and it is at least instructive to take a look at some of its conclusions. For instance, the National Economic Development Council is due to make a recommendation shortly about the growth of the economy in the second half of the 1960's. The T.U.C. members of "Neddy" have been discussing their attitude and intend to suggest to the Council that the implications of a growth rate as high as 6 percent should at least be studied. If this was shown to be impossible, the target could be scaled down to 5, 4½ or even 4 percent. Technological changes over the last few years made it conceivable, they argued, that the economy could achieve a higher annual rate of growth than at present in spite of manpower limitations. "Why not be a little more ambitious," one trade union leader said, "if you look no higher than 4½ percent, you will never be aiming at 6 percent."

The official view, and the view of some employer members of the Council, is that the range suggested by the N.E.D.C. is realistic. The Government sees a practical target as lying somewhere within this bracket; the employers view that T.U.C.'s more ambitious aspirations with extreme caution and argue that the higher you go, the greater the margin of error in your projections. The argument in the Council will of course in no way fix the next growth target. It is designed simlpy to define an area in which the N.E.D.C. can begin working out the implications so that when industries and "little Neddies" have been consulted and the arithmetic is all done the Council can plump for a figure. The period of the programme has also to be settled. The favoured spans seems to be 1966-70; it fits in well with the European growth programmes, which mostly run for five periods and are currently due to expire in 1970—a neat date.

The T.U.C's advocacy of faster growth could open up some general discussion in the Council of the measures that would be needed to increase the present annual rate by 50 percent. It may be pointed out that wage restraint and the abandonment of restrictive practices could make 6 percent growth look more feasible. The T.U.C.'s answer to this is that the more trade union members can expect through increased prosperity, the more they will be willing to cooperate in achieving a growth programme. It is a valid point. An incomes policy, most experts agree, is more likely to be devised under conditions of rapid growth than otherwise.

Monopolies and Mergers

The General Council of the T.U.C. finds no evidence of a detailed factual study of the problems of monopoly and mergers having gone into the Government's proposals for changes in the law. In a comment just published—on the recent White Paper—the T.U.C. urges a full enquiry into the concentration of British industry. It thinks it should be of the standing of the Radcliffe Committee on the working of the monetary system and should have powers to require evidence from industry. The T.U.C. says: "The basic shortcoming of the White Paper is that it reflects the Government's continuing preoccupation with only one aspect of industrial concentration—control of one-third of a particular market by a single firm or connected group of firms. The implications of industrial concentration, however, far transcend this limited and, indeed rather dated approach. The White Paper does not come to grips with the implications of growing industrial diversification, as opposed to product concentration.

"What is fundamentally needed is a systematic appraisal of developments towards industrial and financial concentration, over, say, the last 20 years. This would be a major task and would involve not only an analysis of the technological, managerial and other forces making for concentration and the rôle played in it by the financial institutions, but also the effects of this development in such fields as employment, pricing, marketing and the development of investment, and on relations between firms and their shareholders, their work-people and the Government."

To monopoly as such, the T.U.C. has no objection in principle—large concerns are often better employers, it notes—and, therefore, the General Council was concerned only with remedying abuses of monopoly. Greater competition was not always the best solution: Government control or public ownership could be more appropriate in some cases. The Government's approach—as set out in the White Paper—was also "neutral," that is to say confined to remedying the defects of the present system of control. But while the General Council welcomed the Government's intention to take reserve powers to enforce divestiture, it noted that the Government had powers under the 1948 Act which it declined to use when the Monopolies Commission recommended that the Imperial Tobacco Company should divest itself of its shares in Gallaher's. "Further powers without the intention to make use of them will be of little value," the T.U.C. concludes.

Public Control and Ownership

On the question of nationalisation, opinion is voiced by the leaders of the Confederation of Shipbuilding and Engineering Unions, whose proposals for "a large measure of public control and ownership" of the heavy electrical manufacturing industry will be submitted to the T.U.C. and the Labour Party. The Confederation hopes that a Labour Government would lose no time in giving them legislative form. Two principal measures are urged. These are:

(1) The establishment of "specialist committees," recruited from the nationalised industries and public services, to keep a "continuous watch" on tenders, prices and supplies and report to Ministers and nationalised boards; and

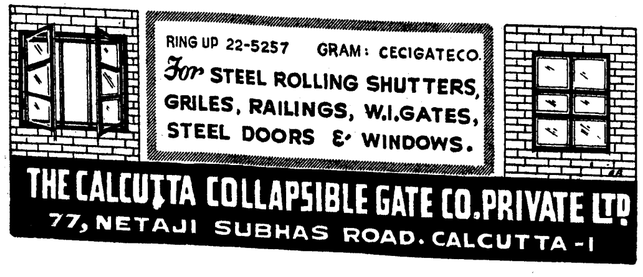
(2) Outright nationalisation. The chief firms affected would be Associated Electrical Industries, English Electric, and General Electric.

The Confederation embraces 37 unions, representing about 3 million workers, so the document outlining the proposals must be regarded as a serious contribution to the growing debate on public ownership.

It has not yet been formally submitted to the Confederation executive, but there is no doubt that it will be approved. A Labour Government is likely to feel bound to look on it sympathetically, if only in the hope of winning the unions' co-operation in an incomes policy. To reject it out of hand would antagonise militant unions like the Boilermakers.

On outright nationalisation, the document concedes that difficulties and inefficiencies might arise out of "unscrambling" heavy electrical plant from the great variety of other products the chief firms make. But it also points out that the system of "product divisions," under which different sections of each company concentrate on particular types of output, is now widespread in the industry. "The manufacture of electrical plant and equipment under private ownership is a near monopoly," the document continues. "It is, therefore, restrictive, operating restrictive practices in production and tender. These practices have been condemned by the Monopolies Commission. But they continue to be operated by agreement and by the fact of the monopoly position of the giant firms in the industry." Most of the companies belong to the British Electrical and Allied Manufacturers Association, which "from its inception has concentrated its energies on the elimination of competition among its members in the same category of products."

The State-owned electricity supply industry is almost entirely dependent on the main manufacturers for its generating and distribution equipment. Hence, it has to pay prices which, in most cases, bear no relation to costs. "The electricity supply industry and its customers are exploited in consequence of this lack of competition." Another alleged justification for public ownership is the fact that directors of big electrical firms sit on other boards. Last year, 14 directors of Associated Electrical Industries had 98 directorships of other firms and nine directors of General Electric were on 47 other boards. "It is the directors of the big industrial combines, the banks, the insurance companies, the finance and investment houses who are the 'top decision makers'," the document declares. "In their hands lie the economic and financial destinies of the British people."



The Union Structure

The case for a giant amalgamation of the three largest trade unions—Transport and General Workers' Union, the Amalgamated Engineering Union, and the National Union of General and Municipal Workers—is put forward by Professor H. A. Turner, of Cambridge University. Arguing that these three giant multi-occupation, multi-industry organisations stand as the chief obstacles to trade union rationalisation along the lines now being explored by the T.U.C., Professor Turner asks—in the *British Journal of Industrial Relations*—"Why not amalgamate the Big Three themselves."

The result would be an organisation of more than three million members accounting for nearly a third of all trade union membership, and three-eigths of the T.U.C.'s affiliated strength. It would cover supervisors and clerks, craftsmen and labourers in almost every industry and trade. It would overwhelmingly dominate the workers' sides of bargaining bodies in engineering, vehicles, chemicals, road transport, docks and public utilities; it would have important interests, both skilled and unskilled, in construction, light manufacturing and non-Governmental public services.

Professor Turner foresees an enormous impact by such an amalgamation on the rest of the trade union movement. Trade unions with pretensions as industry-wide organisations—such as the vehicle-builders, the chemical workers and the rubber workers—would be faced with the choice of joining the new organisation, or withering away. Where the possibility of authentic industrial unionism existed—in printing, railways, steel and textiles—consolidation would be hastened in reaction to the new giant. Small craft unions would be driven to amalgamate in order to maintain an effective negotiating front; ex-craft unions—those of electricians, foundry workers, bricklayers and wood workers—would be left in a limbo and forced to reconsider their position.

Of course, it is as likely to happen as a union of all the churches. Professor Turner is aware of the difficulties, but he makes the valid point that his scheme is less impracticable—and makes more sense in the light of British trade union history—than industrial trade unionism.

Jute

INTRODUCTION OF QUALITY CONTROL MEASURES

CONSIDERABLE progress has been made at various levels for complying with the formalities prescribed by the Export (Quality Control and Inspection) Act which came into force from 1st January, 1964. For the jute industry the legislation will be operative on a compulsory basis from 1st December. The Act seeks to ensure that commodities or manufactured goods, available or made in India for exports, should conform to an acceptable standard of quality.

Even before the passing of the Act, the industry had made arrangements for voluntary sampling, quality control and inspection of goods. The I.J.M.A. set up a special organisation, the I.J.M.A.Q.I.C., to co-ordinate the activities of the mills in this direction. The central bureau of the organisation has been accommodated at the headquarters of the I.J.M.A. Research Institute. To facilitate work, five zonal offices have been set up at different mill centres. After a study of the activities of the I.J.M.A.R.I. and the I.J.M.A.Q.I.C., the Government of India has decided to entrust the latter with the responsibility of co-ordinating quality control and pre-shipment inspection work throughout the industry.

I.S.I. Certification Marks

The I.S.I. Certification Mark procedure will help determine the export-worthiness of the product. Under it, individual mills, licensed by the Indian Standards Institution to use the I.S.I. mark, will be responsible for drawing samples, testing them and marking their goods. The I.J.M.A.Q.I.C. will do the super-inspection work. In addition to the inspection of manufactured goods, mills will also have to enforce "in process" quality control to ensure that requisite standards are maintained right from the raw material stage. Severe penalties are provided for the abuse of the I.S.I. mark. If it is found that goods do not meet the quality requirements, mills will be advised to suspend marking unless the I.J.M.A.Q.I.C. is satisfied that the goods are produced in accordance with specific norms. The present system of inspection, being carried out by the I.J.M.A.Q.I.C. through the five zonal offices, and the submission of reports to mills have been found to be helpful in providing an advance intimation of the standards attained. When any deficiency is noticed, corrective steps can be taken immediately by the mills concerned.

Mills have to apply to the I.S.I. for licence to use the I.S.I. certification mark on their goods. Such licences will be issued on the recommendation of the I.J.M.A.Q.I.C. that the applicant mills are able and equipped to meet the quality control and inspection requirements. Mills should have proper testing equipment and qualified quality control staff.

Import of Equipment

As for equipment, the fabric-strength testing appliances have to be imported, but others are available within the country. A special priority order will be given by the Government of India for prompt issue of licences and foreign exchange permits for importing quality control equipment. Mills are required to have four quality control personnel for thousand looms. The department should be under a qualified technologist. Training facilities will essentially be of a practical character, supplemented by a series of lectures to be arranged by the I.J.M.A.Q.I.C.

The implementation of quality control and pre-shipment inspection will no doubt entail an additional financial burden on the mills. But experience has shown that the incidence of such expenditure will be more than offset by the improvement in quality, fewer rejections and other technical benefits. The Government of India may sanction a matching grant to the I.J.M.A.Q.I.C. for meeting the expenses incurred in this direction.

I.S.I. Draft Standards

The Indian Standards Institution had issued in 1963 a number of standards for gunnies. But these have since been withdrawn and reissued as drafts on receipt of comments from overseas buyers. The suggestions of American and Australian consumers are expected soon. It is hoped that the standards would be finalised on the basis of such comments before December.

THE JUTE MARKETS

Manufactured Goods: Steady conditions prevailed in the Calcutta gunny market during the past week. There was a revival of interest in heavy goods following the issue of Indian Government tenders for about 17,500 bales of B Twills for July-August delivery. The Mysore Sugar Mills' tender for 250,000 A Twill bags for September-January delivery and the Kenya Jute Control enquiry for 1,000 bales of heavy goods were additional stimulants. Mills emerged as keen sellers for all positions during the rally following the issue of the tenders, and booked handsome business. Shorts also rushed in to cover their open positions, hardening the price trend. In hessian, transactions were more or less of a routine covering nature in the absence of fresh overseas enquiries or business. The trend in the fabric was barely steady in sympathy with heavy goods. In the hedge market, conditions were governed by the trends in the spot market. Sacking was exceptionally firm on brisk bear-covering, while hessian finished with a minor gain on balance. Turnover was heavy in sacking, and moderate in hessian. Fluctuations were wide in the former and narrow in the latter. The undertone was buoyant in heavy goods and steady in hessian. The situation in Calcutta port worsened. Shortages of lighters and berthing space continued to halt loading operations. Besides, dockworkers continued their delaying tactics. Although the congestion at the Sandheads had been reduced, there was a rush of ships in the dock areas. In view of these difficulties, most shippers could not avail themselves of the lower freight up to 10th July. The report that Argentina was experiencing foreign exchange difficulties, which might ultimately compel her to reduce her overseas purchases, called for caution.

Wednesday's quotations were as follows:

	July	Aug.	Sept	Oct.-Dec.
40in. 7½oz.	33.65	33.70	33.75	33.85
40in. 8oz.	36.15	—	—	—
40in. 10oz.	44.65	44.85	45.00	45.30
B Twills	116.45	116.20	116.00	116.00
Cornsacks	119.00	119.75	119.75	119.25
Heavy Cees (Plain)	116.50	116.00	116.00	116.00
A Twills	138.50	139.50	140.00	141.00
Liverpools	129.50	129.50	129.50	129.50

Raw Jute: Opening on a quiet note, steady conditions emerged in the raw jute market during the past week. A decline in the stocks of raw jute with I.J.M.A. mills from 2.23 million bales at the end of May 1963 to around 2 million bales in May 1964 gave rise to the belief that mills would have smaller fibre stocks at the close of the 1963-64 season. So, they entered the market for lifting the new crop jute right from the beginning of the current season. Reports of some damage to the early sown crop in northern Bengal and lower Assam valley called for caution, encouraging operators to bid higher prices. Daily arrivals in upcountry agencies were 10,000 maunds and in Cossipore about 3,000 maunds. Transactions were more or less of a routine nature, confined to selected grades. Mill support helped prices to harden by about 50 paise a maund for all varieties. In the hedge market, Upper Assam White Bottoms for September lost pace on tired long liquidation combined with some short-selling. Turnover was small in the spot market, and moderate in the futures market. The closing undertone was steady in the former and hesitant in the latter.

Wednesday's quotations were as follows:

	Landed at Mills (Basis Bottoms) 1963-64 Crop		1964-65 Crop	
	Rs. A Qtl.	Rs. A Md.	Rs. A Qtl.	Rs. A Md.
Assam-Agartala Jute	83.05	31.00	85.74	32.00

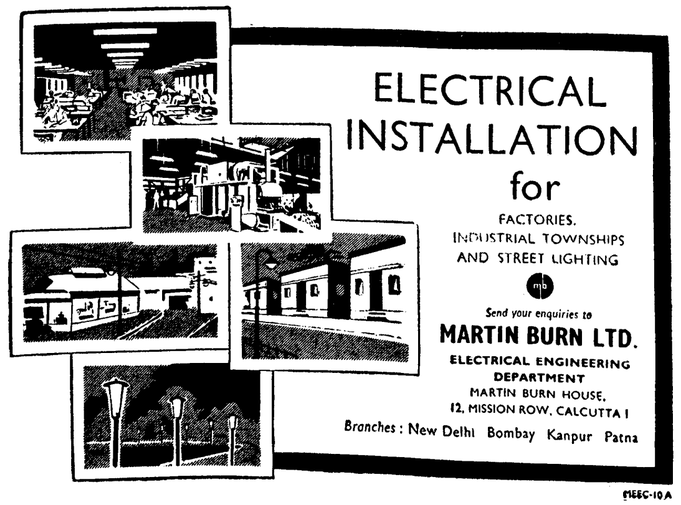
Bihar Dist.	66.98	25.00	69.66	26.00



THE U. K. JUTE MARKETS

FIBRE STILL DULL

(FROM OUR DUNDEE CORRESPONDENT)

VERY few offers of raw jute were made in Dundee during the past week. Most sellers were still remaining out of the market, although a new range of F.P.C. values have been issued. The official values fixed are lower than expected with Mill Firsts at £115 10s, Export Firsts at £103 10s. Export Lightnings at £92 10s and Export Hearts at £81 10s, c.i.f. U.K., 90 days sight. The grades of Mill Lightnings and Mill Hearts have been abolished. Dark jute E.P.C. values are at £117 10s for Crack Tossa-4 and Dacca Tossa-5, £112 10s for Grade Tossa-2/3, at £103 10s for Grade Tossa-4 and Dacca Tossa-6, £95 10s for Outport Tossa-2/3 and £85 10s for Outport Tossa-4. Cuttings have been fixed at £59 for S.N.C. and D.T.C. and at £51 for N.C. and T.C., c.i.f., U.K.

The few offers being made here were £3 to £4 a ton above the official rates and spinners were showing no buying interest. It will take a little time for the market here to settle

down and for offers to be freely made.

Most Dundee spinners are holding substantial stocks of raw material and there is no need for them to start buying new crop immediately. They are in a position to remain out of the market for a few weeks until they see how prices are to move. The question of the reduction in export duty on raw jute purchased before 13th June but not shipped by that date, has still to be settled.

The Siam jute market is quiet and unchanged. Only small parcels of old crop are available, but offers of new crop are being quite freely made. Prices are at £76 for super A, at £69 15s for grade A, at £65 15s for grade B and at £61 for grade C, delivered mill Dundee for October-November shipment.

Little or no change took place in the Calcutta goods market during the past week. The Jute Control here is now buying on c. and f. terms, and the following prices are on this basis. Quotations are at 73s 7d for 40in. 10oz. and at 56s 4d for 7¼oz. a 100 yards for July shipment, at 74s and 56s 4d August-September and at 74s 6d and 56s 4d October-December. B Twills were at 197s 7d, 197s 7d and 197s 9d for the respective shipment periods.

Dundee jute spinners are busy and have orders in hand for delivery a fair distance ahead. The carpet trade continues to take regular supplies and contracts are being renewed. Supplies of yarns are not easy to obtain for reasonably early delivery, and this is bringing out more interest in the forward position.

Manufacturers of hessians are well placed, and production is being maintained at a high level. Demand for wide cloth for the tufted carpet industry is very good, and there is every indication that this will continue. The heavy end of the trade is still very quiet, and although there have been enquiries for sackings, very little actual business has resulted so far.

THE PAKISTANI JUTE MARKETS

GOOD RECEPTION TO NEW PRICE POLICY

(FROM OUR DACCA CORRESPONDENT)

UNDER the new jute policy, announced last week, minimum prices have been withdrawn. This means that the Export Price Control on the basis of which contracts may be registered with the State Bank, will be based on the market as interpreted by the committee consisting of the P.J.A. chairman, a large shipper, a small shipper and a representative of the Jute Board. These will be issued daily by the P.J.A. It is reported that the State Bank and the J.M.C. representative will also have a say in the matter so that if the market goes too low, either the price will not be reduced accordingly or the Jute Board will use its authority to start buying in order to steady the market.

The £2 preference for small shippers and the J.M.C. has been withdrawn. This has naturally created a certain amount of bitterness in certain circles. Internal minimum prices have been raised and readjusted. Furthermore, the 10 percent discount below local minima in the purchase for the buffer stock which was allowed to the J.M.C., has been cancelled. The quota system has been changed. There are no details of this yet, but it is reported that exporters will be allowed to sell freely during the first three months ending September, and they will be issued with quotas for the next three-month period based on their purchases during the previous three months.

There is no doubt that this new policy will be accepted as being equitable and far sighted by most circles of the trade. It means that prices at which one can sell will be more realistic. It will drastically cut the drain of Pakistan's foreign exchange resources by obviating the necessity to deal in black market currency. It will encourage balers who want to get a god export quota to buy more locally, which will help the growers, which is the Government's aim. The lifting of quotas and the removal of £2 preference will squash the argument that Pakistani shippers are receiving preferential treatment in comparison with foreign shippers.

Furthermore, since there is every reason to believe that there is insufficient jute to let the market fall, this new policy will almost certainly work satisfactorily both from the point of view of shippers and of the Government. Altogether the new season starts with a favourable climate marred only by one cloud in the sky, namely, the question of export duty. It will be noted from the enclosed E.P.C. figures that the P.J.A. has adjusted the price to the market without taking into consideration one way or the other the question of export duty. That is to say, some prices have been increased, some have been reduced more and some less than the difference in export duty. It is reported that there was a certain amount of pressure at the meeting which decided on the new E.P.C. P.J.A. prices to increase rather than decrease. It was finally agreed that the maximum decrease should be effected and it is not likely, unless something catastrophic happens, that they would further decrease and in fact by the time this appears in print, some of the E.P.C. prices may well have been increased. The new range of prices is considered reasonable in white jute if a bit high for Export Hearts. In Tossa, the prices for old crop are rather high particularly in Outport Tossa 2/3 and 4 but for new crop the prices are reasonable.

Quite apart from the jute policy and the new P.J.A. prices, the Jute Board has decided that the marks of Mill Lightnings and Mill Hearts will be abolished. While this will upset some buyers it is a reasonable decision to make since the prices for Mill Hearts and Export Lightnings and the price for Mill Lightnings and Export Firsts is the same in E.P.C.s and there is nothing to prevent balers from giving side guarantees such as pure jat origin, etcetera. In the loose jute sector, there is still nothing to report since arrivals continue to be very small and very short. Some lucky day purchases have been made purely for sentimental reasons and the jute bought is not really suitable for export. More reports are coming in to the effect that not only is the crop small but also the quality is poor in many areas. The indications are that the percentage of cuttings will not be very heavy since weather conditions have been good. This again is a bullish factor because interest in cuttings overseas seems to be high and this is reflected in the local pucca bale prices.

As a result of the new E.P.C. prices there has been some interest in Outport Tossa 2/3 locally and parcels have changed hands at about the overseas market price. Overseas balers have still not reacted to the new prices, probably because they are still upset about the question of export duty which remains unsettled. This season very little new crop business is reported and it may well be that when buyers come in to buy they will buy more than usual. At the same time, the mills have given an undertaking to lift 800,000 bales physically before the end of September, which means some 40 percent of normal arrivals during this period. The lifting by the mills of this amount of jute combined with overseas buyers concentrating purchases rather than buying spread over a wider period together with balers' probable heavy purchases in order to attain a good quota, must surely result in a much steadier market.

Important P.J.A. E.P.C. price changes:

	Old	New
Export Firsts	£ 97	£ 91
Export Lightnings	£ 86	£ 80
Export Hearts	£ 73	£ 69
Dacca Tossa 5	£ 114	£ 105
Dacca Tossa 6	£ 97	£ 91
Grade Tossa 2/3	£ 108	£ 100
Grade Tossa 4	£ 97	£ 91
Outport Tossa 2/3	£ 91	£ 83
Outport Tossa 4	£ 80	£ 73
S.N.C./D.T.C.	£ 49	£ 50

I.J.M.A. STOCK FIGURES FOR JUNE

The Indian Jute Mills Association reports the total stocks of jute goods at the end of June as follows:

Description	30th June, 1964		31st May, 1964		Increase over (+) or decrease from (−) last month		30th June, 1963	
	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)
Hessian cloth and bag	14,51.32 (15.87)	45.1 (44.4)	15,11,14 (16.53)	47.0 (46.2)	− 59,82 (−66)	−1.9 (−1.8)	10,31,73 (11.28)	32.4 (31.8)
Sacking cloth and bag	10,08,23 (11,03)	45.1 (44.4)	9,02,30 (9.87)	40.4 (39.8)	+1,05,93 (+1.16)	+4.7 (+4.6)	10,36,10 (11,33)	47.2 (46.5)

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are in British measures.

Commodity Markets

SOUTH INDIAN TEA CROP DISAPPOINTING

(FROM OUR SOUTH INDIAN CORRESPONDENT)

SOUTH Indian tea crop is disappointingly poor this year due to unfavourable weather. Production in this region up to the end of May is estimated at 65 million lbs. This is 17 million to 18 million lbs short of the harvests during the corresponding periods of the past two years. This fall in production is attributed to a severe and prolonged drought the tea growing belt of south India experienced this year. Monsoon was unusually delayed. It is only a few days since the monsoon has started in south India and even if the rest of the year gets adequate rain, it is doubtful whether the damage suffered already will be fully compensated.

This shortfall in production has not had any effect on the market. The prices realised at the Cochin auctions where most of the south Indian tea is offered for sale have been more or less in keeping with the prices realised last year when production was on the high side. For instance, the sale average for leaf grades from 1st January to 23rd June was only Rs. 4.94 a kilogram, compared with Rs. 4.77 a kilogram of the same period last year. It is feared that the precarious balance between supply and demand maintained in the last three years may be upset in spite of the smaller south Indian production in view of the good crop prospects forecast for the other producing centres including north India. If this apprehension materialises, the worst sufferers will be the producers in south India because the falling price coincides with a smaller crop.

South Indian producers, particularly of the Nilgiris, have a serious grievance against the zonal classification applied to their districts. Nilgiris, for instance, is placed under Zone IV, thereby having to pay 42 paise a kilogram as excise duty, against 30 paise for tea falling under Zone III. But the average price fetched for some of the Zone III teas like those produced in Darjeeling district is said to be at least 40 percent higher than that fetched by Nilgiri teas. Nilgiri district has the largest number of small growers in India and many of them do not produce anywhere near the average attributed to the district. Therefore, the Nilgiri producer suffers a substantially larger loss by having to pay an excise duty at this high rate. Mr. J. W. Lawrence, chairman of the Nilgiri Planters Association, made a strong plea for a reassessment of this defective system of excise levy, in the course of his address to the in the course of his address to the recent annual meeting of his association.

CASHEW KERNEL

Higher Export Earnings

India has been able to make more money through the export of cashew kernel and cashew shell oil so far this year. The export earning on these two items during the first five months of 1964, is placed at Rs. 9.97 crores, representing a gain of Rs. 86 lakhs over that of the same period last year. Export of cashew kernel during January-May 1964 amounted to 879,000 cases of 50 lbs each valued at Rs. 9.21 crores, compared with 976,000 cases worth Rs. 8.83 crores exported during the same period in 1963. Due to higher prices for processed kernel this year, India's export earnings on cashew kernel have increased by Rs. 38 lakhs during this period. As in the past, the U.S.A. topped the list of buyers with an offtake of 455,000 cases. This was, however, 64,000 cases less than what she took in the corresponding period of last year. Russia came next with an offtake of 132,000 cases, as against 167,000 cases bought during the same period last year. East Germany had taken 81,000 cases, the same as that of last year. The U.K. which bought 70,000 cases had enhanced her offtake by 22,000 cases. Shipments to other important destinations with the corresponding figures for last year in brackets are given below: Australia 27,000 cases (38,000) ,West Germany 20,000 (18,000), Canada 19,000 (25,000), Japan 12,000 (5,000), the Netherlands 11,000 (9.000), France 9,000 (4,000), Poland 9,000 (10,000).

The Central Minister for Commerce, Mr. Manubhai Shah, has done a good job by making arrangements in America for the sales promotion of cashewnuts. They figure in India's exports to that country and as a result of the arrangements now made with the importers there, the exports of these commodities are expected to receive a boost. A fund of $ (U.S.) $500,000 has been raised for the promotion of cashew and another fund of $1 million for spices. The cashew fund will be shared equally between the Indian Cashew Promotion Council and American importers, while the spices fund will be shared between the Spices Export Promotion Council and the importers in the U.S.A. According to New York reports, the importers in the U.S.A. told Mr. Shah that they were satisfied with the quality control measures introduced by the Government of India some time ago, but they were concerned about the wide fluctuations in the prices, particularly of processed cashewnuts. Mr. Shah, too, agreed that the prices could not be allowed to sag or rise sharply. Both felt that there was scope for increasing the demand for both cashew and spices in the Americas. The funds now constituted for sales promotion are considered initial. One of the objectives of the new funds will be to promote sales of Indian mixed brands through the supply of free sample packets.

PEPPER

Dull Market

The Indian pepper market has been remaining dull for same time now with prices remaining more or less steady around Rs. 345 a quintal for garbled spot delivery on the Cochin market. Futures trading also has been a colourless affair. The reason is said to be the virtual withdrawal of U.S. buyers from the Indian market. The American disinterest in Indian pepper at present is attributed to the competition from Indonesia. The latter is currently offering pepper at around 30 cents a lb, whereas Indian prices work out to about 39 cents. It is said that Indonesia is forced to sell pepper cheap because of accumulated stocks. Further, the exporters there have to bear detention charges which are very high at about 5 cents a lb. One cannot say how long Indonesia would opt to sell her crop at this low price.

COMPANY AND PUBLIC NOTICES

THE INVESTMENT & FINANCE COMPANY LIMITED

NOTICE is hereby given to the Members of the abovenamed Company that an Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, on Tuesday, the 4th August, 1964 at 11-00 A.M. for the following purposes:—

INTEREST ON LOANS AND DEPOSITS TO GO UP

THE decision of the scheduled banks to step up their average lending rates from 7½ percent to 8¼ percent was more or less expected. This is indeed a further step taken by bankers to widen the margins between advance rates and deposit rates in a bid to meet rising costs. It may be mentioned that the minimum lending rate had already been raised appreciably, the present rate being 6½ percent. This minimum will still continue. The increase in advance rates, coupled with stationary rates on deposits, was indeed a major cause for the improvement in the profits of banks for 1963. The proposed increase in advance rates will not be enshrined in any formal agreement, but will be implemented almost simultaneously by all the scheduled banks from September—a few weeks before the commencement of the official busy season in November. This may hasten the return of loaned funds to the banking system.

While the contemplated increase in lending rates will, no doubt, help to strengthen the finances of banks, its repercussions in the economy will be both widespread and far-reaching. At a time when the capital market is far from being buoyant and the resources of companies are strained because of heavy fiscal burdens, it will push up commercial and industrial costs by making bank credit costlier and thus accentuate the inflationary pressures. Dearer credit will be particularly burdensome in the case of industries whose products are still subject to Government controls. Two major considerations have prompted the decision to step up advance rates. The first is the statutory obligation on banks to increase their liquidity ratios considerably by next September. Since larger investments in gilt-edgeds will lower the earnings of banks, the deficit is sought to be made up by realising more on advances. The Reserve Bank, in fact, has not favoured a rise in lending rates, although it has supported the move to increase the interest rates on deposits as a means of mobilising funds. Since it is now virtually certain that banks will offer more on deposits, they have sought a cover for the bigger outgo on this account by putting up their interest charges on loans.

The decision to increase lending rates will, no doubt, help to evoke ready support from banks to the proposal for raising deposit rates. In fact there has been a keen controversy on the question of increasing the deposit rates for over a year now —ever since the State Bank of India levelled up its rates in April last year to bring them in line with the rates prescribed in the inter-bank agreement. Opinion among bankers has been sharply divided on the rôle of bigger interest rates in attracting deposits and on their effects on the operating costs of banks. The stand-patters have argued that most short-term deposits are not sensitive to interest rates and that a rise in the latter will be justified only in the case of deposits kept for more than a year; and that in any case, deposits will grow automatically at a satisfactory rate because of deficit financing and huge Government outlays. Deposits, in fact, did rise impressively during the past year, demand deposits increasing much more than term deposits—a development resulting mainly from large Government disbursements to the corporate sector. But bank loans increased at an even faster rate, necessitating sizable borrowings from the Reserve Bank and reduction in banks' portfolio investments.

The demand for advances in the coming busy season, judging from present indications, may in fact go up even higher. At present bank loans still stand at a high level and the prospects of a sizable credit contraction appear poor. Besides, scheduled banks have to step up their liquidity ratios substantially by September and this calls for a large volume of funds. It is such hard realities as these which seem to have prompted banks to agree to increase their deposit interest rates in a bid to attract more funds and strengthen their competitive position *vis-à-vis* non-banking institutions. But it is doubtful whether the increase in deposit rates, by itself, will be effective, considering that some non-banking institutions have already put up their interest rates on deposits by 1 percent or 2 percent. There has lately been a sharp diversion of deposit funds to joint stock companies. Although efforts are being made to bring such funds within the purview of the Reserve Bank, the competition from corporate borrowers is formidable and it will be too naïve to assume an automatic expansion of bank deposits.

Banks will need to follow up the rise in their deposit rates with steps to improve their services to clients and to diversify their activities in order to attract more funds. The service in most Indian banks is very poor and the facilities they offer their clients are few. There is indeed some point in the argument that in this country deposits are interest-sensitive only to a limited extent, and if banks' deposits have risen phenomenally during the past few years, the reasons are to be sought in considerations other than the interest offered. While bigger interest rates are undoubtedly an attraction, they are by no means the crucial factor in mobilising deposits. The influence of interest rates is not likely to be enhanced by the proposed rise since it is of a marginal nature, amounting to just ¼ percent on deposits maturing in six months to three years.

The new rates for deposits of more than six months' duration are based on the suggestions of a committee set up under the chairmanship of Mr. C. H. Bhabha by the conference of bank chairmen. The interests on term deposits for periods of over six months are to be raised by ¼ percent to 1 percent, depending on the duration. The bigger rates will come into effect from 17th August if the inter-bank agreement is so amended by the signatories with a three-fourths majority. This is, however, just a matter of formality since the majority of banks are supporting the move. It has been estimated that the enhancement in deposit rates may cost the banks an additional Rs. 2.5 crores at the present level of deposits. But this outgo will be more than made up by the likely additional earnings of about Rs. 7 crores as a result of raising the lending rates. Of the total time deposits of Rs. 1,296 crores (as on 3rd July) with the scheduled banks, the deposits of the 46 members of the inter-bank agreement account for more than Rs. 1,000 crores. The State Bank of India,

which has time deposits running to about Rs. 280 crores, is not a signatory to the agreement, but when the other banks step up their deposit rates, the former too may fall in line sooner or later, as indeed it did last year.

An important point to note is that the term deposits with banks for periods of over three years are very limited, while there are none for periods of over seven years. This means that the increase in interest rates ranging from ½ percent to 1 percent for these longer-term deposits has little practical significance from the point of view of the banks' interest liabilities as well as the mobilisation of deposits. Most of the time deposits held by banks are for periods of less than three years, and there again a large majority of them may be for durations of six months to one year. The rise in interest rates proposed for these shorter terms is just ½ percent. Even so, in view of what has been explained above, the biggest increase in banks' interest liabilities will result mainly from these deposits. When the Bhabha Committee suggested a fractional cut in the rates for deposits maturing within six months by sliding the periods, the aim was obviously to offset the increase in expenditure stemming from the rise in the rates for deposits in the six-to-twelve-months category. This suggestion has, however, not been accepted as banks fear that a cut in the near-term interest rate may affect the flow of deposit funds.

SHIFT IN PLAN EMPHASIS LIKELY

ALTHOUGH the members of the Government never tire of saying that they are pledged to continue Mr. Nehru's policies, there is growing evidence that the winds of change are blowing through New Delhi. At this early stage one can only say that there will decidedly be a shift in the emphasis even if there is no fundamental change in policies. This shift is only partly—almost incidentally—a result of the change in administration following Mr. Nehru's departure from the scene. A more direct and compelling reason for change is the failure of the third plan to gain many of its important objectives. The fact of the failure is evident from the inflationary pressures generated by production shortfalls on the one hand, and the steep increase in investment outlays on the other. The gravest shortfall is in food output where the marginal increases achieved since 1960-61 have been overtaken by the growth of population.

While the food crisis may be the immediate issue, one should not overlook the penalties that shortfalls in other spheres are exacting. The delay in building up basic industries—the steel target, for instance, is not likely to be achieved until 1968-69—is increasing the economy's requirements of maintenance imports. Considering the balance-of-payments prospects, this must mean foreign exchange becoming an even severer constraint in the years immediately ahead. Some relief may be available from the larger allocations of non-project aid judging from the pledges at the last two meetings of the Aid-India Club, but the benefit to industry may not be proportional because of the step-up in defence preparations. Capital equipment and hardware may come from the military aid given by the U.S.A. and Britain, but day-to-day needs of stores and supplies have still to be met out of the general foreign exchange pool.

In the current year, industrial production may register a modest advance with an improvement in the supplies of components and raw materials. But this will not, by itself, be sufficient to restore to the economy the momentum it has lost. The sag is most noticeable in the capital market, particularly for new issues. The effect of this will be seen only two years or more from now if one allows for the lag between the time an enterprise comes into the market for funds and the time it takes to start production. In other words, the slowing down of the economy is taking not only an immediate toll but is also blighting future prospects. In this situation, it is hardly surprising that New Delhi should find it necessary to do some serious rethinking. Mr. Asoka Mehta, Deputy Chairman of the Planning Commission, has already conceded that the basic strategy of the plan may have to change without, of course, specifying in any detail what sort of changes he has in mind. Clearly, the need to contain inflation must take priority—a line of thinking which obliges the Government to direct attention to short-term measures for expanding the output of essential commodities. The allocation of resources for the purpose is bound to cut into what can be spared for long-term projects designed to strengthen the economy's growth potential. This may mean hastening slowly in steel and machine-building even though this impairs India's capacity to reduce the import content of future development.

Another priority requirement is employment because of the mounting backlog of the jobless. In the first three years of the plan, the number of new jobs created is estimated at no more than 5 million, against 9 million to 12 million that entered the work force during the period. This makes it plain that planning so far has failed to make any real impact. The policy-makers have drawn the lesson that a substantially stronger employment orientation must be adopted in future planning. Here again, a solution seeking immediate results may come in conflict with longer-term aims. A deliberate choice of labour-intensive technology is bound to reduce the surplus value added by manufacture, and thus hamper the accumulation of resources without which capital formation cannot be stepped up. But what will be the benefit from higher surpluses if unemployment (and frustration and bitterness which are its corollaries) threatens to disrupt the social fabric? Insurance against instability, as leaders of the new Government recognise, must take priority over considerations for the future. Just before he fell ill, the Prime Minister, Mr. Shastri, had indicated that his choice was for the present rather than for the future. Even though the full implications of this new directive are not yet clear, one may safely assume this to mean a vote for consolidation (in line with what Mr. T. T. Krishnamachari, Central Finance Minister, has been urging) before the country embarks upon a fresh round of adventures.

All this rethinking cannot but set back the preparation of the fourth plan. This need not be a great loss if the time is utilised in taking stock and making realistic and hard-headed assessments of what the fourth plan can achieve. The more thorough the preparation for the next plan, the better it will be for everyone, including the Ministries. In fact, the Planning Commission has an important contribution to make towards this exercise by demanding that all proposals coming up before it should be backed by adequate technical and feasibility data on the basis of which an informed decision may be made. This, as is common knowledge, is impossible in many cases because sponsoring Ministries or States can count upon winning the day if they can mobilise sufficient political pressure to browbeat the Commission. By making planning more thorough, it should be possible to spread available resources far more constructively than in the past. In that case, money may still be found for those schemes which should really go through because of their importance for the economy's future growth. In the past, the result of priorities has often been to pre-empt domestic and external resources long before a particular project was ready to use them.

In other words, the cuts that key sectors may suffer on account of the change in emphasis from the future to the present can be lightened if a determined attempt is made to eliminate the slack that is known to exist in the implementation of plans. This fact lends significance to the call given by Mr. Shastri in his first broadcast to the nation for far-reaching administrative reforms. As he implied at the time, the procedures which were perfectly correct for a laissez-faire Government only remotely involved in the country's economic life could hardly serve in today's vastly different situation. The reorientation of outlook now under way cannot but leave an impress upon the institutional framework of planning. Mr. Shastri has given advance notice, as it were, that the Planning Commission will have to fit itself in a new rôle in which its involvement with day-to-day policy-making is eliminated. Mr. Asoka Mehta, one must quickly add, is not averse to the change—he has recently made it quite clear that the Commission has no hand to play in devising immediate measures for alleviating the food shortage, but will concern itself with the long-term task of bringing food supply into better balance with demand. While this division of functions between executive Ministries and the Planning Commission is logical, it leaves unanswered one major question. Who, if anyone, is to take the responsibility for co-ordinating the Government's responses to current problems?

A Department of Co-ordination exists in the Ministry of Finance. If this is to be chosen as the agency, its functions will need to be redefined, carrying with it the corollary that the Finance Minister should be acknowledged explicitly as the economic overlord. Tacitly, he holds this position already by virtue of controlling the purse-strings but this gives him only a negative control and not the opportunity to give a positive direction to the policies impinging upon the larger economic issues before the country. This does not obviate the need for keeping the planning agency fully in the picture about current developments especially those that have a bearing on the future. At the same time, as the Planning Commission is stripped of the superfluous executive function that it has acquired, New Delhi should give more adequate representation to the Commission in the Cabinet. It is obvious that a Minister of State for Planning does not meet this need. This is not necessarily a plea for induction Mr. Asoka Mehta into the Cabinet—a proposal already mooted—but to devise alternative arrangements, if necessary, to ensure that the Commission does not become a technocratic agency without any feeling for the practical problems arising in the implementation of plans.

NEW CLOTH PRICE SCHEME

THE voluntary price control scheme which has been in force from January 1961 is to be replaced by a more comprehensive measure. Under the new scheme, popular varieties of cloth up to a maximum of 40 percent of the total output of mills excluding deliveries for export and defence, will be brought under statutory control, leaving the producers free to sell the balance at any price they like. This is what the Cotton Textiles Consultative Board has recommended and with the Commerce Minister as its chairman and the Textile Commissioner as vice-chairman, the Government's acceptance of the Board's recommendations can be taken for granted. As statutory control is expected to take at least three months to be enforced, the Board has suggested that, during the interim period, the existing scheme of voluntary price regulation should be continued, but prices of the varieties which were in existence before 1st January, 1962, and which continue to be produced at present, should be refixed on negotiated basis by the Textile Commissioner in consultation with the industry because of the rise in production costs. No increase in prices to be allowed for varieties which came into existence after 1st January, 1962, and the Board has further recommended that no new varieties should be allowed to be added by the mills during the next three months until the statutory control is brought into force. Price stamping is to be continued; ex-mill price, excise duty and retail price will be indicated in red in the case of controlled varieties and in blue in the case of others. Controlled cloth will be made available to all consumers co-operatives and fair price shops in the countryside for sale to consumers. In order to avoid malpractices and to redress immediately any difficulty which consumers may face, the Board has recommended the setting up of vigilance committees of consumers, public workers and other interests concer

ed, in each city to keep watch over the working of the control scheme.

The Cotton Textiles Consultative Board has given no explanation for drawing a distinction between varieties which were in existence before January 1962 and continue to be produced at present—their prices are to be refixed on a negotiated basis—and the varieties which came into existence after 1st January, 1962 and will not, therefore, be allowed any price increase. Apparently, the Board must have felt convinced that the prices of varieties which came into existence after January 1962 have already been raised sufficiently to absorb the increase in production costs. How else could most of the cotton textile mills have shown improved results during 1962 and 1963 despite the enormous rise in production costs? The statistics prepared by the industry in June 1963 had shown an increase of about 14 percent in the cost of production over that in 1961, and the costs are said to have gone up further during the past 12 months.

Reliable reports indicate that the prices of the varieties which existed before 1st January, 1962, and continue to be produced at present will be allowed to be raised by 8 percent to 10 percent. According to official estimates, hardly 10 percent of the varieties will be covered by the price increase which implies that nearly 90 percent of mill output falls under varieties which came into existence after 1st January, 1962. This confirms the popular view that price control was being circumvented on a large scale through the manufacture of innumerable new varieties which did not come strictly within the purview of the voluntary price control scheme. The Textile Commissioner owes it to the public to explain how all this took place when the introduction of new varieties required his prior approval. Although it was only in May last that the Indian Cotton Mills Federation made it plain to the Government that the voluntary price regulation system had become unworkable, the scheme had long been reduced to a complete farce. The cotton mill industry has every reason to feel happy over the partial statutory control scheme devised by the Consultative Board. The industry will not only have a free hand to dispose of more than 60 percent of its total production, but prices, which will be fixed for the controlled varieties, will take into account the increase in production costs. It is now left to the industry to accept the responsibility of making available cloth to the consumer at reasonable prices. With the restoration of greater freedom to the industry, there is likely to be a reduction in the varieties of cloth.

The proposed partial decontrol might be a good compromise for improving the profitability of the industry and at the same time ensuring that the common man's clothing requirements are met at fair prices. But the real solution to the problem of high cloth prices lies in creating proper facilities for the industry to step up its production in an economical way. Any appreciable improvement will depend not only on a suitable expansion of capacity, but also on an adequate supply of cotton. Import prospects being what they are, determined efforts will be necessary to bring about a substantial increase in cotton production, which has been lagging behind the industry's growing requirements. As for economies in production costs, the industry will need to be encouraged to modernise and rehabilitate itself quickly. Fortunately, the supply of cotton at present is not bad and cloth output this year is likely to improve moderately. An intensive production programme may require balancing machinery or equipment, which in some cases may have to be imported. The Cotton Textiles Consultative Board has suggested that the Government should encourage such a programme with the help of indigenous textile machinery manufacturers and by allowing imports on a priority basis.

POOR PROSPECTS FOR NEW ISSUES

THE steady growth in the corporate sector in past years has been due to the successful flotation of new capital issues, and the poor response to these offers in recent months has naturally caused great concern in business circles. A factual but interesting study of capital issues in India during 1960-63 in the June issue of the *Reserve Bank of India Bulletin* makes interesting reading. The total paid-up capital of non-Government companies stood at Rs. 1,399 crores at the end of March 1963, and they constituted about 64 percent of the total paid-up capital of all companies working in India. Despite a substantial reduction in the number of companies between 1956 and 1963 due to the elimination of moribund and inactive concerns from the register by the Department of Company Law Administration, the paid-up capital of the remaining enterprises has tended to rise from year to year. There has been an increase of about Rs. 311 crores in the paid-up capital during the second plan period. During the first two years of the third plan it has risen by a further Rs. 130 crores. Although activity in the new capital issues market has been growing since 1951 in step with the growth of the corporate sector, it has tended to fluctuate from year to year. The value of new issues rose from Rs. 5 crores in 1952 to Rs. 43 crores in 1959 and to Rs. 98 crores in 1962. In the latter year, however, there was a debenture issue for Rs. 30 crores by Oil India Ltd, an undertaking jointly owned by the Government of India and a private company. But new issues declined sharply to Rs. 51 crores in 1963.

There was a boom in the new issues market during 1960-62, but it came to an end with the declaration of emergency in October 1962. The number of new issues rose from 115 in 1960 to 180 in 1961. In 1962, it fell to 174 due to the slackening trend resulting from the emergency. Out of Rs. 264.88 crores worth of issues during 1960-63, engineering industries accounted for about Rs. 99.51 crores, mineral oils for Rs. 30 crores, chemicals for Rs. 24.13 crores, cotton textiles for Rs. 15.57 crores, paper for Rs. 15.34 crores and rubber and tyres for Rs. 14.64 crores. The market for fixed-yield industrial securities in the form of preference shares and debentures has been limited. During the 1960-62 boom period several new issues were floated at considerable premiums, the bulk of them carrying premiums of up to 50 percent over the face value. The premiums were fixed by the Controller of Capital Issues to curb speculation, and this caused considerable disappointment to investors. Preference shares and debenture issues floated since 1960 have carried bigger dividends and interest, because of the increased cost of capital. The bulk of the new issues have been offered to the public for subscription. The next important subscribers have been the promoters, directors and their friends. Foreign participation in new issues declined considerably between 1960 and 1962. Of the 76 issues with Rs. 20.77 crores of foreign participation, the share of the U.S.A. has amounted to Rs. 11.09 crores and that of the U.K. to Rs. 4.44 crores.

A disconcerting feature is that the participation of financial institutions like the Industrial Finance Corporation, the Industrial Credit and Investment Corporation of India and the Life Insurance Corporation of India, in capital issues has declined. In 1963, their share amounted to barely 2.3 percent of the total. Out of Rs. 32.79 crores of capital issues through prospectuses in 1963, these financial institutions subscribed for only Rs. 77 lakhs. Their participation rose from 6.7 percent to 17.6 percent of the total during 1960-62. As for underwriting activities, the liability of the underwriters arose only in one-seventh of the total issues underwritten in 1960 as public response was excellent. When investors became more selective in 1961-62, the liability of the underwriters increased correspondingly. Nearly 43 percent of the underwriting business during 1960-63 has been done by the Life Insurance Corporation, Industrial Finance Corporation, Industrial Credit and Investment Corporation and State Financial Corporations.

The study also discusses the setback in the new issues market during 1963. The number of issues floated at a premium dropped significantly from 39 in 1962 to 19 in 1963. One quarter of the total amount issued through prospectuses had to be taken up by the promoters, directors and their friends, against one-eighth in 1962. The proportion of the issues underwritten to the total made through prospectuses rose from 71 percent in 1962 to 77 percent in 1963. The bulk of the issues in the latter year had to be subscribed by the underwriters themselves. Since a large part of their funds has thus been blocked, their capacity to underwrite new issues has been reduced.

The outlook for new issues has greatly suffered since the 1964-65 Budget. Investors have taken a gloomy view of the prospect for industrial equities because of the heavier taxes. The growth prospect for shares has been affected by the imposition of the dividend tax and the levy on bonus shares. In line with the drop in the prices of existing shares, the value of new shares has also slumped. Several new shares have not only been quoted below par but they have also been difficult to sell. As long as the outlook remains as depressing as it is at present, investors are not likely to take interest in new issues. Considering that many companies will float new shares in the near future after the Government loans have been subscribed, suitable steps need to be taken to revive activity in the new issues market. Although there may be many financing institutions to provide funds to trade and industry, it is important to realise that the development of the corporate sector greatly depends on its ability to raise money through public issues. The creation of the Development Bank will not by itself help strengthen the capital market unless the Government modifies the fiscal structure to provide incentives for investors. The Unit Trust of India is also likely to compete with new issues for funds. Since the units of the Trust have been assured a tax-free return of about 6 percent from the very beginning, they are likely to prove more attractive for investors. A new company cannot be expected to pay dividends for some years; in any case, it is not likely to pay anything like 6 percent for some years initially.

F.I.C.C.I. View on Mahalanobis Report

It is possible that the Mahalanobis Committee report may mean different things to different people, as Mr. T. T. Krishnamachari is once reported to have remarked, but there would be a wide measure of agreement that some of its main findings are definitely controversial. The Federation of Indian Chambers of Commerce and Industry has, therefore, thought it necessary to bring out a brochure examining the main findings of the Committee against verifiable facts and statistical data. As is to be expected, the Federation, disagrees with all the chief conclusions, and says that the problem in its essential characteristics is one of poverty, the solution to which must lie in increased production, and not in the distribution of existing wealth. In any case, forces in this country are already working towards levelling up those who are in low income brackets, while those in the upper brackets are being levelled down by steeper rates of direct taxation, and levies on property and capital. The brochure argues that the increasing production of articles generally used by the less well-to-do classes, should indicate that their real income is going up. Moreover, the provision of welfare services like free schooling, medical facilities, and pensions and provident fund schemes, all financed by taxing the richer classes, is tending to distribute the real income more equitably. Looking from the monetary angle also, the basic data available for wages, salaries and profits in different sectors of the economy, show that increased income has mainly accrued to the lower income groups, except of course agricultural labour. On the other side,

the earnings of companies have failed to rise in proportion to the additional capital investment, and consequently, the index of profitability based on the ratio of profits after tax to total capital employed, has declined by about 15 percent over the decade 1951-61. Another point which the F.I.C.C.I. brochure emphasises is that the disparities in income and wealth as between the higher and lower income groups of people are not as large as are popularly supposed. It gives the figures of income of the highest and lowest brackets in 12 countries—six developed including the U.K. and the U.S.A. and six under-developed —for purposes of international comparison and then asserts that the people in the lowest income brackets in India earn proportionately more of the national income and those in the highest income bracket proportionately less. than in any of the countries compared. Unfortunately, the data used for the 12 countries are more than a decade old in most cases. The authors would have carried greater conviction had their figures been more recent.

As for concentration of wealth and economic power, the F.I.C.C.I. is on surer grounds in questioning the concept employed by the Mahalanobis Committee to measure economic power. The Committee itself admits that the increasing size of companies is not necessarily an index of growing concentration in ownership, nor are large Indian companies following any anti-social policy. Seizing on this point, the Federation points out that nobody can honestly complain about the growth of companies when this happens in the process of fulfilling national plan targets. Apart from the fact that large Indian companies are really small by international standards, in the present conditions of modern technology, some of the goods can be produced only by large industries, and their growth, therefore, becomes a prerequisite for progress. Industries like iron and steel and fertilisers cannot operate on a small scale, while others like cement, sugar, and paper, cannot be economic unless they are operated on a sufficiently large scale. The small-scale industries have been growing also, but for obvious reasons, they are unsuitable in fields requiring heavy capital investment.

The Mahalanobis Committee has concluded that big business complexes have grown more rapidly and now control a substantial portion of industrial activity. But in the establishment of new large ventures involving great risk and requiring correct foresight, only entrepreneurs of tried ability would be able to give the lead, the F.I.C.C.I. points out. In many new fields, development has to be initiated by big business houses. The Committee's verdict on the interlocking of directorships would have been more useful had it considered the size of the companies belonging to various groups. In a study of the largest 50 companies made by the Federation for instance, it was seen that more than 80 percent of the directors were on the board of only one of the 50 companies. The 402 directorships in the 50 companies were shared by 316 directors. "Thus in spite of the general scarcity of entrepreneurial ability in India, directorships are shared by the largest possible number of industrialists and business men." Certain factors also necessitate some degree of interlocking. A well-known industrialist inspires investor confidence. while some are valued for their experience in management.

Role of Investment Centre

The total number of enquiries of all kinds received by the Indian Investment Centre during 1963-64 from Indian and foreign entrepreneurs was 750, against 1,050 during 1962-63 and 1,272 during 1961-62. Of these, 750 enquiries about 310 were from Indian and foreign entrepreneurs for establishing joint ventures in India. During 1963-64, eight proposals resulted in technical collaboration agreements while 22 proposals matured into joint venture agreements involving a total capital cost of Rs. 3.05 crores. This brings the total number of joint ventures assisted by the Centre during the past three years to 66 with a capital cost of Rs. 5.60 crores and foreign equity participation of Rs. 6.50 crores, 22 of these 66 proposals being technical collaboration agreements. If one goes by the magnitude of private foreign capital that the country needs for its rapid economic development, the Centre's contribution appears to be a trickle. But as the chairman, Mr. G. L. Mehta, has rightly pointed out, the number of joint ventures brought to fruition or the vast number of enquiries assisted by the Centre can by no means be regarded as the only yardstick of its activities.

It is difficult to assess the work of the Centre in purely quantitative terms. In the assistance rendered by it, there are various types of services of an intangible nature, such as technical advice rendered for specific projects, advice sought by the existing undertakings for the agreements arrived at in the past and other such matters. Besides, the Centre provides information on various aspects of investment in India, including Government policies and regulations, the usefulness of which cannot be considered in statistical terms. The Centre functions as a sort of a catalytic agent by maintaining a continuous link with prospective entrepreneurs by giving them an up-to-date review of business and financial trends in India and an understanding of Government policies and procedures affecting industrial development. There can be little doubt that it has created an increasing awareness of the potentialities of foreign private capital investment in India by serving as an important clearing house of information.

In view of the continuing pressure on India's foreign exchange resources and a gradual change in the outlook for Government-to-Government aid, the inflow of private foreign capital will have to be accelerated considerably as a supplementary source of foreign exchange if the requirements of the latter under the fourth plan are to be met. The Centre will, therefore, have to play a more important rôle in coming years. The Centre seems fully aware of its growing responsibilities. In the course of its activities in the past three years, the emphasis had been rightly placed on information, assistance and service aspects of work rather than on its stimulation and sales functions. But, as Mr. Mehta has pointed out, for the Centre to succeed in the tasks ahead, it must now be in a position to impress on foreign entrepreneurs about investment opportunities in India. This would be possible only by planning the Centre's activities in this country and abroad over a period of time. Mr. Mehta has suggested the setting up of a technical wing in the Centre which will not only advise Indian and foreign entrepreneurs on their projects but also assist them in framing them. The establishment of a feasibility division and a field service are also considered necessary for this purpose.

The Centre's activities abroad will have to be simultaneously enlarged. Its New York office is known to have been doing a great deal of useful work in promoting better understanding of the investment opportunities in India and of the Government's policy on foreign investment. It is setting up another office in Dusseldorf which will start functioning by September. Private foreign capital in Europe is becoming more outward-looking in seeking profitable outlets. The Dusseldorf office is expected to play a useful part in publicising investment opportunities in India and attracting private capital. The Centre is trying to bring about better understanding of the investment opportunities in India by sponsoring visits of leading industrialists from abroad. Recently, a team of 51 top-ranking U.S. business men visited India and they had useful discussions with the Government of India. Mr. Mehta has expressed the hope that as a result of suitable follow-up actions, the U.S. firms would evince greater interest in specific schemes of joint ventures in India. The Centre is arranging a visit to India of a team of West German industrialists to enable them to study investment opportunities in the country. A team of Japanese experts on petro-chemicals is also expected to arrive in India some time in August with a view to exploring the possibilities in this field and the prospects of technical and financial participation in such development.

The inflow of private foreign capital will depend on the economic climate in the country and the state of the domestic capital market. Although there had been a decline in the number of enquiries with the Centre during the past three years, it could be regarded as a temporary phenomenon. The factors which affected the economic climate of the country are gradually undergoing a change. Useful concessions have been given to the corporate sector in the 1964-65 Central Budget and foreign investors have also been allowed many incentives. There has been a reappraisal of the Government's policies and procedures in a number of directions. All these factors provide hopeful signs for the future and are likely to act as an impetus to the flow of foreign private capital to India.

Policy on Foreign Capital

Comings and goings in New Delhi bear witness to the increasing interest of the foreign investor in the Indian market. A good deal of exploratory negotiation is under way, but for obvious reasons, these have been kept away from the public. The Foreign Investments Committee, which will have to find a new chairman with Mr. L. K. Jha's becoming the Prime Minister's Secretary, has been considering awkward proposals with a great deal of flexibility and understanding. Nothing, one is told, will be turned down if it brings a net benefit to the country. An example of flexibilityfi one of several. is the latest deal with the American giant. General Electric. New Delhi's readiness to accept foreign equity investment in heavy electricals, which under the Industrial Policy Resolution was to be an exclusive State preserve, is a departure which deserves notice. Also significant is the open invitation extended to American capital when the 40-man delegation visited India in April, to participate in other branches of heavy enginering, not excluding metallurgical enterprises. More doors may yet be opened, and the remaining inhibitions about admitting foreign capital into basic industries given up. New Delhi is reported to be willing to consider private investment even in steel. Essentially, steel is no different from any of the other industries which have been open to private foreign capital, except that repeated assertions of exclusive public-sector responsibility have made it difficult to give up the present stance.

Ideological taboos are not the only ones that are being shed. On the economic plane, there has always been a strong objection to foreign private investment in fields where India's dependence on imported plant and equipment or know-how is marginal. The argument has been that even if foreign capital accelerates growth in such fields, the advantage will be outweighed by repayment obligations The natural desire in India's circumstances to keep these obligations within manageable limits has thus stood in the way of admitting foreign capital more freely. But a contrary view now gaining ground holds that foreign capital should not be excluded even from these fields because new enterprises would themselves enlarge the country's capacity to service its external debt. Repayment is unlikely, therefore, to aggravate the strain upon balance of payments.

It is too early to say whether New Delhi will eventually agree to be less discriminating in its welcome. It is safe, however, to assume that any new policy formulation will keep in mind the growing interest of large international firms in using India as an export base. They are clearly hoping to gain from low labour costs, typical of a developing country, to make their goods more competitive in third markets. The latest Budget recognises in passing this emerging possibility, but that by itself is not enough. Competitiveness can hardly be maintained without production in sufficient volume to arrive at low unit costs . If so, these export-oriented enterprises may have to be allowed some access, howsoever limited, to the domestic market on well defined terms.

Among the difficulties that still stand in the way of a larger inflow of capital, the issue of future expansion is the most important. To start with a firm may build a plant just big enough to take care of local demand and the immediate export potential, if any. As markets develop, it will naturally want to expand to take advantage of the economies of scale. While expansion has been rarely disallowed in the past, the investor cannot but take note of the clamour against concentration of economic power. He can hardly dismiss it as the outpourings of the less responsible elements in Indian political life when the Dhebar Committee (of which three members held high political office in Government) goes on record against further licensing of industries to the large business houses. New Delhi has been keen to reassure foreign capital on this issue, and has justly claimed credit for the pragmatism that has guided its policies so far. The investor is presumably impressed, but cannot cast out of his mind the nagging thought that the promise to consider each case on its merit, commits the Government in fact to nothing.

Promoting Engineering Goods Exports

Engineering goods exports have been rising steadily. According to the figures cited by Mr. S. Kirloskar, chairman of the Engineering Export Promotion Council, at a Press conference last week, the value of goods sold overseas during 1963 rose to Rs. 13.45 crores from Rs. 9.37 crores in 1962. This represents a rise of 43 percent. The same trend of increase has continued during the first five months of 1964, the total rise in this period being 36 percent, compared with the corresponding period of 1963. Mr. Kirloskar said that although some notable results had been achieved through the Council's export promotion efforts, the overall progress was not completely satisfactory. A survey of the world markets showed that there was considerable scope for expanding exports further, particularly to the developed countries of the West. Because of their high standard of living, these countries offer a good potential for many of the simple manufactures or semi-processed goods in which Indian engineering industries enjoy an advantage in raw material and labour cost. In order to explore this potential, the Council has already set up two offices in Dusseldorf and London, and a third one will be set up in Chicago soon. With these three branches, the Council will have three foreign officers in Asia and Africa (Beirut, Nairobi and Singapore) and three foreign officers in Europe and America. The Council has also been trying to expand markets in East Europe. So far, substantial business has been done only in razor blades and storage batteries. A trade delegation sent by the Council to these countries has already completed its tour, and its report will be submitted soon. Its preliminary findings, however, indicate that there will be opportunities for selling more engineering goods to east European countries.

Mr. Kirloskar deplored the fact that the official foreign trade policy lacked stability so essential for expanding the country's exports. In its absence, exporters are unable to plan their business on a long-term basis. During the last few weeks alone, the prices of steel for export goods have been raised, apart from an increase in the floor price of the metal. Exporters' import entitlement for a number of non-ferrous items has been reduced and a system of grouping has been introduced for the purpose of using import entitlements. These changes have had a discouraging effect on the trade, and have shaken the confidence of exporters. The Government has subsequently assured that the exporters would be enabled to honour their commitments at the old rates, but the announcement came a little too late, and a good deal of dislocation of the trade had already taken place. Mr. Kirloskar wanted the Government to appreciate the inherent problems of the export trade. In order to "develop a long and sustained export effort, agents have to be appointed, servicing arrangements have to be made, submission of tenders to authorities have to be arranged, and long-term commitments are not possible if there are disturbances in the various export promotion schemes." He, therefore, urged that if the Government wanted exporters to plan their operations on a long-term basis and thus expand their business. New Delhi should make a timely declaration that upsetting changes in the export policy would not be made at least until the end of the fourth plan.

The Rupee Depreciates Rapidly

In its July economic letter, the First National City Bank of New York has included an interesting feature on the depreciation of world currencies during the decade 1953-63. The Indian rupee, as was to be expected, depreciated at the rate of 2.4 percent over the decade while the Pakistani rupee depreciated at the rate of 1.5 percent and the Ceylonese currency by 0.7 percent. The rate of depreciation has been inversely calculated from the increases in the cost of living or consumer price indices as reported by the Governments concerned. The review points out that the rate of depreciation of the Indian rupee has been particularly significant between 1958 and 1963. During the first five years of the decade, the rupee depreciated at the rate of 1.9 percent, but in the next five years, the rate of depreciation increased to as much as 2.9 percent. The fall in the value of the rupee has undoubtedly to be ascribed to the growing inflationary pressures in the economy. India has launched a large number of capital-intensive projects with long gestation periods. Besides, controls on some essential consumer goods have created artificial shortages, leading to conditions of suppressed inflation in some sectors of the economy. This, together with a large volume of unaccounted money, has made monetary management difficult. It is small wonder, therefore, that the monetary policies pursued hitherto have failed to curb inflation. Some experts have, in fact, suggested that deficit financing be cut down to the bone to avert fresh inflationary pressures in the economy.

The rate of depreciation of the Indian rupee, as indicated in the bank's review, suggests that it is over-valued in relation to many leading currencies. It is because of the growing inflationary pressures in the economy and the consequent depreciation of the Indian currency that some economists suggested devaluation of the rupee. The International Monetary Fund does not encourage the frequent devaluation of a currency, but since the rupee was devalued as far back as 1949, there will probably be no opposition from the I.M.F. should a decision be taken to that effect. However, since India's exports are now rising after remaining sluggish for some time and the strain on her balance of payments is lessening, there does not appear to be any immediate reason to devalue the rupee. Moreover, the devaluation of the rupee will make imports more expensive and thus accentuate the inflationary pressures in the economy. The supporters of devaluation may argue that since India is now financing her imports largely through institutional aid—the country has, in fact, been sanctioned a larger volume of untied aid from the Aid-India Club recently—the devaluation of the rupee will not raise import costs. However, it is unlikely that the rupee will be devalued in the foreseeable future, firstly because New Delhi may not be willing to admit that the rate of depreciation of the currency has been alarming and secondly because devaluation will create more problems than it will solve.

Although the First National City Bank's review does not say that the world is passing through a phase of secular inflation which has been responsible for the rapid depreciation of currencies, this fact is nevertheless obvious in its analysis, which points to the need for concerted measures for stabilising the value of currencies. In most European countries, for example, the rate of depreciation during the decade has been of the order of 2.5 percent to 4 percent. The dollar has lost value at a slower pace than many Continental currencies. Brazil suffered the most serious loss in purchasing power—43 percent in one year—while the value of Chile's currency shrank by 31 percent and that of Argentina by 20 percent. It is no wonder, therefore, that the severe inflationary problems in these countries have held down their economic growth.

Bank Amalgamation in West Bengal

The move to establish a viable banking unit in West Bengal by amalgamating small banks does not seem to have met with the response it deserves The Metropolitan Bank was amalgamated with the United Industrial Bank on 6th February, 1964, and the Bank of Bankura and the Prabartak Bank were amalgamated with the United Industrial Bank on 6th May, 1964. The amalgamation of the Metropolitan Bank with the United Industrial Bank was effected on the basis that depositors of the former should be given immediate credit up to 70 percent of their deposits and the remaining 30 percent be paid on the realisation of the assets of the said bank. As a result of the amalgamation, the deposit liabilities of the United Industrial Bank have risen by Rs. 48.03 lakhs. After the amalgamation of the Bank of Bankura and the Prabartak Bank with the United Industrial Bank, the latter's deposit liabilities have further increased by Rs. 46.28 lakhs.

The report of the United Industrial Bank for the year ended December 1963, which has just been published, cannot be said to be particularly encouraging. The bank has incurred a loss of Rs. 51,652. Interest paid on deposits amounted to Rs. 4.02 lakhs, while interest and discount earned amounted to Rs. 7.70 lakhs. Deposits stood at Rs. 1.79 crores. The bank reconstructed its capital structure before amalgamation. In order to wipe out the accumulated loss of Rs. 2.10 lakhs, it reduced its subscribed and paid-up capital with the consent of the Calcutta High Court. The capital has been reduced from Rs. 28.03 lakhs to Rs. 14.50 lakhs divided into ordinary shares of Rs. 39 each, fully paid-up. Capital has been reduced to wipe off the loss of Rs. 2.10 lakhs and to provide for depreciation for different assets. The loss took place prior to 1963. The loss of Rs. 51,652 for 1963 has been offset by drawing on reserves which have been reduced from Rs. 3.74 lakhs to Rs. 3.22 lakhs.

The principle of amalgamating small banks with a strong unit is unexceptionable in principle. But a large deposit liability will not by itself ensure the success that is aimed at. If the unit which is formed after amalgamation is to achieve satisfactory progress, it will be necessary to take active steps to improve its working in various ways. Attention should also be paid to improving the services to customers. For example, cashing a cheque at a bank counter is still a great bother to depositors.

Continuing Protection for Caustic Soda

The caustic soda industry has been enjoying protection for over nine years, and its progress during this period has been impressive. From a mere 39,317 tonnes in 1954, the installed capacity of the industry rose to 209,185 tonnes in 1963, and the production of caustic soda during this period rose from 28,993 tonnes to 150,330 tonnes. The quality of the product is, by and large, considered to be satisfactory. The protection granted to the industry is due to expire on 31st December, 1964. The industry has pleaded for the continuance of protection for a further period and the question is now being examined by the Tariff Commission. Manufacturers have argued that the industry will continue to need protection until it reaches self-sufficiency. The industry is still in the process of development. There exists a sizable gap between domestic supply and demand, necessitating large imports. Imports of caustic soda in 1963 were valued at Rs. 3.44 crores, and import prices are lower. Consumers of caustic soda and the office of the Director-General of Technical Development (D.G.T.D.) of the Government of India share the manufacturers' view that the industry deserves protection for a further period of time.

Opening the sixth public enquiry into the question of continuing protection beyond 1964, Dr. R. Balakrishna, member of the Tariff Commission, said that caustic soda being a basic raw material, such questions as the development of the industry,

CALCUTTA-1.

maintenance and enhancement of the productive efficiency, discovery of avenues for fuller utilisation of chlorine, improving the quality of the product and ensuring that the product reaches consumers readily and at reasonable prices, need close attention. He, however, added that as the prices of caustic soda have been decontrolled since 16th December, 1963, the present enquiry was limited only to the issue of protection.

Tracing the progress of the industry since the Tariff Commission's last enquiry in 1961, Dr. Balakrishna said that there were 18 units producing caustic soda in 1961, of which 11 produced for sale and seven for self-consumption. The number of units has since increased to 20 and excepting Saurashtra Chemicals, all the units have adopted the electrolytic process. Between 1961 and 1963, the installed capacity has risen from 143,000 tonnes to 209,185 tonnes. Actual production of caustic soda (on 100 percent NaOH basis) has gone up from 118,646 tonnes to 150,330 tonnes. During this three-year period, the production of caustic soda liquid as well as flakes has registered a progressive rise. Of the total output, the percentage of caustic soda liquid has risen from 53 to 57, and of caustic soda flakes from 6 to 8, while that of caustic soda fused solid has declined from 41 percent to 35 percent. Another development since the last enquiry has been the increase in the output of rayon grade caustic soda from about 44 percent to 47 percent. According to the figures supplied by the Director General of Technical Development, seven existing units have been licensed an additional capacity of 64,200 tonnes, and 14 new units have been licensed with a total capacity of 153,968 tonnes.

Under the conditions obtaining in the country at present, 100 tonnes a day is generally regarded as the technical optimum or the economic size of a caustic soda unit. Dr. Balakrishna has questioned the very validity of the concept of an economic unit. He says that this can vary from unit to unit, depending on whether production is for captive consumption or for sale. In the case of captive units, the optimum unit need not be of 100 tonnes a day capacity. Some of the caustic soda units licensed to paper manufacturers with 10 tonnes capacity were as efficient as the 100-tonne units and their product was low-priced. Dr. Balakrishna said that the question of an optimum unit had to be viewed from many angles. A 100-tonne a day unit was not a necessity from the technical point of view as smaller units could be as efficient. But economies of scale could be derived from the fact that when the unit became larger, capital costs became low and hence there would be lower investment. He felt that when licensing exclusive caustic soda units it would be better to have 100-tonnes a day capacity plants and that the optimum size need not be considered when licensing captive units.

The total estimated demand for caustic soda by various consuming industries, according to the Director General of Technical Development, is placed at 260,000 tonnes in 1964, 295,000 tonnes in 1965, 350,000 tonnes in 1966 and 400,000 tonnes in 1967. The figures supplied by the Alkali Manufacturers Association of India are lower, 245,000 tonnes for 1964 and 366,000 tonnes for 1967. The revised estimated production figures according to the D.G.T.D. are 182,000 tonnes in 1964, 237,000 tonnes in 1965, 304,000 tonnes in 1966 and 330,000 tonnes in 1967. Consumers of caustic soda generally complained against the rise in caustic soda prices after decontrol in December 1963. Manufacturers, however, pointed out that prices had been raised mostly to offset the rise in production costs that had taken place since over a year ago.

Cloth Output and Stocks

Cotton textile output by Indian mills during May is provisionally placed at 383 million yards, compared with 429 million yards in the preceding month and 411 million yards in May 1963. Yarn output also is substantially lower at 159 million lbs, compared with 176 million lbs in April and 164 million lbs in May 1963. The marked fall in production during May has been due almost entirely to more holidays and reduced mill activity following the death of Prime Minister Nehru. The May figures raise the production of cloth and yarn during the first five months of the current year to 2,059 million yards and 856 million lbs, respectively. The corresponding figures for the same period in 1963 were 2,012 million yards and 811 million lbs.

Cloth stocks with the mills at the end of May showed a decline of 11,700 bales (of 1,500 yards each), unsold stocks were down from 97,200 bales to 88,300 bales and there was a fall of 2,800 bales under "sold but delivery not taken" from 152,900 bales to 150,100 bales. Yarn stocks, however, registered a further increase from 102,800 bales (of 400 lbs each) to 107,200 bales.

Shipments of cotton piecegoods from Bombay port, which accounts for nearly 90 percent of the country's total textile exports, during June are provisionally placed at 54.60 million yards, valued at Rs. 5.01 crores. This is the best performance for any month after January 1962. Exports during the first six months of the year amount to 241.96 million yards, valued at Rs. 22.76 crores. The corresponding figures for 1963 and 1962, were 232.16 million yards valued at Rs. 17.14 crores, and 224.69 million yards valued at Rs. 18.09 crores, respectively.

The cotton textile industry's performance during the current year is better than in the previous year, but it is still lagging far behind the plan targets both in production and exports. Against the overall production target of 9,300 million yards for 1965-66, the current level of production is around 8,000 million yards, comprising 4,900 million yards in the mill sector and 3,100 million yards in the decentralised sector. On present indications, it seems highly improbable that the additional production of the order of 1,300 million yards can be achieved in the remaining two years. The planning group for textiles is of the view that since the *per capita* consumption of cloth has not increased as visualised in the plan, and also because cotton textile exports are unlikely to reach the target figure of 850 million yards, the requirements of cotton textiles might be considerably less than envisaged in the plan. It has estimated the requirements at the end of the third plan at 9,000 million yards instead of 9,300 million yards. The share of the organised mill sector has been placed at 5,500 million yards. The maximum output which could be expected by more intensive utilisation of the existing capacity in the mill sector is estimated at 5,000 million yards. In order to achieve production of 5,500 million yards by 1965-66, the planning group has recommended the installation of at least 16,000 additional looms by the end of 1964-65. Yarn requirements for producing 9,000 million yards of cloth are estimated at 2,180 million lbs; current production of yarn is around 1,960 million lbs. As there is little scope for increasing production from the existing capacity, the planning group has recommended that additional capacity of 1 million spindles should be established by the end of 1964-65 in order to ensure the extra output of about 200 million lbs of yarn in 1965-66. The group has also recommended that to the extent the requirements of machinery for the proposed additional capacity cannot be met from indigenous sources, arrangements should be made for importing the requisite machinery. This also holds true of cotton.

Warehousing in West Bengal

The Royal Commission on Agriculture recommended the establishment of a network of warehouses all over the country nearly 30 years ago, but little progress was made in this direction until recently. In 1954 the All India Rural Credit Survey also emphasised the magnitude and urgency of the problem. The West Bengal State Warehousing Corporation, which was established in 1958, has made steady progress in the last six years of its existence. The Corporation has set up warehouses in all the districts of West Bengal, except in Purulia where the Central Warehousing Corporation has a godown. Within the short period of its existence, the Corporation has set up 27 warehouses including a cold storage and four sub-warehouses. During the past two years, the Corporation had to contend with unfavourable circumstances; the credit curb policy of the Reserve Bank, for example, affected its business adversely. Furthermore, uncertain market conditions "as a result of inflationary trends" affected its business. In spite of these adverse factors, the Corporation stored 34,045 tons of agricultural produce in its warehouses during 1963-64. It launched the construction of a warehouse in Alipurduar and purchased godowns and other properties in Siliguri. There is a proposal to set up two godowns in Siliguri, and sites have been selected for constructing warehouses in Ranaghat, Belda and Dinhata. Meanwhile, steps are being taken for acquiring land in these places.

The Corporation has set up a cold storage for potatoes in Tarakeswar in Hooghly district. It is claimed to be the first of its kind to be set up by any Warehousing Corporation in India so far. The Corporation has taken special steps to ensure proper co-ordination among marketing societies, and has distributed fertilisers to agriculturists and tea garden owners in north-eastern India.

Trends in British Insurance

Invested funds of British insurance companies rose from £7,906 million to £8,613 million in 1963. Life funds included in this total increased by a massive £651 million to reach almost £7,200 million at the end of the year. Latest figures giving an analysis of investments at book value provide few, if any, surprises. There has been a further modest increase, from 21.9 percent to 22.2 percent in the proportion of funds held in equities. This is offset by a decline from 19.1 percent to 18.7 percent in the proportion of gilt-edged securities. In absolute terms, the equity holdings rose by £174 million to £1,909 million in the year, while gilt-edged securities were increased from £1,514 million to £1,605 million. The support given to new debenture issues is also reflected in the latest figures. For the first time global figures are disclosed for motor premium income, £391 million, and for aggregate fire losses, over £27 million in 1963. The companies handled 1,957,000 motor claims in Britain last year. This was an increase of 16 percent, although the number of vehicles on the road rose by only 6½ percent. They lost £16 million, 4.1 percent on world motor premiums, 2.8 percent being lost on British business alone. No increase in premiums, however, is contemplated at present. Mr. D. J. R. Evans, the new chairman of the British Insurance Association, takes a confident view of the future. The composite offices should feel the full benefit of last year's rate increases while underwriting losses in recent years have stimulated fresh efforts to improve efficiency.

THE CALCUTTA CORPORATION

THE annual report for the past year by the Chairman of the Municipality has duly been put in type. It is not a very lengthy document and does not throw a great deal of light upon things municipal. We notice that the loan liability of the Corporation has increased from Rs. 3,26,92,090 to Rs. 3,64,29,707; that the annual valuation of the town on March 31st was Rs. 2,48,08,465 and that, therefore, the maximum payable for interest and sinking fund is Rs. 24,80,846, so that the Municipality can borrow a further Rs. 102 lakhs, but if the contribution for repayment of the plague and Government loans is taken into account, their additional borrowing capacity is reduced to Rs. 92,33,700, which we should take it is as much as they should require. There was an increase of Rs. 3,14,848 in the expenditure for the year, of which Rs. 40,305 were on account of pensions and gratuities. The accounts Department is stated to have been reorganised, it is certainly time that this was done, and we must defer remarks on this until we see how the so-called reorganisation works out. We are glad to see the following paragraph in the Report:—"The relative functions of the Corporation and of the General Committee were closely examined and the proper distributions of business between these two co-ordinate authorities was more strictly regulated in accordance with the provisions of the Act. The practice which had grown up by which the General Committee discussed questions within the purview of the Corporation, and made recommendations upon them to the Corporation, was abandoned, and the result has been a prolongation of the Proceedings of the Corporation and an increase in the number of Special Committees appointed." There is an old nautical saying: "Every man to his station and the cook at the foresheet," and we are glad to see that the General Committee will now confine itself to its legitimate business and that questions, which should be dealt with by the Corporation, will not be meddled with by it. This is, indeed, a step in the right direction.

A Ditcher's Diary

HAS IT OCCURRED TO MANY PEOPLE THAT, SINCE Mr. Lal Bahadur Shastri's accession to the office, the Prime Minister's House has been singularly unproductive of windy speeches? I like to think that this is not attributable only to Mr. Shastri's illness about the nature of which unnecessary speculation is still brisk. There is no criticism here of Mr. Nehru's habit of addressing half a dozen meetings a day; his style was his and has to be discussed against the background of his life as a whole. With Mr. Kamaraj as the Congress President, we may be witnessing the Age of Silence in Indian politics. He is a man of very few words, in any language; and what a boon it is. Mr. Shastri may also have seen virtue in silence. To know how to talk is a difficult enough art; to know when not to talk may be even more difficult. Some of the local newspapers recently lamented that the London Press had virtually ignored Mr. T. T. Krishnamachari's statements at the Commonwealth Prime Ministers' conference while President Ayub got a good Press. Well, I am by no means inconsolable. We journalists write because we must. Politicians in office are under no such compulsion. Even as printing notes indefinitely is to court inflation, to speak endlessly is to rob your words of meaning. See what has happened in India to words like "socialism", "integration", "unity" and "emergency". They just don't mean a thing; and this because they have been used so often. Mr. Shastri will be heard with respect only if he speaks when it is necessary to do so and says important things; it may be necessary to repeat them, but this can be done by All India Radio and other agencies. For the rest, Mr. Kamaraj set an admirable example recently in Calcutta at the India Exchange, which reminded me of a mentor of mine. After a formal feast he rose to speak thus: "Gentlemen, I have prepared two speeches for this occasion. I will give you both. The short one is 'Thank you'. The long one is 'Thank you very much'." Then he sat down. Time was when I loved public speeches and walked miles to hear them. Today they bore me and, I am sure, not me alone. I have given up trying to persuade colleagues that what people do is news, not what they say. And look at our newspapers!

SUMMIT CONFERENCES ARE NOW A DOZEN A PENNY; the next time I have an appointment with my barber, I am going to call it either a summit or a confrontation. (Our relations are, in fact, based on a mutually agreed basis of cordial hostility.) At the time of writing, I do not know whether Mr. Moise Tshombe is, after all, going to represent his country at the second African summit at Cairo. If so, he is assured of some cold looks. Perhaps he won't care, as long as Brussels smiles on him; and Brussels does. Think of the man's career. He once wanted only Katanga; and the world would not let him have it. Now he has got the whole of the Congo—after the United Nations has spent some $400 million. Yet I would not write off the whole operation as futile. And if futile it was for the most part, as it appears to have been, many bear responsibility for it. Apart from the obvious saboteurs such as Belgium, Britain and some others, I am still convinced that others are equally to blame. Ghana joined the U.N. Force with alacrity; but soon it became obvious that Dr. Nkrumah's primary inspiration was not upholding the U.N.'s authority. The unfortunate Lumumba erred when he accepted the Osagyefo's advice and, equally, when he did not. And at the United Nations the Africans got together only when the initiative came from the Secretary-General. India provided the largest number of troops; yet she never used the fact to support particular policies in the Congo; too much was left first to the late Mr. Hammarskjoeld and then to the U.N. secretariat. Honourable exceptions apart, U.N. officials are not really quite as supranational as they usually pretend to be. Mr. O'Brien's book has less than complimentary things to say about some Americans and Tunisians at the Congo desk of the U.N. in New York. If I am not uncritical of the U.N., I have even less praise to shower upon what I shall call "aspiring *chhota* U.N.s"—like the Arab League in Cairo, or what the suggested Commonwealth Secretariat will become unless the idea is sat upon heavily and immediately. If I were Tshombe, I wouldn't bother to go to Cairo.

NEVER HAVING TRAVELLED ON A JANATA TRAIN, I don't know how wonderful the experience is. But when I read that the Indian Airlines Corporation was thinking of introducing Janata air services, I wondered why. Are not the existing services Janata enough? You can't buy yourself a drink, or even a packet of cigarettes; the meals are unappetising in the extreme. There is much to be said for reducing international air fares by cutting down the waste involved in pampering passengers of which some airlines seem inordinately proud. In the Soviet Union internal air services are incredibly austere; so they could be in India where the I.A.C. has a monopoly. In Pakistan the helicopter service is said to be very good. Is something comparable feasible in India? Because of the shortage of foreign exchange, Janata air services may not after all come about. The other consideration, I suppose, is that tourists would resent uncomfortable travelling. Speedier travel is certainly to be welcomed; but it seems to me that there is no serious attempt to exploit available resources. India's many rivers have scarcely been used for modern transport. Slow boats still ply. Why not steamers and water buses? Surely India can make them. Road transport remains at a poor level of development. I have never understood why rickshaws in Calcutta cannot be mechanised. It is easy enough to import *Caravelles;* it is far more difficult to make the best use of what we have around us. And that, in my view, is the criterion by which to judge the genius of a people: whether it has made the maximum use of its own resources, mental as well as physical. Look any way you like; and you will find that India is a country of waste; manure is used as fuel. What I am getting at is that we need more down-to-earth thinking on what we have got and what we can make of it.

THE PASSING OF THE CIVIL RIGHTS BILL IS A triumph for President Johnson; there is some doubt whether his predecessor could have done it within the time. Now the difficult stage begins: persuading the southern States to abandon prejudices which over the years have become a way of life. If the negroes continue to conduct themselves with the restraint they have shown so far, the struggle should be a short one. My main anxiety is that in pursuing their statutory rights the negroes may be tempted to resort to force, indeed may successfully be provoked into doing so, in which case the southern whites will have a further excuse for resisting central authority. I have often wondered exactly to what extent "nigger-baiting" in the South is purely the expression of colour prejudice. There is, in fact, much more involved. The white southerners are a proud people, whose defeat in the Civil War a century ago was probably made more humiliating than it need have been. A parallel was the treatment Germany received at Versailles in 1919, and we all know what a complex of hate that engendered. When I visited the South some years ago I was amazed at the depth of feeling which still existed about the Civil War. For a time I thought much of it must be in jest. Then I realised that the resentment of northern domination is still brutally real and that the sentimental memories of the Confederacy remain very much alive. The unfortunate negro, on whose behalf the war was ostensibly fought, has remained the victim of this antagonism between two exclusively white communities for more years than can be numbered since the Civil War. I doubt if the new Bill is going to alter all that for him even if, as I often suspected when talking to white southerners, the

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.

- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.

- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains a number of cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in

- consumer market surveys
- industrial prospecting
- readership analysis
- economic indices
- business research.

colour issue is not really the fundamental one. But whether he does or not, the Bill is timely because at least it must serve to warn the South that the outside world is not prepared indefinitely to see the rights of a minority denied because a few ignorant people are not big enough to forget past grievances. It would be a mistake for the South to regard this Bill as merely another instance of the North's determination to punish it for losing the Civil War, although that is what I suspect it will do.

AS CHAIRMAN OF THE LARGEST PUBLISHING GROUP of companies in the world, the International Publishing Corporation, the views of Mr. Cecil King on the political significance of Britain's newspapers ought at least to be worth pondering. He unburdened himself of them the other day at a shareholders' meeting in London, and since then I have been looking for points on which he and I must disagree. His description of *The Times*, for example, as the "parish magazine of the Establishment" is accurate enough, and the allegation that its political opinions "tend to be so balanced as to be neutral", has a great deal of truth in it. But to say its importance "has much diminished" is, I think, to underrate the extent to which the Establishment and its views still dominate British social and political life. I agree with Mr. King that the *Guardian* was a great paper under C.P. Scott and a good one under Wadsworth, and I am with him when he says that it "is now a very pallid version of what it once was". The trouble with the *Guardian* is that when it dropped "Manchester" from its title and attempted to be all things to all men, it abandoned its *raison d'être*, which was that of expressing the dissenting opinion from outside the capital. There is little wonder it has not succeeded in competing with the London papers on their own ground, although I believe the experiment has not been a financial failure, at least not yet. The *Observer*, Mr. King correctly implies, has never recovered the self-confidence it lost when it chose the wrong side in the Suez controversy—financially the wrong side that is. The *Daily Telegraph*, I must agree, has the best news service in Fleet Street, but I wonder if Mr. King is right in saying that its political comment is "so stodgy as to have no influence on its overwhelmingly Conservative readers". Personally I have always found the *Telegraph*'s comment so banal as to put me off the rest of the paper as well. The *Daily Express*, no doubt, "is a superb journalistic effort", but as Mr. King says its comment is so uncertain that "no political results could reasonably be expected". So far Mr. King's views are much the same as my own. But I do disagree when he says about his own paper, the *Daily Mirror*, that "our readers are more likely to listen to the views of their newspaper than to the views of any other journal". I have never yet met anybody who read the *Mirror* for anything other than entertainment, pure and simple.

THERE SEEMS TO BE A SERIOUS DANGER THAT THE debate on whether or not Lee Oswald did assassinate President Kennedy could eventually become as tiresome as the old question who killed Rasputin. And we all know how that had to be settled: Robert Benchley finally owned up. It would be a terrible finale to such a tragic incident if the Kennedy shooting were ever to become the subject of humour. No chance for the next few years perhaps; the world was too upset by what happened in Dallas last November. But if the question is not answered satisfactorily, if it is allowed to go on being anybody's guess for the next decade or so, then eventually that could be the outcome. Just now it is providing too many opportunities for morbid speculation such as cannot fail to attract cranks, busybodies and money-spinning writers in ever increasing numbers. I realise that the Warren Commission has not yet finished its deliberations, and that matters of such delicacy cannot in any way be rushed. But the need now for the steadying influence of an authoritative judgment has become urgent, and one can only hope for the sake of a great man's memory that it will not be long delayed.

THE DITCHER

Guide for Investors

CEMENT SHARES DEPRESSED DESPITE PRICE INCREASE

(BY A SPECIAL CORRESPONDENT)

INVESTORS in cement shares have not been impressed by the latest increase in the price of cement sanctioned by the Government. So these shares continue to be sluggish. The price of Ashoka Cement has dropped from Rs. 7.31 to Rs. 6.75 over the past year, that of Orissa Cement from Rs. 13.75 to Rs. 13 and that of Sone Valley from Rs. 4.56 to Rs. 4.25. The disappointment has been largely due to two factors. First, the increase is inadequate to compensate the producers for the higher costs resulting from enhanced fuel and transport charges and from governmental action. Secondly, the increase has been made effective only from 1st July, 1964. The price was last raised on 1st June, 1963, so the producers do not get the benefit of the present price increase for the period before 1st July, 1964, although production costs rose substantially during this period. The entire procedure for adjusting the price to cope with increased production costs is unsatisfactory.

As a result of the unrealistic price structure, production has suffered. While the outlook for the commodity is far from encouraging, the present demand has been much in excess of supply. It looks as though the shortage will continue for a long time. The present output capacity amounts to only 10.1 million tons; this is likely to be raised to 14.6 million tons in the course of the next few months. It is highly unlikely that the third plan output capacity for 15.2 million tons will be achieved by 1966, while the demand by that time may have gone up to 16.84 million tons. Since cement is essential for implementing the housing and construction programmes visualised in the third plan, vigorous remedial measures for stimulating the output of cement should be urgently taken. A great deal of the commodity is also required for defence needs.

The producers, apart from feeling discouraged to increase production due to the unrealistic price policy, also lack funds to finance expansion and modernisation. Due to the low profitability, they have not been able to conserve sufficient resources for expansion. It has also not been possible for cement companies to raise funds from the market in the present conditions. Because of their low profitability, first class cement companies have been forced to pay dividends out of reserves in recent years.

Indian Copper Earns More

INDIAN Copper Corporation Ltd has earned a trading profit of £1,384,875 for the year ended December 1963, compared with one of £1,351,771 for 1962, after providing £71,182 (against £82,590) for managing agents' remuneration and meeting other charges. A taxable ordinary dividend of 12 percent has been declared to absorb £98,000. The yield amounts to about 5 percent at the present price of Rs. 3.30 a share of 2s each. A taxable ordinary dividend of 18 percent was paid for 1962, but the share capital has, meanwhile, been raised from £1,371,300 to £2,056,950 by issuing bonus shares in the proportion of one bonus share for every two held. Depreciation is allocated £170,000 (the same), development rebate reserve £26,597 (against £15,136), provision for decretal amount under kyanite suit £21,694 (against £50,788) and taxation £821,855 (against £742,378). Out of the tax provision, surtax absorbs £86,250 while the super profits tax was allocated £129,427 for 1962. General reserve receives £98,000 (against £195,000). The carry-forward is £465, against £570 brought in.

Sales rose from £4,976,934 to £5,162,285. Total ore reserves for all mines amounted to 3,929,789 tonnes, against 3,927,687 tonnes. The mill treated 464,420 dry tonnes of ore, against 478,014 tonnes. About 38,712 dry tonnes of concentrate were produced, against 37,697 tonnes. Refined copper amounting to 9,582 tonnes, against 9,781 tonnes, was produced. The overall recovery from ore of refined copper amounted to 92.403 percent, against 92.90 percent. The construction of the new electrolytic refinery has been delayed due partly to difficulties in obtaining import licences and partly because of irregular supplies of cement, steel and roofing materials. The project is expected to be completed by September 1964. Rolled production, including 1,222 tonnes of copper sheets and strips, amounted to 10,598 tonnes, against 9,739 tonnes. A quantity of 14,029 tonnes, including 2,057 tonnes of refined copper ingots, was despatched for sale, against 12,653 tonnes, including 3,019 tonnes of refined copper ingots. The average selling prices for rolled brass and rolled copper increased. The overall operating cost to produce 1 metric tonne of refined copper amounted to £179, against £172. The sale of kyanite dropped from 33,184 tonnes to 21,597 tonnes, following the slump in world markets due to the recession in the steel industry.

Tata Steel Raises Dividend Again

THE Tata Iron and Steel Company has stepped up the dividend for the year ended March 1964 from Rs. 11 to Rs. 12 a share (Rs. 75 paid up). The increase in the dividend for the second year in succession reflects as much the improvement in the Company's working results as a change in the management's attitude towards its shareholders who have long been denied the benefit of the Company's large expansion. The preliminary report on the working of the Company shows that it has fared better during 1963-64 than in the preceding year, with both sales and profit recording further improvement.

Sales have gone up from Rs. 99.53 crores to Rs. 110.44 crores. The gross profit has increased from Rs. 22.21 crores to Rs. 23.65 crores. The performance looks less impressive when due allowance is made for the amount of Rs. 80.58 lakhs for which credit has been taken in the 1963-64 accounts, but which actually relates to the previous year. An encouraging feature of the year's results is that for the first time in six years, the Company has not withdrawn any amount from the reserves in order to meet the dividend obligation. The directors have, in fact, transferred a sizable amount to the general reserve which has been possible because of the reduction in the allocation to the development rebate reserve.

Appropriations include depreciation Rs. 797 crores (against Rs. 7.70 crores), additional depreciation nil (against 3.95 crores), development rebate reserve Rs. 1 crore (against Rs. 8.70 crores), taxation Rs. 4.75 crores (against Rs. 80 lakhs), deferred taxation reserve Rs. 2.70 crores (against nil), general reserve Rs. 2.75 crores (against nil) and dividend reserve Rs. 5.25 crores (against Rs. 4.90 crores). Preference dividend absorbing Rs. 94.39 lakhs (against same) and equity dividend absorbing Rs. 4.409 crores (against Rs. 4.042 crores) will be paid from the dividend reserve. After making various allocations, there remains a balance of Rs. 2.44 lakhs to be carried forward, against Rs. 32,000 brought in. It might be mentioned here that in the preceding year, the directors had withdrawn a sum of Rs. 3.84 crores from reserves for paying dividend. Tata Steel shares are currently quoted around Rs. 156.50, offering a gross return of a little over 8 percent.

Larsen and Toubro Results Impress

LARSEN and Toubro Ltd has raised the dividend for the year ended March 1964 from 14 percent to 15 percent. The proposed dividend is payable on the higher equity capital of Rs. 1.65 crores as increased by the rights issue of 550,000 equity shares. These additional shares fully paid-up in August 1962 are entitled to a full year's dividend in 1963-64. The total equity dividend works out to Rs. 24.75 lakhs, compared with Rs. 19.25 lakhs in the previous year. The increase in the dividend is fully justified by the Company's impressive performance during the year. Sales have gone up by about 41 percent from Rs. 5.82 crores to Rs. 8.20 crores and the other income is up by 24 percent from Rs. 70.73 lakhs to Rs. 87.74 lakhs. The gross profit has shot up by nearly 68 percent from Rs. 70.25 lakhs to Rs. 1.18 crores.

The Company's impressive results are due largely to the improved performance of its workshops in Powai where output is stated to have increased by as much as 62 percent over the previous year. Production has, in fact, more than trebled in the last three years. With all the production units in Powai having either reached or exceeded their targets, there has been a reduction in the cost of production in spite of a rise in the cost of labour, raw materials, power, etcetera. Encouraged by its rapid growth, the Company has embarked upon a three-year expansion programme to increase production and sales to meet the rising demand for high quality engineering products and skilled engineering services. The expansion programme will be financed partly by the proposed rights issue of Rs. 79.20 lakhs in 660,000 equity shares of Rs. 10 each at a premium of Rs. 2 a share. The Company has also obtained additional cash credit facilities from its bankers and intends to make arrangements for medium and long-term loans later in the year or early next year.

Appropriations of the year's gross profit of Rs. 1.18 crores (against Rs. 70.25 lakhs) include the managing agents' commission Rs. 6.25 lakhs (against Rs. 4.08 lakhs), depreciation Rs. 18.46 lakhs (against Rs. 14.64 lakhs), development rebate reserve Rs. 4.46 lakhs (against Rs. 3.23 lakhs), taxation Rs. 50.50 lakhs (against Rs. 24.40 lakhs), reserves Rs. 12.08 lakhs (against Rs. 5.06 lakhs), preference dividend Rs. 97.500 (the same) and equity dividend Rs. 24.75 lakhs (against Rs. 19.25 lakhs). It is stated that if the dividend tax is continued, the dividend for 1963-64 will increase the Company's current year's tax liability by Rs. 1.85 lakhs which works out to more than 1 percent of the equity capital. The Rs. 10-paid share of Larsen and Toubro is quoted around Rs. 21.32, offering a gross return of a little over 7 percent.

Tata Oil Cuts Dividend

THE Tata Oil Mills fared badly during the year ended March 1964. Despite an increase of about 7 percent in the sales from Rs. 12.89 crores to Rs. 13.80 crores, the gross profit fell by nearly 30 percent from Rs. 70.82 lakhs to Rs. 49.76 lakhs, and the management had to reduce the dividend from Rs. 5.50 to Rs. 3 a share. The shareholders have, however, been compensated for the dividend cut by a one-for-three bonus issue. The directors state in their report that the production of both laundry and toilet soaps was maintained at the previous year's level, but the total sales of branded products in 1963-64 recorded only a nominal increase of about Rs. 7 lakhs over the year. This was in spite of an increase of 23 percent in the sale value of toilet soap. The major setback occurred in the sales of laundry soap, which constitutes about 55 percent of the total sales of the Company's branded products, and glycerine. Sales of *vanaspati* increased by about 5 percent, but a large portion of the hydrogenated capacity, both at Tatapuram and Bombay, was

used to produce hard fat required for the manufacture of soap. Total exports of the Company rose to Rs. 2.40 crores, reflecting an increase of nearly Rs. 80 lakhs over the year, of which Rs. 70 lakhs consisted of increased groundnut oil exports.

The directors have attributed the setback in the Company's trading results in 1963-64 to a number of factors, most of which resulted from Government policies or actions. The cost of raw materials increased considerably because of further rise in the price of Indian oils, but mainly because of the loss suffered on the larger exports of groundnut oil which have become necessary in order to earn import entitlements for raw materials obtained from abroad. The Company exported 10,333 tonnes of groundnut oil during 1963-64, against 5,747 tonnes in the previous year. This had the effect of increasing the cost of raw materials by Rs. 25 lakhs. The excise duty burden cost an extra Rs. 21 lakhs during 1963-64. While the cost of production increased, the Company was unable to raise the selling prices of its products due to Government restrictions. The Company has thus been trebly squeezed between soaring raw material and manufacturing costs, heavy taxation and inadequate selling prices.

However, in his statement to the shareholders which has been attached to the directors' report, the chairman, Mr. J. R. D. Tata, has expressed the hope that the Company will be able to report better results for the current year which will enable the management at least to maintain the present dividend on a capital which will then be one-third larger because of the one-for-three bonus issue. The Company's future depends on the extent to which it is able to reduce its vulnerability to the many factors over which it has no control and to increase the profitability of its operations. The chairman has assured the shareholders that the management is doing everything possible to reduce the cost of production, and these efforts are beginning to show results. As a result of the constant modernisation of the equipment, it has been able to reduce manufacturing costs not only through increased efficiency of the new equipment, but through improved processes and more economical blends of raw materials.

Unfortunately, soap, which is a high volume and low profit product throughout the world, constitutes two-thirds of the Company's operations. In the conditions prevailing in the country today and likely to prevail for many years to come, this makes the Company unduly dependent on a single product highly vulnerable to factors beyond its control. Therefore, while pursuing the programme aimed at modernising and increasing the efficiency of soap-making machinery, the Company is seeking to diversify its activities in the manufacture of products providing higher profit margins and seeking fresh and less vulnerable sources of revenue. In fact, this policy was started some years ago with the launching of Industrial Perfumes Ltd, Lakme, taking of sales agencies and a substantial participation in Tata-Finlay Ltd. This process is being continued and fresh opportunities are being sought to diversify into new sound and profitable lines and distribution.

Tata-Finlay has begun its operations, and it has undertaken two separate projects more or less simultaneously. The first one involving the setting up of a tea packaging factory in Bangalore and sale of Tata-Finlay tea went into operation in February. The second project is the manufacture of soluble instant tea powder in Munar (Kerala State). The factory is nearing completion and production is likely to start before the end of 1964. The whole of the output of instant tea will be exported to America and marketed there as a packed and branded product. Instant tea is likely to be introduced on the American market in the spring of 1965. Mr. Tata has expressed the hope that the venture will be a profitable one for Tata-Finlay and, therefore, for Tata Oils as a principal shareholder in that Company. Lakme has shown improvement in both sales and profits, and this trend is expected to be maintained in coming years. In the not too distant future, Lakme is expected to make an important contribution to Tata Oil's profits.

More from Kesoram Industries

KESORAM Industries and Cotton Mills Ltd has published the preliminary working results for the year ended March 1963. The gross profit has risen from Rs. 2.01 crores for 1962-63 to Rs. 2.70 crores for 1963-64. Depreciation absorbs Rs. 95.28 lakhs (against Rs. 82.49 lakhs). The taxable ordinary dividend has been increased from 13 percent to 15 percent. It offers a yield of 5.7 percent at the present price of Rs. 26.50 a share of Rs. 10 each. Taxation is allocated Rs. 53 lakhs (against Rs. 8 lakhs), development rebate reserve Rs. 4.78 lakhs (against Rs. 3.21 lakhs) and general reserve Rs. 55 lakhs (against Rs. 22 lakhs).

Digvijay Woollen Pays More

SHREE Digvijay Woollen Mills Ltd has reported encouraging results for the year ended March 1964. Sales have risen by nearly 22 percent from Rs. 1.51 crores to Rs. 1.85 crores, of which goods supplied to the defence forces fetched as much as Rs. 88 lakhs. The gross profit is up by about 14 percent from Rs. 41.76 lakhs to Rs. 47.54 lakhs. The dividend has been raised from 17 percent to 18 percent. The dividend for 1963-64 is payable on the increased capital, the new shares ranking for proportionate dividend for five months which amounts to Rs. 75 paise a share, against Rs. 1.80 a share on old shares. After providing Rs. 2.24 lakhs (against Rs. 1.36 lakhs) for depreciation, Rs. 1.79 lakhs (against Rs. 35,320) for development rebate, Rs. 28.50 lakhs (against Rs. 27 lakhs) for taxation, Rs. 5 lakhs (the same) for special reserve, Rs. 1.72 lakhs (the same) for preference dividend and Rs. 7.93 lakhs (against Rs. 6.79 lakhs) for equity dividend, there remains a balance of Rs. 40,584 to be carried forward, against Rs. 53,463 brought in. The directors state that there has been delay in the implementation of the modernisation programme due to the foreign exchange shortage. The Company installed imported machinery worth Rs. 9 lakhs during 1963-64 and it has placed orders for more machinery valued around Rs. 23 lakhs. The directors have drawn attention to the difficulties in securing imported raw materials. In order to achieve the production targets set in the third plan, the woollen industry requires imported raw materials of the value of Rs. 25 crores a year. Against this, import licences issued during the year ended September 1963 totalled only Rs. 9 crores and the licences granted for the year ended September 1964 are placed around Rs. 6.5 crores. The directors have expressed the hope that in view of the increased defence requirements, the industry will be given all the help it needs from the Government.

Britannia Biscuit Maintains

THE Britannia Biscuit Co. Ltd has repeated the taxable ordinary dividend of 21 percent, including a final dividend of 15 percent, for the year ended March 1964. The yield works out to 5.5 percent at the present price of Rs. 38 a share of Rs. 10 each. The net profit has improved from Rs. 27.52 lakhs for 1962-63 to

THE E.I.D.-PARRY GROUP
1964

FOREIGN EXCHANGE AND PARRYS

FOREIGN EXCHANGE* — the most important factor in the country's economy today—is also the most important factor in the E.I.D.—Parry Group's plans for brighter and better tomorrows.

The production of fertilisers provides a good example of the E.I.D.—Parry Group's contribution towards increased food production and towards conserving foreign exchange by reducing the volume of fertiliser imports. In 1963/64 the Government have set aside no less than Rs. 40 crores for the import of fertilisers to meet the deficiency between indigenous production and total demand. During the same period the E.I.D.—Parry Group will produce and distribute about 250,000 tons of fertilisers, which figure will be further increased by expansion programmes during the Third Plan period.

Other manufactures of this Group of nine companies of substance include sugar, confectionery, sanitaryware, acids, chemicals, carbonic acid gas and industrial and potable alcohol.

THE E.I.D.—PARRY GROUP, MADRAS

EDS-PP 348 A

Rs. 31.56 lakhs for 1963-64. Taxation is allocated Rs. 60.60 lakhs.

Baroda Spinning Incurs Loss

THE Baroda Spinning and Weaving Co. Ltd has skipped the dividend for 1963 because of its disappointing performance during the year. The Company had paid a dividend of Rs. 18 a share in 1961 and this was reduced to Rs. 12 in 1962. The working results for 1963 show a loss of Rs. 3.40 lakhs, against a gross profit of Rs. 5.79 lakhs in 1962. The managing agents have not charged their minimum commission of Rs. 40,000. Provision for depreciation is higher at Rs. 4.11 lakhs, against Rs. 3.92 lakhs and Rs. 1.13 lakhs has been provided for bonus for 1961. After making these appropriations and certain minor adjustments, the net loss to be carried forward amounts to Rs. 8.71 lakhs.

McLeod Cuts Dividend

THE profit of McLeod and Co. Ltd has dropped from Rs. 25.29 lakhs for 1962 to Rs. 22.04 lakhs for the year ended December 1963, largely due to the reduced dividend incomes from the miscellaneous trading and tea departments. The revenue from jute mills, insurance and shipping departments has been slightly larger, but the agency and railway departments have earned less. The income from the engineering department has been almost maintained. The taxable ordinary dividend has been reduced from 18 percent to 15 percent which works out to a yield of 7 percent at the present price of Rs. 213 a share of Rs. 100 each. Depreciation absorbs Rs. 1.21 lakhs (the same), taxation Rs. 7 lakhs (against Rs. 7.75 lakhs) and surtax on profits Rs. 60,000. Reserve absorbs Rs. 2.24 lakhs (against Rs. 8.60 lakhs). Sales rose from Rs. 2.87 crores to Rs. 3.05 crores.

Britannia Engineering Pays Less

THE gross profit of Britannia Engineering Co. Ltd has amounted to Rs. 38.75 lakhs for the year ended December 1963, compared with a profit of Rs. 36.36 lakhs for 1962. Depreciation absorbs Rs. 15.65 lakhs (against Rs. 12.19 lakhs). The taxable ordinary dividend has been reduced from 10 percent to 9 percent which works out to a yield of 9.1 percent at the present price of Rs. 9.94 a share of Rs. 10 each. Taxation is allocated Rs. 10 lakhs (against Rs. 9.10 lakhs). Sales rose from Rs. 3.52 crores to Rs. 3.72 crores, but the margin of profit dropped due to increased production costs. Working was also interrupted by a strike during the latter half of 1963.

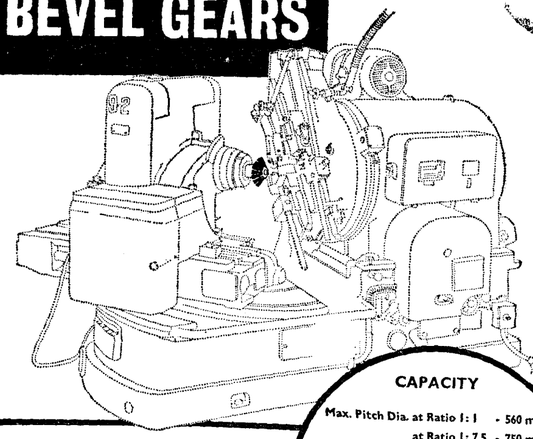
Kalyanpur Lime and Cement Maintains

KALYANPUR Lime and Cement Works Ltd has maintained the taxable ordinary dividend at 8 percent for 1963, and the arrears of cumulative preference dividends up to 1963 have been paid. The gross profit has amounted to 27.06 lakhs, against Rs. 26.75 lakhs for 1962. Depreciation is allocated Rs. 7.16 lakhs (against Rs. 6.80 lakhs). Sales rose from Rs 1.66 crores to Rs. 1.78 crores. The Company has undertaken an expansion scheme to increase the output capacity for cement by 200,000 tonnes a year. The project is likely to be completed by the middle of 1966. The directors hope that the profit will improve when the expansion projects are completed. It is proposed to raise fresh share capital for Rs. 77 lakhs to finance expansion. A loan of Rs. 1.25 crores is likely to be obtained from the Industrial Finance Corporation, out of which Rs 16.25 lakhs will be in dollars and Rs. 19.75 lakhs in West German currency. The remaining Rs. 45 lakhs will be taken in rupees. The Industrial Finance Corporation has agreed to underwrite preference shares for Rs. 5 lakhs.

General Investment and Trust Repeats

THE General Investment and Trust Co. Ltd has repeated the taxable ordinary dividend of 5 percent for the year ended 29th February, 1964. The yield works out to 1.6 percent at the present price of Rs. 31 a share of Rs. 100 each. The profit has dropped from Rs 41,266 for 1962-63 to Rs. 14,961 for 1963-64, after providing Rs. 11,502 (against Rs. 10,162) for taxation. The carry-forward is Rs. 42, against Rs 4,826 brought in. The total market value of the investment portfolio has exceeded the book value by Rs. 1.23 lakhs on 29th February, 1964.

New Capital Issues



TEN companies have been authorised to raise fresh capital exceeding Rs. 7.76 crores. Of these, one will be issuing bonus shares, three will be issuing equity shares and six are floating equities plus preference shares. Four of these companies involve foreign collaboration. Two companies will be offering part of their shares to the public by prospectus The consent of the Controller of Capital Issues is valid for 12 months in all cases excepting one in which case it is valid only up to 8th April, 1965. The following are the details:

India Paper Pulp Company Ltd, Calcutta, is to issue bonus shares of the value of Rs. 35,28,000 divided into 352,800 equity shares of Rs. 10 each, on capitalisation of the share premium account to a like extent. The bonus shares will be offered at the ratio of two shares for every five shares held. The Company is engaged in the business of paper and paper board manufacture.

Food Specialities Ltd, Delhi, engaged in the manufacture of sweetened milk, baby foods, etcetera, is to issue further capital of Rs. 1,20,00,000 divided into 120,000 equity shares of Rs. 100 each. Out of this, shares of the value not exceeding Rs. 84 lakhs (70 percent)—Rs. 72 lakhs for consideration other than cash against import of plant and equipment and Rs. 12 lakhs for cash—will be offered to Nestle's Holdings Ltd., Nassau, Bahama Islands and the balance of Rs. 36 lakhs (30 percent) to the existing Indian shareholders, for cash at par. The money will be used for financing the setting up of a plant for the manufacture of a new item, namely, instant soluable tea direct from green leaves.

Indodan Milk Products Ltd, Calcutta, a public limited Company engaged in the business of processing milk food and other products allied thereto, is to issue capital of Rs. 34.93 lakhs divided into equity shares of Rs. 100 each for cash at par. Out of the issue, such number of shares as would enable the Company's scrip

WHICH HOLDS THE GREATER LOAD?

Modern construction projects, require scaffolding of far greater strength and safety than bamboo tied with coir.

Unaffected by rot, fungus and termites, Mills tubular scaffolding has a versatile use—storage racks, temporary buildings, open-air auditoriums or bridges—apart from its normal use as a construction aid.

The special spring-steel fittings quickly secure the tubes—with a ½" spanner as the only tool needed. The greater the load the firmer the grip of the fittings, since they are designed on the 'shackle grip' principle.

All fittings are made by Guest, Keen, Williams, Ltd. and the tubes by The Indian Tube Co. (1953) Ltd.

being listed on recognised stock exchanges, will be offered to the public by a prospectus. The capital will be used for financing the existing activities of the Company.

Aluminium Corporation of India Ltd, Calcutta, an existing Company, will be issuing further capital of Rs. 42,81,250 for cash at par, consisting of Rs. 17,81,250 in equity shares of Rs. 10 each and Rs. 25 lakhs in 25,000 9.3 percent cumulative redeemable preference shares of Rs. 100 each. The money will be used for financing the expansion involved in the manufacture of virgin aluminium ingots, sheets, circles, etcetera.

Usha Hunger Hydraulics Ltd, Calcutta, a new Company, is to issue capital of Rs. 28 lakhs consisting of Rs. 20 lakhs in equity shares of Rs. 10 each and Rs. 8 lakhs in 9.5 percent cumulative redeemable preference shares of Rs. 100 each. Out of these, equity shares of the value of Rs. 5.2 lakhs—Rs. 1.2 lakhs against technical know-how and Rs. 4 lakhs against supply of machines, tools, jigs, fixtures etcetera—will be offered for subscription to Walter Hunger International, GmbH, West Germany. The capital will be used for the manufacture of hydraulic and mechanical tipping gears for automobiles.

Republic Forge Co. Ltd, Hyderabad, is to issue capital for cash at par of Rs. 1,47,60,000 consisting of equity shares of Rs. 100 each of the total value of Rs. 112.60 lakhs and 35,000 cumulative redeemable preference shares of Rs. 100 each carrying dividend at 9.3 percent free of Company's tax but subject to deduction of taxes at source at prescribed rates. The money will be used for the establishment of a forge plant in collaboration with Renault Engineering Co. of Paris. This consent is in supersession of the earlier consent dated 9th February, 1962, and is valid for 12 months.

Usran Electronics Ltd, Bombay, a public Company registered on 21st January, 1964, for the manufacture of carbon resistors, is to issue capital of Rs. 35 lakhs including Rs. 7,38,500 already issued (privately) in equity shares of Rs. 100 each, for cash at par.

Prima Particle Board Corporation Ltd, Gujarat, will be issuing Rs. 40,00,000 divided into 300,000 equity shares of Rs. 10 each, and 10,000 9.3 percent preference shares of Rs. 100 each. The money will be used for the manufacture of chipboards.

Shamsher Sterling Cable Corporation Ltd, Bombay, engaged in the manufacture of rubber insulated wires and cables, is to issue further capital of Rs. 35 lakhs divided into 50,000 equity and 20,000 9.5 percent cumulative redeemable preference shares of Rs. 50 each, for cash at par, of which equity shares of the value of Rs. 12.5 lakhs will be allotted as to Rs. 3.5 lakhs to Showa Electric Wire and Cable Company Ltd., Japan, and Rs. 9.0 lakhs to Mitsui and Company Ltd., Japan. The capital will be utilized for financing expansion of the existing activities of the Company.

Central Pulp Mills Ltd, Poona, who was accorded consent on 8th April, 1964, to issue capital of Rs. 245 lakhs have now been allowed to increase the said amount to Rs. 257.50 lakhs divided into 176,250 equity and 81,250 cumulative redeemable preference shares of Rs. 100 each, carrying dividend at 9.3 percent per annum, for cash at par. Out of the issue, such number of each kind of shares, as would qualify the scrip to be listed on recognised stock exchanges, will be offered to the public by prospectus. The consent is valid up to 8th April, 1965 only.

The Stock Markets

INDIAN IRON FALL ON DIVIDEND UNCERTAINTIES

Wednesday Evening.

THE Calcutta stock market has been quiet during the past week. The prices of clearing shares in particular have dropped on tired bull liquidation, combined with bear pressure. The decline in the prices of Indian Iron has been a major damper. Bulls have preferred to keep their commitments light because of uncertainty concerning the size of the Indian Iron dividend for 1963-64, which is expected to be announced next Friday. Although steel shares were supported earlier due to the increase in the Tata Steel dividend for 1963-64 from Rs. 11 to Rs. 12 a share, taxable, the rally proved temporary. Operators are disappointed that T.I.S.C.O.'s profit has fallen short of general expectations. The clearing on Wednesday passed off smoothly and carry-forward charges were moderate.

Business is largely confined to clearing shares. Interest in cash scrip is negligible and their prices have generally dropped. An appreciable part of the investible funds has begun to flow into the Unit Trust. The new loans of the Central Government have also mopped up considerable funds. Lyons Range is disturbed by the decision of commercial banks to increase their lending rates. It is feared that industrial production costs will rise further, so the profitability of companies will suffer. The prospects for an increased flow of bank credit into the stock market during the current slack season are considered poor, since the Reserve Bank has been keen on regulating bank advances. In any case, the banking community has been cautious in view of the fact that increased liquidity requirements have to be complied with by September 1964.

The corporate news is fairly encouraging. India Paper Pulp will soon issue bonus shares in the proportion of two shares for every five held. Kesoram Industries and Cotton Mills have increased the ordinary dividend. Investors are, however, reluctant to increase their commitments in industrial equities in view of the discouraging outlook. Industrial workers have begun to agitate for higher wages because of the increased cost of living. India's balance of payments still looks unhealthy. In the political sphere, the future of Indo-Pakistani relations remains as uncertain as ever. The deliberations of the Commonwealth Prime Ministers' conference are being watched with keen interest.

Indian Iron have fallen back due to profit-taking, combined with short-selling. Among engineering shares, Burn have been steady while Texmaco, Guest, Keen, Williams and Jessop have lost. Braithwaite have met with scattered support. In the miscellaneous section, attention has centred on clearing shares. Kesoram Industries have been supported on a higher dividend. Union Carbide, Metal Box and Alkali Chemical have been steady. Among managing agency shares, Martin Burn and Jardine Henderson have been taken. There has been little interest in electric company and bank shares. Orient have been prominent in paper shares. Seshasayee and India Paper Pulp have attracted scattered support. Sugar shares have been neglected.

Birla have been a steady feature in jute shares on diversification prospects. Turnover in jute scrip has however, shrunk due to sluggish overseas enquiries for jute goods. Barnagore, Champdany, Anglo-India and Kinnison have been taken. Stray business in coal shares has been done, but prices have tended to drop. Central India, Burrakur and Bengal have changed hands. Cotton mill shares have been steady in view of the new control scheme recommended by the Cotton Textiles Consultative Committee. Bharat Commerce, Elgin, Dunbar and Jay Shree Textiles have changed hands. J. K. Rayon have reacted due to profit-taking. In selected Assam and Dooars gardens, a small business has been transacted, but fluctuations have been narrow. Patrakola have been a steady feature.

Government securities are very steady, although turnover is limited. The list for the two new loans issued by the Government of India opened last Monday. The response is reported to be satisfactory. The short-dated 4 percent Loan 1970 has met with good support from banks. The 3 percent Conversion Loan 1986 has been quoted at Rs. 63.80.

Bombay

SHARES SLUGGISH IN SMALL TURNOVER

TATA STEEL PROFIT FIGURES DISAPPOINT

Wednesday Evening.

THE Bombay stock market has been sluggish during the past week. There has been an appreciable decline in the prices of clearing shares due to profit-taking. When the dividend of the Tata Iron and Steel Company for 1963-64 was declared, bulls hurried to take their profits, although the taxable ordinary dividend of the Company has been increased from Rs. 11 to Rs. 12 a share. Holders have been disappointed with the profit figure which has fallen below market expectations. Prices of other clearing scrip have been marked down as a result of the recession in steel shares. Towards the close, turnover has shrunk considerably and operators have been disinclined to extend commitments. Business in cash shares has been negligible, and their prices have also dropped.

Dalal Street has felt the growing shortage of funds. In spite of the flow of funds into the banking system following the advent of the slack season, commercial banks have not been keen on increasing their credit to the stock market. The decision of the Reserve Bank to restrict advances against vegetable oils and oilseeds has made operators cautious. The response for units of the Unit Trust has been satisfactory. Small and medium investors, in particular, have tended to divert their funds to investing in these units.

Tata Steel ordinary have declined to Rs. 156 towards the close. Among engineering shares, Tata Engineering have been about steady since the chairman of the Company hinted that the dividend would be maintained even on the increased capital. The Company's prospect of getting dollar loans for expansion has been bullishly interpreted. Larsen and Toubro have been steady due to the payment of a higher dividend. Mukand Iron, Premier Construction and Alcock Ashdown have been quiet. Among motor-vehicle shares, Hindustan Motors have reacted due to profit-taking, while Premier Automobiles have been steady on hopes of a good dividend.

Cotton mill shares have shown losses all round towards the close due to profit-taking. Century, Bombay Dyeing, Standard, Svadeshi and Gokak have declined. India United ordinary, Central India and Morarjee have been sold at lower prices. Investors have preferred to wait until the decision of the Government on partial control of cloth is announced.

Turnover in miscellaneous shares has been small. In cement shares, Digvijay have been steady on hopes

of expansion, but Associated Cement have been sluggish. Among steamship company shares, Scindia Steam have lost on profit-taking. In mining scrip, Be Be Petrol and Shivrajpur Syndicate have dropped. Among sugar shares, Belapur, Walchandnagar Industries and Phaltan have been quiet.

Chemical shares have turned quiet. Tata Chemical and Indian Dyestuff have declined. Voltas and Tata Oil have been about steady. National Rayon have reacted due to profit-taking. Business in bank shares has been negligible, but prices have shown little change. Bank of India and Bank of Baroda have been transacted. Electric company shares have been steady. Support has been forthcoming for Ahmedabad, Tata Power and Tata Hydro.

Madras

SHARES FALL ON EASIER BOMBAY ADVICES

LIFTING OF POWER CUTS FAILS TO ENTHUSE

Tuesday Evening.

THERE has been an appreciable drop in turnover in the Madras stock market during the past week. Because of easier advices from Dalal Street, the prices of shares, especially of clearing shares, have tended to decline on profit-taking. In spite of the restoration of power cuts, investors have tended to be cautious. Attention has, for the time being, been diverted to units of the Unit Trust and their sale has met with good response.

Selected State Government loans have been bought in spite of good enquiries for high-yielding preference shares and debentures. Little business has been done due to the shortage of sellers. Bank shares have been steady. Syndicate Bank have been bought up to Rs. 143.50 and Canara Bank have been taken at Rs. 77. Selected sugar shares have improved on balance. Deccan have risen to Rs. 12.65 on prospects of a bonus issue. E.I.D. have been taken at Rs. 35.75 and Mysore at Rs. 28.33. Travancore have been supported at Rs. 7.20 on prospects of a bonus issue. India have been done at Rs. 9.10 and K.C.P. at Rs. 24. In electric companies, West Coast have been steady at Rs. 13.50 on prospects of further compensation which is likely to be paid by the State Government. Cochin have changed hands at Rs. 12.42.

Planting shares have been sluggish, although selected rubber and coffee shares have been taken. Blue Mountain have been quoted at Rs. 2.34 and Cochin Malabar at Rs. 6.35. Consolidated Coffee have gained at Rs. 23.40 and Ouchterlony have been done at Rs. 3.55. Periakaramalai have been quoted at Rs. 3.44. In rubber shares, Nenmeny have improved to Rs. 22.55 on declaring a taxable ordinary dividend of 10 percent. Peninsular have come to hand at Rs. 21.25 on declaring a taxable ordinary dividend of 20 percent. Shares of gardens producing both tea and coffee have been selectively bought. Balanoor have changed hands at Rs. 12.12 on paying a taxable ordinary dividend of 10 percent. Devon have been done at Rs. 11.96 on declaring a taxable ordinary dividend of 12 percent. In cash shares, Coffee Lands have been steady at Rs. 16.75, Rajendra at Rs. 10.42 and Sheveroy at Rs. 2.05.

Among textile shares, South India Viscose have reacted to Rs. 119.50 and Travancore Rayon to Rs. 22.35. Lakshmi have been done at Rs. 137 and Madura at Rs. 33. Buckingham have been taken at Rs. 272 and Bangalore Woollen at Rs. 263. Premier have been supported up to Rs. 280. Business in Ramakrishna has been done at Rs. 217.80. Mettur have been wanted at Rs. 277.50 and Loyal have changed hands at Rs. 39.50.

In miscellaneous shares, Aluminium Industries have been quiet at Rs. 19.70, but Ashok Leyland have improved to Rs. 6.50 on hopes of expansion. Dalmia Cement have been done at Rs. 12.70 and India Cement at Rs. 5.62. Mettur Chemical have hardened to Rs. 13.90 and F.A.C.T. have risen to Rs. 5.40. Enfield have come to hand at Rs. 10.50 and Standard Motors have been quoted at Rs. 10.12. In paper shares, Seshasayee have been steady at Rs. 7.12 and Mysore at Rs. 12.50. Parry's Confectionery have hardened to Rs. 2.98 and Spencer have been steady at Rs. 21.70. Textool have changed hands at Rs. 149, but Tube Suppliers have been freely offered down to Rs. 10. Madras Rubber have been quiet at Rs. 11.37, but Kirloskar Electric have been steady at Rs. 18.40. Andhra Scientific have been sold at Rs. 13.50 and Binny at Rs. 271.60.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available. All quotations are in Rs.]

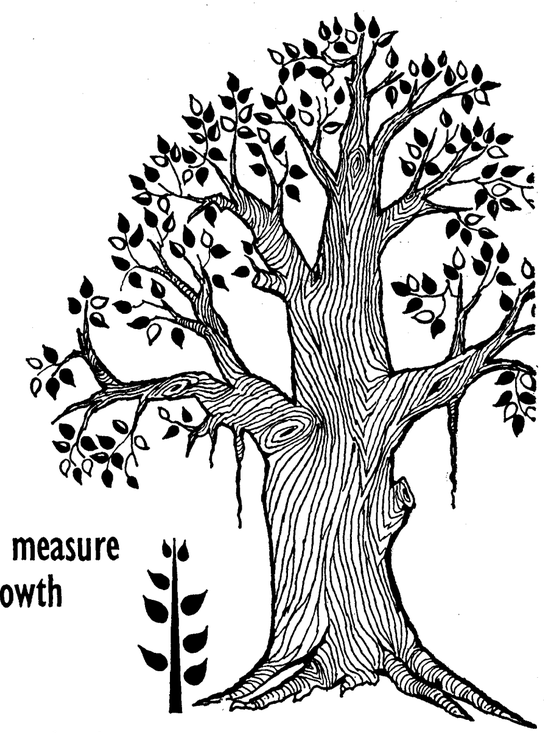
London

INSTITUTIONAL BUYING BOOSTS SHARES

STEELS IN DEMAND ON HOPES OF TORY VICTORY



London, 15th July.

HOLIDAYS, conflicting political opinion polls and big postal delays brought about by unofficial strikes by postal workers had a restricting influence on business in the stock market during last week. However, a distinctly firm undertone developed later as institutional investors took a greater interest with the result that many leading equities pushed ahead, and falls sustained earlier in the week were more than made up. Imperial Tobacco were in particular demand and Pressed Steel, where there were take-over rumours at one time, moved ahead while B.I.C.C. which announced a one-for-five free scrip issue and forecast a maintained dividend on the larger capital, advanced smartly. Bank shares responded to some good dividend announcement, but insurances lost ground. There was a big demand for steel shares on the growing belief that the Conservatives might be returned, and a considerable call option business went on.

BOOKS RECEIVED

Decentralised Economic Development. By Vaikunth L. Mehta. (Published by S. C. Sarker, Director of Publicity, Khadi and Village Industries Commission, Gramodaya Irla Road, Vile Parle (West), Bombay 56 A.S. Price Rs. 12, pages 439.)

Iyer's Handbook of Railwaymen, Fifth Edition. By N. G. Iyer. (Published by N. G. Iyer, 228 Sirdar Sankar Road, Calcutta 29. Price Rs. 10, pages 351.)

All things grow in age—but only *some* grow in size and stature. A young sapling shoots up—sprouts new leaves and branches. But how does one measure the growth of a bank? Take the Bank of Baroda, for instance.

One way would be to compare figures. The Bank of Baroda began in 1908 with a single office in Baroda. Now it has as many as 210 branches in India and abroad. And deposits exceed Rs. 140 crores.

A strong and progressive institution with 55 years of experience, the Bank of Baroda has had a successful programme of branch expansion. It has also aimed at an ever-widening pattern of service. Indeed the Bank's chief goal has been to widen the range and scope of its banking services for the convenience of its customers.

THE BANK OF BARODA LTD.

(Estd. 1908) Head Office: Baroda

now has over 210 branches all over India and abroad with deposits totalling over Rs. 140 crores

Write in for our free booklet entitled **'May We Help You?'** which gives details of all our services.

THE CALCUTTA MONEY MARKET

CALL RATE RISES SHARPLY

Wednesday, 15th July.

THERE has been a moderate decline in the general level of advances in the Calcuta money market during the past week. The decline is due to a slight fall in the credit given to all the major categories of borrowers—cotton mills, jute mills, sugar factories, iron, steel and engineering industries and the foodgrains trade. In the interbank market, there has been a keen demand for funds for subscribing to the Central Government loans. As a result, the call rate has risen sharply from 1½ percent to 5¾ percent.

The exchange market has been active, with an excellent supply of gunny bills and a fair supply of tea bills. The demand for remittances is moderate. In the London market, sterling has lost further ground against all important currencies, except the Danish krone and the Swiss franc.

SILVER WAS SLIGHTLY STEADY IN Calcutta during the past week due to upcountry offtake. The price advanced from the previous week's level of Rs. 243.25 to Rs. 245.75, quoted today. The London and New York prices stood at 111½d and 129.3 cents.

In spite of a rise in silver gold was quiet and the price of 14-carat declined slightly from Rs. 71.50 to Rs. 71.

DURING THE WEEK ENDED 10TH JULY, Government of India Treasury bills for Rs. 212,57,50,000 were sold in favour of the Reserve Bank.

ACTIVE NOTES ROSE BY Rs. 6.44 crores to Rs. 2,507.98 crores, according to the return of the Reserve Bank of India for the week ended 10th July, 1964, while the total note issue at Rs. 2,519.50 crores showed little change. Rupee securities in the paper currency reserve increased by Rs. 21 lakhs to Rs. 2,211.23 crores. Deposits of the Government of India dropped by Rs. 7.13 crores to Rs. 53.42 crores while those of other Governments rose by Rs. 6.99 crores to Rs. 19.79 crores. Balances of scheduled banks at Rs. 106.77 crores showed a rise of Rs. 14.70 crores. Balances held abroad increased by Rs. 93 lakhs to Rs. 7.99 crores and investments by Rs. 26.94 crores to Rs. 301.30 crores. Loans to scheduled banks increased from Rs. 30.50 lakhs to Rs. 47.70 lakhs, of which there was again no advance against usance bills. Ways and means advances stood at Rs. 25.86 crores, against Rs. 36.29 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 3rd July, 1964, shows a rise of Rs. 10.57 crores to Rs. 636.07 crores in total deposits. Investments in Government securities are up by Rs. 9.05 crores to Rs. 246.84 crores, while other authorised investments remain unchanged at Rs. 9.44 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 88 lakhs to Rs. 361.33 crores. Cash and balances are, in consequence, shown at Rs. 17.64 crores or Rs. 10.15 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 3rd July, 1964, shows Demand and Time liabilities at Rs. 1,281.76 crores (Rs. 47.22 crores on account of borrowings from banks) and Rs. 1,373.37 crores (Rs. 20.57 crores), compared with Rs. 1,267.99 crores (Rs. 40.59 crores) and Rs. 1,353.16 crores (Rs. 17.14 crores), respectively, in the previous week. Cash has risen by Rs. 1.77 crores to Rs. 68.26 crores, while balances with the Reserve Bank have fallen by Rs. 2.10 crores to Rs. 91.50 crores. There is a rise of Rs. 19.44 crores to Rs. 674.47 crores in investments. Advances and bills discounted at Rs. 1,790.01 crores show a rise of Rs. 5.02 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6 percent and 67.4 percent, against 6.1 percent and 68.1 percent.

PARTIAL STATUTORY CONTROL ON CLOTH RECOMMENDED

(FROM OUR NEW DELHI CORRESPONDENT)

THE Central Government, it is learnt, may soon replace the present scheme of voluntary price control on cloth by a more comprehensive measure. The step has been recommended by the Cotton Textiles Consultative Board whose suggestions are usually accepted by the Government.

Meeting in Bombay on 7th July, 1964, under the chairmanship of the Central Minister of Commerce, Mr. Manubhai Shah, the Board suggested that statutory controls might be imposed by the Government on production and prices of the popular varieties of cloth made by composite mills. Such controlled production may amount up to 40 percent of the present total cloth output, excluding deliveries for export and defence. The remaining 60-percent mill-made cloth, the Board suggested, need not be subjected to production or price controls and might be allowed to be sold by mills at prices to be determined by them.

The Board further suggested that in the case of the controlled varieties of cloth, the statutory ex-mill and retail prices, the excise duty a metre and the words "controlled variety" should be stamped in red on each piece of cloth. In the case of the non-controlled varieties also, it should be made obligatory for the mills to stamp in blue the actual ex-mill prices, the corresponding retail prices, excise duty a metre and the words "non-controlled variety" on each piece of cloth. This, the Board felt, would make it possible for the consumer to know the maximum prices for the non-controlled varieties of cloth and ensure that the dealers or retailers would not mix the controlled varieties with the non-controlled ones.

Checking Malpractices

For checking malpractices and keeping watch over the working of the control system, the Board recommended the formation of vigilance committees of consumers, public workers and other interests concerned in all towns and cities. The controlled cloth, the Board suggested, should be made available to all consumers' co-operatives and fair price shops in all parts of the country by suitable arrangements so that these varieties could be available to all consumers.

The Board, however, appreciated that it might not be possible for the Government to bring into force statutory controls till all preparatory arrangements were completed. It, therefore, recommended that the working of the present voluntary price regulation scheme should be continued until preparations to enforce the statutory controls are finalised in the next three months. During the interim period, in view of the increase in production costs which has taken place since January 1961, the Board suggested that the existing prices of old varieties, *i.e.*, varieties which were in existence before 1st January, 1962, and which continues to be produced at present, should be refixed on a negotiated basis by the Textile Commissioner in consultation with the industry. No increase in prices, it is felt, need be allowed for the new varieties which came into existence after 1st January, 1962. No new varieties of cloth should be allowed to be added by the mills during the next three months before statutory controls are brought into force. According to knowledgeable sources, the prices of the varieties of cotton textiles which were in existence before January 1962, may be allowed to be raised by 8 percent to 10 percent.

Apart from suggesting the institution of production and price controls on cotton cloth consumed by the common man, the Board felt that mills should be asked to produce as much cloth as possible, especially when the present cotton stock position and imports already arranged had ensured satisfactory supply of the basic raw material.

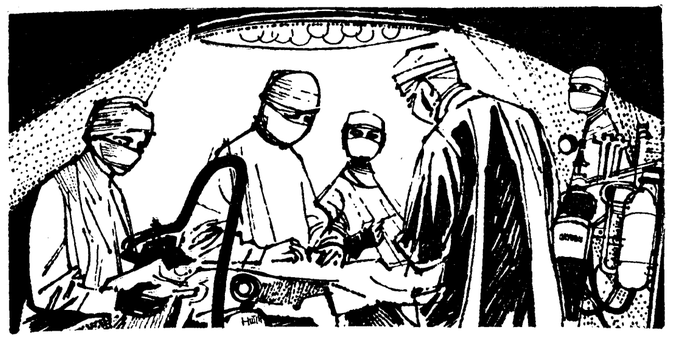
The Board, however, suggested that the Government should assist the mills to secure whatever balancing machinery or equipment was needed by them to increase production immediately. If the equipment is not available from indigenous sources, imports should be allowed on a priority basis.

Third-shift Working

The Board also felt that the third-shift working in the looms sector of the composite mills, which had steadily increased during the last four years from 21 percent to 30 percent, should be further raised.

For increasing cloth production in the near future, the Central Government is understood to be considering a proposal to stagger the weekly holiday in textile mills and to raise the working period in a week to 54 hours. The proposal will be discussed at the forthcoming session of the Indian Labour Conference in Bangalose. The step, it is thought, can raise cloth production by about 16 percent as it will facilitate a better use of the installed capacity.

For raising production in the longer run, the Government is understood to be examining a proposal to allow all the textile units of 12,000 spindles to raise their capacity to 25,000 spindles.



Meanwhile, the all-India final estimate, prepared by the Directorate of Economics and Statistics, Central Ministry of Food and Agriculture, puts the 1963-64 cotton production at about 5.5 million bales (of 392 lbs each)—an all-time high and about 2.2 percent more than the output in 1962-63.

Reports from London say that the S.T.C. chief, Mr. B. P. Patel, has signed an agreement with the Midland Bank (referred to in these columns last week) for providing £6.5 million to finance textile machinery imports by India from Platt Brothers (Sales) of Oldham, north-west England.

AGRICULTURE

Steps to Raise Output

After high-level discussions between the Planning Commission and

In Hospitals, Factories, Schools, Public places...

PUT AN END TO THE DANGERS OF

SUDDEN DARKNESS

In hospitals sudden darkness can be a danger to life. Emergency lighting is the obvious safeguard—and that's where Keepalite comes into its own. Keepalite is an automatic emergency lighting system employing lead-acid storage batteries which are automatically triggered into operation by the actual mains failure. Modern methods of control and 'trickle' charging mean that Keepalite equipment has outstandingly long life and requires minimum of maintenance. That's why architects everywhere specify Keepalite as sure inexpensive protection for hospitals, factories, schools, banks and public places.

gasc-79

the Central Ministries of Food and Agriculture, Community Development and Irrigation and Power, it has been decided that a target of 5.6-percent annual increase in agricultural production during the fourth plan period should be recommended to the forthcoming meeting of the National Development Council. Although this high rate of agricultural growth implies an increase of nearly 60 percent over the likely achievement during the current plan, it is considered quite feasible, provided effective steps are taken by the State Governments for implementing the fourth plan agricultural development programmes.

It has been further decided to continue to accord priority to agricultural development next only to defence build-up under the fourth plan period. All the resources required for raising the farm output, it was felt, should not only be found but actually made available to cultivators.

The targets for the principal agricultural crops suggested by the Working Group on Agriculture were generally favoured. These were as follows: foodgrains 120 million tonnes, sugarcane 13.5 million tonnes, oilseeds 10 million tonnes, cotton 8.5 million bales, jute 8 million bales, mesta 2 million bales, and tobacco 480,000 tonnes. But an urgency was felt to fix the targets for the cotton and oilseeds output at higher levels.

In the case of the targets proposed for various agricultural development programmes, while there was a general agreement with the Working Group's proposals, it was felt that the targets for minor irrigation and green manuring could be fixed higher than 16 million and 64 million acres, respectively, suggested by the Working Group.

As far as the long-term approach to agricultural development is concerned, it is thought that the annual increase in the farm output during the fifth plan period should be 6.3 percent a year.

Making Power Tillers

At another high-level meeting between the Planning Commission's members for agriculture and industry, Mr. Shriman Narayan and Mr. T. N. Singh, the Central Ministers for Food and Agriculture and Industry, Mr. C. Subramaniam and Sardar Swaran Singh, and officials of the Central Ministry of Finance, it was felt that a big programme for manufacturing power tillers should be taken up in the public sector. It was also suggested that no new capacity should be licensed in the private sector for the manufacture of tractors and the facilities already created in this sector should be used to the maximum extent possible and expanded to optimum sizes in the interest of keeping down production costs.

Concern was expressed at the meeting over a large number of the tractors imported during the last few years, lying idle for want of spare parts. It was felt that a quick survey should be undertaken to assess the requirements of spare parts for these tractors so that necessary arrangements can be made to procure them.

Meanwhile, the Planning Commission experts have suggested that the fourth plan programme for the provision of improved farm implements to agriculturists should aim at:

(a) providing a set of improved agricultural tools, implements and machines to at least 20 percent of the farmers in the country,

(b) providing a tractor each to 150.000 farmers,

(c) providing power tillers and small tractors to at least 300,000 farmers,

(d) providing service and maintenance facilities as well as spare parts to farmers up to district and block levels, and

(e) evolving and developing improved agricultural implements and machines suitable for local conditions.

SUBSIDIARY FOODS

Raising Production

The Central and State Governments are taking immediate steps to increase the production of fruits and vegetables, milk, meat, eggs and fish. Increases in the production and availability of these commodities, it is hoped, will help keep the prices of essential food articles under check. Apart from partly relieving food shortages, the increased supplies and consumption of these subsidiary foods will provide a more balanced and nutritional diet to the people.

A note indicating the details of the programme drawn up by the Centre in this connection was circulated to the State Governments at the Chief Ministers' Conference held here from 24th to 26th June. The details of the proposals were also discussed during the conference between the officials of the Central Ministry of Food and Agriculture and State Government officials who had accompanied the Chief Ministers for the conference.

On the basis of the Centre's proposals and the discussions on them, the State Governments have now been requested to formulate detailed schemes and forward fully worked-out proposals not later than 27th July, 1964. The Centre has assured them that the schemes would be examined and processed quickly and its concurrence indicated immediately thereafter. Meantime, the States have been requested to go ahead with preparatory arrangements so that the schemes could be implemented immediately on receipt of the Centre's approval.

Broad Objectives

The broad objectives and criteria which need to be kept in view in preparing the detailed schemes have been indicated by the Centre, but the States have been given the freedom to make adjustments to suit local requirements in relation to the number of schemes, their locations and other aspects of the individual programmes. The criteria indicated to the State Governments are as follows:

(i) the schemes should make a quick contribution to the production and availability of food articles like fruits and vegetables, milk, meat, eggs and fish;

(ii) the programmes should be so located that either suitable marketing arrangements are already available or they can be created very quickly so that the increased production will be immediately available for consumption. Ancillary facilities for marketing by way of refrigerated road and rail transport, cold storage facilities, etcetera, wherever necessary, should also be provided for in the schemes; and

(iii) the scheme should not be costly and the economic benefits should be commensurate with the expenditure incurred. Programmes involving large investments with no immediate benefits should not be taken up.

Some of the schemes are already included in the third plans of the States and some are also provided for in their annual plans for 1964-65. What is envisaged now in such cases is only their acceleration to meet the urgent needs. There are also some new schemes which are being considered for inclusion in the fourth plan. But in view of their importance, it is proposed to take them up during the third plan itself. Some schemes are by way of advance action for the fourth plan.

The Centre has also indicated to the State Governments that to the extent finances cannot be found for the purpose from the State resources and their plan allocations, Central assistance would be available for the implementation of the schemes included under these special programmes.

PIG IRON

New Blast Furnaces Planned

The Central Ministry of Steel, it is understood, will be shortly commissioning three Indian technical consultancy firms, including the Dastur and Company, for preparing feasibility studies for setting up blast furnaces to produce pig iron at a dozen selected places in Maharashtra, Andhra Pradesh and the coal and steel belt of eastern India.

Two or three of these blast furnaces may be included in the public-sector programmes of the fourth plan. The other schemes would be taken up for implementation as and when it is felt necessary. Some of these blast furnaces will constitute the nuclei of the new steel plants to be set up in the future.

The technical consultants will be required to prepare the feasibility reports in about eight to nine months' time. The Russian experts at the Heavy Engineering complex being set up in Ranchi have been asked to prepare a technical report detailing what components of a blast furnace can be manufactured there.

With a view to meeting the demand for pig iron early during the fourth plan period, the Central Steel Ministry has also decided to advance the establishment of one blast furnace each in Bhilai and Durgapur under their fourth plan expansion programmes. An agreement for an additional blast furnace in Bhilai was signed with the Russian Government last week. The pact with the British consortium for the Durgapur blast furnace is expected to be signed shortly. Both these blast furnaces would be ready for operation in the second half of 1967.

The supply position of pig iron would ease further in the first two years of the fourth plan when the four blast furnaces licensed recently to Birlas and three other parties in Goa are commissioned. These four blast furnaces will have a total capacity to produce 1 million tonnes of pig iron a year.

Most of the new blast furnaces to be set up, whether in the public or the private sector, are expected to have an annual capacity of 300,000 tonnes or 400,000 tonnes.

STOCK EXCHANGES

Transfer Deeds

At a meeting held here last week, the Standing Committee of the Presidents of the Indian Stock Exchanges reiterated that companies should be requested to accept transfer deeds duly rectified if relodged before the closure of books. In view of certain practical difficulties, the committee, however, rejected the proposal that companies should withhold the disbursement of dividends even if the rectified documents were relodged after the reopening of transfer books.

The committee also expressed the view that the present practice of deducting net dividends from *cum*-dividend deals should be continued except in cases where delivery is delayed wilfully by the seller. The committee discussed at length the difficulties in the way of deduction of gross dividends and decided to seek further clarification on this matter from the Central Board of Direct Taxes. It observed that the problem could be simplified if trading was marked ex-dividend earlier than the date of closure of the transfer books instead of the dividend payment date as at present.

The committee expressed satisfaction over the response already received by the different Stock Exchanges from most of the listed companies to its request to abolish transfer charges. It hoped that by further attempts, the Stock Exchanges would be able to persuade the remaining companies also to abolish these charges in due course.

As for the adoption of common application forms for new issues, the committee decided to get them cleared through the Company Law Board.

The committee also discussed the question of acceptance of ladies' signatures in Hindi on transfer deeds without attestation and expressed the view that the companies which do not yet accept such signatures as valid should be persuaded to do so. The next meeting of the committee will be held in Calcutta on 6th and 7th October, 1964.

NEW OIL REFINERIES

Decision Expected Soon

The Government of India is likely to take a decision next month on the collaboration arrangement for the Madras and Haldia refineries. The Central Ministry of Petroleum and Chemicals held discussions last week with the National Iranian Oil Company's delegation. The N.I.O.C. is understood to have offered to supply to India about 2 million tonnes of crude oil a year.

Phillips Petroleum and E.N.I. of Italy, it is learnt, have listed the O.N.G.C. as a co-bidder for the offshore oil concessions in Iran. The agreement, however, is only provisional. Details about sharing the cost of the oil exploration and prospecting venture, if at all awarded to the E.N.I.-Phillips Petroleum-O.N.G.C. partnership, are yet to be finalised. Phillips Petroleum and E.N.I. are asking the O.N.G.C. to share the cost equally in foreign exchange. This requires clearance from the Central Ministry of Finance.

Negotiations have also been held with the National Iranian Oil Company's delegation for the production of ammonia from natural gas in Iran and for its supply to India. The Iranian delegation has urged the Government of India to appoint a panel of two engineers—one Indian and one Iranian—to study jointly various aspects of the issue. Iran has also shown interest in importing from India iron ore and bauxite.

Negotiations are said to be progressing well with E.N.I. for offshore drilling in the Cambay area. The agreement under which E.N.I. will take up the project on a contract basis from the O.N.G.C. is expected to be reached soon. For carrying out offshore seismic surveys in the Gulf of Kutch and near the Coraomandel coast, a contract has been recently signed with Russia. The Russian experts will take up the work in the near future.

U.S.A.

Prospects for Exports

Addressing a Press conference on his return from the U.S.A. last week, the Central Minister for Commerce, Mr. Manubhai Shah, said that the United States was soon likely to make available to India 100,000 tonnes of soyabean oil and some tallow under P.L. 480. The first shipment out of the 360,000 bales of cotton to be supplied by the U.S.A. under the P.L. 480 agreement signed in April this year, Mr. Shah expected, would come in by the end of the current month.

Referring to textile exports to the U.S.A., Mr. Shah said that India's dissatisfaction at the smallness of the U.S. import quota had been expressed to the U.S. Government. But from the categorisation of quotas, it appeared that there were several varieties either not under restraint or under partial restraint only. These could be sold to the U.S. market in increasing quantities. If the Central Government and textile manufacturers studied this problem and made concerted efforts, India could increase textile exports to the U.S.A. by about $5 million or $6 million. Indian textiles, Mr. Shah added, satisfied the quality standards of the U.S. market but some U.S. importers had complained that they sometimes received short lengths.

As a result of Mr. Shah's discussions with the U.S. importers of Indian mica, spices and cashewnuts, various measures are proposed to be taken in the near future to boost these exports. A Rs. 34-lakh research project will soon be launched in the U.S.A. to find varied uses for mica. Indian exporters would contribute Rs. 5 lakhs to this project and the American importers another Rs. 5 lakhs. The remaining Rs. 24 lakhs would be made available

by U.S.A.I.D. As for the export of red chillies, black pepper, turmeric, aniseeds and cardamom, a market promotion drive project is proposed to be launched. The cost of the project, nearly Rs. 10 lakhs, will be shared equally by Indian exporters and U.S. importers. Another similar publicity drive is to be undertaken for promoting cashewnut exports.

Mr. Shah said that from his discussions with the U.S. importers, he had gathered the impression that exports of marine products—such as sardines and shrimps—to the U.S.A. could be increased from about 9 million lbs at present to as much as 20 million lbs, if the Indian exporters improved their packing and maintained quality consistently. There were also good chances of India stepping up her exports of engineering goods, machine tools, surgical instruments and motor-car ancillaries to the U.S. market. The Engineering Export Promotion Council, Mr. Shah said, would be setting up an office in New York with a view to increasing exports of engineering goods.

Referring to mineral ores, Mr. Shah said that there were fair chances of India increasing her manganese ore exports to over 1 million tonnes in the next few years from 800,000 tonnes or 900,000 tonnes at present. There were also good prospects for stepping up exports of bauxite and chrome.

Mr. Shah found the official U.S. attitude towards India's request for increased sugar quota quite sympathetic. He hoped that the quota would soon be raised substantially from the present level of 20,000 tonnes.

The U.S. Government authorised last week another three credits totalling $37.8 million (Rs. 18 crores) to help the Indian motor-car industry expand and modernise its production facilities and to increase its heavy engineering capacity. The credits are to be routed through the U.S. Agency for International Development and can be utilised for purchasing machinery from the United States.

Two loans of $23 million and $3 million have been extended to the Hindustan Motors Ltd and the third one of $11.8 million to the Tata Engineering and Locomotive Co. Ltd (T.E.L.C.O.).

The $23-million loan to Hindustan Motors will enable the Company to expand its production of Bedford lorries from 10,500 to 15,000 a year, to produce its own engine for the lorry, and to modernise its overall plant facilities. Through an earlier U.S.A.I.D. loan of $15.8 million, Hindustan Motors is financing its present expansion programme, expected to be completed by the end of the current year, to increase the production of lorry chassis from 6,000 to 10,500 a year.

Hindustan Motors is manufacturing Bedford lorries with the collaboration of Vauxhall Motors Ltd, of the United Kingdom, which is owned by General Motors Inc. of the United States. The lorries manufactured by Hindustan Motors are currently powered by an engine produced by another firm. The new loan will enable Hindustan Motors to manufacture the Bedford engine, which is of greater horsepower, at its factory in Uttarpara, near Calcutta. The engine will have an indigenous content of 85 percent at the time of commencement of production. It is expected that the entire expansion programme will be completed by the end of 1966.

The $3-million credit to Hindustan Motors will be used by its heavy engineering division to expand its output of Hind-Marion power shovels from 12 to 36 a year and to increase the indigenous content of the machine from 28 to 70 percent. The ultimate goal of the Company is to produce 48 shovels a year of 95-percent indigenous content. A power shovel is a portable digging machine which is of great use in the mining industry and in many construction projects. The Hind-Marion 2½ cubic yard diesel powered shovel has several attachments which render it convertible to back-hoe, dragline, clamshell and lift crane operations. The shovel, the basic machine, digs in earth or rock located above the base of the machine. It is useful in the mining of coal, iron ore and limestone and in moving earth during the construction of dams.

The back-hoe enables the shovel to dig pipeline trenches in a rugged terrain. The dragline is suited for operations, such as the construction of large-sized irrigation canals, which involve scooping up a large quantity of loose material and casting it aside. The clamshell is used primarily for operations in narrow working spaces. The lift crane is used for erecting steel in building construction, for driving piles, and for magnet lift and other lifting operations. The Marion Power Shovel Company of the U.S.A., a division of the Universal Marion Corporation, is assisting Hindustan Motors in this venture.

The loan to T.E.L.C.O. will enable it to expand its production of Mercedes-Benz lorry chassis from 18,000 to 24,000 a year. The firm expects to complete by December 1964, its current expansion programme, financed by an earlier U.S.A.I.D. loan of $13.7 million, to increase its production capacity from 12,000 to 18,000 vehicles. The equipment to be financed under the latest loan includes some foundry and forge machinery to fill out the expansion programme begun under the first U.S.A.I.D. loan, but mostly it consists of machine tools and attachments such as dies and fixtures. When the entire expansion programme is completed in 1966, T.E.L.C.O. expects to increase the indigenous content of its lorry to more than 90 percent.

The three loans will be repaid by the two Companies to the Government of India in rupees over a period of ten years, including an initial grace period of two years, with 5½ percent interest a year. The Government of India will reimburse the U.S.A.I.D. with these credits over a period of 40 years, including a grace period of ten years. During the grace period, the Government of India will pay interest at the rate of ¾ of 1 percent a year and during the remaining 30 years at the rate of 2 percent.

Aid for Ashok Leyland

Another Indian motor-car concern —Ashok Leyland Ltd—has also signed an agreement with its British collaborator, the Leyland Motor Corporation, under which the British Company will invest another £2.5 million in the Indian concern's £4-million new manufacturing programme. The Leyland Motor Corporation has already invested £3 million in Ashok Leyland Ltd. The British Company's new investment will be in the form of special plant and machinery not available from Indian manufacturers.

Under the new manufacturing programme, Ashok Leyland will produce two- and three-axled vehicles with gross ratings of up to 107,520 lbs (compared with the present Comet tractor-trailer maximum of 40,320 lbs) and with 185 horse-power Leyland power-plus 0.680 diesel engines. Some £750,000 worth of vehicle components have already been ordered from Leyland Motors Ltd for the construction of the first of these new vehicles.

The manufacture of Leyland's power-plus 0.680 diesel engines for the new lorries will also aid another facet of Ashok Leyland's work—the production of industrial diesel engines for Indian manufacturers of specialised equipment. At present, the company is supplying 100 horse-power diesel engines for such diverse machinery as air compressors, water pumps, electricity generating sets, earth-moving machines, pile drivers, and stone crushers.

The indigenous content in Ashok Leyland's Comets at present amounts to 80 percent. It is to be raised to 90 percent by the end of the current year.

I.D.A.

Developing Telecommunication

The International Development Association—a subsidiary of the International Bank for Reconstruction and Development—has sanctioned a second credit of $33 million (Rs. 15.71 crores) for the development of telecommunication facilities in India during the current plan period. The first credit for this purpose—$42 million (Rs. 20 crores)—was provided by I.D.A. in 1962.

The new loan is intended to cover the foreign exchange requirements of the factories manufacturing telecommunication equipment, namely, Indian Telephone Industries, Hindustan Cables, Hindustan Teleprinters and Posts and Telegraphs workshops. The first credit was used for the import of equipment and stores directly by the Posts and Telegraphs Department.

BOARD OF TRADE

Reconstitution Announced

The Board of Trade has been reconstituted. It will consist of Mr. Manubhai Shah, Minister for Commerce (chairman); Mr. S. V. Ramaswamy, Deputy Minister for Commerce (vice-chairman); Mr. D. S. Joshi, Secretary, Ministry of Commerce; Mr. K. P. Goenka, president of the Federation of Indian Chambers of Commerce and Industry; Mr. Ogilvie, president of the Associated Chambers of Commerce; Mr. Sachin Chaudhury; Mr. E. P. W. da Costa; Mr. Khandubhai K. Desai; Dr. B. N. Ganguli; Mr. H. V. R. Iengar; Mr. S. L. Kirloskar; Dr. P. S. Lokanathan; Mr. Prabhu V. Mehta; Sir A. Ramaswamy Mudaliar; Mr. Padampat Singhania; Mr. P. L. Tandon; the Secretary-General of the Ministry of External Affairs; Secretary of the Ministry of Finance (Department of Economic Affairs); Secretary of the Planning Commission, Secretary of the Ministry of Food and Agriculture (Department of Agriculture), and a Joint Secretary from the Ministry of Commerce (member-secretary).

COMMUNITY DEVELOPMENT BLOCKS

Criteria for Classification

The Working Group, set up by the Central Ministry of Community Development and Co-operation in November 1963, under the chairmanship of Mr. B. Mukherji, Managing Director of the State Bank of India, to suggest the criteria for classification of community development blocks for purposes of implementing selected agricultural programmes and to recommend, in broad terms, the programmes for each category of blocks, has suggested that the Community Development blocks should be classified on the basis of availability of water resources.

The categories of blocks envisaged by the Working Group are: (1) blocks having an assured water supply where definite programmes of agricultural production can be taken up immediately; (2) blocks which have a big potential for agricultural development provided the land and water resources are first developed; and (3) blocks where agriculture is not an economic proposition or which have no development potential.

The Working Group observes that although an increase in agricultural production results from various factors, one essential requirement for stable agricultural production is an assured supply of water. The group is, therefore, firmly of the view that only one criterion, that of assured water supply, should be adopted for the classification of areas from the point of view of intensive agricultural development.

Together with intensive agricultural programmes, the promotion of dairying, poultry and animal husbandry have been recommended for the blocks in the first category. For blocks in the second category, programmes like irrigation, soil conservation, drainage, flood control, levelling, etcetera, have been suggested. In blocks where agriculture is uneconomic, intensive programmes of animal husbandry, milk production and sheep and wool development are envisaged.

The group has stressed the need to provide incentives to the village level workers and *Panchayati Raj* institutions in organising programmes for increasing agricultural production.

JUTE

New Body Created

The Government of India has dissolved the Central Supervisory Body for Jute and has created in its place a 25-member Central Committee for Jute Development. The new committee will scrutinise the development programmes formulated by the State Governments for jute and allied fibres, review the progress of jute development in the context of targets laid down and recommend measures for accelerating the tempo of jute development programmes. It will as well suggest special schemes for improving the quality of jute and other allied fibres. The appraisal of prices for jute and allied fibres in the producing States, recommendation of measures to stabilise them and facilitate movement of the produce to the marketing centres are among the other functions of the committee.

The Special Secretary to the Ministry of Food and Agriculture and vice-president of the Indian Council of Agricultural Research has been appointed chairman of the new committee. Among its members are the Agriculture Secretaries of the producing States of West Bengal, Bihar, Assam, Orissa, Uttar Pradesh and Andhra Pradesh and of the Tripura Administration, two representatives of jute growers and a representative of the Indian Jute Mills Association. The Planning Commission, the State Trading Corporation and the National Agricultural Co-operative Marketing Federation are also represented on the committee. The Chief Jute Development Officer, Indian Central Jute Committee, Calcutta, has been appointed member-secretary of the committee.

RUSSIA

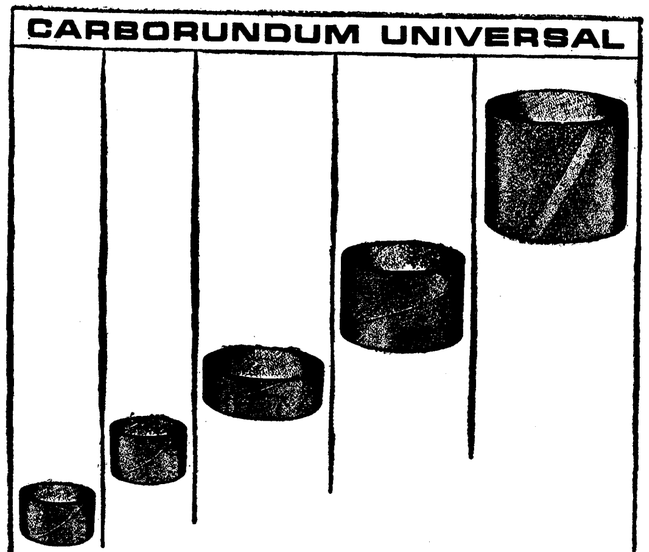
Pacts Signed

The Government of India signed last week two agreements with Russia—one for setting up the sixth blast furnace complex at the Bhilai steel plant and the other for the establishment of the precision instruments plant in Kotah. Under the two pacts, Russia will supply equipment as well as technical know-how for the two projects. Part of the equipment for Bhilai's sixth blast furnace complex is proposed to be manufactured at the heavy machine-building plant in Ranchi. For this portion of the equipment, only essential components will be made available by Russia.

The sixth blast furnace at Bhilai forms part of the steel works' fourth plan expansion programme. But its erection is being advanced for meeting the growing demand for pig iron. The blast furnace will be of a capacity of 1,719 cubic metres. The precision instruments plant in Kotah will produce electromagnetic and electronic instruments and accessories to a capacity of 138,000 instruments and 400,000 transmitting elements a year.

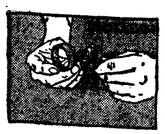
The supply of equipment for Bhilai's sixth blast furnace complex is to be financed out of the credit made available by Russia in February 1961. The equipment and technical know-how for the Kotah precision instruments plant is being financed out of the Russian credit offered in September 1959.

RUMANIA



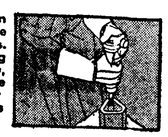
New Mechanised Brick Plant

The Government of India signed last week an agreement with Rumania for setting up the first mechanised brick-making plant in India. The plant will produce about 112,000 solid, hollow and perforated bricks a day. It will also manufacture special type of decorative bricks and roofing tiles.



The total cost of the project is expected to be Rs. 24.5 lakhs. The estimated cost of the machinery is Rs. 8 lakhs, out of which machinery worth Rs. 5.5 lakhs will be imported from Rumania.

About 55 acres of land have already been acquired by the National Buildings Construction Corporation in Sultanpur, near Delhi, where the plant is to be installed.



CARBORUNDUM UNIVERSAL

COATED ABRASIVE SLEEVES

Mounted on expandable mandrels and used on high speed pneumatic or electric grinders, these coated abrasive sleeves have countless uses. They are virtually indispensable for grinding and polishing hard-to-get-at corners, grooves, shoulders of moulds, dies, etc. The abrasive sleeves are available in sizes ranging from 1/2" to 4 1/16" diameter, and in various widths as required.

Commodity Markets

WORLD COFFEE PRICES DROP

(FROM OUR SOUTH INDIAN CORRESPONDENT)

IT appears that the coffee market is at present suffering an indigestion caused by heavy buying earlier this year. With huge stocks on hand, buyers are said to be unwilling to absorb fresh arrivals in the market in spite of the fact that the sellers are willing to give substantial price discounts. Consequently, the world market for coffee is at present in an unsettled condition. In New York, B contract for July has dropped to 46.39 cents a lb. Losses in September and December positions were heavier. In London, Robusta futures displayed a similar trend. The gap between near and distant positions has narrowed down considerably. According to reports, the Uganda Coffee Marketing Board is thinking in terms of introducing a minimum export price. The prices mentioned in this connection are 280s a cwt for July, August and September deliveries and 290s for the following three months.

However, it is felt in certain quarters that there are possibilities for the market sentiment to take an opposite turn in the near future if the pessimistic forecasts relating to the next Brazilian crop materialise. At the same time, the available stocks of good quality coffees and the diversion of demand to other coffees can hold down the pace of recovery. The delay in the U.S.A. joining the International Coffee Agreement is causing some concern in coffee circles. The latest addition to the membership of the Agreement is Belgium. She has joined the Agreement recently as the 48th contracting party.

SPICES

Increase in Exports

The Spices Export Promotion Council reports that India has made over Rs. 5 crores on the export of spices during the first quarter of 1964, against Rs. 4 crores during January-March 1963. The items which earned more money this year were cardamom, chillies, ginger and turmeric. The quantum of exports of cardamom from India during the three months ended March 1964 was 726 tonnes, compared with 595 tonnes in the same period of last year. Export of chillies during the period under review was 3,672 tonnes valued at Rs. 83 lakhs, against 596 tonnes worth Rs. 13 lakhs in the corresponding period of 1963. Although there was a slight decline quantitatively in the export of ginger, the earning on ginger export during this period was higher at Rs. 63 lakhs, against Rs. 45 lakhs in the corresponding period of last year. Turmeric export during this period came to 1,171 tonnes, valued at Rs. 22 lakhs, compared with 1,115 tonnes worth Rs. 18 lakhs exported in the same period of 1963.

In pepper, there was a quantitative decline by about 450 tonnes during the period under review, but the earning was more or less the same at Rs. 2 crores. The export of curry paste and powder maintained the previous year's level. The export of other minor spices registered mild decreases. This was due to lesser offtake by principal importing countries. The Spices Export Promotion Council, however, anticipates good demand in the months ahead. Export figures for the financial year 1963-64 supplied by the Council show that India could earn as much as Rs. 15.3 crores during that year out of the export of spices, compared with Rs. 13.4 crores during the previous year. While chillies, cardamom, ginger, turmeric, celery seed and aniseed earned more during this period, there was a decline of Rs. 69 lakhs in the earning on pepper export. India got Rs. 5,88,87,413 from the 1,89,34,994 kilograms of pepper exported during 1963-64, compared with Rs. 6,57,05,875 in 1962-63 from an export of 2,08,68,496 kilograms of pepper.

The Spices Export Promotion Council's final estimate of the 1963-64 pepper crop of India is 24,030 tons showing a decline of 1,670 tons from the previous season's crop. The area under pepper cultivation in India in 1963-64 was 252,67,000 acres, 35,000 acres more than that of the previous season. According to the Council, there were 245,58,000 acres under pepper cultivation in Kerala during 1963-64, and that State's contribution to the Indian crop that year was 22,070 tons. Mysore had 635,000 acres under pepper and Madras 74,000 acres. Their production figures were 1,900 tons and 60 tons, respectively.

TEA

North Indian Tea Output Increases

(BY A SPECIAL CORRESPONDENT)

THE crop figures for the major producing countries published recently were as follows (in '000 lbs):

		1964	1963
North India	Mid-June	91.430	74.954
South India	April	45.995	59.318
Pakistan	May	9.872	6.458
Ceylon	April	174.080	166.555
Indonesia	Jan.	7.117	7.787
East Africa	Mar.	37.047	31.117
Mozambique P.E.A.		11.467	9.597

The crop to the end of June from north India was 128,470,394 lbs, against 103,870,944 lbs last year, a gain of 24,599,450 lbs. But south Indian production up to this period has been running short by about 10 million lbs. Production from north India is already running at the maximum capacity, and may be expected to remain in top gear up to mid-October.

The Terai Planters Association has already stated it does not expect earnings to cover present liabilities and it is fairly certain that Darjeeling and Dooars producers will find themselves in a like financial quandary. Further wage awards should be held in abeyance until the financial position of the tea industry as a whole improves.

So far, Calcutta auctions have followed a normal pattern with Darjeeling teas maintaining last year's prices, but Assams are down by nearly 50 paise with Dooars lower by about 5 paise a kilogram. The general average to 22nd June was Rs. 5.91 a kilogram, against Rs. 6.12 a kilogram a year ago. Dust were also selling below last year. The relative figures being Rs. 4.79 a kilogram this season and Rs. 5.14 a kilogram a year ago, but latest advices report a good enquiry.

Shipments from 1st July, 1963, to 22nd June, 1964, show that the U.A.R. has taken about 2½ million lbs of tea more. The Russian offtake is also slightly higher and the U.S. import figures show 15¼ million lbs compared with 13⅞ million lbs in the previous 12-month period. This, however, looks better than some recent estimates. Iran at 5.17 milliion lbs is just about half of 1962-63. The Sudan has imported 1½ million lbs less. Turkey too has heavily cut her purchases. On the other hand, eastern Europe shows improvement from 1.5 million lbs two years ago, to 3.3 million lbs last year and 6.4 million lbs so far this year. Tunisia has already been noted as showing a heavy increase.

...always finds something new. New developments in welding make constant demands on the skill and knowledge of the welder. He now works in a specialised industry the basis of which is an exact science. Organised research has made the maximum use of such elemental powers as heat, light, sound, water and electricity. The result is a series of complex welding processes in various stages of development — Plasma Arc, Mig, Tig, Laser, Friction Welding, Electroslag, Ultrasonics, Fine Wire Mig and Electron Beam. The pioneer of this industry in India, Indian Oxygen is occupied today in introducing the latest processes, thus leading the industry and the men behind it to greater recognition.

IOL INDIAN OXYGEN LIMITED

Jute

PROSPECTS FOR MILLS: CHANCES OF COST REDUCTION POOR

ALTHOUGH the statistical position of the Indian jute industry is quite good, it has to contend with several adverse factors. The price of raw jute is gradually tending to harden. About this time last year, the new crop was arriving satisfactorily and was on offer at around or below the derivative price levels in some upcountry markets. So the Jute Commissioner had issued a compulsory purchase quota of 440,000 bales. This year, the new crop has started arriving in the agencies, but only in driblets; they are being offered at a premium over the official floor levels. Upcountry prices are ruling much above Calcutta parity levels. Hence both mills and sellers are reserved, transacting only routine business for small quantities. The Jute Commissioner has not yet issued any quota, presumably because there is no need for supporting prices now.

In spite of the abolition of the minimum export price of jute and the 57-percent cut in export duty in Pakistan, fibre prices have hardened in that country appreciably during the past couple of weeks. Until recently, prices were ruling £3 a ton below the official minimum price, but now they are about £5 a ton above. Against a price of Rs. 19 a maund for Cross Bottoms, they are now transacted around Rs. 24 a maund. According to present estimates, Pakistan is likely to have a smaller crop of about 5.7 million bales. The quality is reported to be poor in many areas. Besides, the percentage of cuttings is not big as weather conditions have been fairly good. So Indian mills may have to pay more for Pakistani cuttings and better-grade fibre.

Another important development is the failure of the jute crop in Thailand. Against an estimate of 200,000 tons, the crop has been only around 100,000 tons. Out of this, 70,000 tons have been absorbed by the Thai jute industry, leaving only 30,000 tons for export. Most export contracts have either been cancelled or settled. Others are being completed by the sellers by purchasing jute from Pakistan. Against this background, the indications are that irrespective of the size of the domestic crop, the Indian industry will have to pay a much higher price for high-grade fibre—Indian or Pakistani—which it must have in ample quantities to produce quality gunnies, especially hessian and carpet-backing.

Labour Unrest

In the field of labour relations, absolute peace does not prevail despite co-operation from the industry and the State Labour Directorate. Although wage and bonus incentives have been given, there are reports of labour unrest here and there, causing a temporary setback to production. No fool-proof norm has yet been introduced for linking wages to productivity. An export industry cannot retain its overseas markets or extend them unless it can hold down its costs.

Then there is the problem of offtake. No doubt, despatches are good. At the June level of output of about 107,000 tonnes, the closing stocks were 126,100 tonnes, i.e., 17.7 percent above the production for the month. An industry with a wide diversity of products may not mind carrying 1.18 months' output if it wants to continue meeting the consumers' demand. Since the commencement of production at the maximum level more than a year ago, and more particularly since the annulment of the I.J.M.A. Working Time Agreement last February, overseas consumers and the Government of India have been inclined to defer their purchases expecting prices to decline. They practically desisted from entering into forward contracts with the industry or their suppliers.

Large Government Purchases

It was only in June that the Government of India entered the market and has since placed excellent orders. It is expected that the Government offtake for storing foodgrains and fertilisers will be substantial. Domestic industries like sugar, cement, cotton textiles will also increase their offtake in view of their rising production. Overseas consumers too are absorbing sizable lots, although not on the scale of the previous year when there was a large volume of pent-up demand to cover. This is evident from the monthly despatches statistics. Instead of lifting their requirements on ready or forward basis from the markets, they are negotiating with mills either directly or through their local agents. Except the Jute Commissioner and the Customs department as the registering authorities and the parties or the agents concerned, no one else knows about these contracts. That is why these transactions fail to create any impression on the market. Jute circles are inclined to believe that they will be able to dispose of their entire output—particularly hessian, sacking and odd constructions in this manner.

Prospect for Carpet-backing

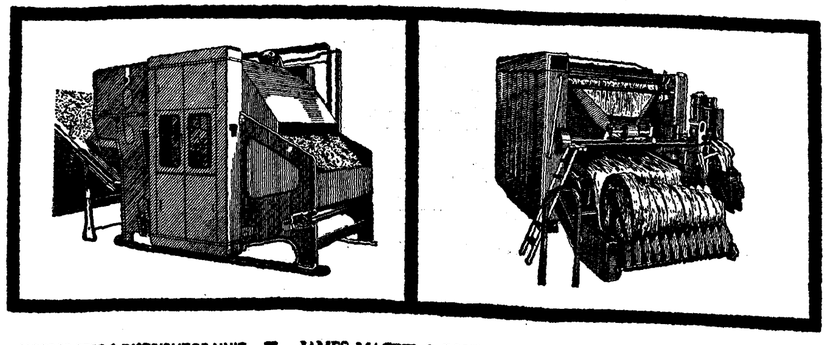
But there is need for caution concerning carpet-backing cloth. Against an approximate monthly output of 7,700 tonnes during the past six months, the export offtake has been around 5,600 tonnes, leaving a monthly carryover of 2,100 tonnes. So, even with the present complement of about 2,000 broad looms, the June-end stocks of 21,400 tonnes may more than double in a year's time unless steps are taken in the meanwhile to accelerate the offtake. As a large number of broad looms are in the process of installation, the problem will assume a bigger shape later. Pakistan's entry into this profitable line, the competition from Continental producers and the threat from synthetic substitutes are the other dangers.

Steps are being taken by the Government and the industry to stimulate the export of this special-purpose product. There has been no internal demand for it so far. With a view to creating it, efforts have been made to produce tufted carpets in India. The Government of India has already sanctioned letters of intent to 13 firms for the installation of power looms to produce this type of carpets. It may approve one or two more proposals of a like nature. Trade circles feel that India should be quick to take advantage of the high level of overseas demand for tufted carpets. A number of other countries have already entered this market to their advantage.

Rise in Gunny Stocks

The closing stocks of jute goods with mills reporting to the I.J.M.A. increased from 124,200 tonnes to 126,100 tonnes during June. While stocks of hessian declined by 1,900 tonnes to 45,100 tonnes and of miscellaneous goods by 1,100 tonnes to 14,500 tonnes, sacking stocks rose sharply by 4,700 tonnes to 45,100 tonnes. Carpet-backing cloth also increased by 200 tonnes to 21,400 tonnes. At the end of June 1963, the inventories were: 32,400 tonnes of hessian, 47,200 tonnes of sacking, 6,400 tonnes of carpet-backing and 10,200 tonnes of miscellaneous goods, making a total of 96,200 tonnes.

Although the heavy increase in sacking stocks has produced a bearish impact on the market, jute circles have been impressed by the despatches, especially in view of the bottleneck in Calcutta port. The figures indicated that the offtake during June absorbed at least 3,700 tonnes of the excess production of gunnies during the month.



Another I.J.M.A. statement shows that working at the maximum level for 200 hours in June, against 192 hours in the previous month, mills produced a total of 107,000 tonnes of gunnies, against 101,400 tonnes. Output of hessians increased by 900 tonnes to 44,300 tonnes, of sacking by 2,700 tonnes to 41,200 tonnes, of miscellaneous goods by 1,500 tonnes to 13,600 tonnes and of carpet-backing by 500 tonnes to 7,900 tonnes. The higher production of sacking was effected by the diversion of hessian looms to sacking. The incentive for it came from the excellent offtake on Indian Government account. It also stimulated brisk short-covering and purchases by other domestic consumers.

In June 1963, the mills worked at the same level for 192 hours, producing a total of 100,300 tonnes of gunnies—41,500 tonnes of hessian, 40,000

THE JUTE MARKETS

Manufactured Goods: Opening on a steady note on excellent support given by the Government of India to heavy goods for ready and near positions, the Calcutta gunny market suffered a setback on the announcement of the June closing stocks with I.J.M.A. member-mills. A higher output of jute goods during the month was an additional damper. Despite the issue of tenders for about 28,000 bales of B Twills for July-September delivery, sentiment continued to be depressed due to the slow overseas offtake of hessian although the figures indicated that about 3,700 tonnes of the excess output was absorbed during the month. Hessian suffered heavily, while heavy goods escaped with minor losses on balance. Conditions in the Calcutta port were causing anxiety. Congestion of vessels in the dock areas and at Sandheads hampered the operation of Calcutta loaders. So shipments were more or less of a routine nature. The Australian loader for Freenmantle and Sydney for mid-July position was believed to have done well. Towards the close, lower levels attracted scattered short-covering and overseas buying. But these failed to arrest the drift in prices. In the absence of any positive incentives, conditions in the spot market governed the trend in the hedge market. Tired long liquidation and some bear-selling caused a heavy slump in hessian values. Brisk short-covering helped sacking for August and November deliveries to close with only minor losses. Fluctuations were wide and turnover fair in heavy goods and moderate in hessian. The closing undertone was easy in the former, and hesitant in the latter.

Wednesday's quotations were as follows:

	July	Aug.	Sept	Oct.-Dec.
40in. 7½oz.	33.20	33.30	33.45	33.55
40in. 8oz.	35.80	—	—	—
40in. 10oz.	44.05	44.35	44.55	44.95
B Twills	115.90	115.50	115.45	115.50
Cornsacks	119.25	120.25	119.75	118.50
Heavy Cees (Plain)	115.50	115.50	115.50	115.50
A Twills	138.00	139.00	139.50	140.25
Liverpools	128.25	128.25	128.25	128.25

Raw Jute: With the new crop still arriving in small quantities in up-country centres, and sellers unwilling to extend commitments at a discount, steady conditions prevailed in the raw jute market during the past week. Reports of some damage to the plants in the lower Assam valley and in northern Bengal induced mills to make scattered purchases even around the present levels. A hardening price trend in Pakistan in spite of the abolition of the minimum export price and the cut in the jute export duty, combined with reports of a smaller crop called for caution. Contrary to expectations, the Jute Commissioner did not issue any purchase quota for July, presumably due to the slow pace of arrivals and the continuing firm price trend. Last week's alternate showers and sunshine helped the plants and arrested chances of pest infestation. Brisk interculture work was in progress. Now the crop prospects appeared to be bright in the Tossa and Daissee areas. In the futures market, Upper Assam White Bottoms for September opened on an optimistic note on scattered bear-covering and closed firm with a nominal gain on balance after fluctuating within narrow limits. The steadiness stemmed from the buoyant trend in the spot market. There was intermittent profit-taking at the bulges. But all offers were well-absorbed. Turnover was moderate and the undertone firm at the close.

Wednesday's quotations were as follows:

	Landed at Mills (Basis Bottoms) 1963-64 Crop		1964-65 Crop	
	Rs. A Qtl.	Rs. A Md.	Rs. A Qtl.	Rs. A Md.

I.J.M.A. PRODUCTION FIGURES FOR JUNE

The Indian Jute Mills Association reports the total production of jute goods for June as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	
8,809 tonnes	(3,670 tons)
2,34,64 thousand metres	(2,56.6 lakh yds.)
1,54.6 lakh nos.	
(b) Sacking	
39,673 tonnes	(39,046 tons)
8,58.14 thousand metres	(9,38.5 lakh yds.)
4,31.3 lakh nos.	
2. Gunny Cloth	
(a) Hessian	
35,507 tonnes	(34,946 tons)
12,11,79 thousand metres	(13,25.2 lakh yds.)
(b) Sacking	
1,549 tonnes	(1,525 tons)
33,00 thousand metres	(36.1 lakh yds.)
3. Carpet-backing	
7,918 tonnes	(7,793 tons)
59,98 thousand metres	(65.6 lakh yds.)
4. Other Manufactures	
13,593 tonnes	(13,378 tons)
5. Total Production (all kinds)	
1,07,049 tonnes	(1,05,358 tons)

Summary

	(000 metres and 00,000 yds.) June '64	May '64	June '63
Hessian	14,46.43 (15,82)	14,08,09 (15,40)	13,70,72 (14,99)
Sacking	8,91,14 (9,75)	8,29,54 (9,07)	8,67,22 (9,48)
Carpet-backing	59,98 (66)	57,05 (62)	57,02 (62)
	(000 tonnes and tons)		
	June '64	**May '64**	**June '63**
Hessian	44.3 (43.6)	45.4 (42.8)	41.5 (40.9)
Sacking	41.2 (40.6)	38.5 (37.9)	40.0 (39.3)
Carpet-backing	7.9 (7.8)	7.4 (7.2)	7.4 (7.3)
Others	13.6 (13.4)	12.1 (11.9)	11.4 (11.2)
Grand Total	107.0 (1,05.4)	101.4 (99.8)	100.3 (98.7)
Hours worked	200.0	192.0	192.0

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are in British units.

THE U.K. JUTE MARKETS

FIBRE UNCHANGED

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market was firm in Pakistan last week, but there was little change in prices here. Some buying of the fibre took place at the end of week, but since then, the position has become quieter. Sellers are anxious for business and well-known marks are available at just slightly above current E.P.C. values. The matter of the rebate on export duty on contracts placed before 13th June but not shipped by that date, is still not settled in Pakistan. This is rather an important question for Dundee spinners as it not only involves a return of money but it is a condition of the contract that any alteration in export duty is for buyers' account. In the past, when export duties were raised, spinners had to pay the increase on outstanding contracts.

It was announced yesterday, that the E.P.C. values of Mill Firsts, Dacca Tossa-5 and Grade Tossa-⅝ had been raised by £2 a ton, but this made little difference to the position here as very few offers of these grades were being made. On the other hand, the E.P.C. values of mesta were reduced by £1. Offers of new crop are being made in Dundee of £104 10s for Export Firsts, at £93 for Export Lightnings and at £82 for Export Hearts, c.i.f., U.K., for August-September shipment. Grade Tossa-⅝ was at £119 and Grade Tossa-4 at £104 5s. Outport Tossa-⅝ ranged from £95 15s and Outport Tossa-4 from £86, September-October. Cuttings were at £51 for N.C.

Offers of old crop were made, and the prices asked were more or less in line with new crop values. As spinners here held fair stocks of raw material, not much buying interest was shown. The Siam jute market was now quieter, and prices were at a slightly lower level. Offers were at £75 for super A, at £69 10s, for grade A, at £64 10s for grade B and at £60 10s for grade C, delivered mill Dundee for October-November shipment.

THE PAKISTANI JUTE MARKETS

NEW QUOTA SYSTEM FOR FIBRE

(FROM OUR DACCA CORRESPONDENT)

THE question of the refund of the export duty continues to exercise everybody's minds. It is reported that the authorities now recognise the gravity of the situation, and have recommended to the Finance Minister that the Act be amended in some manner either to allow a refund or else to clarify that the new export duty only refers to contracts signed on 13th June and later. The decision is still to come. In the meantime, documents worth hundreds and thousands of pounds are being held up.

The quota system has already been announced. The details are not worth recounting, but it is sufficient to say that it seems to be a very well thought-out plan, which will ensure regular buying and which should, particularly in a short crop season like this one, keep prices at a reasonably high level.

In brief, each baler has been allotted a quota and each baler has been told by how much the quota can be increased if he purchases well and by how much it can be decreased if he does otherwise. For a start, balers have been instructed to buy 11 percent of their total quota within the first two months of the season, which is quite reasonable. At any rate, it is gratifying both for the trade in Pakistan and abroad to see that under the guidance of Mr. I. A. Khan, the new jute policy both in prices and in quotas, represents an honest attempt to make the trade as free as possible without at the same time permitting practices detrimental to the economy of the country. The new policy, of course, quite reasonably in an election year, tries hard, particularly by the quota system, to ensure that the grower gets a fair price. The intention behind the policy and the way it has been framed, will no doubt be appreciated by all circles of the trade. Fortunately, the fact that the crop is not very large, will be a factor which will help make the new policy work.

In the loose jute sector, arrivals are normal to poor for this time of year. The quality is certainly poor even when one considers that this is very early jute. Continuous rains have not been of much help. Paradoxically, despite continuous widespread rains, the river levels in certain areas are falling. At this time of year, this will have no effect on the crop, but this certainly discounts regular reports in the Press of floods in various parts of the country. In the pucca bale market, activity has centred round cuttings, which are quoted ready, as far forward as March and at as high a rate as £49 a ton f.o.b. From overseas, very little interest has been shown at prices varying considerably from seller to seller.

COMPANY AND PUBLIC NOTICES

(SITUATION VACANT)

RESERVE BANK OF INDIA

APPLICATIONS are invited for the posts of Junior Officers Grade II (on probation) in the Bank in the scale of Rs. 375-20-535-25-560-EB-25-660-30-720.

Note: Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scale.

In addition to pay, the selected candidates will be eligible to draw local pay at 10% of the pay rounded off to the next higher complete rupee when stationed at Bombay, Calcutta, Madras, New Delhi, Kanpur, Ahmedabad, Bangalore and Hyderabad and dearness allowance at prescribed rates. The present rate is 20% of pay with a maximum of Rs. 100/- per mensem. In addition they will be eligible for house rent allowance at 15% of pay with a minimum of Rs. 60/- per mensem.

QUALIFICATIONS:

Applicants should have a good academic record and possess a first or high second class Bachelor's or Master's degree in Science, Arts or Commerce of a recognised Indian or Foreign University. Practical banking experience in a commercial bank will be considered as an additional qualification. Preference will be given to those who have passed the Institute of Bankers' Examination.

THE SELECTION BOARD WILL INSIST ON A VERY HIGH STANDARD OF SUITABILITY IN MAKING SELECTIONS FOR THE ABOVE POSTS AND ONLY THOSE CANDIDATES WHO POSSESS HIGH ACADEMIC QUALIFICATIONS AND/OR ADEQUATE EXPERIENCE OF THE TYPE SPECIFIED ARE ADVISED TO APPLY.

AGE LIMIT AS ON 1ST AUGUST 1964:

Between 21 and 25 years. The maximum age limit is relaxable but not beyond 30 years in the case of:—

(i) candidates possessing special qualifications and experience of value to the Bank;

(ii) ex-employees of banking institutions whose services had to be terminated for reasons of economy or as a result of the banks going into liquidation;

(iii) personnel retrenched from Government offices after at least one year's service applying through Employment Exchanges; and

(iv) candidates belonging to the Scheduled Castes or Scheduled Tribes.

2. Applicants for the above post must remit with their application a fee of Rs. 7.50 by cheque or bank draft on a **Scheduled Bank** payable at Bombay or by Postal Order. **The application fee is in no case refundable.** In the case of candidates belonging to Scheduled Castes/Tribes, the fee will be reduced to one-fourth.

3. Applications in the candidate's own handwriting in the prescribed forms obtainable from the Reserve Bank's offices at Bombay, Calcutta, Kanpur, New Delhi, Nagpur, Madras, Bangalore, Hyderabad, Trivandrum, Lucknow, Patna and Jaipur accompanied by copies (originals should **not** be sent) of certificates regarding age and educational qualifications, statements of marks secured in the Graduate and Post-Graduate degree examinations and copies of two testimonials should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1 so as to reach him on or before the 1st August 1964.

4. Candidates already in service will be required to produce a proper discharge certificate from their employers in the event of their being selected at the time of their appointment in the Bank's service.

5. Candidates belonging to Scheduled Castes/Scheduled Tribes should mention this fact prominently in their applications and also enclose a copy of a certificate to that effect from a competent authority.

6. Candidates must be prepared to serve in any office of the Bank in India or group of departments to which they are posted, and to undertake tours when required.

7. Selected candidates will have to appear for interview/s before the Selection Board at any of the Bank's Offices.

8. Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

9. If any candidate desires to have his application acknowledged, he should send it by "Registered Post-Acknowledgement Due". Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

10. Canvassing in any form will be regarded as disqualification.

COMMONWEALTH LEADERS PREFER TRADE TO AID

EVEN the most ardent supporters of the Commonwealth have not failed to notice its basic weaknesses, which stem from its very composition. It is essentially a loose conglomeration of differing nations, with a wide divergence of interests and with little in common except their former imperial ties. If such a body confronted with the most divisive and disruptive of problems has retained its solidarity so far, it is more a tribute to the flexibility of the organisation. Even more important, it is the surest indication of the usefulness of the Commonwealth, since being fundamentally a voluntary association, its member-nations can quit it any time they want. But if they continue to belong to this club, it is because they profit by their membership and are anxious to stick to it in spite of their many differences. Their gain results mainly from the continuance of the old imperial preference system and the sterling area. These two have provided for the developing countries regular markets and the means to serve them. The benefits flowing from this arrangement, it must be stressed, are mutual and stable.

Although the newly independent nations have been the loudest in criticising the Commonwealth, it is precisely they who stand to get the most out of their membership. Besides enjoying preferential treatment for their exports to Britain, they receive considerable sums as economic aid from the developed countries. This year the British Prime Minister has proposed that the aid from the older Commonwealth nations to the newer members should be stepped up. Furthermore, in times of need they have looked to Britain for military help, as indeed Kenya and Tanganyika did recently. These then are the positive advantages which the developing countries of the Commonwealth have derived from their membership. The Commonwealth leaders, who forgathered in London last week to participate in their biggest conference so far held, had to grapple with many explosive issues like the future of Southern Rhodesia, but not entirely unexpectedly came out with a unified stand. That the greatest common denominator could be evolved by a diverse group, whose members were so blatantly preoccupied with their own problems and were least interested in larger issues, speaks for the inherent attractions of the club. True, a good deal of tight rope walking has had to be done, but a unanimous *communiqué* was produced out of the hat, credit for which is largely due to Britain's Prime Minister, Sir Alec Douglas-Home.

Economic affairs and trade figured as the last item on the agenda of the Prime Ministers' conference. The Prime Ministers have stressed the need of the developing countries for bigger and more remunerative outlets for their products. President Ayub Khan's argument that for some countries markets were becoming even more important than aid found ready support from most speakers who participated in the discussion. The developing countries are bedevilled by chronic balance-of-payments difficulties, and many of them are, in fact, meeting their repayment obligations out of the aid they receive. Aid has at best been a temporary palliative. In the long run the developing nations can stabilise their external payments position only if they are able to step up their export earnings. The Commonwealth leaders have unreservedly recognised this aspect and agreed that the work of the U.N. Conference on Trade and Development should be followed up, in particular that relating to the expansion of trade in primary products through freer access to markets, and, in suitable cases, through commodity agreements and stabilised prices at fair levels. Sir Alec in fact pointed out later in the House of Commons that Britain was in a very good position to follow up the work of the U.N. Conference on Trade and Development. As far as Britain's imports were concerned, he said she took about 40 percent from the developing countries.

Indeed a section of British opinion feels that the Commonwealth is a growing burden on Britain. The share of U.K. exports absorbed by Commonwealth countries has dropped from about 41 percent ten years ago to about 29 percent last year. In fact, as a contemporary pointed out, much of the trade is only British aid money returning home. Britain's investments in her former colonies are substantial and her aid disbursements in loans and grants have been of the order of about £150 million a year. The Chancellor of the Exchequer, Mr. Reginald Maudling, drew attention to the steady increase in Britain's programme of aid to Commonwealth countries, but stressed that there were obvious dangers in allowing long-term loans to exceed income. Ultimately, the limit to Britain's aid programme is set by her own external payments position, which is already under stress. But not many have seriously accepted the argument that her resources are already fully extended. The Labour leader, Mr. Harold Wilson, has an even more ambitious programme of Commonwealth aid than what Sir Alec has drawn up. The Labour Party has in fact pointed out that what Britain now offers in aid is just a fraction of the amount that Britons spend on gambling and bingo, and smaller still than what they spend on greeting cards.

The Overseas Development Institute in London in a recent pamphlet has expressed doubts that aid puts a big strain on the country's balance of payments, and says that the apparent outflow of £140 million in 1962-63 could well have disguised a net gain of £30 million. According to the Institute, the loss in terms of reserves, even on making the most unfavourable assumptions, is hardly more than 10 percent of the total aid. More than half of British aid, the Institute says, is given in the form of high-interest loans tied to British exports. No doubt, since last year easier terms have been offered for loans, such as postponement of repayments and waiver of interest in the first seven years in certain cases; these concessions amount to reducing the effective interest rate over the entire period from 5½ percent to about 3 percent. But as the *Financial Times* editorially suggested some time ago, the really generous gesture for Britain would be to "give much more through the International Development Association which lends for 50 years at no rate of interest." The U.K. and the U.S.A. have indeed given a lead in routing aid through the I.D.A., but the amounts pledged have been small. Britain's aid commitments in recent years have,

no doubt, risen faster than any other item of Government expenditure, and about 85 percent of the assistance has flowed to Commonwealth countries. But the aid from public and private sources together amount to only about 1¼ percent of the *gross national product. And in the case of aid tied* to purchases in Britain, the benefit is watered down because the prices are not often competitive. Nevertheless, the London conference has served a useful purpose in that—to quote *The Times*—"the accepted idea that the developed Commonwealth countries must help the rest has been deepened and given more precision."

In the context of the forthcoming elections in Britain, the Commonwealth conference signifies a tactical triumph, minor though it may be, for the Conservatives. In certain evenly contested constituencies, the Commonwealth relationship exerts an appeal which can influence the marginal votes. At the same time, by deftly avoiding a show-down on Southern Rhodesia, Sir Alec has managed to stave off unpopular reactions. The support given by the conference to the proposal for setting up a Commonwealth Secretariat can be turned to advantage at the polls in that it can be interpreted as a symbol of Afro-Asian confidence in the Tory Government. The idea of a Commonwealth Secretariat has been raised in one form or another for quite some years now, but so far it had fallen by the wayside because of the fear of domination by Britain. In view of the changed complexion of the Commonwealth, these fears seem to have been allayed. The position now appears to be the other way round as is implied by *The Times* when it says that those who wanted more formal structure in the Commonwealth must not complain if what they get is a permanent and increasingly well-informed technical lobby of the have-nots in the heart of London.

SUCCESS OF CENTRAL LOANS

THE second tranche of the two Central Government loans—4 percent Loan 1970 and 4¾ percent Loan 1989—has yielded a total subscription of Rs. 151 crores on 15th July, which was the closing date. The subscriptions have exceeded the notified amount by Rs. 1 crore. The Reserve Bank has announced that all applicants will be given full allotment. As was expected, the short-dated 4 percent Loan 1970 has attracted the bigger subscription of Rs. 106 crores; the balance of Rs. 45 crores has been raised from the longer-dated 4¾ percent Loan. Although the details of the subscription are yet to be published, it is likely that scheduled banks, including the State Bank of India, have taken up Rs. 60 crores to Rs. 70 crores of the 4 percent Loan. The Reserve Bank has probably gone in for a substantial amount of this loan with a view to selling it on tap later. In view of the higher yield from the 4¾ percent Loan 1989, the main subscribers, presumably, are the Life Insurance Corporation of India and the provident funds which generally look to yields rather than to the period of maturity.

In April 1964, two loans worth Rs. 188.51 crores were offered for converting maturing securities. Conversions amounted to Rs. 71.78 crores for the 4 percent Loan 1970 and to Rs. 69.24 crores for 4¾ percent Loan 1989. So maturing securities for Rs. 46.9 crores had to be repaid in cash. In sum, the gross market borrowings of the Central Government have amounted to Rs. 292.52 crores during the current financial year (1964-65), and net borrowings have totalled Rs. 104.10 crores. Since the Central Finance Minister, Mr. T. T. Krishnamachari has indicated a total gross market borrowing of Rs. 295 crores for 1964-65 in the last Budget, the target has been attained for all practical purposes. Nearly Rs. 10 crores is expected from the premium prize bonds.

The borrowing programme of the Central Government has so far been in line with the third plan target. During the current plan, the net borrowing target has been fixed at Rs. 475 crores. A sum of Rs. 340 crores has already been taken, and the balance of Rs. 135 crores will be raised in the course of the next financial year. The gross market borrowings during the third plan so far have amounted to Rs. 1,010 crores. Net borrowings amounted to Rs. 62.63 crores in 1961-62, to Rs. 72.92 crores in 1962-63, to Rs. 100 crores in 1963-64 and to Rs. 104.10 crores in 1964-65. Consequently, the interest-bearing obligations of the Central Government have risen from Rs. 3,114 crores in 1963-64 to Rs. 3,220 crores in 1964-65.

The subscriptions for the new loans have been obtained without straining the money market. The prices of Government securities have been steady. Although there was a temporary stringency in the money market at the time the new loans were issued, conditions have again become easy. The call rate has dropped to around ½ percent after touching a peak of 6 percent. There is a predominance of lenders at present. But it would be wrong to read too much into the prevailing easiness, which is entirely due to the slack season. Also, the fact that the Central loans have so far been subscribed without difficulty does not by itself mean that the Centre will go in for a third instalment of borrowing later this year. Even if it does so, it is likely to borrow a relatively small amount, which can be secured through Reserve Bank sales on tap.

Attention for the time being has been focussed on the borrowing programmes of the States. In 1963 the Central Government borrowed on behalf of the States under a combined loan programme. In spite of the many advantages of that programme, it has been given up, and the States have to fend for themselves this year. In view of some maturing State Government loans, their net borrowings may amount to about Rs. 100 crores during the current financial year. Although subscriptions for State loans have often been obtained through persuasion as well as pressure, the prospect this year is by no means very certain. The State Governments may have to offer bigger interest rates on their new borrowings than what they offered in 1963-64, as the cost of money has been substantially raised since. Although banks will be persuaded to buy these loans, their support is likely to be limited. It needs to be remembered that with the subscriptions to the new Central loans which have just closed, the banking community has nearly fulfilled the increased liquidity requirements to be enforced next September. As far as the market for Government securities is concerned, a drop in prices is not unlikely with the floating of new State Government loans. As in previous years, the bulk of these loans will probably be thrown back to the market.

The Government has not attached to borrowing the importance it deserves. The prevailing inflation has been largely due to excessive money supply in relation to the availability of commodities and services. The bulk of the money supply has originated from large public expenditure. Since the Government has obtained considerable funds by resorting to deficit financing, inflationary pressures have been aggravated. If inflation is to be curbed, it is not only necessary to restrain deficit financing through the printing press, but it is also urgent to take effective measures to mop up excessive purchasing power. In this borrowings can be very useful. But there has so far been no serious effort to make Government loans popular. Until now the support for securities has largely come from institutions which have perforce to invest in gilt-edged to comply with statutory requirements. The factor standing in the way of making Government securities popular has been the interest offered, which falls much short of current market standards. So investors have little incentive to buy gilt-edged stock. Although a rise in the interest rate will increase the financial obligations of the Government to service the loans, it will have the distinct advantage of promoting further savings and thus curb inflation which has begun to assume serious proportions.

As for raising funds through premium prize bonds and the various small savings schemes, the outlook is not very encouraging. The improved collections under small savings during 1963-64 were due to exceptional circumstances. The collections during the current financial year have begun to decline. Not only have savings been affected by rising commodity prices, but the Unit Trust assuring a yield of 6 percent, tax-free, poses a further threat to small savings schemes. Unless the interest rate on the latter are suitably raised, they will *not* attract savers.

PLANS FOR RURAL DEVELOPMENT

THE tardy development of agriculture has inevitably attracted much attention from the Planning Commission, which is reported to have accepted a scheme submitted by Mr. Chester Bowles, the U.S. Ambassador to India. The programme suggested by him is now being examined by a small committee appointed by the Commission, and its financial and administrative implications are being worked out. The scheme is an integrated one and envisages the improvement of all existng programmes in rural areas for agriculture, community development, irrigation, power, etcetera. It goes without saying that any scheme for rural development should not be conceived in a piecemeal fashion, but should be related to the broader development needs of an area. Mr. Bowles is apparently conscious of the financial limitations of such a comprehensive programme, so he has suggested that, to start with, efforts should be made to develop a model district in every State. The entire money earmarked in the plan for the development of the model district should be spent in a single year.

Mr. Bowles, who originally submitted his scheme to Mr. Nehru, thinks that "a sound and enduring increase in agricultural output cannot be achieved by pushing buttons labelled 'fertilisers', 'better seeds', 'rural credit', nor with many exceptions can it be achieved by tying the success of India's rural development to a few thousand locally dominant individuals who, in most cases, will have achieved their dominance as landlords or moneylenders." His plan for developing initially a model district in every State is on the lines of the package agricultural programme which has already been undertaken in seven districts. Although the results of the scheme cannot be said to be good so far, it cannot be gainsaid that it is based on sound principles, as is indeed Mr. Bowles's latest programme for the development of India's rural areas.

But the main worry for the planners will be to find resources to undertake a comprehensive programme of rural development. The success of the programme will to some extent depend on assistance from abroad. Mr. Bowles has not been unconcerned about this problem, for he has pointed out that the U.S.A. would offer the use of P.L. 480 funds and provide some foreign exchange loans to buy lorries, communication and hospital equipment, etcetera. He has also assured the planners that his country would assign technical people to assist in setting up the model districts. But there are problems which money alone cannot tackle, for example, the slow pace of land reforms to which Mr. Bowles has drawn attention. The available statistics, according to him, do little to clarify the actual situation. The U.S. Ambassador has said that while it is reassuring to note that 78 percent of Indian rural families "own land", it is much less so to read that 12 percent of the families control more than half of all cultivated land and that 1 percent control nearly one-fifth of it. Meanwhile, the progress of land reform has not been uniform in all the States. Although the Bihar Government has recently passed four land reform legislation, it has itself admitted that the correct position of share-croppers *vis-à-vis* the land they till has not yet been determined.

As for the other rural development programmes, such as community development projects, Mr. Asoka Mehta, Deputy Chairman of the Planning Commission, has admitted that they have left no deep impact on villagers. Yet the aim from the very start was to encourage the participation of the rural people in community development projects, which have now been set up throughout the country. The annual conference of community development and Panchayati Raj, which began in New Delhi on Monday, diseussed such problems as the fuller utilisation of rural manpower, paying special attention to the welfare of the weaker sections of the community and what is called "composite and integrated planning." Mr. Jaya Prakash Narayan feels that Panchayati Raj should be developed primarily for fostering local leadership. The Ministry of Community Development has for some time been suggesting a separate sector for Panchayati Raj with specified powers and responsibilities. The Planning Commission, however, does not seem to be favourably disposed towards the proposal. A danger in this move is that in the name of strengthening the local self-government institutions in rural areas, a village bureaucracy may be established. India's rural areas are already being dominated by such elements as moneylenders, landowners and people of higher castes. If the development plans are to be executed efficiently and expeditiously, it will be necessary to discipline these vested interests in the villages.

Current News and Comment

Edible Oil Prices Still High

The ban on futures trading, margin restrictions on bank advances against vegetable oils, including *vanaspati*, and the complete ban on further export of groundnut oil and *vanaspati* with effect from 11th July, have failed to produce any visible impact on edible oil prices. After a mild setback noticed in the beginning of July, oilseeds prices have recovered to around the highest levels of the season. That the ban on forward trading with effect from 1st June should not have produced the slightest effect on the market is not the least surprising because few had ever shared the Forward Markets Commission's view that speculators were responsible for the rise in oilseeds prices. If the credit restrictions and the ban on oil exports have failed to impart an easier tendency to the market, it is mainly because the shortage of edible oils is far too severe than is generally believed and partly because the restrictions have been imposed very late in the season. For instance, about 74,000 tons of groundnut oil have already been shipped between November 1963 and June 1964, the bulk of the export having taken place between December and March. Groundnut oil export has accentuated the scarcity of supplies in the internal market. Because of the partial failure of the mustard crop and a small setback in the production of linseed, sesame, kardiseed and nigerseed, the total supply of edible oils this season has been smaller than in the previous season.

The shortfall has to be viewed in the context of the steadily expanding internal demand. Although the credit restriction and export ban have failed to cause any fall in edible oil prices, it can be argued that prices would have risen much higher but for these curbs. Therefore, although belated, these restrictions are welcome. The Government would do well to examine carefully whether credit facilities extended to co-operative societies have not encouraged the withholding of supplies from the market. Oilseeds prices might not register any important decline in the immediate future as there is little prospect of any appreciable increase in market supplies. But if weather conditions remain favourable for the new groundnut crop and the Government is successful in arranging an early import of 100,000 tons of soyabean oil and 50,000 tons of tallow from the U.S.A., which is under negotiation, oilseeds prices could be expected to develop an easier tendency after some time.

Exports of Spices Rise

The export of spices from India in 1963-64 earned Rs. 15.3 crores, against Rs. 13.4 crores in 1962-63. This increase in export earnings was not shared by all the spices. While the export of curry paste and curry powder remained more or less constant at last year's level, the export of chillies, cardamom, ginger, turmeric, celeryseed and aniseed in 1963-64 increased by Rs. 2.88 crores, compared with those in 1962-63. The export of black pepper, coriander and garlic over this period actually declined by Rs. 89 lakhs. In the case of black pepper, Singapore and Indonesia offered stiff competition to India in the U.S. market. The Spices Export Promotion Council should look into the causes for the reduced competitive power of Indian black pepper in the U.S. and other markets and suggest practical ways and means of overcoming it. In the case of coriander, export earnings appear to have declined because of lower production and higher internal prices which reduced exports.

In the case of cardamom, there is good scope for increasing exports if proper care is taken to raise internal production and to keep the export prices down. Although India is at present a major producer of the commodity with an annual output of 3,300 tonnes, she does not have a monopoly market, and Ceylon and Guatemala are her competitors. The total output of the latter is still small, but if the export prices of Indian cardamom are allowed to rise, these countries will increase their total production and offer more serious competition to India. It is, therefore, necessary to increase the production of the commodity in India to improve its quality and above all to keep the export prices down. The main difficulty appears to be that nearly two-thirds of the cardamom estates are small with less than ten acres of land, and there are five to six pickings a year. This makes it difficult to control the quality of the produce. But with proper efforts this should not prove an impossible task.

Cotton Consumption Increasing

Cotton consumption by Indian mills during the first eight months of the current season beginning with September 1963 amounts to 4,082,000 bales comprising 3,668,000 bales of indigenous cotton and 414,000 bales of foreign cotton. During the same period of the last season, consumption totalled 3,740,000 bales, of which 3,072,000 bales were accounted for by indigenous cotton and 668,000 bales by foreign cotton. Assuming that the current trend is maintained, which is very likely, consumption this season should exceed 6.1 million bales comprising some 5.5 million bales of Indian cotton and 600,000 bales of foreign cotton. There has been an appreciable increase in the consumption of cotton over the past three years. The rise has been particularly marked in the case of indigenous cotton. From 376,000 bales a month in 1961, the consumption of Indian cotton increased to 387,000 bales in 1962 and to 427,000 bales in 1963. The monthly average for the first four months of 1964 works out to 465,000 bales. The total consumption, which averaged 464,000 bales a month in 1961, increased to 469,000 bales in 1962 and 524,000 bales in 1963. The monthly average for January-April 1964 comes to 514,000 bales.

The consumption of cotton is likely to record a further big increase in coming years because of further additions to the spindleage capacity. The Government is anxious to accelerate the pace of the expansion of the textile industry so that the spindleage reaches 16.5 million by the end of the current plan. The capacity is proposed to be increased from the present 14.8 million spindles to 15.6 million spindles in the course of the current year. The Government is reported to be actively considering allowing textile units of 12,000 spindles to raise their capacity to 25,000 spindles. It is also considering a proposal for staggering weekly holidays and for a 54-hour week in the textile industry to increase cloth production. The country cannot afford to depend on an increasing volume of imported cotton for meeting the growing requirements of the textile industry. This means that domestic production will have to be increased appreciably, and this will have to be achieved through a higher yield an acre which at present stands around 115 lbs or 120 lbs, compared with 457 lbs an acre in the U.S.A., 555 lbs an acre in Russia and 586 lbs an acre in Egypt. The extremely low yield in India encourages the hope that it should not be difficult to bring about a considerable increase in production through a moderate increase in the yield.

Unfortunately, past experience has not been happy. But since the industry itself is now beginning to take a more lively interest in the matter of cotton production, one can perhaps take a little more optimistic view of the future. Even so, it seems improbable that production can be stepped up to reach the target of 7 million bales in 1965-66. In spite of the ideal weather conditions throughout the season, the 1963-64 crop is placed around 6 million bales—an all-time record. The Planning Commission expects production in 1965-66 to reach the level of only 6,540,000 bales and the target for the fourth plan has been tentatively fixed at 8.5 million bales. If cotton production cannot be increased to meet the industry's growing requirements, prices of the commodity will continue to remain on the high side, making it increasingly difficult for the Indian textile industry to compete in international markets without adequate export incentives.

Tasks of Management

With the spread of industrialisation and the general growth of the economy, the quality and character of business management have been undergoing changes, the emphasis on the selection of personnel having shifted from family connections to professional training and competence. As managerial talent is not inborn but has to be acquired, business and industrial houses send their staff for training in specialised institutions before they are given responsible jobs. Bodies like the Calcutta Management Association are doing useful work in spreading ideas about the rôle and responsibilities of management in the context of India's economic development. Addressing the annual general meeting of this body in Calcutta last week, Mr. K. P. Goenka, president of the Federation of Indian Chambers of Commerce and Industry said that industry both in the public and private sectors now placed greater emphasis on the "training and development" of managerial executives. Some modern business houses also had their own training schemes. In August 1963, the Federation organised a seminar on the problems of private and public industrial undertakings. Its proceedings showed that the managerial job in both the sectors required training on an organised basis, as the problems were in many aspects common.

Discussing the old controversy of whether managers are "born" or "made", Mr. Goenka thought that to pose the question in this form would be making a wrong approach altogether. In his opinion, managers are "developed". Specific areas of management require different skills and this would require a person to have either formal or informal training, or both. Managerial task—that is, the task of managing the work of people who are engaged in a common venture—required "organisational ability, leadership, power to motivate and capacity to delegate." Some of these qualities are inborn, but some others are acquired through training. Although there have been successful business men in India and abroad with very little formal education, professional training, Mr. Goenka held, had to be accorded a prominent place in developing managerial talent. Moreover, with the increasing separation of the function of ownership from that of management and the complexities created by modern technology and mass production, emphasis needed to be placed on both formal and informal training in specific management subjects as also the general management techniques. While conceding that training alone cannot make a good manager, Mr. Goenka observed that training gave a person with a certain background, sufficient proficiency and competence to carry out specific jobs, gradually and responsibly. In keeping with this realisation, management training has now become part of the country's education system, and many universities and specialised institutions are imparting training in related subjects. Almost every major city has

a *management association* which provides a useful forum for exchanging experience and knowledge.

Discussing the rôle of management in the context of today's economic problems, Mr. Goenka said that the biggest task was to ensure that production could "proceed without interruption and delay." Also, there was the question of expansion. The economy has to function with shortages all round and there are external regulations to reckon with. There are also certain other handicaps. Yet, he said, there were some favourable circumstances for the successful operation of industry. Good management had to condition itself to the situation as it obtained today. It had continually to ensure that costs were progressively brought down and the competitive ability enhanced. At any level of management, the function was to plan and ensure the use of resources to the best advantage. Citing the example of Japan, the F.I.C.C.I. president pointed out that her natural resources were much lesser than India's. But primarily through better organisation and techniques, she had attained a higher rate of economic development. Reminding the audience that India was carrying out an experiment in economic development without parallel in history, Mr. Goenka pointed out that whether this development took place in the private or public sector or a mixture of the two, there was no getting away from the fact that success or failure would depend on the quality of the management which runs business enterprises.

Refrigeration for Preserving Food

The Indian refrigeration and air-conditioning industry has made good progress during the past few years. The importance of refrigeration has been increasing in view of the growing food shortage. A great deal of food which is wasted at present can be saved through better storage. There is much scope for preserving sea foods to supplement India's food requirements. There is already a large export market for shrimps and tuna but their export has been hindered by the lack of refrigeration facilities. Refrigeration can be developed as a large export-oriented industry in the west coast of India. The export of shrimps can be considerably increased if adequate refrigeration is provided.

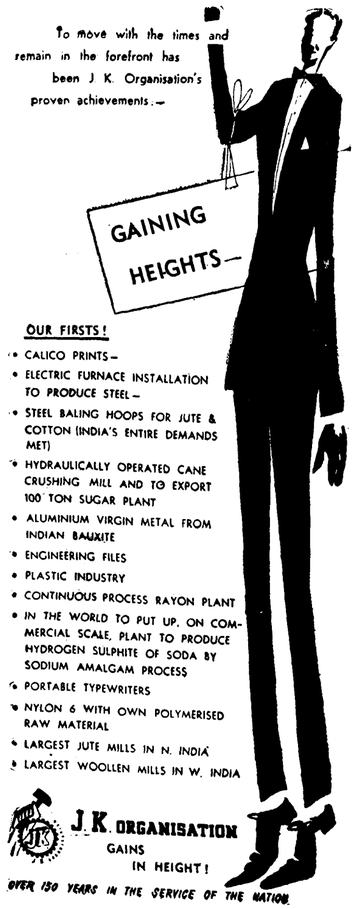
Mr. B. S. Dua, president of the Refrigeration and Air-Conditioning Council of India, pointed out on the occasion of the Council's eighth session in Calcutta last Saturday how the industry had been handicapped. Manufacturers have been forced to work at only 25 percent of the capacity due to the shortage of essential raw materials which are imported. Since the foreign exchange required to import these raw materials is not considerable, the Government should not find it difficult to help the industry with foreign exchange allocations. If the industry is helped for a further two years or so, indigenous production will reduce the need for importing foreign raw materials. In the meantime, the capacity of the industry can be doubled with a bigger foreign exchange allocation.

Mr. Dua stressed the importance of treating the industry as an essential one rather than as a "dispensable luxury." Because of the importance of refrigeration as a food preserver, its usefulness cannot be overlooked. Refrigeration helps to produce many goods required for defence. It is essential for telephone, electronic and radar industries. Due to major technological advances in freeze-drying and refrigerated transportation, the industry has played an important rôle in food preservation. The industry's working has also been hindered by the lack of power supplies. It is unfortunate that in the allocation of power to various industries, the refrigeration and air-conditioning industries get a very low priority. Since idle capacity is a great economic waste, it is necessary to take vigorous measures to ensure an adequate supply of power to the industry.

Stores Purchase Policy

The Directorate-General of Supplies and Disposals purchased stores worth Rs. 520 crores in 1963-64, against Rs. 405.15 crores in 1962-63. The indigenous content of the purchases in 1963-64 amounted to Rs 420 crores. There is, however, still much scope for increasing purchases in India, especially from the small-scale and cottage industries which supplied goods worth only Rs. 35 crores in 1963-64.

Addressing the meeting of the Regional Purchase Advisory Council (Western Zone) in Poona recently, the Director-General of Supplies and Disposals, Mr. S. S. Jagota, said that suppliers should quote realistic delivery dates in their tenders so that the purchasing authority might not face undue difficulty. It is, however, equally necessary that producers should know the requirements of the Directorate sufficiently in advance and in detail so that they might tender for a larger proportion of the total purchases. Although there has been some improvement recently, producers have still to comply with too many formalities in submitting tenders, many of which can be easily avoided.



U. S. TRADE INDEX

THE National Association of Manufacturers of the United States of America, have sent us a copy of their "American Trade Index for 1904." This Volume grows larger and larger every year. This sixth edition numbers 700 pages, and contains classified lists of about three thousand of the leading makers in the United States of all classes of goods suitable for the export trade. The index has now become a standard reference work for the U.S.A. as regards manufacturers generally. The present edition comprises twelve thousand copies of which seven thousand five hundred have been sent abroad, free for distribution to prominent importers, wholesale dealers and manufacturers in countries outside the United States who are interested in purchasing or handling American goods. Companies or firms in India desiring a copy can obtain one free on giving a brief statement of their business together with references if the same shall be found satisfactory. Communications have to be addressed to the National Association of Manufacturers, New York, U.S.A. The activities of the Association are not confined to the publication of the Index. For its members, it is prepared to take up all trade questions connected with the development of export business including translation of correspondence, furnishing reports on the commercial standing of business houses etc etc. For its foreign correspondents it is always prepared cheerfully to furnish them with information free of charge, and invites their correspondence on commercial topics. The Association is supported wholly by the annual fees of its members and devotes its energies to the cultivation of its members' interests. It does no buying or selling on its own accord nor does it accept any commissions in any form for services at home or abroad. The usefulness of the Institution is shown by the fact that its membership has trebled since 1899, and still goes on increasing. Firms in India of good standing will find, through the aid of the National Association of Manufacturers a safe introduction to the best manufacturers in the States who deal in the special commodities in which they are interested. The Association seems to be thoroughly equipped at all points for the special work it undertakes to do.

A Ditcher's Diary

"COME OFF IT", I SAY, ADDRESSING MYSELF LESS to Mr. Raghunath Singh than to the political operators behind him who, with unexpected aid from a section of the Press, have produced the phoniest of storms in recent years. The *communiqué* issued at the end of the Commonwealth Prime Ministers' conference in London is a document of no use whatever to man or beast; I was glad to see the sensible suggestion made in the *Statesman* that this business of issuing a *communique*, the drafting of which causes the maximum trouble, be done away with. But let us take the *communiqué* as it is. The reference to differences between India and Pakistan is so vague that Mr. Krishnamachari was absolutely right in claiming that India had lost nothing and Pakistan gained less. The protests do, however, make clear how guilty some consciences are: and this, I suggest, was precisely the inspiration behind Pakistan's stupid insistence on inclusion of the reference. Mr. Singh has been made to say that this would not have been possible if Mr. Nehru were there in London. Why does he have to be reminded that, let alone Mr. Nehru, even Mr. Lal Bahadur Shastri could not be there? Mr. Krishnamachari was not only not the pianist but not even the first fiddle: he was at best, the second fiddle and he played quite well with not much help from Mrs. Indira Gandhi. What is depressing about the whole business is that so many should have confused the substance with the shadow, the *communiqué* with the conference. The late Professor C. E. M. Joad defined decadence as "dropping the object". This may be just what we are witnessing in India and Pakistan. For both countries Kashmir appears to have become an irrelevance: the object seems to be to secure favourable statements from all and sundry on the case each upholds so passionately. This enhances the dignity of neither party in the eyes of the world which is beginning to treat us both as importunate canvassers in search of good conduct certificates. To say "Commonwealth, their Commonwealth" is to betray not only unwarranted cynicism but also one's own inadequacy. The public is being fooled by a handful of shrewd politicians who are out to undermine Mr Shastri's Government. It is not too difficult to identify these gentlemen.

SO THEY HAVE, AFTER ALL, GOT WHAT THEY WANTED, Mr. Lal Bahadur Shastri has relieved himself of the External Affairs Ministry over which Sardar Swaran Singh now presides. I have nothing at all against the choice; against Mr. Bhutto over Kashmir, he gave a good account of himself. If Mr. Shastri's health could not really stand up to the strain, the decision itself may be wise. It is time, however, to warn Mr. Shastri that the frequent reshuffles of his Government, only a few weeks old, may create the impression that either he does not know his mind or he is amenable to pressure from unidentified quarters. This can do the Prime Minister but little good. I suggest he needs to watch some of the gentlemen in the South Block, which has issued yet another protest to Peking about something or other. Such notes have in the past been the precursor of mischief. I do not by any means take China's good intentions for granted; I never have done. But do I discern a hardening of New Delhi's attitude to negotiations with China? The latest note makes me think I may not be wrong. I am not suggesting that the affair with China can be settled in a couple of days, or even months or years. What I am wary about is the vested interest that may grow over prolonging the affair, both in New Delhi and Peking. Years ago I had to negotiate with a landlord for the present offices of *Capital*. This was first done through two firms of solicitors; and the correspondence just went on and on, months after we had moved in. I then spoke to the landlord direct and exchanged a couple of simple letters with no legal jargon at all. Things like protest notes grow on officials; to end the series seems too cruel a thought to bear. This is where Mr. Swaran Singh can apply himself with vigour. If with Mr. Bhutto his brief was to make the talks yield nothing, with China he can show new initiatives, the cue for which was given by Mr. Shastri himself not very long ago. The Colombo proposals were never very promising. Other ways remain.

I AM SURE MR BIJU PATNAIK INCLUDES HIMSELF among those "men of high and impeccable public standards" who, together with eminent jurists and even journalists, should, according to him, meet in a convention to define corruption and formulate a code of conduct for Ministers and others. Can the former Chief Minister of Orissa, a highly successful business man, be so naïve as to believe that the public, which can frequently be gullible, does not know just what he is getting at? It has not been very easy to take Mr. G. L. Nanda and his Sadachar Samiti and Sadhu Samaj and what-have-you very seriously; *diwan-i-ams* are gimmicks and not very original ones at that. But the moment Mr Nanda appeared reasonably earnest about doing something against corruption in public life, some parties were visibly worried. Mr. Patnaik is, if anything, a very clever man. That's why I am rather surprised that he should have made himself the mouthpiece of these worried men. Again, there is politics in it, of course. Mr. Patnaik's reported support for Mr. Morarji Desai for the prime ministership in June last may well have something to do with the things one hears about him and his man in office, Mr. Biren Mitra. This, however, is no reason why there must be a time-consuming convention on corruption, which can only delay even the very little Mr. Nanda is likely to achieve. As for the code, let me tell Mr. Patnaik that it already exists and Mr. Patnaik knows what it is. The simple criterion is whether any decision taken by a Minister in his official capacity has led to the enrichment of himself or his relations. By and large the Das Commission applied this simple principle to the case of Mr. Pratap Singh Kairon and his sons and found them guilty. Anyone objecting to its application to other suspects inevitably gives the impression that there must be something to hide. If Mr Patnaik is creating spurious semantic difficulties about defining corruption, Mr. Nanda is surely oversimplifying his task by saying he will do the job in six months. He is up against a monster whose immense strength he does not appear to have even begun to measure.

SAN FRANCISCO'S COW PALACE WITNESSED THE most bovine of decisions last Thursday. It saw the nomination of Senator Barry Goldwater as the Republican candidate for the U.S. Presidency. In fact his victory seemed certain ever since the crucial Illinois delegation led by the redoubtable Senator Dirksen decided to back him against his rival Scranton. The conservative wing of the Republicans has at last notched up a victory after suffering nearly a quarter century of eclipse. I think it is one of the strangest quirks of history that the Party of Abraham Lincoln should nominate for the Presidency a person who seems to be the very antithesis of liberalism and moderation, one who cast his vote against the Civil Rights Bill. Goldwater is trying to wriggle out of this incongruous position by emphasising that his opposition to the Civil Rights Bill stemmed only from his disapproval of certain clauses in it and that in line with the Republican stand he favours civil rights in principle. The *volte face* was complete when the Arizona Senator promised to enforce civil rights if the nation sent him to the White House next November. He has expressed the hope —obviously to clear racial hurdles out of his way —that Negro rights won't become an issue in the electioneering campaign. The question may be asked why did the G.O.P., knowing full well that a Goldwater nomination will spell certain defeat at the hustings in November, name the Senator as its candidate. I think a plausible theory is that in a year when Democratic victory seems certain, Republicans could not think of a choicer sacrificial lamb than Goldwater. If they were convinced

that another candidate might carry the nation; their ride on the Goldwater bandwagon would almost certainly have been in doubt. Even as it is, he has provoked a rift in the G.O.P. by proclaiming in his acceptance speech that political moderation is not a virtue and that extremism in defence of liberty is no vice. This is interpreted as a snook at the liberals in the Party.

SURELY DR. NKRUMAH OF GHANA MUST HAVE BEEN joking when he said at the Commonwealth Prime Ministers' conference that even Britain had a history of anti-colonialism because she had "thrown off the yoke of the Roman Empire". For one thing he was historically incorrect. There is no evidence whatever to indicate that the Romanised Britons of the early 5th century A.D. were anxious to hasten their patrons' departure. In fact, they were just the opposite because it left them without protection against the *marauding* Saxons. The Britons had twice within three centuries suffered invasion from the barbarian Pict tribes north of Hadrian's Wall when the Roman legions were withdrawn to fight in Europe; they could scarcely have been eager to repeat the experience. Nor did they regard themselves as in any way a nation, despite the fact that the Romans, as the British did in India, had united the various warring *communities* for reasons chiefly connected with their own administrative convenience. There had certainly been local resistance to Roman intrusion in the early days, but by the 5th century all that was over and the Celtic Britons were confirmed in their Romanised ways. Furthermore, the withdrawal of the Romans was for them an unmitigated disaster. The vast majority of the people, whose descendents President Nkrumah congratulates on throwing off the Roman yoke never in fact lived under it; they came to Britain from north Germany after the Romans had left and slaughtered all the native Britons who did not manage to escape to Wales, Ireland, Scotland or Cornwall. So Ghana's President could not possibly have chosen a more unfortunate example of the "throwing off" of a colonial yoke, and I only hope the same fate which befell the Britons does not eventually overtake any of the peoples from whom the British have recently withdrawn their protection. But is this not just another example of the muddled thinking which exists about colonialism in some regions of the world today? For instance, I suspect that Dr. Nkrumah does not even include in the term the state of affairs which exists in central Asia. There, at the moment, is the only remaining colonial empire of any size left in the world. Yet when the Russians denounce the colonial mote in the West's eye and craftily disregard the beam in their own, Dr. Nkrumah is always first to add his voice to theirs.

WHAT I WROTE SOME TIME AGO ON THE "TOPLESS" development in sartorial styles seems to have created a flutter in many an unexpected dovecote. A friend assures me that the topless dress will not catch on in this land of Manu and Yagnavalkya—as indeed the bikini has not. His contention is that the danger from topless dresses is real only in western countries, where in any case it shouldn't matter much since strip-tease has inured people's eyes to the wonders of God's creation. In India, he says, we do not have anything to fear. No shop in this country has yet received any consignment of topless suits. Although feminine fashions are remarkably transcontinental in their spread, so far no topless beauty has been espied here. My friend hastened to add that in India even fully dressed women were admired only silently, even as former Speaker Ananthasayanam Ayyangar adjured Lok Sabha members to laugh silently in their minds (not sleeves, though). Such being the case the modern Eve will have no incentive to plump for topless suits. My friend is equally firm about the undesirability of any legislative provision against the use of such dresses. The right to sartorial autonomy, he says, is inviolable and dress is something pre-eminently personal, not amenable to legislative dispossessment or a writ petition under Article 32 of the Constitution. Adapting Voltaire's statement to Helvetius on the freedom of speech, he said, "I wholly disapprove of the topless dress but shall defend to the death women's right to wear it."

THE DITCHER

Guide for Investors

STEELS REACT ON DIVIDEND DISAPPOINTMENT

(BY A SPECIAL CORRESPONDENT)

THERE has been a slight reaction in steel shares during the past week or so. The earlier rise was due to hopes that both the Tata Iron and Steel Company and the Indian Iron and Steel Company would pay higher dividends for 1963-64 than for 1962-63. Although both the Companies have increased their distributions to shareholders, the rise has fallen short of the market's expectations. Indian Iron has raised its distribution from 16 percent to 17 percent. The yield amounts to 6.7 percent at the present price of Rs. 25.52 a share of Rs. 10 each. Tata Steel has increased the taxable ordinary dividend from Rs. 11 to Rs. 12 a share. It works out to a yield of 7.7 percent at the present price of Rs. 155.25 a share of Rs. 75 each. A special cash bonus of 10 paise a share has been included in the total distribution of Indian Iron.

The reaction is partly due to the corrective process which has become overdue in view of the sharp rise which had taken place earlier. The liquidation of shares is, therefore, believed to have contributed to a technical improvement. This has been corroborated by deliveries in the past settlement in Calcutta. The carry-forward charges in Indian Iron have been larger due to the closing of the ordinary share transfer book for the purpose of the dividend.

The yields on steel shares are, no doubt, considered fair since in a heavy industry investments are substantial and the return needs to be maintained at a conservative level. But the existing yields have become unattractive mainly because of the soaring interest rates. The assurance of a tax-free yield of 6 percent on the units of the Unit Trust of India has also rendered the yields on industrial equities poor by comparison. As far as the small and middle-income groups are concerned, they are likely to invest their savings in units of the Unit Trust of India instead of in equity investments. The attraction for the latter has suffered greatly because their growth values have been hindered by the levy of the tax on bonus shares.

The investor's cautious attitude towards steel shares is attributable to two factors. Firstly, the partial de-control of steel products has still to show its effects on the profitability of the producers. Secondly, the prospect for further expansion in the production capacities of the two private steel companies during the fourth plan period is being cautiously assessed. Although reports say that the method of repaying the loans which the two steel companies have taken from the Government of India for expansion is being satisfactorily settled, investors are inclined to wait until it is known how the steel companies will obtain finance if they are asked to undertake further expansion.

The Indian Iron and Steel Company has earned a net profit of Rs. 2.29 crores for 1963-64, against Rs. 1.92 crores for 1962-63, after transferring Rs. 4.40 crores (against Rs. 3.40 crores) to depreciation, Rs. 3.87 crores (against Rs. 3.56 crores) to taxation and Rs. 5.35 crores (against Rs. 3.64 crores) to appropriation reserves. The bigger profit has presumably arisen from the increase in output. The Company has produced 1.03 million tonnes of steel ingots and 810,000 tonnes of salable steel, against 1 million tonnes and 795,119 tonnes, respectively. The production of pig iron has, however, declined from 1.3 million tonnes to 1.2 million tonnes. The ordinary share register of the Company will be closed from 1st August to 22nd August, 1964, both days inclusive, and the dividend and cash bonus, if sanctioned by the shareholders at the annual general meeting, will be paid on or after 9th September, 1964. The annual general meeting of the Company will be held on 8th September, 1964.

Poor Profit Outlook for Tea

EXCEPT for Patrakola Tea, which have risen to Rs. 252, against Rs. 120 for the corresponding period of 1963, tea shares have been quiet. Patrakola scrip, it is believed, have been bought by interested parties. Turnover has declined to almost a trickle, and buyers have been difficult to locate even by discounting current prices. The investors feel more apathetic because of the latest award of the Wage Board granting a second interim wage increase to plantation workers. Considering that tea estates, particularly in northern India, have found it difficult to cover production costs fully out of the average selling prices realised for teas, it is feared that if the Wage Board's recommendation is implemented, tea gardens will be in financial difficulties.

The poor start to the new marketing season in north India has disappointed investors. It was earlier expected that due to the small carry-over from the past season (1963-64), the Calcutta auctions for new teas would begin in a steady way. During the past few auctions held in Calcutta so far, buyers have been very discriminating despite a good general demand. Overseas customers have, in particular, been keen to buy only quality grades. They have on the whole been slow in taking their requirements, considering that the overall supplies of tea during the current season are likely to be adequate. The north Indian crop has been making excellent progress. Up to June 1964, the total crop has amounted to 128,470 lbs, compared with 103,871 lbs for the corresponding period of 1963. In view of the prevailing good weather, July, August and September are expected to be heavy cropping months, as is usual at this time of year. The world crop has also risen from 484,353 lbs to 505,325 lbs. Judging from the current trends, north India is likely to produce during 1964 a much bigger crop than it did in 1963.

Investors are worried that the average selling prices so far have been lower than those realised in the corresponding period of 1963. The average selling price for leaf has dropped from Rs. 6.21 to Rs. 6.01 a kilogram and that of dust has declined from Rs. 5.26 to Rs. 4.96 a kilogram. The drop in prices is all the more disconcerting since at this time of year, second flush teas which constitute the pick of the crop, begin to arrive in the market. Later, the trend is expected to soften when monsoon teas will begin to make their weight felt.

The future trend is not likely to be very encouraging as far as the producers are concerned. Buyers will concentrate their attention upon quality grades increasingly. The supply of these teas have been in close balance with demand during the past three years or so. They are, therefore, expected to meet keen support in the coming months. As far as common teas are concerned, the prospect looks very uncertain. Considering an abundant supply of these teas in world markets, buyers will not take their requirements in a hurry by paying high prices. Indian teas, in particular, do not enjoy an advantageous position in world markets in comparison with teas from other countries. Since production costs in India are higher than those of other producers, Indian teas have been steadily priced out of foreign markets. The decline in the price of dust is discouraging because the domestic buyers have also turned cautious. They are also not keen to buy quickly in view of the prospect for an abundant supply. This besides, domestic blenders are inclined to keep their inventories as small as possible due to costlier credit. It is also apprehended that the rate of growth in domestic consumption will slow down due to the rising cost of living.

In sum, tea gardens are unlikely to make a bigger profit for 1964 than they did in 1963. Profits of gardens shrank considerably in 1963, and poor dividends were paid by tea companies. If profits keep declining, expansion and modernisation schemes of gardens will suffer. As a matter of fact the bulk of the producers have already been financially strained due to the low profitability of the industry during the past few years. Their reserves have been nearly exhausted. Not only has the cost of finance risen sharply, but the plantation industry has also found it difficult to obtain institutional finance. The possibility of raising funds from the open market is not very bright. In the circumstances, the expansion schemes relating to tea production are unlikely to make much progress unless the profitability of the industry improves. One measure that may help the industry a great deal is to modify the fiscal system and allow tea exports the advantage of drawback of the excise duty. Although the Government indicated earlier its intention to collect excise duty at the auctions instead of at the gardens, no concrete step has so far been taken about it. In the meantime, tea producers are having to block substantial funds in paying excise duty at the gardens.

Britannia Biscuit Fares Well

THE report of the Britannia Biscuit Co. Ltd for the year ended March 1964, shows that the demand for the products of the Company continues to increase. The improved results have been achieved by economies in production and greater efficiency in spite of steadily rising costs and irregular supplies of essential ingredients and materials. The directors point out that due to working the equipment in multiple shifts it needs urgent replacement. Since the plants of the Company have been working up to the maximum capacity, the rehabilitation of the equipment has posed a problem. If the Company is to contribute progressively to the development of the processed food industry, it is essential that it be allowed to obtain modern equipment.

The installed capacity of the industry is inadequate to satisfy rising consumer needs. Britannia Biscuit has begun to manufacture several new products and further diversification of activity is proposed to be undertaken in the near future. It is constructing a bread bakery in Delhi, which is expected to begin production early in 1965. Conspicuous progress in the field of exports has been made by the Company. New products and packagings are being developed to meet the specific preferences of individual export markets. It is proposd to promote a widespread and more diversified range of products. But the directors mention the steadily rising production costs which have rendered competition in foreign market more difficult.

Sales rose from Rs. 5.08 crores for 1962-63 to Rs. 6.23 crores for 1963-64. The profit has improved from Rs. 86.52 lakhs to Rs. 92.16 lakhs, after increasing depreciation from Rs. 9.99 lakhs to Rs. 12.05 lakhs. The taxable ordinary dividend of 21 percent, including an interim of 6 percent, has been repeated, which works out to a yield of 5.5 percent at the present price of Rs. 38 a share of Rs. 10 each. Development rebate reserve is allocated Rs. 1.15 lakhs (against Rs. 1.49 lakhs), debenture redemption reserve Rs. 1.50 lakhs (the same), general reserve Rs. 14.48 lakhs (against Rs. 12.80 lakhs) and taxation Rs. 60.60 lakhs (against Rs. 59 lakhs). Out of the latter, surtax absorbs Rs. 12.50 lakhs. The carry-forward is Rs. 745, against Rs. 6,999 brought in.

Prospects for Colour-Chem

THE chairman of Colour-Chem, Mr. Ramniwas R. Ruia, told the shareholders' annual meeting on 16th July that the prospects for the current year could be viewed with cautious optimism. The Company's working so far has been quite satisfactory. The demand for the Company's products continues to be good and the customers are satisfied with the quality. But there are indications that things may not be the same as hitherto. This is because of the heavy incidence of excise duty on the Company's production which is estimated to be of the order of Rs. 50 lakhs. Mr. Ruia said that nearly half of this additional burden was likely to be passed on to the consumers. The chairman also drew attention to the rise in cost of raw materials. The foreign exchange allocated to the Company for the purchase of raw materials is extremely inadequate and a major part of the production has to be carried on out of raw materials imported on E.P.S. licences on which a premium of about 60 percent has to be paid. Mr. Ruia said that although sales might be maintained or even improved upon some erosion of profit margin was unavoidable. But he assured the shareholders that the dividend would be maintained at the previous year's level.

Referring to the Phthalocyanine Blue project, Mr. Ruia said that during the last two months some more indigenous components of the sulphuric acid reconcentration plant

had been received. The installation of the plant will be taken in hand shortly to enable the Company to commission the Phthalocyanine Blue project. This plant is expected to reach full production by March 1965 and it will then yield a turnover of about Rs. 30 lakhs a year. The Company's German collaborators are currently working on plans to diversify the production and to manufacture certain intermediates in its factory. The Company hopes to approach the Government for approval of these plans very soon. The diversification plans are estimated to cost Rs. 1.5 crores to Rs. 3 crores. It is hoped that the foreign collaborators will be able to provide the necessary foreign exchange for these plans. The Company's German collaborators hold nearly 33 percent of the total number of shares.

Universal Electric Earns Profit

UNIVERSAL Electric Ltd has earned a profit of Rs. 3.12 lakhs for the year ended March 1964, against a loss of Rs. 25,840 for 1962-63. Taxation for 1962 absorbs Rs. 2,734. The previous debit balance of Rs. 25,840 has been wiped off, and a credit balance of Rs. 2.86 lakhs has been carried forward. The dividend has been passed. Preference shares for Rs. 1.50 lakhs have been issued to the foreign collaborators, Mitsubishi Electric Corporation, for consideration other than cash. The construction of the house-service meter factory has been completed and production began in May 1963. The factory has worked up to its rated capacity. Meters produced amounted to 105,201. Due to the establishment of several other factories, competition in electric meters has increased. But the directors hope that demand will soon overtake supply in view of the rising power-generating capacity in the country. The Company has secured orders from various departments of the Government and from State Electricity Boards.

Indian Organic Chemicals Skips

ALTHOUGH the dividend has again been skipped, the working results of Indian Organic Chemicals Ltd for the year ended March 1964, show an appreciable improvement over the previous year's performance. The turnover has almost doubled from Rs. 19.87 lakhs to Rs. 39.77 lakhs, and the gross profit has increased from Rs. 7.65 lakhs to Rs. 14.35 lakhs. After providing Rs. 12.27 lakhs (against Rs. 10.37 lakhs) for depreciation and Rs. 7.60 lakhs (against nil) for development rebate, the year's operations show a loss of Rs. 5.52 lakhs, against Rs. 2.72 lakhs in the preceding year. The total deficit at the end of the year amounts to Rs. 8.77 lakhs.

The directors state that the Company's factory operated fairly efficiently during the year. The production of acetic acid glacial, however, could not be increased appreciably due to shortage of alcohol. The management has taken up the matter with the State Government and regular supplies of alcohol from sugar factories are expected shortly. The demand for glacial acetic acid is much lower than the supply in the country. The maximum annual consumption is placed around 5,000 tonnes, against the total production of about 12,000 tonnes. The overproduction has badly affected the price realisation. In order to remedy the situation, the Company has decided to go in for the manufacture of other derivatives whereby substantial quantities of acetic acid glacial would be consumed by the Company.

India Cements Cuts Dividend

THE directors of India Cements Ltd have recommended a dividend of 6 percent on equity shares (against 9 percent last year) for the year ended March 1964. The lower dividend has caused some disappointment among shareholders. But the working of the Company during the year has been satisfactory with a rise in earnings. The gross profit for the year, before depreciation and taxation, amounts to Rs. 1.11 crores, against Rs. 91.69 lakhs in the previous year. According to preliminary figures, the net profit amounts to Rs. 69.95 lakhs, after providing Rs. 41.14 lakhs (against Rs. 37.01 lakhs) for depreciation. Out of this, Rs. 40.72 lakhs (against Rs. 35,000), is transferred to development rebate reserve. Rs. 100,000 (against nil) to investment reserve and Rs. 75,000 (against nil) to capital reserve. Donations amounted to Rs. 1.77 lakhs.

The output of cement was about 495,000 tons and the clinker output 465,000 tons. Although the conservation of the company's resources may be facilitated by the lower dividend of 6 percent in view of the expansion needs of the Sankaridrug plant, the dividend will hardly satisfy the shareholders in the context of the rising rate of interest and the higher yield expectations of investors.

Higher Profit for Punjab National Bank

SUBJECT to audit, the net profit of the Punjab National Bank Ltd for the half-year ended June 1964, after providing for taxes and making other usual and necessary provisions, amounts to Rs. 69.26 lakhs. This shows a sizable increase of Rs. 19.11 lakhs over the figures of Rs. 50.15 lakhs for the corresponding half-year in 1963. With Rs. 2.27 lakhs brought forward from the previous year, the total available comes to Rs. 71.53 lakhs. The directors have decided to pay an ad-interim dividend for the current year at the rate of Re. 1 gross a share, absorbing Rs. 20 lakhs, the same as for the corresponding period of 1963, leaving a balance of Rs. 51.53 lakhs to be carried forward.

Ossoor Estates Earns More

AN improvement in the coffee crop has led to a marked rise in the profit of Ossoor Estates Ltd for the year ended March 1964. The profit for the year amounts to Rs. 3,27,700 (against Rs. 1,61,254). Out of this, provision for taxation gets Rs. 1,90,500 (against Rs. 68,000). This leaves a net profit of Rs. 1,37,200, after taxation. Adding to the profit Rs. 17,987 brought forward from the previous year and Rs. 1,57,120 being the excess provision for taxation for previous years no longer required, the total surplus comes to Rs. 3,12,307. Out of this, Rs. 25,536 is transferred to capital reserve and Rs. 70,000 (against Rs. 25,000) to general reserve. The interim dividend paid at 5 percent absorbed Rs. 48,750. The proposed final dividend of 10 percent will absorb Rs. 97,500. The balance of Rs. 70,521 is carried forward.

The total crop for the year amounted to 230 tonnes, against 166 tonnes in the previous year. The crop has been valued at Rs. 2.30 a point. A bonus payment of Rs. 9,362 at 5.3nP a point has been received on the 1959-60 crop making a total of Rs. 2.29 a point for the year. The 1962-63 season's crop has been revalued at Rs. 2.30 a point being the final figure declared by the Coffee Board for that season. The 1964-65 crop has been estimated at 219 metric tonnes.

Baroda and Dena Bank Profits Up

THE Bank of Baroda has done well during the half-year ended June 1964. It has earned a net profit, subject to audit, of Rs. 35.55 lakhs, compared with Rs. 26.10 lakhs in the corresponding period of last year. The interim dividend has, however, been maintained at 16 percent, that is, Rs. 4 a share, absorbing Rs. 16 lakhs. After bringing in the surplus of Rs. 2.97 lakhs from the previous year, the directors have carried forward Rs. 22.52 lakhs to the current half-year.

The Devkaran Nanjee Banking Co Ltd, popularly known as the Dena Bank, has made a net profit, subject to audit, of Rs. 16.58 lakhs during the half-year ended June 1964, against Rs. 14.15 lakhs in the same period of last year. The interim dividend has been maintained at 8 percent, that is, Rs. 2 a share, absorbing Rs. 4 lakhs. After bringing in a surplus of Rs. 1.78 lakhs from the previous year, the directors have carried forward Rs. 14.36 lakhs to the current half-year.

Katras Jherriah Coal Pays the Same

KATRAS Jherriah Coal Co. Ltd has repeated the taxable ordinary dividend of 30 percent, including an interim of 7½ percent, for the year ended January 1964. The yield amounts to 10 percent at the present price of Rs. 30 a share of Rs. 10 each. The profit has risen from Rs. 12.76 lakhs for 1962-63 to Rs. 14.97 lakhs for 1963-64, after transferring Rs. 2.19 lakhs (against Rs. 1.87 lakhs) to depreciation. Taxation absorbs Rs. 8.35 lakhs, out of which Rs. 1.45 lakhs has been provided to meet surtax on profits. The tax provision amounted to Rs. 5.90 lakhs and super profits tax absorbed Rs. 1.25 lakhs for 1962-63. Development rebate reserve is allocated Rs. 77,500 (against Rs. 1.05 lakhs) and general reserve Rs. 1.35 lakhs (against Rs. 1 lakh). The carry-forward is Rs. 22,818, against Rs. 20,670 brought in.

Raisings were higher at 362,834 tonnes, compared with 405,974 tonnes, and despatches improved from 379,503 tonnes to 416,460 tonnes. Raisings at both Laikdih Deep and Seebpore collieries have further improved. At the Seebpore colliery, raisings from the Koithi seam inclines, which account for approximately 65 percent of the colliery's output, are likely to be exhausted within the next 12 months, and this will naturally have an important effect on the Company's total output of coal. The new quarry in the Poniati seam has, however, already been opened, and steps are being taken to increase raisings from all the Company's quarries,. It is hoped that these measures will result in gradually offsetting the decline in raisings as a result of the expansion of the Koithi seam inclines.

Premier Mills Repeats

IMPROVED profits and sales and maintenance of a 20 percent dividend feature the trading results of the Premier Mills Ltd for the year ended March 1964. The profit for the year amounts to Rs. 24,12,037 after providing Rs. 11,48,679 for depreciation. This compares with the previous year's profit of Rs. 23,43,243 after providing Rs. 9,88,168 for depreciation. With the balance of Rs. 7,384 brought forward, the total comes to Rs. 24,19,421. Out of this, donations amounted to Rs. 50,101 while sales tax of prior years amounted to Rs. 6,560. A sum of Rs. 200,000 is transferred to development rebate reserve (against Rs. 200,000). Provision for taxation amounts to Rs. 13,50,000 (against Rs. 13,25,000). General reserve gets Rs. 2,50,000 (against Rs. 200,000). A sum of Rs. 50,000 is transferred to gratuity reserve (against Rs. 50,000). The proposed dividend of 20 percent amounts to Rs. 500,000 (against 20 percent). The balance of Rs. 12,760 is carried forward to the next year.

Sale of finished goods amounted to Rs. 2,58,02,836 (against Rs. 2,07,53,183). The directors state in their report that they are expecting a licence from the Government to install 9,50 spindles to increase the spindleage of B mills to 25,000. Further, the Company has been permitted to expand the spindleage of A Mills by 3,50 spindles, i.e., 10 percent of the installed capacity.

Nil from Searsole Coal

THE Searsole Coal Co. Ltd has earned a profit of Rs. 2.33 lakhs for the year ended January 1964, against one of Rs. 45,045 for 1962-63, after providing Rs. 55,389 (against Rs. 52,388) for depreciation. Development rebate reserve is allocated Rs. 7,245 (against Rs. 28,519). Bringing in a debit balance of Rs. 4.11 lakhs, a net debit balance of Rs. 1.84 lakhs has been carried forward. The dividend has been passed. Raisings rose from 72,477 tonnes to 97,138 tonnes and despatches improved from 62,573 tonnes to 95,074 tonnes. The directors say that raisings during the current year have improved to 45,585 tonnes up to 31st May, 1964.

Dividend from Parasea Collieries

THE Parasea Collieries Ltd has declared a taxable ordinary dividend of 1.2 percent for 1963 and not 12 percent as printed in the previous issue of *Capital*. Reserve for development rebate absorbs Rs. 2.12 lakhs (against Rs. 52,460). The Kenda seams could not be fitted with the electrical winding engine.

Bid for Nedeem Tea

THE announcement of a partial offer for the share capital of Nedeem Tea Company brought a rise of 2s to 17s 6d in the shares on the London Stock Exchange, but that was still half a crown below the 20s peak reached earlier this year when big buying forced up the share price. K. C. Sethia (1944) is offering stockholders 20s a share, ordinary or preference, for half their holdings of each class of stock owned. They are also invited to tender any or all remaining stock to K. C. Sethia so as to give sufficient acceptances to meet the bidders' target of more than 50 percent, including any stock already owned.

Apparent key to these unusual and basically undesirable terms is that the ordinary and preference shares each carry equal voting rights. There is £270,000 of each class in £1 shares in issue, and the offer is clearly designed to give the bidders control. It seems certain that the board will resist the offer and shareholders would appear to be well advised not to take any action until they hear the directors' views. The fact that it is a partial bid alone merits opposition, and it will not escape shareholders that net equity assets are comfortably over £3 a share.

Engo Tea Reduces Dividend

ENGO Tea Co. Ltd (a Dooars garden) has reduced the taxable ordinary dividend from 40 percent to 30 percent for the year ended December 1963. The yield works out to 22.1 percent at the present price of Rs. 136 a share of Rs. 100 each. The profit has dropped from Rs. 81,927 for 1962 to Rs. 63,192 for 1963, after transferring Rs. 31,971 (against Rs. 27,055) to depreciation. Development rebate reserve absorbs Rs. 11,613 (against Rs. 2,198) and taxation Rs. 20,000 (against Rs. 35,000). The carry-forward is Rs. 351, against Rs. 4,772 brought in. The crop amounted to 157,271 kilograms, against 156,516 kilograms and the average sale price rose from Rs. 3.74 to Rs. 4.09 a kilogram. The crop for 1964 has been estimated at 170,000 kilograms at a cost of Rs. 6.25 lakhs.

Coimbatore Murugan Mills Cuts Dividend

DESPITE a rise in sales, the profit of the Coimbatore Murugan Mills Ltd for the year ended December 1963 has fallen, compared with the previous year. The dividend is reduced to 6¼ percent from the previous year's 10 percent. The profit for the year amounts to Rs. 4,26,656, after providing Rs. 2,18,078 for depreciation. This compares with the previous year's profit of Rs. 6,78,369, after providing Rs. 1,87,694 for depreciation. Adding to the year's profit, a sum of Rs. 12,334 being refunds of prior years' expenses, the total available for appropriation comes to Rs. 4,38,990. Out of this, contribution to the National Defence Fund amounted to Rs. 5,684. Bonus paid for the prior year amounted to Rs. 1,18,562. A sum of Rs. 57,250 is transferred to development rebate reserve (against Rs. 40,904). Provision for taxation amounts to Rs. 1,37,569 (against Rs. 3,07,829). The preference dividend at 7.8 percent, subject to deduction of tax, amounts to Rs. 5,561. The proposed dividend on equity shares at 6¼ percent amounts to Rs. 1,14,364.

These appropriations have absorbed the entire surplus noted above. Sale of finished goods amounted to Rs. 80,52,153 (against Rs. 73,01,029). The directors' report says that the fall in profit is due to the rise in the price of raw materials and increase in wages, power consumption, interest charges, gratuity and payment of emergency risk insurance.

Zenith Steel Pipes Pays More

THE preliminary report on the working of the Zenith Steel Pipes Ltd for the year ended 30th April, 1964, shows an impressive improvement over the previous year's performance. The Company produced about 32,000 tons of pipes during 1963-64, compared with 12,000 tons in the preceding year. Sales have almost trebled from Rs. 1.48 crores to Rs. 4.33 crores, and the gross profit has gone up from Rs. 34.78 lakhs to Rs. 52.70 lakhs. From a maiden 6 percent in 1962-63—the first year of production—the dividend has been stepped up to 8 percent (80 paise a share of Rs. 10). The dividend is very well covered, the earning share being as high as Rs. 4.24, against Rs. 2.44 in the preceding year.

Appropriations of the year's gross profit include depreciation Rs. 7.86 lakhs (against Rs. 4.86 lakhs), statutory development reserve Rs. 1.32 lakhs (against Rs. 12.58 lakhs), development rebate reserve Rs. 44,133 (against Rs. 4.19 lakhs), taxation Rs. 13.85 lakhs (against Rs. 27,000) and general reserve Rs. 29.50 lakhs (against Rs. 7.50 lakhs). The dividend for 1963-64 absoring Rs. 5.60 lakhs (against Rs. 4.20 lakhs) is to be paid out of the general reserve. The entire dividend will be exempt from tax as it will be paid from the portion of the profit which is considered to be subject to relief under Section 84 and 101 of the Income Tax Act 1961. An application is being made to the income tax authorities for a certificate to that effect.

The directors state that although the offtake of pipes has been fairly satisfactory, due to various circumstances the annual sale contracts covering the production of the year under report have had to be made at prices lower than those for the previous year. The Company has received orders for almost all of its production for the current year, but because of consumer resistance and increasing competition, the selling prices have been reduced further. The Company's production at present is running at a level of about 3,000 tons a month. It has received letters of intent from the Government to produce 48,000 tons of seamless pipes, 3,000 tons of steel castings and 12,000 tons of heavy structurals a year on a two-shift basis The seemless pipes project is estimated to cost about Rs. 4.50 crores. The Company has already made an application to the International Finance Corporation, Washington, for a long-term loan of Rs. 2 crores. A clear picture of the project will emerge only when the negotiations with the I.F.C. and with the suppliers of plant and technical collaborators reach an advanced stage. The progress of the scheme also depends on the availability of the required foreign exchange loan and rupee finance. The Company is likely to issue equity or preference capital during the current year to finance the project. The Rs. 10-paid share of Zenith Steel is quoted around Rs. 16.24, offering a tax-free return of a little over 5 percent.

Big Contracts for Simon-Carves

SIMON-CARVES India Ltd has secured four important contracts valued at approximately Rs. 3.75 crores. Three of these are in the public sector for the alloy steels plant of Hindustan Steel Ltd. and one in the private sector for Cominco Binani Zinc Ltd. The work comprises the complete water supply system and the distribution systems for coke oven gas, compressed air, fuel oil, steam, oxygen, acetylene and argon for the alloy steels plant.

A zinc refinery together with the associated sulphuric acid plant for Cominco Binani Zinc Ltd is to be constructed under the supervision of the well-known Canadian firm. Consolidated Mining and Smelting Company of Canada Ltd. In addition to the above. Simon-Carves India Ltd has been entrusted with the erection of overhead cranes and sheet mill equipment by Sumitomo Machinery Company of Tokyo and Mitsubishi Shipbuilding and Engineering Company of Hiroshima, respectively, members of the Japanese consortium building the alloy steels plant in Durgapur.

Papchemi Corporation Shows Loss

THE directors of Papchemi Corporation Ltd state in their second annual report for the year ended March 1964 that the construction work of the Company's factory is nearing completion. Production is expected to start by the end of the current year or the beginning of 1965. A sum of Rs. 9.95 lakhs has been spent on machinery so far and the remaining machinery and equipment are expected to be delivered by the end of August. The Maharashtra State Financial Corporation has agreed in principle to grant a loan of Rs. 17 lakhs to meet a part of the project cost. Necessary requirements are being complied with for the disbursement of the loan at an early date. The Company's accounts for 1963-64 show a net loss of Rs. 445 after transferring a sum of Rs. 85,270 as expenditure during construction. A sum of Rs. 1.36 lakhs, including Rs. 50,555 brought in from the previous year under the head "expenditure during construction", is being carried forward. The Rs. 100-paid share of Papchemi Corporation is currently quoted around Rs. 55.

Calicut Modern Spinning Will Enter Market Soon

THE Calicut Modern Spinning and Weaving Mills Ltd is a new Company which proposes to set up a spinning plant in Chelambra (near Calicut) in Kerala State, with a capacity of 25,096 spindles. The project is estimated to cost Rs. 64.65 lakhs of which Rs. 20 lakhs will be raised through capital issue, Rs. 22.65 lakhs by deferred payment facilities, Rs. 20 lakhs by bank borrowings and Rs. 2 lakhs through short-term deposits. The Punjab National Bank has sanctioned the Company a demand loan of Rs. 20 lakhs and the Kerala State Industrial Development Corporation has sanctioned deferred payment guarantee for the purchase of machinery, indigenous as well as foreign.

The Company has secured an import licence for Rs. 12.38 lakhs for importing machinery which is likely to be of French origin. The authorised capital of the Company is Rs. 25 lakhs of which Rs. 20 lakhs comprising Rs. 14 lakhs in equity shares of Rs. 100 each and Rs. 6 lakhs in 9.3 percent redeemable cumulative preference shares are being issued for the present. The directors, promoters and their friends have subscribed equity shares worth Rs. 8.5 lakhs and preference shares worth Rs. 2 lakhs. The Company is now offering 6,860 equity shares and 4,000 preference shares for public subscription. Of this equity capital of Rs. 6.86 lakhs, shares worth Rs. 1.36 lakhs are being offered out of the capital already subscribed by the directors, promoters and their friends. The public issue has been fully underwritten.

New Standard Engineering Pays More

THE directors of New Standard Engineering Co. Ltd have raised the distribution on equity shares from 9 percent to 10 percent for the year ended March 1964. This includes a cash bonus of 1 percent to mark the silver jubilee of the Company What is more. the dividend is payable on the enlarged capital. the new shares being entitled to a proportionate dividend of Rs. 2.50 a share. The preliminary report on the working of the Company shows that it has done much better than in the preceding year. The net sales have risen by Rs. 53.86 lakhs to a record level of Rs. 2.34 crores. Out of this, sales from the new units at Goregaon amounted to Rs. 74.80 lakhs for the structural shop and Rs. 10.40 lakhs for the foundry. Sales from the new unit in the preceding year amounted to Rs. 44.53 lakhs. The gross profit is up about 17 percent from Rs. 22.89 lakhs to Rs. 26.87 lakhs.

The Company has obtained a licence for the manufacture of 10,000 tons of pig iron. Machinery required for this project will be manufactured indigenously in collaboration with Cekop of Poland. The Government's approval has been obtained and the terms of collaboration agreement are being finalised. The Company has arranged to obtain machinery valued at Rs. 41.62 lakhs on deferred payment terms from Cekop, Poland, for the implementation of its foundry project in Goregaon. When this project is completed, the Company will be in a position to undertake single castings up to 30 tons. It proposes to manufacture trimming presses in collaboration with B and S Massey Ltd, England. The Government's sanction has been obtained and the collaboration agreement is expected to be finalised soon. New Standard Engineering has in collaboration with the Wheelabrator Corporation, U.S.A., and Tilghman's Ltd, England, established a separate Company called Indabrator Ltd. The new Company which is undertaking the manufacture of shot blasting equipment for the first time in India is expected to go into production in October 1964. The Rs. 100 paid share of New Standard Engineering is currently quoted around Rs. 135, offering a gross return of about 7.9 percent.

Share Offer from Southern Gas

THE Southern Gas Ltd which proposes to undertake the manufacture of oxygen and acetylene is offering 12,500 equity shares of Rs. 100 each for public subscription. The list will open on 3rd August, and will close on 11th or earlier, but not before 5th August. The factory will be located in Ernakulam (Kerala). The Company has been licensed to manufacture annually 60 million cubic feet of oxygen and 12 million cubic feet of dissolved acetylene. The project will be undertaken under the phased programme. To begin with, a compressing capacity of 30 million cubic feet of oxygen and a producing and compressing capacity of 10 million cubic feet of acetylene will be put up. Provision will be made for the installation of additional capacity in due course. The project is estimated to cost Rs. 40 lakhs, of which Rs. 22.50 lakhs will be provided by share capital. Rs. 14.50 lakhs from bank loans and Rs. 3 lakhs from deposits.

The Company has entered into an agreement with the East German manufacturers for the supply of machinery. The Central Government has already granted import licence worth Rs. 25 lakhs for the import of machinery and cylinders from East Germany and Yugoslavia. Since the project is to be implemented in stages, the Company will import machinery and equipment worth Rs. 16 lakhs for the present. A special feature of the project is that F.A.C.T. has agreed to supply oxygen in an uncompressed state at Rs. 10 a 1,000 cubic feet. This arrangement is considered to be very beneficial to the Company and the capital cost of the project will be reduced and sufficient time will be saved in putting up a

production unit for the manufacture of oxygen. The plant is expected to go into production in October-November 1964. The authorised capital of the Company is Rs. 50 lakhs, of which Rs. 22.50 lakhs—all in equity shares of Rs. 100 each—is being issued for the present. The promoters, directors and their friends have already subscribed Rs. 10 lakhs and the balance of Rs. 12.50 lakhs is being offered for public subscription. The entire public issue has been underwritten.

Paper Mill Plant Pays Maiden

THE Paper Mill Plant and Machinery Manufacturers Ltd has declared a maiden dividend of 6 percent, tax-free, for the year ended March 1964. The preliminary report on the working of the Company shows that it has fared well during the year. The pre-tax profit is placed at Rs. 8.90 lakhs, against Rs. 4.64 lakhs in the previous year. The directors have provided Rs. 1.60 lakhs (against nil) for taxation and Rs. 3,048 (against Rs. 2,445) for development rebate reserve. After taking credit for Rs. 17,231, being the excess provision for royalty, and Rs. 2,238, being the refund of electrical cable charges for the previous year, the directors have written off Rs. 59,404 for preliminary expenses and Rs. 19,107 for brokerage on shares, leaving a surplus of Rs. 6.67 lakhs. A sum of Rs. 3.09 lakhs has been utilised to wipe out the loss brought forward from the previous year.

The directors have created a special reserve representing profits exempted from tax under Sections 84 and 101 of the Income Tax Act by allocating Rs. 2.65 lakhs and Rs. 85,000 has been transferred to general reserve, leaving a balance of Rs. 8,098 to be carried forward. The proposed dividend of 6 percent is to be paid out of the special reserve. During 1963-64, the Company executed orders worth Rs. 45 lakhs. The total value of orders on hand at the end of the year was Rs. 65 lakhs. Further orders worth about Rs. 1.28 crores are said to be under negotiation.

Supreme Industries Pays the Same

ALTHOUGH the dividend has been maintained at 6 percent, the Supreme Industries has fared rather badly during the year ended March 1964. Sales are down from Rs. 21.88 lakhs to Rs. 19.32 lakhs and the gross profit is lower at Rs. 1.63 lakhs, against Rs. 1.76 lakhs in the preceding year. The Company's performance, although poor, does not look unsatisfactory when viewed against the background of acute shortage of the main raw material, namely, polyethylene moulding powder. The difficulty arose because the Alkali and Chemical Corporation of India, one of the major manufacturers of polyethelene moulding powder, had to close down its plant due to alcohol scarcity. Supreme Industries was badly hit because many of the items are polyethelene-oriented. Conditions are said to have improved since the beginning of January 1964, and the directors have expressed the hope that sales and profit would should show an improvement during the current year.

After providing Rs. 96,819 (against Rs. 1.11 lakhs) for depreciation and Rs. 35,130 (against Rs. 29,140) for taxation and Rs. 17,570 (against Rs. 3,493) for development rebate, the disposable surplus amounts to Rs. 12,364 (against Rs. 32,275). Taking credit for Rs. 71,000 (against Rs. 31,000) being the profit on sale of capital assets and making certain other minor adjustments and after providing for the proposed dividends which absorb Rs. 84,836, there remains a balance of Rs. 440 to be carried forward, against Rs. 746 brought in. The Rs. 100-paid share of Supreme Industries is currently quoted around Rs. 90.

Cauvery Spinning and Weaving Sales and Profit Up

AN impressive rise in sales and profits features the trading results of Cauvery Spinning and Weaving Mills Ltd for the year ended March 1964. The profit for the year amounts to Rs. 4,74,012.29 after providing Rs. 4,58,535.44 for depreciation. This compares with the previous year's profit of Rs. 2,27,089 after providing Rs. 3,94,977 for depreciation. With the amount of Rs 9,658.12 brought forward, and with Rs. 52,643.12 being excess sales tax provision in previous years, the total available for appropriation comes to Rs. 5,36,313.53. Out of this, bonus for the previous year amounts to Rs. 92,395.70. Short provision towards taxation in previous years amounts to Rs. 2,210.38. A sum of Rs. 1,13,000 is transferred to development rebate reserve (against Rs. 50,000). A sum of Rs. 1,15,000 is provided for taxation (against Rs. nil). A sum of Rs. 50,000 is transferred to general reserve (against nil). The preference dividend at 8.93 percent subject to tax amounts to Rs. 58,259.32. The equity dividend at 10 percent (the same) amounts to Rs. 93,656. The balance of Rs. 11,792.13 is carried forward.

Sales for the year amounts to Rs. 1,38,23,607, against Rs. 1,14,50,433 in the previous year. The directors' report says that the profit for the year has improved, as anticipated, due to the revision of ceiling prices of yarn and the improvement in the supply position of Indian cotton and the introduction of rationalisation in the spinning department. The directors are taking steps to introduce rationalisation in other departments also.

Telangana Spinning Share Offer

TELANGANA Spinning and weaving Mills Ltd proposes to set up a spinning plant at Kachiguda (Hyderabad) with a capacity of 12,096 spindles. The project is estimated to cost Rs. 70.75 lakhs of which Rs. 44.76 lakhs will be spent on machinery. The cost of the project will be met by the issue of share capital of Rs. 30 lakhs, loans of Rs. 20 lakhs from the Andhra Pradesh State Financial Corporation deferred payment guarantee for Rs. 15.57 lakhs from the Andhra Pradesh State Financial Corporation and short-term borrowings amounting to Rs. 5.18 lakhs. The spinning mill will have the benefit of easy availability of raw cotton and the existence of a big market for yarn because of the large number of handlooms in Andhra Pradesh.

The construction of the factory building is in progress and if all goes well, the plant is likely to go into production by January 1965, and will be in full production within six months thereafter. The Company has an authorised capital of Rs. 50 lakhs made up of Rs. 35 lakhs in equity shares of Rs. 10 each and Rs. 15 lakhs in 9.5 percent cumulative redeemable preference shares of 10 each. The issued capital will be Rs 30 lakhs of which Rs. 22 lakhs will be in equity shares. The promoters, directors and their friends have taken up equity shares worth Rs. 10 lakhs. The balance of Rs. 12 lakhs in equity shares and Rs. 8 lakhs in preference shares is now being offered for public subscription. The list will open on 24th July and will close on 4th August or earlier, but not before 3rd August. The entire public issue has been underwritten. The board of directors includes Raja J. Rameshwar Rao, Mr. P. B Ramakrishnan, Mr. R. V. G. K. Ranga Rao, Mr. J. V. Somayajulu, Mr. N. V. Ramakrishna Reddy and Nawab Fazilath Hussain.

Investment and Finance Repeats

THE profit of the Investment and Finance Co. Ltd has declined from Rs. 87,130 for 1962-63 to Rs. 67,053 for the year ended 29th February, 1964, after transferring Rs. 29,607 (against Rs. 30,492) to taxation. A taxable ordinary dividend of 7½ percent has been declared (the same), which works out to a yield of 3.6 percent at the present price of Rs. 55 a share of Rs. 100 each. The carry-forward is Rs. 19,473, against Rs. 12,910 brought in. The market value of all investments of the Company has exceeded the book value by Rs. 4.16 lakhs on 29th February, 1964.

Nav Bharat Refrigeration Earns More

THE Nav Bharat Refrigeration and Industries Ltd has earned a profit of Rs. 1.38 lakhs for the year ended December 1963, against one of Rs. 22,752 for 1962, after providing Rs. 1.32 lakhs (against Rs. 98,640) for depreciation. The taxable ordinary dividend of 4 percent has been declared to absorb Rs. 40,500. Development rebate reserve is allocated Rs. 36,000 (against Rs. 6,516), taxation Rs. 55,000 (against Rs. 8,000). A sum of Rs. 14,856 has been set aside to meet tax liability for 1961. The carry-forward is Rs. 410, against Rs. 8,345 brought in.

The prospect for the current year has been assessed cautiously. The potato crop has failed in Uttar Pradesh and other growing areas, so arrivals at cold storages have dropped. The Company is exploring the possibility of storing other items. It has added a further 18-ton capacity to the ice plant. Sales rose by 12.3 percent to Rs. 3.03 lakhs.

New Capital Issues

TEN companies have been authorised to raise fresh capital aggregating Rs. 5.69 crores. Of these, two will be issuing bonus shares, four are issuing equity capital, one is floating debentures and three are issuing equity plus preference shares. Four companies involve foreign collaboration. Two companies are offering part of their shares to the public by prospectus. The consent of the Controller of Capital Issues is valid for 12 months in all cases. The following are the details:

Indian Overseas Shipping Company, Bombay, is to issue capital of Rs. 1.5 crores, divided into 1,100,000 equity shares of Rs. 10 each and 40,000 9½ percent redeemable cumulative preference shares of Rs. 100 each to be issued for cash at par. Out of this, equity shares of the value of Rs. 50 lakhs and the entire preference shares will be offered to the public by prospectus, and equity shares of the value of Rs. 25 lakhs will be offered to the Company's foreign collaborators, American Shipping and Financing Syndicate. The capital will be used for starting a liner service.

Jeypore Sugar Company Ltd, Madras, is to issue bonus shares of the value of Rs. 3,37,210 divided into 33,721 equity shares of Rs. 10 each on capitalisation of its share premium account. The bonus shares will be issued in the proportion of one share for every 12 equity shares held.

Hyderabad Laminated Products Ltd, Secunderabad, is to issue capital of Rs. 1,42,857.14 on capitalisation of reserves to a like extent, by way of bonus issue, for converting the existing 20,000 equity shares from partly paid-up into fully paid-up shares of Rs. 50 each.

Tata-Merlin and Gerin Ltd. a public Company proposed to be incorporated in Maharashtra State for the manufacture of switchgear and controlgear, in collaboration with Merlin and Gerin of France, will be issuing capital of Rs. 70 lakhs in equity shares of Rs. 100 each, for cash at par. Out of these, shares of the value not exceeding Rs. 8.75 lakhs will be offered to the French collaborators against the import of plant and equipment.

Electrolytic Tinplates Ltd, Bombay, is to issue Rs. 50 lakhs capital divided into Rs. 36 lakhs equity in shares of Rs. 10 each and Rs. 14 lakhs preference in shares of Rs. 100 each. All the shares will be issued for cash at par. The money will be used in the manufacture of tinplates by electrolytic process.

Kamani Industrial Corporation Ltd, Jaipur, is to issue Rs. 1 crore debenture stock in units of Rs. 1,000 each carrying 7½ percent rate of interest and to be offered to the public for cash at par. The capital will be used in the establishment of a pig-iron project in Udaipur (Rajasthan).

Material Handling India Ltd. a public Company proposed to be incorporated in West Bengal is to issue capital of Rs. 50 lakhs in equity shares of Rs. 10 each, for cash at par. The money will be used for the manufacture of electrical cranes, heavy structurals and conveyors.

Hind Equipment Corporation Private Ltd, Bombay (a Company proposed to be converted into a public one) engaged in the manufacture of friction and hydraulic stock absorbers for automobiles, is to issue further capital of Rs. 40 lakhs in 400,000 equity shares of Rs. 10 each, for cash at par. The capital will be used for financing expansion of the existing activities of the Company.

Steelcrete Private Ltd, Calcutta, will be issuing further capital of Rs. 75 lakhs, on conversion into a public Company. Of this, Rs. 50 lakhs will be issued in equity shares of Rs. 10 each, and Rs. 25 lakhs in preference shares of Rs. 100 each, all for cash at par. Shares of the value of Rs. 30 lakhs in equity and Rs. 10 lakhs preference will be issued to Foundation Overseas Ltd, Canada, against supply of construction machinery, etcetera. The Company will offer the balance shares to the public by prospectus.

Anup Engineering Ltd, Ahmedabad, is to issue capital of Rs. 29 lakhs divided into equity shares of Rs. 100 each. Of this, shares of the value of Rs. 7.5 lakhs—consisting of Rs. 2.5 lakhs to the foreign collaborators, Machine fabrick Reinveld N.V. Draft, Holland, against the supply of know-how and Rs. 5 lakhs to the shareholders of Hind Laboratories Private Ltd. in terms of an amalgamation scheme, will be issued for consideration other than cash and the balance for cash at par. Out of the cash issue, shares worth Rs. 50,000 will also be offered to the Dutch firm for cash. The capital will be used for financing the manufacture of machines like centrifuges, separators, etcetera.

The Stock Markets

LYONS RANGE DISAPPOINTED OVER INDIAN IRON DIVIDEND

Wednesday Evening.

THE declaration of dividend by the Indian Iron and Steel Company for 1963-64 has been the most notable event in the stock market during the past week. The Company has declared a taxable ordinary dividend of 17 percent, including a special cash bonus of 1 percent, compared with 16 percent for 1962-63 (fuller details appear on a previous page in this issue of *Capital*). Lyons Range had expected a bigger dividend. The price of the scrip has also been marked down due to profit-taking. Prices of other clearing shares have tended to decline in sympathy with Indian Iron. Turnover has declined considerably, and holders are inclined to take profit at every bulge.

In spite of the fairly encouraging corporate news, trading has been sluggish. Although corporate profits for 1963-64 show an increase, taxation has absorbed a large part of the earnings. Some companies have, no doubt, increased their dividends, but they have fallen short of the market rates of interest. Investors have become shy since the growth prospects for industrial equities have suffered due to the levy of capital gains tax on bonus shares.

Lyons Range is disappointed over the Central Finance Ministry's decision not to abolish the 2-percent carryover margin. Although the stock market has pressed for the removal of the margin to stimulate activity, particularly in clearing shares, there is little logic in its arguments. Margins were imposed to curb speculation in shares, and they were recently liberalised as far as circumstances permitted. So there is little justification for further liberalisation at the present stage. Anyway, the removal of margins may increase speculative activity, but it is unlikely to attract investment support. Investors will not take the risk of investing in equities until their outlook is improved by a suitable modification of the fiscal system.

Operators are worried over the Government's failure to restrain price rises in essential commodities. As a result of the increased cost of living, industrial workers have started demanding higher emoluments. The smooth working of industries will be interrupted unless serious efforts are made to reduce commodity prices.

Indian Iron are sluggish and activity has been restrained. Except for scattered support in Burn and Texmaco, engineering shares are generally neglected. In the miscellaneous section, clearing scrip are prominent but they have tended to drop towards the close due to the absence of interest. Hindustan Motors are about steady on hopes of a better dividend which is likely to be announced soon. Scattered support has been forthcoming for Alkali Chemical, Metal Box and Martin Burn. Goodyear India have not responded to the improved results achieved during the first half of the current year. Electric company shares are neglected and stray business has been done in Calcutta Electric. In spite of the prospect for better results during the half-year ended June 1964, bank shares attract little interest. United Commercial and United Bank of India have been transacted. In paper shares, Orient have fluctuated narrowly. Seshasayee, Bengal and India Paper Pulp are about steady.

Except for scattered support in selected jute shares, turnover has been small. Birla have met with support. Kinnison, Northbrook, Barnagore, Anglo-India and Ganges have been taken. Coal shares are quiet. Talk of fixing a bigger output target for the fourth five year plan has created little impression. Stray business has been done in Burrakur, Bengal, Western Bengal and Amalgamated.

Selected cotton mill shares have been steady, but investors have been inclined to wait until the Government announces the plan for partial control on cloth. Bharat Commerce, Elgin, Dunbar and J. K. Rayon have been transacted. Sugar shares have been freely offered, but buyers have been reserved. Patrakola have been a firm feature in an otherwise dull tea section. The scrip have enjoyed support from interested parties. Scattered interest has been taken in selected Assam and Dooars gardens.

Government securities have been fully steady in spite of the subscriptions for the new Central Government loans which closed on 15th July, 1964. The 3 percent Conversion Loan 1986 is quoted at Rs. 63.80.

Bombay

SHARES DULL : TATA REPORT AWAITED

TEXTILE INVESTORS CAUTIOUS

Wednesday Evening.

THE new account in the Bombay stock market began last Monday on a steady but dull tone. Although share prices have fluctuated narrowly, there has been a considerable drop in turnover. Holders, particularly those who have been holding shares for a long time, have taken the earliest opportunity to take profit at every rise. Selling pressure has, nevertheless, been light because bears think that almost all adverse factors have been discounted. Operators now await the publication of the report of the Tata Iron and Steel Company for 1963-64 to know exactly why the Company has not succeeded in earning profits as expected. Investors in textile shares have turned cautious since they cannot assess the prospect for these shares until the Government announces the details relating to the introduction of partial control on cloth.

Dalal Street has been disappointed by the decision of the Central Finance Ministry to reject the proposal to abolish the 2 percent carryover margin. The Government thinks that under the present circumstances, the abolition of the margin might promote speculation in shares.

Tata Steel ordinary have been quoted at Rs. 155.25. Among engineering shares, Tata Engineering have been steady in the belief that the Company will be able to maintain the dividend on the increased capital. New Standard Engineering have been supported on expansion prospects. Alcock Ashdown and Larsen and Toubro have met with scattered buying. In motor-vehicle shares, Premier Automobiles have improved on the hope that the Company will again return to the dividend list, as it is reported to have produced good results for the past working year. Hindustan Motors have been supported by outside interests on the expectation of a higher dividend.

Selected cotton mill shares have been steady, although turnover has been restrained. Century, Bombay Dyeing, Kohinoor, Gokak and Svadeshi have been prominent. Simplex, India United ordinary, Morarjee and Standard have been about steady. Central India have attracted scattered interest on reports of good working.

Turnover in miscellaneous shares has been small. Among sugar scrip, Belapur and Walchandnagar Industries have been steady. In cement shares, Associated and Digvijay have been maintained. Among mining shares, Be Be Petrol have recovered on replacement purchases. Scindia Steam have been prominent due to short-covering among steamship company shares. Great Eastern Shipping have changed little.

Chemical shares have been quietly steady. Tata Chemical have gained, but Polychem have reacted due to profit-taking. Among rayon shares, National Rayon have drifted downwards due to reports of a drop in the demand for rayon yarn. Voltas and Tata Oil have been steady. Bank shares have improved due to satisfactory results achieved for the half-year ended June 1964. Bank of India, Central Bank and Dena Bank have been bought. Electric com-

pany shares have met with scattered support. Ahmedabad, Tata Hydro and Tata Power have been favourites.

Madras

DEARER CREDIT LIMITS ACTIVITY

SELECTIVE SUPPORT FOR PLANTING SHARES

Tuesday Evening.

THE Madras stock market has been steady during the past week, although turnover has been limited. Interest has been largely confined to clearing shares. Among cash scrip, selected plantation and sugar shares have been supported. Bank shares have also been prominent due to good results achieved for the half-year ended June 1964. The prospect for the restoration of power cuts has been an important influencing factor. Investors have, nevertheless, proceeded cautiously in view of the rising cost of money. Unit Trust units have attracted attention, and considerable investible funds have begun to flow into them.

In Government securities, selected State Government loans have been bought. Interest has been shown in good preference shares. Among banks, Indian have been done at Rs. 155 and Indian Overseas at Rs. 144.50. In sugar shares, E.I.D. have been steady at Rs. 35.87. Jeypore have attracted support up to Rs. 16.50 on the decision to issue bonus shares in the proportion of one share for every 12 held, by capitalising the share premium reserve. The Controller of Capital Issues has sanctioned the issue, but the approval of the Industrial Finance Corporation of India is being awaited. Deccan have reacted to Rs. 12.05 on profit-taking. Cauvery have been done at Rs. 97.50. Mysore at Rs. 28.33 and Travancore at Rs. 7.15.

In planting shares, Consolidated Coffee have been steady at Rs. 23.70. Blue Mountain have been transacted at Rs. 2.31, Cochin Malabar at Rs. 6.35, Ouchterlony at Rs. 3.55 and Periakaramalai at Rs. 3.43. Among tea shares, Nonsuch have been steady at Rs. 21.87, Kalasa at Rs. 4.20 and Peermade at Rs. 21.50. In coffee shares, Kumergode have been bought up to Rs. 3.78 and Rajendra have been taken at Rs. 10.42. Among shares of gardens producing both tea and coffee, Devon have changed hands at Rs. 11.96, Manar at Rs. 1.93 and Nilgiri at Rs. 9.

In textile shares, South India Viscose have dropped to Rs. 117.50 and Travancore Rayon to Rs. 20.60. Lakshmi have been steady at Rs. 137 and Madura at Rs. 33.75. Bangalore Woollen have been done at Rs. 267 and Buckingham at Rs. 274. Coimbatore Cotton have come to hand at Rs. 151 and Mettur have been supported up to Rs. 277.50. Tirupati have been transacted at Rs. 10.12 on declaring a taxable ordinary dividend of 7½ percent. Rajapalayam have been steady at Rs. 154 and Vasanta at Rs. 234.

In the miscellaneous section, Aluminium Industries have been quoted at Rs. 19.85 and Ashok Leyland have gained at Rs. 6.75. In spite of reducing the taxable ordinary dividend from 9 percent to 6 percent, India Cement have been taken at Rs. 5.45. Dalmia Cement have been steady at Rs. 12.62. Mettur Chemical have been wanted up to Rs. 14.15 on declaring a taxable ordinary dividend of 6¼ percent, making a total of 12½ percent for the year. F.A.C.T have recovered to Rs. 5.52 and Seshasayee Paper have gained at Rs. 7.25. In transport shares, Enfield have been steady at Rs. 10 and Tube Investment at Rs. 193. Parry's Confectionery have hardened to Rs. 2.97, but Spencer have been sluggish at Rs. 21.25. Textool have been bought up to Rs. 150. Kirloskar Electric have been steady at Rs. 18.40, but Madras Rubber have been easier at Rs. 11.37. T. Stanes have been quoted at Rs. 30.50 and W. I. Plywoods at Rs. 207.

INDIAN TUBE TO EXPAND ITS SEAMLESS TUBE MILL

The Indian Tube Company, pioneers in the manufacture of seamless tubes in India, have been granted an Import Licence for additional plant and machinery which will enable them to raise their annual capacity for these tubes from 24,000 to 40,000 tonnes.

Existing technical and service facilities at the Company's Works in Jamshedpur will enable speedy execution of the expansion programme, which is expected to be completed in 1965. INDIAN TUBE will then meet the bulk of India's requirements of seamless tubes for the oil and chemical industries, power generation and transmission and other essential demands which are still being partly met by imports. This will mean an annual saving of Rs. 6 crores in foreign exchange.

London

JUNE TRADE FIGURES RESTRICT ACTIVITY

ROLLS RAZOR SHARES CRASH

London, 22nd July.

HOLDING quiet but firm during the early part of the period, the stock market took a distinct turn for the worse following the June overseas trade figures which came as a rude shock. On top of this came the news that Mr. John Bloom's Rolls Razor Company is to liquidate and this further upset sentiment. The disappointing trade figures raised fears of a rise in Bank rate and/or other restrictive economic measures. Certainly no appreciable amount of selling developed, but buyers were holding off. The slump in Rolls Razor and English and Overseas Investments (which has a large holding of Rolls) provided the features of the week. Rolls plunged from 9s 6d to 1s 10½d and E and O from 10s 9d to 4s 3d. Gilts fell sharply on fears of a Bank rate increase and losses extended to nearly a point. Leading industrials moved up to start with, but turned off with the rest of the market following the trade figures and were widely lower on balance. Falls, however, were not large. Steels rallied after losing ground on the trade figures. Insurance shares lost some ground. Banks held up quiet well, but H.P. shares receded on fears of an increase in Bank rate. Properties held their recent gains. Greek bonds reacted after their improvement which followed the debt settlement offer. Dollar stocks moved up in response to Wall Street. Gold shares made a satisfactory showing, but business was very small. Coppers by contrast eased on further consideration of the Northern Rhodesian tax changes. Tins eased after early firmness. Oils moved within narrow limits, but rubbers and teas were well maintained.

THE CALCUTTA MONEY MARKET

CALL RATE DECLINES SHARPLY

Wednesday, 22nd July.

THERE has been a fair decrease in the general level of advances in the Calcutta money market during the past week. This is due to a slight decline in the credit given to cotton mills, jute factories and the sugar industry. Miscellaneous advances too have fallen slightly. But the requirements of the iron, steel and engineering units and the foodgrains trade have remained more or less unchanged. In the interbank market, conditions have become very easy after the Central loans closed, and the call rate has slumped from 5¼ percent to ½ percent.

The exchange market has been moderately active, with a fair supply of tea and gunny bills. The demand for remittances is moderate. In London, sterling has suffered further losses against all important currencies because of the adverse foreign trade figures for June.

BULLION WAS STEADY IN CALCUTTA during the past week due to a rise in the upcountry offtake. The price of silver rose from the previous week's level of Rs. 245.75 to Rs. 248.75, quoted today. The London and New York prices stood at 111⅞d and 129.3 cents.

In sympathy with the rise in silver, gold was also steady and the price of 14-carat increased from Rs. 71 to Rs. 72.25.

DURING THE WEEK ENDED 17TH JULY, Government of India Treasury bills for Rs. 194.02.75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-day Government of India Treasury bills were opened on 21st July. The total amount offered was Rs. 7,58,00,000. Tenders at Rs. 99.400 percent were allotted 57 percent approximately. Lower tenders were rejected. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.400 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 27th July.

IT IS STATED THAT 91-DAY Intermediate Treasury bills will be sold from 22nd July to 25th July at Rs. 99.416 percent. Sales can be stopped at any time without notice if the Government thinks it necessary.

DECLINES OF RS. 29.11 CRORES TO Rs. 2,478.87 crores in active notes and of Rs. 24.79 crores to Rs. 2,186.44 crores in the total note issue were notable features of the return of the Reserve Bank of India for the week ended 17th July, 1964. The currency contraction was covered by reducing rupee securities by Rs. 22.66 crores to Rs. 2,186.44 crores. Deposits of the Government of India were Rs. 32 lakhs larger at Rs. 53.74 crores while those of State Governments dropped by Rs. 1.34 crores to Rs. 18.45 crores. Balances of scheduled banks at Rs. 104.17 crores showed a decline of Rs. 2.60 crores. Balances held abroad dropped by Rs. 1.99 crores to Rs. 6 crores. Investments at Rs. 259.03 crores showed a drop of Rs. 43.27 crores. Loans given to scheduled banks rose from Rs. 47.70 crores to Rs. 85.70 crores, of which advances against usance bills amounted to Rs. 35 lakhs (nil). Ways and means advances stood at Rs. 21.12 crores, against Rs. 25.86 crores.

THE STATEMENT OF THE POSITION of scheduled banks for the week ended 10th July, 1964, shows Demand and Time liabilities at Rs. 1,274.97 crores (Rs. 40.58 crores on account of borrowings from banks) and Rs. 1,383.85 crores (Rs. 19.73 crores), compared with Rs. 1,281.76 crores (Rs. 47.22 crores) and Rs. 1,373.37 crores (Rs. 20.57 crores), respectively, in the previous week. Cash has declined by Rs. 7.20 crores to Rs. 61.06 crores, while balances with the Reserve Bank have increased by Rs. 13.36 crores to Rs. 104.86 crores. There is a rise of Rs. 1.06 crores to Rs. 675.53 crores in investments. Advances and bills discounted at Rs. 1,776.10 crores, show a fall of Rs. 13.91 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.2 percent and 66.8 percent, against 6 percent and 67.4 percent.

THE RETURN OF THE STATE BANK of India for the week ended 10th July, 1964, shows a rise of Rs. 7.47 crores to Rs. 643.54 crores in total deposits. Investments in Government securities are down by Rs. 4 crores to Rs. 242.84 crores, while other authorised investments remain unchanged at Rs. 9.44 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have declined by Rs. 4.34 crores to Rs. 356.99 crores. Cash and balances are, in consequence, shown at Rs. 26.52 crores or Rs. 8.88 crores higher.

THE HONGKONG AND SHANGHAI BANKing Corporation has declared an interim dividend of 5s a share on its paid-up capital of 3,161,845 shares of £4,940,383. This interim dividend is a distribution of £790,461 and is the same as that declared in July 1963.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 24-7-64

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
24-7-64	27-10-64	2,00.00	Rs 2.400%

FOREIGN COLLABORATION FOR INDIAN VENTURES

By P. K. Srivastava

Foreign investors, who are interested in setting up joint ventures in India, have to contend with a lot of official formalities. The Government departments take a long time to dispose of applications. There should be more co-ordination between the Central, State and local authorities if the progress of joint ventures is to be accelerated.

THE establishment of more than 1,500 foreign collaboration, joint ventures indicates a new trend in the industrial pattern in India during the last decade. These joint ventures have been set up to provide foreign capital and technical know-how. The agreements with foreign entrepreneurs are for either technical or financial collaboration or a combination of both. Foreign collaboration ventures have been mainly started in the fields of engineering, machinery, chemicals and pharmaceuticals, electrical goods industries, etcetera. But the actual working of ventures with foreign collaboration has shown that they have to face many difficulties in the initial stages as well as afterwards.

Some of these problems and difficulties are responsible for the tardy response of foreign investors in setting up new projects. For example, 428 and 425 proposals were approved in 1960-61 and 1961-62, but the number dropped to 250 in 1962-63. Some of the problems of foreign collaboration ventures are as follows:

Too Many Formalities

The Central Government's approval and other formalities: Every undertaking to be started with foreign collaboration has to take a licence from the Central Government—a very cumbersome and lengthy process of red tape. In the majority of cases, the Government takes eight to ten months to approve a case of collaboration.

Government approval is also needed for many other things. For example, (a) control of capital issues requires that permission from the Controller of Capital Issues be obtained for the issue of shares to the public. (b) Under exchange control regulations, permsision from the Reserve Bank has to be obtained for all foreign exchange requirements. (c) As for the import of machinery and raw materials, etcetera, a licence has to be obtained from the Central Ministry of Industry for importing them.

Government officials, not wholly conversant with the requirements of industry, are unable to take a realistic view of the demands and difficulties of manufacturers. There have always been long delays in the disposal of applications and one has to fill in innumerable forms. So the managerial personnel have to devote a major part of their valuable time on wasteful correspondence.

If a plant has to be purchased from a foreign collaborator, the Indian collaborator has to be reasonably certain that before he parts with some of the information, there is some chance of the scheme getting through. Some time the foreign seller of technical know-how will not even negotiate unless the foreign exchange is made available and the Government approval is obtained. Furthermore, the agencies that help to get exchange will naturally not be interested till full details of the project, its profitability, etcetera, are ascertained. The whole project, therefore, hangs on with a big question mark for a long time. This has an unsettling effect on the planning of a project.

Formalities of the State Governments and local bodies: After the Central Government come the State Governments and local authorities—the State and the city where the undertaking is to be set up. The project needs land and electric power, etcetera, so the entrepreneurs have to approach these authorities. Plants cannot start production for some time or they cannot use their full production capacity because of the power shortage. Even after a project has been approved by the Central Government, the State or local authorities are unable to supply power at the last moment when the factory has been set up and machinery installed. All this is due to the lack of co-ordination between the approving authorities at the Centre and the State and local authorities which sanction power and other facilities.

Import Restrictions

Maintenance imports of raw material and spare parts: Another difficulty is in the import of raw material and spare parts of foreign machinery for replacement, etcetera, which are not available in India. These have to be imported every year. But because of the foreign exchange shortage, the Government does not issue import licences in some years which leads to the stoppage of production in some units and the use of restricted production capacity in others. A shortage of foreign exchange for maintenance imports has led to less than capacity production in such essential items as machine tools, industrial machinery, basic electrical equipment, structural fabrication, pipes and tubes, electrodes, etcetera.

The National Council of Applied Economic Research has recently suggested in a study that larger maintenance imports should be allowed for a faster growth of the Indian economy. The Council thinks that along with the issue of licences for putting up new plants, there should be provision to build capacity for the manufacture of essential parts, components and equipment for replacement. According to the Council, provision for the manufacture of components and accessories should be part of one project. It has left it to the Government to decide whether the same firm should be entrusted with the entire job or whether the main project and the accessories should be allocated to different units.

The annual output of some foreign collaboration ventures is small. Because of import restrictions, they are unable to expand their production capacity by importing additional plant and machinery. This is the reason why the articles manufactured in joint ventures in India are costly than those made by joint ventures in other countries in collaboration with the same firm because of the large volume of output in those countries. Many products can be manufactured at a lower cost in India if the volume of output is increased. For example, jeeps manufactured by Messrs Mahindra and Mahindra in India can be manufactured at a lower cost if the volume of production is raised. South American countries are manufacturing jeeps at a lower cost because of the increased volume of output.

Export Guarantee

Another problem of the foreign collaboration ventures is the special emphasis on the export of the articles manufactured. Unfortunately, due to the urge to achieve quick results, attempts are being made to force manufacturers to export without considering the state of overseas demand or their capacity to produce the goods at competitive prices. The levy of excise duty on materials and components used in the manufacture of some articles (*e.g.*, radio receivers and components) make the costs too prohibitive. But industrial licences are withheld unless the company concerned guarantees to export a certain percentage of the output of the new unit. Such guarantees are, however, difficult to give unless the manufacturer is prepared to export at a loss.

It is here that a hard choice must sometimes be made to sacrifice exports until such time as essential domestic needs have been met. There seems to be no point in exporting the goods of joint ventures manufacturing engineering, machinery, chemical products, etcetera, if the same products must have to be imported to make up for the deficiency at home. An example of this type of insistence is the pressure to export welding electrodes, which are now in short supply. The shortage, as is well known, is slowing down steel fabrication and construction work all throughout the country. Yet there is pressure on electrode manufacturers to export while, at the same time, large sums of foreign exchange are being spent to import finished electrodes. Some quantities have also been diverted to meet defence requirements.*

The export policy should be a long range one with more emphasis on incentives and less on compulsion. The views of German collaborators may be cited in this context: "As long as it was only a question of producing in India for consumption in that country, the inducement to go there was considerable for German

entrepreneurs, who through lack of import licences, were losing their Indian market. Now since the Government of India has begun to insist on the export of such jointly manufactured goods, even in preference to home demand, German manufacturers sometimes begin to hesitate as none of them desires to resign from their last remaining markets abroad. After all, they have a factory at home with labourers whom they have to provide with work. If their export trade goes to pieces, it will help them very little to earn some dividends from India or anywhere else. They are manufacturers and sellers in the first place. They want to see the wheels in their own factory at home turning and do not go after income which is largely unearned.'

Many foreign collaboration projects fail to materialise because of the Government's insistence that the product of the joint enterprise should be freely exported without any waiting period. In many cases, this condition is impracticable, since it may take several years for the quality of the new products to come up to the standards required for successful export promotion.

The result is that many useful projects which would generate income and employment within the country (and possibly save imports) are being sacrificed on the altar of compulsory exports. The correct solution here would seem to be to persuade the foreign collaborator, wherever possible, to agree to a limited export franchise. When the agreement expires, unrestricted exports would then be possible. It seems that most foreign collaborators would be quite prepared to enter into agreements on these terms for five, seven or ten years.

Curbs on Foreign Travels

Restriction on foreign travel: Restriction on foreign travel has also created difficulties for Indian business men having a tie up with foregn collaboration ventures. Indian collaborators are often required to visit foreign countries for discussion and consultations with foreign collaborators on important business matters, or to seek export possibilities and business contacts in other countries. This restriction, imposed mainly because of the scarcity of foreign exchange, often becomes a source of loss to the joint venture undertaking. However, the Government has recently removed some of the restrictions on foreign travel by business men.

Transport and communication and technical personnel: While more and more factories and plants are being set up with foreign collaboration, the country appears to have taken it for granted that once capacity is set up, it automatically gets fully utilised. In fact, for various reasons such as the shortage of power and other ancillary facilities in some places, lack of adequate supervisory and skilled workers and inadequate selling effort, the country is not using its resources to the maximum. This is a waste of capital resources which a poor economy like India's can hardly afford. During the period February to June 1961, only because of the transport and power shortages, the engineering industry was estimated to have suffered production losses in some cases of as much as 40 percent, and in the Calcutta industrial area alone, the loss probably amounted to as much as 10 percent.[2]

Standards and Designs

The Indian Standards Institution and the National Productivity Council are no doubt making an endeavour at the standardisation of products, but in the present stage of the development of the engineering industries, this problem will continue to remain for quite some time. The slow growth of ancillary industries due to the foreign exchange shortage and the multiplicity of standards has led to the lack of balance between the main and ancillary industries.[3]

Language, cultural and business practice differences: Foreign collaboration is easiest with English collaborators, because of India's long association with the English people. Indian entrepreneurs—collaborating with entrepreneurs of other countries—are experiencing difficulties in initial stages because of the difficulty in supplying background information about Indian conditions and policy. These difficulties arise because of differences in language, culture, way of living and doing things, the Government's policy and attitudes, nature and temperament, etcetera. Foreign collaborators also want more incentives and concessions in taxation, in addition to the double taxation agreement and investment guarantee agreement between the Government of India and the Government of their country.

TEXTILE PLANT FOR INDIA

The Midland Bank in London has agreed with the State Trading Corporation of India to finance a £6,500,000 contract for the supply of textile spinning machinery. The equipment will be made by Platt Brothers of Oldham. The contract is covered by a financial guarantee issued by the British Export Credits Guarantee Department. The loan, repayable over 12 years, is being made jointly by Midland Bank and Insurance Export Finance Company. The Indian State Trading Corporation represents a consortium of 17 Indian textile mills. Successful conclusion of this major project follows several months' negotiations. The Midland Bank is already concerned in other major projects of this type. Several more are stated to be under negotiation.

New Delhi

RAPID EXPANSION OF SHIPPING UNDER FOURTH PLAN URGED

(FROM OUR NEW DELHI CORRESPONDENT)

THE experts of the Planning Commission have suggested that the broad aim of developing shipping during the fourth and the fifth plan periods should be to secure under the Indian flag at least 50 percent of the country's overseas liner and bulk carrier trade and about 30 percent of the tramp trade. The share of Indian shipping in the overseas liner trade is at present 30 percent to 35 percent and in the bulk carrier and tramp trade 3 percent to 4 percent. As for oil cargoes, the Commission has suggested that the aim should be to have about two-thirds of this trade for Indian shipping.

To achieve these objectives, it is estimated that the country will need by 1975-76, a fleet of about 5 million g.r.t., of which overseas shipping will account for 4.5 million g.r.t. It has been recommended that the total shipping capacity in operation at the end of the fourth plan period should be around 3 million g.r.t., with orders amounting to 500,000 g.r.t. placed during the fourth plan period for completion in the early years of the fifth plan.

India's total tonnage is at present around 1.32 million g.r.t.—347,000 g.r.t. of coastal tonnage and 925,000 g.r.t. of overseas tonnage. By the end of the current plan period, it is hoped that the tonnage would go up to 1.47 million g.r.t.—338,000 g.r.t. coastal and 1.13 million g.r.t. overseas. A number of new ships have also been ordered. When these ships are received, the tonnage of Indian ships engaged in the coastal trade will go up to 439,000 g.r.t. and that of ships engaged in the overseas trade to 1.96 million g.r.t., making a total of 2.5 million g.r.t.

Of the additional ships needed for the fourth plan, tonnage to the tune of 400,000 g.r.t. may become available from indigenous production. The balance will have to be obtained from abroad. The total financial outlay involved is expected to be around Rs. 150 crores—about Rs. 35 crores for commitments during the third plan, nearly Rs. 75 crores for the cost of ships to be built in India and about Rs. 40 crores against payments during the fourth plan period for orders placed on a deferred payment basis, amounting in all to about Rs. 100 crores.

Need for Flexibility

Three other points have also been suggested for drawing up the development programmes for Indian shipping during the fourth plan. One of these is that there should be sufficient flexibility and readiness to take advantage of favourable turns in the world shipping situation and the availability of credits. The second is that while there will have to be some expansion in liners, the main directions in which accelerated growth should be assured are bulk carriers, tramps and tankers. The third point suggested is that the share of the public sector in Indian shipping, expected to go up from 16 percent in 1961 to 22 percent at the end of the third plan and about 30 percent when the orders already placed materialise, should be increased to about 40 percent by 1970-71 and 50 percent by 1975-76. This would require adding to the shipping capacity in the public sector nearly 700,000 g.r.t. in the fourth plan period and about 1.5 million g.r.t. in the course of the fifth plan.

Foreign exchange earnings from Indian ships are reckoned at about Rs. 11 crores in 1960-61. These will increase to about Rs. 20 crores in 1965-66 and to about Rs. 60 crores by the end of the fourth plan.

STEEL

Manufacture of Rolling Mills

With a view to promoting the manufacture of steelworks equipment within the country, the Central Ministry of Steel, it is understood, is thinking in terms of taking out licences from reputed manufacturers of rolling mills in foreign countries. Negotiations are said to be already going on with a firm in the United States.

The indigenous manufacture of rolling mills is considered essential in view of the necessity to develop the steel industry rapidly and the difficulties being encountered in raising enough foreig exchange resources for setting up new steel plants. More than half of the foreign exchange component of putting up a steel plant, it is stated, is accounted for by rolling mills.

WEST GERMANY

Investment Guarantee Pact

A good deal of progress, it is understood, has been achieved in relation to the signing of an investment guarantee agreement with West Germany. Bonn is said to have accepted New Delhi's stand that only investors guaranteed by the West German Government should have a right under this agreement to question the amount of compensation to be paid by India in the event of nationalisation. But this right would be exercised by them through their Government which would be entitled to take up the matter with the Government of India.

One hurdle, however, still remains to be crossed. It is the plea of West Germany that the compensation should be at the prevailing market value of the assets. The Government of India's stand is that the compensation payable would be calculated on the same basis as provided in the case of American investments under the investment guarantee pact with the United States. The differences over this issue are expected to be resolved soon.

JUTE GOODS

Quality Control on Exports

The Government of India has decided to introduce with effect from 1st December, 1964, compulsory I.S.I. certification marking on jute goods meant for export. The Director of Quality Control, Central Ministry of Commerce, had discussions recently with the Indian Jute Mills Association on this matter. During these talks, he urged the jute industry to prepare for the introduction of compulsory quality control on jute exports accoring to the following schedule:

(1) Date by which orders should be placed by the mills for testing equipment to be imported from abroad—30th June, 1964.

(2) Date by which mills must obtain locally available testing equipment—31st August, 1964.

(3) Date by which recruitment of quality control staff is to be completed by mills—31st August, 1964.

(4) Date by which the training of quality control mill staff is to be completed—30th November, 1964.

(5) Date by which testing equipment should be installed in the mills—30th November, 1964.

The Indian Jute Mills Quality Control Inspection Council (I.J.M. Q.C.I.C.), which has been set up by the I.J.M.A. for the enforcement of voluntary quality control on jute manufactures meant for export, is likely to be declared as the competent authority under the I.S.I. Certification Marks Act. The Council will thus carry out necessary quality control and supervise the I.S.I. certification marking on jute goods export.

The Government appreciates that the measures which will have to be taken for implementing quality control and pre-shipment inspection under the I.S.I. Certification Marks Act, will, to begin with, involve an additional financial burden on the jute mills. But experience, it is said, has shown that such expenditure will be more than offset by the improvment in quality, resulting in fewer rejections and other technical benefits. The Government of India, will however, be prepared to consider a matching grant for the expenditure incurred by the Council on behalf of the industry.

COTTON MILLS

Raising Working Hours

The proposal of the Central Ministry of Commerce to increase the working hours in the cotton mill industry from 48 to 54 a week may not be accepted at the Indian Labour Conference to be held in Bangalore on 29th and 30th July. The Central Labour Ministry, it is understood, has expressed the view that the step might evoke adverse comments by the International Labour Organisation. In a communication to the Central Ministry of Commerce, the Labour Ministry is reported to have pointed out that although India has ratified the I.L.O. Convention providing for a 60-hour week and the increase of the working hours from 8 to 9 a day in the textile industry would be within this limit, the I.L.O. is aware that the Indian Factories Act prescribes a 48-hour week. Relaxations from the relevant section of the Act can be made during the emergency in relation to factories producing defence requirements and essential supplies. But any prolonged exemption from this section, it is feared, may not be considered in order by the I.L.O.

The Labour Ministry is, however, reported to be of the view that the staggering of the weekly holiday in the textile industry, as suggested by the Central Commerce Ministry, is possible and can be implemented in consultation with employers and workers.

The Central Ministry of Commerce had put forth these two proposals with a view to increasing cloth production in the country in the immediate future for checking the rise in cloth prices. It was felt that by staggering the weekly holiday and increasing the working period in the textile industry from 48 to 54 hours in a week would help raise cloth output by about 16 percent.

As a preliminary step towards introducing partial control on cloth, as recommended by the Cotton Textiles Consultative Board, the Textile Commissioner, it is learnt, has issued instructions to cotton mills that they should not introduce any new varieties of cloth during the next three months.

Representatives of textile mills, wholesale dealers and associations of retailers have been invited for talks with the Secretary to the Central Ministry of Commerce, Mr. D. S. Joshi, on matters relating to the distribution of cloth.

RICE

Imports Planned

The Central Government, it is understood, has decided to import nearly half a million tonnes of rice to check the rising prices. This will be in addition to nearly 200,000 tons expected from the United States under P.L. 480.

An agreement has already been signed with Pakistan for the import of Kangari and Joshi rice to the value of Rs. 3.65 crores, against exports of coal, railway equipment, spices, biri leaves, umbrella fittings, etcetera. Although the quality of rice to be imported from Pakistan under this deal has not been specified, it is learnt that only about 60,000 tonnes can be purchased with the Rs. 3.65-crore amount. This falls short of the earlier expectations of importing 100,000 tonnes of rice from Pakistan. The balance of 40,000 tonnes, it is understood, could not be arranced because of India's inability to supply to Pakistan such commodities as cement and steel. Pakistan will supply rice to India in the next six months. Her purchases from India can take place in the course of the next one year.

Another protocol has also been signed with Pakistan. Under it, India and Pakistan will exchange during the next 12 months fresh fruits to the value of Rs. 50 lakhs each way.

SUGAR

Co-operative Factory in Bihar

The Government of India has approved the setting up of a co-operative sugar factory in Banmunkhi, in Purnea district of Bihar. The project is expected to cost nearly Rs. 1.4 crores. A sum of Rs. 90 lakhs is likely to be provided by the Industrial Finance Corporation of India. The rest of the investment will be made available by the State Government, co-operative institutions and canegrowers. The factory is likely to be commissioned in 1965-66.

There is no sugar factory in this area at present. The Semapore factory, which was there earlier, was shifted to another State about 20 years ago. It is hoped that the establishment of the new co-operative venture will reintroduce the valuable sugarcane crop in this region. The main cash crop of the area is jute.

EDUCATION

New Commission Set Up

The Government of India has announced the appointment of a 16-

member *Education Commission to survey the entire field of educational development* and to have a comprehensive review of the country's education system. The Commission will advise the Government on the national pattern of education and on the general principles and policies to be followed for the development of education at all stages and in all its aspects.

The Commission will consist of Dr. D. S. Kothari, chairman of the University Grants Commission, New Delhi; Mr. A. R. Dawood, General Secretary, Anjuman-i-Islam, Bombay; Mr. H. L. Elvin, Director, Institute of Education, University of London, London; Mr. R. A. Gopalaswami, Director of the Institute of Applied Manpower Research, New Delhi; Dr. V. S. Jha, former Director of the Commonwealth Education Liaison Unit in London; Mr. P. N. Kirpal, Educational Adviser to the Government of India, New Delhi; Professor M. V. Mathur, Professor of Economics and Public Administration, University of Rajasthan, Jaipur; Dr. B. P. Pal, Director, Indian Agricultural Research Institute, New Delhi; Kumari S. Panandikar, Head of the Department of Education, Karnatak University, Dharwar; Professor Roger Revelle, Dean of Research, University of California, U.S.A.; Mr. K. G. Saiyuddin, former Educational Adviser to the Government of India, New Delhi; Dr. T. Sen, Rector, Jadavpur University, Calcutta; Mr. Jean Thomas, Inspector General of Education, France and formerly Assistant Director General of U.N.E.S.C.O.; Mr. J. P. Naik, Head of the Department of Educational Planning, Administration and Finance, Gokhale Institute of Politics and Economics, Poona; and two other members to be appointed in consultation with U.N.E.S.C.O.

Four consultants are also proposed to be associated with the Commission. They are: Sir Eric Ashby, Master, Clare College, Cambridge; Professor P. M. S. Blackett, Professor of Physics, Imperial College of Science and Technology, London; Sir Willis Jackson, Professor of Electrical Engineering, Imperial College of Science and Technology, London; and Professor Fredrick Seitz, president, United States National Academy of Sciences, Washington.

Some more foreign consultants may be associated with the Commission later on. Dr. Kothari has been appointed the chairman of the Commission and Mr. J. P. Naik as its member-secretary.

The Commission is expected to submit its report by the end of March 1966. It will, however, be making some interim reports from time to time, whenever certain programmes are to be implemented immediately.

EXPORTS

Fall in May

The last two years' upward trend in India's export earnings appears to have been halted. *Exports in May* last at Rs. 64.1 crores showed a decline of Rs. 44 lakhs from Rs. 64.5 crores in May 1963.

Commoditywise, the main fall in *export earnings in May 1964*, compared with the corresponding month in 1963, was witnessed in the case of sugar, tea, jute goods and vegetable oil exports. Export earnings from sugar went down by Rs. 2.4 crores, tea by Rs. 1.9 crores, jute goods by Rs. 1.1 crores and from vegetable oils by Rs. 1 crore. The decline in receipts from sugar, tea and vegetable oil exports is attributed to current shortages and congestion at the ports. Export earnings from jute goods are said to have gone down due to severe competition from Pakistan which resulted in lower prices. It is, however, hoped that early improvement of the position at the ports and the efforts being made to push up exports in general will enable export receipts to look up again in the near future.

SOYABEAN OIL

Imports from the U.S.A.

A small delegation headed by a Central Commerce Ministry official and including representatives of the *vanaspati* and soap manufacturing industries will be leaving shortly for the United States for finalising imports of 100,000 tonnes of soyabean oil for the *vanaspati* industry and 50,000 tonnes of tallow for the detergent and soap industry under the U.S. Public Law 480.

The negotiations for these imports were initiated by the Central Commerce Minister, Mr. Manubhai Shah, and the Secretary to the Central Ministry of Food and Agriculture, Mr. V. Shankar, during their recent visits to Washington. The response of the U.S. Administration to India's request for these imports is reported to be favourable. The U.S. Embassy here is said to be currently processing this request further for formally forwarding it to Washington.

In view of the recent spurt in vegetable oil prices and products, the Government of India has imposed restrictions on the export of coconut oil, cottonseed oil, groundnut oil, kardiseed oil, mustardseed oil, rapeseed oil, salad oil and sesamum oil. The restrictions cover exports of both crude and refined varieties of these oils as well as the products in the manufacture of which these oils are used.

Explaining the restrictions, an official of the Central Ministry of Commerce has stated that no exports of these oils and products are to be allowed for some time. The situation will be reviewed again when the prices of edible oils come down.

U. S. A.

Loans and Grants Announced

Another batch of loans and grants totalling Rs. 78.4 crores has been made available to India by the United States under P.L. 480. Agreements for these loans and grants were signed here on 10th July, coinciding with the tenth anniversary of the U.S. Food for Peace Programme.

Under the new agreements, the Refinance Corporation for Industry will receive a credit of Rs. 10 crores and five irrigation and power projects—Nagarjunasagar, Kosi, Tungabhadra, Mahanadi and Koyana—will get a loan of Rs. 18.6 crores. The new grants made available include Rs. 16.3 crores for the malaria eradication programme, Rs. 2 crores for the training of teachers for medical colleges, Rs. 2.6 crores for soil and water conservation, Rs. 18.4 crores for craftsmen's training, Rs. 2.8 crores for setting up primary health centres and Rs. 7.7 crores for small-pox eradication.

BOKARO

Land Offered for Plant

About 7,500 acres of land have been handed over by the Bihar Government to the Bokaro Steel Ltd for the construction of the plant. In all, about 36,000 acres of land will be required for the plant, township and administrative offices. The State Government is going ahead with the acquisition of the remaining land required by the Bokaro Steel Ltd.

The Bokaro plant will be located east of the Muri-Chandrapura railway line. It will be bounded on the north by the Damodar river and on the east by the Garga Nadi.

The Bokaro Steel Ltd has already placed orders for the construction of about 1,000 permanent houses for its staff. Plans are also ready for the construction of a permanent office, shopping centres and schools.

Adequate basic amenities are expected to be available by the second half of 1965 to permit the headquarters of the Company, now temporarily located in Calcutta, to be shifted to the construction site in Bokaro.

COAL MINES

Ropeways being Built

More than 60 miles of aerial ropeways are being built in the Raniganj-Jharia coalfields to ensure adequate sand-stowing for the preservation of coal reserves.

Six aerial ropeways, three in the Jharia field and three in the Raniganj field, are being erected by the Coal Board for carrying sand from the Damodar and Ajoy rivers to the collieries in this coal belt. All the ropeways will be commissioned by the end of the current plan period.

Work on the 16-mile-long ropeway is expected to be formally commissioned by March next year. Two other ropeways for the Jharia field —each 13 miles long—will be erected by a U.S. firm. The work is due to begin immediately after the monsoon.

The last two ropeways will be of the "aerial tramways" W-type, to be erected for the first time in this country. The sand carrying buckets of the "aerial tramways" will be riding over the ropeways instead of being suspended.

Costing about Rs. 19 crores, the six ropeways will supply 10 million tons of sand a year to the collieries. Each of them will have a capacity to carry 450 tons of sand an hour.

The foreign exchange requirements of the six ropeways are estimated at Rs. 8.2 crores of which Rs. 3.57 crores have been obtained from the U.S.A. and the rest from the U.K.

The ropeways will help in improving the raisings of metallurgical coal and superior grades of non-coking coal from these fields.

AIRCRAFT

U.S. Experts Visit India

A team of six American aircraft design, production and engineering experts has arrived in India in response to a request from the Government of India. They are in Bangalore visiting the Hindustan Aircraft factory to assist Indian engineers in their efforts to improve the performance and rate of production of the India-built *HF-24* jet aircraft. They are expected to study ways in which the speed and performance of the *HF-24* can be improved by the use of a more powerful engine.

Representatives of the British Rolls-Royce Company—makers of one of the engines under consideration—will also participate in the expert technical evaluation of the development of the *HF-24*.

All of the American experts are from the U.S. Air Force's Air Research and Development Centre at Wright-Patterson Air Force Base in Dayton, Ohio. They are led by Colonel Walter L. Moore, Jr., Deputy for Studies and Analysis of the Centre's research and technology division.

TELEPHONES

Trunk Dialling Facilities

The plans for introducing subscribers' trunk dialling facilities between different cities, it is learnt, are making steady progress. It is hoped that by the end of the fourth plan period, it will be possible to provide this service between all the major cities in the country.

The Posts and Telegraphs Department has placed orders for four cross-bar trunk automatic exchanges with the Bell Telephone Manufacturing Company, Antwerp, Belgium. These will be installed in Bombay, Delhi, Madras and Kanpur. The cross-bar equipment is the latest innovation in telecommunication engineering and will enable the introduction of subscribers' trunk dialling on a wide scale. It is also proposed to obtain equipment for the Calcutta trunk automatic exchange, but this will be supplied by the Indian Telephone Industries.

When these trunk automatic exchanges are installed, subscribers' trunk dialling facilities will, in the first stage, be provided between 32 stations. More places in the eastern region will get this facility when the trunk automatic exchange is installed in Calcutta.

The first subscribers' trunk dialling service in the country was introduced between Lucknow and Kanpur in 1961. The second was introduced between Delhi and Agra. The latter service has proved extremely popular.

The Delhi-Jaipur service is likely to be commissioned shortly. Six other services are planned for introduction in the near future. Work on these is in an advanced stage. The new services will be between Delhi-Kanpur, Delhi-Lucknow, Kanpur-Varanasi, Agra-Kanpur and Delhi-Meerut.

FILMS

Exports to U.S.A. Planned

Among the several steps being taken by the Indian Motion Pictures Export Corporation for the promotion of exports of Indian films is the selection of six Indian pictures for the non-traditional markets, especially the United States. These pictures, which are being selected on the basis of cost of print, will be edited and sub-titled at the cost of the Corporation. If the export rights are sold, the net receipts will be shared equally between the Corporation and the producers.

The Corporation has purchased the exports rights of one feature film for the traditional markets. Also, half a dozen feature films are being selected for the east European countries. The Corporation has also selected seven documentaries for commercial exploitation in world markets.

When the Central Minister of Commerce, Mr. Manubhai Shah, met the Motion Pictures Export Association of America (M.P.E.A.A.), it was decided that the Indian Motion Pictures Export Corporation (I.M.P.E.C.) will open an office in New York. A delegation headed by the chairman of the Corporation with two Indian producers will be going to the United States very soon for promoting the export of Indian pictures to that country and for exploring the possibilities of joint production.

The American companies have shown interest in producing four pictures in India. Manuscripts of two of these have already been submitted to the Central Government for approval. The scripts for the other two films are expected to be ready soon. These pictures will be produced in India out of the accumulated blocked funds on account of the imported American pictures. Thus, the expenditure incurred on the production of these films in India will help liquidate her foreign exchange liability. This will also enlarge the future scope of joint production of Indian films for the English-speaking markets.

The I.M.P.E.C is now exploring the possibility of appointing the Indian Film Society, London, as its agent for the sale of Indian films in the United Kingdom. It is also contemplating having one technical and one editing expert from foreign countries in order to assist the Indian producers to make films for export to non-traditional markets in the east and west European countries.

MOISTURE METER

Order Placed

The world's first microwave moisture meter—with applications in foundry and building trades as well as in glass, refractory, cellulose, soap and food manufacture—will soon be in use in India. The Council of Scientific and Industrial Research's Central Building Research Institute in Roorkee, U.P., has ordered an S-Band meter, developed by A.E.I. in collaboration with the U.K. Department of Scientific and Industrial Research. The moisture measuring meters, now being manufactured at the A.E.I. New Parks works, use radar techniques and give highly accurate measurement of moisture in almost any solid material without harm, contamination or even direct physical contact with the product.

JETSAR FARM

Land Offered

The Rajasthan Government has placed at the disposal of the Central Government about 13,948 acres of land (out of over 16,500 acres required) for the initial setting up of the Jetsar farm, near Suratgarh.

The scheme for the Jetsar farm envisages a capital outlay on the purchase of machinery amounting to Rs. 33.64 lakhs. While the purchase of machinery worth Rs. 23.45 lakhs from Russia has been spread over a period of two years and contracts have been concluded with that country's Trade Representative in India, for the present tractors and agricultural machinery have been transferred from the Central Mechanised Farm, Suratgarh, with a view to catching up with the time for sowing kharif crops.

The work of reclamation of land, construction of roads and water courses on an area of about 1,000 acres has been completed. The area has already been ploughed up and subsequent operations for the preparation of land are in progress.

Since irrigation facilities in the Suratgarh branch of the Rajjasthan canal are expected by the middle of July, it is proposed to bring about 3,000 acres under kharif crops during the current year.

CHINA CLAY

New Deposits Discovered

During the course of investigations for copper near Umra, in Udaipur district of Rajasthan, the Geological Survey of India has discovered new deposits of good quality Chinaclay near Karabaria-ka-Gurha. Inferred reserves of these deposits are reported to be of the order of 3,990,000 tonnes. Besides, brown clay and buff-coloured clay have also been discovered. The reserves of these two are estimated at 86,700 tonnes and 252,000 tonnes, respectively.

INLAND WATER TRANSPORT

Programme for Fourth Plan

The Road and Inland Water Transport Advisory Committee, which met last week, has recommended the appointment of a working group to formulate proposals for the development of inland water transport during the fourth plan period. The committee also suggested that two study groups of officials and non-officials should be appointed to go into the organisational and financial problems of the road transport industry.

The committee indicated the guidelines for the preparation of State plans for road and inland water transport for inclusion in the fourth plan and approved the proposals of the Central Ministry of Transport for amendment of the Inland Steam Vessels Act, 1917. The proposals relate to the enhancement of penalties for various offences under the Act, empower State Governments to order investigation of casualties on board a vessel involving loss of human life and provide for booking offices and maintenance of proper accounts of tickets by owners of vessels.

The recommendations of the Motor Vehicles Insurance Committee were generally endorsed by the Advisory Committee. The main recommendation of the Motor Vehicles Insurance Committee relates to the creation of a Central Fund for the prompt payment of compensation to victims of accidents involving uninsured or unidentified or stolen vehicles and insolvent insurers.

PLANNED DEVELOPMENT FOR NATIONAL DEFENCE

DAV/FS

London

GROWING USE OF COMPUTERS IN U.K. OFFICES

(FROM OUR LONDON CORRESPONDENT)

AT present, a large number of firms are contemplating the transfer of some of their clerical and control procedures from manual or punched card methods of data processing to electronic processing on a computer. Many of these firms are uncertain of the consequence of such a step, and as yet, there is very little written information available here about the experiences of firms which have installed computers. Small firms in particular may find it difficult to obtain disinterested advice on the problems of computer installation and may be worried that they will not find the necessary specialised staff to run the computer or that existing staff will prove antagonistic and unco-operative.

Any major change in industry represents both a threat and a challenge. It means the overthrowing of traditional ideas and values and the replacement of security by ambiguity and uncertainty. It is bound to cause disruption in that jobs and status will be affected, old methods will have to be abandoned and new ones learnt and accepted. Such change presents the management of a firm with a number of complex problems. Management must thoroughly understand the technical requirements of the new processes; it must also appreciate their effect on organisational and social structure and it must adopt policies which will ensure an easy transition from the old methods to the new. These policies will involve "selling" the idea of change to staff, ensuring that the effects of change cause minimum hardship and pacing the change so that those involved can understand, accept and co-operate.

Too often, change appears to be seen as a technical problem to be handled solely by technologists and the speedy realisation of organisational goals is put first, with the result that people get hurt and frustrated and they resist the innovations. How is this to be avoided? In an effort to guide firms contemplating the introduction of computers, the Institute of Personnel Management has recently issued a booklet (*Living with a Computer*, by Enid Mumford, price 7s 6d) dealing in detail with the introduction of a computer in one firm, and drawing upon the experience of eight others for comparative information.

Miss Mumford's paper (which is a preliminary to a book to be published later on the basis of the main study by Olive Banks and Enid Mumford of the Social Science Department, Liverpool University which will analyse the processes and effects of social change arising out of automation and will consider in detail work organisation and staff attitudes in two case study firms before, during and after the transfer from manual to electronic data processing) is not intended and does not offer guidance on weather a firm should purchase a computer or not, nor does it provide a blueprint for the successful introduction of a computer. It describes and comments on some of the experiences of firms in planning for, installing and staffing computers, and makes general observations on the kinds of problems which firms embarking on computers are likely to encounter. Although the data presented is limited in scope, in that no attempt is made to deal with purely technical problems, it will be of interest to all managers looking for information on the social and organisational aspects of automation.

Policy Decisions

While final decisions on policy must be taken by the board, these must be based on the experience and knowledge of the firm's specialists, many of whom will be involved. The personnel manager with his awareness and understanding of employee needs and problems would seem the specialist most qualified to advise on the likely human consequences of change and the one to suggest ways in which change could be introduced with due regard for the feelings of the people affected. Personnel managers accept the need for planning and for communication in their day-to-day activities, but, because rapid change is a new development in many firms, they may not always appreciate the greatly increased importance of such consultation when their employees feel threatened and disturbed by a changed system of work. Because observations in the firms described suggest that many personnel managers do not sufficiently see themselves, nor are seen, as change catalysts, part of the paper is devoted to topics, such as communication and consultation: these are well documented for the stable situation, but less well for situations, involving rapid change. In the course of five short chapters, under the headings "Planning and Problems," "Staffing the Computer Centre," "Using the Computer," "Effects on Staff" and "Customer-Manufacturer Relations," Miss Mumford provides a succint review of the results provided by the case study, concluding with a useful bibliography for further reading and reference, mainly of American publications.

It is clear then from the study that all nine firms had some problems in introducing or planning to introduce computers, although the most serious difficulties were encountered by firms whose computers were installed some years ago. Four of these firms were now acquiring second computers either to replace or add to an existing installation. They believed they had learnt a great deal from their early mistakes and generally were making most careful preparations for the introduction of the subsequent machine. Not unnaturally, the firms most sanguine about difficulties were those whose first computers had not yet arrived.

Some problems seemed common to all the firms. Planning was not begun soon enough and was not sufficiently comprehensive. With the early computers the long period elapsing between installation and effective operation made the consequences of inadequate planning less serious than they might have been: there was time for staff to adjust to the new system and for modifications to be made. This time-lag would be less likely to occur today. The firms did not sufficiently appreciate the need for effective reassuring and early communication and consultation with all staff likely to be affected. Some firms believed too much communication by management was unnecessary and even disadvantageous.

Displacement of Staff

Insufficient consideration was given to the problems of staff whose jobs had changed in content, skill or status, or even vanished as a result of automation. Actual redundancy was uncommon, but in most firms there was some displacement of staff in departments transferred to the computer A number of firms were able to cut drastically the number of school leavers they would normally have recruited for clerical jobs each year. This raises problems of social and political policy much publicised in the U.S.A. at present, as to whether automation should be pursued indiscriminately if one of its consequences is a large increase in the number of young people unable to find jobs.

Because no two organisations are exactly alike, the introduction of a computer will have different consequences in every firm. It is, therefore, impossible to suggest strategies which will always guarantee an easy and stress-free transfer of work from manual method to E.D.P. In fact, some degree of stress is a natural consequence of rapid social change. The experiences of the nine firms described do suggest, however, that the adoption of certain policies and procedures will ease the change-over and facilitate the acceptance of the machine by staff. These include:

(1) *Acceptance at the Top*—All senior management must be agreed on the desirability of introducing a computer and must understand the implications of the new system. Change is unlikely to be successfully introduced lower down an organisation if it is resisted or incompletely understood at the top.

(2) *Planning and Research*—Careful long-term planning should start as soon as the decision to get a computer is taken. As part of the planning process, investigations must be carried out to ascertain the technical, organisational and social problems likely to arise. It is not always easy for a management to foresee the consequences of automation, but the experiences of firms with successful computer installations can be of help here. It is particularly important that there should be awareness of the likely organisational and social effects of the computer. These are: changes in organisational and social relationships within and between departments, the displacement of labour with possible redundancy, changes in job content, skill and status, and unfavourable reactions from employees who feel insecure and threatened.

(3) *Supervisory Involvement*—(a) the Personnel manager—Because firms tend to see the introduction of a computer as a technical rather than a social process, personnel managers may be insufficiently involved in the event. As the human relations expert in a firm, the personnel manager should be actively concerned with all personnel problems associated with automation. These include estimating the installation and post-change labour requirements, selecting and training staff for the computer centre, arranging transfers for any displaced departmental staff, "selling" the idea of a computer to everyone in the company and advising on human relations and organisational problems arising out of the new system.

(b) Departmental Managers—If work is to be successfully transferred to a computer, departmental managers must accept and approve of the new system. It is, therefore, particularly important to involve them in planning the change process, to consult them continually and to listen to their point of view.

(4) *Communication and Consultation*—Employees have an increased need for information during periods of change and insecurity. The adoption of a policy of "secrecy" about the computer is both unrealistic and disfunctional. Information of this kind cannot be kept secret and rumours may cause excessive alarm about job security. Secrecy may increase hostility to the computer when the news is eventually disclosed and will prevent management from introducing at an early stage policies designed to secure acceptance and co-operation.

Ideally, consultation with all staff likely to be affected should begin as soon as the contract is signed. Reassurances about redundancy should be given at this stage provided the firm can offer these with confidence. Staff should be warned that a computer inevitably means change and that some jobs will be altered in content while others will be eliminated altogether and their holders moved to new work, perhaps outside their present departments. Care should be taken that no one suffers financially as a result of these transfers.

Consultation and communication should continue throughout the change-over process and should involve computer centre as well as departmental staff.

(5) *Redundancy*—If some redundancy is unavoidable then staff likely to be affected need to be identified as early as possible and all staff told the firm's policy on redundancy. They should be told that every effort will be made to keep this to a minimum; also, that if an employee does lose his job he will be given adequate notice and helped to find suitable work in another firm should he wish this. The severity of this problem will depend on how much of a firm's work is being transferred to the computer and how quickly this process takes place. If redundancy is to be avoided it is important to estimate well in advance the likely staff savings so that adequate plans can be made.

(6) *Information*—It is much easier for firms introducing computers today to obtain information on the kind of problems they may encounter. A number of journals regularly feature articles on automation in offices, although the majority of these deal with technical and organisational rather than social problems. It is of first importance that firms should be aware of the need to obtain comprehensive advice and information before they embark on a computer and that they should be prepared to devote a considerable amount of time to the necessary research. Computers have now arrived in the offices of this country and can reduce costs and increase efficiency, but, in the sphere of automation, a little knowledge can be a very dangerous thing indeed.

Industrial Training

The greatest and most urgent requirement in industry today is for young engineers with creative ability to work in the fields of design and manufacture: they need to be men who have a full understanding

of the basic scientific principles involved in an engineering process and an appreciation of the practical problems involved in its successful operation, and have minds trained to a scientific appraisal of these problems and of the sociological factors involved.

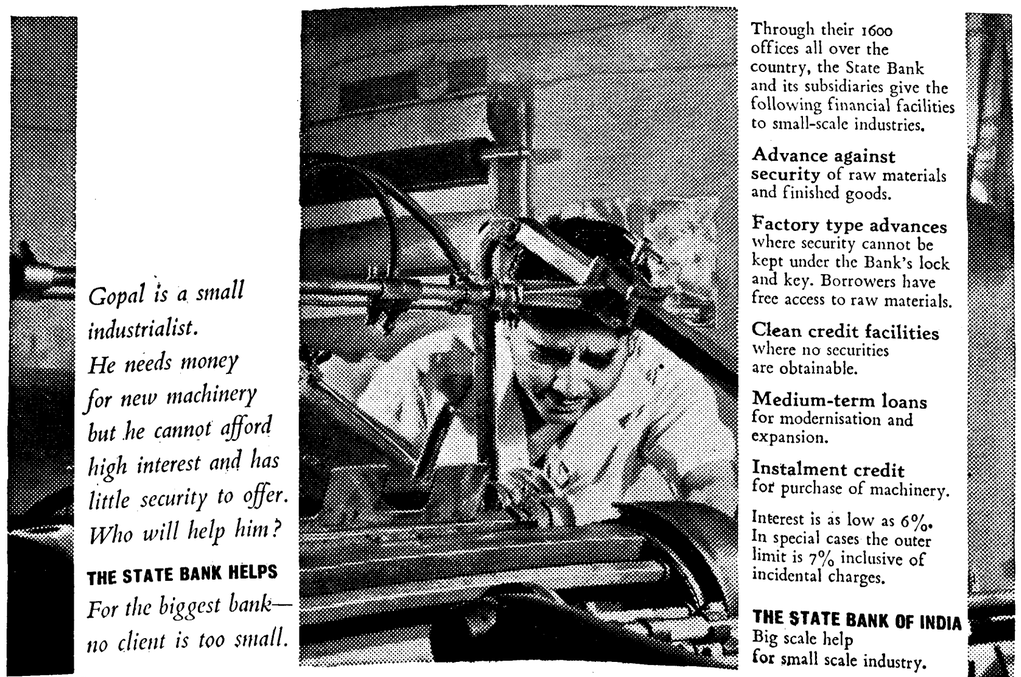
In an effort to meet this need, the National Council for Technological Awards has recently been considering how the industrial training of students followig courses leading to the diploma in technology can be improved so as to make a contribution. A detailed study of the question was undertaken by the Council's Industrial Training Panel, which has now submitted an interesting report which the Governing Body is circulating to stimulate further discussion and produce comment.

The industrial side of some courses leading to the diploma in technology is criticised in the report. The panel says that during visits to firms, it found that the purpose of industrial training as an integral part of courses leading to the diploma "is far from clear in the minds of either college or industrial staff." This, says the panel, is not surprising, in view of the uncertainty which has existed within the Council itself. In many cases, the main part of the training is something of a ritual based on modified craft training concepts.

If the Diploma in Technology is to achieve the status and importance in the minds of prospective students, teachers and employers that its originators visualised, then the courses leading to it must be seen to offer a desirable alternative to the traditional university courses. Academically, the standard set is equivalent to that of a university honours degree and the principal difference of a course in engineering leading to the diploma in technology from the majority of existing courses in engineering is that education is undertaken in an industrial as well as an academic environment. From its inception, the Council has been vigorous in setting the standards of college facilities, courses, and examinations, but has not exercised similar vigilance over industrial training, perhaps because the purpose of industrial training has not so far been defined except in rather sweeping generalisations; or that examinations of practical experience in industry comparable to college examinations of academic studies have been tacitly assumed not to be feasible; or the obvious administrative difficulties inherent in inspecting the facilities of the large number of firms providing industrial training; or the assumption, stemming from the influence of the apprenticeship tradition, that exposure of the student to industrial conditions will inevitably result in the acquisition of some knowledge, wisdom, and "experience".

From the outset the Council has placed on colleges the responsibility for the adequacy of students' industrial training and there is no doubt that college staffs in collaboration with firms' staffs have exercised a powerful influence in the raising of the standards of training. Nevertheless it has been apparent to the Panel that there is still a long way to go before universally high standards of industrial training, making full use of all advantages which can accrue from the Diploma in Technology, have been established.

Diploma in Technology



It is not sufficient to plan the Diploma in Technology course merely by adding a compulsory period of industrial training to the academic equivalent of a traditional university degree course. This is already available in the form of a degree plus a graduate apprenticeship in the case of engineering, and equivalent industrial training for other technologies even where this is only an industrial and not a professional requirement. Something more specific and purposeful is needed if Diploma in Technology courses are to attract in large numbers students who will make the courses their first choice rather than a traditional university degree course.

A student following a course leading to the Diploma in Technology is educated partly in an academic and partly in an industrial environment. His course includes a thorough study of engineering science and its applications, and an introduction to those more general studies essential to a young engineer who aims to reach the highest levels in his profession. A main objective of the course is to develop the student's creative ability and fit him for employment in any field of industrial activity—design, manufacture, research, development, for example.

Therefore, the Panel's consideration of Diploma in Technology courses and, in particular, of the purpose and nature of industrial training, has been based on the need to provide courses which will stimulate the development of the young man's creative ability and help him to appreciate that he can make a worthwhile and satisfying career in the fields of design and manufacture. At the same time the Panel believe that the proposals set out in this report are equally applicable to those students who will ultimately have successful careers in other fields, industrial or academic.

The diploma course needs initially to instruct in the fundamentals of science and the scientific method but also needs to extend observation and measurement into other fields which take into account opinions and judgments as well as facts. A traditional field of this kind is accountancy; a less familiar one is work measurement. Cause and effect in purely physical systems are amenable to the traditional scientific approach, but cause and effect in human activities are not yet fully understood and so are less readily taught.

It would be wrong to argue that an engineering course laced with management studies and liberal studies really meets the requirement. It is necessary, not only to develop a course which demonstrates the extension of the scientific method into the solution of general industrial problems, but also in teaching to draw examples from industry to illustrate principles. This means that the Diploma in Technology course must be conducted in close relationship with the real industrial world which in turn requires that those who teach should have ready and constant access to problems as they occur in real life.

Gopal is a small industrialist. He needs money for new machinery but he cannot afford high interest and has little security to offer. Who will help him?

THE STATE BANK HELPS

For the biggest bank— no client is too small.

Through their 1600 offices all over the country, the State Bank and its subsidiaries give the following financial facilities to small-scale industries.

Advance against security of raw materials and finished goods.

Factory type advances where security cannot be kept under the Bank's lock and key. Borrowers have free access to raw materials.

Clean credit facilities where no securities are obtainable.

Medium-term loans for modernisation and expansion.

Instalment credit for purchase of machinery.

Interest is as low as 6%. In special cases the outer limit is 7% inclusive of incidental charges.

THE STATE BANK OF INDIA
Big scale help for small scale industry.

PROSPECTS FOR FOREIGN INVESTMENT

Report on Prospects for Private Investment in India. By Anila Graham. (Published by Economic and Development Research Ltd, 116 Seymour Place, London W.1. Price 25 guineas, pages 42+appendices.)

The advanced industrial nations need an expanding world market for maintaining their rate of progress. India, with her population of 400 million, provides a potential market, particularly as her development ambitions will bolster up the level of effective demand. The severely restrictive import policy of the Government of India in recent years has been implemented to conserve her meagre foreign exchange resources, and any relaxations in the forseeable future are unlikely. This, however, should not deter the advanced nations from investing in India, as foreign capital will be assured of a protected internal market where the risks of competition are few and the prospects of growing demand bright.

The report presents an impartial study of the relative advantages and disadvantages of investment in India and concludes that this is a calculated risk which is worth undertaking. In spite of recurrent talks of nationalisation, the private sector is most likely to play an important rôle in many years to come. Moreover, India has so far maintained an excellent record for paying fair compensation when foreign enterprises are taken over. For example, instead of the Rs. 87 lakhs asked for by the Kolar Goldfields, the Government awarded Rs. 1.64 crores. Secondly, India's record on the repatriation of foreign capital and of the remittance of profit and dividend is unblemished. In fact, very few developing nations provide opportunities to such an extent.

The rate of profit earned by foreign capital—an annual average of 10 percent—compares favourably with that earned in other countries and the provisions for "tax holidays" and depreciation allowance for new enterprises are conducive to new investments. Against these advantages, one should consider the adverse factors discouraging the inflow of capital. The high rate of personal taxation and the virtual fixing of managerial remunerations are intensely disliked by foreign investors. The super profits tax, which has now been abolished, was a great deterrent. The procedural delay in Government departments for sanctioning foreign collaboration is another snag. Some foreign countries consider Indian labour legislation to be too liberal.

Some attempts have lately been made to improve the climate for foreign investments. It is worth noting that the Government of India is willing more than ever to collaborate with foreign firms in the public sector and the success of Oil India Ltd will provide a good example for the interested parties.

WEST BENGAL

West Bengal: a Panorama. (Published by the Indian Chamber of Commerce, Calcutta. Pages 63.)

West Bengal is the second smallest State and the most cosmopolitan of all the States in India. Partition has meant for West Bengal a series of problems of almost insurmountable magnitude—the greatest of these being the continuous influx of refugees. This has shattered the economy of the State and it is no wonder that it is now known as a "problem province".

There are few books on West Bengal which give a comprehensive picture of the State and its economy. So the Indian Chamber of Commerce has made a praiseworthy attempt by publishing a booklet on West Bengal. This neat and handy book provides adequate information on the land and the people and the fast developing economy of West Bengal. The booklet contains seven main sections, namely: (1) West Bengal (2) Calcutta (3) Agriculture (4) Industry (5) Transport and Communication (6) Trade and Trade Centres, and (7) Comparative Statistical Tables.

The comparative statistical tables given at the end of the book will serve as a mine of information about West Bengal and the other Indian States. The Indian Chamber of Commerce should consider publishing similar booklets on other Indian States.

DECENTRALISED ECONOMY

Decentralised Economic Development. By Vaikunth L. Mehta. (Published by the Directorate of Publicity, Khadi and Village Industries Commission, Gramodaya Irla Road, Vile Parle (West), Bombay. Price Rs. 12, pages 439.)

This book is a collection of articles written by Mr. V. L. Mehta. Most of them appeared in *Khadi Gramodyog* during the past decade. In one capacity or the other, Mr. Mehta has been associated with the *khadi* and village industries movement. Almost all the articles stand for a single objective: a basic strategy of planning wherein the right place is given for the development of village and cottage industries. This objective is discussed in relation to such aspects of economic development as the five year plans, unemployment, industrial policy, co-operative movement, and slum clearance. The term "decentralised economic development" is apparently used to connote the process in which, through the medium of the cottage and small industries, each individual, each community and each area participate in their development effort. Work and the fruits from that work are the essential requirements for both economic as well as intellectual and spiritual uplift.

The book gives an insight into the problems and policies related to the growth of the village and cottage industries and to some extent helps in appreciating Gandhian economics and philosophy. Above all, Mr. Mehta's clarity of expression and the fluency of thought add to its substance. Students of Indian economics will find the book interesting and useful. An index at the end of the book would have been extremely useful, particularly as it is a collection of articles.

INDUSTRIAL FINANCE

Industrial Finance in India. By P. C. Jain. (Published by Suneja Book Centre, 24/90, Connaught Circus, New Delhi 1. Price Rs. 9.50, pages 338.)

Financial Institutions. (Published by the Economic Adviser to the Government of Pakistan, Ministry of Finance, Rawalpindi. Pages 278.)

Institutions providing industrial finance are playing an important rôle in the growth of an economy, and the books under review deal with financing agencies. The first book is the second edition and when it was first published about 20 years ago, it was perhaps a pioneer in the field. The present edition takes into account the developments that have taken place since then. The book also covers international agencies and discusses the principles, problems and organisation of the same.

The second book enriches one's knowledge about Pakistan and there are 50 useful statistical tables. The first part is devoted to ten financial agencies of Pakistan and it is not merely descriptive but also analytical. The information furnished include historical background, objectives, resources, administrative apparatus, investment criteria, distribution pattern, economic impact and future operations. However, the working of the institutions brings into focus the lack of balance between West and East Pakistan. The House Building Finance Corporation gave loans of Rs. 17 crores, of which West Pakistan got Rs. 14 crores and East Pakistan Rs. 3 crores. Similarly, the Industrial Development Bank of Pakistan gave 126 domestic currency loans in West Pakistan and 104 in East Pakistan. The Agricultural Development Bank of Pakistan gave in 1963-64 Rs. 17.35 crores in West Pakistan and Rs. 16.82 crores in East Pakistan and the average amount of loan was Rs. 488 in East Pakistan against Rs. 2,841 in the West. Mr. Mohammad Shoaib, Finance Minister, has contributed a foreword to the book. The volume is a welcome addition to the literature on Pakistan.

COMPANY LAW

Investing in India—Company Law. (Published by the Indian Investment Centre, Parliament Street, New Delhi 1. Price Rs. 3, pages 125.)

The Indian Companies Act, 1956, has more than 600 sections. Covering as it does more than 300 pages, it is really voluminous. But it is a legislative measure of vital importance to the private sector. The amendments introduced during the last few years have made it more complicated, although the intention was to weed out all complications. To merely read an Act of such magnitude and complexities, not to speak of assimilating it, is a painstaking job. Without expert assistance, it is difficult to comprehend all its provisions.

The Indian Investment Centre has, therefore, to be complimented on its timely publication of a brochure on company law. Despite the rather limited scope through which the subject has been discussed, the booklet will not only benefit the layman but will also prove useful to the professionals like company solicitors and accountants. The Centre will receive the appreciation of many if it brings out an elaborate volume on the subject with the same clarity of thought and expression.

EXPANSION IN INDIA BY LEYLAND MOTORS

Projects costing over £4 million, which will increase the size of Leyland's vehicle-producing factories and foundries in Madras, and nearly double the number of employees, were announced by the Company in London recently. The news was given jointly by Sir A. Ramaswami Mudaliar, chairman of Ashok Leyland, and Mr. Donald G. Stokes, Managing Director of the Leyland Motor Corporation.

It followed a meeting of directors and executives at Leyland's London office and confirmed that Leyland's investment in the new projects will amount to £2,500,000 in addition to the £3 million already invested.

that tender care for your goods

Rush handling is often confused with rough handling. To move the goods fast is not enough, extreme care to ensure that the goods reach their destinations in perfect condition is basically important.

MODEST RISE IN GUNNY OUTPUT IN PREVIOUS SEASON

In spite of continuing production at the maximum level with the entire loomage for the same 2,440 hours during 1963-64, the Indian jute industry could not substantially increase its output, as it did during the previous year. Even the scrapping of the I.J.M.A. Working Time Agreement failed to produce any perceptible effect on production. The total output was 1,249,100 tonnes, against 1,218,200 tonnes in 1962-63 and 1,069,000 tonnes in 1961-62. Output of hessian increased by 3.6 percent from 514,900 tonnes to 533,800 tonnes and of other goods, including carpet-backing cloth, by 28.1 percent from 171,500 tonnes to 219,800 tonnes, while the production of heavy goods declined by 6.9 percent from 531,800 tonnes to 495,500 tonnes. The separate breakdown for carpet-backing cloth, available for the period January to June, shows that the output increased by only 20.8 percent from 38,400 tonnes during the second half of 1962-63 to 46,400 tonnes in the corresponding period of 1963-64, despite the very large increase in the complement of broad looms. In 1961-62, output of hessian totalled 414,300 tonnes, of sacking 508,500 tonnes and of other goods 146,200 tonnes.

The total offtake of 1,211,200 tonnes in 1963-64 also just kept pace with the rising trend in production, the offtake was 1,195,200 tonnes in 1962-63 and 1,059,400 tonnes in 1961-62. Despatches of hessian rose from 511,500 tonnes in 1962-63 to 523,800 tonnes in 1963-64, and of other goods from 164,500 tonnes to 192,400 tonnes, while sacking declined by 4.8 percent from 519,200 tonnes to 495,000 tonnes.

Exports Increase

Of the despatches in 1963-64 exports accounted for 878,400 tonnes, against 875,700 tonnes in the previous year and 772,400 tonnes in 1961-62. Hessian shipments improved from 465,100 tonnes in 1962-63 to 475,200 tonnes, while exports of other goods rose from 128,400 tonnes to 153,500 tonnes. This spurt helped more than offset the fall in sacking exports from 282,200 tonnes to 249,700 tonnes. Total internal consumption also followed the general trend and rose from 287,000 tonnes in 1961-62 to 319,500 tonnes in 1962-63 and to 332,800 tonnes in 1963-64. The increase in consumption was attributed to the rise in agricultural and industrial production within the country. Consumption of hessian rose from 46,400 tonnes to 48,600 tonnes, of heavy goods from 237,000 tonnes to 245,300 tonnes and of other goods from 36,100 tonnes to 38,900 tonnes.

With the backlog of demand satisfied and sufficient supplies, the U.S.A. slackened its burlap offtake during the year. Most bag-makers and consumers in that country were inclined to keep their stocks and commitments light as Indian and Pakistani mills were producing at the maximum levels and holding larger stocks. This apart, the progress made by the synthetic fibre industry in the U.S.A. also induced American consumers to divert their attention to manmade bagging and carpet-backing fabrics, though on an experimental scale. In view of the impact of open tenders in the market on the price trend, they also started the practice of entering into direct contracts with mills.

All these produced a depressing effect on market sentiment. Lacking bargaining capacity, mills accepted offers around or a shade below the prevailing market levels. The consumption of burlap in the U.S.A. registered a minor decline from 896 million yards in 1962-63 to 886 million yards in 1963-64. But this fall was attended with a more-than-proportionate decline in the price level. U.S. consumption was satisfactory during the first half of the year, but it fell sharply in the latter half. The offtake during July-December 1963 was 449 million yards, against 432 million yards for the comparable period of 1962: it amounted to only 437 million yards in January-June 1964, against 464 million yards in the corresponding period of 1963.

Spurt in Gunny Offtake

A spurt in gunny exports helped more than offset the decline in internal consumption of jute goods during June. An I.J.M.A. statement says that mill despatches of gunnies rose from 104,500 tonnes in May to 104,800 tonnes in June. Despatches of hessian increased by 2,400 tonnes to 46,200 tonnes, of miscellaneous goods by 1,800 tonnes to 13,900 tonnes and of carpet-backing cloth by 1,500 tonnes to 7,700 tonnes; despatches of sacking, however, declined by 5,400 tonnes to 37,000 tonnes. Exports totalled 80,300 tonnes, against 75,600 tonnes. Of these, shipments of hessian rose by 2,800 tonnes to 42,900 tonnes, of other goods by 1,500 tonnes to 10,500 tonnes and of carpet-backing by 1,500 tonnes to 7,700 tonnes. Exports of sacking, however, declined from 20,300 tonnes to 19,200 tonnes. Internal consumption was lower at 24,500 tonnes, compared with 28,900 tonnes—consumption of heavy goods fell from 22,100 tonnes to 17,800 tonnes and of hessian from 3,700 tonnes to 3,300 tonnes. But consumption of miscellaneous goods rose nominally from 3,100 tonnes to 3,400 tonnes.

In June 1963, the total offtake was 99,000 tonnes—41,800 tonnes of hessian, 37,900 tonnes of sacking, 6,500 tonnes of carpet-backing and 12,800 tonnes of other goods. Exports absorbed 75,300 tonnes—39,100 tonnes of hessian, 19,500 tonnes of sacking, 6,500 tonnes of carpet-backing and 10,200 tonnes of other goods. Internal consumption totalled 23,700 tonnes—2,700 tonnes of hessian, 18,400 tonnes of sacking and 2,600 tonnes of miscellaneous goods.

Rise in U.S. Burlap Consumption

Burlap consumption in the U.S.A. has increased to 70 million yards in June from 63.5 million yards in May. The offtake was 68.8 million yards a year ago. Up to the end of June 1964, the country consumed 436.8 million yards, against 463.9 million yards during the comparable period of 1963. The average monthly consumption came to 72.8 million yards in the first six months of 1964, against 77.3 million yards in the corresponding period of 1963. U.S. stocks during June rose from 278.2 million yards to 286 million yards. Of these, 157 million yards (against 147 million yards) were spot stocks and 129 million yards (against 131 million yards) were afloat. They were 298 million yards —176 million yards spot and 120 million yards afloat—at the end of June 1963. At the June level of consumption, the stocks will last for 4.085 months. The corresponding stock duration on the same basis a year ago was 4.302 months.

the previous week's Government tenders in heavy-goods. Reports of strike in East Pakistani jute mills helped a fresh rally in the course of which heavy goods prices flared up in both spot and hedge markets. Shorts and shippers made a hectic covering of their open positions, helping mills to negotiate sizable orders for all positions at the higher levels. In the hedge market too, prices fluctuated between wide limits in sacking and closed with a comfortable gain. On Monday, the sentiment suffered a setback on heavy long-liquidation combined with bear-selling in the hedge market following reports of the calling off of the Pakistani strike. On Tuesday, brisk bear-covering at lower levels helped the price firm up appreciably. Hessian continued to be barely steady all through in sympathy with heavy goods. Higher exports and a spurt in the consumption of burlap in the U.S.A. during June could not produce any impact on the trend in view of small overseas enquiries and business. The port situation had improved to some extent following the drastic steps taken by the authorities. There was less congestion in the dock areas and shorter detention at Sandheads. Vessels were available for shipment to Montevideo, Buenos Aires, Odessa and other continental ports. Turnover was fair in heavy goods and small in hessian, and the undertone was firm in the former and steady in the latter.

Wednesday's quotations were as follows:

	July	Aug.	Sept	Oct.-Dec.
40in. 7½oz.	33.60	33.65	33.75	33.85
40in. 8oz.	36.15	—	—	—
40in. 10oz.	44.40	44.75	44.95	45.45
B Twills	117.00	116.75	116.50	116.35
Cornsacks	120.75	121.75	121.00	119.25
Heavy Cees (Plain)	116.25	116.25	116.25	116.25

Liverpools	129.00	129.00	129.00	129.00

Raw Jute: With a decline in the arrivals of new crop fibre due to bad road conditions and inclement weather, combined with the preoccupation of farmers with interculture and paddy-sowing operations, less jute was on offer in the agencies and in Calcutta. Sellers were not inclined to reduce the price in the belief that this season's crop would not be larger than the previous season's. Besides, mills had opened the new season with a smaller carryover. This apart, the report of a firm trend in Pakistan induced mills to accept whatever supplies of selected-grade fibre were available at current levels. The existing conditions are somewhat unusual. So far mills have bought small quantities, for, at the current prices of raw jute and finished goods, mills can hardly make any profit. But the steady upcountry trend prevents local fibre dealers from discounting prices any further. That is why they seem to show little keenness in negotiating business when their order-book position is rather bad. The hedge market also moved in line with the general trend. Opening on a hesitant note, there was an initial setback on bull liquidation combined with some amount of short-selling. Mid-week there was a reversal of the trend on hectic bear-covering at lower levels after intermittent fluctuations. All offers were well absorbed and the market closed steady with an appreciable rise from the previous week's level. Turnover was small in the spot market and fair in the hedge market.

Wednesday's quotations were as follows:

EXPORT DUTY TO BE REFUNDED

(FROM OUR DACCA CORRESPONDENT)

THE authorities have at last decided to allow the refund of export duty to the buyers. This refers to the reduction made for all shipments effected on or after 13th June, 1964. The fact that the authorities have shown themselves to be flexible enough to admit the error made, is commendable.

Despite beliefs to the contrary, the L.J.A. does not ask from the authorities more than to be allowed to operate within the laws of the country and to have those laws intelligently and fairly interpreted. The incidents over the last few weeks imply that in future this will be so. This will undoubtedly encourage overseas buyers as well as London agents and jute shippers to abide by the rules, which would benefit the trade and automatically the economy of Pakistan.

As was expected, certain sections of the trade in Pakistan had objected to the quota system on the ground that the small shipper is not being given enough chance. In fact, what is being asked is that the big trader should be completely restricted and the small shipper should be allowed to take whatever pickings he can, knowing very well that he cannot replace the big shipper overnight. It is pleasing to note that the jute authorities have compromised by giving every facility to the small shipper to increase his turnover without at the same time unduly restricting the big shipper. Provided the laws are obeyed and this petty bickering is avoided, there is plenty of room in the trade for both big and small shippers, who are prepared to abide by the contractual obligations.

Loose jute arrivals are slowly increasing, and the quality is improving slightly. The fact remains, however, that the crop is later than expected and the quality is not as good as last year. The prices continue to increase as more balers start buying. In fact, the demand is increasing faster than the arrivals. In the pucca bale sector, there has been a fair amount of business during the last week and practically the whole of the buffer stock both white and tossa has been sold to local traders. Cuttings maintain their steady position with a very slight discount in the ready position. Considering the overseas demand for ready jute, the implication is that the steadiness in cuttings is mainly due to local speculators.

Overseas buyers, still trying to keep the market down and to hide their need for jute, are trying to buy small lots for ready delivery so that if any premium is paid the pretence is that this is only because they asked for early delivery. Although some balers are offering cheap, the majority are keeping out of the market or only offering nominal quantities in order not to offend old buyers.

LOAN FOR LAKSHMI MACHINE WORKS

The International Finance Corporation, an affiliate of the World Bank, is to join with Indian and Swiss interests in providing loan and share capital to Lakshmi Machine Works. This new Indian Company will build and operate a cotton textile machinery plant in Coimbatore at a cost of about $12.5 million. The new plant will eventually produce the entire range of cotton textile machinery now manufactured by Rieter in Switzerland and will be the only plant in India to manufacture a complete line of cotton spinning equipment.

Commodity Markets

WORLD COTTON TEXTILE OUTPUT TRENDS

THE summer issue of the Cotton Board's *Quarterly Statistical Review* shows that although cotton textile production in the non-communist part of the world declined in 1963 for the second year in succession, activity turned upward in the course of the year. This trend was maintained in the first quarter of 1964 when it is estimated that cotton yarn output in those countries for which regular figures are available was about 5 percent greater than in the corresponding period of 1963. The main increases, compared with a year earlier, were in India, Pakistan, the U.S.A. and Japan. Output in the U.K. and continental western Europe was also slightly greater than in the first quarter of last year.

The decline in world trade in cotton piecegoods, which lasted from 1960 to 1963, may now have been halted, though perhaps only temporarily. In the first quarter of this year, exports from the main non-communist exporting countries are estimated to have been about 2 percent greater than in the same period of 1963. Exports from the U.S.A., the continental western European countries as a whole and one or two of the minor exporting countries were greater than a year earlier; in contrast, Japanese and British exports of cotton piecegoods were again lower than in the corresponding period of the previous year.

Exports of man-made fibre fabrics from the principal non-communist exporting countries in 1963 were about 1 percent less than the comparatively high 1962 level. In the last quarter of 1963, however, they were rather greater than in the same period of 1962, and this expansion became more marked in the first quarter of 1964 when it is estimated that the total world trade was about 7 percent greater than a year earlier. If the continental western European countries are considered as a whole, all the main exporters of man-made fibre fabrics, except possibly Japan, shipped more than in the first quarter of last year.

With the easing of production curtailment in Japan, the output of cotton yarn and cotton cloth in the first quarter of this year was, respectively, 6 percent and 2 percent greater than in the same period of 1963. The increase must be accounted for by the strength of domestic demand and the end of destocking, since exports of cotton goods continued to fall. Spun rayon yarn output showed little change in the first quarter, but the production of spun synthetic yarns (including blends predominantly of synthetic fibre) was 35 percent greater than a year earlier and the increase in synthetic fibre fabric production over the same period was over 40 percent. The scale of the synthetic fibre business in Japan is illustrated by the fact that in the first quarter of this year, spun synthetic yarn output exceeded spun rayon yarn output and was as much as 39 percent of cotton yarn output: in the same period, synthetic fibre fabric production was equal to 35 percent of cotton fabric production. Further large extensions to the capacity for producing synthetic fibres are planned.

Japanese Exports

Exports of cotton piecegoods from Japan in 1963 reached their lowest total since 1955 and the trade expects a further decrease this year. Apart from increased competition from China and other Asian exporting countries, and more stringent import restrictions in certain important markets, it is feared that there may be a sharp fall in shipments to the U.S.A. as a result of the new cotton price legislation. Exports in the first quarter totalled only 232 million square yards, compared with 276 million in the same period of 1963: the decline was spread over a number of important markets in addition to the U.S.A. Exports of man-made fibre piecegoods, which declined in 1963 for the third year in succession, were probably much the same in the first quarter of 1964 as a year earlier. A marked expansion in the exports of synthetic fibre piecegoods roughly offset a further contraction in rayon piecegoods exports.

Cotton yarn output in India continues to run at record levels, the first quarter total showing a 9 percent increase over the figure for the corresponding period of last year. Mill production of cotton cloth in the first quarter was about 5 percent greater than a year earlier; this followed a steady decline in production since 1961 at a time when the output of the decentralised handloom and power-loom was apparently expanding. The industry puts part of the blame for the surprising failure of mill-made cloth output to expand on to the price control system, which allegedly makes several cloth types unprofitable to produce. Substantial installations of new spindles and looms are planned for this year.

Indian Exports Stagnate

In the second half of 1963, Indian exports of cotton piecegoods were almost exactly the same in total as in the corresponding period of 1962. Full details for the first quarter of this year are not yet to hand, but it is believed that shipments then were much the same as in the first quarter of 1963. In 1963, exports to the U.K. and the U.S.A. were greater than in 1962, but there was a very severe fall in trade with the Sudan. Shipments to the U.K. were again very heavy in the first quarter of this year.

Hongkong achieved a very creditable expansion in her exports of cotton cloth during 1963 and shipments were maintained at a high level in the first quarter of this year. Further increases in spindleage are apparently planned for this year, but fears have been expressed that it may become necessary to curtail production later in the year. The most important current developments in the Hongkong textile industry are the efforts to upgrade the quality of the products of the industry and the increasing use of synthetic fibres. As an illustration of the former, it is estimated that the average value of imports of made-up woven cotton goods into the U.K. from Hongkong was roughly 52d a square yard in 1963, compared with about 40d in 1962.

TEA

Pakistan Expands Tea Cultivation

(BY A SPECIAL CORRESPONDENT)

PAKISTANI tea output is moving ahead rapidly. The estimated crop for 1964 is 60 million lbs, or a rise of 2.85 million lbs over last year, which itself was a record. The expansion of production is expected to allow Pakistan to renew exports. A tea research station has been established in Srimangal and finance is being made available to proprietory estates from the tea development funds at 4-percent interest.

During the past four years, 10,579 acres have been brought under cultivation in Pakistan, thereby increasing the planted area to 87,000 acres as at 31st March, 1964. Another 3,000 acres are expected to be planted this season. In addition to the above, approximately 25,000 acres of tea have been rehabilitated by replanting and infilling. Under the third five year plan, a further 28,500 acres of land will probably be added, thus bringing the total area under tea to 118,000 acres.

The output in Pakistan was 52.27 million lbs in 1952-53 and in 1961-62 it was 58.46 million lbs, but due to unfavourable growing condition, the yield fell to 42.12 subsequently. It will be noted that Pakistan has made quicker progress than north India. One obvious reason is cheaper finance, and a second reason for the progress which is closely related to finance, is that tea production in Pakistan is profitable.

During the ten years 1953-62, north India has increased its production from 267 million to 344 million kilograms which looks quite satisfactory as the 1964 output looks like showing another upswing. These different weights and measures make comparison difficult, but it appears safe to conclude that tea production is a more profitable occupation in Pakistan than in India. Hence the increase in acreage under tea in that country. The great pity is that the net result will be more common tea for world market.

Calcutta Tea Auctions

This year teas offered for sale at the Calcutta auctions have met with a fairly satisfatcry demand, but at a slightly lower level, namely, Rs. 5.95 a kilogram, against Rs. 6.03 a kilogram last year. Dusts likewise show a fall at Rs. 4.91 a kilogram, compared with Rs. 5.23 a kilogram a year ago. The larger supplies expected from the north may help to keep down costs—to some extent—but the decision of the Wage Board to recommend a second interim increase of wages is untimely, as the move must result in higher production costs which will eventually result in marginal gardens closing down altogether. More costly money rates from September will be another difficulty. Developing industries require cheap finance, whereas the reverse process is in operation in India.

Reverting to the supply position, it may be noted that the surplus from north India looks like being cancelled out, in part, by a shortage in the south, but total world production is estimated at 502.3 million lbs, against 481.2 million lbs in 1963. The statistical situation is hardly encouraging, but the annual reports published by local tea broking firms some weeks ago expressed fairly confident expectation as to supply and demand, which was expected to be

I.O.B. is big enough to serve you...

I.O.B. is an international bank with offices throughout India and South-east Asia and correspondents the world over. It offers a wide range of services to suit the needs of varied customers. Indeed, I.O.B. is big enough to serve you.

We asked our customers, thousands of them at random, what they thought of our service. They replied: "We are pleased". They also made several helpful suggestions which we are implementing. Indeed, I.O.B. is small enough to know you.

Range of I.O.B. services: Savings and Current Accounts—Recurring and Fixed Deposits—Personal and Business Loans—Bills Payment Service—Gift Cheques—Travellers Cheques—Safe Deposit Lockers —Trade and Export Information and Advice—and whatever other specialised help you may need.

...and small enough to know you

THE INDIAN OVERSEAS BANK LIMITED

fairly evenly balanced by the end of the cropping season.

Lower U.K. Stocks

Although world supplies to the end of June show a moderate increase over production in 1963 stocks in the U.K. actually marked a decline for the week ended 10th July at 122.1 million lbs, against 124.5 million lbs a week ago. In 1963, stocks were at lowest level for the year at the end of August, and in 1962, July recorded the low mark. Conditions, therefore, seem to be following a normal pattern. Deliveries at 8.7 million lbs were lower than during recent weeks. Teas afloat were estimated at 16.5 million lbs, of which under half a million lbs was from north India.

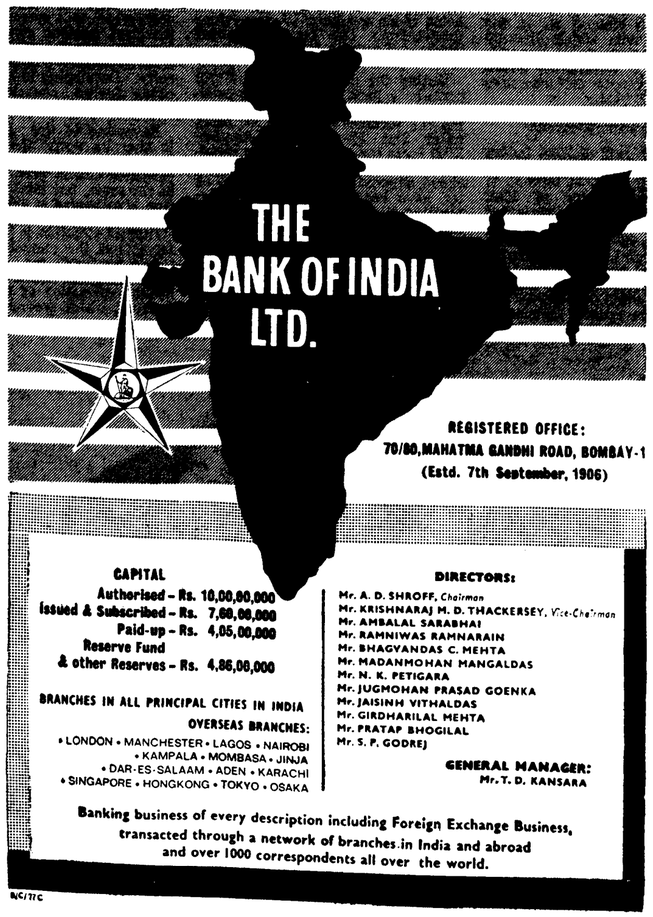
The average price was 46.15d. compared with 45.83d the previous week, and 44.69d a year ago, so the loss on Calcutta prices may be partly made up at London auction, but so far, only a small proportion of north Indian new season's teas have come up for sale in Mincing Lane. The total offerings last week were only 53,400 chests of tea. The few Assams sold well, but Dooars offerings were irregular and supplies from south India remain on the low side. African teas were steady, but some stalk is showing in some invoices. There was an active demand for Ceylon supplies, sometimes at higher prices.

In 1963, Terai tea planters enjoyed a good season, but so far this year conditions have been more difficult. The Terai Indian Planters Association held its annual general meeting recently under the chairmanship of Mr. S. G. Raha who referred to the industry's problems with particular reference to high taxation and the difficulties in implementing the recommendations for labour due to the lack of funds for ordinary working capital and other expenditure. He reasoned that the Government must pay greater attention to make finance more readily available to the industry because bankers have already imposed restrictions against loans on hypothecation. Mr. Raha suggested that banks should be asked to grant loans at least to the extent of the cost of production. That, of course, would be against common sense. Banks are custodians of other people's money, and must protest their depositors' interests.

The chairman was on safer ground in asking the Government for a subsidy on internal freight, or and, waiving of taxes and refund of export duty for any gardens able to export 65 percent or more of their production. Mr. Raha noted that recently Mr. Manubhai Shah, Central Minister for Commerce, stated that the Government has decided to treat all expenses of new and replacement planting as a revenue charge and has approached the States for similar ruling for income tax—agricultural income tax as well as adjustments for deferred payment of excise duty until the time teas came up for auction. He also advocated that hospitals and schools should be taken over by the Government and that tea estates should secure interest-free loans from the Government or the Tea Board, for housing.

These seem to be perfectly legitimate requests because if gardens are forced into liquidation, the losses will fall first on shareholders and then on Indian employed nationals, and lastly, Government revenue will suffer.

One of Calcutta's daily papers recently published an article entitled "An Acre of Tea", which draws attention to the value of cash crop, and states that under present practices, paddy does not generally fetch more than Rs. 100 an acre and jute not more than Rs. 300 an acre in a good year. If the total cost of jute production from seed to harvest is taken into account, it can be shown that jute is not the most profitable of crops. That is why there has been no appreciable improvement in the fortunes of the peasantry in West Bengal.



Every cultivator in Darjeeling and Jalpaiguri should grow tea as a cash crop. In the acid soils of these districts, tea flourishes. Planted in shady places where nothing else will thrive, it will benefit the grower for many years to come.

In Japan tea is a cottage industry. Why should it not be here? A one-acre tea garden receiving a normal supply of organic farmyard manure will produce 20 maunds of pucca black tea. In the home market tea sells at Rs. 3 a lb, i.e. Rs. 246 a maund. Twenty maunds will give roughly Rs. 5,000, as against Rs. 300 from jute. (But here, costs seem to have been overlooked). Big tea estates can look after quality tea and the export trade while the common farmer can make tea on a cottage industry scale for internal consumption.

The suggestion that local ryots will secure 20 maunds of pucca tea from an acre looks optimistic, but the idea might be followed up with good profit to the small grower. The system said to work in south India and Ceylon where co-operative factories have been erected and with abundant labour, there should be no serious difficulty about cultivation, but where is the normal supply of, farmyard manure to be found when most of it is used for fuel. The seeds or clones should also be supplied by the Tea Board because it is essential to aim at quality, also an acre of tea probably still requires about 3,000 bushes.

This correspondent has been pessimistic with regard to the profitable working of north Indian tea estates for some time—but, fortunately Calcutta tea brokers and others remain fairly optimistic in reference to the supply and demand position and tea auction so far this year have held up well.

On 1st July, the U.S. Department of Agriculture published estimates for this year's production. It puts the figure at 2,326 million lbs. This would be 2 percent above last year's record output. Asia is expected to offer; in India 770 million lbs; the Ceylon 500 million lbs; in Pakistan 55 million lbs; in Iran to 30 million lbs and in Turkey 25 million lbs. Japan, China and Indonesia do not appear to have been included.

LEMONGRASS

Overproduction Crisis

Our South Indian correspondent writes: The Lemongrass Development and Export Advisory Committee constituted by the Government of India has issued an appeal to the lemongrass cultivators to curtail production of oil during the 1964 season. The record production of 1963 has left a big carry-over of nearly 700 tonnes, which even under normal conditions, would prove a big drag on the market, the committee says in a Press release. The committee advises the growers that their production should be limited in such a way that the monthly total does not exceed the quota fixed by the State Trading Corporation of India for its purchases during the next six months from the growers. In order to provide safeguards to genuine growers, a limit of 30 kilograms has been prescribed for monthly sales by the producers. The S.T.C. has fixed a limit of 750 tonnes for its purchases during the 1964 season. The committee feels that production over and above this limit might produce a very distressing effect on the market, which is already weak, in view of competition from Guatemala for natural oil as well as from synthetic substitutes in the western market.

COMPANY AND PUBLIC NOTICES

(Situation Vacant)

RESERVE BANK OF INDIA

APPLICATIONS are invited for the following posts in the Bank:—

(A) POSTS AND SCALES OF PAY:

(i) **Statistical Assistants in the Department of Statistics**

Rs. 255-15-270-16-398-21-419
EB 21-482-22-570.

(ii) **Economic Assistants in the Economic Department**

Rs. 255-15-270-16-398-21-419
EB 21-482-22-570.

In addition to pay, the selected candidates will be eligible to draw house allowance and dearness allowance.

(B) QUALIFICATIONS:

(i) Statistical Assistants: Applicants should have obtained at least 50% marks or its equivalent in the Master's degree of a recognised University in Statistics or Mathematics/Commerce with Statistics as a special subject.

(ii) **Economic Assistants:** Applicants should have obtained at least 50% marks or its equivalent in the M.A. or M.Com. degree of a recognised University with specialisation in any of the following subjects:—Economic Analysis, Monetary Theory, Banking, International Economics, Theory of Growth or Rural Economics. Preference will be given to those who have practical experience of research in Economics.

(C) AGE LIMITS AS ON 1ST JULY 1964:

Between 18 and 24 years.

The maximum age limit is relaxable but not beyond 30 years in the case of:—

(i) applicants possessing special qualifications and experience of value to the Bank;

(ii) ex-employees of banking institutions whose services had to be terminated for reasons of economy or as a result of the banks going into liquidation;

(iii) personnel retrenched from Government offices after at least one year's service applying through Employment Exchanges; and

(iv) candidates belonging to the Scheduled Castes or Scheduled Tribes.

2. Candidates who wish to apply for more than one category of posts must submit **separate** applications accompanied by separate application fees and **should clearly indicate the post for which they have applied.**

3. Applicants must remit with their applications a fee of Rs. 2.00 for each post. **The application fee is in no case refundable.** In the case of candidates belonging to Scheduled Castes/Tribes, the fee will be reduced to one-fourth.

4. Applications in the candidate's own handwriting in the prescribed forms obtainable from the Reserve Bank's offices at Bombay, Calcutta, Kanpur, New Delhi, Nagpur, Madras, Bangalore, Hyderabad, Trivandrum, Lucknow, Patna and Jaipur accompanied by copies (originals should not be sent) of certificates regarding age and educational qualifications, statements of marks secured in the Graduate and Post-Graduate degree examinations and copies of two testimonials should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1 so as to reach him on or before the 8th August 1964.

5. Candidates already in service will be required to produce a proper discharge certificate from their employers in the event of their being selected, at the time of their appointment in the Bank's service.

6. Candidates belonging to Scheduled Castes/Scheduled Tribes should mention this fact prominently in their applications and also enclose a copy of a certificate to that effect from a competent authority.

7. Candidates must be prepared to serve in any office of the Bank in India and to undertake tours when required.

8. Selected candidates will be required to appear for a written test which will be held at the above-mentioned offices of the Bank. Candidates should clearly state on the top of their applications, the office of the Reserve Bank at which they desire to appear for the test, if called. Those successful in the test will have to appear for an interview at Bombay.

9. Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

10. If any candidate desires to have his application acknowledged, he should send it by "Registered Post—Acknowledgement Due". Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

11. Canvassing in any form will be regarded as disqualification.

THE INDIAN IRON & STEEL COMPANY LIMITED

Notice

AT a meeting of the Board of Directors held today the Directors have recommended in respect of the Ordinary Share Capital payment of a dividend for the year ended 31st March, 1964, of Rs. 1/60 per share together with a special cash bonus of 10 paise per share, making a total distribution of Rs. 1/70 per share subject to deduction of tax in accordance with the provisions of the Income Tax Act. This distribution awaits sanction by the shareholders at the Annual General Meeting to be convened for Tuesday, the 8th September, 1964.

The net profit after provision of Rs. 4,40,25,006 for depreciation, Rs. 3,87,00,000 for taxation and net transfer of Rs. 5,35,17,685 to Appropriation Reserves is Rs. 2,29,04,228. For the previous year the net profit was Rs. 1,91,87,975 after provision of Rs. 3,40,18,269 for depreciation, Rs. 3,56,00,000 for taxation and net transfer of Rs. 3,64,01,226 to Appropriation Reserves.

The Ordinary Share Register and Transfer Books of the Company, as already announced, will be closed from the 1st to the 22nd August, 1964, both dates inclusive, and the dividend and cash bonus if sanctioned will be paid on or after the 9th September, 1964 to those shareholders whose names appear on the Register of Members on the 22nd August, 1964.

By Order of the Board,

MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

Registered Office:
12, Mission Row, Calcutta 1.
17th July, 1964.

HOWRAH MILLS COMPANY, LIMITED

Notice of Annual General Meeting

NOTICE is hereby given that one hundred and thirtyninth annual general meeting of the members of the above-named company will be held at the registered office of the Company, No. 4, Clive Row, Calcutta-1 on Friday, the 21st day of August, 1964 at 12-15 p.m. for the following purposes:—

1. To receive and consider the Audited Accounts for the year ended 31st March, 1964, the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.
2. To confirm interim dividends already paid and to declare final dividends.
3. To appoint a Director in place of one retiring.
4. To appoint Auditors and to fix their remuneration.

NOTICE is also given that the Share Transfer Books of the Company will be closed from 7th August, 1964 to 21st August, 1964 both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself on a poll and a proxy need not be a member of the Company.

By Order of the Board,

JARDINE HENDERSON, LTD.
C. EVANS,
Secretary,
Managing Agents.

4, Clive Row,
Calcutta-1.
17th July, 1964.

Note:—The dividends, if approved, will be payable on and after 7th September, 1964 to those members whose names are registered in the books of the Company on 21st August, 1964.

ANGLO-INDIA JUTE MILLS COMPANY LIMITED

31, Netaji Subhas Road, Calcutta-1.

NOTICE

THE Directors at the meeting held on 8th July 1964 have recommended for consideration of the Members at the Annual General Meeting to be held on 21st August 1964 at 11-00 A.M., payment of the following dividends, subject to deduction of tax, for the year ended 31st March 1964:

On Preference shares at the rate of Rs. 9.1 per share

On Ordinary shares at the rate of Rs 12 per share.

The Register of Members and Share Transfer Books of the Company will be closed from 11th to 21st August 1964, both days inclusive.

By Order of the Board,

DUNCAN BROTHERS & COMPANY LTD.,
Managing Agents.
Calcutta, 10th July 1964.

DELTA IRRIGATION PROJECT

Tender Call Notice

SEALED quotations are invited for the supply of spare parts for AILSA CRAIG MARINE DIESEL ENGINE, Model RFR4 and RF4 and will be received upto 3-00 p.m. on the 17th August, 1964 and will be opened on the same day in the presence of the tenderers or their authorised agents.

The detailed list of spare parts required can be had from the office of the undersigned on application.

HIDES AND SKINS

The market was steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 14th and 20th July, 1964)

Cowhides: Wet salted (Ord) 11,500 pcs. on the basis of Rs. 7 to Rs. 9; Wet salted (slaughtered) 45,500 pcs. on the basis of Rs. 7 to Rs. 13 and Rs. 16 to Rs. 24; Wet salted (Ord) 1,500 pcs. on the basis of 54 Paise a lb.

Goatskins: Wet salted (Patna, Daissee, Kustia) 52,800 pcs. on the basis of Rs. 270 to Rs. 320; Rs. 320 to Rs. 330 and Rs. 370 to Rs. 380; Wet salted (he-killed) on the basis of Rs. 4.25 and (she-killed) on the basis of Rs. 4 a piece; Assam-Dinajpur 33,500 pcs. on the basis of Rs. 170 to Rs. 225.

Bazaar Stocks

(20th July, 1964)

Cowhides: Wet salted 78,100 pcs.
Goatskins: Wet salted (Patna Daissee, Kustia, Killed) 47,000 pcs; Assam-Dinajpur 1,22,000 pcs; Mozafferpore - Patna - Pakur - Purneah-Kissenganj 4,13,000 pcs.

SHELLAC UNCHANGED

During the week ended 21st July, the market was unchanged. The range of quotations was as follows:

	Rs. a package
Pure Buttonlac	168 value
Lemon One Shellac	170 buyers
	174 sellers
Lemon Two Shellac	152 buyers
	156 sellers
Standard One Shellac	136 buyers
	140 sellers
Pure T. N. Shellac	120 buyers
	124 sellers
Golden Kusmi Seedlac	200 value
Kusmi One Seedlac	140 value

EXPANDING SCOPE FOR FOREIGN INVESTORS

IN spite of the existence of irksome controls and high taxes, India's basic attractions for the foreign investor remain. This seems to be true even in the case of the fertiliser industry (where profitability is low and the manufacturer has little say in the distribution of the product), judging from what Professor Humayun Kabir stated about offers from a group of U.S. companies to collaborate with Indian parties in setting up four plants. A representative of the Federation of British Industries in fact said last week that India ranked high, next only to Canada and Australia, in the list of countries where British business men and industrialists would invest their capital. A short while ago the Canadian Department of Trade and Commerce expressed satisfaction with the investment opportunities in India. The delegation of U.S. business men who visited this country last April also felt that the investment climate was by and large salubrious, although they wanted some adjustments in India's policies.

India's attractions for the foreign investor mainly stem from her political and economic stability, her uniformly good record in honouring obligations and the freedom she allows in repatriating capital and earnings—factors which cannot be taken for granted in many other developing countries. An even more important factor is the existence of a fairly developed infra-structure, which is steadily expanding. Power and transport facilities are developing fast to support industrial growth. A large and growing domestic market—a sheltered one at that—is another major attraction which the country offers. In industries like oil, where the world production of crude is in surplus, the vast market potential has prompted a large number of entrepreneurs to seek investment opportunities in India. From the point of view of profitability too, the prospects are fairly promising. According to a study by the U.S. Department of Commerce, the earning of direct American investments in India in manufacturing industries (which together with oil account for about 95 percent of U.S. investments) was among the highest in the world, being 20.6 percent in 1962 and 19.2 percent in 1961, compared with a mere 9.1 percent in Japan in 1962, 18 percent in Pakistan and 12.7 percent in the Philippines. As for British capital, a survey conducted by the Board of Trade showed that the return in 1962 amounted to 9.4 percent, which was higher than the return earned on British investments in the U.S.A., Australia and Canada. A Reserve Bank study of the balance-sheets of 1,834 companies showed that profits after tax as a percentage of net worth was above 10 percent in 1960 and 1961. Besides a fair level of profitability and a vast home market, India gives a closer access to the developing countries in both Asia and Africa. Indeed, some international industrial groups have shown interest in setting up export-oriented industries in this country since, apart from proximity to Afro-Asian markets, it offers the advantage of cheap labour.

Confronted with an acute shortage of foreign exchange, the Government of India has wisely adopted a flexible and pragmatic approach in dealing with the foreign investor. With a large number of developing countries staking out claims for aid from the developed countries, the share available to countries like India, which have had an early start in planned development, must inevitably become smaller. In fact, in the opinion of some experts, the utmost that may be hoped for is that the amount of aid will be maintained around the present level. This apart, external aid can meet only a fraction of the country's requirements—a fact which gives an added significance to the need for attracting foreign equity capital. The Central Finance Minister, Mr. T. T. Krishnamachari, in fact, stressed this point in his last Budget speech and announced many concessions to the foreign investor. Although an influential section of opinion in the ruling Party has not taken kindly to external capital, there is little doubt that the Government has warmly welcomed foreign investments. Foreign risk capital brings in not only capital goods but also the technical know-how, managerial skills and enterprise which are so necessary to set an industry on its feet. This is particularly true in the case of new units like petro-chemicals. A large number of foreign collaborations with Indian concerns have been so far put through. The largest number of joint ventures were approved in 1961, but after that there has been a slowdown, the number having dropped to 298 in 1963. Britain contributed almost the entire foreign equity capital in the past, but the picture has now changed considerably. Although as much as 65 percent of private foreign investment is still of British origin, the share of other countries, notably the U.S.A., has been rising. American private investments account for about 16 percent of the total, while investments from countries like West Germany, Japan, Switzerland and Canada are slowly increasing. There is also a change in the pattern of investment, the emphasis having shifted from plantations and oil refining and distribution to manufacturing industries.

New Delhi's anxiety to augment the inflow of foreign equity funds has prompted it to interpret more liberally the Industrial Policy Resolution, which was once looked upon as sacrosanct. Ideological rigidities have gradually yielded place to pragmatism. As a result of the changed attitudes, the Government now welcomes foreign equity investment not only in the private sector but also in the State sector. The Cochin refinery, where foreign minority participation was accepted, is an instance in point. A more recent example is the decision to welcome General Electric as a participant in the heavy electrical industry, which has so far been a State preserve. Besides modifications in the fields open to foreign entrepreneurs, the relaxation covers such matters as the extent of capital participation by collaborators, terms of royalty payment and procedures. These have, no doubt, been facilitated by the latitude which the Industrial Policy Resolution permits. Apart from adopting a more flexible approach, the Government has initiated a number of administrative and procedural reforms with a view to reducing red-tape

delays and cumbersome procedures, which have been a positive deterrent to foreign investors.

While these steps to attract oversea investments may be all right, an equally important need is to revive the Indian capital market. Foreign investments cannot be viewed in isolation from indigenous capital since both of them have to consort together in order to promote industrial growth. Incentives to the foreign investor, by themselves, will be of little avail in fostering economic growth unless they are backed by serious efforts to encourage the Indian investor. The last Budget, far from reviving investment confidence, seriously undermined it. In particular, the capital gains tax on bonus shares and the dividend tax have greatly detracted from the attraction of equity investments. This has naturally affected the new issues too. Many of the recent flotations have miserably failed to raise resources from the market and have had to depend on the underwriters. Several new shares are not only quoted below par but are also difficult to sell. The Government's total dependence on institutional financiers like the newly-created Development Bank and the Unit Trust of India to stimulate the capital market cannot but prove to be futile in the long run.

PROBLEMS OF COAL EXPANSION

LEARNING from the experience of the third plan, the Ministry of Steel and Mines now favours setting a comparatively modest target of 136 million tons for the coal industry. This is considerably lower than the targets earlier in view and reflects a healthy realism about both demand and the physical feasibility of expansion beyond the level likely to be attained in 1965-66. If output in that year is around 76 million tons, as is now expected, the fourth plan will require a very considerable effort to get another 60 million tons out of the existing mines and any new ones that can be developed in the comparatively short intervening period. Fortunately, not all development work has to begin from scratch. Both in the public and private sectors, a great deal has been begun during the current plan which will yield benefits only in the next. The National Coal Development Corporation, for instance, is sinking two deep mines at Sudamdih and Monidih, and there are the big open cast operations in the outlying fields, which have been put in slow gear because of the lack of demand. The private sector has also similar schemes to carry forward into the fourth plan, less by design than by the accident of delays arising from the difficulties over either financing or the release of foreign exchange under the World Bank loan scheme. In sum, the industry is better placed to go forward than it was when embarking on its third plan expansion.

New Delhi has tentatively allotted to the private sector the task of raising 17 million out of the 60 million tons of additional fourth plan production. Not unexpectedly the private sector is being chiefly relied upon to produce coking coal—just over 10 million tons—because it holds leases in the areas from which the output must come. In most cases, this will require vertical development to open up new seams, putting a considerable financial burden upon those who participate in the expansion. This burden will be of an entirely different order from that devolving on the public sector, which will have the advantage of averaging out its capital outlay on high-cost deep mining with the much less expensive open cast development. There will equally be a difference between coking and non-coking collieries within the private sector. According to official estimates, four million tons out of the seven million tons of non-coking coal required from the private sector should be forthcoming from mining development already in hand, leaving only three million tons to be taken care of through future expansion. As for the better-grade non-coking coal, however, the producing mines are already fully stretched and the problems will, therefore, be similar to those faced by coking coal producers.

The investment required to enable the private sector to produce an extra 17 million tons will still be very large even if some of it is assumed to have been made already during the current plan. With the experience of mining development at present-day prices, it should be possible to draw up a fairly precise estimate of costs. Once this has been done, the Government and the industry should get together to consider how the sum is to be found. Very little can be raised from the market. This is obvious from the fact that it is quite some time since a successful issue was made by the coal industry. Profitability has certainly not improved, nor the mood of the market. In a situation when attractive issues in growth industries have failed, coal cannot expect much public support as the industry knows only too well. This means falling back upon internal resources or, in the case of a few, the credit-worthiness of associated enterprises. The possibilities in this direction are also limited since both have been drawn upon extensively in recent years.

There is thus a clear need for a special arrangement to finance the expansion ahead if the private sector is to fulfil its allotted task. It will not do to argue that private enterprise should fend for itself since its ability to do so has been impaired by long years of price control, a mistaken policy of cheap fuel directly thwarting the building up of the industry's strength. This gives the industry a claim upon assistance from the State as most people are ready to concede, no matter what a small extremist fringe may say. But obviously this claim can be legitimately made only by those whose expansion programmes merit support. Selectivity is implicit in this approach and one cannot really object to fairly vigorous tests being applied before assistance is made available.

This selectivity is necessary on yet another count. Coal is not one homogeneous industry but an amalgam of several of greatly differing techniques and scales of operation. There are at the lower end of the scale dozens of small producers who are clearly in no position to equip themselves for a larger rôle. To leave them as they are in the hope that time will take care of the situation is hardly possible, particularly in Jharia where additional production must come from re-development and not from opening up of virgin areas. Amalgamation on a voluntary basis is one way out but this has not worked as is evident from the lack of progress in this direction. Greater compulsion is now being advocated, and this may well be unavoidable.

This operational problem carries with it obvious implications for future financing. Help needs to be channelled in a manner that encourages the adoption of modern mining practices, which offer promise of keeping rising costs steady in the face of the more difficult geological conditions. This is the only way in which inflation in the cost of national energy supplies can be checked, as other coal-mining nations have discovered. It follows, therefore, that future development must be pushed towards a higher technological level than now prevails generally in the industry. The more generous development rebate introduced in 1963 was a step in the right direction even if somewhat inadequate. Thinking on the same lines, New Delhi should now be considering how to make resources available to encourage a changeover to modern mining methods which alone can win coal efficiently under the difficult conditions now being encountered by the private sector in the already developed fields. A scheme of subsidies already operates, but this has suffered from a penny-pinching approach adopted by the Coal Board out of a fear that some unscrupulous persons may get away with high profits. This fear does neither the Board nor other agencies of the Government any credit. It is up to them to prevent illicit gains being made, but in no way it behoves them to make their fears a reason for self-defeating parsimony.

BANKS DOING BETTER

THE working results of almost all leading Indian banks for the half-year ended June 1964, which have just been published, are better than those for the corresponding period of 1963. The improvement is mainly on account of the sharp increase in advances during the 1963-64 busy season. Since the bulk of the banking resources have been used for more remunerative advances, it has been possible to absorb the increases in administrative costs. Yet in spite of the improvement, bank shares have been hesitant. The index for the ordinary shares has risen from 200.8 to only 208.6 (1952-53 equals 100), although the current dividends of many banks give more attractive yields than are available on good industrial equities. The main factor which has restrained the investor is that under the present circumstances, it has not been possible to assess the outlook for banks clearly.

Although the chances of nationalisation are now considered remote and it has been repeatedly affirmed that the Government will continue to encourage the development of banking in both the public and private sectors, the working of commercial banks has been hamstrung by numerous statutory restrictions. The main question is whether the rising trend in bank profits will continue much longer. The move to increase the deposit interest rates will, no doubt, be taken care of by the increase in lending rates. Yet there are many factors which need to be reckoned with for assessing the outlook for profits. The banking community has been asked to increase its liquidity requirements to 28 percent from 20 percent by September 1964. Most of the banks have already complied with the required ratio, but this will mean lower yields than what are obtainable from advances.

Whether banks will succeed in recouping the loss of income arising from larger investments in gilt-edged depends on their ability to increase the turnover in advances. This in turn will depend on whether the banking community succeeds in attracting bigger deposits. The banks are worried that the Government has asked all public-sector concerns to keep their accounts with only the State Bank of India and its subsidiaries. The significance of the move seems to have been exaggerated because most of public-sector concerns have been banking only with the State Bank and its subsidiaries. It, however, needs to be stressed that it may do the economy no good if the public sector keeps its accounts only with the State Bank. The advantage of maintaining accounts with private banks arises from the possibility of obtaining advances from them. Since the resources of the State Bank are not unlimited, it will be a good idea if public-sector concerns use commercial banks for financing their operations, particularly through overdraft facilities.

The decision to extend the operation of the Desai award for a further year is a move in the right direction. But there is no sense in encouraging bank employees to press their claims for higher emoluments in the meantime. If they are allowed to do so, it will virtually nullify the beneficial effects of the Desai award which aims at maintaining cordial relations between the management and employees.

Commercial banks will face keener competition in attracting deposits in the coming months. The units of the Unit Trust of India which may offer a tax-free yield of 6 percent will attract, particularly, the low and middle-income groups. So a considerable part of bank deposits, especially in the category of savings accounts, may be diverted to the Unit Trust. The competition from non-banking institutions is still there, but it is possible that the threat has been exaggerated. Although fuller information relating to non-banking deposits has so far not been available, the deposits are not likely to be very large. When the Reserve Bank has completed its study of the returns relating to these deposits, a clearer picture will emerge. It would be perhaps a wrong idea to check the flow of these deposits, but precautions will have to be taken to make them safe. Public deposits with trade and industry are generally taken for longer periods, and thus they are different from bank deposits which are usually for shorter periods.

To attract deposits, banks will have to expand their activities, particularly in areas in which the banking habit has not yet developed. Since a new branch usually takes a number of years before it reaches the profit-earning stage, banks should be prepared to incur the necessary expenditure. Indian banks, in spite of the progress they have achieved, have not yet developed any modern credit information service. It should be emphasised that advances can be safely made only on the basis of reliable information relating to the credit-worthiness of borrowers. Hitherto every bank has evolved its own system of obtaining information about borrowers. There has been no co-operation among bankers in exchanging information about the reliability or otherwise of parties looking for accommodation. Although the Reserve Bank of India has been compiling information about borrowers, it is usually out of date and scrappy. It is time the banks evolved a joint credit information service so that all data relating to borrowers can be obtained from one source. The need for such a service has grown with the steady growth of bank advances. The Reserve Bank of India is not the appropriate body for the purpose. In addition to its extensive operations as a central banking authority, it has already been loaded with many extraneous activities. Apart from the direct rôle which it has to play in financing the co-operative movement, it has been asked to shoulder the responsibility of guiding the activities of the Unit Trust of India and the Development Bank. In the circumstances, the commercial banks should rely on their resources, rather than on the central bank, to evolve a joint credit information service.

Current News and Comment

Expanding Indian Shipping

The third plan shipping target has been fulfilled well before the end of the current five-year period—during the fourth year of the plan to be precise. The Indian shipping now stands at 1.32 million G.R.T., consisting of 925,000 G.R.T. of overseas vessels and 398,000 G.R.T. of coastal vessels. This has encouraged the Central Transport Ministry to raise its sights high, in fact, it has already submitted an expansion scheme to the Planning Commission for raising the target to 2.5 million tons. A substantial part of the additional tonnage, it is proposed, should consist of tramp vessels including some bulk carriers of the size of over 100,000 tons which can be used for carrying iron ore from India and bring back cargoes which are economically carried in bulk form. Under the fourth plan expansion scheme also, the pattern of development proposed favours the growth of the tramp fleet. The logic of this emphasis on tramp shipping, as explained by Transport Ministry officials, is that an expansion of the fleet is essential to save the huge amount of foreign exchange now being spent on freight bills. Moreover, the entire price of a bulk carrier can be paid back out of the net earnings within a period of seven to eight years. The recent dispute with the Karmoham Lines over the latter's proposal to increase freight rates, is also said to have prompted the Transport Ministry to plan on these lines.

The Planning Commission, too, is reported to favour the development of Indian shipping in the way the Ministry proposes. The broad aim is to so develop shipping over the next 12 years that at least 50 percent of the country's overseas liner and bulk carrier trade, and at least 20 percent in the tramp trade, is carried in Indian bottoms, as against the current shares of 30 percent to 35 percent and 3 to 4 percent, respectively. It is also visualised that Indian tankers should carry at least about 60 percent of the country's oil trade. But the Planning Commission, for reasons more doctrinaire than rational, wishes to see the share of the public sector in shipping increase faster than it has so far. The public sector's share in 1961 stood at 16 percent. It is likely to increase to 20 percent by the end of the third plan or even to nearly 30 percent if orders already placed materialise by 1965-66. According to the schemes now being worked out by the Planning Commission, it is proposed to raise the Government's share to 40 percent during the next plan and to 50 percent in the fifth. In order to achieve this objective, the public sector will have to add nearly 700,000 gross registered tons to its fleet by 1970-71, and another 1.5 million tons during the next five-year period.

As for costs and returns, the total financial outlay which will be necessary to take the Indian tonnage to 3 million tons by 1970-71 has been estimated at Rs. 150 crores, the break-down being as follows: nearly Rs. 35 crores for commitments entered into during the third plan; about Rs. 75 crores for the cost of ships to be built in India, and approximately Rs. 40 crores against payments during the fourth plan period for orders (amounting to about Rs. 100 crores) placed on a deferred payment basis for completion early in the fifth plan. With this order of investment, foreign exchange earnings are calculated to rise to Rs. 20 crores by 1965-66, as against Rs. 11 crores in 1960-61. If the fourth plan targets are achieved, the earnings should increase to Rs. 60 crores by 1970-71. In the present context of things, the more important question, however, is whether the Government will be able to find the necessary resources. Due to favourable factors in the world shipping market, India has been able to acquire additional tonnage during the current plan much in excess of what even the optimists in the Central Transport Ministry had hoped. In fact, orders already placed amount to 830,000 gross registered tons, and if these materialise before the end of the current plan, the Indian tonnage (including the coastal fleet) could well go up to the figure that the Transport Ministry now proposes as the new shipping target for 1965-66.

The Planning Commission, however, is not sure that the favourable factors, largely stemming from a depression in the world shipbuilding industry, would continue much longer. In fact, as *Lloyd's Register of Shipping* return for the second quarter of 1964 shows, a recovery in the world shipbuilding industry appears to have already started. During this quarter, the number of vessels under construction amounted to 1,454 steamships and motorships together accounting for 9,673,963 tons gross, an increase of 187,423 tons over the previous quarter. New construction for export purposes totalled 4,361,511 tons, of which as much as 37 percent was being built in Japan alone, 17.1 percent in Sweden, 12.4 percent in West Germany, 7.5 percent in France and 4.8 percent in Italy. The total tonnage under construction represents the highest figure ever recorded for the non-communist world excluding Britain, and it is largely due to the continued expansion of work in Japan which has doubled over a period of 18 months. Only in Britain was there a decline in the tonnage under construction compared with the previous quarter. In the circumstances, India may not find it easy to acquire additional tonnage when all major maritime nations are taking steps to strengthen their fleets. No wonder the Planning Commission favours a flexible target.

Finance for Tea Industry

The appointment of a committee to look into the financing of the tea industry's future expansion is a welcome step even though one can reasonably argue that the broad requirements are too well known to require further enquiry. One must philosophically accept that consideration by committee is an unavoidable stage in getting several wings of the Government to act in concert as will indeed be necessary in tea's case. For one thing, tax relief unilaterally from the Centre is not very meaningful because 60 percent of the industry's income is deemed to be agricultural and comes, therefore, within the purview of State taxation. For another, savings accruing from fiscal relief may still be unavailable for productive purposes if demands upon the industry for welfare amenities are stepped up. Hence the need for an integratd approach which explains why collective backing from a committee of 20 has been found necessary.

The first requirement is to help the industry expand the acreage under tea and replace old bushes now approaching the end of their useful life with new, higher yielding plants. During recent years, extension and replacement together are proceeding at the rate of just over 10,000 acres. This has to be stepped up to 24,000 acres a year or an average of 3 percent of the area already under tea. The cost, which will vary from Rs. 3,000 on acre in the plains to Rs. 4,000 in the hill districts, will be at least Rs. 36 crores. Another Rs. 10 crores will be needed for irrigation equipment, machinery and other essentials following rapid expansion, making a total of Rs. 46 crores required to implement the fourth plan task of taking tea output to 1,000 million lbs.

Returns in the tea industry have been none-too-attractive in recent years because of high costs and relatively stable prices resulting from competition. This, together with the hazards to which this industry is exposed by virtue of its dependence upon world markets, are making it increasingly difficult to raise resources on the scale that the ambitious fourth plan target requires. It is this situation which makes it necessary to make special arrangements to provide capital to the industry.

One solution which has increasingly found favour with both the Government and the industry is tax relief on the expenditure incurred on replacement and extension of tea acreage. If the whole of this expenditure can be charged to revenue, instead of only the small part now allowed, the tea industry will make a big tax saving on the money that it puts into the worthy cause of expansion. Helped by this saving, it could find a substantial proportion—up to 75 percent—of the Rs. 36 crores that are needed for expansion on the ground. The rest will still have to come from elsewhere, possibly from an enlarged plantation finance scheme that the Tea Board now operates. The Board will also have to help, as it is doing now, in financing machinery and irrigation equipment, but the bulk of the responsibility will be squarely shifted on to the industry's shoulders where it properly belongs.

Financing is necessary to make expansion possible, but actual progress will depend on how effectively the entrepreneur's interest is mobilised through incentives. Before the grower puts more of his money into tea estates, he must have a reasonable assurance that the return to him will be not worse than what he can get from other comparable investments. Among the suggestions in the air are tax relief on exports on par with industries now eligible for this concession and exemption from garden excise on additional production. Both are eminently suitable as they link concessions with the performance required from the industry to protect and expand export earnings. Tea incidentally provides one of the rare examples where the internal excise is not refunded on the quantities exported even though the case for strengthening India's competitive position in relation to common teas hardly needs arguing.

New Company Registrations

New company registrations in India during 1963-64 reveal some interesting trends. According to statistics recently released by the Directorate of Research and Statistics, on the basis of returns received from the Registrars of Companies in different States, 1,227 new companies with an authorised capital of Rs. 340.4 crores were registered in 1963-64, against 1,497 companies with an authorised capital of Rs. 257.5 crores in 1962-63. The figure for authorised capital was higher in spite of a smaller number of companies registered in 1963-64 because of an authorised capital of Rs. 100 crores for the Bokaro Steel Ltd which was registered in January 1964. Although the number of newly registered companies in 1963-64 was lower than in 1962-63, the declining trend which set in August 1962 seems to have been arrested, and the number of new registrations is

increasing. There is no doubt that the Central Finance Minister, Mr. T. T. Krishnamachari's policy statement that the Government would follow a positive policy of economic growth had helped restore confidence in the minds of entrepreneurs. But a more positive reason appears to be an increase in industrial activity in the country. It is significant that more than half the total number of new companies registered in 1963-64 was for manufacturing goods and accounted for more than 80 percent of the authorised capital.

There were some significant changes in the regional distribution of the companies. While in earlier years, the eastern region comprising the States of West Bengal, Bihar, Orissa, Assam, Manipur and Tripura held the leading place, it enjoyed third place in 1963-64 with 294 new company registrations. First place was occupied by the western region comprising the States of Gujarat, Maharashtra, Madhya Pradesh and Goa, with 340 new companies. Second place was occupied by the northern region consisting of the States of Delhi, Punjab, Himachal Pradesh, Rajasthan and Uttar Pradesh, with 335 new registrations. The southern region—States of Madras, Andhra Pradesh, Mysore and Kerala—with 258 new registrations held fourth place as in the past. It would not be advisable to see too much in the shift in regional distribution of new company registrations, but the fact seems to stand out that the new industrial region in the north is fast developing. As was only to be expected, the share of Government companies in the authorised capital of Rs. 340.4 crores was 49 percent. This was due to the fact that the authorised capital of the Bokaro Steel Ltd accounted for as much as Rs. 100 crores.

Although there were 55 giant-sized companies with an authorised capital of Rs. 1 crore and above, the largest number of companies, totalling 414, were registered with an authorised capital of Rs. 1 lakh and above but under Rs. 5 lakhs. This shows the predominance of small-sized companies in India.

No Monopoly in Engineering Industry

In a memorandum submitted to the Monopolies Enquiry Commission, the Engineering Association of India has stated that there is no monopoly in the engineering industry except in units manufacturing items such as telephones, coaches, locomotives, railway equipment, etcetera. But these units are public undertakings. The mere existence of only one unit does not amount to monopoly, for as demand continues to rise more units would be set up. There are industries where the existence of too many units may hinder the rationalisation of production. The Association has cited the case of the motor-car industry where the existence of a few enterprises helps to achieve economic production for a restricted market. It has tried to prove by its survey of about 120 engineering industries that in most of them the number of units are far too many to allow monopolies to operate. In the case of the steel industry, for example, there are five big units, and the State itself is a dominant producer. Similarly, in the case of the aluminium industry, the number of producers is about four. There are 24 large-scale units manufacturing electric fans. Likewise, there are about 41 units engaged in the manufacture of various types of machine tools. Furthermore, the concentration of economic power cannot exist under present-day economic conditions. Apart from the Industrial Policy Resolution which has restricted the sphere of the private sector in industrial development, the Industries (Development and Regulation) Act has given enormous powers to the Government for regulating the operation of private industries.

These apart, under the company law no appointment of managing agents, secretaries or treasurers, managers or managing directors can be made without the consent of the Central Government which fixes their remuneration and their terms of office. Moreover, the joint-stock companies in India are now owned by a large number of shareholders. The concentration of economic power is also hindered by the multiplicity of taxes. The Association thinks that restrictive trade practices cannot exist in India. In the case of basic industries like steel, the prices are fixed subject to the approval of the Government. In the case of other industries, the existence of a number of units makes it impossible for any single unit to dictate its own price. For an under-developed country like India, "large-scale operation is essential as modern technology and the need for competition in export markets are paramount." Engineering industries—particularly heavy engineering units—are highly capital-intensive. So they cannot be developed by entrepreneurs of small means.

MUNICIPAL EXPENDITURE

SOME few weeks ago, the London correspondent of *Capital* commented briefly on the colossal growth during the past few years in the debt and expenditure of Municipal bodies in England, both great and small. This increase in local taxation is a sign of the times in Great Britain, which has of course not passed unobserved by the political and social economist, and is unfortunately only too well understood in its direct and immediate effects by the private citizen and taxpayer. The tendency to increased, and often wasteful expenditure does not, however, begin and end with the United Kingdom. In India the same indications of the grossest carelessness or the grossest ignorance —the result amounts to the same thing for the taxpayer—is manifest in Municipal financial administration. The muddle, waste and mismanagement of the Calcutta Municipal finances has been so often referred to in the columns of *Capital* that a mere reference to that particular corporation is sufficient to suggest unfavourable comment, and other municipalities are unfortunately wallowing in the same slough of wasteful administration and ever increasing debt. But if there be in India such an abstraction as public opinion, it is very necessary that those who can voice the general sentiment should keep this growing evil steadily before the mind of the man who has to find the money—not as a mere matter to be grumbled at and borne, but as an intolerable evil to be vigorously attached and eradicated. The latest sinner in the Municipal Black List is Ahmedabad on the other side of India. In this particular corporation, Administration and Collection charges are 14 percent of the average annual income against 7 to 8 percent in Surat, 7 percent in Bombay and 10 percent in Karachi. The Ahmedabad Municipality is described by a local paper as being an unnecessary (?) and burdensome establishment practically useless and doing nothing. It is stated that a large number of subordinates with little or no supervision have grown indifferent and lazy, and spoiled matters to such an extent that the Municipality cannot even boast of a regular Record Department, much less of other minor necessities of a public office. Everything is stated to be in "utter confusion". The servants of the Municipality are said to be discourteous to the public, bills and summonses are in certain instances drawn twice on the rate-payers, summonses and writs are issued which "come to nothing in the end." The outstanding debts are returned at over a lakh of rupees, a large proportion of which sum is, no doubt, hopelessly unrecoverable and should be written off at once. This is a most disreputable condition of affairs and certainly should engage the attention of the Government of Bombay as possibly it will. But the point is that Ahmedabad is in itself only representative of the dry rot of waste and mismanagement which must sooner or later affect any Municipality in which incompetent administration eats like a canker into Departments. It is all very well for Indian Municipalities to go on issuing loans and piling up local taxation to pay the interest on the money thus forthcoming, but this kind of "finance" is destructive of the very genesis of its own existence and the sooner this fact is intelligently grasped the better for the Municipalities and the better for the taxpayer.

A Ditcher's Diary

PEOPLE WILL MAKE UP STORIES ABOUT THE NOBLEST of causes; malice, sheer malice. Here is Mr. Gulzarilal Nanda, heroically battling against the octopus of corruption; and already someone from Delhi tells me that money changes hands before the sentries will let you get into the Home Minister's house to record your complaint against corruption. If Mr. Nanda's approach to the problem of corruption is almost surrealistic, Mr. Biju Patnaik can certainly claim to have introduced in it all a picaresque element. From Mrs. Subhadra Joshi's statement it is easy enough to gather that in the Congress Party itself the opposition against Mr. Nanda's anti-corruption moves is getting more active, even if not everyone is as articulate as Mr. Patnaik. Where Mr. Nanda has gone wrong, I think, is in his unstated emphasis on morality. Integrity is certainly a question of personal ethics; but what the Home Minister is, or ought to be, up against is the administrative evil called corruption. This is easily identifiable and punishable; all that the Government has to do is to apply the Indian Penal Code. And this has not yet been done in the case of Mr. Pratap Singh Kairon. Until this is, Mr. Nanda must not expect to be taken seriously. In refusing to worship poverty, which is often mistaken for honesty, Mr. Patnaik talks almost like Shaw who once said that he did not love the poor; "I want to abolish them". Mr. Nanda and some others do appear to hold poverty holy, which in my view is the kind of ethos that has been a grave obstacle to rapid economic progress in large parts of the world, including India. (I wish Max Weber's works on the relationship between religion and economic enterprise were better known in this country.) On the other hand, Mr. Patnaik is under an obligation to show the public how, with taxation at its present levels, it is still possible for some to acquire vast wealth. And there is undoubtedly a lot of money in a few hands which were strangers to big money not so very long ago. As long as the Kairons go unpunished and only a few retailers of kerosene or something are produced in courts, the public will not believe that the Government is earnest, even if Mr. Nanda is.

I WONDER HOW U THANT FELT DURING HIS DAYS IN Rangoon recently. After a long stay in New York and after all those talks with the high and mighty such as General de Gaulle and others, it must be quite an experience to talk to—no V.I.P., just one's mother. Talking not about war and peace, nor about the Congo; but, perhaps, about the dead son. Perhaps about the neighbours he had not met for years. Perhaps about the school he was once a teacher of. The distance between the U.N. Secretary-General's daily routine and such humdrum, human things is so great that the adjustment must be quite difficult. Only on those not many occasions when we take time off our chores and look within do we discover with a shock how our work has to some extent dehumanised us. It must be much more so for one who perforce must think in terms of countries, peoples, nations and Governments; all these are only concepts. Only people are real; and then not collectively but individually. The late Mr. Hammarskjœld found relief in poetry, which at its best takes no notice at all of public issues. Mr. Conor Cruise O'Brien is no uncritical admirer of the former Secretary-General; but in his book on the Congo he does give a rather touching picture of the personal aspects of Mr. Hammarskjœld's life. Literature, I think, kept him human. Without some such sensitive interest, the job would be maddening; and I like to think that U Thant has something to make him forget the manoeuvres and bickerings that go on in the United Nations. He finds the job "killing", keeping him busy from 9 a.m. to 9 p.m.; and he does not want another term. He won't need it; the job is well paid and has various retirement benefits. But he is going to be a very lonely man and a much smaller man when he has laid down his great office. The U.N. imparts to its officials a slightly bloated, slightly unreal personality. To shed it all and become an ordinary citizen of Burma again must be like travelling in a supersonic plane, then land and then go home on a bullock cart. But the Secretary-General's mother will tell him how to negotiate the transition; to her he is not Mr. U.N.; just her son.

OPINION IN BRITAIN SEEMS TO HAVE BEEN GENUINELY pleased with the outcome of the recent Commonwealth Prime Ministers' conference—an odd title when Prime Ministers are by now probably in the minority among Commonwealth leaders. At least it was immediately afterwards, although doubts have accumulated since then. Not so much about the way the Southern Rhodesian business was handled. The British Government was relieved to be let off so lightly there, bearing in mind the exaggerated ideas most Commonwealth countries seem to have about Britain's ability to do anything at all if the whites of Southern Rhodesia decide to ignore appeals to their reason. But in the proposal for a secretariat, especially originating from the source it did, a number of observers are now claiming to see the cloven hoof. As long as such a body is intended merely to increase co-operation between Commonwealth countries, there will be few to see any danger in it. But if, as some fear, it were to develop into just another instrument for bringing political and economic pressure to bear exclusively on Britain herself, then the doubts at present being expressed in London would soon swell to a roar of protest. It is characteristic of the current phase of international economic relations that advantage should be taken by the underdeveloped countries of every opportunity to embarrass the developed. This is understandable enough, and although a good deal of resistance is being put up by the richer countries, little actual resentment is in fact felt. But if Britain were, by virtue of her Commonwealth connection, to become chronically subject to more pressure than is either justifiable or tolerable given her own particular difficulties, then it seems doubtful whether a secretariat would enjoy her support for long. Britain's attitude towards the Commonwealth countries' tendency to demand trade concessions from her without offering any in exchange was revealed in 1962 when the question of her joining the Common Market was discussed.

ARE STATUES ALWAYS APPROPRIATE? THIS IS NOT a rhetorical question. I found myself asking it when I learned the other day that the money required to pay for the London memorial to Mahatma Gandhi has nowhere near been fully subscribed, at least not yet. An appeal for funds was first launched some years ago; but so far only £1,300 of the £5,000 needed, has been raised. I cannot think this is because the British lack respect for the memory of Gandhiji; quite the contrary. But somehow public imagination has not been caught by the project and now the question arises whether the plan to memorialise Mr. Nehru should follow the same lines. I have myself never considered either Mahatma Gandhi or Mr. Nehru to be the kind of men whose memory can best be commemorated in stone or metal. I should have thought the best memorial to them would have been something more in keeping with the particular principles for which they stood when they were alive. The idea which immediately suggests itself is one I have heard before on many occasions: an institution of some kind dedicated to the furtherance of human relations. Perhaps in Britain's case this could be narrowed slightly so as to concentrate chiefly on relations between Britain and India. Scholarships for Indian students at British universities would be a useful idea; and why not some for British students at Indian universities? Compared with a project of this kind, or some essentially human variation on it, the provision of a mere statue in stone seems rather irrelevant. That might be all right where some monarch or successful general is concerned; they are merely

the crude bricks from which history is made. But when the person embodies eternal and living principles, the best memorial to him is something which serves life itself.

A LOT HAS BEEN WRITTEN LATELY ABOUT THE activities of ex-Nazi war criminals in Egypt, not all of it Israeli propaganda. Without necessarily accepting the truth of all the allegations, it appears reasonably safe to conclude that some German scientists of doubtful respectability are employed on President Nasser's rocket and nuclear-bomb projects, just as indeed there are those working for the Russians and the Americans. What Egypt and the Nazis have in common is a pathological hatred of Jews, and this is what is being suggested as the reason for the growing co-operation between the two. I hope it is not the correct one. President Nasser is, I know, something of a prisoner of his own anti-Israeli policies, and he is not the only ruler to cover up failures at home by fomenting disputes abroad. But surely he must be aware of the dangers involved in his own brand of Israeliphobia becoming too closely identified with Hitler's racially-based anti-semitism. Between the two there is all the difference in the world, or anyway there ought to be. Under existing circumstances I cannot see President Nasser launching nuclear weapons against Israel unless in self-defence. If his aim is to exterminate his Jewish neighbours and not simply to use them as a political convenience, then he is more likely to achieve it with least damage to himself by acting now, when the odds are still more than 20 to one in his favour, than by waiting until both sides have the bomb and the rockets to deliver it. In fact, the possession of nuclear strength adds more to the comparative capabilities of the small battalions than it does to the larger ones, as N.A.T.O. still firmly believes. But if he allows a bunch of ex-Nazis to jog his elbow, then there is no guarantee that his actions will always be dictated either by political expediency or by what he considers to be in his country's best long-term interests.

THE "ANGRY CITIZEN" WHO RECENTLY WROTE TO a contemporary to suggest that the city of Calcutta be abandoned spoke for many besides himself. The rains last week showed once again how hopelessly inadequate the drains of this "sodden city" have been for years. It has become tiresome to curse the Corporation of Calcutta; that useless body should have been abolished long long ago. If the Government of West Bengal will not do so, for political reasons, it must at least accept the responsibilities the civic organisation has failed to discharge. And there is not the slightest evidence in Writers' Building that the Government is in the least bit ashamed that a few showers can submerge the city. Calcutta is not growing nearly as rapidly as Bombay, Madras or New Delhi. What is most distressing is that everyone seems resigned to the city's many and increasing ordeals. How long has the Calcutta Metropolitan Planning Organisation been in existence? I can't remember; but I am getting a little tired of the words "survey" and "research". What Calcutta needs is not research but a few drains; and I am quite certain many could have been bought with the money spent on the C.M.P.O. Research has become almost a racket in the United States: the Ford Foundation would earn the gratitude of many more if to the undeveloped countries it gave a few things rather than a lot of reports. I don't want to know how many pedestrians cross the Howrah Bridge at such and such hours: I want a second bridge to relieve the load. As the C.M.P.O. goes on endlessly with its academic work, New Delhi is provided with an excuse for doing nothing about this city. I have it on good authority that, since the World Bank's remarks on Calcutta, American interest in the city's future is lively and very sympathetic; but the U.S. Government can deal only with the Government of India which has persuaded itself that Calcutta does not matter. In a not very distant future the whole country will be made to realise what Calcutta still means to the Indian economy; but by then it may be too late. The rate at which civic services are deteriorating is nothing short of alarming.

THE DITCHER

Guide for Investors

JUTE SHARES SLUGGISH DUE TO FALLING PROFITS

(BY A SPECIAL CORRESPONDENT)

JUTE shares have been sluggish during the past month or so, and their prices have tended to drop. The index for the ordinary shares has declined from 96.8 to 84.1 (base 1952-53 equals 100) over the past year. For the time being, interest has been confined to only a few selected scrip. Although the statistical position relating to jute goods has on the whole been fairly sound, investors have been worried because the profits of mills have been steadily squeezed. Over the past year, gunny prices have declined while those of fibre have tended to rise, or have been at least maintained around the minimum level due to the successful enforcement of the price support scheme. The predicament of mills has been the greater since the price of good fibre has tended to rise sharply. Superior raw jute has been in short supply and the mills have been forced to pay high prices. During the past three years or so, requirements of superior fibre have risen because the mills have generally concentrated on the production of hessian and carpet-backing in particular.

Secondly, production costs have risen all-round. Wages of jute mill workers have been raised substantially through the recommendation of the Wage Board, while labour productivity has not improved in proportion. The finances of almost all the mills have been greatly strained since they have been obliged to buy and hold large stocks of raw jute under the price support scheme. The cost of storing and stocking raw jute has, in the meantime, become not only costlier due to dearer money, but a great deal of fibre is being damaged because of the shortage of warehousing facilities.

At the current prices of raw jute and jute goods, the mills are finding it difficult to do simultaneous business at a profit. In the manufacture of hessian, the profit has shrunk considerably. The outlook has been the more discouraging because of the steady decline in the demand and price of carpet-backing cloth in recent months. This cloth has hitherto been a profitable source of manufacture. As far as sacking is concerned, the mills do not virtually make any profit on the production of this fabric.

The near-term outlook for profits of the jute mills will be governed by the movements in the prices of raw jute and jute goods. As far as fibre prices are concerned, they are unlikely to drop in the near future because the mills will soon be allocated compulsory purchase quotas as in the past season. The quotas for July have not yet been issued because the price of raw jute has been fully steady. As soon as new crop arrivals gather momentum, the Jute Commissioner is likely to issue purchase quotas to the mills. This apart, raw jute price during the current season may not soften as it was earlier thought. Since arrivals of new crop so far have been much smaller than they were at this time in 1963 and because the carryover of mills' stocks of raw jute in the new season have been smaller than in the past season, a section of the trade has begun to doubt whether the new crop will be as large as has been expected. A part of the standing crop in lower Assam has been damaged by floods, but the crop as a whole has been progressing very well. So it is hoped that the new crop will be as big as the previous one, if not slightly larger. The bullish trend has been reinforced by the firmer price of the Pakistani fibre. Since the reduction of the export duty on raw jute by 50 percent and the abolition of the minimum export price of raw jute by that country, the price has since hardened. It is now generally believed that the Pakistani crop will be smaller than expected. This besides, the crop has failed in Thailand. As a result, many shippers in that country have been obliged to buy Pakistani fibre in order to fulfil their export commitments.

Judging by current indications, the prospect for jute goods needs to be viewed cautiously. At the present time, foreign enquiries for jute goods have been limited, and overseas customers have confined their attention to buying goods for ready delivery to satisfy their bare requirements. Considering that the Indian and Pakistani mills have been working up to their maximum capacities, there is likely to be an abundant supply of jute goods in the coming months. So no foreign country is keen to buy as vigorously as they did formerly. This apart, a large part of foreign buying is now being done directly with the mills, so the impact of overseas purchases on market sentiment is considerably less.

The growing competition from the Pakistani mills poses a great threat to the Indian industry. In sacking, Indian goods have been priced out of foreign markets because the Pakistani mills enjoy the advantages of superior fibre and the generous export voucher scheme. The Pakistani mills have already taken active steps to increase the production of hessian and carpet-backing. Since they enjoy the advantage of an abundant supply of good fibre, they are now in a better position to compete in overseas markets. The sale of carpet-backing is likely to meet with keener competition due to the growth of synthetic fibres. In the circumstances, it is time to consider whether the Indian jute mills should not be helped by the Government, particularly in the manufacture of sacking so that Indian fabrics can be sold in competition with goods of other countries. The investors will do well in the meantime to take a guarded view about the profits and dividends of jute companies for the current year. Considering that the profits are likely to be smaller than they were for 1963-64 the possibility of cuts in dividends cannot be ruled out.

Motor-vehicle Shares Steady

MOTOR-VEHICLE shares are steady on reports that steps have been taken to ensure that a sum of $37.8 million will be lent by the U.S. Agency for International Development to the Tata Engineering and Locomotive Co. Ltd and Hindustan Motors Ltd at an early date. It is also reliably learnt that the Government has agreed to provide rupee finance to the motor-car manufacturers for helping them to use the dollar credit. T.E.L.C.O. has been granted a loan of $11.76 million to increase the production of Mercedes Benz lorry chassis from 18,000 to 24,000 a year.

Hindustan Motors will receive a dollar loan equivalent to about Rs. 11 crores to expand the production of Bedford lorries from 10,500 to 15,000 a year. It will also import the necessary equipment to produce engines for Bedford lorries. The latter are at present produced in collaboration with Vauxhall Motors of the U.K. owned by General Motors of the U.S.A.

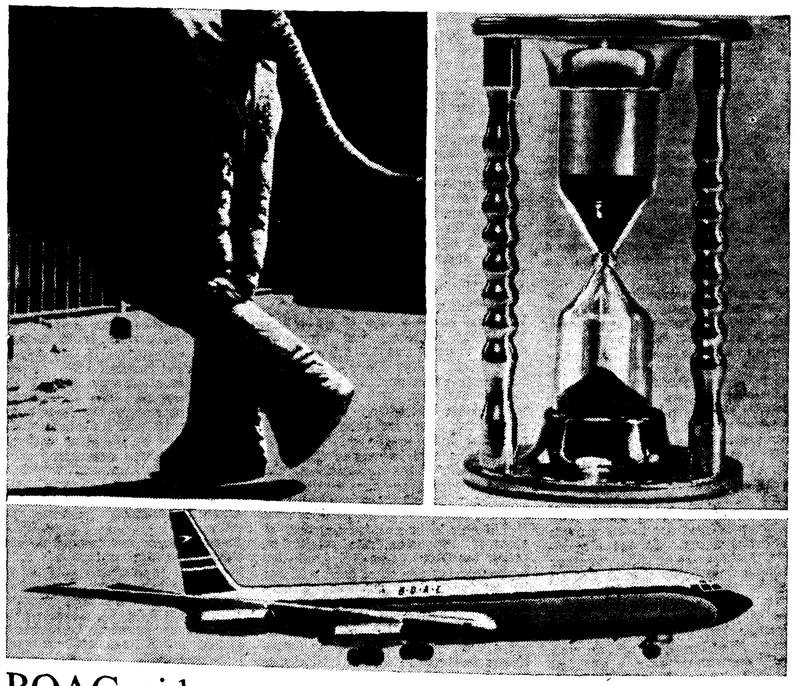
There has been a temporary drop in the price of Hindustan Motors shares since the Company has maintained the taxable ordinary dividend at 11.5 percent for the year ended March 1964, while the market had expected a higher dividend. The dividend was cut from 12.5 percent to 11.5 percent in 1962-63. The Company has earned a net profit of Rs. 1.19 crores, against Rs. 1.18 crores for 1962-63, after providing for depreciation, development rebate reserve and taxation. The preliminary figures do not show the provisions for depreciation and development rebate, but the taxation liability amounts to only Rs. 1.43 crores, against Rs. 2.23 crores. General reserve is allocated Rs. 25 lakhs. The dividend gives a yield of about 6.7 percent at the present price of Rs. 18.12 a share of Rs. 10 each.

Meanwhile, Leyland Motors of the U.K. has given a loan of £4 million to Ashok Leyland for producing diesel engines and for other expansion work. Thus there is going to be a fair expansion in the motor-vehicle industry. It is expected that when these expansion schemes are completed, the indigenous components of Indian-made vehicles will rise to about 90 percent of the total. As a result of the expansion of the heavy engineering capacity of the motor-car industry, the general engineering industry should also benefit. But it should be pointed out that in spite of expansion, the production target for 60,000 commercial vehicles a year during the third plan will not be attained, since the output may amount to only 50,000 vehicles a year which will fall short of the demand. It is, therefore, encouraging that the production target has been tentatively doubled to 120,000 vehicles a year for the fourth plan. This will involve a further capital outlay of about Rs. 150 crores, of which only half will be in the form of foreign exchange. As for increasing the output target for passenger cars, no decision has yet been taken. Since the demand for motor-cars has been far in excess of production, it is hoped that the Government will increase the output of passenger cars during the fourth plan.

T.E.L.C.O. Expansion Scheme Progressing Well

THE preliminary report on the working of the Tata Engineering and Locomotive Company for the year ended March 1964, showed that the Company had fared much better than in the previous year. Sales increased by nearly 18 percent from Rs. 43.64 crores to Rs. 51.51 crres, and the gross profit rose by about 21 percent from Rs. 5.50 crores to Rs. 6.65 crores. The directors state in their final report that the results would have been still better if the operations had not been disrupted during the last quarter of the year by a strike in the Calcutta docks which delayed the clearance of imported materials, by a strike at Jamshedpur and by the serious communal disturbances in the latter town during March 1964. But for these adverse factors, the year's output would have been substantially higher. Fortunately, the expansion programmes of various divisions were affected only to a limited extent and have made satisfactory progress. The labour trouble notwithstanding, the high level of activity in the motor-vehicle division enabled the output of Tata Mercedes Benz lorries to be increased by 5 percent from 1,200 to 1,800. The first stage of expansion programme of 18,000 vehicles a year will be completed on schedule, and the capacity for the output of 1,500 vehicles a month will be established from August 1964.

The Company is confident of stepping up the indigenous content of the Tata Mercedes Benz lorries from the present 84 percent to 90 percent by December without in any way sacrificing the quality. The output of locomotives fell from 62 to 57 due to labour unrest. The Company has agreed to supply 200 locomotives to the Railway Board during the fourth plan period on the clear understanding that on the completion of these supplies, the Company would cease to produce steam locomotives and direct its manufacturing activity to other engineering products which offer greater scope for profit. The forge division was expanded substantially, and the output of forgings continued to increase both in range and quality. Up-to-date forging facilities including high production mechanical forging processes of 1,300 to 2,000-ton capacity have been installed and a large 6,000-ton press is expected to be in operation before the end of 1964. The rate of production of castings in the steel foundry continued to rise and the quality of products was maintained. A substantial expansion of the alloy iron foundry is now under way. When com-



PRECISE
TAPPING MACHINES

Armstrong Smith Ltd.
P-17, MISSION ROW EXTN., CALCUTTA-13

pleted, the Company will have a large versatile foundry capable of meeting the full needs of alloy iron castings of diverse specifications required for the motor-vehicles industry. The Company is undertaking the manufacture of large press tools and complex dies near Poona in collaboration with a British firm. The production of Tata P and H 2½ cubic-yard excavators was hampered during 1963-64 by the non-availability of foreign exchange for the import of certain components. The Company exported Tata Mercedes Benz vehicles valued at Rs. 23 lakhs during 1963-64 to the South and Middle East countries, against exports of Rs. 3 lakhs in the preceding year. The Company continues to have serious difficulties in obtaining the necessary supplies of plates and special steels for paper and pulp plants. The paucity of skilled and trained workers has also retarded progress. Instead of undertaking the manufacture of complete paper and pulp plants, the Company now proposes to concentrate on the production of a limited number of standardised items of paper and pulp machinery for which a substantial demand exists in the country. This will enable the production facilities of the Company to be used more efficiently and fully.

In his statement to the shareholders circulated with the directors' report, the chairman, Mr. J. R. D. Tata, says that barring a totally unforeseen setback, the increased profit resulting from the Company's expanding output should enable it without difficulty to maintain the current dividend of 14.5 percent on the ordinary capital in future. (A fuller version of the speech appears on a later page in this issue of *Capital*.) In fact, there are, according to Mr. Tata, good prospects of the Company being able to maintain the same rate of dividend even after the additional issue of 200,000 ordinary shares (in the ratio of one new share for every five shares held at a premium of Rs. 50 a share). The chairman says that in view of the fact that only recently —March 1963—the Company had made a similar issue at the same high premium and in view of the difficult times for shareholders to find additional funds, the directors would normally have preferred to postpone the present issue for a year or so. But the extraordinarily large and rapid expansion of the Company and the growing unbalance in the capital structure make a further issue imperative and urgent. The total funds employed by the Company amount to around Rs. 44 crores at present and these are expected to increase to Rs. 60 crores by 1966. As against this, the Company's present share capital of Rs. 12 crores is disproportionately small. An issue of shares is required not only to provide urgently needed funds, but also to improve the debt-equity ratio to which the A.I.D., like the World Bank, attaches considerable importance. Mr. Tata says that the demand for Tata Mercedes Benz vehicles continues unabated, and in spite of the steady increase in output the Company has so far failed to catch up with the rising demand. Much else of what the chairman has stated in his speech relates to the criticism of the Government's policy on the development of road transport. "Of all economic activities in the country, none to my knowledge", says Mr. Tata, "bears such a crushing burden of tax as the road transport industry."

BRITISH OVERSEAS AIRWAYS CORPORATION WITH AIR-INDIA AND QANTAS

Indian Cable Pays More

THE ordinary shares of Indian Cable Co. Ltd have been steady around Rs. 36 due to the declaration of a larger dividend for the year ended March 1964. A taxable ordinary dividend of 25 percent has been declared, against 22.5 percent for 1962-63. This is the first time that the dividend has been raised since 1959-60; the ordinary share capital was raised in September 1962. In that year, the capital structure was reorganised and the cumulative taxable preference shares were converted into ordinary shares. At the present price, the dividend yield amounts to 6.9 percent. The preliminary figures show that the pre-tax profit has improved from Rs. 1.57 crores to Rs. 1.90 crores. Taxation is allocated Rs. 1.03 crores (against Rs. 93 lakhs). Reserves absorb Rs. 34.77 lakhs (against Rs. 87.40 lakhs) and a sum of Rs. 10.35 lakhs has been written back from various accounts.

Mettur Chemical Does Well

THE Mettur Chemical and Industrial Corporation Ltd shows very encouraging results for the year ended March 1964. Sales are up by nearly 30 percent from Rs. 2.01 crores to Rs. 2.61 crores, and the gross profit has increased by about 23 percent from Rs. 47.78 lakhs to Rs. 58.80 lakhs. The increase in sales reflects increased production, especially of caustic soda which reached a record 12,700 tons in 1963-64. In spite of the substantial improvement in the Company's working results, the dividend has only been maintained at 12.5 percent. But the total distribution among equity shareholders is considerably higher at Rs. 18.12 lakhs, compared with Rs. 13.84 lakhs in the preceding year even though equity shares of the value of Rs. 60 lakhs were entitled to only two months' dividend during 1963-64. The Company raised additional capital amounting to Rs. 90 lakhs, comprising Rs. 60 lakhs in equity shares and Rs. 30 lakhs in preference shares, during 1962-63.

Appropriations of the year's gross profit of Rs. 58.80 lakhs (against Rs. 47.78 lakhs) Rs. 2.30 lakhs (against Rs. 1.63 lakhs), depreciation Rs. 15.99 lakhs (against Rs. 16.33 lakhs), development rebate reserve Rs. 4.62 lakhs (against Rs. 2.50 lakhs), taxation Rs. 14.10 lakhs (against Rs. 7.50 lakhs), debenture and share issue expenses Rs. 82,486, bonus for previous year Rs. 78,103 (against Rs. 71,530) and donations Rs. 24,978 (against Rs. 45,226). No provision has been made for the general reserve which had received Rs. 1.60 lakhs in the preceding year. The proposed equity dividend absorbs Rs. 18.12 lakhs (against Rs. 13.84 lakhs) and preference dividend takes up Rs. 1.79 lakhs (against Rs. 1.56 lakhs), leaving Rs. 12,185 to be carried forward, against Rs. 11,631 brought in.

Machinery Manufacturers Pays the Same

THE working results of Machinery Manufacturers Corporation Ltd for the year ended March 1964 show an appreciable improvement over the previous year's performance. Sales are higher by about 24 percent at Rs. 2.536 crores, against Rs. 2.04 crores, and the gross profit is up by nearly 20 percent from Rs. 55.43 lakhs to Rs. 66.68 lakhs. The dividend, however, has only been maintained at 15 percent—Rs. 1.50 a share of Rs. 10. This is mainly because the Company has had to make a substantially larger provision for taxation. Allocations include depreciation Rs. 13.34 lakhs (against Rs. 10.27 lakhs), development rebate reserve Rs. 2.12 lakhs (against Rs. 1.91 lakhs), taxation Rs. 31 lakhs (against Rs. 17 lakhs), gratuity and superannuation Rs. 1.50 lakhs (against Rs. 3.50 lakhs) and general reserve Rs. 12 lakhs (against Rs. 17.30 lakhs). After providing for the proposed dividends—preference Rs. 2.19 lakhs and equity dividend Rs. 4.52 lakhs—there remains a small surplus of Rs. 3,000 to be carried forward, against Rs. 2,374 brought in.

The directors state that the Company's order book remains full. The production of speed frames designed by the Company's engineers has started and schemes for further expansion for the manufacture of Crosrol-Varga high production device and Whitin drawing frames are under the Government's consideration. The Rs. 10-paid share of the Company is quoted around Rs. 22.76 offering a gross return of about 7 percent.

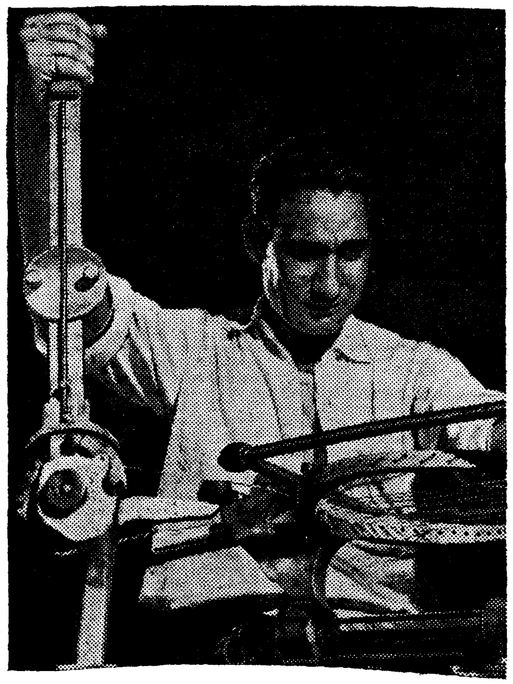
A Good Year for Oil India

IN his chairman's statement at the annual general meeting of Oil India Ltd held recently in Duliajan, Assam, Mr. Khandubhai K. Desai referred to the satisfactory results achieved during the year ended December 1963. (The full text is printed on a later page in this issue of *Capital*.) The Company has earned a net profit of Rs. 3.36 crores, after providing for depreciation, taxation and development rebate. The taxable ordinary dividend of Rs. 120, including an interim of Rs. 40 a share, has been declared, giving a minimum dividend of 9 percent, after paying all taxes. The offtake by the Indian Refineries Ltd has been lower than was expected because of the delay in commissioning the Barauni refinery. The pipelines connecting the oilfields with the Government refineries in Gauhati and Barauni have been completed. This is the second longest crude oil pipeline in the East. The project has cost Rs. 45 crores, instead of Rs. 46 crores to Rs. 47 crores estimated earlier.

The crude conditioning plants in Nahorkatiya and Moran have been completed. The requirements of crude for the refineries in Gauhati and Digboi have been fully met and production will increase when the first unit of the Barauni refinery goes on stream. It will be followed by the second unit. The Company has achieved its drilling targets. With the wells drilled and completed, it is now in a position to meet the requirements of the public-sector refineries in Gauhati and Barauni. The Company's exploration activities have been making progress. Apart from producing natural gas for use in oilfields, it has been supplying gas to many industrial projects.

Mr. Desai takes an optimistic view of the Indian oil industry. Since coal and hydraulic power resources will be inadequate and nuclear energy will take a considerable time to develop, the rapid development of the oil industry is imperative to meet the combined requirements of energy and petro-chemicals. The demand for petroleum products has been rising by about 10 percent a year; during the fourth plan period, it may rise by 2 million tonnes to 3 million tonnes a year. By the end of 1971, the demand for all petroleum products may increase to 28 million tonnes or 30 million tonnes. Mr. Desai stressed the importance of producing more kerosene and fuel oil out of imported crude. India hopes to produce 6 million tonnes of indigenous crude oil by the end of 1966. Out of this, half will be contributed by the Assam oilfields.

Maiden from Sandvik Asia



THE 6 percent maiden dividend by Sandvik Asia Ltd for the year ended 31st March, 1964, is fully justified by the Company's performance during the year. Sales have gone up by about 58 percent from Rs. 65.60 lakhs to Rs. 1.036 crores and the gross profit has risen by nearly 65 percent from Rs. 15.62 lakhs to Rs. 25.88 lakhs. Allocations include depreciation Rs. 12.09 lakhs (against Rs. 7.27 lakhs), development rebate reserve Rs. 4.50 lakhs (against Rs. 6.06 lakhs) and general reserve Rs. 1.25 lakhs (against nil). After writing off the preliminary expenses amounting to Rs. 28,833 and adjusting the previous year's loss of Rs. 4.12 and providing Rs. 3.60 lakhs for the proposed maiden dividend, there remains a balance of Rs. 3,512 to be carried forward. The directors state that all the plants of the Company were in production during the year. The production of tungstone carbide from one stage commenced, and a new line of manufacture—tungstone carbide tipped tools—has also been started. The production of tungstone carbide powder has been increased to meet the Company's own requirements as well as the demands of other manufacturers of tungstone carbide products. A letter of intent has been received from the Government to extend tungstone carbide production. The Rs. 100-paid share of Sandvik Asia is quoted around Rs. 168.

Dhrangadhra Chemical Results Impress

THE directors of the Dhrangadhra Chemical Works Ltd have raised the dividend for the year ended March 1964 from 8 percent to 10 percent and the new rights shares issued in 1962 which had received *pro rata* dividend in the preceding year are entitled to a full dividend for 1963-64. This is the second year in succession for which the dividend has been raised. The Company had paid a dividend of 6 percent in 1961-62. The increase in the dividend is fully justified by the Company's impressive performance. According to the detailed preliminary report released along with the dividend announcement, the Company's sales have risen by 13.8 percent from Rs. 4.34 crores to Rs. 4.94 crores, whereas the gross profit for 1963-64 has gone up by nearly 47 percent from Rs. 92.30 lakhs to Rs. 1.358 crores. The profit margin, measured by the ratio of gross profit to sales, has improved

Prakash is a small industrialist who needs money badly for purchasing raw materials. But he cannot afford high interest and has little security to offer. Who will help him?

THE STATE BANK HELPS
For the biggest bank—no client is too small.

Through their 1600 offices all over the country, the State Bank and its subsidiaries give the following financial facilities to small-scale industries.

Advance against security of raw materials and finished goods.

Factory type advances where security cannot be kept under the Bank's lock and key. Borrowers have free access to raw materials.

Clean credit facilities where no securities are obtainable.

Medium-term loans for modernisation and expansion.

Instalment credit for purchase of machinery.

Interest is as low as 6%. In special cases the outer limit is 7% inclusive of incidental charges.

THE STATE BANK OF INDIA
Big scale help
for small scale industry.

Ayers SB. 321 B

from 21.3 percent in 1962-63 to 27.5 percent in 1963-64. Improved results are attributed to the increase in the production of caustic soda from 27,000 tons to around 34,500 tons. The Company would have shown still better results but for the production losses in the caustic soda unit due to breakdown and trippings and frequent power restrictions and shut offs imposed by the Madras State Electricity Board during the year. If there had been no breakdown, the output of caustic soda would have reached 39,000 tons.

Appropriations include depreciation Rs. 54.61 lakhs (against Rs. 34.70 lakhs), development rebate Rs. 40 lakhs (against Rs. 1.06 lakhs) and general reserve Rs. 23 lakhs (against Rs. 46 lakhs). As in the previous year, no provision is considered necessary for taxation. After making certain minor adjustments and providing for the proposed dividends —preference and equity—absorbing Rs. 15.43 lakhs (against Rs. 13.28 lakhs), there remains a balance of Rs. 76,000 to be carried forward, against Rs. 1.75 lakhs brought in.

The prospects for the current year are considered to be better. The programme for increasing the installed capacity of the caustic soda unit from 80 tonnes to 140 tonnes a day was completed during 1963-64 and the extended plant went on stream in August 1963. Production for the current year is expected to reach 42,000 tonnes and the Company's turnover will increase to around Rs. 5.75 crores. It proposes to increase the installed capacity from 140 tonnes to 180 tonnes a day which is expected to take about two years to materialise. Orders have been placed for certain equipment. The Company has also applied for an industrial licence to set up another plant with a capacity of 300 tonnes of caustic soda a day. The project is still in a preliminary stage and it is estimated to cost about Rs. 10 crores to Rs. 12 crores. It is proposed to be undertake the project in two stages. The scheme for putting up the liquid chlorine plant has made further progress. A letter of credit under yen credit from Japan has been opened and the deliveries of plant and machinery will be made over a period of ten to 16 months. The plant, it is expected, will go into production by the end of 1965 or the beginning of 1966. In view of the higher production and growing demand for the Company's products and regulation of imports, the directors visualise increased earnings in the current and coming years.

Indian Bank Pays More

THE directors of the Indian Bank Ltd have raised the interim dividend for the half year ended June 1964, from 7 percent, including a bonus of 2 percent, to 7.5 percent, including a bonus of 2.5 percent. The half-yearly profit amounts to Rs. 10.39 lakhs, compared with Rs. 9 lakhs in the corresponding period of 1963. The interim dividend will absorb Rs. 6.63 lakhs, against Rs. 6.22 lakhs. A sum of Rs. 2.08 lakhs has been transferred to the reserve fund. After bringing in the surplus of Rs. 1.62 lakhs from the previous year, the balance of Rs. 3.28 lakhs has been carried forward.

Central Bank Repeats

THE working results of the Central Bank of India for the half year ended June 1964, show a fair improvement over the performance during the same period last year. The profit for January-June 1964, subject to audit, amounts to Rs. 98.53 lakhs, compared with Rs. 89.80 lakhs in the corresponding period last year. The interim dividend has been maintained at Rs. 2.40 a share. The new rights shares offered in February will rank for the *pro rata* dividend with effect from 1st May. The total interim dividend distribution will amount to Rs. 30.35 lakhs, against Rs. 30.28 lakhs. The directors have also provided a sum of Rs. 1,401 for payment of final dividend for 1962 and interim and final dividends for 1963 to the former shareholders of Jodhpur Commercial Bank to whom the shares of Central Bank have been allotted. After bringing in the surplus of Rs. 91.500 from the previous year, the balance of Rs. 69.09 lakhs, subject to tax, has been carried forward.

New Great Eastern Disappoints

THE New Great Eastern Spinning and Weaving Company reports disappointing results for the year 1963. Despite quite an appreciable increase in the sales from Rs. 2.56 crores to Rs. 2.97 crores, the gross profit has declined sharply from Rs. 26.72 lakhs to Rs. 11.21 lakhs. The dividend, both on preference and equity shares, has been skipped. In 1962, the Company had paid a dividend of 18 percent. After providing Rs. 18.68 lakhs (against Rs. 12.09 lakhs) for depreciation, Rs. 3.78 lakhs (against Rs. 5.49 lakhs) for development rebate and Rs. 6.93 lakhs (against Rs. 3.04 lakhs) for bonus for previous years, the year's working shows a net loss of Rs. 18.18 lakhs, against a profit of Rs. 6.10 lakhs. After taking into account the surplus of Rs. 1.80 lakhs brought in, the net deficit of Rs. 16.38 lakhs is being carried forward.

The directors state in their report that the Company's working results were adversely affected by the increase in prices of cotton, power and fuel, stores, spares, etcetera. Besides, as a part of the rationalisation, the Company had to pay a sum of Rs. 5 lakhs by way of compensation and gratuity to the retrenched workers.

Production suffered because of the erection of new machinery in various departments; production schedule could not be achieved as workers were not accustomed to working on new machinery. A sum of Rs. 30.75 lakhs was spent on machinery during 1963 and further orders for machinery worth Rs. 12 lakhs had been placed by the end of the year. During the current year up to 30th June, orders for machinery have been placed for Rs. 11 lakhs in addition to the unexecuted orders at the end of 1963. The directors are doing their best to improve the Company's working and they are hopeful of better results for the current year.

Outlook for Modern Mills

MODERN Mills did not fare well in 1963, but it is expected to do much better this year. The chairman, Mr. N. D. Sirur, assured the shareholders at the Company's adjourned annual general meeting on 18th July that the Company would be able to pay a dividend of at least 10 percent for the current year, against 6 percent for the previous year. A still higher dividend could be expected when the Company's investment in the new acetate rayon project starts bearing fruit. Mr. Sirur stated that because of change in the pattern of production from coarse and medium cloth to fine and superfine cloth, the Company hoped to realise better prices for its products and earn an additional profit of Rs. 6 lakhs to Rs. 7 lakhs a year. The profit for the current year is expected to be between Rs. 25 lakhs and Rs. 30 lakhs. The partial cloth decontrol is likely to benefit the Company considerably and from next year onwards, the profit of the Company is expected to reach the level of average profit for the previous three to four years. It has obtained a sanforising machine and placed orders for felt calendering equipment which will improve the Company's working results.

Mr. Sirur assured the shareholders that it would be more advantageous from their viewpoint to implement the acetate rayon project by floating a new company rather than implementing it as an expansion of Modern Mills. That is why a new Company named Modern Fibres of India Ltd had been formed in collaboration with two foreign firms—one from the U.K. and the other from the U.S.A.—of international reputation. The new Company would have an equity capital of Rs. 3.75 crores of which 49 percent would come from abroad; about 21 percent would be provided by the Modern Mills and the balance would be raised by public subscription. The installed capacity of the new factory would be 10 tonnes a day, comprising 8 tonnes of flake acetate filament rayon and two tonnes of acetate staple fibre.

Mr. Sirur expressed the hope that the new company would be in a position to pay a dividend of 12 to 14 percent after about four years. The new Company would take over the Mill No. 1 of Modern Mills together with 16.664 post-war spindles installed therein along with ancillary machinery at a price of Rs. 75 lakhs, against its book value of Rs. 25 lakhs. After the transfer of Mill No. 1, the main property of the Modern Mills would comprise Mill No. 2 with a total spindleage of 48.000 and loomage of 6,044 when the installation of additional spindleage capacity has been completed. The separation of Mill No. 1, therefore, will have no effect on total spindleage as it obtains at present. Mr. Sirur justified the investment by Modern Mills in Sundatta Foods and Fibres because it was because of Sundatta that the raw material problem of the new company—Modern Fibres—was being solved.

More from Sidhpur Mills

THE Sidhpur Mills Ltd has raised the dividend for the year ended March 1964 from 8 percent to 10 percent, and this dividend is payable on the increased capital of Rs. 30 lakhs, following the one-for-two bonus issue with the result that the dividend distribution will claim Rs 3 lakhs, against Rs. 1.60 lakhs in the preceding year. The increase in the dividend is fully justified by the Company's improved performance during the year. Sales are up by nearly 20 percent from Rs. 1.39 crores to Rs. 1.67 crores, while the gross profit has soared by 130 percent from Rs. 7.62 lakhs to Rs. 17.53 lakhs. Allocations include depreciation Rs. 6.26 lakhs (against Rs. 4.92 lakhs), development rebate reserve Rs. 1.27 lakhs (against Rs. 25.600), general reserve Rs. 5.25 lakhs (against nil), gratuity reserve Rs. 50,000 (the same) and provision for doubtful debts Rs. 1.194 (against nil). No provision has been made for taxation. After making various appropriations, there remains a surplus of Rs. 21.265 to be carried forward, against Rs. 8.888 brought in. The directors state that the modernisation of the mills has been making satisfactory progress. The Company installed new machinery worth Rs. 6.36 lakhs during 1963-64. Commitments for the purchase of new machinery at the end of the year amounted to Rs. 13 lakhs of which machinery worth Rs. 5.95 lakhs has been received. The working of the Company for the current year so far is said to be quite encouraging.

New Swadeshi Mills Fares Well

The New Swadeshi Mills of Ahmedabad Ltd reports highly encouraging results for the year ended 31st March, 1964. The sales are up by about 24 percent from Rs. 3.88 crores to Rs. 4.82 crores and the gross profit has shot up by about 55 percent from Rs. 27.38 lakhs to Rs. 42.41 lakhs. There has thus been a marked improvement in the Company's profit margin from 6.4 percent to 8.3 percent. In spite of substantially better results, the dividend has only been maintained at 10 percent. Appropriations include depreciation Rs. 21.82 lakhs (against Rs. 14.23 lakhs) donations Rs. 2.31 lakhs (against Rs. 1.67 lakhs), taxation Rs. 10 lakhs (against Rs. 3.57 lakhs), leaving a surplus of Rs. 8.28 lakhs (against Rs. 7.91 lakhs). A sum of Rs. 5 lakhs has been transferred to the general reserve out of this surplus. The Company purchased during the year one more textile mill in Ahmedabad. This mill which remained closed for about eight months has now been restarted. An addition to the acquisition of the block assets of this mill, the Company spent Rs. 11.96 lakhs on renovation and modernisation of the mill known as the "New Swadeshi Mills." The Rs. 100-paid share of New Swadeshi is currently quoted around Rs. 110, offering a gross return of 9.8 percent.

Poysha Industrial Results Impress

THE increase in the dividend for the year ended March 1964 by Poysha Industrial Co. Ltd from 9 percent to 10 percent provides little indication of the Company's impressive performance during the year. Sales are up by about 38 percent from Rs. 93.36 lakhs to Rs. 1.292 crores, and the gross profit has shot up by as much as 91 percent from Rs. 9.14 lakhs to Rs. 17.46 lakhs. The profit margin as measured by the ratio of gross profit to sales, has improved from Rs. 9.8 percent to Rs. 13.5 percent. The increase in the dividend appears to be very modest, compared with the improvement in the Company's working results. The main reason for this is the need for conserving resources for financing the large expansion programme that the Company has on hand and for which it will shortly enter the capital market to raise funds through public subscription. Appropriations of the year's profits include depreciation Rs. 3.12 lakhs (against Rs. 3.32 lakhs), development rebate Rs. 11.867 (against Rs. 18.784), taxation Rs. 8.58 lakhs (against Rs. 2.95 lakhs), general reserve Rs. 1.66 lakhs (against Rs. 40,000), additional taxation for earlier year Rs. 10.057 (against nil) and dividend Rs 2.50 lakhs (against Rs. 1.74 lakhs).

The Company's performance during the current year is expected to show a further improvement. The chairman says that this will probably be the last year in which the company will function throughout the year in the present factory in Bombay. It is expected to move into the new modern factory near Thana before the end of 1965. The Company has embarked on a huge expansion programme. Apart from the modern factory in Thana, the Company proposes to erect a factory in Cochin. Negotiations are also in progress for the purchase of suitable land for setting up a factory in Ghaziabad. Additional printing machinery for the Bombay factory has been received and is awaiting installation. The Government has agreed to the import of all the necessary plant and equipment for the Cochin and Ghaziabad factories. The Company proposes to raise its capital from Rs 25 lakhs to Rs. 1.10 crores in order to finance its expansion schemes. The existing shareholders will be offered rights shares worth Rs. 25 lakhs in the ratio of one new share for each one held. The balance of Rs. 60 lakhs will be raised through public subscription. Negotiations are said to be nearing completion for securing long-term loans amounting to Rs. 74 lakhs from various financial institutions.

Bengal Chemical Pays the Same

THE trading profit of Bengal Chemical and Pharmaceutical Works Ltd has risen from Rs. 21.05 lakhs for 1962-63 to Rs. 26.02 lakhs for the year ended March 1964. Depreciation absorbs Rs. 5.93 lakhs (against Rs. 5.54 lakhs). The taxable ordinary dividend of 10 percent has been repeated. Taxation is allocated Rs. 10 lakhs (against Rs. 7.25 lakhs) and reserves Rs. 1.22 lakhs. Sales rose from Rs. 2.28 crores to Rs. 2.35 crores, but production was interrupted by the shortage of raw materials and various other difficulties. The expansion of the Panihati factory has made good progress. The trial run of the alum plant has begun, and full production is likely to be achieved in the near future.

Devon Tea and Produce Pays More

RECORD crops and higher profits have led to a rise in the rate of dividend announced by the Devon Tea and Produce Co. Ltd for the year ended March 1964. The ordinary dividend has been raised to 12 percent from the previous year's 10 percent. The net profit for the year amounts to Rs. 2,83,391, after providing Rs. 47,433 for depreciation and Rs. 4,150 for development rebate. This compares with the previous year's net profit of Rs. 1,78,933, after providing Rs. 41,689 for depreciation and Rs. 18,029 for development rebate. With Rs. 23,158 brought forward from the previous year, the total available for appropriation comes to Rs. 3,06,549. Out of this, provision for taxation amounts to Rs. 1,27,000 (against Rs. 72,000). A sum of Rs. 50,000 is transferred to general reserve. No amount is transferred to dividend equalisation reserve while Rs. 30,000 was transferred to this account in the previous year. The dividend at 7½ percent (grossed) on preference shares amounts to Rs. 16,660. The equity dividend at 12 percent absorbs Rs. 80,958. The balance of Rs. 31,931 is carried forward.

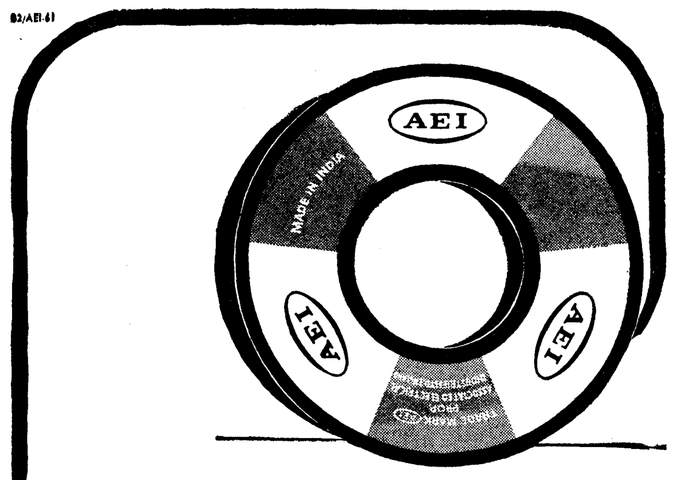
The directors have stated in their report that the crops harvested during the year set new records. The prospects for both tea and coffee crop for the next year are quite good. The report says that during the year excise duty on tea was raised by 5 paise a kilogram and an interim increase in wages was given to staff and labour. So the small increase in tea prices was more than offset by the increases in cost. The tea crop for the year amounted to 198.096 kilograms against the previous year's 178.500 kilograms. The all-in cost of production was Rs. 3.70 a kilogram, against Rs. 3.47 a kilogram The average sale price realised amounted to Rs. 4.39 a kilogram, against Rs 4.22 a kilogram. The coffee crop for the year amounted to 117.20 tonnes, against the previous year's crop of 79.73 tonnes. The tea crop for 1964-65 is estimated at 182,000 kilograms and the coffee crop at 149 tonnes.

As for the working of Devon Plastics, the report says that the unit has been working satisfactorily. Turnover for the year was Rs. 14,76,050, against Rs. 1,90,000 in the previous year. But for the acute shortage of raw materials during the latter part of the year, the unit would have shown even better results.

Balanoor Tea and Rubber Earns More

THE working of the Balanoor Tea and Rubber Co. Ltd for the year ended March 1964 shows a net profit of Rs. 4,23,730, after providing Rs. 56,523 for depreciation and Rs. 6,013 for development rebate. This compares with the previous year's net profit of Rs. 3,62,103, after providing Rs. 39,803 for depreciation and Rs. 3,630 for development rebate. With Rs. 44,601 brought forward from the previous year, the total surplus available for appropriation comes to Rs. 4,68,331. Out of this, provision for taxation amounts to Rs. 2,21,000 (against Rs. 1,80,000). Short provision of taxes in the previous years amounted to Rs. 63,760. A sum of Rs. 25,000 (against Rs. 50,000) is transferred to dividend equalisation reserve. The dividend at 7½ percent (grossed) on the preference shares amounts to Rs. 20,175. The equity dividend at 10 percent (the same) absorbs Rs. 1,09,899. The balance of Rs. 28,497 is carried forward.

The tea and coffee crops harvested during the year were records in spite of one of the severest droughts in recent history. The tea crop for the year amounted to 300,702 kilograms, against the previous year's crop of 254,836 kilograms. The all-in cost of production was Rs. 3.61 a kilogram, against Rs. 3.34 a kilogram. The average sale price was Rs. 4.40 a kilogram, against Rs. 4.29 a kilogram. The coffee crop during the year was 245.80 tonnes, against the previous year's crop of 166.31 tonnes. The rubber crop amounted to 12,993 kilograms, against the previous year's 13,990 kilograms. The tea crop for 1964-65 is estimated at 275,000 kilograms, the coffee crop at 184 tonnes, and the rubber crop at 13,000 kilograms.



Progress of Seshasayee Wire Ropes

THE report of the Seshasayee Wire Ropes Ltd for the year ended March 1964 discusses the progress of the Company during the construction period. The directors state that no profit and loss account has been prepared for the accounting period, since the construction of the factory is continuing. All expenses during construction will be capitalised in due course. Expenses during the year (to be capitalised) amount to Rs. 3,11,358. Total expenses during construction to be capitalised up to 31st March, 1964, stand at Rs. 4,22,694 in the balance-sheet. The report adds that by March 1964, all the items of imported machinery have arrived at the factory premises in Edathala, Alwaye. The installation of machinery is now progressing under the guidance of Japanese engineers. The directors expect that the factory will be ready for operations by September 1964.

Glass Carboys Share Offer

THE Glass Carboys and Pressedwares Ltd is a new company which proposes to set up a factory in Ambernath Industrial Estate in Thana district (Maharashtra) for the manufacture of glass carboys (one to five gallon capacity) and pressedwares, domes for mercury vapour lamps, glass tiles, etcetera. The Company has been licensed to manufacture 4,200 tonnes of glass carboys and pressedwares a year. The promoters hope to turn out some 3,600 tonnes a year on the basis of 80 percent efficiency. The project does not visualise any foreign collaboration, and it is estimated to cost about Rs. 45.56

lakhs, of which Rs. 25 lakhs will be provided by share capital, Rs. 10 lakhs by term loans from the Maharashtra State Finance Corporation, Rs. 5.5 lakhs in foreign exchange loan from the I.C.I.C.I. and the balance by borrowings from banks.

The plant and machinery worth Rs. 5.5 lakhs is being imported from the U.K., West Germany and the U.S.A. If all goes well, the plant is expected to go into production in August 1965. The Company will have an authorised capital of Rs. 50 lakhs, out of which Rs. 25 lakhs, made up of 20 lakhs in equity shares of Rs. 10 each and Rs. 5 lakhs in 9.5 percent redeemable cumulative preference shares of Rs. 10 each, is being issued in the beginning. The promoters, directors and their friends are taking up equity shares of the value of Rs. 7.5 lakhs and the balance of Rs. 12.5 lakhs in equity shares and Rs. 5 lakhs in preference shares, is likely to be offered for public subscription in August. The entire public issue has been underwritten. The board of directors includes Mr. Ramjilal Jhunjhunwala (chairman), Mr. R. B. Rungta, Mr. N. R. Ruia, Mr. M. V. Meghji, Mr. M. L. Apte and Mr. Bhagvati Prasad Jhunjhunwala.

Mysore Electro Chemical to Raise Capital

THE Mysore Electro Chemical Works Ltd proposes to raise additional capital of Rs. 25 lakhs, made up of Rs. 20 lakhs in equity shares and Rs. 5 lakhs in preference shares, for financing its expansion programme. Apart from stepping up the production of lead acid batteries, the Company proposes to undertake the manufacture of special types of batteries for electronic flashes, electronic equipment and transistorised units. Many of the new items which the Company proposes to manufacture are special patents of the West German collaborators. It has also plans for the manufacture of hard rubber containers in collaboration with an Austrian firm. Permission for the import of capital goods to the tune of Rs. 10 lakhs has been secured. The Company has already begun to implement the expansion programme which is expected to be completed within a year. The Mysore State Financial Corporation has sanctioned a loan of Rs. 14.30 lakhs for the Company's expansion programme. The preference capital of Rs. 5 lakhs is being taken up by the West German collaborators. And out of the equity capital of Rs. 20 lakhs, shares worth Rs. 10 lakhs are to be taken up by the directors and their friends and the balance of Rs. 10 lakhs will be offered for public subscription in the near future. The public issue has been underwritten by the Industrial Finance Corporation of India.

Devashola (Nilgiri) Tea Earns More

A RECORD crop and improved profits feature the trading results of the Devashola (Nilgiri) Tea Estates Co Ltd for the year ended December 1963. The dividend is maintained at 15 percent. The net profit for the year, after taxation, amounts to Rs. 1,22,930, compared with Rs. 1,08,597 for the previous year. With the amount of Rs. 3,300 brought forward and with Rs. 24,798 being excess provisions and write-backs, the total available for appropriation comes to Rs 1,51,028 Out of this, a sum of Rs. 700 is transferred to development rebate reserve. A sum of Rs. 21.000 is transferred to dividend equalisation reserve (against nil). The interim dividend of 7½ percent absorbed Rs. 63,000, and the final dividend of 7½ percent amounts to Rs. 63,000. The balance of Rs. 3.328 is carried forward.

A record crop of 190,775 kilograms of made tea was secured during the season. The crop for 1962 amounted to 186,643 kilograms. The all-in-cost of production was Rs. 4.78 a kilogram, against Rs. 4.79 a kilogram in the previous year, and the price realised was Rs. 5.38 a kilogram, against Rs. 5.30 a kilogram in 1962. The directors' report says that the Governmental and quasi-Governmental levies have been increasing from year to year in one form or the other, and the enhancement in the rates of Central excise duty and electricity charges and the imposition of emergency risk insurance accounted for a substantial increase in expenditure to the extent of over Rs. 25,000.

MANAGEMENT SCHOOLS IN BRITAIN

British business is being asked for £3 million to finance the first large-scale plan in Britain for management education. The idea is that Britain should have schools comparable to the best in America. The appeal is made jointly by the Federation of British Industries, the British Institute of Management and the Foundation for Management Education. It has been made on the basis of specially prepared studies. There has also been consultation with all sides of business life and with the Government and the universities. The appeal fund will be used for the foundation of two business schools in London and Manchester There will also be provision for further business schools at other universities and centres in Britain. A working party has reported that the cost of establishing the two schools would be between £2,180,000 and £2,430,000. They are not intended to replace nor to diminish the present expansion of management education at universities and colleges. They will take their place in a general national growth and give impetus to it.

In the appeal, the target is £420,000 to meet existing projects. They are at the Universities of Durham, Edinburgh, Glasgow, Liverpool, London and Manchester, and at the Royal College of Science and Technology, Glasgow, the Birmingham College of Science and Technology and the Regent Street Polytechnic, London. Lord Nelson is launching the appeal in London. In a foreword to a brochure on the subject he says the proposal "launches a revolutionary change in the whole pattern of management education in Britain."

The Stock Markets

TURNOVER CONFINED TO CLEARING SHARES

Wednesday Evening.

THE Calcutta stock market has been sluggish but steady during the past week. Share prices have fluctuated narrowly and activities have been limited. There has been a general inclination to keep commitments light in the absence of any incentive. Although corporate news is on the whole good, Lyons Range is concerned over the rising prices of essential commodities. Operators are watching carefully how the Government tackles the food crisis in the country.

Transactions have not only been confined to clearing shares, but they have also been mainly of a squaring-up nature. Holders have been keen to take profit at every bulge. The clearing on Wednesday was uneventful and the carry-forward charges were practically unchanged. Business in cash shares has declined to almost a trickle, although the prices of selected scrip have been maintained. The attention, particularly of small investors, has been diverted to the units of the Unit Trust of India. Considering that very little change has taken place in the prices of industrial equities during the current month, the Unit Trust has extended the period of selling its units to the public at par beyond 31st July, 1964. Since these units are expected to give a tax-free yield of 6 percent, it will be a good idea to continue to sell them at par as long as possible. The move is likely to help mobilise a considerable part of the savings of the middle and low-income groups.

Indian Iron have gained slightly due to short-covering. Among engineering shares, Burn and Texmaco are about steady. Jessop and Guest, Keen, Williams are sluggish. Scattered support has been forthcoming for Britannia Engineering and J. K. Steel. Birla have been prominent in jute shares and have gained due to influential buying. Turnover in other jute shares has been small due to the uncertainty concerning the outlook for jute goods. The hardening tendency in fibre prices has called for caution. The greater increase in the price of raw jute than in that of jute goods in recent weeks has squeezed the jute mills' profits. Indications are that during the current year jute mills' profits will not be as large as those for 1963-64. Kinnison, Anglo-India, India, Ganges and Barnagore have attracted support.

Although attention in the miscellaneous section is concentrated on clearing scrip, Indian Cable have risen due to the payment of a larger dividend. Hindustan Motors have recovered on short-covering. Scattered interest has been taken in Metal Box, Alkali and Chemical and Union Carbide. Indian Oxygen and British Paints have slipped back. Among managing agency shares, Martin Burn have been steady. Electric company shares are dull and nominal business in Calcutta Electric has been transacted. Interest in new shares is poor. Hindustan Aluminium have been barely steady. In spite of making bigger profits for the half-year ended June 1964, bank shares are sluggish. Stray business has been transacted in United Commercial and United Bank of India. Sugar shares have been freely offered, but buyers have shown no interest. Selected paper mill shares have been steady on hopes of an increase in the price of paper. Orient have fluctuated both ways. Seshasayee have gained. Bengal and India Paper Pulp have been maintained.

Cotton mill shares have met with scattered support. Bharat Commerce, Jay Shree Textiles, Dunbar and Elgin have been steady. J. K. Rayon have recovered on short-covering. The investors are awaiting the details of the proposed partial control schemes for cloth. Coal shares have lacked interest and turnover has been small. Burrakur have been steady, but Central India and Western Bengal have lost. Scattered support has been forthcoming for New Beerbhom. There has been limited activity in tea shares and attention has been largely confined to selected Assam and Dooars gardens. Brooke Bond, Hasimara and Nagri Farm have changed hands. Patrakola have reacted due to the decline in earlier support.

Government securities are about steady, although turnover has been limited. Support has been forthcoming particularly for short-dated loans, but sellers are generally reserved. The investors await the announcement of the forthcoming State Government loans, which are likely to be issued within the next few days. All the State Governments are expected to borrow together about Rs. 100 crores. It is believed that the new loans will carry a higher rate of interest than what is available from the existing securities. The 3 percent Conversion loan 1986 has been quoted at Rs. 63.75.

Bombay

TURNOVER DROPS, BUT UNDERTONE STEADY

SUPPORT CONFINED TO SELECTED SCRIP

Wednesday Evening.

THERE has been a considerable drop in turnover in the Bombay stock market during the past week, although the undertone is fairly steady. Selling pressure has abated, but support is largely confined to selected scrip due to good corporate news. Operators are, however, cautious because of the growing food shortage. Unless the Government succeeds in checking the rise in prices of essential commodities, it is feared that the working of various industries will be interrupted by labour unrest. Meanwhile, Dalal Street has felt the shortage of funds. In spite of the return of money to the banking system, commercial banks have not been keen on diverting funds to industrial equities. The sale of units of the Unit Trust of India has also meant less money for the stock market.

Tata Steel ordinary have closed at Rs. 154.75. Among engineering shares, Tata Engineering have been prominent due to the encouraging statement made by the chairman at the Company's last annual general meeting. T.E.L.C.O. has maintained the taxable ordinary dividend of 14.5 percent on the increased share capital. It is proposed to issue a further 200.000 shares, and the Company hopes to maintain the dividend even on the capital increased after the share offer. Scattered support has been extended to Larsen and Toubro, Alcock Ashdown and Premier Construction. Among motor-vehicle shares, Premier Automobiles have improved on hopes that the Company will return to the dividend list. It is believed to have made satisfactory profits. Hindustan Motors have reacted on profit-taking following the maintenance of the ordinary dividend.

In spite of limited turnover, the prices of selected cotton mill shares have been steady. Investors prefer to wait until the Government announces the details of its plan to enforce partial control on cloth. Century have enjoyed support from informed quarters. Bombay Dyeing, Kohinoor, Svadeshi, Standard and Morarjee have been supported. India United ordinary, Simplex and Gokak have been steady.

Sugar shares have been prominent in the miscellaneous section in the belief that the sugar companies have done well during the current season. Belapur, Walchandnagar Industries and Phaltan have been supported. National Rayon have improved on replacement purchases. The Company is believed to be doing well. Chemicals shares have shown mixed trends. Tata Chemical have been steady, but Polychem have been sluggish. In steamship company shares, Scindia Steam have improved on short-covering. In the mining section, Be Be Petrol have been steady, but Shivrajpur Syndicate have been sold freely. Voltas and Tata Oil have met with scattered support. Bank shares have tended to improve due to the good results

NEVER COMPARE...

It is always frustrating! So it is when you compare metric weights and measures with obsolete units like seer or viss. You will only waste your time and often lose in the transaction.

For quick service and fair dealing

USE METRIC UNITS

BA 63/267

achieved for the half-year ended June 1964. Central Bank, Dena Bank and Bank of India have changed hands. Among electric company shares, Ahmedabad and Tata Power have been quotably higher.

Madras

SHARES QUIET AFTER EARLIER STEADINESS

UNINSPIRING ADVICES DEPRESS SENTIMENT

Tuesday Evening.

AFTER earlier steadiness, the Madras stock market has closed the past week in a quiet mood due to uninspiring advices from outside centres. Turnover has dropped, and support has been confined to selected miscellaneous and cash scrip. Selected State Government loans, good preference shares and debentures have been wanted.

Bank shares have been steady due to the good results achieved for the half-year ended June 1964. Canara have been quoted at Rs. 77 and Indian Overseas at Rs. 145. Selected electric company shares have been bought. Negapatam have changed hands at Rs. 11.12 and West Coast at Rs. 13.50. Sugar shares have been fairly steady. E.I.D. have come to hand at Rs. 35.65 and Jeypore at Rs. 16.50. Business in Mysore has been transacted at Rs. 28.33 and Travancore have been bought up to Rs. 7.50. Deccan have nevertheless been sluggish at Rs. 12.05.

In the planting section, attention has centred on selected coffee and tea shares due to the improved marketing outlook. Blue Mountain have been quoted at Rs. 2.30 and Cochin Malabar at Rs. 6.35. Consolidated Coffee have hardened to Rs. 23.40 and Ouchterlony have been done at Rs. 3.55. Periakaramalai have been transacted at Rs. 3.43. Kailas have been taken at Rs 6.28 on declaring a final taxable ordinary dividend of 15 percent. Chembra Peak have risen to Rs. 4.77 on declaring a taxable ordinary dividend of 25 percent. Pullangode have been done at Rs. 3.18 on paying a taxable ordinary dividend of 8 percent. Mysore Coffee have come to hand at Rs. 4.22 on declaring a taxable ordinary dividend of 6 percent. Ossoor have been steady at Rs. 2.85 and Lingapur at Rs. 5.17.

Among textile shares, South India Viscose have reacted to Rs. 115.25 and Travancore Rayon to Rs. 20.40. Lakshmi have lost at Rs. 130.25, but Madura have been steady at Rs. 33.70. Interest has been taken in Bangalore Woollen at Rs 268 and in Buckingham at Rs. 274.50. Anglo-French have been bought at Rs. 142 and Mettur at Rs. 277.50. Vijaykumar have been done at Rs. 150 and Ramnarayan at Rs. 85.

Among miscellaneous shares, Aluminium Industries have been steady at Rs. 20.12 and Ashok Leyland at Rs. 6.75. In cement shares, India Cement have dropped to Rs. 5.44, but Dalmia have been maintained at Rs. 12.50. Mettur Chemical have hardened to Rs. 14.26 and Travancore Chemical Manufacturing to Rs. 18.70 on declaring a final taxable ordinary dividend of 10 percent. Seshasayee Paper have hardened to Rs. 7.40 and Mysore have been steady at Rs. 12.62 on paying a smaller dividend of 9 percent on the increased capital. Standard Motors have met with support at Rs. 10.12 and Tube Investment at Rs. 192. Parry's Confectionery have improved to Rs. 2.97 and Spencer to Rs. 21.37. Mysore Stoneware have been done at Rs. 11.57 on declaring a taxable ordinary dividend of 12½ percent. Madras Rubber have been sold down to Rs. 11.37, but McDowell have attracted support up to Rs. 22.22.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available. All quotations are in Rs.]

TRADE MARKS

CAUTION

Notice is hereby given that the word 'Terylene' *per se* and the 'Terylene' symbols in English and in Hindi illustrated below this paragraph are registered trade marks in India, the property of Imperial Chemical Industries Ltd., London. They can be used only on or in relation to polyester fibre manufactured by Imperial Chemical Industries Ltd., London, or their associated company, Canadian Industries Ltd., Canada, and in the manner authorised on the goods made from or containing this polyester fibre.

'TERYLENE' Polyester ICI Fibre

'टेरिलीन' पॉलिएस्टर ICI फ़ाइबर

Instances have come to our notice where the 'Terylene' Trade Mark is being applied by certain manufacturers to garments or fabrics not containing the polyester fibre manufactured by Imperial Chemical Industries Ltd., or Canadian Industries Ltd., and also to fabrics containing polyester fibre waste in appreciable quantities, and that such garments and fabrics are sold or offered for sale as garments or fabrics containing genuine 'Terylene'.

Such manufacturers and the dealers concerned are hereby warned against such improper use of these trade marks and the public is also hereby cautioned against buying such garments and fabrics.

Neither of these trade marks can be applied to any articles or used in advertisements for their sale except with the authority from and under conditions prescribed by Imperial Chemical Industries Ltd., London, or by Imperial Chemical Industries (India) Private Limited.

Any unauthorised use of these marks on the goods or in advertisements will be regarded as infringements thereof and liable to legal action. Any imitation, infringement or fraudulent use of the said Trade Marks will also be dealt with according to law.

London

MARKET ENLIVENED BY TAKEOVER NEWS

BIG CALL OPTION DEMAND IN STEEL

London, 29th July.

ALTHOUGH for most of the past week, the stock market was unsettled due to the threat of an all-out postal strike, conditions were enlivened by big takeover developments in the textile fields. In the past day or so with the postal threat removed, the tone improved as selective buying was resumed. In the foreign market, Greek bonds seesawed. Dollar stocks moved in the wake of transatlantic markets where the trend on most days was towards lower levels. It was a very busy week for option dealers who met with a considerable demand for three-month "call" options on steel shares for the general election period.

Money

THE CALCUTTA MONEY MARKET

CALL RATE GOES UP AGAIN

Wednesday, 29th July.

THERE has been a moderate decline in the general level of advances in the Calcutta money market during the past week. This is mainly due to the slight decrease in the credit given to jute mills, sugar factories and the iron, steel and engineering industries. Miscellaneous advances too have fallen moderately. The accommodation given to cotton and woollen mills and to the foodgrains trade has remained unchanged. In the interbank market, the call rate rose sharply from ½ percent to 5 percent and has closed at 4½ percent. The rise is attributed to the purchase of Treasury bills by some big lenders.

The exchange market has been steady, with a good supply of tea bills and moderate supply of gunny bills. The demand for remittances has been fair. In London, sterling has improved slightly in relation to most currencies except the Belgian franc, the Dutch guilder and the Danish krone.

BULLION WAS STEADY IN CALCUTTA due to good upcountry offtake. The price of silver rose from the previous week's level of Rs. 248.75 to Rs. 251.75, quoted today. The London and New York prices amounted to 111⅞d and 129.3 cents.

Gold was quiet and dropped from Rs. 72.25 to Rs. 72 a 10 grammes.

DURING THE WEEK ENDED 24TH JULY, Government of India Treasury bills for Rs. 12,27,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 28th July. The total amount offered was Rs. 4,05,00,000. Tenders at Rs. 99.410 percent were accepted in full, and those at Rs. 99.400 percent were allotted 49 percent approximately. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.399 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 3rd August.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 29th July to 1st August at Rs. 99.416 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 22nd July to 25th July amounted to Rs. 19.06 crores.

DECLINES OF RS. 35.11 CRORES TO Rs. 2,443.76 crores in active notes and of Rs. 32.18 crores to Rs. 2,464.66 crores in the total note issue, were notable features of the return of the Reserve Bank of India for the week ended 24th July, 1964. The currency contraction was adjusted by reducing foreign securities by Rs. 4 crores to Rs. 85.46 crores and rupee securities by Rs. 30.76 crores to Rs. 2,155.68 crores in the paper currency reserve. These securities were transferred to the Banking Department in which balances held abroad rose by only Rs. 1.37 crores to Rs. 7.37 crores and investments by Rs. 24.06 crores to Rs. 283.09 crores. Deposits of the Government of India increased by Rs. 23.14 crores to Rs. 76.88 crores while those of State Governments dropped by Rs. 52 lakhs to Rs. 17.93 crores. Balances of scheduled banks at Rs. 95.96 crores showed a decrease of Rs. 8.21 crores. Their loans from the Reserve Bank dropped from Rs. 85.70 crores to Rs. 45.40 crores, of which advances against usance bills were nil, against Rs. 35 lakhs. Ways and means advances to Governments amounted to Rs. 22.94 crores, against Rs. 21.12 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 17th July, 1964, shows a drop of Rs. 2.30 crores to Rs. 641.24 crores in total deposits. Investments in Government securities are down by Rs. 11.45 crores to Rs. 231.39 crores, while other authorised investments remain unchanged at Rs. 9.44 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have declined by Rs. 8.95 crores to Rs. 348.04 crores. Cash and balances are, in consequence, shown at Rs. 25.70 crores, or Rs. 82 lakhs less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 17th July, 1964, shows Demand and Time ilabilities at Rs. 1,270.89 crores (Rs. 30.47 crores on account of borrowings from banks) and Rs. 1,389.62 crores (Rs. 18.73 crores), compared with Rs. 1,274.97 crores (Rs. 40.58 crores) and Rs. 1,383.85 crores (Rs. 19.73 crores), respectively, in the previous week. Cash has risen by Rs. 1.55 crores to Rs. 62.61 crores, while balances with the Reserve Bank have fallen by Rs. 3.86 crores to Rs. 101 crores. There is a rise of Rs. 3.49 crores to Rs. 679.02 crores in investments. Advances and bills discounted at Rs. 1,750.27 crores show a fall of Rs. 25.83 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.1 percent and 65.8 percent, against 6.2 percent and 66.8 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 31-7-64.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate

OIL INDIA LIMITED

(A 50:50 Cooperative Enterprise of the Government of India and The Burmah Oil Company for Prospecting, Drilling, Production and Transport of Crude Oil from Assam to Refineries in Gauhati, Assam and Barauni, Bihar)

STATEMENT OF THE CHAIRMAN, SHRI KHANDUBHAI K. DESAI, M.P., TO THE SHAREHOLDERS ON THE OCCASION OF THE FIFTH ANNUAL GENERAL MEETING OF OIL INDIA LIMITED, HELD AT DULIAJAN, ASSAM, ON TUESDAY, JUNE 23rd, 1964.

Gentlemen,

I have pleasure in presenting to you the report of the Directors and the Annual Accounts of the Company for the year 1963. Under the new order issued under Rule 52 of the Defence of India Rules it will not be possible for us to circulate these reports as usual. This rule also imposes restrictions in regard to publication of news concerning the activities in individual fields and details in respect of the other aspects of our work. Within these limitations I shall endeavour to present a general view of our activities during the last year and a continuation of these efforts in the next year.

TRIBUTE TO LATE

SHRI JAWAHARLAL NEHRU

We are meeting under the shadow of a great tragedy which struck the nation in the death of Jawaharlal Nehru, whose unique role as a leader in the forefront of India's struggle for independence and as Prime Minister of independent India for over 17 years has contributed a new and glorious chapter in the history of this ancient land. He was the architect of modern India and took a keen interest in all activities directed to promote the welfare of the country and the people. Only in June 1963 we were honoured by his visit to our oilfields in Assam and his appreciation of our work had been a source of encouragement and inspiration to us. The best way to honour his memory is to work hard in our limited spheres and thus contribute our mite to India's prosperity.

General : Oil is fast assuming a place of first importance in the industrial economics of the world and recent trends in uses of various commercial fuels indicate that the popularity of petroleum products and their proportionate use in industry has been going up steadily. Although India has a very low per capita consumption of Oil products, the economy of the future will require a rapid and steady increase of these energy sources. In the long run coal and hydraulic power sources may prove inadequate and nuclear energy will take a considerable time to replace traditional sources of energy. The combined requirements of energy and petro-chemicals in India leave no alternative therefore to the rapid development of the oil industry.

In the recent past the demand for petroleum products has been increasing at the rate of nearly 10 percent per annum and during the Fourth Plan period it is now expected to increase by 2 to 3 million tonnes annually. By the end of the Fourth Plan period, demand for all products is likely to go up to about 28 or 30 million tonnes. However, there is some difference of opinion about the total demand and how it will shape in future during the Fourth Plan period and it is not necessary for me to go into these details except to stress that the refineries based on imported crude should produce more of kerosine and fuel oil, for which there is a spurt in demand. The purpose of this review is to set a background for the functions of Oil India and the role it has to play in meeting this demand for petroleum products.

The country hopes to have a production of about 6 million tonnes of indigenous crude oil by the end of the current Plan and, of this, more than half will be contributed by the oilfields in Assam. When this quantity of oil is produced and refined at the public sector refineries of Gauhati and Barauni it will save imports of petroleum products of the value of nearly Rs. 40 crores per annum.

Oil Field Development : Despite the difficulties faced in acquiring land for drilling sites, Oil India Limited have achieved their drilling targets. An average of 74,154 feet per drilling rig was achieved which compares favourably with similar drilling efforts elsewhere in the world. Of the total wells drilled during this year, 2 wells were completed with a view to producing oil from two zones independently, popularly known as dual completion wells, and 3 deviational wells directed to tap oil reserves under the river bed. These were the first deviated and dual production wells to be drilled in India and Oil India can legitimately lay claim for these two "firsts" in their drilling programme. Another noteworthy feature of the drilling activities in Oil India's areas is that increases in the cost of material and labour and heavy expenses involved in exploration drilling have been offset by speed in drilling.

With the wells drilled and completed, Oil India is in a position to meet the requirements of the public sector refineries at Gauhati and Barauni, to the extent of its commitments. The refinery at Gauhati has been taking regular supplies of crude oil particularly since the latter half of this year, while the first unit of the refinery at Barauni is expected to go on stream in the near future. In fact some quantities of crude oil are being supplied to this refinery for "trial runs."

Exploration Activities : For the first working season, a seismic party from the Oil and Natural Gas Commission was employed to do seismic surveys in the New Exploration Licence Areas. In the second working season a seismic party from the Seismograph Services Limited was engaged in the fields. Both parties made excellent progress. Over 900 line miles of seismic reflection survey were completed during the two working seasons commencing February 1963 as against a target of about 700 line miles for this period.

The permits required to enable the personnel to enter the Exploration Licence Area in NEFA were not received until 5th February, 1964. However a ground survey was commenced on 6th February but later heavy monsoons interrupted the work and the party had to be evacuated with the assistance of helicopters.

Exploration drilling in the New Exploration Licence Areas was taken up side by side with seismic survey. This programme of surveys and test drilling, costing a total of about Rs. 2 crores will be continued throughout 1964 and early 1965.

Pipelines : Oil India's pipelines system in North East India connecting the oilfields with Government refineries at Gauhati, Assam and Barauni, Bihar, has been completed. This is the second longest crude oil pipeline in the East and one of the most modern and automatic of its kind in the whole world. This pipeline was constructed for Oil India by The Burmah Oil Company (Pipe Lines) Limited and I would like to pay here a tribute to all the project staff—labour, clerical and executive—and the various contractors and their men who worked hard to complete this extremely difficult job. After the completion of the pipeline The Burmah Oil Company (Pipe Lines) Limited, have been required to operate and guarantee the pipeline for a period of 12 months from January 1, 1964. Meanwhile the operational control without affecting the guarantee is being taken over by Oil India with the necessary integration of staff to which I propose to revert later. A little known fact of this project is that the final completion cost of about Rs. 45 crores was a little below the original estimate of Rs. 46 to Rs. 47 crores.

Crude Conditioning Plant : The crude conditioning plants at Nahorkatiya and at Moran, the first of their kind in the world and which were especially designed to make Nahorkatiya-Moran crude pumpable, were completed and operated during the year. These plants were actually constructed for Oil India by the Assam Oil Company, a subsidiary of The Burmah Oil Company—Government's partner in Oil India. Oil India has taken charge of these plants after thorough tests and these are now operational. The tests showed that the completed plants conform to pilot plant expectations and our thanks are due to Assam Oil Company and their staff for this job.

Industrial Installations and Domestic Buildings : Almost all the programmed construction work for 1963 on the various industrial installations and domestic buildings was completed during the year. One more oil collecting station was installed at Nahorkatiya making a total of six such stations there, and another similar station was completed at Moran, 95 domestic buildings of various types, together with the necessary roads, drainage and other services, were completed during the year and what was an impenetrable jungle a decade ago has turned into a thriving and prosperous town due to the oil find at Nahorkatiya.

Crude Supplies : The requirements of crude of the refineries at Gauhati and Digboi were met in full. The production will go up once the first unit of the Barauni Refinery goes on stream to be followed by the second unit.

Gas : Apart from nearly 10 million cubic feet of natural gas which will be required for oilfield uses, there is still a large balance which can be utilised for other projects. As at present, commitments have been made for the supply of nearly 45 million cubic feet of natural gas per day to various industrial projects ; 18 million cubic feet per day to the Assam State Electricity Board ; about 10 million cubic feet per day to the Assam Gas Company ; 8 million cubic feet per day to Assam Oil Company ; 8 million cubic feet per day to the Fertilizer Plant at Namrup ; and small quantities to brick kilns and tea gardens. Here I would like to assure the Government of India and the State Government of Assam that we, on our part, are prepared to supply the balance of the gas available with us to the industrial projects approved by them, and we can do so at a price which will be sufficient to enable Oil India to compress and store gas to the extent necessary to provide for uninterrupted supplies over the period required by the consumer.

Finances : The delay in the commissioning of the Barauni Refinery resulted in the offtake by the Indian Refineries Limited being much lower than originally anticipated. The consequent reduction in the anticipated cash inflow necessitated the use of larger overdraft facilities for working capital and general purposes and arrangements were made with the State Bank of India to make these available.

The rupee cost of pipeline construction was financed by Rs. 30 crores received in full on 6½% debenture stock 1968/77. The foreign exchange expenditure on this project was financed partly by a loan of £3 million from the U.K. Government to the Government of India under a U.K./India (Oil Pipeline) Credit Agreement 1959 and a sterling loan of £10,250,000 from the Bank of Scotland, U.K.

Dividend : The profit and loss account shows a net surplus of Rs. 336 lakhs after providing for depreciation, taxation and development rebate. This leaves funds available for the declaration of a dividend of Rs. 120/- per share of paid-up equity capital which is a minimum dividend of 9 percent after payment of all taxes including taxes payable on dividend. An interim dividend of Rs. 40/- per share of paid-up equity capital was declared in December 1963, and a final dividend of Rs. 80/- per share is now being recommended.

Staff : We are making advance arrangements now to take over the Pipeline and for this purpose additional staff have been taken on the payroll for maintenance and operation of the Pipeline. This process has almost been completed. The last years have been formative ones for Oil India and organisational problems have been tackled side by side with development work in the Mining Leases and exploration activities in the New Exploration Licence Areas. This has been rendered possible by the spirit of co-operation shown by all concerned at all levels—workers, clerical and executive—and here I would like to pay a tribute to their sense of duty and constancy. In particular I would like to mention that there was no industrial unrest, which is evidence of the consciousness on the part of the workers of their participation and keen interest in the national endeavour to produce more oil.

Lastly, I would like to thank my colleagues on the Board for their active assistance. In particular I would like to mention Mr. J. C. Finlay, M.C., Managing Director, and Shri P. Govindan Nair, I.C.S., Financial Director, who have worked most closely together to make this year a successful year for Oil India. I also take this opportunity of expressing my thanks to various Ministries of the Government of India especially the Ministry of Petroleum and Chemicals and State Governments of Assam, West Bengal and Bihar for their assistance in our work.

TATA ENGINEERING & LOCOMOTIVE CO. LTD.

STATEMENT OF THE CHAIRMAN, MR. J. R. D. TATA

The following is the statement of Mr. J. R. D. Tata, Chairman of the Tata Engineering & Locomotive Co. Ltd., for the year 1963-64.

Before I review the Company's operations during the past year, I must give expression to our profound sorrow at the passing away of our late Prime Minister. Although his failing health during the last year had given rise to some anxiety, his sudden death at the end of May stunned the people of India and, indeed the whole world, for Jawaharlal Nehru's status as a statesman and as a man transcended political and geographical frontiers. His fame, his writings, his struggles and sacrifices in the cause of freedom and peace were known in every country of the world and it is probably true to say that more people mourned his passing than that of any other man in modern history, with the exception perhaps of Mahatma Gandhi. It was possible to disagree with some of his and his Government's policies and decisions on political, international or economic issues, but it was impossible not to be deeply affected and influenced by his intellectual brilliance, his single-minded devotion to the causes he espoused, his courage, his innate goodness, the depth and tenderness of his solicitude for the afflicted, the opposed and the poor and and the love which he inspired amongst the people. Jawaharlal played a dynamic role in shaping world history during these two decades, but it is as the Maker of Modern India that he will be remembered and his memory forever enshrined in the hearts and minds of the people of India.

I am glad to report that the Company made good progress in its operations, profits and expansion during the past year which, however, was also marked by certain unhealthy developments culminating in the tragic events of March, 1964, to which I shall revert later in this review.

Production Rises

Output rose appreciably: the first stage of expansion to 18,000 vehicles is now virtually complete and work has started on the second stage intended to bring production up to 24,000 vehicles per annum. I am glad to report that the Agency for International Development has just approved of a further loan of $11.80 million (Rs. 5.62 crores) to finance the foreign exchange element of the second stage of the expansion programme. Orders for imported machine tools and equipment will be released shortly.

Operating profits for the year were Rs. 114.75 lakhs higher than in the previous year, but most of the excess was absorbed by increased allocations to depreciation. Development Rebate Reserve and taxation, so that the net increase in disposable profit was only Rs. 20.62 lakhs. The total amount available for distribution was thus Rs. 136.15 lakhs, which is some Rs. 8 lakhs short of the amount required to maintain the current dividend of 14½% on our enlarged capital. Your Directors have therefore, transferred Rs. 8 lakhs from the General Reserve and recommended the same dividend as last year. A total of Rs. 14 lakhs will thus have been drawn from reserves over the last two years towards the payment of dividends. This will have been fully justified as, barring some totally unforeseen set-back, the increased profit resulting from our expanding output should enable us without difficulty to continue paying the same dividend on ordinary shares in future. In fact, there are, in my view, good prospects of the Company being able to maintain the same rate of dividend even after the additional issue of 200,000 ordinary shares in the ratio of one new share for every five shares held, which is being recommended to you at such premium, not exceeding Rs. 50 per share, as the Controller of Capital Issues may prescribe and as may be agreed to by the Directors.

In view of the issue for the same amount made as recently as 1963, your Directors would have normally preferred to postpone the present recommendation for a year or so, but the extraordinarily large and rapid expansion of the Company and the growing imbalance in the Company's capital structure make a further issue imperative and urgent.

Debt-equity Ratio

In relation to total funds employed of about Rs. 44 crores (including Rs. 25 crores of debt), which are expected to rise to about Rs. 60 crores by 1966, our present share capital of Rs. 12 crores is clearly disproportionately small, while our debt-equity ratio will be unacceptably large if the share capital is not increased and the amount is borrowed instead. An issue of shares is therefore required not only to provide urgently needed funds but also to improve the debt-equity ratio to which the A.I.D., like the World Bank, attaches considerable importance.

Your Directors realise that these are difficult times for shareholders to find additional funds to invest. In view, however, of the special and urgent requirements of the Company, the recent indications of a revival in the state of the market and the fact that the new shares may be expected to earn a dividend of 14½% from the date of issue, equivalent to 9.7% on capital plus premium. I am sure shareholders will approve the recommendation which is also subject to the approval of the Controller of Capital Issues.

Although about half of the capital of the Company is institutionally held and only one and a half crores Rupees or so will therefore be obtained from individual subscribers, the Directors have recommended, in order to lighten the burden on shareholders, payment of the amount for the new issue in two installments, one in November this year and the other in May, six months later.

The demand for Tata Mercedes-Benz vehicles continues unabated and in spite of the steady increase in our output, we have so far failed to catch up with it. Ever since we commenced production of these vehicles, they have been the first choice of the transport operator because of the quality, performance and ruggedness built into them. There are today more Tata Mercedes-Benz vehicles on the road than any other make.

There are misguided people who assume that bigness in Private Sector enterprises, particularly those which supply a significant proportion of the total market for any product, results in the exploitation of the consumer and is therefore against the public interest. The manner in which your Company has used its pre-eminent position in the field of commercial vehicles should provide a telling answer to such a belief.

Between October, 1959, when the Company completed the initial phase of its struck manufacturing programme, and today, the price to a customer in Bombay of the TMB 312/42 model—the most popular model in our range—increased from Rs. 30,455 to Rs. 37,619, i.e., by Rs. 7,164. During the same period, the sales, excise and other taxes charged on this vehicle by the Central and State Governments increased by Rs. 6,780, while the cost of imported materials and components rose by Rs. 739, a total of Rs. 7,519. Therefore, over the last five years which witnessed a disturbing and continuous rise in the price of practically every product, commodity or service in the country, the price of the TMB vehicle excluding the above two items has actually fallen in spite of the continuous incorporation of a number of major improvements to the vehicle, the cost of which was absorbed by the Company, and in spite also of the fact that the price of locally made ancillary items invariably exceeded the price of the imported ones which they replaced.

Keeping Prices Low

The point to be noted in this context is that the Company could not have fulfilled its desire to keep its prices low in the interests of the consumer and the country if it did not have the benefits of large-scale production.

If Government had not sanctioned the successive expansion schemes of Telco, as they wisely did, there is no doubt that the user of Tata Mercedes-Benz vehicles would be paying a substantially higher price than he is paying today, while the country would have been deprived of the full benefits of a powerful, versatile and highly productive engineering unit, geared to meet both civilian and military requirements, and also of most of the substantial contributions which have accrued to the public exchequer as a result of the Company's operations. It is noteworthy that during the year under review, public revenues were enriched, as a result of Telco's operations, by as much as Rs. 16 crores, in import and excise duties, sales taxes and taxes on profits.

But this is by no means the full measure of our Company's contribution to the Indian economy. The Company has created direct employment for over 16,000 men, whom it has, over the years, trained to a high degree of skill. The importance of this contribution should not be underestimated, for the economic growth of a country depends just as much on the specialised skills of its workers, technicians and managers as on machines, raw materials and finance.

Finally, the large-scale development of Tata Mercedes-Benz vehicles has helped to establish a number of ancillary industries in the country, the lack or insufficiency of which in the past has been one of the main obstacles to the rapid development of the automobile industry. All in all, we can be justly proud of our performance during the last decade which, in terms of growth and service to the country is probably unsurpassed by any other company in the country.

I have referred earlier to the large revenues accruing to the National Exchequer as a result of our operations. As the cost of Government's various imposts is largely included in the price of our vehicles it is the user who ultimately bears this heavy initial burden; but that is only the beginning so far as he is concerned. On an average, every commercial vehicle in regular use for highway transport pays every four years in taxes alone a sum in excess of its original cost. Of all economic activities in the country, none to my knowledge bears such a crushing burden of tax as the road transport industry. It is, I believe, a fact that the incidence of taxes and duties alone in every ton-mile of road transport equals the total amount charged by the Railways for a ton-mile by rail. In addition to crippling taxation, the road transport industry suffers in a number of ways from Government policies and is burdened with such a maze of outmoded restrictions as to prevent it from playing in full the role it would in the country's economic development. That in spite of these conditions, road transport in India has grown to such an extent that it is now estimated to carry half the country's passenger traffic and over a fifth of its freight, reflects the road transport industry's technological advantages as well as the initiative, perseverance and resiliency of its operators.

Transport Policies

India has one of the world's largest railway systems born long before motor vehicles came into existence. As a result, the transport policies of successive administrations have invariably been based on "railway thinking" with little consideration given to alternative forms of transport. This thinking has dominated official attitude to transport problems to a degree which is probably unique in the world. India must surely be one of the few countries where such numerous and oppressive barriers continue to be placed in the way of the development of road transport while railway mileage continues to be expanded at tremendous cost. How else can one explain the restrictive regulations that are imposed by the numerous State Governments which make inter-State trucking a nightmare for operators and long-distance trucking virtually impossible? These restrictions include difficulties and long delays in obtaining permits for inter-State operations, limitations on the number of permits issued for some routes and the temporary nature of permits that make long-term investment in motor transport hazardous. Multiple taxation of vehicles and sometimes taxation of the cargo add to the difficulties. The result is that inter-State traffic is reserved to the Railway to a degree which fails to take into adequate account that for some goods the speed and other advantages of highway transport are very important. What is needed is a system where inter-State trucking permits for operating through any State should be issued by a central authority. The permits should carry a fee sufficient to absorb all the State and local vehicle taxes at present levied. The permits should be given for one year and automatically renewed unless the holder has his permit revoked for some violation. These should not be limited in number for the trucking business attracts thousands of small operators who should be permitted to develop the traffic.

It is unfortunately apparent, from a recent announcement of the Railway's share of about 70% of the total proposed investment in surface transport in the Fourth Five Year Plan, that Government's thinking on the subject is as Railway-dominated as ever and that the prospects of some relief to the road transport industry and of an improvement in the operating conditions are dim indeed. I feel that the time has come when a comprehensive and impartial study of the economics of transportation in India needs to be undertaken by an independent body. An explicit analysis of benefits and costs will, I am sure, reveal that greater investments in highways and some relief to the road transport industry are not only fully justified but urgently needed.

Labour Situation

I have kept to the last a reference to the unhealthy developments mentioned in my opening paragraph which marred an otherwise satisfying year of progress. I am referring to the labour situation as it developed at Tatanagar during the past twelve months and to the shocking events which brought such misery and shame to Jamshedpur during the month of March last.

The labour situation at the Telco Works has been increasingly unsatisfactory during the last year and particularly since the beginning of 1964. Internal rivalries between two groups within the recognised Telco Workers' Union have been mainly responsible for the deteriorating situation and the blame must squarely attach to the dissident group which, notwithstanding the fact that its claim for control of the Union was, and still is, the subject of proceedings before the Patna High Court, carried on an intensive agitation which far exceeded the bounds of legitimate trade union activities. In its attempt to force its demand for recognition, this group resorted to widespread intimidation not only of workers but also of supervisory personnel. Indiscipline, defiance of constituted authority and unpunished intimidation, threats of violence and actual violence create an atmosphere where crime and lawlessness find it easy and profitable to rear their ugly heads.

We have constantly sought the assistance of the Central and State Governments, in addition to doing everything possible ourselves, to restore normalcy and are grateful to them for their assistance. I earnestly hope that stern action will be taken against those who, under the guise of trade unionism, deliberately create problems of law and order and prevent the full utilisation of industrial capacity urgently needed by the country. The recent communal disturbances have shown how easy it is for a handful of mischievous and anti-social persons to lead masses of people to planned acts of violence.

Large Industrial Centre

With its thousands of tough and hardy men drawn from all parts of the country, a large industrial centre like Jamshedpur-Tatanagar obviously contains explosive possibilities of trouble and therefore requires the maximum of alertness coupled with firm and ment of factories and those charged with the maintenance of law and order. The scope for Management to maintain discipline and prevent acts of violence and intimidation is largely limited to the shop floor whereas in this case, agitation and violence grew and flourished largely outside the Works.

Perhaps one of the reasons for the inadequacy of law and order enforcement in the area, is the fact that although the city of Jamshedpur-Tatanagar is the second largest in the State of Bihar and one of the largest and most vital industrial centres in the whole country, it is still constitutionally treated for administrative purposes as a sub-division of a district, the headquarters of which are not even Jamshedpur but Chaibasa which is a minor town in the area. We have urged that consideration should be given to upgrading Jamshedpur to an administrative status within Bihar commensurate with its importance and the magnitude of the task and problems of administering it.

While looking forward to another year of progress. I wish to acknowledge the diligent efforts of our employees, suppliers and dealers which have made possible the good results before you in spite of the many difficulties and obstacles which faced them. In particular, our officers at Tatanagar, Indian and German, deserve our gratitude for the hard work they put in and the fortitude with which they faced difficult and harassing situations.

Note :—This does not purport to be a record of the proceedings of the Annual General Meeting.

UNIT TRUST OF INDIA

(ESTABLISHED UNDER THE UNIT TRUST OF INDIA ACT, 1963)

Units Are Now On Sale

Units of the face value of Rs. 10/- each, available in multiples of ten, are being sold initially at Rs. 10/- upto 31st July 1964.

Investment in units gives you major advantages ;

- Assured Income
- Liquidity of Investment
- Safety of Capital
- Important Tax Concessions

UNITS ARE AVAILABLE AT ALL BRANCHES OF THE FOLLOWING BANKS :

State Bank of India, State Bank of Hyderabad, State Bank of Mysore, State Bank of Bikaner & Jaipur, State Bank of Indore, State Bank of Travancore, State Bank of Saurashtra, State Bank of Patiala, Bank of India, Central Bank of India, Punjab National Bank, Indian Overseas Bank, Indian Bank, United Commercial Bank, Canara Bank, Bank of Baroda, National & Grindlay's Bank, Syndicate Bank, Devkaran Nanjee Banking Co., United Bank of India, Andhra Bank, Allahabad Bank, Chartered Bank of India, Bank of Behar, New Bank of India, First National City Bank, Mercantile Bank, Hongkong and Shanghai Bank, Krishnaram Baldeo Bank, Tanjore Permanent Bank, Bank of Rajasthan, Lakshmi Commercial Bank, Hindusthan Mercantile Bank, Bank of Maharashtra, Union Bank of India, Netherlands Trading Society, Oriental Bank of Commerce and British Bank of the Middle East.

Also from sharebrokers registered with Stock Exchanges at : Ahmedabad, Bangalore, Bombay, Calcutta, Delhi, Hyderabad, Indore and Madras.

UNIT TRUST OF INDIA

POLAND'S CONTRIBUTION TOWARDS

INDIA'S DEVELOPMENT

THE POLISH STATE ENTERPRISES OFFER ON RUPEE PAYMENT THE FOLLOWING MACHINERY, EQUIPMENT AND SERVICES:—

CEKOP
Mokotowska 49, Warszawa

SUPPLIERS OF COMPLETE EQUIPMENT FOR INDUSTRIAL PLANTS for Heavy Engineering Industry, Shipyards, Power Stations, Building & Building Material Industry, Chemical Industry, Agricultural and Food Industry and other industries.

POL SERVICE
Poznanska 15, Warszawa

SUPPLIERS OF TECHNICAL SERVICES—Technical documentation, drawing up technical and economic project reports, supervision of construction, training and instructing technical personnel, providing the services of specialists and technical assistance during initial period of operation.

METALEXPORT WARSZAWA
Mokotowska 49

SUPPLIERS OF MACHINE TOOLS FOR Metal-Cutting, non-Cutting, shaping. Metallurgical Industry and Railway Repair Shops, Textile Machinery and Accessories, Railway Rolling Stocks, Wood Working Machinery, Pumps, Compressors and other Machinery.

POLIMEX
Czackiego 7/9, Warszawa

SUPPLIERS OF Crushing and Distintegrating Equipment, Housing Equipment, Excavators, Building Machinery, Machines and Installation for Chemical, Rubber Processing Plastics, Food Processing and Pharmaceutical Industries, Flour Milling Machinery and Bakery Equipment.

CENTROZAP
Plebiscytowa 36, Katowice, Poland

SUPPLIERS OF MACHINERY AND EQUIPMENT for Mining Industry, Foundries and Metallurgical Industry, Drilling Rigs and Tools for Geological Exploration and Exploitation, Hoisting and Transport Equipment, Anti-Gas Equipment, Welding Equipment and Rolls for Rolling Mills.

Elektrim
Czackiego 15/17, Warszawa

SUPPLIERS OF ELECTRICAL EQUIPMENT—Power Station, Generating Equipment, Diesel Generating Sets, High and Low Voltage Switchgears and Transformers, Flame-proof Mining Equipment, Fork Lift Trucks, Welding Sets and Measuring Instruments, etc.

Ciech
Jasna 12, Warszawa

SUPPLIERS OF CHEMICALS AND PHARMACEUTICALS—Pharmaceutical Products, Dyestuffs, Auxiliary Products and Intermediates, Inorganic and Agrochemical Products, Organic Products and Fine Chemicals, Coal-tar Derivatives and Pressed Carbon Products and Photochemical and Photographic Goods, etc.

For further information please contact:—

FOURTH PLAN PORT PROGRAMME ESTIMATES REVISED

(FROM OUR NEW DELHI CORRESPONDENT)

THE experts of the Planning Commission have tentatively recommended a total provision of Rs. 200 crores in the fourth plan for the port development programmes and the Sethusamudram canal project, against the earlier proposal for allocating Rs. 242.5 crores for these development schemes. The Commission feels that an allocation of Rs. 150 crores for major ports, Rs. 30 crores for minor ports and Rs. 20 crores for the Sethusamudram canal project will be sufficient for their development. The Working Group on Port Planning, it will be recalled, had estimated the expenditure on the development of major ports at Rs. 176.5 crores. It was earlier thought that the development of minor ports and the Sethusamudram project would require Rs. 45 crores and Rs. 21 crores, respectively.

The revised estimates given by the Planning Commission are also stated to be only of a rough nature. They might be pruned even further in the light of the detailed studies which have been suggested by the experts before finalising the port development programmes under the fourth plan.

The Commission's experts have further recommended that apart from expanding port capacities, more attention should now be paid to increasing the efficiency of port operations and management. The manpower training plans for ports, the experts think, have not received adequate consideration in the past. Without adequate manpower planning and the drawing up of proper programmes for fresh recruitment, they say, not only will the present technical and administrative weaknesses of the port authorities remain, but will become even more marked in the future.

Realistic Programmes Needed

For drawing up realistic programmes for the development of various ports, the Commission's experts have suggested that each port authority should be suitably equipped. Except for Calcutta and Bombay, the other port authorities at present do not have sufficient technical personnel for preparing feasibility studies, much less detailed projects. It has been recommended that while the Calcutta and Bombay ports should take early steps to develop and strengthen their technical organisations on their own with a view to assisting other ports, the Central Ministry of Transport should organise a well-equipped technical organisation capable of undertaking investigations, preparation of project reports and the supervision of construction of difficult works.

The Commission's experts have further recommended that to the extent possible, for a number of ports at any rate, it would be desirable to establish a "pool" for higher technical and administrative personnel. This will help achieve high levels of competence, attracting able men to work in ports and create a greater sense of security in port personnel.

The experts have also suggested that the shortage of engineering and harbour research facilities should be removed expeditiously. Another matter that should receive immediate attention, the experts think, is the modernisation of port equipment. Efforts should be made to increase progressively the indigenous production of modern equipment required at the ports.

The total traffic handling capacity of the major Indian ports is expected to go up to about 121 million tonnes by 1970-71. At the end of the current plan, it is expected to be of the order of 62 million tonnes.

LUBRICATING OILS

Production under Fourth Plan

Some more details are now available of the fourth plan programme for raising the production of lubricating oils in India. The private oil companies have estimated that the demand for lubricating oils will go up during the fourth plan period at a compound rate of about 11.2 percent a year—from about 550,000 tonnes in 1966 to nearly 925.000 tonnes in 1971. The Indian Oil Company in the public sector, however, considers the estimate of the private-sector companies on the high side. It expects the demand for lubricating oils to go up in the fourth plan at a compound rate of 10 percent a year—from nearly 500,000 tonnes in 1966 to about 800,000 tonnes in 1971. The Central Ministry of Petroleum and Chemicals, it is understood, is planning for the production of lubricants to the tune of about 850.000 tonnes in 1971. The Ministry's estimate places the 1966 demand around 525,000 tonnes.

As only about 70,000 tonnes of lubricating oils are expected to be available from the indigenous sources in 1966—25,000 tonnes from the Assam Oil Company's refinery in Digboi and about 45,000 tonnes from the Barauni refinery in the public sector—it is proposed to set up five lubricating oil manufacturing units during the fourth plan period to bridge the gap between the anticipated requirements and domestic supplies. One of these plants is to be set up in equal partnership between the Government and the Esso Standard Eastern in Trombay. It will have a capacity of 145,000 tonnes of lubricants a year. The second plant with a capacity of 200,000 tonnes may also be put up in Trombay in partnership with Burmah-Shell. The other three plants are proposed to be located in Cochin or Madras, Koyali and Haldia. The Cochin-Madras plant may have a capacity of 100.000 tonnes, and the Koyali and Haldia units a capacity of 140.000 tonnes to 150.000 tonnes each. The Barauni lubricating oil plant is also proposed to be expanded.

According to the present thinking of the Central Ministry of Petroleum and Chemicals, the Esso and Burmah-Shell plants should go into production in 1966-67, the Cochin-Madras and Koyali plants in 1967-68 and the Haldia unit in 1969-70.

It is estimated that the five plants will cost about Rs. 35 crores, with a foreign exchange component of slightly over Rs. 20 crores. With the setting up of these plants, it is hoped, the lubricating oil requirements of the country will be met largely from indigenous sources. Some special types of lubricants may, however, still have to be imported.

BONUS REPORT

Objections from States

The implementation of the Bonus Commission's recommendations in toto, it is learnt, has been objected to by several States and Central Ministries. They are understood to have expressed serious concern over the consequences the Commission's recommendations will have on the profitability of many a public-sector enterprise and the price level in the country.

The matter is shortly expected to be referred to the Economic Secretaries Committee. The issue is also likely to be discussed at the Bangalore session of the Indian Labour Conference. The Central Cabinet will consider the report only after the Economic Secretaries Committee has submitted its recommendations.

The Central Labour Ministry is stated to be greatly worried because all the trade union organisations in the country have been demanding an early acceptance and implementation of the report. One organisation has even threatened to launch agitation if the Government does not arrive at a decision at an early date.

TEA INDUSTRY

New Committee Set Up

The Government of India has appointed a 21-member committee for suggesting ways and means to strengthen the financial base of the tea industry.

The Committee is headed by Mr. V. V. Chari, Additional Secretary to the Central Ministry of Finance. Its other members are Mr. P. C. Barooah, M.P.; Mr. Rameshwar Tantia, M.P.; Mrs. Akkamma Devi, M.P.; Mr. B. N. Adarkar, Additional Secretary, Central Ministry of Finance (Department of Economic Affairs); Mr. N. S. Pandey, Joint Secretary, Ministry of Finance (Industry and Supply Division); Mr. A. S. Bam, chairman, Tea Board; Mr. H. K. FitzGerald, chairman, Indian Tea Association, Calcutta; the president, United Planters Association of Southern India, Coonoor; Mr. B. C. Ghose, Indian Tea Planters Association, Jalpaiguri; Mr. P. Crombie, Senior Adviser to the Indian Tea Association, Calcutta; Mr. Vinod Parekh, Managing Director, J. Thomas and Co., Calcutta; a representative each of the Governments of Assam, West Bengal, Madras and Kerala; Mr. B. K. Kacker, Secretary and Treasurer, State Bank of India, Calcutta; Mr. V. Sivaraman, Managing Director, Agricultural Refinance Corporation, Bombay; Mr. R. B. Shah, General Manager, the United Commercial Bank Ltd, Calcutta (alternate member-Mr. K. M. Krishnamurthy, Manager, the Bank of Baroda Ltd, Calcutta); Mr. P. Chentsal Rao, Secretary, the Federation of Indian Chambers of Commerce and Industry, New Delhi; and Mr. K. M. Kidwai, Director of Tea Development, Tea Board, Calcutta. Mr Kidwai has also been nominated as the Secretary of the Committee. The Committee will have powers to co-opt other members as well.

The terms of reference of the Committee are as follows: (1) To examine the financial position of the tea industry with particular reference to the requirements of increase in production and exports;

(2) To review the financial assistance available to the industry from the Tea Board and banking institutions and to suggest the simplification of precedures relating to it;

(3) To make recommendations on the provision of finance required by the industry;

(4) To examine the structure of taxes on tea and to suggest appropriate measures for giving tax relief where necessary;

(5) To make any other recommendation that the Committee may deem appropriate for the development of the industry.

The Committee will submit its report to the Government within three months.

PUBLIC SECTOR

Role under Fourth Plan

The Planning Commission is reported to be considering an additional rôle for the public sector during the fourth plan period. The proposal is that, apart from its normal part, the public sector should be in a position to step up production in good time if the private sector fails to perform its allotted tasks.

The move, it is understood, has been made in view of the failure of the private sector to play its allotted rôle during the current plan period in such vital industries as fertilisers and cement. It is feared that there will be big shortfalls in the production of these industries during the third plan period.

If the proposal is accepted, there may be a reserve for the public sector in the fourth plan allocation for it. The revocation of industrial licences issued to the private sector may also be resorted to if there are indications that not much progress is likely to be made within a specified time in implementing the projects.

STEEL

Raising Output

The Planning Commission is understood to have endorsed the feasibility of increasing the steel output during the fourth plan to 17.3 million tonnes of ingots, as recommended by the Working Group on Steel. This implies almost the doubling of the estimated production of 8.9 million tonnes of ingot steel at the end of the current plan.

The expansion of the existing steel plants—T.I.S.C.O.'s to 3 million tonnes, I.I.S.C.O.'s to 2 million tonnes, Bhilai's to 3.5 million tonnes, Durgapur's to 3 million tonnes and Rourkela's to 2.5 million tonnes—will take the production to 14 million tonnes. The Bokaro plant will yield another 1.5 million tonnes. The rest of the output will come from the Salem steel plant and the one other unit proposed to be set up in the Goa-Hospet or Visakhapatnam-Bailadilla area.

M.M.T.C.

Bulk Imports of Steel

The Minerals and Metals Trading Corporation (M.M.T.C.), it is learnt, may soon be entrusted with bulk imports of steel. Imports of special steels, bulk purchases of which are

not considered practicable or economical, may be left in the hands of private importers.

The move to canalise bulk imports of steel through the M.M.T.C., it is understood, has been made because of the feeling that under the present system, private importers are making huge profits on steel imports. The entry of the M.M.T.C. in the steel import trade, it is felt, will not only rationalise steel imports but will also strengthen its bargaining position for selling manganese ore on a barter basis.

The selling prices of the steel imported by the M.M.T.C. will be determined by the Central Ministry of Steel. The profits earned by the Corporation on its steel imports are proposed to be utilised for offsetting the losses incurred by it on exports of manganese ore or other such difficult-to-sell mineral ores.

Manganese Ore Exports

The two-member M.M.T.C. team which recently visited the United States and Europe for studying mineral ore export markets there is stated to have expressed the view that the U.S. and Continental buyers may go in for increased imports of manganese ore from India. The prospects for raising manganese ore exports to Japan are now rated high.

The Corporation plans to enter into long-term contracts with foreign buyers for the export of manganese ore. Initially, it is proposed to negotiate deals for exporting about 1 million tons of manganese ore a year. Although manganese ore has been recently allowed to be exported by the Indian mine-owners on their own, it is felt that they may not be able to export much, since the Indian prices are higher than those in the world market. The M.M.T.C. proposes to enter into contracts with mine-owners against the arrangements it makes with foreign buyers.

INDUSTRIAL LICENSING

Lists Revised

The Government of India has revised the two lists of industries for which applications for licences under the Industries (Development and Regulation) Act will continue to be considered on merits or ordinarily rejected without reference to the Licensing Committee.

Eight new industries have been added to the banned list. These include certain auto-ancillaries, industrial fans and blowers, winding wires, bleaching powder, bicycle tyres and tubes, sodium aluminate and rubber accelerators. The banned list now consists of 195 industries—89 engineering and 106 non-engineering industries.

Eighteen industries have been deleted from the banned list and put on the open list. These include the manufacture of calculating machines, refrigeration plants for industrial use, pulp and paper-making plants above 25-ton capacity, power and industrial alcohol, asbestos sheets and pipes, glazed tiles, plasticisers, P.V.C. resins and compositions, fertilisers, etcetera. The open list, comprising 79 engineering industries and 70 non-engineering industries, however, does not exhaust the fields in which new industrial licences may continue to be granted. Both the lists are valid up to 31st December, 1964.

The following is the list of industries for which applications for licences will continue to be considered on merits:

(A) *Engineering industries*: agricultural machinery; air rifles; aluminium ingots; biscuits and bread-making machinery; boats and crafts; boilers; calculating machines; cast iron castings; cement machinery; centrifugles; ceramic machinery; chemical and pharmaceutical machinery; chip board and fibre board plants; cigarette making and tobacco machinery; coal mining and washing machinery; coated abrasives; construction machinery; conveyers; dairy machinery; drilling equipment; dry cells; electric furnaces; electric lamps; electric motors (above 10 horse-power); electrical measuring instruments; electronic components; electronic measuring and testing equipment; fractional horse-power motors; grinding media balls and cylpebs; grinding wheels; hacksaw blades; H. T. bolts and nuts; hand tools (hammers, screw drivers, etcetera); heavy earth-moving equipment (except shovels) 11-motorised dumpers; motorised scrapers, motorised graders; industrial gas plants; industrial sewing machines and sewing machine parts; jute machinery—carding engines, drawing frames, H. S. centrifugal spinning frames, H. S. high draft first drawing frames, H. S. high draft second drawing frames, jute machinery and parts (including jute silver spinning frames), self-doffing silver spinning frames and spinning frames; lifts; light house equipment, machine screws (socket head, allen and other specialised types); machine tools; malleable cast iron castings; malleable pipe fittings; medical and surgical instruments, equipment and appliances; metallurgical machinery; oil firing equipment; oil mill machinery; oil separators; paper and pulp-making plant (above 25-ton capacity); picking bands; plastic industrial machinery; power factor correction capacitors; power rectifiers; pumps; rayon plants; refrigeration plants for industrial use; rice, dals, wheat flour mill machinery; small tools (threading tools, milling cutters and reamers); soap and cosmetics machinery; speed reduction units; steel castings; steam engines and turbines; steel files; steel forgings; steel pipes and tubes (seamless and expansions in welded to make existing units economic); steel structurals; steel wire mesh (other than welded wire mesh); storage batteries; strips cold rolled (M.S., alloy steel and box strappings); switchgear and controlgear (below 35 kV)—H. T. switchgear (below 33 kV), iron-clad switches and switchfuse units, L. T. switchgear, hotor controlgear; textile machinery; tinplates; tool bits (lathe tools); tractors, harvestors and the like; transformers; typewriters; weighing machines; weights and measures; and X-ray equipment.

(B) *Non-engineering industries*: Acetyl chloride; activated carbon (only superior grade); aerated waters; alcohol—industrial and power; amyl acetate; antimony (expansion cases only); asbestos cement sheets and pipes; bromine; canned fruits and fruit products; caustic soda and chlorine; cement; chip board (particle board); chlorinated paraffin; chloro-sulphonic acid; chocolate; citric acid; cocoa powder; copper salts (excepting copper sulphate); cottonseed oil (organised sector); dextrose powder; essential drugs and pharmaceuticals; ethyl acetate; ethylene dibromide and ethylene dichloride; fatty acids; ferric chloride; fibre board and hard board (including insulation board); fuller's earth; fuming sulphuric acid; gypsum board; glass shells for tubes and lamps; glazed tiles; glue; glycerene; grease; high temperature and voltage refractories excepting insulators; industrial explosives; laboratory glassware (borosilicate type only); leather belting; liquid glucose; liquid sulphur dioxide; man-made fibres except viscose tyre yarn and viscose filament yarn; marine paints; metallic stearates; milk powder; mixed fertilisers; mono-chloro acetid acid; nitrogenous fertilisers; P.V.C. resins and compositions (expansion schemes only); paints, enamels and varnishes; penicillin and neutral glass vials; plasticisers; polythene films and layflat tubings and pipes; potassium chloride; potassium and sodium ferrocyanide and sodium cyanide (by producers of acrylic plastics only); rosins and turpentines; soda ash; sodium silico fluoride; solvent extraction of oilcakes and rice bran; superphosphates; synthetic detergents; synthetic resins; tartaric acid; tetra chloro ethane; textile auxiliaries; urea (technical grade); urea formaldehyde moulding powder; urea formaldehyde resins (for plywoods); wall boards; yeast; and zinc sulphate.

Applications to be Rejected

The following is the revised list of industries for which applications for licences may ordinarily be rejected without reference to the Licensing Committee.

(A) *Engineering industries*: Agricultural implements (excluding tractor drawn); air compressors (expansion of the existing units for compressors up to 700 cfm. will be permitted); aluminium strips, sheets, circles, foils, extruded rods and sections; antimony (except for expansion schemes); motor-car ancillaries (only expansion or diversification in the range of the same products of the existing units will be considered) —axles, brake assembly, brake drums, brake linings, carburetters, clutch plates and clutch assemblies, distributors, dynamos, electric horns, filters, fuel injection equipment, gaskets, gasolene tanks, gears and shafts, head-tail and side lamp fittings, ignition coil, inlet and exhaust valves, jacks (hydraulic, mechanical and manually operated) up to 100 tons capacity, king pins, oil seals, panel instruments, piston assembly, including piston rings and piston pins, push rods, radiators, regulators, rocker arms, shackle pins, shock absorbers, silencers, muffler pipes, etcetera, spark plugs, starter motors, tappets, thin walled bearings, tie rod ends, tipping gears, tyre inflators, valves for tyres and tubes, wheels for motor vehicles and agicultural tractors; ball and roller bearings (except when the expansion is desirable for making the unit an economic one); barbed wire, bare copper conductors; bare copper strips; bicycles and bicycle parts (except when expansion of bicycle tube valves is desirable for making the unit an economic one); bifurcated rigets; bolts, nuts and rivets; brass and copper extruded pipes and tubes, and extruded rods and sections and sheets, circles and strips; car lifts; cast iron pipes including spun pipes; chaff cutter blades; cinema arc carbons; circles, sheets, rods and utensils of stainless steel: collapsible tubes and rigid container; commercial vehicles (except expansion schemes); conductors (A.C.S.R./A.A.); conduit pipes; conveyor belting; virgin copper; copper wire for non-electrical purposes; cotton and hair belting; crawler tractors; domestic utensils; domestic refrigerators; drawing of wire mild as well as special steel; drop forged tools, drums and barrels and tin containers excepting those for manufacturers' own requirements; electric fans; expanded metal; ferro-manganese; ferro-silicon; flash light and torch containers; fork life trucks and the like; heavy earth-moving equipment (only shovels); household appliances such as electric irons, heaters and the like, hurricane lanterns; H. T. switchgears 33 kV and above; industrial fans and blowers; internal combustion engines, including petrol, kerosene and marine engines (except expansion schemes); jeep type vehicles and station wagons; kerbside petrol pumps; lead (virgin); meters (single and polyphase); miniature lamps (except motor-car headlight lamps); motor vehicles and scooters, autocycles, mopeds and three-wheelers; non-ferrous alloys; non-ferrous castings (including pressure die castings); paper and pulp making plants up to a capacity of 25 tons a day, including wire-cloth for paper machinery; passenger cars; photoflash lamps; plates and sheets (M.S.)—(except for main producers); railway wagons (except when the expansion is desirable for making the unit an economic one); razor blades; road rollers (expansion and diversification of the existing units will be considered); rolling shutters; room air-conditioners; rubber ply transmission belting; solvent extraction plant; saws of all types (excluding hacksaw blades); steel pipes and tubes (welded) (except when the expansion is desirable for making the unit an economic one); steel doors and windows, steel sheets (black)—galvanising and corrugation (except for main producers); steel measuring tapes; steel—re-rolled products including wire rods; stranded wire; sugar mill machinery (except milling plant and centrifugals); tea processing machinery; trailers (except expansion of existing units); tungsten carbide tips and their intermediates; twist drills; vacuum cleaners; V.I.R. and P.V.C. cables (except power cables); washing machines (except industrial washing and dry cleaning machines); water coolers and ice plants; water meters; welding electrodes (except when the expansion is desirable for making the unit an economic one); welded wire mesh; winding wires; wire—M.S. Med/H.C. and special wire; wire nails; wire ropes (except when the expansion is desirable for making the unit an economic one); wood screws; zinc (virgin); and zinc sheets and strips.

(B) *Non-engineering industries*: Abrasive grains, including silicon carbide; acetic acid; activated bleaching earth; art silk weaving, hosiery, twisting, doubling and synthetic yarn crimping and stretching by other than primary yarn manufacturers; azo dyes; barium carbonate; barium chloride; barium nitrate; barium sulphate; basic dyes; beer; beta naphthylamine; bichromates; blanc fixe; bleaching powder; borax and boric acid; bottles and vials (excluding penicillin vials); brake fluid; calcined petroleum coke; calcium carbide; calcium carbonate (precipitated and activated); camel back; camphor; carbon black; carbon dioxide gas (other than by-product carbon dioxide); carboxy methyl cellulose; cashew kernels (applications from new areas to be considered on merits); cellulose acetate flakes for moulding powder; cellulose film (cellophane); copper sulphate; cosmetics and toiletries; cotton mesh fabrics; D.D.T. (excepting for expansion); dissolved acetylene gas; drugs and pharmaceuticals—antibiotics—penicillin, streptomycin and tetracycline, anti-dysentry drugs which are quinoline derivatives, bismuth salts, chloral hydrate, empty hard gelatine capsules, P.A.S. acid and salts, salicylie acid—sodium salicylate, acetyle salicylic acid, sulpha drugs, surgical adhesive tapes, vitamin "A", vitamin "C"; east India tanned (semi-tanned) kips and skins; fast colour bases; fire works and paper caps; gelatine (edible, photographic and technical, except pharmaceutical); glass, mineral wool and allied products; glass fibre and its products; glass—hollow-ware (semi-automatic); glass—table and pressed-ware; glass tubes and rods (hand-made), sheet glass, glass-bottles, wired, figured and rolled glass; graphite electrodes; H.T. and L.T. insulators; hoses (vacuum brake); hoses—other types; hydrogen feroxide; laminates (industrial and decorative including malamine laminates); lead oxides; manganese metal and manganese dioxide; match; menthol; methanol; myrobalan extract; napthols; newsprint (applications for substantial expansion from existing units as well as applications for the setting up of new units in areas where raw material resources have remained untapped would be considered on merits); nitric acid; organic pigments; oxygen gas (as applied for the cutting and welding of steel only); paper and paper board (applications for a substantial expansion from existing units as well as applications for setting up new units in areas where raw material resources have remained untapped would be considered on merits); pesticidal formulations (except formulations based on B.H.C., melathion and dithio carbomate); P. F. moulding powder; phenol; photographic raw film and paper; phthalic anhydride; polystyrene; polyethylene; polyvinyl acetate; potassium chlorate; potassium permanganate; processing (excluding printing) of cotton textiles, P.V.C. resins and composition (except expansion schemes); pulp—paper and rayon grade (applications for a substantial expansion from existing units as well as applications for setting up new units in areas where raw material resources have remained untapped would be considered on merits); rayon tyre cord yarn; reclaimed rubber; refractories; refrigeration gases; rubber accelerators and antioxidants; sanitary ware; soap; sodium aluminate; sodium bicarbonate; sodium hydrasulphite and derivatives; sodium sulphite, bi-sulphite and sulphide; sodium thio sulphate; sulphuric acid (except when it is required for captive consumption); sulphur black; sulphur dioxide gas; sulphur dyes—others; synthetic rubber (SBR type); synthetic tops; textiles made of art silk; motor-car tyres; tyres and tubes (bicycle); vacuum flasks; *vanaspati* (except expansion of small and medium-sized units to achieve economic capacity); vat dyes; vegetable oil other than cottonseed oil; viscose filament yarn; wool tops; woollen and shoddy yarn (except expansion schemes); woollen and worsted cloth; worsted yarn; and zinc oxide.

BANKS

Desai Award Extended

The Government of India, it is learnt, has extended the Desai award for scheduled banks by another year from 30th July, 1964. The Government is reported to be of the view that the award should at least be allowed to run for three years, the maximum period laid down in the Industrial Disputes Act.

Simultaneously, the Central Labour Ministry, it is understood, has advised the All-India Bank Employees Association, which had opposed the extension of the award, that any genuine grievances the bank employees may have could be taken up separately without linking them with the extension of the award. The Association had asked for certain modifications of the provisions of the award, including those relating to the calculation of basic pay for provident fund and gratuity and the abolition of Area IV. It had also demanded a 20-percent pay rise for all categories of bank employees in view of the rise in the cost of living.

AGRICULTURE

Development Plans Considered

At a meeting here last week, the Agricultural Production Board considered the suggestions on the farm production programmes emerging from last month's conference of State Chief Ministers. The Board decided to accept the suggestion that for minor irrigation, all plans that are feasible should be implemented by the State Governments. However, approval of all such projects will be subject to the conditions that they are quick-yielding schemes and are completed within a specified period depending on the size of the project.

As for the working of irrigation tubewells, the Board felt that the question of granting subsidy for tube-well irrigation on a basis similar to the subsidy at present extended to canal irrigation or open-well irrigation should be examined.

As for the decision of the Board at an earlier meeting that the facilities for soil testing should be expanded, the Board was informed that an expert team had examined the present soil-testing facilities and indicated the location for the new soil-testing laboratories. The State Governments had been informed of the recommendations of the team and requested to include the setting up of these laboratories in their respective State plans.

The Board endorsed the view of the Chief Ministers' Conference that the concessional rate at present given for aerial spraying of pesticides on cotton and oilseed crops should be extended to foodgrains. The concession involves a 50-percent subsidy on the cost of pesticides and the charging of a nominal fee of Re. 1 an acre for the use of aircraft.

In order to give a fillip to the improvement of indigenous livestock by cross-breeding with imported breeds which would help in increasing the milk yield, etcetera, the Board decided that the purchase of stock, namely, young calves for this purpose should be subsidised.

On an examination of the suggestions made for the improvement of medium-term and short-term credit for agricultural purposes, the Board recommended that the use of commercial banks for providing credit to cultivators which had already been tried in certain parts of Mysore State and was being shortly introduced in some parts of Madras State, might be examined with a view to introducing it in other parts of the country.

On the complaints about the inadequacy of cement supplies for agricultural programmes from some States, the Board suggested that an effort should be made to divert the annual increase in production exclusively to agricultural purposes.

SUGAR

Role of Co-operative Factories

The share of the co-operative sector in India's sugar production has gone up from 21.66 percent in 1962-63 to 22.73 percent in 1963-64. Up to 15th May this year, the 47 sugar co-operatives which were in operation, had produced 562,000 metric tons of sugar, out of the national production of 2,472,000 metric tons. The corresponding figures for the previous year are 451,000 metric tons and 2,082,000 metric tons.

The output of the co-operative sugar factories this year shows an increase of about 24.60 percent over last year's. The corresponding increase in the private sector is about 17.10 percent. For the industry as a whole, the increase has been 18.72 percent.

During the 1963-64 season, seven new co-operative sugar factories went into operation, taking the total to 48. Of the new factories, three are in Maharashtra and one each in Orissa, Punjab, Kerala and Madras.

There has been near-capacity production in two of the three new factories which went into production in Maharashtra this year. This is considered to be a commendable achievement for factories operating for the first time.

The Warana and Karad co-operative sugar factories in Maharashtra secured first and second places in sugar recovery this season. The percentage was 13.4 for the Warana factory and 13.34 for the Karad factory.

Since the beginning of the first plan co-operatives are playing an important role in sugar production. During the first plan, licences were given for setting up 16 sugar co-operatives, and in the second plan for 25 more. To date, licences have been issued to 57 co-operative factories. Forty-eight of these have already been installed. Six more are expected to go into production in 1964-65. The rest are in formative stages.

ROME

All ALITALIA flights lead to ROME. If you've never seen Rome, or if you want to see it again, from every part of the world there's an ALITALIA jet waiting to take you. An average of more than 330 flights every week go to Rome from Europe, North and South America, Middle and Far East, Australia and Africa. At every moment, for every occasion, ALITALIA's network is the most modern, the most convenient road to Rome, the most glorious city in the world.

A choice of four flights on a Super DC-8 jet from Bombay every week on Sundays Mondays, Wednesdays and Thursdays.

London

CREATING A VIABLE COTTON INDUSTRY IN U.K.

(FROM OUR LONDON CORRESPONDENT)

THE present arrangements for controlling imports of cotton textiles from India, Pakistan, Hongkong and Spain are due for renewal at the end of 1965. It is natural, therefore, that all sections of the industry are now giving thought to what is likely to happen and formulating proposals for what is felt should happen. At a Press conference held in London last week, correspondents were briefed by spokesmen for the Cotton Board on a document for submission to the Secretary of State for Industry, Trade and Regional Development which, under the title "The Case for a Viable U.K. Cotton Industry," outlines what action the various sectional associations believe is required from the Government to ensure the future of the industry. The main plea is for a long-term policy instead of short-term *ad hoc* expedients, as it is held that otherwise the capital being invested in the industry and the training of people entering the industry will be wasted.

Critics of Lancashire's plea for parity of treatment with other western cotton textile industries are guided mainly by two arguments—the needs of the developing countries for expanding outlets for their exports of textile manufactures, and how to make the best use of the national resources. The former were recognised by the suggestion made at Geneva that no developed country should take less than 10 percent or more than 20 percent of its requirements of cotton textiles from the developing countries, and that the U.K., was far exceeding the ceiling was internationally recognised in the G.A.T.T. Long Term Arrangement. The U.S.A. and the E.E.C. countries are still well below the suggested 10 percent floor.

As for the interests of the U.K. economy, the document says theoretically, free trade ensures the most efficient international allocation of resources, but no one now advocates it completely. To protect some industries effectively but not others must lead to distortions in the allocation of resources within the economy. Historically, duty-free entry for Commonwealth cotton goods has done just that, both for the U.K.'s own industrial structure and for the pattern of world trade in cotton goods. To deny effective protection to the cotton industry alone among major British industries would be, in effect, deliberately to influence the structure of U.K. industry in a discriminatory manner, and could have a number of adverse repercussions.

The document goes on to discuss the justification for holding that the cotton industry is not labour-intensive and is, in fact, capital-intensive, and why it would be irrational to allow it to be destroyed just as costs are moving gradually in favour of Lancashire *vis-à-vis* the developing countries. Facts and figures—quoted in some detail—indicate that the industry is no longer declining and that since the introduction of the Reorganisation Scheme, it is in fact moving forward in several directions. There is no reason to doubt that this rate of progress could continue and indeed accelerate in the next few years. If, however, the considerable sums of money which will be needed are to be invested and sufficient labour of the right quality is to be attracted, the industry needs from the Government a recognition that it has a substantial part still to play in the country's economy and an assurance that the requisite conditions to ensure this will be created. These conditions are substantially the same as those enjoyed by other western cotton industries.

Erosion of Capital

The cotton industry, alone among major British industries, has been required to face over the past decade an ever-increasing proportion of cut-price, duty-free imports. Consequently, a catastrophic decline, with enormous erosion of capital and employment has been unavoidable; a burden which has been carried in furtherance of the nation's general economic and political policies. It seems certain that a new era of technological advance is opening, Lamour-saving techniques are materially affecting the historic balances between capital and labour costs. Both the cotton and synthetic fibre industries are becoming dependent on revolutionary developments in scientific and mechanical techniques. The theory, so frequently still quoted, that cotton textiles are ideally suitable for production in low labour cost, labour "surplus" areas, is no longer true. It is urgent that this should be realised by all concerned.

It is especially necessary that reasonable Government support should still be available to the U.K. industry while the technical, commercial and financial reorganisation continues. In more precise terms, the industry requires during this period of adjustment: (a) control of the volume of goods imported from low-wage countries; (b) control of the pattern of imports from low-wage countries; and (c) a price level reflecting, for the first time for many years, "western" instead of "eastern" costs of production.

The industry believes the best solution would be a countervailing levy on the imports of cotton textile from low-wage countries, calculated to bring their prices within a fixed percentage of fair domestic prices. The proceeds of the levy would be returned to the exporting country concerned. (In practice, the level of prices at which imported goods were offered would rise, so that very little levy would be payable. The effect on the foreign exchange earnings of the exporting country would be the same, but the additional earnings would go to the exporter instead of to the Government of the exporting country.) A similar scheme to this (except that there is no collection of levy; entry being denied to goods invoiced below the stipulated percentage of the fair domestic price) has operated satisfactorily in Switzerland for many years, and the "Brasseur Plan", now under consideration by the E.E.C. appears, in part, to be based on the same principle. Provided that the percentage discount were sufficiently small, there could be a gradual dismantling of quantitative limitations. (A scheme such as this could easily be combined, if so desired, with the establishment of a central buying commission for imports, such as operates in the jute trade and has sometimes been suggested for the cotton trade.)

Administrative Problems

The Cotton Board believes that the operation of a scheme such as that outlined would undoubtedly solve the cotton industry's main difficulties. While it is recognised that there might, initially, be practical administrative problems, particularly in applying the scheme to made-up goods, the scheme could, from the beginning, be applied to all yarns and piecegoods. It would be necessary to maintain quantitative control over the import of made-up goods until they could be brought within the scheme. It is realised that any such scheme involves a withdrawal of Commonwealth preferences, but this is held to be one of the incidental benefits of the proposal, since the preferences accorded under the Ottawa Agreements to the cotton textile industries of Commonwealth countries, developing and developed in equal measure, are not appropriate in the 1960's. A price certification scheme on Swiss lines, or the introduction of a countervailing duty offers, in the industry's view, the best framework for a solution of its present difficulties, which stem from the price levels as well as the volume of the goods imported, mainly duty-free, from so many low-cost countries.

Failing such a radical reform, present methods of control must be made more effective. There are two principal ways in which this could be done. In the first place, and this point applies whether or not a price certification scheme is adopted, there should be a refinement of quantitative controls. The "ring fence" has proved inadequate in that there has been a continuing need to deal on an *ad hoc* basis with countries which export their surpluses to the U.K., establish a performance and thereafter are permitted quotas based on their performance. These quotas for new suppliers have added to the total volume of imports. The only way in which the "ring fence" poilcy can be made effective is for the existing bilateral agreements to be reinforced by the introduction of a "global quota" for all those developing countries with whom there is no existing bilateral agreement. In other words, the global quota would apply to all countries except (a) those with which there are bilateral agreements; (b) E.F.T.A. and E.E.C. countries not included in (a), and North American countries. There might well be foreign opposition to this global quota. As a negotiating concession, the Cotton Board would be prepared to envisage a 25 percent share of any increase in U.K. consumption of cotton manufactures being offered to exporters to the U.K. for division among countries covered by bilateral agreements and those subject to the global quota.

The second method is the imposition of a tariff on goods from the Commonwealth Preference Area. No excuse need be offered for repeating that in no other country does the cotton textile industry have to face duty-free imports from so many low-cost sources. It is estimated, for instance, that 71 percent of 1963 cotton cloth imports retained in the U.K. were admitted duty-free from the Commonwealth Preference Area and that nearly 95 percent of these imports (i.e., some 67 percent of total imports) originated in low labour cost countries. This quantity, which excludes made-up items, is equal to 30 percent of U.K. production of cotton cloth.

During the negotiations for British membership of the E.E.C., agreement was reached on the gradual introduction of tariffs on Commonwealth textiles exported to the U.K. In offering this settlement to the E.E.C., the British Government demonstrated a willingness to put this trade on a more realistic footing by bringing it more into line with practice in other western industrialised countries. In the view of the U.K. cotton textile industry, the conditions then considered to make the imposition of duties desirable have not changed with the breaking-off of negotiations for British membership of the E.E.C.

The main advantage of a tariff would be to help to some extent in bringing prices of low-cost Commonwealth imports more into line with domestic prices and thereby reducing disruption. The tariff might conveniently be fixed at five-sixths of the M.F.N. level, on the analogy of the man-made fibre tariff. This would not by itself, however, enable the industry to dispense entirely and immediately with quantitative limitations. As the G.A.T.T. Long Term Arrangements recognised, no western cotton industry can yet face such a situation. With increasing capital-intensive methods of production and rising wages in the developing countries, it is reasonable to hope that in due course a tariff will be sufficient as far as yarn and piecegoods are concerned. It is difficult to foresee such a situation arising in the case of garments, however, in view of their much greater labour content.

Proposal for Tariff

The Cotton Board, therefore, proposes that a tarifi of five-sixths of the yarns, piecegoods and made-up goods and that, for a trial period of five to ten years, restrictions on the volume and types of imports should be maintained. At the end of that period, the Cotton Board would hope that special quantitative restrictions on yarns and piecegoods would no longer be needed and that the general provisions of the G.A.T.T. Long Term Arrangement, if still in force, would be sufficient protection. The combination of global quota and tariff would be less effective and is put forward as an inferior substitute to the other proposals. The global quota would do no more than make a reality of the present notional ring fence. The tariff on Commonwealth goods would rationalise this country's present eccentric policy in allowing duty-free imports of manufactured goods from low-cost countries and also contribute something towards the avoidance of price disruption.

It may be that a combination of some of the measures put forward in this document will have to be considered, but the industry emphasises the merit—and the practical advantages in purely administrative terms—of getting away from the complexities and confusion of principles inherent in the present approach to the import problem. It is felt that if proposals can be agreed which are likely to give a minimum five years of effective stability, during which time the industry could continue its present progress towards rehabilitation, it would then be possible to review the position with the Board of Trade to see what level of longer-term safeguards was then advisable. What is vital is that the present protracted crisis of confidence should be resolved. Only in this way will it be possible for the industry finally to arrest and reverse the process of disintegration which it has had to suffer in the last decade.

Jute

RISE IN FIBRE PRICES WORRIES INDUSTRY

THE unusual buoyancy of fibre and gunny prices in the spot and hedge markets during the past week has worried trade and industry. The factors stimulating the rise seem more speculative than real. So the governing body of the East India Jute and Hessian Exchange, at its meeting last Monday, has taken a serious view of the trend and asked the Vigilance Committee to keep a close watch on the situation. The body is to meet again on Thursday to review the position in the light of the developments. On Tuesday prices rose further on hectic buying. But the top gains were partially erased on scattered realising in the hedge market and on the emergence of more mills as sellers for all positions at the higher levels in the spot market.

While both trade and industry have felt that the price fluctuations were not warranted by circumstances, they seem to be helpless in the matter. Barring small lots of Indian Government tender for B Twills and scattered hessian purchases by the U.S.A. for ready and near positions, business in the gunny market has been more or less of a routine nature. True, some mills have booked a fair volume of orders in both hessian and sacking for all positions at the higher levels. But these are in the nature of distress bookings by shorts and shippers against their open positions.

A coincidence of several factors appear to have stimulated the trend. The U.S.A. stepped up its burlap consumption to 70 million yards during June. Although the stocks at the end of June were higher around 286 million yards and bag-makers had enough stocks with them for meeting short-term needs, spot and afloat burlap prices hardened in New York from 11.35 cents to 11.55 cents a yard during the week. It indicated that the bag-making industry had accelerated its offtake of burlap. The 13-day workers' strike in five East Pakistani jute mills which was called off on Monday also led to a lot of covering in India by shorts against their open positions. The report that Pakistani mills were booked to capacity right up to the end of October also induced the belief that fresh overseas orders, at least for short and near positions, would flow to India as prices were fairly attractive. A lower jute crop in East Pakistan, combined with the slow pace of new crop arrivals in the agencies in both India and Pakistan, prompted sellers to be reserved and book orders only when higher prices were offered. The turnover was small and price levels hardened rather sharply. In spite of the reduction in the jute export duty and the removal of the minimum price restrictions in Pakistan, prices had firmed up in that country.

Rise in Costs Feared

Circles close to the industry in Calcutta believe that irrespective of the size of the Indian crop, Indian mills may have to pay a higher price for a much larger percentage of selected-grade fibre—Indian or Pakistani—and Pakistani cuttings during the 1964-65 season. Thus the cost of production of the end-product may be increased further, undermining the competitive position of the Indian industry. Inclusive of the J.B.S.A. stocks, Indian mills opened the new jute season with a carry-over of 3.1 million bales, against 3.3 million bales during the previous season. Fibre consumption during 1963-64 also rose by about 600,000 bales to around 7.8 million bales. The figure may increase further this season as mills have been working at the maximum level without any restriction on loomage. Besides, jute circles say that heavy showers and flood in lower Assam valley and North Bengal during May-June, and the month-long drought conditions in the predominantly Tossa districts of West Bengal have affected the new crop. The continuing shortage and high prices of foodgrains and other essential commodities have prompted farmers to charge more for jute.

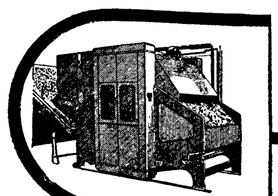
Government Remains Optimistic

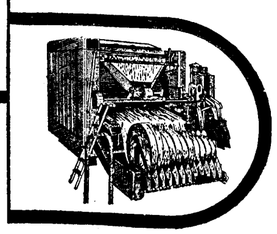
Government sources, however, seem to feel that the elaborate crop improvement measures taken during the year right from the time of soil preparation have yielded the desired results in spite of short spells of adverse weather. Any setback to the crop during May-June, these sources say, have already been overcome since the middle of last month due to excellent weather conditions. Alternate sunshine and showers have helped brisk interculture which is essential to plant growth and to arrest pest attacks. The condition of the plants is said to be satisfactory in almost all the areas. The crop harvested so far, it is claimed, is of an improved quality and better lustre. The yield is also reported to be satisfactory. Lower arrivals in up-country agencies are attributed to the bad condition of rural roads and the preoccupation of farmers with interculture of the soil under jute and also with *aman* paddy transplanting operations. These sources feel that Indian mills should not be worried over the small decline of about 200,000 bales in the opening stocks of fibre, for the 1963-64 crop will be adequate to meet the enhanced fibre consumption. They hope that the new crop will be around 8 million bales—enough to meet the requirements of mills.

The industry has been worried over the problem of rising prices. At the price of Rs. 30 a maund, f.o.r., Calcutta, ready, basis Assam Bottoms, the profits of the industry have been severely squeezed since prices of hessian 40in. 10oz. hovered around Rs. 44.50 a 100 yards and B Twills around Rs. 116 a 100 bags. On the basis of a fibre price of Rs. 33.50 a maund, the margins will shrink further even if the price of hessian rises to Rs. 46 a 100 yards and B Twills to Rs. 119 a 100 bags. This apart, it is feared that any sharp fluctuation in gunny prices may induce overseas consumers to go in for substitutes and bulk handling. A rise in Indian prices will also benefit the Pakistani industry helping it to expand its markets still more. These are crucial issues which need immediate attention.

THE JUTE MARKETS

Manufactured Goods: Active conditions prevailed in the Calcutta gunny market during the past week. Rising fibre prices induced hesitancy among operators. They were not inclined to extend their commitments except at higher levels. Speculative support to heavy goods and hessian in the hedge market also governed the general trend. At the higher levels, mills emerged as keen sellers and booked fairly large orders in both hessian and sacking for all positions. But these were, more or less, of a covering nature. The Government's offtake was low and overseas orders few and far between. The hardening price trend here and in New York at one time led to the belief that the U.S.A. would enter the market in a big way. But the expectation was belied. Only routine covering transactions in hessian were reported with the U.S.A. Calcutta was pinning its hopes on getting the Kenya Jute Control tender for moderate lots of heavy goods for July-August delivery. Hardening prices induced hesitancy among Indian industrial consumers too and they preferred to wait on the sidelines. Towards the close, sentiment suffered a setback on the calling off of the 13-day strike in the Pakistani mills. Indian mills turned cautious. In the hedge market, there was a seesaw battle between bears and bulls and shorts were forced to cover their open positions at higher prices in both hessian and sacking. But the highest levels were pared towards the close on realising and on the close watch kept by the Vigilance Committee of the hedge market. Fluctuations were wide, and turnover was fair. The undertone was exceptionally firm at the close.





Wednesday's quotations were as follows:

able to book orders at current prices. Mills and mill agents absorbed the offering at higher prices, stimulating the upsurge. Speculative support to Upper Assam White Bottoms for September at hardening prices in the hedge market also contributed to the bullishness. In the course of the week fibre prices shot up by more than Rs. 2 to the highest level of Rs. 34 a maund, basis Assam Bottoms, f.o.r., ready, Calcutta, in the spot market and by Rs. 2.06 to Rs. 33.62 in the futures market. In the agencies prices were ruling 50 paise higher than the Calcutta parity levels. Towards the close top gains were partially eroded due to the reluctance of mills to offer higher prices. The watch kept by the Vigilance Committee of the East India Jute and Hessian Exchange also seemed to have helped the decline. Turnover was small in the spot market, and heavy in the hedge market. Fluctuations were wide and the undertone very firm at the close.

Wednesday's quotations were as follows:

THE U.K. JUTE MARKETS

FIBRE PRICES RAISED

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market in Pakistan was firm in the past week, and quite a few sellers in Dundee have raised their prices. Prices of loose jute in Pakistan also advanced due to small arrivals from upcountry and a steady demand from the mills there. The outturn of the present crop may be smaller than at one time expected, but there still should be sufficient jute to meet all demands.

At present, prices of raw jute in the U.K. are, on average, about the same as last season, but it must be remembered that the export duty was reduced by 50 percent on 13th June, which in fact means that the seller is receiving approximately £4 a ton more. Dundee spinners are showing some buying interest, but business passing is still confined to small quantities and no bulk buying for forward shipment is taking place. With no Mill qualities available this season, spinners are waiting until the first shipment of Export grades arrive here so that the quality can be assessed.

Offers being made in the U.K. were very irregular with the lowest rates at £106 for Export Firsts, at £94 for Export Lightnings and at £82 for Export Hearts, c.i.f. U.K., for August-September shipment. Grade Tossa-2/3 was nominal at £120 with Grade Tossa-4 available at £105. There were sellers of Outport Tossa-2/3 at £95 and of Outport Tossa-4 at £85, c.i.f. U.K., September-October. Offers of old crop jute were still being made and the prices asked were slightly under the above rates.

The cuttings market was very firm, and some high prices were reported to have been paid in Pakistan during the past week. This could be due to the Indian mills having received licences to import substantial quantities. Only a few offers of cuttings were being made in Dundee with S.N.C. at £64 10s and N.C. at £55 10s. Offers of new crop mesta were scarce and irregular. Grade A was named at £91 10s, B at £79 10s and C at £71 10s, for October-November shipment.

The Siam jute market was quiet but steady. Prices were at £75 10s for super A, at £69 for grade A, at £64 10s for grade B, at £60 10s for grade C and at £51 for cuttings, delivered mill Dundee for October-November shipment.

Very little change took place in the Calcutta goods market during the past few days. The position was steady, especially where sackings were concerned. A small buying interest was shown by the U.K. and some business took place in hessians. Quotations were at 73s 2d for 40in. 10oz. and at 55s 11d for 7½oz. a 100 yards c. and f., U.K., for July shipment, at 73s 8d and 56s 1d August and at 74s and 56s 1d September. B Twills were at 200s, 199s 3d and 198s 11d for the respective shipment periods.

Prices of Dundee jute yarns and cloth were very firm, and there appears to be no likelihood of any reduction in the near future. Raw material prices are steady and an increase in wages comes into force next month. Spinners and hessian manufacturers are busy and have orders in hand for forward delivery, but there is still a shortage of orders for sackings.

THE PAKISTANI JUTE MARKETS

FIBRE KEEPS RISING

(FROM OUR DACCA CORRESPONDENT)

A FEW days' sunshine has done a lot of good to the crop and enabled drying of jute to proceed and it has also been easier for sellers to bring it to the baling centres. The prices locally continued to rise during the past week, and there is no likelihood of this being arrested until the flow of jute is considerably increased.

Trading in pucca bales continued to centre round cuttings and business was done at £53 f.o.b. This was probably due to the speculator buying at exaggerated prices mainly for forward deliveries. Apart from this, operations were restricted to purchases of the buffer stock which has now been liquidated.

From overseas, reports continued to come in of limited interest for early positions and a reluctance to pay higher prices. Nevertheless, registrations for the first half of July have amounted to more than 276,000 bales. Even if one were to assume that as much as 50 percent were excess registrations, which is unlikely, these figures show that a fair amount of purchasing has gone on.

RUBBER OFFTAKE RISES FASTER THAN OUTPUT

(FROM OUR SOUTH INDIAN CORRESPONDENT)

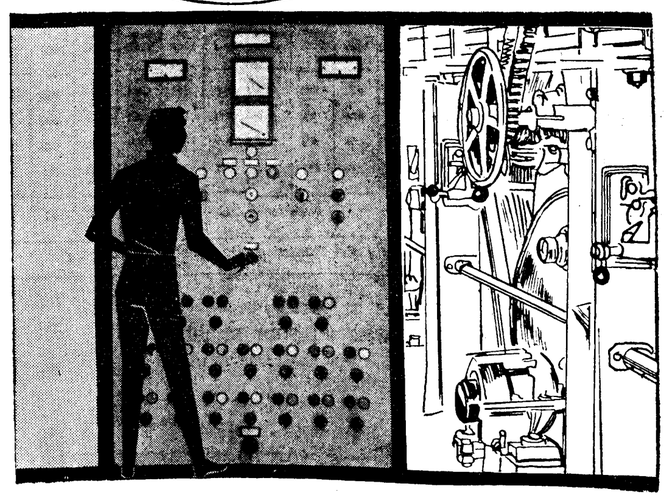
THE Indian rubber manufacturing industry's requirement of natural rubber by 1970-71, that is, by the end of the fourth plan, is estimated at 95,000 tons. This is almost double the quantity consumed by the rubber manufacturing industry towards the close of the second plan and 35,000 tons more than the likely consumption at the end of the third plan.

Natural rubber output in India has been lagging behind consumption. When the manufacturing industry took 28,445 tons in 1955-56, the rubber growing industry could produce only 14,060 tons, making it necessary for the country to import as much as 13,385 tons to bridge the gap. The gap widened to the extent of 20,702 tons by 1960-61, in spite of the fact that production had almost doubled to 27,446 tons in the course of the second plan period.

Natural rubber production in India is expected to show a substantial increase in the next few years as a result of the extensive replanting and new planting which have already taken place. The great bulk of these plantings were done with high-yielding budded plants and clonal seedlings. Out of the 361,142 acres there were under rubber on 31st March, 1963, 136,070 acres were under these improved varieties and all these areas should come into bearing by 1970-71. It is not unreasonable to expect a minimum crop of 60,000 tons from this area alone, as the yield will be between 800 and 1,200 lbs an acre from the high-yielding plants. From the 216,072 acres of ordinary rubber, another 20,000 tons can be got. Since considerable advances have taken place in the methods of cultivation like spraying and manurial operations even the ordinary rubber trees could yield about 400 lbs an acre. Some knowledgeable sources estimate natural rubber production at the "conservative figure" of 80,000 tons by 1970-71. This will leave the country with a deficit of 15,000 tons: 5,700 tons less than the deficit at the end of the second plan period. This deficit can be very easily covered with imports from the neighbouring countries like Malaya and Ceylon, it is pointed out.

In the past, there have been occasional complaints from the rubber growers that due to some flaws in the licensing policy of the Central Government, gluts used to develop in the rubber market and the weaker elements among the producers were finding it difficult to sell their rubber even at the minimum price prescribed under the Rubber Act. It has been suggested that licences are now being issued by the Government to any manufacturer who is willing to purchase a certain quantity of synthetic rubber produced at the Bareilly factory in a bid to help that unit now experiencing teething troubles. It is said that for every one ton of synthetic rubber bought from that factory, the manufacturer will be allowed to import four tons of natural rubber. Some 8,500 tons of S.B. rubber was produced in that factory last year. At this rate, 34,000 tons of raw rubber could be imported by the manufacturers. Even if the import entitlement is reduced to 1 ton to 3 tons of natural, the total of synthetic and imported would amount to 34,000 tons, which is in excess of the actual level of consumption last year.

The import licensing has always been based on an estimate of the actual shortfall expected in a given year. If that is shifted to the quantity of rubber purchased from the synthetic plant, the shortfall estimates would not have as strong a relevance to the licensing policy and an excess of import depending upon larger output of S.B.R. and its purchase by manufacturers cannot be avoided.



Meanwhile, the view has been strongly pressed that there is no scope for another plant to manufacture S.B.R. in view of the new types of general purpose synthetic rubbers being developed in the world such as polybutadiene, poly-isoprene and ethylene propylene co-polymers. It is suggested that every effort should, therefore, be made to see that any new plant established in India for the manufacture of synthetic rubber should be for one of these synthetic rubbers. The economics of the manufacture of such synthetic rubbers should be studied in advance, and it should be ensured that their prices should not be higher than the c.i.f. prices of similar imported rubbers plus the current import duty on the same.

The rubber growers are to a certain extent worried over the reported issue of fresh licences for the manufacture of synthetic rubbers within the country. Mr. George John, chairman of the Mundakayam Planters Association, has said while addressing the latest annual general meeting of that premier rubber growers' association in this country last week that the production of synthetic rubbers should not be at the cost of the existing plantation industry. While admitting that the Government has the interest of the rubber growers at heart, he has said that it could have been better shown by carrying the entire rubber policy through the Rubber Board instead of having this done through widely separated agencies. In his opinion, it is desirable that the Rubber Board should be used as a forum where all rubber matters can be discussed and a co-ordinated rubber policy can be hammered out, if not with the consent of all interests, at least with their knowledge.

Referring to rubber prices, Mr. George John has said that the necessary protection against distress sale by small producers is the maintenance of a reasonable balance between the shortfall in supply and the import licence issued. Even here, a powerful manufacturer could easily manipulate his purchase so as not to allow the market to rise. But considering the fact that a minimum floor price is still statutorily in existence, the producers of natural rubber in India do not have a strong case to protest against the policy of the Government. "In fact, the Government has been most sympathetic to the cause of the producers", he has said.

It has been suggested that one way to overcome the chances of excessive supply of raw rubber is to allow the Rubber Board to import rubber from abroad and distribute it according to the needs of the manufacturing industry. "I think the Rubber Board has far more important work to do than to become a trading agency. It

is not constituted for commercial operations and cannot handle the buying and selling of rubber with satisfaction either to itself or to the manufacturers. Once it is conceded that the Rubber Board can buy and sell rubber from overseas sources, it will be very difficult to say that the same Rubber Board cannot market the rubber produced within the country. I think those who suggest the wholesale import of rubber through the Board in order to prevent manufacturers from exploiting the situation will realise that it is a double-edged weapon", Mr. George John said.

CASHEW

Kernel Prices Soar

Prices of processed cashew kernels have claimed new highs in the past few days to 68 cents(U.S.) a lb for September-October delivery. November is quoted a cent lower. This is about 10 cents a lb higher than the rates obtaining at this time last year. Russia is said to be the largest buyer at present. She is reported to have bought around 50,000 cases of 50 lbs each recently for shipments up to October. U.S. buyers also have taken some 10,000 cases at prices ranging between 67 and 68 cents a lb. The U.K., West Germany and some other countries, too, are said to be showing interest in Indian cashew kernal at current rates in spite of the fact that they are considered to be fancy prices by most of the buyers.

Raw nut also is ruling firm with new African crop (Angoch) being quoted at Rs. 980 a ton. The old crop is available at Rs. 950 a ton. Mozambique is quoted at Rs. 50 less. The latest report from the Coffee Board places the pool receipts from the 1963-64 crop at 67,383 tonnes, against 54,672 tonnes of the previous corresponding period. Of this, the Board had sold for export to the middle of this month 20,099 tonnes. The Coffee Board's Marketing Committee had recommended an export of 35,000 tonnes from the 1963-64 crop as early as in March last on the basis of an estimate which placed the 1963-64 crop at 65,000 tonnes. Actual receipt in the pool had already exceeded this figure by about 2,500 tonnes. Therefore, one should think that the Board will find its way to export more than 35,000 tonnes. The Central Government had already suggested to export more than 35,000 tonnes.

COFFEE

Securing Higher Export Quota

India is trying to get an increase in its basic export quota under the International Coffee Agreement. The basic quota for India comes to 21,600 tonnes. With a slight enhancement in the quotas of the different producing countries made at an emergency session of the International Coffee Council in February last, India was allowed to export 22,064 tonnes. India has filed an application with the International Coffee Organisation for the grant of a waiver or an increase in the basic export quota. This subject will be coming up before the current session of the Coffee Council which began in London on 27th July. Mr. Sitarama Reddy, chairman, Coffee Board, is representing India at this meeting.

The Coffee Board has revised its estimate of the standing crop downward to 67,500 tonnes in the light of the long period of drought that the coffee areas had to suffer earlier this year. Blossom showers were unsatisfactory and insufficient. Backing showers were also inadequate. The present estimate is subject to revision later in the season.

TEA

Tea Auction Prices Continue to Fall

(BY A SPECIAL CORRESPONDENT)

THE Calcutta tea auctions this month continue to offer comparatively small quantities. On 20th July, only 33,720 packages were on offer. There was a fairly general demand with a strong enquiry for orthodox Assam types, but best Assam C.T.C. were sometimes easier by as much as 50 paise a kilogram. London offerings were also on the low side. A total sale of 17,586 packages contained a small proportion of north Indian tea, but this position should change within a month as teas are now moving more freely through the Port of Calcutta.

Crop figures from north India to mid-July compare as follows: (in million of lbs): 1964 171.85; 1963 145.89, or a rise of 35.96 million lbs. At the end of May and June the comparative figures were: 1964 57.77 million lbs and 128.50 million lbs, against 49.34 million lbs and 103.87 million lbs in 1963.

In 1961, the year of record yields from this area, June saw 31.4 million kilograms of tea. This jumped to 43.7 million kilograms in July. August usually sees the most prolific output and the third or fourth week of that month probably registers 50 percent of the annual crop. With production at its peak, it is important to avoid strikes and disputes with labour, and one hopes that the tripartite talks to be held in Darjeeling between the workers, management and the Deputy Labour Commissioner, will arrive at some workable solution. The Government's representative is there presumably to assist in working out a compromise. The important point to remember is that no person or industry can continue to pay out indefinitely more than he or it earns. It might be a sound policy to defer discussion until after the plucking season, by then the Central and State Governments will have had time to review the working of the taxation system as it affects the tea industry. At the moment wage awards and bonus concession cannot be financed, and a strike will definitely add to the difficulties. In Pakistan where profits were considerably lower in 1963, but working still was profitable: but practically all tea companies in north India reported a serious fall in the profit margin.

As promised by Mr. Manubhai Shah, a committee headed by Mr. V. V. Chari, Additional Secretary to the Ministry of Finance, representatives from the Tea Board, the Indian Tea Association, planters' associations and the State Governments concerned (Assam, West Bengal, Madras and Kerala) has been formed to look into the question of strengthening the financial basis of the industry. Production, exports and relief from taxation as also facilities for bank finance will be its terms of reference.

The timing of this enquiry is good because, as already stated, it will give a reasonable period for consultation between the authorities to allow the necessary fiscal adjustments to be agreed before the next Budget. It should also help the planners to aim at a practicable production target for the fourth plan. The present objective is said to be 1,000 million lbs of tea by 1970-71 (up from 800 million lbs expected this season). (The U.S. estimate places it at 770 million lbs.)

As tea bushes take five years or more to mature, it has to be borne in mind that the bulk of the increase of 25 percent—from 800 million lbs to 1,000 million lbs—will have to be produced from the acreage already planted. Can that be done? According to Messrs J. Thomas and Co. Private Ltd booklet of statistics, the area under tea has made little progress since 1958. This remark applies to south India also. Actual figures for all India are 334,093 hectares in 1962, against 326,494 hectares in 1958, or an increase of just 7,599 hectares. It remains doubtful if any spectacular increase in yield can be secured from intensive cultivation and application of fertilisers and even if this can be done, what effect will forced growth have on quality?

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to June 1964. As compared with May, the June index for Food shows a rise of 9 points. The indices for Fuel and Lighting, Clothing and Miscellaneous remain unchanged at 308, 609 and 331 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 5 points during June 1964.

COMPANY AND PUBLIC NOTICES

THE KARANPURA COLLIERIES LIMITED

AT a meeting of the Board of Directors held on Thursday, the 23rd July, 1964, the following dividends were recommended for declaration at the Annual General Meeting to be held on Friday, the 28th August, 1964, subject to deduction of tax.

On 5½% Cumulative (Taxable) Preference Shares at 4.579 per cent (being dividend at the stipulated rate of 5½% per annum increased by 11% thereof, and deducting therefrom Income Tax at Company's rate of 25% in accordance with the provisions of the Preference Shares (Regulation of Dividends Act, 1960), subject to deduction of tax).

On Ordinary Shares at the rate of 12 per cent per annum.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Secretaries & Treasurers.

Registered Office:
Chartered Bank Buildings,
Calcutta, 23rd July, 1964.

THE KARANPURA COLLIERIES LIMITED

NOTICE is hereby given that an Annual General Meeting of THE KARANPURA COLLIERIES LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Friday the 28th August, 1964, at 11 A.M. for the following purposes:

1. To consider and adopt the Audited Accounts of the Company for the year ended 29th February, 1964, and to receive the Directors' and the Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint Auditors and fix their remuneration.
4. To appoint a Director in place of a retiring Director.

As Special Business

5. To appoint a Director in place of Mr. N. K. Kejriwal, who retires, and in this connection to consider and if thought fit, to pass with or without modification the following resolution of which a notice has been received by the Company from one of its members under Section 257 of the Companies Act, 1956, which will be proposed as ordinary resolution.

"That Mr. N. K. Kejriwal be and is hereby appointed a Director of the Company."

The Share Transfer Registers of the Company will be closed from the 13th August, 1964, to the 28th August, 1964, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Secretaries & Treasurers.
Chartered Bank Buildings,
Calcutta, 23rd July, 1964.

Notes:

(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(b) The Dividend, if declared, will be paid on or after 10th September, 1964, to those members so entitled whose names appear in the Company's books on the 28th August, 1964, or to their mandatees. No application for Dividend Warrants will be necessary.

(c) The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of the Special business set out above is being sent to all members.

INDIAN ALUMINIUM COMPANY, LIMITED

31 Chowringhee Road, Calcutta-16

NOTICE is hereby given that an Extraordinary General Meeting of Indian Aluminium Company, Limited will be held at its registered office, 31, Chowringhee Road, Calcutta-16, on Friday, August 28th, 1964, at 11-30 a.m., for the purpose of considering and, if thought fit, passing the following two special resolutions:

"1. That subject to the sanction of the High Court at Calcutta being obtained the Registered Office of the Company at present situate in the State of West Bengal shall be removed to and be situate in the State of Mysore.

2. That subject to the sanction of the High Court at Calcutta being obtained the Memorandum of Association of the Company be altered by the substitution of the words 'State of Mysore' in place of the word 'Bengal' in Clause II of the Memorandum of Association."

Any member of the Company entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

By Order of the Board,
T. D. SINHA,
Secretary.

July 13th, 1964.

EXPLANATORY STATEMENT AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT 1956

Your Company has submitted an application to the Government of India under the Industries (Development & Regulation) Act 1951 for a licence to build the first stage of a large integrated aluminium industry, starting with a 30,000-tonne per annum smelter together with related alumina and bauxite facilities. The proposed smelter will draw power from the Sharavathi project in Mysore State and is expected to be located as close to the source of power as possible. A separate application has been submitted for establishing a rolling mill in Maharashtra State.

When these industrial undertakings have been completed a large integrated aluminium industry will have been established by the Company with its principal units in Mysore State. In the circumstance, and as the construction and operation of the abovementioned projects will, in your Directors' opinion, be facilitated if the registered office of your Company is transferred from Calcutta to a suitable location in Mysore State, your Directors have decided to place before you the resolutions set out in the above notice for your consideration and they recommend their adoption.

Under the provisions of the Companies Act 1956, the change in the location of the Company's registered office will be subject to confirmation by the High Court at Calcutta and the necessary steps in this connection will be taken if the special resolutions now placed before you are passed.

(Continued from foot of previous page)

(A) Repayable at par by 1986 by annual Drawings on 1st July each year. May repay the issue in full after 30th June 1961 on 6 months notice.
(B) Repayment at par on 31st Dec., 1964 with the option of repayment on 31-12-54 or any subsequent interest date at a prem. of 2%.
(C) Rs. 56,000 to be redeemed at par annually by drawing.
(D) With option to redeem any part at 101% after 31-12-64 and at 100½% after 31-12-66.
(E) Rs. 30 Lacs will be redeemed annually by drawings from 1st May 1964 onwards. The Co. has option to redeem all Debentures at 101% on 1st May 1963 on 6 months' notice.
(F) Option to redeem all or any of the Debentures at a premium of Re. 1/- per cent by giving one month's notice on the 31st December 1954 or any subsequent interest date.
(G) May be redeemed on 30th June 1957 at a premium of 1% or on 30th June, 1962, at a premium of ½%.
(H) May be redeemed at a premium of Rs. 20/- per debenture (i.e. 2%) if redeemed earlier than 31st Dec. 1955 on 3 months' notice.
(I) The Company has option to repay all or any at par by giving notice for 6 months expiring on any interest date after 30th Sept. 1955. At any time on or after 1st Oct. 1957 the holders may convert each note of Rs. 500/- into 25 ordinary shares to take effect on 1st Oct. in each year on giving 15 days' notice prior to such day.
(J) May be redeemed at 101% at any time after 31st March, 1963 and at 100½% on any time after 31st March 1955.
(K) Rs 1,600,000 Debentures will be redeemed at par annually by drawing from 1-9-65. Any Debenture outstanding on 1-9-69 will be redeemed on that date with option to redeem all Debentures at 101% on 1-9-64.
(L) Any time on 3 months notice.
(M) At par in September 1960.
(N) May be redeemed at the end of 1963 or thereafter at 101%.
(O) Option to repay at par on or after 31st May, 1961.
(P) Redeemable at par on 31st Dec., 1972 with option to redeem at par at any time on 6 months notice after 30th June 1958. At any time after 31st Dec. 1948 each note of Rs. 500/ may be converted into two ordinary shares of Rs 100/ each ranking for dividend from 1st January following.
(Q) With option to redeem annually Rs 2,00,000/- at par after 31-3-58 by drawing or by purchase in the open market.
(R) May be redeemed annually at par by drawing after 10th year also the whole issue at 101% on or after 31-3-63.
(S) (Option to repay at par one month's notice). At any time after 1st October, 1956.
(T) (Option to repay at par on 6 months notice) after 1-1-67
(U) (Option to repay on 3 months notice). At any time after 31st December 1960
(V) May be redeemed at par on 30-6-56 or any subsequent interest date on one month's notice.
(W) After giving six months' notice.
(X) Rs 5,00,000 will be redeemed each year from and after 1964.

* These Debentures are registered and are transferable by transfer Deeds.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends. T means that dividend tax is deducted at source.

TEA COMPANIES

O., Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

JUTE MILLS WORRIED BY RISE IN FIBRE PRICES

THERE is a touch of irony in the fact that just when India's perspective planners from their ivory towers in Yojana Bhavan are busy turning out dream targets for exports in the fourth plan period, the jute industry, which is the country's biggest exporter, should run into unexpected difficulties. The industry's worry has stemmed from the sharp rise in the price of raw jute. Fibre rates, which have been ruling for some time now above the floor level of Rs. 30 a maund (basis Assam Bottoms, delivered in Calcutta), have climbed to Rs. 35.50 a maund in the spot market, a jump of about Rs. 3.50 within a few days. The rise has been triggered largely by speculative factors based on fears that the new crop may fall short of the requirements. Reports of a shortfall in the Pakistani output have worsened the situation. Although it is premature to say anything definite about the size of the new crop both in this country and in Pakistan, and crop estimates are now more in the nature of "guesstimates", knowledgeable sources do not apprehend any physical shortage of fibre in the current season. These sources feel that the Indian crop may be about 7 million bales, as against the trade's estimate of about 6.6 million bales and the Government's forecast of about 7.6 million bales. Together with the carry-forward of 3.1 million bales, the needs of the mills will be adequately met assuming the total annual offtake to be 8 million bales.

As an immediate measure to arrest the upward trend in fibre prices, it will be worth while to use the stocks (amounting to a little less than 500,000 bales) held by the Jute Buffer Stock Association. The buffer stock has, in fact, been created just to import an element of stability in fibre prices. Releases from the buffer stock now will help lower prices to more realistic levels. Later during the peak months of November and December, when the full weight of the crop is felt in the market, the J.B.S.A.'s stocks may be replenished. A second and equally important step is that the Government should release more foreign exchange immediately for the purchase of high-grade fibre and cuttings from Pakistan and Thailand. It is quite on the cards that Pakistan's fibre output may be smaller during this season, amounting to hardly 5.5 million bales. Heavy rain in East Pakistan has affected the Tossa crop and the quality of the white jute. Pakistan's internal requirement has been about 2 million bales, and she has been exporting some 4 million bales. On this reckoning, a shortage of Pakistani jute, particularly in quality fibre, is quite possible. In fact, the Pakistani market has already been rising sharply, and it may well-nigh be impossible for the Indian mills to secure their requirements of high-grade fibre at economic prices at a later date. The Indian Government has, no doubt, released some foreign exchange for importing selected grade fibres, but it has not been adequate. The foreign exchange allocation needs to be stepped up without any loss of time if an additional burden is not to be cast on Indian mills as a result of the increase in Pakistani and Thai fibre prices.

In an industry, where raw material costs account for as much as 55 percent to 60 percent of the total cost of production, it is only natural that the increase in fibre prices should cause much worry. In fact, some of the mills have themselves contributed to the bullishness of the fibre market by allowing themselves to be stampeded into indiscriminate buying of new crop jute at a time when speculative factors are rife. They could have prevented such a situation by buying some of their requirements of new crop jute at the end of the last season. Although rather belatedly, the mills have now acted wisely in stopping their purchases.

Largely in sympathy with the increase in fibre rates, gunny prices have also risen in the past few days. Sacking B Twills has gone up from Rs. 117 to Rs. 124.75 for 100 bags, while 40in. 10oz. hessian has climbed from Rs. 44.40 to Rs. 47 for 100 yards in the spot market in the course of a fortnight. In view of the bullish fervour in the market, the East India Jute and Hessian Exchange has fixed price ceilings from last Saturday and trading will be suspended for the day if these limits are crossed. On Tuesday the Exchange fortified these measures by providing for imposition of special margins on buyers for trading in hessian and sacking contracts for August and November deliveries and in raw jute contracts for September delivery. It is to be hoped that these steps will help bring some stability to the jute and gunny markets.

The spurt in gunny rates calls for comment from two points of view. Firstly, overseas buyers look upon with disfavour any sharp increase in prices, although they may not frown upon a rise if it is spread over a period of months. During the last couple of years foreign importers have given an indication of the price at which they consider a transaction worth while; for B Twills it is about Rs. 110 a 100 bags and for 40in. 10oz. hessian it is about Rs. 47 a 100 yards. Any big rise over these levels has generally met with consumer resistance. This underlines the importance of reducing production costs in the jute industry, something which is possible only if its raw material is available at cheap rates. The second point which has to be noted is that the present increase in Indian gunny prices, while making Indian goods costly for foreign buyers, has not helped the industry in any way since fibre prices have also gone up. The industry was experiencing a severe profit squeeze, both in hessian and sacking, even when fibre was ruling around the floor rate of Rs. 30 a maund (basis Assam Bottoms, delivered in Calcutta). Although the prices of hessian and sacking have now risen, the spurt in fibre rates will continue to keep the pressure on profits unrelieved.

In the competition with Pakistani goods in overseas markets, Indian gunnies have been severely handicapped. The Indian industry has been pointing out that because of the availability of better and cheaper fibre and the windfall profits from the export bonus voucher scheme, the Pakistani mills enjoy a cost advantage of about Rs. 350 to Rs. 400 a ton. This has seriously undermined the competitive position of the Indian mills. The industry is, no doubt, in high gear, and its output as well as exports have been remarkably buoyant. In fact, in 1963 its production touched an all-time high of 1.3 million tons in its long history of over

a century. Its exports at 900,000 tons again made a record, being the largest in 15 years. Nevertheless, the industry's greatest worry is the competition from Pakistan, which has already annexed many of India's traditional sacking markets. The Pakistani industry is diversifying its production and the pressure of competition, which has so far been confined to sacking, will soon be felt in hessian and carpet-backing. But strangely enough, the Government of India has so far done little to neutralise the cost advantage enjoyed by Pakistani competitors.

UNREALISTIC TARGET FOR STEEL

THE fact that the Planning Commission has recently endorsed a 17.3-million target for steel is of next to no significance. With the very basis of the next plan shaken by the grave misgivings arising from current inflationary pressures, it is somewhat premature to discuss specific targets. But even if one lets that objection pass, the economy's real requirements of steel need looking into afresh in view of the doubts that are being expressed both at home and abroad. This is still necessary even though several independent studies carried out to assess likely demand have all arrived at more or less the same conclusion only because they worked from exactly the same hypotheses. In a developing economy the bulk of the demand arises in the construction sector. If present needs are to have a greater priority in the framing of the next plan, it follows that some construction activities geared to long-term goals may well have to be cut. If so, the impact upon steel will be quite considerable, requiring as a consequence a reassessment of the tasks to be set before this industry.

But this is not the only reason for dismissing the Planning Commission's formal endorsement of the half-baked ideas formulated by a steering group. By the testimony of one of its most eminent members, the group was no more than a device for rubber stamping decisions reached elsewhere. Targets must be judged first in terms of their physical possibility and secondly in the light of the resources that can be deployed for implementing them. Unless both these are scrupulously done, target-setting becomes an exercise in wishful thinking which has no place in serious, hard-headed planning. There is no indication that the Planning Commission has undertaken independent checks to satisfy itself on these points to discharge the responsibility that it owes to the country.

At the end of the third plan, the industry's installed capacity will be well below the nine million tons assumed by the Commission since it is evident that some construction work on third plan expansion will spill over into the fourth. In fact, it is officially acknowledged that production at the level of nine million tons of ingots is unlikely before 1968-69, the third year of the fourth plan. Is it reasonable to assume that India can increase the installed capacity by eight million tons in the three or four years that will actually be available for the task? This is not to suggest that the goal is physically impossible—large new integrated works have been built in about three years or even less. But one must allow for the difference in circumstances, and above all for the lack of decisiveness in New Delhi, which holds up the simplest decisions for months.

Even if one were to imagine that India's special difficulties miraculously disappeared overnight, the pace of expansion would still remain too ambitious. A steel mill does not function by itself; a very large effort must be mounted to ensure that its needs of raw materials, water, power and transport are fully met. The time lag in bringing these facilities into operation is usually much longer than in building the steel plant proper. India does not have today any real margin of capacity in relation to these important requirements, which means that the entire requirements developing from the eight-million-ton addition to capacity will have to be met from facilities specially created for the purpose. New coking coal collieries will have to be put down or new seams tapped in existing workings, dams such as the one proposed at Tenughat for Bokaro will have to be built [illegible] scratch, transport links developed to new ore [illegible]e sites, and power plants expanded. It will be seen, therefore, that many decisions in different spheres have to be taken to support the steel programme. It is almost axiomatic that the more dispersed is the decision-making, the greater is the possibility of delay (as over Tenughat, the details of which are still in dispute between West Bengal and Bihar).

Having made a physical audit, as it were, of the feasibility of the programme, the Commission should ask itself some pertinent questions about its financial implications. At the very least, the programme will require Rs. 1,000 crores which would make a very heavy dent on whatever allocation is finally decided upon for industrial development. As if this was not forbidding enough, there is the separate issue of foreign exchange to consider. Assuming the import content of the investment to be 40 percent—a figure which ignores the ancillary import requirements of what is assumed to be available from within India—the liability of Rs. 400 crores amounts virtually to the total of a year's consortium aid. Earmarking one-fifth of the foreign aid for steel alone would be patently iniquitous because it must mean serious curtailment of resources for other equally deserving spheres. From the donors' point of view, this excessive emphasis upon aid is more than their industries at home will stand for. All capital goods industries in the donor countries look out for some benefit from the aid their Governments provide and it will be politically difficult for the latter to make suppliers to the steel industry walk away with the whole cake.

Some of these objections would not arise if India spread her net wider accepting both official aid and private finance when available. New Delhi is not averse to private credits if the terms are reasonable. But other lenders may have reservations if India piles on additional medium-term obligations over the very considerable repayment burden she is already carrying. The World Bank, as the spokesman of the donor nations, is particularly sensitive to this issue; it has after all the responsibility for protecting their interests at the same time as it tries to get them to extend the maximum possible support to India. For this reason, the terms of private credits would need very careful examination before one can recommend a switch to this form of financing. On the face of it, it may well be necessary to consider private investment as offering a more worthwhile alternative.

It is a hopeful sign that there are people in high places who are willing to look into this alternative. It is difficult to say whether Mr. T. T. Krishnamachari, Central Finance Minister, had steel specifically in mind when he urged shedding past inhibitions and opening the door wider to foreign investment, but the arguments he advanced fit steel particularly well. The wholly Indian-owned steel industry is already large, and the public sector will grow larger with the years. There is no reason, therefore, to fight shy of admitting private capital in what will apparently be a marginal area. This presumes, of course, that private capital will be available—something which one can hardly be sure of until the idea has been given a thorough airing. All one can say at the moment is that private capital should not *per se* be excluded. It is wholly illogical to bring up the Industrial Policy Resolution as constituting a veto since the Resolution does not debar the Government from accepting private participation—both Indian and foreign—in the Cochin refinery, and from planning a joint venture in heavy electricals with General Electric. Even more to the point is the search for private capital for pig iron plants of 300,000 tons capacity. A glance at Schedule A of the Resolution will disclose that "iron" is bracketed with steel, and the same considerations should, therefore, apply to both.

REVIVING THE CAPITAL MARKET

THERE has been a substantial drop in share prices as well as in stock market activities in recent months. In fact, most brokers now find it difficult to meet their recurring expenses out of current earnings. In a recent statement, the Calcutta Stock Exchange authorities estimated that the erosion in the value of ordinary shares in the case of 122 companies out of the 621 listed, amounted to about Rs. 20.56 crores between 28th February, 1964, and 2nd April, 1964. Obviously, the adverse effects of the last Budget have been severe.

The depression has also affected the new issues market. There has been a marked fall in new issues in the past year or so. A more disconcerting feature is that the bulk of the recent new issues have had to be taken up by the underwriters themselves, since public support has been far too small. Although the slow progress of many new ventures has given rise to misgivings in the minds of investors, the poor outlook for industrial investment is an equally important reason for the lack of support from investors. In a recent joint representation to Mr. T. T. Krishnamachari, Central Finance Minister, made by the eight recognised stock exchanges in the country, it has been pointed out that the current adverse economic trends are mainly responsible for the gloom in the investment market. The national income has not increased in line with planned targets; agricultural production has been stagnating; and the rate of industrial growth has been unsatisfactory. Heavy taxation has mopped up the bulk of the savings of companies and individuals. Inflationary pressures have also affected savings.

Although the Government has set up a new financing institution for providing funds to industries, economic progress will necessarily depend on the community's increased savings. Companies have been unable to save enough because of heavy taxes, including the surtax on profits. The saving capacity of individuals has been reduced not only by the high rate of taxation, but also by the sharp rise in the prices of essential commodities. Furthermore, the annuity deposit scheme is likely to mop up almost all savings, particularly in the case of middle-income groups.

Since the stock market is about the best medium to mobilise savings for industrial ventures, it is essential to take prompt measures to stimulate activity in stocks and shares. The confidence of investors will not revive until the outlook for industrial investment is improved. An investor, it should be emphasised, takes a great deal of risk in putting his money in equities. The risk is worth taking if the reward is attractive. At present, the outlook for dividends, rights and bonus shares has greatly suffered because of various fiscal measures. The 7½-percent tax on dividends has placed a heavy burden on companies. They have, therefore, been restrained from paying attractive dividends. But under the present circumstances, the rate of dividends needs to be increased to attract more risk capital into industry. In the first place, the market rate of interest has risen, and secondly, there has been a substantial loss in the purchasing power of money. Moreover, as the stock exchanges have rightly stressed, it is inequitable to treat dividend income as "unearned income", and thus subject it to a higher rate of tax.

As far as the issue of bonus shares is concerned, the outlook has suffered because of the extension of the capital gains tax to these shares. Since the tax has to be paid even by a shareholder who does not sell his holdings, the impost is most inequitable. The stock exchanges have rightly suggested that the dividend tax and the capital gains tax on bonus shares must be scrapped if confidence in the capital market is to revive. It is necessary to point out here that the success of the Unit Trust of India will ultimately depend on a healthy stock market. The units of the Trust will prove unattractive in the long run unless equity dividends improve and share prices rise. The value of the Trust for attracting savings is

admitted, but it is essential to ensure its success by improving the outlook for industrial equities. The case of the stock exchanges for further rationalisation of the margin system is difficult to defend. Margins have been liberalised only recently. Since they have been imposed to restrain speculation, it will serve no purpose if they are made ineffective. The abolition of margins will help stimulate activity only in speculative shares. Unless investment support can be attracted by modifying the fiscal system, the mere stimulation of speculative activity will not go far in improving the investment climate. As for liberalising the supply of bank credit to the stock market, it is doubtful whether it will be of much help. The lending rates are now prohibitive, and investors are unlikely to finance the purchase of stocks and shares by borrowing from banks.

Current News and Comment

Curbs On Cotton Futures

On Thursday, 30th July, the Forward Markets Commission announced the imposition of a special margin of Rs. 75 a bale on all outstanding positions, short or long, if in excess of 1,000 bales, in the Jarilla August 1964 contract traded at the East India Cotton Association, Bombay. The margin will become payable by bulls when the price rules above Rs. 750 and by bears when the price falls below Rs. 725 (a 3 quintals). Apart from allowing the free limit up to 1,000 bales to help the small operator, short position held as a hedge against cotton stocks will be exempted from the payment of the margin. The Commission says that it had been watching with concern the unduly large open position amounting to about 300,000 bales and that since no attempt had been made by the Association for the orderly liquidation of the open positions, it has been constrained to resort to the special margin "in the interest of the satisfactory working of the cotton market".

The closure of futures trading in a number of commodities over the past few months has perhaps diverted speculators' attention to the cotton market and the volume of outstanding business in the August contract, estimated around 300,000 bales, might seem to be on the high side, although the price pattern in futures does not indicate any unhealthy situation. Of all the contracts this season (1963-64), fluctuations in the August contract have been confined to a comparatively narrow range of Rs. 34 a 3 quintals, between Rs. 749.25 and Rs. 715.25. Currently, the contract is quoted around Rs. 742. The highest price recorded by the August contract is well below the maximum prices recorded by the earlier contracts. It might be recalled that the March contract had risen very close to the ceiling of Rs. 798 without attracting any serious notice of the Commission. Small wonder, therefore, that the Commission's latest action on the August contract has evoked considerable criticism. The general market opinion is that the special margin is partial to bears; the margin is aimed mainly against bulls. If the Commission were concerned mainly with the liquidation of outstanding positions it need not have fixed separate prices for bulls or bears and it could have straightaway called for margins on all the outstanding business. It is certainly unfair to draw any distinction between bulls and bears, especially during the delivery period. It is more so when speculation is not known to have caused any wide swings in prices.

While announcing the special margin for the August contract, the Forward Markets Commission has also stipulated certain safeguards for the March 1965 contract in which trading has been permitted with effect from 30th July. Trading will be subject to a maximum price of Rs. 775 a 3 quintals up to the commencement of the delivery period, that is, 28th February. During the delivery period, whenever the price rises above Rs. 775, a special margin of Rs. 150 a bale will be payable on the gross long position held by a member on his own account and on account of each of his clients. To afford relief to the small operator, a free limit has been allowed up to 1,000 bales. In order to check speculative operations of non-member clients, which have of late shown a tendency to increase, the Association, at the instance of the Commission, has assumed powers to check the same. Non-member clients will henceforth be required to get themselves registered with the Association. Powers have also been taken to limit, if necessary, the open position of non-member clients.

No serious objection can be raised against measures designed to contain the volume of speculation within limits, especially when these measures are announced well in advance. It is one thing to prescribe certain terms and conditions for trading, no matter how fair or unfair they might appear, but it is quite a different matter when the authorities interfere in the market even though the liquidity and the solvency of the market are not threatened in any way. It is arbitrary interference which needs to be scrupulously avoided. Discipline has got to be enforced, but the authorities would do well to remember that markets cannot be made to fluctuate to order. How cotton futures will behave in the new season is difficult to say, because it all depends on the size of the new crop about which very little can be said at present. However, in view of the rising trend in consumption, the new crop will have to be sufficiently large around 6.3 million to 6.4 million bales if prices are to keep within the ceiling.

The States to Borrow

With the exception of Punjab, 13 State Governments are offering 12-year loans for Rs. 100 crores, carrying interest at 4.75 percent. The loans are redeemable at par. The funds will be used to finance development under the plan. The loans, except that of the Kerala Government, will open for subscription on 24th August and close on 29th August or earlier as soon as subscriptions equivalent to the amount of each issue are obtained. The Kerala loan will open for subscription on 25th August and close on 31st August or earlier if the notified amount is obtained. All the States have reserved the right to retain subscriptions up to 10 percent in excess of the notified amounts. Provision has been made to allow a subscriber to transfer his application from one loan to another in case the former is over-subscribed. Maharashtra and Gujarat will offer their loans at par; Madras, Uttar Pradesh and West Bengal at Rs. 99.75 percent; Andhra Pradesh, Assam, Bihar, Kerala, Madhya Pradesh, Mysore, Orissa and Rajasthan at Rs. 99.50 percent. Five of the 13 States have offered cash-*cum*-conversion loans. The Maharashtra loan for Rs. 15 crores is the largest, while the Assam loan for Rs. 3 crores is the smallest. The West Bengal loan amounts to Rs. 7 crores.

Although the gross borrowing of the States amounts to Rs. 100 crores, their various maturing loans amount to about Rs. 21 crores. So a net amount of Rs. 79 crores will be raised, but this amount may increase by a further Rs. 10 crores due to over-subscription. The State Governments did not issue any loan in 1962-63 since their requirements were obtained through the centralised borrowing programme which gave them about Rs. 101 crores. In spite of the many advantages of the combined borrowing scheme, it has been abandoned mainly because of two reasons. Firstly, the States did not seem to exert themselves to attract funds under the combined borrowing programme. Secondly, it has been found difficult to allocate shares to various States in a combined borrowing programme. In 1963, it is presumed that the share of the States was paid out of the ten-year loan which the Central Government issued at an interest rate of 4.25 percent.

The terms and conditions of the new loans are in keeping with market expectations. The higher return offered conforms to the rising interest rate all round. The yield amounts to 4.75 percent for loans issued at par, to 4.78 percent for loans issued at Rs. 99.75 percent and to 4.81 percent for loans issued at Rs. 99.50 percent. The total amount which the State Governments seek to raise will siphon off considerable funds from the money market, and aggravate the pressure on banks in the coming weeks when the pull of the busy season begins to be felt.

The Life Insurance Corporation of India and provident funds will support the loans in view of the large yield. As for banks, they are likely to show fair interest. During the past fortnight or so, the banking community remained aloof from the securities market to conserve funds for investing in the new loans. Most of the banks have already complied with the increased liquidity requirement to be enforced by September 1964. Under the circumstances, the State Governments are likely to put pressure as in former years for subscriptions. If this happens, there would be an inclination to sell the securities shortly after subscriptions. So the prices of the new loans may temporarily drop below their issue prices. As a result of the pressure, the prices of the existing State Government loans may decline.

Maintaining Real Income of Workers

It was only natural that the best part of the proceedings of the two-day session of the Indian Labour Conference, held last week in Bangalore, should have been devoted to the price situation in the country, particularly to the soaring prices of foodgrains. Although the agenda did not provide for it, the circumstances justified the discussions. But the solution, as the Central Labour Minister seemed to think, does not lie in all industrial establishments opening fair price shops by next February, for fair price shops would at best be palliatives, and not the remedy proper. Mr. Sanjivayya sets great store by these shops but he appears to have overlooked the fact that factory establishments can run such shops only when they have the assurance of a regular supply of foodgrains and other essentials from the market, or from the Government at reasonable prices. Secondly, the workers themselves must be willing to draw their supplies from the shops. Mr. Naval Tata pointed out that only 30 percent of the workers in some of the textile mills who had opened fair price shops, were drawing their supplies, and the balance preferred the free market. This simply means that the workers, too, have acquired a taste for better things of life, which they are able to satisfy with their enhanced purchasing power. This is no unhealthy thing in itself but in the prevailing context of scarcities all round, there ought to be some check on the spending spree of industrial labour as it is thought necessary in others' cases. It is strange that no worthwhile savings plan is yet operating for workers in industry.

The present rise in prices is bad enough, but it would be worse if labour wages were linked automatically to every rise in the cost of living index, itself open to various objections. Besides, such a system would accentuate inflation, not counter it. Labour's agitation for higher wages is understandable, and it is unfortunate that more mandays have been lost in the first five months of this year than during the whole of 1963, but labour, too, has to realise that its interests are not something separate from those of society as a whole. The Central Labour Minister, therefore, did well in stressing the larger problems facing the country and urging labour to co-operate in raising production which alone can provide a lasting remedy against inflation. Mr. Sanjivayya also deserves to be complimented on resisting the pressure to implement the Bonus Commission's recommendations straightaway. This, he said, required the consideration of many issues and the Government had to give further thought to the matter before coming to a decision. On the closing day however, he promised to have the Government announce its decision by the next Independence Day. The Central Labour Minister's faith in Wage Board awards as the more useful means of securing the "share of labour in the fruits of its toil" is much too one-sided. If Mr. Sanjivayya knew how these awards are boosting industrial costs, itself a great factor in current inflation, he would feel compelled to revise his opinion. Since he does not know, or does not care

to know, he is about to set up wage boards for the engineering and fertiliser industries.

In the matter of fixing wages, industry's capacity to pay should be the main criterion, but not all wage boards prefer to go by it. Now that the Conference has agreed that part of workers' wages should be paid in kind—the non-cash element covering such essentials as rice, wheat substitutes, sugar, pulses, cooking medium and cloth, and these at cheaper rates than those ruling in the market—the wage boards should devise a formula which would do justice to employers and workers alike. The boards should also consider larger problems like holding the price line and increasing the country's exports against increasing competition. The Government's labour policy, unfortunately, has tended to make labour a pampered section of society. Everything has been done to ensure the security of its employment, while practically nothing is being done to enhance its productivity. And Mr. Sanjivayya has stated that a draft amendment to the Industrial Disputes Act is ready for introduction in the next session of Parliament, with a view to providing greater security of employment to workers.

No Private Monopoly in India

In a memorandum to the Monopolies Commission, the Indian Chamber of Commerce has pointed out that there is no monopoly in the private sector, but in the public sector there are already several including life insurance, airlines, telephones and export and import trade in some goods. If monopoly is harmful to public interest, it can be scarcely less so when it exists in the public sector. In fact, while private monopolies can be controlled by State action, there is no such restraining influence when the State itself is a monopolist. The Chamber has also drawn attention to the fact that a monopoly by itself is not harmful if this has arisen in the process of achieving economies of scale or in applying the benefits of modern technology to a line of manufacture. In the United States as well as in the U.K., the State intervenes only when a monopoly operates in a manner detrimental to public interest. In an under-developed economy particularly, the term monopoly is often a misnomer. Pioneering enterprises have to be started in fields hitherto left untapped, and therefore, one or a few units may be operating for some time because of the smallness of the market. But when the market widens, competitors come in. "The so-called monopoly, therefore, represents only a stage and an inescapable stage at that, in the early stages of industrial development of a country".

Referring to the concept of concentration of economic power, which is being used in a loose and imprecise sense in this country, the Chamber contends that there is really no such concentration in the private sector. Production is regulated by licensing under the Industries (Development and Regulation) Act; investment is regulated by the Capital Issues Control and management by the Company Law. In the case of the more important industries, prices are fixed by the Tariff Commission. Purchases and sales are regulated by strict provisions of the Company Law. In the circumstances, economic power is really "vested in the Government and not with private enterprise", the Chamber argues. It further points out that even according to official spokesmen, there is not a single group or house which controls even 3 to 4 percent of the entire output in major industries. It may be argued that there may be several independent undertakings producing small percentages of different items and functioning under one management. But apart from the fact that each of these companies is owned by a large number of shareholders, the management itself is subject to strict control under the Company Law. No managing agency house can manage more than ten companies, and no person can be the managing director of more than two concerns. By any other yardstick also, there is no concentration of economic power in private hands. For instance, there is not a single Indian company which finds a place in the list of 450 large undertakings in the world. Even of the 100 largest Indian companies, the total paid-up capital of 19 Government companies is much more than that of the 81 in the private sector. And among the topmost ten, six companies are in the public sector. The National Coal Development Corporation, for instance, has net tangible assets amounting to Rs. 72 crores, which exceeds the assets of all the private collieries put together.

At the personal level, the fiscal policies of the Government have been so framed that as much as 88 percent of some incomes is taken away by tax. Then there is a capital levy on all wealth in the form of wealth tax. In some cases, income tax and wealth tax together take away as much as 120 to 140 percent of a person's income. There are expenditure and gifts taxes to plug loopholes if any, and over and above these, the estate duty takes away 85 percent on estates exceeding Rs. 20 lakhs in value. These are measures which cannot make for concentration of economic power and wealth. There are yet others, such as controls and regulations, which do not allow restrictive practices to grow. In the circumstances, the Government ought really to be thinking about providing more incentives for the large and growing class of new entrepreneurs which has come up in the wake of economic development. It must also appreciate the logic of modern industrial growth. As the Mahalanobis Committee has itself pointed out, industrialisation has its own logic, and neither the economies of scale nor that of full use of scarce talent can be ignored with impunity. The Chamber draws attention to the fact that the trend throughout the world is that industrial units are becoming bigger; the process of merger of even bigger units to improve production techniques and to stand international competition is commonly observed in all fully developed and mature economies.

Benami Ownership of Shares

The latest issue of *Company News and Notes* contains an interesting discussion on *benami* ownership and take-over bids in shares which should attract attention since these two subjects constitute important problems in Indian company management. *Benami* ownership is deep-rooted in this country, so its abolition may dislocate trade and business without conferring counter-balancing advantages. In many cases, nominee holdings are harmless and tend to serve legitimate purposes. But strong arguments have been produced for the abolition of nominee ownership. Shares have been held *benami* for such purposes as tax evasion fees. *Benami* ownership has helped to obscure the real ownership. Unscrupulous directors have taken advantage of it to obtain inside information for speculative purposes. Furthermore, genuine shareholders have found it difficult to consult the real owners for joint action. The non-exercise of voting rights by banks and executor companies has enabled groups with small shareholdings to control companies. However, since the total abolition of *benami* holdings is not immediately desirable, stricter control over such ownership is necessary.

It has, therefore, been suggested that every transfer of share shall contain a declaration by the transferee stating whether or not he would be the beneficial owner of the shares. A declaration on *benami* ownership should be made by all existing shareholders who directly or indirectly control the beneficial ownership of more than 1 percent of the issued capital of the Company. Any changes concerning beneficial ownership should be communicated to the Company and also to the Registrar of Companies. The desirability of amending Section 153 of the Companies Act restricting the period of validity of blank transfers may be considered in this connection and a penalty for non-disclosure be imposed.

The importance of take-over bids has been appreciated in this country and abroad. The Jenkins Committee of the U.K. fully dealt with this problem in investigating company law reform. In spite of the misuse of take-over bids, they may confer positive economic advantages such as rationalisation of production, provided a take-over is *bona fide*. But it is necessary to ensure that take-over is *bona fide* by framing appropriate rules and regulations to check malpractices and undesirable concerning of shares.

Symposium on Science and Technology

The four-day symposium on "Science and the Nation", which began in New Delhi last Friday, rightly urged closer scientific collaboration between India and some of the Afro-Asian countries. Unfortunately, many countries in the region are still scientifically backward, so it is difficult to say how fruitful the collaboration among them will be. It was suggested at the concluding session of the symposium that scientific collaboration between these countries should include the exchange of books and scientific abstracts and the training of scientific and technical personnel from other countries. Dr. V. K. R. V. Rao, Member of the Planning Commission, strongly supported the idea that India should make scientists and technicians available to other developing countries. This is no doubt a laudable proposal, but how far India will be able to fulfil this obligation in spite of the current shortage of trained scientific and technical personnel, it is still difficult to say. An atomic scientist, however, gave details of an agreement under which India will assist some south-east Asian countries in using research reactors. The suggestion of the Philippines' delegate that an Asian science bulletin should be brought out is also welcome in principle, provided it encourages the spirit of research without treading the delicate ground of politics. Much of the discussion at the symposium was, however, restricted to generalities, and there was little scope for disagreement over the major conclusions reached. For example, nobody could disagree that there should be rapid electrification of the rural areas or that there should be greater co-ordination between irrigation and agriculture departments. The discussion at the symposium also stressed the need for minor irrigation projects and the increased production of fertilisers over which there could not arise any controversy. The symposium would have been a greater success if the discussion on such generalities were avoided and if greater attention was paid to the more important subjects on the agenda.

Under Mr. Nehru's leadership, the country has made considerable progress in the sphere of science and technology. But if the National Laboratories were not hamstrung by too much of red-tape, their contribution to industrial research would undoubtedly have been more remarkable. The junior scientists at these laboratories need more encouragement than they have received so far. As it happens, more importance is now attached to the number of papers a scientist publishes than to the quality of his work. There has also been complaints that senior scientists take credit for what their junior colleagues do. There is no wonder, therefore, that an atmosphere of frustration prevails. Under the circumstances, it is not surprising that qualified and talented scientists, who are working abroad, are unwilling to return to this country despite verbal exhortations from Ministers and the planners from time to time.

Suggestions were made in the past that research personnel engaged in the National Laboratories should be allowed to work as industrial consultants. This will promote a greater liaison between these laboratories and industry. Admittedly, the money spent by the latter on research is still too small, so the Central Minister for Heavy Engineering, Mr. T. N. Singh, recently suggested that the Government might have to impose a tax on industry for promoting research. This is a welcome proposal, but before the Government makes up its mind on the issue, it should see to it that the money already being set aside for either scientific or industrial research is properly utilised and that there is no scope of infructuous expenditure from the proceeds of the proposed taxation.

Staff Management in Banks

Inaugurating the first course on staff management in banks at the Bankers' Training College in Bombay last Sunday, Mr. P. C. Bhattacharyya, Governor of the Reserve Bank, said that the crucial problem before Indian banks was to equip themselves well in order to shoulder the increasing responsibilities arising from a developing economy The efficiency of banks can be improved if right people are recruited and trained in adequate numbers. It involves long-range planning of staff requirements; adoption of a scientific and systematic policy of recruitment, selection, training and placement; providing the staff with opportunities and scope for promotion and development; creating the right type of organisational set-up so as to ensure proper co-ordination, direction and control of their activities and lastly maintaining the right type of atmosphere so that apart from acquiring competence, they develop devotion to their work. So the new management course introduced in the Bankers' Training College will prove to be of particular importance to the entire banking industry. Efficient managerial resources, Mr. Bhattacharyya said, are very scarce, particularly in a developing country like India. Unfortunately, management studies have not been given that amount of importance that they deserve in the banking industry Even in advanced countries, it is only during the last few decades that a scientific study of the subject has been undertaken. In India also, it has received some attention only in recent years. Better staff management would not only contribute to profits, but would also enable banks to render useful service to customers and the community.

Mr. Bhattacharyya said that the Reserve Bank had taken a number of steps to promote the study of sound banking techniques, practices and procedures. The setting up of the Bankers' Training College for imparting training in practical banking to the supervisory staff of comemercial banks was the starting point. The college began with a senior course for the upper layer of the managerial staff But subsequently, in response to requests from banks, it started the intermediate course. Later on, in the context of commercial banks undertaking new activities such as offering term loans to industry and financing the foreign trade, two more courses were added, namely, the industrial finance course and the foreign exchange course. The college has now introduced a special course on staff management in banks in order to equip senior officers with the knowledge of modern management practices and human relations which, Mr. Bhattacharyya said, is necessary for analysing problems relating to banking personnel in "a scientific, objective and rational way."

Control on Cloth Prices

The views expressed by the representatives of the Bombay Retail Cloth Dealers Association and the Kanpur Kapra Committee on the proposed scheme of statutory control on cloth prices deserves the Government's consideration. It is a sound suggestion that "popular varieties" should be determined on the basis of either maximum demands or maximum sale and no other basis would be quite so realistic. It will be a tricky business to decide the 40 percent of total production of cloth on which statutory price control would be imposed, but in deciding this 40 percent—constituting the popular varieties—the views of the industry should be taken into account.

The proposed profit margins at 6 percent to 7 percent for wholesalers and 15 percent to 16 percent for retailers is inadequate in view of the rising costs, and as the trade representatives have pointed out, might encourage illegal practices. They have suggested a margin of 25 percent for retailers.

The proposed statutory price control on cotton textiles will undoubtedly create many difficulties. It is doubtful whether statutory price control will benefit either the consumer or the producer. Since there is at present no shortage of cotton cloth in the market, the suggestion made by Mr. Navnitlal Shah, president of the Federation of All-India Cloth Merchants Association, that the Government should completely decontrol cloth prices—at least as an experimental measure for a few months—deserves to be carefully considered by the authorities.

Cloth Output Up

The output of cotton textiles by Indian mills during June is provisionally placed at 415 million yards, compared with 384 million yards in the previous month and 396 million yards in June 1963. The June figure raises the total for the first six months of the current year to 2.473 million yards, compared with 2.408 million yards in the same period of last year. Yarn production in June at

SYMBOL OF QUALITY

Quality is the key to success and development of industries. Use of quality products reduces cost of production, maintenance and overhead charges. That is why, the demand for N.P.T. products are growing more and more every day. This increasing demand surely proves that N.P.T. stands as a symbol of quality.

N.P.T

RANGE OF PRODUCTS:
Bars—Rounds, Hexagonals, Squares & Flats, Sections, Pipes and Tubes of Brass & Copper including Arsenical Copper, Copper Bus Bars, Strips and various other non-ferrous Semis. N.P.T also roll pure Lead and Electrolytic Zinc Sheets.

NATIONAL PIPES & TUBES CO. LIMITED
"NICCO HOUSE," 2, HARE STREET, CALCUTTA—1.

SEKAI-NPT-1A

160 million lbs is 2 million lbs less than in the preceding month, but compares very well with the June 1963 figure of 140 million lbs. The output of yarn for the six months of the year comes to 1,019 million lbs, against 951 million lbs in January-June 1963. The increase in production is welcome, but the improvement is too small to make any significant impact on the total availability of cloth and on prices which keep rising in any case because of the mounting production costs.

Cloth stocks with mills which had declined from 250,100 bales (of 1,500 yards each) in April to 238,400 yards in May are up again at 249,500 bales. Unsold stocks are down from 88,300 bales to 87,300 bales, while there has been an increase of 8,100 bales under "sold but delivery not taken" from 150,100 bales to 162,200 bales. Yarn stocks are down from 107,200 bales (of 400 lbs each) to 101,600 bales. Unsold stocks are lower at 51,200 bales, against 52,200 bales, and there is a decline of 4,600 bales under "sold but delivery not taken". While yarn stocks are somewhat on the high side, stocks of cloth are reasonably low. At the end of June 1963, cloth stocks with the mills stood at 311,200 bales, of which unsold stocks accounted for 150,800 bales.

New Companies in Eastern Region

Eighty-nine new limited companies, including one guarantee company, with a total authorised capital of Rs. 8.71 crores were incorporated in the eastern region comprising the States of West Bengal, Bihar, Orissa and Assam during the quarter ended June 1964. Eleven companies with a total paid-up capital of Rs. 11.83 lakhs went into liquidation, and the names of 16 companies with a total paid-up capital of Rs. 4.14 lakhs were finally struck off under the Companies Act, 1956, during the same period. As for the Statewise details, 76 companies with a total authorised capital of Rs. 7.67 crores were registered in West Bengal during the quarter. In Bihar, six companies with a total authorised capital of Rs. 38 lakhs were registered during the period In Orissa, three private companies with an authorised capital of Rs. 9.95 lakhs were registered during the quarter. In Assam one public company and three private companies with an authorised capital of Rs. 25.50 lakhs and Rs. 30 lakhs, respectively, were registered during the period.

4¾ PER CENT STATE GOVERNMENT LOANS, 1976.

All loans, except Kerala Government's loan, will open for subscription on Monday, 24th August 1964 and close on Saturday, 29th August 1964 or earlier without notice as soon as subscriptions approximate to the amount of each issue. The Kerala Government's loan will open for subscription on Tuesday, 25th August 1964 and close on Monday, 31st August 1964 or earlier without notice as soon as subscriptions approximate to the notified amount. All the State Governments reserve their right to retain subscriptions upto ten per cent in excess of the notified amounts

The loans will be redeemable at par after 12 years i.e. 24th*/25th@ August 1976 and interest will be paid half-yearly on 24th*/25th @ February and 24th*/25th@ August each year.

Subscriptions may be in the form of CASH/CHEQUE in respect of all the loans.

Securities of 4% Bombay State Development Loan, 1964 and 4% Saurashtra State (Local Bodies Development) Loan, 1964 will be accepted AT PAR for conversion into the new loan of the Government of Maharashtra. Securities of 3% Madhya Pradesh Loan 1964, Madras Government 4% Loan 1964, 4% Uttar Pradesh Loan 1964 and 4% West Bengal Loan 1964 will also be accepted AT PAR for conversion into the new loans of the respective State Governments.

Interest on the securities of 4% Bombay State Development Loan, 1964, Madras Government 4% Loan 1964, 4% Uttar Pradesh Loan, 1964 and 4% West Bengal Loan, 1964 tendered for conversion will be paid at the rate of 4% per annum upto 31st July 1964. inclusive and at 4¾% per annum for the period 1st to 23rd August 1964 inclusive. Interest on the securities of 4% Saurashtra State (Local Bodies Development) Loan, 1964 and 3% Madhva Pradesh Loan, 1964 tendered for conversion will be paid at the rate of 4% and 3% upto and inclusive of 23rd August 1964 and 31st August 1964 respectively.

Applications for **all the loans** will be received at the offices of the Reserve Bank of India at Bangalore, Bombay (Fort and Byculla), Calcutta, Madras, Nagpur and New Delhi, the branch of the State Bank of India at Patna and the branch of the State Bank of Hyderabad at Hyderabad.

Applications will also be received **at other places within the respective States** as follows :

(i) Branches of the Subsidiary Banks of the State Bank of India conducting Government treasury work.

(ii) Branches of the State Bank of India at places where there is no branch of its Subsidiary Banks conducting Government treasury work.

(iii) Treasuries and Sub-Treasuries (except in the States of Assam and West Bengal) at places not served by the aforesaid branches.

Copies of the Notifications and Application Forms may be obtained at any Receiving Office.

Applicants tendering applications at the offices of the Reserve Bank of India at Bangalore, Bombay (Fort and Byculla), Calcutta, Madras, Nagpur and New Delhi will, in the event of oversubscription to the loan applied for, be given the option of transferring their cash refunds to any of the other State Government loans which may still be open for subscription. To avail themselves of this facility, the applicants should complete the "Special Option Form" copies of which can be obtained at any of the foregoing offices of the Reserve Bank of India and tender the form along with their applications.

TEA ACREAGE IN INDIA

FROM the interesting monograph prepared by Mr. J A. Robertson, we gather that the area under tea at the end of 1903 was 524,827 acres made up thus :—

	Acres
Sylhet and Cachar ...	133,576
Assam	204,702
Bengal	135,956
Madras and Travancore	31,627
Northern India ...	17,446
Burma	1,520
Total Acres	524,827

An addition of 85 percent has been made to the area under cultivation during the last 19 years made up thus :—

	Acres
1886-1890	60,892
1891-1895	70,890
1896-1900	106,770
1901-1905	2,340

It will be observed that the great extension was during the five years ended 1900, the years 1898 and 1899 being responsible for 68,400 acres. This is what has brought about the decline in prices for the tea then planted is now in full bearing. The net addition to the area during the last two years is only 60 acres, and if Tea garden agents will only leave well alone, the industry will come round, but to talk of it as moribund or as having received a death-blow is merely drivel. The industry is here, the capital embarked in it is over 12 millions sterling, and it has come to stay. Probably 90 to 95 percent of that capital belongs to persons resident out of India and consequently the Indian Tea industry is carried on presumably for their benefit, though the cream of the profits finds its way into the pockets of the management of these companies, and the return to shareholders in many instances is infinitesimal. The cost per acre of tea under cultivation averages £23 per acre, but this is a low average. We can fairly assume that £30 per acre is a reasonable price. The yield of tea has increased in more than double the ratio of the increase in the area planted. Taking 1885 as a starting point and 100 as representing the area and production then, we find that in 1903 the area had increased to 185 and the production to 292. The great increase in production was in 1899, when 24 million lbs. were made in excess of 1898. Last year the increase over 1902 was 20 million lbs and the outturn 208,709,571 lbs., was the highest on record. This wholesale extension has of course led to a smart fall in prices; Broken Pekoes realised in Calcutta in 1902 an average of 6 annas 1 pie against 11 annas 8 pie in 1894. Pekoes 5 annas 2¼ pie against 9 annas 4.4/5 pie and Pekoe Souchong 4 annas 3¼ pie against 7 annas 5/7 pie! Had not considerable economies been effected in the manufacture many concerns must have perished as it is old. expensively managed companies can make no return.

A Ditcher's Diary

WHAT'S GOING ON IN NAGALAND? PERHAPS THE Government of India itself would give much to know the answer. Three more joined the many dead on Saturday, just when negotiations with the "hostiles" seemed imminent, with some hope of a settlement. Meanwhile, I find considerable criticism of the rôle Mr. Michael Scott may be playing. It is not pleasant to see a foreigner meddling in what is undoubtedly India's internal problem. Yet the estrangement between India and the Nagas was not getting better; and, as in several other spheres, India seemed to have lost the initiative. It is excruciatingly difficult to devise a correct as well as effective policy for the Nagas; it is all too easy to err both on the side of kindness and severity. And it is my impression that New Delhi's errors have been of both categories. Critics, however, would do well to remember that a mixture of charity and severity was the only possible policy; to be absolutist in these matters is either to be ineffective or inhuman. Again, it is not at all surprising that the policy has been misunderstood by many Nagas. Some think fighting will soften the Government of India's will; others are convinced that militancy will extract more concessions from New Delhi. The result of both is continued unrest. I shall reiterate my feeling that India has not yet been able to create a body of officials and others who are genuinely interested in the Nagas' way of life; there are few in the Government of India who are prepared to look at things from the Naga point of view—especially now that Dr. Verrier Elwin is no more. It is not easy for plainsmen to inspire confidence in secluded societies like the Nagas'; physical penetration is far easier than psychological penetration. But I believe that it can be done. The first thing to do is to shed that superior sneer that manifests itself on many faces at the sight of something unfamiliar; the temptation to call it quaint or uncivilised is strong. In spite of their simple minds, tribals are quick to detect this feeling of the outsider who, to them, looks like a foreigner who is by definition, suspect.

I NEVER WAS ENTHUSIASTIC ABOUT THE SO-CALLED Colombo Proposals on the Sino-Indian border dispute; I thought they were irrelevant and none of Ceylon's business anyway. But the latest proposals of Dr. N. M. Perera, the Finance Minister, affect the Indians in Ceylon very severely indeed; and New Delhi seems almost callous. But most of what Burma and Ceylon have done was surely foreseeable; unless the Indian missions in those countries were sleeping, the Government of India must have been warned of what was coming. Yet, is there the slightest evidence of any forethought as to how the problem was to be faced when it arose? The politics of the affair are complex enough; a variety of historical circumstances took a large number of Indians to places like British Guiana, East Africa, Fiji and, of course, Burma and Ceylon. They are now unwanted and being squeezed out through political, economic and other arbitrary measures. Yet the economics of the matter has received singularly little attention. The truth is that the economies of Ceylon and Burma have been steadily deteriorating in recent years. That the expulsion of economically productive Indian communities will worsen matters is not unknown to the respective Governments; but the local pressures are harder to resist than piteous appeals from expatriates. The answer to most problems of immigrants is—prosperity. In Switzerland every fifth worker is a foreigner; large numbers have been absorbed in Britain and Germany; France is still looking for workers from abroad, although recent reports of hopes for Indians were grossly exaggerated and led, I gather, to not a little embarrassment and overwork in the French consulates in India. If only Mrs. Bandaranaike and General Ne Win had not made such a mess of their economies, they would perhaps have welcomed the Indians in their countries. With plenty of rice about, there is no reason why Burma should be on the verge of a collapse. It is. Ceylon need not be poor either. It is. And all because the natural economic processes were distorted beyond recognition. Result: suffering for all.

ALL I CAN SAY IS THAT INDIA ASKED FOR WHAT SHE got in Tokyo. Admittedly, Mrs. Aruna Asaf Ali walked out of the conference against atom and hydrogen bombs in reasonably respectable company which included the Soviet Union; but, if she had not walked in in the first place, there would be no need to walk out later. It's as simple as that. And I do not believe that India would have lost anything by not being represented there—or, indeed, at a good few other get-togethers that I could name. To put it bluntly, international respect for India is on date very limited. Nor is the reason far to seek. It may seem terribly cynical to say so; but the fact is that the largest ingredient of one people's respect for another is fear, physical fear. And, after the manner in which the Chinese worsted the Indian forces in 1962, no country fears India. On the contrary, the apparent deference many countries in south-east Asia and elsewhere show China proceeds from sheer fear and nothing else. As long as this contrast continues, whatever the nature of India's confrontation with China, and whatever the place, the scales are heavily weighted against India. It's no use blaming T.T.K. today and Mrs. Asaf Ali tomorrow. What, then, does India do? Especially when conferences are held at a non-governmental level to which non-officials are invited over whom, in theory, the Government is supposed to have no control? When teachers or journalists go, as sometimes happens, despite the Reserve Bank of India, no great harm is done. They are not regarded as representatives of the Government of India. Mrs. Asaf Ali, I suspect, is, which may or may not be Mrs. Ali's fault. What, I think, the Government has to beware of is any unintended extension of India's commitments by parties not directly responsible to the Government. This has happened about Formosa; this has happened about communists going to all sorts of conferences. Quite unnecessarily. What New Delhi has to do is to make it clear what is official and what is not. Just as the Government of India is not, mercifully, responsible for what I am writing here, it should make clear that anyone going from India is not an ambassador of India.

IT IS DIFFICULT TO AVOID THE CONCLUSION THAT THE British Government has acted precipitately over Malta. I am not criticising the decision to grant independence; not, that is, if the Maltese want it, because an island of Malta's size cannot hope to provide its large population with a reasonable standard of living unless some protecting power is prepared to foot the bill. But it does seem to me that the way it has been done invites the kind of reaction which proved so disastrous in Zanzibar's case. Wherever Britain has handed over to the wrong people previously, the resulting "revolution", even where this has taken place through the ballot box as in Ceylon, has established circumstances that have been in nobody's true long-term interests, especially Britain's. The final step has been decided on, of course, because the British Government has suddenly found Malta useful again, and therefore worth taking a gamble on, whereas only a few years ago the island had been written off completely as a strategic base. Such a state of affairs, or so it was reckoned in London, weakened the bargaining power of the Maltese political Parties and increased their reliance on British charity. Now, with the old rôle of naval fortress transformed, for the time being, into that of an air staging-post, the estimate seems to be that the necessary few more years of tranquillity can best be gained by handing over internal power to a minority, though pliable, Maltese national government supported by British money paid over in consideration for the use of the landing facilities. So now it all depends on how strong that new government turns out to be. My guess is that it will not be strong at all, and that Britain, to its embarrassment, may have to take over responsibility again in a few years' time, as happened in British Guiana. All this forecasts rather a dim prospect for an island which joined the British Empire voluntarily over 150 years ago and has

served Britain well ever since. I could never wholeheartedly accept the reasons given for not incorporating Malta into Britain itself in the same way, for example, as the Andamans are a part of India or Hawaii one of the United States.

WHATEVER SIR CHARLES SNOW HAS TO SAY I always find of immense interest. His thesis that English education is altogether too polarised is one with which I entirely concur, and now that he has acknowledged the importance of the social sciences I find it impossible to disagree with his submission that all imparted knowledge should take full account of modern scientific thinking. So far I have only read the Press reports of what Sir Charles said recently in his first Tagore memorial lecture, but one point he appears to have raised does strike an odd note for anybody so convinced of the virtues of the scientific approach. I can only hope he has been wrongly quoted. To say, for instance, and without apparent qualification, that if poor countries are to be helped, the "accumulation of capital is essential", is to take a strikingly naïve view of the problems of underdevelopment. I shall not deny that the accumulation of the right kind of capital might, in some circumstances, help poor countries, but I do think it is important to make clear that this is only a small part of the solution to the overall problem. Far more important is the task of changing old social and economic habits, something which requires little capital but a good deal of education and persuasion. To take only the case of India: if productivity in agriculture could be doubled by the adoption of improved methods of cultivation and animal culture, the standard of living of the country could be increased by well over 50 percent with very little capital indeed. Looked at another way, all the aid in the world, if invested in unproductive capital resources, would not help India one bit, as experience with the five year plans is beginning to show. I am sure that Sir Charles realises this and that if he ever reads my words as carefully as I read his I run the risk of being dismissed as a quibbler. But I am saying all this because I do feel a most important principle is involved. Human thinking tends to follow the easiest path through the jungle of life's complications and realities, and at the moment the "conventional wisdom", as Professor Galbraith has called it, in the West on development is that if enough capital can be pumped into the poorer countries, everything will eventually be all right. In fact, it would be difficult to be more wrong; so often these days foreign capital is not a complement to the home-produced variety, it is a substitute for it, and leads government into policies of wasteful and ostentatious investment which could not be sustained if the resources had to be raised from their own people.

WHEN DISRAELI SAID THAT INCREASED MEANS AND increased leisure were the two civilisers of man, I am sure his thoughts must have been very different from the ideas that the Government in this country has on holidays. If Scotland is the land of cakes and Copenhagen the city of bicycles, someone may as well call India the land of holidays. Each State has its own set of public holidays, which are not necessarily observed as such by other States. The pride of place goes to Jammu and Kashmir which has 30 public holidays and 13 sectional ones. Second on the list comes Bengal (22 days) followed by Uttar Pradesh (21 days) and Rajasthan and Bihar (20 days). The Central Government itself has declared 16 public holidays and 12 restricted holidays, of which two may be availed of by its employees. And if perchance a holiday falls on a Sunday, a compensatory closure is often declared for the next working day. Considering the vastness of the country and the bewildering number of festivals and festivities it has, and the many great men and events whose memory has to be honoured, this is to an extent understandable. But in terms of man-days lost to the country the tally is huge. I think it is time that the number of holidays was cut and some uniformity was introduced. The number may be limited, say, to 20, of which 10 may be fixed by the Central Government as national holidays and the remainder left to the discretion of the States.

THE DITCHER

Guide for Investors

IMPERIAL TOBACCO EARNS LESS, PAYS LESS

THE Imperial Tobacco Co. of India Ltd has declared a final dividend of 2.5 percent, subject to tax, for the year ended March 1964. This, together with the two taxable interim dividends of 2 percent each, makes a total of 6.5 percent for 1963-64, against 8 percent for 1962-63. The yield amounts to 7.1 percent at the present price of Rs. 9.19 a share of Rs. 10 each. The net profit has amounted to Rs. 99.25 lakhs, against Rs. 1.80 crores, after providing Rs. 1.87 crores (against Rs. 2.62 crores) for taxation and other charges. The directors have also decided to declare a first taxable interim dividend of 2.5 percent for the year ended March 1965, against 2 percent for 1963-64. It has been mentioned that the Company's business was adversely affected by taxation, so a reduced dividend has been recommended. Prospects for the current year, however, justify the declaration of a larger interim dividend. The share transfer books of the Company will be closed from 5th to 24th September, 1964.

Birla Jute Maintains Dividend

THE Birla Jute Manufacturing Co. Ltd has repeated the taxable ordinary dividend of 15 percent for the year ended March 1964 At the present price of Rs. 33.44 a share, the yield amounts to 4.5 percent. The trading profit has amounted to Rs. 2.12 crores, against Rs. 2.07 crores for 1962-63. Depreciation is allocated Rs. 1.01 crores (against Rs. 67.43 lakhs), taxation Rs. 36 lakhs (against Rs. 60 lakhs) and development and rehabilitation reserve Rs. 2.24 lakhs (against Rs. 3.10 lakhs). General reserve absorbs Rs. 4 lakhs (against Rs. 30 lakhs). The carry-forward is Rs. 40,062, against Rs. 46,410 brought in.

Anglo-India Jute Repeats

THE profit of Anglo-India Jute Mills Co. Ltd has declined from Rs. 73.58 lakhs for 1962-63 to Rs. 35.66 lakhs for the year ended March 1964, after increasing depreciation from Rs. 15.13 lakhs to Rs. 23.47 lakhs. The taxable ordinary dividend of 12 percent has been maintained, absorbing Rs. 7.09 lakhs. The yield amounts to 7.5 percent at the present price of Rs. 160 a share of Rs. 100 each. Taxation absorbs Rs. 17.10 lakhs, but a sum of Rs. 38.10 lakhs was provided for taxation in 1962-63. Development rebate reserve is allocated Rs. 3.65 lakhs (against Rs. 6.40 lakhs) and revenue reserve Rs. 4.50 lakhs (against Rs. 9.84 lakhs). The carry-forward is Rs. 55,875, against Rs. 90,773 brought in.

The directors view the prospects for the current year with extreme caution. Although the crop forecast is satisfactory, export prospects for sacking continue to cause concern. The domestic demand for sacking is, however, encouraging. The offtake of hessian depends on U.S consumption which has so far not been encouraging. With no sign of recession in the U.S. economy—combined with the growing support of the Argentine and Russian markets—a steady demand is expected. The competition in the sacking markets has been aggravated by the development of jute industries in various consuming countries. The rapid expansion of the Pakistani jute industry and its ability to produce jute goods at cheaper costs pose a great threat to the Indian jute industry. Meanwhile, the production of carpet-backing cloth in India is more than adequate to meet the current overseas requirements. Although the abolition of the Working Time Agreement will tend to foster free competition within the industry and eliminate inefficient units, it is hoped that it will be possible in the near future to evolve a satisfactory method for ensuring a considerable adjustment of supply and demand. The Company has incurred considerable capital expenditure to increase the capacity for carpet-backing cloth and for installing electrical equipment at the mills. The subsidiary Company, Landale and Clark Ltd, has had a successful year and earned a profit of Rs. 8.67 lakhs. The preference dividend for the year ended May 1954 is proposed to be paid.

Bally Jute to Issue Rights

BALLY Jute Co. Ltd proposes to issue rights ordinary shares at par in the proportion of one new share for each one held in order to bring the paid-up capital of the Company in line with its assets and activities. The Company has reduced the taxable ordinary dividend from 25 percent to 20 percent for the year ended March 1964. The yield works out to 8.4 percent at the present price of Rs. 239 a share of Rs. 100 each. The trading profit has amounted to Rs. 26.28 lakhs, against Rs. 38.19 lakhs for 1962-63. Depreciation is allocated Rs. 10.48 lakhs (against Rs. 6.39 lakhs), taxation Rs. 4 lakhs (against Rs. 19.70 lakhs) and development rebate reserve Rs. 6.95 lakhs (against Rs. 18,409). A sum of Rs. 1 lakh has been transferred from general reserve. The carry-forward is Rs. 24,424, against Rs. 39,338 brought in.

Aluminium Industries Expands and Diversifies

THE directors of Aluminium Industries have announced a final dividend of 9 percent for the year ended March 1964, making a total of 18 percent for the year. The previous year's dividend was 15 percent. The higher dividend follows a rise in the profit for the year. According to preliminary figures, the profit for the year ended March 1964, after depreciation, amounts to Rs. 59,85,542 (against Rs. 55,39,720). With Rs. 47,916 brought forward, the total comes to Rs. 60,33,458. Out of this, development rebate accounts for Rs. 4,91,000 (against Rs. 69,250). A sum of Rs. 2,00,000 is transferred to general reserve (against Rs. 1,00,000). No amount is transferred to dividend equalisation reserve (against Rs. 2,00,000). Provision for taxation amounts to Rs. 30,00,000 (against Rs. 39,50,000). The proposed final dividend of 9 percent and the interim dividend account for Rs. 22,72,500 (against Rs. 15,00,000). The balance of Rs. 69,958 is carried forward.

During the year, the Company manufactured 11,750 tonnes of bare conductors and 11.04 million core metres of covered aluminium conductors while aluminium rod rolling and accessories production was maintained at usual levels. The Company experienced an acute shortage of raw materials, and this did not permit full utilisation of the capacity for the manufacture of high-tensile galvanised steel wire. But towards the end of the year, the availability was better.

As for sales, there was a satisfactory market for the Company's products. Considerable diversification of covered aluminium conductor production was effected to cater to the varying pattern of demand. The expansion of the covered aluminium conductor plant in Kundara and the construction of the new factory in Hyderabad were completed during the year. The factory in Hyderabad was inaugurated on 29th January, 1964. The construction of the plant for the manufacture of low voltage aluminium underground cable in Kundara is nearing completion. This is expected to be in production after two months. The import licence and foreign exchange for the expansion of the aluminium rod rolling mill in Kundara have been secured. This expansion work is expected to be completed in the third quarter of 1965. The bare conductor manufacturing facilities in Kundara and Hirakud are also being increased through the installation of suitable balancing equipment.

More from Gwalior Rayon

THE Gwalior Rayon Silk Manufacturing (Wvg) Co. Ltd has stepped up the dividend for the year ended March 1964 from 25 percent to 27.5 percent, that is, from Rs. 2.50 to Rs. 2.75 a share. The detailed preliminary report on the working of the Company shows that it has fared better than in the preceding year, in that both sales and gross profit are higher. But the improvement in profit is too small in relation to the increase in sales. The turnover has gone up from Rs. 13.20 crores to Rs. 16.21 crores, whereas the gross profit has recorded only a modest increase from Rs 4.27 crores to Rs. 4.34 crores. The profit margin, measured by the ratio of gross profit to sales, is down from 32.3 percent to 26.8 percent. Appropriations include depreciation Rs. 163.35 lakhs (against Rs. 83.89 lakhs), development rebate reserve Rs. 7.98 lakhs (against Rs. 112.36 lakhs), donation Rs. 1.07 lakhs (against Rs. 21.44 lakhs), preference share redemption reserve Rs. 15 lakhs (the same) and general reserve Rs. 2.336 crores (against Rs. 1.72 crores).

The tax liability of the Company for 1963-64 is placed at Rs. 1.25 crores, which, together with the previous years' arrears, amounts to Rs. 6.71 crores and this is to be paid out of the general reserve which amounts to Rs. 9.93 crores after including the sum allocated to it in 1963-64. The equity dividend of Rs. 68.75 lakhs (against Rs. 62.50 lakhs) and the preference dividend amounting to Rs.12.92 lakhs (the same) are also to be paid out of the general reserve. After allowing for tax provision and dividend liability, the general reserve stands reduced to Rs. 2.40 crores.

The output of staple fibre increased from 28.78 million kilograms to 29.67 million kilograms and the directors state that production would have been still higher but for an accident in one of the ancillary plants. The Government's decision allowing the Indian Cotton Mills Federation to import 8.3 million kilograms of staple fibre adversely affected the staple fibre market during the year, and the selling price of staple fibre had to be reduced which affected the margin on staple fibre output. The working of the weaving division, however, was very satisfactory.

The Company produced 7,500 tons of rayon grade pulp, all of which was consumed in the staple fibre factory. Besides, about 24,400 tons of paper pulp was also produced. It is expected that in the current year the output of rayon grade pulp will be considerably more, although, the respective production of rayon and paper grades of pulp will depend on the availability of suitable bamboos for each quality. It is stated that the production of rayon and paper grade pulp has resulted in the saving of foreign exchange to the extent of about Rs. 3 crores which is equivalent to about 85 percent of the total foreign exchange used for this project. The directors add that even though an industrial licence was granted about three years ago to the Company to manufacture rayon and other chemical plant machines, no appreciable progress has been made because of the delay in the granting of import licence for importing the necessary plant and machinery. It has been possible to manufacture some of the equipment for rayon and other ancillary plants and spare parts with the existing facilities and with whatever machines that could be procured from the domestic market.

The Company has purchased a cotton textile mill in Bhiwani with an installed capacity of 18,000 spindles and 286 looms. It has been licensed to increase its capacity further by 9,200 spindles. The working of this unit has been quite satisfactory. It has applied for a licence for the establishment of a polynosic staple fibre plant with a capacity of 50 tons a day and for PVA fibre plant with a capacity of 10 tons a day. The capital outlay on the polynosic fibre plant which, it is proposed, will be taken up first is estimated around Rs. 4 crores and negotiations are in progress for foreign collaboration.

Cochin Malabar Estates Maintains

A RISE in the profit and the maintenance of the dividend at 12 percent feature the trading results of the Cochin Malabar Estates Ltd for the year ended February 1964. The profit, before taxation, amounts to Rs. 10,13,193, against the previous year's Rs. 8,80,694. After deducting tax provision of Rs. 5,57,000 (against Rs. 4,68,500), there is a net profit of Rs. 4,56,193. Adding to this a sum of Rs. 28,851 brought forward from the previous year, and Rs. 15,000 transferred from general reserve, the total available for appropriation comes to Rs. 5,00,044. Out of this, a sum of Rs. 1,60,300 (against Rs. 25,000) is transferred to rehabilitation reserve. The dividend at 7.06 percent on preference shares, subject to deduction of tax, amounts to Rs. 7,999. The proposed dividend of 12 percent on ordinary shares (the same) will absorb Rs. 3,22,953, leaving a balance of Rs. 8,792 to be carried forward.

A total rubber crop of 1,132,759 kilograms was harvested during the year,

against 1,105,303 kilograms in the previous year. The all-in cost of production was Rs. 2.84 a kilogram, against Rs. 3.05 a kilogram. The average sale price was Rs. 3.41 a kilogram, against Rs. 3.48 a kilogram. The yield an acre has improved to 278 kilograms from the previous year's level of 254 kilograms. The percentage of earnings on equity capital has risen to 38 from the previous year's level of 33. The chairman, Mr. A. D. Bolland, says in his statement that the crop has been satisfactory and the young rubber areas brought into tapping during the year have shown satisfactory results. He adds that it will be difficult to reduce expenditure on the rehabilitation programme which the Company has launched to increase the yields. The cost of materials and stores continues to rise and the existing legislation governing the employment of labour places a very heavy burden on the Company.

Referring to the future prospects, the chairman says that the crop for 1964-65 is estimated at 1,088,708 kilograms. This anticipated reduction in crop is mainly due to the replanting programme which continues to reduce the area of yielding rubber trees. This trend will continue for a few more years, but once the replanted areas come into tapping, considerable improvement will occur.

Mettur Industries Cuts Dividend

THE directors of Mettur Industries Ltd have recommended a dividend of 15 percent for the year ended March 1964, against 20 percent in the previous year. According to preliminary figures, the profit for the year, before taxation, amounts to Rs. 30,18,427, against Rs. 29,31,837 in the previous year. With Rs. 10,434 brought forward, and Rs. 5,551 being the surplus on disposal of investments, and with Rs. 94,749 transferred from advertisement reserve, the total available for appropriation comes to Rs. 31,29,161. Out of this, the directors have provided Rs. 1,82,943 (against Rs. 1,98,042) for depreciation. Bonus amounted to Rs. 4,25,000 (against Rs. 4,43,500). Provision for gratuity amounts to Rs. 54,000 (against Rs. 54,000). Provision for additional bonus in previous years amounted to Rs. 1,27,894 (against Rs. 11,577). Provision for taxation amounts to Rs. 13,20,000 (against Rs. 13,45,000). A sum of Rs. 1,00,000 is transferred to general reserve. Development rebate accounts for Rs. 17,000 (against Rs. 20,925). The proposed dividend of 15 percent will absorb Rs. 9,00,000 (against Rs. 12,00,000). Loss on disposal of fixed assets amounts to Rs. 2,033 The balance of Rs. 291 is carried forward.

Kirloskar Oil Engines Pays More

THE directors of Kirloskar Oil Engines Ltd have stepped up the dividend for the year ended March 1964 from 12 percent to 16 percent, that is, from Rs. 1.20 to Rs. 1.60 a share. The dividend on participating perference shares has also been raised from 8 percent to 10 percent. Production and sales are said to be considerably higher though the figures are not mentioned in the preliminary report which shows a small setback in the gross profit from Rs 1.098 crores to Rs. 1.04 crores. The decline in profit is attributed to the rise in the cost of production and extra expenses for exporting the Company's products without any corresponding increase in the selling prices of engines. The increase in the dividend has been made possible by the larger disposable surplus because of the lower provision for taxation.

After providing Rs. 16.17 lakhs (against Rs. 13.50 lakhs) for depreciation, Rs. 3.79 lakhs (against Rs. 3.86 lakhs) for development rebate and Rs. 46 lakhs (against Rs. 61 lakhs) for taxation, the net profit amounts to Rs. 32.10 lakhs, against Rs. 24.99 lakhs in the preceding year. Allocations include general reserve Rs. 9.24 lakhs (against Rs. 10 lakhs), rehabilitation reserve Rs. 4 lakhs (the same), bad and doubtful debts Rs. 50,000 (against nil) and capital redemption reserve Rs. 5 lakhs (against nil). After providing for the proposed dividends which absorb Rs. 13.60 lakhs (against Rs. 11 lakhs), there remains a balance of Rs. 4.952 to be carried forward, against Rs. 28,996 brought in. The directors state that the Company's expansion programme is progressing satisfactorily, and is expected to gather momentum in the current year. The Company has negotiated a loan of Rs. 99 lakhs with the Industrial Finance Corporation of India to finance the expansion programme. The Rs. 10-paid share of the Company is currently quoted around Rs. 25, offering a gross return of about Rs. 6.8 percent.

Calcutta Bombay Madras New Delhi

Mukand Iron Results Impress

THE Mukand Iron and Steel Works Ltd has maintained the dividend on ordinary shares at 12 percent—Rs. 1.20 a share—on the increased capital, with proportionate distribution of 24 paise a share on the new partly paid shares. The dividend on deferred shares has been raised from Rs. 29.94 to Rs. 37.43 a share. The Company's working results for the year ended March 1964, show a considerable improvement over the previous year's performance, in that the gross profit is up by nearly 37 percent from Rs. 72.86 lakhs to Rs. 1 crore, despite a decline in the sales from Rs. 6.50 crores to Rs. 6.21 crores. The increase in profit is attributed mainly to larger sales of steel castings. Sales of rolled products suffered a decline, but the Company could do better because of the considerably larger profit margin on steel castings.

Appropriations of the year's profit include depreciation Rs. 21.46 lakhs (against Rs. 15.25 lakhs), development rebate Rs. 2.55 lakhs (against Rs. 4.25 lakhs), taxation Rs. 38.50 lakhs (against Rs. 29.75 lakhs), bad and doubtful debts Rs. 5,943 (against Rs. 26,411), general reserve Rs. 30.44 lakhs (against Rs. 15.30 lakhs) and dividend reserve nil (against Rs. 15 lakhs). No provision has been made for gratuity which had received Rs. 3 lakhs in the preceding year. The write-backs amount to Rs. 75,640, against Rs. 12.81 lakhs in 1962-63. The proposed dividends absorbing Rs. 17.75 lakhs (Rs. 14.01 lakhs) are to be paid from general reserve.

The prospects for the current year are stated to be good and the dividend is expected to be maintained. The management has, however, sounded a note of caution as the supply position of billets continues to be unsatisfactory. The Company's project in Kalwe is said to be progressing well. Orders for plant and machinery have been placed with foreign suppliers and the entire installation of machinery is expected to be over by May 1965. The plant is likely to be commissioned by next July-August.

The Company had spent about Rs. 5 lakhs on this project by the end of 31st March. The total cost of the project is placed around Rs. 4.5 crores. The Company has started giving technical collaboration to various Indian engineering firms. Four such collaborations have been completed by now. It is exploring the possibility of supplying technical know-how to Malaysia, Kuwait and British East Africa. Mukand Iron exported rolled products worth Rs. 7.50 lakhs, mainly to Viet-Nam, during 1963-64. Exports during the current year are expected to be larger. Referring to the scheme for conversion of deferred shares into ordinary shares, the chairman stated that although the conversion might not attract capital gains tax under the new Finance Act, legal opinion was not very clear on this point because of certain technical flaws in the provisions. The directors are examining this issue very carefully.

Kirloskar Pneumatic Raises Dividend

KIRLOSKAR Pneumatic Co. Ltd has raised the dividend for the year to March 1964 from 10 percent to 12.5 percent—Rs. 10 to Rs. 12.50 a share—which is more than justified by the Company's impressive performance during the year. Sales have increased by nearly 72 percent from Rs. 1.67 crores to Rs. 2.88 crores and the gross profit has improved by about 77 percent from Rs. 27.18 lakhs to Rs. 48.13 lakhs. Allocations include depreciation Rs. 7.77 lakhs (against Rs. 4.60 lakhs), development rebate Rs. 2.25 lakhs (against Rs. 1.86 lakhs), taxation Rs. 23.50 lakhs (against Rs. 10.23 lakhs), bonus to employees Rs. 2.94 lakhs (against Rs. 1.62 lakhs), depreciation reserve Rs. 3.50 lakhs (the same), machinery replacement reserve Rs. 2 lakhs (the same) and general reserve Rs. 2 lakhs (against Rs. 50,000). Equity dividend absorbs Rs. 3.88 lakhs (against Rs. 2.13 lakhs) and preference dividend Rs. 14,838 (against Rs. 80,219), leaving a sum of Rs. 32,352 to be carried forward, against Rs. 18,511 brought in.

The preference dividend absorbs less because 9,107 out of 10,000 convertible preference shares have been converted into equity shares. The last date for exercising the option of conversion is 31st December, 1964. In May last the Company issued 15,090 equity shares of Rs. 100 each, and these were offered to existing shareholders at par. The issue was fully subscribed and that brought the issued capital to Rs. 50 lakhs The authorised capital of the Company, it is proposed, will be raised from Rs. 50 lakhs to Rs. 3 crores.

The directors state that the Company has made considerable progress in developing semi-scaled air-conditioning compressors. It placed on the market during 1963-64 two reciprocating stationary compressors, the largest machines of their types to be manufactured indigenously. It has also commenced the building of 600 c.f.m. portable rotary compressors. The Company has signed the technical assistance agreement with Westinghouse Brake and Signal Co. Ltd of the U.K. for the manufacture of air brake compressors suitable for the railways The Company has been licensed to manufacture power transmission equipment and negotiations are in progress for securing technical collaboration from the U.S.A.

Bajaj Electricals Fares Well

BAJAJ Electricals Ltd has maintained the dividend for the year ended 31st March, 1964, at 10 percent. The dividend, however, is payable on the increased capital, the rights shares issued in 1963 being entitled to a proportionate distribution of Rs. 1.25 a share. The dividend on deferred shares has been raised from Rs. 4.27 to Rs. 4.53 a share. The preliminary report on the working of the Company shows a small improvement over the previous year's performance. Sales have risen from Rs. 3.58 crores to Rs. 3.92 crores and the gross profit is higher at Rs. 28.25 lakhs, against Rs. 27.20 lakhs. Out of the total turnover of Rs. 3.92 crores (against Rs. 3.58 crores), lamps and lighting equipment account for Rs. 1.78 crores (against Rs. 1.57 crores) and fans Rs. 1.08 crores (against Rs. 1.14 crores). The provision for depreciation has been raised from Rs. 2.17 lakhs to Rs. 2.42 lakhs and for development rebate reserve from Rs. 13,000 to Rs. 32,000. Taxation accounts for Rs. 13.75 lakhs (against Rs. 14 lakhs). After setting aside a sum of Rs. 53,145 (against Rs. 32,026) for adjustments for previous years and writing off Rs. 65,182 (against Rs. 51,553), the balance of Rs. 10.58 lakhs has been transferred to general reserve. In the preceding year, the general reserve had been allocated Rs. 4.05 lakhs and a sum of Rs. 6 lakhs had been taken to the dividend reserve. The dividends for 1963-64 will absorb Rs. 6.36 lakhs (against Rs. 5.97 lakhs) and this is to be paid from the general reserve.

The directors state that there was an increase in the sales of lamps and lighting equipment, transformers and appliances. The production of fans by Matchwel Electricals was lower on account of non-availability of electrical stampings due to a strike in the suppliers' works and the production of electrical instruments was interrupted for a few months because a section of the instrument factory was shifted from Bombay to Poona. Accordingly, sales of these two items were lower. During 1963, Allied Lamp Exporters, in which the Company and its associate Hind Lamps are partners, exported about 900,000 of general lighting service lamps, 300,000 of miniature lamps and 75,000 fluorescent tubes. Prospects for the current year are considered to be more promising. The management is hopeful of achieving a sales turnover of about Rs. 5 crores in the current year, and to raise it to Rs. 10 crores in the course of next four years. Hind Lamps in which the Company has a 50-percent interest has received a manufacturing licence for substantial expansion of its production of standard type lamp caps and for the manufacture of miniature lamp caps. It has also applied for the expansion of the capacities for the manufacture of electric lamps and glass shells. The Company has received the Government's approval for the technical collaboration with Westinghouse Electric International of the U.S.A. for manufacturing electrical measuring instruments. The construction of the building for the new instrument factory in Poona is progressing satisfactorily.

Bararee Coke Pays More

BARAREE Coke Co. Ltd has produced satisfactory results for the year ended March 1964. The plant has been working satisfactorily and the output of low-ash-content hard coke has been maintained. The directors have mentioned that the regular maintenance and renovation programme would affect the production costs. The increased wages due to the recommendations of the wage board have also raised production costs. Although the demand for hard coke dropped temporarily following the shortage of pig iron, the sale of the high-quality products of the Company has met with good demand because of coke requirements for precision castings. The demand has arisen from internal and export markets. Since the grade of coal produced by the Company was decontrolled on 1st March, 1963, it has been possible to pass on to the consumers a part of the increased production costs. The output from the by-products flowing from the sulphate of ammonia and sulphuric acid plants, has been maintained at a reasonable level. The renovated boiler and new water filtration plants which are being installed, should help increase the steam generation capacity. So the efficiency of the old plant should improve. The Company has been investigating plans to expand and diversify activities.

The net trading profit has risen from Rs. 10.12 lakhs for 1962-63 to Rs. 13.46 lakhs for 1963-64, after providing Rs. 1.18 lakhs for depreciation. Bringing sums from various accounts, the total of available balance amounts to Rs. 14.19 lakhs. The taxable ordinary dividend has been increased from 15 percent to 20 percent which works out to a yield of 9.5 percent at the present price of Rs. 21.13 a share of Rs. 10 each. Taxation, including a sum of Rs. 1.89 lakhs for surtax on profits, absorbs Rs. 9.23 lakhs (against Rs. 7 lakhs), development rebate reserve Rs. 891 (against Rs. 120), deferred repairs reserve Rs. 1.50 lakhs (the same) and general reserve Rs. 1.05 lakhs (against Rs. 80,889).

Howrah Mills Modernises

IN their report for the year ended March 1964, the directors of Howrah Mills Co. Ltd say that stress is being given to quality control throughout the mill and to preshipment inspection of jute goods. Since the bulk of raw jute is fit for producing sacking, the embarrassment of the mills has been increased by the purchase quotas allocated to them for raw jute. The margin of profit on the manufacture of hessian and sacking has been shrinking due to increasing competition. It is encouraging, however, that more countries have started taking interest in Indian jute goods, so vigorous efforts should be made to develop the new markets, particularly for sacking. But it will be difficult to prevent the loss of more markets unless steps are taken to counteract the price advantage which is enjoyed by overseas competitors, especially the Pakistani mills. Some additions have been made to the machinery of the mill. The sewing capacity of the mill is being increased and applications have been made for licences to import more preparatory machinery. Orders will be placed for additional spinning frames to increase the mill's capacity for the production of non-standard fabrics. Additional godowns are being constructed to accommodate the increased stocks of raw jute.

The net profit has amounted to Rs. 40.61 lakhs, against Rs. 57.40 lakhs for 1962-63, after providing Rs. 9.29 lakhs for depreciation. The taxable ordinary dividend has been raised from 10 percent to 12½ percent, including an interim of 7.5 percent. The yield amounts to 4.7 percent at the present price of Rs. 15.94 a share of Rs. 10 each. Sums of Rs. 2 lakhs and Rs. 1 lakh have been transferred from debenture stock sinking fund reserve and labour superannuation and welfare reserve, respectively. Debenture stock sinking fund reserve is allocated Rs. 1 lakh (against Rs. 2 lakhs), taxation Rs. 24.62 lakhs (against Rs. 30 lakhs), development rebate reserve Rs. 57,263 (against Rs. 54,953) and general reserve Rs. 7.33 lakhs (against Rs. 84,335). Out of taxation, Rs. 2.47 lakhs has been provided for surtax on profits.

Phoenix Mills Pays the Same

ALTHOUGH the dividend has only been maintained at Rs. 20 a share (20 percent), the working results of the Phoenix Mills for the year ended March 1964 show a marked improvement over the previous year's performance. As against an increase of about 18 percent in the sales

from Rs. 3.48 crores to Rs. 4.11 crores, the gross profit has gone up by about 41 percent from Rs. 37.74 lakhs to Rs. 53.38 lakhs. The profit margin —the ratio of gross profit to sales— has improved from 10.8 percent to 13 percent. This is attributed to reduction in labour costs because of the modernisation programme. The Company has successfully completed the scheme of four-looms system. After providing Rs. 13.54 lakhs (against Rs. 11.67 lakhs) for depreciation, Rs. 2.69 lakhs (against Rs. 5.77 lakhs) for development rebate, Rs. 19 lakhs (against Rs. 6.50 lakhs) for taxation, Rs. 14,000 (against Rs. 5.88 lakhs) for bonus for the previous year and Rs. 9.60 lakhs (the same) for dividends, there remains a balance of Rs. 5.30 lakhs to be carried forward. The Company added machinery worth Rs. 13.18 lakhs during 1963-64. Five single drive ring frames and 47 double-drive ring frames were installed during the year. Under its expansion programme, the Company proposes to install additional 29,000 spindles and undertake extension of the dye house. The Rs. 100-paid share of Phoenix Mills is quoted around Rs. 250, offering a gross return of about 8.6 percent.

Indian Guarantee Earns Less

INDIAN Guarantee and General Insurance Co. Ltd has earned a gross profit of Rs. 19.45 lakhs for 1963, against Rs. 28.49 lakhs for 1962. The drop in the profit is due to the increase in reserve in the marine department and because of the adverse experience in the fire and miscellaneous departments. General reserve has been raised by Rs. 3.90 lakhs to Rs. 6.50 lakhs. A taxable ordinary dividend of 6 percent has been declared.

In his chairman's statement at the recent annual general meeting, Mr. B. K. Kaul said that the Company was reconstituted from 1st January, 1960, as one transacting only reinsurance business. (A fuller version is printed on a later page in this issue of *Capital*.) The Company was considered as an "approved Indian reinsurer" under the law, so it receives statutory cessions. It is operating as a reinsurer in the Indian and international markets. In line with the adverse claims experience throughout the world, the fire department has not done well. The gross premium amounted to Rs. 8.46 crores, against Rs. 6.98 crores. The net premium income has improved by about 24 percent, compared with that for 1962. The increased claims cost has largely been due to unfavourable fire claims experience, combined with the adverse experience of foreign acceptances. Reserves in the fire and miscellaneous departments have been maintained at 50 percent while those of the marine department have been raised from 65 percent to 100 percent of the net premium income in 1963.

Wartyhully Estates Pays the Same

THE directors of Wartyhully Estates have maintained the dividend at 12 percent for the year ended March 1964, in spite of a net loss incurred for the year. The directors have been able to maintain the dividend by using the write-back under the head of excess provision for taxation in previous years. After providing for depreciation and all charges, including tax provision of Rs. 22,500, the year's working shows a loss of Rs. 12,686. This compares with the previous year's profit of Rs. 1,16,572, after providing Rs. 97,000 for taxation. The amount brought forward from the previous year is Rs. 36,874. Adding this amount to the sum of Rs. 3,12,931 being excess provision for taxation in previous years no longer required, there is a total of Rs. 3,49,805. After deducting the year's loss of Rs. 12,686 from this amount, there is a balance of Rs. 3,37,119. Out of this, the 5-percent interim dividend absorbed Rs. 60,000. A sum of Rs. 1,30,000 (against nil) is transferred to general reserve. The final dividend of 7 percent accounts for Rs. 84,000. The balance of Rs. 63,119 is carried forward.

General reserve now stands at Rs. 12,80,000, including the sum of Rs. 1,30,000 transferred out of the year's profit. The directors' report says that assessments under the Mysore Agricultural Income Tax Act which were pending, have been completed up to the assessment year 1961-62. As a result, an amount of Rs. 3,03,679 provided in those years for taxation, is no longer required. The amount has, therefore, been transferred to the profit and loss account. A total coffee crop of 158,200 tonnes (against 195,508 tonnes) was harvested during the year. This crop has been valued at Rs. 2.30 a point. The 1962-63 season's crop has been revalued at Rs. 2.30 a point. The 1964-65 crop has been estimated at 175 tonnes.

Nimar Textiles Share Offer

NIMAR Textiles Ltd which has been licensed to set up a mill in Khandwa (Madhya Pradesh) with a capacity of 25,000 spindles will soon be in the market to raise Rs. 42 lakhs in equity and preference shares. The project is estimated to cost Rs. 1.975 crores, of which Rs. 1.09 crores will be spent on plant and equipment. Machinery worth about Rs. 25 lakhs will need to be obtained from abroad. The cost of the project will be met by raising Rs. 70 lakhs of share capital, Rs. 70 lakhs by way of loan from the Industrial Finance Corporation and the rest by borrowing. The construction work of the mills has already begun and machinery has started arriving.

If all goes well, production will start by July 1965 and the mill will go into full production by about the beginning of 1966. The Company has an authorised capital of Rs. 3 crores consisting of Rs. 2.50 crores in equity shares of Rs. 100 each and Rs. 50 lakhs in 9.5 percent cumulative redeemable preference shares of Rs. 100 each. The issued capital comprises Rs. 56 lakhs in equity shares and Rs. 14 lakhs in preference shares. Out of this, the promoters, directors and their friends are taking up equity shares worth Rs. 28 lakhs. The balance of Rs. 28 lakhs of equity capital and Rs. 14 lakhs of preference shares are being offered for public subscription. The entire public issue has been underwritten. The subscription list is expected to open on 28th August. The board of directors includes Mr. T. P. Chakravarti (chairman), Mr. Lalchand B. Sethi, Mr. Pravinchandra M. Shah, Mr. M. D. Vora, Mr. N. S. Shah, Mr. R. V. Deshmukh, Mr. L. K. Panday and Mr. S. B. Bilimoria.

Struthers Wells (India): A New Venture

STRUTHERS Wells (India) Ltd is a new Company which has been formed to undertake the manufacture of chemical plants and equipment such as heat exchangers, evaporators, dryers, pressure vessels, etcetera, in collaboration with the reputed U.S. firm of Struthers Wells International Corporation, New York. The American firm will not only provide the technical know-how, but also participate in the capital of the Company. The chemical plants and equipment which are proposed to be manufactured are in great demand by the chemical, petro-chemical, fertiliser and refinery industries. The factory is being set up in Chinchwad, near Poona. The licensed capacity of this plant is placed around Rs. 4.50 crores worth of equipment. The factory is expected to go into production by the beginning of 1966. The project is estimated to cost Rs. 2.50 crores, of which Rs. 1.40 crores will be provided by share capital and the balance will be raised by borrowings.

The Company has an authorised capital of Rs. 1.50 crores comprising Rs. 1.17 crores in equity shares of Rs. 100 each and Rs. 33 lakhs in 9.3 percent preference shares of Rs. 100 each. The issued capital consists of Rs .1.07 crores in equity shares and Rs. 33 lakhs in prefence shares. Out of this, the promoters, directors and their friends are taking up equity shares of the value of Rs. 25 lakhs. The foreign collaborators will subscribe for equity shares worth Rs. 40 lakhs and the International Finance Corporation will take up equity shares of the value of Rs. 17 lakhs. The balance of equity shares worth Rs. 25 lakhs and preference shares of the value of Rs. 33 lakhs will be offered for public subscription. The Company is expected to enter the market some time in October or November. The project has been sponsored by Mr. N. H. Mapara, Mr. Rajkumarsing Hukamchand of Indore, Mr Parmanand Kejriwal and Mr. Sanwarmal Todi.

Universal Cables Shows Loss

UNIVERSAL Cables Ltd has incurred a loss of Rs. 8.27 lakhs for the year ended March 1964. After adding Rs. 21.79 lakhs for depreciation, the total loss has amounted to Rs. 30.05 lakhs. A sum of Rs. 4 lakhs has been transferred from general reserve. After bringing in Rs. 25.594, the net debit balance which is carried forward has been reduced to Rs. 25.80 lakhs.

Bagalkot Cement Resumes Payment

THE Bagalkot Cement Company fared reasonably well during 1963, and it was able to resume the payment of dividend after a break of three years. From what the chairman, Mr. Tulsidas Kilachand, stated at the Company's annual meeting on 31st July, the shareholders could expect still better results for the current year. Production during the first six months of 1964 has been 98 percent of the rated capacity, and it is expected to reach 100 percent for the year. That apart, the quality and supply of coal has been better and the mechanisation of both the quarry and transport will reduce costs. The chairman pointed out that much had been done towards improvement of the plant last year.

In addition to the intensive working of the 80 feet deep existing quarry which has already supplied over 1.5 million tonnes of limestones, the Company has opened a new quarry face which would meet stone requirements of even expanded cement capacity. Further, the installation of a belt conveyer would reduce the transport cost of limestone. The belt conveyer has been designed to convey limestone for an installed capacity of 500,000 tonnes of cement a year. Electric power from the Sharavathy grid will become available before the end of 1965, and this will offer relief to the Company's existing power plant which has been working continuously for the past eight years on a single boiler and a single turbine.

The chairman said that the increase of Rs. 2 a tonne in cement retention price allowed from July 1964 was totally inadequate to meet the actual increase in costs since the beginning of 1963. Moreover, out of this rise of Rs 2, the State Trading Corporation would receive 75 paise, leaving only Rs 1.25 a tonne for the cement producers. The cement industry has represented to the Government on this point. Replying to shareholders' questions, the chairman stated that the method of calculating depreciation had been changed from last year as the block had been sufficiently depreciated and it was also necessary to do so to pay a dividend to the shareholders. Mr. Kilachand said that compared with other units with similar capacities, the Company was not faring badly but profits would improve significantly only if the present capacity of 200,000 tonnes is raised to 400,000 to 500,000 tonnes. The management is considering how best to implement the expansion programme so that the shareholders do not suffer during the period of expansion.

☆

Rameshwara Jute Skips Dividend

RAMESHWARA Jute Mills Ltd has earned a trading profit of Rs. 13.73 lakhs for the year ended March 1964, against Rs. 20.68 lakhs for 1962-63. Depreciation absorbs Rs. 7.12 lakhs (against Rs. 10.64 lakhs), taxation Rs 3.31 lakhs (against Rs. 3.90 lakhs) and development rebate reserve Rs. 39,373 (against Rs. 2.28 lakhs). The usual preference dividends for five years up to March 1961 have been paid to absorb Rs. 3 lakhs. The ordinary dividend has again been passed. The carry-forward is Rs. 16,893, against Rs. 25,500 brought in.

CLEARING SHARES RALLY ON SHORT-COVERING

Wednesday Evening.

THERE has been a slight improvement in the Calcutta stock market towards the close of the past week. The prices of selected clearing shares, in particular, have rallied mainly due to short-covering. The prices of some selected cash scrip have also improved because of good corporate news. Business, however, continues to be concentrated on clearing shares.

Turnover has tended to drop because operators are inclined to be cautious. Although the Government is keen on checking the rise in the prices of essential commodities, it remains to be seen whether the various official measures succeed in curbing inflationary pressures. Meantime, great concern has been expressed over the possibility of labour unrest in industry. Workers have started agitating for bigger pay to compensate them for the rise in the prices of various commodities. The interruption of work in banks is the most disconcerting feature. Clearing operations of the Calcutta banks have been greatly hindered since their staff are working "according to rule". Unless serious efforts are made to resolve the dispute between workers and management in banks, economic development will suffer.

Indian Iron are steady. The Company's pig iron output for July has declined from 99,003 tons to 74,440 tons and steel ingot production from 79,845 tons to 67,295 tons. The output of salable steel has, however, increased from 52,274 tons to 63,222 tons and despatches from 54,791 tons to 58,947 tons. The managing agents of the Company have stated that the production of iron has been smaller due to a fracture of the large bell rod of a furnace on 26th June, 1964. So no production is being obtained from that furnace. Meanwhile, continuous efforts are being made to bring it back to normal working. Among engineering shares, Indian Standard Wagon, Texmaco, Guest, Keen, Williams and Burn are steady. Jessop are sluggish. Scattered support is forthcoming for J. K. Steel and Britannia Engineering.

In the miscellaneous section, attention centres on clearing shares. Hindustan Motors are depressed due to disappointment over the maintenance of the dividend. Indian Cable are steady following the payment of a larger dividend. Dunlop Rubber enjoy influential support. Indian Aluminium and Indian Copper are steady. Imperial Tobacco have changed hands due to the payment of a smaller dividend. Alkali and Chemical, Union Carbide and Metal Box have met with support. Indian Oxygen, Associated Battery and British Paints are sluggish.

Among new shares, Hindustan Aluminium and Phillips Carbon have been bought. Electric company shares are neglected and stray business has been transacted in Calcutta Electric. Among managing agency shares, Martin Burn and Jardine Henderson have changed hands. Bank shares are neglected, and there has been a small turnover in United Commercial and United Bank of India. Paper shares are steady. Orient have gained on short-covering. Support has been extended to Seshasayee on prospects of improved working. Bengal and India Paper Pulp have been taken. Sugar shares are freely offered without attracting support. The outlook for profits of sugar companies during 1963-64 is considered discouraging. National Rubber Manufacturers' rights issue has been fully subscribed.

Birla are a prominent feature in jute shares and have improved on influential support. Turnover in jute shares has, however, tended to drop due to the growing concern about the rising price of raw jute. Since the prices of jute goods have risen much less than that of raw jute, the profits of jute mills have been squeezed. Scattered support has been forthcoming for Kinnison, Northbrook, Barnagore, Anglo-India, India, Ganges and Gourepore. Coal shares are sluggish and turnover has been small. Burrakur have been more or less maintained, while Equitable have tended to drop. Western Bengal and Central India have been done at lower prices. Investors are worried since the demand for coal has not yet improved.

Selected cotton mill shares are steady, although investors have been cautious. They are awaiting the announcement of the details about the partial control of cloth. J. K. Rayon have recovered on short-covering. Elgin have been sluggish, but Bharat Commerce have been steady. Dunbar and Jay Shree Textiles have met with support.

Tea shares have been transacted on a small scale and attention is largely confined to selected Assam and Dooars gardens. Investors have been disappointed because the average sale price realised so far during the current season has been smaller than that obtained during the corresponding period of 1963. Patrakola have retreated since interested buying in these scrip has almost ceased.

Government securities are steady, although turnover has been small. Investors seem to be conserving funds for buying the new State Government loans which will be issued towards the close of this month. The details of these new loans appear in the "Current News and Comment" section in this issue of *Capital*.

Bombay

NEW ACCOUNT OPENS ON STEADIER NOTE

GOOD CORPORATE NEWS HELPS SENTIMENT

Wednesday Evening.

THE Bombay stock market opened the new account on Monday on a steadier note. The prices of selected clearing scrip, in particular, have rallied on renewed support, combined with short-covering. Dalal Street has been impressed by the vigorous measures of the Central Government to check the rise in the prices of essential commodities. Prospects of increased wheat imports from the U.S.A. have been bullishly interpreted. Corporate news has, meanwhile, been encouraging.

Kirloskar Oil Engine has raised the ordinary dividend from 12 percent to 16 percent and Kirloskar Pneumatic has increased the ordinary dividend from 10 percent to 12 percent. Bajaj Electrical has repeated the taxable ordinary dividend of Rs. 12 a share and the working results have shown considerable improvement. Gwalior Rayon has increased the taxable ordinary dividend from Rs. 2.50 to Rs. 2.75 a share. Mukand Iron has produced satisfactory results for the year ended March 1964.

Trading has, nevertheless, been cautious since the improvement has not been backed by any follow-up support. Steel shares have been steady, but investors are inclined to await the publication of the results of the two steel companies for 1963-64. Tata Steel ordinary have closed at Rs. 156. Among engineering shares, Tata Engineering and Mukand Iron have been supported. Larsen and Toubro, Premier Construction and Alcock Ashdown have been steady. In motor-vehicle shares, Premier Automobiles have attracted support on hopes of a dividend, while Hindustan Motors have met with pressure.

Selected cotton mill shares have improved on replacement purchases. Century have gained on hopes of a higher dividend. Bombay Dyeing, Swadeshi, Kohinoor and Standard have been taken. Gokak, India United ordinary and Morarjee have improved. Investors have, nevertheless, been cautious, and they are not

willing to extend commitments until the details of the partial cloth control scheme are known.

In the miscellaneous section, sugar shares have been buoyant. Belapur have gained on a report that the Company has decided to sell one of its factories which has proved to be unprofitable for some time. Walchandnagar Industries and Phaltan have been steady. In steamship company shares, Scindia Steam have met with pressure, while Great Eastern Shipping have been maintained. In mining shares, Be Be Petrol have reacted on profit-taking. Shivrajpur Syndicate have been freely offered.

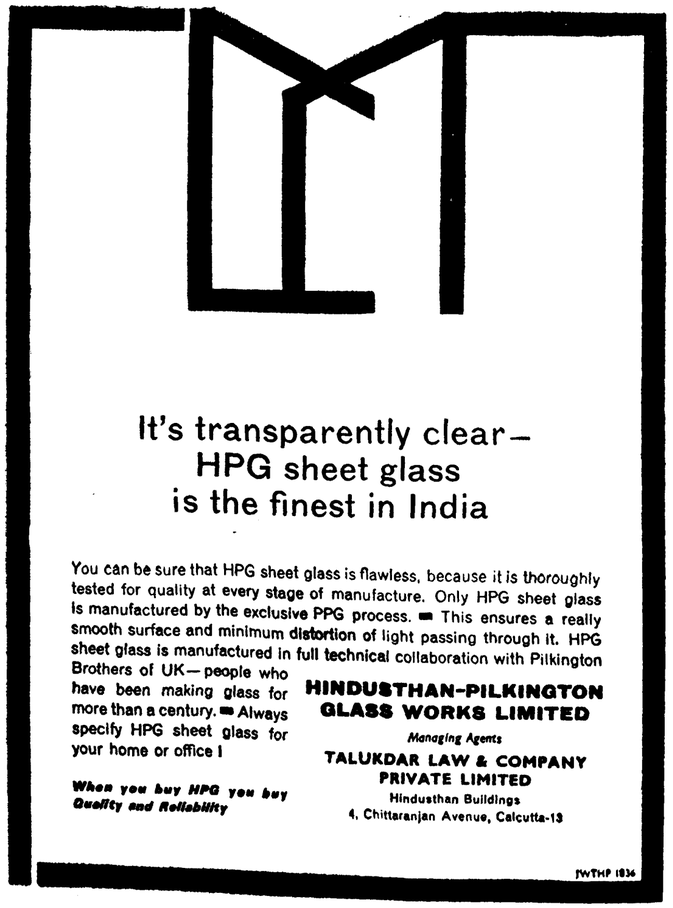
In chemical shares, Tata Chemical have been steady on reports of improved working, but Indian Dyestuff have been easier. Polychem have been barely steady. Among rayon shares, National Rayon have recovered on short-covering due to reports that imports of rayon yarn and tyre chord will be further restricted. Gwalior Rayon have been steady on a higher dividend. Voltas and Tata Oil have been supported. Bank shares have been fully steady, although turnover has been limited. Bank of India, Dena Bank and Bank of Baroda have been transacted. Electric company shares have been maintained. Support has been forthcoming for Ahmedabad and Tata Hydro.

Madras

ECONOMIC OUTLOOK RESTRICTS BUYING

GOOD PREFERENCE SCRIP IN DEMAND

Tuesday Evening.



THE Madras stock market has been quietly steady, but turnover has shrunk considerably. Towards the close, there was a slight increase in activity in clearing shares due to steadier advices from the Bombay stock market. The prices of cash scrip have tended to drop in the absence of support. Investors have turned cautious due to the uncertain economic outlook. The growing food shortage has caused a great deal of concern. The possibility of the introduction of partial control on cloth in the near future has called for caution. Interest has been forthcoming for good preference shares, but turnover has been limited due to the paucity of sellers.

Business in Government securities has declined almost to a trickle due to the fact that new State Government loans will be issued towards the close of the current month. Bank shares are fully steady. Indian Overseas have been done at Rs. 145 and Indian at Rs. 155. Selected electric company shares have been bought. Vellore have been wanted at Rs. 15.62 and Salem-Erode at Rs. 14.37. Sugar shares have been sluggish. Deccan have been done at Rs. 11.60 and E.I.D. at Rs. 35.68. Cauvery have been steady at Rs. 100 and Mysore at Rs. 28.33. Travancore have been taken at Rs. 7.15 and Madura at Rs. 9.44.

Although the prices of selected tea shares have been maintained, those of coffee shares have tended to drop due to the uncertain outlook for exports. Blue Mountain have been sluggish at Rs. 2.24 and Cochin Malabar at Rs. 6.35. Consolidated Coffee have, nevertheless, been steady at Rs. 23.40. Ouchterlony have been done at Rs. 3.15 and Periakaramalai at Rs. 3.43. Business has passed in Nenmeny at Rs. 22.55 on the payment of a taxable ordinary dividend of 10 percent. United Nilgiri have come to hand at Rs. 23.40 on declaring a final taxable ordinary dividend of 11 percent. Balanoor have been taken at Rs. 12.12 on declaring a taxable ordinary dividend of 10 percent. Lucky Valley have been quoted at Rs. 11.75, Peermade at Rs. 20.50 and Thamarapally at Rs. 15.05. In coffee shares, Coffee Lands have dropped to Rs. 16.62, Savamalai to Rs. 4.32 and Lingapur to Rs. 5.17.

Textile shares have been barely steady. South India Viscose have dropped to Rs. 114 and Travancore Rayon have been quoted at Rs. 20.40. Lakshmi have been available at Rs. 130.25 and Madura at Rs. 33.70. Adoni have been steady at Rs. 8.78, but Anglo-French have been sold down to Rs. 142. Bangalore Woollen have been transacted at Rs. 268 and Buckingham at Rs. 274.50. Mettur Industries have been steady at Rs. 277.50 on paying a taxable ordinary dividend of 15 percent. Ramakrishna have changed hands at Rs. 199.40 and Ramnarayan at Rs. 85.

Among miscellaneous shares, Aluminium Industries have been done at Rs. 20.80 on paying a final taxable ordinary dividend of 9 percent, making 18 percent for the year. Ashok Leyland have been steady at Rs. 6.78. In cement shares, Dalmia have been bought at Rs. 12.50 and India at Rs. 5.47. Mettur Chemical have been fully steady at Rs. 14.30. Indian Steel Rolling have been quoted at Rs. 9.80 on delcaring a taxable ordinary dividend of 9 percent. F.A.C.T. have been steady at Rs. 5.52. Seshasayee Paper have attracted support up to Rs. 7.60 and Mysore Paper have been taken at Rs. 12.62. Standard Motors have been quoted at Rs. 10.12 and Tube Investment at Rs. 192. T. Stanes have been steady at Rs. 30.50 on declearing a taxable final ordinary dividend of 20 percent, making 30 percent for the year. Parry's Confectionery have been done at Rs. 2.96 and Spencer at Rs. 21.25. Madras Rubber have been stagnant at Rs. 11.37, while McDowell have attracted support up to Rs. 22.22. Binny have been wanted at Rs. 271.60, but Seshasayee Wire have been sold down to Rs. 10.

London

SHARES FIRM ON GOOD INVESTMENT DEMAND

GILT-EDGED IMPROVE

London, 5th August.

ALTHOUGH business was restricted by holidays and by the aftermath of the postal strike, the stock market maintained a firm undertone, thanks to a steady investment demand in which the institutions played a not unimportant part. On Thursday, sentiment was shaken by the announcement of the failure by a firm of stockbrokers which has led to a share problem, but confidence was soon restored and the steady upward trend in prices was resumed. Bank rate fears receded and buyers returned to gilt-edged with the result that prices made moderate progress. With Wall Street in a mood of indecision due to domestic and international political uncertainties, dollar stocks moved narrowly and with a tendency to drift lower. Take-over news was not lacking and textiles continued to be the main target. Courtaulds with their insatiable appetite gained several shillings and Lancashire Cotton and Fine Spinners and Doublers, the latest candidates, advanced in sympathy. Revised takeover talk boosted Monsanto Chemicals while Glaxo, Bats, Tube Investments and Associated Cement were the other leaders to go ahead. Fairly responded to good results. The Insurance shares rose steeply on the advance in fire insurance premiums.

SIMON-CARVES WINS CONTRACT

Simon-Carves Ltd, U.K., has obtained another important contract from Hindustan Steel Ltd. This contract is for the construction of an iron ore sintering plant at the Durgapur steel works on a "turn-key" basis. The plant will produce 5,000 tons of sinter a day and will be built to the design of Huntington, Heberlein and Co. Ltd, a U.K. subsidiary of Simon-Carves. Simon-Carves India Ltd will be responsible for carrying out the entire Indian portion of the work which will be approximately 60 percent in terms of the total value of the contract which amounts to Rs. 5 crores.

THE CALCUTTA MONEY MARKET

CALL RATE REMAINS FIRM

Wednesday, 5th August.

THE general level of advances has remained stationary in the Calcutta money market during the past week. There has been a slight fall in the credit given to the jute and sugar mills. But the requirements of the iron, steel and engineering industries are slightly up. The advances given to the cotton mills and to the foodgrains trade remain unchanged. In the interbank market, conditions have been tight and the call rate quotes 5¼ percent largely because banks are not certain about their clearing figures due to their employees' agitation.

The exchange market has been very active, with a good supply of both gunny and tea bills. The demand for remittances is moderate. In the London market, sterling has lost ground against all important currencies except the French franc and the deutschemark.

BULLION WAS QUIETLY STEADY IN Calcutta during the past week. Silver was quoted at Rs. 249.50. The price amounted to 129.3 cents in New York and 111⅛d in London.

The price of 14-carat gold was quoted at Rs. 72.

DURING THE WEEK ENDED 31ST JULY, Government of India Treasury bills for Rs. 53,20,25,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 4th August. The total amount offered was Rs. 4,25,00,000. Tenders at Rs. 99.415 percent were accepted in full and those at Rs. 99.400 percent were alotted 44 percent approximately. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.393 percent a ycar. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 10th August.

IT IS STATED THAT 91-DAY Intermediate Treasury bills will be sold from 5th August to 8th August at Rs. 99.416 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 29th July to 1st August amounted to Rs. 5,27,50,000.

DECLINES OF RS. 24.35 CRORES TO Rs. 2,419.41 crores in active notes and of Rs. 8.21 crores to Rs. 2,456.45 crores in the total note issue were notable features of the return of the Reserve Bank of India for the week ended 31st July, 1964. The currency contraction was covered by decreasing rupee securities by Rs. 9.98 crores to Rs. 2,145.70 crores in the paper currency reserve. Deposits of the Government of India rose by Rs. 37.75 crores to Rs. 114.63 crores and those of State Governments by Rs. 1.25 crores to Rs. 19.18 crores. Balances of scheduled banks at Rs. 100.55 crores showed a rise of Rs. 4.59 crores. Balances held abroad rose by Rs. 1.16 crores to Rs. 8.53 crores. Investments at Rs. 290.04 crores showed a rise of Rs. 6.95 crores. Loans to scheduled banks increased from Rs. 45.40 lakhs to Rs. 3.66 crores of which advances against usance bills amounted to Rs. 2.05 crores (nil). Ways and means advances stood at Rs. 24.46 crores, against Rs. 22.94 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 24th July, 1964, shows a rise of Rs. 6.16 crores to Rs. 647.40 crores in total deposits. Investments in Government securities are up by Rs. 37.86 crores to Rs. 269.25 crores, while other authorised investments remain unchanged at Rs. 9.44 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have declined by Rs. 3.05 crores to Rs. 344.99 crores. Cash and balances are, in consequence, shown at Rs. 26.31 crores or Rs. 61 lakhs higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 24th July, 1964, shows Demand and Time liabilities at Rs. 1,279.73 crores (Rs. 32.42 crores on account of borrowings from banks) and Rs. 1,397.39 crores (Rs. 15.49 crores), compared with Rs. 1,270.89 crores (Rs. 30.47 crores) and Rs. 1,389.62 crores (Rs. 18.73 crores), respectively, in the previous week. Cash has risen by Rs. 16 lakhs to Rs. 62.77 crores, while balances with the Reserve Bank have declined by Rs. 6.89 crores to Rs. 94.11 crores. There is a rise of Rs. 58.42 crores to Rs. 737.44 crores in investments. Advances and bills discounted at Rs. 1,741.33 crores show a drop of Rs. 8.94 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.9 percent and 65.0 percent, against 6.1 percent and 65.8 percent.

TREASURY BILL MATURITIES

INDIAN GUARANTEE AND GENERAL INSURANCE COMPANY LTD.

CHAIRMAN, MR. B. K. KAUL'S ADDRESS

The following is the speech delivered by the Chairman, Mr. B. K. Kaul, I.C.S. at the Forty-Second Annual General Meeting of the Shareholders held on 28th July, 1964.

Gentlemen,

We are meeting under the gloom cast by the passing away of Shri Jawaharlal Nehru, Prime Minister of India since Independence. His death has plunged the nation in deep grief. An illustrious fighter for freedom, an outstanding Statesman, a world leader, he will always hold a prominent place in the hearts of his countrymen as the architect of a modern India. It is he who gave India a strong and stable Government for seventeen years and strove with all his might to banish poverty from amongst Indias millions. The greatness of Jawaharlal Nehru needs no further elaboration and the best tribute we can pay to our Departed Learder is to work hard and do our duty, as he would have wished us to do.

The Report, Account and Balance Sheet for the year ended 31st December, 1963 are already in your hands and, with your approval, I propose to take them as read. Before we proceed to consider adoption thereof, I would like to say a few words on some of the points which have a bearing on the working of your Company.

Approved Reinsurer

Your Company was reconstituted from 1st January, 1960 as a Company transacting reinsurance business only. In April 1961 your Company was approved by the Government of India as an "Approved Indian Reinsurer" under the provisions of the Insurance Amendment Act 1961, and receives statutory cessions under the provisions of that Act from all General Insurance business transacted in India by Insurers, both Indian and non-Indian.

In addition to receiving statutory cessions, the Company operates as a Reinsurer not only in the Indian Market but on an International basis. However, since it started operations in 1960, the results of fire business all throughout the world have been deteriorating steadily. For instance, in the U.K. the claim cost in 1963 amounted to almost £67,000,000 which is 20 per cent higher than 1962 which was the worst year up to then. The highest claims cost recorded till as late as 1958 in the U.K. was only £28,000,000. On the Continent, as well as in Canada and United States of America, the claims cost is also continuously rising.

As we transact reinsurance business only it is inevitable that we have to bear our share of the adverse claims experience all over the world, but fortunately for a large part of our operations we have escaped this disastrous experience on account of different methods of dealing with our reinsurances and surpluses.

Gross Premium

Turning now to the results of the year's working, the Company wrote a total gross premium of Rs. 8,46,46,469 (£6,348,485) as compared to Rs. 6,97,63,358 (£5,232,252) in 1962 and after fulfilling statutory obligations and making other retrocessions, a net premium of Rs. 3,28,63,678 (£2,464,776) as compared to Rs. 2,65,02,946 (£1,987,721) in 1962. The net premium income in 1963 shows a 24 percent increase over 1962. The net premium income in the Fire Department increased by Rs. 19,81,347 (£148,601), in the Marine Department Rs. 21,28,395 (£159,630), and in the Miscellaneous Insurance Department by Rs. 22,50,990 (£168,824).

Claims cost increased to 45.3 per cent from 41.1 per cent in 1962. Commission cost showed a slight increase to 31.9 per cent from 31.8 per cent and

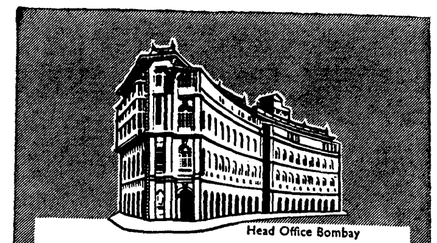
Mr. B. K. Kaul

expenses of management remained stable at 1.2 per cent. The increase in the overall claims cost is due to several factors, mainly increase in All India Fire claims experience, adverse experience on our Foreign acceptances, increase in Motor Claims, and the fact that the year 1963 was the first full year in which the impact of claims of statutory cessions is reflected. In the Fire Department, claims cost increased from 29.8 per cent in 1962 to 31.4 per cent which, considering the experience of fire business world-wide, must be considered as very satisfactory, In the Marine Department the claims cost decreased to 60.1 per cent from 62.4 per cent in 1962 and in the Miscellaneous Insurance Department the claims cost increased from 39.0 per cent in 1962 to 48.4 per cent, giving an over-all claims cost of 45.3 per cent, against 41.1 per cent in 1962.

Whilst continuing to maintain reserves in the Fire and Miscellaneous Insurance Departments at 50 per cent, I am happy to report that in the Marine Department we have increased the reserves from 65 per cent to 100 per cent of the net premium income in 1963.

Our Investments as at 31st December, 1963 aggregate to Rs. 2,85,26,453 (£2,139,484) and the depreciation thereon was Rs. 3,61,862 (£27,140). This is adequately covered by the Investment Reserve. Considering the volume of Investments and that the major portion of our Investments were made during the second half of 1961 and 1962 when prices were comparatively higher as compared to the prices ruling on 31-12-1963, the depreciation is nominal.

As a result of the year's working the Departmental reserves have increased by Rs. 64,47,114 (£483,534) to Rs. 2,06,42,538 (£1,548,190) in 1963 as compared to Rs. 1,41,95,424 (£1,064,657) in 1962. The funds of the Company stand at Rs. 3,25,31,831 (£2,439,887) in 1963 compared to Rs. 2,47,57,550 (£1,856,816) in 1962 showing an increase of Rs. 77,74,281 (£583,071).



The Gross Profit

The gross profit of the Company before making provision for taxation amounted to Rs. 19,45,167 (£145,888) as against Rs. 28,48,755 (£213,657) for the year 1962. The fall in the profit is mainly due to increasing the reserves in the Marine Department from 65 per cent to 100 per cent of the net premium income besides the adverse experience in the Fire and Miscellaneous Insurance Departments. The General Reserve has been further augmented by an appropriation of Rs. 3,90,000 (£29,250) and now stands at Rs. 6,50,000 (£48,750).

Your Directors have recommended a Dividend at the rate of 6 per cent (subject to deduction of tax at prescribed rates) on the paid-up value of the shares which will absorb a sum of Rs. 6,06,000 (£45,450).

In conclusion I take this opportunity to express my thanks to our business connections both in India and abroad from whom we have received excellent support and co-operation. I would also like to thank the Management and the Staff of the Company for their loyalty and good work.

N.B.—This does not purport to be a record of the proceedings of the Annual General Meeting.

SOLVING THE FOOD PROBLEM THROUGH CONTROLS

(BY A SPECIAL CORRESPONDENT)

The present food crisis in the country is mainly the result of supply lagging behind demand, and not only because of "human sharks". The solution must, therefore, be sought in increasing food supplies, through imports if necessary, and, of course, through taking more vigorous measures to control population.

THIS writer has been noticing with considerable surprise the futile attempts that are being made to control the prices of foodstuff in this country, particularly in West Bengal. Most of the suggestions, reports of special committees and Governmental measures are based on certain imaginary "axioms". The prices of foodstuff in the free market are governed by the considerations of demand and supply, but unfortunately, the economic laws are assumed to have no application in India.

The demand for foodstuff has gone up due to several reasons, the chief among them being: (i) Increase in the quantity of money in circulation, (ii) a rapid increase in population.

Food supply has not been augmented to keep pace with the growing population or with the increased purchasing power, whether permanent of transitory. It should be quite easy to understand that under these circumstances, not only will the prices shoot up, but there will also not be enough food to go round. Public attention is being continually diverted by raising war cries against "black-marketeers", "profiteers", and the "human sharks". All attempts have, therefore, been directed towards controlling prices by introducing penal measures for bringing the black-marketeers to book.

Elasticity of Demand

It would be interesting to remember that there is a great elasticity of demand in India due to our poverty even for essential items like salt. If, therefore, the human sharks are raising the prices of foodstuff artificially for their own personal ends, the demand must decline. It would be reasonable to expect, therefore, that just before the beginning of the new harvesting season, the excess foodgrains withheld from the consumers to create artificial scarcity will be dislodged in the market at a cheap price.

We are all aware that this has not happened during the last several years to any appreciable extent. The conclusion, therefore, is irresistible that there is not enough to go round and everything said and done, these "profiteers" and "black-marketeers" and "human sharks" have been contributing, absurd though it may sound, to the social well-being by restricting consumption by raising the prices, thereby allowing the foodgrains to last for the whole year. The pity is that this really is not recognised and the truth is always sought to be obscured by finding some scapegoats. Anybody who tries to be honest about the whole situation perhaps will be labelled as a supporter of black-marketing, just as people who had pointed out the dangers of the impending Chinese aggression were labelled as warmongers by many of our leaders who have since been disillusioned.

There was some attempt quite recently to control fish prices by introducing penal measures for the sellers, for the buyers and even perhaps for the cold storage people. It has been consistently suggested that fish is withheld from the market and kept in the cold storage, but it has not occurred to anybody if and when this stored fish comes out in the market, there should have been a temporary glut, but we have never been able to get a plentiful supply of fish at any time. If it is suggested that when there is a big catch on any day, a part of it is kept in the cold storage to provide against future shortage, then every reasonable man will accept that this sort of withholding from the market is a service to the community.

It is amusing that the authorities from time to time try to fix the control prices for fish, mustard oil, etcetera, along with that for foodgrains. It does not occur to them that it is beyond human ingenuity to be able to calculate the correct prices with seasonal and local variations for these items so as to ensure a steady supply even if all the people follow a Gandhian philosophy of truth and honesty. The British public and tradesmen are reputed to be very nationalistic and honest in their outlook. Even then durnig the war period, when they would make any sacrifice to win the war, the authorities had to introduce a rationing system to cover even meat, eggs, butter, vegetable oil, etcetera.

Utility of Rationing

It was not possible to rely on the tradesmen and the consumers to supply a particular quantity per head and at a fixed price. If, therefore, it is the intention of the authorities to ensure a restricted (for there is not enough to go round) supply at a reasonable price to all consumers, there can be only one answer and that is rationing. With the present Governmental set-up, rationing in India will be fraught with great dangers and it is likely to fail. The Government will be taking on itself a grave responsibility of acquiring all the foodstuffs for distributing them throughout the country. Rationing only in industrial areas will mean that some privileged people living in the city areas will be assured of supplies, but villagers will be left to their lot in obscure parts of the country where they can die of hunger, without giving rise to publicity.

The two obvious ways of combating the food crisis are, (i) to arrange for increasing the production of foodstuffs, and (ii) restricting the growth of population. Both these have been neglected for all practical purposes. After 17 years of independence, we will be told that these suggestions are good, but it will take years to implement them. As a palliative, the import of foodstuff will help. Too much emphasis should not be put on the question of foreign exchange because the country is spending a huge amount of foreign exchange on capital projects, a number of which are not likely to be productive. If some items covered by the misconceived five year plans have got to be kept in abeyance, one might consider the sacrifice as the price the country has to pay for the apathy that the Government has shown to the vital problems of population and agriculture. The lead given by Mr. Lal Bahadur Shastri in offering to use an Indian-made car, if followed, may release foreign exchange for saving many lives with imported food.

Need for Family Planning

It may not be out of place to mention that had family planning methods been implemented over the past many years, it might have been easier to take in the migrants from Pakistan. The Hindu population in Pakistan is providing the Pakistani authorities a permanent field for creating problems, have a tendency to upset the Indian economy in several ways.

If the Government will take over the responsibility of distributing foodgrains in future, it will find out at a tremendous cost that it is not only human sharks, but powerful economic factors which are causing food scarcity in the country. It is easier to mismanage trade and industry with impunity than to be directly responsible for starvation deaths. The Government should try to solve the real difficulties rather than try to control hunger by legislation.

4¾ PER CENT MAHARASHTRA STATE DEVELOPMENT LOAN, 1976

ISSUE PRICE AT PAR

OPEN ON MONDAY, THE 24th AUGUST, 1964.

The loan will be closed as soon as the total amount of Rs. 15 crores has been subscribed and in any case not later than the close of business on the 29th August, 1964.

The applications for the loan will be received at—

(a) the offices of the Reserve Bank of India, Bangalore, Bombay (Fort & Byculla), Calcutta, Madras, Nagpur and New Delhi,

(b) the branch of the State Bank of India at Patna,

(c) the branch of the State Bank of Hyderabad at Hyderabad,

(d) the branches of the State Bank of Hyderabad conducting Government treasury work within the State of Maharashtra,

(e) the branches of the State Bank of India within the State of Maharashtra except at Bombay and Nagpur and at places covered by item (d),

(f) the Government treasuries and Sub-treasuries in the State of Maharashtra at places not covered by items (d) and (e).

Full particulars can be obtained at any of the offices mentioned above.

New Delhi

DRIVE TO BRING OUT HOARDED FOODGRAINS PLANNED

(FROM OUR NEW DELHI CORRESPONDENT)

AN intensive drive has been planned by the Central Government for bringing out hoarded foodgrains. The State Governments, meanwhile, are being advised to issue notifications under the Defence of India Rules to compel stockists to declare their holdings. The Government proposes to impose heavy penalties on defaulting traders as well as those who indulge in malpractices. Such notifications have already been issued by the Maharashtra and Andhra Pradesh Governments and the Delhi administration.

The Government also proposes to fix maximum prices for various foodgrains so that traders and big producers are left with no incentive to hold stocks in the hope of further rise in prices. The first step in this connection was taken on 31st July, when the Central Government promulgated two orders fixing the maximum wholesale and retail prices of rice in the four southern States of Andhra Pradesh, Madras, Mysore and Kerala. The wholesale ceiling and retail prices for rice and wheat in the other States are expected to be announced during the current month.

Meanwhile, the enforcement machinery is proposed to be strengthened in all the States so that the Government's policy of bringing out hoarded stocks can bear fruit. Fifty percent of the extra expenditure to be incurred by the State Governments in this connection will be borne by the Central Government.

For fixing the prices of foodgrains for the producer, wholesaler and the retailer for the 1964-65 agricultural year, an *ad hoc* committee has been set up under the chairmanship of Mr. L. K. Jha, Secretary to the Prime Minister. The committee has been asked to submit its report on rice prices before the next harvest in September. For fixing reasonable producer and consumer prices for the 1965-66 agricultural year and thereafter, a technical team is to be constituted shortly. It will study in detail the cost of production of foodgrains before giving its verdict on the reasonable producer and consumer prices to be fixed.

The proposed Foodgrains Trading Corporation is expected to start functioning from January next. It will be a wholly Government-owned commercial organisation registered under the Companies Act. There will be only one corporation for the whole of India to deal in both rice and wheat. It may, however, have branches in various parts of the country. The corporation will buy foodgrains from producers at fixed prices. Wholesalers will also be required to hand over their stocks to it, if the necessity arises, at the declared wholesale prices. In course of time, the Corporation is expected to handle the import trade in foodgrains. The Government also proposes to grant it the monopoly of moving foodgrains by rail. Private traders will, however, be allowed to move grains over shorter distances by road.

For augmenting food supplies, the U.S. Government has promised to ship to India during the next seven months 4 million tons of wheat and a substantial quantity of rice under P.L. 480 American shipping and port handling experts are also being sent for advising the Government of India on ways of speedier unloading, bagging and distribution of these grains.

The 4 million tons of wheat promised by the U.S.A. is out of the balance quantity which could not be imported by India under the P.L. 480 agreement of 1960 up to its expiry on 30th June, 1964. The promised rice supplies will be made available out of the new U.S. rice crop to be harvested this month. The quantity is understood to be 300,000 tons. The prospects of the U.S.A. continuing to supply substantial quantities of foodgrains to India during the next few years are rated high.

The U.S.A. has also offered to assist India in a big way in raising her agricultural production. American experts with long experience in the pricing of food products will be coming to New Delhi shortly to help the Central Government devise incentive prices for agriculturists. A consortium of fertiliser manufacturing companies of the U.S.A. has offered to set up five new fertiliser factories, each with a capacity to produce 200,000 tons of nitrogen nutrients a year. An American expert is also expected here in the near future for assisting the Government in developing and expanding the programme of aerial spraying against insects and plant diseases.

The U.S.A. has further promised to help with programmes designed to improve soil and water conservation, extension of area under hybrid maize and jowar and the expansion of beans and peas production. She has also offered 1,000 pedigreed bulls for cross-breeding of the Indian milch cattle.

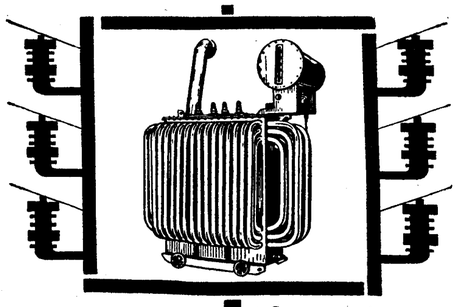
AGRICULTURE

Talks on Raising Production

Several important recommendations dealing with measures to step up agricultural production have been made by the Conference of State Ministers of Community Development and Panchayati Raj held here last week.

The Ministers felt that in drawing up the village agricultural production plans, the approach should be selective, that is, only those practices should be included in the farm programmes which have already been accepted by agriculturists. The progressive farmers should be increasingly associated with the village agricultural production programmes. It was also suggested that a phased programme of demonstrations of improved agricultural practices should be drawn up by the State Governments. Specific responsibility should be fixed on various functionaries engaged in the community development programme for the timely supply of improved seeds, fertilisers, insecticides and other requisites of farming.

The programme of intensive development of fisheries and poultry also came up for discussion at the conference. The Ministers suggested that the improvement of coastal fisheries should receive attention. The facilities necessary for this purpose, namely, cold storages, ice plants, refrigerated transport and improved marketing facilities should be provided. During the fourth plan, all blocks which have water areas of over 200 acres should be brought under intensive pisciculture for which advance action in relation to the survey of water areas, construction of nurseries and training of fisheries personnel should be taken up immediately.



The State Ministers further recommended that the poultry schemes should be taken up as an integral part of the programmes of the State Departments of Animal Husbandry and adequate funds should be provided for the purpose in the departmental budgets. Another recommendation made was that at least Rs. 10,000 should be provided from the block budgets in each intensive block for loans to poultry farmers to supplement departmental funds. Specific targets for the formation of co-operatives of poultry farmers should be formulated in the intensive blocks as an essential part of the operational plan. Provision of a revolving fund to these co-operatives should be made a part of the poultry development programme to enable these societies to make outright payments for the eggs and birds received for marketing.

The Ministers devoted a considerable part of their discussions to the question of minor irrigation, excavation of field channels and rural electrification for agricultural purposes. It was agreed that the States, which had not so far introduced legislation, should do so to make the beneficiaries responsible for the excavation and maintenance of field channels. In view of the importance of the subject in the context of increasing agricultural production, the Ministers felt that if the beneficiaries failed to dig the field channels within the stipulated period, *panchayats* should be authorised to have the work executed and the expenditure realised from beneficiaries. For this purpose, funds should be placed at the disposal of *panchayats*. The strength of staff in the Irrigation Department for the survey of field channels should be increased, if necessary. Also, the rural works programme should be used for the excavation of field channels.

Since high priority has been accorded for the development of agriculture, the Ministers recommended that power for agricultural purposes—particularly for lift irrigation—should receive priority over others. The rates of power should be low and in States where higher rates prevail, they should be subsidised, the Central and the State Governments sharing the subsidy. Funds should be earmarked for meeting the cost of transmission lines for lift irrigation schemes. Power for agricultural purposes should be exempted from electricity duty.

The Ministers emphasised that the training of extension personnel was of basic importance in increasing their general and professional competence. Training camps for *gram sahayaks* were also considered necessary. The proposal to link short-duration *gram sahayak* camps with specialised training conducted by the Central Food and Agriculture Ministry was accepted. The training scheme for districts covered by the "intensive agricultural development programme" and the scheme envisaged for "intensive cultivation areas" were also endorsed.

The Ministers also considered the Central Food and Agriculture Ministry's suggestion for the establish-

WHAT MAKES THE EIE TRANSFORMER AN OUTSTANDING TRANSFORMER?

- Constant, uninterrupted service at peak performance.
- High alloy lamination in the core, insulated with heat resisting varnish.
- Provision for expansion of oil in the main tank.
- Deadening of noise and elimination of hot points.
- Designed for impulse level of insulation.
- Rigorous inspection at each stage.
- One year guarantee After—sales service Installation facilities

ment of panels of progressive farmers. It was recognised that such panels could provide practical and useful guidance to the block and district authorities in drawing up useful agricultural programmes. Members of the panels, the Ministers suggested, should be selected on the basis of their performance in achieving higher agricultural yields.

CEMENT

Plans for Raising Output

A massive rôle is envisaged for the proposed Cement Corporation of India in expanding the cement output during the fourth plan period. According to current thinking in official circles, the Corporation may be asked to set up as many as 20 to 25 cement manufacturing plants between 1966-67 and 1970-71 with a total annual capacity of about 5 million tonnes. This means that approximately half of the additional cement manufacturing capacity to be established in the fourth plan period will be in the public sector.

The Corporation is expected to be brought into existence by the end of next month. Besides undertaking the production of cement, it will be prospecting for cement-grade limestone in various parts of the country.

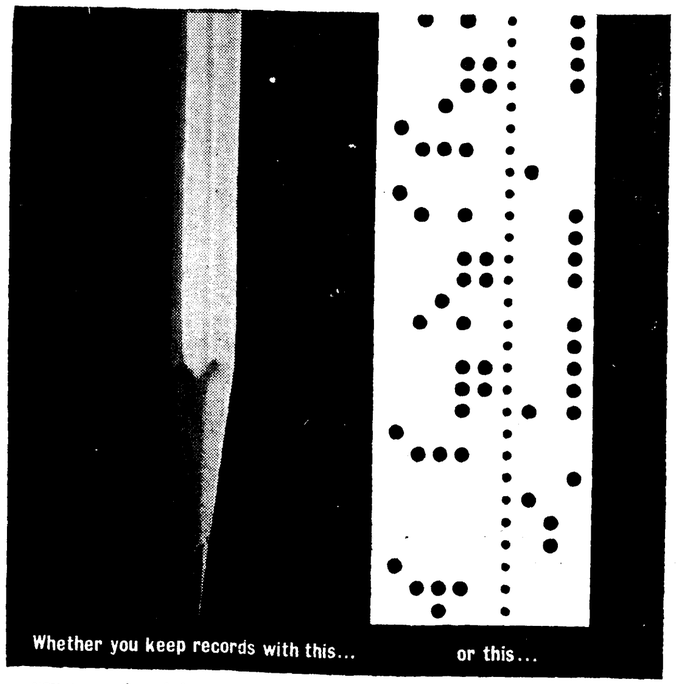
STEEL

Raising Production

According to indications available here, the expansion of output of the Tata Iron and Steel Works may materialise only to the tune of 2.5 million tonnes by 1970-71, against 3 million tonnes expected earlier.

To meet this shortfall, the view is gaining ground in official circles that both the proposed Goa-Hospet and Visakhapatnam-Bailadila plants should be set up up to the steel-making stage, maybe each with a capacity to produce 1 million tonnes of ingots a year. The big question mark, however, is the foreign exchange cost of the two plants.

With a view to reducing costs and stepping up production expeditiously, the Central Government is understood to be laying great emphasis on technological improvements in planning the advance action on the expansion of the steel industry during the fourth plan period. The first step in this direction was taken last week when a technical committee was set up under the chairmanship of Dr. B. R. Nijhawan, Director of the National Metallurgical Research Laboratory, to suggest improvements in blast furnaces.



It has been estimated that technological improvements in blast furnaces can increase the production of pig iron by 1 million tonnes. This will go a long way in meeting the demand for pig iron in the fourth plan.

According to the tentative estimates prepared by the Planning Commission, the demand for pig iron will rise to around 4 million tonnes by 1970-71. Of this, the existing steel plants and the units already licensed in the private sector will be able to supply 1.75 million tonnes. In case 1 million tonnes of pig iron are available as a result of technological improvements, arrangements will have to be made only for 1.25 million tonnes of additional capacity during the fourth plan period.

The Government has also received the report of the delegation which was sent to Japan to study the various factors concerning capital and operational cost of steel plants in that country with a view to devising measures for effecting economy in the steel industry in India. The delegation is understood to have made far-reaching recommendations on the basis of its studies in Japan. Its suggestions will be taken into consideration while drawing up the final steel programme for the next plan.

Another aspect to which the Government is paying immediate attention is the supply of trained personnel for the fourth plan steel development programme. A committee, which was set up to study the requirements for construction, operation and maintenance of steel works, has submitted its report. The report will be shortly considered by the Steering Group on Steel.

In a statement issued last week, the Central Minister for Steel and Mines, Mr. N. Sanjiva Reddy, denied that any proposal was being considered by the Government to permit the participation of foreign investors in the expansion of the Indian steel industry. The Government, he said, had no intention of deviating from the principles embodied in the Industrial Policy Resolutions of 1956. The question of a shift in the Government's policy relating to the development of the steel industry in the public sector, therefore, did not arise.

you can cut maintenance costs up to 15% or more with Caltex "Stop Loss" Programme

Here's one plan for reducing major overhead costs that puts no premium on your record-keeping methods.

Whether you use a clerk or a computer, you can count on a Caltex "Stop Loss" Programme for substantial savings in maintenance expense... savings that can reduce costs up to 15% or more.

The key to this plant management plan for cost control is our exclusive Lubrication Control System. This flexible blueprint for economy helps slash costs in the primary areas of production and maintenance. It eliminates the high price that companies pay for unnecessary shutdowns. It extends machine life, reduces maintenance time and labour costs, and increases unit output.

Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex office.

CAL SL G 1/64

COAL

Using World Bank Credit

In view of the fact that the Rs. 16.67-crore credit made available by the International Bank for Reconstruction and Development for the expansion and modernisation of the Indian coal industry has not been fully utilised so far, the Central Ministry of Steel and Mines has decided to invite fresh applications from the industry for offering financial assistance out of these funds. This assistance will be available for new projects, expansion of the existing mines and the replacement of the equipment.

Fresh applications will be entertained up to the end of August 1964. Applications for new projects will be considered on merits, taking into account the need for development of such projects and the most suitable agency for undertaking the development schemes. These new projects will also require clearance of the World Bank. The request for such clearance will be made to the World Bank once the projects have been examined and approved by the Central Ministry of Steel and Mines.

U.K.

Credit Offered

The British Government has made available to India the first instalment of £10 million (Rs. 13.3 crores) out of the £30 million (Rs. 40 crores) credit promised by it under the aegis of the Aid-India Club last May. The credit is not tied to any development project and can be used for financing any current imports from Britain.

Including this £10-million credit, the total aid provided by Britain for India's economic development under the current plan amounts to £135 million. Of this, over £72 million has already been disbursed.

The U.K. Government has also informed the Government of India of its readiness to extend a loan of about £50 million for meeting the foreign exchange cost of expanding the capacity of the Durgapur steel works under the next plan from 1.6 million tonnes of ingots to 3 million tonnes of ingots. A formal agreement is proposed to be signed as soon as the terms and conditions of the loan are finalised.

Construction work under the expansion programme is expected to start early in 1966. The capacity of the Durgapur steel works is currently being expanded from 1 million tonnes of ingots to 1.6 million tonnes. The U.K. Government has provided £22 million for the current expansion programme.

OIL

Seismic Survey

The seismic survey for oil and gas reserves under the sea-bed along the Coromandel coast is expected to begin around the middle of this month when the Russian scientific ship *Akademik Arkhangelsky* arrives in Madras. About 60 Russian seamen and scientists will be manning this ship under the leadership of Dr. Yakov Malovitsky. Nearly ten Indian specialists are also expected to be associated with the survey work.

Investigations will initially begin in an area of 200-kilometre long and 30-kilometre wide up to a depth of 100 metres near the mouth of the Cauvery river. These will continue till the middle of October. After that, when the weather in this area becomes unfavourable, the Russian ship will go over to the Rann of Kutch for conducting a seismic survey there. It will return to the Coromandel coast again some time in March.

The seismic surveys both along the Coromandel coast and in the Rann of Kutch area are expected to be completed by October or November next year.

POWER

Fourth Plan Programme

Matters relating to development of power during the fourth plan period were considered at a meeting of the Planning Commission last week. The Commission concurred with the view of the Ministry of Irrigation and Power that the Centre should have a bigger hand in power generation in the future. The Central direction, it said, would ensure specialisation in power engineering and technology, besides fostering the standardisation of machinery, equipment and designing, which would lead to economy in generation costs.

The Commission favoured the establishment of an all-India electricity grid. It considered whether the Centre should set up extra high voltage lines for the transmission of bulk power in a region and for inter-connecting regional grids with the national grid. It expressed the view that the power-stations in a region should be operated in an integrated manner by establishing regional grids.

The Commission generally favoured efforts under the fourth plan towards redressing the lack of balance in the States in the *per capita* power generation and utilisation, but recognised that there were limits to such a remedial programme because the location of new power-stations would be determined by various factors which might not work in favour of reducing Statewise lack of balances. Besides, requirements being the main determining factor, new thermal plants will have to be established near the coalfields or washeries where inferior coal or middlings can be economically used.

The Planning Commission also discussed whether the small private electricity undertakings should be taken over by the State during the next plan. It was agreed that such undertakings should be acquired if they stood in the way of developing the country's power resources.

The Second Annual Power Survey Committee has recommended that the fourth plant target for the installed power generation capacity should be 25 million kilowatts—just double the installed capacity likely to be established by the end of the current plan. The committee has expressed the view that power development in the next few years will have to be rapid enough to support the high production targets proposed to be fixed under the fourth plan for the various electricity consuming sectors of the economy.

Referring to last year's growth in power resources of the country, the committee says that on an all-India basis, the load growth for the period April 1963 to March 1964 was only 625 megawatts, against the predicted growth of 1,079 megawatts. The "capability" added during 1963-64 was only 394 megawatts, against an anticipated addition of 1,070 megawatts. The projected increase in peak load for 1964-65 is placed at 1,566 megawatts.

The committee thinks that power supply will improve in most areas in the country by the end of the current plan period. The installed capacities which are expected to be available in the five regions during the current and the next three years are summarised in the table on the top of columns 3 and 4.

Region	1964-65	1965-66	1966-67	1967-68

EXPORTS

Fourth Plan Target Revised

In order to end the recent controversy on the fixing of the fourth plan target for exports, a compromise is understood to have been arrived at between the Planning Commission and the Central Minister for Commerce, Mr. Manubhai Shah. As a result of this, the fourth plan export target may be fixed around Rs. 5,000 crores. This implies that exports in 1970-71 will have to be raised to about Rs. 1,150 crores from nearly Rs. 850 crores expected in 1965-66. The Commission had earlier suggested a target of Rs. 1,200 crores of exports in the last year of the fourth plan. Mr. Shah was of the opinion that exports in that year could not be expected at more than Rs. 1,100 crores.

To achieve the compromise target, some drastic changes are envisaged in the export policy. Some restraint may be put on the internal consumption of products having good export potential. The prices of such goods may be pegged high to discourage domestic consumption. The lever of excise duties may be used to attain the objective.

Foreign exchange allocations for the import of machinery and equipment for industries, the products of which can find good markets abroad, may also be increased. Furthermore, the public sector may go in for the manufacture of some selected consumer goods for export purposes.

The Central Ministry of Commerce has been asked to spell out the conditions, the creation of which will help increase exports to Rs. 5,000 crores during the fourth plan period.

TRANSPORT

Talks in Srinagar

At a meeting in Srinagar last week, the Transport Development Council endorsed the recommendation of the working group set up by the Central Ministry of Transport at the instance of the Planning Commission, that the allocation for road development under the fourth plan should be about Rs. 1,150 crores. The Council also approved the idea of setting up Road Planning Boards at the Centre and in the States for suggesting priorities and phasing road development programmes and for reviewing the progress periodically. It stressed the need for having an integrated road plan, for both the Central and State Governments, to meet the requirements of various sectors of the economy.

The Council recommended that a phased programme for road development should be drawn up after carefully fixing the priorities. There should be an economic justification for every scheme to be undertaken. The larger projects should be backed by cost benefit studies.

In view of the increasing number of heavy vehicles, the Council recommended the adoption of higher specifications for roads. It further

stated that the road plan should be framed, keeping in view the requirements of the region as a whole, special attention being given to less developed areas such as Nagaland, Manipur and Assam, which are also border areas.

The Council also recommended priorities for various categories of roads and said that the national highway system should be adequately expanded to meet the requirements of the country's developing economy. As for the roads of inter-State importance, the Council suggested that the Centre should give financial help for constructing bridges near boundaries of the States, while the State Governments should build the required connecting road links to these bridges.

The need for setting up testing and control laboratories in the States and the establishment of a few full-fledged road research stations in various regions was also emphasised by the Council. It also recommended the creation of facilities for training technical personnel and the adoption of mechanised methods of construction on an increasing scale for ensuring roads of higher specifications for heavy traffic. According to another recommendation of the Council, proper assessment of road-making machinery on a national basis and steps to promote indigenous manufacture should be taken up.

To tackle the problem of strengthening the weak and old bridges and culverts, which is a big task requiring considerable finances, the Council suggested the drawing up of a crash programme to meet the minimum needs. Emphasising the urgency of development and proper maintenace of rural roads, the Council agreed that fair percentage of the State plan funds for roads should be earmarked for rural roads. Financial assistance, it suggested, should also be given by the Central Government.

To cover unregulated burrow pits along national and State highways, the Council urged the association of landscape architects in the design and lay-out of roads, so that the highways could be made as attractive as they usually are in foreign countries.

Simplification of Procedures

The Council pleaded for the simplification of the existing procedures to expedite the execution of road works. It noted that a working group had been appointed for the purpose and was expected to submit its findings within a few months.

As for road transport, the Council suggested the amendment of the Road Transport Corporation Act, 1950, to enable the constitution of corporations under it. The present company which had been incorporated to provide goods transport service in certain areas of Assam and West Bengal, the Council stated, should be converted into a corporation under the Road Transport Act and the field of its operations extended to inter-State routes in other parts of the country, if necessary.

The Council wanted that the limit of 300 miles recommended by the inter-State Transport Commission for unrestricted movement of oil tankers should be relaxed, if it could not be totally removed.

For assisting the development of tourism, the Council recommended that the State Government should finalise and notify by 31st October, 1964, rules under the Motor Vehicles Act, 1939, for countrywide operation by tourist vehicles without counter-signature of their permits by various regional and State Transport authorities. These rules, which would allow the grant of all-India permits for 50 tourist taxies and ten tourist buses by each State, should be based on orders already circulated for this purpose by the Central Transport Ministry.

COTTON TEXTILES

Controls Opposed

The representatives of the leading associations of wholesalers, semi-wholesalers and retailers of mill-made cotton cloth, who had been invited by the Central Ministry of Commerce for talks on cloth distribution, have generally expressed themselves against the institution of controls.

As for the stamping of prices—both ex-mill and retail—the general view of the associations was that if controls were to be introduced on popular varieties and if the balance of production was to remain outside these controls, it should not be necessary to stamp either ex-mill prices or retail prices on the non-controlled varieties. It would be enough if the name of the mill, the nature of construction, the type of the cloth and brand names, if any, were printed on the non-controlled varieties without any stamping of ex-mill or retail prices. They also represented that the retail and the wholesale trade should continue to participate fully in selling the controlled cloth as well as the non-controlled varieties. The view expreseed by the trade on the margin of retail sale to consumers over the ex-mill prices of controlled varieties was that the present margin of 18 percent over the ex-mill prices without excise duty was inadequate.

The official spokesmen are stated to have indicated that the Government would keep all these in mind before reaching the final decisions. The officials assured the representatives of the associations that for the distribution of the controlled varieties, the normal trade channels of wholesalers and retailers would be maintained as the quantities of the controlled varieties would be very large—nearly 2,000 million yards a year. Even after satisfying the requirements of co-operative societies and fair price shops, there would be very large quantities which the normal trade channels of wholesalers and retailers would be required to handle. With production control aiming at making adequate and larger quantities of popular mass consumption varieties, the trade would be handling the controlled popular varieties in the same manner as at present.

Stamping of Prices

As for the stamping of ex-mill prices and retail prices on non-controlled varieties of cloth, the Government spokeman emphasised that these varieties should also be sold to consumers in a satisfactory manner and that there would not be any need for stamping such prices on non-controlled varieties if the mills and the trade could make satisfactory arrangements for their sale.

The Government's policy to bring popular varieties like dhoties, sarees, long cloth and shirtings into the controlled sector, to the extent necessary, was reiterated by the Ministry officials. They point out that even with production and price controls, the mill industry should be in a position to produce adequate quantities of these popular varieties.

As for the distribution margin on the controlled popular varieties, it was explained by the officials that in view of the present situation, further enlargement of the margin was not feasible.

The Textile Commissioner is stated to be working out the production and price control measures for the popular varieties of cloth. These preliminaries are likely to be completed within the next few weeks after which the industry will be consulted for finalising all the technical matters concerning production and price controls. Steps are also being taken to appoint an advisory committee at the apex level consisting of all interests, namely, industry, trade, labour, consumers and others, to advise the Government on the efficient and smooth working of the controls.

SMALL INDUSTRIES

Programme under Fourth Plan

The Planning Commission is said to be in favour of encouraging small-scale industries during the fourth plan period at a much faster pace than has been the case hitherto. It is felt that although the third plan laid a good deal of emphasis on the development of small industries, in practice the process has not made sufficient headway. There still remains considerable bias in favour of the large-scale sector.

With a view to correcting this bias, the Commission is stated to be of the view that production of nearly 54 industries, including plastic goods, dyes, leather footwear, pressure cookers, bolts, nuts and screws, tape recorders, wire products, metal buttons, locks, lanterns, cycle pumps, cigarette lighters, microscopes for students and medical use, mechanical toys, paints and varnishes, pesticides, detergents, soaps, should be exclusively reserved for the small-scale sector.

The Commission is understood to have proposed an investment of Rs. 500 crores on the development of small-scale industries during the fourth plan. The annual rate of growth in this sector is expected to be stepped up from the present 4 percent to 8 or 10 percent.

MICA

Exports Prohibited

The Central Government has prohibited the export of all forms of mica (other than micanite and micanite products, fabricated mica parts and mica powder) unless the export consignment is accompanied by a certificate of inspection issued by the Mica Export Promotion Council in accordance with the Export of Mica (Inspection) Rules, 1964. The order came into force from 1st August, 1964.

The Government has also notified that the Council will be the agency for the inspection of mica before export. The Export of Mica (Inspection) Rules, 1964, have also been published. They prescribe the place of inspection, inspection fees and details of the procedure for inspection, as well as the issue of certificates of inspection thereafter.

If any person is grieved by the refusal of the Council to issue the certificate, he has a right to appeal within ten days of such refusal to an appellate authority appointed by the Government consisting of a panel of not less than three persons, whose decision on the appeal shall be final.

FOUNDRY-FORGE PLANT

Czech Machinery and Plant

The Central Government has signed a protocol with the Government of Czechoslovakia defining the scope of the second foundry-forge plant proposed to be set up in the public sector. In terms of the protocol, Czechoslovakia will supply the requisite machinery and equipment for the project and will also help in putting up the plant. The project will comprise a steel foundry and forge shop in Wardha and a branch plant for grey iron foundry to be located elsewhere.

The steel foundry will have a capacity to produce 12,000 tons of castings and 13,500 tons of ingots for forgings a year. The plant will manufacture moulds required by producers of cast iron pipes and steel castings needed in lorries, tractors and other industries. It will also add to the defence potential of the country.

INDIAN STANDARDS

Suggestions of Advisory Body

The Advisory Committee on Implementation of Indian Standards has recommended that Indian manufacturers entering into collaboration arrangements with foreign companies should adopt, wherever possible, Indian standards and raw materials. The Committee has noted that in some industrial units set up recently with foreign technical collaboration, foreign standards for raw materials, spare parts, design practices and even terms of measurements have been used in spite of the fact that corresponding Indian standards are available. The Committee has expressed the view that the existence of different standards for raw materials, spare parts, design practices, etcetera, is not conducive to organised methods of production, speedy industrialisation and economic progress.

DEVELOPMENT BANK

Shares of I.F.C. Transferred

All the shares of the Industrial Finance Corporation of India held by the Central Government and the Reserve Bank have been transferred to the Industrial Development Bank of India. Th transfer took place on 1st August. These shares comprise nearly 40 percent of the Rs. 7-crore share capital of the Corporation. The latter has also issued 2,692 additional shares in favour of the Industrial Development Bank. The Bank will thus hold 50 percent of the total share capital of the Corporation which will now stand at a little less than Rs. 8.35 crores.

With the present reconstitution of the share capital, the Corporation will be co-ordinating its activities closely with the Industrial Development Bank. The latter, it will be recalled, was established on 1st July, 1964, as a wholly-owned subsidiary of the Reserve Bank of India. It has an authorised capital of Rs. 50 crores, which, if necessary, would be increased to Rs. 100 crores. It will, among other things, co-ordinate the activities of bodies like the I.F.C. and State Finance Corporations which are providing financial assistance for industrial development of the country.

STORES SUPPLY

Official Seminar

The three-day seminar of the senior officers of the Supply Department, which concluded here on Friday last, decided that in cases where stores and material had to be imported, proper liaison should be maintained with the Chief Controller of Imports for obtaining the requisite licences in time. In cases where steel had to be issued for fabrication, liaison would be maintained with the producers and the Iron and Steel Controller.

It was disclosed at the seminar that the Progress Wing in the Directorate-General of Supplies and Disposals would be strengthened, so that a watch can be kept on orders placed and on the level of production by manufacturers.

London

ADVERSE U.K. TRADE BALANCE WEAKENS STERLING

(FROM OUR LONDON CORRESPONDENT)

DISAPPOINTING was how Mr. Heath, the Minister for Trade, described the United Kingdom trade figures for June If anything, it was an understatement, for they have given rise to some anxiety in business circles. After adjustment for seasonal factors, exports were down to £348 million, against £370 million in May while imports on the same basis were up to a record figure of £473 million, against £450 million in May. With little difference in re-exports, the trade deficit in balance of payment terms soared to £63 million, compared with £19 million in May.

As Mr. Heath reminded the National Production Advisory Council, the monthly trade figures have been very erratic this year. Exports in the second quarter of the year were 1 percent below the first quarter. In the first six months of 1964, they were 4 percent more than the average for last year. That is clearly not enough to support a growth of 4 percent a year in national production. Mr. Heath could only say that this was not good enough and claim that the "underlying trend" was still upward. Imports in the second quarter were 2 percent more than in the first quarter. In the first six months of the year, they were no less than 14 percent higher than the average for last year. The very high figures earlier in the year were believed to reflect a rush to build up industrial stocks for expanding production. But stockbuilding is supposed to have slowed down.

When the trade figures were announced, sterling dropped sharply in the exchange markets. After some official support, the sterling-dollar rate settled down at the lowest figure for three years. In the gilt-edged market, prices fell back to the lowest level of the year. Talk about the possibility of a higher Bank rate revived. Sterling's behaviour is being watched closely for any signs that confidence has been sapped by the June trade figures.

Recent Pressure

Recent pressure on sterling has largely reflected the tightening of money on the Continent and the shortage of dollars. Little evidence of speculative activity against the pound has been detected so far. But the ominous trade figures, coming when the election is no more than three months away, could well lead to nervousness among foreign holders of sterling. Talk of some early precautionary moves by the authorities is only natural in the circumstances.

Not surprisingly, a higher Bank rate is being canvassed again. The technical case against action at this stage is that market short-term rates are still below the ceiling and can be pushed up some way further before Bank rate need be raised. In policy terms, it is arguable that an increase in Bank rate would have an unnecessarily restrictive effect internally on an economy which is returning to balance of its own accord The International Monetary Fund has agreed to renew for a further year the $1,000 million standby credit for Britain. From 8th August, the British Government will, therefore, be able to draw on the new credit if necessary. No drawing is being made at present, but Mr. Maudling has repeatedly said that he would make use of the resources available from the I.M.F. to reinforce the reserves, rather than take precipitate action to restrict economic growth in Britain. The I.M.F. in announcing the agreement said that it was designed to assist the U.K in its efforts to overcome any temporary balance of payments difficulties without disrupting economic growth. It would thus contribute to sustaining confidence in the pound sterling.

The possibility that some financial strain may soon develop is also stressed in a report on the British economy issued in Paris by the Organisation for Economic Co-operation and Development. It is still too early to judge, says the report, whether the last Budget with its "moderately restrictive tax measures" will have been sufficient to stabilise economic growth at a sustainable rate. It was right that the British Government should avoid measures that might altogether end the expansionary phase. "But in the months ahead the Government should be prepared if necessary to make prompt use of the weapons it has at its disposal to dampen demand." The O.E.C.D. suggests that vigorous action should be taken to improve the competitive position of Britain. To achieve this competition will have to be stimulated and the rise in money incomes moderated. One method that has been found useful in Continental countries is "selective reductions in import tariffs."

Production Survey

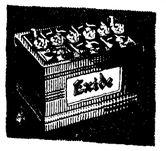
The slowing down may well already be taking place. An enquiry among 500 small and medium-sized industrial firms shows that production is tending to level off and that this trend may become more marked in the second half of the year. That is the surprising upshot of the tenth production survey undertaken by the National Association of British Manufacturers. The general picture is still one of rising production, but fewer firms report expansion for the second quarter than for the first quarter, and still fewer expect output to go on rising in the third quarter of the year.

The results are yet another item of evidence in support of Mr. Maudling's recent suggestion that here are "built-in stabilising forces" at work in the economy. The firms to which the survey refers cover a wide range of industries from engineering and vehicles to textiles and clothing; chemicals, building materials, food, drink and tobacco and paper and printing Over four-fifths of the participating firms employ 500 people or fewer, although the survey includes 33 firms with over 2,000 employees. In the first quarter of the year, 56 percent of the firms said output was rising, and 37 percent said it was unchanged In the second quarter, 55 percent said it was rising and 40 percent unchanged The forecast for the third quarter shows 52 percent rising and 43 percent unchanged.

Questions as to home and export orders show a similar levelling off. In the first quarter, 64 percent of firms indicated that home orders were rising, while 26 percent showed no change from the previous quarter. In the second quarter, only 56 percent of firms said orders were rising and 34 percent said there had been no change. The export position was similarly somewhat less promising: 29 percent showed a rise, as against 33 percent in the first quarter, while 58 percent indicated no change, compared with 52 percent in the first quarter.

Costs Rise

In addition to the tendency of home and export orders to level off, production has been somewhat limited by shortages of labour, both skilled and unskilled. These have been reported from all regions, but particularly from the Midlands, London and to a less extent Yorkshire and Manchester. There have been some reports of lack of orders and also of lack of capital. In a limited number of cases, a lack of capacity has been reported. Some shortage of materials has emerged in the engineering and building industries in Yorkshire, Wales and the northern region.



Costs have continued to rise, but this is less widely spread than in the previous quarter. Selling prices also seem to have steadied. Seventy-four percent report no change in prices, compared with 60 percent in the first quarter. In a comment on the figures, the Association suggests that there are "growing signs that further growth is likely to be limited by shortages of labour, by production capacity and by some shortages of materials." All of these may cause production to level off in the second half of the year, particularly in those areas where labour is relatively short.

According to this survey, labour shortage is particularly prevalent in the Midlands and in Yorkshire. The expansion in Scotland, Wales and the northern region may, therefore, continue unchanged. The tendency to level off seems to be most marked in the textile and chemical industries. In building materials and food, production is still rising strongly. As far as investment is concerned, the trend seems to be upward. Final results for the first quarter of 1964 show that industry's capital expenditure was 4 percent higher than in the previous quarter. This rise, though less than estimated from the provisional figures, confirms that the industrial investment cycle is now firmly on the upturn. It began to rise again in mid-1963 after falling since its 1961 peak.

Exide Batteries still keep going when the rest have stopped

Silver Exide are the strongest, most reliable batteries under the sun. They are quality tested at every stage of production . . . . that's why you're sure of a long and trouble free life. Silver Exide Batteries are obtainable from dealers everywhere. So don't delay—and you'll still keep going when the rest have stopped.

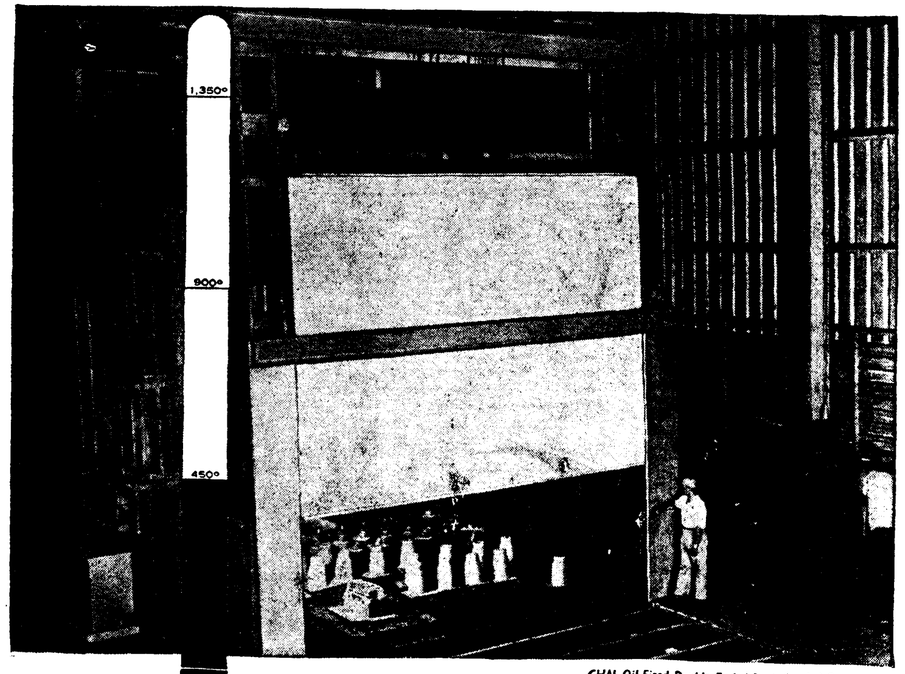
NORTH INDIAN TEA OUTPUT RISES

(BY A SPECIAL CORRESPONDENT)



PRODUCTION continues to make satisfactory progress in north Indian gardens, and output up to 15th July, was 77.949 million kilograms, compared with 66.174 million kilograms in 1963.

In a recent issue a newspaper published an interesting article on tea with particular reference to the potential value of the estates in West Bengal. It pointed out that the planted area in this State exceeds the total planted acreage in south India. It then added: "Apart from collecting taxes, the State of West Bengal does not concern itself in any way about its huge resources of tea plantations in the State".

With reference to comparative yields, the article drew attention to the age of tea bushes and noted that south India enjoys comparatively newer plants, as only about 20 percent of the gardens have tea over 60 years of age. In the Dooars, the percentage is 35.47 and in Darjeeling 79.16 (figures based on a study made in 1953-54).

The Plantation Enquiry Committee has assessed the economic life of a tea bush at 60 years in the plains. In the hills, the life span is thought to be longer. This increased life could be due to the great depth to which the tap roots penetrate and possibly also to less severe strain from overplucking which must sometimes happen in the tropical conditions experienced in the plains, but whatever the life span in the Hills, replanting in the Darjeeling district is already an urgent problem. The article in question gives the estimated cost of renovating as between Rs. 4,000 and Rs. 6,000 an acre. The old tea has to be uprooted, the ground levelled, then terraced and replanted. This would apply to Terai, but hardly to Darjeeling as far as levelling is concerned.

When this correspondent was last in Darjeeling, most estates looked fairly green when viewed from the top of any hill. But if seen from a low elevation upwards, about half the soil will be found to have been eroded and the roots of perhaps a like proportion of the plants exposed. That replanting is an expensive business is not disputed, but nature appears to have done half the work of uprooting and surely modern gadgets are available in this scientific age to pull out what remains of these old stumps. All Darjeeling gardens were originally planted from China seeds. They still produce the finest tea in the world. Will replanting, if undertaken, be done with Assam indigenous, Manipori, etcetera? No doubt the new Tea Committee will go into these matters. Replanting is not a profitable project today. This brings one back to the benefits the West Bengal Government derives from its fortuitous interest in tea companies, namely, the agricultural income tax which yields Rs. 60 lakhs. Entry tax alone provides Rs. 1 crore.

CHAL Oil Fired Double Ended Bogie Loaded Core Drying Oven installed in a reputed steel foundry in India.

WELLMAN INCANDESCENT LOW TEMPERATURE HEAT TREATMENT OVENS

Wellman Incandescent India Ltd., in collaboration with Controlled Heat and Air Ltd., Smethwick—England, are now manufacturing in India industrial ovens for low temperature heat treatment up to a maximum of 450°C.

These ovens cover the whole CHAL range of products. Ovens for Stoving, Tinprinting, Drying, Metal Heat Treatment, Core Plate Varnishing, Maturing as well as Filtration equipment are available.

Wellman Incandescent are also specialists in Mechanical Handling Equipment and have commenced to manufacture progressively many products which hitherto had to be imported.

Jute

SPECULATIVE RISE IN PRICES CONTINUES

RAW jute and gunny prices have touched new peaks after violent fluctuations during the past week. The temporary shortage of raw jute has been one of the causes for the speculative spree. There has been a sharp decline in arrivals in Calcutta and in the agencies due to heavy rain and floods in Assam, northern Bengal and Bihar. Reports of some damage to the crop in these areas stimulated the hardening trend. Another factor was the continuance of the strike in East Pakistani jute mills. Although the strike has been formally called off, workers did not resume duty on the plea that their demands were not met. The firming up of fibre prices in Pakistan has also contributed to the rise in this country. In view of the higher prices and restricted offerings of fibre, mills have not been inclined to sell gunnies for short and near terms since they could not cover these sales by jute purchases. So gunny prices have hardened more in the spot market than in the hedge market. Business during the week has been confined to brisk short- and shipper-covering, scattered hessian bookings by the U.S.A. and cornsack purchases by Australia. The Government of India, as also the packers of foodgrains, sugar and cement have been practically out of the picture. Although most of the mills have sold heavily for all positions at the higher prices, their margins have been reduced due to the much higher rates they had had to pay for fibre while covering these sales. Overseas business has been small, although burlap prices have risen in New York in sympathy with the trend in Calcutta. The report that export shipments were high around 100,000 tonnes in July, due to the enhancement of the shipping freight from the 15th of that month was another bullish factor. Both mills and trade circles are worried over the hectic price movements.

Regulatory Measures

In order to arrest the speculative spree, the East India Jute and Hessian Exchange has imposed various restrictions on trading with the prior consent of the Forward Markets Commission. On Saturday, it was announced that trading during any day will be suspended whenever the prices of hessian and sacking for August and November deliveries ruled at or above Rs. 47.50 a 100 yards and Rs. 123 a 100 bags, respectively. In the case of Upper Assam White Bottoms for September, it is Rs. 34.25 a maund. The ceilings imposed on daily fluctuations above the closing levels of the previous day are 25 paise a 100 yards in hessian, 70 paise a 100 bags in sacking and 25 paise a maund in raw jute.

Special Margins Imposed

But these restrictions failed to produce the desired results and trading remained virtually suspended till midday on Tuesday when the authorities imposed special margin restrictions on trading. These prescribed that buyers will have to deposit a special margin of Rs. 24 a 100 yards when the price of hessian for August or November delivery ruled at or above Rs. 47.50. In the case of B Twills, the margin is Rs. 62 a 100 bags at or above Rs. 123.70 for the same deliveries; in Upper Assam White Bottoms for September the margin is Rs. 17 a maund at or above Rs. 34.75.

The special margins are payable on the net outstanding purchases of a member on his account or on account of his member and non-member clients separately for hessian and sacking without setting off the outstanding purchases in one delivery against the outstanding sales in another delivery and also for raw jute contracts. The amount of special margin will be refunded on the liquidation of the outstanding purchases and/or on the special margins being not required to be paid on application by a member. Since the enforcement of the restrictions, prices have reacted in the hedge market due to selling pressure from holders. In the spot gunny market too, prices have eased somewhat, although fibre prices still continue to be high. Fluctuations have narrowed down and the market has closed on an easier note.

THE JUTE MARKETS

Manufactured Goods: Buoyant conditions prevailed in the Calcutta gunny market during the past week. The spree was touched off by the flare-up in the hedge market which scaled new peaks almost every day due to hectic speculation. Offers of raw jute declined sharply and holders demanded higher and higher prices. Mills turned reserved and transacted business only when adequate premiums were offered to help them cover the extra fibre costs. Shorts and shippers turned panicky and sought to cover their open positions at higher prices. A squeeze was specially felt in goods for near and far delivery, and their prices rose disproportionately. Since the imposition of the special margins on Tuesday, prices softened in both spot and futures sections. Turnover was heavy and the undertone cautious but easier at the close.

Wednesday's quotations were as follows:

	Aug.	Sept.	Oct.-Dec.	Jan.-Mar.
40in. 7½oz.	35.50	35.75	36.00	36.35
40in. 8oz.	38.10	—	—	—
40in. 10oz.	47.00	47.25	47.85	48.25
B Twills	124.75	125.25	125.50	126.00
Cornsacks	133.50	133.00	129.00	129.00
Heavy Cees (Plain)	123.50	124.00	124.50	125.00
A Twills	149.50	150.00	150.50	151.00
Liverpools	138.50	139.00	140.00	140.50

Raw Jute: Firm conditions prevailed in the raw jute market during the past week. The steadiness stemmed from a sharp decline in arrivals in the terminal markets and in Calcutta as rivers were in spate in northern Bihar, Assam and northern Bengal. Rural roads too were in a bad condition. Besides, higher fibre prices in Pakistan were additional stimulants. Although it is still too early in the season to speculate on the size of the crop, a section of the trade held the view that the new crop would be lower in both India and Pakistan. They believed that with a decline in the carryover of fibre from the 1963-64 season, Indian mills would be facing difficulty in working their capacities at the maximum level and so they would have to pay higher prices for fibre. Such unrealistic crystal-gazing led to the speculative spree which pushed up prices in both the hedge and spot markets. Fibre offerings declined appreciably. In the course of a week, prices of Assam Bottoms ready, f.o.r., Calcutta, rose by about Rs. 2 a maund to Rs. 36, and of Northern Bottoms and Daissee Bottoms by about Rs. 1.50 a maund each to Rs. 35 and Rs. 37, respectively. Reluctantly though, the mills had to absorb all offers, further stimulating the upward price spiral. In the hedge market too, prices rose continuously after wide fluctuations. On Tuesday, there was a mild setback in the course of which the fluctuations narrowed down and easier conditions seemed to prevail in the market. Turnover was fair and the undertone very firm in the spot section and easier in the futures section at the close.
