AMBIVALENCE IN PLAN PRIORITIES

AN air of unrealism permeated last week's no-confidence motion against the Shastri Government, something which became evident when the sponsors of the motion failed even to secure the support of the largest Opposition group, the Swatantra Party. The latter declined to join hands with the Opposition, and rightly so, on the ground that the Government had been in office for just three months, which was too short a period to expect results. It was also clear where the sympathies of the other right-wing parties lay, although they joined the foray reluctantly. Even so strong a critic of the Government as Mr. Frank Anthony rallied round to its support. In fact, at no time before had the Opposition been in such a state of disarray, and, as was expected, the censure motion turned out to be a damp squib. The Opposition's attack was far from being united either in its purpose or tactics. Mr. N. C. Chatterjee, who mounted the offensive, put up a feeble and ineffective show although the nation-wide discontent over prices and the Congress Party's discomfiture in Kerala and Orissa provided obvious circumstantial advantages for an assault. Another noteworthy aspect of the debate was that there was no attack from the Congress legislators themselves, who have in recent years developed the technique of hitting out at their own Party Government into a fine art.

The gravamen of the charge against the Shastri Cabinet, particularly from the left-wing politicians, was that it had drifted away from the policies of Mr. Nehru. Mr. Shastri took the opportunity to assert his right of independent thinking while unequivocally repudiating the charges that his Government was veering away from the objectives and policies of his illustrious predecessor. He affirmed his belief in the socialist aims adopted by the Party under Mr. Nehru's leadership. In fact, Mr. Shastri is the staunchest upholder of the Nehru tradition, even to the point of inhibiting his own individuality. It is a wholesome indication that he is now asserting his freedom of action, although it is still very much within the framework left by Mr. Nehru. Mr. Shastri has indicated in no unmistakable terms that he would like his policies to be judged by themselves, without reference to their adherence to Mr. Nehru's views. Maintaining continuity of the Nehru tradition is one thing and a rigid conformity to it without regard for the change in circumstances is quite another thing. As Mr. Shastri pointed out, in a democracy there is no such thing as deviation and there ought to be complete freedom to re-think old policies and formulate new ones. Indeed, Mr. Nehru himself believed in flexibility and pragmatism.

The main challenge before Mr. Shastri, as he himself sees it, is the price situation which has assumed proportions never before witnessed in the post-independence years. So Mr. Shastri's major objective has to be to stabilise prices at reasonable levels. This being the case, the emphasis must necessarily have to be on expanding the output of agricultural and consumer goods. Since the real resources of the economy are severely limited—according to the Reserve Bank directors, even with the utmost optimism about agricultural production and the availability of foreign exchange, the country's resources may remain strained—a selective pause in the expansion of heavy industry becomes inevitable. This is all the more important because huge investments in heavy industry, with their long gestation periods, substantially add to the pressure on prices, thereby undermining stability. In the conditions obtaining in India today, the conflict between stability and growth has become very real. In effect this means that a choice has got to be made, however distasteful it may be, between the needs of the present and of the future. In response to the hard logic of the situation, Mr. Shastri is wisely trying to opt for the present.

However, the burden of the past is obviously lying too heavily on the Shastri Government. This is most clearly visible on the question of the choice of plan priorities. During the no-confidence debate, Mr. T. T. Krishnamachari, Central Finance Minister, stated that it would be "disastrous" for the country at this stage to reverse its development strategy "merely because there have been failures of supplies causing hardships in the short run." He put forth a case for ambitious investment planning aimed at rapid industrialisation, and stated that the situation did not warrant a cut in development expenditure or a shift away from heavy industries. This is obviously an attempt to placate leftist elements within the Congress. But it is difficult to see how this hitches in with Mr. Shastri's plea for consolidating the work on projects already under way and for a selective pause in heavy industrial expansion. It apparently betrays the lack of a co-ordinated approach towards planning at the top echelons of the Government and the inability to face the hard realities of the situation due to the economic legacy of the past. When such an ambivalence characterises thinking at the highest level, it is bound to be reflected in the working of the Planning Commission. It has not clarified things for the public either and has caused much confusion in the country.

No doubt, there cannot be two opinions about Mr. Krishnamachari's plea that there should be a continuous effort to improve the returns from every field so that the rate of economic growth is speeded up. This is all right so far as the existing projects are concerned. But what about the new schemes which are still in the womb of time? The snag lies in the fact that some of them, which entail the largest of outlays, are, by their very nature, slow-maturing and, therefore, involve a substantial time lag between investment and production. Such projects are quite often in the public sector which, with its burdens of red-tape, prolong the gestation period. On the other side, there are "light" industries and other quick-yielding schemes, which involve a smaller capital outlay. The big question is whether the disproportionate emphasis on the former at the cost of the latter is going to be continued. This is a question which needs to be faced squarely irrespective of political dogma, since on the right answer depends economic stability and ultimately political stability for the country.

Mr. Krishnamachari affirmed that the correct policy was "to remove the obstacles in the way of an even faster rate of growth in industry." A question may justifiably be asked as to what has so far been done to remove the obstacles. The present

fiscal structure is perhaps the biggest deterrent to the growth of industry and has made it extremely difficult for entrepreneurs to tap the capital market. Mr. Krishnamachari felt that while the new institutions like the Unit Trust and the Development Bank would help to some extent, the entrepreneurs themselves ought to learn to mobilise the people's savings. This is rather odd advice considering that the Government itself has created the situation where equity investments have become unattractive. To say that it is primarily the duty of industry to "cultivate" the market so that it responds to the former's needs, as the Finance Minister said, sounds platitudinous advice which ignores the realities of the capital market. Savings can be attracted only if hard incentives are offered to the investor in place of wordy exhortations. The latter are no more capable of hitting the target than the Opposition's missiles in the no-confidence debate.

BANK LIQUIDITY AND CREDIT NEEDS

THE scheduled banks have been able to comply with the increased liquidity requirements, enforced since 16th September, 1964, without much difficulty. The Banking Companies Amendment Act, 1962, gave the banks two years to raise their liquidity ratio from 20 percent to 28 percent. The new ratio consists of 3 percent in the form of statutory balances with the Resrve Bank and 25 percent in the form of other unencumbered liquid assets, mainly Government securities. Under the law, the Reserve Bank has the option to increase the statutory balances of banks from 3 percent to 15 percent, if required. So the Reserve Bank can, if it thinks necessary, ask banks to maintain a liquidity ratio of up to 40 percent. In view of the easier money supply during the current slack season, it has not been difficult to achieve the new ratio. Furthermore, the interbank market has an adequate supply of funds since the call rate in Calcutta is hovering around 1½ percent with lenders over. On a rough estimate, the overall liquidity ratio of all scheduled banks now works out to an average of about 34 percent to 38 percent, although that of the State Bank of India is considerably higher. But it enjoys the advantage of holding a substantial amount of U.S. P.L. 480 counterpart funds.

The maintenance of a higher liquidity ratio is impeccable in principle since it ensures the financial soundness of banks. Its importance, particularly in India, cannot be exaggerated because some bank failures had shaken the confidence of depositors only a few years ago. But the impact of the increased liquidity ratio on the working of banks needs to be assessed carefully. Since the Reserve Bank is armed with enormous powers to regulate the working of banks, the need for enforcing a very high liquidity ratio is not considered urgent. The new ratio will tend to interrupt the smooth working of banks, especially when there is a pressure on banking funds in the busy season.

The transition to the new ratio has been facilitated by the fact that banks have invested considerable funds during the current slack season in Government securities. The investment portfolio of scheduled banks has risen by Rs. 129.46 crores to Rs. 761.99 crores since the beginning of the present slack season. But this trend usually prevails at this time of year because the absence of an adequate demand for credit induces banks to invest more heavily in Government securities. As soon as the demand for credit improves, securities are sold and the proceeds are used to give loans and advances.

The question, however, arises whether banks will be able to satisfy fully the credit requirements during the ensuing busy season under the new liquidity ratio. Since it will block a larger amount of funds, the majority of banks may experience a shortage of resources. This apart, credit requirements during the next busy season are likely to be a good deal larger than those of the 1963-64 busy season. During the latter, bank credit expanded by about Rs. 377 crores. It is significant that a large part of the credit expansion was due to the rise in non-seasonal requirements. During the current slack season, credit contraction has been no more than one-third of the busy season's usual credit expansion. This indicates that banking advances are tending to become non-seasonal in character. The trend is understandable because bank advances to industries have increased substantially during recent years. Considering the fact that the progress of industrialisation will continue, industrial advances will expand rather than decrease. In sum, the banking community will be asked to expand its credit much more during the 1964-65 busy season than it did in the previous one.

Although the Reserve Bank has the discretion to relax the new ratio for any particular bank, it is unlikely to do so. In the circumstances, the banking community will have to mobilise deposits much more vigorously to meet the demand for credit. Since the beginning of the current slack season, deposits of scheduled banks have risen by Rs. 195.99 crores to Rs. 2,703.90 crores. The pace of growth needs to be accelerated. One way of doing this is to make bank deposit rates more attractive. These have been recently raised, but they do not appear to be sufficiently attractive. Funds have been diverted to other financing institutions which are offering higher interest rates. So it is time the banks considered adjusting deposit interest rates again. It also needs to be pointed out that poor banking services have been a major cause of checking the deposit growth. In the case of many banks, the encashment of a cheque at the counter takes a great deal of time. There is no reason why a bank should take about an hour or so to pay a cheque. Even depositing money or cheques in some banks takes a long time.

The effect of the new liquidity ratio on bank profits is likely to be unfavourable. Since the interest obtainable on Government securities is far too small in comparison with the lending rates of banks, the larger funds which have been shifted into securities, are obviously less remunerative. Banks generally do not prefer Government securities due to various factors. During the current slack season, they have invested heavily in Treasury bills in spite of the low return obtainable from them. Since the rate offered on new Government flotations has tended to rise in recent years, the risk of a capital loss on existing security investments has increased. This apart, the absence of a free market in securities has been a major restraining factor. Except for institutional support there has virtually been no public interest in securities. Even the Reserve Bank does not buy securities except in switches. So banks generally find it difficult to sell Government securities when they want to do so. If greater institutional support for gilt-edged is to be attracted, it is essential to make them more easily marketable.

The banks will be encouraged to invest more in securities if the Reserve Bank lends funds against securities more freely. At present, borrowings from the Reserve Bank are regulated by maximum quotas allocated to banks. The banks have been deterred from borrowing from the Reserve Bank freely due to the prohibitive lending rate of the latter under the tier system. In view of the substantial credit needs likely to arise during the coming busy season, it is time the Reserve Bank considered liberalising its lending policy. Commercial banks should be allowed to borrow liberally from the Reserve Bank against Government securities. The Bank should also consider buying Government securities in the open market. This will help inspire greater confidence in the market for gilt-edged.

DEVELOPING SMALL INDUSTRIES

THE small-scale industries have made rapid progress over the past few years. There are at present about 60,000 small-scale units registered under the Factories Act, representing approximately 90 percent of the total registered factories. This shows a rise of nearly 50 percent during the course of the last three years. However, in spite of this phenomenal growth, its impact is not reflected in the industrial economy of the country, and large-scale units still remain the backbone of the Indian industrial structure. The net output of the small-scale units represents hardly about 25 percent of the total value added by the Indian industry as a whole. This is not insignificant, but much more still remains to be done if the small-scale sector has to contribute a sizable share in the industrial development of the country. The development of small industries has been stifled by numerous adverse factors operating against their interests, but the second All-India Small Scale Industries Conference held in Bombay on 15th September under the auspices of the All-India Manufacturers Organisation, restricted its discussions to the three major problems, namely, raw material shortages, technical and managerial assistance and internal and international marketing.

The chairman of the A.I.M.O., Mr. Hansraj Gupta, rightly pointed out that although the performance of small industries might not be all that one would wish for, they should not be made the scapegoat for the faults which were not theirs. He said that the scarcity of raw materials was the major reason for the inability of small industries to fulfil the hopes cherished in them. Because of the raw material shortage, many small industries are compelled to operate at as low as 30 percent of their installed capacity, which greatly inflates their cost structure. Similarly, the compulsion to resort to the open market for the purchase of their required raw materials at exorbitant prices reduces the profitability of small ventures and weakens their competitive capacity. Besides, whenever large industries producing raw materials and intermediates also engage themselves in the production of end-products from them, small industries are generally starved of these raw materials. In order to overcome this handicap, the A.I.M.O. has suggested that some curbs may be imposed on these particular large producers of raw materials and intermediates when the end-products could be produced by small industries. Several units are known to be working uneconomically because of obsolete and outmoded equipment, lack of managerial and technical know-how and inadequate finance. The facilities made available by institutions like the National Small Industries Corporation in supplying modern machinery are inadequate to meet the needs of the small-scale sector. Technical and managerial assistance has assumed a vital importance for increasing the productivity of the small industries because of the varied needs arising out of the growing sophistication in the pattern of their development in the context of multiplicity and complexity of fiscal and labour laws.

Marketing is another major problem. As expenditure involved in an ambitious sales drive is beyond the reach of an individual small industry, marketing assistance, both on the internal and international fronts, is essential for opening new vistas of growth for the enterprising small entrepreneurs. Small industries are expected to make a substantial contribution to foreign exchange earnings during the fourth plan; their contribution so far has been very poor. In view of the limitations of size and resources, the small industries find it difficult to enter international markets. The A.I.M.O. chief has recommended that corporations like the National Small Industries Corporation and the S.T.C. should make greater efforts to secure bulk orders from abroad for the benefit of small industries not only from East European countries, but also other countries. The accruing import entitlements could also then assist in relieving the scarcity of raw materials. Intensive training programme to acquaint the small industrialists with the intricacies of export business could also prove very useful. It has also been suggested that in order to keep pace with the development of large-scale industries, the list of ancillary industries should be enlarged to bring more small units within its fold. Similarly, the growing sophistication in the pattern of development of small industries should be satisfactorily reflected in the list of items the purchases of which are reserved for the small industry sector.

In his inaugural address to the conference, the Central Minister for Industry and Supply, Mr. H. C. Dasappa, reiterated what he had stated at the recent meeting of the Small Scale Industries Board that "the growth of those small-scale industries which depend upon scarce raw materials will have to be on a regulated selective basis." But he was quick to clarify that the Government had no intention to resort to any elaborate system of licensing which is most welcome as it will save the small-scale sector from the cumbersome and dilatory procedures associated with the licensing of large-scale industries under the Industries Development and Regulations Act. Mr. Dasappa emphasised that screening will apply only to new entrants requiring scarce raw materials and that new units utilising indigenous raw materials, which are not in short supply, can be established freely as at present. Few can find fault with a policy which restricts the setting up of new units based on raw materials the supply of which is insufficient even to feed the existing units.

In fact, it is necessary to ensure that even the development of units utilising indigenous raw materials does not lead to wasteful use of resources. Raw materials and intermediates, previously imported, are now being produced in the country by units in the scheduled sector and are becoming available increasingly for further processing and fabrication by small units on a decentralised basis. Besides, various national laboratories, Indian Standards Institution and other research organisations are studying the scope for substitution for imported or otherwise scarce raw materials. Mr. Dasappa said that it would be his endeavour to increase supplies of scarce raw materials in future, but he could not be certain whether the increase would be such as to satisfy all the requirements. As for marketing, the Central Minister suggested that assistance needed for the promotion of exports should be organised on a co-operative basis by progressive exporters themselves. As for internal marketing, he assured the conference that the National Small Industries Corporation had been finalising a scheme to facilitate the participation of small units in supplying goods to the Government under the store purchase programme.

The experience of small-scale industry development during the last decade has unmistakably proved that given a certain amount of initial assistance the small units can become viable and self-reliant. They show promise of vigorous growth and, if afforded the benefits flowing from modern technology, the small-scale sector has the ability to take advantage of the scope for further development in sophisticated fields. The development of the small-scale sector should be co-ordinated with the development of large-scale industries so that they complement and supplement each other and unhealthy competition is avoided. The Government would do well to revise the present definition of small-scale industry which seems to have led to a tendency on the part of small units wilfully to check their growth so that they may remain within the definitional limits of the small-scale industry and enjoy the benefits and facilities granted by the Government. It is necessary to evolve a suitable formula which besides being easily ascertainable and non-discriminatory will help encourage the small-scale entrepreneur in expanding his activities as he prospers.

TRADE WITH COMMUNIST BLOC

UNTIL the end of October this year, holders of Baltic bonds and of other claims on territories that were occupied by Russia during the last war can state their claims to the Foreign Compensation Commission in London. The British and Russian Governments will soon begin negotiations to settle these old debts (but not the debts of Tzarist Russia) and the Soviet counterclaims for gold and other valuables frozen in London since 1940. The City of London believes that on this occasion (which is not the first) the Russians will negotiate with the intention to reach an amicable settlement, although (in a total of roughly £20 million) the claims against Russia are considerably more than those against the U.K. For the City believes that the Russian authorities (who operate in a fully professional manner in the London money market through the Moscow Narodny Bank) wish to establish their creditworthiness in London with a view to borrowing in the London capital market.

In isolation, these moves would be more interesting than important; but they fit into a wider pattern. The Russian bloc is trying to develop trade with the western countries as fast as possible, but the latter are divided in their attitude towards this trade, particularly in relation to credits. The United States and West Germany are on one side of the dispute, insisting that the five-year limit must be maintained: Britain, France, and Italy, are on the other side, inclining towards longer credits. The dispute is becoming acrimonious. The Berne Union of credit insurers—in which not all capital-exporting countries are represented —is no more than semi-official, and the Berne Union agreement that fixed the terms of export credit in the various categories lacks the force of inter-governmental agreements. Governmental decisions to allow longer credits to communist countries would be difficult to resist, and experience suggests that in this competitive field of export credit generally any advance by one country is quickly followed by others.

Britain's policy on trade with communist countries has been clarified this year. It is officially unpolitical. Britain as an international trader is not concerned with Washington's fine distinction between Russia and the "satellites" or with the animosity between the Soviet Union and China; she is willing to trade on proper commercial terms with any country with which she is not in open conflict—and any country includes, of course, South Africa and Spain as well as Russia and China. Credits far in excess of five years have been granted to some developing countries, and industrialists throughout western Europe, as well as the Governments of Britain, France and Italy argue that the western countries suffer more than the communist countries from special restrictions on East-West trade. Despite Washington and Bonn, the movement to bring this trade into the ordinary field of commerce and finance is probably irresistible. Britain has a special interest in this trade; yet a special reservation in the financing of it. The special interest is easy to perceive; her export drive—if its effects can be measured by the trade figures—has failed alarmingly this year. The special reservation is a corollary of that failure: a country whose balance of payments is deteriorating fast cannot afford to grant long credits on a massive scale.

This is a case where general principles must be supported, or modified, by practical details. A product-analysis of Britain's exports shows that the failure has occurred in one category—the most important one—machinery. While imports in this category have soared, exports have been virtually static. This contrast suggests that, in general, British capital goods are less competitive this year. The communist countries want value for money, but, like other developing countries, they are willing to compromise if they can get long credits. It is tempting to grant long credits if exports in this languishing sector can be revitalised. On the other hand, very long credits are applicable not to ordinary machinery but to whole industrial plants and other big development projects, and various big contracts negotiated recently with British companies (or consortia of companies) have seemed to imply that in this sector British industry can compete successfully with any rival. Very long credits would probably be most advantageous, on the British side, in relation to ships; immediately for Russia and later (so the depressed and somewhat uncompetitive shipbuilding industry hopes) for China.

If the principle of extended credit is accepted, the prospective debtors' creditworthiness will be reconsidered accordingly. The City of London, which has assisted the financing of Anglo-Soviet trade for many years, regards Russia as an exemplary—indeed, an impeccable—debtor in commercial affairs. (Her treatment of old government debts is not, of course, similarly praised.) It must be admitted that not all developing countries are likewise reliable financially, if only because they have accumulated such a weight of commitments that their ability to discharge them is in doubt. It seems, therefore, that self-interest may incline creditor countries to grant long credits to communist countries rather than to needier countries that would be preferred politically. The proper solution of this problem is to strengthen the guarantees for credits to developing countries in general.

Current News and Comment

Enquiry Report on Powerlooms

The Asoka Mehta Committee set up by the Government of India early in 1963 to enquire into the problem of the powerloom industry has made as many as 126 recommendations. If fully implemented, these will radically change the complexion of the Indian textile industry. The recommendations aim essentially at strengthening the handloom and powerloom sectors at the expense of the mill sector, which is in sharp contrast to the worldwide trend towards vertical integration of the spinners, weavers and processors. The committee has recommended that additional production of cloth in the fourth plan should be exclusively in the decentralised sector and that mills should not be given any additional loomage; but mills which have already been licensed to set up additional looms may be allowed to install them.

It is suggested that the production of *dhotis* and *sarees* by mills should be pegged at the 1963 level and that the production of coloured *sarees* should be reserved for the handlooms. The phased conversion of handlooms into powerlooms which had been discontinued in 1961 is sought to be revived. It has been recommended that 10,000 powerlooms should be introduced in the co-operative sector of the handloom industry during the third plan period. These looms should be installed with Government assistance at the rate of Rs. 3,700 a loom. The committee has estimated that an additional 60,000 powerlooms will be needed in the cotton sector to meet the requirements of cloth during the fourth plan period and another 40,000 powerlooms will be needed in the man-made sector which will be phased with the availability of yarn. It has been suggested that the marketing and processing of cloth by the powerloom industry should be arranged on a co-operative basis and that the powerloom industry should be eligible for assistance from the State Finance Corporation, the State Bank and commercial banks, in addition to assistance under the State-aid to Industries Act.

Control over the acquisition and installation of powerlooms in the decentralised sector is sought to be removed, and instead, the introduction of a scheme of registration of powerlooms on payment of a fee has been recommended. The committee says that both handlooms and powerlooms should be able to draw their requirements of yarn from a common pool of co-operative spinning mills. It is suggested that the pattern of growth for the powerloom industry should be based on clusters of about 300 powerlooms each, not under one roof, but in small units within convenient distances of each other established in and around small towns. The committee feels that the scope for setting up powerlooms in rural areas with a view to providing rural employment and improving the economic conditions of the rural populations is at present rather limited. Another important recommendation relates to the revision of the taxation structure so as to plug the existing loopholes and to discourage unauthorised growth of the powerloom industry. It is suggested that the incidence of taxation should be shifted from cloth to yarn and processing. Above all, the committee has recommended that the implementation of development schemes relating to the powerloom industry should be entrusted to the All-India Handloom Board which should be made a statutory body and equipped with adequate funds for this purpose.

pressed the view that the entry of the decentralised sector in a big way in the supply of cloth during the fourth plan will serve to exert a healthy influence to the advantage of the consumers.

While the powerloom industry has every reason to be much pleased with the committee's recommendations as these are designed to promote organised expansion of the powerloom sector in a big way, the spokemen of the organised mill sector have described these recommendations as extremely disappointing and retrograde. The mill industry's sharp reaction is understandable as it has been debarred from expanding its loomage to meet the increased demand for cloth during the fourth plan period. Possibly, the Asoka Mehta Committee has been greatly impressed by the creditable performance of the decentralised sector which produced a record 3,144 million yards of cloth in 1963 which compares well with its third plan target of 3,350 million yards. The mill industry, on the other hand, produced no more than 4,837 million yards which is not only far below its target of 5,800 million yards, but it is considerably short of its past achievements. The monthly average production of 418 million yards for January-July 1964 holds little promise of the plan target being achieved by the mill sector.

While there seems little doubt that the powerloom sector has been thriving on the tax concessions and reservations of fields of production originally meant for the handloom sector, the mill industry's argument that its production has been stagnant due to freezing of its weaving capacity at the level of 200,000 looms for several years cannot carry much conviction because mills are known to have produced 5,317 million yards in 1957. As for undue advantage that powerlooms have been enjoying through evasion of taxes, the Asoka Mehta Committee has recommended the revision of the tax structure in order to plug the existing loopholes. Besides, the Indian Cotton Mill Federation's plea that the excise duty should be imposed only at the yarn stage and processing stage has also been endorsed by the committee. Notwithstanding all this, the committee's recommendation prohibiting mills from any further expansion in their loomage until the end of the fourth plan seems too harsh. The target for cloth production for the fourth plan has been tentatively fixed at 11,200 million yards, of which 150 million yards will be *khadi*. It would be very unfair to deny the mill industry a share in the increase in production under the fourth plan. It might not be easy for the decentralised sector to satisfy consumers' growing preference for quality goods and also the needs of the overseas markets.

Production and Marketing of Fertilisers

The representatives of U.S. fertiliser interests —General Lucius D. Clay, senior partner of Lehman Brothers, and Mr. Stephen D. Bechtel, head of the Bechtel Corporation—who were recently in New Delhi, have apparently gone back satisfied that a joint Indo-U.S. fertiliser corporation with a total capital of Rs. 240 crores ($500 million) will materialise. In fact, they indicated their optimism at a Press conference held just prior to their departure. Considering the shortfall in fertiliser production, the prospect of such a venture is to be welcomed. The third plan target for fertiliser production at 1 million tons of installed capacity and 800,000 tons of actual output has little chance of being realised in full. Judging from the rate of the industry's growth, the maximum that can be achieved by the end of 1965-66 is 640,000 tons of installed capacity and 500,000 tons of output. India is not in a position to find sufficient foreign exchange to import fertilisers adequately. Therefore, the total supply which has been available in recent years gives India just 2.7 kilograms a hectare (2.471 acres) and a meagre 0.9 kilogram a head. Compared with the average world figure of 22.2 kilograms and 12.2 kilograms, respectively, let alone those of countries like Japan and West Germany, the Indian figure really looks small. Struck by the slow increase in fertiliser consumption, the experts of the Planning Commission, who recently worked out commercial fertiliser requirements for the fourth plan, have fixed targets on a scale which would be much too ambitious in spite of the proposed Indo-U.S. venture. These experts have fixed the production targets at 2 million tonnes of nitrogen, 1 million tonnes of P_2O_5 and 350,000 tonnes of K_2O. The consumption targets have been fixed higher at 3.65 million tonnes of netrogen, and 2.33 million tonnes of P_2O_5. These production and consumption targets are based on the assumption that 120 million tonnes of foodgrains, 13.5 million tonnes of sugarcane, 10 million tonnes of oilseeds, 8.5 million bales of cotton, 8 million bales of jute, 2 million bales of mesta, and 35,000 tonnes of pepper, and 480,000 tonnes of tobacco will be produced by the end of the next plan.

There can be no dispute with the view that India has to use commercial fertilisers as the main soil nutrients for raising her farm production. But how far such targets would prove practicable is the main question. The disappointing performance in the third plan period is not only due to the projects, both in the public and private sectors, especially in the latter, failing to come up as scheduled, but also due to inefficient and faulty distribution arrangements. All fertiliser sales are at present done through a central pool and through co-operatives in the villages. If the growth rate of fertiliser consumption is any guide, then obviously the present arrangement is not the best that could have been chosen. The Planning Commission's experts too are worried by its inadequacy and have suggested an 11-point programme to promote better distribution. They have also suggested fertiliser imports on a long-term basis since new units cannot be established as quickly as they are needed.

It seems that the costs of fertilisers to the farmer in India are more than twice as high as those in the U.S.A. and the U.K., and are the highest in the world excluding Spain. Only a 25 percent subsidy is available on phosphatic fertilisers, but most State Governments do not deliberately avail themselves of this because they have to meet part of the cost of the subsidy themselves. The experts have naturally recommended subsidies on a more adequate scale. An important recommendation is that private parties should be allowed to handle fertiliser distribution and the margin for retailers should be increased wherever found necessary. This alone could induce greater sale of fertilisers as co-operatives apparently have been doing a half-hearted job. But if co-operatives must be entrusted with most of the distribution work, part of agricultural credit should be given in the form of fertilisers. According to General Clay's statement at the Press conference, a U.S. team will shortly visit India to make a feasibility study in connection with the proposed venture. This study is likely to be ready early next year, and will cover such aspects as the location of the five new plants (which according to present ideas should be of 200,000 tons capacity each), the end-products, marketing and distribution arrangements and pricing. The proposed study is likely to uphold most of what the Planning Commission's experts have said about the existing marketing and distribution arrangements; they are likely to suggest new ideas also. But suggestions have not lacked in the past. It is only the Government's lack of a proper sense of priorities which is at the root of most of the country's economic troubles, including the one over fertilisers.

Progress of Banking

A study of the *Statistical Tables relating to Banks in India, 1963*, recently issued by the Reserve Bank of India, shows that the banking industry made satisfactory progress last year. Banks' operations showed further expansion in resources, credit and investments and there was a fair improvement in their pre-tax profits. No less significant is the expansion of banking facilities in the smaller towns. The number of offices of scheduled banks in India increased by 396 to 5,004 in 1963, compared with 215 in 1962. The State Bank of India opened 67 offices, against 56 in 1962. Part of the increase in the number of offices of scheduled banks was due to the taking over of business of some non-scheduled banks. Nearly half of the new offices established by scheduled banks last year were located in places having population of less than 25,000. The total number of offices of commercial and co-operative banks (comprising State, Central and urban co-operatives, banking unions and industrial co-operatives) together increased by 517 to 7,855 with the result that the average number of persons served by a banking office in 1963, was 56,000, compared with 60,000 in the preceding year.

Deposit mobilisation of scheduled banks in 1963 was higher than in the previous year, amounting to Rs. 245.9 crores, compared with Rs. 186.2 crores in 1962. The paid-up capital and reserves continued to increase and for the first time, scheduled banks' reserves exceeded their paid-up capital. Their credit increased by Rs. 182.8 crores (against Rs. 162.6 crores) and their investments rose by Rs 73.8 crores (against Rs. 91.4 crores). There was, however, a further decline in the deposits and advances of the non-scheduled banks which was mainly due to the transfer of assets and liabilities of some non-scheduled banks to scheduled banks. The pre-tax profits of Indian and foreign scheduled banks which had registered a nominal decline of Rs. 10 lakhs in 1962, recorded an increase of Rs. 2.6 crores last year.

The current operating expenses of Indian scheduled banks rose by Rs. 13.7 crores, and their current operating expenses by Rs. 13.1 crores: the corresponding figures for 1962 were Rs. 16.9 crores and Rs. 16.7 crores. The profits of Indian scheduled banks increased by Rs. 1.4 crores, against a nominal decline in 1962. This was due mainly to the smaller increases in interest paid on deposits as well as in establishment expenses than in 1962. In the case of foreign banks, the current operating earnings rose by Rs. 3.3 crores and their operating expenses by Rs. 2.2 crores, while in 1962 both the items had shown an equal rise of Rs. 1.5 crores. The pre-tax profits of foreign scheduled banks increased by Rs. 1.2 crores in 1963.

Demonetisation of Currency Notes

The Central Finance Minister, Mr. T. T. Krishnamachari's statement last week at the Informal Consultative Committee of Parliament that the Government has at present no idea of demonetising currency notes has been received with a feeling of relief in many quarters. Demonetisation of high denomination notes was suggested by some as a method of unearthing black money and of stabilising the price level. But, as the experience in India a few years ago showed, most of the people who possessed such notes could somehow account for them and the experiment did not produce the desired result. In fact, there is always the danger that such a drastic measure might shake the people's confidence in the currency. Moreover, the statistics given by Mr. Krishnamachari show that the total amount of Rs. 1,000 notes in circulation is Rs. 50 crores, of Rs. 5,000 notes only Rs. 15 crores and of Rs. 10,000 notes only Rs. 10 crores. Persons who have demanded demonetisation have, however, estimated the amount of black money to be much greater. It is, therefore, evident that not much of the black money could possibly be held in the form of currency notes of the denomination of Rs. 1,000 and higher.

Mr. Krishnamachari said that while the total issue of high denomination notes increased from Rs. 71 crores at the end of March 1956 to Rs. 95 crores at the end of March 1962, there was a sudden drop of Rs. 26 crores by the end of March 1963. This decline in high denomination notes was accompanied by a sharp increase of Rs. 96 crores in ten-rupee notes and Rs. 67 crores in hundred-rupee notes. This shows that if black money is held in the form of currency notes, lower denomination notes account for a considerable part of it. But it would be a stupendous task to demonetise all currency notes in the hope of bringing out black money. Besides, such a measure would completely dislocate the economic life of the country and might even hamper the progress of the third plan.

It is a far-fetched argument that demonetisation of high denomination notes would help in bringing down the price level in India. But in the event of demonetisation of currency, or even if there is a fear of it, people may well decide to convert their currency into durable goods. If this were to happen, any talk of demonetisation might actually add to the inflationary pressures in India.

Expansion of Shipping

The Government of India has taken a decision to acquire 19 tramp ships with a view to strengthening the country's tramp tonnage. This is as it should be, for although Indian shipping has made some progress in liner trades in recent years, it is still deficient in tramps and tankers. In the dry cargo tramp trade, in particular, the share of Indian shipping is only about 3 percent to 4 percent, while its share in the tanker trade is negligible. India's aim, according to the planners, should be to carry at least 50 percent of her overseas trade; the tramp shipping needed for the purpose has been placed at between 1.5 million and 2 million g.r.t. In view of India's small tramp tonnage, this is undoubtedly an ambitious target, but as the Prime Minister, Mr. Lal Bhaadur Shastri, said while inaugurating the recent meeting of the National Shipping Board, it would be worth while to aim at these targets since overseas shipping can earn a good deal of foreign exchange for the country. Although the Prime Minister was reluctant to anticipate what the fourth plan shipping target would be, he felt that it should not be less than 3 million to 3.5 million tonnes. He even added that a tonnage of 4.5 million tonnes might be necessary if Indian ships were to carry 50 percent of the cargo. The "pay as you earn" facilities offered by many shipbuilders should make the acquisition of ships for overseas trade relatively easy, but this advantage will not be available for expanding coastal shipping.

Immediately after independence, the Government of India declared that the country's aim should be to carry the whole of the coastal cargo. The latest figures suggest that the aggregate coastal tonnage is a little over 400,000 g.r.t., out of which 165,000 g.r.t. will have to be scrapped during the remaining period of the third plan and the balance during the next plan period. The gap between the promise and performance in coastal shipping has to be attributed to uneconomic freight rates, lack of regular cargo and the existence of a large number of worn-out vessels. In contrast, India's overseas tonnage is at present 890,000 g.r.t. The expansion of this tonnage is necessary because the country has to import as much as 6 million tons of wheat a year and has also fixed an ambitious export target of Rs. 5,100 crores for the fourth plan. But along with the expansion of overseas tonnage, it will be necessary to improve the existing port facilities. As Mr. Shastri pointed out at the recent meeting of the National Shipping Board, ships carrying the much-needed food suplies should not be detained at ports due to the lack of berthing facilities. The fixing of an ambitious shipping target is, therefore, related to the expansion of port facilities with improved loading and unloading arrangements.

The Enquiry into Monopolies

The spate of literature that has flowed ever since the appointment of the Monopolies Commission has sought to show that the growth of giant oganisations is not possible due to the system of industrial licensing and permits, the Industrial Policy Resolution and a host of other factors related to Government policy. All the memoranda submitted to the Commission so far more or less cover the same ground, but the latest one from the Punjab and Delhi Chamber of Commerce includes some new points. The statement included in the annexure showing the all-India production of some industries and the share of the biggest unit clearly indicates that India's planners are showing unnecessary concern over monopolies. The majority of Indian industrial units are of much smaller size than their counterparts in the developed western economies. Many of them are also uneconomic, so their production costs are high with the result that consumers have to pay a high price for the items manufactured by them. As for new plants which are licensed, the sizes are invariably being kept within limits because of ideological considerations. The few units which produce a substantial portion of the all-India output are either pioneers in the field or enjoy superiority over others because of their efficiency and lower costs. However, the biggest company in India does not figure among the first 450 companies of the world. In terms of net assets, the largest company in the private sector is "only 3.2 percent as big" as the largest enterprise in the United States. The Chamber has, therefore, argued that the people of this country would be better served by the production and supply of cheaper goods even if their manufacture is handled by a few people rather than by a large number of uneconomic or marginal units.

Foreign collaboration has played a significant rôle in India's industrialisation. Such collaboration is possible with firms and entrepreneurs in the private sector, who enjoy a good reputation because of their past performance. It would, therefore, be necessary to allow these companies reasonable opportunities for expansion with a view to attracting foreign collaboration. The foreign collaborator, as the Chamber rightly points out, normally evaluates the Indian entrepreneur before taking a decision on a scheme. There are numerous instances on record where a collaboration has taken place mostly because of the record of the Indian company in relation to production, efficiency, business methods and entrepreneurship. It is, therefore, essential that efficient business houses who have already achieved considerable success in attracting foreign capital, should not be disturbed either in their collaboration programmes or their size. The Chamber suggests that because of the vague suspicion in the people's mind about the growth of monopolies, the Commission should consider setting up a permanent machinery which can take care of such enquiries from time to time. Although the terms of reference of the Commission specifically exclude public-sector undertakings, it is necessary that the proposed anti-monopoly machinery must not differentiate between private-sector and public-sector concerns, since the objective is to curb undesirable tendencies which flow from monopolies irrespective of the sector in which they may exist.

Cloth Output and Stocks Up

The Indian mills' cotton textiles output during July is provisionally placed at 452 million yards, against 415 million yards in the preceding month and 420 million yards in July 1963. The July figure—the highest for several months—raises the total for the first seven months of the current year to 2,925 million yards, which is 97 million yards more than the corresponding figure for 1963. Yarn output is considerably higher at 181 million lbs, compared with 160 million lbs in the previous month and 170 million lbs in July last year. The production of yarn during January-July 1964 comes to 1,200 million lbs, compared with 1,121 million lbs in the same period last year. If production during the remaining five months of the year is maintained at the average for the January-July period, the output of cloth and yarn during 1964 should exceed 5,000 million yards and 2,000 million lbs, respectively; yarn production would set a new record.

Stocks of cloth with mills have recorded a further rise from 249,500 bales (of 1,500 yards each) to 271,200 bales. The July-end figure is the highest for the year, but it is well below the level maintained in the previous year. Unsold stocks have gone up from 87,300 bales to 101,700 bales, and there has been an increase of 7,300 bales under "sold but delivery not taken" from 162,200 bales to 169,500 bales. The stocks of yarn are down by 11,300 bales (of 400 lbs each) from 101,600 bales to 90,000 bales. Unsold stocks have declined by 7,800 bales from 51,200 bales to 43,400 bales and "sold but not lifted" show a fall of 3,500 bales at 46,900 bales.

While the production trend seems fairly satisfactory—although still lagging behind the plan target —the export performance has been somewhat disappointing for the past few months. Shipments of cotton piecegoods from Bombay port, which accounts for over 90 percent of the total cotton textile exports from the country, during August are provisionally placed at 28.56 million yards, valued at Rs. 2.48 crores, compared with 31.78 million yards valued at Rs. 2.68 crores in the preceding month. The August figure, the lowest for the year, raises the total for the first eight months of the current year to 318.18 million yards, worth Rs. 27.5 crores, compared with 301.19 million yards, valued at Rs. 22.608 crores in the corresponding period last year. Little comfort can be derived from the small improvement in exports as the performance last year was far from satisfactory. The third plan export target of 850 million yards of cotton textiles remains a dream, notwithstanding all the effort that is being made to boost exports through all sorts of incentives.

CORRESPONDENCE

RIGHTS AND BONUS SHARES

(To The Editor of "Capital")

Sir,

Cases have recently come to light where companies have decided at the same time on the issue of rights shares and of bonus shares. The question arises as to which should be issued first.

Bonus shares are issued out of the funds standing to the credit of the several reserves and of the share premium account, all of which are the property of the shareholders of the company at the time of the proposed issue. It is, therefore, proper that bonus shares should be issued first and the shareholders at the time should get the full benefit of such issue.

The rights shares should be issued next (whether at a premium or at par is a matter of detail which does not, in fact, lie in the hands of the company). The reasons are that not infrequently the holders of the shares are unable to avail themselves of the rights issues in full or even partially, and many of them are unable to find a market for such rights. Superimposed on such loss is the further loss that the bonus shares to which they become entitled are fewer than they would have been had these been issued in the first instance. There is the additional fact that late-comers, i.e., not members at the time of the issue carry away some of the bonus shares.

Yours etcetera,
K. V. Iyer

Madras,
13th September.

PAPER CURRENCY IN 1903-04

THE gross circulation of currency notes means the value of all notes that have been issued and not paid off. The net circulation is this sum less the value of notes held by Government in its Treasuries. And the active circulatnon is the net less the value of notes held by the Presidency Banks at their head offices. It follows that for the purpose of ascertaining what progress the note circulation is making will the public, the active circulation is the real test and it is satisfactory to find a very substantial increase. The following are the figures of average annual active circulation :—

		Rs.
1893-94	...	17,85,00,000
1897-98	...	18,93,00,000
1900-01	...	22,05,00,000
1901-02	...	21,19,00,000
1902-03	...	23,49,00,000
1903-04	...	26,34,00,000

All currency circles save Allahabad have contributed to this increase, but the largest contributions have been those of Calcutta and Bombay. The gross circulation of currency notes during the last 3 years has been :—

(000 omitted 31st March)	Notes of Rs. 100 and under	Percent	Notes of Rs. 500 and upwards	Percent
1901-02	15,87,21	50	15,78,92	50
1902-03	17,62,89	49	18,09,47	51
1903-04	19,40,88	51	18,80,59	49

It will be seen that whereas the percentage was equal three years ago, the smaller notes last year were 51 against 49 percent of the larger kinds. The year 1903-04 opened with a stock of gold in the Currency Reserve and Treasuries valued at £9,978,707 and ended with a balance worth £10,916,537. The assests of the Currency Department on the 31st March were :—

		Rs.
Silver Coin	...	11,49,75,648
Silver Bullion	...	52,97,443
Gold	...	16,18,43,503
		28,21,16,594
Investments in Government Securities	...	9,99,99,946
		38,21,16,540

against a gross circulation of exactly that amount.

MAKING OF ANNUITY DEPOSITS

(BY A SPECIAL CORRESPONDENT)

THE Finance Act, 1964, enacted the necessary provisions relating to annuity deposits. An individual is liable to make a deposit if (i) he is a citizen of India; (ii) he is resident in India; and (iii) his total income during the relevant previous year exceeds Rs. 15,000. Thus foreigners, non-resident Indians and individuals having a total income of Rs. 15,000 or less are exempt.

While an individual becomes liable to make a deposit if his total income exceeds Rs. 15,000, the amount of the deposit is calculated with reference to his "adjusted total income". This is arrived at by deducting from the total income compensation moneys, gratuity and other terminal payments received by a salaried employee, and capital gains, annuities. Thus if an individual retires from a company's service and receives Rs. 20,000 comprising normal earnings of, say, Rs. 5,000, and lump-sum payments totalling, Rs. 15,000, he will be liable to make an annuity deposit. The amount of the deposit, however, will be determined with reference to the sum of Rs. 5,000 only. For every thousand rupees of deposit a taxable annuity of Rs. 125 will be received for a period of ten years, the first payment commencing one year after the date on which the deposit is made.

In terms of Section 280-W of the Income Tax Act, 1961, the Central Government has issued a notification dated 10th September, 1964, announcing an Annuity Deposit Scheme which will come into force on 1st October, 1964. Relevant particulars of the scheme, including the procedure for making annuity deposits and repayment of annuities, have already been published in the Press. Although the procedure for payment of annuities seems simple, practical difficulties may arise; for instance, the form of receipt to be completed by each depositor is elaborate and the reference in it to "number of years for which annuity payments are due" is not clear.

It is instructive to note that an annuity is regarded as income at the time when it becomes due and not when it is received. Thus a depositor may have to pay the tax on an annuity which has fallen due, but which has not been received by him. On the other hand, where a refund is due to a depositor and it is set off against the annuity deposit required to be made by him, the date of the deposit is taken to be the date on which the refund is actually set off and not on which it falls due. It is obviously inequitable to reckon the time for assessment when the annuity becomes due, even though not paid, and to determine the time for the deposit when the refund is actually set off and not when it falls due for repayment.

Clause 7 of the scheme empowers the income tax officer to order payment of the commuted value of any annuity. No provision has, however, been made about the basis on which such value shall be determined, nor has any indication been given of the "genuine hardship". A distressed depositor will, therefore, be entirely at the mercy of the income tax officer and unnecessary harassment may be caused.

Provision is made for adjustment of excess deposits, if any, against future annuity deposits; a simpler procedure would have been to refund the excess deposit on completion, rectification or revision of a regular assessment.

If an individual does not wish to make a deposit he has the right to opt out of the scheme subject to payment of additional income tax. The option must be exercised on or before 30th June of the assessment year, in which the individual first becomes liable to make the deposit (30th September, 1964, for the current assessment year), and is irrevocable. The additional tax is equal to half the amount by which the annuity deposit exceeds the difference between the tax payable on the total income without/with deduction of the deposit. The intention is that the individual should surrender half of the saving made by him by avoiding the annuity deposit. This is clarified by the following illustration:

Total income liable to deposit ...	Rs. 40,000
Annuity deposit thereon at 7½ per cent ...	Rs. 3,000 (A)
Taxable income ...	Rs. 37,000
Income and super tax thereon ...	Rs. 10,340 (B)
Total payment (A) + (B)=3,000 + 10,340	= 13,340 (C)
In case the individual exercises the option, he shall pay	
Income and super tax on total income of Rs. 40,000	Rs. 11,990 (D)
Additional tax calculated as under: (A) − (D-B) / 2 =	Rs. 675
Total payment ...	Rs. 12,665 (F)

Thus net saving made by exercising the option in the first year is (C) −(F)=Rs. 675. But the individual shall pay Rs. 2,325 by way of tax to escape the liability of making a refundable interest-bearing deposit of Rs. 3,000 which, of course, will be subject to tax in due course. Statements are attached showing the anticipated net income of an individual wholly earned during the next ten years on the assumption that tax rates and policy do not undergo a change.

It will be noticed that while an individual with a steeply rising income (statement I), for instance, a junior executive on contractual employment, will be at a disadvantage by making an annuity deposit, the reverse will be the case with an individual expecting a reduction in future income, say, a top executive proceeding on retirement after five years (statement II). In cases where future income will be constant or will not fluctuate violently the making of annuity deposit will be beneficial. Where the income is gradually progressive there may be an initial advantage in the first three or four years if no deposit is made, but the gain will be more than offset by loss in subsequent years. In majority of cases with high income neither the additional tax payable nor the immediate saving or refund is of such a substantial amount as to merit serious consideration; the immediate net saving by avoiding annuity deposit varies between about 2½ percent and 1 percent of total income, the percentage going down with every rise in income. However, from a long-range point of view, it is preferable to make a deposit rather than pay additional tax, except perhaps in the case outlined in statement I. In case it is decided to make the deposit no action is necessary on the part of the individual; an option letter is required only if he decides not to make the deposit.

STATEMENT I

Statement showing net income of an individual earning Rs. 20,000 during the current financial year with increased income in later years on the basis (A) Annuity Deposit is made, (B) Annuity Deposit is *not* made.

A Ditcher's Diary

ON SUNDAY MORNING I WENT ROUND A BIT AND SAW for myself some of the elaborate arrangements made in Calcutta for the visit of the Prime Minister, Mr. Lal Bahadur Shastri. This was his first movement outside New Delhi since he succeeded Mr. Nehru; and, we were ceaselessly reminded, this represented a great honour for Calcutta. Well, I refuse to be enthused overmuch. If the British had not been so silly as to move the capital of the country from Calcutta to New Delhi, the seat of the Government would have been right here and not where Mr. Shastri now resides. (Whether, without transfer of capital, India would have become free when she did and Mr. Shastri would ever have been Prime Minister are for me questions of unimportant detail.) Let nostalgia rest there. The reflection I found irresistible on Sunday was whether preparations on this scale were really necessary. Reluctantly or otherwise, I have by now accepted the proposition that public relations is in our time the major part of politics and it follows that public appearances are an indispensable adjunct of public relations. Granted. But as I saw those arches and those loudspeakers and those flags, I could not help feeling that somebody somewhere is out to make of Mr. Shastri a second Nehru. Such thoughts must be utterly abhorrent to the Prime Minister himself; as, however, I wrote on the subject of the unused lift in the Red Fort on Independence Day, it is not Mr. Shastri who organises these expensive frills but some ambitious politicians and officials. All at the expense of the tax-payer. The amount the Corporation of Calcutta spent on the reception to the Prime Minister is really negligible. To raise objections seems small-minded. I am not so sure. What did it avail the Prime Minister to be told by the councillors of the municipal body that he is a jolly good fellow? Yet for the Rs. 3,000 I could think of so many better uses such as the inoculation of a few more or a public convenience. Mr. Shastri recently declined an *abhinandan granth*, the most unreadable category of printed matter. Why not other *abhinandans*? I don't even want to know how many people really went to the Maidan meeting on Sunday afternoon; I do know that he could have reached many more through other media at his disposal—even without television.

POLITICAL POSTURES IN INDIA TODAY ARE AS numerous and varied as those in another field of human endeavour which is so superbly depicted on the walls of the Sun Temple in Konarak; and I refuse to be surprised that Mr. Biren Mitra is to continue as the Chief Minister of Orissa. The public had better know that it counts for nothing, that it is expected to believe anything the politicians say. Many had credited Mr. Biju Patnaik as the real father of the so-called Kamaraj Plan, out he went, with few believing that he was doing an Asoka renunciation. Mr. Mitra was quite obviously His Man In Bhubaneswar. Then came those nasty charges against the new Chief Minister, followed by a nasty incident in the Orissa Legislative Assembly by student hoodlums. Nobody knows which is which; but Mr. Mitra offered to resign his chief ministership for his failure to preserve the dignity of the House. The Orissa Congress Legislature Party has since given Mr. Mitra four cheers for the nobility of his action. Well, other people may be inclined to interpret the whole proceedings rather differently. If getting into office can be a profitable undertaking, getting out of it can also be a protective measure. The report of the lawyers' committee on Orissa affairs has not been published; the presence recently in Orissa of an inordinate number of officials from the Central Intelligence Bureau can mean too much—or too little. Corruption, it must be remembered, is very much a matter of noise; everybody talks about it and it is universally believed that everything is rotten. Silence; and most people seem reasonably content, though perhaps not deliriously happy. There is no reason to think that Orissa leads the rest of the country in the corruption line. But, as commentators go on speculating on the activities of the so-called High Command, Mr Patnaik and various other personalities, I cannot help thinking that political analysts may have missed the point. With admirable aplomb Mr. Patnaik equates inefficiency with corruption, thus suggesting an equation between "success" and integrity. It may well be that the common people the world over accept the equation. I think of Orissa and I think of the late Mr. Horatio Bottomley. Then I reach a point at which I want to think of neither.

EVEN IN FACE OF CRITICISM FROM COLLEAGUES credited with a diversity of motives, what sustained public esteem for Mr. G. L. Nanda's crusade against corruption in public life was his incandescent sincerity. He must now be told that his claim to have improved upon the recommendation of the Santhanam Committee represents a retreat. It is not too much to say that the code of ministerial conduct evolved by somebody or other is more a cover than a code. It calls for an effort, I dare say, for Ministers to think that they are no more than ordinary citizens of the country; but the exercise will be salutary. By this I mean that Ministers should declare their assets not to the Prime Minister and Chief Ministers but to the agency responsible for receiving everybody else's declaration of assets, meaning the income tax department of the Government of India. As in the case of others, if the department thinks that a Minister may not have been strictly truthful in his statement, there is another agency to go into the matter, namely, the police. To bypass these well established agencies when it comes to Ministers is to create a new caste; and I cannot believe that Mr. Nanda does not know it. As I have said time and again in this diary, there is no need for a new code of conduct for Ministers or any other set of people; there is one already, and its violaters know what it is. There is no occasion yet to question Mr. Nanda's sincerity of purpose or Mr. Shastri's support for it—which I would not say for some other gentlemen—but the charge seems justified that on the heels of Sadachar is afoot what may be called a conspiracy of confusion which protects the very people Mr. Nanda so noisily seeks to get at. A friend who once raised the slogan N.M.G.—Nehru Must Go—says he still sticks to it; now it is Nanda Must Go. After Mr. Biren Mitra's re-election as Chief Minister of Orissa, my friend has started demanding K.S.M.C.B.—Kairon and Sankar Must Come Back. This kind of cynicism I find amusing only up to a point. Some think that it is good to have been rid of Kairon and Sankar and there should be no witch-hunt. They need not worry: there will be none. The Congress simply cannot face the consequences of defacing corruption. And that, in sum, is that.

SOUTHERN RHODESIA'S PRIME MINISTER, MR. IAN Smith, seems to have left London radiating rather more confidence than the circumstances justify. He showed great political tenacity in nobbling Sir Alec Douglas-Home long after the latter had obviously made up his mind that the talks on independence were over. But he will require more than this virtue if he is to persuade the black Southern Rhodesians to support his claim for independence on the basis of the current constitution and franchise. Unless he is prepared for an unconscionable amount of gerrymandering, that is. I suspect Mr. Smith is hoping that after Britain's general election, a Labour Government in Whitehall will make itself so objectionable to white Southern Rhodesians, and perhaps the South Africans as well, that the necessary internal and external support for a unilateral declaration of independence will accumulate with gratifying

rapidity. Let me say right away that I cannot see the whites in Southern Rhodesia ever being prepared to satisfy Whitehall's wish for broader electoral representation to precede independence. I do not think they feel they will have to be. Legality in such matters is irrelevant. The reality behind the issue is that Britain has no power to exercise her overall legal responsibility, and of this Southern Rhodesians are well aware even if the rest of the world is not. It might, theoretically, be possible to drop parachutists into the country, although hardly in the numbers required to overcome serious opposition. There is also a vague chance of mounting an invasion from an adjoining territory, Northern Rhodesia, for example. But these would appear to be the only practicable courses of action—economic sanctions would be of little use—because Southern Rhodesia has no sea coast and airfields are easily rendered useless to an invader. Would a British Government, even a Labour one, be able to rely on support from its own electorate for such a move? I doubt it. After disposing of an empire, the British have grown profoundly disinterested in conflicts of this kind, and it would scarcely go down well with them that the first time for many years they have been called on to resist an independence bid by force of arms, it should be their own flesh and blood that is involved. Perhaps this is ultimately what Mr. Smith is banking on. I shall be surprised if he permits legality to stand in his way for very much longer.

IT HAS PUZZLED ME FOR SOME TIME WHY MR. Khrushchev should be so eager for a communist summit conference when it must be quite obvious to him that its only outcome will be to render the present split in the world movement irrevocable. Since the Chinese laid claim to further large tracts of Russian-dominated territory in Asia, however, I am beginning to understand Mr. Khrushchev's motives. As Mr. Dulles did years ago when East and West alignments were being rigidly drawn, Mr. Khrushchev is demanding that his allies stand up and be counted. Then, presumably, he will know where he stands, or more accurately where China does, because he clearly hopes the result will be to isolate his troublesome neighbour. Personally, I think he is in for a shock. It is not only the Chinese who are coming to realise that the Russians are "in too many places". Mr. Khrushchev's western allies, his east European satellites, have lately been taking a fresh look at the portions of their national territories which the Russians took over after the war. If he is to gain their support for holding on to Russia's Asian possessions, Mr. Khrushchev may find that he has to make some hefty territorial concessions on his western borders, something which might not go down very well with the Russian people. Which, of course, is where this rather surprising decision to visit West Germany comes in. The threat of concessions to Germany, who his east European allies still fear more than anybody else, could perhaps persuade them to forget their claims to Russian-held territory and finally commit themselves in the quarrel with China. All very intriguing, I am sure. But what impresses me most, and depresses me too, is that the Sino-Russian dispute is emerging as just another squabble over territory and power such as has been the chief cause of wars, especially Europe's, throughout man's history. At least a true ideological quarrel might have been a change, although I suppose even that would have had its parallel in the religious struggles which have been such a fruitful source of human conflict.

A MISOGYNIST WAS EXPLAINING THE DIFFERENCE between a woman-of-the-world and a diplomat His friend listened attentively.

"If a woman-of-the-world says 'No', that means 'Perhaps'. If she says 'Perhaps', that means 'Yes'. Unfortunately if she says 'Yes', then she isn't a woman-of-the-world..."

"And the diplomat?" asked his friend.

"If the diplomat says 'Yes', that means 'Perhaps'. If he says 'Perhaps', then he means 'No'. But if he says 'No', then he certainly isn't a diplomat."

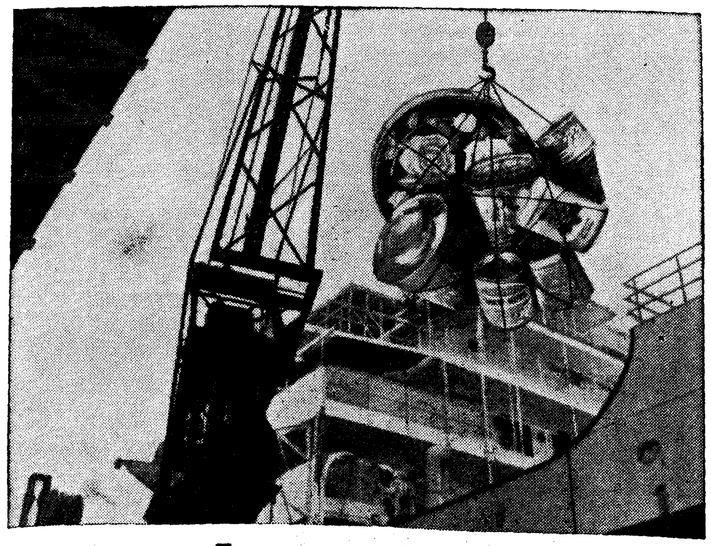
THE DITCHER

Guide for Investors

LAWRENCE JUTE REPEATS, BUT AUCKLAND, UNION PAY LESS

THE results of the Lawrence Jute Co. Ltd, the Auckland Jute Co. Ltd and the Union Jute Co. Ltd for the year ended March 1964, have been published. In their reports, the directors point out that the current jute crop will be more or less of the same size as that of the previous one. The Pakistani crop is expected to be smaller. The profits of mills have shrunk due to the increased production costs. So results during the current year are likely to be unsatisfactory. Meanwhile, direct taxation absorbs a large part of the profits. In the recent assessment, the Income Tax Officer has disallowed the cost of purchase of loom-hours as an allowable expenditure, although the amount received on the sale of loom-hours has been taxed at the usual rate. An appeal has been lodged against the Income Tax Officer's assessment.

Lawrence Jute has earned a profit of Rs. 4.66 lakhs, against Rs. 4.46 lakhs for 1962-63, after providing Rs. 1.79 lakhs (against Rs 1.78 lakhs) for depreciation and Rs. 7.36 lakhs (against Rs. 8.48 lakhs) for taxation. A taxable ordinary dividend of 10 percent has been repeated, which works out to a yield of 9.2 percent at the present price of Rs. 109 a share of Rs. 100 each. General reserve is allocated Rs. 5.25 lakhs (against Rs. 2.18 lakhs), leaving a carry-forward of Rs. 7.256, against Rs. 664 brought in. Sales rose from Rs. 41.05 lakhs to Rs. 51.74 lakhs and stocks of jute goods amounted to Rs. 27,376. The Auckland Jute Co. Ltd is now operating 284 looms of Lawrence Jute. The main buildings and godowns are occupied by the Government of India, and the rent has contributed to a substantial part of the Company's earnings.



The profit of Auckland Jute has dropped from Rs. 17.87 lakhs to Rs. 10.87 lakhs, after increasing depreciation from Rs. 8.55 lakhs to Rs. 12.78 lakhs and providing Rs. 34.78 lakhs (against Rs. 21.21 lakhs) for taxation. The taxable ordinary dividend has been reduced from 15 percent to 12.5 percent. The yield amounts to 9.5 percent at the present price of Rs. 131 a share of Rs. 100 each. Development rebate reserve is allocated Rs. 2.91 lakhs (against Rs. 3.02 lakhs) and general reserve Rs 1.75 lakhs (against Rs. 1.45 lakhs). The carry-forward is Rs. 1,526, against Rs. 1,752 brought in. Sales rose from Rs. 3.42 crores to Rs. 4.20 crores and stocks of jute goods from Rs. 8.41 lakhs to Rs. 13.25 lakhs. The additional labour cost has risen by about Rs. 45,500 a month due to the Wage Board's award. Additional machinery has been installed to complete the modernisation programme.

The profit of Union Jute has declined from Rs. 11.50 lakhs to Rs. 6.61 lakhs, after increasing depreciation from Rs. 4.17 lakhs to Rs. 7.90 lakhs and providing Rs. 7.57 lakhs (against Rs. 20.10 lakhs) for taxation. The taxable ordinary dividend has been halved to 10 percent which works out to a yield of 7 percent at the present price of Rs. 143 a share of Rs. 10 each. Development rebate reserve absorbs Rs. 2.71 lakhs (against Rs. 2.15 lakhs) and general reserve Rs. 5.70 lakhs (against Rs. 1.60 lakhs). The carry-forward is Rs. 2.671, against Rs. 603 brought in. Sales rose from Rs 2.50 crores to Rs. 2.77 crores. Stocks of jute goods rose from Rs. 25,619 to Rs. 83,818. The working of the mills was interrupted by communal riots. The Wage Board's award has increased the labour cost by Rs. 22,000 a month. Additional equipment has been installed to complete the modernisation programme.

Profits of Shaw Wallace Coal Companies Fall

THE results of the Shaw Wallace group of coal Companies for the year ended March 1964, have been published. The profit of the Amalgamated Coal Co. Ltd has dropped from Rs. 26.79 lakhs for 1962-63 to Rs. 22.73 lakhs for 1963-64, after transferring Rs. 7.43 lakhs (against Rs. 6.27 lakhs) to depreciation. A taxable ordinary dividend of 12.5 percent has been maintained, which works out to a yield of 5.9 percent at the present price of Rs. 21.31 a share of Rs. 10 each. Taxation absorbs Rs. 10.32 lakhs (against Rs. 17.01 lakhs), development rebate reserve Rs. 3.11 lakhs (against Rs. 1.68 lakhs), and general reserve Rs. 8 lakhs (against Rs. 4 lakhs). The carry-forward is Rs. 16.512, against Rs 11,464 brought in. Raisings rose from 1.09 million tons to 1.13 million tons and despatches from 1.09 million tons to 1.10 million tons. Capital expenditure rose from Rs. 10.94 lakhs to Rs. 12.4 lakhs and is likely to be considerabl in the near future due to the imple mentation of the expansion pro gramme.

The Pench Valley Coal Co. Ltd ha earned a profit of Rs. 4.60 lakhs against Rs. 11.02 lakhs for 1962-63 after providing Rs. 4.41 lakhs (agains Rs. 3.82 lakhs) for depreciation. The taxable ordinary dividend has been cut from 12.5 percent to 7.5 percent. The yield amounts to 4.3 percent at the present price of Rs. 17.44 a share of Rs. 10 each. Taxation is allocated Rs. 2.12 lakhs (against Rs. 5.84 lakhs), general reserve Rs. 1.25 lakhs (against Rs. 2.40 lakhs) and development rebate reserve Rs. 1.59 lakhs (against Rs. 1.42 lakhs). The carry-forward is Rs. 7,234, against Rs. 6,304 brought in. Raisings dropped from 627,131 tonnes to 607,048 tonnes and despatches from 623,749 tonnes to 585,297 tonnes. Capital expenditure increased from Rs. 6.48 lakhs to Rs. 7.33 lakhs. The directors of both the companies have commented on the drop in the demand for

In quest of gold

More and more Indian manufacturers are today earning valuable foreign exchange by selling their products abroad. Exports of cashew nuts, fish, vanaspati, toiletries and other consumer goods in Metal Box packages alone earned over Rs 8 crores last year. That's a lot of foreign exchange, and for the nation it's as good as gold.

To sell in highly competitive overseas markets the product must be of the finest quality. *And so must the package.* It must be of the *right size* and must have the *right finish.* And an *attractive surface design* that will score over competition in sales appeal.

All this requires research, experience, resources. Metal Box have them. They also have access to the fund of marketing and technical know-how of their world-wide associates. This is why Metal Box can provide a comprehensive packaging service as no one else can. This is why, too, so many packers come to Metal Box for advice, send their goods abroad in packages designed and manufactured by Metal Box.

And Metal Box customers are not located in India alone. Last year Metal Box exported nearly Rs 30 lakhs worth of containers, closures and machinery direct to packers abroad.

You see, word gets around.

MB METAL BOX protective packaging

MB/THB 1805 A

coal, but they have taken active steps to improve sales. They hope that the position will improve soon.

Fort Gloster Industries Expanding

THE expansion programme of the cable division of Fort Gloster Industries Ltd is making satisfactory progress. Orders for equipment have already been placed. The P.V.C. section of the expanded plant will start operating by the middle of 1965. The directors are considering the second stage of expansion. The International Finance Corporation of the U.S.A. has agreed to give a dollar loan of Rs. 38.55 lakhs. The Industrial Credit and Investment Corporation of India has agreed to give a dollar loan of Rs. 37.50 lakhs and a rupee loan of Rs. 22 lakhs. The Company has also issued 31,500 new ordinary shares at a premium of Rs. 90 a share which have been fully subscribed. It has also allotted 10,000 new ordinary shares to the International Finance Corporation at a premium of Rs. 90 a share.

In the cable factory, copper is being steadily substituted by aluminium. As for the working of the jute mills, the directors take a cautious view of the outlook. Steps have been taken to improve the quality of jute products and a laboratory has been set up to enforce quality control. Research on new uses for jute goods has been undertaken. The directors refer to the rising internal consumption of jute goods due to the increase in agricultural and industrial production. The domestic demand may rise to 600,000 tons by 1971. But it will be difficult to increase the export of jute goods according to plans unless steps are taken to counteract the rising competition from the Pakistani mills. The production costs of jute mills have risen considerably. A capital expenditure of Rs. 51.56 lakhs has been incurred to finance the installation of carpet-backing looms and to implement the modernisation programme.

The profit has dropped from Rs. 83.60 lakhs for 1962-63 to Rs. 39.13 lakhs for 1963-64, after providing Rs. 31.09 lakhs (against Rs. 22.46 lakhs) for depreciation and Rs. 6.12 lakhs (against Rs. 4.40 lakhs) for development rebate reserve. A taxable ordinary dividend of 15 percent has been declared. The dividend of 20 percent was paid for 1962-63. Taxation absorbs Rs. 16.50 lakhs (against Rs. 51.60 lakhs), debenture sinking fund Rs. 1.75 lakhs (the same) and general reserve Rs. 7.25 lakhs (against Rs. 16 lakhs). The carry-forward is Rs. 15,622, against Rs. 4,532 brought in. Sales amounted to Rs. 7.57 crores, against Rs. 7.90 crores.

Brooke Bond Estates Cuts Dividend

THE preliminary results of the Brooke Bond Estates India Ltd for the year ended June 1964, have been published. The taxable ordinary dividend has been reduced from 7½ percent to 5 percent, which gives a yield of 4.8 percent at the present price of Rs. 10.37 a share of Rs. 10 each. The net profit has dropped from Rs. 9.52 lakhs for 1962-63 to Rs. 8.08 lakhs for 1963-64. Taxation absorbs Rs. 4.45 lakhs (against Rs. 5.40 lakhs), capital reserve Rs. 5,090 (against Rs. 7,244) and development rebate reserve Rs. 18,764 (against Rs. 1,200).

No Bonus Shares from Khardah Jute

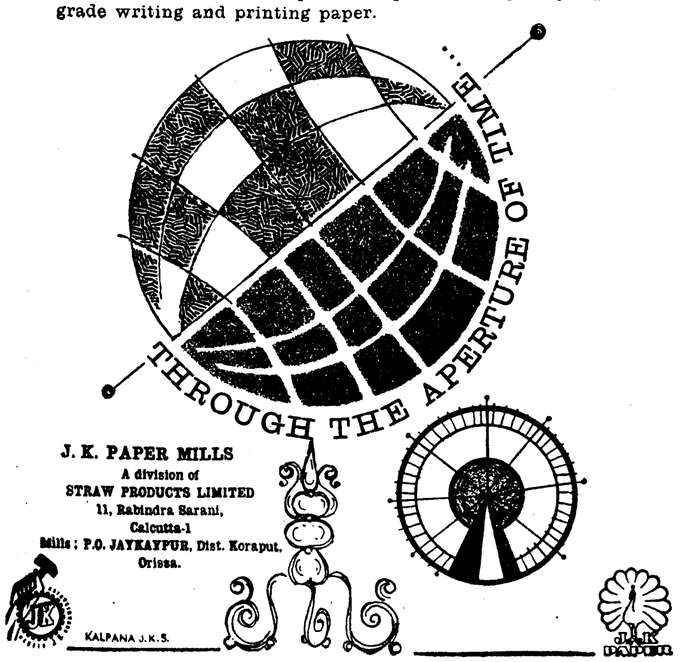
IN their report for the year ended March 1964, the directors of the Khardah Co. Ltd take a cautious view of the outlook for the current year. The disparity in prices of raw jute and jute goods has rendered simultaneous business unprofitable. They also refer to the drop in the profit margins due to the increased production costs. In view of the heavy incidence of the bonus shar tax, it has been decided not to issu these shares which were propose earlier.

The profit has dropped from Rs 42.71 lakhs for 1962-63 to Rs. 34.6 lakhs for 1963-64, after increasing de preciation from Rs. 8.96 lakhs to Rs 10.99 lakhs. A taxable ordinary divi dend of 12.5 percent has been paid The yield amounts to 7 percent a the present price of Rs. 17.75 a shar of Rs. 10 each. Development rebat reserve is allocated Rs. 3.38 lakh (against Rs. 2.62 lakhs), taxation Rs 18.32 lakhs and general reserve Rs 5.15 lakhs (against Rs. 7.85 lakhs) The carry-forward is Rs. 41,261 against Rs. 3,379 brought in. Sale dropped from Rs. 6.79 crores to Rs 5.81 crores, but stocks of jute good rose from Rs. 25.97 lakhs to Rs. 38.4 lakhs.

Less from Fort William Jute

THE Fort William Co. Ltd has taken steps for maintaining the quality of jute products manufactured by the mills. Attention is also being paid to the development of alternate uses for jute and jute goods. The directors, in their report for the year ended March 1964, point to the need for an adequate supply of good fibre for maintaining the quality of jute goods. Commenting on the decline in the demand for sacking, they stress the need for taking urgent steps to improve the competitive position of the Indian mills. The domestic demand for jute goods has risen due to the increase in industrial and agricultural production. The steel wire and rope division of the Company has started operations from September 1963. Orders for new machinery for the division have been placed with foreign collaborators. The Company has obtained a letter of intent from the Government of India to double the annual capacity to 6,000 tonnes a year. When expansion scheme is completed, the Company will manufacture various sizes of steel wire ropes.

The profit has amounted to Rs. 10 lakhs, against Rs 10.64 lakhs for 1962-63, after providing Rs. 14.70 lakhs (against Rs. 6.05 lakhs) for depreciation. Development rebate reserve is allocated Rs. 10.80 lakhs (against Rs. 75,000). The taxable ordinary dividend has been reduced from 20 percent to 15 percent. The yield amounts to 6.7 percent at the present price of Rs. 22.25 a share of Rs. 10 each. The carry-forward is Rs. 4,080, against Rs. 6,051 brought in. Sales amounted to Rs. 3.31 crores, against Rs. 3.17 crores and stocks of jute goods rose from Rs. 7.88 lakhs to Rs. 23.21 lakhs.



Agarpara Jute Pays Less

IN their report for the year ended March 1964, the directors of the Agarpara Co. Ltd say that there has been a significant increase in the manufacturing costs due to the implementation of the Wage Board's award, combined with the rises in costs of electricity, lighterage and essential stores. The mills have adopted suitable measures to enforce quality control. The modernisation programme of the mills has been completed. Due to the sharp rise in the price of raw jute, trading conditions for the current year have become difficult. The profit has dropped from Rs. 32.27 lakhs for 1962-63 to Rs. 19.89 lakhs for 1963-64. after increasing depreciation from Rs. 10.48 lakhs to Rs. 14.99 lakhs. The taxable ordinary dividend has been reduced from 12 percent to 10 percent. which works out to a yield of 10.8 percent at the present price of Rs. 9.25 a

Sir Isaac Newton held that gravity is a force, whereas Einstein regarded it as a property of space, which he believed was curved. But they had one thing in common. Both the Law of Gravitation and the Theory of Relativity were put down on papers for the consumption of knowledge-hungry world.

The world's first paper was made by the wasp for nesting purposes. The Egyptians manufactured Paper by cutting strips from the stem of the Papyrus plant-moistening them and laying them flat.

share of Rs. 10 each. Development rebate reserve is allocated Rs. 1.92 lakhs (against Rs. 1.80 lakhs) and taxation Rs. 12 lakhs (against Rs. 18.70 lakhs). The carry-forward is Rs. 30,951, against Rs. 8,246 brought in. Sales rose from Rs. 2.62 crores to Rs. 3.52 crores and the stocks of jute goods from Rs. 27.79 lakhs to Rs. 32.23 lakhs.

Naihati Jute Mills Skips Dividend

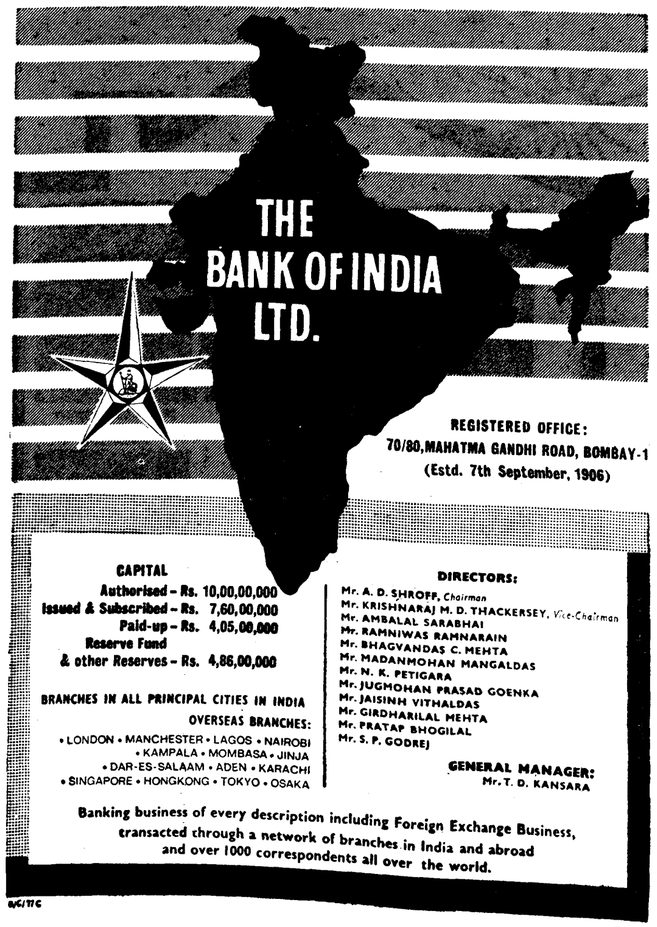
COMMENTING on the working for the current year, the directors of the Naihati Jute Mills Co. Ltd say that it is likely to be worse than that of 1962-63 due to the high price of raw jute in relation to that of jute goods. The working of the mills suffered due to the shortage of electric power. The ordinary dividend has been passed. The profit has amounted to Rs. 5.79 lakhs, against Rs. 19.08 lakhs for 1962-63, after providing Rs. 12.51 lakhs (against Rs. 7.38 lakhs) for depreciation. Development rebate reserve is allocated Rs. 1.53 lakhs (against Rs. 4.98 lakhs) and taxation relating to the previous year Rs. 2.75 lakhs, general reserve Rs. 1.30 lakhs (against Rs. 4 lakhs) and contingencies reserve Rs. 3.75 lakhs (against Rs. 9.35 lakhs). The carry-forward is Rs. 32.760, against Rs. 21,972 brought in. Sales rose from Rs. 2.07 crores to Rs. 2.29 crores and stocks of jute goods from Rs. 20.45 lakhs to Rs. 22.62 lakhs. A great deal of capital expenditure has been incurred to expand the capacity of the carpet-backing division.

New Investment Move by Indo-Burma Petroleum

IN a circular letter issued to the shareholders of the Indo-Burma Petroleum Co. Ltd. the directors have indicated the prospect for further investments. They have been considering opportunities for the investment of the Company's funds. The Company has received an invitation from B. K. Khanna and Co. Private Ltd, the promoters of the Shama Forge Co. Ltd and Shama Pistons and Rings Ltd, to participate in their equity and preference capital. The directors have investigated the prospects of these Companies and consider that the investments proposed will serve the interest of Indo-Burma Petroleum. In Shama Forge Co. Ltd, an investment in the ordinary share capital to the extent of 100,000 shares of Rs. 10 each at par and in the preference share capital of 5,000 cumulative redeemable shares of Rs. 100 each at par, carrying a fixed dividend of 9.5 percent, free of the company income tax, is proposed. This Company will manufacture forging of mild steel and alloy steel and other metals.

A collaboration agreement with Kropp Forge Co. of the U.S.A. has been completed. The collaborators have agreed to supply the equipment and give financial assistance for 14,200 equity shares. The U.S. Agency for International Development has agreed to offer a loan of Rs. 47.50 lakhs. Indo-Burma Petroleum's subscription amounts to 20 percent of the ordinary capital and 20 percent of the preference capital in Shama Forge. The preference shares are redeemable after 12 years and not later than 15 years from the date of incorporation of the Company. The factory will be situated at Bhopal, Madhya Pradesh.

In Shama Piston and Rings Ltd, the investment in the equity share capital to the extent of 80,000 shares of Rs. 10 each at par and in the preference share capital of 2,000 cumulative redeemable shares of Rs. 100 each at par carrying a fixed dividend of 9.5 percent, free of the company income tax, is proposed. It will manufacture pistons, pins and piston rings for automotive and stationary engines of all kinds. The collaborators are Karl Schmidt GmbH of West Germany for pistons and pins and Sim. S. A. of Switzerland for piston rings. The collaborators will help erect the plant and give technical assistance. They will also subscribe for 4.88 percent of the ordinary capital and 4 percent of the preference capital. Indo-Burma Petroleum's proposed investment amounts to 21.62 percent of the ordinary capital of Rs. 37 lakhs and 11.11 percent of the preference capital of Rs. 18 lakhs. The preference shares are redeemable after 12 years and not later than 15 years from the date of incorporation of the Company. A general meeting of Indo-Burma Petroleum has been convened to obtain the approval of the shareholders. The investments will also have to be approved by the Central Government.



Saugor Electricity Supply Repeats

IN their report for the year ended March 1964, the directors of Saugor Electricity Supply Co. Ltd say that the 500-kilowatt diesel generating set that has been made available on loan by the Madhya Pradesh Electricity Board has been commissioned. It is anticipated that the bulk supply from the State Electricity Board grid will be available by December 1965. So the generating capacity of the Saugor power-station will be increased. Units sold rose from 3.5 million to 3.8 million and revenue from Rs. 12.55 lakhs to Rs. 14.31 lakhs. The profit has amounted to Rs. 66,522, against Rs. 66.684 for 1962-63, after providing Rs. 83,378 (against Rs. 81,580) for depreciation, Rs. 5,692 (against Rs. 12,197) for contingencies reserve, Rs. 52,000 (against Rs. 56,000) for taxation, Rs. 4.301 (against Rs. 15,989) for development reserve, Rs. 4,433 (against Rs. 1,454) for tariffs and dividends control reserve and Rs. 4.433 (against Rs. 1,454) for rebate to consumers. A taxable ordinary dividend of 9 percent has been repeated. The carry-forward is Rs. 3,050, against Rs. 1,786 brought in.

Premier Tyres Does Better

THE working results of Premier Tyres for the 15-month period ended March 1964 showed a considerable improvement over the preceding year, with the turnover rising from Rs. 25.69 lakhs to Rs. 3.82 crores on which the Company made a gross profit of Rs. 21.63 lakhs. The chairman, Mr. C. C. Desai, assured the shareholders at their annual meeting that they could look forward to the future with confidence. Although there has been a glut in the market at present, the future of the tyre industry is by no means bleak. He said that with the anticipated increase in the number of vehicles on road and more roads to ply the vehicles, the future of the tyre industry could, in fact, be viewed with optimism. And Premier Tyres was likely to play its rightful rôle. The Company's tyres had been received well in the market and they enjoyed a reputation for quality.

Mr. Desai assured that the Company would be able to provide full depreciation and development rebate by the end of March 1966, and that it would also be able to clear the arrears of preference dividend. As for equity dividend, all that the chairman said was that this question was uppermost in the minds of the directors. Replying to shareholders' enquiries, Mr. Chandrakant S. Desai, a director, stated that the Company's sales during the first five months of the current year amounted to Rs. 1.20 crores, which was some 30 percent more than the figure for the corresponding period last year. Against the licensed capacity of 600 tyres a

day, the Company is currently producing 400 tyres a day on a two-shift basis and the total production during the first five months has been around 32,000 tyres. The Company has made a humble beginning in exports, and it is exploring new markets in the neighbouring countries to push export sales. The Company would benefit to the extent of Rs. 11.25 lakhs by way of relief in excise duty to new units and exemption from surcharge on basic excise duty. The L.I.C. holds 17,000 preference shares and 3,290 equity shares of Premier Tyres.

Agfa India Raises Dividend

AGFA India Ltd has stepped up the dividend for the year ended March 1964 from Rs. 10 to Rs. 16 a share which is well justified by the Company's improved performance during the Realisations from sales and services amounted to Rs. 1.86 crores, about 65 percent more than the previous year's figure of Rs. 1.13 crores. The gross profit more than doubled from Rs. 6.31 lakhs to Rs. 13.48 lakhs. After providing Rs. 65,750 (against Rs. 55,203) for depreciation and Rs. 8.05 lakhs (against Rs. 2.74 lakhs) for taxation the net profit amounts to Rs. 4.77 lakhs, against Rs. 3.02 lakhs in the preceding year. The directors have allocated Rs. 1.50 lakhs (against Rs. 1 lakh) to the general reserve and Rs. 3.20 lakhs (against Rs. 2.04 lakhs) to the dividend reserve. The proposed dividend absorbing Rs. 3.20 lakhs (against Rs. 2 lakhs) is to be paid out of the dividend reserve.

Ahmedabad Electricity Fares Well

ALTHOUGH the dividend has only been maintained at 8 percent, the working results of Ahmedabad Electricity for the year ended March 1964, show a marked improvement over the previous year's performance. With the commissioning of the second 30 kW turbo alternator in June 1963, the sales of energy during 1963-64 rose by 10.41 percent from 859 million kWh to 948 million kWh and realisations from sale amounted to Rs. 8.12 crores, showing an increase of 17 percent over the preceding year's figure of Rs. 6.95 crores. The Company's gross profit increased by 22.8 percent from Rs. 1.75 crores to Rs. 2.15 crores. After providing Rs. 71.27 lakhs (against 61.91 lakhs) for depreciation and Rs. 44 lakhs (against Rs. 23.82 lakhs) for taxation, the net profit amounts to Rs. 89.96 lakhs, compared with Rs. 80.52 lakhs. A sum of Rs. 12.26 lakhs has been written back on account of special reserve for the past years treated as special appropriation for the calculation of clear profit. Other appropriations include development rebate reserve Rs. 20.95 lakhs (against Rs. 1.57 lakhs), contingency reserve Rs. 5.62 lakhs (against 5.68 lakhs), dividend equalisation reserve Rs. 97,450 (against Rs. 2.22 lakhs), gratuity reserve Rs. 4.14 lakhs (against Rs. 3 lakhs), consumers' benefit reserve Rs. 1.10 lakhs (against nil) and dividend Rs. 69.98 lakhs (the same).

With the commissioning of the second 30 kW turbo alternator in June 1963, the generating capacity of the Sabarmati power station now stands at 2,17,500 kW. The load restrictions in the form of evening recess staggering were removed in July and additional loads released at the same time. The number of consumers during the year increased by 9,916 to 116.883, which includes 146 large high tension consumers and the North Gujarat Grid.

Kalasa Tea and Produce Repeats

THE directors of the Kalasa Tea and Produce Co. Ltd have maintained the dividend at 15 percent for the year ended March 1964. The net after-tax profit amounts to Rs. 2,21,324, after providing Rs. 2,02,000 for taxation. The previous year's net profit was Rs. 2,08,443, after providing Rs. 1,96,000 for taxation. With Rs. 29,726 brought forward from the previous year and Rs. 11,746 being the excess provision for taxation written back, the total available for appropriation comes to Rs. 2,62,796. Out of this, a sum of Rs. 606 is transferred to development rebate reserve (against Rs. 2,611). A sum of Rs. 75,000 (the same) is transferred to general reserve and Rs. 50,000 (against nil) to special reserve. The interim dividend at 7½ percent absorbed Rs. 67,500. The final dividend of 7½ percent accounts for Rs. 67,500. The balance of Rs. 2,190 is carried forward.

The tea crop for the year amounted to 312,464 kilograms (against 314,942 kilograms). The all-in-cost of production amounted to 350 cents a kilogram, against 344 cents a kilogram. The average sale price amounted to 480 cents a kilogram, against 464 cents a kilogram. The estimated crop for 1964-65 is placed at 280,000 kilograms at an all-in-cost of 387 cents a kilogram.

Burhanpur Mills Maintains Dividend

DESPITE an increase of nearly 17 percent in the sales from Rs. 1.02 crores to Rs. 2.37 crores, the gross profit of Burhanpur Tapti Mills Ltd for the year ended March 1964, is down by 15 percent from Rs. 6.73 lakhs to Rs. 5.72 lakhs. The dividend, however, has been maintained at 7 percent, but the directors have had to withdraw Rs. 60,000 from the general reserve to provide for the payment of the proposed dividend. Appropriations include depreciation Rs. 5.07 lakhs (against Rs. 4.19 lakhs), development rebate Rs. 14,785 (against Rs. 1.26 lakhs) and taxation Rs. 25,000 (against Rs. 52,651), leaving a net profit of Rs. 25,392, against Rs. 75,338 in the preceding year. After bringing in the previous year's surplus of Rs. 43,581, adding back unclaimed dividend forfeited amounting to Rs. 5,073 and transferring Rs. 60,000 (against Rs. 1 lakh) from the general reserve, the directors have provided Rs. 1.26 lakhs for the payment of dividend and the balance of Rs. 8,046 is being carried forward.

The directors attribute the fall in the company's profit despite larger sales to the all-round increase in production costs. The Company exported cloth valued at Rs. 35.67 lakhs (against Rs. 21.30 lakhs) and supplied goods worth Rs. 13.90 lakhs to the defence department. The Company received a licence for putting up an additional 3,941 spindles and 73 looms and the expansion of spindleage has been completed. The looms are under erection. The rehabilitation of the spinning section as approved by the National Industrial Development Corporation has been completed and the Company has approached the N.I.D.C. for revision of the rehabilitation programme for the weaving section. The Company has drawn the full amount of Rs. 10 lakhs from the Madhya Pradesh Financial Corporation and Rs. 20.93 lakhs from the N.I.D.C.

Khatau Mills Pays the Same

WITH its 15,000 spindles out of operation for a period of some three months on account of repairs, production, sales and gross profit of the Khatau Makanji Spinning and Weaving Co. Ltd suffered a setback during the year ended June 1964. It is, however, encouraging to note that the gross profit has come down only a little from Rs. 93.72 lakhs to Rs. 91.44 lakhs though the sales are down by about 16.3 percent from Rs. 6.49 crores to Rs 5.43 crores. The dividend has been maintained at 8 percent. Appropriations include depreciation Rs 31.59 lakhs (against Rs. 19.50 lakhs), development rebate Rs. 4.42 lakhs (against Rs. 2.84 lakhs), taxation Rs. 24.60 lakhs (against Rs. 45.95 lakhs) and general reserve Rs. 25 lakhs (against Rs. 11.25 lakhs). After making these appropriations, there remains a balance of Rs. 4,000 to be carried forward, against Rs. 13,000 brought in. The proposed dividends —preference and ordinary—absorbing Rs. 11.12 lakhs are to be paid out of the general reserve. The spindles which were stopped for repairs during 1963-64 have now been put into commission.

No Bonus from United Breweries

A substantial rise in the sales and the gross profit and an improvement in the dividend provide the highlights of the working of United Breweries Ltd for the year ended March 1964. In spite of severe competition, the sale of bottled beer rose by 19.5 percent, compared with that of the previous year. The total turnover and profit are the highest so far achieved. The gross profit, before depreciation and taxation, amounts to Rs. 40,18,237, against Rs. 37,15,193. After providing depreciation of Rs. 2,70,659 (against Rs. 2,92,861) and taxation Rs. 23,30,000 (against Rs. 18 lakhs), there is a net profit of Rs. 14,17,578 (against Rs. 16,22,332). Out of this, the directors have provided Rs. 25,000 (against Rs. 4,200) for development rebate reserve. The dividend of 9 percent (against 6 percent) amounts to Rs. 4,50,000. The balance of Rs. 9,42,578 is transferred to general reserve.

Total sales for the year amounted to Rs. 71,35,899 (against Rs. 60,21,164). In view of the high incidence of surtax on the Company and the consequent need to build up its capital base as rapidly as possible, the directors have transferred a substantial portion of the available surplus to reserves. The chairman says in his statement that the proposal for issuing bonus shares of the nominal value of Rs. 25 lakhs is being kept in abeyance in view of the recently introduced principle of taxing such issues in the hands of the shareholders.

Referring to the prospects of United Breweries Ltd for the current year, the chairman says that in spite of increasing competition, sales during the first two months of the current year increased by 11.8 percent, compared with those of the corresponding period of the previous year. Despatches, however, dropped heavily from June as the Mysore State excise authorities insisted on collecting the full rate of excise duty prevailing in the State on beer despatched outside the State. Such despatches had, therefore, to be suspended and were resumed only on 12th August, 1964, after the Government of Mysore issued an order, the effect of which is obscure. The chairman concludes with a note of optimism that the Company as well as the several enterprises in which it has a substantial interest continues to make good progress.

Jam Mills Resumes Dividend

THE Jam Shri Ranjitsinghji Spinning and Weaving Mills Co. Ltd, commonly known as the Jam Mills, which had skipped the dividend for two years has returned to the dividend list and the directors have recommended a dividend of 6 percent (Rs. 60 a share of Rs. 1,000) for the year ended June 1964. The preliminary report shows that the Company has fared exceedingly well during the year, with the gross profit rising from Rs. 5.02 lakhs to Rs. 17.52 lakhs. Improved results are attributed to modernisation of plant and machinery carried out in previous years and change in the pattern of production. The directors have provided Rs. 8.12 lakhs (against Rs. 2.10 lakhs) for depreciation, Rs 2.98 lakhs (against nil) for development rebate, Rs. 1.08 lakhs (against Rs. 62,000) for bonus to employees for previous years, Rs. 21,000 (against nil) for deferred revenue expenditure and Rs. 54,000 (against nil) for general reserve. After wiping out the deficit of Rs. 4.28 lakhs brought in, there remains a surplus of Rs. 31,000 to be carried forward. The proposed dividend absorbing Rs. 93,000 is to be paid out of the dividend equalisation reserve. The Rs. 1,000-paid share of Jam Mills is quoted nominally around Rs. 1,200.

Hindustan Sugar to Diversify

THE Hindustan Sugar Mills Ltd proposes to undertake the manufacture of chipboard by utilising its surplus sugarcane bagasse. The factory will be located in Golagokarnanath in Uttar Pradesh. The project is estimated to cost Rs. 75 lakhs of which Rs. 50 lakhs will be spent on fixed assets. The entire expenditure, it is proposed, will be met from the Company's internal resources. The Company has entered into a technical collaboration agreement with the reputed U.S. firm, International Design Corporation. The collaboration agreement has been approved by the Government of India, and the Company has been sanctioned an I.B.R.D. credit amounting to Rs. 12.5 lakhs for the import of machinery from West Germany and U.S.A. The bulk of the machinery is to be fabricated in India with the assistance of the American firm which is collaborating in the venture. If all goes well, the plant is likely to be ready for production by the end of 1965. The plant will have an initial capacity of 30 tons of chipboard a day which will be later increased to 60 tons. It is claimed that this will be the first plant in India which will manufacture chipboard from sugarcane bagasse. The market for chipboard is assured as the current production is far short of the country's needs. The total production of chipboard in 1963 was around 5,000 tons, against the third plan target of 200,000 tons.

Be Be Rubber Estates Cuts Dividend

FOLLOWING a decline in the profit, the directors of Be Be Rubber Estates Ltd have reduced the ordinary dividend to 3 percent for the year ended March 1964, against 5 percent in the previous year. The profit amounts to Rs. 1,02,103, against Rs. 1,30,387 for the previous year. With Rs. 897 brought forward from the previous year, the total comes to Rs. 1,03,001. Out of this, the dividend at 6.255 percent on preference shares amounts to Rs. 20,105. The ordinary dividend at 3 percent accounts for Rs. 25,983. Provision for taxation amounts to Rs. 55,000 (against Rs. 70,000). The balance of Rs. 1,912 is carried forward.

The total crop during the year amounted to 189,421 kilograms,

against 188,278 kilograms. The estimated crop for 1964-65 is placed at 175,000 kilograms. The directors' report says that during the year, there has been a sharp fall in the total sale proceeds of rubber, against the amount obtained during the previous year.

New Capital Issues

FIVE companies have been authorised to raise fresh capital totalling Rs. 1.617 crores. Of these, four are issuing equities and one is offering preference shares. One of the companies is a State Government undertaking. The consent of the Controller of Capital Issues is valid for 12 months in all cases. The following are the details:

Micro Tools Ltd, Madras, a new Company, will be issuing capital of Rs. 40 lakhs in equity shares for the manufacture of small and hand tools in the beginning and then of precision tools for cutting, boring and countersunk works. The total capital cost of the scheme is estimated at Rs. 75 lakhs, which will be met by issue of capital of Rs. 40 lakhs and by loans from Industrial Credit and Investment Corporation of India, etcetera.

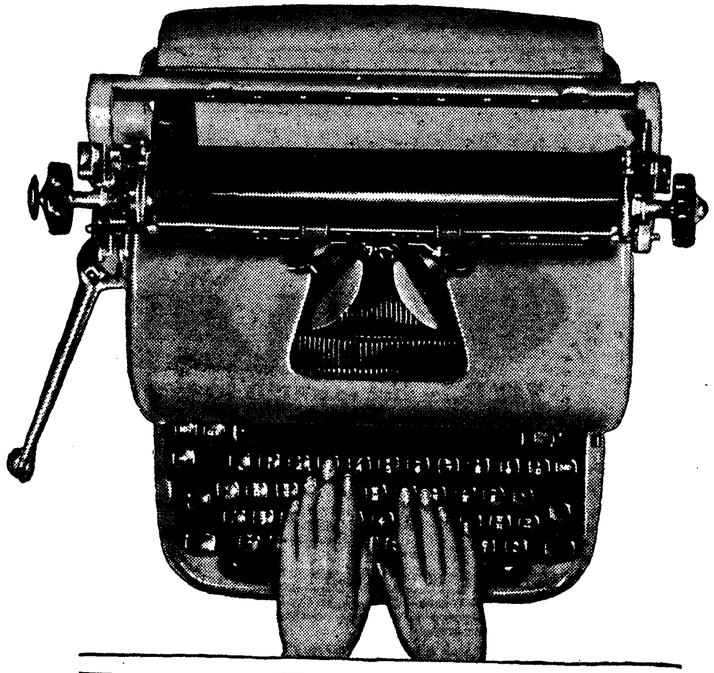
Andhra Steel Corporation Ltd, Calcutta, is to issue capital of Rs. 30 lakhs divided into 30,000 equity shares of Rs. 100 each for cash at par. Out of this issue, such number of shares as will enable the scrip to be listed on the recognised stock exchanges will be isued to the public by prospectus. The money will be used far the setting up of a steel foundry.

The Madhya Pradesh State Industries Corporation Ltd, a State Government undertaking, is to issue a further capital of Rs. 42.77 lakhs, divided into 42.770 equity shares of Rs. 100 each, at par, to the Government of Madhya Pradesh in lieu of assets transferred or to be transferred by the latter.

Prestolite of India Ltd, New Delhi, is to issue further capital of Rs. 9 lakhs in 9.5 percent preference shares each for cash at a premium of Rs. 7 a share to be issued to the existing shareholders in the ratio of one share for four shares held. The money will be used for financing renovation and repaying certain unsecured loans.

Birla Jute Manufacturing Co. Ltd, Calcutta, is to issue further capital of Rs. 39,89,060 (nominal) divided into 398,906 ordinary shares of Rs. 10 each for cash at a premium of Rs. 7 a share to be issued to the existing shareholders in the ratio of one share for four shares held. The money will be used for financing renovation and repaying certain unsecured loans.

We at Remington Rand have been with typewriters a long time—you can say we have always been the first with typewriters. That's why we are so careful about them—careful about things that matter, like *precision, touch.*



The equipment we've invested in at our factory—the Optical Profile Grinder and the Type Aligning Projector—are for just this reason: that the typewriter you invest in is *perfect.* The care we take over accuracy—1/10,000 th of an inch in machined parts, tools and dies, and the perfect alignment of types and typebars, you can call us fussy—even finicky. But then that's why Remington Typewriters are such a good buy.

Our attention to detail means you get precision balanced typebar action that flashes to and from the paper, keys that don't stick even with several typebars in flight, finger-fitted keys designed to cushion finger tips, smooth carriage and lighter, more rhythmic, highly responsive typing.

Remington Typewriters are now better than ever

That's why we are so proud of....

The Stock Markets

COMPANY LAW BILL AFFECTS SENTIMENT

Wednesday Evening.

THE Calcutta stock market has closed the past week in a quiet mood after earlier steadiness. Share prices at first improved due to renewed buying on good corporate news. Several companies have shown bigger profits and have declared larger dividends. The Unit Trust of India has made substantial purchases which have helped to reduce the floating stocks.

Towards the close, there has been a reaction, particularly in clearing shares, due to tired bull liquidation. Turnover has dropped considerably because operators are reluctant to extend their commitments before the Puja holidays. Lyons Range has been disturbed by the drastic provisions of the Bill to amend the Companies Act. Since a considerable amount of unaccounted money has flowed into the stock market in recent months, the provision to stop the holding of shares in fictitious names has perturbed operators.

The more discouraging provision relates to blank transfer. The Bill proposes that no share can be held on blank transfer for more than six months in the case of listed companies and for not more than two months in the case of other companies. Although the new restriction aims at encouraging *bona fide* investments, it will affect the marketability of shares. It is, however, hoped that the Government will enforce the provisions slowly to prevent interruption of trading in the stock markets.

Indian Iron have retreated due to fresh concern over the repayment of advances given by the Government to the Indian Iron and Steel Company and Tata Steel. Among engineering shares, Jessop are a prominent feature due to the optimism inspired by the visit of the Prime Minister, Mr. Lal Bahadur Shastri, to the Company's factory last Sunday. J. K. Steel, Jay Engineering and Binani Metal enjoy influential support. Guest, Keen, Williams, Texmaco, Burn, Indian Standard Wagon and Braithwaite have reacted due to profit-taking.

The prices of clearing miscellaneous shares have moved down in the absence of support. Hindustan Motors, Indian Copper, Indian Aluminium, Dunlop Rubber and Indian Cable have been active. British Paints have improved on replacement buying. Interest is shown in Goodyear India, Metal Box Britannia Biscuits, Alkali and Chemical and Indian Oxygen. Philips India are a steady feature. India Steamship have recovered on short-covering.

Among managing agency shares, Jardine Henderson are quiet but Balmer Lawrie are steady. In electric companies, U.P. Electric have retreated. Calcutta Tramways have turned sluggish due to the uncertainty about the revision of the agreement between the Company and the West Bengal Government. Among new shares, Hindusthan Twyfords, Hindustan Aluminium and Phillips Carbon are prominent. In paper shares, Orient have fluctuated both ways. Titaghur have recovered slightly on replacement buying. Seshasayee, Bengal and Shree Gopal are steady. Sugar shares are neglected, and it has been difficult to attract buyers even by discounting present prices.

Birla are steady in the jute section due to the prospect of a rights issue in the proportion of one new share for every four held at a premium of Rs. 7 a share of Rs. 10 each. Other jute shares are being dealt in cautiously because the profits of jute mills have tended to shrink due to the sharp rise in the price of fibre. Champdany, Anglo-India, Union and Ganges have been transacted. Stray business has passed in coal shares and prices have shown little variation. Investors have been disappointed due to the decline in the demand for coal. Burrakur, Bengal and Central India have changed hands. Cotton mill shares are steady. J. K Rayon have reacted on profit-taking. Bharat Commerce, Dunbar and Elgin are about maintained. There has been a small turnover in tea shares, and prices have tended to drop.

Government securities are quiet. The 3 percent Conversion Loan 1986 has dropped to Rs. 63.55. The prices of short and medium-dated stocks are about steady, although there are few sellers. Most of the new State Government loans have been quoted at a slight discount.

Bombay

TURNOVER CONFINED TO CLEARING SHARES

MOVE FOR TIGHTER CONTROL WORRIES MARKET

Wednesday Evening.

THE Bombay stock market has closed the past week on an easier note. Share prices have tended to drop due to profit-taking. Bulls have been discouraged by some unfavourable developments. The Bill to amend the Companies Act has worried operators because of the proposed restrictions on blank transfers which are likely to affect the smooth working of Stock Exchanges. Dalal Street is not pleased with the Government's move to regulate the working of the Stock Exchanges more sternly. The increase in the interest rate on bank overdrafts is another restraining factor. Turnover has largely been confined to clearing shares. Interest in cash shares has been negligible.

Tata Steel ordinary have closed lower at Rs. 157.75 because of the controversy concerning the repayment of the advances given to the private-sector steel companies by the Government. Among engineering shares, Tata Engineering, Larsen and Toubro and Premier Construction have reacted due to profit-taking. In motor-vehicle shares, Hindustan Motors have lost due to pressure from outside centres. Premier Automobiles have turned hesitant because of the uncertainty about the dividend.

Cotton mill shares have reacted all round after an earlier steadiness. Bombay Dyeing, Century, Kohinoor and Svadeshi have dropped. Morarjee, Standard and Gokak have declined in sympathy with the general trend. Turnover in miscellaneous shares has dropped considerably. Among sugar shares, Belapur and Walchandnagar Industries have lost. In cement shares, Associated Cement are about steady. Mining shares have been subdued. Be Be Petrol and Shivrajpur Syndicate have been sold freely. In steamship company shares, Scindia Steam are a steady feature due to influential support.

Chemical shares have turned quiet. Tata Chemical and Indian Dyestuff have dropped. Rayon shares are quiet due to easier advices from the rayon yarn market. National Rayon have lost due to pressure. Voltas and Tata Oil are about steady. Gammon India have attracted support because of a higher dividend. Bank shares are fully steady, although turnover has been small. Bank of India and Central Bank have changed hands. Electric company shares have been steady. Support has been forthcoming for Tata Power and Ahmedabad Electric.

Madras

ATTENTION CENTRES ON PLANTINGS

TURNOVER IN CLEARING SHARES DROPS

Tuesday Evening.

THERE has been an appreciable decline in turnover in the Madras stock market during the past week. Investors and operators have become cautious because of the proposed amendments to the Companies Act. Bulls are disappointed because

they now think that the Government is unlikely to provide any incentive in the immediate future to stimulate activity in the capital market. The prices of almost all clearing shares have dropped. Interest has centred largely on selected plantation scrip. Although good preference shares and debentures are being sought, sellers are fewer. Government securities are dull, and most of the State Government loans are available at a slight discount.

Bank shares have been negligible. Indian Bank are available at Rs. 141 and Indian Overseas at Rs. 148. In electric company shares, West Coast are steady at Rs. 13.50 and Vellore at Rs. 15.62. Sugar shares have turned quiet. Deccan have lost at Rs. 12.30 and K.C.P. at Rs. 24. E.I.D. are available at Rs. 36.12, but Travancore have hardened to Rs. 8.12. Kothari have been offered at Rs. 6.45 and Mysore at Rs. 27.75.

In plantation shares, Blue Mountain are quoted at Rs. 2.33 and Cochin Malabar at Rs. 6.22. Consolidated Coffee have been supported up to Rs. 23.80 and Ouchterlony have been done at Rs. 3.35. Business has been transacted in Periakaramalai at Rs. 3.47. Woodland are quoted at Rs. 6.90 on declaring a taxable ordinary dividend of 5 percent. Emerald Valley have been transacted at Rs. 6.75 on paying a taxable ordinary dividend of 20 percent. Talayar have changed hands at Rs. 1.83 due to the payment of a taxable ordinary dividend of 5 percent. Balmadies are quoted at Rs. 1.85 on declaring a taxable ordinary dividend of 10 percent. Nonsuch are steady at Rs. 21.87, Peermade at Rs. 20.62 and Nilgiri at Rs. 9.20. Sheveroy are wanted at Rs. 2.07 and Rajendra at Rs. 13.

In textile shares, South India Viscose have dropped to Rs. 170 and Travancore Rayon to Rs. 20.40. Lakshmi are quoted at Rs. 134 and Madura at Rs. 35. Interest has been taken in Bangalore Woollen at Rs. 270 and in Buckingham at Rs. 281. Mettur are steady at Rs. 265.50 and Ramakrishna at Rs. 191.50.

In miscellaneous shares, Aluminium Industries are very steady at Rs. 23.20, but Ashok Leyland have lost at Rs. 7. Dalmia Cement have been bought up to Rs. 12.90, but India Cement have reacted to Rs. 5.43. Mettur Chemical have improved to Rs. 15 and F.A.C.T. are quoted at Rs. 5.15. Seshasayee Paper have lost at Rs. 7.48, but Standard Motors are steady at Rs. 10.15. Mysore Stoneware are wanted at Rs. 11.57 on the prospect of a bonus issue in the ratio of one bonus share for every 10 held. Kirloskar Electric are quoted at Rs. 19.15, Madras Rubber at Rs. 10.05 and Textool at Rs. 156. Parry's Confectionery have hardened to Rs. 3 and Spencer to Rs. 21.50.

Money

THE CALCUTTA MONEY MARKET

MODERATE DECREASE IN ADVANCES

Wednesday, 23rd September.

THERE has been a moderate fall in the general level of advances in the Calcutta money market during the past week. This is mainly due to the decline in the credit given for miscellaneous purposes. There has also been a slight decrease in the advances to cotton and sugar mills. The requirements of the jute industry and the foodgrains trade remain more or less unchanged, and so are those of the iron, steel and engineering units. In the interbank market, conditions are fairly easy and the call rate quotes around 1¼ percent with lenders over.

The exchange market is inactive, with a poor supply of gunny bills and small supply of tea bills. The demand for remittances is small. In the London market, sterling has improved slightly from the lowest levels reached in recent weeks.

SILVER WAS STEADY IN CALCUTTA during the past week. The price rose from the previous week's level of Rs. 252.50 to Rs. 254.50, quoted today. The price was quoted at 112¼d in London and at 129.3 cents in New York.

In sympathy with the rise in silver, gold ruled steady and the price of 14-carat advanced from Rs. 71.50 to Rs. 72.25.

DURING THE WEEK ENDED 18TH September, Government of India Treasury bills for Rs. 66,36,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 22nd September. The total amount offered was Rs. 2,10,00,000. Tenders at Rs. 99.405 percent were accepted in full and those at Rs. 99.400 percent were allotted 95 percent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.399 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 28th September.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 23rd September to 26th Stptember at Rs. 99.416 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 16th September to 19th September amounted to Rs. 7,97,50,000.

THE TOTAL NOTE ISSUE DROPPED BY Rs. 42.96 crores to Rs. 2,407.11 crores and active notes by Rs. 31.36 crores to Rs. 2,389.81 crores, according to the return of the Reserve Bank of India for the week ended 18th September, 1964. The currency contraction was adjusted by reducing rupee securities by Rs. 45 crores to Rs. 2,095.93 crores in the paper currency reserve. Deposits of the Government of India fell by Rs. 26.54 crores to Rs. 60.68 crores and those of State Governments by Rs. 13.19 crores to Rs. 13.68 crores. Balances of commercial banks at Rs. 106.50 crores showed a rise of Rs. 7.60 crores. Their loans from the Reserve Bank amounted to Rs. 2.50 crores, against Rs. 2.04 crores of which advances against usance bills stood at Rs. 20 lakhs (Rs. 50 lakhs). Investments dropped by Rs. 19.44 crores to Rs. 104.22 crores. Balances held abroad rose by Rs. 2.35 crores to Rs. 13.41 crores. Ways and means advances stood at Rs. 18.35 crores, against Rs. 15.83 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 11th September, 1964, shows a drop of Rs. 2.69 crores to Rs. 656.21 crores in total deposits. Investments in Government securities are down by Rs. 31.03 crores to Rs. 266.11 crores, while other authorised investments remain unchanged at Rs. 9.44 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have declined by Rs. 1.08 crores to Rs. 342.26 crores. Cash and balances are, in consequence, shown at Rs. 32.83 crores or Rs. 6.63 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 11th September, 1964, shows Demand and Time liabilities at Rs. 1,280.52 crores (Rs. 26.85 crores on account of borrowings from banks) and Rs. 1,423.38 crores (Rs. 16.96 crores), compared with Rs. 1,285.80 crores (Rs. 29.08 crores) and Rs. 1,417.05 crores (Rs. 17 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs 1.14 crores and Rs. 5.68 crores to Rs. 64.03 crores and Rs. 96.95 crores, respectively. There is a drop of Rs. 29.17 crores to Rs. 762.00 crores in investments. Advances and bills discounted at Rs. 1,744.42 crores show a drop of Rs. 2.78 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6 percent and 64.5 percent, against 5.7 percent and 64.6 percent.

THE DIRECTORS OF THE CHARTERED Bank have declared an interim dividend of 7½ percent actual subject to deduction of income tax at 7s 9d in the pound, payable on Friday, 25th September, 1964.

TREASURY BILL MATURITIES

THE JAY ENGINEERING WORKS LIMITED

COMPANY'S INTRINSIC STRENGTH UNIMPAIRED BY THE STRIKE

—INVESTMENT MUST BE RETURN-ORIENTED

The following is the speech delivered by the Chairman, Mr. Charat Ram at the Twenty-seventh Annual General Meeting of Jay Engineering Works Limited held on 23rd September, 1964, in Calcutta.

Friends,

I have great pleasure in welcoming you to the Twenty-seventh Annual General Meeting of the Company.

We should begin our proceedings today, by paying our homage to the memory of Jawaharlalji Nehru. I can hardly add to all what has been said, and what all of us indeed must feel, about this great personality. Mahatma Gandhiji secured us freedom from foreign bondage and was truly the father of the nation; Panditji attempted to bring freedom from material want in the lives of the people. Few peoples are so lucky as to have as their leader, a man of such deep humanism and scholarliness. May I request you to pay homage to Pandit Ji's memory by standing up silently for a while.

We are lucky that a person of Lal Bahadur Shastri Ji's calibre has succeeded Pandit Nehru as our new Prime Minister. Shastriji is known as a man of sagacity and independence. The pragmatism and the determination with which Shastriji has set about his task is indeed gratifying. In the difficult situation that he has inherited, he has shown firmness of purpose and a sense of realism that augurs well for the future.

Strike and the Aftermath

The annual report of the Company for the year ended March, 1964 has been with you for some time. The profit for the year bears the mark of a part of the period of the strike in the Calcutta factories of the Company from 17th December, 1963 to the end of May, 1964. However, your directors have decided that, as the decline in profits has been due to an abnormal occurrence, the Company should draw upon its reserves to pay a dividend on equity shares, although a lower one at 8%. This is considered equitable, having regard to the overall responsibilities of the Company. I am hopeful that in the course of the year, the Company will be able to replenish its reserves, while compensating the investors adequately.

Labour Leadership Needs to have a Fresh Outlook

I should, to begin with, make a reference to the most unfortunate strike which the Company had to face determinedly. A broad analysis of the causes may help to prevent a recurrence of such unfortunate events. The strike affected not only the Company's profits, but also the country's export earnings. It caused enormous loss, running to over crores of rupees to the workmen in terms of loss of wages, bonus etc; the Government lost large amounts of excise duty and direct and indirect taxes; and the community lost much needed supplies. The strike certainly did not win any rewards for the workmen. The demands, which were the ostensible cause of the strike, had already been reviewed by the West Bengal Government and some of them had been referred to the Industrial Tribunal for adjudication. The same position obtains after the strike. On the other hand, the tempo of production achieved over many years was broken, and production-based earnings of workers have been maintaining a low level; there is no work for a large number of workers; and, as violent activity must feed on its own perpetrators, scores of workers, including many basically good, honest men, have had to be charged for indulging in violence and intimidation. This picture of desolation and disruption, in an undertaking which has been known for its very high remuneration levels and progressive personnel policy, is certainly most unfortunate. I must repeat what I said last year here, that political and agitational considerations must give way to the paramountcy of the needs of working men and the industry, if labour leadership is to be meaningful and constructive in the economy of the nation. During the year there has been much evidence in the country, apart from our own strike, to show that there is more pre-occupation on the part of a section of our labour leadership with political and other extraneous considerations, than with the ultimate good of the working people and the industry. It is clear that labour leadership needs to have a fresh outlook in the matter of labour relations if the working class and the economy of the nation are to be spared the tribulations brought about by pseudo trade unionism having political overtones. I consider the workmen of Jay Engineering Works capable of making a dynamic shift in this matter, as they have shown dynamism in the past on so many other occasions.

Production only Solution for Economic Ills

Of the several factors in the economic situation, making for what is now recognized as an economic crisis, the foremost pertain to food production and prices. Responsible people in all walks of life have their own analysis of the situation. I am not a defender of any anti-social businessmen, but if a disease is not rightly diagonised, the cure may be hard to come by. There may or may not be some hoarding of food grains and other agricultural produce, at the primary level of the producer, or at the secondary level of the distributor; a part of this hoarding must however be distinguished from normal stocking, for unlike green vegetables which are bought for day to day consumption, food grains are harvested two or three times in a year and stocked for consumption in the coming months. Furthermore, any hoarding could at worse take place only till the arrival of the next crop. I am sure that our Government is not interested now in finding temporary scapegoats, but in a continuing long term solution of the problem. The fact is that for over a decade now, the price curve of food grains has been steadily going up, inspite of shiploads of American bounty food increasing in number year after year. Some economists even fear that at this rate, some day America might be itself short, to meet the widening gap of our demand and supply position. The answer in my view is to be found in inadequate production, and the inadequacy seems to grow year after year. With some hesitation I would like to suggest that the Government might have a second look on some of the so called socialist objectives, which have become so sacrosanct, at least so far as agriculture is concerned. There is no question that we have to increase our yields from land, and a great many of our policies may satisfy ideology in some quarters not responsible for results, but may not give the much needed food that the people of this country need. Socialism, democratic or otherwise, or communism, or even capitalism may remain a paper satisfaction for the people, if they fail to make for more production, and availability of goods.

Return-Orientation for National Investment

Another problem of our country is expensive and unproductive investment. Unless capital investment is done with stringent economy, and unless the overall economic return on total investmeat exceeds the economic cost of the investment, the economy of the country is bound to be under continuing severe strain. It is a matter of satisfaction that the Prime Minister has already instituted studies for determining the extent to which our economy can bear the load of gigantic long term investments. I have no doubt that this will result in a review of national priorities with a view to up-grading projects which will yield goods and services in a relatively short time, thus countering inflationary forces and facilitating further investments from earned surpluses.

The other kind of unproductivity arises from confusion about the character and nature of profits. There seems in some lobbies in our country a view, that it is a crime to make profits; I submit that, on the other hand, it should be considered an economic crime to make losses. The idea that business profits are good for the economy is difficult for many to accept. What the critics of profit say on the surface is, that business aims not at helping people, but at making profits through people. Their instinct tells them that one man's profit is another man's loss, and so they conclude that profit means exploitation. Now the relationship between business profits and economic growth is basically very simple. Profit determines investment, for you obviously cannot invest from losses, and investment is essential to growth. Thus declining profits must mean a serious drop in investment, and therefore a slower growth for the economy; per contra, higher profits would mean higher investment and faster growth. It is no accident that business profits, business investment, and unemployment are the three economic indicators that have remained at recession levels during the current economic down-swing.

The matter of rising costs of manufacture is certainly one of alarm. The "cost-price" squeeze situation about which I referred last year, has worsened for industry in general and for engineering industry in the metropolitan Calcutta region in particular. Management has the primary responsibility for controlling costs by seeking more efficient ways of making and marketing products But many of the costs of doing business today in our country lie wholly or partially beyond the control of management. To cite only one and latest example, the runaway price situation has led to increases in rates of dearness allowance payments to our workers in the last three months, which would mean increases in costs for your Company to the extent of about Rs. 10 lacs per year. If manufacturing costs continue to mount up, they must sooner or later be reflected in increase in selling prices. If the goal of our society is to provide the basic necessities of life at prices which the people can afford, we seem to be somehow awfully off the track in achieving it. To me there appears to be some confusion between ends and means.

Satisfactory Trend of Production in the Company after the Strike

Before closing, I should say that our current operations are maintaining a satisfactory trend, considering the aftermath of the strike. Given sustained hard work by the workers without being diverted by self-seeking men, there should be increased earnings and bonuses for the workmen, increased profits for the investor, increased exports for the country and increased supplies for the domestic market. Our shareholders and others concerned with us can feel reassured that the intrinsic strength of the Company remains unimpaired by the strike. The principal asset of any undertaking is its men, and I feel proud to say that the strike has given ample proof of the worth of our management personnel, as well as our rank and file and operating personnel.

A Call to Workmen

Our relationship with our work-force remains good inspite of the fact that most of them had to make common cause with aggressive elements due to compulsive forces that bear upon the working class. To the leadership of our Company's labour, and to the workmen themselves, I take this opportunity of making a personnel appeal. Strike against production can never, never be in the interest of either the labour group or the country at large. Management has responsibilities to the consumer, the labour and the investor alike. Let us all work in the coming years to make Jay Engineering the lowest cost factory in India, for that is the only way to also making it the highest profit factory, from which increased investments and payments to labour can come.

All of you are aware that our old and close colleague Shri T. R. Gupta, left the Company during the year to take up the chairmanship of the mammoth public sector undertaking, the Heavy Engineering Corporation Ltd. We are sorry to lose him, but take pride in this singular recognition. Personally to me it has been a great loss, but he remains basically a part of us and we seek his advice in any difficult situation constantly. I am sure you will join me in wishing him a successful career in his new challenging job.

Shri B. S. Agarwal, along with the officers of the Company, supported by the staff and workers, deserve more than our usual thanks for the manner in which they conducted the affairs of the Company in an eventful year.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

THE CHAIRMAN REVIEWS RESULTS

The following address delivered by the Chairman, Mr. Lakshmipat Singhania at the Twenty-sixth Annual General Meeting held on Monday, the 21st September, 1964.

Gentlemen,

It is my pleasure to welcome you again to the Twentysixth Annual General Meeting of the Corporation. Your Corporation is entering into a new era of development after toiling hard for quarter of a century for establishment of this highly technical industry in this country entirely by local talents and enterpreneurship, which involves competing with big giant companies all over the world having very large resources at their disposal for technical and development research and supported by their national Governments. In India, thinking on the establishment of new industries has been varying from time to time. On political platforms it has always been emphasised that development of national industries was very important but in practice support to those who pioneer basic industries has not been encouraging and preference is being given on other considerations. These types of industries in a country like India, can only be developed with the continued support of the national Government and the nation taking a long range view. The basic factor for development of an industry of this nature is the power rate which is even more important than the physical raw material for the industry, i.e. Bauxite. Until and unless power is made available for this industry at uniform rate and a rate suited to this industry as is being done all over the world, our problems are not going to be solved. In the normal course, the enterpreneur should be free to establish an industry at a site most suited to the industry. But in view of the great scrutiny in licensing, if I may say so, the economic factors play the least part as against other factors like regional planning and those not connected with the economies of the industry. The new trend of the State to increase the revenue by tapping sources easily available to them irrespective of its effects on the nation as a whole is very disheartening. I have in mind impositions like Excise Duty on still undeveloped industries, Electricity Duty on Power or control on other facilities including mineral rights such as Bauxite from the point of view of individual States only without any consideration of the National interests.

Economic Size of Plants

Often arguments as to the size of the plant are being advanced and a minimum economic size is being determined and considered. In my opinion, this will depend on the circumstances from time to time. In every country when development of industry takes place, the size increases from small to big in due course and even today if the list of Aluminium Plants existing in the world is looked into, it will be found that plants in the range of 5,000 tons also exist economically. Therefore, in view of the existing circumstances, construction of new plants of minimum size only is not always a prudent decision to be taken by the Government in countries like India. Probably, after some time when our economy has developed, the present minimum size, to us also will become rather small. Further in India today there is a talk about concentration of economic power and monopolies. And if this trend of thinking prevails, it will not be possible for Indian enterpreneurs even to match the Indian capital requirements even if foreign exchange component is available. Further restrictions are being put by limiting semi-fabrication facilities to producers of basic metals in the country thus making the plants uneconomical. It is a known fact that a highly capital intensive industry, as is the case with Aluminium metal or even steel, the cost of the plant upto the metal stage is much costlier per ton of installed capacity than the semifabrication plants like Rolling Mills, etc. I cannot, therefore, understand the Government's insistence specially in case of Aluminium Industry that the main producers should be allocated restricted amount of semi-fabrication capacity as low as 50% of their ingot capacity. This means that the intensive capital expenditure has to be incurred by the main producers with a very low return and the advantage of higher return for semi-fabrication should be thrown open to small fabricators whose investments are comparatively very little. I may cite the example of steel industry in which most re-rollers exist on scrap and very small availability of billets. All the basic producers of steel plant have their own semi-fabrication facilities to a much larger extent almost about 85% of their steel making capacity.

Demand for Aluminium

The thinking for demand of Aluminium metal in the country seems to be changing every day as more metal is being produced and utilised. The consumption rate is keeping ahead of the metal production and this trend, in my opinion, will continue for some years.

In my speeches in the previous years, I had emphasised that the estimated consumption of Aluminium metal in the country can be in the region of 150,000 tons by the end of the Third Five Year Plan as against earlier thinking of 87,000 tons and later change to 115,000 tons. I am happy to state that the considered opinion now is that by 1966 the demand for Aluminium metal in fact will be 150,000 tons. With present rate of industrial development the consumption of Aluminium metal in all forms should reach about 300,000 tons by 1970. I am sure that this metal is going to play a very important role in Indian economy and it is all the more important for the Government to help this industry to develop at a faster rate.

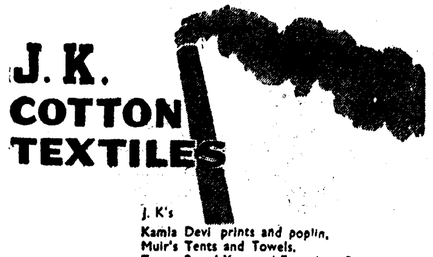
State-owned Plants

By various announcements from time to time it is learnt the Government has been blocking certain available sites for putting up State owned Aluminium plants. Actually it will be in the interest of the private sector if Government would put up State owned Aluminium Plants as only then they would realise the real difficulties of this industry as has been in the case of State owned steel plants. There are number of other items which are more important and which the Government should handle as compared to putting up these industries which can be developed otherwise. The present economic progress is more or less stagnant. The rapid growth of economy is more important than anything else in the country today. In the recent meeting of the World Bank it was rightly emphasised that all unyielding State investments must be curtailed and only yielding investments by the Governments should be encouraged. I only hope this policy will be rigidly followed by our Government too. The country is suffering because of fixed political ideas and considerations. For instance, the risk capital in India has never been recognised as really a risk capital. Instead of having incentives for real risk capital, the risk capital is penalised. There are instances like your own Company where the shareholders did not get dividend for 18 years. In all new industries of basic nature the shareholders will have to wait for certain number of years for dividends and thus those industries should be considered as national institutions rather than owned by any individual. From this point of view there should be much more incentive to the risk capital and such capital must be allowed to be nursed properly.

Labour

The trend of appeasing the industrial labour followed in the country is very disquieting. There should be equal status for the industry and labour. Both are joining hands to generate economy in the country. The total industrial employment is hardly 2% of the population. At the cost of the remaining 440 millions, why is this category only being promoted to create a new class for all types of special amenities such ness allowance, Bonus, State Insurance and so on. The recent decision of the Government in connection with the Bonus Commission is rather unique. The Bonus Commission was set up for formulating uniform norms for payment of Bonus. The latest decision of the Government has increased the complications further which means that both existing uncertain complicated methods of calculation and the Bonus Commission's formula as accepted by the Government have to be applied and whichever be in favour of the Labour has to be adopted. The Union Labour Minister's recent statement reveals that further burden of Rs. 18 crores minimum will be added to the consumers notwithstanding spiral of high prices prevalent at the moment. It is to be realised that the extra burden falls on the remaining population of the country. It will be the happiest day for the country when every one can enjoy the benefits of the generation of the economy.

Corporation's Affairs



I am happy to mention that your Corporation's expansion programmes have been more or less completed. The Corporation can claim to have one of the unique integrated plants where right from the coal raising, power generation, alumina production, smelting of aluminium metal, rolled products like sheets and circles, extruded products, A.A.C. and A.C.S.R. conductors and foils are produced in one compound in addition to its own Bauxite mining. It is necessary for this size of plant to be integrated for its very existence as without combining all these economies, a plant of this size with many odds like very high power rates and increasing coal prices, will be difficult to exist. The only way to maintain economies of this plant in competition with other bigger plants in India would be on the economies of the semi-fabricated products. I have pleasure in informing you that we are working up with the Government of India for further expansion of the present plant. It is hoped that in due course license will be available to your Company. All the expansion schemes which have just been completed will show full results probably in coming years. For the time being, I have only to refer you to the Balance Sheet as at 31st March 1964, which has been circulated to all of you. We have achieved satisfactory results by increasing our sales by 48% and reaching a new high figure of Rs. 345.15 lacs and also our profit has reached a new figure, although the present profit is far below in view of the capital invested. The gross block works out to about Rs. 939.84 lacs plus working capital and the earning of Rs. 63.38 lacs as gross without providing for depreciation is rather low earning.

This year the Corporation has further expanded its capital by issuing Preference shares of Rs. 25.00 lacs and Ordinary shares of Rs. 17.81 lacs. After this fresh issue, the paid up capital of the Corporation will Rs. 2 Crores and I hope the Corporation will be able to service this capital from its new earnings to the satisfaction of the shareholders.

As I have said earlier, these plants are more of national institutions dedicated to the creation and distribution of wealth for the national economy and are to be viewed in this perspective.

Gentlemen, I must congratulate all our workers, officers and the Managing Agents for their untiring zeal with which they have worked to bring this plant to the present status and I am thankful to the shareholders for supporting this Company on all occasions and also to our esteemed customers for their continued patronage.

NEW BILL INTRODUCED TO AMEND COMPANY LAW

(FROM OUR NEW DELHI CORRESPONDENT)

THE Central Finance Minister, Mr. T. T. Krishnamachari, introduced in the Lok Sabha on Monday a 62-clause Bill further to amend the Indian Companies Act. The Bill seeks to implement some of the recommendations made by the Vivian Bose Commission which enquired into the administration of the Dalmia-Jain concerns with a view to preventing the malpractices of the nature observed by it and to ensure due and proper administration of funds and assets of companies in the interest of the investing public. It also embodies the recommendations of the former Solicitor-General, Mr. C. K. Daphtary and the former Judge of the Supreme Court, Mr. Shastri, who had examined the Vivian Bose report and had made some suggestions of their own to amend the Companies Act.

The Bill, among other things, makes it an offence to make an application for shares in the name of, or to include the allotment of shares to, fictitious persons. The beneficial holdings above the limit of 5 percent have to be disclosed so that real holders of such shares, as distinct from those of the nominees by whom such shares are ostensibly held, are known. The Bill will safeguard the amounts paid by applicants for shares until such time as the minimum subscription is collected by a company and imposes the duty on promoters and directors to ensure that the share capital reflects cash or other valuable assets and is not supported by mere book adjustments.

The Bill seeks to make it clear that the underwriting commission should not be paid except in relation to the shares or debentures offered to the public. Similarly, it imposes restrictions on the period of currency of blank transfers. Another amendment will ensure that for companies engaged in production, processing, manufacturing or mining activities, proper records relating to the use of material and labour were available to make efficiency audit possible. The Bill empowers the Registrar of Companies to inspect books of account and other books and papers of a company without prior notice. It seeks to provide against a situation under which the investing public is likely to lose heavily by contributing to the capital of a company which indulges in dubious practices not open to normal audit. Under the Bill, inter-company loans will rank at par with inter-company investments. It seeks to check malpractices in relation to takeover offers and the acquisition of shares of dissenting shareholders under a scheme or contract approved by the majority. It will also seek to prevent the destruction of incriminating accounts and records of a company which has been amalgamated with another company. It will permit investigations into the affairs of a company in spite of its voluntary winding up or even if the application for winding up remains pending in the court.

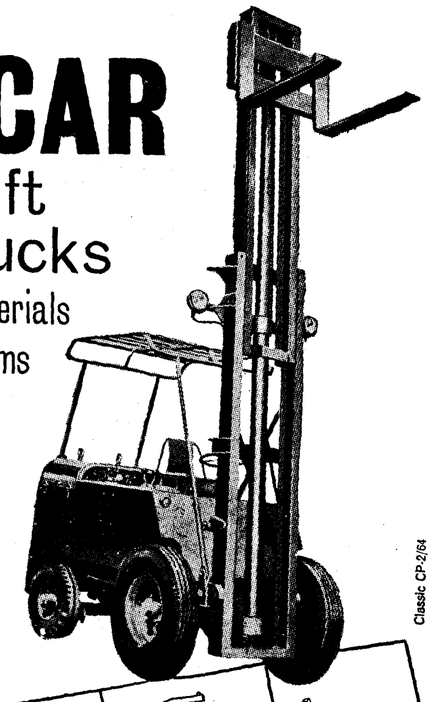
DEFENCE

Programme Outlined

In his statement in the Lok Sabha on Monday, the Central Defence Minister, Mr. Y. B. Chavan, gave the broad details of military assistance India has already got or has been promised by the U.K., Russia and the U.S.A. The British Government has promised to provide financial assistance towards the reconstruction of the Mazagaon docks in Bombay and the subsequent construction there of three Leander-class frigates. The Indian Navy is at present equipped with the British-built ships, including several destroyers, which are overaged and are due for replacement. India has accepted, in principle, the British offer and negotiations for loan and collaboration agreements with Vickers Ltd are progressing. Mr. Chavan did not make a secret of the fact that the U.S.A. had asked India to discuss her naval requirements with the U.K. But the Russian authorities had provided facilities to the Indian military mission to see the performance of their naval craft, including submarine, which the Soviet Union was in a position to supply to India. The technical details made available to the Indian mission are being studied, and it may take some time before a decision is reached on this matter.

Apart from technical evaluation, the financial feasibility of making additional purchases will need to be reviewed. Giving details of the Indo-Russian agreement, Mr. Chavan disclosed that Russia had agreed to supply a certain number of *M.I.G.-21* fighter aircraft and associated equipment. This will enable India to reequip three fighter squadrons with *M.I.G.-21* aircraft. In this connection, Mr Chavan explained that the U.S. authorities had pointed out that as India had already plans for equipping her air force with *M.I.G.s* and *H.F.-24*, the question of introducing another type of supersonic aircraft "may have to be studied further. In these circumstances, no final decision was taken." Side by side, the Russian Government, he added, has agreed to speed up the manufacturing programme of *M.I.G.s* in India. Under the August 1962 agreement, the Russian Government had agreed to provide plant and machinery, jigs and tools, etcetera, of Russian manufacture to facilitate the early establishment of the complex for manufacturing *M.I.G.* Arrangements for the supply of major assemblies, subassemblies and raw materials from Russia from the production of initial batches of the *M.I.G.-21* fighter aircraft have been finalised. In addition, the Russian Government has agreed to supply a certain number of light tanks and associated equipment. A contract has also been signed for the supply of 20 *M.I.-4* helicopters. The payment for these purchases will be made in Indian rupees to be used by Russia for the purchase of goods and articles from India under the existing agreement.

Indo-U.S. Pact



Mr. Chavan also discussed the details of the Indo-U.S. agreement under which immediate credit of $10 million for the purchase of defence articles and services was made available to India. The main item to be financed from this credit relates to the replacement and modernisation of plant and equipment in India's ordnance factories. Military assistance of the same magnitude will be provided during the U.S. fiscal year ending June 1965. This assistance includes the continued support for Indian mountain divisions, air defence communication equipment, transport aircraft and road building equipment for the Border Roads Organisation. In addition, further credit to the extent of $50 million during the 1965 fiscal year would be made available for, among other things, the artillery shell plant to be set up in Ambajhari.

Mr. Chavan said that the successful implementation of the defence plan

FLOCAR
forklift trucks
solve your materials handling problems

You scoop, dig, haul, raise, load, unload, stack, save third dimensions, time and money eliminating considerable cost.

First in India to produce Forklift Trucks of capacities 1000 to 5000 kgs., at 25" load centre.

FLOCAR

Classic CP-2/64

CARTER POOLER & CO. PVT. LTD.

REPAIR AND SERVICING DIV:—36/C, B. T. ROAD, CALCUTTA

would require continued assistance from the U.S.A. at current levels for which the U.S. authorities had agreed to hold periodical discussions. He added that the need for strengthening the defence production base in India had been fully recognised by the U.S. authorities. After detailing his defence plan, Mr. Chavan said that the modernisation programme for defence forces and the improvement of facilities for logistic support of armed forces would require an additional outlay of 10 percent to 12 percent in the defence Budget while the total foreign exchange requirements had been assessed at about three times the normal allocations. Foreign exchange will, therefore, continue to be the main bottleneck to the rapid expansion of India's defence forces required to meet the growing Chinese menace.

RUMANIA

Co-operation with India

The signing of a trade agreement in 1954, the visits to India in 1962 of a Rumanian State delegation, and the inauguration early in 1962 of the Gauhati refinery, are the signposts of economic co-operation between India and Rumania. After the conclusion of the first trade and payment agreement in 1954, the pattern of trade and turnover has constantly improved, and the co-operation between the two countries has been extended to the sphere of technical assistance.

Outstanding results have also been achieved in the petroleum sector. Rumanian specialists and equipment have helped India to use her resources of crude and gas. A number of Rumanian drilling rigs for various depths are now operating on India's oilfields. And apart from oilfield equipment, Rumania has exported to India numerous tractors, road rollers, metal working machine tools, high voltage electric transformers, diesel engines, electric and water meters, lubricating oils, sodium products, carbon black, dyestuffs and intermediaries, various chemicals and paper. In exchange for these commodities Rumania has imported from India a number of her traditional export products such as tea, pepper and coffee and also iron ore, ferro-manganese, cotton yarns, jute sacks, vegetable oils, shellac and mica.

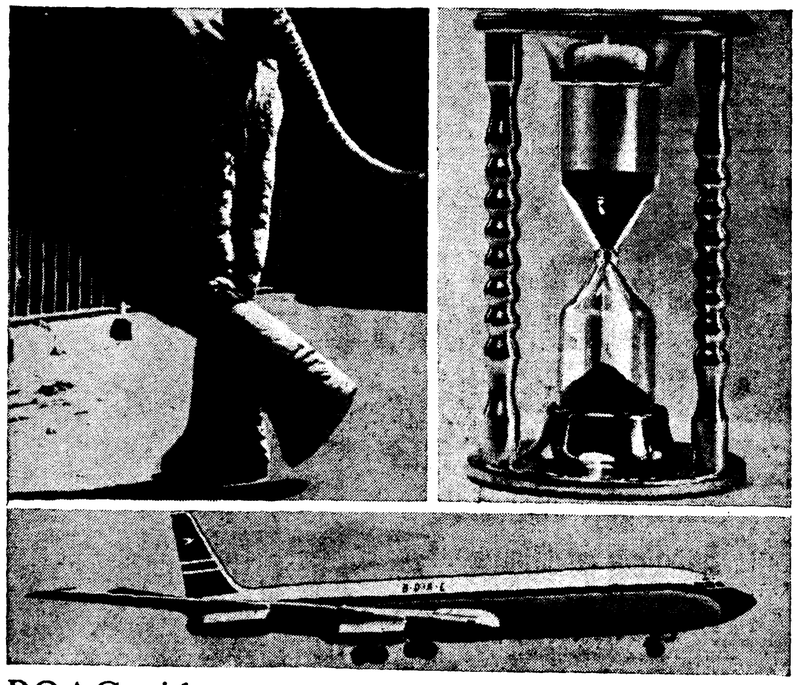
CENSURE MOTION

Rejection by Lok Sabha

The Lok Sabha, as was expected, rejected by a large majority, the no-confidence motion moved by an independent member, Mr. N. C. Chatterji and his allies, included in which were communists. The food shortage, the steady rise in prices and corruption were the main targets of attack by the Opposition. The communists, in particular, accused the Government of drifting away from Mr. Nehru's policies.

The Prime Minister was in a mood of introspection. Referring to lack of co-ordination among different departments, the Prime Minister said that it could not be allowed to continue and that the responsibility for individuals has to be fixed in the future.

Dealing with the Community Development Projects, Mr. Shastri said that all jeeps from these areas should be withdrawn and bloc officers should walk from village to village, mingling with the cultivators. The department, meanwhile, should concentrate on raising agricultural production and "nothing else".



Referring to the price support policy for foodgrains, the Prime Minister appealed to the members to co-operate with the Government. "It is very easy to form unions and organisations and demand higher wages and I think it might be done. But to begin with, if we start with this kind of approach to the price support policy, we might be killing the scheme itself."

Mr. Shastri also referred to the present attitude of the States which invariably show a tendency to depend on Central assistance. They do not put in their best effort to produce more, because they know that ultimately the Centre will find foodgrains for them. As for corruption, the Prime Minister emphatically repudiated the allegation that India was seething with it. India, he said, is a country where integrity is given the highest consideration and the highest respect. This country, by and large, is an honest country and has maintained certain standards.

The Central Finance Minister, Mr. T. T Krishnamachari, dealt with the present economic situation. He also outlined the features of the fourth plan. He said that the country could not rest content with anything less than a 5-percent rate of increase in the agricultural output and the development of agriculture could not proceed without an adequate support from industry. The plan must be treated as an organic whole and there is no question of competition between agriculture and industry.

The country must endeavour to concentrate on: (1) the production of goods such as fertilisers, insecticides, agricultural implements, including tractors, pumps and diesel engines, required urgently for giving a boost to the agricultural programmes; (2) early completion of heavy engineering and other engineering industries already taken in hand and such additional projects as are deemed necessary for balancing the programmes and providing a sound basis for future industrial development; (3) the stepping up of production of both pig iron and steel from the expansion schemes in hand as well as those already contemplated at the present units besides Bokaro, and the establishment of additional capacity for non-ferrous metals, aluminium, copper and zinc; (4) increased production of consumer goods, such as textile, sugar, drugs, kerosene, and

paper; (5) expansion of production of cement and other construction materials to meet the increasing demands; and (6) the production of petrochemical products like synthetic fibres to substitute imported cotton and wool, based on products obtained concurrently with kerosene in India's refineries.

Taking into account the foreign exchange shortage, efforts have to be made in the following directions:

(a) Complete the programmes in hand and secure as much output from each of them as possible;

(b) use the idle capacity by augmenting the supplies of required components and materials to the existing units and giving preference to priority and essential industries, wherever the availabilities fall short of the overall needs;

(c) to give preference to the expansion of the existing units over the establishment of new units wherever conditions justify, as this will help secure additional capacity with minimum investment;

(d) in working out priority between schemes of equal importance, to give preference to fast maturing schemes over those which are likely to have longer gestation periods; and

(e) similarly, in the case of industries which offer export possibilities or import substitution they will get preference over others not similarly placed.

WEST GERMANY

Investment Pact Finalised

The Indo-German pact on investments has been finalised and should be signed at an early date. Firstly, the West German Government has accepted India's contention that the agreement should apply to such German assests in India which were covered by the West German Government guarantee scheme. Secondly, any dispute relating to the amount of compensation, shall be referred to an arbitration tribunal to which India and West Germany would nominate one representative each and they, in their turn, would nominate a referee. In case of difference of opinion in relation to the nomination of a referee, the latter would be nominated by the International Court at the Hague, which will also nominate representative or representative of the parties in dispute, in the event of their failing to nominate their representatives. For the purpose of adjudication, laws of neither India nor of West Germany would be applicable.

Reference was made in these columns last week to the West German credit of 270 million deutschemarks. The credit includes loans to the I.C.I.C.I. of 5 million deutschemarks, to the Industrial Finance Corporation of 15 million deutschemarks and to the National Small Scale Industries Corporation of 5 million deutschemarks, including 82 million deutschemarks for the purchase of ships which is over and above the credit of 270 million deutschemarks. The West German Government is a guarantor to this credit which is for ten years.

STEEL

Talks on Fifth State Plant

Following the visit of Mr. Hindson of Wellman Smith to New Delhi last week, it has been agreed by the Central Ministry of Steel to discuss with the members of the Anglo-American consortium their proposals to build the fifth State steel plant. Messrs Foy and Vance Brand of Koppes and possibly a representative of the International General Electric representing the U.S. wing and Messrs Hindson and Maurice Fines representing the U.K. wing of the consortium are expected here on 3rd October to discuss their proposals with the Central Ministry of Steel. The discussions will last till 7th October. There are three feasibility reports for the Goa-Belary-Hospet area, the Bailadilla-Visakhapatnam area and the Salem-Neyveli area, all in south India. There is also a preliminary report on the second steel plant in the Sundargarh and Keonjhar districts of Orissa. The Central Steel Minister, Mr. Sanjiva Reddy, recently said in Parliament that as far as the fifth steel plant is concerned, the main problem of the Government was to find the financial resources to cover the foreign exchange component of the outlay. The possibility of setting up the fifth steel plant will, therefore, be discussed with the representatives of the Anglo-American consortium who are expected next month.

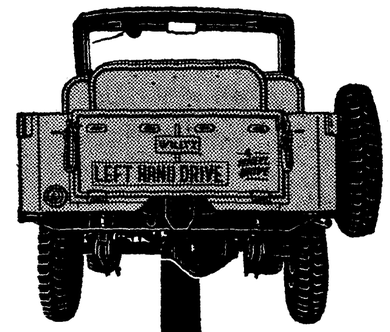
Earlier, the Minister said in a Press conference that the selection of the site would largely depend on the advice tendered by the consortium. It may be added here that a number of copies of the feasibility studies of the three plants in south India have already been made available to the consortium. The members of the proposed British consortium are also expected here on 7th October to hold discussions on the further expansion of the Durgapur steel plant to 3 million tons. Messrs Hindson and Maurics Fines are the common members of the two consortia. Other two members are Mr. David Barrit of Simon-Carves and the representative of Head Wrightson who are expected here on 7th October. The discussions will last till 13th October. The British Government has already announced its commitment to finance the second expansion programme of the Durgapur steel plant. Having awarded the building up of the Bokaro steel plant on a turnkey basis, it will be difficult for the Indian Government to discriminate against Britain by refusing the offer of the proposed British consortium. The main problem for discussions, therefore, may be how to fit in Indian technicians in building up the capacity of the Durgapur steel plant to 3 million tons. The Russian method of associating Indians should be adopted by western countries, it is suggested. As for the Bokaro steel plant, Russians are now engaged in preparing a fresh technical report which should be ready by March 1965. Their team of experts is expected here next month.

FOREIGN EXCHANGE

New Amendment Bill

The Central Finance Minister, Mr. T. T. Krishnamachari, introduced in the Lok Sabha last week a Bill to amend the Foreign Exchange Regulation Act. The principal amendments proposed in the Bill are as follows:

(a) It empowers the Reserve Bank of India to control the transfer of shares of a foreign company from a register outside India to a register in India and to regulate the giving of guarantees by persons resident in India for debts or liabilities of persons resident outside India;



(b) It seeks to control and regulate payments or remittances in favour of a non-resident in accordance with any settlement of property by will as well as by gifts;

(c) It will control and regulate the appointment of foreign companies, firms or branches thereof as the agents or advisers of companies and firms in India;

(d) It will require airlines, shipping companies and travel agents to obtain the general or special permission of the Reserve Bank

(e) It will prohibit unauthorised dealings in foreign exchange brought in by tourists and tighten the control over such dealings;

(f) It will confer additional powers on officers of the Enforcement Directorate similar to those conferred by the Customs Act, 1962, on officers of the Customs Department, for the search and arrest of persons, search of conveyances and premises and in

PARTICULAR SERVICING FOR PARTICULAR PEOPLE

It means more life, more mileage if your Jeep is serviced by Jeep Dealers. It is oiled, cleaned, tuned and adjusted by people who know each nut and bolt of the Jeep. AGRICULTURE

New White Paper

A comprehensive White Paper on the Government's plans for agricultural development would shortly be placed before Parliament for discussion. Mr. C. Subramaniam, Central Minister for Food and Agriculture, announced this while initiating a three-day food debate in the Rajya Sabha last week. Mr. Subramaniam re-affirmed the Government's determination to give to the producer "remunerative and incentive" prices and fix the wholesalers, retailers' and consumers' prices.

Indicating the guide-lines of the Government's approach to tackling "a very difficult and complicated problem", Mr. Subramaniam said that food and agriculture were intrinsically connected and therefore without an integrated policy on production, distribution and price, "we may not be able to find proper solutions". He rejected the theory of "depressing" agricultural prices to satisfy urban consumers and said that unless the producers were guaranteed "remunerative and incentive prices", agricultural production would suffer and we will continue to be in a backward condition in agriculture".

After fixing producer prices, the Minister said, that "reasonable" consumer prices would be fixed taking into account processing, transport and handling charges. "Reasonable margins" would be provided for wholesalers' and retailers' prices. Mr. Subramaniam said that the Jha Committee's recommendations for prices would be implemented for the forthcoming *kharif* and the succeeding *rabi* season.

The Minister told the Consultative Committee of Parliament, attached to his Ministry, that the Foodgrains Corporation which was expected to start functioning in January 1965, would make every effort in procuring as large a proportion of the marketable surplus as possible.

There was also no proposal before the Government at present to nationalise all the rice mills in the country. These mills were relatively old fashioned and did not give an adequate return. The six modern rice mills for which the Government had already placed orders abroad, would be run in the public or the co-operative sector. They would go into production in 1965. The Government proposed to encourage Indian manufacturers to produce a suitable type of mill in due course but not later than the fourth plan period. The public or co-operative sector was expected to acquire a large number of these mills and reach a commanding position in the processing of paddy. For the present, the State Governments had been advised to give preference to co-operative societies in setting up new rice mills.

Further Incentives

The question of further incentives to step up sugar production was one of the subjects referred to the Sugar Enquiry Commission which had recently been appointed under Dr. S. R. Sen of the Planning Commission. Mr. Subramaniam informed the Committee that the Commission had submitted an interim report, containing recommendations for the coming season. He hoped that it would be possible to examine the recommendations and announce their decisions before the end of this month.

Mr. Subramaniam added that the Commission had also made some recommendations on the manufacture of *gur*.

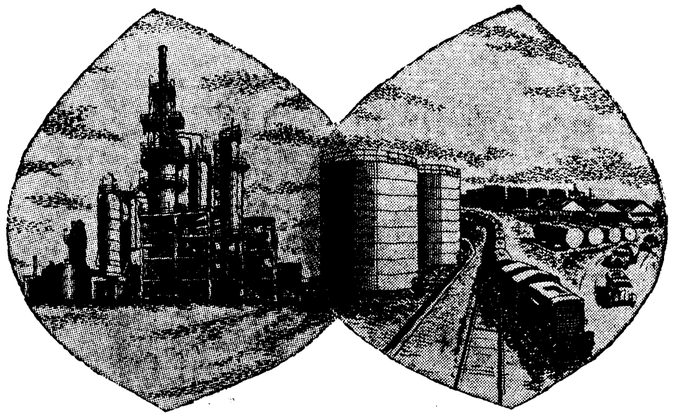
As for the expansion of crushing capacity, Mr. Subramaniam said that licences for the setting up of some new mills and the expansion of the existing capacity to a certain extent had already been issued. The Sen Commission had been asked to recommend a rational policy of new licensing as well as of expansion of the existing capacity. The Government hoped to be able to take decisions on this matter as soon as the Sen Commission reported. Similarly, a decision will be taken at an early date on the modernisation of sugar mills. The Gundu Rao Committee, which had been appointed to look into this aspect, would be submitting its report very soon. He described some of the existing factories as obsolete and a national waste.

U.S. Mission Arrives

Dr. Willard W. Cochrane and Messrs Arthur Thompson and Martin Abel have arrived here from the U.S.A. to work with Indian officials in order to devise a practicable system of incentives to encourage farmers to increase production. Dr Cochrane wants to "think through' the problem of setting up the price support programme for specific commodities, particularly foodgrains.

The four-man team of grain handling experts has also arrived here It includes: Mr. Howard J Marsden chief of the Division of Ports, U.S Maritime Administration: Dr. P. B. Buck, Technical Director, Maritime Cargo Transportation Conference; Mr John R Arwood, General Manager, Continental Grain Company, New York; and Mr Joseph E. Bailey, Assistant Superintendent, Cargil Terminal Elevators, Minneapolis.

Mr. J. Royce, chief of the Mining and Transportation Division, U.S. A.I.D. will accompany the team during its visit to Bombay, Kandla, Madras and Cochin.



BONUS DECISION

Clarification by Minister

The Central Minister of Labour and Employment, Mr. D. Sanjivayya, made the following statement in the Lok Sabha last week. He said that the Government proposed to undertake legislation to embody the principles by which tribunals or other judicial bodies should be guided if and when disputes relating to bonus came up before them. The Government, however, expects that the parties will voluntarily give effect to the above decisions, in settling the question of bonus till the proposed legislation is enacted.

Since the publication of the resolution containing the decisions on the Bonus Commission's report, a large number of representations have been received from various labour organisations. It has been pointed out that, according to the decisions of the Government, in the case of certain industries or establishments the bonus payable would be actually less than what the workers have been getting in the past. The decision taken by the Government on the Bonus Commission's report will provide for the payment of bonus to large number of workers who were not getting any bonus previously and also give enhanced bonus to many others who were getting less in the past.

At the same time, it was not the Government's intention that benefits which labour may have been enjoy-

Indian Refineries Ltd. merge with Indian Oil Co. Ltd.

to form **INDIAN OIL CORPORATION LIMITED**

The Indian Refineries Limited and Indian Oil Company Limited have merged to form the Indian Oil Corporation Limited. With an authorised capital of Rs. 75 crores, the Corporation will rank among the 10 biggest companies of the country, judged from the capital investment.

The Corporation has two divisions—Refineries Division and Marketing Division. The Refineries Division will manage the public sector refineries and the Marketing Division will distribute not only the entire production of public sector refineries but also the deficit products imported from abroad. Spurred by the increased tempo of industrialisation, mechanisation and growing defence requirements, India's demand for petroleum products is bound to grow and INDIAN OIL will contribute its share towards meeting the nation's needs.

The Corporation will ensure that only such quantities and qualities of products as preferred by the market would be produced by the refineries. Better co-ordination and greater efficiency will result in economical operation and better service to consumers.

ing in the matter of bonus in any establishment or industry should in any way be curtailed by the adoption of a new formula for the payment of bonus.

In the circumstances, the Government wishes to clarify that in the legislation to be enacted to give effect to the recommendations of the Bonus Commission as accepted by the Government, suitable provisions will be included so as to safeguard that labour will get in relation to bonus the benefits on the existing basis of the new formula, whichever is higher.

RAW MATERIALS

Scope for New Body

The terms of reference of the seven-member committee, set up by the Central Government to examine the allotment and utilisation of scarce raw materials as between the different sectors of industries, have been announced.

The committee will examine how best to secure the equitable distribution of available scarce raw materials among the three sectors, namely, the scheduled sector units with a capital of over Rs. 25 lakhs; units with a capital of above Rs. 5 lakhs and not more than Rs. 25 lakhs; and small-scale units with a capital not exceeding Rs. 5 lakhs.

The committee will also examine how best to ensure that the materials so allotted are utilised to the fullest advantage for the purpose for which they are allotted.

The scarce raw materials, distribution and utilisation of which will be examined by the committee, shall include raw materials and components licensed by the Chief Controller of Imports and Exports; steel, both indigenous and imported; non-ferrous metals and basic organic chemicals and intermediates; basic inorganic chemicals like caustic soda, soda ash, titanium dioxide, etcetera, pharmaceuticals and drugs; plastics, synthetic and natural rubber, etcetera. The committee will submit its report within three months.

AUSTRALIA

Talks on Trade Expansion

A trade delegation, led by Mr. O. K. Srinivasachar, Joint Secretary, to the Central Ministry of Commerce, has left for Sydney for talks the expansion of trade and economic co-operation between India and Australia. This will be the third round of talks between the two countries; the first two rounds were held in New Delhi in November 1963 and March this year.

The main object of the talks will be to identify the fields in which larger exports and imports can take place and also to see to what extent technical skill and industrial know-how can be exchanged between the two countries.

WOOLLEN TEXTILES

Prospects for Exports

There is considerable scope for stepping up the exports of Indian woollen textiles, according to a report of a team of experts, who made a study on the advisability of modernising the woollen will industry in the country. The study, from both the economic and technical points of view, was undertaken at the invitation of the Government of India by the experts of the International Wool Secretariat.

The report says that there is considerable scope for stepping up the exports of Indian woollen textiles if at least a part of the industry is modernised. As a result of the modernisation of about 200 loom assemblies, it should be possible to earn additional foreign exchange to the extent of £650,000 a year. The experts are of the view that the industry will be able to produce cloth of excellent quality and will be in a position to export even to the most sophisticated markets at competitive prices. It should be possible, they say, for the Indian woollen textile industry to export up to 2 million metres of cloth within a period of four to five years. The foreign exchange requirements for modernisation will have to be obtained on the basis of long-term loans at reasonable rates of interest.

The report recommends the establishment of a strategic reserve or stockpile of imported raw materials as a measure of safety to be used for supply to the industry against prospective export orders. This would save time and ensure that the requirements of raw materials are readily available to meet export orders. The report has also suggested an increase in the amount of export assistance to enable the industry to achieve the export target within a very short period. The report is being considered by the Government.

POWERLOOMS

Report of Expert Body

The committee set up by the Government of India, under the chairmanship of Mr. Asoka Mehta, to enquire into the problems of the powerloom industry, has recommended that the All India Handloom Board, which at present functions in an advisory capacity, should be made a statutory body and entrusted with the implementation of all development schemes relating to the handloom and powerloom industry. The Board, it says, should also be given adequate funds for this purpose.

The committee has proposed that the scheme of conversion of handlooms into powerlooms, which had been discontinued in 1961, should be revived and 10,000 powerlooms should be introduced in the handloom sector in the co-operative sphere during the third plan period. These looms should be installed with Government assistance at the rate of Rs. 6,000 for installation of a loom and Rs. 2,700 for working capital, making a total of Rs. 8,700 for each loom.

The committee has said that the installation of an additional 60,000 powerlooms in the cotton sector to meet the increased requirements of cloth during the fourth plan period and similarly an additional 40,000 powerlooms in the man-made fibre sector will be required. The installation of powerlooms in the man-made fibre sector will, however, be phased with the availability of yarn. The

Travelling beyond the field of thermal power generation in India, where giant power plants bear witness to its technological finesse, Kuljian has long since become active in the field of steel and metallurgy. Already technical consultants for the Mahindra-Ugine Alloy Steel Plant in collaboration with Cetig of France and for a number of steel casting foundries in the public and private sectors in several States, Kuljian offers all or any of the following consultancy services to the iron and steel industry with the same confidence as it has been displaying in the field of power generation for the last 15 years

■MINING AND BENEFICIATION OF ORES AND FUELS ■INTEGRATED STEEL PLANTS ■EXTRACTIVE METALLURGY ■ELECTRIC SMELTING OF IRON AND FERRO ALLOYS ■BLAST-FURNACE IRON PLANTS ■NON-FERROUS METALLURGICAL PLANTS ■FOUNDRIES AND MACHINE SHOPS.

allocation of the additional 100,000 powerlooms should be made on the basis of the number of handlooms registered in different States.

The committee has recommended that the marketing of cloth and its processing by the powerlooms industry should be arranged on a co-operative basis. The powerlooms industry should be eligible for assistance from the State Financing Corporations, the State Bank and commercial banks in addition to assistance under the State-Aid to Industries Act.

Among the other important recommendations and observations are the following: The production of *dhoties* and *sarees* by mills should be pegged at the 1963 level and the production of coloured *sarees* should be exclusively reserved for the handlooms. Powerlooms and handlooms should be asked to adjust their pattern of production with a greater emphasis on the manufacture of medium varieties of cloth.

The entry of the decentralised sector in a big way in the supply of cloth during the fourth plan will serve to exert a healthy influence to the advantage of consumers. Additional production for the fourth plan period should be exclusively in the decentralised sector and mills should not be given any additional loomage.

The estimated total requirements of powerlooms for installation and replacement every year till the end of the fourth plan are about 32,000. A phased programme for increasing the production should be drawn up. There should be no restriction on the manufacture of powerlooms.

Both handlooms and powerlooms should be able to draw their requirements of yarn from a common pool of co-operative spinning mills.

Cotton textile mills should not be debarred from using staple fibre yarn and other man-made fibre yarn.

TEXTILE MACHINERY

Expanding Production

The chairman of the Development Council for Textile Machinery, Mr. Prabhu Mehta, while speaking at the meeting of the Council last week, referred to the expansion of production of textile machinery. He said that from the production worth about Rs. 7.6 crores in 1958, the industry has manufactured complete machines worth Rs. 20.2 crores in 1963. There has also been an appreciable increase in the production of spares in the organised sector. This is an average increase of about 30 percent per year. For a machine-making industry, this could be considered a satisfactory progress.

The industry estimates, while considering the average growth of the population for the next seven years ending March and projecting this growth rate to the fifth five year plan, that the textile industry in order to achieve a modest consumption of 16.8 metres of cloth, may need approximately 18 million or 19 million spindles and 250,000 looms by the end of the fourth plan and approximates 21 million or 22 million spindles and 300,000 looms by the end of the fifth plan. The present installed capacity of the textile industry was about 14 million spindles and 2.2 million looms.

Mr. Mehta added that "finance is important to any industry. It has become more to us. We are called upon, because of the foreign competition and the shortage of available finances with our consuming industries, to sell our machines on deferred payment terms. Our competitors are offering ten-year credit facilities at a very low rate of interest. The indigenous industry is unable to offer similar credits because of the peculiar stand banks have taken in India. In spite of the buyer's guarantee and the buyers' banks' irrevocable guarantee, the machinery manufacturers' banks insist on debiting the machinery manufacturers' account, the value of deferred payment sales. This considerably affects the creditworthiness of the industry. The industry finds itself very much short of production finances. This is the major problem which the Council is urgently called upon to tackle. It has an effect of reducing the indigenous production and also diverting a part of our trade to other foreign countries where the imports can be had at very tempting terms."

New Import Agreements

Agreements have been concluded between the State Trading Corporation of India and two British companies for the import of cotton and woollen textile machinery. The terms of import are as follows:

Import of cotton textile machinery from Platt Brothers, U.K.: (1) An initial payment of 5 percent of the total value of the contract by direct transfer to the seller or to the Midland Bank Ltd., overseas branch, London, for credit of the seller's account to be received within 30 days of the signing of the contract;

(2) A confirmed and irrevocable letter of credit for 5 percent of the total value of the contract to be established in London in favour of the seller payable on presentation of certificate from the Midland Bank Ltd, of the first payment to the seller. All expenses relating to the opening, confirming and extending of the above letter of credit will be borne by the seller;

(3) Two further payments each of 5 percent of the total contract value by the buyers, promissory note issued on the date of contract in favour of the seller and guaranteed by the Government of India payable, respectively, 21 and 30 months after the date of contract;

(4) For the balance of 80 percent of the total f.o.b. value of the equipment, a financing agreement has been entered into with the Midland Bank according to which they will pay to Platt Brothers the 80 percent of the f.o.b. value of the machinery on presentation of the bills of lading. The State Trading Corporation would be required to pay to the bank by promissory notes, maturing every six months over a period of ten years.

(5) The rate of interest on 80 percent will be 5½ percent a year on amounts outstanding up to seven years, and 6½ percent a year on amounts outstanding beyond seven years (free of tax).

Import of woollen textile machinery from Messrs Prince Smith and Steels Ltd, U.K.: (1) ten percent of the f.o.b. value to be paid within 14 days of the placing of orders.

(2) Further 5 percent of the f.o.b. value on presentation of shipping documents.

(3) The balance of 85 percent of the f.o.b. value in 20 equal successive half-yearly instalments; first instalment to start from six months after the date of shipment.

(4) Interest to be paid at 6 percent a year on the diminishing balance outstanding on the date of payment.

EAST GERMANY

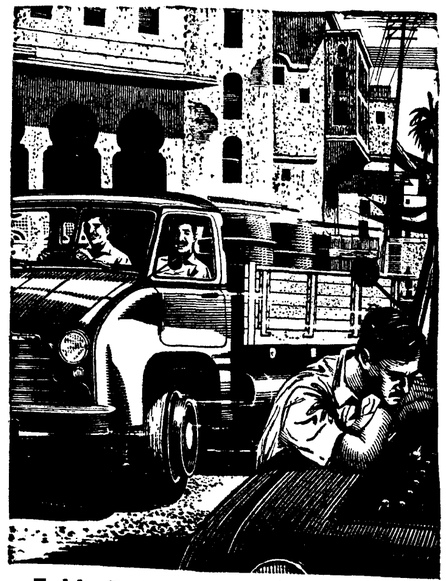
Trade Pact Extended

Letters were exchanged here between Mr. D. S. Joshi, Secretary to the Central Ministry of Commerce and Mr. Kurt Epperlein, leader of the trade delegation of East Germany extending the existing trade arrangements between the two countries for a period of three years up to 1967. The volume of trade between India and East Germany which has been increasing in a satisfactory manner is expected to reach a level of over Rs. 40 crores both ways by 1966.

East Germany will import from India engineering goods like motor-vehicle components, textile machinery and accessories, radiators, machine tools, tropicalised and electrical equipment, storage, batteries, chemicals, drugs and textiles (cotton and art silk). This is in line with the agreed policy between the two countries to diversify and extend the export and import of non-traditional goods. East Germany will continue to import items like coffee, tea, deoiled cakes and other traditional goods.

India will import from East Germany fertilisers like ammonium, sulphate, muriate of potash, various items of industrial raw materials like alloy steel, pig iron, caustic soda, heavy soda ash, dye intermediates and various chemicals. She will also supply machine tools, rotary printing machines, and other printing machinery, textile machinery and various other items of capital goods. East Germany has recently made an offer of a substantially large loan to India for development projects. The question did not come up for discussion.

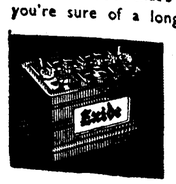
H. M. T.



Pacts with Foreign Firms

Hindustan Machine Tools Ltd has concluded agreements with Messrs Manurein of France for the manufacture of single-spindle automats in Kalamassery, Kerala, and with Messrs Fritz Werner of West Germany for the manufacture of milling machines in Pinjore.

KERALA



Precision Instrument Plant

Pudussery in the Palghat area has been selected as the site for the precision instrument factory in Kerala. A Company by the name of Instrumentation Ltd has been registered in Kotah, Rajasthan, for the implementation of the two projects in Kotah and Kerala. The contract for the preparation of the detailed project report and working drawings for the establishment of the mechanical instrument plant in Palghat with Messrs Prommashexport, Moscow, has already been signed. The detailed project report is expected to be received early in 1965.

Exide Batteries still keep going when the rest have stopped

London

U.K. ECONOMIC PROSPECTS AND THE ELECTION

(FROM OUR LONDON CORRESPONDENT)

AS anticipated, the polling day in the general election will be 15th October. With the announcement from 10, Downing Street, the Party leaders went into immediate electioneering through the medium of television. Both channels switched their evening programmes to give the viewing public a special election battle pre-view in the form of interviews with Sir Alex Douglas Home, Mr. Wilson and Mr. Grimond. All three Parties have also now released their election manifestos, and it is evident from these that the economic situation will play an important rôle in the campaign, for much of the domestic programmes will depend on finding the money to finance them. The Conservatives are banking on their record over the years that they have been in office, but there is no lack of criticism from the other two Parties. It is pertinent, therefore, to keep abreast of developments in the economic sphere.

Whatever else in the economy may have stopped growing, the boom in fixed capital investment by industry is still going strong. This is borne out by new figures from the British Board of Trade which show that capital expenditure in manufacturing industry was moving firmly upwards in the second quarter of this year, but that many projects had not by then advanced beyond the building stage. Also out simultaneously are new statistics on the growth of industry's stocks. The further big rise in the second quarter (£129 million at 1958 prices) goes some way towards explaining why imports remained so high in these months when it had been hoped they would start to fall.

Capital expenditure by industry is estimated to have risen in the second quarter by another 4 percent in real terms on top of increases of 5 percent in each of the two preceding quarters. At £536 million, the total for private investment was not far short of the level reached in the third quarter of 1961 at the top of the last investment cycle and higher than that of any subsequent quarter.

The significant point, however, is the recovery in manufacturing investment. This moved up by 5 percent in the second quarter, reaching a level 12 percent higher than at the bottom of the cycle in early 1963. But the real growth so far has been in the volume of new building work, where the increase compared with a year ago was of the order of 20 percent. Expenditure on vehicles was also up again; but this is not a major part in total investment. Investment on plant and machinery, on the other hand, was only 8 percent above the rate in the first half of 1963.

In other words, Britain has yet to reach the stage in the current investment boom where factories are equipped ready to come on stream. Unless business plans are revised, therefore, expenditure on capital formation is likely to remain high at least into the early part of 1965, and may, indeed, not yet have reached the peak. It is, of course, possible that a change in Government policy (or, for that matter, a change of Government) could result in some projects being left uncompleted. But if industry sticks to its present intentions and exports go up as well, industrial output, having been rather flat so far this year, should pick up smartly.

Steadier Investment

Investment in the distributive and service trades has all along been much steadier. But it, too, showed a rise (of around £10 million, or 4 percent) between the first and second quarters. The growth was entirely in outlays on new building work and vehicles. Investment in plant and machinery was more or less unchanged, although at a level 20 percent above the 1963 average. The stock figures are not easy to interpret. Total stocks in industry rose by £129 million. This is close to the National Institute's estimate of the increase needed in that quarter if the build-up in stocks was to keep pace with a 4 percent growth in the economy. In fact, if one is to believe the production figures, domestic output was not growing in that period.

This could mean that industry was left at the end of the quarter with larger stocks than it actually needed, in which case import figures in later months could show a falling off. One possible piece of evidence in support of this is the big rise—about £50 million—in manufacturers' stocks of finished goods. These could be goods made but not sold because consumer spending failed to come up to expectations.

On the other hand, it may be that both these finished goods and the larger stocks of materials and work in progress which industry was holding, were needed to fill up the pipelines. On the National Institute's calculations, the ratio of stocks to output was abnormally low early this year. Again, business men may have assumed that the slackening in demand was just a temporary phase. In that case, there may be no marked fall in imports for some time yet, especially if industrial output now begins to move ahead again. Will this happen? Unfortunately, once again the Central Statistical Office reports that its index of industrial production, seasonally adjusted, has remained unchanged for the seventh month running. For all industries, the provisional figure for July is 127 and for manufacturing industries only it is 128—in both cases, the same as for the previous six months with one slight deviation in May.

Capital Equipment

Statisticians are frankly puzzled. Everybody knows how much has been going into British industry since the beginning of the year in terms of additional raw materials, manpower and capital equipment. Whenever industrial managements are asked, they report buoyant conditions and expect further expansion. Yet, the production index, which is based on some 800 individual output figures, simply refuses to budge. It is true that the level of the plateau is high. For the first seven months of 1964, it is 9½ percent above the first seven months of 1963; and though this exaggerates the rise because of the severe winter of last year, general industrial activity certainly looks like running at least 7 percent above a year ago, which is not a bad rate of growth.

However, the way in which the economy has been absorbing unemployed labour and resources without apparently yielding increased production over seven months suggests something like constipation. Productivity must be falling badly if the figures are to be trusted. In fact, the temptation to distrust the figures is almost irresistible. The Central Statistical Office says: "Fuller information, which has led to revised estimates for the first and second quarters of 1964, shows that the strong expansion in production which took place in 1963 continued into the first quarter of 1964, but slackened off in the second quarter, which showed a fractional increase over the first quarter. The provisional index for July is at about the same level as the second quarter, but since the difficulties of estimating seasonal adjustments are more acute in the holiday months of July and August, the figure for July must be treated with caution."

The upshot of all this is that the index numbers for all industries (adjusted) have been raised by one point to 127, but still left unchanged for seven months, while those for manufacturing industries are now 128 for the whole period except for May, when the figure has been raised to 129. The picture of a "plateau" is still there, but it is slightly elevated.

Payments Deficit

Meantime, the Bank of England states in its quarterly *Bulletin* that in the first half of this year, on top of a large payments deficit on current account, there was an unusually large net outflow of long-term capital, chiefly in private account. "This is unlikely to be maintained," the Bank says. It was already known that overseas investment was heavy in the first quarter; apparently, this continued on a large scale in the second quarter.

One would hardly go far wrong in guessing that the oil industry was prominently concerned. At the same time, the *Bulletin* shows that there was a large inflow of short-term funds, both sterling and foreign currency. Thus, the second quarter alone brought a rise in gross foreign currency liabilities of £114 million. These funds came largely from North America.

Together with a further increase in the deposits of sterling area countries, this inflow largely financed the U.K. deficit and protected the reserves. In the second half-year that is not likely to happen to the same extent. As a result, the Bank says, "some loss to the reserves must be expected." Discussing the economic outlook, the Bank of England is as puzzled as everybody else by the disappointing trend of the recent overseas trade figures. It points out that "a renewed rise in exports is essential if expansion is to be sustained." It goes on to remind us that the U.K. cannot afford a rise in costs and prices and must, at all costs, find an incomes policy.

Moreover, "the bid for sustained expansion and persistence with this bid through balance of payments difficulties, can only succeed if the best use is made of all the country's resources." There is no place, the *Bulletin* continues, for the wasteful use of labour, whether resulting from restrictive practices or shortcomings in management, any more than for the wasteful use of machinery or imported materials—for example.

Jute

I.J.M.A. HELPS RAISE FIBRE YIELDS IN PILOT PROJECTS

THE Indian Jute Mills Association has succeeded in raising the per acre yield of jute appreciably in a number of experimental development blocks run by it. Against the all-India average of 2.5 bales an acre, the intensive cultivation blocks of the I.J.M.A. in the Nadia district of West Bengal have yielded as much as 5 bales an acre in 1963-64. The output, it is expected, will be maintained at this level despite adverse weather conditions early this season. The intensive cultivation blocks in the Murshidabad district, which have a poorer soil, have yielded between 3.97 bales and 4.60 bales an acre during the last three seasons, against the district average of 2.75 bales. Similar increases in output have been reported from other development blocks in the State.

In the Purnea district of Bihar, the average yield varies from 2 bales to 2.5 bales an acre. Since the introduction of intensive cultivation by the I.J.M.A. in some experimental blocks two years ago, the average yield in one of the selected blocks has risen to 3.65 bales. In the Balajan and Nowgong intensive cultivation blocks in Assam, the yield has risen to 4.26 bales and 3.89 bales, respectively. Likewise satisfactory results have been recorded in some I.J.M.A. blocks in Orissa and U.P. Even in Andhra Pradesh, the yield has registered an average increase of 0.7 bales over the State average.

These experiments have aroused keen interest among farmers in raising the yield by using improved methods. Cultivators of some of the blocks, it is reported, have formed their own jute development committees for teaching other cultivators the technique of increasing the output from the same plot of land. The I.J.M.A. provides cultivators in the selected blocks with implements, improved seeds, plant protection chemicals and equipment, and encourages the use of manures by offering a small subsidy. For the supply of seeds, the Association has set up its own seed multiplication and distribution organisation. Seeds are sold at fixed prices and their quality is guaranteed. The sale of seeds is subsidised by the Government. In addition, new methods of applying nitrogenous fertilisers have also been introduced.

The average yield an acre in India is about 2.5 bales compared with 3.5 bales in Pakistan and four bales in Thailand. If the Indian jute industry has effectively to counter Pakistani competition, the yield will have to be raised to 3.5 bales at least. This is actually important if the Indian cultivator is to raise his standard of living.

Spurt in Gunny Offtake

A further rise in internal consumption from 27,200 tonnes in July to 31,300 tonnes in August has enabled the mills reporting to the I.J.M.A. to step up the total despatches of gunnies from 107,900 tonnes to 114,900 tonnes. Of the total offtake, that of heavy goods rose from 38,300 tonnes to 48,900 tonnes, and of carpet-backing from 7,000 tonnes to 7,100 tonnes. The offtake of hessian declined by 1,300 tonnes to 47,500 tonnes, and of other goods by 2,400 tonnes to 11,400 tonnes.

Exports have been about maintained, being 80,600 tonnes, against 80,700 tonnes. The increase in exports of backing from 19,000 tonnes to 22,700 tonnes has been almost offset by the decline in shipments of hessian from 61,700 tonnes to 42,800 tonnes and of miscellaneous goods from 10,000 tonnes to 8,000 tonnes. Exports of carpet-backing cloth have risen nominally from 7,000 tonnes to 7,100 tonnes. The internal offtake of sacking has risen from 19,300 tonnes to 26,200 tonnes and of hessian from 4,100 tonnes to 4,700 tonnes. The consumption of other goods has declined from 3,800 tonnes to 3,400 tonnes.

In August 1963, the total offtake was 106,000 tonnes—44,900 tonnes of hessian, 45,000 tonnes of heavy goods, 5,600 tonnes of carpet-backing cloth and 10,500 tonnes of other goods. Exports absorbed 82,000 tonnes—41,700 tonnes of hessian, 26,600 tonnes of sacking, 5,600 tonnes of carpet-backing cloth and 8,100 tonnes of other goods. Internal consumption totalled 24,000 tonnes—3,200 tonnes of hessian, 18,400 tonnes of sacking and 2,400 tonnes of miscellaneous goods.

THE JUTE MARKETS

Manufactured Goods: Easier conditions prevailed in the Calcutta gunny market during the past week despite a handsome increase in despatches during August. Scattered tenders for B Twills from the Government of India and routine short- and shipper-covering in ready and near positions failed to improve sentiment, which had been affected by tired long liquidation and shortselling in the hedge market. A decline in fibre prices induced some mills to become keen sellers for all positions. But buyers were reserved and not much business could be negotiated. Prices eased by about a rupee in hessian and sacking for November after wide fluctuations. In the spot market, both hessian and sacking were easier for ready positions. Turnover was moderate and the undertone hesitant at the close.

Wednesday's quotations are as follows:

	Sept.	Oct.	Oct.-Dec.	Jan.-Mar.
40in. 7½oz.	37.15	37.25	37.35	37.55
40in. 8oz.	40.15	—	—	—
40in. 10oz.	48.95	49.20	49.40	49.85
B Twills	142.50	142.40	141.40	140.40
Cornsacks	143.00	144.00	144.00	143.50
Heavy Cees (Plain)	145.00	144.00	143.00	140.75
A Twills	172.00	172.00	172.00	172.00
Liverpools	157.00	157.50	158.00	158.00

Raw Jute: Subdued conditions prevailed in the raw jute market during the past week. Sentiment was depressed by a sharp increase in up-country arrivals to around 150,000 maunds a day and by the fair progress in the harvesting of Daissee and Tossa jute. Growers were keen to sell a part of their output to obtain money for their forthcoming festive-season purchases. An easier trend in the agencies influenced sentiment in Calcutta and holders were inclined to discount prices appreciably. The mills, however, were adopting a cautious approach, and were purchasing within their maximum quotas. The Jute Commissioner announced a quota of 150,000 bales for the week ending 26th September, making a total of 350,000 bales during the three weeks the maximum quota scheme had been in operation. The Commissioner's establishment was also keeping a strict watch on the implementation of the quotas. Since the introduction of the first quotas, fibre prices had eased by about Rs. 5 a maund to Rs. 37 for Assam Bottoms, f.o.r., ready Calcutta. Transactions in Upper Assam White Bottoms for December had not commenced so far. Turnover was small and the undertone easy at the close.

Wednesday's quotations are as follows:

	Rates a maund		Rates a quintal	
	Mid.	Bot.	Mid.	Bot.
Assam-Agartala Jute	40.00	37.00	107.17	99.13

THE U. K. JUTE MARKETS

FIBRE PRICES IRREGULAR

(FROM OUR DUNDEE CORRESPONDENT)

THE trend in raw jute prices in Pakistan is still uncertain, and a wide range of prices is quoted here with a difference of £10 a ton for the same grade. One or two shippers have reduced their prices, but there has been no definite fall so far. Reports indicate that the loose jute arriving at baling stations is very wet and at the same time, the quality of the fibre is not very good.

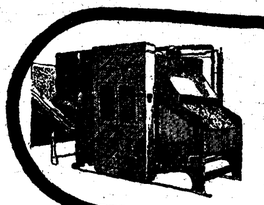
Since a fair quantity of secured jute has been offered on the Dundee market, holders are becoming a little anxious for business. There are cases where they are discounting prices still further. With this easier trend here, it is only natural that spinners are remaining out of the market except for small quantities. However, there is a feeling that more interest will be shown within the next week or two and this will be mainly for Tossa qualities. Only small quantities of Tossa were bought before the rise in prices took place last month.

There are sellers of Export Firsts at £141, of Export Lightnings at £130 and of Export Hearts at £118, c.i.f. U.K., for September-October shipment. Grade Tossa-4 is quoted at £139 and Dacca Tossa-6 at £140. Outport Tossa-2/3 is available at £129 and Outport Tossa-4 at £123, October-November. Cuttings are also easier at £89 for S.N.C. and at £82 for N.C.

The Siam jute market is quiet, and not much business has taken place in Dundee in this type of fibre. Offers are at £93 for grade A, at £87 for grade B, at £80 for grade C and at £77 for cuttings, delivered mill Dundee for November-December shipment.

Although the prices of Calcutta goods are still high, there has been a slightly easier trend during the past few days. Quotations are at 82s 7d for 40in., 10oz. and at 62s 4d for 7½oz. a 100 yards, c. and f. U.K. for September shipment, at 82s 11d and 62s 9d October-December and at 83s 8d and 63s 1d January-March. B Twills are at 237s 3d, 236s 10d and 236s 10d for the respective shipment periods.

It is possible that imports of common hessians into the U.K. will be returned to private trading, commencing with November shipment. This stems from the U.K. Board of Trade's announcement made at the beginning of the current month.



Dundee jute spinners are busy and have orders in hand for forward delivery. Meanwhile, it is difficult to obtain supplies of yarns for reasonably early delivery. In comparison to raw jute, yarn prices are at an attracting level in the U.K. and this has been responsible for additional buying interest.

Cloth manufacturers are also busy and wide hessians for carpet-backing are in good demand. There is every

indication that the industry will remain in this satisfactory position for some time.

THE PAKISTANI JUTE MARKETS

FIBRE IRREGULAR

(FROM OUR DACCA CORRESPONDENT)

ALTHOUGH arrivals increased during the past week, no definite trend was discernible, and there was a rather interesting struggle for supremacy between the sellers and buyers. The sellers, with fairly large quantities of jute recently harvested and retted after floods, have in some cases not brought the jute in at all, awaiting better prices and in other cases have offered to sell jute but at their prices, which unfortunately exceed the limits of the balers.

The balers, on the other hand, who have been waiting for lower prices and increased arrivals, have tried to reduce prices. All balers, however, are bullish and some could not resist the attraction of large quantities of jute in their import sheds. They have paid although they have tried to do so at lower prices. Other balers, bullish as ever, but like the majority being short of finance, have tried to buy on credit and have succeeded in doing so only at higher prices. As a result different market conditions prevailed in different agencies.

In Narayanganj, in theory the main market, there is little buying interest therefore the market may be called weak. This is mainly because the sentiment of Narayanganj is controlled by Calcutta where due to the Puja arrivals in Cossipore, both jute and gunnies are weak. In some of the better jat baling stations, arrivals have increased, some good quality jute has been available but prices have remained unchanged with a steadier undertone. In other agencies there have been practically no arrivals and no activities.

Moisture has more or less disappeared and some very good quality jute has been seen. The western jat areas are producing some very poor quality jute. In the pucca bale market there has been little or no activity. Cuttings have remained unchanged with a weaker undertone due to lack of finance. Small transactions have taken place in long jute at slightly better prices.

In the overseas markets the buyers continue to hold off, but at the same time the sellers are resisting. It is interesting to note that with the increase in percentage of Export Hearts the difference locally between Export Hearts and Export Lightnings is increasing whereas overseas, the gap is being reduced. It is probably because the buyers are trying to buy as cheap as possible. Export Hearts this season can be a very good or very bad buy. Good balers producing a proper Export Heart, will be producing a grade which is a better buy than an Export Lightning. Since, however, there is a lot of very bad jute around, there will be a lot of Export Hearts which will be the cause of much heart burning among buyers.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in August was 17.2 million yards more than in July 1964 and 11.3 million yards more than during August a year ago. Bag cut-up was 58.2 million yards and piecegoods deliveries 22.6 million yards, compared with 51 million yards and 18.5 million yards, respectively, in 1963. Consumption for the first eight months of 1964 is 20 million yards less than during the comparable period a year ago. U.S. spot and afloat stocks at the end of August decreased from the end of July by 19.2 million yards. At 280.9 million yards, 152.3 million yards were spots (up 500,000 yards) and 128.6 million yards were afloats (down 19.7 million yards). Stocks represent about 3.8 months' supply.

KERALA PLANTATIONS PAY HIGHEST TAXES

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE chairman, Association of Planters of Kerala, Mr. M. M. Varghese, while addressing the 25th annual general meting of that organisation recently, complained that planting in Kerala is subpected to the "highest level" of taxation, compared with any State where any plantation crop is grown. While appreciating the difficulties faced by the State Government with its small resources to maintain modern, social and economic overheads and to carry forward particular forms of economic activities, the A.P.K. chairman felt that taxation could not be extended to make up for every kind of revenue needed.

India is one of the very few countries where agricultural income is taxed separately from business income. The intention is that agriculture should serve as one of the sources of State revenue, but it does not seem reasonable to think that taxation on agriculture should be without any regard to the level of taxation on business income. As the Taxation Enquiry Commission of 1954 had enunciated the principle, the total of the tax incidence on a given agricultural income should not exceed that which it would have been under the Central income tax. Both in the matter of the weight of taxation at the maximum rate on a rupee of agricultural income in Kerala, as well as the progressive rates to which corporate income from agricultural sources is liable, are in substance a departure from the principles accepted by the Central income tax, Mr. Varghese said.

Continuing he said that in the matter of commodities for export, it is an agreed principle that no internal tax shall be levied. In Kerala, however, the tea sold for export at Cochin is liable to a sales tax. The only reason why this is being maintained and defended is plainly because the Government wants the revenue from it. The result is that the tea industry, despite the fact that it is exporting the bulk of its produce and is serving an important national purpose, has to pay 5 percent, plus a surcharge of 5 percent to the Kerala exchequer by way of sales tax.

Mr. Varghese has said that during the past decade producers have been becoming high-yielding varieties. To the country and the industry it is equally beneficial to have the fields replanted with such material, which would help each acre produce two to three times or even more than the present level of production. It is the lack of resources which have prevented most of the planters from undertaking replanting on a large scale as is really required. He has pointed out that where such replanting has been done, the yield from each acre has increased much. In the case of rubber, from an average of 410 lbs, the crop has risen to well over 1,000 lbs an acre. In coffee, as against an average yield of less than 3 cwts a decade ago, replanted fields have proved to be capable of producing over 10 cwts an acre. As for tea, the yield has been doubled over a period of 15 years by scientific methods of cultivation and the prospects are bright for still increasing the yields substantially by replanting. With the rise in production, it is possible to achieve three things; to reduce the unit cost of production, to make available more of the produce for internal consumption and export and to enable the Government to earn more from the industry.

Replanting and Modernisation

All these can be frustrated, the A.P.K. chief said, unless the planters have the resources to undertake the gigantic task of replanting and modernisation. He estimated the replanting cost at Rs. 5,000 an acre for tea, over Rs. 2,500 for rubber and about Rs. 3,000 for coffee on an average. Taking the total acreage in Kerala, the annual sum required for replanting would exceed Rs. 3 crores, he said and added that there was little hope of attracting this additional capital from the open market unless the industry was in a position to give a reasonable return on the investment. The planters had no means of saving for reinvestment unless there was a reduction in the burden of tax. There was no hope of lowering the cost of production if the present level of wages and amenities were to be maintained.

Referring to the appointment of the Tea Finance Committee appointed by the Central Government, Mr. Varghese said that the labours of this committee would have significance only if the State Governments who are represented on it are willing to abide by its decisions, even at the risk of some reduction in the existing rates of taxation.

The A.P.K. chairman has noted with satisfaction the increasing production of raw rubber in India. In the coming years, the rate of increase would be even higher as new plantings come into bearing. According to forecasts of production and internal demand by the manufacturing industry for the next two plan periods, there would still remain a large gap between indigenous supply and the total demand. Based on this, there is a move for the setting up of more synthetic plants. As long as the production of synthetic rubber is to meet the technological requirements of the manufacturing industry or even to meet a part of the shortage, the planters had no quarrel, provided the statutory board set up by the Government is in a position to review the overall demand and has a voice in the licensing of additional capacity, so that a co-ordinated policy could emerge In his view, the developmental efforts which are being made on behalf of the natural rubber industry would largely be negatived by the insistence the Government is making on the import of raw rubber. It would appear that a linkage has been fixed between the import licence issued to a manufacturer and the offtake of synthetic rubber, whether it is suitable, economic or not.

As suppliers of natural rubber, the planting industry's future is closely connected with the fortunes of the manufacturing industry. Should that industry suffer any serious setback in the long run, it will naturally affect the planting industry also. It is, therefore, a matter of prudence and commonsense for the Government of India to review the licensing policy for the setting up of new synthetic factories, the A.P.K. Chief said.

COFFEE

Higher Export Quota Demand

The World Coffee Council is sending in a technical mission to India early next year to study the coffee situation here *vis-à-vis* India's plea for an enhancement of her export quota under the International Coffee Agreement. In the opinion of the Coffee Board of India, this is a "step forward". India's request would come up for further consideration before the International Coffee Council after the technical mission submits its report.

The International Coffee Council at its meeting last month in London had fixed the export quota for the coffee year that begins next month at 47.5 million bags of 60 kilograms each, against 48.3 million bags for 1963-64. There is provision for another million bags to be released in two stages after a review of the world coffee situation in January and April 1965. The overall quota for the year may be slightly larger than the previous year's quota, according to the Indian Coffee Board chairman, Mr. Sitarama Reddy, who participated as India's representative in this meeting.

Asian members of the Council had some unpleasant experience in this meeting. In the election to the executive board of the Council, Asia was totally excluded. The Indian Coffee Board chairman had taken objection to the elimination of Asia from this important committee. The text of his statement at the meeting is published in the latest issue of the *Coffee Bulletin*, official organ of the Indian Coffee Board. He said: "The attempt made by a few people to exclude Asia from the executive board is an attempt to undermine the concept of international organisation. It is now a body maimed of one leg. Its capacity to stand firm is limited and circumscribed. This kind of thing should not have happened. Now that it has happened it is the duty of all members to set right this wrong. I still have faith that good men in this organisation will not allow this wrong to be perpetuated." Right from the negotiating conference in New York, Asia was in the executive and its presence helped to create an image that the International Coffee Organisation was really global in its set-up. This image has been tarnished by this incident.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base : August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to August 1964. As compared with July, the August indices for Food and Clothing show increases of 10 points and 11 points. The indices for Fuel & Lighting and Miscellaneous remain unchanged at 308 and 331 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living rose by 6 points during August 1964.

Middle Class Cost of Living Index Number for Calcutta. Prices in August 1939=100

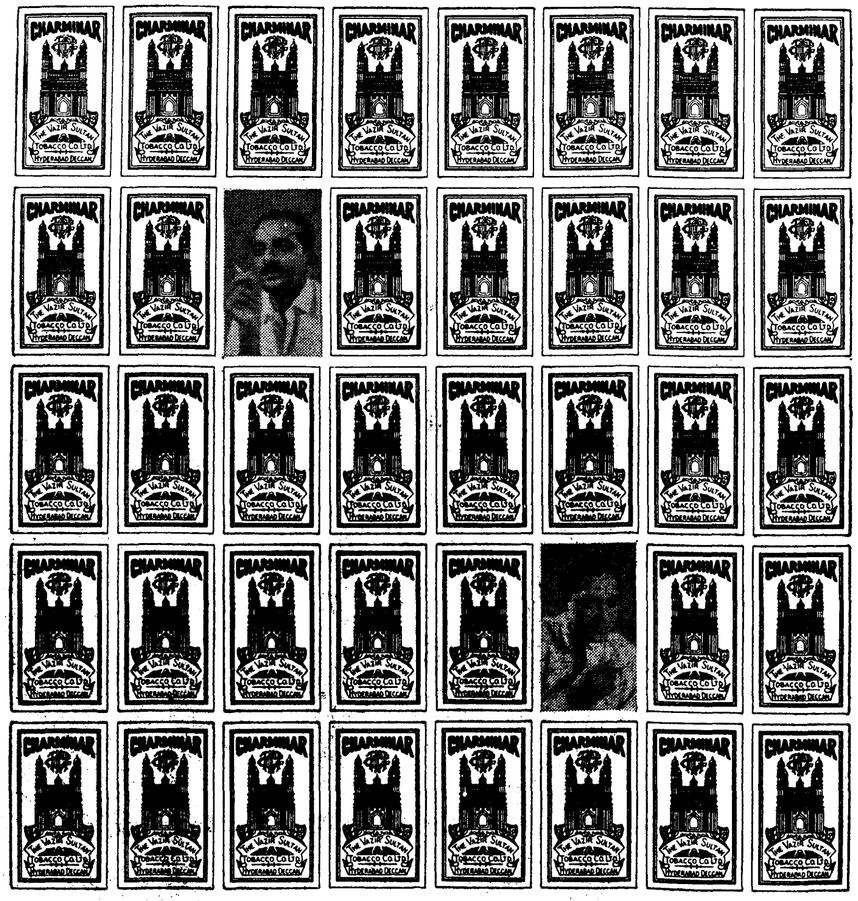
TEA

Good Progress of Crop



(BY A SPECIAL CORRESPONDENT)

CROP figures from the major producing countries make interesting reading. Up to the first week of September, the total tea produced was (in thousand tons) 852.457, against 834.693 last year. North India and Pakistan are both well ahead, but south India had produced only 96.149 tons, against 116.668 tons in 1963.

Up to end-July, Ceylon was also short by 8 million lbs. Indonesia shows some progress, while East Africa and Mozambique continue to add to the supply.

Stocks in Calcutta warehouses were higher than in 1963, but not unduly so. Tea chests afloat were very high at 112.842, against only 9.937 in the previous year. The average over the past three years was round 10,000 chests afloat at this time of season. Arrivals this year by river have been heavy, but not excessive. There is congestion in this port as well as at London.

At Sales held on 7th, 8th and 9th September, offerings amounted to 65.840 packages. It is curious to note that some sound teas are irregular, but cheapest varieties sell easily. On 14th September—71,858 packages were advertised for sale. There was a good general demand, and exportable fannings were stronger, but again good orthodox Assams were lower. If quality fell away, bids were appreciably lower.

SMOKING PLEASURE 10 TIMES OVER IN OVER 1000 MILLION PACKS A YEAR

Or, nearly 900 million Charminars are smoked every month ! Or, one in every four cigarettes sold is a Charminar ! Certainly, Charminar is India's most popular cigarette. What's Charminar got that others haven't ? *Rich* flavour, *unique* taste . . . that comes from special ingredients and processes at The Vazir Sultan Tobacco Company Limited.

Experts start with the finest tobaccos—developed exclusively for Charminar. These are specially cured, *triple-matured* and skilfully blended. Next, an *extra process*, special to Charminar. Then automatic machines take over, produce millions of Charminar cigarettes at South-East Asia's largest cigarette factory. What does it all add up to ? Why, the finest smoking pleasure for you . . . in over 1000 million packs a year !

There's nothing like Charminar — India's greatest cigarette !

THE VAZIR SULTAN TOBACCO COMPANY LIMITED

MAKERS OF INDIA'S GREATEST CIGARETTE!

COMPANY AND PUBLIC NOTICES

THE ALKALI & CHEMICAL CORPORATION OF INDIA LIMITED

Registered Office : 34, Chowringhee Road, Calcutta-16.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends. T means that dividend tax is deducted at source.

COAL COMPANIES

O., Po., F and Dd Indicate Ordinary, Preferred Ordinary Founders and Deferred Shares respectively. 'P' next to the name of the company indicate that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES—Contd.

O., Po., C. and Dd. indicate Ordinary Preferred Ordinary, Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

CHOOSING BETWEEN POLICIES IN BRITAIN

WHEN U.S. voters go to the polls in November they will be electing a man, an individual, to lead a pressure group and be head of an administration. What they will get is a "manager" who will run their country and be personally responsible to them for doing so. This will not be the case in Britain on 15th October. There, a good deal of trouble is being taken to avoid the "star" system of politics. When the British voter makes his choice he will be electing a Party to form a Government on the basis of the policies represented to him at the hustings. Personalities will be at a discount, despite the influence of television and the natural tendency to form judgments concerning which leader might make the best Prime Minister. This is in accordance with the wishes of all Parties; there is still a strong feeling that policies must come before personalities and that voters should be allowed, indeed encouraged, to make as definite a choice as possible between them. Whatever opinion may be held about the political effectiveness of such a system in this day and age, there is no denying that it does encourage a certain amount of rational thinking about the issues at stake among that small minority of voters who are prepared for such exertions. Fortunately, it is this marginal or "floating" voter who chiefly decides which Government is returned to power.

At the present time people in Britain are busy making their choice. They would no doubt find the task easier if the differences between the main Party platforms were in fact more marked than they are. That seems to be seldom the case there nowadays. Both Conservatives and Labour are offering their own brand of democratic socialism; each has its theory of planning, the only discernible difference between them being, to quote the Tory manifesto, that one is based on consent and the other on compulsion. It is not necessary to belong to either Party to realise that this statement over-simplifies the truth. In fact, at least in the field of policy, the dividing line is nowhere near so well defined. Labour is certainly not contemplating wholesale compulsion as a means of implementing its plans; it would soon come up against the opposition of its own supporters in the trade unions if it did. Nor are the Conservatives likely to rely wholly on consent without the use of a little "persuasion" here and there; the absence of it has already ruined that key to planned prosperity, a viable incomes policy. No, the real difference between the policies of the two main Parties in Britain lies rather deeper than this. It is to be located not so much in the old political division between liberalism or authoritarianism, but in the new "scientific" one between progress and stagnation.

At least such is the impression Labour is trying to create, and at the moment it is this Party which is making the electoral running—inevitably, perhaps, after 13 years of Tory rule. What Mr Wilson is seeking to do is present a dynamic image, one based on scientific planning for progress, both economic and social. In this he is undoubtedly right, but he is taking a double risk. The first is that the reactionary section of his own Party—the trade unions and the old "cloth-cap" socialists—might not permit him to go ahead with his intentions once the election was won and the need for unity ceased to be so acute. The other is that the British people will not trust him. The main reason why they may not do this is that they are not yet ready for anything as revolutionary as rapid economic progress. But another one is that, quite rationally, they do not believe the Labour Party is capable of carrying out its promises. One glance at Labour's manifesto explains why this should be so. There is no doubting this document's forward-looking character; it is just that here and there the old class prejudices and jealousies peep through, and the preference for restrictions and controls for their own sake makes itself apparent. Such things are sure election-losers in Britain today. That is why Labour's chances are by no means as good as its choice of what is undoubtedly the right approach would seem to suggest.

By temperament the British are not a fast-moving people. Yet in recent years there has been a distinct feeling in the country that only by learning to live with rapid change can Britain hope to stay abreast of other advanced nations. And if she wants to retain her standard of living, leave alone increase it, she has no real choice but to keep up with the times, the facts of economic life being what they are. So when Mr. Wilson angles his election appeal to those who believe that their country's only salvation is to abandon its traditional distrust of change and adopt a more thrusting and progressive attitude towards the modern world, he is only behaving in accordance with what the vast majority of thinking people in Britain today believe to be the dictates of wisdom. What he is still failing to do, however, is convince them that the Labour Party is the right vehicle for transporting the nation into the twentieth century. Nobody can say he is not trying his best. Why it may not prove good enough is because the Party still cherishes its old working-class soul under its shining new classless and scientific exterior.

In promising to inaugurate an era of modern progress, the Labour Party is not the only one hampered by its past. The Conservatives, too, are the subject of acute mistrust on the part of the more intelligent voters. This is scarcely surprising. After 13 years of almost unbelievably inept economic mismanagement, during which, in *comparative* terms, Britain's standard of living is among the few of any in an industrially advanced country to show a distinct *fall*, the burden of the Conservatives' election appeal is that living standards have risen and must be protected from Labour's dark designs. It would be difficult to imagine any more dishonest approach. The real facts underlying the Tories' promises for the future are that thanks to four successive waves of "stop-go" the British economy shows one of the slowest rates of progress in the world, and certainly the slowest in western Europe. Further, far from benefiting by such dismal experience—particularly that of creating a sharp slump and the highest postwar record of unemployment only 18 months ago due to Mr. Selwyn Lloyd's overenthusiastic use of monetary restraints—the present Government has contrived to bring the

country to the brink of yet another balance-of-payments crisis which will undoubtedly require the prior attention of whichever Ministry emerges from the election on 15th October. It is extremely hard, after such a record, to believe that the Conservative Party can be trusted to solve Britain's chronic balance-of-payments problems, and to ensure a steady and modest growth rate of 4 percent a year, if returned to Westminster.

This image of amateurish incompetence is not alone in damaging the Tories' chances at the polls. There is also the class aspect, almost, though perhaps not quite, as distinctive as Labour's, but of course in the opposite direction. This was perhaps the main reason why the choice of Sir Alec Douglas-Home, Lord Home as he was then, to lead the Party, was entirely the wrong one. At least the back-bench Conservative M.P.s, those who are soliciting votes in this election, can claim that this was none of their doing; in fact the decision was Mr. Macmillan's and nobody else had much say in it. But the responsibility for the choice must be borne by the whole Party if only because it was accepted in such supine fashion. Now the Tories are saddled with a leader who has failed both to revitalise his Party and enthuse the electorate. The image of aristocratic dilettantism, the very one which should have been avoided by the Conservatives at all costs, has not by any means been dispelled by Sir Alec's near-year in office. If the Conservatives lose this election, a large portion of the blame will be their leader's.

Compared with this striving for a modern progressive image with which to attract the uncommitted voter, the detailed contents of the main Party programmes are of only minor importance. Both promise more of everything, and only the Conservatives would pay much attention to the cost. Neither Party's policy is without its glaring contradictions, although Labour's probably has the most. Nowhere is there any open acceptance of what should in fact be the first priority of any British Government which has the economic future of the country at heart, the need to secure speedy admission to the European Economic Community. So in fact, despite the programmes so carefully laid out on paper, what the thinking British elector will be doing is not so much choosing, as he is intended to, between policies, which in any case look depressingly alike, as deciding which Party offers his country the best chance of rapid conversion to progress and prosperity in a modern world. An interesting point is that whichever one of the main Parties he picks on, the chances are that he may never get their policies in the form they intend them.

Such is the state of the main two Parties in Britain at the moment that it appears highly likely neither is capable of securing an absolute majority at the polls. If this should happen, then the tiny Liberal Party could hold the balance in the House of Commons. Such a situation is not without its consolations, whatever may be said of its political propriety. The Liberals are the traditional custodians of the radical side of the British political conscience, and because they lack the strong sectional encumbrances which appear to doom both Labour and the Conservatives to perpetual reaction, they are undoubtedly the most progressive Party in Britain today. Their election manifesto is conspicuously lacking in inspiration; the most that can be said of it is that it embodies the best features of those of the other two Parties. But the prospects of a minority Government of either the Right or the Left being kept on its toes, or prevented from going to excess, by a forward-looking body of Liberal M.P.s, is not such as to depress those with the best interests of the country at heart.

THE BANK RATE INCREASE

THE Reserve Bank of India last Friday raised Bank rate from 4½ percent to 5 percent, which is the highest fixed so far. According to an inter-bank agreement, the minimum lending rate has to be 2 percent above Bank rate. So with the latest increase, the minimum lending rate of scheduled banks will go up from 6.5 percent to 7 percent unless the agreement is amended. Since the Reserve Bank has placed a maximum limit of 9 percent on the lending rate of the larger Indian and foreign banks, the cost of credit will now vary between 7 percent and 9 percent. The Central Finance Minister, Mr. T. T. Krishnamachari, told the Lok Sabha that the emphasis in the Reserve Bank's lending policy will be on making credit costlier rather than on directly restricting its availability. The rise in Bank rate has been so timed that it has come after the Governments, both at the Centre and in the States, have completed their borrowing programmes.

In its efforts to wield Bank rate as an instrument of credit policy, the Reserve Bank has had to face two conflicting motives. One is the Government's desire to raise large sums of money from the public as cheaply as possible, which postulates a low Bank rate. The second is the need to curb credit expansion, which calls for a high Bank rate. By timing the increase in Bank rate now, the central bankers seem to have got the best of both worlds. But this advantage will be short-lived. With the Government's permanent commitment to massive outlays under the five year plans and the limited scope for raising funds through deficit financing and additional taxation, it will have to come to the market every year for substantial loans. The increase in Bank rate will, however, be welcomed by international financing institutions like the I.M.F. and the World Bank which have considered the relatively low cost of credit in India as being out of tune with the shortage of capital in the country.

The main objective of putting up Bank rate is to restrain credit expansion, which has far outpaced the increase in real output. According to the Reserve Bank directors, during the year ended June 1964, bank credit rose by Rs. 245 crores, or as much as 16 percent. The record credit expansion in the last busy season put a great strain on the liquidity of banks, necessitating substantial borrowings from the Reserve Bank. Indeed their borrowings reached an all-time high of Rs. 107 crores in March 1964, against only Rs. 83 crores in the previous busy season. The rise in the rediscount rate, the Reserve Bank hopes, will compel borrowers to make more economic use of loan funds and thus restrain the indiscriminate expansion of credit. It is thus conceived as an anti-inflationary measure.

But it is doubtful if the higher Bank rate will achieve this purpose, since with the existence of a vast unorganised money market the Reserve Bank's control on credit has seldom been effective. On Mr. Krishnamachari's own reading of the situation, the vast hoards of unaccounted money have been an important element in the speculative cornering of commodities, thus worsening shortages. Apart from holders of unaccounted money, there are the innumerable moneylenders who constitute the unorganised market. The Reserve Bank's writ has seldom run in these sectors of the economy. Indeed, instead of exercising an anti-inflationary influence, the rise in Bank rate will jack up industrial and trading costs all along the line and aggravate the pressure on prices. The impact of higher interest rates will be particularly severe since, in the present depressed state of the capital market, industries have to depend heavily on borrowed funds. A policy of dearer money will also affect corporate profits, and make equities less attractive than they are.

A direct consequence of the higher Bank rate may be a downward readjustment in the prices of stocks and shares since the increase in the interest rate structure will cause investors to expect a bigger yield on their investments. This will be particularly true in the case of fixed-return investments. In fact, Government securities have already depreciated. The erosion in the values of shares and securities will adversely affect the investment portfolios of institutional investors like banks, the Life Insurance Corporation and the Unit Trust. The impact will be particularly felt by banks, whose minimum liquidity ratios have been statutorily raised from 20 percent to 28 percent since 16th September. The need to abide by the new ratio has compelled banks to subscribe handsomely for the recent Government flotations, an operation they could perform only because of the availability of slack-season funds.

The Reserve Bank has simultaneously enforced a new scheme linking the cost of central bank credit with the net liquidity position, that is, the total of a bank's cash, balances with the Reserve Bank and other banks and investments in Government securities minus its total borrowings from the Reserve Bank and the State Bank. Under this scheme, the existing quota system for scheduled bank borrowings from the Reserve Bank has been replaced by a system of differential interest rates determined by a bank's liquidity. So long as its net liquidity position is at or above 28 percent of its total demand and time liabilities, a bank can obtain credit from the Reserve Bank at Bank rate. But for every decline of 1 percent in the net liquidity ratio, the rediscount rate will be stepped up by ½ percent. By adopting this strategy, the Reserve Bank will be able to penalise those banks which try to increase their resources by liquidating their holdings of gilt-edged. In fact, during the last busy season much of the expansion in bank credit was brought about by liquidating securities and by borrowing from the Reserve Bank. Now by linking the cost of central bank credit to net liquidity, the Reserve Bank has deterred banks from selling their securities and compelled them to make serious efforts to mobilise deposits. The biggest beneficiary of this new scheme will be the State Bank of India since its liquidity ratio is as high as 46 percent.

Both the Government and the Reserve Bank have been pointing to the need for a "more orderly" system of deposit rates since the present narrow spread between the interest on short- and longer-term funds is not "conducive to deposit mobilisation." After remaining vague for a long time, the Reserve Bank has now come out with some definite instructions. It has said that deposits for up to 14 days should not be paid more than what current accounts get. Secondly, the maximum rate the banks can pay for deposits given for up to 90 days is 2½ percent. Thirdly, the Reserve Bank has indicated its preference for a minimum rate of 4 percent for deposits of 91 days, "with suitable spreads for deposits of longer maturities." The competition for savings will be quite keen, particularly from non-banking companies which are offering attractive returns. Banks will, therefore, have to offer other attractions, such as improved service to their clients, in order to mobilise deposits. The vigorous expansion of branches in areas not adequately served by banks can do much to spread the banking habit. New branches may not earn their keep in the initial stages, so there is some justification for providing special financial incentives to banks undertaking branch expansion.

REFINANCE FOR AGRICULTURE

THE first annual report of the Agricultural Refinance Corporation for the year ended June 1964 is of considerable interest since it highlights the difficulties in agricultural development. The Corporation was established on 1st July, 1963. Its object is to help augment the resources available for providing medium- and long-term finance to agriculture. It is primarily a refinancing agency providing accommodation of a long-term nature for major development projects which cannot be financed by the existing credit agencies for various reasons. First, the volume of funds required may be very large. Secondly, the terms and conditions of repayment of the existing credit agencies are generally very rigid. Thirdly, the projects which are to be financed may be such that they cannot be brought within the normal rules of business under which land mortgage banks, the principal financing agencies, are functioning. Considering the activity of the Corporation, it is clear that it does not intend to replace the existing schemes for providing long- and medium-term finance, including the Reserve Bank's scheme of assistance. At the same time, it is not expected to be merely a passive financing agency; it has to play an active rôle in stimulating interest in agricultural development schemes. It has to advise the various institutions that are eligible for refinance, and assist them in planning and executing projects.

Since the Corporation aims at supplying funds to the primary lenders for helping them to provide medium- and long-term credit, it should play a useful part in the field of agricultural credit. Among the factors inhibiting agricultural development in recent years, the lack of a timely and adequate supply of credit to cultivators has been a prominent one. To the extent that the Corporation succeeds in reinforcing the supply of credit to agriculturists, it renders a useful economic service. It intends to provide refinance facilities for the reclamation and preparation of land so that facilities for irrigation can be used more fully. It is also expected to promote the development of mechanised farming and encourage the use of electricity for working tube-wells. It will take steps to develop dairy farming, animal husbandry and poultry farming. It will also encourage the development of plantation crops, many of which are good foreign exchange earners. In addition to providing refinance facilities to land mortgage banks, co-operative banks and scheduled banks, the Corporation aims at toning up the entire institutional credit structure for agriculture.

Although the working of the Corporation during the first year was not expected to be spectacular, its performance was poor, mainly due to the apathy of various State Governments about agricultural development. During 1963-64, the Corporation approved only four schemes involving a total financial outlay of Rs. 6.38 crores. Of these, the applications received for refinance were only three. The three schemes for development—two in Andhra Pradesh and one in Orissa—are expected to increase agricultural output. In the course of a few years, there may be an additional production of 90,000 tonnes of paddy and 10 million coconuts a year. The fourth scheme for reclaiming and developing land under the Nagarjunasagar project in Andhra Pradesh, involving Rs. 3.66 crores, is likely to be sanctioned towards the close of 1964. The expected annual increase in production from this project should amount to 132,000 tonnes of paddy from reclaimed land, which will get water by June 1966. A few other schemes have also been received from States like Madras and Maharashtra which await finalisation.

Presiding over the annual general meeting of the Corporation in Bombay last week, Mr. M. R. Bhide, chairman, pointed out that the response from State Governments in sending worthwhile schemes has not yet been as encouraging as one would like it to be. Before State Governments can be helped in preparing sound schemes, the initiative has to come from them. If they set up expert committees to prepare good schemes for agricultural development, the Corporation will give them assistance. Considering that the poor performance of the agricultural sector in the past few years has largely contributed to the prevailing economic distress, it is time the State Governments gave agriculture the attention it deserves. Since agriculture is primarily their responsibility, the output of foodgrains and cash crops will not improve unless State Governments become more serious about farm development.

Although the Corporation provides refinance facilities for only those schemes which are technically feasible and economically sound, it has taken steps to ensure that State Governments are given help in preparing good projects. It undertakes technical evaluation of all projects by appointing experts on an *ad hoc* basis. With the help of the Division of Rural Economics, Reserve Bank of India, it carries out benefit-cost surveys in each area covered by various projects. It also undertakes to prepare a technical plan for every agriculturist covered by the schemes of development. The idea behind these measures is to ensure that the refinance facilities given by the Corporation are properly used to increase production.

The plantation industry did not send any development scheme to the Corporation during 1963-64 because it could not comply with the existing rules. Since the Corporation is keen on helping plantation development, it has decided to give refinance facilities to the plantation industry through scheduled banks without insisting on a Government guarantee. But the financing bank must have a good reputation and enjoy a sound financial position. The security offered should also be acceptable to the Corporation. Besides, the rules have now been sufficiently modified to make refinance facilities available to the plantation industry. Considering that many small planters are unlikely to enjoy the support of scheduled banks due to administrative reasons and the lack of a sound security, the Corporation is investigating the possibility of using land mortgage banks to help them. If refinance facilities are extended to the tea industry, it will enable the latter to undertake new schemes for stepping up output.

Current News and Comment

Trading in Groundnut Futures

New Delhi's recent decision to lift the ban on hedge trading in groundnut and groundnut oil has cleared the way for resumption of forward trading in these commodities. The trade and the Forward Markets Commission have been discussing for some time the terms and conditions for futures trading in new crop contracts, and the trade has been obliged to accept the stringent terms stipulated by the Commission. The January contracts will attract special margins when the price of groundnut rises above Rs. 250 a 250 kilograms and that of groundnut oil rises beyond Rs. 20 a 10 kilograms. The rate of margin, which will be payable by bulls, will be Rs. 5,000 a 25 tonnes for groundnut and Rs. 4 a 10 kilograms for oil. A free limit of 300 tonnes of groundnut and 120 tonnes of oil will be given for each member and non-member. Further, the long position held against actual export commitments will be exempted from the margin on furnishing the necessary export documents. A limit has been placed on the open position at 5,000 tonnes for groundnut and 2,000 tons for oil. The weekly fluctuation limit (in the regular official trading) has been fixed at Rs. 2.40 a quintal of groundnut and 55 paise a 10 kilograms for oil. All non-member clients with an open position exceeding 300 tonnes in groundnut and 120 tonnes in groundnut oil will be required to get themselves registered with the exchange. The margin and the free limit applicable to the delivery period will be decided later.

The terms and conditions laid down by the Commission are designed to check excessive speculation and stabilise prices at reasonable levels. Few will deny the need to contain speculation within healthy limits, but if experience is any guide margins simply eliminate the small fry but do not have a significant impact on the volume of speculation. Margins have proved utterly futile in the past in influencing the course of prices. And whenever artificial restraints are placed on the futures market they simply widen the spread between spot and futures prices. Whether hedge trading has any important economic function to perform may be a moot point, but if forward trading is to be permitted there is little sense in putting such restrictions on trading as make the market thin and anaemic and impede its smooth functioning. The margin of Rs. 5,000 a 25 tonnes is stiff by any standard; that is what a bank might normally charge for stocking the actual goods on behalf of its clients. The level of Rs. 250 a 250 kilograms at which the special margin will become applicable is also rather low when one bears in mind that the quotation for spot groundnut has been bid up to Rs. 380 a week or so ago. The new crop distant positions are no doubt quoted appreciably lower, the current quotation for Gujarat Kathiawar for December delivery being mentioned around Rs. 240 a 250 kilograms. Groundnut oil for December is reported around Rs. 19 a 10 kilograms, against the spot quotation of Rs. 28.50; only about a fortnight earlier, spot oil had touched an all-time high of Rs. 33. The market can be expected to remain subdued for a few months under the pressure of new crop arrivals. But prices are likely to firm up again once the seasonal influences have spent their force.

How groundnut and groundnut oil will actually behave will depend to a large extent on the Government's export policy. The Government cannot boost the export of groundnut oil through liberal incentives and at the same time expect internal prices to fall to reasonable levels. How to strike a happy compromise between exports and internal prices is a matter which calls for careful consideration not only of the demand-and-supply position at home, but also of international demand and price trends. Apart from export policy, the Government will have to revise the present formula for fixing *vanaspati* prices in order to keep groundnut prices within reasonable limits. The Government of India's policy for export of groundnut oil and for fixing *vanaspati* prices is not the only factor which will have a significant bearing on oilseeds prices and the functioning of the futures market. The smooth working of the hedge contract is likely to be seriously affected if the Gujarat and Uttar Pradesh Governments do not take early decision on removing the restriction on the export of groundnut and groundnut oil from their States. The Uttar Pradesh Government has restricted the movement of other oilseeds as well, and enquiries with the trade indicate that there is much politics behind the State's policy for oilseeds. Restrictions on the movement of goods from one State to another have created artificial markets and it is difficult to make a proper assessment of the demand and supply equation. The outlook of the hedge contract in groundnut in Bombay will be seriously affected if export curbs make it impossible to tender the inferior Kanpur Bold groundnut against the contract.

Making More Textile Machinery

The Development Council for Textile Machinery, a body created by the Government with the object of helping domestic manufacturers to increase their output to 80 percent of the country's total requirements in as short a time as possible, held its first meeting in New Delhi recently. The meeting provided an occasion for a review of the industry's economic conditions, the difficulties which have been checking further growth and the prospects ahead, by the chairman, Mr. Prabhu Mehta. Discussing demand prospects, Mr. Mehta visualised that the cotton textile industry would need to raise its capacity by 1970-71 to 18 million or 19 million spindles and 250,000 looms from the present capacity of 14 million spindles and 200,000 looms if the requirements of the growing population are to be met. The woollen industry's requirements of machinery for expansion, modernisation and rehabilitation, at present met by imports, are valued at Rs. 18 crores for the entire third plan period, but judging from the present rate of purchases, only Rs. 7 crores worth of machinery might be imported by 1965-66. The arrears would naturally have to be met in the next plan period. The art silk and synthetic fibre industry's needs of machinery are placed at Rs. 35 crores in the third plan period, and this, in Mr. Mehta's opinion, can be entirely met by the indigenous textile machinery-makers provided they modify their designs. The jute industry's third plan requirements are placed at approximately Rs. 55 crores, in addition to accessories, spares and stores worth about Rs. 23 crores. Although the Indian textile machinery industry's production of such items amounted to only Rs. 3.75 crores in 1963-64, Mr. Mehta pointed out, continuous work was being done for developing improved jute machinery, particularly in the post-spinning section. More sophisticated machines were also being "developed" in other lines.

These indicate the large scope for the textile machinery industry's development—the point was

particularly stressed by the Minister for Heavy Engineering, Mr. T. N. Singh in his inaugural address. The Minister said that the production of textile machinery was worth Rs. 19 crores in 1963, and might rise to Rs. 27 crores in 1965-66. As against this, the country's total requirements of textile machinery may rise to Rs. 347 crores during the next five-year plan. But the most that can be expected from domestic manufacturers is Rs. 272 crores worth of machinery. Ways must, therefore, be found to bridge the gap. There were gaps also in some important items like draw-frames, speed-frames, warping machinery, etcetera, which were yet to be produced at home.

The obstacles to raising domestic production have been mainly two; first, lack of adequate finance, and secondly, dearth of raw materials like pig iron, steel and alloy steels. Mr. Mehta pointed out that while the textile machinery industry, was called upon to sell its products on deferred payment terms because of foreign competition and shortage of finance with the using industries, the Indian banks had been unhelpful. Foreign suppliers were able to offer credit facilities covering as long a period as ten years at a very low rate of interest. The indigenous industry is unable to provide competitive facilities because of the peculiar stand taken by the banks. "In spite of the buyers' and the buyers' banks' irrevocable guarantees", Mr. Mehta said, "the machinery manufacturers' banks insist on debiting the value of the deferred payments sale on the machinery manufacturers' account." This has affected the industry's creditworthiness considerably. It has, therefore, always found itself short of funds. Consequently production has been hampered, and the trade has been diverted to other countries. Mr. T. N. Singh responded to this complaint by saying that the financial difficulties of the industry were already receiving the attention of the Government and agencies like the I.C.I.C.I. Other development institutons would in due course do whatever was necessary.

An important aspect of indigenous manufacture was stressed by Mr. H. C. Dasappa, Central Minister for Industry and Supply, who said at the meeting that the quality of machinery produced in the country should conform to the requisite standards. A detailed assessment of the exact requirements of different items would be helpful. Mr. Manubhai Shah, Central Minister for Commerce, felt that the industry could make an appreciable contribution to the country's export drive. It was, however, disappointing to note that none of the Central Ministers, especially the Minister for Heavy Engineering whose direct responsibility it is to look after the textile machinery industry, could give any satisfactory assurance that the industry's raw material needs would be adequately met.

Balance of Payments Improves

According to the August issue of the *Reserve Bank of India Bulletin*, India's foreign exchange reserves rose modestly by Rs. 11 crores during 1963-64. The external transactions resulted in a current account deficit of Rs. 382 crores. But there was a net capital inflow of Rs. 393 crores which more than offset the current account deficit. The rise in foreign exchange reserves took place despite the repayment of Rs. 24 crores towards the credit line provided by the International Monetary Fund. During 1962-63, reserves had dropped by Rs. 2 crores in spite of a borrowing of Rs. 12 crores from the I.M.F.

The main factor contributing to the improvement in 1963-64 was a marked rise in export earnings, combined with a favourable turn in invisible accounts and larger receipts under official loans. The deficit in current account narrowed down successively from Rs. 101 crores in April-June 1963 to Rs. 71 crores in July-September 1963 and to Rs. 57 crores in October-December 1963. Imports dropped in July-September while exports rose in July-September and October-December 1963. The trend was reversed in the last quarter of 1963-64, when the current account deficit increased sharply to Rs. 107 crores. But for the year as a whole, while the deficit on merchandise transactions increased by Rs. 20 crores, the net invisible receipts rose by Rs. 30 crores. As a result, the current account deficit contracted from Rs. 345 crores in 1962-63 to Rs. 335 crores in 1963-64.

Management Education in India

Management education as an academic discipline is of recent origin in India, even if one takes into account the institutions run by some universities. Suddenly however, due entirely to the spread of industries and general economic growth of the country, the various courses offered by these institutions have become popular. Although not exactly in step with demand, facilities have expanded and two institutes of management have been set up recently—one in Barrackpore near Calcutta and the other in Ahmedabad, Gujarat. Both these are modelled on the lines of the two best business schools in the United States. These are permanent institutions, and there are many which offer *ad hoc* courses. For instance, the Administrative Staff College, Hyderabad, also provides refresher courses for managers and business executives in the public and private sectors. Yet in spite of the expansion in training facilities, the demand for seats, especially in the two new institutes (in Calcutta and Ahmedabad), is so great that only a small proportion of the total number of candidates seeking admission every year are absorbed by the institutes. This points to the need for further expansion of facilities, but it would be useful to know the precise requirements of managerial and supervisory personnel of the economy for the next few years in advance so that training facilities can be suitably planned and augmented.

The Management Personnel Committee, set up by the All India Board of Technical Studies in Management, has estimated these requirements in a way which will help the planning of additional training facilities. The Committee's report was presented to the Board at its recent meeting in Calcutta (with Sir Jehangir Ghandy in the chair), and it estimates the requirements of managerial and supervisory personnel during the third plan period at 7,000 on the technical side and 13,000 on the general and commercial sides. These requirements are expected to rise to 13,250 and 26,000, respectively, during the fourth five year plan. The National Council of Applied Economic Research has also forecast that the demand for managerial personnel between 1960 and 1980 would amount to 50,000. Because of the longer period chosen, it is not possible to compare the two estimates here, but in industry generally, the N.C.A.E.R.'s calculations have been taken to be under-estimates. In any case, and judging particularly from the data in the Managerial Personnel Committee's report, it appears that the training and instruction facilities for managerial and supervisory personnel available in the country is much too inadequate. The Committee specifically recommends that more facilities should be provided for part-time instructions in management courses at Baroda, Durgapur, Kanpur, Ranchi, Jamshedpur and Bhilai. India has no regular training institute for foremen and supervisors. The All India Board of Technical Studies in Management had also appointed a committee to examine the existing training facilities for these categories of personnel; it was also required to enquire whether it is necessary to set up a permanent institute. The committee has recommended that three new residential institutions (in Bangalore, Bombay and Jamshedpur) will be necessary if the training programme is to be adequate. It has also suggested that as many industrial establishments as possible should be persuaded to start some part-time training in foremanship and supervision. The Board will submit in due course its considered views to the All India Council of Technical Education at whose instance the former had undertaken the evaluation enquiry.

The problem, however, is not just one of quantitative expansion, but as Sir Jehangir Ghandy rightly emphasised in the course of his address at the Calcutta meeting, the quality of education, or training, imparted is equally important. For this purpose, management education needs to be kept constantly under review. The Board, Sir Jehangir said, has been revising the syllabus for post-graduate courses in industrial management and business management in the light of the latest developments in the field, but it must now undertake a further review of the need for a study in depth of new managerial techniques. These include value analysis, inventory control, operations research and quality control. India, which has been trying to catch up in the industrial race, needs to produce managers with first-class background and sound training in these advanced techniques. Any investment in this field will be money well spent.

UNIVERSITY EDUCATION

Rex writes under "Current Coin":

SIR William Ramsay has been speaking out on the value of University Degrees as a test of capacity, in his address from the Chair to the Society of Chemical Industry at New York on September 9th. He said: "The older I get the less I believe in them." Examinations are a fetish in England and China, in which men of Science have lost faith. "The qualities tested," continued the professor, "by such examinations as have been customary for the past 40 years in England are the last which one would wish to have in a student of science—readiness of memory to the exclusion of deliberate judgment; the faculty of spreading knowledge thin, and making a veneer of scientific facts instead of the power to correlate them and increase their value; and skill to gauge the capacity of and hoodwink the examiner. Instead of the power to incite enthusiasm in others. They are ideal qualities for a successful barrister, because they pay in his profession: but their reward has been the bane of science. A sound judgment, though it may be a slow one, persistence in struggling against obstacles; the knowledge where to get information when required, and to use it when found; and the inventive faculty —these are the qualities required, and they can be gauged only after long-continued observation." Sir William Ramsey also denounced our system of competitive scholarships and fellowships as pernicious. We know something in India of the way in which Human Parrots are manufactured by the thousand and branded M.A. and B.A. and then turned out fit for nothing useful in the economy of life. The god "Cram" is exalted everywhere, and the faculty for deliberate judgment is relegated to a place of very inferior importance in gauging the capacity of university candidates. Sir William is of course speaking mainly of the evils created in the domain of science by the way in which degrees are now obtained, but Educationists in India may well find food for reflection in his words, as regards other realms of study. And I am sure his observations about "the skill to gauge the capacity of and hoodwink the examiner" will be readily recognised here as applying in a very special sense to Indian examinations.

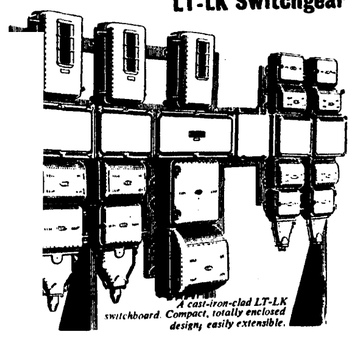
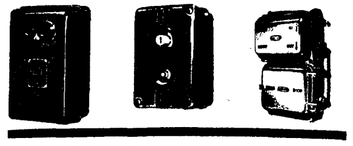
A Ditcher's Diary



A WHOLE WEEK AFTER THE DAWN ARREST OF BAKSHI Ghulam Mohammed and his pals—ah, the knock on the door in the small hours sounds almost Central European—the whole affair remains nearly as misty as some of those mornings in Srinagar. It says something for the pervasive legalism in India that most commentators should have questioned the application of the Defence of India Rules, for the spur obviously was the defence of somebody or something else. It is entirely correct—"correct"; how old-fashioned the word sounds, before it dies at my feet—that everybody should demand for the Bakshi the earliest possible open and fair trial, totally unlike the one the Sheikh got at the Bakshi's hands. I am not at this point prepared to sing in praise of poetic justice; I have not read the poetry of the Hungry Generation, also in jug, and justice has been reduced to something else by many of the obliging judicial commissions those politicians appoint when the public howl cannot be otherwise met. Mr. Lal Bahadur Shastri, I daresay, was entirely honest when he said that the arrest of the Bakshi was an act of the Government of Jammu and Kashmir; New Delhi had not even been consulted. I am a warm supporter of States' rights in most matters; language and Prohibition, for instance. Yet nobody should need to be reminded that Article 370 is still there in its pristine inviolability; and the Article is not closed to two-way traffic. Even if I could lay my hands on a letter I received from a colleague holidaying in Kashmir last year, I could not possibly quote from it; the whole thing was calculated libel from beginning to end—all about the Bakshi. My friend knew his law all right and so added, as I remember, "Don't use a word of it, for Nehru's sake; but what I have written is not a tenth of what I keep hearing from everyone I meet". There need be, thus, little sympathy for Bakshi Ghulam Mohammed; some, perhaps, for Mr. Sadiq. Pitiful is the state of New Delhi. Detractors will say that it pretends to be a silent witness to things going on; alas, it does not have to pretend, for it is. I am getting tired of the word "drift"; drift itself seems tireless. It needs to be remembered that Kashmir is still there before the U.N.; UN-knowingness will be no defence.

NOT MANY YEARS AGO, THE "SUCCESS" OF A *hartal* in Calcutta was judged, more than anything else, by the number of those killed or injured, or by the number of trams and buses burnt on the streets. As I read the smug newspaper reports about last Friday's general strike, it occurred to me that the times may have changed, but the criteria of success had not; the *hartal* was widely reported to have been a virtual failure, but apparently for no better reason than that the few people, buses and trams emerging on the roads all managed to survive the experience. My faith in the value of such assessments, and of the West Bengal Government's claims, is, however, diminished a little by the recollection that the previous *hartal*, on 20th May, was also dismissed at the time as a failure; only last week—more than four months later—was the Chief Minister, Mr. P. C. Sen, able to revise his memory and discuss it in terms suggesting that it was an "eight-anna success". Whether last Friday's *hartal* should, by comparison, be described as a two-anna success or a four-anna failure seems to me of no great consequence. Transport services were somewhat better, and attendance in offices slightly larger, than during previous *hartals*. But that, to my mind, would be a poor standard to go by; more important, perhaps, was the fact that life in the city was far from normal, and a very large number of people chose, or felt compelled, to stay away from work. It is easy for those in authority to feign dismay at such evidence of pusillanimity; but, at heart, they know that the pusillanimity is born of experience, especially experience which has taught people that they cannot always bank on police protection if they should fall into the hands of interfering hoodlums. The Calcutta police are to be complimented on having managed to prevent serious incidents, partly through the questionable use of the Defence of India Rules. But the Government has an unflattering past to live down, and last Friday's experience showed that it cannot be lived down easily. Mr. Sen, meanwhile, might usefully remember that if a one-day strike called by the Opposition parties can cause a loss of Rs. 10 crores, so can a one-day holiday declared by the Government. Between the passion for stoppages alternately displayed by the two, it is hard to decide where the greater foolishness lies.



THE PRESIDENT, DR. RADHAKRISHNAN, HAS NOW returned to India after what, according to All India Radio, was a triumphant tour of the Soviet Union and, of all places, Ireland. Dr. Radhakrishnan is unquestionably the most agreeable and presentable personality the country has after Nehru; any day I would rather have him on junkets round the world than, well, so many you and I can think of who are far more peripatetic. The time may yet have come for all to treat the tours for what they are. Rituals have their uses, perhaps as much in politics, democratic or otherwise, as in religion, idolatrous or otherwise. Anything more? Now that Mr. Krishnamachari is ever so much more reasonable about foreign exchange for legitimate purposes, some of the earlier pretence and hypocrisy, generated by Mr. Morarji Desai's rigidity, should go. It was once necessary to mingle public purpose with personal business to get anywhere out of the country. The country's loss, unnoticed, was twofold; it spent scarce foreign exchange and it also saw a personal charge being transferred to the public exchequer. The Commonwealth Prime Ministers' conference or endless negotiations on the India Office Library were purely incidental; somebody had to go somewhere to fix a son's admission or something of that sort; and the tax-payer paid for it. All this has nothing whatever to do with the President, who cannot, obviously, always be the host and never a guest. I am unable to extend the immunity to his vast retinue; several Ministers also have had an unnecessarily large entourage on their recent travels abroad. It may all sound very petty, and I know it. But I wish the Ministers ever cared to look at the trail of bitterness and ill-will each of these visits leaves behind—much longer and more enduring than the trail of smoke drawn on the sky by the jets they fly by. What do they know of the rancour between Shrimati A and Shrimati B, all over the lipstick or pressure cooker the former's husband got from Paris and the latter's didn't from Rangoon? Mr. Krishnamachari must one of these days sit down and think over the forbidden fruit his predecessor made of foreign travel; Mr. Desai should approve, for sin he is believed to disapprove.

LAUNCHING A NEW NEWSPAPER IS ALWAYS A TRICKY and expensive business, even when it can rely on a "captive" first readership of 1¼ million. That was the circulation figure the *Sun*, Britain's first new popular daily in 34 years, kicked off with. The question now is whether it can increase it. To begin with the number might be higher; not only will the readers of the old *Daily Herald* be anxious to give the newcomer a chance, but others will no doubt buy it out of curiosity. The "moment of truth", the point when the readership will have settled down and will either be declining or expanding at a fairly steady pace, is not expected before the early months of next year. By that time, a great deal of money will have been spent, quite apart from the £10,000 a week it was costing to keep the *Daily Herald* alive during its last few months. Very sobering economics indeed, and an interesting comment on what is required to launch a popular newspaper these days, even one which claims to have no political affiliations. That, I believe, is now a necessity for a daily newspaper

For Guaranteed Quality and Dependability insist on LT-LK Switchgear

A cast-iron-clad LT-LK switchboard. Compact, totally enclosed design, easily extensible.

Type MK1, 15Amps automatic direct-to-line motor starters for motors up to 7.5 h.p.

Type MF1, 15 Amps manually operated motor starters for motors up to 7.5h.p.

Switch-fuse gear — available as switch unit, fuse unit, and combined switch-fuse unit in ratings of 60/100 to 1000 Amps, 500 Volts

It is false economy to buy inferior switchgear. Of the finest quality, LT-LK is made in India in collaboration with the leading European manufacturers of switchgear — Laur Knudsen Ltd. of Denmark.

L&T also manufactures control panels (floor mounted, wall mounted or console type) for India's power generating and distribution stations and industrial installations.

of wide circulation in Britain. In bulk, the *Sun* is larger than the *Daily Herald*, although that may not last. It contains more features, which means that it does not intend to follow the formula that has served the *Daily Express* so well—"there is no substitute for news in a newspaper"—but has decided instead to copy its stable companion, the *Daily Mirror*, in being at least partly a daily magazine. That would certainly lose me as a regular reader. Nor do I approve of its policy of mixing up news and comment. This can be highly misleading if not actually dangerous. Otherwise, the *Sun* looks to me very like the paper it is replacing. The format is similar and the type faces are identical. The difference lies in the image. It is no longer that of "cloth-cap" socialism; rather it tries to conform more with Mr. Wilson's new, scientific, popular mass appeal. It seems to me the formula is a good one, bearing in mind the extent to which the British working classes have become "de-proletarianised" in recent years. This is the reason why the death of the *Daily Herald* marked the end of an era. It will be interesting to see how long the *Sun* survives to illuminate the present one.

THE IDENTITY OF MR. KHRUSHCHEV'S "ULTIMATE" weapon, even if it had in fact existed, is a problem which would not have intrigued me greatly. I noticed distinct signs of similar unconcern among the vast majority of the people I spoke to about it; most of us are just not caring any more. I suppose if the Russians really did have such a weapon, Mr. Khrushchev would have been doing everybody a favour by warning us about it. But he would be aware, in turn, that there is no great consolation in knowing you can always destroy your enemy provided you are prepared to destroy yourself in the process. Moreover, he must also know that the very possession of such a weapon is likely to make his problems of defence, especially against the Chinese, so much more difficult. It was said some years ago, by me I believe, that wars are no longer won by rockets, aircraft carriers or nuclear bombs, even if international politics are to some extent influenced by such things. Nowadays wars are won by under-fed little men with "burp" guns and very little else except a determination to fight on indefinitely if need be. Against such nuisances, "ultimate" weapons would be useless. They would not save the United States from its inevitable defeat in South Vietnam, for instance. Nor would they have helped the French in Algeria, or the British in Malaya. And, nearer home, they would not safeguard India against intrusions from China. Devices such as these belong to the period of history when wars were declared and fought to a finish. Nowadays they tend to be long-drawn-out, indefinite affairs, where the dividing line between preparatory politics and decisive hostilities is often impossible to draw. Like the other weapon-bound major Powers, Russia has so far shown herself unprepared for this kind of warfare, especially psychologically. That is why Mr. Khrushchev is still talking nonsense about highly destructive weapons and why, trusting its instincts rather than its reason, the world has become profoundly bored by his claims. I am sure that Peking is not in the least impressed by what Mr. Khrushchev said; rather the reverse, because it revealed taints of the old "Maginot Line" reactions to the threat of war. So far, the Chinese have shown themselves to be the most accomplished exponents of the new kind of warfare. But I see that President Soekarno is also learning fast.

ONCE UPON A TIME A CHAP HAD A FRIEND, OR SO IT seemed, who was an inspector of taxes. As evidence of his love and affection he frequently gave presents to the inspector, who at length was moved to write and protest. His letter stated that while he appreciated the friendship and the generosity which accompanied it, a man of his importance could not go on accepting these gifts and, therefore, to protect himself he must give notice that any further gifts would go straight into the fire. The chap wrote back saying that he fully appreciated the position but his feelings of generosity could not be curbed. The next day he had delivered a ton of coal.

THE DITCHER

IMPERIAL TOBACCO PAYS INTERIM

COMMENTING on the prospect for the current year in his chairman's address at the annual general meeting of the Imperial Tobacco Company of India Ltd. held in Calcutta last week, Mr. F. A. Collett emphasised that the Company is well equipped to face the growing competition from other cigarette manufacturers. (A full text of the speech is printed on a later page in this issue of *Capital*.) The results during the current year are expected to show an improvement, provided taxes are not further increased. So the directors have decided to revert to the previous rate of interim dividend by declaring the first interim dividend of 2½ percent for the current year. He takes an optimistic view of the future. There is a great scope for increasing the consumption of cigarettes, but the rate of the rise depends on two factors: firstly, the standard of living in India, secondly, the rate of excise duty, which governs consumption greatly. At present, it is considered very high.

During 1963-64, cigarette consumption dropped for the first time in many years. The high rate of the excise duty seems to have reduced consumption. If the revenue from the cigarette industry is to remain buoyant, it is necessary to reduce the excise duty. Mr. Collett mentioned that the Company might have to bear the burden of heavier direct taxation during the current year. It seems that the 1964 Budget has increased the corporation tax for the Company to 60 percent. He also mentioned the disadvantages of frequent changes in taxation. So he commented, "if we cannot have a reduction in taxation, then at least a period of stability is overdue". The Company has taken steps to improve sales by toning up the sales organisation and diversifying the products. In the export field, attempts are being made to find markets in rupee payment countries by arranging trade on Government-to-Government basis. The two printing factories of the Company situated in Monghyr and Tiruvottiyur, near Madras, are doing very well. In addition to doing the work of the Company, outside orders are being executed by them.

Martin Burn Power Companies

THE results of the electric companies under the managing agency of Martin Burn Ltd for the year ended March 1964, have been published. The directors of Agra Electric Supply Co. Ltd point to the satisfactory progress that is being made in the installation of the new generating plant in Agra. It is hoped that the new station will be commissioned in March or April 1965. The transmission and distribution systems are being increased to facilitate the supply of additional electric power. Operating expenses have increased due to rising costs of coal and labour. The Company has been permitted to make a very nominal increase in charges to consumers. Since the rise has proved to be insufficient, proposals for a further rise in rates are being discussed with the Uttar Pradesh Government.

Units sold rose from 55.2 million to 61.3 million and revenue from Rs. 68.51 lakhs to Rs. 76.63 lakhs. After providing for all charges and setting aside Rs. 52,626 (against Rs. 50,437) to contingencies reserve, Rs. 5.15 lakhs (against Rs. 4.81 lakhs) to depreciation and Rs. 1.25 lakhs (against Rs. 50,000) to general reserve, there is a distributable balance of Rs. 2,03,357, including Rs. 13,612 brought in. The taxable ordinary dividend has been reduced from 11 percent to 10 percent which works out to a yield of 8 percent at the present price of Rs. 125 a share of Rs. 100 each. The carry-forward is Rs. 3,398.

The United Provinces Electric Supply Co. Ltd has been operating the new 10MW power station in Talkatora, Lucknow, since January 1964. In pursuance of the notice of the State Government, arrangements have been made to hand over the Lucknow and Allahabad undertakings of the Company to the State Electricity Board. The licence has expired since 10th September, 1964. Units sold rose from 127.5 million to 141.8 million, and revenue from Rs. 1.54 crores to Rs. 1.80 crores. After providing Rs. 11.42 lakhs (against Rs. 10.80 lakhs) for depreciation, Rs. 1.49 lakhs (against Rs. 1.15 lakhs) for contingencies reserve and Rs. 2.25 lakhs (against (Rs. 1.25 lakhs) for general reserve and meeting other charges, there is an available balance of Rs. 5.63 lakhs, including Rs. 9,311 brought in. The taxable ordinary dividend has been reduced from 11 percent to 10 percent. The yield amounts to 4.6 percent at the present price of Rs. 217 a share of Rs. 100 each. The carry-forward is Rs. 2,908.

The permanent bulk supply from the Ganga Sarda grid of the U.P. Electricity Board has now been connected to the system of Bareilly Electricity Supply Co. Ltd. So the capacity of the power station has been increased. The expansion programme to increase the transmission and distribution systems has been undertaken. The State Electricity Board has advanced a loan of Rs. 10 lakhs to the Company for the purpose. Operating expenses have increased due to the increased costs of coal and labour. Although the Company has been allowed to increase charges to consumers, the rise is insufficient. So, proposals for a further increase in charges are being discussed with the State Government. Units sold rose from 15.8 million to 16.9 million and revenue from Rs. 27.52 lakhs to Rs. 29.43 lakhs. The distributable balance has amounted to Rs. 51,402, including Rs. 1,852 brought in, after providing Rs. 2.34 lakhs (against Rs. 2.14 lakhs) for depreciation, Rs. 19,932 (against Rs. 18,800) for contingencies reserve and Rs. 18,000 (against Rs. 13,500) for taxation. The taxable ordinary dividend has been reduced from 11 percent to 6 percent which works out to a yield of 5.2 percent at the present price of Rs. 11.50 a share of Rs. 10 each.

The undertaking of Upper Jumna Valley Electricity Supply Co. Ltd was handed over to the State Electricity Board on 27th June, 1964, and the Company received an initial payment of Rs. 4.5 lakhs to be followed by further payments in due course. Until such time as a settlement is reached as to the price to be finally paid to the Company for the acquisition of the undertaking and until the contingency liabilities have been suitably assessed, it will not be possible to formulate proposals relating to the future of the Company. Units sold dropped from 28.1 million to 25.6 million, but revenue rose from Rs. 40.76 lakhs to Rs. 46.24 lakhs. The Company has incurred a loss of Rs. 58,422, after providing for all charges and setting aside Rs. 16,439 to contingencies reserve. This has been due to the increase in the bulk supply tariff imposed by the State Electricity Board. The excess of expenditure over income and the reasonable return have been made good by transferring Rs. 76,318 from the appropriation account and Rs. 48,707 from tariffs and dividends control reserve. There is an available balance of Rs. 68,537, including Rs. 1,934 brought in. The taxable ordinary dividend has been reduced from 13½ percent to 10 percent. The yield amounts to 3.9 percent at the present price of Rs. 25.37 a share of Rs. 10 each.

India Steamship Earns Profit

THE ordinary shares of India Steamship Company Ltd have improved to Rs. 7.25 due to an optimistic assessment of the future outlook of the Company by Sir A. Ramaswami Mudaliar, chairman, in his address at the annual general meeting held in Calcutta last week. After incurring losses during the past few years, the Company has earned a profit of more than Rs. 9 lakhs for the year ended March 1964. He seems to be of the view that the Company has now again entered the profit-earning stage. (A full text of the speech is printed on a later page in this issue of *Capital*.) Nevertheless, he pointed to the various factors which are contributing to the unprofitable working of shipping companies. The delay in the turnround of ships in Indian ports has involved the companies in enormous losses. Berthing delays, combined with lightning strikes and labour troubles, have contributed to the increased operational costs. This apart, Indian ports do not provide enough dry docking and repair facilities. As a result, the earnings of shipping companies have suffered. He rightly stressed that either the frieght rates must be increased to offset the increased operational costs, or port facilities should be adequately improved.

Commenting on the expansion of Indian shipping, Sir Ramaswami pointed out that there is need for more tramp shipping, tankers and bulk carriers. Since India is deficient in these lines, it is hoped that attention will be given to develop them. It will be sheer waste of economic resources if new entrepreneurs are allowed to enter the liner trade in which Indian shipping is now largely represented. Any new tonnage should be usefully utilised so that the Indian shipping industry develops on healthy lines.

Satisfactory Results from Jay Engineering

ALTHOUGH the working of the Jay Engineering Works Ltd for the year ended March 1964, was interrupted by a prolonged strike lasting from 17th December, 1963 to the end of May, 1964, the Company has produced fairly satisfactory results. It has earned a profit of Rs. 16.24 lakhs, against a profit of Rs. 35.85 lakhs for 1963-64, after providing Rs. 35.20 lakhs (against Rs. 32.51 lakhs) for depreciation and Rs. 3 lakhs (against Rs. 5.40 lakhs) for development rebate reserve. Despite the smaller profit, the directors have decided to pay a taxable ordinary dividend of 8 percent by transferring a sum of Rs. 9.50 lakhs from general reserve. This has been done in view of the strong

Subsequent to the merger of De Twentsche Bank N. V. into the Nederlandsche Handel-Maatschappij, N.V., the business conducted in India since 1920 by the

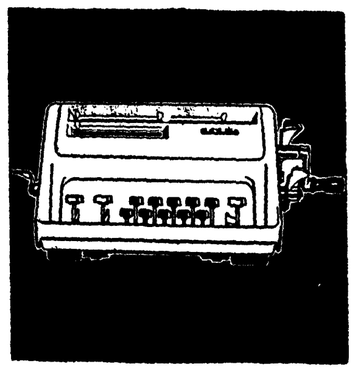
Indo-Swedish Arithmagic!



FACIT ASIA'S factory in Madras will be formally inaugurated on October 3 by His Excellency KLAS BOOK, *Swedish Ambassador to India.*
Sri R. VENKATARAMAN, *Minister for Industries, Government of Madras, will preside.*
Sri M. BHAKTAVATSALAM, *Chief Minister, Madras State, will participate.*

FACIT CALCULATORS AND ADDING MACHINES MAKE BUSINESS ARITHMETIC CHILDISHLY SIMPLE!

FACIT solves all calculation problems quickly, efficiently, economically and with fool-proof accuracy. Just 10 keys to operate—and just 10 minutes to learn operating!

PRODUCTS OF SWEDISH PRECISION
Every third calculator exported in the world bears the legend "FACIT." Facit comes to India with an unsurpassed reputation for quality and precision in business machines. Over 40 years of research and experience in the making of more than two million business machines, assure the excellence of Facit Asia's products.

ANY BUSINESS NEEDS A FACIT
Wherever there is business arithmetic to be done—in offices, banks, shops, government departments, theatres and restaurants—a Facit business machine is the answer.

WHO IS FACIT ASIA LTD.?
FACIT ASIA LTD., has been formed by AB Åtvidabergs Industrier, the world-renowned Swedish makers of calculators and office equipment, in technical and financial collaboration with Indian interests. The factory in Madras is the first Facit factory to be set up in South-east Asia.

financial position of the Company. In his chairman's address at the annual general meeting held in Calcutta (a report of which was printed in the previous issue of *Capital*) that current operations are maintaining a satisfactory trend. It is hoped that the Company will increase its earnings during the current year and there should be bigger exports of the Company's products. The subsidiary Company in Ceylon is operating at a profit. It has already earned a profit of Rs. 77,553, but the factory in Hyderabad has not yet turned the corner.

Pointing to the unfortunate results of the strike, he mentioned that the interests of the working class in this country are suffering because trade unionism is dominated by political considerations. Referring to the rising costs of industries, he stressed the importance of taking urgent steps to hold them down. If the Indian economy is to be relieved of the prevailing stresses and strains, it is necessary to concentrate attention upon productive investments. Unproductive investments should be avoided as far as practicable.

Aluminium Corporation Results Impress

THE performance of Aluminium Corporation of India Ltd during the year ended March 1964, has been impressive. Sales rose by 48 percent to Rs. 3.45 crores, and the profit has been much higher than that of 1962-63. The Company issued new preference shares for Rs. 25 lakhs and ordinary shares for Rs. 17.81 lakhs. So the paid-up capital of the Company now amounts to Rs. 2 crores. Presiding at the annual general meeting of the Corporation held last week, Mr. Lakshmipat Singhania, chairman, assured (a full text of the speech was published in the previous issue of *Capital*) the shareholders that the Company would service the new capital satisfactorily out of its increased earnings. The expansion programme has been completed and an intregated plant is now operating. Steps have been taken to undertake further expansion and discussions with the Government have begun.

He takes an optimistic view of the outlook for aluminium. By the end of the third five year plan, the demand for the metal should rise to 150,000 tonnes and may increase to 300,000 tonnes by 1970. Since aluminium is a heavy capital-intensive industry with long gestation periods, the Government should provide incentives for its development. At present, the working of this industry is being hindered by the high cost of power and various difficulties, particularly that relating to bauxite which is the chief raw material. Since the primary producers are not given free scope for developing fabricating facilities, their working has tended to suffer.

Hastings Mill Repeats

HASTINGS Mill Ltd has repeated the taxable ordinary dividend of 6 percent for the year ended March 1964. The yield amounts to 4.8 percent at the present price of Rs. 126 a share of Rs. 100 each. The profit has dropped from Rs. 16.57 lakhs for 1962-63 to Rs. 12.07 lakhs for 1963-64, after providing Rs. 18.02 lakhs (against Rs. 10.93 lakhs) for depreciation, Rs. 5.20 lakhs (against Rs. 3.79 lakhs) for development rebate reserve and Rs. 10.75 lakhs (against Rs. 22.50 lakhs) for taxation. General reserve is allocated Rs. 7.80 lakhs (against Rs. 13.14 lakhs), leaving a balance of Rs. 2,274 (against Rs. 4,954) to be carried forward. Sales of finished goods rose from Rs. 4.18 crores to Rs. 4.62 crores.

The Company has concentrated on improving the quality of jute products by installing a modern laboratory. The directors say it is essential to increase the supply of good raw jute to improve the quality of jute goods. Attention is being given to developing alternate uses for jute and jute products. The Company has installed 120 broad looms. The felt plant is working satisfactorily. The silk mill of the Company is making progress. Synthetic fabrics are being produced. The expansion programme is also progressing.

Anil Hardboards Sales up

ANIL Hardboard's performance during the year ended March 1964 showed a considerable improvement over the previous year, with its turnover up by about 10.7 percent from Rs. 89.82 lakhs to Rs. 99.42 lakhs and gross profit increasing by 10.5 percent from Rs. 27.54 lakhs to Rs. 30.44 lakhs. The Company is likely to do still better during the current year. Mr. G. R. Jolly, the managing director of the Company informed the shareholders at the annual meeting held recently, that the Company's sales during the current year up to 24th September amounted to Rs. 62 lakhs.

The Company's second plant would go into production very shortly—and it would reach full production in three months. This plant would add between Rs. 12 lakhs and Rs. 15 lakhs worth of production during the remaining months of the current year, and it would help the Company in doubling its production in the coming year. It is going ahead with its expansion plans. It has received two new industrial licences for the manufacture of embedded hardboards and melamine films. Five factories are proposed to be set up at different places for the manufacture of embedded boards: the first factory to start production will be in Bombay. The Company has entered into a collaboration agreement with a U.S. firm which will provide 45 percent of the finance required for the project. It is doing well on the export front. It exported boards worth Rs 6 lakhs last year and it has booked orders for about 3.5 million square feet of boards. Exports are exported to show a further improvement because of the larger export incentives. The Particle Boards India Ltd in which the Company has invested Rs. 1 lakh, has now gone into production.

More from Mysore Kirloskar

MYSORE Kirloskar Ltd has stepped up the dividend for the year ended June 1964 from 10 percent to 12.5 percent, which seems amply justified by the Company's impressive performance during the year. According to the preliminary report, sales have risen by about 38 percent from Rs. 2.24 crores to Rs. 3.09 crores, and the gross profit has gone up by about 40 percent from Rs. 65.08 lakhs to Rs. 90.72 lakhs. Appropriations include depreciation Rs. 18.97 lakhs (against Rs. 13.86 lakhs), development rebate Rs. 10.56 lakhs (against Rs. 6.08 lakhs), taxation Rs. 31 lakhs (against Rs. 27.40 lakhs), general reserve Rs. 12.22 lakhs (against Rs. 1.05 lakhs), debt redemption reserve Rs. 5 lakhs (against Rs. 1.20 lakhs), contingency reserve Rs. 1 lakh (against Rs. 2 lakhs) and replacement and rehabilitation reserve Rs. 4.40 lakhs (against Rs. 2 lakhs).

No provision has been made out of the year's profits for dividend reserve which had received Rs. 5.75 lakhs in the preceding year. The directors have transferred Rs. 9.30 lakhs from the development rebate reserve to dividend reserve which will be used for the payment of the proposed dividends amounting to Rs. 9.20 lakhs (against Rs. 6.75 lakhs). The previous year's excess provision for taxation of Rs. 2 lakhs has been transferred to general reserve. The Company is stated to be making good progress in the manufacture of existing lines as well as Capstan and turret lathes. The Company has taken on hand the manufacture of grinders and monomatic lathes and these are expected to be placed on the market by 1966. The Rs. 100-paid share of Mysore Kirloskar is quoted around Rs. 156, offering a gross return of about 8.5 percent.

Outlook for Citric India

CITRIC India's shares have since long been quoted at a heavy discount, the latest quotation for the Rs. 100-paid share being around Rs. 69. This does not reflect merely the generally depressed mood of the capital market. The progress of the Company has been far from satisfactory. But its affairs seem to be improving with the change in the management. Presiding over the recent annual meting of the Company, Mr. G. D. Somani, a director who took the chair in the absence of the chairman, Maharaja of Jaipur, assured the shareholders that the Company's teething troubles were almost over, that the pilot plant had shown satisfactory results and that commercial production would be started within a few weeks. He explained that a few fermentation trials, recently begun on a commercial scale, had not been completely successful due to the difficult process involved, but the management was confident of standardising the process.

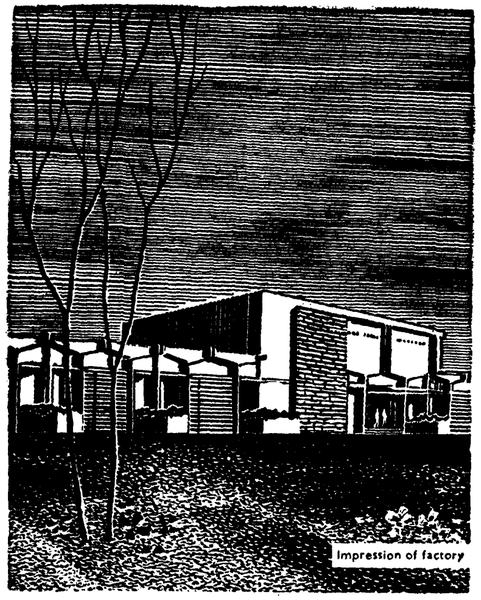
Mr. Somani stated that there would be some delay in starting the entire plant and eventually turning out the finished product as some of the equipment of the finishing section had to be reordered as they were broken down in transit. While unable to give any categorical assurance about the time when the rated capacity would be achieved, he assured the shareholders that the project would be remunerative and that the Company will not find any difficulty in selling its product. He said that negotiations were going on with the Imperial Chemical Industries concerning the selling arrangements of the Company's products and he seemed optimistic that the negotiations would be successful. The Company has applied for permission to expand its rated capacity from the present 1,500 tons to 4,000 tons a year. The implementation of the expansion programme would help bring down the cost of production. But the expansion programme will be taken up only after achieving satisfactory working results with the present installed capacity. As for the outlook for the current year, Mr. Somani stated that this year was going to be a difficult one. However, everything depended on how soon the rated capacity would be achieved.

T. Maneklal Raises Dividend

T. MANEKLAL Manufacturing Co. Ltd has declared a dividend of 25 percent for the year ended May 1964, compared with 6 percent in the preceding year. In 1962-63, the directors had proposed a one-for-five bonus issue in addition to the 6 percent dividend but the issue had to be deferred because of the levy of capital gains tax on bonus shares in the 1964-65 Budget. The increase in the dividend for 1963-64 is fully justified by the Company's improved performance. The sales are up by about 20 percent from Rs. 1.37 crores to Rs. 1.63 crores, and the gross profit has gone up by about 54 percent from Rs. 26.35 lakhs to Rs. 40.57 lakhs.

Appropriations include depreciation Rs. 6.39 lakhs (against Rs. 5.17 lakhs), development rebate Rs. 1.25 lakhs (against Rs. 2.13 lakhs), taxation Rs. 18.43 lakhs (against Rs. 15.21 lakhs), general reserve Rs. 3.70 lakhs (against Rs. 1.20 lakhs) and gratuity reserve Rs. 39,400 (against Rs. 41,000). The proposed dividend absorbs Rs. 7.39 lakhs (against Rs. 1.40 lakhs) leaving a sum of 16,530 to be carried forward, against Rs. 11,654 brought in. In the previous year, the directors had to withdraw Rs. 80,000 from the development rebate reserve in order to provide for the payment of dividend. The Rs. 100-paid share of T. Maneklal is currently quoted around Rs. 530.

Gammon India Pays More



THE increase in the dividend from 11 percent to 12 percent by Gammon India for the year ended March 1964, does not reflect fully the improvement in the Company's performance during the year. According to the preliminary report which has been released along with the announcement of the dividend, the Company's sales are up by about 22.4 percent from Rs. 5.55 crores to Rs. 6.80 crores, and the gross profit has gone up by as much as 58.3 percent from Rs. 52.08 lakhs to Rs. 82.48 lakhs. Appropriations include depreciation Rs. 28.32 lakhs (against Rs. 17.09 lakhs), development rebate Rs. 16.40 lakhs (against Rs. 4.39 lakhs), taxation Rs. 20 lakhs (against Rs. 16 lakhs) and general reserve Rs. 5 lakhs (the same). The proposed dividend absorbs Rs. 13.80 lakhs (against Rs. 12.65 lakhs) leaving a sum of Rs. 96,000 to be carried forward, against Rs. 2 lakhs brought in.

The Company is said to be having a large volume of work on hand and the turnover during the current year is expected to be maintained at a high level. Additions made to plant and equipment and other fixed assets during the year amounted to Rs. 1.379 crores, compared with Rs. 44.22 lakhs in the preceding year. The paid-up capital of the Company has been raised to Rs. 1.38 crores through the issue of 230,000 right shares, which will be eligible for dividend from the current year. The Rs. 10-paid share of Gammon India is currently quoted around Rs. 14.64, offering a gross return of about 9 percent.

Tata-Merlin and Gerin: An Indo-French Venture

A NEW factory for the manufacture of electrical switchgear and controlgear is being set up in Thana by Tata-Merlin and Gerin Ltd, a new Company which has been promoted by Voltas Ltd jointly with the French firm of Etablissements Merlin and Gerin of Grenoble, and Tata Sons Private Ltd. The factory will make under Merlin Gerin's licence various types of switchgear and allied power distribution equipment including the Solenare high-tension air-break circuit breakers, isolators upto 380 kV, interrupters, current and potential transformers, switchboards and control panels and a complete range of L.T. air-break circuit breakers. The manufacture of relays and measuring instruments is also planned. Production is expected to start at the end of 1965.

Tata-Merlin and Gerin Ltd has an authorised capital of Rs. 2.5 crores.

USHA MARTIN BLACK

LARGEST MANUFACTURERS OF STEEL WIRE ROPES IN INDIA

ISI and AP Certified
Also approved by Lloyd's Register of Shipping

Formed as recently as 1961, Usha Martin Black is the first to attain the full rated capacity of 3600 tonnes of Steel Wire Ropes per annum within a year of commencement. Within the same period it embarked on its ambitious expansion programme—Phase II—aimed to raise its annual capacity to 7200 tonnes thereby covering a large variety of special and compound constructions of wire ropes needed for varied and specialised purposes.

The most modern and well laid-out UMB plant is run under the supervision of foreign and foreign trained Indian technicians. Strict quality control measures are enforced at every stage of manufacture and every rope that leaves the factory is assured of the highest standard.

UMB Ropes are the first in India to be granted API certification by the internationally recognised organisation of American Petroleum Institute for ropes for oil-well industry and use of ISI marking by the Indian Standards Institution on their mining, haulage and winding ropes. Lloyd's Register of Shipping has also approved them for use in ships.

UMB Wire Ropes are now available in a wide range of black and galvanized quality for oil drilling, engineering, mining, shipping, railways, earth moving and various other purposes.

USHA MARTIN BLACK (WIRE ROPES) LIMITED

n the first stage, its issued capital rill be Rs. 70 lakhs of which about 5 percent will be issued to the pubic. The balance will be taken up by he three promoters, Merlin Gerin apitalising a part of the fees and ayalties payable to them.

Although switchgear and controlear are already under progressive nanufacture in India, the output of hese items is far below the present lemand and the country has been importing switchgear and allied quipment worth about Rs. 11 crores year. The fourth plan visualises an ncrease in the installed electricity generating capacity in the country oy approximately 6 million kW to approximately 16 million kW by 1970-71. It is estimated that thereafter the installed capacity will double approximately every five years. The demand for switchgear to be manufactured by the Company is closely interlinked with the development of generating capacity.

Devidayal Tube Repeats on Increased Capital

DEVIDAYAL Tube Industries Ltd has maintained the dividend for the year ended June 1964 at 10 percent, but this dividend is payable on a higher capital as increased by the public issue in November; the new shares rank for dividend proportionate to the amount and period for which shares are paid-up. The total distribution among the equity shareholders is considerably higher at Rs. 5.23 lakhs, against Rs. 2.46 lakhs in the preceding year. The preliminary report does not mention the turnover, but it says that it increased by some 8 percent despite the closure of the Company's factory in April and May 1964 for certain major repairs. The increase in turnover is said to be due to the operation of the Company's plant No. 1 in a more scientific manner. Most of the machinery for plant No. 2 has been received and the construction of the factory building and erection of the machinery is progressing satisfactorily. This plant is expected to be commissioned by about the middle of next year.

The gross profit of the Company for 1963-64 is higher by about 15.5 percent at Rs. 16.16 lakhs, compared with Rs. 13.99 lakhs in the previous year. After providing Rs. 5.41 lakhs (against Rs. 5.14 lakhs) for depreciation and Rs. 4.16 lakhs (against Rs. 2.77 lakhs) for taxation, the net profit is shown at Rs. 6.59 lakhs, against Rs. 6.08 lakhs. No provision has been made for development which received Rs. 1.70 lakhs in the preceding year, but a sum of Rs. 2.75 lakhs (against nil) has been taken to the general reserve. Preference dividend takes up Rs. 19,800 (against nil) and equity dividend absorbs Rs. 5.23 lakhs (against Rs. 2.46 lakhs), leaving a sum of Rs. 30,328 to be carried forward, against Rs. 1.80 lakhs brought in.

Madhusudan Mills Pays Again

SHREE Madhusudan Mills Ltd has declared a dividend of 10 percent (Re. 1 a share) for the year ended June 1964. The Company has thus returned to the dividend list after a lapse of 15 years. The dividend for 1963-64 is payable on the increased capital. The Company has fared much better than in the preceding year with the total turnover rising from Rs. 6.55 crores to Rs. 6.92 crores, and the gross profit moving up from Rs. 48.96 lakhs to Rs. 54.65 lakhs. The textile unit earned Rs. 28.64 lakhs (against Rs. 23.25 lakhs) on a turnover of Rs. 4.17 crores (against Rs. 4 crores) and Hall and Anderson unit made a gross profit of Rs. 26.01 lakhs (against Rs. 25.71 lakhs) on a turnover of Rs. 2.75 crores (against Rs. 2.56 crores). After providing Rs. 31.50 lakhs (against Rs. 20.52 lakhs) for depreciation and Rs. 4.25 lakhs (against nil) for taxation, the net profit amounts to Rs. 18.90 lakhs, against Rs. 28.44 lakhs in the preceding year.

After writing back excess provisions amounting to Rs. 14 lakhs, the directors have transferred Rs. 20 lakhs (against Rs. 18 lakhs) to development rebate reserve including arrears for previous years and taken Rs. 4 lakhs (against nil) to the general reserve. The preference dividend absorbs Rs. 1.76 lakhs and equity dividend will take up Rs. 7 lakhs, leaving a surplus of Rs. 55,000 to be carried forward, against Rs. 41,000 brought in.

The improved performance of the Company during 1963-64 is attributed to the efforts made by the management in renovating and modernising the plant and machinery of the textile unit. During 1963-64, the Company added machinery worth Rs. 35.21 lakhs and a further programme involving an outlay of Rs. 45 lakhs is on hand for the current year. The Company has so far availed itself of Rs. 37.80 lakhs out of the loan of Rs. 53 lakhs sanctioned by the N.I.D.C. for modernisation and rehabilitation of the textile unit.

Acme Manufacturing Fares Well

ACME Manufacturing Co. Ltd reports very encouraging results for the year ended June 1964, and this has enabled the directors to clear arrears of preference dividend for six years ended June 1962. The Company's production of diesel engines during 1963-64 increased from 594 to 1,097, that of valves from 190,000 to 330,000 and of shaping machines from 85 to 201. The sales recorded an increase of nearly 38 percent from Rs. 63.43 lakhs to Rs. 87.96 lakhs, and the gross profit shot up by 125 percent from Rs. 5.59 lakhs to Rs. 12.62 lakhs. After providing Rs. 2.21 lakhs (against Rs. 1.51 lakhs) for depreciation, Rs 1.40 lakhs (against Rs. 30,000) for development rebate and Rs. 4.25 lakhs (against Rs. 1.40 lakhs) for taxation, the net profit amounts to Rs. 3.89 lakhs, against Rs. 2.11 lakhs in the preceding year. After writing back excess provisions and making provision for taxation for previous years, the directors have set aside Rs. 4.47 lakhs for the general reserve. Preference dividend for six years absorbs Rs. 2.16 lakhs, and it is to be paid out of the general reserves.

The directors have struck an optimistic note about the outlook for the current year. The Company is stated to have sufficient orders on hand. In order to meet the increasing demand, the Company has stepped up the production of engine valves from 20,000 to 40,000 a month and it is expected to achieve the target of 50,000 before the close of the year. The Company has approached the Government for stepping up the licensed capacity of engine valves from 50,000 to 75,000 a month. It has secured a licence to manufacture bigger sized shaping machines at the rate of 250 a year.

Canara Workshops Repeats

THE working results of the Canara Workshops Ltd for the year ended March 1964, show a small setback, compared with the previous year due mainly to inadequate supply of raw materials for the factories in Mangalore and Nagpur. Sales are down from Rs. 83.19 lakhs to Rs. 81.21 lakhs and the gross profit is lower at Rs. 21.79 lakhs, against Rs. 24.68 lakhs. The dividend has been maintained at 20 percent. After providing Rs. 3.52 lakhs (against Rs. 3.04 lakhs) for depreciation, Rs. 1.58 lakhs (against Rs. 42,000) for development rebate and Rs. 7.50 lakhs (against Rs. 12.30 lakhs) for taxation, the net profit amounts to Rs. 9.19 lakhs, against Rs. 8.92 lakhs in the preceding year. A sum of Rs. 41,787 has been set aside for dividend tax and Rs. 1.50 lakhs have been provided for capital redemption fund. The proposed dividends absorb Rs. 7.10 lakhs (against Rs. 7.25 lakhs). After making various appropriations, there remains a sum of Rs. 26,279 to be carried forward, against Rs. 8,112 brought in.

The directors state that springs production and sales were affected by irregular arrivals of raw materials. The consignment of spring steel which had been stranded in Yokohama last year was found on inspection to contain steel flats of substandard quality. After protracted negotiations, the suppilers agreed to indemnify the Company for the loss sustained, but the Company could secure only half the original cost.

The installation of the alloy steel plant was started in September 1963, and the erection was completed by December, but the plant has not been commissioned as the Company has not yet been offered power supply on a definite time schedule. The directors hope to be able to start trials before the next annual meeting. The capital investment on this project had been estimated around Rs. 52 lakhs. Despite several increases both in price and in Customs duty, the total cost is expected to be lower around Rs. 49 lakhs. The Government is said to be willing to encourage the expansion of the Company's factory and the directors hope to place proposals in this connection before the shareholders in the near future.

The hubs and brake drums division is stated to be developing steadily. A foundry and machine shop is equipped with the latest type of equipment. In addition to the modern type of engine lathes and turret lathes, the Company has installed one programme control lathe and a vertical programme control copying lathe at a cost of about Rs. 4 lakhs. These two lathes are mass production type lathes and will help the Company to turn out brake drums in large numbers at reduced cost. The Government has granted an import licence to get a multiple spindle drilling machine from the U.S.A. and this has now been shipped. This drilling machine is designed to drill all the five or six holes or eight holes of a brake drum simultaneously. The project of hubs by the use of ductile iron, which the Company is producing under the collaboration of International Nickel Company of the U.K., is under development.

Machinery Manufacturers Fares Well

MACHINERY Manufacturers Corporation did exceedingly well during the year ended March 1964, with its sales rising by 24 percent from Rs. 2.04 crores to Rs. 2.54 crores and the gross profit increasing by 20 percent from Rs. 55.43 lakhs to Rs. 66.68 lakhs. The dividend, however, has only been maintained at 15 percent. From what the chairman, Mr. Aloke Kumar Mitra, stated at the Company's annual meeting on 23rd September, the shareholders can expect still better results in the current year and the years ahead. (A full text of the chairman's address is printed on a later page in this week's issue of *Capital*). The Company is going from strength to strength. It has acquired high reputation as manufacturers of quality products and it is going ahead with various expansion schemes.

The Company has received the Government's consent for the technical collaboration agreement with Carding Specialists Co. Ltd, Halifax, for the manufacture of Crosrol-Varga high production conversion units which when applied to conventional cards will increase production two to fourfold. The manufacture of this Crosrol-Varga device is expected to commence by the end of next year. The Company has also entered into a technical collaboration agreement with Whitin Machine Works, U.S.A., for the manufacture of the firm's high-speed draw frames which have been installed at various mills and are known to be giving excellent results.

This agreement has yet to be aproved by the Government, but the chairman is confident that the official sanction will be available soon. The speed frame is said to be undergoing extensive trial under mill conditions. Batch production of these frames will be taken up when they are proved to be working to full satisfaction. The chairman has, however, pointed out that due to lack of certain types of machine tools yet to be installed, the production of speed frames during the current year will be very limited. The diesel engines produced by the Company have earned a high reputation and the order-book is stated to be very satisfactory. But production of diesel engines has been restricted because of lack of space and other facilities, and also due to inevitable teething troubles in locating certain indigenous sources of supply.

The chairman says that the process of rehabilitation of plant and equipment and increasing the capacity of the factory continue at a steady pace. During the last three years, the Company has spent Rs. 50 lakhs on this account. The entire amount has been raised from self-generating funds and at the same time the Company has paid off the Government loan of Rs. 5 lakhs and reduced its indebtedness to the I.F.C. from Rs. 59 lakhs to Rs. 18 lakhs. The new expansion programme will undoubtedly increase the future profitability of the Company and the directors are considering how to raise additional funds required for the expansion programme. Replying to shareholders' enquiries, the chairman disclosed that the total sales of cards for the first five months of the current year had amounted to Rs. 88 lakhs. Orders for 437 cards had been booked and the average production was about 104 cards a month. He also pointed out that production of diesel engines during the first quarter was negligible because of the difficulty in obtaining the parts and components. Sales of diesel engines were also limited because of poor producton.

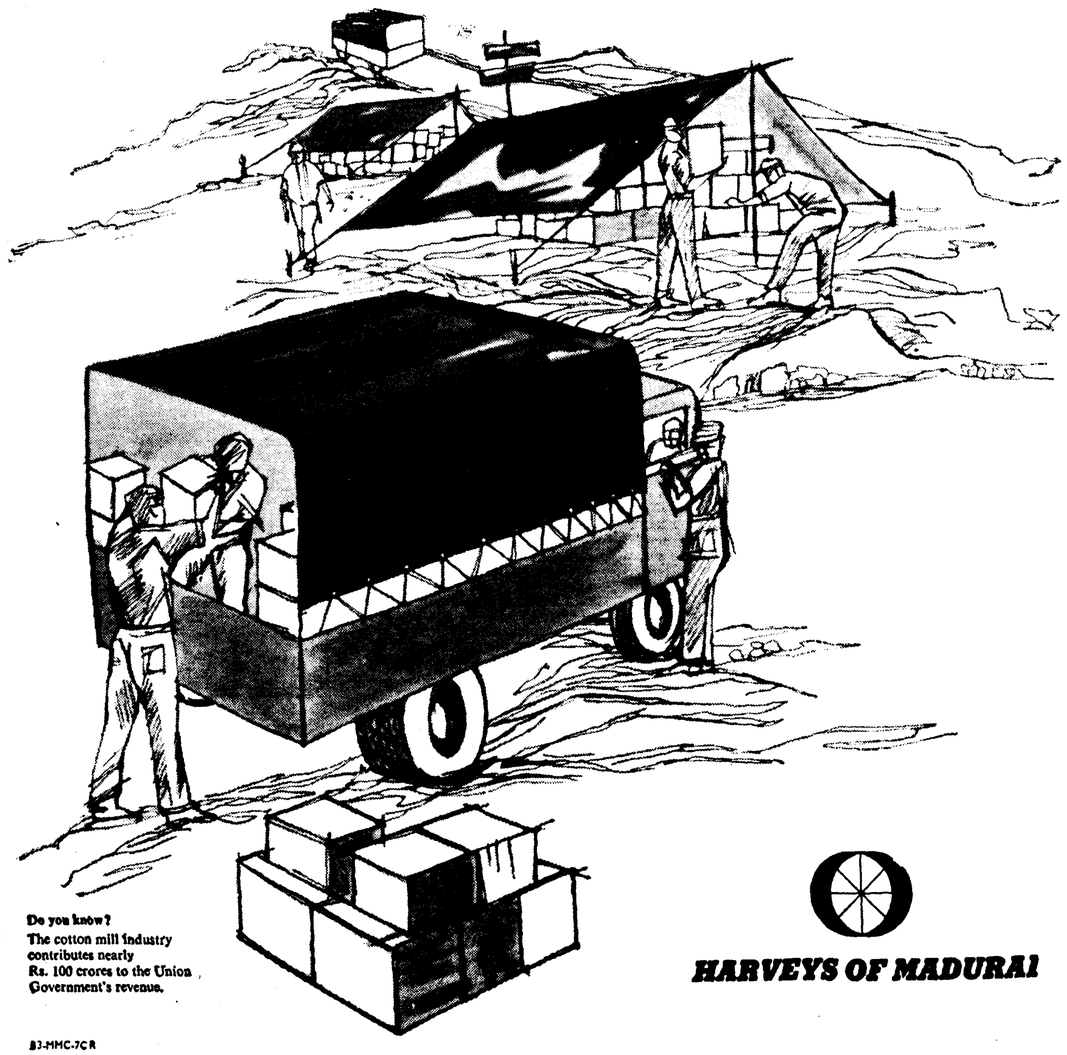
Ramon and Demm: A Venture for Automobile Gears

RAMON and Demm Ltd is a new venture which has been promoted to undertake the manufacture of motor-vehicle gears. The Company has secured the collaboration of Officine Meccaniche Fratelli Daldi and Matteucci, Milano, Italy and Montex Limited, London. The factory it is proposed will be located in Thana (Maharashtra). The Company has been licensed to manufacture 2,000 tonnes of finished motor-vehicle gears a year. The project is estimated to cost a little over Rs. 1.20 crores. This is proposed to be met by the share capital of Rs. 60 lakhs, a loan of Rs. 38 lakhs from the I.C.I.C.I., another loan of Rs. 15 lakhs from the Maharashtra State Finance Corporation and the balance by borrowing from banks.

The authorised capital of the Company will be Rs. 2 crores of which Rs. 60 lakhs—all in equity shares of Rs. 10 each is being issued for the present. The promoters, directors

EXCELLENT COVERAGE!

HARVEY CANVASES



provide the finest, surest protection for men and material

When the safety and protection of men and vital materials are at stake, one can't afford to take risks. Nothing but the finest coverage material will do! That's why top-ranking manufacturers like Kilburns insist on Harvey Canvases—the strongest and most reliable fabrics for making superior quality tarpaulins, tent canvases, etc.

Harveys' Madura Mills are today India's largest producers of industrial fabrics. Through the years they have built up a world-wide reputation for consistently high quality. They have the men, machines and knowhow to produce a wide range of industrial fabrics such as Tyre Cords, Belting Ducks, Jacket Ducks, Light and Heavy Canvases.

What's more, Harveys can weave industrial fabrics to your specifications—however rigid. Recent expansion at Madura Mills, with the installation of up-to-date high-speed looms and precision machinery, has further increased Harveys' weaving capacity. They can now meet all your requirements in industrial fabrics - to your complete satisfaction.

and their friends are taking up shares of the value of Rs. 22.95 lakhs. The Italian firm will subscribe Rs. 9 lakhs and the British firm will take up shares worth Rs. 6 lakhs. The balance amounting to Rs. 22.05 lakhs will be offered for public subscription some time in November. The factory is expected to commence production by about the middle of 1966, and the promoters hope to earn sufficient profits from the fourth year after the plant goes into production to be able to declare a dividend. The board of directors includes, Mr. Fatehsinghrao P. Gaekwad of Baroda, Mr. R. C. Cooper, Dr. Franco Vono, Mr. Giorgio Robiglio, Mr. C. M. Shah, Mr. Rohit C. Mehta, Mr. S. R. Damani and Mr. H. K. Shah.

Kurchermala Plantations Resumes Dividend

FOLLOWING good crops and improved profit, the directors of Kurchermala Plantations Ltd have been able to declare a dividend of 5 percent on equity shares (against nil) for the year ended March 1964. The net profit for the year amounts to Rs. 1,23,479.20, after meeting all expenses and after providing Rs. 1,18,395.63 for taxation. This compares with the previous year's net profit of Rs. 56,754, after providing Rs. 34,172 for taxation. With the balance of Rs. 1,856.93 brought forward from the previous year, the total comes to Rs. 1,25,336.13. Out of this, a sum of Rs. 82,000 is transferred to the reserve for capital expenses (against Rs. 48,000). The preference dividend amounts to Rs. 8,586.90. The equity dividend at 5 percent amounts to Rs. 34,500. The balance of Rs. 249.23 is carried forward. Although there was an increase in expenses, there was a good increase in the crops. Consequently, the all-in-costs a kilogram were less and better prices prevailed in the market for tea and cardamom. The tea crop for the year amounted to 160,191 kilograms (against Rs. 1,21,534 kilograms). The cardamom crop amounted to 5,053 kilograms (against 1,880 kilograms). The coffee crop amounted to 70,099 kilograms (against 60,125 kilograms).

Kerala State Industrial Development Corporation

THE Kerala State Industrial Development Corporation Ltd has done well for the year ended March 1964. The gross income rose from Rs. 2.55 lakhs for 1962-63 to Rs. 6.25 lakhs for 1963-64. The Corporation has written off preliminary expenses and has provided for reserve for depreciation on investments and special reserve amounting to Rs. 1.33 lakhs. The issued capital stands at Rs. 1.95 crores. Commenting on the working in his chairman's address (a full text of which is printed on a later page in this week's *Capital*) at the annual general meeting held last Monday, Mr. K. R. K. Menon pointed out that there has been a slight drop in the number of applications received for financial assistance. This is due to the fact that industrial licences sanctioned for Kerala have decreased. He has asked the State Government to impress upon the Central Government the need for encouraging the growth of industries in the State. This will help relieve the pressure on land.

He also stressed the importance of creating favourable conditions for attracting industrial capital and entrepreneurship to the State by ensuring political stability and cordial labour-employer relations. The need for providing electric power at reasonable charges is urgent. Steps have been taken to raise funds for the Corporation. It is also negotiating with some foreign companies for securing their technical collaboration in several projects. The Agency for International Development, U.S.A., is showing keen interest in promoting the development of industrial enterprises in Kerala.

Britannia Building Passes Dividend

BRITANNIA Building and Iron Co. Ltd has again passed the dividend for the year ended March, 1964. The net profit has amounted to Rs. 2.32 lakhs, against Rs. 1.05 lakhs for 1962-63, after providing Rs. 14,339 (against Rs. 15,080) for depreciation. So the debit balance has now been reduced to Rs. 4.05 lakhs. The arrears of preference dividends for 1960-61 and 1961-62 have been paid. There has been an improvement in the availability of steel sections and the Company is now receiving orders for conversion. The forge shop is being installed and should begin production before the end of the current financial year.

Vayitri Plantations Maintains

THE directors of Vayitri Plantations Ltd have maintained the dividend at 6 percent for the year ended March 1964. The profit for the year amounts to Rs. 87,000, against Rs. 48,912 in the previous year. With the amount of Rs. 11,500 brought forward, the total comes to Rs. 98,500. Out of this, additional income tax for the assessment years 1958-59, 1959-60 and 1960-61, amounted to Rs. 57,000. Provision for taxation amounts to Rs. 55,000 (against Rs. 25,000). A sum of Rs. 10,000 is transferred to general reserve (against nil). The dividend of 6 percent amounts to Rs. 24,000. The balance of Rs. 3,800 is carried forward.

A tea crop of 43,902 kilograms was harvested during the year and the average sale price was Rs. 3.80 a kilogram. The estimate for the next season is placed at 40,000 kilograms. A coffee crop of 46¼ tonnes was harvested during the year. The estimate for the next season is put at 20 tonnes. A cardamon crop of 3,993 kilograms was collected during the year. The estimate for the next season is put at 2,000 kilograms. A pepper crop of 210 kilograms was harvested during the year.

Ajudhia Textile Mills Fares Well

THE Ajudhia Textile Mills Ltd which had skipped the dividend in 1962-63 has declared a dividend of 10 percent for the year ended 31st March, 1964. The payment of the dividend is subject to the approval of the Industrial Finance Corporation. The Company's working results show an appreciable improvement over the previous year. While sales are up by 28 percent, the gross profit has recorded increased improvement from a mere Rs. 4.19 lakhs to Rs. 14.29 lakhs. The directors have held out the promise of still better results in the current year. Appropriations include depreciation Rs. 6.40 lakhs against Rs. 3.80 lakhs), development rebate Rs. 1.49 lakhs (against Rs. 69,069), bonus to employees Rs. 1.50 lakhs (against nil), reserve for doubtful debts Rs. 43,000 (against nil), dividend equalisation reserve Rs. 1.13 lakhs (against nil) and general reserve Rs. 3.50 lakhs (against nil). In view of the previous years' losses brought forward, the Company is not likely to have any tax liability and no provision has, therefore, been made for this purpose. The proposed 10 percent equity dividend and proportionate distribution on the 10 percent cumulative preference shares from the date of allotment will together absorb Rs. 1.43 lakhs, and this is to be paid out of the general reserve.

The directors state that the Company's spinning capacity was raised during 1963-64 from 14,524 to 18,536 spindles. The directors hope to instal an additional 8,636 spindles by January, bringing the total capacity to 27,172 spindles. Apart from increasing the spindleage, the Company has under consideration plans for modernisation and renovation of the existing machinery in the spinning and weaving preparatory sections. The Company has already submitted to the Government the necessary applications for import licences. The Company's tent factory worked satisfactorily during the year and it received orders worth Rs. 90 lakhs from the defence department. The working of the factory was disrupted by a heavy fire in June 1964. The Company has drawn Rs. 12.25 lakhs from the I.F.C. against the additional loan of Rs. 15 lakhs. The application for a further loan of Rs. 25 lakhs and deferred payment guarantee for Rs. 8.44 lakhs in under the consideration of the Industrial Finance Corporation of India. The Rs. 5-paid share of Ajudhia Textile Mills is quoted around Rs. 5.75, offering a gross return of a little over 9 percent.

Shree Vallabh Glass Incurs Loss

AFTER providing Rs. 8.10 lakhs (against Rs. 92,179) for depreciation and nil (against Rs. 1.25 lakhs) for taxation, the working of Shree Vallabh Glass Works for the year ended March 1964 shows a loss of Rs. 9.11 lakhs, compared with a profit of Rs. 21,478 in the preceding year. Adjusting the year's loss against the previous year's surplus of Rs. 1.51 lakhs, there remains a debit balance of Rs. 7.79 lakhs which is being caried forward. The Company's sales during 1963-64 amounted to Rs. 35.82 lakhs, against Rs. 18.85 lakhs. The directors point out that despite larger sales, the working shows a loss because of the short period of production at the Company's new plants at Vallabh Vidyanagar.

The Company started the commercial production of figured and wired glass from October 1963, of laminated safety glass from December and of sheet glass from May 1964. Initial technical difficulties are now over and plants are running satisfactorily. The full effect of the working of these plants will be reflected in the current year's working. The Company proposes to undertake further expansion of its works in Bombay this year. The expansion at Vallabh Vidyanagar will also continue according to schedule. The plants for polished plate glass and for mirror manufacturing will be erected in Vallabh Vidyanagar. The Rs. 100-paid share of Vallabh Glass is currently quoted around Rs. 82.

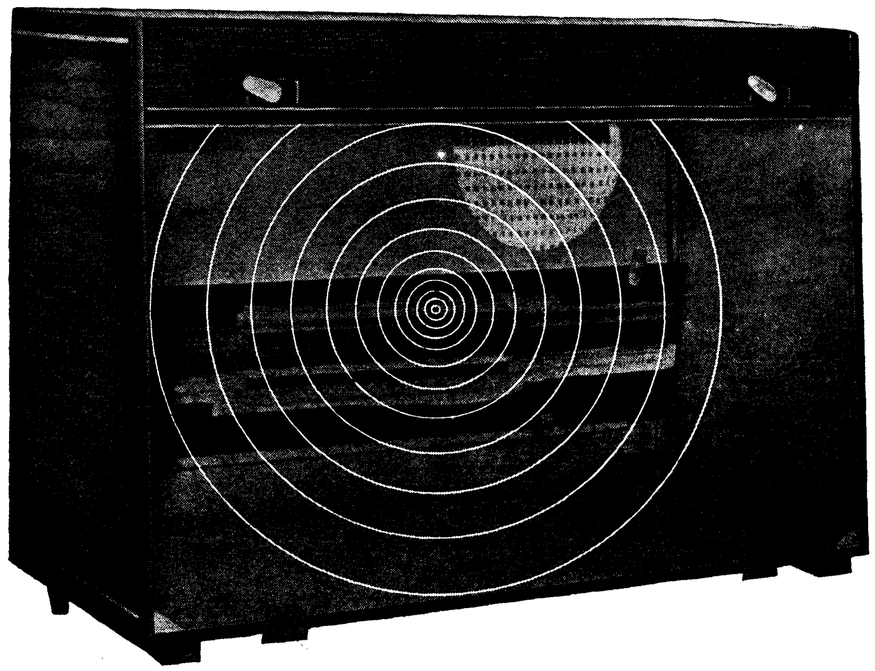
Rajapalayam Mills Earns More

A SUBSTANTIAL rise in the sales and profit has enabled the directors of Rajapalayam Mills Ltd to step up the dividend to 20 percent for the year ended March 1964. The sale of finished goods amounted to Rs. 1,55,14,625 (against Rs. 1,20,39,707). The profit for the year amounts to Rs. 17,64,006, after providing Rs. 5,78,420 for depreciation. The previous year's profit was Rs. 11,48,537, after providing Rs. 5,00,101 for depreciation. Out of the year's profit of Rs. 17,64,006, the directors have provided Rs. 8,61,088 for taxation (against Rs. 4,31,051). Donations amounted to Rs. 47,371 (against Rs. 48,908). Development rebate reserve accounts for Rs. 21,000 (against Rs. 28,000). The proposed dividend of 20 percent (against 16 percent) amounts to Rs. 3,22,860. A sum of Rs. 2,70,000 (against Rs. 1 lakh) is transferred to general reserve. These appropriations and provisions have absorbed the year's profit.

New Capital Issues

FIVE companies have been authorised to raise fresh capital aggregating Rs. 7.10 crores. Three of these are issuing equities, one debentures and another equity shares and preference shares. Two companies involve foreign collaboration. The consent of the Controller of Capital Issues is valid for a year in all cases. The following are the details:

Utkal Machinery Ltd, Kansbahal, Orissa, engaged in the manufacture of heavy vessels, structural and plate work and machinery and equipment, is to issue a further capital of Rs. 60 lakhs in equity shares of Rs. 10 each for cash at par. The shares will be offered on a rights basis, except 312,000 shares which will be offered to Deutsche Entwicklungs Geseitschaft mbh (DEG), a West German development bank, after observing formalities under the Companies Act. The money will be used for the purchase of balancing equipment and machinery and also for working capital.



Madras Motor and General Insurance Co. Ltd., Madras, is to issue a further capital of Rs. 10 lakhs, divided into 10,000 equity shares of Rs. 100 each, for cash at par, on rights basis to the existing shareholders of the Company. The capital will be utilised to strengthen the funds of the Company.

Gwalior Rayon Silk Mfg. (Wvg.) Co., Ltd, is to issue 7 percent debentures of the value of Rs. 3 crores. The capital is required for several expansion schemes, namely, installation of additional spindles at Bhiwani and looms at Birlanagar textile units and for manufacturing pulp and staple fibres at Kozhikode.

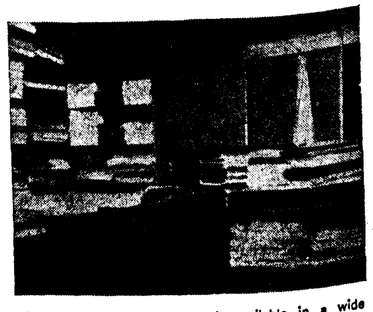
Widia (India) Ltd, proposed to be incorporated in Mysore, is to issue Rs. 40 lakhs worth of equity capital in Rs. 100 shares. Altogether 60 percent of the shares will be allotted to Meturit A.G. of Zurich, Switzerland (Meturit Group), for supplying plant and machinery, 20.4 percent will be taken up by Sak Industries Pvt. Ltd, partly against cash and partly against the purchase of land, indigenous equipment and construction of factory, and the balance—19.6 percent—will be offered to the public for cash at par. The money will be used to manufacture sintered hard metal.

The Andhra Pradesh Paper Mills Ltd, Rajahmundry, a new Company incorporated in Andhra Pradesh, is to issue a capital of Rs. 3 crores, divided into 200,000 equity shares of Rs. 100 each and 100,000 preference shares of Rs. 100 each, to be issued for cash at par, excepting 66,000 equity and 50,000 preference shares which will be allotted to the Government of Andhra Pradesh for consideration other than cash, that is, against the assets transferred by the Government. Of the balance, such number of shares of each kind as will qualify for enlistment on recognised stock exchanges will be offered to the public by prospectus and the balance subscribed privately. The money will be utilised for taking over the Andhra Pradesh Mills, a State Government-owned undertaking, having a rated capacity of 10 tons a day as also for expansion of its production to 70 tons a day.

IN RADIOS the sound is the thing

WESTERN INDIA PLYWOODS
make the specialised plywoods to express it best

Different industries need different types of specialised plywoods. Makers of well-known radios, for instance, are highly selective of the plywoods they use for their cabinets. They have to be, and they choose 'WESTINDPLY' plywoods. Seasoned wood specially processed for resonance and low temperature and a wide choice of attractive veneers to suit modern interior decor combine to make 'WESTINDPLY' ideal for radio cabinet designs.



Western India Plywoods, the largest manufacturers of processed woods in India, make numerous varieties of specialised 'WESTINDPLY' plywoods to meet the industrial, architectural and defence needs of our country. They also manufacture 'WESTON' Hardboards, 'WIPEX' Paper laminates, Flushdoors and Block Boards.

Western India Plywoods supply a large part of the plywoods and hardboards required by India's leading radio manufacturers.

Chairs, table tops, panels, shelves, cupboards, flooring —infinite is the scope of 'Westindply', 'Weston' and 'Wipex'.

'Westindply' plywoods are made available in a wide variety of veneers to add prestige and modernity to showrooms.

THE WESTERN INDIA PLYWOODS LIMITED

P. O. Baliapatam, Cannanore District, Kerala State.

BANK RATE RISE HAS BEARISH IMPACT: TURNOVER LIMITED

Wednesday Evening.

THE Calcutta stock market has closed the past week on a quiet ote. The prices of clearing shares ave retreated due to bull liquidation, ombined with short-selling. Although turnover has centred on earing shares, some cash scrip too ave met with scattered support. eports of purchases by the Unit rust of India and the Life Insurance orporation of India have helped ift the prices of selected cash scrip. urnover has, on the whole, been restrained in view of today's settlement which passed off smoothly. Since he next settlement will take place after the Puja holidays, the carry-forward charges are larger than at the previous settlement.

Operators are worried because the liquidity of stocks and shares will suffer due to the restriction on blank transfers. A cautious view is taken of the latest modifications in direct taxes because more stringent measures will be taken to stop evasion. Operators are also anxiously waiting to see what measures the Government will take to bring out unaccounted money.

The increase in Bank rate has had a bearish impact. In view of the rise in interest rates, investors will be expecting higher yields. So a decline in share prices is not ruled out. Prices of Government securities have already dropped in response to the increase in Bank rate. Since the banking community will be forced to pay a higher rate of interest on its borrowings from the Reserve Bank, bank credit will become costlier. As a result, industrial costs will tend to rise further.

Although commercial banks will henceforth pay less interest on short-term deposits, the gain will be largely offset by the bigger interest that will be paid on medium and long-term deposits. On the whole, banking profits may suffer as a result of the new monetary measures announced by the Reserve Bank over the week-end. As far as electric companies are concerned, they are expected to benefit from the increase in Bank rate because the reasonable return allowed to these companies is fixed at 2 percent above Bank rate.

Indian Iron have slipped back, and investors are inclined to await the Government's decision on the repayment of advances given by it to the two private-sector steel plants. Engineering shares have tended to fall, although Jessop have improved on balance. Interested buying has helped Binani Metal, J. K. Steel and Jay Engineering.

The prices of clearing shares in the miscellaneous section have dropped towards the close. Support has been forthcoming for British Paints, Metal Box, Indian Oxygen and Philips India. Britannia Biscuits are steady on the decision of the Company to issue preference shares to the existing ordinary shareholders. Among new shares, Hindusthan Twyfords and Hindustan Aluminium have met with support. National Rolling Mills National Insulated Cable, India Steamship and British India Corporation are steady. In paper shares, Orient have reacted while Bengal and Titaghur are steady. Bank and electric company shares are sluggish.

Except for Birla which have been maintained, turnover in jute shares has declined. Investors are worried because profits of jute mills have tended to shrink due to the disparity between the price of fibre and that of jute goods. Coal shares have tended to lose in restricted activity. Burrakur, Bengal and Central India have been transacted. J. K. Rayon have reacted among cotton mill shares. Dunbar and Bharat Commerce are about steady. A small turnover in tea shares has been transacted.

Government securities are quiet and the 3 percent Conversion Loan 1986 has dropped to Rs. 63.20. Most of the new State Government loans are available at a slight discount.

Bombay

SLIGHT IMPROVEMENT IN SENTIMENT
SUBSTANTIAL BUYING BY L.I.C. AND UNIT TRUST

Wednesday Evening.

THE undertone of the Bombay stock market has improved slightly towards the close of the past week after earlier sluggishness. Dalal Street is veering round to the view that the Central Finance Ministry is keen on reviving confidence in the capital market. Even a modification of the Government's fiscal policy is not ruled out. Substantial purchases by the Life Insurance Corporation and the Unit Trust have helped to reduce floating stocks. Cotton mill interests have welcomed the decision of the Government to introduce partial control on cloth production. They think that the cotton mills may find it worth their while to give the scheme a fair trial.

Turnover has, however, been restrained because of several factors. The increase in Bank rate is being bearishly interpreted. If the current prices of equities are to be maintained, dividends will have to be raised to bring them in line with the higher interest rates. Electric companies will benefit from the increased Bank rate as the "reasonable return" allowed to them is linked with Bank rate. However, operators are worried over the food situation. Unless the Government takes vigorous measures to check the rise in the prices of essential commodities, the Indian economy will be subjected to greater strains and stresses.

Tata Steel ordinary have closed at Rs. 148.50, but investors are worried about the repayment of the advance given to the Company by the Government. Among engineering shares, Tata Engineering and Premier Construction have recovered slightly. In motor-vehicle shares, Hindustan Motors have have met with pressure from outside sources while Premier Automobiles have been sluggish.

Cotton mill shares have recovered towards the close due to short-covering. Mills which have rayon plants have improved due to the prospect of a reduction in the excise duty on rayon yarn. Century, Kohinoor, Svadeshi and Standard are better. Bombay Dyeing are steady because the chairman of the Company has denied rumours of a change in its management.

Business in miscellaneous shares is limited. In sugar scrip, Belapur and Walchandnagar Industries have been steady. In cement shares, Associated Cement and Digvijay have changed hands. Mining shares are subdued, and Shivrajpur Syndicate are being freely offered. In steamship company shares, Scindia Steam have reacted due to profit-taking after an earlier improvement. Chemical shares have shown mixed trends. Tata Chemical and Indian Dyestuff have dropped, while Polychem are steady. Rayon shares have been supported. National Rayon have recovered on replacement buying. Gwalior Rayon have responded to the prospect for further expansion. Voltas and Tata Oil are steady. Synthetics and Chemicals have gained due to replacement buying.

Turnover in bank shares has been small. Central Bank and Bank of India have been transacted. Electric companies have improved on the prospect of an increase in the "reasonable return". Tata Hydro, Tata Power and Ahmedabad have gained.

PRESIDIAN

Bank rate appear to have been discounted. Investors and operators take the view that the rise was long overdue since the market rates of interest had already moved up substantially. This apart, the offer of a higher rate of interest on the long-dated loan which was recently floated by the Central Government, had indicated the possibility of an increase in Bank rate. Prices of clearing shares have shown mixed trends. In cash scrip, attention has centred largely on selected planting shares. Business in Government securities is negligible, and prices on the whole have tended to drop. In spite of a good demand for preference shares and debentures, turnover has been small due to the shortage of declared sellers.

In banks Indian have come to hand at Rs. 151, and Indian Overseas at Rs. 149. Sugar shares have been dull with prices showing few variations. Deccan are available at Rs. 10.50 exrights and E.I.D. are steady at Rs. 36.12. Travancore have changed hands at Rs. 8.12, Andhra at Rs. 13.04 and K.C.P. at Rs. 24.

Among planting shares, Blue Mountain have hardened to Rs. 2.36 and Consolidated Coffee to Rs. 23.76. Cochin Malabar have been taken at Rs. 6.22, Ouchterlony at Rs. 3.42 and Periakaramalai at Rs. 3.55. Nelliampathy have been bought up to Rs. 4.75, Peermade up to Rs. 20.62 and Pullangode up to Rs. 3.38. The last-named Company is likely to sell one of its estates. Puthutotam are quoted at Rs. 2.65 because it is expected to sell the Waverley Estate for Rs. 19.5 lakhs. Vayitri have been taken at Rs. 1.44 on paying a taxable ordinary dividend of 15 percent.

In textile shares, South India Viscose are quiet at Rs. 115.50, but Travancore Rayon have gained at Rs. 20. Lakshmi are steady at Rs. 134 and Madura at Rs. 34.85. Bangalore Woollen have been taken at Rs. 270 and Buckingham at Rs. 281. K. Rajendra have dropped to Rs. 57.50 on passing the dividend. Saraswathi are quoted down to Rs. 10, since the dividend has been passed. Tirupati have been done at Rs. 10.12 on the news that the Company is issuing one equity share and three preference shares to existing shareholders for every ten shares held.

Among miscellaneous shares, Aluminium Industries have reacted to Rs. 22.55 and Ashok Leyland to Rs. 6.95. Dalmia Cement are steady at Rs. 12.90 and India Cement at Rs. 5.39. Mettur Chemical have dropped to Rs. 14.90. Mysore Chemical Manufactures are quoted at Rs. 16.70 on declaring a taxable ordinary dividend of 15 percent. Business in Madras Safe has passed at Rs. 45 on the payment of a taxable ordinary dividend of 6 percent. Rane (Madras) have come to hand at Rs. 9.15 on declaring a taxable ordinary dividend of 17½ percent. Kirloskar Electric are steady at Rs. 19.50, but Madras Rubber have dropped to Rs. 10. Seshasayee Paper are steady at Rs. 7.45 and Mysore Paper at Rs. 12.50.

London

POLL NEWS INDUCES SMALL BUYING

LEADING INDUSTRIALS RISE

London, 30th September.

THE approaching general election remained the dominating influence in the stock market last week, and with the latest political opinion polls showing a definite swing in favour of the Conservatives, buying by small investors steadily increased. Even so, the volume was still on the small side, and the institutions participated to a very limited extent. Sentiment received a considerable boost from the excellent I.C.I. half-year statement and this attracted buyers to other leading stocks. I.C.I. has not fully held its gain, but rises elsewhere carrid the index to a new all-time peak. With Wall Street also reaching new peaks almost daily, dollar stocks were marked up which were accompanied by a certain amount of buying. Gilt-edged were an extremely quiet market and prices showed little movement. The feature of gold shares was the persistent firmness of the finance issues. Platinum shares fell away sharply. Although the dividends were satisfactory it was felt that further increases were unlikely, while the statement by the chairman of Rustenberg on the uncertain outlook for the metal was an unsettling influence. Coppers were quiet, while *tin* moved up fairly sharply in response to the rise in the metal price. Oils gained little benefit from the B.P. interim statement and prices moved narrowly. Rubbers and teas were supported from time to time.

another order for CELCON® came the other day

® Celcon is the new engineering material which has excited interest of buyers from the automobile industry, the electrical industry, the building materials industry, the hardware industry, the packaging industry, the office equipment industry and the weapons-making industry. Celcon was developed after many years of research by the Celanese Corporation of America, one of the world's major producers of formaldehyde and trioxane.

Celcon is fast displacing iron, steel, brass, zinc, aluminium, magnesium, thermosets, laminates and wood in the manufacture of many articles. As contrasted with many die-cast metals, Celcon components require little or no finishing when they emerge from the mould and may almost immediately be put to use. Considerable amounts of money are thus saved when Celcon is used. Celcon maintains its high mechanical strength, stiffness, toughness and resistance to impact force over a long period and through broad ranges of temperature and environment.

Celcon is available in natural translucent white and 18 standard colours; it is easy to fabricate; has excellent frictional characteristics; it can be readily sawed, drilled, turned, milled, filed and threaded. It can be fabricated by injection moulding, extrusion, blow moulding and other high volume thermoplastic processing techniques. Processing ease and economy are its greatest advantages.

® CELCON is a trademark

CELCON

ACETAL COPOLYMER
MADE BY THE CELANESE CORPORATION OF AMERICA

A3P/C-4

DUNCAN BROTHERS & CO. LTD. ARE THE EXCLUSIVE SALES AGENTS IN INDIA FOR CELCON:

HIDES AND SKINS

The market was steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 23rd September and 28th September, 1964)

Cowhides: Wet salted (Ord.) 5,000 pcs. on the basis of Rs. 10.50 to Rs. 11.25; Wet salted (Slaughtered) 44,000 pcs. on the basis of Rs. 10 to Rs 17 and Rs. 19 to Rs. 28.

Goatskins: Wet salted (Patna, Daissee, Kustia) 75,700 pcs. on the basis of Rs. 300 to Rs. 320, Rs. 375 to Rs. 390 and Rs. 420 to Rs. 430; Wet salted (he-killed) on the basis of Rs. 4.75 and (she-killed) on the basis of Rs. 4.50 a piece; Purneah-Kissenganj 3,000 pcs. on the basis of Rs. 290.

Bazaar Stocks

(28th September, 1964)

Cowhides: Wet salted 100,600 pcs.

Goatskins: Wet salted (Patna Daissee, Kustia, Killed) 63,000 pcs.; Assam-Dinajpur 71,000 pcs.; Muzafferpore-Patna-Pakur - Purneah-Kissenganj 189,000 pcs.

VC-10 INAUGURAL FLIGHT THROUGH CALCUTTA

British Overseas Airways Corporation's new aircraft the *VC-10*, touched at Calcutta last Sunday on its inaugural flight from London to Tokyo. Unlike other planes, the *VC-10* has four engines mounted near the tail, and this, it is claimed, reduces the noise inside the aircraft. It is also claimed that the plane has a shorter take-off and landing, and can stand rough weather better than other types.

HINDUSTHAN MERCANTILE BANK LIMITED.

THE CALCUTTA MONEY MARKET

SMALL DECLINE IN ADVANCES

Wednesday, 30th September.

THERE has been a small decline in the general level of advances in the Calcutta money market during the past week. Almost the entire decline is accounted for by miscellaneous borrowers. The requirements of the major industries, and the foodgrains and seeds trade, are unchanged. In the interbank market, the call rate shot up from 1 percent to 4½ percent. But at the close, the supply of funds has increased and the rate has eased in stray transactions.

The exchange market has been moderately active during the past week, with a fair supply of both tea and gunny bills. The demand for remittances is small. In London, sterling has been weak in relation to most of the major currencies, except the Dutch, Swiss and Belgian.

SILVER WAS STEADY IN CALCUTTA during the past week. The price closed around Rs. 255. It was quoted at 112¼d in London and at 129.3 cents in New York.

Gold was also steady, and 14-carat fetched Rs. 72.25 a 10 grams.

DURING THE WEEK ENDED 25TH September, Government of India Treasury bills for Rs. 150,40,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 29th September. The total amount offered was Rs. 4 crores. Tenders at Rs. 99.400 percent were allotted 50 percent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.400 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received in Bangalore and Calcutta up to the close of business on 3rd October and in Bombay, Kanpur, Madras, Nagpur and New Delhi up to the close of business on 5th October.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 30th September to 3rd October at Rs. 99.416 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 23rd September to 26th September amounted to Rs. 13.35 crores.

THE TOTAL NOTE ISSUE DROPPED BY Rs. 7.57 crores to Rs. 2,399.54 crores and active notes by Rs. 26.55 crores to Rs. 2,363.26 crores, according to the return of the Reserve Bank of India for the week ended 25th September, 1964. The currency contraction was adjusted by reducing rupee securities by Rs. 9.80 crores to Rs. 2,086.13 crores. Deposits of the Government of India rose by Rs. 65 lakhs to Rs. 61.33 crores and those of State Government by Rs. 1.40 crores to Rs. 15.08 crores. Balances of commercial banks at Rs. 100.71 crores showed a drop of Rs. 5.79 crores. Their loans from the Reserve Bank amounted to Rs. 83.25 lakhs, against Rs. 92.95 lakhs, of which advances to usance bills stood at Rs. 20 lakhs (the same). Investments dropped by Rs. 25.87 crores to Rs. 78.35 crores. Balances held abroad declined by Rs. 1.24 crores to Rs. 12.17 crores. Ways and means advances stood at Rs. 25.87 crores, against Rs. 18.35 crores.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 18th September, 1964, shows Demand and Time liabilities at Rs. 1,286.61 crores (Rs. 27.70 crores on account of borrowings from banks) and Rs. 1,443.87 crores (Rs. 20.37 crores), compared with Rs. 1,280.52 crores (Rs. 26.85 crores) and Rs. 1,423.38 crores (Rs. 16.96 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 42 lakhs and Rs. 2.27 crores to Rs. 63.61 crores and Rs. 94.68 crores, respectively. There is a rise of Rs. 34.22 crores to Rs. 796.22 crores in investments. Advances and bills discounted at Rs. 1,729.18 crores show a drop of Rs. 15.24 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.8 percent and 63.3 percent, against 6 percent and 64.5 percent.

THE NEDERLANDSCHE HANDEL-MAATSchappij, N.V. (Netherlands Trading Society), a banking Company established in the Netherlands in 1824, has announced that its name will be changed into Algemene Bank Nederland N.V. (General Bank of the Netherlands) with effect from 3rd October, 1964. The change in the Company's name is subsequent to a merger of De Twentsche Bank N.V., into the Nederlandsche Handel-Maatschappij, N.V., both leading banks in the Netherlands. Total resources of the enlarged institution will be in excess of Rs. 670 crores, and capital and reserve will amount to Rs. 40 crores.

The new enlarged structure of the bank will comprise nearly 400 branches in the Netherlands as well as 22 own branches and 13 affiliated and allied banks abroad. The bank has been maintaining branch offices in Calcutta and Bombay since 1920. These will continue their operations under the new name of the combined venture.

TREASURY BILL MATURITIES

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

THE CHAIRMAN'S REVIEW OF ACTIVITIES

The following Speech delivered by the Chairman, Mr. F. A. Collett, at the Fifty-third Annual General Meeting of the Company held on 24th September 1964.

Ladies and Gentlemen,

The year under review saw two changes on your Board necessitated by the departure from India of Mr. C. N. Kirkus and Mr. H. C. Reeve on retirement. Mr. Kirkus had served the Company for 28 years and Mr. Reeve for 31 years and so had well earned their retirement, and with them go our best wishes.

In their places Mr. Patrick Evan John and Mr. Balwant Kumar Nehru were appointed to the Board on 1st April. Mr. John joined the Company in 1938 on the accounting side, and Mr. Nehru in 1950 on the engineering side. They bring with them a wealth of experience and drive which is already apparent in our deliberations.

Turning to the Accounts I am afraid that, as I foreshadowed in my speech a year ago, the Company has come through a difficult year.

The reduction in profit from the high figure of 1962/63 is almost entirely due to two main causes, indirect and direct taxation; indirect taxation in the form of excise adversely affecting our Company's gross trading profits, and direct taxation reducing the net profits available for distribution.

As a result of the 1963 budget, when not only were the basic rates of excise raised, but an additional 20% special Emergency excise imposed, your Board decided to absorb a large part of the extra taxation on some of the lower priced brands as it was considered probable that had we not done so the higher prices would have put these brands at prices which many consumers would have been unable to pay.

Despite the disappointing financial results of the year under review your Directors are still of the opinion that that decision was a right one because even despite it, cigarette consumption during the year showed a reduction for the first time for many years: and had prices been still further increased this reduction would have been even more marked. I should perhaps point out that the value of our sales as shown in the Profit and Loss Account shows an increase of some Rs. 5 crores but this figure is largely offset by additional excise paid and does not therefore represent an increased volume of sales. Nevertheless it does mean that this extra money was paid out for your Company's products.

This overall reduction in volume is a clear indication of the fact that we have, anyhow for the time being, reached a point at which many consumers, particularly those in the lower income groups can no longer afford to smoke cigarettes. This must of course soon be reflected in Government revenue: and it is my opinion that if the revenue from the cigarette industry is to maintain its buoyancy, this is most likely of achievement by a reduction of excise, particularly in the lower categories and the removal of the special Emergency excise.

I now come to the incidence of direct taxation because the excise to which I have already referred only accounts for part of our reduction in profits, another large part of which is accounted for by retroactive corporate taxation for which we could not possibly have budgeted.

Changes in Excise Rates

In the last three budgets there have not only been changes in excise rates; but our liability to direct taxation has been increased by retroactive new impositions and increases in rates. The 1962 budget increased the rate of corporate taxation from 45% to 50% at a cost of Rs. 18 lakhs; the 1963 budget introduced Super Profits Tax at a cost of Rs. 20 lakhs, and there is an unfortunate possibility that the 1964 budget may raise, perhaps unintentionally, our rate of corporation tax to 60% at a cost of Rs. 31 lakhs. I say "perhaps unintentionally" because there are varying interpretations of the provisions of the Finance Act 1964 relating to Super Tax on companies. In view of this uncertainty we have thought it wise to provide for the higher rate of 60% in our Accounts.

In the case of a change in excise duty which is primarily a tax on the consumer the difference becomes effective from the date of imposition, and your directors are free to decide how much of the change should be passed on to the consumer, and on this decision is the Company's forward pricing policy fixed. In the case of direct taxation being imposed or increased retroactively in the last trading month of the year, forward planning becomes, to put it mildly, difficult.

These very frequent changes in two major forms of taxation, particularly in a trade where on average 50% of the sale value of our product is represented by excise, are bound to lead to erratic results: and if we cannot have a reduction in taxation, then at least a period of stability is overdue.

Your Directors have in previous years considered it advisable to appropriate part of the profits earned to Reserves in order to retain in the business funds needed to replace fixed assets and stocks at current price levels and to finance expansion. Having reviewed the whole situation they have decided to recommend to you that this year no such appropriations should be made and that reserves previously made should be drawn upon in order to cover taxes retrospectively levied for the previous year. It will then be possible to pay a final dividend of 2½%, making a total of 6½% for the year, which I now recommend.

Now to turn to the more cheerful side of the picture.

A more healthy aspect of the current situation is the more intense competition between the manufacturers but your Company is maintaining a satisfactory position and I have no doubt at all will continue to give a good account of itself.

Good Effect of Competition

Competition has a stimulating effect on your Company's management, and the results of our various training programmes which we have carried out continuously for several years are now standing us in good stead in overhauling old, and evolving new techniques on all sides of the business.

The year 1963 marked the Diamond Jubilee of our famous SCISSORS brand and we celebrated this by giving it a modern dress which, judging by the reception it has received, has been warmly appreciated by its loyal followers. I mention this particular item because in fact it is probably not untrue to say that this rejuvenation is symbolic of the many changes that we have made, and shall continue to make to keep abreast, and indeed ahead, of today's trading conditions.

In addition, and with an eye to the future, we have been concentrating on the increasing filter tipped trade where we now have the two leading brands in WILLS NAVY CUT Filter and SIMLA which have recently been followed by SAVOY Mentholated for those who like this variation.

Perhaps I should not leave this subject without a lament for the passing away of the round 50s tin, which has been a feature of the market for so long and which has now become a casualty of the Emergency. The Government can undoubtedly put the tinplate, which is in short supply, to a more vital use: and we hope that our public will be satisfied with our various alternative packings.

Generally your Company's products have been able to give a good account of themselves against increasing competition and despite increased prices; but in the few exceptions where this has not been the case you may rest assured that the most vigorous action has been and still will be taken.

Export Performance

In the export field we have exhibited in a number of trade fairs, have sent a representative to various European countries and received assistance from our British associates: and we have also made numerous quotations at competitive f.o.b. prices: but all on the whole with disappointing results. The vast majority of countries now have their own cigarette industries which are equally well protected against imports as is the Indian domestic market. There is a limited market in Rupee payment countries, which seems better handled on a Government to Government basis: and it has been arranged to investigate such an arrangement.

A side of our business which is not perhaps as well known as it might be is the Printing side. We have two printing factories, one in Monghyr and another at Tiruvottiyur near Madras. These were originally set up to supply our own requirements for packaging materials: and they still do this. However Tiruvottiyur, which does some of the most high class offset printing in the country has of recent years been taking on a certain amount of outside work which we are hoping to develop still further.

I have already referred to the changed outlook of management to meet today's trading conditions and I should now like to say something of our Labour relations, and our relationship with the many trade Unions who represent the workers and clerical staff employed here in Head Office and in our branches throughout the country, in which sphere we consider that our record is good.

The changes in trading conditions to which I have referred necessarily involve changes in working conditions, and these have been under discussion with many of the Unions during the year. Earlier this year we arranged a conference between Management and the leaders of the Unions at which it was agreed, with the unfortunate exception of a small minority of branches, to set up a Committee composed of four members each from Management and the Unions to review working conditions in Head Office and all the branches represented with a view to rendering recommendations to the Board at the end of this year: and it was further agreed to call a moratorium on demands, apart from local adjustments, during this period.

This Committee has already had several meetings in different parts of the country and I have been struck not so much by the constructive work that they are undoubtedly doing, but by the atmosphere of mutual trust in which they are doing it. On the Committee at least there appears to be an understanding on both sides that the interests of Management and Labour in the prosperity of the Company are the same: and if this is really accepted, and although there will certainly be some bargaining on the way, I think that the fact that these matters are being discussed in a free atmosphere and under no form of duress on either side is a major step forward.

Future Prospects

Finally it is usual at this meeting for the Chairman to attempt to give you some indication of our future prospects. I have already said a great deal about the difficulty of doing this. However as regards trading prospects in the long run I am still of the opinion that only the fringe of the eventual cigarette consumption potential has been touched: but that the rate of the increase depends entirely upon two factors, the rate at which the standard of living in the country increases and the rates of excise duty imposed. At present I believe these latter rates to have run ahead of the economic development to an extent that they are not able to be absorbed.

In the short term I believe your Company is well equipped to face the present competitive situation and in the absence of further retroactive taxation I would expect improved results during the current year but that these are not likely to be spectacular. As a result of these improved prospects it is possible to revert to our previous rate of interim dividend and the first interim for the current year of 2½% has already been notified to you. What we are eventually able to pay for the year will naturally depend on the final results we achieve.

"This does not purport to be a report of the proceedings of the Annual General Meeting."

EARNS PROFIT—ASSURES ACCELERATED GROWTH

CHAIRMAN SIR D. N. MITRA HIGHLIGHTS THE COMPLEX PATTERN OF CELLULOSE ACETATE INDUSTRY—AND ITS NEED FOR PROPER INTEGRATION

The following is the full text of Sir D. N. Mitra's address to the shareholders at the Eighth Annual General Meeting of the Company held in Calcutta on 30th September, 1964.

Friends,

I have much pleasure in extending to you all a warm welcome to this General Meeting of the Company. Before this review is presented, it is my duty to refer to the calamity that has befallen us at the death of Jawaharlal Nehru. It is also my duty to express our grief at this great national loss and to preface our proceedings with a tribute to his memory by dedicating our endeavour to the fulfilment of his vision of a modernised industrial India. Objective thinking is our inheritance from the great leader, who is no more. But his ideals, I am sure, will always inspire us and help develop a conviction about the great future of India. To do so we must fully comprehend that industrialisation is basic to the very life of our country. Without such conviction the creative possibilities of large-scale industries cannot be fully realised to achieve economic freedom.

On this occation, I propose only to highlight some aspects of our Acetate Industry which is yet to reach its full growth in our country. This apart I would like to talk generally on the industrial climate as it is obtaining today in India. So far as the affairs of the Company are concerned, I would request you to refer to the Audited Statement of Accounts and the Directors' Report which together give a fair indication of the achievement of our Company over the past years. The performance of your Company during the year under review in particular is very significant—being the first year of fruitful endeavour by which the Company has produced some positive results and a token profit. This year is also significant because now we have come to a turning point, wherefrom the growth of our Company will be accelerated. This achievement, however, is to be studied in the context of what remains to be achieved in the years to come. In the Annual Report there is a brief note titled "The World of Cellulose Acetate". This defines the framework of the canvas of our Acetate Project. We have just made a beginning in this field. We are yet to go a long way to reach our goal.

Plasticizer Project

Our Compounding Unit at Dum Dum is now in the swing of volume production. The Plasticizer Project will soon go into stream. All the ground work for the Cellulose Acetate Flakes Project has also been completed. In planning our schemes we have adopted a pragmatic approach, and in programming the Cellulose Acetate Project we have worked out the detailed data on inputs and investment costs. The elaboration of the development plans has been, in general, started with a long-term projection. For operational purposes, it has been necessary to link aggregative planning to that of the individual phases of our project. In our study, major emphasis has been placed on the analysis of the differential of the fixed investment and other major input requirements in the industry between a developed country and a developing country. The course of our activities has been charted out on an aggregative projection which is fundamental for proper development of Cellulose Acetate Industry.

Looking back, I would recall—and you are perhaps aware—that our original scheme was only to compound Cellulose Acetate and P.V.C. resins for the Plastics Industry. Our Government, in sanctioning the scheme, advised us to integrate our project backwardly with the production of Cellulose Acetate Flakes. The Government was very much justified because the modern Cellulose Acetate Industry is one of the most completely integrated industries in the world to-day.

If you examine the pattern of Cellulose Acetate Industry all over the world, you will find that only very big corporations are now dominating this field. In all advanced cuntries, mainly the leaders of chemical or man-made fibre industries are engaged in the production of Cellulose Acetate.

Acetate Industry

The economics of Acetate Industry are generally based on a pattern of intricate integration. Lack of proper integration often has forced some producers to discontinue production. A very large and reputed chemical company in an advanced country, once an important producer of Cellulose Acetate Flakes, had to shut down their Acetate Plant as it was not properly integrated for the manufacture of end-products. To make the Cellulose Acetate Industry very stable, there is no doubt that it has to be properly linked up with end-products industries, such as plastics, yarn, film, etc. In a developing country like India, the question of integration of a Cellulose Acetate Industry is far more involved. To be absolutely sure of supply of raw materials from indigenous sources and to be independent of imports, this industry has also to be integrated backwardly to ensure the availability of the raw materials at an economic price.

The pattern of integration in Acetate Industry varies in the advanced countries according to local conditions. Besides having major forward integration for manufacture of end-products and auxiliary integration for marketing, most of them also have facilities of chemical conversion plants. Many of them produce all the basic and intermediate raw materials and chemicals like Acetic Acid, Chemical Cotton, Acetic Anhydride and have facilities for recovery of Acetic Acid; some producers however buy Cellulose Pulp and Acetic Acid and only produce Cellulose Acetate by linking with the production of Acetic Anhydride and recovery of dilute acid. We also know of cases where even recovery of Acetic Acid is not undertaken by the Acetate producer because they not only buy Acetic Acid but have also the advantage of returning to the seller the dilute acid for recovery.

But in a developing economy where the chemical industry is still in its infancy, it is to be expected that such facilities will not be available. It is, therefore, incumbent upon your Company to integrate the Acetate Project not only to the limits upto which your Company has obtained licences, viz. production of Acetic Acid, Acetic Anhydride, etc. but also for producing pulp and other chemicals; and it would also be desirable to go a further step, backwardly, to set up a Distillery for regular supply of alcohol and to integrate, forwardly, with a yarn Spinning Plant.

In this context, I would also like to refer to the status of the Acetate Industry in a developing country like South America where we find that the producer of Acetates has even gone as far backward as to undertake sugarcane cultivation in order to ensure supplies of alcohol by crushing of cane and subsequent fermentation. Some internationally-known firms have also diversified in the field of forestry development and timber extraction to produce pulp in the process of integration. Such complexity is inherent for a stable Cellulose Acetate Industry in its larger perspective.

I am glad to report that your Company has made a study of the economics of this industry and the development plan has been based, accordingly on a long-term projection. This being a resource-tied industry, your Company has studied the various problems relating to the availability of raw materials required for the project. It has also taken into consideration the prospects of the development of Petro-Chemical Industry during the next decade which might provide a ready source of Acetaldehyde, etc., which, in turn, will ensure economic production of Acetic Acid.

I feel proud to report that your Company is the pioneer in the field of Acetate Plastics in India and therefore enjoys a happy position. We are now successfully marketing Cellulose Acetate Compounds to meet the requirements of the plastic end-products industry. Now that we have planned for a wide range of products involved in our integrated project, your Company will be in a position to take up such production progressively and develop the side-lines of trading for a sustaining growth in course of time. Our activities however have to be related to the general industrial programme of our country. We should bear in mind that the Indian economy has undergone a major transformation since independence and we are at the beginning of a new era—one in which big industries can fulfil their promises of benefit.

General Industrial Progress

I would like to observe here that while the country is preparing for a large-scale development forces are at work to put obstacles to our way of thinking. Despite the fact that big industrial development is an immediate need to generate rapid economic growth, some of us, perhaps a large section of the Indian people, have a deep-rooted fear out of prejudices and emotional repugnance to it. We shall have to surmount this contradiction. This is not a small job. In the present industrial scene in India, suspicion and emotional prejudices have inevitably created a degree of cynical distrust in all business and downgrading of a businessman's function in society. A time has come for scrutinising what is good for the society and what is not. The feeling resulting from our prejudices brings in a host of untoward consequences in its wake and such feeling will act as a dead load upon our economy—it will slow down the social and economic progress. It will develop a negative attitude which will ultimately refuse to accord honest recognition to the actual benefit of big corporate business.

The other reason for the negative feeling is the assumption that small-unit business should be the norm. This brings emotional consideration in determining the Government policies towards large industry. To live in the world of big productive machines side by side with handlooming and basket-weaving, is perhaps responsible for the two schools of thoughts. It would be unfortunate for us if our industrial policies develop any contradiction in the process of planning. In a developing country like ours, both the streams of economic growth—large and small—have come to stay in our "mixed economy". I am not opposed to small industries. In fact, I am all for small and cottage industries. In India ours is not a case for supporting one or the other—the two should be inter-dependent and inter-related in such a way as to continually add to the wealth of the country as well as to lead to equitable distribution of wealth.

I can appreciate the emotional feeling leading to the negative attitude on the part of certain section of Indians which is probably due to the possible concentration of economic power. But to avoid such concentration it would not be prudent to throttle the economic growth.

Our economic system calls for re-examination of our thinking as well as of the policy of industrialisation. Big industry is inevitable in a big country like ours which is big in every respect—population, external relations as well as natural resources. We should be conscious of the kind of industrial society that our illustrious leaders have planned for India. This calls for an understanding of its fundamental characteristics. We need an enterprising kind of society, an increasingly productive society, an efficient and active society, a realistic and stable society, a forward-looking society that should always be agreed to conserve its resources—a society in which all our institutions, public and private, big and small, are responsible to the interest and the will of the people.

All this thought leads to the conclusion that a rational planning is very significant for the creation of right economic climate in which proper industrial development might flourish. A change in our feeling is therefore fundamental and should be the prime concern of every one of us. We need a comprehensive industrial policy, a more cogent public investment policy that could act as a stimulus to private enterprise—and such policies that could help speedier implementation of the various projects and remove the negative climate that prevails today in the industrial and economic scene of our country.

Chemical Research

Before I conclude, I would like to point out that in India the chemical industry has just begun. And the vast industries based on petroleum, are yet to come. To accelerate its growth, emphasis must be given on research and development. It is true that the Government now pay an increasing attention to scientific research but to me it appears that Government alone cannot take these responsibilities. Scientific investigation should not remain within the four walls of laboratories run by the Government or a few individuals. We shall have to translate the technical achievements and discoveries into industrial realities to speed up the development of chemical industries. Significant research and development require large resources and often a long period of waiting during which no result can be forthcoming. To develop a chemical process, a pilot plant may cost enormous money, may take years to build and even then the results may prove unsatisfactory. It is, therefore, necessary for every enterprise engaged in chemical industry to sink substantial sums of money required to develop basic process and chemical engineering research. Our Government should come forward and take up the responsibility of introducing such policies and incentives as would encourage large-scale and widespread research activities. If proper facilities for such basic research are not developed in our country, there will be a continuous drag on our industrial growth. If we depend only on foreign assistance in these areas, we may not ever base our industries on up-to-date technologies and would always remain behind other industrially-advanced countries. Such research activities call for a practical approach. Your Company, within its own resources, has realised the need for the development of advanced technology and has therefore taken up some research and development work relating to the various phases of our Cellulose Acetate Project.

Finally, I would like to address on your behalf and on my own, our thanks to the staff and all the employees who have worked in the interest of the Company during the year. The success of the Company's current operation and in the preparatory work in respect of the bigger project is a tribute to the enthusiasm on the part of the Company's personnel.

Thank you.

KERALA STATE INDUSTRIAL DEVELOPMENT CORPORATION LTD.

THE CHAIRMAN, MR. K. R. K. MENON REVIEWS ACTIVITIES

The following speech was delivered by Mr. K. R. K. Menon, Chairman, at the Third Annual General Meeting of Kerala State Industrial Development Corporation Ltd. held on 28th September 1964.

Gentlemen,

I have great pleasure in placing before you the accounts of the Kerala State Industrial Development Corporation Ltd. for the year ending 31st March 1964 and the Report of the Board of Directors of the Corporation on the working of the Corporation during that period. With your permission I shall take the report as read.

It is only less than twelve months since we held our previous annual general meeting, but, during this short period, two events have occurred which have caused us all much sorrow and concern. Firstly, we in Kerala, along with the whole nation, were plunged into grief by the sudden demise of our late beloved Prime Minister, Shri Jawaharlal Nehru, who, by his dynamic leadership and far-sighted policies had striven assiduously to set our country well on the path towards the goal of a properly integrated social and political unit. And, secondly, less than four months after this national calamity overtook us, we have had a major incident in our own State where the mounting political tension of some months' duration, culminated recently in the termination of the Cabinet form of government and its substitution by President's rule. The untimely passing away of our late Prime Minister has, I believe, served as a grim—and none too early—reminder to the entire nation that we cannot afford to rest on our oars and enjoy the luxury of living snugly in the protective shade of a great leader's umbrella for ever. The passing away of our Government's Cabinet of Ministers will, I hope, bring us Keralites—from the lowliest to the highest among us—to the realisation of the fact that sheer political immaturity of the kind that we have witnessed for some time past in our State in all its naked ugliness must inevitably result, sooner than later, in the sacrifice of the economic progress of the State. In my speech last year I had referred to the feeling of uneasiness and insecurity which even the then political instability in our State had engendered in the minds of outsiders, and the baneful consequences that this had entailed so far as our industrial development was concerned. I sincerely hope and trust that, whatever may be the form of Government we have, our Government will pay due attention to the urgent and immediate problem of industrial development on the massive scale and rapid pace that the dire economic plight of our people today undoubtedly calls for.

Successful Working

The Corporation's work in the year covered by the report placed before you has, on the whole, been rewarding, and financially successful, as the report and accounts placed before you will show. Our gross income rose from Rs 2.55 lakhs of the previous year to Rs 6.25 lakhs in the year under report. This has enabled us not only to write off the entire amount of our Preliminary expenses, but also to provide for a Reserve for Depreciation on our investments, and another Special Reserve for general purposes, amounting to a total of Rs. 1,33,000, and also to carry forward a sum of Rs. 90,369 to the following year. Our issued capital on 31st March 1964 stood at Rs. one crore ninety five lakhs, as against Rs. one crore on 31st March 1963.

While we had no lack of funds during the year under report wherewith to finance the industrial schemes approved by us, I regret to say that there was a slight fall in the total number of applications received for assistance from us. Ordinarily, there should have been an appreciable increase in this number rather than a fall, even though slight. I must attribute this unsatisfactory feature to the rapidly dwindling number of industrial licences which have been granted for units in this State. This is a matter which I have repeatedly stressed as deserving the urgent attention of both the Central and the State Governments, as nothing less than some kind of special and preferential treatment for us at the hands of the Central Government will help solve this problem satisfactorily. I regret to say there is no sign yet that a solution on these lines will be forthcoming. All that I can do on this occasion, therefore, is to re-stress this point with all emphasis, and to request the Kerala Government to take up the matter with the Centre as one of immediate urgency brooking no further delay.

While we must wait patiently for necessary action in this regard being taken by the two Governments, there is a good deal that can also be done by all of us in the way of paving the way for attracting industrial capital and entrepreneurship into our State. The first and foremost is the achievement of a modicum of political stability; this I have already mentioned, and needs no further expatiation. Secondly, we would do well to try and achieve a greater measure of stability in the labour-employer relations in the industrial units already established in our State. We have in our State special facilities for developing the sagacity and maturity of judgment that this calls for, in view of the general education and literacy prevalent here; we could profit greatly by capitalising on this. A third thing that our State Government can—and must—do is to take immediate steps to ensure a plentiful and regular supply of electric power for industrial users. We must take note of the hard fact that cheap electricity alone will just not suffice; a *regular* supply is even more vitally important.

Last, but not least, in drawing up and presenting to the Central Government our State Government's suggestions for the fourth Fve Year Plan our Government must keep prominently in mind the primary need for trying to reduce by the maximum possible extent the growing pressure of population on our meagre land resources, and diverting it to industrial enterprise, be it in the public sector or in the private sector.

Need for Additional Funds

The question of raising additional financial resources for the Corporation will soon have to engage our serious attention, and I hope that we shall find adequate ways and means of solving this problem. We are at the moment engaged in active negotiations with certain foreign companies for securing their technical collaboration in several worth-while schemes, all of which, I hope, it will be found possible to implement in due course with the assistance of Indian industrialist parties, who will be willing to take over the management. I must, in this connection, make special mention of the assistance and co-operation we have received from the concerned officials of the U.S.A. Agency for International Development organisation in New Delhi in regard to industrial schemes in which we have sought American technical and financial collaboration. While expressing my sincere gratitude to the A.I.D. for their invaluable assistance and advice, I should also like to add that a team of experts from that organisation has recently completed an on-the-spot study of Kerala's economic—and particularly industrial—needs and potentialities, following the discussions which took place between the U.S.A. Ambassador, Mr. Chester Bowles, and our then Chief Minister. I am keeping in close touch with the A.I.D. officials in this matter, and I have hopes that appreciable results in the form of substantial aid to Kerala will follow from this in due course.

In conclusion, I should like to express, on behalf of the entire Board of Directors, our heartfelt thanks to all the industrial entrepreneurs, Indian as well as foreign, who have helped us, in the course of the year under review, with their co-operation and assistance, often in the face of heavy odds. Our grateful thanks are also due to the Kerala Government for the assistance and co-operation we have received from them, and in particular to the former Industries Minister of Kerala, Shri K. A. Damodara Menon, whose warm and enthusiastic support of our Corporation's activities had always been a source of inspiration and strength to us all.

CHAIRMAN'S STATEMENT

Addressing the Twentieth Annual General Meeting held at the Registered Office, Udyogamandal, on 29th September 1964, Mr. T. A. Joseph said :

Gentlemen,

I am glad to welcome you to this the 20th Annual General Meeting of the Company and to present to you the accounts of the Company and the Report of the Directors for the year ended 31st March 1964.

As in the previous year inadequate power supply was the Company's major problem during the year under review. There was a drastic power cut in the first three months of the year. Again power cut was resumed in February 1964 and continued till the end of June. During the periods of power cut there were several occasions when the position became so critical that there was no alternative but to close down the entire plant as it would have otherwise constituted a grave risk to continue to operate it under marginally safety conditions. The total loss in the sale value of production on account of power cut amounted to over Rs. 2.5 crores during the year. Consequently the Company's results have not been as good as one could have expected. In spite of this position it is gratifying to note that the Company has been able to break even and to make a small profit of about Rs. 12 lakhs, after meeting charges on account of depreciation. This has been possible only due to the unstinted efforts of the Executives and the workers and I would like to take this opportunity to record our appreciation of their efforts.

Power supply continues to be our major problem. A solution to this has to be found as early as possible if the Company should work on a satisfactory basis. There are several major hydro-electric projects under various stages of progress in Kerala State now. I am not aware if any of them will oe commissioned this year. Even with all the hydro-electric projects coming into operation we will continue to be at the mercy of nature unless adequate insurance against its vagaries is provided in the shape of a reasonably large thermal power station. Your Company has been making representations to the Government of Kerala since 1960 for the installation of such a station. I am glad to say that our request has at last been taken up during this year and I gather that the Government have decided to put up a thermal station with a minimum capacity of 100,000 KW at Cochin. I do hope that the work on that project will be taken up expeditiously.

In the light of what I have stated so far you will appreciate that the Company has not been able to declare a dividend this year. The current year also has started with a drastic power cut that lasted for three months resulting in a loss of production amounting to a sale value of approximately Rs. 1 crore.

Third Stage of Expansion

The Third Stage of Expansion is well under way. Although scheduled to be completed in 1965-66, it is expected that most of the plants will be ready for commissioning by the end of this year. But we will be requiring another 20,000 KW of power for operating the plants when the expansion is completed. We are hoping that the Kerala State Electricity Board will be able to give us this power; but if they do not, the Company will not be able to take any benefit from the expanded capacity till the required power is made available.

Another factor that has been causing us concern is the possibility of a severe shortage of water in the Periyar river when the Idikki power project is completed. The idikki project is designed to generate 800 to 1000 MW of power. It is based on the waters that flow into the Periyar now. When the project is completed, all that water will be diverted to the Moovattupuzha river as the power house will be located on one of its tributaries. Such a situation can have dangerous consequences as the Ernakulam-Alwaye industrial belt is bound to suffer during the summer months on that account. Your Company has represented this matter both to the Government of Kerala and to the Government of India. We had suggested that the Government revise the plans for Idikki in such a manner as to provide at least a part of the water to flow back into the Periyar. If the water in the Periyar turns saline near the industrial area, factories like ours may have to be closed down for about 3 to 4 months in the year. I understand that the seriousness of this situation has been realised by the Government and that they are considering this proposal along with certain other alternatives.

As most of you must be aware, raw naphtha is the feed-stock used in your Company's Oil Gasification Plant for production of Hydrogen, which is one of the constituents of Ammonia. As this is a very important raw material in the manufacture of chemical fertilisers the Government of India were pleased to exempt it from the excise duty payable on it to the extent of 95%. This position is recognised in States like Madras and Maharashtra where fertilisers are being made out of raw naphtha. In Kerala the situation however is different. Originally raw naphtha was charged sales tax at 3%. Recently the Government of Kerala seems to have decided to treat it as a petroleum product and charge sales tax at 15%. This will seriously upset the economics of production of your Company. A representation has therefore been made to the Government of Kerala to reconsider the matter and restore the original position. Raw naphtha is the raw material for most petrochemical industries. In Kerala, fertiliser industries can be developed only on the basis of raw naphtha being used as a raw material. If this raw material is charged this high rate of Sales Tax like a finished product, it will cripple the fertiliser industry in Kerala. I hope the Government will realise the gravity of the situation and revise the sales tax on raw naphtha.

Last year I had informed you of the directions received from the Government of India that your Company should plan, design and construct three more major fertiliser plants in South India during the Fourth Plan period. Your Company has since then been advised by the Government of the location of two of these plants. One of them is proposed to be built at Madras and the other at Cochin, as near to the Refineries as possible. The project reports for these projects have been prepared by the Company and submitted to the Government of India for approval and further directions.

Diversification of Activity

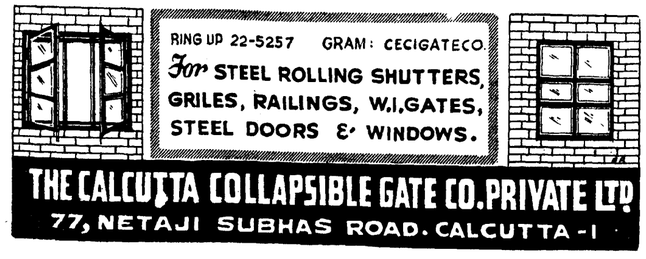
I had mentioned to you last year of the Company's intention to promote a Fabrication Shop in collaboration with the Davy-Ashmore group of the UK for the manufacture of specialised items of equipment required for the fertiliser and chemical industries. I am glad to say that a formal agreement has been drawn up between your Company and Messrs. Davy & United Engineering Company of the UK, one of the units of the Davy-Ashmore group, for the establishment of such a Workshop As soon as the Government of India's approval to the agreement is obtained, further steps will be taken to organise the new Company.

Your Company has also been able to secure the consent of Messrs. Power-Gas Corporation of the UK, a member of the Davy-Ashmore group and a well-known engineering and contracting organisation in the field of chemical engineering, to collaborate with your Company for setting up an Engineering & Contracting Organisation. The Heads of Agreement drawn up in this regard are being submitted to the Government of India for their approval. Further steps will be taken on receipt of Government approval.

Most of you must be aware of the steps taken by your Company to promote the use of fertilisers in South India. These measures have been appreciated by the State Governments as well as the Centre. The Fertiliser Festival, a new concept introduced by your Company in the field of fertiliser promotion, has now been accepted as one of the best means of propagating fertiliser use. The Madras Government for example has started organising fertiliser festivals on their own initiative and with the co-operation of suppliers.

The distribution net-work has also expanded considerably during the year under review. Today, your Company has 53 Central Depots and about 1900 Authorised Agents in Kerala State alone. In Madras, Mysore and Andhra Pradesh, your Company has been spreading its distribution system at a rapid pace. Recognising the efficiency of the methods followed by your Company in fertiliser distribution, the Government of Madras have invited your Company to assist them in the distribution of nitrogenous fertilisers, sales of which were so far confined to co-operatives. Your Company has gladly accepted the invitation and will be starting distribution of nitrogenous fertilisers in Madras State within a few days.

Your Company's agronomists continued to render useful services to the farmers of South India. The nature of services included the maintenance of demonstration plots, supervision of manuring operations, supervision of application of pesticides and speedy analysis of soil samples.



Employer-Employee Relations

Employee-employer relations continued to be cordial during the year under review. But in July this year a new situation has developed. A member of our Managerial cadre has been elected as the President of the Union. The Union has been insisting on our recognising him as the President of the Union. It is most embarrassing for any Management to recognise one of its own members as an office-bearer of the Union; especially so when he has been the Assistant Personnel Manager of the Company and has conducted negotiations on behalf of the Management with the Union. It will be difficult to find such an instance anywhere else in trade union history. Along with this the Union had also raised an issue relating to the grant of bonus for the year 1963-64. Bonus payment is governed by the long term agreement between the Union and the Management. Any difference of opinion relating to any of the clauses of the agreement has to be referred to the Labour Commissioner for arbitration according to the agreement. The issues were therefore referred to the Labour Commissioner in terms of the agreement for arbitration.

As the Union has refused to accept arbitration, the Government of Kerala have referred the issue relating to Bonus for adjudication. In regard to the other point, namely the anomalous position of a manager holding an office in the Union, the Union has been conducting an agitation for over a month now. A strike notice was given on the 21st of August. The Union has been extending this notice on the dates of expiry. So far no strike has taken place. The Management believes that for the efficient running of an industrial unit a healthy and strong trade union is necessary; but at the same time no management can afford to compromise on fundamental principles. The question now posed by the Union has very grave implications and if conceded shall strike at the very roots of management and trade Union relationship. The Management have therefore advised the Union that so long as their President continues to be a member of the Managerial cadre of the Company they will find it difficult to hold any discussions with him. I do hope that the Union will appreciate the difficulty of the Management and take a realistic view of matters.

I now move that the Directors' Report and the Audited Statement of Accounts for the financial year 1963-64 be adopted.

N.B. This does not purport to be a report of the proceedings of the General Meeting.

THE CHAIRMAN, SIR. A. RAMASWAMI MUDALIAR'S REVIEW

The following Address of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), Chairman, India Steamship Co., Ltd., delivered at the Annual General Meeting of the Shareholders of the Company, held on the 24th September, 1964.

Gentlemen,

The Audited Accounts and Director's Report for the period ending March, 1964 have been in your possession for some time and with your permission I shall take them as read.

At the outset I would like to refer to the great loss that the nation has sustained in the passing away of Prime Minister Shri Jawaharlal Nehru in May of this year. For over 16 years since the attainment of Independence by India, Shri Nehru guided the destinies of the nation and steered the country clear through many dangers and pitfalls, both external and internal. His outstanding contribution to the nation has been the great impetus that he gave to the industrial and social development of the country. His broad vision, great insight and deep appreciation of modern advances in science and technology enabled him to guide the industrial progress of the country. More than that, his vision of a society broad-based on social justice and affording equal opportunities for all citizens, led to his determination to prevent the nation from falling back into archaic and superstitious ways of thought and life and saved the country at a time when the tendency was to enshrine all the past as glorious, irrespective of merits and demerits of the traditions we inherited Whatever reservations some may have regarding Shri Jawaharlal Nehru's stewardship of the nation, none can gainsay the invaluable worth and value of the two distinctive assets which he has left to the nation. I trust that no corroding influences will destroy these precious assets.

For some time, it was a hackneyed question in India and elsewhere. "After Nehru, Who?" Some believed with faith in providence that "the hour will find the man" It is a matter of supreme thanksgiving that the nation, in its saddest and most critical hour, was destined to find in Shri Lal Bahadur Shastri the right person to be Prime Minister and leader of the nation. I can testify from my own experience how the unanimous choice of Shri Lal Bahadur Shastri was received with great relief and with equal admiration by the many nations of the world as it was received by the Indian public. Shri Lal Bahadur Shastri, without being personally known to many abroad, had somehow impressed his character and integrity, his modesty and sense of fair dealing as much on the people abroad as on his own countrymen. His leadership of the nation and the guidance that he will give to the country in the solution of its many perplexing problems, both internal and external will be safe, prudent and practical. We join with others of our countrymen in wishing him all success in the great task and willingly offer our full co-operation in the work that lies ahead.

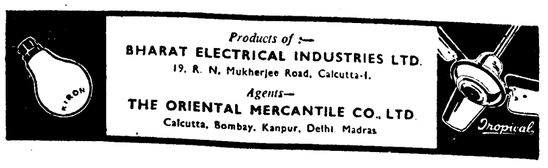
We, who are connected with Indian shipping, have reason particularly to welcome his Prime Ministership as he has been the architect of modern India shipping development. It was during his Ministership of the Transport Department that Indian shipping got a special impetus for expansion, development and courageous progress. His sympathy and understanding of the needs of Indian shipping, both in the public and private sectors, was responsible for the turn that Indian shipping took in its expansionist activities since 1954. I feel certain that his beneficent influence will be felt by Indian shipping.

Progress

In my speech at the last meeting, I indicated that it was inevitable that the freight rates from East to West would be increased and that it was generally recognised both by shippers and Government that this increase was justified in the circumstances in which shipping lines were working on the India-U.K.-Continent route. I had stated that the Conference had increased the rate by 12½% while the Indian lines had pressed for an increase of only 10%. The percentage proposed by the Conference was justified on the ground that, with the many exceptions that were made, with reference to commodities which were called sensitive and could bear only a lower percentage of increase, the effective rate would only be a total increase of 10%. The increase proposed was not approved by the Maritime Freight Commission and by the shippers, and the Indian lines, at a later meeting of the Conference, induced their colleagues to accept the lower figure of 10%. The increase was effective from 1st October, 1963 so that, as the Directors' Report points out, the effect of this increase was felt only for three months of the year under review through the completed voyages that took place after 1st October.

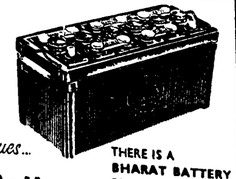
The year resulted in a net profit of a little over Rs. 9 lakhs after setting aside Rs. One crore & 28 lakhs for depreciation and after deducting all other charges. As you are aware, the result of the working of the company last year showed a loss of nearly Rs. 30 lakhs. I trust that the continued loss over the last few years has been definitely arrested and that a period of profit making has begun. Even so, I cannot feel happy or satisfied any more than the shareholders, of the small profit that has been made this year.

Problems of Indian Shipping



It is unfortunate that, in spite of repeated statements of Chairmen of Indian shipping companies about the handicaps that they are seized with, there has been little achieved in solving these problems or mitigating the hardships and handicaps that face shipping and particularly Indian shipping. The delays in Indian ports have been referred to more than once and it has been pointed out how Indian shipping losses by the number of days it is held up unnecessarily at loading and unloading ports in India. Except for one or two ports, delays have continued to the same extent in the major ports of Calcutta and Bombay. Owing to berthing delays your Shipping Company lost 432 days in the year out of which 300 days were in Indian ports alone; rain and inclement weather has resulted in a further delay of 76 days. These artificial and natural handicaps have been aggravated by lightening strikes and labour troubles of various kinds which resulted in a further delay of 25 days. The slow arrival of cargoes to some of the ports, necessitating the holding up of ships which were ready to sail, has contributed a further delay of 54 days. Thus, through avoidable causes except for rain and inclement weather, the days lost by your Shipping Company apart from the normal holidays was over 500 days. It must be admitted with appreciation that there was considerable improvement over the situation last year only at the port of Madras. The piece-rate system, which has not been accepted so far as Calcutta port is concerned, has further added to the delay in the turn-round of ships. The rate of discharge or loading is only a third of what it is in the port of Bombay where the piece-rate system prevails. When it is realised that more than half the trade of India moves through the port of Calcutta and that it serves a vast hinterland, the importance of energetic action being taken in Calcutta at various levels for remedying this acute state of affairs becomes obvious. Plans are no doubt under way for execution of long-range solutions of these difficulties; but the immediate present is of more concern to all shipping lines and particularly the Indian shipping lines.

To the delays in ports in India has been added in recent months similar delays encountered in some of the western ports owing to labour strikes and even go-slow tactics. The delays in western ports though comparatively shorter are of considerable significance because the harbour and port charges and other incidentals of ships' delays in western ports are very much higher than similar charges in eastern ports. It is under these conditions which prevailed during the year that the earning capacity of shipping lines in the U.K.-Continent-India trade has to be judged.



Extraneous Factors

There are certain extraneous factors which are having an increased impact on the consideration of freight rates and on normal profits, particularly for Indian shipping lines. The problem of earning foreign exchange and the consequential question of balance of payments has necessarily loomed large in recent times. India particularly and the less developed nations are seeking to meet their requirements of foreign exchange for imported plant and machinery and raw materials for their industrial development and must therefore, to a reasonable extent, concentrate on increasing their exports to various markets of the world. There have been many incentives considered in this connection for promoting exports. While I agree with this policy, I must reiterate that some shippers at least are taking advantage of the anxiety of the Government to increase exports and are constantly clamouring for a decrease in freight rates and objecting to even small increases. Shipping is as much an industry as any other industry and while land-based industries can cope with increasing cost of production due to a rise in labour cost or raw materials by an increase in the prices of the articles they produce, it is considered by some that shipping, in spite of the fact that all these increases affect them equally, could not adjust its freight rates suitably. It is essential that a more realistic attitude towards shipping should be taken by both shippers and ultimately by Governments and I feel certain that better results, even from the point of view of foreign exchange, will accrue from this altered attitude towards shipping lines.

The facilities that are available at ports in India are so poor in other directions also that they form a severe handicap to Indian shipping lines. It has been a matter of great concern that the dry docking and repair facilities in Indian ports leave very much to be desired. If, with this factor, Indian shipping lines are compelled to do the dry-docking and shipping repairs only at Indian ports as is often the case, not merely the resulting cost, but even more the resulting delay in carrying out this work, seriously affects the earning of these companies. During the year under review, your ships had to spend on an average 15 days for facilities for dry docking and special survey. If this was done in a foreign port to which the ship had to go for discharge or loading, the average number of days would have been about 5. The cumulative effect of all the factors I have referred to above makes it difficult for Indian shipping, whether coastal or overseas, to make

a reasonable profit unless one of two things occurs: either the freight rates are fairly increased or the amenities and conveniences at Indian ports are radically improved.

I feel that that the time has come when the Committee in charge of national harbours is reconstituted with defined aims and objectives consistent with the needs of the times and their recommendations are not only seriously considered but given prompt effect to so that, apart from long-term suggestions, immediate improvement may be made in the directions mentioned above.

I have referred to this long catalogue of grievances and deficiencies merely to explan the financial position of the Company. I feel confident, as I said, that we have turned the corner and that a more favourable balance-sheet may be presented in the succeeding years. But shipping companies must be assured of fair conditions of working in Indian waters and in overseas ports. When I find as a result of the year's working in the Liner trade that your ships spent 3,379 days in port and 2,301 days at sea and that on the coastal trade they spent 993 days in port and 282 days at sea, that is, nearly 60 per cent in port in the Liner trade and 77 per cent in the coastal trade, I must confess that there is something radically wrong in the manner in which Indian shipping companies generally were obliged to work. The loss is as much to the nation as to individual shipping companies.

Expansion of Shipping

The need to expand Indian shipping is obvious and it is in this direction that some additional earning of foreign exchange may be expected. But the immediate increase in foreign exchange earnings of Indian shipping lines can well be brought about—and comparatively easily—with altered conditions in Indian ports. I have advocated the expansion of Indian shipping but always with the basic idea that they will really increase the cargo carried to and from India. There is need for more tramp shipping, for tankers and for bulk carriers of appropriate size, and if attention could be concentrated by new entrepreneurs or even by established shipping companies on these kinds of ships, it will help the country as much as it will be of help to them. It will be disastrous if shipping companies which have an ambition to enter the Liner trade cut into the existing trades of Indian shipping companies on routes in which they have established themselves after great difficulty and considerable initial loss. They will only be dividing the income which the Indian shipping lines are now earning to the detriment of both themselves and of old-established lines. Given proper guidance by the Ministry of Transport in increasing the tonnage of Indian shipping and in fair and proper utilisation of such tonnage, there is every reason to believe that Indian shipping can expand on healthy lines.

Thanks

Our thanks are due to the Minister of Shipping for his continued help and guidance and to the officers of the Ministry, the Secretary, the Director-General of Shipping and his deputies and assistants, who have always given useful advice and timely help.

Tribute

I should like, on behalf of the Board and myself, to convey our sincere appreciation of the work of the officers and staff, both afloat and ashore. Theirs has been devoted service in the interests of the Company. I should also like to express my thanks to the shippers, brokers and forwarding agents for their firm support and for the confidence they have reposed in us and in the quality of our service.

NOTE:—This does not purport to be a report of the proceedings of the Annual General Meeting.

INDUSTRIAL FINANCE CORPORATION OF INDIA

THE CHAIRMAN REVIEWS ACTIVITIES

The following is the Speech delivered by Mr. A. Baksi, Chairman, Industrial Finance Corporation of India at the 16th Annual General Meeting of the Corporation held on the 29th September, 1964.

Gentlemen,

I have great pleasure in welcoming you to this Annual General Meeting of the shareholders of the Corporation.

We have assembled here only four months after the demise of Prime Minister Jawaharlal Nehru. It is fitting that we should begin by paying our respectful homage to his memory.

Printed copies of the Sixteenth Annual Report of the Board of Directors and the Accounts of the Corporation are already in your hands and I shall, with your permission, take them as read.

During the year ended the 30th June, 1964 the Corporation sanctioned a total financial assissance of Rs. 38.27 crores made up of rupee and foreign currency loans of Rs. 25.12 crores, underwritings of Rs. 5.41 crores and guarantees of deferred payments and foreign loans of Rs. 7.74 crores. The quantum of assistance disbursed or made available during the year was Rs. 21.88 crores out of which the cash outgoings amounted to Rs. 17.99 crores. To meet the immediate needs of our borrower concerns we disbursed during the year interim loans amounting to Rs. 3.42 crores.

The gross income for the year was Rs. 507.28 lakhs. Deducting interest of Rs. 262.04 lakhs on borrowings, and other expenses including establishment of Rs. 18.18 lakhs, the gross profit subject to provision for taxation is Rs. 227.06 lakhs. After setting apart a sum of Rs. 101.62 lakhs towards taxation, the net profit for the year comes to Rs. 125.44 lakhs. These results, I hope you will agree, are satisfactory.

As for appropriations out of the profits, a total sum of Rs. 106.19 lakhs has been transferred to Reserves which now total Rs. 409.19 lakhs as against a paid-up capital of Rs. 7 crores on the 30th June, 1964. The balance profit of Rs. 19.25 lakhs is being distributed as dividend.

The gross financial assistance sanctioned by the Corporation during the last 16 years up to the 30th June, 1964 aggregated Rs. 240.97 crores. The net figure for this period, after taking into account cancellations and withdrawals of Rs. 44.19 crores, totalled Rs. 196.78 crores, made up of rupee loans of Rs. 134.29 crores, foreign currency loans of Rs. 16.89 crores, underwritings and direct subscription to capital of Rs. 14.13 crores and guarantees of Rs. 31.47 crores. Out of the net assistance sanctioned of Rs. 196.78 crores, about Rs. 137.16 crores (70%) was for new projects and Rs. 59.62 crores (30%) for existing concerns for expansion, modernisation and diversification. As against the net assistance sanctioned of Rs. 196.78 crores, Rs. 124.45 crores had been disbursed or made available up to the 30th June, 1964. Assistance outstanding on that date, after providing for repayments, aggregated Rs. 94.02 crores.

Cash disbursements up to the 30th June, 1964 in respect of loans sanctioned and shares and debentures subscribed to, or taken up by the Corporation as a part of its underwriting commitments, amount to a total of Rs. 105.78 crores.

financed to the extent of Rs. 26.87 crores (25%) out of repayment of loans, Rs. 28.24 crores (27%) by borrowings from the market, Rs. 35.60 crores (34%) by borrowings from the Central Government, Rs. 3.98 crores (4%) from foreign credits and the balance of Rs. 11.09 crores (10%) from the paid-up capital and reserves.

Assisted Projects

Projects assisted during the year under review numbered 75, covering a variety of industries such as Textiles (20), Metal Products (15), Electrical and other machinery (14), Glass (7), Basic Industrial Chemicals (5), Paper (4), and Iron and Steel (3). The total number of projects assisted by the Corporation since the beginning up to the 30th June, 1964 was 334 out of which 224 are new undertakings. The total cost of the 334 projects, for which we sanctioned assistance of Rs. 196.78 crores, is estimated at Rs. 558.00 crores. The last figure is significant because an institution like ours is often judged by the extent to whom the projects financed by it are able to mobilise resources from other quarters.

The Corporation's contribution to industrial development in terms of production is also significant. For example, in the Paper industry the additional capacity created as a result of our assistance is 1,58,000 tonnes per annum as against the total installed capacity of 5,49,000 tonnes per annum. In Basic Industrial Chemicals, the additional capacity set up is 61,800 tonnes of caustic soda, 2,83,000 tonnes of sulphuric acid and 23,100 tonnes of soda ash per annum. In the Cement industry the additional capacity created is 19,20,000 tonnes and in the Refractory industry 2,09,000 tonnes per annum. In Sugar the additional cane-crushing capacity amounts to 67,000 tonnes of sugarcane per day. In Cotton Textiles, the additional capacity installed is 6,44,000 spindles.

The Corporation has progressively increased its underwriting activities. During the year, we sanctioned 40 applications for a total amount of Rs. 5.41 crores comprising of equity shares of Rs. 3.86 crores and preference shares of Rs. 1.55 crores. In a number of cases underwriting facilities were sanctioned in addition to loans and other forms of assistance.

Up to the 30th June, 1964, the Corporation had sanctioned underwriting facilities in 77 cases for a net aggregate amount of about Rs. 12.31 crores made up of equity shares of about Rs. 6.02 crores, preference shares of about Rs. 3.86 crores and debentures of Rs. 2.43 crores. During this period 52 issues involving an aggregate commitment of over Rs. 9.48 crores were placed in the market and shares and debentures of Rs. 7.55 crores devolved on the Corporation as a result of these operations. The main reason for this was the unsatisfactory condition of the capital market in the last two years.

Foreign Currency Loans

While rupee loans constitute the bulk of our operations, sub-loans in foreign currency have been on the increase. Loans sanctioned during the year under the lines of foreign credit available with us amounted to Rs. 8.04 crores as against Rs. 3.04 crores in the previous year. The net amount of foreign currency loans sanctioned up to the 30th June, 1964 totalled Rs. 16.89 crores. Out of the two loans of $30 national Development (AID) of the United States of America, the Corporation had committed itself to a total of $23.78 million (Rs. 11.32 crores). We have repaid to the AID three half-yearly instalments of principal amounting to $150,000 (Rs. 7.14,000) up to the 30th June, 1964. Two lines of credit aggregating DM 40 million from the Kreditanstalt Fur Wiederaufbau, Frankfurt have been fully committed and the demand for DM loans continues unabated. The utilisation of the credit of 50 million Francs from the Banque Francaise du Commerce Exterieur (BFCE), Paris has unfortunately been slow. We have so far sanctioned four sub-loans aggregating 8.59 million Francs out of this credit.

The industry-wise pattern of our assistance has been changing. For some years till 1962, the Sugar industry was at the top of the list of our beneficiaries. In 1963 Sugar made way for Non-ferrous Metals. During the year under review Metal Products headed the list with 18.7% of the total assistance, followed by Textiles (16.7%) and Basic Chemicals (15.1%).

As regards the State-wise distribution of our assistance, Maharashtra topped the list in the year under review with 15.8% closely followed by Andhra Pradesh with 14.5% and Madras with 12.5%. A sizable proportion of our assistance was claimed by the less developed areas the industrialisation of which, as you are aware, the Corporation is keen to assist.

The net financial assistance sanctioned up to 30th June, 1964 to industrial co-operatives amounted to Rs. 37.66 crores representing about 19% of our total net financial commitment. This covered 51 sugar co-operatives, three co-operative spinning mills and one unit for extraction of vegetable oil.

A review of our loan accounts has shown that no additional provision is necessary towards the Reserve for Bad an Doubtful Debts, the balance in which now stands at Rs. 14.47 lakhs. The existing provision relates to three old accounts action in regard to which is already being taken.

The credit record and the financial position of our borrowers, including industrial co-operatives, continues on the whole to be satisfactory. The percentage of default in respect of instalments of principal and interest as on the 30th June, 1964 was negligible, being 0.88% and 0.66% respectively. Many of the concerns assisted by us have earned sizable profits and 21 concerns have, during the year, declared dividends of 12% or more. The Corporation received during the year a sum of Rs. 77.15 lakhs from borrower concerns on account of premature repayments of principal. The total amount received on account of premature repayments of principal upto the 30th June, 1964 was nearly Rs. 7 crores which included a sum of Rs. 1.12 crores from sugar co-operatives. We welcome such premature repayments and do not charge any premium on them.

Unit Trust of India

Among events of interest to us during the year, the establishment of the Unit Trust of India was a major one. We welcome this step taken for the mobilisation of the savings of the public for industrial development.

Mr. Mobert Michel Titus of the Agricultural and Industrial Credit Corpora-

during the year to study our procedures and working. Dr. G. Varade Gowda, a senior official of the Mysore State Government and two officials from the Indian Overseas Bank Ltd. and the Punjab National Bank Ltd. were also with us.

The General Manager of the Corporation participated in the Second Regional Conference of Development Banks in Asia held at Tehran in October, 1963. During the year, one of our senior officers was deputed to the Economic Development Institute of the I.B.R.D. Washington, for a special course in the appraisal of industrial projects. He also studied the organisation and procedures of the International Finance Corporation in Washington and the Commonwealth Development Finance Company Ltd. in London. We thank these institutions for the valuable facilities given.

Our relations with the various Chambers of Commerce in the country and with our borrower concerns continue to be cordial. We appreciate the constructive suggestions made by them from time to time.

Our cordial thanks are due to the U.S.A. Agency for International Development (AID) the Kreditanstalt Fur Wiederaufbau and the Banque Francaise du Commerce Exterieur for the consideration they have shown us. Their assistance has added to the capacity of the Corporation to serve the development of industries in the country.

Shri K. P. Mathrani, I.C.S., who held with distinction the Chairmanship of the Corporation from the 1st July, 1961 relinquished his office on the 16th May, 1964 on appointment as Secretary to the Government of India in the Ministry of Rehabilitaion. On behalf of the Board of Directors I would like to express our high appreciation of the valuable services rendered by him to the Corporation.

During the year Sarvashri C. C. Desai, M. Ct. Muthiah and V. P. Varde retired from the Board. Their active participation in the affairs of the Corporation was of great value and I thank them on behalf of my colleagues on the Board. I also take this opportunity on behalf of the Board to convey our thanks to the members of the Advisory Committees for the able and objective assistance they gave to the Corporation throughout the year. I would also like to thank the non-officials nominated by us on the boards of our borrower concerns for the interest they have taken in their work.

Recent Developments

Considering the time which elapses between the end of our financial year and the Annual General Meeting it will not be out of place for me to refer to a few recent developments without which the picture before you would be left incomplete.

The most notable of these has been the setting up of the Industrial Development Bank of India on the 1st July, 1964. The provisions of the I.D.B.I. Act have been commented upon in the newspapers and journals and the charter of the new body and the role it is expected to play have already received wide notice. Without dilating on these matters I may usefully draw your attention to certain important amendments which the I.D.B.I. Act, 1964 has made to the Industrial Finance Corporation Act, 1948 with effect from the 1st August, 1964. The shares held in the Corporation by the Reserve Bank of India and the Central Government have been transferred at par value to the Industrial Development Bank and the latter has acquired additional shares so as to bring its total holdings up to 50% of the paid-up capital of the Corporation which now stands at Rs. 834.60 lakhs. Certain changes have been made in the provisions relating to the composition of the Board of Directors and the arrangements for the audit of the Corporation. The power of giving policy directives to the Corporation has passed from the Central Government to the IDB. The limit of loan assistance by the Corporation to a single industrial concern has been increased. It has been made possible for the Corporation to have access to financial assistance from the IDB in certain specified ways.

I expect that the formation of the IDB and the consequential changes in the IFC Act will enable the Corporation to play a more fruitful role in industrial development. Already we have done some joint financing with other bodies. Now, coordination between sister institutions in the field will grow in depth, lacunae in the requirements of industry will be filled in more easily and very large projects which the Corporation could not handle alone will be assured of comprehensive attention by a consortium of financial institutions.

The recent amendments to the IFC Act tend to reduce considerably the Corporation's dependence on the Central Government. It is now incumbent on the Corporation to raise funds for its operations to the maximum extent practicable through its own endeavours assisted, of course, by the provision which remains intact in the law that its bonds will be fully guaranteed by the Central Government. As our requirement of outside funds during the current year will be quite substantial we entered the market a few days ago with bonds of Rs. 6 crores @ 4¾% per annum at an issue price of Rs. 99.25% with 12 years maturity. The issue was handsomely over subscribed within a few hours. We thank our shareholders and other investors for the support they gave us. This was our seventh bonds issue, the total raisings by this means from the market up to now being over Rs. 39 crores.

Review of Procedures

It is our duty in the Corporation to review from time to time our own procedures to see if we can relax any of the conditions on which we render assistance to industrial concerns. A recent review has enabled us to take three or four decisions which may be of interest to you and the industrial circles.

As you are aware, it has been one of the standard conditions of our loans that borrower companies shall not declare equity dividend at a rate higher than 8% per annum without the prior approval of the Corporation. In view of the prevailing yields on equity and preference shares and the conditions in the capital market we have decided to raise the limit of equity dividend from 8% to 10% per annum.

Loanee concerns so far had to seek the prior approval of the Corporation to the disposal of any item of assets mortgaged to it. It has now been decided to permit assisted concerns to sell or write off specified items of assets of a minor nature within prescribed limits where they find it necessary to do so, without the prior approval of the Corporation.

It has also been decided that the restriction on the disposal and pledge of shareholdings should not apply to all directors or members of the managing agency but should be confined to those who have a real stake in the assisted concern. The Corporation has already decided to liberalise the condition about personal guarantee of directors and/or managing agents in suitable cases.

We have also decided that our right to appoint nominee directors on the boards of assisted concerns should be exercised more selectively in future.

I trust that these relaxations in the sandard terms and conditions will be welcomed by our clients. It will be my endeavour to maintain a flexible attitude in these matters and make, from time to time, such variations as experience may show to be useful so long as these are in accord with the basic principles of sound financing.

Thoughts for the future are a natural concomitant of a review of the past. The Corporation has lived through sixteen years of change, has met with new challenges from time to time and has tried to evolve suitable responses. Now, with the progress of sister institutions set up at the all-India and the State levels and with the growth in the demand for long and medium-term financing of industry we shall face new tasks which will need imaginative handling. It is essential that we take stock of the changes in the situation and adapt ourselves increasingly to a versatile approach.

More Foreign Credit Needed

For this purpose we shall need a great deal more of foreign credit than has yet come to us. Negotiations for fresh lines of credit have been under way with the Kreditanstalt and the AID. We have just had news that a further line of DM 15 million has been allotted to us. I hope that from the AID, too, we shall get further credit. We must, nevertheless, look for more assistance from institutions abroad to make good our deficiency, particularly in the line of convertible currency. Our record will show that we, as a single institution, have been associated with investment of over Rs. 550 crores in the private sector of industry since 1948. While not oblivious to considerations of profit we have consistently laboured to give help where help is needed most and not where it can be most easily given. We have tried and shall try harder in future to ensure that the foreign lines of credit that we have and that we get are utilised to the best and promptest advantage of industry and that no procedural obstacles stand in the way.

As for our rupee resources we have to do our best to add to them by revolving our investment portfolio at every suitable opportunity. In August this year we added Rs. 1 crore to our funds by sale of certain debentures.

We have to see that while industrial concerns receiving or seeking our assistance are not subjected to excessive rigours of fruitless inquiries, projects are prepared with circumspection and probity, with full attention to technical, financial and managerial details and are implemented promptly and with vigour. A sensitive balance has to be struck by the Corporation all the time between generosity and prudence. An excess of the latter will retard development; an excess of the former may use up valuable resources without bringing an economic dividend. This balance is now particularly necessary when the Corporation has taken a long stride into the field of underwriting. If industry is to flourish, underwriting must go on. At the same time, if the Coroporation, which borrows money at 5% interest and is not, basically, an investor in securities on the stock exchanges, has to subscribe in a large measure to new shares, its underwriting has to be wise. In this context, I feel that the staff of the Corporation for technical and financial scrutiny of projects and for advice to entrepreneurs needs strengthening. I am giving my best attention to this matter.

The tasks before the Corporation are not easy. But I am confident that we shall fulfill them and pass on to more difficult ones. To my colleagues on the Board I wish to express my sincere thanks for their valuable co-operation and wise counsel. And to conclude, I record with pleasure the appreciation and thanks of the Board of Directors and my own to the General Manager, the other officers and the entire staff for yet another year of devoted work.

Note: This does not purport to be a report of the proceedings of the Annual General Meeting.

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.

- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.

- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains a number of cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in

  - consumer market surveys
  - industrial prospecting
  - readership analysis
  - economic indices
  - business research.

MACHINERY MANUFACTURERS CORPORATION LIMITED

THE CHAIRMAN, MR. A. K. MITRA'S REVIEW

The following is the speech delivered by the Chairman Mr. Aloke Kumar Mitra, at the 18th Annual General Meeting of the Shareholders of Machinery Manufacturers Corporation Limited held in Bombay on 23rd September, 1964.

It is a pleasure and privilege for me to have the opportunity of welcoming you for the first time as Chairman of your Company. Before I proceed further, I must express our deep sense of loss at the passing away of Pandit Jawaharlal Nehru who was Prime Minister since independence and who guided our destiny.

The year, on the activity of which I am about to report has been tinged with sorrow. Mr. K. C. Mahindra, our late Chairman, passed away in October, 1963. Although he took over Chairmanship from the late Sir Purshotamdas Thakurdas in 1956, he along with his brother, the late Mr. J. C. Mahindra, was the architect and pioneer of this Company which was the first public venture of Mahindra & Mahindra as Managing Agents. It had a strong foundation in the clear objective of serving the textile industry, the largest in this country, with quality capital goods of the latest design. From its birth, Mr. K. C. Mahindra devoted himself tirelessly to its progress and growth. Those were the days of struggle caused by customer resistance to indigenous manufactured products. But he never waivered in his belief that a quality product must eventually win. He had full confidence in the ability of your engineers to manufacture a quality product and he insisted that this must take priority over everything else. It was his inspiration that has today enabled your Company to earn high reputation as manufacturers of quality products. Two-thirds of the textile industry's requirement of Carding Engines is met by your Company and there is wide acknowledgement that MMC Cards are fully comparable with similar products manufactured abroad. Simultaneously he had planned to convert gradually the Company's plant from a single product to a multi product unit with diversification as its objective. It was his policy decision and direction that is bearing fruit today, and we are on our way to fulfil some of his aims. All this could not have been achieved, as he told you last year, without your confidence and patience. His greatest regret was that the shareholders had to suffer a dilution of their equity and had to wait a long time for their maiden dividend. He had at least the satisfaction of presiding at the last two shareholders' meetings when dividend was declared, and to see that the market price of the equity was more than its original value. One cannot but wish that he was with us today to tell you the story himself of the Company's continued progress and future development programmes. He is missed by all and his faith and complete confidence will continue to be our guiding principle.

A NICHOLAS PRODUCT

Modernisation and Expansion

In order to facilitate a most needed modernization and expansion of the textile industry, it has been our constant endeavour to build the best design and quality of machines. Our late Chairman had mentioned to you last year that our Development Section had kept pace with the latest research in Carding technology. Following a careful study of all these developments we have entered into a technical collaboration agreement with Carding Specialists Co. Ltd. Halifax, for manufacture of their Crosrol-Varga high production conversion units which when applied to conventional cards will increase production two to four fold. Crosrol-Varga high production units can be applied to old as well as new Cards. An MMC Card fitted with Crosrol-Varga device costs much less than other high production Cards, some of which are presently being imported. I am pleased to inform you that we have received Government's approval to this collaboration and our engineers are presently in U.K. finalising the detailed programme for the manufacture of the product. We expect to commence manufacture of the Crosrol-Varga device by the end of next year.

Simultaneously, we have also entered into a technical collaboration with Whitin Machine Works, U.S.A. for the manufacture of their reputed high speed Draw Frames. Many of these machines imported and installed in various mills have given excellent results, and we are confident that when we manufacture Whitin Draw Frames they will meet the mills' requirements satisfactorily. The proposal for manufacture is still awaiting Government's approval but we have been assured of a favourable decision at an early date.

The Speed Frame designed by our engineers incorporates such latest developments as are efficient and necessary. It incorporates features such as ball bearing to spindles and bobbins, telescopic spline shaft bobbin drive, large package suitable for Indian Mills and over 500 anti-friction bearings for smooth operation at high speed. Simplicity in design and quality in manufacture have been the main objective. The Speed Frame is now undergoing extensive trial under mill conditions. Once our engineers are convinced that the machine undergoing trial is working to the full satisfaction of the mill-owners, batch production of the Speed Frames will commence. Due to lack of certain types of machine tools yet to be installed the production of speed frames during the current year will be very limited.

I am pleased to inform you that the diesel engines which have been manufactured by your Company have earned a high reputation and our order book is very satisfactory. Here again, production, owing to lack of space and other facilities, and also inevitable teething trouble in locating certain indigenous sources of supply, has been restricted.

Full Order Book

The order book for Carding Engine remains full and the current production and despatch of cards continue to maintain an upward trend, but it would be unwise to be too complacent. It is true that the textile industry has an ambitious modernization and expansion plan, but it is equally true that lack of funds, both foreign and rupee, has hampered implementation of the plan. It is widely known that the delay in the finalisation of the Japanese Yen Credit has upset plans for several new units which in turn has had its effect on the off-take of textile machinery in India. Speaking of Carding Engines, requests for postponement in respect of firm orders—often a last minute exercise—cannot but be regarded as an indication of the situation. Knowledgeable quarters have assured us that this is a brief and passing phase, and we would like to think that it is so, but we cannot help having reservations about future offtake.

There is another factor which impinges on our order book. Lack of rupee funds is driving the mills to purchase against deferred payment. We as manufacturers of textile machinery can only go so far in this matter. Even bankers have their limits, and we are called upon to go from bank to bank trying to arrange credit terms for customers. Whatever we have been able to arrange with our bankers appears to be inadequate, and we are, therefore, sometimes compelled not to accept orders under those terms and conditions. It is my plea that the mills must induce Government to re-examine their financial requirements because it is well beyond our scope to make credit arrangements which would meet the increasing demand for deferred credit. Your Company itself in respect of its expansion programme needs further finance, and it cannot possibly be expected to arrange for this type of deferred payment facilities.

Technological Developments

Yet another factor is in respect of technological developments which encouraged some of the mills to defer delivery of their cards hoping that they would be able to obtain the latest type of machinery. As I have mentioned before, your Company will be able to supply these high production cards with Crosrol-Varga and we have assured millowners that as and when Crosrol-Varga units are available, they can be fitted to conventional cards for converting them into high production ones.

The Directors' report together with the statement of accounts which has already been circulated will show that the operation during the year under review has been satisfactory. Sales Improved by Rs. 50 lacs to just over Rs. 2½ crores. High taxation provision —because of our having to pay for the first time full taxation on our profit—has however, reduced the profit after tax. The process of rehabilitation of plant and equipment and increasing the capacity of the factory continue at a steady pace. For example, during the last three years Rs. 50 lacs has been utilised on this account. What is of greater significance and interest is that the entire amount has been raised from self-generated funds and at the same time the indebtedness to IFC has been reduced, the figure is now standing at Rs. 18 lacs from the original figure of Rs. 59 lacs. The Government loan of Rs. 5 lacs which was given to the Company to complete its foundry project, and which was most timely, has since been repaid. The new expansion programme about which I have spoken to you and which will undoubtedly increase the future profitability of your Company, will require additional funds and your directors are giving careful thought to it and will soon report to you their proposal for raising such funds.

I should like now to draw your attention to some recent recommendations by Government which have a bearing on labour relations, and therefore, to industrial growth generally. I understand that there is a move by the Government to legislate that employers will be required to pay a portion of the wages in kind. The details are yet to be worked out but from the broad outline of the scheme it is discernible that employers will be required to provide the workers with cereals and certain other basic necessities by establishing fair price shops. While the object behind this move is commendable employers will be in an embarrassing predicament if the Government cannot make available to them sufficient quantity and the right quality of cereals and other basic needs for distribution to the workers. I would urge the authorities concerned to take these factors into consideration and take proper safeguards while finalising the scheme.

Bonus Commission's Report

I must also make reference to the Bonus Commission's report. In making the amendments regarding the inclusion of all taxes in prior charges, the Government has acknowledged the obvious, the obvious being that tax reliefs intended for specific purposes relating to industrial growth cannot be frittered away in wages. Be that as it may, I cannot help thinking that unless bonus is related to productivity, the workers can never derive its full benefit. By fixing the minimum of 4%, the Bonus Commission has indirectly given a proportionate wage award leaving the question of bonus as confounded as ever before.

It is my plea that Government should once again give very careful thought to the whole subject and should tackle the problem of wages separately through a Wage Board and Tribunals and that Bonus should be viewed exclusively as an adjunct of production and, therefore, directly related to productivity. Without such an approach neither will workers derive the maximum benefit nor will industry secure the appropriate advantage for incentive payments. Half-hearted measures will only aggravate the problem. If however legislation is under way to implement the amended Bonus Commission's recommendation, I would urge that the Act be viewed as a stop-gap measure until eventually bonus is related to productivity which I repeat is the only appropriate way of dealing with this issue to the mutual benefit of industry and industrial workers.

I am sure you will like to join me in thanking the staff and workers who have worked loyally and diligently for the satisfactory working of the Company during the year.

NOTE :—This does not purport to be a report of the Proceedings of the Annual General Meeting.

New Delhi

PLANNING BODY TO PREPARE FRESH FOURTH PLAN REPORT

(FROM OUR NEW DELHI CORRESPONDENT)

THE Planning Commission is living up to its reputation by producing one brave plan after another. Thanks to Mr. Shastri's realism, it is now having to be realistic. It has just been asked to prepare a more acceptable plan for the next five-year period.

When India was invaded by China in October 1962, the sole anxiety of the planners was to save the third plan. And because of the dominating personalities of the then chairman, the late Mr. Nehru, and the then deputy chairman of the Planning Commission, Mr. Gulzarilal Nanda, the third five year plan became an integral part of the country's defence. To cite one example, overnight the Central Ministry of Community Development raised what will go down in Indian history as "the village defence force." On the plea that he was a Congress soldier, the then Finance Minister acquiesced in this employment-oriented development and imposed on the country such a dose of taxation that industrial growth was soon paralysed. In fact, the economic crisis now facing the country can be attributed to the "save the third plan" decision.

Before he changed his attention so as to deal with corruption, Mr. Nanda and the Planning Commission did an exercise in introspection. A mid-term appraisal of the plan was produced, indicating wide gaps between targets and achievements. (Incidentally, till today, the Planning Commission has not produced, what may be called a balance-sheet of the second five year plan.) The mid-term appraisal, however, did not have any sobering effect on the Planning Commission. Those who had hoped that the introduction of some new blood would bring about a change in the thinking of the Planning Commission were disappointed. As a well-known Persian saying goes, "whatever goes into a salt mine becomes salt."

One has to go back to the early stages of the second plan to understand the present controversy between reality and idealism. Mr. K. C. Neogy, then a Member of the Planning Commission, in charge of industry, regarded the second plan outlay as unrealistic, which, if persisted in, would lead to economic chaos. He wanted to append a minute of dissent to the Planning Commission's second plan report. The tussle then was between what may be called the conservatives and the progressives, the latter led by Professor Mahalanobis. In the final round, the so-called conservatives lost. In preparing the third plan, the "realists" had no say.

Even before the mid-term appraisal of the third plan, with its uncomfortable disclosures, had been published, the Perspective Division of the Planning Commission circulated a draft framework of the fourth plan. Either through ineptitude, or lethargy or the belief that the Perspective Planning Division had the ear of the former Prime Minister, the working groups set up by the various Ministries formed their own proposals, not on the basis of realism backed by actual achievements, but on the basis of what would be acceptable to the P.P.D.

The Perspective Planning Division, it will be recalled, calculating on the basis of a 7 percent growth rate by 1971, had placed the fourth plan outlay at Rs. 22,000 crores. The Finance Minister, Mr. T. T. Krishnamachari, who unlike the members of the Perspective Planning Division has to depend on the votes of his electorate, placed the outlay ceiling at Rs. 18,000 crores, stating that it was the maximum he could raise. But the "realistic wing" of the Planning Commission did one better by placing the plan outlay at Rs. 25,000 crores. Last week it offered a compromise. It suggested a floor of Rs. 21,000 crores and a ceiling of Rs. 24,000 crores. The overall rate of growth is also slightly less. It is 6.7 percent, against the current rate of about 2 percent. The growth rate planned for agriculture is 5.5 percent.

Although the Central Cabinet has postponed its decision on the total outlay for the fourth plan, indications are that the Finance Minister's view to peg it at Rs. 18,500 crores plus Rs. 2,500 crores as spill-over from the third plan, making a total of Rs. 21,000 crores, will be accepted. The formal decision will be reached after the Prime Minister's return from Cairo.

Even an outlay of Rs. 21,000 crores might have an adverse effect on the economy. Inflation is basically a problem of money supply exceeding real output. But its pressures are aggravated for psychological reasons also, which are often expressed in such activities as hoarding. The Planning Commission is lucky that it has no responsibility for maintaining a stable price-structure, much less think about the law and order problem in the country. The people are already over-taxed, and only a very bold Finance Minister would add further to the burden.

The question of external finance is even more difficult. Two World Bank missions are due to appraise the economy and the soundness of the fourth plan. It may be argued that it would hurt India's self-respect if these missions offered some suggestions or criticisms of the planned economy in the context of the inefficient implementation and availability of resources. India is welcome to ignore such advice as may be offered to it. But the aid-giving nations may also refuse to finance an unrealistic plan. It is unbalanced development and the neglect of consumer industries which have accentuated the present crisis. The Prime Minister, therefore, should be congratulated on asking the Planning Commission to pay greater attention to the needs of the common man. According to present thinking, some capital goods should be provided for the production of toys, baby foods, biscuits and sweets.

There is a French saying that even the most beautiful woman cannot give more than she has. Nor can a country The Planning Commission can make paper plans, placing the outlay even at Rs. 30,000 crores. But there will be no real chance of such a plan being implemented in full. On the other hand, there will be a good deal of dislocation on account of bad planning. The Planning Commission no longer has a Nehru to give respectability to anything that may pass for a plan.

FIFTH STATE STEEL PLANT

Talks with Consortium

Accoding to the latest information, representatives of the Anglo-U.S. consortium, which has been formed to build India's fifth State steel plant are arriving in New Delhi very shortly. They are Messrs Fred Foy, Vance Brand and Robert Wilson of Köppers and Messrs Mickham and Doughman of International General Electric (representing the U.S. wing), and Messrs Hindson and Maurice Finnes (representing the British wing). Mr. David Barrit of Simon-Carves and Mr. Peter Wrightson of Head Wrightson are arriving here on 7th October to join Messrs Hindson and Maurice Finnes to discuss their proposals for the second expansion of the Durgapur steel mill. According to the present schedule, the Anglo-American representatives will hold discussions from 3rd October to 7th October and the members of the proposed British consortium for the Durgapur expansion from 7th October to 13th October.

TENANCY REFORM

Evasion of Law

The problem of raising food production in the country is many-sided. It depends as much on fertilisers and irrigation facilities as on a proper tenancy system for insecurity of tenure has been the bane of Indian agriculture. How difficult this latter aspect is, is seen from a recent study on tenurial conditions in India and the package programme. The study says that in four out of the five districts visited by the team the tenurial situation is not satisfactory. A sizable area is cultivated by tenants in all districts except Aligarh. The problem is most acute in the districts of Tanjore and West Godavary, where 50 percent or more of the farmers cultivate wholly or partially leased lands, mostly on unwritten leases.

In Tanjore, West Godavary, as well as in Shahabad district in Bihar, the land records do not contain any information about tenants. Ejection of tenants has taken place in the past and the landlords still continue to change tenants from plot to plot to defeat the tenancy laws. The few tenants who have been allowed to continue over a fairly long period feel insecure. Thus a large number of cultivators hold no title to the leased lands, pay extortionate rents and are never certain of their status They are left with little to subsist on, and much less to invest.

The reason for this state of affairs is two-fold; one is the faulty legislation itself, and the second is the negative attitude of Government officials at State, district, block or village levels. With the exception of Aligarh, no serious attempt has been made to enforce land reform legislation. If land tenure conditions were a part of the criteria for selecting a package district, West Godavary and Tanjore would not qualify at all.

Such tenurial conditions are obviously not conducive to higher agricultural production. This situation is made much more difficult because village level workers hesitate to prepare production plans for the "pure" tenant-farmers and, in the case of leased lands, for the owner-tenant farmer, unless the landlord agrees to it. A co-operative society will not provide a tenant-farmer with a short-term loan unless he produces a lease deed from the landlord or the latter's signature on the loan application. Even where a tenant succeeds in all this, the maximum loan that he can get is very small. There is ample evidence, therefore, that the vast majority of tenant-cultivators are poor investors and the package programme aimed at reaching every farm family is bound to suffer accordingly.

A factor in the tenurial situation which needs to be maintained specially is that in all the four districts where leasing is permitted, a large number of small landowners have leased small acreage to make up viable units of cultivation. In enacting land legislation, this factor must receive careful consideration.

In Madras and Andhra Pradesh the present land reform law is of a temporary, stop-gap nature, and comprehensive legislation has yet to be enacted. In Bihar, the law in force is still the Tenancy Act of 1885 with some modifications which are wholly inadequate. Legislation in the Punjab is extremely defective and needs complete overhauling. Only in Uttar Pradesh has well-thought-out, comprehensive legislation been enacted and effectively implemented. There million of tenants and sub-tenants have been made owners and hundreds of thousands, who had been evicted, have been restored their rights.

Security of Tenure

The provisions for security of tenure are crucial to the whole scheme of land legislation. It has been the experience all over India that the right to resume land for self-cultivation by the landlord has tended to defeat the provisions for security of tenure. Resumption is all the more damaging in the case of small landowners who have made up viable units of cultivation by leasing an additional acre or two of land. It would be in the best interests of agriculture, therefore, to restrict resumption severely; no resumption should be permitted to absentee owners and others whose principal occupation is not cultivation, and it should be so regulated that the holding of the tenant cultivator is not reduced below the size of, say, a family holding.

As mentioned earlier, most tenancies are oral leases; and the tenants are generally not in a position to establish their title to the cultivation of a particular piece of land. This has tended to defeat not only the provisions of tenancy laws, but also the attempts at preparing production plans for them. For the same reason, credit facilities as visualised under the package programme, are often not available. It is important, therefore, that immediate steps be taken to prepare a record of tenancies in accordance with well-known procedures. As an aid to officials in the preparation of this record, a committee should be set up in each village or a group of villages made up of two classes of tenant-farmer, one part-owner-part-tenant-farmers, and the other landlords.

The study goes on to say: "In making this recommendation, we have in mind the experience of Shahabad district, where the preparation of the record by the official agency proved to be a fiasco. What the officials do not know about 'who is who' in the village—who rents whose land and for how much—the committee would surely know and thereby ensure the correctness of the record. The other important consideration is to give the tenants a sense of participation in the implementation of the land reform

programme. As soon as this basic record is prepared, each tenant farmer should be provided with a certificate indicating the plots he cultivates In view of its importance to the package programme, the preparation of such a record should receive high priority and its cost could legitimately form part of the package budget for the year.

"We noticed that rents are payable generally as a share of the produce. Crop share rents are extremely difficult to regulate and should be abolished, and replaced by cash rents. To facilitate this, either the rents should be fixed as a multiple of land revenue, as in Maharashtra and Gujarat, or else the State Government should divide lands in each area into a few broad categories, and determine the 'average' produce of each such category of land and the average price at which it may be converted into cash. The average produce and the average prices to be determined should be announced in each area for general information.

"We are aware that due to the proverbial weakness of the tenant's socio-economic position, the landlords would in the long run be able to defeat even the soundest provisions for tenancy regulation. We are of the view, therefore, that steps should be taken for the early transfer of ownership to all tenants for non-resumable lands. To facilitate the implementation of this programme, certain steps would be necessary, namely, that (1) the rate of compensation should be equitable both to owners and tenants. We consider that an amount equal to 15 to 20 times the net income of the owner with payments spread over a period of about ten years, should be quite reasonable to both; and (2) that the State should actively sponsor this programme either by assuming responsibility for the payment of compensation as in U.P., or else by giving financial assistance to tenants directly or through land mortgage banks as in Saurashtra; and (3) that the procedures for the transfer of ownership and determination of compensation should be simple, easily enforceable, and widely publicised.

"The stand taken by the co-operatives in advancing credit deprives a large number of tenants of the opportunities offered by the package programme, the totally negative attitude towards the tenancy problem on the part of all officials from State to village levels only compounds the problem. If the co-operatives continue to treat the tenants neither in terms of social justice nor from the point of view of practical considerations vis-à-vis the package programme, the Government should assist the tenants with taccavi loans, bypassing the co-operatives, if necessary."

BANK RATE INCREASE

Background Explained

The Central Finance Minister, Mr. T. T. Krishnamachari, last week made the following statement in the Lok Sabha: "When I spoke in the Lok Sabha a little over a week ago, I referred to the concern with which the Government viewed the deterioration in the price situation. The general index was 156-7 on 5th September, an increase of not less than 14 percent over the year. The deterioration in the price situation and the vulnerability, in particular, of food prices are basically the symptoms of the increasing strain under which the economy is currently operating.

"A policy of utmost economy in Governmental expenditure and a drastic pruning down of non-essential expenditure is called for urgently to reduce the strain of excess demand on the economy. A few weeks ago, I had announced that the Central Government had decided to effect economies in expenditure of over Rs. 70 crores. I would like to reiterate, however, that this figure must be regarded as the absolute minimum.

"It was also my hope that the States would be able to prune down their expenditure substantially. I would earnestly appeal to the States to review their expenditure position in the light of the current serious supply and price situation. The financial position of several States, despite substantial Central assistance, continues to cause concern. In the interest of overall stability and successful planning, there is no alternative to the maintenance of utmost vigilance in limiting overall expenditure to available resources.

"In particular, we should seek to keep the level of deficit financing to the absolute minimum. This is all the more necessary as the capacity of the economy to bear deficit financing has been weakened by continuous recourse to this form of finance and additional doses of deficit financing in the light of the tight position on the supply side would only aggravate an already serious situation.

"I had mentioned earlier that the operations of the private sector were not less significant in bringing about the present imbalance between the rate of monetary expansion and real output growth. This also calls for corrective action. This has been engaging the Reserve Bank's attention and on a review of the present situation, the Reserve Bank has decided to raise Bank rate to 5 percent with immediate effect.

"In addition, the existing mechanism of credit control is being modified. Hitherto, the borrowings of scheduled banks from the Reserve Bank were being regulated through a system of quotas. The Reserve Bank has now decided to introduce a system under which the cost of commercial banks' borrowings from the Reserve Bank will be linked to the actual level of credit extended by the commercial banks in relation to their own resources. Thus, the emphasis will be on increased cost, rather than a direct restriction of the availability of credit from the Reserve Bank, to secure the needed restraint. In this way, genuine productive requirements of the economy will not be affected.

"The capacity of the banking system to meet the growing credit demands of an expanding economy, will essentially depend on the success with which it can increase deposits. The present narrow spread between the interest rates on short and longer term deposits is not conducive to the process of deposit mobilisation. The Reserve Bank is, therefore, simultaneously taking steps to introduce a more orderly deposit rate structure under which the rates on longer term deposits will become relatively more attractive to the holders and thus assist deposit mobilisation."

FOOD PRICES

Jha Committee Report

The interim recommendations of the L. K. Jha Committee on food-grain prices appointed by the Government of India last month, have been received by the Central Minister for Food and Agriculture. These recommendations will be discussed with the Chief Ministers and Food Ministers of the States during the next few days. It is hoped that the Government's decision on the interim recommendations of the Committee will be announced in Parliament before the end of the present session.

The Central Food and Agriculture Minister, Mr. C. Subramaniam, last week told an informal meeting of State Ministers of Agriculture that in spite of its best efforts, the Central Government may not be able to meet the entire demand for nitrogenous fertilisers. Consumption of fertilisers this year was expected to be over 600,000 tonnes which represented an increase of over 60 percent compared with the consumption of 391,000 tonnes in 1963-64. He called upon the State Governments to prepare an assessment of fertiliser requirements during the next three years so that advance action could be taken to plan suplies to match the demand in future.

Mr. Subramanian added that efforts were being made to speed up the projects for increased production of fertilisers. One of the main proposals under consideration was from the consortium of American companies, which had offered to put up five units for producing 1 million tonnes of nitrogenous fertiliser before the end of the fourth plan. The preliminary study on the feasibility and location of these units had already been undertaken by the consortium. It was hoped that the programme of this consortium will be finalised by March next, and the first unit would go into production in about 18 months thereafter. After that, one unit was expected to be completed every few months. It was, therefore, necessary that they should prepare the farmers for increased use of fertilisers during the next few years, he added.

In the context of the increased demand for fertilisers and the limited supplies available, the Central Food Minister emphasised the importance of early implementation of schemes for using urban waste, as also a proper soil survey for each block and village. A proper soil survey was essential. A programme for setting up an adequate number of soil testing laboratories with proper equipment so as to ensure the coverage of the entire country by the end of the fourth plan would have to be drawn up. For this purpose, it was proposed to undertake aerial mapping, preparatory to a detailed survey. Foreign assistance was likely to be available for this project, the Minister said.

UGANDA

Pact with India

The Governments of Uganda and India last week signed a memorandum of agreement on collaboration between them for the development of the sugar industry in Uganda. Under the terms of the agreement, Indian participation in the industry will be in the form of sugar machinery manufactured in India, and materials for factory building from India. The latter will also install machinery and operate factories and estates. A sugar development corporation will be established in Uganda which will directly own these factories and estates.

The total investment required will be determined when the precise location of the estates has been decided and also the financial structure of the sugar development corporation. Indian participation in the equity capital of the corporation will be 45 percent. The balance of 55 percent will be shared by the Uganda Government and private Uganda investors in the proportion of 45:10. The board of directors of the corporation will be in these proportions also.

The memorandum of agreement also provides that the Indian side will arrange for training in India of Ugandans for managerial and technical posts in the sugar industry. It is intended that at least 90 percent of the employees in the industry will be Ugandan with the ultimate aim of having the project wholly staffed by the nationals of that country. However, in order that the sugar development corporation can draw upon the experience and knowledge of the Indian side, an Indian will continue as general manager for six years after the commencement of sugar production. The Indian side will also arrange for such feasibility and project studies of the proposed sites as may be necessary for the proposed four factories and estates.

FISH MARKETING

Corporation Set Up

It is proposed to set up a corporation for supplying fish to the Calcutta market. The scheme visualises the supply of 100,000 tons of fish during the first five years of its operation, and 40,000 tons annually from the sixth year onwards. If these targets are achieved, the import from Pakistan could be progressively reduced. A scheme for the intensive development of inland fisheries in several States of India which are already supplying fish to Calcutta in small quantities, namely, Orissa, Andhra Pradesh, Uttar Pradesh, Madhya Pradesh, Punjab, etcetera, has already been drawn up. These are being considered by the authorities now.

TELEPRINTER-MAKING

Commercial Credit from Italy

A commercial credit agreement was signed in New Delhi last week between the Hindustan Teleprinters Ltd—a Government of India enterprise—and the Italian firm, Olivetti and Company. Under this agreement, the Italian firm will provide Hindustan Teleprinters with a commercial credit in foreign currency of about Rs. 1.70 crores. With the help of this credit, the production of Hindustan Teleprinters will rise from about 1,300 teleprinter units a year to about 5,400 units a year in a single shift. The factory will later produce 8,500 teleprinter units a year by operating in double shifts.

The overall capital expenditure for the factory's expansion programme is estimated at about Rs. 1.5 crores. This includes about Rs. 40 lakhs as the cost of capital goods, like machinery, production tools and equipment which will be financed out of the Rs. 1.7 crores commercial credit. The remaining Rs. 1.1 crores of the capital expenditure will be financed internally. Part of the commercial credit will be used for importing raw materials and consumable goods required for the manufacturing processes.

Four years ago in 1960, Hindustan Teleprinters and the Olivetti and Company of Italy entered into collaboration for manufacturing teleprinters. The Company went into production in 1961 for starting the assembly of machines from imported components. The indigenous content of these machines attained so far is about 70 percent. By the middle of next year, it will be possible to produce 1,300 units with wholly indigenous content.

In the meantime, the Posts and Telegraphs Department has introduced telex service in the country. This service has become extremely popular and more telex exchanges are being opened. Consequently, the demand for teleprinters has exceeded the anticipated requirements. It is expected that about 30,000 teleprinter machines will be required to meet the fourth plan demands. As a result of the latest credit, it is expected that the output will rise to 2,100 units in 1965, when machinery for the expansion programme is expected at the factory site. Thereafter, the production will increase gradually to reach the planned output of 8,500 machines (including spares) a year by 1969-70. Under the terms of the present agreement, the loan is repayable in 20 half-yearly instalments.

EMERGENCY RISKS INSURANCE

Automatic Extension

The Emergency Risks (Goods) Insurance Scheme and the Emergency Risks (Factories) Insurance Scheme have been modified so as to provide for the automatic extension, by a further period of three months from 1st October, 1964, of the policies already issued under these two schemes. No premium will be charged on these policies and no fresh applications will be necessary for the renewal.

INDIA-U.A.R. TRADE

Letter Exchanged

Letters were exchanged last week between the Governments of the U.A.R. and India, providing for economic, industrial and technical collaboration in certain fields like the production of fertilisers and superfine cotton yarn, the supply of rock phosphate on a long-term basis from the U.A.R., and the export of mining equipment, spinning machinery and steel structurals from India to meet the requirements of Egyptian industries, railways and electrical and other enterprises.

The letters contain agreed trade proposals visualising a total turnover of about Rs. 45 crores between the two countries in the current year, namely, Rs. 22.5 crores each way. Besides tea and jute goods, numerous engineering and chemical products and new items like cotton yarn, cocoa concentrates, tissue paper and reinforced steel bars have found place in the list of goods to be exported by India to the U.A.R. Likewise, besides Egyptian cotton, rice and rock-phosphate, new products like fertilisers, flax and printing paper will be exported by the U.A.R. to India. Both sides have agreed to examine the possibility of introducing more new items and have accordingly left sufficient scope for the same in the agreement reached.

PIG IRON

Cause of Shortage

Mr. N. Sanjiva Reddy, Central Minister for Steel and Mines, at a meeting of Parliament's Informal Consultative Committee attributed the shortage of pig iron in the country to the failure of private sector projects to come up as scheduled. The licensees, he pointed out, had neither set up new projects nor expanded the existing units. He had, therefore, called a meeting of the licensees to review the entire situation.

DEVELOPMENT BANK

Application from Jute Mills

The Industrial Development Bank, which has started functioning with its head office in Bombay, will consider the applications of the cotton textile and jute mills for rehabilitation loans. It will be recalled that early in 1963, the Government of India decided to discontinue the scheme of grant of loans through the National Industrial Development Corporation to cotton textile and jute mills for modernisation and rehabilitation. It was then intended that applications for modernisation and rehabilitation from these units should in future be processed by the Industrial Finance Corporation. Since then, the necessary legislation for the constitution of an Industrial Development Bank has been enacted, and the Bank entrusted with the work of considering loan applications from the jute and cotton textile industries.

SINGARENI COLLIERIES

Carbonisation Plant Project

The Singareni Collieries Co. Ltd is formulating proposals for the setting up of a low-temperature carbonisation plant in Kothagudem in Andhra Pradesh during the fourth plan. The project report is being prepared. The capacity of the plant is placed at 450 tonnes of coal input a day and its estimated cost at about Rs. 1.93 crores including about Rs. 39 lakhs in foreign exchange.

SUGAR EXPORT

Central Cash Assistance

Cash assistance is given by the Government to facilitate the export of sugar at international prices. The amount of assistance given on the export of sugar over the past three years is as follows:

Year	Rs. (in crores)
1961-62	5.50
1962-63	14.20
1963-64	3.42

The consumer, on the one side, has to pay higher and higher price for his sugar. He has also to pay for the export promotion effort, which is one contributory cause for the sugar shortage.

SETHUSAMUDRAM PROJECT

Report on Feasibility

The Sethusamudram Project Committee has reported that the project is feasible and that the cost of the project will be about Rs. 9.98 crores, including Rs. 1.62 crores for developing facilities at Tuticorin port. The Tuticorin project has since been taken up separately. The Government of India considers the estimates of the Committee for the ship-canal project to be on the low side. The Development Adviser, Central Ministry of Transport, has estimated the cost at about Rs. 26 crores. The services of a navigation expert, Captain J. R. Davies, had been obtained to advise on the navigational requirements connected with the project, with particular reference to reducing the estimated cost. Captain Davies has suggested some changes in the alignment and reduction in the navigational aids. A provision of Rs. 22.14 lakhs was made in the third five year plan for further technical investigations relating to this project. After completing the studies, the Government of Madras submitted a revised estimate in May 1963. According to this revised estimate, the cost of a canal which could take ships of 26 feet draft, would be Rs. 15.50 crores. In August 1963, the State Government submitted a fresh report to meet the requirements of ships of 30 feet draft. The cost was estimated at Rs. 21.72 crores. The foreign exchange content was estimated at Rs. 4.50 lakhs. The project report prepared by the Madras Government is being examined by a high-level technical committee.

NEW COIN

Use of Aluminium Alloy

A new 3-paise denomination coin will be issued from all offices of the Reserve Bank of India from 1st October. The metal composition of the new coin is aluminium with 3.5 to 4 percent magnesium. This alloy is being introduced in the country as a coinage medium for the first time. The coin is hexagonal in shape with rounded corners and its weight is 1.25 grams.

SUDAN

India Offers Credit

A credit of Rs. 5 crores has been offered to the Sudan. An agreement on this, however, remains to be signed.

BELGIUM

Conditions for Fresh Credit

Belgium will be willing to pledge a further amount of credit to India after the amounts previously pledged have been utilised, it is learnt.

U.K.

Invitation to Mr. Shastri

Mr. Lal Bahadur Shastri this week disclosed to Parliament that he had been invited by the British Prime Minister to visit England. He had, however, not yet fixed the date of his visit. But it is generally believed that the Indian Prime Minister's visit to London will not take place until after the U.K. general election.

SHIPPING

Foreign Participation Offers

Following the Indian Government's recent decision to raise the extent of foreign participation in the shipping industry to 40 percent, several offers have come. The interests are the P. and O. group of companies and Mackinnon Mackenzie, of the U.K., the National Bulk Carriers of New York, Sea Board Financial Corporation, Central Gulf Stream Corporation and the Phillips Petroleum Company of the U.S.A. They are now negotiating with Indian parties for collaboration. The Government, it is said, is sympathetic to such joint shipping ventures.

SWEDEN

Credit Aid to India

An Indo-Swedish agreement extending to India credit assistance to the extent of 36 million Swedish kronor (Rs. 3.31 crores) was signed in Stockholm on 29th September 8f this, 12 million kronor will be grants in kind, and the remainder is development credit. The period of amortisation is 20 years including a five-year grace period It carries 2 percent interest. Some 12 million kronor will be utilised in importing equipment for dairies, 8 million kronor for the purchase of electrical switchgear control equipment, transformers, and other equipment for electric power schemes, and the remainder on Indo-Swedish joint ventures.

NEPAL BANK LIMITED

Central Office: **KATHMANDU**

Estd:- 1994. B.S. **Estd:- 1937. A.D.**

London

ECONOMIC ISSUES FOR THE U.K. GENERAL ELECTION

(FROM OUR LONDON CORRESPONDENT)

It is understood that in the opinion of Mr. Reginald Maudling, Chancellor of the Exchequer, Britain's economic situation does not at this moment call for urgent or emergency remedial action. This view has been accepted by the Cabinet at what must surely be its last meeting before the election, so the Conservatives are apparently satisfied that their record in this matter will serve them well. To some extent, they are supported by the public opinion polls, which in recent weeks have indicated a slow but steady erosion of the Labour lead until today it looks as though the outcome will be a very near thing indeed.

The muffled message of the August trade figures is that the outlook for Britain's balance of payments is not as bad as it looked a month ago. Exports recovered to £370 million, equal to the May figure and almost equal to the peak of £373 million in March. On the other hand, imports shot up to £477 million, the highest yet recorded, with re-exports £14 million. The adjusted "trade balance" shows a deficit of £51 million, against £40 million for July and £60 million in June. Ministers have repeatedly stated that high imports and a payments deficit must be expected in this phase of economic expansion, but in the past few months, the poor export performance has led to questioning whether the trouble is in fact a temporary one. If it were due to lack of competitive strength in British industry, short-term international borrowing to reinforce the reserves might not be regarded as a proper remedy.

Exports are, therefore, the key to the outlook. The Board of Trade works out that in the three months June to August, exports corrected for seasonal variations were 3 percent less than from March to May. But in the first eight months of the year, they were 4 percent more than the average for last year. On the same basis, imports from June to August were 2 percent higher than in the previous three months. In the first eight months of this year, they were 14 percent above the average for last year. As for the estimated trade deficit in balance of payments terms, the average for June to August was £50 million a month, seasonally adjusted. In the period March to May, it was £29 million a month, and last year, it averaged £4 million a month.

A fortnight ago, the Federation of British Industries said that its own information conflicted with the Board of Trade's recent export figures. A quick enquiry among 71 leading exporting firms indicated that exports were still going well and that order books were heavy. The recovery in August lends a little support to that view, but it is not decisive enough to banish the fear of coming trouble.

Fuller details of the country's exports and imports during August will be issued in the next few days, to be followed by the half-year position concerning the balance of payments. These figures will help to clarify matters. Nevertheless, the Government is frankly puzzled by the length of time it is taking industry to produce the finished goods for sale (at competitive prices in overseas markets) which investment and inducements were thought likely by now to have brought forth. Ministers have been told that industrial production in the first seven months of this year was 9.5 percent higher than in the comparable period of last year, but some of this output has gone, not in exports, but in new construction. Mr. Maudling has described this blockage in the economy as "constipation."

Ministers hope that before long, this blockage will be cleared, but do not know precisely when this happy event may take place. If it is long delayed, the measures likely to be taken by the Government would be, first, the mobilisation of Britain's foreign reserves and borrowing powers, and secondly—though reluctantly—the use of import controls in preference to the harsher stop-go system which Conservative chancellors applied before Mr. Maudling went to the Treasury.

Controlling Imports

The Cabinet, it is believed, has not yet been asked to consider the use of import controls although the Board of Trade is now studying the best means of applying them should the Government decide that import controls are necessary. Mr. Maudling told the House of Commons on 14th April, in his Budget speech: "I do not object to import controls on doctrinal grounds, but on grounds of practical policy. Certainly, there could be occasions where their use would be justified and permissible under international agreements, that is, if we should be facing severe balance of payments difficulties which could not be dealt with in better ways." The assent of international bodies, particularly members of the G.A.T.T., to such a control would be a prerequisite to its imposition. Mr. Maudling also forecast, on 14th April, that there would be a worsening of the overall balance of payments in 1964-65, but did not suggest that it would be on a scale that would justify recourse to import controls. This practical objections to import controls were:

(1) Britain could not expect to export machinery and consumer goods unless she was prepared to import them;

(2) Controls might deny to British manufacturers some of the best and most modern machinery that they had to import;

(3) By protecting her industries against external competition, Britain would lose a stimulus to greater efficiency;

(4) Help to under-developed countries would be frustrated if Britain were not prepared to accept from them progressively increased imports of manufactures.

The worsening of the overall balance of payments which Mr. Maudling forecast should not, he said, cause alarm or dismay if it were temporary, but the country could not be confident that it would be temporary "unless we keep control of our own costs and particularly of our export prices." Mr. Maudling has never been frightened of temporary deficits that could be met by the use of reserves and credits; that, he has told the House, is what reserves and credits are for.

The present uncertainty about the duration of the adverse balance of trade has a sharp point for the electioneers, because the Conservatives long tried to discredit Labour by saying that the late Hugh Gaitskell, when Chancellor of the Exchequer, and the Labour Government "ran away" from an economic situation which was getting out of hand in 1951. Mr. Maudling has frequently assured the House of Commons that the present situation is nothing like so threatening as that which existed at the time of the general election in 1951.

Attitude of Labour

How about Labour's attitude to the economy as an election factor. Just about the most difficult tactical decision facing Labour Party leaders is how to use the deteriorating balance of payments situation to the discredit of the Government, without laying themselves open to damaging counterattack for undermining confidence in the pound, and thus aggravating the position.

The latest view is that the current trade position cannot be brought to the centre of the campaign unless the Government itself does something or says something to indicate the approach of crisis point. The Government is highly unlikely to make any such admission. In any case, it does not believe that a crisis is imminent, defining crisis as a turn of events not anticipated in the contingency plans. Labour leaders have no desire to make sterling an election issue. Confident of forming the next Government, they are soberly aware of the responsibility they will inherit for dealing with an extremely tricky situation. They believe that whatever Government is returned will have to act almost immediately after the election and they wish to make this no more difficult for themselves.

On the other hand, Labour leaders insist (in contradiction to the Government's line) that were it not for the election, steps would have been taken by now to draw upon reserves or impose selective controls. They realise, however, the dangers of making a case they cannot prove as long as the Government has a monopoly of economic statistics and intelligence. Labour would surely stand to lose in an argument about whose facts were right about the real trends of imports and exports.

The precariousness of Britain's foreign trade position, is, nevertheless, one of Labour's most potentially powerful counters to the Conservative prosperity progaganda. To establish the imminence of a balance of payments crisis necessitating the return to restrictive measures, would effectively explode the chief Conservative claim to re-election.

But present indications are—Mr. Harold Wilson and his "shadow" Chancellor, Mr. James Callaghan, have been in close touch on this one—that Labour will not risk trying to set the pace They will have to be content with the general argument that current prosperity rests heavily on unpaid bills and that structural changes will have to be made in the economy—of the kind a Labour Government has promised to undertake—if long-term stability in the payments position is ever to be achieved.

Trends in Sterling

Dr. Paul Einzig, the financial expert, however, contends that the monthly "balance of payments" figures are nothing of the sort. They merely represent the value of imports and exports and do not explain trends in sterling. Statisticians could and should produce figures that lend themselves to "meaningful analysis." Steps should also be taken to try to induce the Government to provide better statistics. In a study made for Aims of Industry he criticises the National Institute of Economic and Social Research for spreading alarm and despondency by forecasting a £500 million foreign trade deficit for the whole of 1964, based on the figures. Doubt on these has already been cast by the Federation of British Industries.

Dr. Einzig suggests that instead of trying to play the part of an economic "Old Moore's Almanac," the Institute should provide better statistics, if the Government will not do so. He argues that Britain exports for the sake of finding foreign exchange needed to pay for imports. But in the figures of the returns, items which have been paid for are lumped together with those that will not be paid for until 1970. "Does this make any sense to anyone wanting to know how far the weakness of sterling during the period covered by the return was due to an import surplus and how far that import surplus had been settled earlier or is likely to lead to buying or selling pressure on sterling in the future? It is like lumping together the weight of coal exports with that of precision instruments exports."

On more than one occasion this year, the monthly trade figures disclosed a spectacular increase in the import surplus during a month in which sterling was quite steady. The figures should take account of the fact that the United Kingdom is part of the sterling area. Up-to-date statistics should be produced to show the significance of U.K. trade against the overall effect of foreign trade on sterling Details of invisible import and export items should also be published more frequently. He argues that the problems involved are not incapable of solution. Even if it proved impracticable to collect all relevant data, sample surveys could help a great deal and would be preferable to guessing.

Jute

FIBRE PRICES EASE: FAIR STOCKS WITH MILLS

THANKS to the forbearance shown by mills and the timely introduction of the maximum purchase quota scheme by the Jute Commissioner, raw jute prices have eased from week to week. A gradual increase in daily arrivals in the agencies and fair progress in harvesting and retting in the daissee and tossa areas are additional factors helping the decline in prices. On reviewing the position, the Jute Commissioner has issued a maximum purchase quota of 175,000 bales for the week ending 3rd October. With this fourth quota, the total for September comes to 525,000 bales. It may be recalled that by the end of September 1963, mills had lifted 1.84 million bales, against the compulsory purchase quotas issued by the Jute Commissioner.

Taking account of the opening balance of 2.8 million bales and the purchases so far of about 1.473 million bales, the total amount of fibre available to mills has been of the order of 4.273 million bales. Assuming consumption during the period to be around 1.964 million bales, mills are likely to have a stock of about 2.31 million bales. This will be enough for 3.55 months on the basis of a monthly consumption of 650,000 bales. So with fibre prices declining to more realistic levels, mills will have to regulate their purchases in a planned manner.

The I.J.M.A., it is learnt, has arranged the collection of weekly production figures from mills in an effort to assess the trend of jute consumption. The Association appears to be as anxious as the Government to ensure that no mill buys in excess of the quotas issued to it, upsetting the market trend. Although mills have not yet resorted to any cut in production, the advisability of permitting individual mills to adjust their output temporarily on the basis of their fibre stocks has been approved in principle. Such cutbacks will not cause any perceptible reaction in the finished goods market in view of the heavy stocks held by mills. In spite of an upward revision of the crop estimate to 7.5 million bales by circles close to the industry, the I.J.M.A., it is reported, sees no justification for relaxing its vigilance. Such relaxation, it is feared, will help speculators regain their grip on the market by spreading rumours.

Likely Price Trends

The fibre market trend is likely to remain easier during October due to growers' anxiety to get money for the festive season. With the harvesting of the *aman* crop farmers' earnings will improve and they may be in a position to hold back their stocks of fibre. So fibre supplies are likely to shrink, and prices may firm up. So the regulation of the quantity of raw jute a mill can buy and hold is likely to continue throughout the season. Only the size of the weekly quota will vary so that the offtake matches the market arrivals. The broadening seasonal demand for jute goods during the month is an additional reason for continuing the policy of regulated purchases. The order-books of mills are reportedly expanding. Many of the sales for far forward positions have not been covered by fibre purchases in the hope that the open position in raw jute can be adjusted in due course.

Although the jute buffer stock scheme was originally introduced in India as a price-support measure to ensure a fair return to the grower, it is increasingly recognised that price stabilisation in the world jute economy can be achieved through it. Mr. R. H. Morrison, chairman, Jute Buffer Stock's Association, made this observation while addressing the annual meeting of the J.B.S.A. in Calcutta last week. The buffer stock operations in India and Pakistan had already attracted international attention, he said. Considerable discussion on fibre supply and price stabilisation through various measures, including the maintenance of buffer stocks, took place at the meeting of the Study Group on Jute, Kenaf and Allied Fibres recently in Rome. Suggestions had been made for buffer stock operations on a world scale, possibly financed by international agencies. Mr. Morrison said that such schemes could not be devised and worked out in a short time. Many formidable difficulties had to be overcome, and the scheme might prove to be impracticable.

Referring to the recent spurt in fibre and gunny prices, Mr. Morrison said that the timely release of the buffer stock played a part in bringing down prices to more reasonable levels. The effect would have been even more pronounced had the buffer stocks been bigger. All these point to the need for building up a substantial buffer stock—amounting to about three months' consumption. While the date for replacing the released stocks has been provisionally fixed for February next year, the chairman felt that the extent of replenishment would depend on how the supply situation developed. At the present level of fibre consumption, it would obviously take a longer time to replenish the buffer stock godowns on the desired scale.

Mr. Morrison said that the total volume of transactions of the J.B.S.A. during the year amounted to Rs. 12 crores. In addition to 625,000 bales bought earlier, there was a further purchase allocation of 250,000 bales, bringing the total to 875,000 bales, including a portion of Pakistani cuttings. A satisfactory procedure for turning over the buffer stocks was evolved in October 1963. The target was to turn over 50 percent of the total stocks by December that year. It was clearly in the interest of the industry to replace the 1961-62 and 1962-63 stocks by the 1963-64 crop as soon as possible. The turnover up to March 1964 was reasonably satisfactory although the old crop could not be entirely replaced, mainly due to the shortage of storage accommodation, he added.

F.A.O. Bid to Stabilise Prices

The first meeting of the Study Group on Jute, Kenaf and Allied Fibres held recently in Rome under the auspices of the F.A.O. has served a useful purpose both for the producing and consuming countries. The meeting was attended by Government officials from India, Pakistan, Thailand, the United Kingdom and the E.C.M. countries. But representatives of the jute industry were also allowed to attend the session as observers.

The meeting was significant for two reasons: first, for the wealth of papers submitted and, second, for the opportunity it provided to the representatives of the Asian and European industries to acquaint themselves with one anothers' problems. The question of consumption and of stabilisation of fibre prices figured prominently in the deliberations.

Almost all the consuming countries have appreciated India's efforts to stabilise the prices of raw jute. India has been keen to see that fibre prices in other producing countries too are stabilised in order to ensure that her own efforts do not suffer a setback. The discussion, centring primarily on industrial fibres, covered a much wider field and included estimates of future world demand for jute manufactures. The consensus of opinion was that jute prices must be stable and low if the industry is to flourish.

The report of the Study Group now goes to the F.A.O. Committee on Commodity Problems. The recommendations include the appointment of a consultant to study the consumption trend in jute goods and to analyse the factors influencing it. The meeting has set up a working party on price stabilisation and improvements in the collection of statistics relating to the end-uses of jute. Considerable discussion has also taken place on the question of price stabilisation. The solutions examined include the need for setting up buffer stocks. The entire subject will be examined by the working party which is expected to meet in Dacca early next year.

The Study Group felt that the present trend of gunny sales indicate that sooner or later all the members of the jute industry—European, Indian or Pakistani—would have to make a joint effort to promote the consumption of gunnies. The Indian delegation, it is reported, informally proposed a meeting of the directors of the jute research laboratories.

THE JUTE MARKETS

Manufactured Goods: Buoyant conditions prevailed in the Calcutta gunny market during the past week. A squeeze was felt in heavy goods and their prices improved by about Rs. 4 a 100 bags. Hessian was steady in sympathy, with prices advancing by about 75 paise a 100 yards. Sentiment was stimulated by brisk speculative support to sacking in the hedge market, reports of scattered business in woolpacks with Australia, some deals in heavy goods with the Middle East and western Africa, stray hessian business with the U.S.A., and an Indian Government tender for moderate lots of B Twills for October-December delivery. Month-end short- and shipper-covering in ready and near-positions also helped sentiment. Mills were generally reserved, but booked a fairly large volume of orders at the higher levels. Towards the week-end, rumours of a fresh workers' strike in three East Pakistani mills led to hectic buying, especially of heavy goods for immediate and near deliveries. In the hedge market, prices fluctuated within wide limits in a see-saw battle between bears and bulls. There was profit-taking at the bulges, but all offers were absorbed. On Tuesday, there was a mild setback on profit-taking. Turnover was fair and the undertone steady at the close. Conditions in Calcutta port continued to cause anxiety. In addition to the cut in drafts, there was a compulsory detention of vessels at Sandheads. A shortage of lighters continued to hold up the shipment of cargo. Vessels had to load in their moorings due to a spate of bore tides.

Wednesday's quotations are as follows:

	Sept.	Oct.	Nov.	Dec.	Jan.-Mar.
40in. 7½oz.	37.10	37.50	37.75	38.00	38.25
40in. 8oz.	40.10	—	—	—	—
40in. 10oz.	49.45	49.90	50.30	50.50	50.90
B Twills	146.90	147.15	145.90	145.40	144.90
Cornsacks	147.50	148.75	148.75	148.25	147.75
Heavy Cees					
(Plain)	147.75	147.75	146.50	146.50	144.90
A Twills	176.00	175.50	175.50	175.50	175.00
Liverpools	162.00	162.50	162.50	162.50	162.50

Raw Jute: Easier conditions marked trading in the raw jute market during the past week. Rigorous implementation of the maximum purchase quotas, combined with a gradual increase in upcountry arrivals and the proximity of the festival season, induced growers and sellers to discount prices by about 50 paise a maund in the course of the week. In view of the comfortable stock position, mills continued to show selective interest in better-grade fibre, but confined their offtake strictly to their respective quotas. As a result, demand failed to match supplies, influencing the softening trend in fibre prices. Fluctuations were narrow, turnover moderate and the undertone hesitant at the close. Transactions in Upper Assam White Bottoms for December did not commence in the hedge market.

Wednesday's quotations were as follows:

	Rates a maund		Rates a quintal	
	Mid.	Rot.	Mid.	Rot.
Assam-Agartala Jute	40.50	37.50	108.51	100.47

Bihar Dist.	36.50	33.50	97.79	89.75

THE U.K. JUTE MARKETS

FIBRE WEAK

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market was quiet in Pakistan, and prices became easier during the past week. The Pakistani mills have reduced their scale of buying This should allow shippers to acquire larger stocks. There was some improvement in arrivals of loose jute from upcountry and these should continue to increase. Although practically no business is taking place at current rates, there has been no reduction in E.P.C. values.

The raw jute market in Dundee was weak. Very little buying interest was shown even at the lowest quoted rates. Holders of secured parcels were anxious for business and in an effort to attract buyers they were discounting the generally quoted rates. As a result of this, prices being quoted in Dundee were very irregular, and in the case of some grades, the range extended to over £10 a ton.

The lowest prices were at £147 for Mill Firsts, at £136 10s for Export Firsts, at £124 for Export Lightnings and at £155 for Export Hearts, c.i.f. U.K., for September-October shipment. Grade Tossa-2/3 was now available at £144 and Grade Tossa-4 at £133. Dacca Tossa-6 was at £137. There were sellers of Outport Tossa-2/3 at £123 and of Outport Tossa-4 at £118, October-November. It was possible that less than the above rates would be accepted if any

real buying interest was shown by spinners. Cuttings were also quiet at £88 for S.N.C. and at £81 for N.C.

Dundee spinners were still awaiting the first arrivals of new crop jute so that they could assess the quality of the fibre. The quality of the various grades is as important as the price and on this hinges the selling rates of yarn and cloth.

The Siam jute market was also quiet, and only a small buying interest was shown here. Offers were at £90 for grade A, at £85 for grade B and at £78 for grade C, delivered mill Dundee for November-December shipment.

The Calcutta goods market tended easier for both hessians and sackings. Some buying still took place here with prices at 80s 5d for 40in. 10oz. and at 61s for 7½oz. a 100 yards c. and f. U.K. for September shipment, at 80s 10d and 61s 3d October and at 81s 2d and 61s 8d November-December. B Twills were at 238s 5d, 238s 1d and 237s 3d for the respective shipment periods.

Dundee jute spinners were busy and had very little yarn to sell for reasonably early delivery. Business continued to take place and prices were firm. A further fall in raw material prices would have to take place before any reduction can be made in yarn prices, because they were never raised to the same extent as raw material. The cloth position was also satisfactory with production running to the full extent of the available labour force. Demand for wide cloth for carpet backing was steady. There is every indication that this will continue to be the case.

THE PAKISTANI JUTE MARKETS

FIBRE WEAKENS

(FROM OUR DACCA CORRESPONDENT)

THE battle for supremacy between sellers and buyers referred to in the previous despatch, was won by the buyers. The market last week was considerably weaker purely because of the overwhelming weight of arrivals. After a few days' hesitation, all agencies reported daily increasing arrivals. All balers bought to the limit of their finances, but as the arrivals increased prices were lowered daily. There was a slight slackening in arrivals at close and a steadier undertone prevailed in the market.

Despite the weakness (there was a drop of £7 a ton during the last seven days), lower prices did not prevail in all areas. In Ashuganj and the western jat area, where the good jute comes from, there was a slight drop in prices, but when one big buyer entered, the market firmed up.

The main question was how much balers could buy at the present reasonable prices. The balers were probably concerned with tossa arrivals. These are just beginning to come in in reasonable quantities. All balers feel that the tossa crop is short, but nevertheless, the first heavy arrivals do not reflect the shortness of the crop in this quality. Of course the early quality is usually good and for this reason all balers are keen for tossa.

Unfortunately during the October-November period, river levels fall, making it impossible for the grower to bring in his jute by country boats. At the same time, the tracks are too muddy for bullock carts to play. During the second week of October, there are the Puja holidays during which little is done. During this period every year irrespective of the size of the crop, arrivals fall off and prices harden. When that happens this season it is felt that prices will rise rather high and are not likely to come down again.

It is worth repeating that the quality of arrivals has fallen off considerably. There is still some jute to be seen in the fields and this is the last of the highland tossa, with a small percentage of white. The amount of jute seen standing at present is deceptively large because growers have left larger quantities than usual for seed, which already suggests exceptional sowings next season. On the other hand, this also means large quantities of seed-cut jute appearing later in the season, and if, as is expected, the seed-cut jute is also specky, there will be some very unhappy spinners.

The pucca bale market was more or less inactive during the week. There were some dealings in cuttings ready and forward at considerably reduced prices, and in fact, some of the big holders unloaded a small proportion of their January-February-March holdings at unprofitable prices. Probably when the loose jute market steadies, cuttings will rise in sympathy. In the meantime, the mills, who normally operate extensively in cuttings, have been restricting their activities to loose jute and have just started buying reasonably heavily, which always encourages a steadier undertone in loose.

Overseas buyers continue to sit out. From repeated cables one begins to feel that perhaps many of them honestly believe that they can wait for cheaper prices. They have succeeded very well so far in keeping the market down. The biggest buyer, who also has the biggest short position, is Dundee. During the last month, there have been a spate of Dundee spinners and brokers in East Pakistan. Without exception they came out here quite convinced that they can show the balers that there is ample jute for everybody and prices must come down even further. A few days here showed them how wrong they were and all these people must have sent bullish reports to their principals.

There has been a fair amount of so-called merchant jute bought cheaply early in the season, which the Dundee buyers have been able to get from the merchants at cheap prices. Most of this, however, has disappeared and any large purchases must be made from the origin. The Bulgarians and the Yugoslavs have been in the market. Some balers, who have been short of finance and who might have been prepared to sell cheap, have been discouraged from doing so because of the great difference between E.P.C. levels and the market. This has undoubtedly helped sellers resist. There are rumours that the Russians will shortly be in the market and as they only buy at E.P.C. levels, this will have a very bullish effect.

E.P.C. registrations for the first half of September have been extremely small at only 35,950 bales. Registrations for the second part of September are not likely to be much higher in view of the fact that E.P.C.s are so much higher than market levels.

LOOM AND SPINDLE STATISTICS

The Indian Jute Mills Association's booklet *Loom Statistics*, which was last published in 1962, has now been revised and brought up-to-date. With the inclusion of spindle statistics, the title has been changed to *Loom and Spindle Statistics*. The booklet is priced at Rs. 1.50 a copy, and is on sale in the accounts section of the Bengal Chamber of Commerce and Industry, 6 Netaji Subhas Road, Calcutta.

Books

SIMPLIFYING COMPANY REPORTS

Annual Company Reports. By S. K. Bhattacharjee. Sponsored by the Company Law Board, Ministry of Finance, Government of India.)

The object of this brochure is to suggest a simplified framework for the presentation of accounts of joint stock companies so that they may be readily intelligible and perhaps more meaningful to the average shareholder and to the general public. Corporate accounting is largely based on traditions and conventions which have been developed during many years. Financial statements prepared according to the accepted accounting principles cannot be completely understood without some knowledge of the practices. This traditional presentation of annual accounts of companies has come in for criticism in recent years from various quarters. The statutory balance-sheet and profit and loss account is confusing to most shareholders due to the technical jargon, un-uninformed terminology, involved footnote, and so on.

Whether the principles of accrual accounting developed over many years should be sacrificed merely to accommodate ideas which are antiquated and out of date, even though they may be popular, has been answered in the negative by corporate legislation in all countries. The hiatus between the needs of the statute and specialists on the one hand and the persons who are not versed in accounting jargon and techniques but who are nevertheless vitally interested in the organisation of corporate sector on the other, needs to be resolved urgently. The solution of the problems would appear to lie in supplementing the statutory accounts by a non-technical presentation of all significant items as would enable the man-in-the-street to appreciate the financial position and the trading results of companies as are disclosed in the published statutory accounts.

The Institute of Chartered Accountants of India has done some service in this direction by awarding a shield for the best presented balance-sheets. In the light of knowledge gained by him as a member of the National Productivity Council Team of cost accounting and financial control which toured the U.S.A., U.K. and West Germany and utilising the recommendations made by the team on the presentation of annual accounts, the author has made useful recommendations, which he has illustrated by incorporating suitable reproductions from the published accounts of leading Indian companies.

HISTORY OF LAC

A Monograph on Lac. By M. S. Muthana. (Published by the Indian Lac Research Institute (Ranchi): Editors B. Mukhopadhyay and M. S. Muthana. Pages: 378.)

Lac is one of the most valuable gifts of nature to man. It is the only resin of animal origin, being actually the secretion of a tiny insect. Although difficult to conjecture exactly when and how lac was first exploited for utility purposes, the fact that the dye can be straightaway used without being processed in any way suggests that dye might have been the first to have been exploited. The first authentic descriptive account of lac is to be found in the report sent in 1596 by a traveller-adventurer, John Huyghen Von Sinsheoten, to the King of Portugal. It contained a most comprehensive list of the uses of lac in those far-off days. Actual scientific work on lac and lac products appear to have commenced in the year 1709. Since then several workers have carried out investigations which enabled the accumulation of knowledge on the lac insect, its life history and the many uses to which shellac is put.

The importance of lac in the modern economy particularly of India is quite considerable. This country produces 70 percent of the world output of lac. Well over 90 percent of what is produced is exported. It earns for India foreign exchange to the tune of Rs. 10 crores, every year. It provides spare time occupations to some 5 million cultivators, mostly aboriginals in the underdeveloped areas in Bihar, Madhya Pradesh, Orissa, Assam and a few other States, who form the poorest section of the country's population. Its cultivation does not require any capital. It also provides employment to some 30,000 persons, besides those engaged in cultivation.

During the first World War, the lac-industry in India showed two vulnerable points, violent price fluctuations, and adulteration due to a shortfall of production. As a result of an enquiry that was initiated by the Government of India on the then prevailing conditions, a small export cess was levied and the funds so raised were utilised for the establishment of the Lac Research Institute near Ranchi. Since its inception, much work has been done and the accumulated knowledge has been put together between the covers of this useful monograph. The monograph, well got up and profusely illustrated, contains information on the lac insect, lac pests, lac cultivation in India and abroad, the technology of lac, its chemistry, testing and grading, marketing and statistics of lac production, prices and grades. It will no doubt meet a long-felt need.

TRADE JOURNAL

Wool and Woollen. Edited by T. V. R. Chandran. (Eastern Press Services (India), 227 Frere Road, Bombay).

It is a new monthly journal devoted exclusively to trades and industries allied to wool, and fills the gap of the absence of a trade journal for the woollen industry. A journal on this industry disseminating information needed both by the grower and exporter has certainly a useful rôle to play. The inaugural September issue contains articles covering different aspects of raw wool and the industry, including research on raw wool, research institute for the industry, colour in wool fabrics, production costs in different countries, etcetera.

In a special article, the deputy chairman of the Indian Woollen Mills Federation, Mr. B. M. Grover, discusses the development of the woollen industry in India and Mr. T. N. Khaitan, vice-chairman of the Federation, has written on a research institute for the woollen industry. Mr. Ram Khanna has urged the abolition of controls on worsted yarn in order to make fabrics cheaper.

The journal is illustrated, all embracing and well produced in art paper. The annual subscription is Rs. 24 and the single issue is priced at Rs. 2.50.

ommodity Markets

NEED TO RAISE HOME CASHEW OUTPUT

(FROM OUR SOUTH INDIAN CORRESPONDENT)

ALTHOUGH the Indian cashews today enjoy a virtual monopoly n the U.S. market, other countries ike Mozambique, East Africa and Brazil are gradually gaining a foothold on that market. The threat of stiff competition from the main producing countries of Africa which at present export almost all their rawnuts to India is very real. They are entering the field of processing cashew, so the Indian trade in cashew kernels and shell oil will be seriously hampered if indigenous production of raw nuts is not increased considerably. In order to achieve it, a big effort is required. Large cashew plantations on a scientific basis have to be developed side by side with improving the present methods of collection and marketing. A fairly large portion of the produce is often wasted or used up for local consumption.

This view was expressed by the Kerala Governor, Mr. V. V. Giri, in his address to a two-day seminar on cashew exports in Ernakulam last week. About 60 representatives of cashew trade and industry, associations and organisations, Ministries of Commerce, Food and Agriculture and Finance, as well as directors of Agriculture and Industry of the cashew producing States participated in this seminar, which was organised by the Indian Institute of Foreign Trade in collaboration with the Cashew Export Promotion Council.

Mr. Giri said in his address (which was read out to the seminar in his absence) that the basic problem of cashew processing industry in this country lay in securing continuous supplies of raw nuts of high quality. In this connection, he stressed the need for increasing the acreage under cashew, because the country cannot continue to depend on imports. It is, therefore, imperative that indigenous production should be stepped up substantially if Indian cashew is to maintain its pre-eminent position in the export trade. He suggested that growers, processors, exporters and research scientists, interested in this field should sit together and find a workable and lasting solution to the problems of plantation, factory production and exports. Kerala should give a lead to the country in this direction, as she has got the biggest stake in this industry.

Exports of cashew, the second biggest dollar earner for the country next to jute, amounted to about 54,000 tonnes, valued at nearly Rs. 22 crores during 1963. There are about 250 cashew processing factories in India employing more than 100,000 workers. Out of more than 225,000 tonnes of raw nuts required by the industry for processing in these factories, only about 65,000 tonnes are available from indigenous sources and nearly two-thirds of the country's requirements of raw nuts are imported from Africa. To reach the target of 60,000 tonnes of cashew kernels for exports a year during the fourth plan, the industry should be able to receive about 250,000 tonnes of rawnuts a year, the Governor said.

The seminar has urged the State Governments concerned to reexamine their land legislations in order to provide the same facilities to cashew plantations as are being given to tea, coffee and rubber plantations. It has appointed a committee to go into the whole question of expanding cashew plantations. This committee under the Chairmanship of Mr. M. K. K. Nair will take up with the State Governments concerned the various problems relating to the development of cashew cultivation with a view to stepping up the internal production of cashew. The seminar has recommended that Kerala, Madras, Mysore, Maharashtra and Goa which have the potential for cashew expansion should appoint a separate joint director of agriculture/horticulture with the requisite additional staff and equipment for vigorously tackling the problems relating to the allocation of land, provisions of seedlings, grant of loan to the growers, regulation of markets for cashewnuts and introduction of intensive cultivation methods for maximising the yield. It has also suggested that these State Governments should set up cashew advisory committees for chalking out the lines of action for the development and expansion of cashew production.

Co-ordination of Efforts

The seminar felt that in order to effect co-ordination in the effort at the Centre and State Government levels and to give greater attention to the problems of production of more cashewnuts in the country, there might be need for setting up a cashew board on the lines of the Tea and Coffee Boards. It emphasised that the programme of cashew production should be included in the core of the agriculture sector of the fourth plan with a view to ensuring that all requisite steps are taken by the Central Government as well as the State Governments for expanding the production of cashew nuts. The seminar has suggested that the establishment of processing factories should be stimulated wherever necessary to cater to the needs of fresh plantations. The seminar has recommended that in the interest of reducing the cost of production, it would be necessary to explore the ways and means of gradual mechanisation of cashew processing. For this purpose, the seminar suggested that productivity studies should be initiated.

The seminar has recommended that the Kerala and Mysore Governments should again be approached for the abolition of sales (or purchase taxes) on cashew nut and kernels which add to their export price. It has also been suggested that the cashew industry should be brought within the purview of the first schedule to the Industries (Development and Regulation) Act 1951, in order that the 2 percent additional rebate on income tax could be extended to it. The seminar decided that more intensive publicity should be undertaken by the Cashew Export Promotion Council for creating more demand for cashew abroad.

CARDAMOM

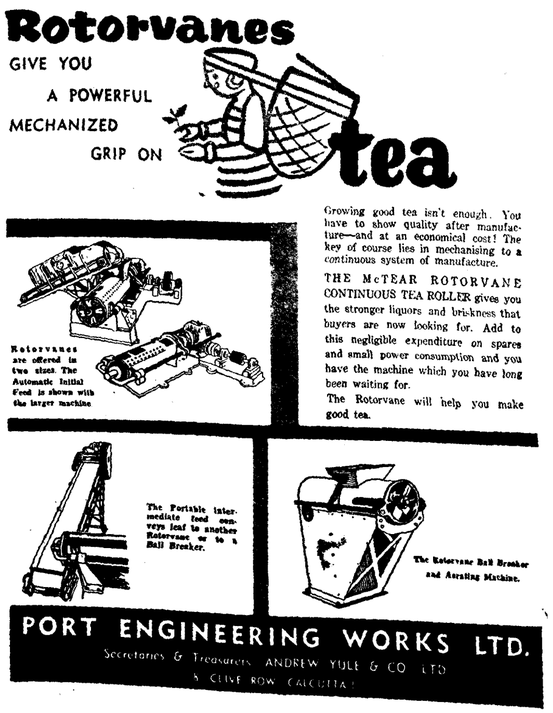
New Marketing System

The Cardamom Development and Marketing Committee claims that measures like the fixing of the minimum and maximum prices and stock procurement have gone a considerable way in stabilising the economy of the cardamom growing industry in India. Under the scheme of procurement announced by the Government of India, the Committee had procured 126 tonnes of cardamom of various grades and sold them in the market. It has been possible to sell the procured stocks without any loss to the exchequer. According to Mr. Sitarama Reddy, chairman of the Committee, the procurement scheme has helped to create a climate of confidence among the cardamom planters and stabilise the export prices. There are still some sections of the cardamom trade who feel that the functioning of the committee is a handicap to them. The Central Government is contemplating to bring in legislation to set up a separate Cardamom Board on the analogy of the Coffee Board. What final shape the Cardamom Board would take is to be seen. The planting community is pressing for the establishment of a distinct Cardamom Board. The planters seem to feel that this is one of the long-term measures that could be devised with the object of stabilising the economy of the industry.

The total foreign exchange earned on cardamom in 1963-64 amounted to Rs. 3.19 crores, against Rs. 2.67 crores in the previous year. It is not estimated that the total output of cardamom in India is in the region of 4,000 tons in a normal year. Some 60 percent of this is produced in Kerala. A suggestion which the larger interests in cardamom planting industry is not happy to see implemented is that cardamom should be sold as in the case of coffee, through a centralised pool. The U.P.A.S.I. and its constituent State Associations have already announced their objection to this proposal for introducing the pool system of cardamom marketing.

It has been represented to the Central Governmnt by the Cardamom Merchants Association that the present uncertainty about export prices had deterred exporters from entering into long-term commitments with overseas buyers. The Central Ministry of Commerce, has clarified that it is the intention of the Government at present minimum and maximum export prices unchanged at least until August 1965. Even after that date, the chances are that these export prices would remain unchanged. The Central Government has also announced that the present minimum and maximum prices are inclusive of selling commission, if any, payable by exporters to their foreign agents. This will be subject to a proviso that the commission does not exceed 2½ percent of c.i.f. prices worked out by raising the f.o.b. price by 7½ percent irrespective of the destination.

TEA



Higher Price Trend

(BY A SPECIAL CORRESPONDENT)

JUDGING from the tea auctions held in Calcutta so far, the price trend would appear to be quite satisfactory. On the whole, a higher average has been maintained. For example, at Sale No. 1, held on 18th May this year, 19,355 packages were sold at an average price of Rs. 7.35 a kilogram, compared with Rs. 7.34 a kilogram at the comparable sale last year. At Sale No. 18, held on 14th and 16th September, 71,900 packages were sold at an average price of Rs. 5.63 a kilogram, compared with Rs. 5.25 a kilogram last year. Total sales this season so far amounting to 672,122 packages at an average price of Rs. 5.88 a kilogram, compare with Rs. 5.99 a kilogram for last year's sales.

North India also looks like establishing a new production record. The crop figure up to 15th September has exceeded the record crop figure on the same date in 1961. The north Indian crop up to 15th September totalled 174,556,228 kilograms, compared with 172,497,821 kilograms up to the same date in 1961. It will be seen that production is going strong. Last year's output to the same date was only 158,496,449 kilograms.

As is well known south India has suffered a setback. Ceylon is also behind. East Africa, however, continues to move ahead. The total crops from the major producing countries so far amount to 852,457,000 lbs, compared with 834,693,000 lbs last year.

COMPANY AND PUBLIC NOTICES

THE INDIA JUTE COMPANY, LIMITED

NOTICE

NOTICE is hereby given that the Annual General Meeting of the Members of THE INDIA JUTE COMPANY, LIMITED will be held at 16, Strand Road, Calcutta-1, the Registered Office of the Company, on Friday, the 30th day of October, 1964, at 4 O'clock in the afternoon for the following purposes:

Agenda.

1. To consider the Profit and Loss Account of the Company for the year ended 31st March, 1964, the Balance Sheet as at that date and the Report of the Directors and Auditors.
2. To declare a dividend.
3. To elect a Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 23rd October, 1964, to 30th October, 1964, both days inclusive.

By Order of the Board.
A. MUKHERJEE.
Secretary.

16, Strand Road.
Calcutta, 24th September, 1964.

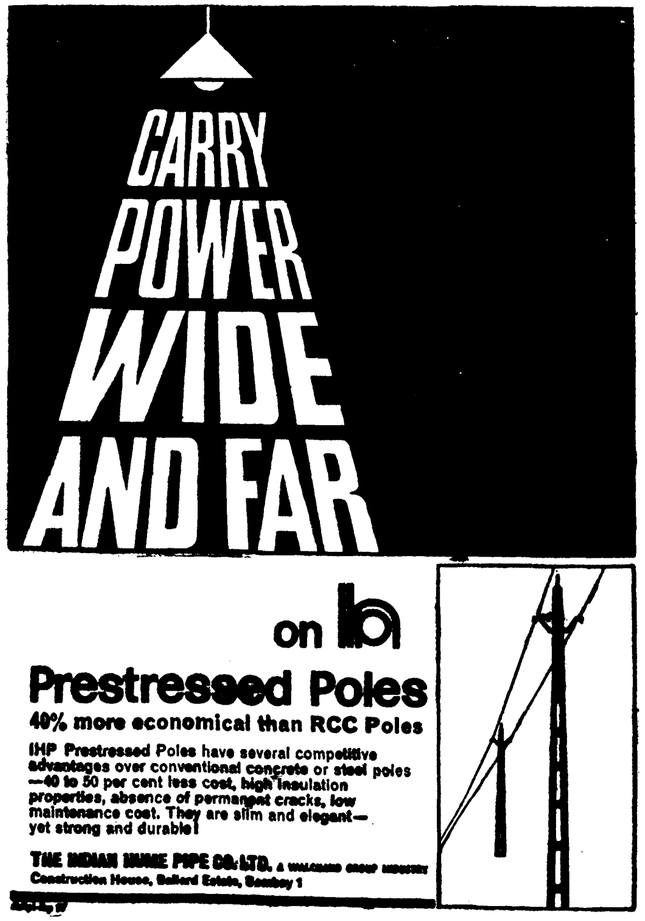
Note:—A Member of the Company, who is entitled to attend and vote at the meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

THE MEGNA MILLS COMPANY, LIMITED

NOTICE

NOTICE is hereby given that the Annual General Meeting of the Members of THE MEGNA MILLS COMPANY, LIMITED will be held at 16, Strand Road, Calcutta-1, the Registered Office of the Company, on Friday, the 30th day of October, 1964, at 3 O'clock in the afternoon for the following purposes:

Agenda



1. To consider the Profit and Loss Account of the Company for the year ended 31st March, 1964, the Balance Sheet as at that date and the Report of the Directors and Auditors.
2. To declare a dividend.
3. To elect a Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 23rd October, 1964 to 30th October, 1964, both days inclusive.

By Order of the Board.
A. MUKHERJEE,
Secretary.

16, Strand Road,
Calcutta, 24th September, 1964.

Note:—A Member of the Company, who is entitled to attend and vote at the meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

MARTIN BURN LIMITED

NOTICE is hereby given that the Register of Members and Share Transfer Books for Preference Shares in the Company will remain closed from the 7th October to 9th October, 1964, both days inclusive, for the purpose of payment of Preference Dividend for the half-year ending 30th September, 1964, on or after the 9th October, 1964, to those Preference Shareholders whose names appear on the Company's Register of Members on the 9th October, 1964, or to their mandatees.

By Order of the Board,
L. K. SEN CHOWDHRY,
Secretary.

Registered Office:
12, Mission Row,
Calcutta-1.
24th September, 1964.

COMPANY MEETINGS AND DIVIDENDS DECLARED OR PROPOSED

Name of Company	Date	I.S.T. Hours
East Indian Coal Co. Ltd. ..	23-10-64	11-10 a.m.
Megna Mills Co. Ltd.	30-10-64	3 p.m.

SHELLAC DULL

During the week ended 29th September the tone was easier at the beginning, but dull and inactive at the close. The following were the quotations:

	Rupees a package
Hand-made grades	
Pure buttonlac	224 buyers, 23 sellers.
Lemon One Shellac	230, 224 buyers 230 sellers.
Lemon Two Shellac	210, 206 buyers 212 sellers.
Standard One Shellac	194, 190 buyers 196 sellers.
Pure T.N. Shellac 2½%	180, 176 value, 14
Pure TIN Shellac 4%	150 value, 140 buyers, 140 value.
Machine-made grades	
Lemon Superfine	250 sellers.
ABTN Shellac	250 buyers, 25 sellers.
Lemon One	242 sellers.
Fine Orange Shellac	252 buyers 252 sellers.
Angelo's TN 1 Shellac	190 sellers.
AC Garnetlac	166 sellers
IG Garnetlac	166 sellers
Kala Garnetlac	166 sellers
Golden Kusmi Seedlac	270 value
Kusmi One Seedlac	210 value.
Golden Bysacky Seedlac	250 value.
Manbhum Fine Bysacky	180 buyers, 16 170 sellers. 17
Fine Bysacky	170 buyers, 154 sellers. 156 value, 14
Genuine Bysacky 5%	156 value, 15 sellers.
Grade One Class B 5%	180 buyers, 16 value, 170 sellers.
Grade Two Class B 5%	160 buyers, 154 value, 154 sellers.
Manbhum Sticklac	150, 160, 154 buyers.
Palas Sticklac	120, 130, 126 buyers.
Kireelac	32 buyers, 22 value.

Shipments during September until the 21st were 15,605 packages.

INSTITUTIONAL FINANCE FOR INDUSTRIAL EXPANSION

THE depression in the Indian capital market has made it increasingly difficult for industrial and trading companies to raise funds through new issues in recent months. Confidence in equities has suffered because heavy taxation is affecting corporate profits. Companies have not been able to increase ordinary dividends in line with market rates of interest since too large a proportion of their profits is mopped up by taxation. The growth value of equity shares has been undermined by such levies as the capital gains tax on bonus shares. The steady increase in market rates of interest has tended to divert the attention of investors from equities to fixed-yield securities. But preference shares, which carry a fixed dividend. and debentures. which bring a fixed rate of interest. are not frequently used by companies to raise funds because the servicing of such capital is expensive. Companies have, therefore, been forced to rely more and more on the financing institutions to satisfy their requirements of medium- and long-term funds Although commercial banks began to participate in industrial financing some years ago to a small extent, they are likely to reduce their commitments now since the Reserve Bank seems to think that they cannot contribute usefully to medium- and long-term industrial financing without jeopardising their soundness.

With the capital market debilitated, financing institutions like the Industrial Development Bank, the Industrial Finance Corporation, the State Financial Corporations, the Life Insurance Corporation and the Unit Trust of India are likely to be the main sources of funds for industries. along with the Industrial Credit and Investment Corporation of India. Most of the money will thus be channelled through Government-sponsored institutions. They have hitherto done much to help industries by giving rupee and foreign currency loans, underwriting capital issues and guaranteeing deferred payments and foreign loans But their usefulness is limited by the fear of private entrepreneurs that loans taken from such institutions could in due course be converted into shares. The Industrial Development Bank has recently been set up as an apex body to co-ordinate the activities of the older financing institutions. The Industrial Finance Corporation being about the largest of the latter, the changes in its composition and functions resulting from the establishment of the Industrial Development Bank are of considerable interest.

Since the Industrial Development Bank of India was set up on 1st July, 1964, the provisions of the I.D.B.I Act have made some important amendments to the Industrial Finance Corporation Act, 1948, with effect from 1st August, 1964. The shares held in the Corporation by the Reserve Bank of India and the Central Government have been transferred at par value to the Industrial Development Bank. The latter has acquired additional shares so as to bring its total holding up to 50 percent of the paid-up capital of the Corporation, which now stands at Rs. 8.35 crores. Certain changes have been made in the provisions relating to the composition of the board of directors and the arrangements for the auditing of the Corporation's accounts. The power of issuing policy directives to the Corporation has passed from the Central Government to the Industrial Development Bank. The limit for loan assistance given by the Corporation to any single industrial concern has been raised. The I.F.C. will receive financial assistance from the Industrial Development Bank in certain specified cases. In sum, it is hoped that the Corporation will now be able to play a more fruitful rôle in industrial development as a result of its close association with the Industrial Development Bank. Although it has already done some joint financing business, co-ordination between the different financing institutions is expected to grow steadily in the future. Many large projects which the Corporation alone could not handle before will henceforth be assured of comprehensive attention by a consortium of financial institutions. It is expected, therefore, that several gaps in industrial financing will be filled more easily.

As a result of the recent amendments to the I.F.C. Act, the dependence of the Corporation on the Central Government has been reduced. In his address from the chair at the annual general meeting of the I.F.C. in New Delhi last week (a full text of which was printed in the last issue of *Capital*), Mr. A. Baksi pointed out that the Corporation is now obliged to raise funds for its operations to the maximum extent possible, although its bonds will be fully guaranteed by the Central Government. It has recently raised Rs. 6 crores by issuing bonds carrying an interest rate of 4¾ percent at an issue price of Rs. 99.25 percent, with 12 years' maturity. The issue was oversubscribed within a few hours of the opening. This is the seventh bond issue of the Corporation and a sum of Rs. 39 crores has so far been raised by bonds.

More encouraging is the fact that the I.F.C. has relaxed the conditions under which financial assistance is given to industrial concerns. First, it used to insist that a borrowing company should not declare equity dividends of more than 8 percent without its prior approval. The limit for equity dividends has now been raised from 8 percent to 10 percent—a timely step considering that dividends on equity and preference shares need to be increased so as to bring them in line with the higher market rates of interest. With the dearer money policy adopted by the Government, company managements have been obliged to increase the interest on debentures also. Secondly, loanee concerns formerly had to seek the prior approval of the Corporation before disposing of any asset mortgaged to it. But now they will be allowed to sell or write off minor assets within prescribed limits without the previous sanction of the Corporation Thirdly, the restrictions on the disposal and pledging of shareholdings will no longer apply to all directors or members of the managing agency, but will be confined to only those who have a real stake in the loanee concern. The condition about personal guarantees from directors and managing agents has been liberalised in suitable cases It has also been decided that the right of the Corporation to appoint nominee directors on the boards of loanee concerns

will be exercised more selectively. The Corporation will henceforth adopt a more flexible attitude in its operations; this is a welcome adjustment to the fact that the industrial structure of the country is becoming increasingly complex.

Most of the changes are good as far as they go, but the crux of the problem of industrial financing remains untouched. The institutional framework is becoming nicer and prettier, but the basic difficulty of attracting more savings for industrial investment stays undiminished. A sound corporate structure cannot be built unless a substantial part of the capital is raised in the form of equity funds. To have the gearing of its capital structure right, a company should not have to rely too heavily on borrowed money. This is the main reason why companies are already not inclined to take advantage of the Government's move to relax the debt-equity ratio of 2:1. In the circumstances, urgent steps are necessary to encourage the flow of risk capital into industry. Since heavy taxation is the strongest factor affecting the flow, the fiscal system has to be modified. With lower taxes to pay, companies would not only plough back more funds but would also be able to raise fresh money to finance replacement, modernisation, expansion and diversification.

NEW CLOTH CONTROL SCHEME

THE voluntary scheme for regulating the prices of cotton textiles, which had been in force since January 1961 but was long ago reduced to a farce, will be withdrawn on 15th October. It will be replaced by a new scheme for statutory control over the prices and production of the popular varieties of mill-made cotton textiles. All the mills will now have to produce in the form of *dhotis, saris,* long cloth and shirting 45 percent of their total annual output, excluding sales for export and defence requirements. The rest of the output will be in the non-controlled sector. No mill will be allowed to produce the controlled varieties of cloth in the non-controlled sector. Due consideration has been given under the scheme for sales for export and defence. For every 10 percent of sales made by any mill for defence and export out of its total production, credit will be given at the rate of 2 percent as if this proportion had consisted of controlled cloth.

The ex-mill price for the controlled varieties will be worked out by prescribed formulae for the cost of cotton and conversion and processing charges. The trade will be allowed a total margin of 18 percent over the ex-mill price, excluding excise. The schedule of realisation multipliers, it is said, takes into account the cost of production and provides for a reasonable margin of profit for producers as well as distributors. Provision has been made while fixing the multipliers for calculating the prices of grey cloth, with adjustments for the use of superior and foreign cotton and also for various processes, such as bleaching, mercerising, dyeing, printing, sanforising, oiling, backfilling and finishing. In order to get the controlled varieties of cloth moving as quickly as possible, the Government has established the Textile Control Advisory Committee, with which representatives of the Indian Cotton Mills Federation will be associated. A Central Consumers Vigilance Committee has been constituted; in course of time the State Governments will be setting up local consumers' vigilance committees to look after the interests of consumers in every town having a population of 25,000 or more.

It would have been idle to expect that a scheme of partial control, which sought a compromise between the apparently conflicting interests of producers, traders and consumers, would ever be accorded a very enthusiastic welcome by the industry or the trade. The trade is unhappy as its plea for a bigger margin of profit has not been accepted by the Government. But it could scarcely be expected that the margin would be raised when the Government is trying hard to keep consumer prices within reasonable limits. And the industry, while welcoming the abolition of the voluntary price regulation scheme, is disappointed that the Government has rejected its suggestion for extending control over a cross-section of its entire production. When the scheme for partial control was first considered, and the industry agreed to give it a trial, it was visualised that control would be extended to a cross-section of the entire production. The idea was that, on the one hand, the consumer should get all types of cloth from the pool of the controlled varieties; and, on the other, all units of the industry should contribute the same proportion of their production for the civilian market.

The Government's decision to restrict the control to *dhotis, saris,* long cloth and shirting has been criticised on the ground that these items constitute a different percentage—ranging from nil to 100 percent—in the total production of each mill; the new scheme will thus be inequitable and might affect output adversely. But the choice of a cross-section of around 150 varieties would have proved a blessing for the industry; the cross-section might have included many varieties which are not very essential and mills would have eventually been in a position to charge higher prices for essential varieties in the non-controlled category. This explains the Government's decision to restrict control to four popular varieties. The industry's fears of production being disrupted seem greatly exaggerated. In the past, the output of the controlled varieties has been around 41 percent of the total and this is now being increased to 45 percent. (The proportion is really 43 percent if allowance is made for the rebate on account of export and defence commitments.) If drill were also to be included among the popular varieties—this is being considered—the extent of control would be about 51 percent.

The Central Minister for Commerce, Mr. Manubhai Shah, has stated that care is being taken to see that the pattern of production is not disturbed and that there is a minimum technical switchover. Efforts are being made to reach some sort of understanding about mills' quotas of these four categories so that the switching over of production is fairly smooth. Mills in Punjab and West Bengal, whose output consists mainly of the varieties which have been brought under control, especially *saris* and *dhotis* are being accorded concessional treatment. In any case, the industry has been assured of assistance in overcoming technical difficulties arising from the switchover of production which may be necessitated by the introduction of the new cloth control scheme.

While announcing the scheme, Mr. Shah expressed the view that there would be a reduction of between 5 percent and 8 percent in the prices of the controlled varieties, and that only a few old varieties which constituted less than 5 percent of the controlled cloth were likely to show an increase of about 7 percent or 8 percent. Nobody need take official statements on prices very seriously since Government forecasts have seldom proved correct. A great deal depends on the schedule of multipliers. While the trade and the industry are inclined to wait and examine carefully the multipliers released last week before commenting on the subject, informed sources say that the multipliers will benefit the industry and tend to push up the prices of the controlled varieties. Mills which have not changed their varieties after 1961 will stand to gain the most; only those mills which raised their prices in a highly arbitrary manner will suffer under the new scheme.

Apart from honest and efficient administration, any scheme of control depends for its success on the co-operation of the various interests concerned. The Indian Cotton Mills Federation has done well to appeal to all mills and the trade to co-operate wholeheartedly with the authorities in implementing the new control scheme in order that the consumer may obtain the controlled categories of cloth at the fixed prices. It would indeed be unfortunate if co-operation were not forthcoming from the mills when they have been given complete freedom to market 55 percent of their production. Fortunately, the new cotton crop is likely to set a record; with a plentiful supply of raw material, cloth output can be expected to show a fair increase which will check any excessive rise in prices. The mills might not find it easy to raise the prices of the uncontrolled varieties very much in view of the growing competition from the powerlooms.

THE FOURTH PLAN

THE Planning Commission is now busy drawing up a fourth five year plan which may be more acceptable to the Central Government. A few days ago, it placed before the Cabinet plans of three different sizes, involving an outlay of Rs. 24,000 crores, Rs. 22,500 crores or Rs. 21,000 crores. Although the Cabinet has not yet taken a decision, no doubts have been left about the preference of certain key members for a greater measure of realism. It is reported that the Prime Minister, Mr. Lal Bahadur Shastri, and the Finance Minister, Mr. T. T. Krishnamachari, unambiguously favour a more careful assessment of resources. This is welcome; the mistakes made while drafting the third plan cannot be repeated. Mr. Krishnamachari, whose responsibility it is to find the resources, opposed an inflated plan right from the start and indicated his preference for an outlay target of about Rs. 18,000 crores. He now seems prepared to accept a plan of Rs. 21,000 crores, which may be stretched to Rs. 22,500 crores if the situation becomes favourable. For this purpose he has reportedly suggested splitting the fourth plan into two halves; the step-up in outlay from Rs. 21,000 crores to Rs. 22,500 crores would be decided only in the second half of the plan, after seeing the progress of the economy in the first half. Viewed as a way of a introducing some flexibility in the plan, the move to divide it in two halves may have something to commend it. It can be argued that resources are not a fixed fund to be drawn upon; they keep growing, depending on the efficiency of investment and the resulting increases in output.

But whether the economy can afford an outlay of Rs. 21,000 crores, or for that matter even the Rs. 18,000 crores originally visualised by Mr. Krishnamachari, remains a big question mark. This is all the more important since a much smaller third plan, with an outlay of only Rs. 11,600 crores, has created a highly inflationary situation by increasing the pressure on real resources. The country cannot buy prosperity with "created" money. During 1963-64 the money supply has increased by as much as Rs. 439 crores, or 13.3 percent. This sharp increase—even assuming that Rs. 100 crores of it is purely statistical—without a matching rise in production has been responsible for the recent rise in prices. In determining the size of the fourth plan, another question to consider is whether there are physical resources corresponding to the financial outlays. The real resources may keep growing, but with the heavy accent on public-sector projects, which are also slow-maturing, it is doubtful if the growth will be fast enough to keep pace with the rate of investment. The working of public-sector industries so far does not justify any optimism on this point. The resources of the private sector too are greatly strained because of an unrealistic fiscal structure and the imposition of restraints in a desperate bid to contain inflationary pressures.

Taxation has already reached saturation point in support of the Government's effort to superimpose a large defence budget on a grandiose plan. The canalising of a substantial part of the development outlay into slow-yielding projects, together with an investment programme out of all proportion to the real resources of the economy, has been a major cause of inflation. This has coincided with the stagnation of agricultural production for three years in succession, causing widespread distress in the country. Commenting on the price situation, the directors of the Reserve Bank recently warned that even with the utmost optimism about farm production and the availability of foreign exchange, the resources of the nation would remain strained. In such critical circumstances, some think that even an outlay of Rs. 18,000 crores, which Mr. Krishnamachari originally had in mind, might prove excessive. The target-setters in Yojana Bhavan have yet to bring their ideas in line with reality and experience. If the annual rate of economic growth has so far averaged no more than 3.1 percent, against a target of 6 percent, how can one reasonably expect it to jump to about 7 percent in the fourth plan period? Unfortunately, the perspective planners are not bothered by the limitations of the economy.

An idea of the stringent resources position can be had from the scope for additional taxation. Even for a plan involving an outlay of Rs. 20,000 crores, the revenue visualised through additional taxation was Rs. 2,500 crores. The Finance Ministry felt that the scope for raising resources through Central taxation was "necessarily limited in view of the large tax effort that has already been made" and indicated that as much as Rs. 1,500 crores would have to be found by the States. The fiscal achievement of the States so far belies any such expectation. Even during a period of national emergency, the States have failed to raise the targeted amount of Rs. 610 crores through additional taxes. It can hardly then be realistic to expect them to raise as much as Rs. 1,500 crores in the next plan. The Finance Ministry would like to see more revenue raised from the rural population, since they have not adequately borne the cost of economic development. But the States have all along been lukewarm towards any proposal for taxing agriculturists. Apart from the influence of the rural vote, the taxing of agriculturists at a time when there is clamour for giving them bigger incentives for raising farm output is by no means likely. This is only one instance of the kind of limitations the Government has to face in raising resources. It is better to have a modest plan and implement it fully than to go in for an ambitious plan out of all proportion to the country's capacity and resources.

Current News and Comment

Export Prospects for Rayon

Exports of rayon and synthetic fabrics from India during 1963-64 amounted to 88.5 million metres, valued at Rs. 10.58 crores, showing an improvement of 25 percent over the performance in the preceding year, when exports totalled 77.8 million metres, valued at Rs. 8.46 crores. The performance exceeded the Rs. 8-crore target fixed for 1963-64. The achievement could be described as fairly creditable considering the restrictive trade policies adopted in certain countries and unsettled political conditions in some others. Shipments during the first half of 1964 at 37.5 million metres, valued at Rs. 4 crores, represent an increase of 32 percent in terms of value and 20 percent in terms of quantity, compared with the corresponding period last year. The highlights of export performance during this period include a notable improvement in the average unit value of exports from 97 paise to Rs 1.06 a metre, an impressive increase in exports to Ceylon, Aden, Indonesia, Afghanistan, Hongkong, Italy, Yugoslavia, Mauritius, Kenya, Ethiopia and capture of new markets comprising Czechoslovakia, Hungary and East Germany. However, judged by the export performance during the first five months of 1964-65—April to August—with exports amounting to no more than Rs. 2.5 crores, it is extremely doubtful whether exports this year would show any appreciable increase over those of the previous year, let alone reaching the target of Rs. 12 crores.

In his speech at the recent annual meeting of the Silk and Rayon Textiles Export Promotion Council, the chairman, Mr. D. N. Shroff, pointed out that the decline in export activity during the current year had been due primarily to some unfavourable factors at home. One of these was the indiscriminate linking of imported art silk yarn, against the exports of a number of items for which it is not a raw material. This imparted considerable instability to the art silk yarn market, which in turn discouraged manufacturers and exporters from entering into export commitments. The scheme has now been withdrawn, but it has already done a lot of damage. Another factor which has adversely affected the export trade is the arrangement under which spinners, who are under an export obligation, by exporting rayon and synthetic fabrics. The items exported, overseas markets and the buyers being the same for both the spinners and the rayon manufacturers, the former who are granted incentives on a different basis and which is comparatively high, offer competition to the latter. It is difficult to defend two schemes with different compensating benefits operating for the export of the same item.

Mr. Shroff's suggestion that a scheme should be evolved under which spinners, who are under an export obligation, are enabled to procure entitlements for importing their requirements of raw materials deserves to be considered carefully. It would be unfortunate if the preferential benefits given to spinners and the violent fluctuations in yarn prices were to be allowed to undermine seriously the Council's export promotion effort. Mr. Shroff has rightly urged the authorities to look upon the incentive in the perspective of its compensatory effect and the degree of its neutralisation resulting from the decline in yarn prices and to take timely corrective action in maintaining stability of yarn prices. Yet another factor which is stated to have been hampering exports is the schedule of international prices because of inadequate prices fixed for certain qualities with a good export potential. The unbalance between the prices attracted by different qualities creates tendencies to export such items which give the maximum incentive benefit even when those items have no established demand in world markets. Such tendencies are unhealthy as items are traded for the price and not for the demand and have an overall damaging effect on the goowill that is built up for the product as well as the trade. It is heartening to hear that the schedule of international prices is in the process of being suitably revised in order to overcome the existing shortcomings.

With the domestic production of rayon and synthetic fabrics continuing to show a steady increase and world trade in man-made fibre continuing to grow, the outlook for the exports of rayon fabrics from India would not seem unpromising. But the situation which the rayon trade has of late been experiencing highlights the need for urgent examination of the approach to the incentive allowed at present, and for reinforcing the existing export effort suitably so that the trade can withstand vicissitudes of changes in Government policies which may be required in the context of expanded indigenous production as well as increasing foreign competition. Mr. Shroff says that the approach should be such as is directed to procure adequate raw material for maintaining and expanding the present supply position whenever required, as well as to allow adequate compensation out of the incentive for the loss incurred in an export transaction.

Mr. Shroff has rightly emphasised the need for strengthening the export effort by reinforcing the present system with a suitable institutional arrangement so that the individual attempt to organise trade on scientific lines supported by proper merchandising policy, is not retarded by undesirable elements in their pursuit of quick gains. The Export Promotion Council seems to be fully seized of all the problems. The Council has already set out a programme, covering institutional arrangement, publicity and market studies, which is intended to generate activity in various directions and which will help in achieving the export target. But it will be difficult to meet the challenge of growing foreign competition unless the manufacturers are able to produce quality goods to suit consumer preferences abroad and market them at competitive prices. This underlines the pressing need for modernisation of the machinery employed by the industry. The Government has allowed full utilisation of the entitlements earned for the import of machinery. It is for the industry to think in terms of evolving a scheme within itself which could help in modernising the machinery.

Expanding Plastics Output

The plastics industry has become a key and dynamic one in today's world. Its technology and science are changing the very mode of modern life. In India, the industry is still in its infancy, but its development has been quite rapid over the past years. In 1963, it achieved a production of 25,000 tons, against a capacity of nearly 30,000 tons. Consumption of plastic goods in India is increasing every year despite restricted imports and the limited indigenous production of raw materials. The present consumption of plastics is estimated around 35,000 tons, while the third plan has fixed a production target of 74,000 tons of raw materials for the industry. Taking into consideration the progress achieved by the Indian industry so far, the pattern of growth in other advanced countries, and the fresh avenues opened up for plastics in industry and agriculture, the Plastics Panel has suggested a capacity target of 400,000 tons for the fourth plan. The estimated demand for plastics by 1970-71 is expected to be of the order of about 275,000 tons.

The achievement of the plan targets is possible only if the petro-chemical industry is developed in the country, offering adequate basic chemicals at competitive prices. At present, the industry is largely dependent on imported raw materials, but these are very much restricted because of the difficult foreign exchange position. Total imports of synthetic plastics raw materials in powder and other primary forms amounted to Rs. 4.71 crores in 1963-64, compared with Rs. 6.48 crores in 1962-63 and Rs. 7.77 crores in 1961-62. In view of the heavy reduction in imports, it is scarcely surprising that the industry which had maintained a steady progress for the last many years, received a setback last year due to an acute and prolonged shortage of polyethylene—an essential and high tonnage plastics raw material.

In his welcome speech at the All-India Plastics Manufacturers Conference, held recently in Bombay, the chairman of the Reception Committee, Mr. Kantikumar R. Podar, pointed out that although the Government had belatedly taken some measures to overcome the shortage by importing raw material from the rupee payment area, the supply position still continues to be difficult and many converters are denied supplies of polyethylene. That many factories should be obliged to curtail their output due to the raw material shortage seems unfortunate, especially when the industry is known to be making steady progress on the export front. From a mere Rs. 73.67 lakhs in 1959-60, plastics exports rose to a little over Rs. 1 crore in 1962-63 and further to Rs. 2.643 crores in 1963-64. It must, however, be conceded in all fairness to the Government that the increase in exports has been possible largely due to the various measures taken by the Government, the chief among them being the refund of duties (Customs and excise), supply of raw materials at concessional prices, import entitlements against exports, participation in world fairs and sending of delegations to explore foreign markets. The Plastics and Linoleum Export Pormotion Council is taking energetic steps to augment exports, but the success of the efforts must ultimately depend on the competitive strength of Indian goods.

High costs constitute a continuing problem for the plastics industry. Mr. Kantikumar R. Podar was emphasising the obvious when he pointed out at the conference that unless and until the converters installed the latest types of machinery, which alone can bring down the cost of production and at the same time produce goods of quality acceptable to overseas buyers, no substantial progress could be made in exports. He pleaded for a flexible policy towards the imports of machinery, particularly those which were essential for the export promotion programme. The two projects with foreign collaboration, which are already under implementation and are making satisfactory progress, will before long be able to supply standard types of injection moulding machines. But there are various other types of machinery such as extruders, calenders, embossing rollers and blow moulding machines, which are not produced in the

country. They are very essential for the progress of the industry as a whole. Mr. Podar urged the Government to accord the plastics industry the high priority enjoyed by industries like iron and steel, coal, tea, so as to be entitled to the tax concessions enjoyed by them. He added that adequate assistance and encouragement from the Government were necessary for maintaining a high tempo of growth. Mr. Podar also urged relief in excise duty on plastics which stood at an exorbitant rate of 24 percent and yielded nearly four times the revenue anticipated in the Budget—Rs. 1.6 crores, against Rs. 40 lakhs.

Rationalising Coal Uses

The crisis of overproduction facing the coal industry was analysed by Mr. D. C. Driver, in his speech from the chair at the annual meeting of the Coal Consumers Association of India in Calcutta last week. Some of the basic factors responsible for the crisis, in Mr. Driver's view, are as follows: (1) "vacillating vicissitudes" of declining targets of coal and steel in the sluggish Indian economy; (2) embarrassing surpluses of low- and medium-grade coals, compelling distress sales below cost; (3) amalgamation of small collieries producing non-coking coal, adding only to the output of unwanted grades; (4) setback to planning due to lack of foreign exchange and diversion of available finance to more urgent needs; (5) inability of the private sector, which is in "debt and doubt", to advance with hope; and (6) unrealistic price policies. The speaker did not comment on the proposed coal target for the next five year plan, nor on the pattern of allocation of shares to each sector of the industry, but made some suggestions as to how the uses of coal might be rationalised. He rejected the idea that 30 million tons of low-grade coal can be absorbed in the villages replacing cow dung as domestic fuel. It is not economically practicable at present. The villager gets his cow dung practically free, and he is not likely to spend Rs. 50 or Rs. 60 a ton for coal without the Government subsidising its consumption heavily. The better alternative, in Mr. Driver's view, is the gasification of low-grade coal under high pressure, so that it can become an important source of industrial and domestic fuel. The gas can be carried by a network of grids and inter-connections over fairly long distances. The Durgapur Projects of the West Bengal Government is already doing this on a limited scale by supplying gas to Calcutta. Mr. Driver also holds the view that coal washing is rather uneconomic, because of the high capital cost of washeries and the large outturn of middlings which are hard to dispose of at present. Since the quality of coking coal seems to be deteriorating steadily, it would not be a bad idea to import low-ash foreign coal and blend it with the inferior grades available in the country. Some organisations connected with the Government including the Central Fuel and Research Institute are working on this idea, and experiment is being carried out with a grade of Australian coal.

Presiding over the annual meeting of the Geological, Mining and Metallurgical Society of India, in Calcutta last week, Mr. S. N. Mullick, dealt with the problem of coal surplus. He felt that there was hardly any other industry which was so problem-ridden and at the same time so badly neglected as the coal industry. In fact, since its inception the industry has been suffering from one problem or another, and at times from a multitude of them. Discussing the current slump in demand, Mr. Mullick said that the Government's overestimation of consumption requirements was mainly responsible for this. The slump has led to a slowing down of production, and with that, the demand for coalmining machinery and equipment has sharply declined. He referred to the fourth plan production programme and said that in the new target of 136 million tons involving an additional output of 60 million tons or so, the public sector has been assigned nearly two-thirds of the extra output target, which its past performance does not justify. The provisions of the Mines Act of 152 relating to accidents in coal mines, also came in for criticism. Mr. Mullick felt that it was unfair that harsh penalties should have been prescribed for managerial lapses including the cancellation or suspension of mine managers' certificates, while the negligence of workers was easily overlooked. During the years from 1957 to 1961, the average number of deaths occurring in the 825 mines in India was 262. According to a report of the Chief Inspector of Mines, more than 50 percent of the accidents occurred as a result of misadventure, while about 30 percent were attributed to the faults of the subordinate staff. Most of the accidents, in any case occurred mainly because of workers' negligence.

Panel Report on Cotton Fabrics

The need to bring down the production costs and prices of essential commodities for containing inflationary pressures in India as well as to promote exports can be scarcely over-emphasised. Cloth is not only a necessity of life, but it is also an important foreign exchange earner. That the Government should have given up the third plan export target of 850 million yards of cotton textiles as unattainable and that it should be content with keeping the same target for the fourth plan, underlines the gravity of the situation. A committee on cotton fabrics had been set up to recommend how best costs and prices of cotton textiles could be brought down to reasonable levels. The full report of the committee is not yet available, but from the extracts of its recommendations placed before the Lok Sabha by the Deputy Minister of Commerce, Mr. S. V. Ramaswamy, it appears that the committee has simply restated the problem. It has suggested that reduction in costs to the extent of 15 paise a yard is the minimum to be attmpted and that it would be well (quite naturally) to exceed this target.

The committee has recommended that economies in cloth production should mainly be sought in the price and usage of raw cotton and in the level of wages and labour productivity. This should have been very obvious because between them, raw cotton and wages account for nearly 80 percent of the ex-works costs. The committee says that the prices of Indian cottons are unduly high and out of parity with those of foreign cotton. It points out that a proper economic price for cotton cannot be derived from mere trade experience and, in any case, must be in proper alignment with the prices of other agricultural commodities.

One wonders whether the Government has ever had any integrated price policy for agricultural commodities. If cotton prices in India have been pushed well above world parity, the explanation lies in the chronic unbalance between demand and supply; domestic production of cotton has failed to keep pace with the industry's growing needs. That is why the country has had to spend huge amounts of valuable foreign exchange on cotton imports and the cost might have been formidable but for the supply of cotton by the U.S.A. under P.L. 480. While there is some substance in the committee's view that there is considerable scope for more economic use of raw cotton, cotton prices can be brought down only through more abundant supplies, mainly through increased indigenous production. What is more, production will have to be stepped up by increasing the yield, as the scope for bringing more area under cotton is limited. The industry would very much like to be assured of adequate supplies of cotton at reasonable prices but there is little that it can do to keep these prices down. Next comes the question of wages and labour productivity. This again is nearly beyond the control of the industry.

Engineering Units in Howrah

The working of the numerous small industries in Howrah, where the concentration of such units is said to be the highest in the country, has been surveyed by Jadavpur University, at the instance of the Reserve Bank of India. The survey was conducted between July 1960 and April 1961 by the Econometric Research Unit in collaboration with the Engineering Faculty of the university. The operations of some 200 firms, each employing 20 or more persons, were intensively surveyed, and a "quick survey" was made of the working of 396 out of the 943 smaller units, each employing less than 20 persons. Perhaps for the first time, a study of idle-time, work-time and machine study in the field of small industries was carried out.

Useful data have been collected on several important aspects of the working of these units; the aspects cover capital, labour, costs and output, net value added by manufacture and its distribution between labour and capital, finances, personnel and works management, and marketing organisation. An outstanding feature of the study is that the engineering industries of Howrah display a close inter-dependence, which is evident from the fact that orders are farmed out among neighbours This is perhaps the main reason why despite congested surroundings, new units are constantly springing up there. As the survey shows, most of the units are basically small. Few of them have any internal organisation for production, purchase, sales and accounts. Their factory lay-out is often unscientific. But unlike the medium units, the machines in the smaller units are mostly new. Therefore, a rather disturbing feature is that most of the units with relatively new machines are working below capacity. This is presumably on account of raw material shortages. Despite their obvious growth prospects, these industries are hard put to it to find the working capital. Loan facilities extended by banks are all too often meagre. The survey suggests that with adequate financial and technical assistance, a large number of these units could become viable "and contribute effectively to the industrial potential of the region." Capital goods with the units have also been enumerated according to their type, specification and age. This has made possible an estimation of their replacement cost. It has also collected certain interesting data on capital-intensity and labour productivity which are relevant for policy formulation.

PUJA HOLIDAYS

On account of the Puja holidays, there will be no issue of CAPITAL on 15th October, 1964. The first issue to be published after the holidays will be dated 22nd October, 1964.

THE MONEY MARKET

THE longer we have experience of the Calcutta money market, the more certain does it appear to us that the accounts given of it in local papers are generally misleading. The reports given of it are usually extremely curt, and appear to be based solely upon the willingness of the Exchange Banks to lend to or borrow from each other, to take money from private firms on short deposit or to lend short on Government Paper. The indications, thus afforded, represent only one section of the money market and taken by themselves are very frequently illusory. In fact we may assert that they are nearly always misleading when money is running out. To those who have watched our money market for a period of years it must be evident that the first signs of money running out are discovered in Burra Bazar, secondly in the figures of the Presidency Bank, and lastly, in a sudden change of front on the part of the Exchange Banks. It almost invariably happens that the latter on the occasion of a rise in the Bank rate, after a long spell of apparently cheap money, veer round from being lenders at any rate to bring borrowers at full rates. Consequently, as we have already stated, the indications of the money market, as afforded by the attitude of the Exchange Banks, are frequently misleading. The weekly statements of the Bank of Bengal are also an uncertain guide as they show the result on only one day in the week on which it may happen, and often does happen, that the changes are fortuitous and temporary. Several successive weeks' statements taken together tell with fair exactness how a very large section of the money market is being influenced, but the knowledge is belated before the general outside public can acquire it. The best guide available to the public when money is running out is the comparatively small section of the money market represented by Burra Bazar.

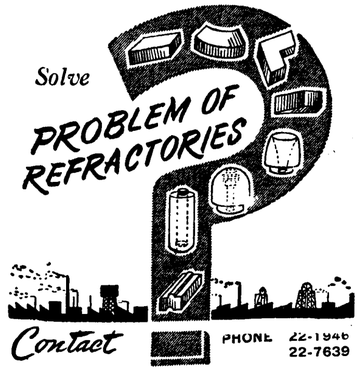
A Ditcher's Diary



ONE COMMENTATOR, I FIND, HAS QUESTIONED THE *raison d'être* of the Foreign Ministers conferences which, as a matter of routine, precede the so-called summits. I couldn't agree more, extending my scepticism to the summits. From the Indian point of view in general, and Mr. Lal Bahadur Shastri's in particular, it may not be a bad thing that, after all, Mr. Shastri is in Cairo. He needs to be known to the world, and through him the new India. There will be nothing very concrete to show at the end of it all; there never was much even with Nehru participating. Most international conferences are a waste of time; but I cannot see Mr. Shastri suggesting a conferenceless year. The suggestion, if made, has not the slightest chance of being accepted. Like hashish or marijuana, foreign travel is habit-forming; and I will not be altogether surprised if Mr. Shastri, who had hitherto gone only to Nepal, becomes a mild addict. If he doesn't, officials will egg him on. But back to Cairo. What remains of non-alignment? A lot. Non-alignment would be a very odd philosophy indeed if its content were to evaporate with its acceptance by the two super-Powers, as we are assured it has been accepted. The dead horse of anti-colonialism has been flogged again. Some in India need to appreciate that the horse is not all that dead for those in Southern Rhodesia, although there it is an unusual kind of imperialism. Cairo must have noticed the victory of the ruling Rhodesian Front in the two recent by-elections: its implications are still unclear, for Mr. Ian Smith has spoken of the birth of a new Rhodesia while everybody knows that what he wants is old Rhodesia. Unilateral independence? There was little that Cairo could do either way. Those who have prevented the conference from being more contentious than it is have reasons to congratulate themselves: avoidance of unpleasantness is not so negative an achievement as it sounds, when one considers the state of the world today.

MORE THAN ONCE IN THE PAST I HAVE WRITTEN ON the extreme touchiness of our legislatures. Is it possible that in Uttar Pradesh some gentlemen overreached themselves in challenging the judiciary itself? The Supreme Court has since pronounced on the subject with dignity and objectivity. Not for the first time, Mr. A. K. Sen, the Law Minister, has given insufficient evidence of his respect for the judiciary, which is somewhat strange in so distinguished a lawyer. Let us forget the particular U.P. case, about which we have not heard the last. That Houses of Legislature should in the public interest have some privileges is not to be doubted; many a debate would be insipid and unfruitful if members had to speak in constant fear of being hauled up for libel or defamation. The public may, however, soon begin to feel that some legislators at any rate are taking the term "privilege" rather literally and then in a narrow sense. Representing ordinary folk, people like you and me, they then demand to be deemed a class apart. What they seem to insist on is not legitimate protection in the performance of their public duty but the right of free access to precisely those things to which ordinary citizens are not entitled. What they want, in other words, is the right to do and say what they jolly well like, with nobody ever questioning their actions or utterances, while they retain the right to question and condemn the deeds or words of everyone else. A nice position to be in, isn't it? But, as the Press has been reminded and now realises, it is not good for independence to ask for too many privileges; the Press has none, beyond fair comment in the public interest which too can be variously defined, frequently to its disadvantage. Unless legislatures in India devise some self-imposed checks on their behaviour, besides the quinquennial renewal, the people one day may. Though at a tremendous cost, parliamentary democracy in India is not doing too badly; but I must respectfully remind our elected gentlemen that democracy hereabouts is not operating in a sellers' market. *Caveat vendor.*

WE ARE ALREADY FAMILIAR, AT LEAST IN WEST Bengal, with a meatless day, which is also dry and riceless in restaurants. But, oh, a meetingless day a week sounds so much meatier! This is intended as a compliment, although, Mr. Shastri, a strict vegetarian, may not readily think so. But imagine the parallels and the possible consequences. Mahatma Gandhi had a day of silence. Is the meetingless day in New Delhi going to be a day similar? Somehow I can't see it. The temptation to swap the latest gossip about that Deputy Minister and his alleged girl friend (or business friend) must be irresistible. It is, I am sure, an exaggeration, that this was principally the business conducted at those inter-ministerial meetings where decisions were expected to be taken on the spot. The Prime Minister's decision seems to be that the time has come to call a halt to wasteful confabulations or coffee meets. Before 1947 decisions used to be taken, still tardily, on the "old boy" basis: Jim rang up Bob and everything was ticketiboo. (O.K. came later.) There has since been a great divide, insufficiently noticed. In some ministries there is an I.A.S. boss; in others a man with the magic initials, I.C.S. The line of communication between the two is more tenuous than the public knows. If my information is not wholly incorrect, most of the conferences now to be off for at least once a week saw a tussle between one class and another. Ministries represented by Ministers always ticked off those represented by Deputy Ministers; ministries with an I.C.S. delegate always took it for granted that one with an I.A.S. spokesman had to be put in its place. Decisions were the last things taken. All right, then: there will be fewer conferences. May I now suggest that the officials immediately demand that Ministers address fewer public meetings and attend fewer public receptions? This seems to me entirely legitimate, for it is at these gatherings that Ministers make promises which can never be honoured within the rules. That's the beginning of corruption at more levels than one. What Mr. Shastri probably has in mind is that even Ministers and officials should have some time for thinking instead of talking. Alas, a lack of time is seldom the main impediment to thinking.

FORTUNATELY FOR US, TELEVISION IS NOT YET A factor in this country's election campaigns. I hope we shall be free of its tyranny for some years yet, because from what one can see of the influence it has at present in Britain and the United States, democracy is better off without it. I am old-fashioned enough to believe that the important thing in elections is what is said about policy, not how a particular politician says it, or what he looks like as he does so. Yet, from what I hear, President Johnson dare not explain his own admirable policies on television without first being groomed in techniques which are more appropriate to an actor than a statesman. The "star system", thanks to television, is now as firmly established in western politics as it is in the cinema. Mr. Harold Wilson, for instance, has been cultivating his screen personality most carefully in recent months; his advisers have decided that the pipe he habitually chews does not square with the image he wants to create of a dynamic nation-manager. It was said of the 1959 election in Britain that one of the reasons for Labour's defeat was the old-fashioned devotion it showed to policy rather than personality. To some extent that was inevitable for a Party which has always been long on good intentions and short on comforting words. But this time it is different; while retaining its fondness for policies, Labour is taking great pains to put across at least its leading personality, Mr. Wilson. Strangely enough, the Conservatives seem to be failing to do that this time. In the absence of Mr. Macmillan, a television "natural" if ever there was one, Sir Alec Douglas-Home is simply not making the run-

ning. Sir Alec is a colourless personality at the best of times; his main electoral use to the Party has always been as an aristocratic contender for what is derisively known as the "forelock pulling" vote. As a television personality, he projects neither the dynamic image of a Wilson nor the paternal one of his predecessor.

A FRIEND WHO HAS JUST RETURNED FROM BRITAIN assures me that there will be no racial issues in next week's general election, despite the fact that more than one in every hundred voters there is now coloured. Unlike India, where a Briton can live for the major proportion of his life and still not be entitled to vote in a general election, in Britain Commonwealth immigrants are included in the voters' rolls if they happen to be in the country when these are being compiled. The result is that their numbers would now make them a powerful force in some constituencies, or conversely a potential liability, if any Party cares to take advantage of the fact. Fortunately none has yet tried, except the Fascists and they do not count. There have been recent examples of overt racialism: the revival of the by-election slogan: "If you want a nigger as a neighbour, vote Labour", promptly disowned by the candidate to whom it was attributed, is one of them. But on the whole there is a marked reluctance—amounting really to fear after what happened recently in the United States—to wake the sleeping racial monster. My friend says that the main source of irritation between resident and immigrant sections of the community at the moment, housing, only incidentally touches on the race issue. He was talking to a postman the other day, a mild little man who spoke without bitterness about having fought for his country for six years during the war and not being able to get a house since because he had always been crowded off the housing list by families with more children. Now the immigrants are being given first priority because, as he put it, they can always find any amount of children whether they are their own or not. Such incidents could eventually give rise to serious grievances.

WITH MR. NEHRU'S DEPARTURE FROM THE INDIAN scene there has been, in India's international rôle, a reduction not in degree but in dimension; I have been nagging away on this theme for months now. Whether Mr. Lal Bahadur Shastri has more or less gracefully accepted this new rôle will not be clear until he has completed his visit to Cairo. He has, however, given welcome indications that the scale is to be reduced domestically also. He is entirely right. He first said that he would like too see community development workers do some footwork; jeeps are useful but have in more ways than one contributed to the estrangement of Authority from the people. Now Mr. Shastri has hit upon the idea of small cars for Ministers. From what gossip I have heard, Mr. Shastri was not being politically diplomatic or diplomatically friendly to colleagues when he made the admission in the Rajya Sabha that, in the matter of setting examples of austere living, he was "also guilty of that mistake". But let that pass. Mr. Shastri's desire to help the indigenous motor-car industry will no doubt comfort some souls, without altogether silencing all critics. Let that pass too; I'm, believe it or not, in a forgiving mood at the moment. The Vice-President, Dr. Zakir Hussain, was right in saying that the Government had to begin somewhere; perhaps small cars for Ministers are as good a beginning as any. The symbolic value of the beginning can, however, be exaggerated; its essential insubstantiality needs to be exposed just the same. The exceptions the Prime Minister has already made for Chief Ministers and bureaucrats turned tycoons in public-sector industries are already evidence that the iron curtain between Governments and imported diplomatic cars is going to be flexible enough to be meaningless. But, the car is not the thing. What matters is the smaller man sitting inside the small car under the new dispensation; he will not grow bigger. Mr. Shastri can do very little about that. He is also certain to be persuaded that an Indian ambassador abroad in a small Ambassador does not represent India's dignity. Oh, the deceptiveness of those symbols of austerity!

THE DITCHER

Guide for Investors

MARTIN BURN LIGHT RAILWAY GROUP DISAPPOINT

THE results of the light railway companies under the managing agency of Martin Burn Ltd for the year ended March 1964 have been published. The Shahdara (Delhi)-Saharanpur Light Railway Co. Ltd has incurred a net loss of Rs. 79,531, against one of Rs. 1.21 lakhs for 1962-63. Gross earnings amounted to Rs. 39.64 lakhs (against Rs. 37.54 lakhs) and the working expenses to Rs. 37.59 lakhs (against Rs. 36.28 lakhs). Replacement and renewals are allocated Rs. 1.51 lakhs (against Rs. 1.06 lakhs). The loss has been offset by transferring funds from general reserve. The directors think that this railway cannot be run at a profit. The position has been explained to the Central Government and the Government of Uttar Pradesh. They have also suggested that either the railway should be nationalised or it should be given financial assistance. The Central Government is unwilling to accept any of the suggestions, while the State Government has not yet given any reply to the Company. The dividend has been passed.

The Howrah-Sheakhala Light Railway Co. Ltd has reduced the taxable ordinary dividend from 4 percent to 3 percent. At the present price of Rs. 36.50 a share of Rs. 100 each, the yield amounts to 8.2 percent. Gross earnings have amounted to Rs. 9.35 lakhs (against Rs. 8.99 lakhs) and working expenses to Rs. 7.97 lakhs (against Rs. 7.92 lakhs). Replacement and renewals are allocated Rs. 52,000 (against Rs 16,241). General reserve is allocated Rs. 13,000, leaving a carry-forward of Rs. 1,006, against Rs. 2,342 brought in.

The taxable ordinary dividend of the Howrah-Amta Light Railway Co. Ltd has been reduced from 4 percent to 3 percent and the yield amounts to 7.5 percent at the present price of Rs. 40 a share of Rs. 100 each. Gross earnings rose from Rs. 29.89 lakhs to Rs. 31.36 lakhs, and working expenses from Rs 26.81 lakhs to Rs 28.04 lakhs. Replacement and renewals absorb Rs. 1.25 lakhs (the same). The carry-forward is Rs. 2,077, against Rs. 6,372 brought in.

Better Results from Shipping Corporation

THE State-owned Shipping Corporation of India continues to make good progress. Its working results for the year ended March 1964 show an all-round impressive improvement over the previous year's performance. The cargo handled, operating earnings and gross profit—all show an appreciable increase. The cargo handled during 1963-64 amounted to 1.327 million tons, against 1.189 million tons in the preceding year; over the past five years the cargo handled by the Corporation's vessels has gone up by nearly three-and-a-half times. Earnings by way of freight, passage money, charter hire, etcetera, increased from Rs 10.43 crores to Rs. 13 crores. The gross profit rose from Rs 2.98 crores to Rs 3.31 crores. After transferring Rs. 80 lakhs from the development rebate reserve and writing back Rs. 3.10 lakhs being excess provision relating to previous years no longer required, the amount available for disposal comes to Rs 422.49 lakhs.

Appropriations include depreciation Rs. 1.789 crores (against Rs. 1.557 crores), development rebate Rs. 1.32 crores (against Rs. 80.20 lakhs), taxation Rs. 12.70 lakhs (against Rs. 10 lakhs), gratuity reserve Rs. 5 lakhs (against nil) fleet special repairs reserve Rs. 15 lakhs (against Rs. 21.08 lakhs), staff welfare reserve Rs. 1 lakh (the same) and general reserve Rs. 60 lakhs (against Rs. 32.70 lakhs). After making these allocations and some minor adjustments, there remains a sum of Rs. 3.64 lakhs to be carried forward, against Rs. 22.359 brought in.

The directors think that the prospects of the Corporation handling increasing volume of cargo and achieving higher earnings in the coming years are bright. The Corporation's fleet at present consists of 29 vessels aggregating 236,586 G.R.T. Firm orders for 20 vessels totalling about 200,000 G.R.T. have already been placed. Other shipbuilding orders, including bulk carriers and proposals for purchasing two or three second-hand vessels, are under the active consideration of the Corporation. The Corporation confidently looks forward to having a fleet exceeding 500,000 tonnes in 1967. The Corporation entered the U.S.A. trade in May 1963, and it has firmly established itself in this competitive trade. Its vessels have fully participated in the increased trade between India and Russia, Rumania, Bulgaria and Poland. The Corporation hopes to participate in the proposed India-U.A.R. shipping service which is likely to be inaugurated next year. As against its subscribed capital of Rs. 23.45 crores, the Corporation's reserves and surplus amount to Rs. 4.98 crores. Depreciation amounting to Rs. 7.97 crores has been provided against the fleet account of Rs 34.98 crores, leaving a net block of Rs. 26.99 crores.

Muttra Electric Supply Pays the Same

MUTTRA Electric Supply Co. Ltd has repeated the taxable ordinary dividend of 9 percent for the year ended March 1964. At the present price of Rs. 11.06 a share of Rs. 10 each, the yield amounts to 8.1 percent. After providing Rs. 91,464 (against Rs. 81,284) for depreciation, Rs. 1.50 lakhs (against Rs. 63,000) for taxation, Rs. 15,516 (against Rs. 14,618) for contingencies reserve, Rs. 12,235 (against Rs. 23,411) for development reserve, Rs. 33,791 (against Rs. 8.154) for rebate to consumers, the profit has improved from Rs. 79,925 for 1962-63 to Rs. 81,127 for 1963-64. General reserve is allocated Rs. 30,000 (against Rs. 23,500), leaving a carry-forward of Rs. 5,727, against Rs. 12,919 brought in. Units sold rose from 7.1 million to 8 million, and revenue from Rs. 13.71 lakhs to Rs. 18.75 lakhs.

Less from East India Coal

RAISINGS and despatches of the East India Coal Co. Ltd for the year ended April 1964, dropped mainly due to the reduced offtake by the steel plants. The accumulation of stocks of coking coal at pitheads seriously hindered output and raised production costs. Although the selling price of coal was increased by the Government in March 1964, the producers of coking coal have not benefited much because the price increase was made conditional upon determination of the grade of coal by joint sampling and analysis at destination. In practice, joint sampling has become impossible because of various difficulties. In their report, the directors mention that although tax relief was obtained by the Company under the Finance Act 1964, it is inadequate to provide funds for further expansion during the fourth five year plan. No 3 pit at Kendwadih was sealed off since 1959 due to fire, but it has now been successfully reopened. The reorganisation and development of the collieries could not be completed due to the accumulation of pithead stocks of coal. The development programme of the subsidiary Company has been delayed because imported equipment is taking a longer time to arrive than was expected earlier. The subsidiary has incurred a loss for 1963-64.

The profit has risen from £149,174 for 1962-63 to £160,962 for 1963-64, after providing £85,533 (against £71,400) for depreciation and £64,329 (against £197,625) for taxation. The taxable ordinary dividend has been reduced from Rs. 2.75 to Rs. 2 a share of £1 each. The yield amounts to 7.1 percent at the present price of Rs. 28.25 a share. General reserve is allocated £75,896 (against £20,015) and development rebate reserve £57,994 (against 52,818).

Patna Electric Supply Repeats

THE Patna Electric Supply Co. Ltd is making satisfactory progress and the future outlook is considered encouraging. Units sold during the year ended March 1964, rose by 9.16 percent over those of 1962-63. The Company's transmission and distribution systems are being expanded to meet the rising demand for energy. It has also taken steps to install new equipment to complete the expansion project.

The profit has risen from Rs. 2.12 lakhs to Rs. 7.11 lakhs, after transferring Rs. 6,141 (against Rs. 9,294) to depreciation, Rs. 4.88 lakhs (against Rs. 4.60 lakhs) to provision for taxation, Rs. 81,251 to development reserve and Rs. 54,845 to contingencies reserve. General reserve is allocated Rs. 1.10 lakhs. A taxable ordinary dividend of 10 percent has been repeated, which works out to a yield of 9.5 percent at the present price of Rs. 10.50 a share of Rs. 10 each. The carry-forward is Rs. 61,066, against Rs. 8,329 brought in.

Megna Mills Reduces Dividend

THE directors of the Megna Mills Co. Ltd mention in their report for the year ended March 1964 that it is essential to maintain stable prices for jute goods to discourage the use of substitutes. Although buffer stocks of raw jute have been created to restrain fluctuations in prices, the recent release from these stocks has had little effect on the price of fibre. The Company installed 275 carpet-backing looms during 1963-64.

The profit has declined from Rs. 1.07 crores for 1962-63 to Rs 68 lakhs for 1963-64, after providing Rs. 27.90

Subsequent to the merger of De Twentsche Bank N. V into the Nederlandsche Handel-Maatschappij, N.V., the business conducted in India since 1920 by the

1788
THE E.I.D.-PARRY GROUP
1964

A FREE MERCHANT LANDS IN MADRAS

The Madras Presidency of 1788 consisted of Fort St. George, the surrounding hamlet of Madras City, and the Northern Circars.
It was in that year that Thomas Parry completed his five months' voyage from England and set foot in Madras and established himself as a Free Merchant, trading in various commodities.

Could he have dreamt then that, 176 years later, the firm founded by him would be contributing so much to the economy of the country, being engaged in the manufacture of fertilisers, sugar, confectionery, industrial and potable alcohol, chemicals, acids and sanitaryware in the formulation of plant protection product, in the distribution throughout India of light and heavy machinery, pharmaceuticals and consumer goods, and in insurance, and shipping.

THOMAS PARRY

The E.I.D.–Parry Group of today consists of E.I.D.-Parry Ltd., Parry & Co., Ltd., and a number of subsidiary and associated concerns, in all nine companies of substance, providing employment for more than 10,000 people.

The Group continues to increase and broaden its activities, to provide employment to increasing numbers, and to play its full and responsible part in the country's drive to achieve economic independence and raise the standard of living.

THE E.I.D.—PARRY GROUP, MADRAS.

PLAY YOUR PART IN THE NATIONAL DEFENCE EFFORT

PDS-PP-364-A E

lakhs (against Rs. 17.47 lakhs) for depreciation. The taxable ordnary dividend has been reduced from 22 percent to 12 percent which offers a yield of 9.5 percent at the present price of Rs. 12.62 a share of Rs. 10 each. Taxation absorbs Rs. 36 lakhs (against Rs. 51.25 lakhs), contingency reserve Rs. 10.50 lakhs (against Rs. 86 lakhs) and development rebate reserve Rs. 12 lakhs (against Rs. 11.25 lakhs). The carry-forward is Rs. 3,495, against Rs. 37,681 brought in.

Election to Nedeem Tea Board

THERE was no lack of information at the recent annual meeting of Nedeem Tea Company in London. Questioned by representatives of Mr. K. C. Sethia, and by counsel for one of the Sethia interests, the chairman provided detailed breakdowns of the marketing and general expenses of the Company. Arising from these questions, Mr. J. R. Vernede disclosed the basis of fees and commissions paid to the Calcutta and London agents and secretaries. The Calcutta agent is paid 2½ percent on crop proceeds and 1½ percent on profits, while London has 1 percent on the crop and ½ percent on profits. This looks reasonable enough, compared with the significantly higher average levels that probably apply throughout the industry. Mr. Vernede reported that so far this year, the crop had improved by 900,000 lbs to over 6.2 million lbs. Prices realised were about 1d a lb better.

Moves to elect Mr. Sethia to the board in place of a retiring director were heavily defeated on a poll. The chairman gave an assurance that queries raised on the basis on which the board's pay was calculated would be considered by the directors. Surprisingly, no reference was made by any member to the decline in the share price, 13s 6d, against a peak of 27s 3d; since the failure of the Sethia bid for control.

India Jute Cuts Dividend

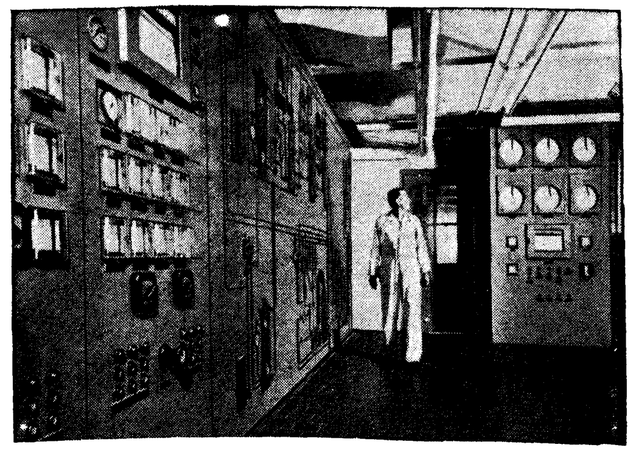
THE India Jute Co. Ltd has cut the taxable ordinary dividend from 18 percent to 12 percent for the year ended March 1964. The yield works out to 9.7 percent at the present price of Rs. 15.44 a share of Rs. 12.50 each. The profit has dropped from Rs. 58.76 lakhs for 1962-63 to Rs. 28.14 lakhs for 1963-64, after transferring Rs. 24.72 lakhs (against Rs. 13.92 lakhs) to depreciation. Development rebate reserve is allocated Rs. 5.54 lakhs (against Rs. 6.40 lakhs), contingency reserve Rs. 2.10 lakhs (against Rs. 49.25 lakhs) and bad debts reserve Rs. 70,000 (against Rs. 1 lakh). Provision for possible loss on forward contracts absorbs Rs. 1.06 lakhs and taxation Rs. 8.25 lakhs (against Rs. 31 lakhs). The carry-forward is Rs. 8,630, against Rs. 4,811 brought in.

Commenting on the outlook for 1964-65 in their report, the directors pointed out that the Pakistani mills enjoy a Government subsidy of Rs. 275 a tonne of jute goods in addition to the low cost of fibre. Although the Indian industry has been asking the Government for a subsidy to counteract the Pakistani competition, the Government has not so far taken any step in this direction. They refer to rising production costs following increased labour emoluments and higher costs of mill stores and power. The Company installed 42 carpet-backing looms during 1963-64. In the cotton section, 36,092 spindles out of the total complement of 47,586 spindles have been installed. It is proposed to install automatic looms in the near future.

Setback to Malayalam Plantations

HAVING recently had their dividend raised from 20 percent to 22½ percent, shareholders of Malayalam Plantations must be prepared for a less rewarding year ahead. In 1963-64, new crop records were established for tea and rubber, but lower profits from both commodities are in prospect for 1964-65. Mr. John Sands, the chairman, reports in his annual statement that the tea estates have been hit by the most prolonged and severe drought for many years with the result that for the first five months of the current year, only 10,036,000 lbs had been harvested, compared with 11,777,000 lbs for the same period of 1963-64. At best, the final tea crop might be around 24 million lbs, against 25.1 million lbs last time.

The rubber crop has also suffered early setback, the harvest up to end-August being 847,000 lbs less at 3,691,000 lbs. The shortfall is entirely due to a strike by tappers. The 1964-65 crop is now unlikely to exceed about 10 million lbs, against 10,800,000 lbs in 1963-64. There is also the prospect of increased costs of production and replanting. With the dividend 1.5 times covered the 2s units at 2s 6d, return 17 percent.



T. Stanes Pays Less

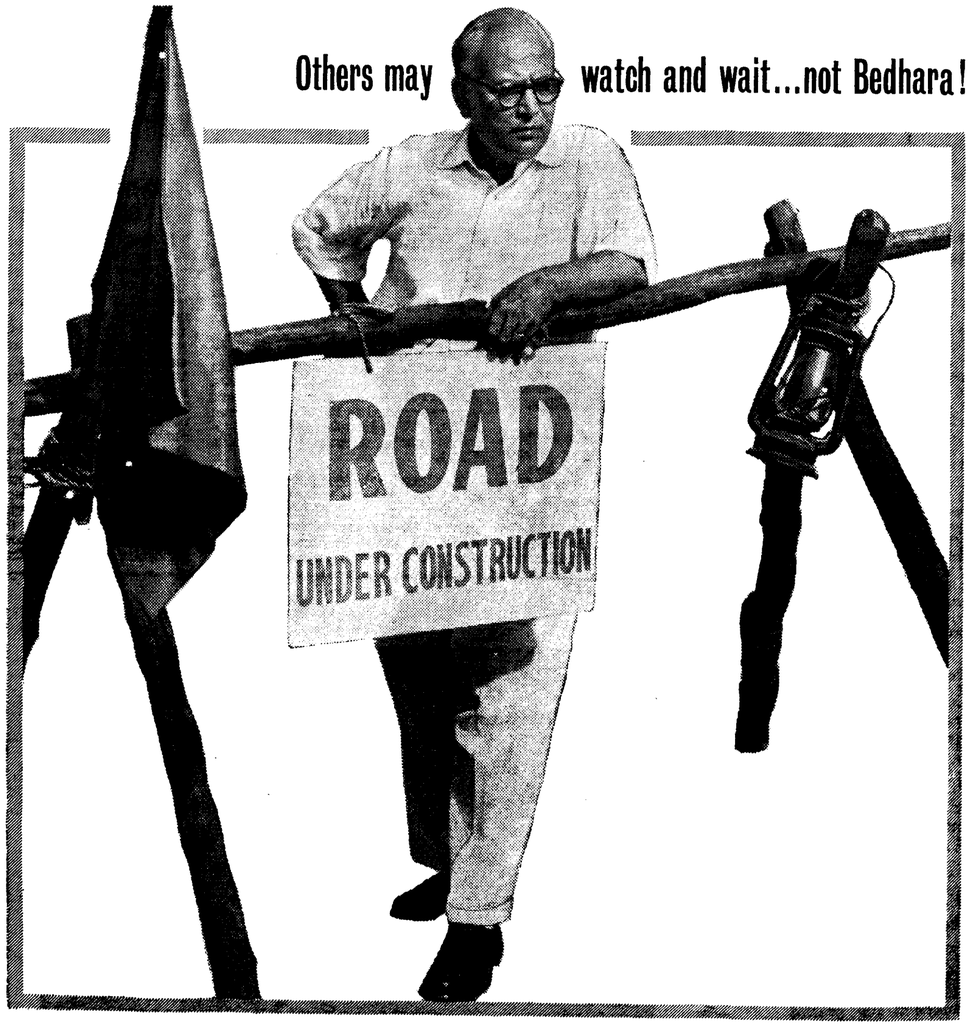
FOLLOWING a drop in profit for the year ended March 1964, the directors of T. Stanes and Company have reduced the ordinary dividend to 30 percent from the previous year's 33½ percent. The profit for the year amounts to Rs. 7,08,581 after providing Rs. 89,059 for depreciation, compared with the previous year's profit of Rs. 9,50,847 after providing Rs. 73,815 for depreciation. With the amount of Rs. 53,666 brought forward from the previous year, the total available for appropriation comes to Rs. 7,62,247. Out of this, the provision for taxation amounts to Rs. 3,20,000 (against Rs. 4,20,000). Additional income tax for previous years amounted to Rs. 38,404. A sum of Rs. 1,460 is transferred to development rebate reserve (against Rs. 7,761).

The interim dividend of 10 percent on ordinary shares amounted to Rs. 1,15,630. The final dividend of 20 percent on ordinary shares amounts to Rs. 2,31,260. The preference dividend at 7 percent amounts to Rs. 8,741. The balance of Rs. 46,752 is carried forward to the next year. The directors' report says that although the turnover during the year has been maintained, the Company and its subsidiaries made a smaller profit due to keen competition from others. There was a decrease in profits for the subsidiary companies too.

Oriental Power Cables Starts Production

IN their report for the year ended May 1964, the directors of Oriental Power Cables Ltd state that the Company has started commercial production of paper-insulated power cables up to 33 kV at its Kotah factory from June 1964. The construction of the factory buildings and erection of plant and machinery were completed in May, and trial runs were started immediately thereafter. Cables of various sizes manufactured by the Company during the trial runs have been found satisfactory. The quality of the cables is stated to have been approved by State electricity boards and other big consumers of cables. In anticipation of achieving the desired production target, the Company has already started booking orders for cables of different sizes from elec-

Look what you get with
HONEYWELL instrumentation



Far more than just instruments, you get a complete control system, custom designed for your specific needs, by men who know your processes.
You get expert, interested assistance every step of the way, with your initial planning and long after your instruments are installed. Blue Star assume full responsibility for the engineering, installation and start-up of your system.
You get training for your instrument technicians in the most up-to-date maintenance methods at the tuition-free Blue Star-Honeywell Instrumentation Education Centre at Bombay.
You get prompt, competent service from your nearest Blue Star office and immediate replacement of emergency repair parts.
These are but some of the plus-values that comprise Instrumentation by Honeywell...and they apply regardless of whether you buy a single instrument, a replacement part or a complete control system.

His life is one of action. He is always ready with help and advice whenever needed by customers. Advice based on 21 years of experience. His job is where bitumen is being used. A Bitumen Sales Representative with Burmah-Shell, New Delhi, Bedhara has travelled a lot. Driving through the changing landscape of Delhi, the Punjab, Rajasthan, the U.P. The wheels of his car humming over smooth, safe bitumen roads.

ALL ALONG THE WAY

... Bedhara meets engineers, planners and construction workers he's known and worked with. Often he stops at a road construction site, discusses problems with engineers in charge and moves on. He advises on the use of 14 grades of bitumen—airfield and road surfacing, hydraulic and industrial applications. 'I've helped plan surfacing of National Highways,' says Bedhara, 'factory roads and even floors of Kennel Clubs.'

TODAY, AS EVER, PEOPLE LIKE BEDHARA ARE WORKING FOR YOU

Bedhara is often on the move. He has made good friends among the engineers and supervisors who share his thoughts, skills and interests.

Bedhara and people like him—at all levels of responsibility—are Burmah-Shell. Today, as ever, they are hard at work... working to ensure that vital petroleum products, essential to India's growth and progress, are brought to you at the right place and time, in the right quantities.

BURMAH SHELL

BURMAH-SHELL are People in the service of the People

tricity boards and other dealers, and it is stated to have booked orders for about seven months' production.

Unfortunately, it has not been possible to get sufficient licences for importing the necessary raw materials to achieve the desired production. The Company has obtained a letter of intent for increasing the present production capacity of paper insulated power cables from 960 kilometres to 1,600 kilometres and also for the manufacture of 640 kilometres a year of P.V.C. cables. With the technical collaboration of Sumitomo Electric Industries Ltd, Japan, the Company now manufactures paper insulated power cables mass impregnated non-draining (or with normal compound), lead or lead alloy sheathed steel tape or steel wire armoured of all sizes and types both for industrial and mining applications. The Company's plant is claimed to be the first to manufacture paper-insulated power cables over 11 kV in India and it can offer 22 kV and 33 kV screened or S. L. type cables. The Company has obtained the I.S.I. mark for its power cables up to 11 kV. Since the commercial production was started after the close of the financial year, there were no sales during 1963-64.

After transferring Rs. 13.01 lakhs to expenditure during construction account and after providing Rs. 22,000 (against Rs. 27,000) for taxation, the Company has incurred a loss of Rs. 59,650. Together with the carried forward loss of Rs. 32,185 from the previous year, the total loss amounting to Rs. 91,835 has been carried forward.

Progress of East Anglia Plastics

REVIEWING the progress of East Anglia Plastics India Ltd in his chairman's address at the annual general meeting of the Company held in Calcutta last Friday, Sir D. N. Mitra said (a full text of the speech was printed in the last week's issue of *Capital*) said that the compunding unit at Dum Dum was making good progress The volume of production was expected to increase in due course. The plasticiser project would start operating soon. He mentioned that the Company intended building a comprehensive integrated unit which is essential for the development of the cellulose acetate industry. Research is essential for developing this industry, and the Company is giving proper attention to this aspect of its production.

Expansion of Mysore Paper Mills

THE directors' report of the Mysore Paper Mills Ltd for the year ended March 1964 states that production during the year has increased by about 8 percent over the previous year and the turnover has improved to Rs. 130,30,769 from the previous year's Rs. 122,98,760. The report adds that the costs of raw materials, chemicals, and labour, etcetera, have all risen while the selling prices remain the same in spite of repeated representations to the Government of India for a suitable increase in the prices.

The net profit for the year amounts to Rs. 9,92,696, after providing Rs. 5,76,201 for depreciation. The previous year's net profit was Rs. 6,37,287, which was arrived at after providing Rs. 6,03,908 for depreciation and Rs. 6,00,000 for taxation. The directors state that no provision for taxation is required as the Company has no assessable income for the year on account of the development rebate allowance. With Rs. 15,216 brought forward, Rs. 1,22,500 transferred from dividend equalisation reserve, and Rs. 21,51,000 transferred from general reserve, the total comes to Rs. 32,81,412. Out of this, the directors have transferred Rs. 21,51,000 (against Rs. 22,800) to reserve for development rebate. The proposed dividend of 9 percent on shares of Rs. 10 each, fully paid, will absorb Rs. 2,25,000. The proposed dividend at 9 percent on the new shares for the proportionate period accounts for Rs. 8,25,000. Provision for taxation on dividend comes to Rs. 78,750. The balance of Rs. 1,662 is carried forward.

The report says that the progress of the expansion scheme to increase the production capacity to 18,000 tons a year has been well maintained. The directors hope that the full benefits of the expansion scheme will begin to be felt when the erection and installation of the pulp plant and modern soda recovery plant are completed in November 1964.

Sijua (Jherriah) Electric Earns More

SIJUA (Jherriah) Electric Supply Co. Ltd has earned a profit of Rs. 1.98 lakhs for the year ended March 1964, against Rs. 1.49 lakhs for 1962-63, after transferring Rs. 1.34 lakhs (against Rs. 1.51 lakhs) to depreciation, Rs. 23,230 (against Rs. 22,396) to contingencies reserve, Rs. 2.81 lakhs (against Rs. 3.73 lakhs) to taxation and Rs. 60,000 (the same) to debenture redemption reserve. A taxable ordinary dividend of 9 percent has been maintained. The yield amounts to 9.4 percent at the present price of Rs. 9.62 a share of Rs. 10 each. General reserve is allocated Rs. 50,000, leaving a carry-forward of Rs. 6,958, against Rs. 4,081 brought in.

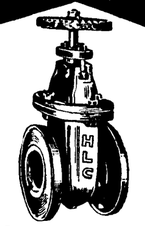
Sales of energy rose by 29 percent, but the net surplus before taxation dropped due to the increased cost of fuel and because of the payment of additional surcharge on the purchase of energy.

Hindustan Electric Pays Again

THE Hindustan Electric Co Ltd has declared a dividend of 4 percent for the year ended April 1964, which brings the Company back to the dividend list after a break of two years. The Company has fared much better than in the preceding year although the increase in the gross profit is much too small in relation to the rise in sales. The turnover has been more than doubled from Rs. 2.26 crores to Rs. 4.73 crores, whereas the gross profit has gone up by hardly 20 percent from Rs. 22.96 lakhs to Rs. 27.37 lakhs. No provision has been made for managing agents' commission which amounted to Rs. 30,852 in the previous year.

Depreciation gets Rs. 6.33 lakhs, against Rs. 3.18 lakhs, and taxation accounts for Rs. 9.50 lakhs, against Rs. 5.19 lakhs. The provision for development rebate has been stepped up from Rs. 17.533 to Rs. 1.53 lakhs and a sum of Rs. 2 lakhs (against Rs. 1.50 lakhs) has been set aside for doubtful debts. The proposed equity dividend absorbs Rs. 4.80 lakhs (against nil) and preference dividend takes up Rs. 1.71 lakhs (against Rs. 3.53 lakhs for two years). After making certain minor adjustments, there remains a balance of Rs. 95,502 to be carried forward, against Rs. 12,767 brought in. The Company has a large expansion programme on hand and it recently announced a rights issue of Rs. 60 lakhs. The Company's Howrah works has started regular production and normal labour conditions have been restored there. The Rs. 100-paid share of Hindustan Electric is currently quoted around Rs. 108, offering a meagre gross return of 3.8 percent.

Nilgiri Tea Estates Pays More



AN improvement in the profit of the Nilgiri Tea Estates Ltd for the year ended March 1964 has enabled the Company to pay a higher dividend of 7½ percent on the ordinary shares, against 5 percent for the previous year. The net after-tax profit for the year amounts to Rs. 1,47,975, after providing Rs. 69,539 for depreciation and Rs. 1,40,000 for taxation. The previous year's profit was Rs. 94,180, after providing Rs. 68,417 for depreciation and Rs. 40,000 for taxation. With the balance of Rs. 8,183 brought forward from the previous year, the total comes to Rs 1,56,159. Out of this, the dividend on ~~preference~~ shares at 8 percent accounts for Rs. 22,484. The equity dividend at 7½ percent absorbs Rs. 1,05,468. The balance of Rs. 28,207 is carried forward.

The tea crop harvested during the year amounted to 509,705 kilograms. The crop harvested up to 31st July, 1964, was 184,477 kilograms, against 241,326 kilograms for the same period in 1963, because of the severe drought in south India. The estimated tea crop for 1964-65 is 511,800 kilograms.

More from Jubilee Mills

THE Jubilee Mills Ltd has raised the dividend for the year ended June 1964 from Rs. 4.50 to Rs. 5 a share. The preliminary report shows

NESTLER 'Package' Boilers ensure continuous supply of steam for industrial uses

Textile, Chemical and Pharmaceutical Industries, laundries and dry cleaners, dairies and food processors, paper and rubber manufacturers have found that NESTLER 'Package' Boilers provide abundant, continuous steam at an economical rate.

The NESTLER 'Package' steam boiler integrates various components—boiler, burner, controls, feed water pumps, etc.—into one compact, factory-assembled-and-tested unit. Clean and efficient in working, every NESTLER Boiler gives outstanding performance and operating convenience.

The NESTLER 'Package' Boiler is a self-contained unit mounted on its own base plate and requires no expensive foundation and pipe work. NESTLER 'Package' Boilers are manufactured to Indian Boiler Regulations.

NESTLER's Warranty against manufacturing defects covers a period of one year.

NESTLER 'Package' Boiler range: 1290 to 20,000 lbs. per hour at 100 to 200 p.s.i. from and at 212°F; suitable for oil-firing.

Write for illustrated technical literature.

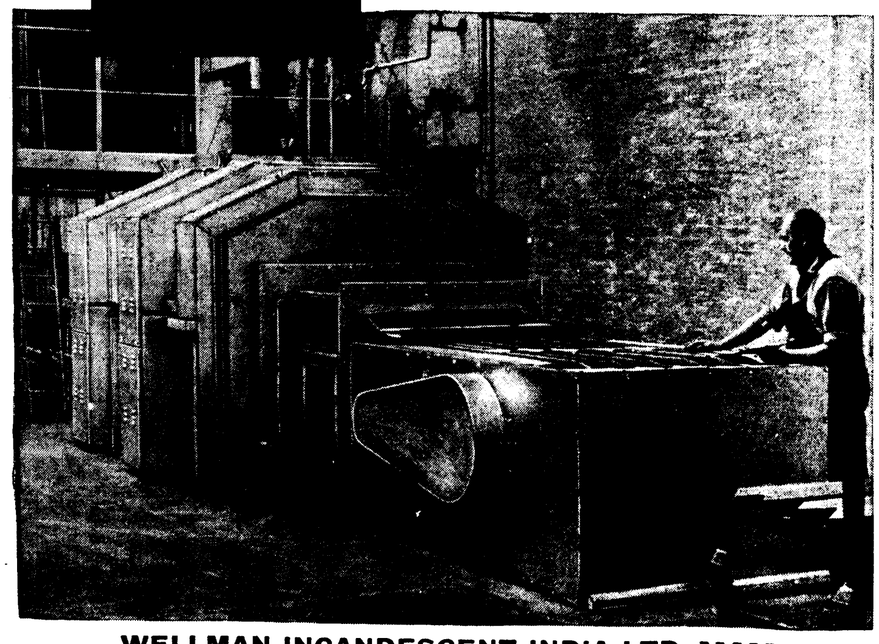
that the Company has fared better than in the previous year, with the turnover up from Rs. 85.30 lakhs to Rs. 94.30 lakhs and the gross higher at Rs. 29.36 lakhs, against Rs. 27.02 lakhs.

The provision for depreciation has been raised from Rs. 4.47 lakhs to Rs. 7.21 lakhs. Statutory development rebate takes up Rs. 1.16 lakhs, against Rs. 1.50 lakhs, and taxation absorbs Rs. 12.60 lakhs, against Rs. 11.40 lakhs. A sum of Rs. 6.25 lakhs has been transferred to the general reserve and the proposed dividend is to be paid out of this reserve. The Company spent Rs. 11 lakhs on machinery and building during the year and a screen printing department has been set up recently.

Shree Gopal Industries Pays Maiden

SHREE Gopal Industries Ltd, a subsidiary of Shree Niwas Cotton Mills, has declared a maiden dividend of 10 percent for the year ended June 1964. This follows an impressive improvement in the Company's performance during the year. The turnover has risen by 27 percent from Rs. 44.24 lakhs to Rs. 56.25 lakhs, and the gross profit has increased by 21 percent from Rs. 12 50 lakhs to Rs. 15.12 lakhs. The directors have written back a sum of Rs. 1.40 lakhs being the excess provision for development in the previous year and this brings the disposable surplus to Rs. 16.52 lakhs. After providing Rs. 8.80 lakhs (the same) for depreciation, Rs. 4.20 lakhs (against Rs. 4 lakhs) for development rebate, Rs. 1.50 lakhs (against nil) for taxation and Rs. 50.000 (against nil) for general reserve and Rs. 1.60 lakhs (against nil) for dividend, there remains a balance of Rs. 10.000 to be carried forward, against Rs. 18,000 brought in.



The directors state that the Company's expansion programme of setting up additional 13.000 spindles is making rapid progress. During 1963-64, 6,320 spindles were put into commission and the remaining 6,680 spindles are expected to be put into operation by the end of this year. The Company has also ordered further 2,504 spindles in accordance with the Government's general permission to increase the installed capacity. The total licensed capacity of the mills is now 27.504 spindles, and the management is making efforts to achieve this capacity by the end of 1965. Meanwhile, preparatory machines have arrived from the U.S.A. and are to be installed shortly. During the year 1963-64, the Company added machinery worth Rs. 15.37 lakhs and a further programme involving an outlay of Rs. 15 lakhs is on hand for the current year. The working of the Company is expected to improve further when the additional spindles are installed. The Company has an equity capital of Rs. 16 lakhs, and its gross block is valued at Rs. 59.80 lakhs.

WELLMAN INCANDESCENT ELECTRIC FURNACES

A wide range of Electric Furnaces for industrial use are now being manufactured in India by Wellman Incandescent in collaboration with Metalectric Furnaces Ltd., of Smethwick, England.

Electric furnaces for heat treatment, enamelling, induction heating, dialectric heating, wire and strip annealing as well as furnaces for light alloys, non-ferrous metals and the ceramic industry can be supplied against order. Special furnaces can also be designed to meet the customers requirements.

Specialists in industrial heat engineering, Wellman Incandescent are also experts in the manufacture of mechanical handling equipment, much of which will shortly be made in India.

The Stock Markets

LYONS RANGE DULL DESPITE GOOD CORPORATE NEWS

Wednesday Evening.

SLUGGISH conditions have prevailed in the Calcutta stock market during the past week. Operators are generally inclined to keep their commitments light in view of the forthcoming Puja holidays. Share prices have fluctuated narrowly. Although selling pressure is not conspicuous, bulls are inclined to take profit at every rise. Turnover centres largely on clearing shares, which have tended to drop towards the close due to the absence of support. In spite of a small turnover in cash scrip, prices of selected shares are steady due to the shortage of floating stocks. The Unit Trust and the Life Insurance Corporation have reportedly shown interest in ordinary shares.

Although corporate news is, on the whole, encouraging, Lyons Range is inclined to take a cautious view of the short-term trend. Dunlop Rubber has decided to issue rights ordinary shares at a premium of Rs. 10 a share of Rs. 10 each to the existing shareholders in the proportion of one new share for every three held. It is also thinking of capitalising the share premium account in due course to issue bonus shares, subject to the sanction of the Controller of Capital Issues. The Company is to be complimented on having adopted the practice of paying an interim dividend. It has already declared an interim taxable ordinary dividend of 8.75 percent for the current year.

Operators apprehend that the stock market will feel the shortage of funds when the busy season starts in three weeks or so. Due to the new credit restraint enforced by the Reserve Bank, bank credit will become scarcer and costlier. It is also likely that funds will be diverted to bank deposits because the rates of interest on deposits have recently been increased. Since dividend yields have been rendered less attractive due to the rise in market rates of interest, funds will tend to be shifted away from stocks and shares.

Political developments are also considered unfavourable. The outcome of the proposed Shastri-Ayub meeting will be watched with keen interest. China's attitude seems to have taken a turn for the worse.

Indian Iron are sluggish and have tended to drop. The production of the Company during September 1964 has, nevertheless, shown an improvement over that of August 1964. The output of pig iron has risen from 91,003 tonnes to 104.733 tonnes and that of steel ingots from 70,333 tonnes to 77.244 tonnes. The production of salable steel has improved from 53,526 tonnes to 54,671 tonnes. Despatches of salable steel have dropped from 57,875 tonnes to 49.826 tonnes. Engineering shares are dull, and stray business has been transacted, in Guest Keen, Williams, Textile Machinery and Indian Standard Wagon. Jesop have, nevertheless, been a steady feature. Interested support has been forthcoming for Binani Metal, J. K. Steel and Jay Engineering.

Prices of clearing miscellaneous shares have declined on balance. Interest has been shown in Union Carbide, Philips India, Britannia Biscuits and Indian Oxygen. National Insulated Cable, National Rolling Mills and British India Corporation are steady. India Steamship have recovered on short-covering. Among new shares, Hindustan Aluminium and Hindusthan Twyfords have been supported. Electric company shares have not responded to the prospect of an increase in the "reasonable return" following the rise in Bank rate. Managing agency shares like Jardine Henderson have tended to drop. In paper shares, Orient have slipped back but Titaghur are steady. Bengal and Seshasayee have been supported. Bank shares have been neglected.

Small business has been transacted in jute shares. Birla, Union and Lawrence are steady. Nominal business in coal and tea shares has passed at lower prices. Cotton mill shares are hesitant due to the introduction of partial control on cloth. Government securities are quietly steady. Turnover has been restrained due to the absence of institutional support. The 3 percent Conversion Loan 1986 is quoted around Rs. 63.10.

Bombay

TURNOVER DROPS APPRECIABLY

CONTROLS AFFECT TEXTILE SHARES

Wednesday Evening.

THE Bombay stock market has been dull and quiet during the past week. Turnover has dropped considerably, and share prices have tended to ease on tired long liquidation, combined with short-selling. Clearing shares have borne the brunt of pressure. Interest in cash scrip has been negligible and prices have dropped. Investors in cotton mill shares are hesitant following the introduction of partial control on cloth. It is feared that the stamping of prices on a large variety of cloth would tend to reduce the profits of cotton mills. Dalal Street thinks that the restriction on blank transfers will restrain activity in stocks and shares. The prospect of a credit squeeze during the next busy season, which will begin in about three weeks, has called for caution.

Tata Steel ordinary have dropped to Rs. 147.75 towards the close since the production of the Company during September has not been particularly impressive. Among engineering shares, Tata Engineering have lost considerably due to pressure. Mukand Iron, Larsen and Toubro and Alcock Ashdown are available at lower prices. Among motor-vehicle shares, Hindustan Motors and Premier Automobiles have declined.

Cotton mill shares have shown losses all round. Century, Bombay Dyeing, Kohinoor and Svadeshi have lost. India United ordinary, Morarjee and Standard have reacted due to profit-taking. Turnover in miscellaneous shares is small. Among cement shares, Associated Cement and Digvijay are about steady. In the sugar section, scattered support has been forthcoming for Belapur and Walchandnagar Industries. Mining shares are subdued, and Be Be Petrol have dropped. Among steamship company shares, Great Eastern Shipping have reacted due to pressure because of disappointment over the taxable ordinary dividend of 7.3 percent declared for the year ended June 1964. For 1962-63, the dividend was passed, but bonus shares were issued in the ratio of one share for every three held. Scindia Steam are quiet in the absence of interest. Chemicals shares have declined in sympathy with the general trend. Tata Chemical and Indian Dyestuff are quiet.

Rayon shares have become quiet since the Government has not yet reduced the excise duty on rayon yarn. National Rayon have lost. Bombay Burmah are steady because of the payment of a higher taxable final ordinary dividend of Rs. 3.30 a share, against Rs. 3 a share paid for 1962-63. Voltas and Tata Oil are about steady. Nominal business has been done in bank shares. Bank of Baroda and Bank of India have been transacted. Electric company shares are steady. Tata Hydro and Ahmedabad have met with support.

Madras

INTEREST CENTRES ON PLANTINGS

HEAVY DISCOUNT IN STATE LOANS

Tuesday Evening.

THE Madras stock market has been steady during the past week. Prices of selected clearing and cash shares have tended to harden on renewed support. Investors and operators are inclined to think that the

Government will soon take steps to stimulate activity in the capital market. In cash scrip, interest has largely centred on good planting and miscellaneous shares. Turnover in Government securities has been small and some new State Government loans have been bought at a considerable discount.

Negligible business has been transacted in bank shares. Syndicate Bank has been quoted at Rs. 143.50 and Indian Overseas at Rs. 149.50. In electric company shares, West Coast are steady at Rs. 11.50 and Salem-Erode at Rs. 14.37. In sugar shares, Deccan are available at Rs. 11, although the Company is expected to maintain the dividend on the increased capital. E.I.D. have dropped slightly to Rs. 36.12, but Travancore are steady at Rs. 8.12. K.C.P. have been transacted at Rs. 24 and Mysore at Rs. 27.75.

In planting shares, Blue Mountain have hardened to Rs 2.38 and Consolidated Coffee at Rs. 23.76. Cochin Malabar have been done at Rs. 6.22 and Ouchterlony at Rs. 3.42. Business has passed in Periakaramalai at Rs. 3.55 and in Kalasa at Rs. 4.25. Woodland have been bought up to Rs. 6.50 on declaring a taxable ordinary dividend of 5 percent. Peermade have improved to Rs. 20.62 on declaring a taxable interim ordinary dividend of 5 percent. Nilambur are quoted at Rs. 10.65, Midland at Rs. 10.58, Nonsuch at Rs. 21.87 and United Nilgiri at Rs. 22.22. In coffee shares, Mysore are steady at Rs. 4.12, Swinton at Rs. 2.68 and Badra at Rs. 2.90.

In textile shares, South India Viscose are sluggish at Rs. 115 and Travancore Rayon at Rs. 20.25. Lakshmi have dropped to Rs. 132, but Madura are steady at Rs. 34.85. Bangalore Woollen have been taken at Rs. 263.60, Mettur at Rs. 265 and Ramakrishna at Rs. 199.40. Tirupati are available at Rs. 9.52. Vijajyakumar at Rs. 117 and Anglo-French at Rs. 142.

Among miscellaneous shares, Aluminium Industries are firm at Rs. 22.87 on prospects of expansion, but Ashok Leyland have reacted to Rs. 6.90. Dalmia Cement have hardened to Rs. 12.91 on the news that two cement factories in Pakistan, wholly owned by a subsidiary of the Company, have been sold for Rs. 2.34 crores and they have been taken over by Pakistan Progressive Cement Industries Ltd. India Cement are steady at Rs. 5.39. Mettur Chemical are wanted at Rs. 14.90 and Trichy Steel Rolling have been bought up to Rs. 10. Seshasayee Paper have risen to Rs. 7.45 and Mysore Paper to Rs. 12.50. Standard Motors are quoted at Rs. 10.55. Jaipur Metals at Rs. 102.50 and Madras Rubber at Rs. 10. Parry's Confectionery have been done at Rs. 2.90. Ruby (Madras) at Rs. 8. Spencer at Rs. 21.50 and Textool at Rs. 154.

Dunlop Gold Seal tyres are being bought by car owners in unprecedented numbers. There are good reasons. They give the highest mileage. Their proven grip on wet roads means that they are the safest tyres. Further, the strength of the casing assures maximum retreadability. You too can have these advantages by fitting a set of Dunlop Gold Seal car tyres.

London

NEW POLL RESULT CAUSES SETBACK

SHARP FALL IN STEEL

London, 7th October.

THE general election, now only nine days away, has been a major influence on sentiment in the stock market over the past week. On most days, there was a steady upward movement in equity prices following a spate of opinion polls favouring the Conservatives, but when the latest Gallup poll, which appeared over the week-end, showed a sharp reversal of this trend, much of the ground gained over the four previous business days was lost. The "political" shares attracted most attention, and steel shares, where a considerable bull market had been built up, were the chief sufferers in the setback. Although much of the fall was due to marking down by jobbers, there was a fair amount of selling. Properties and insurances also ran back sharply after earlier buoyant conditions. Leading issues like Tube Investments, Babcock and Wilcox, Woolworths, Hawker-Siddeley and Bowaters all had their earlier gains reduced. Dollar stocks moved in the wake of Wall Street and looked firm after yesterday's advance there to a new peak. Gilt-edged were extremely quiet and failed to establish a decided trend. Gold shares met with selective support, which increased when equities plunged, but coppers were overshadowed by the Chartered affair. Tins moved irregularly. In oils, Shell and Royal Dutch were wanted on reports of new oil discoveries, but Burmahs eased after the interim statement. Rubbers and teas were quiet.

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.

- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.

- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains a number of cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in
  - consumer market surveys
  - industrial prospecting
  - readership analysis
  - economic indices
  - business research.

P.O. Box 14, Calcutta-1, or 5, Mission Row, Calcutta, India.

THE CALCUTTA MONEY MARKET

CALL RATE RISES

Wednesday, 7th October.

THERE has been a slight increase in the general level of advances in the Calcutta money market during the past week. The increase is accounted for almost entirely by the jute mills and by the foodgrains and seeds trade. The requirements of the other major borrowers—the textile and sugar mills, and the iron, steel and engineering industries—are unchanged. In the interbank market, the call rate fell from 3½ percent to 2 percent, but has subsequently risen to 4 percent.

The exchange market has been fairly active, with a good supply of both tea and gunny bills. Remittances have been on a small scale. In London, sterling has continued to show a weak tendency, although no great change has taken place in relation to the other major currencies.

SILVER WAS STEADY IN CALCUTTA during the past week. The price rose from the previous week's level of Rs. 255 to Rs. 256 a kilogram, quoted today. The price was quoted at 112⅛d in London and at 129.3 cents in New York.

In spite of a rise in silver, gold was quiet and the price of 14-carat declined from Rs. 72.25 to Rs. 71.25.

DURING THE WEEK ENDED 2ND OCTOBER, Government of India Treasury bills for Rs. 146,95,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 6th October. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.375 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.500 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 19th October.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 7th October to 17th October at Rs. 99.391 percent subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 30th September to 3rd October amounted to Rs. 5.75 crores.

ACTIVE NOTES ROSE BY Rs. 7.02 crores to Rs. 2,370.28 crores while the total note issue dropped by Rs. 47 lakhs to Rs. 2,399.07 crores, according to the return of the Reserve Bank of India for the week ended 2nd October, 1964. Notes held in the Banking Department consequently declined by Rs. 7.49 crores to Rs. 28.79 crores. Deposits of the Government of India rose by Rs. 14.59 crores to Rs. 75.92 crores, while those of State Governments dropped by Rs. 30 lakhs to Rs. 14.78 crores. Balances of scheduled banks at Rs. 103.30 crores showed a rise of Rs. 2.59 crores. Balances held abroad fell by Rs. 1.82 crores to Rs. 10.35 crores and investments by Rs. 66 lakhs to Rs. 77.69 crores. Loans to scheduled banks declined from Rs. 83.25 lakhs to Rs. 60.05 lakhs of which advances against usance bills amounted to nil (Rs. 20 lakhs). Ways and means advances stood at Rs. 35.22 crores, against Rs. 25.87 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 25th September, 1964, shows a rise of Rs. 4.59 crores to Rs. 670.55 crores in total deposits. Investments in Government securities are up by Rs. 8.90 crores to Rs. 296.06 crores, while other authorised investments are down by Rs. 46 lakhs to Rs. 8.98 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have declined by Rs. 1.24 crores to Rs. 331.16 crores. Cash and balances are, in consequence, shown at Rs. 26.03 crores or Rs. 6.66 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 25th September, 1964, shows Demand and Time liabilities at Rs. 1,302.87 crores (Rs. 31.10 crores on account of borrowings from banks) and Rs. 1,351.17 crores (Rs. 19.65 crores), compared with Rs. 1,286.61 crores (Rs. 27.70 crores) and Rs. 1,443.87 crores (Rs. 20.37 crores), respectively, in the previous week. Cash has declined by Rs. 2.52 crores to Rs. 61.09 crores, while balances with the Reserve Bank have increased by Rs. 8.71 crores to Rs. 16.68 crores. There is a rise of Rs. 17.68 crores to Rs. 814.90 crores in investments. Advances and bills discounted at Rs. 1,718.27 crores show a drop of Rs. 10.91 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.2 per cent and 64.7 percent, against 5.8 percent and 63.3 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 9-10-64

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
9-10-64	12-1-65	2,00,00	Rs. 2.500%
1-10-64	4-1-65	2,00,00	Rs. 2.400%

New Delhi

CONTROVERSY ABOUT THE SIZE OF THE FOURTH PLAN CONTINUES

(FROM OUR NEW DELHI CORRESPONDENT)

IN formulating the fourth five year plan, it is said that a good deal of pressure has been used to persuade the Central Finance Minister, Mr. T. T. Krishnamachari, to agree to a plan outlay of Rs. 22,500 crores, or Rs. 1,500 crores more than what he considered feasible. The Rs. 21,000-crore outlay is based on the assumption of a 6.5 percent growth rate during the fourth plan, against 7 percent advocated by Mr. Pitambar Pant, who is very influential in the Planning Commission. It is appropriate in this context to refer to the views on Indian Planning of Mr. John P. Lewis, who has now replaced Mr. Tyler Wood as the Minister-Director of the U.S. Agency for International Development in New Delhi. Mr. Lewis has written a book called *Quiet Crisis in India*, in which he observes : "It must be understood that the *per capita* growth rate projection in the Indian programme rests primarily on a political and not an economic premise. It is the considered judgment of the Indian Government and Parliament that no lesser rate of improvement is apt to support the maintenance of orderly political progress."

Mr. Lewis further says : "At a number of points, the formal official articulations of the Indian programme seem to be almost slavishly rooted in the saving-centred economy. The error lies in interpreting past statistical relationships between saving and output to mean that policies bearing directly on the volume of saving *per se* are the handles one must grasp to engineer an expansion in production. A far more appropriate assumption is that the saving rate is a symptom, a reflection of the economy's productive performance, which, in turn, is determined by a whole collection of variables, of which the private propensity to save is only one of the lesser."

It is instructive to quote Mr. Lewis's observations on the formative stages of the third plan because of the similarity of conditions. He says : "The advocates of boldness, who held the initiative in the debate almost from its beginning in late 1958, were helped no little by the fortuitous circumstance that Rs. 10,000 crores, which happened to represent a quite bold investment figure for third plan purposes, is a nice round number. Given the unfortunate Indian penchant for thinking and talking about planning in investment-focussed rather than production-focussed terms, the catch-phrase 'a Rs. 10,000-crore plan' became entrenched in popular discussion early in the plan-formulation period, and thereafter, undoubtedly exerted an upward influence on the judgments of the more timorous. The political difficulty of cutting State plans to a figure that would be consistent with a total investment of less than Rs. 10,000 crores reinforced the big plan advocates. Moreover, the more influential pieces of foreign advice to which the Government was exposed tended to support an ambitious third plan. This advice came from both the Russian and the American Government missions that conferred with Indian officials in 1959 and early 1960 ; from a World Bank mission in the spring of 1960 ; and, perhaps most influentially of all, from the 'Three Wise Men' team of international bankers who, at the request of the World Bank president, Mr. Eugene Black, made a survey of the third plan proposals that same spring.

"Within the Indian Government, the key advocates of an ambitious third plan pressed their case unswervingly; once consent had been won for a 'Rs. 10,000-crore plan,' they re-examined their estimates of the needs and possibilities and raised their sights a few hundred crores higher ; and once the feasibility of a somewhat larger programme had been conceded, the big plan proponents nudged their asking figure up still another notch. The somewhat bizarre result, since advocates of caution, although giving ground, also clung to their principles, is that the controversy over size has been carried forward, *quasi*-unresolved, all the way into the final third plan document itself.

"Thus in chapter 2 of that document, which obviously is the product of the Planning Commission's Perspective Planning Division, it is stated that during the third plan period as well as during the succeeding ten years, real national income should be raised 'as nearly as possible' by an average of 6 percent a year, or about 34 percent over five years. Yet in chapters 4, 5 and 6, which show the hand of somewhat more cautious analysts elsewhere in the Planing Commission and in the Ministry of Finance, the annual growth target is phrased as being 'something in excess of 5 percent a year,' or 31 percent from 1960-61 to 1965-66. Similarly, whereas the third plan's financial programme calls for a public outlay of Rs. 7,500 crores for investment and other development purposes, the price tags of all of the specific projects that the physical planners have incorporated in the programme add up to a total of more than Rs. 8,000 crores."

If the debate in 1958 centred on a Rs. 10,000-crore plan, in 1964 it is on a Rs. 24,000-crore programme. Since the Finance Minister has already agreed to a Rs. 22,500-crore plan, by the time it is finalised the outlay may go up to Rs. 25,000 crores. The mistake already made is to agree even to a Rs. 21,000-crore plan. Mr. Krishnamachari had originally suggested a Rs. 18,000-crore plan, with a spill-over from the third plan of Rs. 2,500 crores. This debate over figures personally does not take into account the expenditure on defence, which is placed at Rs. 1,000 crores a year. Nor does it take into account the performance of the third plan and the rate of growth so far achieved after 17 years of planning.

Internal resources, as claimed by the Planning Commission, depend to a large extent on taxation and savings. Much of this country's savings, for reasons which are sufficiently known, seem to have "gone underground," and the Central Finance Ministry, it is reported, proposes now to give a tax-free bonus to all those who help bring them out.

In the absence of Mr. Nehru, Congress leaders will not find it easy to secure as big majorities as they have been used to. The spectre of runaway prices, coupled with the prospect of bigger doses of taxation to finance the fourth plan, may prevent the Congress from winning decisive majorities in the legislatures without which, as everyone knows, no State Government is possible.

Mr. Colin Clark in his latest book, *Taxmanship*, does not take kindly "to the habit of politicians of all parties who inculcate the dishonest belief that somehow or other someone else will pay for the good things for which electors are invited to vote." In New Delhi, at any rate, the voters know the good things they have got after 17 years of planning. According to newspaper reports, private and official experts found a bat in the capital's water supply system. They also found cow-dung afloat on the surface of the water reservoir. This discovery was made on Gandhiji's birthday, after the Central Health Minister had inaugurated "a national cleanliness day."

INDIAN PLANNING

I.M.F. Chief on Stability

The Managing Director of the International Monetary Fund, Mr. Pierre Paul Schweitzer, told the Press last week that India at present did not suffer from secular inflation and the present state of runaway prices was a temporary phase. His talks with the Central Finance Minister gave him confidence that the size and outlay of the fourth plan would be compatible with India's means and resources. Mr. Schweitzer was elaborating on his earlier speech in the course of which he had stated that rapid inflation breeds distrust in domestic money, and, therefore, discourages savings and, that savings are liable to be diverted to such unproductive uses as real estate, excessive speculation, large inventories or gold hoardings. Government control over prices of strategic goods only increases consumption and discourages exports. These remarks appeared to carry some reference to the Indian economy. Hence Mr. Schweitzer's elucidation.

There has been a real tug of war between the Planning Commission which would like a Rs. 25,000-crore plan outlay, and the Finance Minister who prefers one of Rs. 18,000 crores. Mr. Schweitzer's remarks that development should not be undertaken at the cost of stability seems to uphold the Finance Minister's point of view. The general preference in developing countries is in favour of stability rather than rising prices. Once the atmosphere of stability is destroyed and replaced by the expectation of

I.O.B. is an international bank with offices throughout India and South-east Asia and correspondents the world over. It offers a wide range of services to suit the needs of varied customers. Indeed, I.O.B. is big enough to serve you.

We asked our customers, thousands of them at random, what they thought of our service. They replied: "We are pleased". They also made several helpful suggestions which we are implementing. Indeed, I.O.B. is small enough to know you.

Range of I.O.B. services: Savings and Current Accounts—Recurring and Fixed Deposits—Personal and Business Loans—Bills Payment Service—Gift Cheques—Travellers Cheques—Safe Deposit Lockers—Trade and Export Information and Advice—and whatever other specialised help you may need.

...and small enough to know you

continually rising prices, the re-establishment of stability becomes a much more difficult task. Mr. Schweitzer, it is interpreted here, is obviously against a plan outlay which would encourage the expectations of rising prices. The I.M.F. chief is opposed to compulsory savings.

FIFTH STEEL MILL

Agreement with Consortium

A broad agreement has been reached between the Government of India and the Anglo-American consortium to build the fifth steel mill. Under the arrangement, the consortium will recommend sites where the fifth steel mill should be located. The Government, after examining this report, will ask the consortium to prepare a detailed project report for a specified sum. On the basis of this report and subject to the consortium arranging the resources, the Government may entrust the consortium to undertake the commissioning of the project.

LAND TENURE

Tenancy System Grows

A reference was made in these columns last week to a study report on land tenure in four selected districts. This report was by Mr. Ladejinsky, who was closely associated with land reforms in Japan. Professor K. N. Raj of Delhi University, speaking on "development and economic policy" last week also referred to land reforms in India, and made a pointed reference to Mr. Ladejinsky's report. This is what Professor Raj said: "Despite all the land reform measures that have been undertaken in India since independence, the fact is that tenancy is very much more widespread now than official statistics would have us believe. The effect of these reforms has been in part to drive some forms of tenancy underground and make them even more oppressive than otherwise. If all these formal and informal arrangements are taken into account it is likely that as much as 50 percent of the total cultivated area is now under one form of tenancy or another. For obvious economic reasons, the rent as a proportion of the product is higher on more fertile land, and the incentive to increase the application of inputs for raising production is, therefore, correspondingly less in these areas. The result is that, while the strategy of agricultural planning is to concentrate on and encourage the application of inputs in areas where land is irrigated and other natural conditions are more favourable, the land tenures work in the opposite direction and more powerfully in these areas than elsewhere. This is such an obvious point that it hardly needs to be laboured.

"Yet, when someone points this out, the tendency now appears to be to play it down or dismiss it altogether. When Mr. Ladejinsky referred in a report last year to the land tenure system in the Tanjore district of Madras and its depressing effect on agricultural development in this area, the report was suppressed at the instance of the Government of Madras. What is more, when an enterprising journalist brought out its contents recently, the Member in charge of agriculture in the Planning Commission took pains to call a Press conference, dismiss Mr. Ladejinsky's observations as 'untenable and unfounded,' and took the Press to task for the crime of publishing a confidential document. The facts mentioned by Mr. Ladejinsky have however been substantially confirmed by at least two others in the course of the last year."

H.E.C. FIRE

Enquiry Report Disclosures

The report of Mr B. Mukerji on the fire in the heavy machine building plant of the Heavy Engineering Corporation Ltd, Ranchi, on 29th January, 1964, was presented to Parliament last week. It is a revealing document from which the following extracts are worth reproducing.

"I am of the opinion that the cause of the fire having been sabotage, there could be only two methods of averting it: first, to have taken adequate steps to eliminate the causes which provide a motive to the saboteur; and, secondly,, to have completely eliminated the possibility of the saboteur getting an opportunity for the sabotage. In order to achieve the first, the management had to act over the course of long months with such wisdom as not to have generated those forces which lay at the bottom and created the situation which provided content and incentive for the sabotage: such matters have already been fully dealt with by me earlier in this report. The management could not and, therefore, did not properly utilise the services of its 'labour relations' personnel because of many circumstances but the most potent of them all was the unnecessary and undesirable external influence.

"As for the second matter, a possible saboteur could be made completely innocuous only if the security arrangements were such as could not be pierced through in any event. The security arrangements obtaining in the Heavy Engineering Corporation were anything but satisfactory and, therefore, it was not at all difficult for anyone trying to get into the area where the fire took place—getting into the area undetected was not at all difficult. In my judgment, the management's great failure had been their slackness in security arrangements—a false sense of security appears to have been generated when there was nothing like proper security in the area. Reasons may be found to offer some sort of explanation for the failure, but these explanations, in my opinion, could never salvage the security service nor could these provide adequate reasons to condone their failure.

"There should have been, I feel, sufficient security consciousness all round the administration and every effort should have been made to see that whatever was required to make the security arrangements perfect and to make the security impregnable, was done. There was but a vague consciousness in the Heavy Engineering Corporation that some sort of security arrangements were necessary. I have a feeling that, to most men in the Heavy Engineering Corporation, the security personnel existed only to guard against thefts, but even in this, they have not been very successful. Possibly no one had any clear conception that security was necessary to guard the stores and the 'plants' against sabotage also. The security arrangements were thoroughly inadequate for meeting this great threat to the undertaking. When the Heavy Engineering Corporation's top executives spoke of a "volatile labour situation" and other difficulties, they had, apparently, no realisation that such situations could also lead to sabotage.

"The Heavy Engineering Corporation is a public undertaking, a public sector undertaking as such undertakings are often referred to. These undertakings are intended to provide the nation with the basic potential for substantial industrial growth. The undertakings are, in many instances, being built with foreign collaborations; in the case of the Heavy Engineering Corporation, the foreign collaborators are the Russians and the Czechs. A vast amount of national wealth has been sunk into these undertakings and the future of the nation in many ways now seems tied with the future of these undertakings. Therefore, every little circumstance that may have an adverse effect on their progress has to be eliminated.

"The 'set-up' of these undertakings needs, in some measure, a certain amount of re-thinking because of the experience which has been gathered so far. The Heavy Engineering Corporation Ltd is a complex of many, more or less, separate 'undertakings'; this should be fairly patent from the circumstance that two different peoples, the Russians and the Czechs, have been collaborating in building up this undertaking. The undertaking as projected is so vast that the administration has become almost a 'colossus'. The administrative head of such an undertaking, if he is to succeed in his assignment, has to have all the qualities, and those too in abundant measure, of a 'top class' administrator. Failures in the administration can spell disaster as would be fairly obvious from the evaluation of the undertaking's administrative performance by me earlier.

"Whatever may be the pattern which may be evolved by the Government after due consideration of the *pros* and *cons* of the matter, one thing is obvious that a serious rethinking is necessary about the set-up and the administration of this national undertaking. There has been a tremendous wastage of time, energy and money because of the failure on the part of the administrative set-up of the Heavy Engineering Corporation to cope with the magnitude of the tasks it was called upon to perform.

"There were no very clear-cut rules or procedure laid down. There was no serious attempt at decentralisation of responsibilities with the result that there were many failures and many vices grew up unchecked, often even undetected. The set-up of the administration as such has made for the vicious growth of many vested interests.

"One great misfortune which this undertaking had to face was a scramble for places in every sector. The schism in the administration started and grew to unseemly dimensions because of this scramble so that steps have to be taken to eliminate this danger to the extent it is reasonably possible—public criticism, as also the greater part of the dissatisfaction in the ranks of the employee was due to this.

"There was one other matter to which I wished to draw the attention of the Government of India and this lay in the fact that the officers of the Government of Bihar appeared to me to have a very step-motherly attitude to this undertaking, maybe, they were merely reflecting the attitude of their masters.

"If I may hazard a guess, this was due to two reasons; first, the Government of Bihar never liked the appointment of Dr. A. Nagaraja Rao as chairman and this fact was fairly well known in Governmental quarters, and further that it smarted under a sense of defeat when its attempts to have a say in the matter of appointments in the Heavy Engineering Corporation proved unsuccessful because of the firm attitude taken by the Minister for Steel, Mines and Heavy Engineering, New Delhi, which was evident from his letter to the Chief Minister, Bihar. I feel that this kind of attitude, if it is persisted in or becomes a common pattern, is likely to lead to many complications in the future, and, therefore, the Government of India should give this matter its consideration."

Since the completion of the enquiry there has been another fire in the Heavy Engineering Corporation's plant in Ranchi. The Government has not yet decided the final shape of the Corporation, as has been strongly recommended by Mr. Mukerji, but this needs to be done quickly.

their latest interest is in plastics and paper

"What are Metal Box doing with plastics and paper?" people wonder.

Why, making packages, of course! Blow-moulded plastic containers for chemicals and toiletries, laminated pouches for dehydrated vegetables and other foods, strip packs for pharmaceuticals, polyethylene bags for garments, foods and chemicals...and precision made paper cartons for a wide range of products.

It's news to many that almost 25% of all Metal Box sales comes from non-tinplate products.

This branching out in new directions is *not* new with Metal Box...in fact, Metal Box started working with plastics a decade ago. But this process has been accelerated by the shortage in tinplate, which many people think is about the only material Metal Box can turn into a package. Small wonder—with a name like Metal Box.

Actually MB Research set out several years ago to develop substitute packaging materials. And so, today, Metal Box are busy in the exciting world of plastics, paper and foil—materials which have already proved to be *right* for a wide variety of products. And, with every day, the range continues to grow.

So that, in time to come, flexible and paper packages could well make 'Metal Box' an even bigger misnomer.

MB METAL BOX protective packaging

SPITFIRE 1964A

U.S.A.

More Food for India

An agreement between the Indian and U.S. Governments for the supply to India of 4 million tons of wheat, 300,000 tons of rice and 75,000 tons of soyabean oil under the U.S. Food for Peace programme was signed last week. The commodities are valued at $398.3 million (Rs. 190 crores). Two other agreements were also signed. One agreement provides for a loan to the Government of India for economic development projects, the bulk of the rupees resulting from the sale of the commodities provided under the U.S. Public Law 480. The loan is repayable within 40 years at an interest rate of three-quarters of 1 percent. Under a similar agreement, a sum of Rs. 16.6 crores accruing under an earlier 1962 P.L. 480 sales agreement will be given as a loan to the Indian Government.

During the fiscal year ending June 1965, the United States will make available to India as much as 6.7 million tons of wheat under the "Food for Peace" programme. The arrangements provide that the dollars for purchasing and shipping will be made available to the India Supply Mission in Washington.

The Government of India will deposit the equivalent sum in rupees in New Delhi. These funds will be divided in three ways: 80 percent for long-term development loans to the Government of India; 10 percent for loans to Indo-U.S. joint enterprises (Cooley loans), and 10 percent for expenses of the U.S. Government within India, including some joint scientific research projects and textbook production.

TEXTILE MILL

Joint India-Kenya Venture

A cotton textile mill with a capacity of 24,000 spindles and 600 looms is to be established in Kenya as a joint venture of India and Kenya. The Governments of Keyna and India have accorded their approval to Messrs R. M. Gokuldas and Company, one of the leading Indian industrialists, to establish the mill. It will begin with a capacity of 6,000 spindles and 150 looms. The majority holding will be by the Kenya Government and local nationals, and the Indian party will have 33⅓ percent participation. Machinery, plant and equipment will be mostly supplied by the Indian party against Indian equity holding. It is expected that the full capacity of the mill will be reached within two to three years of its establishment.

A brief review of the other joint venture in Africa is as follows:

ETHIOPIA

(1) Birla Brothers have already established an Indo-Ethiopian textile mill. They are presumably now interested in expansion of the mill and participating in an industrial complex that is being planned by the mill.

(2) Malhotra and Sons, Calcutta, have been permitted to set up a factory for manufacturing blades (machinery would cost about Rs. 15 lakhs).

(3) Mckenzies Ltd, Bombay, are considering the establishment of a glass and paint factory. The proposals are being considered.

KENYA

(1) Morarji Brothers, Bombay, are examining the possibility of setting up a fertiliser unit in Kenya.

(2) Jay Engineering Works Ltd are stated to have already conducted a study for setting up of a sewing machine and parts manufacturing industry in Kenya.

UGANDA

(1) Jankidas and Company, proprietors of Atlas Cycle Works, Sonepat, are exploring the possibilities of setting up a bicycle manufacturing plant in Uganda. A representative of the firm has gone to Uganda for the purpose.

(2) A high-powered delegation led by the Central Secretary (Commerce) visited Uganda recently and concluded agreement with the Government of Uganda for setting up four sugar plants there in collaboration with the Government of Uganda and local entrepreneurs.

(3) India is also extending assistance to Uganda authorities for starting a handloom industry.

LIBYA

(1) Indian Hume Pipes Company has already been allowed to establish, on collaboration arrangements with a party in Libya, a concrete pipe manufacturing plant.

NIGERIA

(1) Birla Brothers are establishing a composite industrial unit for manufacturing light engineering goods (air-conditioners, water coolers, refrigerators, electric fans, bus and lorry bodies, etcetera) in Nigeria. Their project has already been approved by the Government and a company under the name of Nigerian Engineering Works, has been floated by Birlas in collaboration with Nigerian industrialists and the Government.

(2) Birla Brothers' proposal for setting up a textile mill in northern Nigeria has also been approved by both the Governments of India and northern Nigeria.

(3) Birla Brothers are also actively pursuing the possibility of setting up a jute mill in northern Nigeria.

(4) The above party is also likely to set up one cement plant (asbestos), in Nigeria.

LIBERIA AND SIERRA LEONE

Both the Governments of Liberia and Sierra Leone are keen to set up sugar industries in their countries. A two-man expert team consisting of an industrialist and an agronomist has been sent to the two countries for investigating the scope for establishing sugar industries there.

At least four African Governments, Liberria, Sierra Leone, northern Rhodesia and Nyasaland have indicated the possibilities of establishing cotton blanket manufacturing units in their respective territories.

TEA BOARD

Development Schemes

The following schemes for the development of the tea industry and for raising the commodity's production are being operated by the Tea Board during the year 1964-65:

	(Rs. lakhs)
Plantation finance scheme	27.07
Tea machinery hire-purchase scheme	55.56
Irrigation equipment hire-purchase scheme	18.93
Financial assistance scheme for marginal gardens in Cachar, Tripura, Kangra and Mandi	0.56
Fertilier subsidy scheme for small growers	1.10
Development of co-operative factories	1.50
Improvement of marketing facilities	3.00
Agricultural trials with improved seeds and clones at Palamour experimental farm, Punjab	0.10
Manufacturing trials with 8 in. rotorvane at selected tea estates in Kangra	0.21

SMALL-SCALE INDUSTRIES

Report of Working Group

A working group has been constituted to draw up programmes for the development of small-scale industries during the fourth five year plan. The group submitted its interim report in March 1964. It suggested the following objectives for the programme of small-scale industries' development during the plan:

(1) To promote the co-ordinated development of large-scale and small-scale industries by:

(a) reserving further expansion either exclusively or partly for the small-scale sector in certain industries;

(b) developing small-scale industries more vigorously as ancillaries to large-scale industries; and

(c) encouraging the participation of small-scale industries in the export drive.

To achieve these objectives, the group considered that the Government, among other things, should lay down a positive policy on all necessary aspects:

PLASTICS

Indian Production

The total production of plastics raw materials and goods including linoleum in India during 1963 was valued at Rs. 32 crores approximately. While the basic materials were produced in the organised sector, the production of moulded goods, films, sheets, etcetera, was shared almost equally between the organised and the small-scale sector. Production of some of the important categories of plastic goods and basic materials during 1963 in the large-scale sector for which figures are available, was of the following order:

	Quantity	Value (in lakhs of Rs.)
Plastic Goods:		
(1) Polythene films (M.T.)	... 2612	181.2
(2) P.V.C. sheets (M.T.) ...	... 1957	137.45
(3) Phenolic laminates (M.T.) ...	... 1657	156.62
(4) Leather cloth (1,000 metres) ...	... 6895	277.00
(5) Fountain pens ('000,000 pieces)	... 9.24	112.00
(5) Plastic moulded goods ('000,000 pieces)	... 1054	400.00
	Total value	1264.27
Basic materials:		
(1) P.F. Moulding Powder (M.T.)	... 2895	77.25
(2) Urea formaldehyde (M.T.) ...	... 1030	45.07
(3) Polystrene (M.T.)	... 5515	218.18
(4) Polythene (M.T.) ...	... 7923	361.69
(5) P.V.C. resin (M.T.) ...	... 2964	127.18
		829.37

London

ENSURING HEALTH AND SAFETY OF U.K. INDUSTRIAL WORKERS

(FROM OUR LONDON CORRESPONDENT)

GOVERNMENT reports are not usually read with much attention or interest, especially when they are annual reports on the working of a department. There were however, two exceptions recently—the annual report of the Chief Inspector of Factories and the report of a committee set up by the National Joint Advisory Council to consider the payment of sick pay. The former, as might be expected, contains a mass of statistical detail not calling for perusal except by those specially concerned, but there are also, here and there, a number of valuable observations on the running of industrial establishments which are of general interest.

Fatigue at work, whether physical or psychological in origin, and its effect on efficiency, for instance, is discussed in a special chapter on applied physiology of work, and it is shown how such fatigue will result in reduced output and may increase the liability to accidents and disease. It goes on to deal with the importance of such environmental aspects of the workplace as heating, lighting and ventilation, and with the effect on the worker of posture, seating, food and rest breaks.

When fatigue does occur in persons working at their own speed, the report finds, a simple deterioration of performance occurs, but in work at controlled speeds, hurried actions and judgment result leading to a disruption of performance. One example of the latter may be overactivity exhibited by individuals who find they cannot control a situation, or anticipate they will be unable to do so. As fatigue develops, overactivity may be replaced by inertia. The need to match the psychological abilities, particularly the intellectual capacity of persons to form judgment, with the demands of the work requires no emphasis if a breakdown is to be avoided.

To some extent, fatigue can be modified by changing the situation. In monotonous watch-keeping tasks, such as observing variations in indicator dials or momentary signals, such as blips on a radar screen, a telephone message may raise performance to its original level, and human company may reduce the fatigue increment. This may explain the beneficial effects of intervals of "music while you Work". The present limitations on hours of work were fixed when fatigue was largely a matter of physical exhaustion. While such limits still apply to physical work, the intervals between rest pauses may well be too long if maximum efficiency is to be maintained at perceptual tasks. Unlike "brain work" undertaken by persons who are more or less free to take pause at will, perceptual tasks do not permit such rests.

After referring to the action taken in 1963, to improve the standard of reporting accidents, Mr. R. K. Christy mentions that a further, and larger survey was undertaken in April this year, and the results, which were now being examined, should enable more detailed information to be obtained about the reporting standards of individual industries. I should like all occupiers to be clear", Mr. Christy comments, "that information on accidents is wanted not in order to prosecute those who have transgressed the law in some matter, but because knowledge of the pattern of accident occurrences is essential to the formation of an accident prevention policy. This is true for national policy and, indeed, applies at all levels in industry. It is also a gauge of the efficacy of safety controls and measures."

Importance of Training

The Chief Inspector draws particular attention to the importance of properly organised training for all categories of workers, particularly of the young, because, despite growing interest in this subject, there are still a very great number of accidents to young people. Many firms, particularly the smaller ones, still do not consciously and actively follow a policy designed to eliminate these accidents. Only a few make use of group training schemes, or similar training courses offered by some local education authorities and voluntary safety organisation. Examination of the accidents reported shows that lack of training, inadequate supervision, sometimes amounting to downright negligence, and the bad example of older workers, are, either singly or in combination, the main causes.

Two out of every three reported accidents in 1963 fell into the "big five" categories—manual handling of goods and materials, falls of persons, striking against objects, struck by falling objects and the use of hand tools. While a proportion of these accidents might be connected with breaches of factory legislation, experience showed that the majority occurred in circumstances which could not be readily controlled by legislation; for example, the lack of attention to good industrial housekeeping and to general tidiness, ignorance of proper methods of lifting, failure to make use of protective clothing such as gloves, goggles, safety footwear and helmets, and above all, lack of knowledge or application of safe methods of work.

The errors arising from human behaviour, unlike the requirement to fence a dangerous machine, do not, except to a very limited extent, lend themselves to control by legislation. The Chief Inspector draws attention to a special chapter in the report dealing with the responsibilities of employers, workers or others in safety and health matters, and emphasises "the need for all to know and accept their responsibilities for creating a safer working place: only when this is universally recognised will these types of accidents be reduced."

Systematic Arrangements

Systematic arrangements for checking compliance with the law and the adequacy of all safety precautions should form part of accident prevention in every factory. The responsibility for maintaining safe working conditions rests upon controlling managements, and this obligation cannot be properly discharged unless they take steps to inform themselves about the way in which lower levels of management are carrying out the duties delegated to them. Quality control is just as important for safety as it is for the product of the factory. Examples of the variety of ways in which self-inspection can be carried out are quoted in the report, and it is pointed out that yhile these have been drawn from large undertakings, there are indications that the need for self-inspection is gradually becoming appreciated in small firms also. Drawing attention to the importance of properly equipping those who have to discharge the duties of accident prevention, it is pointed out that small firms would be do well to take advantage of short training courses for managers and foremen which are organised by voluntary safety organisation.

There is evidence of a growing interest in the training of new entrants in safety matters, and an increasing number of firms have developed excellent training schemes into which effective safety training has been integrated. Unfortunately, it is still only the larger firms which offer systematic training. In the smaller firms, safety training may sometimes be limited to a warning from the foreman to "be careful" without giving any reason, or much indication of what the young person should be careful about. It may not be so easy for small firms to give safety training, but, if the will is there, it is by no means impossible, nor even particularly difficult. It can be given adequately by a foreman or another experienced worker provided that they have the proper attitude towards safety, are fully aware of all the potential dangers, and are scrupulously careful about safe working methods. It can also be done by using group-training schemes.

Training in many firms, including safety training, still appears to be concentrated on apprentices and little or no attention is paid to new entrants to semi-skilled or skilled work. One reason advanced for this is the rapid turnover among this type of worker, which discourages the spending of time, effort and money on training. For this reason, the increasing number of induction courses or lectures being given to prospective school-leavers while they are still at school is welcome.

Accidents to Young Men

A number of accidents to young persons in 1963 are cited. The report comments that these accidents bring out all too clearly what has been said about the need for training, supervision and good leadership of young people by older workers. Such accidents, it adds, may help to drive home the fact that old heads cannot be expected on young shoulders, that training on all safety matters, especially on dangerous machines, is essential, but that even the well-trained young person requires supervision. "It is also important that good habits taught in training are not eroded by the bad example of older workers."

Some developments in mechanisation which eliminate old hazards, but may sometimes introduce new ones, are considered in a separate section. This points out that in many factory processes developments over the years have either eliminated or greatly reduced a hazard to which the worker has been exposed. It points out that automation and mechanisation continue to remove worker from contact with dangerous processes and substances. Developments which enhance the efficiency of existing processes or offer the way to the introduction of new processes are, however, not always beneficial to the health and safety of the worker.

Developments in mechanisation reported during the year indicate that although operators employed in many processes are no longer exposed to the danger of machinery in motion, the problems of plant maintenance have greatly increased because maintenance personnel in some industries must attend to machinery while it is running and such dangerous machinery should be securely fenced. Some examples are given of developments in certain industries which present new hazards, or which, in resolving old ones, have introduced new hazards. These include the use of tonnage oxygen in steel-making, problems of exhaust ventilation in cotton textiles, and in the use of driverless lorries.

New developments in industry which are discussed in the report include the superseding of mild steel by higher tensile steel or alloy steel in the manufacture of lifting gear, the fencing of foreign blow-moulding machines, and the use of organic peroxides in the plastics industry, and a safety device for radial drills. Further recent discoveries with far reaching industrial implications include the development of "laser" beams, which are capable of punching holes in steel strip as thick as a razor blade, and open up possibilities for welding, drilling, profile cutting, sawing and the general machining of micro-miniature devices.

Laser beams are of current industrial interest because they show great promise as a means of communication, and offer further possibilities for range-finding instruments and satellite tracking. The use or manufacture of devices employing lasers may thus be expected to become widespread in the years to come, and the Inspectorate has been closely watching such developments. In Britain practical devices for use in industry are at present in their infancy, and the concern of the Inspectorate is largely with those factories in which laser devices are being manufactured and, therefore, tested. The risk involved is almost solely to the eyes, and care must be taken to ensure that the beam is never viewed directly or reflected into the eye from highly polished surfaces.

In the first place, the responsibility for creating and ensuring safe working conditions rests mainly on the top management of any industrial concern. This is a responsibility which goes far wider than merely seeking to comply with the obligations laid down by law. In the second place, the drive from the top should ensure a climate of opinion in which the responsibility for maintaining safe working conditions should be as widely felt as possible: everyone should feel responsible for the safetly and health of others working with him. Employers and workpeople alike are, and must recognise they are, their brother's keepers.

STRENGTHENING POLITICAL TIES IN THE COMMONWEALTH

By Robert W. Brock

The writer, a staunch advocate of firm economic and political ties in the Commonwealth, suggests that the present relations can be strengthened by making the British Privy Council and the House of Lords common institutions drawing their membership from the entire Commonwealth.

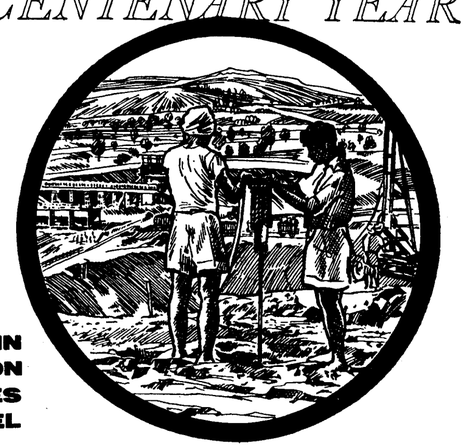
HENCEFORTH either the Commonwealth will draw closer together, or it will gradually disintegrate. The Common Market Six hope that economic integration will culminate, sooner or later, in political integration. Indeed, to some of the founder-members, political integration has always been, and still remains, the primary aim. "We are not in business" Professor Hallstein has declared, "we are in politics". Although General de Gaulle, at this juncture, applies the brake more often than the accelerator, a Common Market Political Confederation may finally crystallise. If so, the Gaullist veto on U. K. entry represented the most fortunate failure in the British political and economic history.

The Tory move to join the Common Market had one aim and that was to avert nationalisation of U. K. industry by internationalising it on a Common Market basis so firmly and irrevocably that further nationalisation, on a U. K. domestic foundation, would have become for ever impracticable. The legacies left to their successors by the last two Prime Ministers were hardly helpful. Whereas the last Prime Minister inherited "Suez", the present Prime Minister has inherited, as he recently confessed to Parliament, not a dead pheasant, but, less flatteringly, a "dead duck" shot down over Paris early last year and now no longer nutritious or even hygienic. So where do we go from here? Most Tories hailed Macmillan as a modern Moses born to lead his wandering people into the Promised Land, the march being assisted by a helpful breeze defined by Party climatologists as "the wind of change". The writer was among the rebellious minority who considered that Moses, his deluded followers, and the accompanying wind were all blowing and puffing in the wrong direction. The Macmillan thesis, in effect, was that the Tory Party is the constitutional guardian of commercial enterprise and that, to preserve it, it was justifiable, not only to imperial national sovereignty—without consulting the sovereign electorate—but also to abdicate leadership of the Commonwealth which Tory pro-Common Market politicians and newspapers still deride as a "farce", a "myth" and so forth.

The U.K.-Commonwealth alliance, despite political and economic diversities still possesses the opportunity to become the most potent contributor to the creation of a peaceful and prosperous world. It does not stand either for racial, economic or political *apartheid*. Its survival offers the best hope of the ultimate elimination of all three. In opposing all three, it practises what it preaches, as South Africa discovered, and will continue to be reminded. America now beginning to abandon, or at least to curb, racial *apartheid* within its own bounderies, is still applying political and economic *apartheid* (of McCarthy vintage) to China and Cuba.

A Barren Programme

The Commonwealth opposes, and will continue to oppose, that barren programme in every practicable way and at every opportunity. The Nehru treaty with China was not misconceived. Its implementation has been frustrated, only temporarily, by the American policy, now reinforced by Russia, of keeping China wholly isolated, politically and economically—politically, by excluding her from the U.N.O., economically by a process of thought starting from the sound assumption that communism is a poisonous political offshoot of economic poverty, leading to the unsound conclusion that the way to combat and defeat Chinese communism is to perpetuate the poverty which gave it birth and, if possible, to intensify it until Mao and his deluded colleagues agree to migrate to Formosa and accept American guidance—world without end. Amen.



That line of reasoning is as obtuse as the further calculation that, further east and south, the surest way to repel Chinese communism, and make it unpopular, is to turn ricefields into battlefields, and maintain them indefinitely in that condition. If "Freedom from Hunger" is the objective, the route suggested appears somewhat tortuous, and Cambodia's preference for "austerity" rather than "aid" becomes less difficult to understand.

Trade with China and Cuba

The U.K. and many European countries are developing trade both with China and Cuba and will go on doing so despite American assurances that Castroism would die with Castro and Chinese communism with Mao. Who will deny that Washington produces the world's funniest stories? It is true that America was recently prepared to sell wheat to Russia and is now negotiating to sell atomic power stations to communist Rumania, if only to prevent a British consortium snatching a profitable contract. The issue Washington will be forced to confront—*after* the Presidential election—will be, if trade with the Soviet *bloc* is expedient and profitable, what convincing criteria can be adduced for applying the contrary policy to China? Not to promote communism, but to promote world trade as the best aid to world peace. If racial *apartheid* is repugnant, international *apartheid*, political and economic, can only accentuate international tensions, and make a mockery both of the U.N.O. and of the development decade, as long as it survives.

As already emphasised, the Commonwealth, by its intrinsic diversity, must remain opposed to *apartheid* in every form, and is the only free world group inherently incapacitated from following any alternative. No stronger justification for its survival and development is required. Political hunger has been satisfied by the almost complete process of decolonisation. The elimination of physical hunger in the three undeveloped continents represents the next

BIRD'S CENTENARY YEAR

MINERALS IN MULTI-MILLION TONNES FOR STEEL

India's rising steel production demands an increasing supply of raw materials. To help meet this demand, the total minerals output of the Bird-Heilgers Group has increased in the last five years from just under 4 million tonnes to over 7 million tonnes per year. The Group is among the biggest mining organisations in the world—and still growing— producing coal, iron ore, limestone, manganese and dolomite.

Deploying the skills acquired over a hundred years, the Bird-Heilgers Group is making important contributions to the economy . . . through planned diversification and expansion.

major assignment, and the Commonwealth, in that sphere, is best qualified to accept, as it could easily achieve, world leadership, if all its members will collaborate in that not ignoble campaign.

This is not a task within the compass of charitable aid or commercial enterprise. It can be accomplished only on an inter-Governmental basis designed to promote maximum productivity at minimum expense but with maximum speed. The nature of the problem is as clear as the solution.

Today 80 percent of world agriculture remains dependent on human and animal traction and all the new Commonwealth States come within that category. Mechanisation of peasant crop-farming, based on co-operative cultivation, is the only practicable method of raising production and consumption levels to tolerable standards, and, within the Commonwealth, that objective can be achieved only if the U.K. mass-produce the British-designed peasant tractors, and make them available, as "economic aid", to all the new Commonwealth Governments.

Monetary aid, or "tied" loans, means price inflation leading to debt-inflation and cumulative exchange difficulties. Mechanical aid, in the form of peasant tractors, produced and supplied free of cost, would be wholly immune from those objections. They would have a still further advantage. In the long run, mechanised industry will acquire and retain the necessary foundation of purchasing power only if its economic basis is a fully mechanised agriculture. As the most populous common market in the free world India, with a population as large as Russia and America combined, will also become the most profitable when its 70 million peasant farms are made fully productive, in food and raw materials, creating a market for cheap manufactures wholly under Indian control.

Internal Development

The Geneva trade conferences, although propagating a prodigal proliferation of new political and administrative units, would have been more useful only if the 75 developing nations realised that, while export development is important, internal development is vital. It is vital because the Geneva discussions were devoted almost exclusively to the lowering of tariff barriers and similar impediments hindering access to western markets and ignored altogether the more formidable, because still undeveloped, barrier incipient in the accelerating spread of western industrial automation.

To quote only one familiar illustration—if western textile mills, sooner or later, move increasingly towards automated production, relying increasingly on man-made fibres, for how long will "cheap" eastern textiles retain their relative cheapness, and, therefore, their relative salability? The firm foundation of an expanding domestic market is more attractive than the slender, shifting foundations on which international markets must always rest! For that major reason, a Commonwealth Development decade, promoted by U.K. mechanical aid fructifying peasant agriculture, would represent a programme beneficial alike to its own peoples and as a prototype inviting world emulation.

Economic collaboration might be consolidated by closer poiltical collaboration than has hitherto been either feasible or acceptable. This could be promoted most easily by placing the Privy Council on a fully Commonwealth basis, making every Commonwealth Cabinet Minister a Right Honourable, and thereby facilitating more frequent consultations below Prime Ministers' level,—between Foreign Secretaries, Ministers for Commerce and Indusry, Ministers of Education, etcetera. Such a constitutional link, even although solely consultative, not involving even the slightest encroachment on national sovereignty, might well prove of special value at this juncture as between India and Pakistan, by reinforcing, and perhaps extending the present rapproachement, and giving it ample time to bear fruit, in all possible spheres of co-operation.

A concurrent development, with the same objective, might well be to develop the House of Lords, at present of somewhat uncertain stature and dependent on varying sources of recruitment, into a Commonwealth Senate (also advisory) as fully representative of Commonwealth States as of the U.K. itself. To be specific—if an Indian Peer, why not a Life-Peer from Pakistan? As there are women Peers, who would adorn, and reinforce, such an Assembly with such charm and competence as Mrs. Pandit? And, pursuiting that line of thought, if Asia is to find its spokesmen, who could speak with greater authority, and vigour, as the voice of African nationalism, than President Nkrumah? Could he refuse such a world platform? And if he accepted, would not the citizens of Ghana acquire a better chance than they have been vouchsafed hitherto, to gain practical experience in terms of a parliamentary democracy, looking to India as the world's most populous, and not the least stable or successful, exponent of that form of government?

Wind of Change

The "wind of change" is not blowing only in Africa. It was blowing before the former U.K. Premier, Mr. Macmillan had discovered it. It may blow in many unexpected directions following his unexpected retirement. There was a time in British history, perhaps more than one occasion, when the U.K. "saved herself by her exertions and the world by her example". I have a feeling that the Commonwealth may soon repeat, and excel, that saving achievement, not in a war against military aggression, but in the wider, more insistent, more rewarding "war against want". The hydrogen bomb survives. The hunger bomb should be eliminated, and will be if the Commonwealth so agrees, and so decrees.

The Commonwealth countries, including India and Pakistan, are not overpopulated. Their deficiency is the remediable deficiency of underproduction. The solution is not a planned diminution of human fertility, but a planned improvement in soil-fertility. Whereas the former solution is blasphemous and destructive, the second is creative and constructive. In Great Britain, the campaign for birth control has been succeeded by the highest birth rate recorded in the present century, leading mothers to clamour for more maternity hospitals, and Government to issue agonised appeals to married midwives to cope with the flood of babies.

It is reported that Indian village boys who have been "educated" reject manual-*cum*-animal farming as "degrading". It is worse! It is unscientific and unproductive. Any policy which alienates the Indian intelligentsia from the countryside stands self-condemned and needs no further indictment. Only mechanisation will reverse the "brains drain" from rural India. Only mechanisation will vitalise the community development units and give them full opportunity to become fully productive in all their varied range of activities. No Government east of Suez has greater opportunities for constructive achievement than the new Government led by the successor-

share in nation's growing industrial prosperity

When you buy Units of the Unit Trust of India, you acquire an interest in various types of securities of over 150 industrial enterprises, that is, in the entire portfolio of investments of the Trust. The aim of the Trust is to spread out the investments to minimise risk.

Also Units give a steady income. The dividend to Unit holders will be based on the average income of a well-balanced portfolio consisting of Government securities, industrial debentures, preference shares and equities.

Other Important Advantages

Liquidity of Investment

Investment in Units is liquid because the Unit Trust is ready to sell and buy back its Units at prices determined and announced by it every day. Unit holders can also borrow against Units from banks.

Tax Concessions

The income earned by the Trust is exempt from taxes and income upto Rs. 1,000/- distributed by the Trust to individual Unit holders is excluded in computing their total income for purposes of income-tax.

Each Unit is of the face value of Rs. 10. You can buy ten or a multiple of ten Units. Units are sold at prices determined daily by the Trust on the basis of the current value of its investments and other elements as provided in Clause 8 of the Unit Scheme, 1964. Units can be sold back to the Trust from November 15, 1964 at prices announced daily. A Unit holder can always transfer Units in favour of a bank for purposes of borrowing.

Application forms and details of the Unit Scheme, 1964 are available at any branch of the leading scheduled banks throughout the country. In case of any difficulty, call at or write to the Unit Trust of India direct.

Unit Trust of India

I.J.M.A. DENIES TELLING MILLS TO CUT OUTPUT

THE I.J.M.A. has denied the rumour that it has compelled its members to cut production by 10 percent or so from 1st October. A Press note issued by the Association on Saturday says that "the I.J.M.A. has no authority to issue such a directive. The Association is, however, aware that some members have made adjustments in production during September and that others may be doing so. These adjustments were or are being made to avoid losses or in connection with seasonal demand or because of other economic factors, and are all the result of voluntary decisions taken by individual members." The I.J.M.A. has assured all buyers that their requirements will be fully met. In view of the steps being taken by the Government, the Association has expressed its confidence that there will be an adequate supply of raw materials.

Captive Generators for Mills

The jute industry in West Bengal will be offered all facilities for maintaining its production at the desired levels, said Mr. P. C. Sen, Chief Minister of West Bengal while addressing last week a high-level conference of representatives of the Central and State Governments, chambers of commerce, associations of exporters and other industrial organisations. The State Government has permitted the industry to have its own generating sets to avoid any shrinkage in production when power cuts are imposed. Furthermore, most of the restrictions on the use of energy have been relaxed following the increase in power supply. On the basis of an annual production target of 1.7 million tonnes during the fourth plan, against 1.3 million tonnes in the current plan, the additional power requirements of the industry have been estimated around 40 MW. The annual export target for the next plan has also been stepped up from 900,000 tonnes to 1.1 million tonnes.

As for raw jute, Mr. Sen said that it was not possible to increase the acreage. But the Government would try its utmost to encourage intensive cultivation in an effort to improve the quality of fibre and raise the yield. The Central Government has offered an interest-free loan of Rs. 2.3 crores to jute-growers for this purpose.

Trading in T.S.D. Contracts

The East India Jute and Hessian Exchange Association has invited suggestions on certain amendments to the by-laws for trading in transferable specific delivery contracts in raw jute and jute goods. These were approved by the directors of the Association at a recent meeting. The first amendment relates to the insertion of the definition of "margin" as "the amount of money payable as a deposit by a member or non-member if his net open position at the end of a working day in respect of his outstanding transactions in T.S.D. contracts in raw jute and/or jute goods is in excess of the free limits."

The second amendment is a new by-law authorising a member to demand from a non-member client any margin money concerning outstanding contracts which the former has to deposit with the Association. The non-member constituent has to pay the amount demanded by the member within such reasonable time as will enable him to carry out his obligations to the Association or to other members. In the event of default, the member will be competent to square up his outstanding contracts with such a non-member constituent in the market on the trading day following the expiry of the time limit at the then prevailing rate. Such transactions will have to be reported to the E.I.J.H.E.A. before being squared up. The by-law also makes it obligatory on the member to refund to a non-member constituent the money collected as margin on his net outstanding position in any of the contracts as and when such deposit is no longer to be maintained. It authorises a non-member to make a direct deposit of the margin money with due intimation to the Association.

The third amendment is a new by-law in Chapter V providing that no member "shall trade in T.S.D. contracts in raw jute and jute goods either on his own account or on account of any other member with a person who is not registered with the Association except in accordance with the procedure laid down by the Board" with the prior approval of the Forward Markets Commission.

THE JUTE MARKETS

Manufactured Goods: Trading in the Calcutta gunny market was interrupted by holidays during the past week. Opening on an optimistic note on brisk short- and shipper-covering in the spot market, gunny prices shot up during the week-end on hectic bull support for sacking in the hedge market. The bullish fervour was sparked off by expectations of a brisk offtake of heavy goods. During August and September, the Government of India had booked about 45.000 bales of B Twills, the Egyptian Trade Mission about 20,000 bales, the Sudan 20,000 bales of assorted constructions and Australia about 15,000 bales of cornsacks and woolpacks. Furthermore, Thailand, Nyasaland and Russia also placed firm orders for substantial lots of jute goods for the ready and near positions. U.S. demand, now limited to routine offtake, was also expected to rise in view of the low inventories in that country and the sharp spurt in gunny consumption in recent months. Rumours of a production cut of 10 percent by I.J.M.A. member-mills were additional stimulants. But the earlier gains were practically erased on Tuesday on rumours of the Government's intention to use second-hand gunny bags for storage of foodgrains. The I.J.M.A.'s note on the production cut rumour was another bearish factor. Fresh overseas offtake was negligible during the week, although mills booked handsome business with shippers and shorts at the higher level. Conditions in Calcutta port improved somewhat. Enough space was available but it was mostly used for tea shipments. Shortage of lighters and berths continued to slacken the loading of vessels. The position was expected to improve in a couple of weeks. Fluctuations were wide. Turnover was moderate in the spot market and fair in the hedge market. The undertone was hesitant at the close.

Wednesday's quotations were as follows:

	Oct.	Nov.	Dec.	Jan.-Mar.
40in. 7½oz.	37.70	37.90	38.15	38.35
40in. 8oz.	40.50	—	—	—
40in. 10oz.	50.15	50.45	50.70	51.10
B Twills	149.80	148.40	148.15	147.55
Cornsacks	151.75	151.25	150.75	152.25
Heavy Cees (Plain)	149.50	148.40	148.00	147.25
A Twills	180.00	180.00	179.50	179.00
Liverpools	166.50	167.00	167.00	166.50

Raw Jute: Steady conditions prevailed in the raw jute market during the past week. The widespread rains all over West Bengal, Assam, Tripura, Orissa and Andhra made the feeder roads in the upcountry centres unsuitable for cart traffic. This affected the movement of fibre to the terminal markets and daily arrivals shrank appreciably. Holders also became reserved on reports of a rise in gunny prices in India and of a firm trend in fibre prices in East Pakistan. Mills had already lifted the maximum purchase quota of 175,000 bales for the week ended 3rd October. Although they experienced a shortage of several grades of quality jute required for batching purposes, they were restrained in their purchases. The turnover was more or less of a routine nature, confined to marginal lots of selected-grade fibre for the ready and near positions. Prices hardened by 50 paise a maund over the previous week's levels. Fluctuations were moderate and the undertone firm at the close. In the hedge market, transactions had not commenced in Upper Assam White Bottoms for December.

Wednesday's quotations were as follows:

	Rates a maund Mid.	Bot.	Rates a quintal Mid.	Bot.
Assam-Agartala Jute	41.00	38.00	109.85	101.81

THE U.K. JUTE MARKETS

FIBRE DEARER

(FROM OUR DUNDEE CORRESPONDENT)

THERE was a firmer trend in the raw jute market in Pakistan last week and many sellers raised their rates. It is understood that the mills there have been instructed to purchase substantial quantities of raw jute by the end of October, and as a result of this, prices have advanced. The outlook at present is that prices will still go higher because of the size and nature of the crop.

The raw jute market in Dundee also became dearer. Most of the cheaper sellers either withdrew or raised their prices. Holders of secured parcels had been selling, but they started taking a much firmer view of the position. Business in the fibre continued to take place for October and November shipments.

The main rise in prices in the U.K. took place in the lower qualities. This could be due to the bulk of the secured jute being of the bottom grades. Offers were not being so freely made as previously, and some sellers became rather reserved. A small movement took place in spot jute which could be to cover about 4,000 bales damaged in a warehouse fire in Dundee at the end of last week.

Offers being made here were still very irregular with Mill Firsts at £154, Export Firsts at £141, Export Lightnings at £126 10s and Export Hearts at £117, c.i.f. U.K., for October-November shipment. Grade Tossa-2/3 was named at £150 and Grade Tossa-4 and Dacca Tossa-6 at £137 15s. There were sellers of Outport Tossa-2/3 at £126 and of Outport Tossa-4 at £120, October-November. Cuttings were also becoming dearer at £93 for S.N.C. and at £82 for N.C.

The Siam jute market was quiet, and prices of the higher grades became easier. Offers were being made at £89 for grade A, at £85 for grade B, at £78 for grade C and at £74 for cuttings, delivered mill Dundee for November-December shipment.

The Calcutta goods market remained steady for hessians, but prices of sackings were still advancing. Some business took place here. Quotations were at 81s 10d for 40in. 10oz. and at 62s 1d for 7½oz. a 100 yards c. and f. U.K. for October shipment, at 82s 6d and 62s 7d November-December and at 83s 1d and 64s 3d January-March. B Twills were at 245s 6d. 243 3d and 242s 6d for the respective shipment periods.

Prices of Dundee jute yarns and cloth were very firm and supplies of the former were only available for forward delivery. Business continued to take place, and no doubt increased demand would be shown if the raw material markets became firmer. The carpet trade is taking regular deliveries of yarns and wide cloth. Prospects are that this will continue for some time.

The heavy end of the trade was rather quiet. There was not very much movement taking place in sackings and tarpaulins, but producers appear to have sufficient orders in hand to maintain output at a steady level.

THE PAKISTANI JUTE MARKETS

FIBRE RISES AGAIN

(FROM OUR DACCA CORRESPONDENT)

THE sellers had the upper hand in the jute markets in the interior last week. Arrivals everywhere were scarce and any purchases made were at higher levels than in the previous week. What was particularly worrying was that the percentage of tossa in the arrivals had been falling off considerably. This did not mean that the tossa crop has all been marketed; in fact, quite a lot of it has yet to be harvested. Nevertheless, it showed that already the sellers in the origin appreciate that they could get better prices for tossa than for white.

Despite low prices, the bullish undertone prevailed, although to a slightly lesser degree. There were still the odd case of a few bulls, talking of a 3½ million bale crop. The voice of the bear was also heard in the market, suggesting that the crop is as much as 6 million bales. Most balers, however, stick to their 4½ to 5 million bale crop estimate.

In the pucca bale market again, there was little activity except for cuttings, which improved slightly in prices. The discount for ready remained, but there were few buyers. It has now become obvious that the heavy business concluded in cuttings for the January-February-March position, is mostly speculative. There is no question of delivery being taken, but differences will be settled. This will leave large quantities of cuttings in balers' godowns, which must eventually result in a fairly heavy drop in the price of cuttings since the mills cannot lift more than they usually do and very few overseas buyers can afford to pay even F.P.C.

Books

RUSSIAN ECONOMIC POLICY

Foreign Economic Policy of Soviet Russia. By D. S. Nag. (Published by Lakshmi Narain Agarwal, Agra. Price Rs. 10.)

In this book the author attempts to establish that Russian economic policy is not governed by the exigencies of circumstances, but is based upon the doctrines of Marx and Lenin. Soviet aid to under-developed countries should be judged against this background. In his criticism the author, however, finds Soviet aid in different forms to be much inadequate when compared with that from the U.S.A. He is not very happy over Russia's abstention from the different world organisations set up under the auspices of the United Nations to help the under-developed countries. Russia's attitude could have justification on political grounds, but the author feels that re-orientation of outlook is called for in the changed circumstances.

The book unfortunately has a few drawbacks. It does not seem to bring out the changes that have taken place of late in Russia which have influenced the authorities to withdraw gradually the iron curtain in international trade. The withdrawal is not complete, but there is greater appreciation of trade and exchange with the West than before. Secondly, the author has not sought to ascertain whether Russia has as much investible surplus as America. Political or doctrinaire considerations may influence investments abroad at the cost of domestic consumption, but there is an obvious limit to it.

The author has concentrated his attention on Soviet economic relationship with the developing and underdeveloped countries, and has virtually ignored her growing trade relationship with Western countries. In view of this, a sub-title should have been added to the book. Considering the size of the publication and the author's intention to circulate it among students and the interested members of the public, the price appears to be a little too high for this country.

Who has been one of the foremost names in commercial and industrial refrigeration and air-conditioning around the world for over 75 years?

York, of course

Since 1885 York have been making high quality refrigeration and air-conditioning machinery. York equipment, know-how and unparalleled service have been available in India for over 35 years.

York equipment will now be manufactured here by York India Ltd. in collaboration with Borg-Warner Corporation of U.S.A. York India will set a new standard in refrigeration and air-conditioning.

We will welcome an opportunity to discuss your specific refrigeration and air-conditioning requirements.

WAGES AND TRADE UNIONS

Wage Determination and Organised Labour in India. By A. J. Fonseca S.J. (Published by Oxford University Press. Pages 241. Price Rs. 10.)

Organised labour has an important part to play in the development of Indian economy, but if misdirected, trade union movement may well prove a hindrance to economic growth. A carefully planned labour policy is, therefore, essential to minimise the tension between employers and employees. The author starts with a brief resumé of the different theories of wage determination beginning from Ricardo and Marx, and enumerates the structure of trade unions in India and the efforts made by the Government of India after independence to establish "fair" wages in different fields of production by legislation and other methods. The following chapters on forms and methods of wage settlement are informative and among other things, discuss the methods available in advanced countries like the U.K., Holland and Sweden.

The book devotes a chapter on the impact of trade unions on wages which in fact, is an offshoot of the theory of wages. The author justifies labour's share in profit and the right to bonus although he is aware of the practical difficulties of the implementation of the principle of profit sharing in different industries. Enlightened industrialists in this country as elsewhere, have recognised this right long before any legislation was introduced.

In the context of a developing economy and the constant threat to inflation, care must be exercised that the cost of labour does not grow disproportionately heavy so as to retard the growth of rising enterprises and trade unions should well realise their ultimate responsibility in promoting economic growth through active participation and co-operation wherever possible.

EXPORT DIRECTORY

Directory of Exporters of Indian Produce and Manufacture 1963. 15th Edition. Price Rs. 12.50. Foreign 20s 2d or (U.S.) $4.50. (Published by the Government of India, Department of Commercial Intelligence and Statistics, Calcutta.)

One need not dwell upon the importance of Sell's Directory or Bankers' Almanac as a valuable source of information in the world of business. The directory of exporters as published in the present edition will prove of great value to foreign importers who wish to establish or renew trade contacts with India. The directory was first published in 1919, and further editions were brought out from time to time. As many as 1330 firms were included in the 1961 edition, but the present volume covers the names of 3,350 firms with the novel feature that non-traditional items have been included which India seeks to export. The book contains several useful appendices on the Export Promotion Advisory Council, Export Risk Insurance Corporation, addresses of Indian trade representatives abroad and gives a list of foreign exchange banks and travel agents in India.

NEW W.I.M.C.O. CHAIRMAN

The board of the Western India Match Co., Ltd has elected Mr. Akbar Hydari as chairman of the Company in succession to Sir Chunilal V. Mehta, who has retired from the chair after 25 years. Mr. Hydari is 45 and has been an executive director of W.I.M.C.O. since 1951.

Commodity Markets

TEA OUTPUT AND EXPORTS BELOW TARGETS

(FROM OUR SOUTH INDIAN CORRESPONDENT)

It is now an undisputed fact that the tea industry will not reach the original third plan targets either for production or for export. In the light of a recent assessment of the performance so far, the Tea Board chairman, Mr. Bam, is estimating the Indian tea production by 1965 at 830 million lbs. against the original third plan target of 900 million lbs. He has apportioned 620 million lbs for north India and 210 million lbs for south India. These estimates were given in his address to the recent annual conference of the United Planters Association of Southern India. He estimated export in 1965, at 530 million lbs, against the third plan target of 550 million lbs. There has been a steady increase in Indian tea exports from 426 million lbs in 1960 to 493 million lbs in 1963. There was a 21 percent increase in the export of south Indian tea, compared with one of 14 percent of the north Indian tea during this period. The Tea Board chief's feeling is that exports in 1964 will be of the order of 510 million lbs.

The Planning Commission is now examining the report of the Working Group set up by it for formulating the targets for the fourth and fifth plans. It is reported that the Working Group has recommended a production target which contemplates an increase of 170 million lbs by the end of the fourth plan period compared with the anticipated increase of 122 million lbs during the third plan period. It is stated in certain quarters that the yielding capacity in North East India and south India has reached a point of saturation and a further increase in production is possible only through the extension of new areas. Official circles do not agree with this view. Better methods of cultivation, adequate application of fertilisers, drought and pest control measures and other scientific methods can certainly bring about a further improvement in yield, they argue. Besides new planting with high-yielding clones or improved seeds will lead to greater results. However, for achieving higher production, the industry requires assistance in many directions, including tax concessions.

To achieve a rapid increase in production, it has been estimated that during the next few years, at least 24,000 acres of new planting will have to be done every year. Out of this, about 18,000 acres are earmarked for north India and 6,000 acres for south India on the basis of the present ratio of acreage in the two areas. This level of new planting will require investment on a large scale which is not very easy for the industry to manage under the present conditions. It is this context that the appointment of the Tea Finance Committee recently by the Government of India is particularly significant.

North Indian tea estates are having a very fine season this year. Their production to the end of August was to the tune of 327 million lbs, representing a 26.7 million lb gain over the crop for the corresponding period in 1963. From the present trend of production, it would appear that north India will harvest well over 600 million lbs this year which will be a record. Unfortunately, production in south India is lagging behind last year's. The south Indian tea crop to the end of August at 110 million lbs, was down by about 20 million lbs, compared with that of the same period last year. This was due to a prolonged drought early this year. Conditions have improved since then and the expectation is that at least a good part of this loss will be made up by the end of the year. The present estimate is that the total production in India in 1964 will be higher than the 1963 output by about 40 million lbs. This will be the highest on record.

A special correspondent writes: Nature seems to regulate the supply position of tea better than the producers can order it. Since the end of the Second World War, Ceylon has steadily increased its output from 135.5 metric tons (1 metric ton = 2,205 lbs) to 219.8 metric tons in 1963, while south India moved up from 48.7 metric tons in 1948 to 87.6 metric tons last year. In north India, however, although production improved reasonably from 213.3 metric tons in 1948 to 273.4 metric tons by 1961, output fell away to 257.2 metric tons last year. A new record of production amounting to something over 273.3 metric tons is probable this year. Had south India and Ceylon continued to go ahead, this bumper crop from north India would have caused a serious fall in commodity prices, but as noted, nature has restricted the supply so far this year; south India is remaining short by about 10,000 metric tons and Ceylon's output is lower by 3,000 tons so far. The stocks in the U.K. are also short. These have so far saved the situation, and Indian teas are getting a reasonably good price.

Nevertheless looking to 1965, this correspondent is of the opinion that the F.A.O. warnings may come true. North India has made a recovery, and Pakistan is likely to do likewise; so also East Africa. Even if south India and Ceylon daily round the 1963 level, still there will be a lot of tea for world markets. Some hoped the E.C.M. countries would absorb more in 1964, but so far figures are not very encouraging. The U.S.A. is another market which held out great expectations, but actual exports through Calcutta from 1st July to 15th September, 1964 were 4,117,030 lbs. compared with 4,450,394 lbs in 1963, and 4,819,540 lbs in 1962.

CARDAMOM

Prices Look Up

Our South Indian Correspondent adds:

Cardamom prices are looking up, and the reason given is smaller arrivals of the new crop. Due to absence of adequate rains during February, March and up to monsoon, the prospects of cardamom have dwindled and the planting opinion is that this year's crop may not exceed 60 percent to 70 percent of last year's production. The crop is late also by about a month. Prices of green medium have moved up to Rs. 15.50 to Rs. 17.50 a kilograms. The superior variety is quoted at Rs. 18 to 21 a kilogram. This represents an increase of 5 to 7 percent over the prices a few weeks ago.

TAXATION

Memorandum to Commission

The United Planters Association of Southern India in a memorandum to the Finance Commission has highlighted certain aspects of the taxation on the planting industry which by further neglect might seriously affect the revenue expectation from the industry and its contribution to the nation's export trade. The memorandum points out that the combined incidence of sales tax and Central duties of excise, Central income tax, agricultural income tax, entry duties, cesses, octroi duties, building taxes, *panchayat* and other local levies on production, consumption and export of plantation products has reached a point causing concern to the industry. It recommends that the Finance Commission should propose measures for a co-ordinated approach for the taxation between the Central and State Governments, and that it should lay down the principle that agricultural income should not be taxed more heavily than business income, that concessions available to industries and commodities under the Central scheme of taxation should be made equally available to plantation crops and that the crops in export should be exempted from the levy of sales tax and excise duty. As an alternative, all taxes and duties should be levied by the Central Government, and these should be subject to the Commission determining the procedure of periodical allocation of shares to the State Governments concerned, so that the cumulative weight of taxation of the industry is fully recognised by the Central Government and the power to take corrective action is available to it.

PIG IRON

Shortage Affects Foundries

THE Indian foundry industry has made substantial progress in the past few years. Its annual capacity now totals 2.5 million tonnes, which is distributed over 2,000 units operating mostly on a single-shift basis. The range of these products too has widened considerably, and includes heavy alloy castings of intricate standards and specifications for machine-building. The main market for foundry products is provided by the railways. The industry has also been making an increasing contribution to the country's export earnings, which have risen from Rs. 12.30 lakhs in 1959 to Rs. 37.60 lakhs in 1963. Exports in the first seven months of 1964 have totalled 33.31 lakhs. Indian castings have found a good market not only in Asia and Africa but also in the industrially advanced countries of the west. Shipments to the U.S.A. in the first seven months of 1964 have amounted to 1.13 lakhs. In his presidential address at the annual general meeting of the Indian Foundry Association held in Calcutta on Wednesday Mr. K. Prosad stated that if the quality of Indian foundry products was improved, exports could be stepped up even more. He suggested that a research organisation should be created to accelerate the growth of

RETAILERS: LOHIA TRADING CO., 133, Canning Street, Calcutta-1.

the foundry industry. He also suggested that the industry should be mechanised as far as possible in order to bring down production costs and improve quality.

The main problem of the industry arises from the shortage of pig iron. Mr. Prosad said that against an estimated demand of 2.5 million tonnes, the supplies of pig iron amounted to only 1.2 million tonnes. Out of this, limited supply, only a small quantity goes to the industry since the major portion is ear-marked for specific purposes. As a result, the foundries producing commercial items get raw material supplies to the extent of only 20 percent or 22 percent of their installed capacity. The decision to import 150,000 tonnes of pig iron from Russia, Mr. Prosad said, should be able to relieve the scarcity to some extent. But since its landed cost is higher than the existing controlled price of pig iron, the foundries are burdened with bigger production costs. The speaker pointed out that even if all the industrial licenses so far granted by the Government for establishing small pig iron plants materialised the total indigenous availability would not exceed 2 million tonnes. So he has suggested that an additional capacity for producing 2 million tonnes of foundry-grade pig iron should be established by the end of the fourth plan, since the requirements by then would have gone up to about 4 million tonnes.

New U.K. Mark to Guarantee Wool

THE official launching of the "Woolmark" in London recently marks the first stage in the most ambitious promotion scheme that has even been launched for wool, or indeed any other fibre. It has taken two years to prepare and within another two years will be in operation in 21 countries throughout the world. In essence, the scheme is to promote wool textiles on the grounds of quality and performance (they cannot compete with many of the new fibres on price) and to establish and maintain trading standards as a guarantee to the public.

In addition to Britain, the International Wool Secretariat is also introducing the mark simultaneously in West Germany, Holland, Belgium, America and Japan. In about 12 months, it will be in force in ten more European countries, India and Canada, and in the following year in Australia, New Zealand and South Africa. The "Woolmark"—it rather resembles the knot known as a monkey's fist—is a certification trademark, so that the conditions under which its use is granted has legal backing and one of the Secretariat's greatest tasks was to find a mark and conduct the necessary negotiations to secure it by patent in 90 different countries.

Use of the new mark will impose stringent conditions on those manufacturers who intend to use it. The scheme will be introduced in stages. At first, the mark will be an assurance of pure new wool processed by manufacturers of standing. The maximum allowance for decorative fibres will be 5 percent, plus 0.3 percent for inadvertent fibrous substances. The mark will in the first place be confined to worsted cloths, but will be extended to woollen cloths in the spring of next year. It will then be extended gradually to other types of fabric, including knitwear and knitting yarns, blankets and carpets.

In time, the requirements for the mark will also be increased. The Secretariat will define standards of strength, colour, fastness and other performance characteristics and the mark will also cover new processes such as resistance to shrinkage, permanent pleating and so forth. An interesting feature of the scheme is the co-operation promised to the I.W.S. by the Retail Trading Standards Association. There will be a policing system of random purchases by I.S.W staff and the garments will then be tested in the laboratories of the R.T.S.A. Mr. Roger Diplock, director of the Association, announced the other day that it was ready to erect an additional building at its laboratories if the use of the "Woolmark" made it necessary. Mr. Dennis Clive, U.K. director of the International Wool Secretariat, has said that the "Woolmark" scheme is "a great step forward in consumer protection." At the same time, it is probable that it will also be of some assistance to the British wool textile industry by bringing a new internationalism to wool promotion.

IFOC-87

COMPANY AND PUBLIC NOTICES

BRIDGE AND ROOF CO. (INDIA) LIMITED

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the aboye-named Company will be held at the Registered Office of the Company, 21 Netaji Subhas Road, Calcutta, on Thursday, the 29th day of October, 1964, at noon, to consider and if thought fit, to pass the following resolution :—

(To be proposed as a Special Resolution)

"That the Regulations contained in the printed document submitted to this meeting and for the purpose of identification subscribed by the Chairman thereof, be and are hereby approved and adopted as the Articles of Association of the Company with effect from the first day of November, One thousand nine hundred and sixty-four in substitution for and to the exclusion of all existing Articles of Association."

BALMER LAWRIE & CO. LTD.,
D. MANSON,
Managing Director,
Secretaries.

alcutta, 1st October, 1964.

lotes :—(1) A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

(2) **An Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, has been forwarded to the members of the Company.**

MALAYALAM PLANTATIONS LIMITED

Accounts

THE profit for the year after taxaon was £586,891 against £513,817 or 1962/63. In view of the current igh level of expenditure upon tea achinery and equipment the Direcors have transferred £138,200 to apital General Reserve. They have lso transferred £8,750 to Developent Rebate Reserve and have dded £50,000 to Replanting Reserve raise the latter to the amount now stimated to cover the cost to matuity of existing immature areas. hey propose a final dividend of 17½ er cent, making 22½ per cent for the ear and leaving £98,110 to carry orward. The total dividend is overed 1.53 times by the profit after eduction of tax and replanting exenditure.

FOURTH PLAN: AN ESSAY IN ASTROLOGY

FEW debates in recent months have been as astrological in tone and as confusing in content as the one on the size of India's fourth five year plan. Several months ago, a gallant band of dreamers not fully roused from slumber suddenly dropped out of bed and announced that they thought the outlay target for the next quinquennium should be Rs. 30,000 crores. Soon afterwards, fortunately, the voices of caution began to be heard: some, supported by a varying mixture of hunch and reasoning, suggested that the outlay should be no more than Rs. 15,000 crores or Rs. 16,000 crores. In terms of the reasoning displayed and the quality of the analyses made, the process of haggling which followed was not very different from that which enlivens the proceedings of fish markets the world over. The perspective planners, perhaps sobered by the reaction of astounded observers to their original ideas, quietly began to advertise a figure of around Rs. 25,000 crores as the minimum necessary. Meanwhile, the Central Finance Minister, Mr. T. T. Krishnamachari—backed, reportedly, by the analyses made by the Planning Commission's working group on resources—gave the impression that in his view only about Rs. 18,000 crores or so could be found for the next plan.

During the subsequent haggling, it appears, all these estimates suddenly acquired a remarkable degree of elasticity. The Finance Ministry's estimate of the feasible outlay seemed to go up to Rs. 18,500 crores, Rs. 20,000 crores or even Rs. 21,000 crores—depending on which newspaper one was inclined to believe. The perspective planners, on the other hand, appeared to lower their sights a little too: in a memorandum submitted to the Central Cabinet three weeks ago, they favoured a plan of Rs. 24,000 crores, while indicating half-heartedly that the other choices were a plan of Rs. 22,500 crores or one of Rs. 21,000 crores. Some of these figures were said to represent not just the proposed outlay on the fourth plan itself, but also to include what was curiously termed as the spillover from the third plan. The variations in other estimates were explained as having been suggested in order to introduce a measure of flexibility in the fourth plan. The result of the haggling now is a compromise which was endorsed by the Central Cabinet last week, and which is to go up before the National Development Council a few days hence. The essence of the compromise is that the outlay on the fourth plan should be at least Rs. 21,500 crores; but if the progress of the economy during the first two years indicates that more resources are likely to be available, the figure will be raised by Rs. 1,000 crores—to Rs. 22,500 crores. Assuming that he was correctly reported, Mr. Krishnamachari declared in a statement in Bangalore last Saturday that there was now "complete agreement" on the size of the fourth plan. But considering the wide differences prevailing only recently between his ideas on the one hand, and the perspective planners' on the other, many might wonder how complete and genuine the agreement really is.

Apologists might say that the extent of the agreement does not matter particularly: the second plan as well as the third one were both the children of similar compromises, and such compromises are inevitable in the functioning of a democratic society. The point remains, however, that the second plan ended as at least a partial failure, and the third plan seems likely to end as an even bigger one. In both cases, the failure can be traced directly to the fact that resources and organisational capacity were dissipated over too wide a field because the plans to start with were far larger than the country could sensibly hope to manage. In defence of the fourth plan, the plea might be offered that it is not really as big as it sounds: in purely arithmetical terms, the outlay proposed may seem almost double that visualised under the third plan, but its real significance is much less since it is based on the much higher level of prices prevailing in 1963-64. Even after all due allowance is made for this difference, however, the impression is unavoidable that the fourth plan outlay now proposed is far greater than the country can incur without dangerous strain.

The political pressures in favour of a large outlay, and therefore a "big" plan, are familiar ones, and they have been prominent in the debate of the past few months. The Planning Commission is prone to give the pressures a cloak of respectability and economic justification through its customary clap-trap about capital-output ratios: that a larger plan means larger investment, and therefore must mean larger output. The fact that its assumptions about capital-output ratios have regularly been falsified by experience has not undermined its devotion to high-sounding mathematical mumbo-jumbo. The devotion continues because the Commission lacks the courage to say what is feasible, as distinct from what is merely desirable. It fears that if it were to support a smaller and more realistic plan, it would find thrust upon itself the distasteful responsibility for rejecting or pruning the programmes submitted by Ministries, State Governments and other implementing agencies. In the process, it would incur their displeasure, and such support and strength as it enjoys would suffer. The constant struggle to retain that support impels it frequently to sanction programmes which it knows cannot possibly be implemented. The Commission forgets that while the political framework within which it has to work is there, its duty is primarily that of an independent and expert agency which ought to say what things can be done and in what order they should be done. To shirk the duty in search of political favours—by inflating a plan in order to accommodate a larger multitude of schemes, good, bad and indifferent—represents an abdication of both sense and responsibility.

The basis on which resources have been calculated for a fourth plan worth Rs. 21,500 crores or Rs. 22,500 crores, for example, is still far from clear. Soothing references have been made to the need to restrict deficit financing (although it appears that an extra Rs. 500 crores of notes will be printed to cope with the growth of the economy). There is talk about squeezing bigger surpluses out of Government enterprises, forgetting that the

surpluses secured so far are much smaller than what the Commission expected. More resources, it is said, will be obtained through Government borrowing and small savings schemes; the point that the former has become a subterfuge for deficit financing, and the progress of the latter remains fitful and uncertain, is not, however, mentioned. Finally, there is the inevitable reference to the supposed scope for additional taxation; but the severe impact of the existing taxes in increasing cost inflation is coolly glossed over, and so also is the unwillingness or inability of State Governments to raise their share of the revenue.

The purpose in highlighting these difficulties is not to suggest that no plan of any size can be implemented. The purpose is to invite the planners once again to descend from the cloud-cuckoo land of economic astrology and take a long, hard look at the existing realities of the country they are supposed to be planning for. It is easy to say that with "advance preparation", "detailed planning" and "efficient implementation", miracles will be achieved; but most people know that this is the same sort of familiar eyewash that was freely dispensed five years ago, before the third plan was launched—with results that are now plain for all to see. The truth is that while the progress of the fourth plan will depend on a multitude of uncertainties, there are perhaps three that will be of crucial importance. The first is the condition of agriculture, and to a lesser extent of industry—which will determine how much can safely be raised by way of rupee resources. The second is foreign aid and investment, which will provide the external resources. The third is organisational efficiency, which will be required to translate money into factories and goods. About the first, there is no reason for optimism yet, considering that agricultural production has stagnated for the third year in succession and the growth of industry remains far slower than the planners visualised. As for the second, the planners' assumptions are discouraging enough to make the entire concept of a large plan look deceitful: it is odd to assume that Rs. 2,500 crores of foreign aid will be enough for a Rs. 21,500-crore fourth plan when it has proved extremely inadequate for a Rs. 11,600-crore third plan. As for organisational efficiency, the less said the better; it remains to be discovered not only among those who implement plans but also among those who in the first place write them.

IN RETROSPECT

ONE wishes Russia's proud new Voskhod had stayed in orbit a few days longer, days in which mankind was called upon to witness a series of events whose full significance might or might not be comprehensible if seen from outer space. From the earth, they only filled most minds with a feeling hovering between fear and uncertainty. That at Eden Gardens on Saturday and Sunday wickets fell with astonishing rapidity was something lovers of sport have learnt to understand. The sudden fall of Mr. Nikita Khrushchev, if a fall it was, is something quite inexplicable in terms of struggles for power as enacted in the non-communist part of the world. Only Peking may be at once enlightened and delighted, although we may never know whether the timing of the explosion of China's first atom bomb was based on intelligence as to what was going on in the Kremlin. Only Sir Alec Douglas-Home has said that earlier announcement of the news from Peking and Moscow might have greatly affected the polling in Britain which now has a Labour Government again after 13 long years of Tory rule. There is the portrait of a week replete with surprises, agreeable or otherwise.

Was the eclipse of Mr. Khrushchev quite so sudden as it appeared? It is now known, for instance, that for months before the Twentieth Congress, at which Mr. Khrushchev did to Stalin what others may soon do unto him, there was active and widespread discussion in Party cells throughout the country. Although western intelligence did not have the slightest inkling, it may well be that critics of Mr. Khrushchev took considerable pains to educate Party opinion (which in Russia is more important than public opinion) in the new line. The tendency hereabouts is to see a sinister Chinese hand behind just about every unpleasant or merely unexpected development; and it is by no means certain that the Kremlin does not still contain a few unreconstructed Stalinists with considerable admiration for Peking's stubborn rigidity and orthodoxy. It is altogether too early, however, to conclude that Mr. Khrushchev's exit is Mr. Mao's triumph. The Sino-Soviet rift reached a point at which Mr. Khrushchev was a liability in any attempt to improve Russian relations with China; but if it is true, as it undoubtedly is, that the quarrel is not, basically, either personal or ideological but concerned with national interests, there is little reason to think that the new men in the Kremlin will be any softer to Chinese intransigence. Quite the contrary, especially after the crude Chinese advertisement of the possibly cruder bomb.

For all the surprises the Kremlin so loves to spring on the world, it is already possible to see a certain continuity in Russia's foreign and domestic policies; and this continuity is the product not so much of an individual, however eccentric, as of objective conditions created over the years since the Revolution. Messrs Brezhnev and Kosygin—eventually one or the other—will undoubtedly introduce their own style(s) in the execution of policy but the policy itself will not undergo structural change. In demonstrating that the Russian polity can do without Mr. Khrushchev and Mr. Khrushchev can stay alive without being in power the country gives further evidence of its growing maturity; this, surely, is a more positive reaction to developments in Russia than alarm or surprise. That New Delhi felt rather lost without Mr. Khrushchev is a measure of India's lack of confidence in herself and her policies.

The same weakness could be discerned in India's exaggerated reaction to China's noisy and clumsy entry into the world's exclusive nuclear club. Not so very long ago India boastfully proclaimed her capacity to make nuclear weapons, accompanied by a somewhat self-righteous announcement that India would make none. It is certainly to be deplored that, by exploding an atom bomb, China has added to existing dangers of fall-out and worse consequences if the bomb is used in anger; yet it is necessary to point out that behind the explosion lies impressive technological and industrial progress, for without that no country can actually make a bomb which is a very different proposition from knowing the there of making one. Thoughts should have been directed to India's comparative deficiency in the department; Mr. Lal Bahadur Shastri was content to tell his people and the world how wicked these Chinese are and how naughty it has been of them to test their bomb. Mr. Shastri saw for himself in Cairo how few fully accept the Indian indictment of China; and this was before China broke the "white monopoly" in nuclear arms. In the other audible Indian reaction—that India should now proceed to make atomic bombs—is evident no greater discernment or wisdom.

No great harm was done if New Delhi decided to be a little sentimental over Labour's marginal victory in the British general elections. For reasons largely out of date, nationalism in Asia and Africa has traditionally been fonder of Labour than of the Conservative Party. Although Mr. Harold Wilson must greatly envy the vast majorities enjoyed in India by the Congress, except in Kerala, the ruling Party here has much to be worried about. Quite apart from internecine Party squabbles, the Congress must know that the process of disenchantment with the Government's response to problems both within and without is gaining momentum daily. The automatic but utterly barren Indian reactions to three events of far-reaching significance—the removal of Mr. Khrushchev from the Kremlin, the explosion of the Chinese bomb and Labour's victory in the British general elections—are indicative of a deeper malaise which is far more disturbing than the Chinese bomb by itself is ever likely to be.

It is not suggested that India put a cosmonaut in orbit tomorrow or the day after. Far less is it suggested that India make a bomb to get even with China. There is no reason at all why anyone in India should be looking for a Shri Kosygin or a Shri Brezhnev here. Mr. Lal Bahadur Shastri is all right; he still enjoys a great deal of respect and affection. But, as one watches the exciting events the world over, one's 17-year-old satisfaction that India is an oasis of stability in a world full of uncertainties tends to seem a little depressing. India's political stability is certainly something to be grateful for; but, unless the nation is vigilant and active, stability soon degenerates into stagnation. "Stagnant" seems the word for most things in India—except, of course, prices. Harassed in the daily effort to obtain the barest necessaries of life at reasonable prices, the common people of India have not the time either to be thrilled by friendly Russia's achievements in space or to be frightened by hostile China's young atom bomb. Mr. Shastri's first enemy is hunger; all else is secondary.

CO-OPERATIVE BANKING

CO-OPERATIVE banking has expanded rapidly in India since the Government decided to use co-operative as a major instrument to stimulate development in rural and urban areas under the plans. But the weakness is that the co-operative movement as a whole depends too heavily on official patronage and support. As a result, the real purpose of co-operation has largely been forgotten and extraneous influences have tended to dominate the movement. The public stake in co-operatives has grown since the Reserve Bank has extended massive support to co-operative credit. The short-term credit limits sanctioned to State co-operative banks by the Reserve Bank have risen from Rs. 7.62 crores in 1950-51 to Rs. 186.16 crores in 1963-64. Yet, in spite of rapid growth, co-operative banking has not yet been subjected to the same kind of regulation and control as commercial banks. Co-operative finance is already a substantial element in total bank credit. In his inaugural address at the silver jubilee celebrations of the Maharashtra State Co-operative Banks Association recently in Bombay, Mr. P. C. Bhattacharyya, Governor of the Reserve Bank, rightly pointed out that it is necessary now to bring co-operative banks within the regulation and control of the Reserve Bank if the overall monetary and credit policy is to be implemented more effectively.

The weakness and deficiencies of the co-operative movement are likely to be mitigated if co-operative banks are disciplined so that they conform more closely with the practices and progressive policies pursued by commercial banks. The latter, for example, are restrained from giving advance against commodities, except within the limitations set by the Reserve Bank, while co-operative banks are more or less free to make such advances. In view of the increased holding power of cultivators, it is possible that advances given by co-operative banks have been used to hoard stocks of agricultural commodities. This besides, the cheap credit extended to the co-operative movement by the Reserve Bank seems to have benefited middlemen rather than farmers. Large overdues and defaults have bedevilled the working of co-operative banks because of their unsound practices. Although a controversy over the Reserve Bank's rôle in promoting the development of co-operatives emerged at the Maharashtra seminar, the fears there seemed to have been exaggerated. Mr P. D. Kasbekar, chief officer of the Agricultural Credit Department of the Reserve Bank, was right in saying that the rapid expansion of the Reserve Bank credit, particularly in the shape of credit money, should not be maintained for long in view of the prevailing inflation. Co-operative agencies should seek to reduce their dependence on the Reserve Bank. Given the need for credit restraint under the present circumstances, the sooner co-operative banks become viable and self-supporting, the better it will be for the movement as a whole.

A move to restrict the supply of Reserve Bank credit does not automatically imply that co-operative institutions will begin to suffer a shortage of credit. If co-operative banks are organised on sound lines, they should be able to attract bigger deposits. There is no reason why they should not be able to offer the same basic services to constituents as are given by commercial banks. If the Reserve Bank succeeds in bringing co-operative banks under its discipline, there could be greater co-ordination among all categories of banking, including the State Bank of India, commercial banks and co-operative banks. With such co-ordination, commercial banks would also be interested in providing credit to sectors which now depend largely on co-operative banks for funds. The State Bank of India has already been extending substantial amounts of credit to the co-operative movement. It has helped co-operative banks by granting generous remittance facilities. It has also subscribed to the debentures of land mortgage banks. The State Bank hopes to take keener interest in the co-operative movement in the future.

Mr. Bhattacharyya offered some valuable suggestions to improve the working of co-operative banks. Their lending operations need to be more production-oriented. In view of the large number of overdues and defaults, it is clear that applications for advances are not being scrutinised as strictly as they should be. If the loans are used to increase production, the financial position of borrowers will improve. Co-operative institutions, therefore, have to concenerate on encouraging thrift among their constituents. If savings are encouraged in rural areas, the deposits of co-operative banks will grow. Apart from mobilising resources in the rural sector, they can attract deposits from urban areas by offering attractive rates of interest. Co-operative banks cannot expect to go on getting special favour. All categories of banking have to try and develop in an atmosphere of competition, so the demand that co-operative banks should be allowed to function exclusively in specified areas is unjustified. Although it is not desirable to multiply banks unnecessarily in any area, there is no reason for preventing a commercial bank from opening a branch in a place where a co-operative bank is operating, provided the scope for new banking facilities is indicated.

Although co-operative banks should concentrate their attention on giving credit to promote production, it is time they also diversified their loan operations to make the movement more viable. If the financial position of farmers is to be improved, it is necessary to extend adequate credit facilities to marketing societies so that primary producers are assured of fair prices for their products. This apart, there is great scope for co-operative banks to stimulate the growth of small industries in urban and rural areas by giving proper credit facilities. The co-operative movement has so far confined its attention to rural industries. But in many urban areas small industries have failed to grow due to the shortage of funds. It is not possible for these industries to obtain credit facilities from commercial banks because they are small and cannot furnish proper security. If co-operative banks finance them, particularly in urban areas, it will help increase production and employment. Co-operatives also have a big rôle to play in so far as consumer goods are concerned. Consumer stores organised on proper lines could reduce profit margins and help hold the prices of commodities down. Most such stores suffer from a shortage of funds, so if they could get adequate credit facilities, consumers would benefit. The main need is to ensure that the credit extended to co-operatives is used to benefit members, and not middlemen.

Current News and Comment

New Schedule of Cloth Multipliers

It was on 1st October that the Government of India released what has now come to be known as the "tentative" schedule of basic realisation multipliers and processing charges and other allowances for finished cloth for fixing the prices of controlled categories of cotton textiles. But within a few days of this announcement, the Government somehow came to realise that the prices so fixed would not help achieve the promised 5 to 8 percent reduction in the prices of popular varieties. Accordingly, it asked the industry to stay the stamping of new prices under the statutory control scheme until further notice. The tentative schedule has been revised after "further closer examination and cost accounting". What provoked the authorities to revise the schedule within a few days of the first announcement is intriguing. An enquiry into how all this came about might prove to be revealing.

Under the new schedules released on 13th October, there has been a downward revision in the basic realisation multipliers for nine out of the 13 groups in comparison with the original schedule of prices. Processing charges and other allowances in several cases have also been revised downwards. The changes in the cloth multipliers cannot be said to be of a minor nature as the Central Commerce Minister, Mr. Manubhai Shah, would have one believe. According to informed sources, there has been a cut of 4 to 4½ percent in the multipliers for the groups V to XIII, in addition to a reduction in combing allowances, cotton adjustments and processing charges. The net effect of all these would be a reduction, except in the case of coarse and lower medium varieties, of 6 to 7 percent in the prices as calculated on the basis of the original schedule.

The impact of the revised schedule on the price structure would vary from mill to mill. It is common knowledge that the voluntary price regulation scheme had long been reduced to a sham and that several mills had inflated their stamped prices quite arbitrarily. Despite recent modifications in the multipliers, most mills will still stand to benefit. In many cases, contract prices used to be lower than the stamped prices; here, it is the traders rather than the mills who would suffer as they would not be able to enjoy as big a margin of profit as they did under the old scheme. Since ex-mill prices of controlled varieties have been worked out by prescribed formulæ for the cost of cotton and conversion and processing charges, it is difficult to share the industry's view that cloth prices under the revised schedule will be reduced to uneconomic levels. There is probably a good deal to be said in favour of the revised schedule which aims at bringing down the prices of popular varieties of cloth by 5 to 8 percent, especially when the industry has been given complete freedom to market some 55 percent of its production at the best possible prices.

The spokemen of the industry point out that restrictions placed on the combing allowance for Indian cotton will greatly discourage the industry's attempts to upgrade the commodity and that this will inevitably bring about a deterioration in quality. It is stated that the cut in processing chrages will affect the production of quality goods. The industry has even hinted at possible decline in cloth production because of uneconomic prices. The Government realises that where there are a large number of factors such as the type of machinery used, the condition of that machinery, the particular nature of the processes employed, the amount of raw materials used and the degree of skill of the workers, which have a bearing on the cost of cloth produced, differences of views are bound to arise about the various charges and allowances which make up the total cost. But the industry, trade and consumers can take comfort from Mr. Shah's assurance that the Textile Control Advisory Committee, the panel of technologists and the Textile Commissioner's office would go into any case of hardship or into any suggestions for the improvement and modifications which might be brought to their notice by different interests based on facts and cost accounting data. Needless to say that the success of any scheme of control depends on the co-operation of various interests concerned.

Utilisation of Cement Capacity

Statistics relating to capacity, production and despatches released by the Cement Manufacturers Association indicate that while there has been an increase in production and despatches during the third quarter of the current year, compared with the same period last year, there has been a considerable fall in the utilisation of manufacturing capacity. The capacity of the member factories during July-September 1964 amounted to 2.404 million tonnes, against 2.211 million tonnes in the corresponding quarter of the previous year, and the production of cement equivalent of clinker increased from 2.04 million tonnes to 2.213 million tonnes. During the same period despatches increased from 2.056 million tonnes to 2.213 million tonnes. The increase in capacity and production is attributable to the expansion carried out in the existing plants and the setting up of new plants.

The figures for 1964 relate to 33 factories of 20 members, against 31 factories of 19 members in 1963, the new member being Mysore Cements Ltd. The ratio of production to capacity fell from 92.3 percent in the third quarter of 1963 to 90.9 percent in the third quarter of this year. The ratio of production to capacity for the first three quarters of the current year has come down from 95.1 percent to 93.7 percent. The production of six members exceeded their capacity. The capacity utilisation is the highest in the case of Panyam Cement at 139.9 percent, and this is followed by Dalmia Cement (Bharat) 122.2 percent, Sone Valley Cement 110.7 percent, Dalmia Dadri Cement 103 percent, Jaipui Udyog 100.3 percent and Saurashtra Cement 100.1 percent. Associated Cement Companies, the largest producer, had a capacity utilisation of no more than 86.9 percent. The utilisation of capacity is the lowest for Travancore Cement at 32.7 percent. The figures for Andhra Cement, Ashoka Cement, Bagalkot Cement, K.C.P., Mysore Cement, Madras Cement and Rohtas Industries are below 85 percent.

First World Bank Loan for Education

The World Bank has approved a loan equivalent to $6 million to the Republic of the Philippines. This will be the Bank's first loan in the field of education. The funds provided by the loan will be used for a project in higher agricultural education. The beneficiary will be the College of Agriculture of the University of the Philippines in Los Banos. The College is currently engaged in a five-year development programme designed to improve the quality of agricultural education and research. This programme is a vital part of a comprehensive effort that is being undertaken by the Philippine Government to raise the level of agricultural production. It was singled out for support by the World Bank because it promises to help give agricultural extension and research services in the Philippines the strength that is needed to exploit fully the existing potential for a higher level and accelerated growth of output. The proceeds of the loan will cover about one-half the cost of constructing and equipping 16 buildings required to carry out the College's development programme, and of renovating three others. The Government of the Philippines will provide all additional funds needed. The total cost of the project is estimated at $12 million equivalent.

The College of Agriculture, founded in 1909, is the second oldest of 37 schools and colleges making up the University of the Philippines. It has a well-established reputation, not only in the Philippines but also in several neighbouring countries which have sent to it many of their agricultural students. The Ford and Rockefeller Foundations have selected the College as an institution of special importance and promise in southeast Asia and together have pledged substantial grants to finance important educational and training elements of the development programme. They have already helped to establish in Los Banos (on College property) the International Rice Research Institute which will be an important centre of rice research in Asia. Recently, the

U.N. Special Fund established a Dairy Training and Research Institute at the College to serve the Philippines and other countries of south-east Asia.

The Bank loan is for a period of 30 years and bears interest at the rate of 5½ percent. Because the economic benefits of educational projects of this kind are realised only slowly and because the development of the Philippine economy requires a large continuous inflow of capital from abroad, amortisation of this loan will begin only after ten years, the first repayment falling due in 1975.

Trading in Staple Fibre Yarn

Forward trading in staple fibre yarn has been resumed after a lapse of 22 months. Hedge trading has been banned with effect from 17th December, 1962, in the wake of a heavy slump in prices. Business was resumed on 16th October under the auspices of the Bombay Yarn Merchants Association and Exchange Ltd. The resumption of forward deals in staple fibre should pave the way for hedge trading in art silk yarn, the production of which has increased markedly over the past two years or so. Steps are being taken to seek the sanction of the Forward Markets Commission for forward trading in art silk yarn.

Forward contracts in staple fibre yarn for 17NF and 2/34NF both for January and March 1965 deliveries, have been allowed simultaneously. The terms and conditions of the hedge contract stipulate that 100 percent viscose staple fibre yarn manufactured by Indian mills of standard count and test, double cross reeled, double hanks, bright and bleached and in original packing, will be tenderable. In the contract of 17NF staple fibre yarn, goods with a minimum count strength product (C.S.P.) of 800 (French) or 1600 (English) with 5 percent variation with a count between 16.50NF to 18NF will be tenderable. Similarly in the case for contract for 2/34NF staple fibre yarn, goods with minimum C.S.P. of 850 (French) or 1700 (English) with 5 percent variation with count between 2/33NF to 2/36NF will be tenderable.

Every trading member will be required to pay an initial deposit of Rs. 2,500 against which trading up to 100 bales will be allowed free, without any margin. Over 100 bales, a margin of Rs. 50 a bale will have to be paid. The limit for weekly fluctuation has been fixed at Rs. 20. The unit of trading will be 5 bales of 100 kilograms each and prices will be quoted for 100 kilograms. Members intending to tender goods for delivery will have to obtain a certificate about tenderability of goods from the Survey Certificate Committee, at least three days prior to such tender. A provision has been made for making an appeal against the certificate issued by the Committee. The staple fibre yarn January contract (2/34NF) opened at 851 a 100 kilograms on 16th October, and was marked down to Rs. 840 the next day.

Plea for Realistic Planning

Speaking from the chair at the second quarterly meeting of the All India Manufacturers Organisation in Bangalore recently, Mr. Hansraj Gupta said that Mr. Lal Bahadur Shastri's move to postpone some large projects with long gestation periods on which action has not yet been initiated, was wise. But he wondered why the controvers about the size of the fourth plan should still co tinue. There is overwhelming evidence that th country's resources cannot support a plan with very big outlay. Moreover, the concentration o large projects with long gestation periods to th relative exclusion of agriculture and consume industries, has led to the present unsatisfactor economic situation. High prices and shortage have been hampering progress. At one time, amb tious study groups had drawn up schemes involv ing an investment of about Rs. 33,000 crore Thanks to a more realistic assessment of the cour try's resources and the Central Finance Minister insistence of keeping the plan down to mor manageable proportions, the outlay in the drai plan, which has now been submitted to the Cab net and which the latter has cleared for th consideration of the National Development Cour cil, has been cut down to Rs. 21,500 crores. Th central board of directors of the Reserve Bank i their latest annual report have also stressed th need for a "purposive and positive" price polic and for fixing the size and content of the deve lopment effort in a manner as would not strai the resources of the country seriously.

The trend of events during the past few months Mr. Gupta observed, showed that while the Gov ernment and the Reserve Bank wanted a realisti plan for the next five-year period, the Plannin Commission was "very particular" about "a ver large-sized outlay.' A larger outlay would neces sarily require more foreign exchange. A glarin mistake is that while additional industrial capa city has been created at considerable cost in term of foreign exchange and capital equipment, nc thing has been done to ensure that adequat foreign exchange is available for importin raw materials, components, spares, etcetera. Con sequently, there is a large amount of unused capa city in several important industries. It is only b the fuller utilisation of this capacity in industria and in other projects that resources can be create to sustain a larger outlay in future. "It is a mis take to fix ambitious targets at the beginning an then to be in an unseemly hurry to mobilise th resources regardless of the repercussions," M Gupta commented. This only accentuates in flationary pressures. Another major drawback in Mr. Gupta's opinion, is the over-emphasis o the rôle the public sector has to play. This neces sitates large-scale raising of resources by th Government through taxation and other devices In fact, the Government has appropriated most o the additional national income in recent years t finance its outlay. This has reduced the share o the more dynamic private sector, and the rate o growth has slowed down disturbingly.

THE I.C.S. EXAMINATION

WRITING in our issue of 6th November 1902 we said :—"The Examination Papers set by the Civil Service Commission just out suggest some reflections on the qualifications of the candidates who were successful in passing the examination for the Indian Civil Service. Curiously enough the weakest points in some of the men who got in were those relating to their own language and literature. In English Composition the second and the fourth on the list only obtained 208 and 180 respectively out of the maximum of 500, while others had 150, 125, 130, 57, 170, 188, 80, 150, and 75. In English Language and Literature a number scrambled through with marks under 150 out of a possible 500. Some were particularly strong in Pure and Applied Mathematics. The only youngster who obtained the maximum number (900) in Mathematics got no more than 235 out of 500 in English Composition, and only 145 out of 500 in English Language and Literature. Another strong in Mathematics, got in with only 57 and 56 respectively in English Composition and English History out of a maximum in each case of 500. There are many Bengali students in Calcutta who would made a better show than that. Surely before a young fellow is admitted into the Indian Civil Service he ought to be able to show some decent sort of proficiency in the English subjects referred to. When the maximum number of marks is 500, and a candidate is only able to show not over 50 marks in his examination, he ought to be plucked, as knowing nothing whatever of his own language.

A Ditcher's Diary

LIKE *Punch*, THE PUJA IN BENGAL IS NO LONGER what it used to be ; or so we are told year after year. I am not complaining of monotony ; in fact the wail seems a part of the Puja ritual. For some years now there have been complaints of commercialisation of the Pujas. If Governments take it as a compliment when they are told that in this matter or that they have been business-like, I do not see why commercialisation as such should be a term of abuse of anything unless one has already come to the cynical conclusion that all business is by definition dishonest or shady in varying degrees. I know as well as anyone that many murky things take place in the world or name of commerce ; yet there is no warrant whatever to dismiss all commercial activity as something ignoble. Now I shall proceed to deplore the demonstrable fact that the Pujas in Bengal have not been sufficiently commercialised, at least not by the Bengalis who should have been the first to cash in. To take but one instance, even a few years ago one could buy fairly interesting *pats* in Kalighat ; today anything you lay your hands on is tawdry and stylised beyond belief. The Krishnagar clay idols have visibly deteriorated in craftsmanship ; gone is the lively inspiration that went into every piece one used to see as late as the 'thirties. As anyone familiar with the Kalighat *pats* knows, around the deities there was considerable social satire. Where is that gone now? It is fair enough that there should be universal moaning over shortages and prices ; the performance of the Government and the trade deserved severer condemnation ; but it is not unreasonable to suspect that something more has gone out of Bengali life. Only for Bengali literature and journalism, I am told, Puja is now semi-big business ; those special supplements and new books. But their producers and consumers are both Bengalis. Absent is that spirit of expansion which was the chief feature of Bengal not so very long ago. And for living organisms contraction is a sign of unhealth. If I have in the past repeatedly asked for a calculated contraction in the projection of India abroad, I am all for a greater outwardness for Bengalis ; southerners and Punjabis are doing today only that which Bengal did yesterday ; and in this there can be no cause for pride.

SO IT'S ALL OVER IN CAIRO. AND WE HAVE SEEN those happy, happy photographs, retouched by deft men in newspaper offices. Oh, the loneliness of men, such as me, who are left out of the swing of universal happiness all around whether the joy be over Pujas or an international conference. It was good to read that Mr. Shastri's was the best speech ; but the next reaction was, "Sez you!" Except when money or military hardware changes hands, I am beginning to feel, diplomacy has now been reduced to the monotonous if arduous task of drafting an acceptable *communiqué* ; and the more airy, meaningless and insubstantial it is, the better. This, I suggest, is the work of clerks, even if they have to be called Their Excellencies or Secretary-Generals. Perhaps for the first time, I find, the official segment in the Indian delegation at an international conference has been exposed to some criticism ; whether the Congo's Tshombe was to be or not to be there was a question the clerks could not answer. Which annoyed some Africans. Or so we have been told. My own withers, I assure you, are totally unwrung either way. For once I am inclined to defend the officials. Where would we all be if conferences such as the one in Cairo could dictate who should represent which country? My regard for the ex-President of the sovereign State of Katanga has always been a long way this side of idolatry ; but as it happens he is now the Prime Minister of his country. The world is littered with less legitimate accessions to power. But then it is in the nature of Governments to swallow whole cows and then pretend to be choked by the tail of Tshombe. No, the truth is that even Cairo did not take the conference very seriously ; India's rôle therein was taken seriously only by India. A good time, I hope, was had by all.

FROM WHAT LIMITED ATTENTION I HAVE BEEN ABLE to give to election reports from both Britain and the United States, I have become more than half convinced that an excellent contribution to democracy in those two countries in future would be the total prohibition of public opinion polls. These menaces enjoyed increased prominence in the British election this time, and far from being simply a benign finger on the pulse of public opinion, as they are supposed to be, they seem to have been a factor in the way the Parties behaved and the manner in which the votes were cast. For instance, there is always a proportion of voters who will choose at the last minute to resolve their mental conflict by jumping on whichever political bandwagon happens to be in the lead ; this is nothing more than an expression of the old human fear of solitariness. Such people can easily be stampeded by the evidence of public opinion polls, whether right or wrong. Further, a Party which discovers the polls going in its favour, instead of conducting its campaign in the manner planned, may slacken its efforts or, conversely, become too cock-sure. And one which suddenly finds itself in the opposite position may tend to lose heart or resort to gimmicks to recapture the votes it thinks it is losing. Something of the kind, it seems, happened to the Conservatives during the last week of their campaign. Of course, not all these things necessarily happen ; in both cases, the effect might be entirely the opposite, and wholly beneficial. But this seldom seems to be the case ; more usually a Party will respond by being in a constant lather about its developing chances and so tend to neglect giving its wholehearted attention to its prepared platform. The impact elsewhere is often no less damaging. The heavy pre-election speculation on the London Stock Exchange, to say nothing of the rapid shift in the odds quoted by the gambling fraternity on the outcome, were all the result in some measure of the evidence presented by the opinion polls. Without wishing to decry the usefulness of these institutions altogether, it does seem to me that the serious business of choosing a new Government would be conducted much better without the distractions they introduce. It might not be so bad if they were reliable. But in fact they are statistically of little value, being based on too narrow a sample and too prone to errors of interpretation. It will be a sorry day indeed when they find their way into Indian elections.

THE MAIN POINT WHICH STRUCK ME ABOUT QUEEN *Elizabeth's* reception in Canada was how sharply it compared with the one she received here. Canada, one had been led to believe, was the oldest and most loyal member of the Commonwealth, being among the few which still retain the British monarch as its Head of State. Yet here we had a minority group—acting, one might add, with a very un-French lack of chivalry—anxious to create an impression of rebellion and disunity such as one scarcely thought possible in so comfortable and well-favoured a nation. I cannot but think that in the extent of their security precautions the Canadian authorities might perhaps have let panic get the better of their political judgment, although that was possibly understandable in this early post-Kennedy era. And it may be true, as I believe they have been saying in Paris, that much of the present strength of French-Canadian separatism is due to President de Gaulle's dreams of gallic grandeur being taken far more seriously abroad than they are in France itself. But when all the explanations have been assembled, it does seem that wisdom really dictated that the Queen should not have gone to Canada at all. There was no real need for her to do so ; the events of 1864 were mainly an internal affair in which the British Crown played little part. She could have stayed at home without raising any doubts as to her sense of duty. Perhaps, although it seems doubtful, Britain's internal politics had something to do with the decision : certainly a triumphant Royal tour of Canada might have helped the Conservatives'

election chances. As it is, Her Majesty's tour ha done no good; on the contrary, the rift betwee English- and French-speaking Canadians ha been widened, and the world has been presente with an unnecessary spectacle of national an Commonwealth disunity which is as damaging a it is impressive.

ONE OF THE SIGHTS OF LONDON WHICH NO TOURIST missed if he could help it—particularly if it happened to be a "he"—was the Windmill Theatre. It was not that the entertainment it had to offer was any better than could be obtained elsewhere, or was at all unique for that matter. But it had a certain novelty value, and the British themselves always felt rather sentimental about the place if only because it was the one theatre in London which never closed during the war years. Now that it is to close, for good, the London scene will never be quite the same without it. Semi-nudity on the stage is rarely to be confused with art in any form, but in so far as it can be, the Windmill certainly did its best. Like the *Folies Bergere* in Paris, wit was always preferred to salaciousness, and professional competence to amateur crudity. Which may be why the Windmill has found it impossible to compete in its own chosen line with the innumerable strip clubs which at present disfigure Soho, and are so much more blatant about separating the tourist from his money. Apart from its girls, the Windmill has always specialised in staging clever comedy, and the list of top-line British comedians who have begun their professional lives on its boards is an impressive one. They had to be good, it was said, to compete with the other attractions. It has always seemed to me that the particular kind of show offered by the Windmill is not something at which the British normally excel. Speaking generally, they lack equally the subtle and artistic naughtiness of the French, the American's talent for the spectacular and even the crude vitality of the Japanese. Their gifts lie in staging straight drama or equally straight comedy, not revue. But the Windmill will not go unmissed. It had achieved the status of an institution, a doubtful starter long since accepted as respectable. Its passing is yet another reminder of how rapidly tastes change, and with them economic realities.

MR. KHRUSHCHEV'S CAREER CAN BE SAID TO HAVE come to an end with a bang, albeit Chinese, and not with a whimper. True, he was seventy; but everybody says that at last appearance he was fighting fit. The age of retirement is being revised in many countries since there is not an abundance of talent and expert knowledge. Which emboldens me to suggest that, if he be so inclined, Mr. Khrushchev be given another field of activity. Who needs him better than India, with the possible exception of China? Mr. Mao Tse-tung is unlikely to welcome him; they hate each other heartily. But might not Mr. Lal Bahadur Shastri have use for him here as an adviser on all sorts of things, beginning with political manoeuvring and ending with nothing, including the abuse of scarce steel in Perambur? Mr. Khrushchev may find it difficult to function in the kind of administration India has; but he could have a very salutary effect on some of the orthodoxies inherited from an administration with a fine record but a very different purpose. I can visualise Mr. Khrushchev's first encounter with a crusty I.C.S. bureaucrat; "Sir, that is not done". "From today, it will be", says Khrushchev. The Soviet Union has shown that it can do without Mr. Khrushchev and the top army brass lost in the recent air crash; but India may have need of him. Drunk or sober, he could come and tell the organisers of *Vanamahotsavas* that what the country needs is more trees, not more photographs of Governors or Ministers planting trees that will never grow. Mr. Khrushchev was not particularly successful in his ventures in the field of agriculture, including the virgin lands experiment; but he has the right touch and could perhaps work miracles with the Indian peasantry. All I'm getting at is that the world has need of a talent like Mr. Khrushchev's, even if Russia has not.

THE DITCHER

Guide for Investors

SUGAR SHARES SLUGGISH DESPITE NEW POLICY

(BY A SPECIAL CORRESPONDENT)

SUGAR shares have been sluggish for a long time, and the turnover has dropped. Although the output of the industry during the current season has risen slightly to 2.6 million tonnes, it is much smaller than the target of 3.3 million tonnes fixed at the beginning of the 1963-64 season. Despite the bigger output, profits, particularly of factories situated in northern India, are expected to be no better than in 1962-63. Most of the factories have had to curtail production due to the shortage of cane. Production costs have, meanwhile, risen following substantial increases in the prices of stores and electric power. Wages have been raised due to the recommendations of the wage board. It is feared that several sugar companies in northern India will incur losses during the current year.

The depression persists as the prospect for the coming 1964-65 season, which will begin in a few days' time, is far from encouraging. The latest move of the Government to increase production during 1964-65 has failed to impress investors. Acting on the interim recommendations of the Sen Commission which was appointed to investigate the problems of the sugar industry some time ago, the Government has increased the price of cane. Since the rise has been linked to quality, the growers will not benefit except marginally. To stimulate the output of sugar, the Government has also decided to give a 50 percent rebate of the basic excise duty on the excess production over that of 1962 achieved by the end of November. This has been done to encourage producers to increase output early in the season. Whether the same rebate will be allowed on the excess production achieved after November has not yet been decided. If the output early in the season turns out to be poor, the rebate might be continued. Anyway, this method of giving incentives piecemeal is unlikely to produce good results. Considering the shortfall in output during the past two seasons, it is difficult to understand why the Government has shied away from giving a straightforward incentive for the whole season.

It is doubtful whether the incentive is sufficient to raise the output of sugar. The main problem facing sugar factories, particularly in northern India, is that they do not obtain enough cane. A large part of the cane supply is diverted to the production of *gur* and *khandsari*. Although the cane crop during the coming season is expected to be larger than in 1963-64, no concrete step has been taken to stop its diversion to the manufacture of *gur* and *khandsari*. Since these two commodities are free of the control imposed on sugar, their producers can afford to pay remunerative prices for attracting cane supplies in competition with sugar factories.

Although the Sen Commission will submit detailed recommendations later, it is almost certain that the half-hearted measures the Government has announced will not help increase the output of sugar to any great extent. Unless vigorous measures are taken to increase the supply of cane and improve its quality, sugar factories will not be able to use their installed capacities fully. It is unfortunate that cane development is in the charge of State Governments. Despite the collection of substantial sums through cesses, they have done precious little to improve it. The bulk of the cess collection seems to have been spent for other purposes.

This apart, the operational efficiency of north Indian sugar factories is poor. Most of their equipment is old and out-of-date. Unless they modernise their machinery, working will continue to be inefficient and production costs will remain high. In the near future, north Indian sugar companies are unlikely to earn good profits. In the circumstances, investors are not expected to show much interest in these shares.

The Government has rightly decided to continue the control on sugar. The supply of the commodity is inadequate to meet rising requirements. The price fixed by the Government is not likely to be uneconomic if factories care to improve their efficiency by modernising machinery and rationalising production processes.

Calcutta Tramways Costs Increase

IN his address from the chair at the annual general meeting of the Calcutta Tramways Co. Ltd, held recently in London, Mr. David E. Webb has said that the results of the Company during the current year will not be as good as those of 1963. (The full text of the speech is printed on a later page in this issue of *Capital*.) Receipts have so far fallen behind those of 1963. Emoluments to the staff have been increased and the cost of electric power has risen. The Company has incurred considerable capital expenditure on various projects, but it has not yet been able to arrange the necessary funds for development. He pointed out that unless fares are raised, it is not possible for the Company to conserve resources for expansion. It has bought 30 sets of tramway trucks from Bombay on reasonable terms. But to complete 30 new cars will cost more than £200,000. Although it is necessary to put new vehicles on road for increasing transport facilities, the Company is exploring various ways to raise funds.

During 1963, receipts rose by about £84,000, but the increase has been more than offset by rising costs and heavier taxation. As a result, only £56,359 has been transferred to shareholders' account, compared with £58,778 in 1962. These figures are well below the sum of £87,457 to which the shareholders are entitled under the terms of the agreement with the Government of West Bengal. Since they have long been denied of a fair dividend, the Company has increased it from 5 percent for 1962 to 6 percent for 1963. The fare was slightly raised by 1 paisa in April 1964 but the rise will be almost absorbed by the increase in emoluments sanctioned for the staff.

Great Eastern Shipping Disappoints

WITHIN a few days of the announcement of the dividend and the working results for the year ended June 1964, the shares of Great Eastern Shipping dropped sharply from Rs. 13.92 to Rs. 11.88. Apart from the general weakness in the stock market, the sharp break in the share value reflected the market's disappointment over the Company's performance during the year. Both the dividend and the working results have turned out to be far short of the investors' general expectations. The directors have recommended a dividend of 7.3 percent on the old 600,000 fully paid-up shares, 5.15 percent on the new 600,000 equity shares which became fully paid-up on 1st February, 1964, and of 1.9 percent on 300,000 equity bonus shares issued last year. In 1962-63, the Company had skipped the dividend and, instead, has issued bonus shares in the ratio of one for every three fully paid-up and one for six partly paid shares.

The average tonnage under operation recorded a small increase of 1.8 percent from 156,810 d.w.t. to 159,633 d.w.t. The cargo carried by the Company's ships also showed only a small increase from 1.133 million metric tons to 1.178 million metric tons. The gross freight and charter earnings, however, increased by 16.4 percent from Rs. 4.51 crores to Rs. 5.25 crores. Even so, the gross profit went down from Rs. 1.264 crores to Rs. 1.238 crores. After providing Rs. 75.32 lakhs (against Rs. 64.10 lakhs) for fleet depreciation and Rs. 36.30 lakhs (against Rs. 51.75 lakhs) for development rebate reserve, the net profit is shown at Rs. 8.16 lakhs, compared with Rs. 5.49 lakhs in the preceding year. With Rs. 1.29 lakhs brought forward from the previous year, Rs. 81,522 transferred from the dividend equalisation reserve and Rs. 13 lakhs transferred from the untaxed general reserve No. 2, the disposable surplus amounts to Rs. 23.26 lakhs. From this, a sum of Rs. 13.94 lakhs has been set aside for income tax for 1957-58. The proposed dividend absorbs Rs. 8.04 lakhs, leaving a sum of Rs. 1.28 lakhs to be carried forward.

The directors state that in the preceding year, they had expressed the hope that the Company would be able to derive benefit from the improvement in the international freight market which was expected to be strengthened by the contemplated movement of foodgrains from the U.S.A., Canada and Australia to Russia and China. However, the actual movement of the foodgrains to Russia and China did not materialise to the extent anticipated, and consequently, the expected benefit from the improvement in freight did not materialise. The directors add that the 1963 expansion programme has been successfully implemented by the addition of five vessels to the fleet of the Company at a cost of Rs. 1.70 crores.

Its investment on fleet has increased from Rs. 10.26 crores to Rs. 11.85 crores. The additional five ships came into actual operation only during the second half of the year and their working is reflected partially in the results for 1963-64 and would be reflected fully in the results for the current year. The size of each of the two bulk carriers for which orders has been placed with a Japanese shipyard has been increased from 36,000 d.w.t. to 38,500 d.w.t. It is expected that the vessels will be delivered in early 1966. The capital investment of approximately Rs. 4.12 crores for these two bulk carriers will yield full results in 1966-67.

The Company has already submitted its 1964-expansion programme for the acquisition of additional five vessels at a cost of Rs. 3 crores to the Government. Should permission for acquiring these five vessels be received in time, their operation will be reflected partly in

"The Durgapur Projects Limited **(A Government of West Bengal Undertaking)** offers best quality Grade-I Hard Coke suitable for foundries, Blast Furnaces, Ferro Manganese Plants, etc., etc., and also various bye-products—Benzene (Pure), Benzol (Motor & Industrial), Toluol (Industrial), Light Solvent Naphtha, Creosote Oil (Light & Heavy), Road Tar No. 3 & 4, Sodium Phenolate, Resin and Crude Naphthalene-78°C. and above".

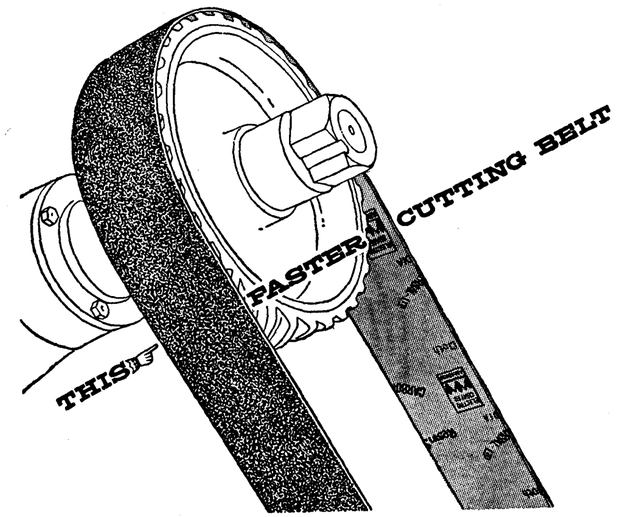
Ajgaonkar BS. 558 B

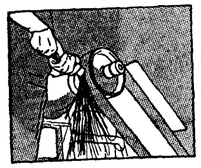
the results for 1964-65 and fully in the results for 1965-66. In view of the deteriorating conditions in the ports and the absence of any decision so far by the Government on the report of the Maritime Freight Commission on coastal freight structure, the directors state that the outlook for the current year remains obscure. It is pointed out that the impact of the delay in the ports during the first three months of the current financial year has been phenomenal. The directors, however, add that should favourable port conditions be made available to ships, the Company would certainly be able to do well. In the circumstances obtaining at present, they are unable to foresee how the Company will fare during the current year.

India Firebricks Project Cost Up



IN their report for the year ended April 1964, the directors of India Firebricks and Insulation Company state that the Company has reached a daily rate of finished production of 80 tons of firebricks after lighting the first kiln in July last. The second tunnel kiln is also ready for firing, and when this is lighted, the output is likely to increase considerably. The commencement of production was delayed on account of the necessity to reimport certain equipment of the tunnel kilns lost in Calcutta docks.

The Company has secured the prospecting licence and also clearance from the Forest Department which has enabled it to get a regular supply of good quality fireclay. Due to the various delays in the implementation of the whole project, the estimated cost of the project has gone up. The management proposes to meet the additional cost through loan capital mainly from the Industrial Finance Corporation and the I.C.I.C.I. The Company has already made applications to these institutions for new loans and the two corporations are said to have agreed to lend Rs. 15 lakhs together. Out of the previous loan of $(U.S.) 1,171,000 sanctioned by the I.C.I.C.I., the Company has so far used $(U.S.) 1,148,012. The I.C.I.C.I. has also sanctioned to the Company an additional loan of $67,000 for payment of freight in foreign currency.



The directors have forfeited 6,250 equity shares and 55 preference shares on which allotment and call moneys were in arrears to the extent of Rs. 31,875 and 2,375, respectively. The forfieted shares have not yet been reissued. After adjusting expenses of Rs. 22,272 and providing Rs. 23,000 (against Rs. 9,000) for taxation, the Company has earned during 1963-64 a net profit of Rs. 699, compared with a net loss of Rs. 16,947 in the preceding year. After adjusting Rs. 573 towards income tax short-provided for 1961-62, the balance has been set off against the carried forward loss of Rs. 15,714. No depreciation has been provided on fixed assets acquired or under construction, pending the commencement of production. Arrears of preference dividend amount to Rs. 4.39 lakhs.

Basti Sugar Raises Dividend

THE Basti Sugar Mills Co. Ltd has raised the dividend for the year ended April 1964 from 6 percent to 15 percent. This has become possible because of the impressive increase in the gross profit from Rs. 3.94 lakhs to Rs. 12.62 lakhs. The profit rose in spite of a fall of about 16 percent in the sales from Rs. 2.43 crores to Rs. 2.09

CUTS COSTS... BOOSTS PRODUCTION!

TESTING!

I'm not trying to pry, but what—

Well, this testing involves every ingredient in a HOECHST preparation. The finished product, too, undergoes some pretty exhaustive tests. And, hourly samples are tested during manufacture.

Quite a job.

It is. But our quality control experts are stern task masters. They reject anything that's not perfect, without worrying about cost.

Appreciate that, you know.

Of course, besides testing there's research. And up-to-date automatic equipment and high standards and (would you mind not fidgeting) experience. A century of worldwide experience goes behind every medicine we make in India or elsewhere. This is what makes HOECHST medicines priceless.

Perfectionists—that's what you are.

Well, doctors know this and they prescribe our medicines with confidence. So now, up with that elbow: down with that pill...

HOECHST

HOECHST PHARMACEUTICALS

HOECHST generally pronounced HEXT

HP. 71 (R)-1D

crores. The cane crushed during the year was larger at 4.6 million maunds, compared with 3.8 million maunds in the preceding year. Allocations include depreciation Rs. 2.83 lakhs (against Rs. 2.39 lakhs), development rebate Rs. 65,828 (against (Rs. 18,907), taxation Rs. 4.76 lakhs (against Rs. 50,000), investment depreciation reserve Rs. 50,000 (against Rs. 69,521), donations Rs. 15,000 (against Rs. 4,000). The proposed dividend absorbs Rs. 2.25 lakhs (against Rs. 90,000), leaving a sum of Rs. 2.22 lakhs to be carried forward, against Rs. 1.72 lakhs brought in.

The directors state that the prospects for the current season depend entirely on the Government's policy. The sowing has been good, but it is feared that the recent heavy rains might adversely affect the crop. The prospects will also depend on the availability of cane in adequate quantities and on the price of sugar that the Government fixes. The Rs. 100-paid share of Basti Sugar is quoted around Rs. 114, offering a gross return of about 14.7 percent.

Textool Repeats Dividend

AN appreciable rise in the sales and profits features the trading results of Textool Company Ltd for the year ended April 1964. The value of goods produced during the year recorded a rise of about Rs. 50 lakhs over that of the previous year. The directors' report says that the prices of raw materials and stores were on the upward trend. Wages also have increased. There has been an increase in the cost of fuels and power. In spite of these increases in the cost, the Company was able to earn satisfactory profits, and this was due to the increase in production and sales. They add that the cone winders produced in collaboration with Messrs Kamitsu Seisakusho Ltd of Japan has been placed on the market during the current year. These machines are working satisfactorily.

Sales during the year amounted to Rs. 2,81,84,539 (against Rs. 2,42,94,625). The net profit is Rs. 26,38,431 after providing Rs. 7,44,301 for depreciation. This compares with the previous year's profit of Rs. 21,58,791 after providing Rs. 5,75,865 for depreciation. With the amount of Rs. 3,132 brought forward, the total available for appropriation comes to Rs. 26,41,563. Out of this, the provision for taxation comes to Rs. 11,08,000 (against Rs. 9,20,000). A sum of Rs. 1,59,160 is transferred to development rebate reserve (against Rs. 200,000). Short provision for dividend for the previous year amounted to Rs. 37. A sum of Rs. 65,000 is transferred to dividend equalisation reserve (against nil). The dividend at 12 percent (the same) amounts to Rs. 7,14,723. The balance of Rs. 548 is carried forward.

Broach Electric Pays More

THE Broach Electric Supply and Development Corporation reports encouraging results for the year ended March 1964, and this has enabled the directors to step up the dividend from 5 percent to 6 percent —50 to 60 paise a share of Rs. 10. The units of energy sold increased from 2.715 million kW to 2.758 million kW and the revenue realised increased from Rs. 8.11 lakhs to Rs. 9.43 lakhs. Revenue from other sources was slightly lower at Rs. 56,196, against 59,150, making a total of Rs. 9.99 lakhs, against Rs. 8.70 lakhs. The gross profit of the Company has improved from Rs. 2.96 lakhs to Rs. 3.75 lakhs.

Appropriations include depreciation Rs. 66,296 (against Rs. 66,083), bonus to staff Rs. 7,000 (against Rs. 6,000), employees' retiring gratuity Rs. 5,566 (against Rs. 4,808), taxation Rs. 1.23 lakhs (against Rs. 1.10 lakhs), contingencies reserve Rs. 11,368 (against Rs. 10,298), consumers' benefit reserve Rs. 66,639 (against Rs. 3,248), tariffs and dividends control reserve Rs. 66,972 (against Rs. 3,248), development reserve Rs. 12,438 (against Rs. 11,303) and dividends Rs. 42,421 (against Rs. 35,351). After making certain minor adjustments, there remains a balance of Rs. 1,816 to be carried forward, against Rs. 452 brought in.

The publication of the previous year's report was prohibited under the Defence of India Rules. In their latest report, the directors state that throughout the two-year period ended March 1964, the power shortage in south Gujarat continued. Arrangements have been made by the installation of the requisite transformers and other apparatus for taking the additional energy supply in bulk from the Electricity Board when the Dhuvaran theremal station is commissioned. The Company has asked for additional power of 700 kVA which together with the 400 kVA now being supplied will be sufficient to meet the present demand on the station. The directors state that it will be necessary to continue to maintain the Company's generating plant for some time more until continuous and uninterrupted supply of energy to meet the normal growth of load is assured from the grid system. The number of consumers increased during 1963-64 from 6,834 to 7,738 and the connected load increased from 3,291 kW to 3,551 kW.

Hindustan Lever Pays Interim

HINDUSTAN Lever has announced to pay an interim dividend for 1964 of 60 paise a share, subject to deduction of tax. The dividend is payable on 19th November, 1964, to shareholders registered in the books of the Company at the close of busi-

Kerala Rubber and Reclaims

A NEW unit under the name of "the Kerala Rubber and Reclaims Ltd," is going to be added to the existing few for the manufacture of reclaimed rubber by the "reclamator process", patented by the U. S. Rubber Reclaiming Company. This will be the first time the "reclamator process" is being adopted for rubber reclaim in India. The Company, with the U. S. Rubber Reclaiming Company as its collaborator, will set up its factory in Mamala near Cochin in Kerala. Land has already been acquired for the purpose and the civil work has already started. The foreign collaborators have agreed for the export of reclaimed rubber also.

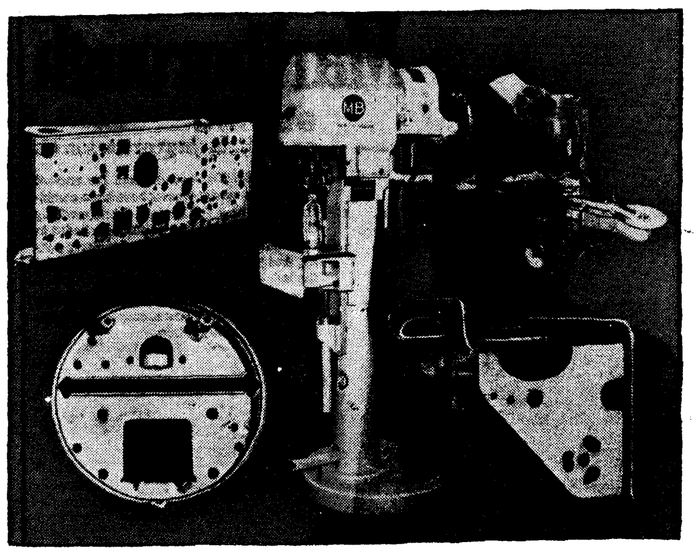
The authorised and issued capital of the Kerala Rubber and Reclaims Ltd will be Rs. 30 lakhs. Of this, shares for Rs. 10 lakhs are being taken up by the directors and their friends. Underwriting arrangements to cover the balance of Rs. 20 lakhs are being finalised. A foreign exchange loan of Rs. 11 lakhs has been sanctioned by the I.C.I.C.I. to meet the entire foreign exchange cost of the project. The Company will go to the market shortly for 49 percent of the share capital.

Mody Spinning Pays More on Increased Capital

MODI Spinning and Weaving Mills has raised the dividend for the year ended April 1964 from 9 percent to 10 percent. This is payable on the increased capital as raised by the one-for-two rights issue in February 1963. The total distribution among equity shareholders, therefore, is Rs. 15.50 lakhs, compared with Rs. 10.65 lakhs in the preceding year. The increase in the dividend is well justified by the Company's improved performance. As against a rise of about 20 percent in the sales from Rs. 8.06 crores to Rs. 9.70 crores, the gross profit has risen by as much as 67.6 percent from Rs. 54.55 lakhs to Rs. 91.40 lakhs. The profit margin (as measured by the ratio of gross profit to turnover) has improved from 6.8 percent to 9.4 percent.

Appropriations of the year's profit include depreciation Rs. 41.38 lakhs (against Rs. 25.73 lakhs), development rebate Rs. 16.95 lakhs (against Rs. 2.51 lakhs) and taxation Rs. 13.50 lakhs (against Rs. 13.10 lakhs). The proposed dividend absorbs Rs. 15.50 lakhs (against Rs. 10.65 lakhs) leaving a sum of Rs. 20,505 to be carried forward, against Rs. 12,095 brought in.

The increase in the Company's turnover during the year is attributed to the commissioning of the new mill and the continuing process of renovation and rehabilitation of the mills. The erection of the new mill has been mostly completed and at present 19,184 spindles are working satisfactorily. The directors hope to add 5,816 new spindles during the year. The Company installed sanforising range and other processing machinery during 1963-64 and spent Rs. 1 38 crores on additions to plant, machinery and buildings which account for the substantially higher allocation to development rebate during the year. It proposes to set up another new mill with 25,000 spindles at a cost of Rs. 2.25 crores. The plant will manufacture sewing thread, hosiery and industrial yarns. The new project will be financed from internal resources, with loans from the Industrial Finance Corporation and other financial institutions and by issue of fresh capital if considered necessary.



New India Fisheries Profit and Dividend Down

THE New India Fisheries Ltd has reduced the dividend for the year ended March 1964 from 9 percent to 7.8 percent. The Company has not fared well during the year. In spite of an increase of 23.4 percent in the sales from Rs. 28.36 lakhs to Rs. 35.02 lakhs, the gross profit is down from Rs. 7.48 lakhs to Rs. 7.11 lakhs. After providing Rs. 3.24 lakhs (against 1.59 lakhs) for depreciation, Rs. 4.09 lakhs (against Rs. 3.52 lakhs) for triennial repairs cost and nil (against Rs. 2.50 lakhs) for development rebate, the year's working has resulted in a loss of Rs. 21,946, against a loss of Rs. 12,522 in the preceding year. After withdrawing certain amounts from various reserves, the directors have recommended the payment of a dividend of 7.8 percent (against 9 percent) on ordinary shares. The dividend on the deferred ordinary shares has also been reduced from 9 percent to 7.8 percent.

In his statement to the shareholders, the chairman says 1963-64 was noteworthy for two events. One was the complete suspension of the Company's trawling activities off Bombay, and the other was the commencement of the export of processed prawns from its Cochin establishment. The export performance has enabled the Company to be entitled to the benefits of import licences of a total value of Rs. 3.05 lakhs for bringing in essential items such as engine spares, nylon twine and paper cartons.

Referring to the heavy cost of fuel, the directors state in their report that an application was made to the Central Government for the remission of excise duty on diesel oil and on electric power and for other concessions to make trawling off Bombay economic. The Government's decision is still awaited. However, in the expectation that suitable relief will be available from the Government of India and in order to maintain the continuity of fish supplies to Bombay, negotiations were started with Taiyo Fishery Company of Japan and the Government of India for chartering two trawlers for operation off Bombay.

Accordingly, the Company has entered into an agreement with Taiyo Fishery for the charter of two trawlers for 15 months starting from the date of departure of these trawlers. These trawlers arrived and went into operation in August. The hire for these trawlers payable to the Japanese firm for 15 months will be around Rs. 2.05 lakhs. Till the end of September, a catch of about 203 tonnes of fish valued at Rs. 1.09 lakhs had been obtained from this venture. Encouraged by the export-oriented operations in Cochin, the Company's collaborators have offered to help with finance for its expansion, involving purchase of some trawlers and equipment which will enable it to increase export earnings to about Rs. 90 lakhs a year in three or four years' time.

Whatever will Metal Box think of next !

The objective—an all-out drive to save foreign exchange. The means—over 30 years' experience in precision drawing and forming of sheet metal. The result—a national saving of almost Rs 1 crore in foreign exchange with industrial components for the radio, automotive, electrical and ordnance industries...and can-closing and bottle-sealing equipment. All these components and machines were previously imported.

And alongside this effort the Metal Box Research Department is busy developing local substitutes for many imported packaging materials. Metal Box also earn foreign exchange by exporting annually some Rs 30 lakhs worth of packages and machinery.

Whatever will Metal Box think of next? More ways to earn and conserve foreign exchange, of course!

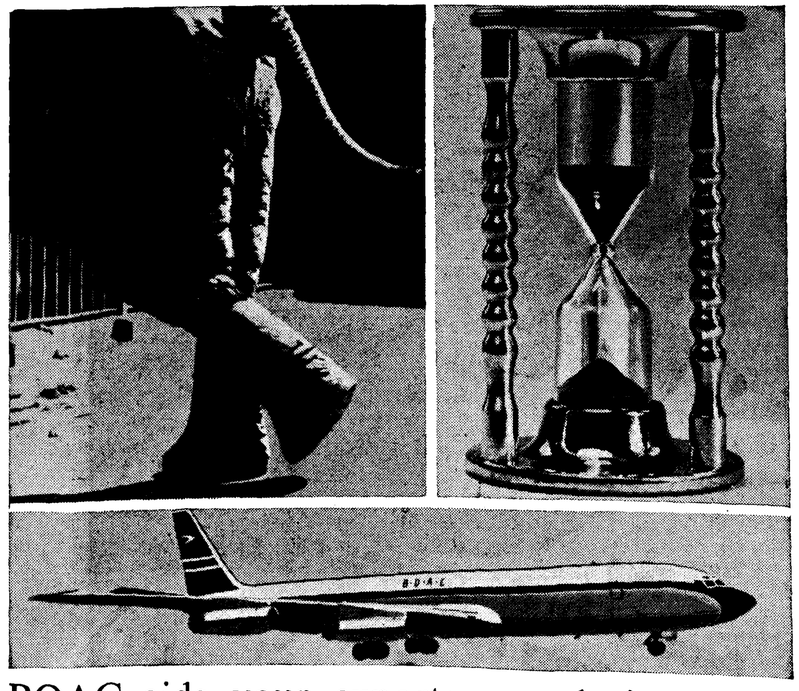
Hyderabad Allwyn Results Impress

THE Hyderabad Allwyn Metal Works Ltd reports highly encouraging results for the year ended April 1964. Sales have increased by 60 percent from Rs. 3.26 crores to Rs. 5.16 crores, and the gross profit has risen by nearly 55 percent from Rs. 43.47 lakhs to Rs. 67.26 lakhs. The dividend, however, has only been maintained at 10 percent. After providing Rs. 21.97 lakhs (against Rs. 14.63 lakhs) for depreciation, Rs. 6.03 lakhs (against nil) for items pertaining to previous years and Rs. 16 lakhs (against nil) for taxation, the net profit amounts to Rs. 19.95 lakhs, against Rs. 26.23 lakhs in the preceding year. Allocation to the development rebate reserve has been reduced from Rs. 9 lakhs to Rs. 3.50 lakhs, but the provision for general reserve has been increased from Rs. 2.65 lakhs to Rs. 4.50 lakhs. After providing Rs. 12.05 lakhs for the proposed dividend, there remains a surplus of Rs. 17,364 to be carried forward, against Rs. 26,824 brought in. In the preceding year, a sum of Rs. 5 lakhs had been taken to the deferred taxation reserve and Rs. 12.05 lakhs had been transferred to the dividend reserve out of which the dividend was paid.

The directors state that there was a steady improvement in production and sales as a result of the plant expansion. The production of refrigeration has been on the increase, although the desired progress could not be achieved due to the scarcity of raw materials. The Company has secured a licence for the manufacture of hydraulic hoists, tipping gears, heavy duty trailers and semi-trailers. Collaboration arrangements with Carrimore Six Wheelers of the U.K. and consultancy arrangement with the Westran Corporation of the U.S.A. have been completed and details of the manufacturing processes are being worked out. As in the previous year, orders for the manufacture and supply of certain defence requirements on a priority basis were received and executed satisfactorily. Some of the uneconomical showrooms have been closed down. The Rs. 10-paid share of Hyderabad Allwyn is currently quoted around Rs. 12.25, yielding a gross return of about 8.7 percent.

Rashtriya Metal Reduces Dividend



RASHTRIYA Metal Industries Ltd has reduced the dividend for the year ended March 1964 from 16 percent to 10 percent. The preliminary report shows that the gross profit is down by about 16 percent from Rs. 12.13 lakhs to Rs. 10.13 lakhs. After providing Rs. 2.56 lakhs (against Rs. 1.66 lakhs) for depreciation and Rs. 4.19 lakhs (against (Rs. 6.05 lakhs) for taxation, the net profit amounts to Rs. 2.63 lakhs, against Rs. 3.38 lakhs in the preceding year. The provision for development rebate is higher at Rs. 45,000, against Rs. 12,500, but allocation to the general reserve has been reduced from Rs. 1 lakh to Rs. 60,000. Employees' gratuity reserve gets Rs 4,000, against Rs. 7,500. The proposed preference and equity dividends absorb Rs. 1.57 lakhs (against Rs. 2.38 lakhs), leaving a balance of Rs. 9,705 to be carried forward, against Rs. 12,379 brought in. The directors state that the position concerning the availability of raw materials including pig iron continues to remain acute. The prices of raw materials in international markets have risen appreciably with the result that there has been a considerable fall in the quantities imported against licences issued by the Government. Licences for the current period for the import of essential raw materials are yet to be received.

Bombay Subarban Electric Fares Well

ALTHOUGH the dividend has only been maintained at 9 percent on the slightly increased capital following the conversion of a part of the B class convertible debenture loan, the working results of Bombay Suburban Electric Supply Ltd for the year ended March 1964 show an all-round improvement over the previous year's performance. The amount of energy sold, total revenue realised and the gross profit—all are higher than those of the previous year. Sales of energy have risen by 22.2 percent from 206 million kV to 252 million kV; the sale for lights, fans and other purposes has gone up by 12.8 percent and for motive power by 28.2 percent. The revenue from the sale of energy has increased from Rs. 1.996 crores to Rs. 2.583 crores and the income from hire of meters, refrigerators and other appliances has improved from Rs. 4.61 lakhs to Rs. 10.13 lakhs. The gross profit has gone up by 12.5 percent from Rs. 62.12 lakhs to Rs. 69.87 lakhs.

After providing Rs. 18.71 lakhs (against Rs. 16.72 lakhs) for depreciation and Rs. 14.11 lakhs (against (Rs. 12.87 lakhs) for taxation, the net profit amounts to Rs. 34.09 lakhs, compared with Rs. 30.09 lakhs in the preceding year. With Rs. 1.72 lakhs transferred from "reserve to augment production facilities" and Rs. 1.47 lakhs from "tariffs and dividends control reserve", the disposable surplus amounts to Rs. 37.28 lakhs. Appropriations include Rs. 3.36 lakhs (against Rs. 1.43 lakhs) for contingency reserve, Rs. 7.50 lakhs (against Rs. 3.10 lakhs) for rural electrification scheme reserve and Rs. 8.41 lakhs (against Rs. 4.73 lakhs) for development reserve and Rs. 1.67 lakhs (against nil) for dividend equalisation reserve. The interim and final dividends absorb Rs. 15.86 lakhs, against Rs. 15.75 lakhs in 1962-63. The final dividend absorbing Rs. 9.74 lakhs is being paid from the dividend

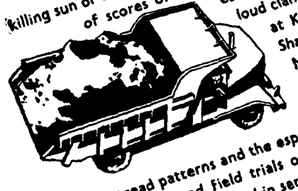
BRITISH OVERSEAS AIRWAYS CORPORATION WITH AIR-INDIA AND QANTAS

reserve to which a sum of Rs. 9.73 lakhs has been allocated.

The Company proposes to make a further debenture issue of the order of Rs. 75 lakhs to finance its five-year development plan. This is on top of the convertible debenture issue of Rs. 87.50 lakhs issued recently and now fully employed in the undertaking. In addition, the Company is accepting call and short-term deposits from the public as temporary capital finance. During 1963-64, the Company incurred a capital expenditure of over Rs. 1 crore.

In his statement to shareholders, the chairman, Mr. A. N. Haksar, says that even larger capital expenditure will be required for the current year. The bulk of this expenditure will be on power and distribution transformers, high and low tension switchgear and cables necessary for the transmission and distribution of energy from the Company's increasing number of receiving stations to the sectors in the areas of supply where the density was now increasing. The phasing of the capital expenditure would, however, largely depend upon import licences being available for 22 kV switchgear and cables from abroad. The chairman says that the electric supply industry's request for offering relief to the investors by appropriate modification to the Electric (Supply) Act is still before the Government.

Tata Chemicals Raises Dividend



TATA Chemicals Ltd has stepped up the dividend for the year ended June 1964 from Re. 1 to Rs. 1.40 a share (Rs. 10-paid). This includes a bonus of 15 paise a share. The increase in the dividend seems well justified by the Company's improved performance during the year. According to the preliminary figures, which have been released adong with the announcement of the dividend, the total turnover of the Company has risen to a new high of Rs. 7.564 crores, which shows an increase of Rs. 41.69 lakhs over the previous year's figure of Rs. 7.147 crores. What is more significant, the gross profit has also gone up by Rs. 40 lakhs from Rs. 1.34 crores to Rs. 1.74 crores.

The ratio of gross profit to sales has improved from around 18.7 percent to 23 percent. The provision for depreciation has been raised from Rs. 44.18 lakhs to Rs. 69.50 lakhs, and a part of the increase is stated to be due to the additional allowance for third-shift working. Allocation to the development rebate, however, is down from Rs. 41 lakhs to Rs. 10.88 lakhs, but the figure for 1962-63 included arrears for previous years. Taxation absorbs Rs. 30.25 lakhs, against Rs. 10.40 lakhs, leaving a net profit of Rs. 58.47 lakhs, against Rs. 38.48 lakhs in the preceding year. After providing Rs. 11.85 lakhs (against Rs. 3.94 lakhs) to the general reserve, a sum of Rs. 46.62 lakhs (against Rs. 34.55 lakhs) has been transferred to the dividend reserve. Preference dividend absorbing Rs. 4.28 lakhs (the same) and equity dividend amounting to Rs. 42.33 lakhs (against Rs. 30.24 lakhs) are to be paid out of the dividend reserve. After making various appropriations, there remains a small surplus of Rs. 3,442 to be carried forward, against Rs. 3,923 brought in.

Two Powerful Tyres for Heavy Duty

Here are two Dunlop tyres of tremendous strength and durability. Massive tyres. Working under the killing sun or deep into the night by the powerful beams of scores of flood lights. Propelling the gigantic earthmoving machines amidst the loud clangour of incessant work...

at Koyna, Nagarjunasagar, Kosi, Sharavathi, Beas...in the iron ore mines of Bihar, Madhya Pradesh, Goa...in the farflung coalfields of the National Coal Development Corporation and at many other project sites all over India.

The tread patterns and the especially tough casings of these tyres were developed after prolonged field trials on many kinds of terrain in many parts of the world. These are tyres proved in service.

New Capital Issues

SIX companies have been authorises to raise fresh capital exceeding Rs. 5.82 crores. Three of them are issuing bonus shares, two equities and another debentures. One company involves foreign collaboration. The consent of the Controller of Capital Issues is valid for 12 months in all cases. The following are the details:

Grindwell Abrasives Ltd, Army and Navy Building, Mahatma Gandhi Road, Bombay, will be issuing Rs. 6-lakh bonus capital in shares of Rs. 100 each to be allotted to the existing shareholders.

Ghaziabad Engineering Co. (P) Ltd, Ghaziabad, engaged in the manufacture of harrows and trailers and household electrical implements, will be issuing bonus shares of Rs. 1.75 lakhs on capitalisation of reserves.

Ahmedabad Advance Mills Ltd, Bombay, is to issue capital of Rs. 95 lakhs consisting of (i) Rs. 70 lakhs in 5½ percent mortgage debentures of Rs. 1,000 each for cash at par: (ii) Rs. 10 lakhs in ordinary shares of Rs. 100 each to be issued as bonus shares in the ratio of one share for every five shares held on capitalisation of the share premium account; and (iii) Rs. 15 lakhs in ordinary shares of Rs. 100 each for cash at par to the existing shareholders in the ratio of one share for every four shares held. The capital from the debentures and rights cash issue will be used to modernise and renovate the mills engaged in the production of cloth.

Hindustan Ferodo Ltd, Bombay, is to issue capital of Rs. 2,68,01,330 in equity shares of Rs. 10 each. Of this capital, Rs. 145 lakhs will be issued to Asbestos, Magnesia and Friction Materials Ltd, to take over its existing assets and Rs. 53,33,330 to its parent company of Turner and Newall Ltd, U.K., for cash at par. The rest of the capital of Rs. 69.68 lakhs will be offered to the Indian public by prospectus at a premium of Rs. 17 a share. The money will be used for expansion and manufacture of new articles.

Modi Spinning and Weaving Mills Co. Ltd, Modinagar, is to issue further capital of Rs. 86,50,820 in equity shares of Rs. 10 each as rights shares for cash at par. The capital will be used to finance the installation of 25,000 spindles for the manufacture of sewing thread, hosiery, etcetera.

Indian Copper Corporation Ltd, Calcutta, will be issuing capital of Rs. 1.25 crores in 7 percent registered debentures of Rs. 1,000 each for cash at par. The debentures will be issued to the Indian public by prospectus. The money will be used to finance the expansion of mine ore production and the setting up of a sulphuric acid plant.

The Stock Markets

LYONS RANGE STEADY DESPITE POLITICAL UNCERTAINTIES

Wednesday Evening.

THE Calcutta stock market, which has remained closed since 9th October for the Puja holidays, reopens today. (It was closed on 10th October due to the death of Mr. B. N. Chaturvedi, a former president). The holidays have provided the operators with an opportunity to understand the implications of various developments, but shares have been steady in kerb dealings.

Although the Central Cabinet has approved the outlay target for the fourth plan, which is substantially bigger than that of the third plan, this has caused no cheerfulness. Considering the shortfalls in the third plan, operators are inclined to think that a bigger plan is unrealistic under the present circumstances. The stock market is, for the time being, more concerned with the measures which the Government is likely to adopt to relieve the present strains in the economy. Prices of commodities have been rising unchecked in spite of the various steps taken. Although industrial production has somewhat increased during the first half of 1964, the rate of growth has been smaller than in the corresponding period of 1963. Despite the increase in the turnover of companies, their profits have been held down by rising production costs and heavier taxation.

Activity in the stock market has declined in recent months. Investment support has been poor. The majority of new issues have been quoted below par. New companies are finding it increasingly difficult to raise funds from the market. Unless the fiscal policy of the Government is suitably modified, confidence in the capital market will be difficult to revive.

Except for purchases by the Life Insurance Corporation and the Unit Trust, there has been little support from other sources. The stock market is at present facing a shortage of funds. As far as the supply of bank credit is concerned, the prospect is not encouraging. In view of the new restrictions imposed on the supply of credit, particularly by the Reserve Bank, the banking community is likely to be hard pressed for funds during the busy season which is about to start. Since interest rates have been raised, there will be little inclination to finance stock market activities with borrowed funds.

Political developments have in the meantime been adverse. The sudden overthrow of Mr. Khrushchev has caused fresh uncertainties.

In the circumstances, the stock market will be opening today in a cautious mood. Steel shares are unlikely to attract much support until the Government decides how the advances given to the Indian Iron and Steel Company and the Tata Iron and Steel Company will be repaid. Although the two Companies have been asked to go in for further expansion, they are expected to examine the financial and other implications of expansion very carefully. Selected engineering shares are fairly steady as the order-books of these companies are well filled. Unless the shortages of raw materials are aggravated, they are expected to work reasonably well. The prospect for good miscellaneous shares is considered fair because the supply of many commodities is short. Paper shares will respond if the Government makes up its mind about increasing the price of paper. Sugar shares are unlikely to attract interest due to the poor working of the industry. Investors in bank shares prefer to wait and see how the new credit policy of the Reserve Bank is going to work in practice.

Jute shares may be dealt in cautiously due to the high price of fibre. Coal shares lack interest as there is overproduction in certain grades of coal. Cotton mill shares have turned hesitant due to the imposition of partial control on cloth. Tea shares are being sold freely because of the decline in the average price of tea.

Government securities are dull and quiet, and the turnover has dropped. The 3 percent Conversion loan 1986 has fallen to around Rs. 62.90.

Bombay

SHARES RALLY IN ACTIVE TURNOVER

RAYONS RISE ON EXCISE DUTY CUT

Wednesday Evening.

INDUSTRIALS on the Bombay Stock Exchange, which were declining since about the end of August, sought new low levels during the past fortnight. On Wednesday, 14th October, when the market was at its worst, it stood within striking distance of its July low from where it had staged an impressive advance which had carried certain counters to the highest levels for the year. In the mood of frustration that had come to prevail because of the non-stop decline in prices for several weeks, the market cared little for the encouraging corporate news. The announcement of higher dividends by several important Companies like Delhi Cloth, Modi Spinning, Tata Chemicals, Bombay Burma, Investment Corporation of India, Scindia Steam and T. Manekial—these dividends had been well earned—fell flat on the market. Most of these shares lost some ground after the announcement of higher dividends and it was by no means just a case of selling on good news.

But the lowest levels recorded on 14th October were not seen again. The market took a turn, and it did so when the turn could have been the least expected. Its initial reaction to the relief in excise duty on viscose rayon filament yarn was one of mild dissatisfaction, the reduction, varying from 50 paise to Re. 1 a kilogram, was considered to be below expectations. What was really surprising was that the market, which had been unable to face up to encouraging corporate news, should have been virtually unmoved by sensational developments which can have an important bearing on the international political situation. The recent Kremlin shake-up, the Labour victory in the U.K. and the explosion of the atomic bomb by communist China—these developments which rocked world stock markets failed to stir the Indian ones.

Dalal Street did not merely manage to hold steady; it presented a remarkably firm appearance on 19th October, with most of the speculative counters recording an impressive recovery under the lead of rayon shares which had been the weakest spot for a long while. Between 14th and 19th October, National Rayon rose from Rs. 342 to Rs. 371, Century from Rs. 600 to Rs. 621, Tata Engineering and Locomotive from Rs. 256.50 to Rs. 266 and Tata Steel from Rs. 146.50 to Rs. 148—to mention only a few leading scrip. More significant than the recovery in prices is the change in sentiment. Bears who had

been dominating the scene for a long while are now beginning to feel uneasy. Activity on the stock market, which had shrunk to negligible proportions in recent weeks, has registered a notable increase, though it is predominantly professional. It is quite possible that the recovery which is now getting under way might mark the beginning of a new important upward move.

Sectionwise, rayon shares which had been hammered down badly over the past few weeks because of the delay in the announcement of the widely anticipated relief in excise duty, have recorded a smart recovery on nervous short-covering and strong bull manipulation. On second thoughts, market men are arguing that, although the relief has not been quite up to expectations, the end of uncertainty about the duty will lead to a revival of demand. This will enable spinners to reduce their stocks which have been piling up for some time. Cotton textile shares have turned steadier on the argument that the downward revision of realisation multipliers is likely to affect the traders' margin rather than the profitability of mills which have been assured of a reasonable return; besides, the industry is expected to benefit from the decontrol of 55 percent of its production.

Steel shares have been dull and rather subdued for some time, but engineering shares received considerable attention and showed fair gains. Among shipping shares, Great Eastern suffered heavily after the dividend announcement and this affected Scindia also. But the latter rallied after the announcement of a higher dividend. Great Eastern also staged a moderate rally on reports that the dividend was likely to be raised in response to a strong protest by shareholders' representative. Sugar shares were fully steady. Dyes and chemicals continued to receive support at lower prices. Electric shares were fully steady. Bank and insurance shares were neglected. Business in cash shares was extremely restricted, but with sellers reserved, prices did not show any noticeable variations.

Madras

SHARES STEADY BUT TURNOVER POOR

PREFERENCE ISSUES IN DEMAND

Tuesday Evening.

THE Madras stock market has been steady during the past fortnight. But turnover has been restricted. Although corporate news has been satisfactory, operators and investors have tended to be cautious because of growing shortage of funds. The increase in the rates of interest made it difficult to finance the p chase of shares with borrowed fur Government securities have been c and prices have tended to decli Despite good enquiries for prefere shares, business has been small to a paucity of sellers. In clear scrip, interest has largely centred textile and miscellaneous shares. lected plantings have attracted att tion following good crop reports fr tea and coffee estates.

In banks, business has been sm but prices have been maintair Indian have come to hand at Rs. and Indian Overseas have been d at Rs. 149. In electric compan West Coast have been steady at 21.87 and Karaikkal at Rs. 1(Among sugar shares, E.I.D. have dr ped to Rs. 36.12, but Travancore steady at Rs. 8.12. K.C.P. have b

MARKET DEPRESSED BUT GOLD SHARES RISE

RECOVERY IN STEELS DUE TO SMALL LABOUR MAJORITY

THE stock market has recently passed through one of the most difficult periods it has experienced for a long time. It see-sawed because of the elections, while there were such factors as the keenly disappointing overseas trade figures, the fall of Mr. Khrushchev and the Chinese atomic development to contend with. Prices took a severe knock as a result of persistent small selling, but it was noticeable that the large investors and institutions did not participate to any extent and preferred to wait and see what the new Government's measures could be to cure the country's economic troubles. This attitude checked the small investors, and a better atmosphere prevailed later. Gilt-edged which had slumped on Bank rate fears turned upwards as these fears receded and equities looked a good deal steadier, and in places showed some recovery. Steel shares met with support on the view that renationalisation is impossible with so small a Government majority. Leading stocks like I.C.I., Turner and Newall, Tube Investments, Imperial Tobacco, Leyland Motors, Beechams and I. C. Tabulators first felt sharply, but later looked a good deal steadier. As usual, when domestic stocks came under pressure, buyers turned to gold shares and this process was witnessed once again. The gold share market had its busiest day in Monday for some time and prices advanced by several shillings.

THE CALCUTTA MONEY MARKET

SMALL INCREASE IN ADVANCES

Wednesday, 21st October.

THERE has been a small increase in the general level of advances in the Calcutta money market during the past fortnight, the entire increase being accounted for by the textile mills. The requirements of the other major categories of borrowers—the jute and sugar industries, the iron, steel and engineering units and the foodgrains and seeds trade—are unchanged. In the inter-bank market, the call rate has dropped from 4½ percent to 3 percent. with lenders over.

The exchange market has been extremely quiet because of the holidays so there have been very few tea or gunny bills. The demand for remittances has also been poor. In London, sterling is weak, and shows small losses in relation to most of the major currencies.

BULLION WAS QUIET IN CALCUTTA during the past fortnight. Towards the close demand declined considerably. The price of silver dropped from the previous level of Rs. 256 to Rs. 253.25 a kilogram, quoted today. The price was quoted at 113d in London and at 129.3 cents in New York.

In sympathy with silver, gold was quiet and the price of 14-carat declined from Rs. 71.25 to Rs. 70.25.

DURING THE WEEK ENDED 16TH October, Government of India Treasury bills for Rs. 213,49,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 20th October. The total amount offered was Rs. 4 crores. Tenders at Rs. 99.375 percent were allotted 50 percent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.500 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 26th October.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 21st October to 24th October at Rs. 99.391 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 12th October to 17th October amounted to Rs. 2,42,50,000.

ACTIVE NOTES ROSE BY Rs. 67.65 crores to Rs. 2,437.93 crores and the total note issue by Rs. 45.99 crores to Rs. 2,445.06 crores, according to the return of the Reserve Bank of India for the fortnight ended 16th October, 1964. The currency expansion was covered by raising rupee securities by Rs. 49.83 crores to Rs. 2,136.16 crores in the paper currency reserve. Deposits of the Central Government dropped by Rs. 21.79 crores to Rs. 54.13 crores while those of State Governments rose by Rs. 88 lakhs to Rs. 15.66 crores. Balances of scheduled banks at Rs. 109.48 crores showed a rise of Rs. 6.18 crores. Balances held abroad decreased by Rs. 1.22 crores to Rs. 9.13 crores while investments rose by Rs. 29.61 crores to Rs. 107.30 crores. Loans given to scheduled banks increased from Rs. 60.05 lakhs to Rs. 3.99 crores, of which advances against usance bills amounted to Rs. 1.70 crores (nil). Ways and means advances stood at Rs. 39.29 crores against Rs. 35.22 crores.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 9th October, 1964, shows Demand and Time liabilities at Rs. 1,322.20 crores (Rs. 28.42 crores on account of borrowings from banks) and Rs. 1,423.34 crores (Rs. 21.43 crores), compared with Rs. 1,308.16 crores (Rs. 29.01 crores) and Rs. 1,438.59 crores (Rs. 20.67 crores), respectively, in the previous week. Cash has increased by Rs. 2.90 crores to Rs. 61.76 crores, while balances with the Reserve Bank have declined by Rs. 2.30 crores to Rs. 94.68 crores. There is a drop of Rs. 2.89 crores to Rs. 827.64 crores in investments. Advances and bills discounted at Rs. 1,730.78 crores show a rise of Rs. 2.16 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.7 percent and 63.0 percent, against 5.7 percent and 62.9 percent.

THE RETURN OF THE STATE BANK OF India for the week ended 9th October 1964, shows a rise of Rs. 3.06 crores to Rs. 669.29 crores in total deposits. Investments in Government securities are down by Rs. 5.99 crores to Rs. 294.63 crores, while other authorised investments remain unchanged at Rs. 8.98 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have declined by Rs. 1.86 crores to Rs. 327.58 crores. Cash and balances are, in consequence, shown at Rs. 28.97 crores or Rs. 22 lakhs less.

THE CALCUTTA TRAMWAYS COMPANY LIMITED

THE CHAIRMAN, MR. DAVID E. WEBB'S REVIEW

The Annual General Meeting of The Calcutta Tramways Company Limited was held on October 8th at 30 Cursitor Street, Chancery Lane, London, E.C.4.

Mr David E. Webb, F.C.A., Chairman of the company, presided and said :

The Accounts before you cover the working of your Company for the twelve months ended 31st December, 1963. Receipts continued their slow increase and were some £84,000 up on the preceding year, but this increase was offset, largely, by increased maintenance charges and power expenses and any increased surplus for the year which might have been foreseen was more than absorbed by the increased charges for Indian Taxation. There was left a sum of £56,359 to be transferred to Shareholders' Account, compared with £58,778 the previous year.

As mentioned last year in the same context, these figures are well below the sum of £87,457 to which shareholders are entitled under the terms of the Agreement with the Government of West Bengal.

In considering the dividend which they would recommend on the Ordinary Shares, your Directors were influenced by the fact that over the years the level of wages and salaries paid to our employees has been continually rising, the percentage of our surplus taken by Government by way of Indian Taxation has increased year by year but the shareholders have received no additional dividends and indeed have seen them reduced.

Your Board therefore felt that it was equitable for the shareholders to receive a small increase in dividend and they therefore recommend the payment of a dividend of 6% on the Ordinary Shares, which compares with 5% last year.

Although, on the surface, the past year appears to have followed closely the pattern of the preceding year, the battle to control expenditure was much fiercer. As I mentioned last year, it was time for the level of the emoluments of our employees to be raised, but this could not be done without adjustments to the fare structure. Negotiations were accordingly entered into with the Unions.

Fare Increase

It was not, however, until April of this year, 1964, the Government, with whom we had been in consultation, agreed with us on a date for the implementation of a fare increase. Even then the amount of the increase was restricted to one naya paisa (one-sixth of a penny) out of deference to the wishes of Government, although they are aware that this amount can do no more than finance the increasing costs on a very short term basis.

Agreement had previously been reached with the Unions for a revised wages and dearness allowance structure. For the first time, this agreement will run for a period of three years and under it the rate of dearness allowance is linked directly with the cost of living index and will be reviewed annually. We believe that this is a great step forward in our relations with our employees and we hope both the employees and the Company will enjoy continued industrial peace. I believe the agreement to be fair and it may well form the basis of future agreements, and I would like to thank all those who took part in those negotiations on both sides for the patience and sense of responsibility which they showed.

The current year, unfortunately, started with a period of general unrest in Calcutta, and our own staff were unsettled by the lengthy discussions with the authorities necessary to secure the implementation of a revised fare structure. Whilst there were a number of threats of strikes, I am glad to say that good sense prevailed and there were no major stoppages. In Calcutta food prices were rising and food itself was not plentiful. There were numerous demonstrations and these, by their very nature, are bound to affect our receipts, and by the end of the first quarter our receipts were approximately £80,000 down on the preceding year.

We are gradually recovering with the help of the increase in fares in May, but we are now paying the increased rates to our employees, which will amount to about £100,000 this year and £150,000 in a full year. Add to this considerable increases in the cost of electric power and it will be clear to all that we shall have great difficulty in producing results this year comparable with those of 1963.

I cannot report any progress on the long term programme of raising funds for capital development.

Capital Expenditure

Government have recently informed us of their inability to grant us a loan and we are faced with such items of capital expenditure as the new Majerhat Bridge completed at a cost to the Company of approximately £30,000, the Tollygunge Bridge re-alignment will have to be paid for in the near future, and still we have no funds out of which to provide for such expenditure. Until we can raise our fares to a level which will give us some surplus to set aside for such commitments, or until we can arrange a long term loan with the approval of Government, we have to meet these charges from our receipts which are already fully extended in meeting our normal expenditure of running and maintenance of existing stock. All this is extremely frustrating at the present time as we have been able to make advantageous purchases of some 30 sets of tramway trucks from Bombay and we are ready to build the necessary new bodies. To complete 30 new cars will cost over £200,000, a figure quite outside our present resources on the other hand we are being pressed on all sides to put new vehicles on the road and to get these new vehicles into service cannot but be of the greatest value to the transport facilities in Calcutta.

We are therefore continuing to investigate all possible sources of finance and I hope by this time next year that I will be able to report progress.

Finally, I would like to pay a very sincere tribute to our Agent and Senior Executive staff. They are called upon to play a variety of roles and in all these lengthy negotiations they must show great qualities of diplomacy, firmness and patience These tributes to them always come at the end of my speech, but I can assure them that their good work and helpful approach to our common problems is very much appreciated by our shareholders and the Board. We are very grateful to them.

This statement is not a report of the proceedings of the Annual General Meeting referred to above.

New Delhi

NO FIRM ESTIMATE OF RESOURCES FOR FOURTH PLAN

(FROM OUR NEW DELHI CORRESPONDENT)

THE Central Cabinet has approved an outlay of Rs. 21,500 crores for the fourth plan with provision for another Rs. 1,000 crores if resources become available. This sum includes Rs. 7,000 crores for the private sector. The plan visualises a 6.5 percent rate of growth. The following are some of the allocations (in crores of rupees) with the outlay assumed at Rs. 22,500 crores:

	Anticipated expenditure in the third plan	Allocations in fourth plan
Agriculture	1,090	2,400
Irrigation	648	1,000
Total	1,738	3,400
Power	1,187	1,950
Small-scale industry	233	450
Organised industry	1,662	3,200
Transport and communications	1,940	3,000
Total	5,022	8,600
Social services	3,178	7,020
Total	8,200	15,620

The planners have laid down the following broad programme of priorities for industrial development:

(a) Completion of the investment programmes already taken in hand and intensive utilisation of the new capacity thus brought into existence;

(b) preference to the expansion of existing units over the establishment of new units wherever conditions justify since such a step would help secure additional capacity with less investment;

(c) rapid expansion of capacity under quick maturing schemes, especially in the field of essential consumer goods industries; and

(d) expansion of heavy and basic industries.

The table below presents the distribution of investment outlays between the public and private sectors under selected groups of industries.

DISTRIBUTION OF FIXED INVESTMENT OUTLAY: 1966-71

(Rs. crores)

	Total	Public sector	Private sector
Metals	1,500	1,250	250
Fertilisers and pesticides	450	300	150
Mining, mineral, oil and related developments	1,050	800	250
Machinery and engineering industries	800	500	300
Consumer goods	800	150	650
Intermediate goods	800	150	650
Miscellaneous	200	50	150
	5,600	3,200	2,400

In order to bring out the logic of the programme, it may be useful to group the various industries in the following broad categories.

(a) Industries manufacturing inputs for agriculture—these include fertilisers, pesticides, farm equipment and other material inputs. The programme provides for expansion of the nitrogenous fertiliser capacity to 2.2 million tons by the end of the fourth plan and that for phosphatic fertilisers to 1 million tons.

(b) Industries which produce finished consumer goods, including sugar, cloth, kerosene, bicycles, electric fans, etcetera. It is important to note that a large portion of the processing activity involved in the production of finished goods is done in the small sector.

(c) Metals and machine-building industries—these include steel, aluminium, zinc machinery and machine-building industries of all types. It is in this sector that production for import substitution will play a vital rôle. Unless this sector is expanded considerably, the country will continue to be dependant on substantial imports for meeting its needs.

(d) Intermediate goods—these include industrial chemicals, fuel, iron and steel castings, refractories and cement. The expansion in the output of fertilisers, consumer goods, metals and machinery generate a large increase in the requirements of chemicals, fuel and a wide variety of intermediates and some-finished products. Here again, the limitations of foreign exchange leave no alternative but to meet most of the requirements of these products through the expansion of indigenous production.

The lack of indigenous organisations for design, construction and engineering of projects is a major gap which will have to be bridged in order that India might become self-reliant. At present, the country depends mostly on foreign agencies for these services. As long as this deficiency remains and there is excessive dependence on foreign design and engineering personnel, the pace of development is bound to be slow. It will expose the development to avoidable uncertainties and pressures, besides involving a large drain on foreign exchange resources. It is, therefore, of vital importance for the future development of the country that attention is given to a healthy development of adequate design and construction organisations in certain selected fields (such as steel, coal, oil, power, fertilisers). These should be staffed by highly qualified technical experts working under proper leadership and within the framework of suitable rules and procedures to be able to play a major rôle in the country's industrial development

Some of the important industrial targets (capacity), are given in the table on the cols. 3 and 4.

In the process of reassessment, this figure has been stepped up to Rs. 18,000 crores, with the possibility of another Rs. 2,000 crores being added to it. The volume of foreign assistance is expected to be Rs. 3,200 crores. This is on the assumption that exports are worth Rs. 5,100 crores and commodity imports exclusive of P.L. 480 do not exceed Rs. 1,200 crores.

	Unit	1965-66	1970-71	Additional capacity during fourth plan
Iron and steel (steel ingots)	thousand tons	8,900 ('66-67)	16,500	7,600
Pig iron (for sale)	,,	1,200	4,000	2,800
Alloy tool and special steels	,,	50	500	450
Aluminium	,,	73	240	167
Iron ore	,,	26,000	54,000	28,000
Coal programme	'000	76,000	125,000	49,000
Merchant ships	'000 G.R.T.	60,	120	60
Chemical plant and machinery	Rs. crores	9	30	21
Coal and other mining machinery	'000 tons	45	45	—
Cotton textile machinery	Rs. crores	22	50	28
Cement machinery	,,	17.8	20	2.2
Paper machinery	,,	8	25	7
Sugar	'000 tonnes	3,200	4,500	1,300
Cement	,,	14,000	30,000	16,000
Cotton fabrics (mill-made)	million yards	5,600	6,000	500
Newsprint	'000 tonnes	30	165	135
Drugs and pharmaceuticals	,,	1,750	3,000	1,250
Motor-cycles and scooters	thousands	60	100	40
Motor-cars	,,	30	50	20
Electric fans	,,	2,800	3,500	700
Petroleum refining	million tonnes	15.25	28.25 (second phase)	13.0

Resources Budget

Resources to finance this plan (in crores of rupees), it is believed, will be raised as follows:

Surplus on the basis of existing level of taxation		1,910
Surplus from public undertakings		1,350
Small savings		1,000
Annuity deposits		200
Provident fund deposits		525
Miscellaneous receipts		860
		5,845
Market loans	1,600	
Deficit financing and P.L. 480 receipts	3,000	4,600
Additional taxation		2,500
		12,945
	or Rs.	13,000 crores

The Planning Commission has done some hard work in pruning the outlay demanded by 43 working groups, which had placed it at Rs. 24,162 crores, plus Rs. 7,000 crores for the private sector, thereby making a total of over Rs. 30,000 crores. It may be explained here that these estimates are based on 1963-64 prices. The Planning Commission's main anxiety over this "modest outlay" of Rs. 22,500 crores is that shortfalls under the third plan have made it necessary for the economy to strive for much higher rates of growth than had been originally envisaged for the successive plan periods, "if the objectives in relation to adequate employment and higher standards of consumption are to be reached by about 1975-76." The planners are also worried that the foreign aid of the existing magnitude may not be forthcoming after the fifth plan, hence the tendency to make hay while the sun shines.

The planners' strategy is not a new one. It was first evolved by the late Sir V. T. Krishnamachari, who silenced critics of the second plan outlay by claiming that agricultural production would go up by 25 percent, which would bring down the price level, thereby making the plan feasible. The planners of today assert that the crucial problem for the fourth plan is that of accelerating the tempo of development without accelerating inflationary trends in the economy.

Meanwhile, the National Council of Applied Economic Research has released to the Press its study on "attitudes towards and motivations for savings" from which the followings extracts are taken:

"It is interesting to note that even in urban India, a majority of urban households do not seem to possess much knowledge of the five year plans. This appears to be so irrespective of the age, education, occupation and the level of income. When questioned about the effect of the five year plans on their welfare, only the groups with high-income occupation and high education came forward to reply and there again described the plans as having a favourable effect on their own economic welfare. The low-income and occupation groups were totally ignorant.

"More job opportunities seem to be one of the specific reasons why households felt benefited by the five year plans. Inflation and higher taxes were found to be the two reasons why some households regard the five year plans as having a detrimental effect on their financial situation. It appears from this survey that a significant proportion of even the urban households in 1960 had little knowledge of the National Saving Certificates. Again, this was irrespective of income, occupation, education and age although the proportion of people having some knowledge of the certificates showed a tendency to rise with income and level of education.

"Opinions of urban households were divided on investment in gold in 1960 (prior to the promulgation of the Gold Control Rules). There were as many in favour of purchasing gold as there were against." This can hardly be regarded as a compliment to the planners and the plan publicity organised by the Central Ministry of Information.

According to the Council, high taxation and inflation have left very little margin for saving. But this has not deterred the planners who claim that notwithstanding the shortfalls in the national product and the emergency, the net investment during the five-year period, 1961-66, taking the public and private sectors together, is likely to reach a total of Rs. 11,700 crores at current prices. Net investment in both these sectors, in the last year of the plan ending in March 1966,

will probably be Rs. 2,600 crores to Rs. 2,900 crores or about 16 percent of net national income. "It is significant that these larger efforts at investment and savings have been undertaken, in spite of the sudden rise in defence spending."

It may be added that this country willingly agreed to two stiff doses of taxation solely because of the Chinese invasion. The emergency will not help the Government to raise Rs. 500 crores through additional taxation every year. On the contrary, it will provide the Opposition with a powerful weapon to beat the Congress down.

In the estimate of resources, market loans and deficit financing have been grouped together by this correspondent, largely because market borrowings too have become a type of deficit financing. The Prime Minister was realistic when, according to reports, he asked the planners to produce concrete proposals for raising production and for bringing down prices to the 1963-64 level. The planners perhaps are busy producing another paper on this subject. Notwithstanding claims to the contrary, the deficit financing contemplated for the next plan period will make inflation even worse. As Mr. Pierre-Paul Schweitzer said, expectations of continually rising prices often make inflation uncontrollable.

Food prices, between March 1961 and September 1964, have risen by 44.4 percent. These are the Planning Commission's own figures. Since then, sugarcane prices have been stepped up. Farm support prices have been announced. It is hoped that with the incentives now offered, the production of foodgrains will rise. Side by side, the Labour Ministry has been setting up wage boards, which have to recommend higher wages. The planners have conceded that in a number of instances it will be legitimate for undertakings to charge higher prices with the specific object of raising resources. Public undertakings have been advised to earn a minimum profit of 12 percent. The 1965-66 Budget proposals are still unknown. They may bring in more excise duties, raising prices further. As matters stand, it is difficult to visualise a return to the 1963-64 level of prices by 1966.

According to reports, the planners feel that the rise in prices has enhanced the incomes of producers and traders. Unless those incomes are converted into savings and investments, they will produce distortions in the economy and aggravate the unbalance. They have, therefore, suggested structural changes through a reduction of disparities in income and consumption. To achieve this, the Commission has suggested a ceiling on urban incomes. According to reports, at least four Cabinet Ministers are in favour of the proposal, but it has been rejected on the ground that the Planning Commission is not within its rights in suggesting a major policy decision.

As for efficiency in the implementation of the plans, irrigation provides a striking example. Under the first plan, the gross area of irrigation potential created was 6.5 million acres, of which, according to the Planning Commission, 3.1 million acres were utilised. Under the second plan, the utilisation was 8.3 million acres, against the created potential of 11.7 million acres. Under the third plan, the potential originally anticipated was 29.5 million acres, against utilisation of 22.8 million acres. The revised figures place the potential at 20 million acres and utilisation at 16 million acres. In the fourth plan, the additional potential is placed at 13 million acres and utilisation at 10 million acres. The plan outlay is Rs. 720 crores for continuing schemes and Rs. 155 crores for new schemes.

As far as agriculture is concerned, even the planners admit defeat. Yet there is no evidence to show that serious efforts are being made to step up agricultural production. The Planning Commission has all along laid down targets for food and cash crops. No attempt has yet been made to prevent the diversion of acreage from food to cash crops. Sugarcane illustrates the point. Unlike food, there has been no grow-more-sugarcane campaign, and yet the acreage under sugarcane has been rising almost each year. Last week, the Government fixed the prices of foodgrains and also of sugarcane. Sugarcane prices have been stepped up deliberately so as to produce more sugar. But no effort is contemplated to prevent the diversion of acreage from, say, wheat to sugarcane.

The planners have emphasised the need for the States to mobilise resources to the maximum. They have urged that in order that the sharing of responsibility is equitable and the measures taken are complementary to each other, steps should be taken, as early as possible, to evolve broad national policies for the administration of complex measures like urban land and property taxation, taxation of agricultural incomes, pricing of public undertakings and so forth.

Judging from the experience of the last two plans, the responsibility for raising finances has mainly devolved on the Centre. For political reasons, the States have not levied or enhanced betterment levies or increased land revenue. Indirect taxes are levied by both the Centre and the States. One advantage of such taxes is that their incidence is widespread and they do not stir public opinion.

The whole plan has been drawn up on a set of presumptions. It is taken for granted that production will be stepped up, leading to higher savings, higher investment, higher taxation and reduction in prices. When the third plan was launched, the late Prime Minister claimed that it would take India to the "take-off stage." Now the take-off stage is put off till 1977.

The five year plans have largely been used as the election manifestos of the Congress Party. Their success is judged not by the rise in production or the quality of the achievements, but by the amount of money the Government is able to spend.

Stagnation in agriculture and inadequate progress in the other sectors, coupled with increasing doses of created money, are largely responsible for the sharp rise in prices during the last years. The Planning Commission, however, is unable to give a correct estimate of the resources for the fourth plan, on the plea that the additional resources to be created by the Centre and the States during 1965-66 are still not known. The question asked here is whether there is room for additional taxation. The more pertinent question may be whether the fourth plan will be attractive enough to catch votes for the Congress.

TELEX EXCHANGES

More Cities Covered

Telex exchanges are under installation in Kanpur, Nagpur and Coimbatore. They have already gained popularity in Bombay, Calcutta, Madras, New Delhi and Ahmedabad where as many as 1,200 applicants are on the waiting list. In 1963-64, over 2 million units were recorded at these five exchanges.

During the third plan period, the Government proposes to install Telex changes in Bangalore, Madurai, Trichinapalli, Ernaculam, Secunderabad, Poona, Baroda, Rajkot, Gauhati, Ranchi, Jamshedpur, Cuttack, Lucknow, Ambala, Ludhiana and Amritsar. The acute shortage of teleprinters is the primary reason which is holding up the expansion of Telex facilities in India. To meet the growing demand for this service, the Government has undertaken a scheme of expansion of Hindustan Teleprinters Ltd, which was set up to manufacture 1,000 units a year in 1960.

The agreement, recently signed between India and Olivetti, will step up the production of teleprinters to 7,500 units a year from the existing output of 1,300 units a year. This will be in addition to spares, the production of which will be progressively stepped up. The following is the schedule of expansion of teleprinter expansion:

1965-66	2,100 units
1966-67	2,700 units
1967-68	3,500 units
1968-69	5,400 units
1969 onwards	7,500 units

HEAVY PLATE AND VESSEL WORKS

Second Plan Project Revived

The second plan project to set up a heavy steel plate and vessel works in India is being revived in a modified form. The project was recommended by the Eric Coates mission, and Davy Ashmore was invited to prepare a project report for it. Originally, according to the project report, the proposed works was to be suitable for the manufacture of pressure vessels up to class I standards and up to 50 tons in weight of 2in. plate thickness in mild and stainless steels and other normal alloys used in the chemical and oil industries.

A foundry forge plant, which is being set up in collaboration with the Czech Government will produce spin pipes moulds and other items.

A team representing Voest of Austria is shortly due in New Delhi to negotiate with the Government of India for setting up a structural shop, somewhere in Uttar Pradesh. Financial and technical collaboration by Voest is possible. Mr. Samuel John of the Chicago Bridge Company of the U.S.A. is also due here in connection with the other part of the project to manufacture steel plate vessels, particularly those suitable for the chemical industry. Here again, financial and technical collaboration with the Indian Government is likely.

Thus the manufacture of heavy plates has been separated from that of vessels and their scope has been considerably modified. The vessel shop, which will be set up near one of the ports, will manufacture fertiliser and chemical equipment. It will be named a fabrication shop.

ELECTRICAL EQUIPMENT

Project Report Commissioned

The Central Government has asked the International General Electric Company of the U.S.A. to prepare a feasibility report for another heavy electrical plant to manufacture 200,000 to 300,000 kW generating units. The Government will share half the cost of the feasibility report.

Heavy Electricals of Bhopal has produced a project report for a foundry forge plant for heavy electrical equipment. The plant will manufacture heavy castings weighing 20 to 30 tons each. It is a Rs. 20-crore project for which a collaborator is required. It is proposed to locate the plant in Hardwar.

COAL WASHERY DESIGN

Talks with Poland

A Polish team is expected here shortly in connection with a coal washery design shop, which the Government is planning to set up.

POSTS AND TELEGRAPHS

Big Outlay Demanded

The Posts and Telegraph Board has asked for a Rs. 725-crore outlay during the fourth plan, as against Rs. 275 crores during the third and Rs. 75 crores during the second. The second and third plan outlays included Rs. 108 and Rs. 22 crores, respectively, from its own resources. In case, the full demand for Rs. 725 crores is conceded, the Posts and Telegraphs Department will be able to step up its resources to the extent of 33 percent, it is claimed. The Department visualises self-financing of its development by the end of the fifth plan.

This outlay of Rs. 725 crores, if granted, will, however, meet 80 percent of the demand for telephones in India, based on the 1961 census. The expansion visualised will be as follows:

In cities with over 1.5 million population	Six telephones a 100 of population
In cities with populations between 700,000 and 1.5 million	Four telephones a 100 of population
In cities of between 150,000 and 700,000 of population	Two telephones a 100 of population
In cities of between 50,000 and 150,000 of population	One telephone a 100 of population
Cities of below 50,000 population	0.1 telephones a 100 of population.

A comparison on the basis of 1960 figures should be interesting.

Country	Number of telephones a 100 of population
India	0.10
China	0.37
Iran	0.45
Bulgaria	0.77
Yugoslavia	1.27
Kuwait	1.13
Hongkong	3.20
Japan	5.21
East Germany	7.16
West Germany	9.98
U.K	15 03
Australia	20.88
Denmark	20.17
Switzerland	29.85
Canada	30.85
Sweden	35.90
U.S.A.	39.52

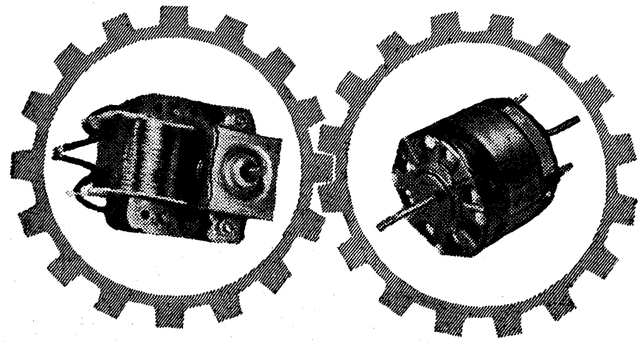
India hopes to improve her position. She will have 0.43 telephones a 100 of her population by the end of the fourth plan.

It may be added that revenue from trunk telephone calls will sharply increase in every three years. The following figures should be an indicator of how the revenu is being stepped up:

1962-63	Rs. 13.03 crore
1963-64	Rs. 15.54 crore
1964-65	Rs. 18.1 crore (Budget)

It may be added that 17 percent to 18 percent calls are cancelled or ineffective, due to overloading of lines. That there has been considerable improvement in the service should be evident from the fact that in 1963-64, 30 percent of calls were defective, as against 92 percent in 1953-54.

FERTILISERS



Study of Consumption

At the instance of the Government of India, the Mission in India of the U.S. Agency for International Development has made a report on the fertiliser needs of this country. The report says that if India is to achieve adequate foodgrains output by 1970-71, a radical increase in new inputs in agriculture will be required, foremost among which will be fertilisers. The Agency for International Development has estimated two very conservative sets of fertiliser targets based on different assumptions as to foodgrains requirements. The results are as follows:

Standstill target: If India is to feed its growing population at only present dietary levels but is also to achieve self-sufficiency in foodgrain

asian

NEW DELHI-1
GRAM: 'GOODMOTORS' TELE: 45084

production by the mid-70's, the total chemical fertiliser nutrient consumption a year must reach 3.42 million tons by 1970-71 and 5.40 million tons by 1975-76. These standstill consumption targets *imply a productive* capacity plus imports as follows:

	Nitrogen capacity	Phosphate capacity	Potassium imports
	(Million tons)		
1970-71	2.18	1.09	.49
1975-76	3.42	1.71	.77

Minimum acceptable target: If by 1970-71, India is to improve slightly *the per capita* intake of foodgrains and achieve agricultural self-sufficiency, the annual nutrient consumption will have to be about 4.70 million tons. A per capita increase in daily grain intake of 2oz. by 1975-76 implies an annual nutrient consumption of 7.64 million tons by that date. The A.I.D. Mission considers these minimal improvements in foodgrain consumption essential to India's economic growth. The minimum acceptable targets imply a productive capacity plus imports as follows:

	Nitrogen capacity	Phosphate capacity	Potassium imports
	(Million tons)		
1970-71	2.98	1.43	.67
1975-76	4.84	2.42	1.09

India's present fertiliser production capacity, and capacity projected for completion by 1968, will leave her with a deficit of 2 million tons of nitrogen capacity and 1 million tons of phosphorus capacity by 1970-71. (Potassium will continue to be imported unless *domestic* reserves are discovered). The capital cost of covering the deficit will be in the neighbourhood of Rs. 487 crores, of which 40 percent or Rs. 194.8 crores will be foreign exchange. In addition, the capacity required to make up the deficit will demand an annual expenditure of foreign exchange for raw materials amounting to Rs. 100.4 crores.

Several steps can be taken at once which will hasten the construction of the necessary fertiliser plants and which can reduce the amounts of foreign exchange indicated above. Plans are ready for the five new public sector nitrogen plants which have been licensed. The F.C.I. Planning Division is staffed to design, engineer and erect two new plants a year, and should do so. Sites should be selected, and other preliminary steps taken, to expedite construction of two plants each year, plus advisable expansion of existing plants. The plans must be practicable, and possible delays, impediments and adverse factors foreseen and overcome in advance to the maximum extent possible.

A synthesis gas system should be installed in Rourkela to supplement the present cokeoven gas supply. Existing studies seem adequate to permit immediate choice of the best system so that work can begin. Sindri can be expanded at once to produce phosphorus fertiliser and sell a mixed product.

To expand India's sulphur production, the Pyrites Corporation should be organised, a General Manager appointed and procedures for pyrite mining established, with help from experienced foreign consultants, to provide ore sufficient for four sulpheric acid plants, each producing 1,000 tons a day. This will reduce the Rs. 23 crores of foreign exchange needed for sulphur to Rs. 15 crores in 1970-71.

Construction of a workshop to fabricate special equipment for the fertiliser and other chemical industries should be expedited. Such a workshop is now being considered by the Central Ministry of Industry. According to the Fertiliser Corporation of India, the shop will cost about Rs. 5 crores (Rs. 4 crores in foreign exchange) to build. By supplying high pressure vessels it would reduce the foreign exchange costs of fertiliser plant construction to 10-15 percent of the total cost.

The recently established F.A.C.T. Planning Division should, like that of the F.C.I., develop plans and supervise construction in southern India. This programme, promptly and efficiently put into effect, could increase public sector capacity to a total of about 1.5 million to 1.6 million tons of nitrogen in 1970-71. The scheme outlined above needs a detailed time schedule of required action to locate sites, develop preliminary financial and organisational plans and ensure quick and unimpeded project development. The schedule should list action to be taken, assign responsibility for these actions and a date for their completion.

If the schedule indicates that action by several agencies is necessary, it may be advisable to establish a fertiliser production committee at a high enough level to speed up usual procedures or eliminate those which cause undue delay. Such a committee's staff should be a task force composed of personnel from the various agencies involved who have the knowledge and initiative to solve problems and move matters rapidly. It should be clear from the beginning that this is not a study committee; it is a special action organisation whose sole objective is to increase as rapidly as possible India's capacity to produce fertilisers.

The remaining necessary capacity of 1.5 million tons should be financed and constructed as quickly as possible to reduce to a minimum the need for imports and the resulting foreign exchange outlays.

The present plans for expansion appear to represent the limit of financial, managerial and technical capacity of existing firms. The soundest and quickest way of expanding capacity seems to be through the attraction of experienced foreign private producers. Many private firms outside India are well experienced in estimating the fertiliser production situation in any given country, including natural resources available and imports required; plant location and design; energy, transport and storage facilities, financial requirements, the most suitable technology, staff selection and training; and other aspects.

A consortium of American firms is now interested in building five nitrogen plants in India to produce 1 million tons of nitrogen a year and a corresponding amount of phosphorus to produce in complex fertilisers. A feasibility study is needed to review the practicability of the proposed investment, determine what problems exist and prepare a schedule for dealing with them. The study should be carried out expeditiously and necessary action to implement the resulting scheme, if it is decided to proceed with it, should be taken as early as possible, preferably by the fertiliser production committee, which should be established in the meantime. In any case, it appears that the 1.5 million tons deficit can be made up by foreign collaboration with Indian concerns. Substantial interest in such undertakings in India is now evident by several foreign collaborators.

I.C.C.

Session in New Delhi

The next congress of the International Chamber of Commerce, the twentieth in the series, will be held in New Delhi from 7th to 12th February, 1965. The Prime Minister, Mr. Lal Bahadur Shastri, has agreed to inaugurate the session. The President of India, Dr. S. Radhakrishnan, will accord a reception is the delegates. The Central Minister for Commerce, Mr. Manubhai Shah, will invite the heads of delegation to a lunch. The provisional programme includes discussion on: (1) advertising in the age of economic expansion, social advancement and technological progress, (2) efficient shipping services through partnership; (3) the increased importance of arbitration in international business relationships; (4) international trade and economic development: (5) marketing in the age of economic expansion, social advancement and technological progress; (6) economic development and monetary unbalance; (7) new vistas for aviation and telecommunications, and (8) modernisation of legislation relating to patents, trade marks, know-how and other industrial property rights.

IRON AND STEEL BELT

Rise in Rail Traffic

A study of transport requirements of the iron and steel belt made by the National Council of Applied Economic Research, shows that the railways in the region carry as much as 50 percent of the traffic of the entire country, and the anticipated total originating tonnage in 1970-71 is expected to increase from 76 million in 1960-61 to 264 million in 1970-71. The railway traffic in the iron and steel belt in mineral products will constitute about 81 percent of the entire Indian railway traffic in 1970-71.

EXPORT PROMOTION

Incentive for Manufacturers

Further foreign exchange facilities, it is proposed, will be extended to manufacturer-exporters for the import of raw materials, components and spares required by them for the production of goods for export, according to a scheme drawn up and approved by the Central Government.

Under the scheme, commercial banks dealing in foreign exchange will obtain lines of credit from their principals, branches or correspondents abroad on the strength of an assurance from the Reserve Bank of India that necessary foreign exchange will be released to repay the credits by the due date. Against these lines of credit, exporters of proved export performance and recommended by the bank concerned will on approval by a committee to be appointed for this purpose by the Central Government, be granted import licences for raw materials, components and spares. This committee will consist of the Secretary, Central Ministry of Commerce, the Secretary, Central Ministry of Industry; the Additional Secretary, Central Ministry of Finance (E.A.D.); and the Director-General of Technical Development.

The exporter will be required to execute a bond undertaking to effect specified exports within a stipulated period. The import licences will be issued only for the value of raw materials or components permissible under the appropriate scheme and required for the production of the goods to be exported.

In the event of any failure on the part of the exporter to fulfil his obligation to effect additional overseas sales, the equivalent amount of foreign exchange will be debited to his entitlement as an actual user, in addition to other penalties under the scheme.

The facility will be available to manufacturer-exporters in specified industries. To start with, applications from manufacturer-exporters of only the non-traditional export items, such as those covered by the Engineering and Chemicals Export Promotion Councils, will be considered. The applications will be scrutinised by the inter-Ministerial committee whose decisions will be final. The exporter will have to undertake to negotiate documents through the bank approved for this purpose under the scheme.

The Export Credits and Guarantee Corporation will be the agency for the purpose, and all enquiries have to be addressed to the managing director of the Corporation, 4 Rampart Row, Fort, Bombay.

The following banks have joined the scheme:—*Indian banks:* (1) State Bank of India, (2) Bank of Baroda, (3) Central Bank of India, (4) United Commercial Bank, (5) Union Bank of India, (6) Dena Bank, (7) Punjab National Bank, and (8) United Bank of India.

Foreign banks (British): (1) National and Grindlays, (2) Mercantile, (3) Chartered, (4) Eastern.

Foreign banks (American): (1) Bank of America and (2) First City Bank of New York.

ALUMINIUM

Talks on Korba Project

Discussions for the setting up of an integrated aluminium project in Korba (Madhya Pradesh) have started between from Hungary and the Government of India. The project will have a capacity to manufacture 120,000 tonnes of alumina a year, and 30,000 tonnes of aluminium metal a year, supported by facilities to manufacture aluminium semis.

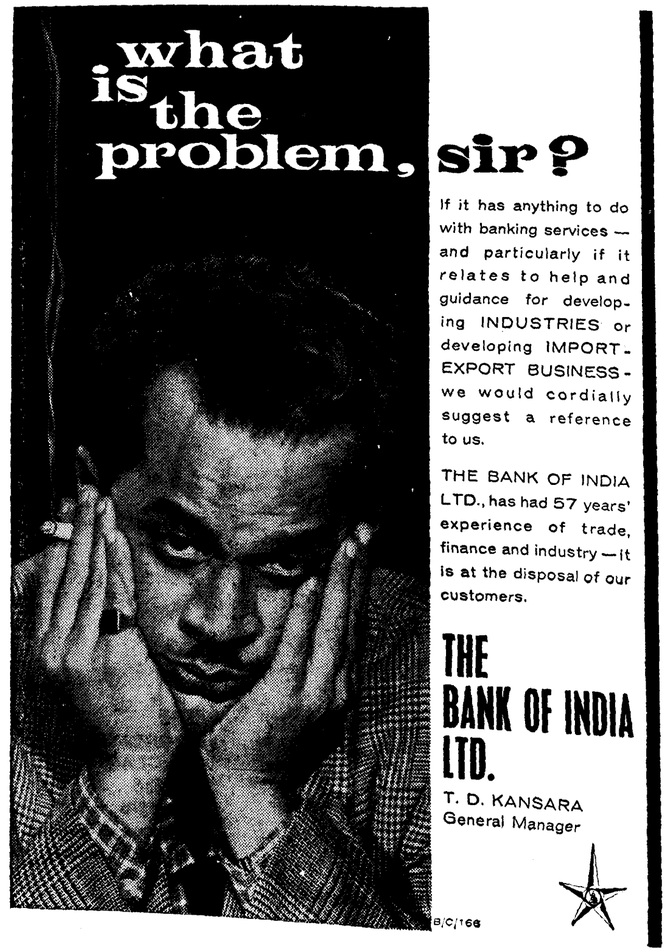
The Hungarian experts will discuss different technical aspects of the project with the representatives of different Ministries in New Delhi. After completing the first round of discussions, the experts will leave for Korba. Hungary is expected to provide technical and financial assistance for the project up to the alumina stage—bauxite mining and manufacture of alumina out of bauxite.

Arrangements for the manufacture of aluminium metal from alumina and aluminium semis are to be made separately after finalising the arrangements for the first stage up to alumina with Hungarians. It is expected that the experts will prepare a detailed preliminary report which will form the basis of an agreement between the two Governments.

The demand for aluminium by the end of the fourth plan is expected to be about 260,000 tonnes. This demand, it is proposed, will be met by the expansion of the present aluminium units and the establishment of new ones.

The Government has already finalised three schemes for producing 85,000 tonnes. These are the Koyna Aluminium Corporation, Maharashtra (25,000 tonnes), the Mysore aluminium project, Mysore (30,000 tonnes), and the Korba project in Madhya Pradesh (30,000 tonnes).

Expansion of the two existing units has also been finalised. These are: Alwaye, Kerala (10,000 tonnes) and the Hindustan Aluminium Corporation, Rihand, U.P. (40,000 tonnes). These are likely to increase the present installed capacity of the units from 62,500 tonnes to 113,000 tonnes.



According to the licences issued, the annual metal production of about 142,500 tonnes is to be achieved by the end of the third plan. Since the licensed units are not proceeding according to schedule, it is likely that large-scale aluminium production may have to be undertaken in the public sector to make good the shortfalls and to provide a surplus for export.

ZINC

Talks on New Smelter

Talks for setting up a zinc smelter in the country have started between Polish experts and the Government of India. The smelter, which will be based on imported concentrates, will have a capacity of 30,000 tonnes. According to tentative estimates, it is expected to cost about Rs. 12 crores.

The experts will hold discussions with the metallurgical and power

experts of the Central Government after which they will visit different sites. It is expected that before returning to Poland, they will finalise the feasibility report and the time schedule for completing the detailed project report and setting up the smelter.

The demand for zinc at the end of the fourth plan is expected to be 225,000 tonnes, compared with 136,000 tonnes at the end of the third plan.

In addition to setting up a zinc smelter with Polish collaboration, the Government also proposes to develop the Zowar zinc deposits in Rajasthan from the present 18,000 tonnes of metal a year to about 50,000 tonnes a year. A committee is now studying the possibilities of increasing the capacity of the Zowar deposits, and is expected to submit a report shortly. The technical experts believe that the establishment of two more zinc smelters of 50,000 tonnes capacity each, based on imported concentrates, is feasible. A tentative provision of about Rs. 35 crores has been made for this purpose in the fourth plan.

HOUSING

New Central Programme

In consultation with the Planning Commission, the Central Ministry of Works and Housing has drawn up a four-point programme for meeting the housing shortage in the country. The most important point is the decision to create revolving funds for bulk acquisition and development of land in and around the growing towns where land prices are rising rapidly. Large-scale acquisition of land is considered the only way to check urban prices. The intention is to allot the land acquired under this programme to co-operative housing societies.

The Ministry has also decided that suitable machinery such as housing boards should be set up in the States to implement the schemes. This would ensure co-ordination among various implementing agencies and prove effective in checking the diversion of funds from housing to other projects.

ROAD DEVELOPMENT

Progress of Schemes

About 250 miles of roads, five bridges and a study of the Bombay city traffic have been completed under the plans visualised in the agreement with the International Development Association, an affiliate of the World Bank. The I.D.A. has provided a development credit of $60 million (Rs. 28.57 crores) for meeting part of the cost of certain selected road and bridge works in the States of Bihar, Maharashtra, Orissa and West Bengal. Also included in the scheme is a traffic study of Greater Bombay at a cost of $3,95,000 (Rs. 18.82 lakhs).

The total estimated cost of the works, including the Bombay traffic study, is about Rs. 50 crores. The I.D.A credit would meet about 55 percent of the expenditure on road and bridge works and 70 percent of the cost of machinery required on these works, the balance being met by the Government of India from the provision made in the third five year plan for national highways.

The credit covers construction or development of about 660 miles of roads, including 18 major bridges. Of the 660 miles of roads, 226 miles are being developed as single-lane roads, 416 miles as two-lane roads and the remaining 18 miles as four-lane roads, the latter comprising 14 miles of the eastern express highway in Bombay and about four miles of national highway No. 2 from Vivekananda bridge to its junction with the Durgapur expressway in West Bengal.

The progress so far on road works is: earthwork in embankment 83 percent; and road crust 38 percent. The eastern express highway in Bombay included in the programme is almost complete except for final asphalt surfacing in certain sections.

Of the 18 major bridges included in the programme five bridges, namely, across the Mahananda in Bihar, the Tansa in Maharashtra, the Birupa and the Mahanadi in Orissa, and the Kangsabati in West Bengal, have been completed. The bridge on the Mahanadi, which was opened recently, is 7,392 feet long, being the longest in India. Work on the remaining bridges is at various stages of progress. Machinery costing about Rs. 2.5 crores has already been procured for these works against a provision of about Rs. 4 crores.

The traffic study which is intended to provide a basis for development of a long-range road plan for Greater Bombay has been completed, and the U.S. firm which undertook this study has submitted its report. An overall expenditure of Rs. 27.54 crores has been incurred against these works up to the end of July 1964.

Among the bridges taken up for construction under the I.D.A. programme, the more important ones costing Rs. 1 crore or more are; a bridge across the river Sone at Dehri-on-Sone (Rs. 2.66 crores), a bridge across the Mahananda river in Bihar at Dhingraghat (Rs. 1.04 crores); a bridge in Maharashtra across the Basin Creek (Rs. 1 crore). The Mahanadi bridge near Cuttack has been completed at a cost of Rs. 1.86 crores. The bridge across the Rupnarayan at Kolaghat in West Bengal is estimated to cost Rs. 1.16 crores.

A special feature of the road construction work under this programme is that full thickness of the road crust, including blacktopping, is being laid in one stage. Built in accordance with the advanced techniques of road construction and with the help of machinery to ensure good quality and speedy execution, the roads are expected to cope with the traffic likely to develop during the next 15 to 20 years. Proper quality control is ensured through field laboratories at various work sites and Central laboratories which help in the assessment of properties and strength of the various materials used in the construction.

The roads are thus expected to provide a good riding surface and have better wearing qualities resulting in appreciable saving in maintenance costs, both of the road and the vehicles. The execution of the works is being done by the respective State public works departments on behalf of the Central Government. The roads wing of the Central Ministry of Transport exercises the overall control on these works.

According to the agreement, the scheme was scheduled to be completed by the end of September 1964. But because of the late arrival of certain items of machinery from abroad, such as earth-moving and compaction equipment, and soil stabilisers, the completion date has been extended to the end of June 1966.

FOODGRAINS

Releasing Official Stocks

The Government of India has been considering the question of bringing about an improvement in the system of distribution of Government foodgrains. It has now decided to constitute a study team consisting of Professor V. M. Dandekar, of the Gokhale Institute of Politics and Economics as leader, Dr. B. P. Dutia, deputy economic and statistical adviser, Central Ministry of Food and Agriculture and Dr. S. C. Gupta, deputy director, Agro-Economic Research Centre, Delhi University as members.

The team will review the working of fair price shops for foodgrains, the pricing of the grains sold through these shops and examine the general impact of the sale of foodgrains through fair price shops on the foodgrains market. It will submit its report with its recommendations within a period of three months from the date it starts its work. The team will have the power to co-opt such additional members as it thinks necessary.

Prices Fixed for Next Season

The Central Government has announced the prices it has fixed for paddy, rice, wheat, gram, bajra and maize for the 1964-65 season. Such a policy was recommended by a Ford Foundation team about four years ago, somewhat on the lines of the farm policy pursued in the United States.

Speaking at a Press conference, the Food Minister, Mr. C. Subramaniam made the following statement: "Pending the setting up of the Agricultural Prices Commission which would recommend the prices of agricultural products on a scientific basis, the Government had appointed the Foodgrains Prices Committee under the chairmanship of Mr. L. K. Jha to advise on the determination of prices for the coming season. On the basis of the recommendations of this committee, and in the light of the discussions held with the Chief Ministers and Food Ministers of State Governments, the Government has fixed the producer's prices at which it will be prepared to purchase all paddy offered to it at the declared assembling points. These prices are for standard varieties of paddy. The prices of other varieties of paddy would be determined by the State Governments in relation to the prices of standard varieties. In order to stabilise the paddy prices at reasonable levels, which in turn would impart stability to the rice prices, the Government has also determined the maximum statutory prices of paddy at assembling points, including the mills' and dealers' premises. These maximum prices will be higher by Re. 1 a quintal than the producer's prices. If paddy prices tend to rise above these maximum prices, the Government will step in to requisition paddy at these prices."

The paddy prices thus assured to the producer contain an element of incentive. These prices are higher than in the post-harvest period during the past three seasons. Having fixed reasonable prices for paddy for the producer, the Government has decided to evolve a three-tier price structure for rice by statutorily fixing the ex-mill wholesale prices, the wholesale prices at the consuming centres and the retail prices. In determining these prices, the Government has allowed reasonable costs and margins for the intermediaries, which vary from 4 to 7 percent.

The State Governments are being authorised to determine rice prices at the three stages for different varieties and at different places and enforce them along with the paddy prices from appropriate dates, depending on the arrival of the new crop. Reasonable costs and margins having been provided for in the price structure, it is hoped that the trade will co-operate in maintaining the prices at different stages within the statutory ceilings. In case the prices show a tendency to rise above the maximum statutory levels, the Government will requisition rice at the statutorily fixed prices. The enforcement of this price structure, it is hoped, will bring relief to the consumer. The producer's price of paddy at assembly points varies from Rs. 34 a quintal in Assam to Rs. 40 a quintal in Kerala. The Government has also decided to fix the producer's prices for wheat for the 1964-65 season starting from February-March 1965. These prices ars as follows:

	(Rs. a quintal)
Red variety ...	45.50
Common white variety	49.50
Superior variety ...	53.50

The State Governments are being authorised to announce producer's prices for gram within the range of Rs. 40 to Rs. 40.50 a quintal for the 1964-65 crop, which will start arriving some time in February-March 1965. The Government will be prepared to purchase all wheat and gram offered to it at these prices at the declared assembling points. The prices at subsequent stages of marketing will be determined before the new harvest.

As for coarse grains, State Governments are being authorised to fix prices for jowar, bajra and maize within the range of prices given below:

		(Rs. a quintal)
Jowar	yellow	38 to 38.50 (with the suitable discount for the red variety and a premium for the white variety).
Bajra	F.A.Q.	40 to 40.50
Maize	F.A.Q.	36 to 36.50

State Governments will be prepared to purchase these grains at the prices fixed by them at the declared assembling points, and, if necessary, to requisition the grains at these prices.

The Central Food Minister disclosed that for some years to come India would have to live with food shortages. To prevent a repetition of the present crisis, the Government has decided to cordon off big cities, in particular Bombay and Calcutta, where statutory rationing will be introduced. Another vulnerable area, Kerala, will similarly be cordoned off to introduce "informal" rationing, thereby guaranteeing the minimum availability of foodgrains to individuals. In other areas, the strategy is to multiply the number of fair price shops and offer assured supplies. In some "depressed" areas or labour localities, "low price" shops will be organised where the supply of food will be subsidised.

The Food Minister welcomed the consumer resistance movement in Delhi, and hoped it would become a national one, thereby effectively checking any unwarranted rise in prices. Side by side, a foodgrains trading corporation is being set up to enter the foodgrains market.

Dump capital investment costs with the Load-and-Carry method

no rails no trucks no sleepers no switching gear no locos no tipping stations - just one man and one Autoloader (and compressed air) to load to carry to dump.

Less capital outlay and greater productivity. That's the end-result of the "Load-and-Carry" technique to offset rising overheads in production and development mining. A method that confines the entire muck-load haul cycle to only one man and one machine, the rubber-tyred Autoloader. A system that gives trackless mechanized handling with 65 per cent effective loading time on 100 ft. runs. And makes hauls of 600 ft. possible.

Unique machines-unique results. Man-hour output up from 4.5 to 13 tons in cut-and-fill sloping and 50% increased advance rate in drifts of coal mines in Central Europe. Mucking costs cut 30 per cent in sub-level caving in North America. Loading and dumping 500 tons of ore per man/shift to Scandinavia. These are authentic "Load-and-Carry" figures from mines. Figures that show how pneumatic Autoloaders keep costs down by performance as well as by equipment-saving design. More than 250 Autoloaders are already working in coal mines. And here are some reasons why:

Reduced development costs. Long haul capacity means fewer ore passes are needed.

Reduced working costs. Three-in-one Autoloader fully utilizes labour, cuts idle time

Increased output. Power assisted steering and speeds of up to 5 ft. a second enable quick hauls in winding drifts. Timber props are no hinderance.

A new "Load-and-Carry" booklet shows on-the-job applications of the method as adopted for various mining and tunnelling conditions.

Note some "Load-and-Carry" applications:

1. Adit driving 2. Sub-level caving 3. Cut-and-fill stopping 4. Raise mucking 5. Drifting and tunnelling

Atlas Copco puts compressed air to work for the world

ATLAS COPCO (INDIA) PVT. LTD. Mahatma Gandhi Memorial Bldg. Netaji Subhas Road, Bomb P.O. Box 1153. Branches: Delhi, P.O. Box 692—Calcutta, P.O. Box 2349—Madras P.O. Box 2244.

try and canegrowers in the forthcoming season. These measures are based on the recommendations of the Sen Commission to increase sugar production.

The basic minimum price of cane at a recovery of 10.4 percent or below has been fixed at Rs. 5.36 a quintal "at the factory gate". The last year's price was Rs. 4.96 a quintal linked to a recovery of up to 9.4 percent.

An additional payment of 4 paise a quintal will be made for every 0.1 percent rise in the recovery. For the industry, the Government has decided to allow a rebate of 50 percent in the basic excise duty on any sugar produced in October-November 1964 that may be in excess of what factories produced during the same period in 1962. An official Press note said that an early announcement would be made on the other recommendations of the Sen Commission abuot fixing the ex-factory price of sugar, and allied matters.

CLOTH CONTROL

Advisory Body Appointed

The Central Commerce Minister, Mr. Manubhai Shah, in the course of a statement has disclosed that the Government has appointed a Textile Control Advisory Committee under the chairmanship of Mr. V. P. Naik, Chief Minister of Maharashtra, with 24 members consisting of representatives from the industry, representatives of trade, representatives of consumers including Members of Parliament, and representatives of textile labour and technical experts of the industry and the Textile Commissioner's office. The Naik Committee will continue to review all the technical and economic aspects of the cloth production and price control orders and will advise the Government from time to time. A panel of technologists has also been appointed with Mr. Fernandes, Additional Textile Commissioner, as its chairman.

Mr. Shah added that as this process of examination would take a few days more and as two Dussehra holidays were intervening, the Government had decided that the Production Control Orders and Price Control Orders on controlled varieties of cloth would come into force from 20th October, 1964, instead of from 15th October, 1964, and therefore, the voluntary price scheme will be discontinued from the midnight of Monday, 19th October, 1964, instead of the midnight of 14th October, 1964. He was confident that, on the whole, the estimated reduction of 5 percent to 8 percent in the prices of controlled categories of cloth would be realised in most of the varieties of controlled cloth.

BOKARO STEEL

Agreement on Second Stage

The Russian team which was here and Bokaro Steel Ltd have agreed to a project assignment. This is to be the basis of the detailed project report which Gipromez, the principal Soviet State design and engineering organisation for metallurgical plants, is to prepare. It is expected that the project report will be ready by June-July 1965, and the plant ordered soon afterwards.

The project assignment visualises a 4 million-tonne plant at Bokaro. The plant is to be built in two stages. The first stage is expected to have a capacity of 1.5 to 2 million tonnes of ingot steel and 700,000 to 800,000 tonnes of pig iron for sale. The plant is to be built on a continuing basis, that is, without a break in construction between stages I and II.

It has been agreed that the design and the engineering of the plant will be a Russian responsibility. It is, however, expected that Indian engineering and manufacturing capacity will be used to the fullest extent possible in the construction of the plant. The management of construction and operation will, however, be entirely in Indian hands. A time schedule for the construction of the plant is still to be settled between the Russian and Indian Governments. An inter-Government agreement on Bokaro is expected to be finalised in November 1964.

DOUBLE TAXATION

Talks with U.A.R. and France

An Indian tax delegation has returned after negotiations with the Governments of the United Arab Republic and France for agreements for the avoidance of double taxation of incomes.

In Cairo, the Indian and the U.A.R. delegations drew up a draft agreement which is comprehensive, covering all sources and types of incomes. It is based on the principles followed by India in similar agreements with other countries, subject to necessary modifications to suit the conditions prevailing in the U.A.R. and India. The agreement will come into force after the draft is approved by the two Governments and instruments of ratification have been exchanged.

In Paris, the Indian delegation completed the pending negotiations for an agreement with a tax delegation of the French Government. The discussions resulted in a settlement of the outstanding points relating to an earlier draft agreement for the avoidance of double taxation of incomes between the two countries on a comprehensive basis. This draft also embodies the principles which have been followed by India with other countries. A formal agreement is now expected to be concluded shortly.

SHIPPING FREIGHT

Agreement with U.S. Company

Following negotiations in the U.S.A. between the delegations of the Government of India and the American Shipping Conference serving the trade from the East Coast of the U.S.A. to India, it has been agreed that a general 25 percent discount on freight will be given on Government cargoes, apart from specially reduced rates negotiated for heavy lift cargoes and special equipment like power plants. The Conference has been persuaded to withdraw the additional "arbitrary" on cargoes' to Kandla and Visakhapatnam. These agreements are valid up to October 1965.

INDIAN INVESTMENT CENTRE OPENS EUROPEAN OFFICE

The Indian Investment Centre is opening its European Office in Dusseldorf on 29th October. This is the Centre's second branch office abroad, and its first in Europe. The official inauguration will be performed by Mr. Kurt Schmucker, Minister of Economic Affairs of West Germany. Mr. P. A. Menon, Ambassador of India to West Germany will be present on the occasion. Mr. G. L. Mehta, chairman of the Investment Centre, will proceed to Dusseldorf for the opening. A distinguished gathering comprising Ministers and officials of West German Government, prominent industrialists, bankers and business representatives from West Germany and other West European countries is expected to attend the function. The new office is headed by the resident director Mr. N. G. Swami. The office is located in "India Dugal House", Karlstr 76, Dusseldorf 4.

U.K. CONFERENCE DEBATES ROLE OF INDUSTRY IN DEVELOPMENT

(FROM OUR LONDON CORRESPONDENT)

IS "development" possible without industrialisation in one form or another? The Fourth Cambridge Summer Conference, sponsored recently by the Department of Technical Co-operation and attended by officials from about 20 countries, devoted itself to an examination of the rôle of industrialisation in economic development. It was perhaps inevitable that the conference came to the conclusion that there was a place for both agricultural and industrial development—after all, even the development of agriculture demands an increased supply of the products of industry, while agricultural products largely depend on industrial processing—and that the emphasis given to one or the other would vary from country to country according to prevailing circumstances.

As the conference proceeded on this platitudinous level, it looked as if it would get bogged down by too much agreement on the obvious. For instance, there seemed to be a tendency to make room for anything and everything anybody cared to propose —for public, private, co-operative, and every other type of enterprise; for every kind of education and technical training; for centralisation and decentralisation; large units and small units; national protection and international common markets; grants and loans; increased taxation and tax relief; single exchange rates and multiple rates.

The danger was averted, and the conference was roused when one speaker, in terms widely criticised as "*too emotional*", claimed that the needless introduction of highly capitalised "western" methods of production into technically backward and poverty-stricken areas was destroying the livelihood of people faster than it could create new workplaces and was thus giving rise to the "twin disease" of mass unemployment and mass migration into metropolitan areas. This, it was said, unless counteracted at once, promised the '*immiseration*" of the people on a scale never before known. A basically new approach was needed—namely, the conscious development of an "intermediate technology" which would be vastly more productive than the traditional methods and yet vastly cheaper and simpler.

It was asked what was the use of five-year plans—such as those of India and Turkey—at the end of which there will be more unemployment than at the beginning? How can poor countries hope to cope with the torrential drift of people into metropolitan areas, where shanty towns and misery belts are growing often at ten times the rate of growth of the city itself? The question of "*intermediate technology*" then became the burning issue of the conference. In most of the developing countries, it was claimed, there are sectors which are irrevocably committed to employing the most advanced technology, *no matter how expensive* in capital, if they wanted to stay in business at all. What interested many people was the rest—the ordinary run-of-the-mill consumers' goods, agricultural implements, and building materials. They wanted to know if, where there is large-scale unemployment or underemployment, was there no way of making some use of wasted labour power, which was the greatest single economic asset that these areas possessed.

Capital and Technology

Some economists, as pointed out by Mr. E. F. Schumacher, Chief Economic Adviser to the National Coal Board, writing in the *Guardian*, argued that it was precisely where capital was scarce that it should be applied in the most concentrated way, because the higher the amount of capital a workplace, the higher would be the "surplus" available for further investment. Against this, others argued that where there was idle labour power, capital itself was in no way a fixed quantity, since labour could be put to work to produce more capital goods—provided only it could be made fruitful by means of a suitable technology.

An African planner claimed that development could never be based on indigenous labour alone, but depended solely on outside aid—a thesis which invited the question of how mankind as a whole could have had any development at all. It was precisely this implicit reliance on an outside *deus ex machina*, which was producing failure and a growing danger of social collapse in many developing countries. The main cause of this was seen as the heedless application of an unsuitable technology, a technology too sophisticated to be imitated and too expensive to spread to the masses. In answer, many delegates were able to point to numerous cases all over the world where simple, effective, low-capital methods of production were being successfully applied. What was needed was the conscious and systematic gathering of the know-how already existing. Examples of careful case studies were quoted from India, where it had been

shown that with a much smaller input of capital and a much larger use of labour, a wide variety of goods could be produced at a cost which made them fully competitive—at least in local markets—with the products of the West.

Some delegates were bitterly hostile to this idea. Others merely conceded that there might be a place for intermediate technology: but many felt that here was a novel and hopeful approach which deserved support. Doubt remained about the support of donor countries. All too often, it was claimed, aid could be easily mobilised for big and showy projects, but could not be obtained for less pretentious schemes—such as those which involved the creation of employment by means of "intermediate technology." It was not the purpose of the conference to come to final conclusions, to pass resolutions, or to make recommendations. Its purpose was to stimulate thought, and this purpose was fulfilled.

The latest survey of British industry's investment plan suggests that business men are confident that expansion will continue. The Board of Trade reports that capital expenditure by private industry and commerce is now expected to be about 14 percent higher this year than in 1963 and to show a further increase in 1965. Forecasts supplied by companies in August and September show that expectations in both the major sectors of private industry and commerce were considerably more optimistic than at the end of 1963, when the last forecasts were made. Investment was then expected to rise by about 10 percent between 1963 and 1964.

In its comments on the latest survey, the Board of Trade says the estimates "confirm the strength of the upward movement in investment which became noticeable towards the end of 1963 and which is reflected in the fiugres of actual expenditure in the first half of this year. They also make it clear that the present upturn will continue into 1965."

Companies' forecasts of their investment intentions show that capital expenditure by manufacturing industry is expected to be 14 percent higher than in 1963, compared with a rise of 8 percent estimated at the beginning of this year. On this basis the level of expenditure (at current prices), this year will not fall far short of that achieved in 1961 at the peak of the previous investment cycle. For most industry groups, expenditure on capital assets is expected to be greater in 1964 than in 1963, an exception being the metal manufacturing industry (mainly, iron and steel) whose expenditure has fallen considerably from the very high figures of 1961.

For the distributive and service trades, the 15 percent rise in capital expenditure between 1963 and 1964 which is now estimated confirms and adds precision to the estimates made in January, when it was thought that investment in this sector would go up by more than 10 percent. Expenditure by the distributive and service trades has risen fairly steadily in recent years and has not been marked to any great extent by the strong cyclical movement which has characterised investment by manufacturing industry. An increase of the magnitude now expected would raise the level of investment by this sector in 1964 to a point considerably higher than the previous peak reached in 1962. The enquiry confirms that expenditure by the shipping industry is likely to show a relatively bigger increase than the rest of the distributive and service sector.

"Our Typewriters get their superior finish here

"This is the HUMP BACK OVEN. Spray-painted parts are uniformly radiation-heated at controlled temperatures—moving along in a continuous flow. This revolutionary baking process gives Remington Typewriters *their superior finish*, which won't crack, peel, corrode, stain or catch dust."

The Hump Back Oven and Keshab Chandra Bose who works on it, are just one team of the multitude of men and machines at the Remington Rand typewriter plant. They are all engaged in a constant endeavour to improve the quality of each tool, die and part that goes into the making of your Remington typewriter.

Over the years people in India have come to expect the standards set by REMINGTON — the highly responsive touch, light positive shift, smooth carriage action and superior styling and finish—which make them so essential to distinctive correspondence.

Jute

SCHEMES TO RAISE FIBRE OUTPUT DURING FOURTH PLAN

IN order to help the jute industry increase India's foreign exchange earnings during the fourth plan period, the Central Food and Agriculture Ministry has fixed the target for raw jute and mesta production at 8 million bales and 2 million bales, respectively, by 1970-71. High-level discussions among the officials of the Central and State Ministries concerned have been held to devise ways of achieving the target.

The consensus favours the extension of the package programme to 14 selected districts in West Bengal, Bihar and Assam. Besides, more irrigation facilities will be provided with the help of deep tube-wells and canals. Proper arrangements for an adequate and timely supply of better seeds and fertilisers are being devised. The Central Agriculture Ministry intends putting 200,000 acres more under jute in the white fibre belts in these three States. Simultaneously, double-cropping in the irrigated areas is visualised. Experts are optimistic about raising the average yield an acre from 2.3 bales to 3.3 bales in the belt. The Central Government, too, is believed to have expressed its readiness to extend adequate subsidies to help these States raise fibre output.

Exports of Jute Goods

The total value of jute goods exports from India during the first half of 1964 rose to Rs. 82 crores, or by 2 percent above the figure for the corresponding period of 1963. The figure would have been appreciably higher but for the decline in prices resulting from the better balance between demand and supply. Comparable figures for Pakistan, for the January-April period, show a 12-percent increase, from Rs. 9.7 crores in 1963 to Rs. 10.9 crores in 1964.

Stable and reasonably low prices resulting from mills operating at the maximum level and the availability of raw jute at more reasonable rates helped stimulate the consumption of jute bags and sacking in the U.K. But the pattern of imports there showed a remarkable shift from ready-made bags to hessian and other cloths. The full order-books of the bag-makers reflected this shift in the pattern of offtake.

Exports of jute manufactures from India, Pakistan, the U.K., France, West Germany and Belgium—the six countries which together produce most of the jute goods for world markets—increased by 23 percent to about 373,500 tons during the second quarter of 1964, compared with the figures for the previous quarter. The second-quarter figures were about 20 percent higher than those for the comparable period of 1963. Exports from India rose by about a third between the two quarters, while shipments from Pakistan were also reported to have registered a sharp increase. Among the four European countries, exports from the U.K. rose by 15 percent, and from West Germany by 23 percent. But France recorded a decline of almost 25 percent. Total exports of jute cloth during the first six months of 1964 from the six countries have been estimated at around 676,200 tons, which is 13 percent higher than the figures for the corresponding period of the previous year. India's share rose by 14 percent to about 500,000 tons and Pakistan's by 18 percent to around 124,000 tons.

I.J.M.A. Gunny Stocks

Stocks of jute goods with mills reporting to the I.J.M.A. have fallen from 132,400 tonnes at the end of August to 126,300 tonnes at the end of September. The decline is ascribed to the voluntary adjustment of production by individual mills, combined with the brisk seasonal offtake of heavy goods. Sacking stocks have dropped by 6,200 tonnes to 43,700 tonnes and miscellaneous goods by 2,500 tonnes to 11,000 tonnes. Hessian inventories have risen by 1,900 tonnes to 47,600 tonnes and carpet-backing by 700 tonnes to 24,000 tonnes. At the end of September 1963, the stocks were 107,400 tonnes—55,100 tonnes of sacking, 32,800 tonnes of hessian, 12,500 tonnes of carpet-backing cloth and 7,000 tonnes of miscellaneous goods.

Paper and Synthetics

There have been further reports indicating that paper sacks are gradually replacing jute bags. A number of U.S. companies are engaged in costly research for the development of suitable packing materials with paper and synthetic products. Already paper sacks have replaced gunny bags in fertiliser packing. Polyethylene packs are popular with the chemical industry. Other containers of synthetic origin have also been well received; the synthetic material is often a by-product of some chemical industry, and having practically no other use, is available at a low price. Efficient and less expensive techniques have been developed for mass production.

The high prices of gunnies, combined with an ample internal supply of paper and synthetic packaging materials of the right specifications, have accelerated the shift in demand. A trial shipment of paper-packed wool from South Africa, it is stated, has "surpassed the highest expectations" of some U.S. wool manufacturers. They have told the South African Wool Board that they are prepared to pay 1½d a lb more for wool packed in paper than for wool shipped in gunny packs. The International Wool Secretariat has announced that more paper sacks will be used by South Africa for wool shipments abroad.

Jute from West Pakistan

West Pakistan is gradually emerging as a producer of raw jute. The current season's crop on an area of about 650 acres is estimated at around 10,000 maunds. Experimental cultivation of the fibre was taken up by the West Pakistan Agricultural Development Corporation during the past season in the area irrigated by the Ghulam Mohammed Barrage. The experiment at the demonstration farm in Khalilo Qasim has yielded encouraging results.

This season's acreage would have been higher but for the heavy rain in the area. Of the area under jute, 150 acres have been reserved for the production of improved types of seeds. The East Pakistan Agricultural Development Corporation has been requested to supply adequate quantities of high-quality seeds. As soon as the W.P.A.D.C. can ensure the supply of jute, the West Pakistan Industrial Development Corporation proposes to set up a number of jute mills in the western wing in order to make it self-sufficient in jute goods.

THE JUTE MARKETS

Manufactured Goods: Opening on an optimistic note on reports of a sizable decline in jute goods stocks during September, the Calcutta market was firm during the past fortnight in spite of the long Puja holidays. The bullishness was helped by reports of a widespread jute workers' strike in East Pakistan, followed by the outbreak of violence and bloodshed in Khulna. Brisk enquiries from the Indian Government, and seasonal purchases by the sugar and food trades, helped the rise. The decline in heavy goods inventories during recent months, combined with the reluctance of mills to book orders at the prevailing levels, caused a sort of a squeeze in sacking. In spite of the rigorous restrictions to restrain speculation in T.S.D. contracts, kerb activity continued to interrupt normal trading. So the E.I.J.H.E. authorities imposed a fine of Re 1 a contract a day for any delay in the submission of T.S.D. contracts in raw jute and jute goods for registration with the Association. On the eve of the holidays, there was hectic covering by shorts and shippers in heavy goods and hessian. Sizable contracts were booked at the higher levels by mills after the start of the strike in the Pakistani jute mills. Completed transactions during the period included Government tenders for about 10,000 bales of B Twills for December delivery, good offtake by the sugar industry and moderate hessian business with the U.S.A., the U.K. Jute Control, Australia and some African countries. In the hedge market, prices continued to be firm in line with the general trend. Sacking for November closed with a larger gain than hessian after wide fluctuations. The turnover was fair and the undertone steady at the close.

Wednesday's quotations were as follows:

	Oct.	Nov.	Dec.	Jan.-Mar.
40in. 7½oz.	38.15	38.50	38.75	39.10
40in. 8oz.	41.00	—	—	—
40in. 10oz.	50.85	51.30	51.55	52.10
B Twills	154.25	153.00	152.25	151.50
Cornsacks	155.00	155.00	154.75	154.00
Heavy Cees (Plain)	153.75	152.50	152.00	151.25
A Twills	183.00	183.00	183.00	182.00
Liverpools	168.50	168.50	168.50	168.00

Raw Jute: Steady conditions prevailed in the raw jute market during the past fortnight despite the long Puja holidays. The maximum purchase quota of 175,000 bales for the week ended 17th October was duly lifted by the mills. In view of the small quota, preference was given to selected grade fibre, so its price rose further. Arrivals in the terminal markets fell to around 125,000 maunds a day, due to the reluctance of the growers to sell jute at the prevailing prices and also their preoccupation with the festivals. Agency prices remained firm above Calcutta parity levels. Mills too were reserved. The turnover was small and the undertone firm at the close. Transactions in Upper Assam White Bottoms for December did not commence in the hedge market.

Wednesday's quotations were as follows:

	Rates a maund Mid.	Bot.	Rates a quintal Mid.	Bot.
Assam-Agartala Jute	41.50	38.50	111.19	103.15
Northern Jute	40.50	37.50	108.51	100.47

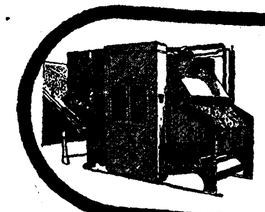
THE U.K. JUTE MARKETS

EASIER TREND IN FIBRE



(FROM OUR DUNDEE CORRESPONDENT)

THERE has been an easier trend in raw jute prices over the past two weeks. At the beginning of the period, the Pakistani authorities adjusted E.P.C. values, and this resulted in most of the lower grades being reduced. In other words, they brought the official prices more into line with actual offers. Demand from Dundee

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are in British measures.

spinners has been small as they have already secured approximately half of their annual requirements from the present crop. Buying is taking place, but the quantities are small and of a selective nature.

During the past few days, there has been no change in prices quoted in Dundee despite the fact that China has been in the market for a substantial quantity of raw jute. At present, the Dundee market does not reflect the true position in Pakistan, as many offers are being made here of secured parcels at well under the generally quoted rates. Prices are lowest at £150 for Mill Firsts, at £137 for Export Firsts, at £126 10s for Export Lightnings and at £118 for Export Hearts, c.i.f. U.K. for October-November shipment. Grade Tossa-2/3 is available at £150 and Grade Tossa-4 at £137. There are sellers of Outport Tossa-2/3 at £125 and of Outport Tossa-4 at £119, October-November.

Cuttings are steady at £90 for S.N.C. and at £83 for N.C. Only a few offers of mesta are being made and prices are considered too high to be of interest to spinners. Grade A is at £116, grade B at £107 and grade C at £99, c.i.f. U.K. Prices of some grades of Siam jute have tended lower, but this has not brought out much buying interest from Dundee spinners. Offers are at £89 for grade A, at £84 for grade B, at £79 for grade C and at £74 for cuttings, delivered mill Dundee for November-December shipment.

The Calcutta goods market has been firm and prices are at the highest level for a very long time. This is unfortunate for buyers here as trading is being transferred from public to private business. Dealers are reluctant to acquire stocks when prices are at the present high level as considerable reductions could take place in the next month or two. Quotations are at 83s 8d for 40in. 10oz. and at 62s 11d for 7¼oz. a 100 yards c. and f. U.K. for October shipment, at 84s 2d and 63s 5d November and at 84s 6d and 63s 10d December. B Twills were at 258s 4d 256s 1d and 255s 9d for the respective shipment periods.

THE PAKISTANI JUTE MARKETS

FIBRE DULL: ARRIVALS SMALL

(FROM OUR DACCA CORRESPONDENT)

THE arrivals of loose jute at the baling centres remain small. In many cases, the percentage of Export Hearts is now over 70. The arrivals of tossa, which is at present producing good average quality, still remain small in proportion to those of white, and compared with the arrivals of last season at this time. There is no doubt that there is a strong seller's resistance and the beparis and growers do not intend to release their jute in quantity unless they get their price. Traditionally during the last week of September raw jute comes in large quantities, because of the need for cash before the Pujas. But this year, it has been different.

The river levels are at last falling. This will mean that it will be difficult for sellers to bring their jute to the baling centres even if they wish to do so in quantity. It is interesting to note that this season large quantities of jute have been left for seed. This may be the first sign that the 1965-66 crop will be a large one. From what has been seen of tossa arrivals, the average quality outturn will be worse than last year, the fibre quality in jat is as good as last year, but the district fibre is disappointing.

The pucca bale market has once again been inactive and prices at

which a little business has been done, have not moved very much.

The big surprise of the past fortnight has been the change in E.P.C. values. The increase in prices of many of the grades was expected. But the rise in cuttings is illogical. Very few overseas buyers can afford to pay such high prices for these grades. The increase in mesta is reasonable, but the really pleasant surprise is the reduction to very nearly the market value in Export Lightnings and Export Hearts, Outport Tossa 2/3, Outport Tossa-4 and Dundee Tossa-4 and Dacca Tossa 6s. The overseas buyers, however, never buy in a falling market for which the baler is duly grateful. The drop in E.P.C.s produced, if anything, a withdrawal of overseas buyers so that the odd position of steadier prices locally and easier prices overseas has arisen again.

There is also no doubt that overseas buyers will reduce their consumption, wherever possible. It is reported that Dundee will reduce by as much as 30 percent. Whether this is true or possible remains to be seen. Certainly it will require a reduction of 30 percent by all buying countries including India before the present level of prices can be brought down substantially. E.P.C. registrations for the second half of September were only 78,000 bales, which is rather low, although slightly better than that of the first half.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption during September 1964 was 500,000 yards more than during August 1964 and 1.6 million yards more than during September 1963. Bag cut-up was 57.4 million yards and piecegoods deliveries 23.9 million yards, compared with 58.7 million yards and 21 million yards, respectively, in September 1963. Consumption for the first nine months of 1964 is 19 million yards less than during the comparable period a year ago. U.S. spot and afloat stocks at the end of September decreased from the end of August by 6.4 million yards. At 274.5 million yards, 150.1 million yards were spots (down 2.2 million yards) and 124.4 million yards were afloats (down 4.2 million yards). Stocks represent about 3.7 months' supply.

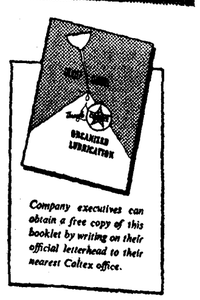
RUBBER PLANTERS OPPOSE AID TO SYNTHETIC PRODUCER

(FROM OUR SOUTH INDIAN CORRESPONDENT)

RUBBER planters in south India are resenting the Central Government's efforts to help the synthetic rubber manufacturer in U.P. The chairman of the Kerala Government-sponsored Plantation Corporation, Dr. E. K. Madhavan, told Pressmen a few days back that he had learnt from reliable sources that the Central Industries Ministry had advised manufacturers of rubber products to lift a certain percentage of their requirements in the form of synthetic rubber produced in the U.P. factory. If the manufacturers fail to lift the quota fixed for them, they are warned that restrictions will be imposed on their import of raw rubber and machinery. Dr. Madhavan feared that this official patronage to the synthetic manufacture would adversely affect the future of natural rubber produced in south India. Several other planting interests including the chairman of the Association of Planters of Kerala, have expressed their concern about the linkage between the import licence issued to the manufacturer and the offtake of synthetic rubber.

The price of synthetic rubber at present produced in the U.P. plant is higher than that of natural rubber and it does not appear that the manufacturer will be in a position to make it available to the consumer at a lower price in the near future. The S.B.R. produced by Synthetic and Chemicals Ltd is being sold at about Rs. 4 a kilogram, whereas the minimum price, exclusive of cess, fixed for natural rubber produced in the country for Group 1 is only Rs. 3.23. This is previsely rubber goods manufacturers are reluctant to buy the indigenous synthetic rubber. The Government's attitude is said to be that the synthetic rubber industry is only in its infancy in India and deserves special assistance until it gets over its teething troubles.

The chairman of the Rubber Board, Mr. Habeeb Mohammed, told the recent meeting of the Board that the Agricultural Refinance Corporation has approved the Rubber Board's scheme for financial accommodation for the expansion of rubber cultivation in the country. The scheme visualises the provision of loans to individual planters at the rate of Rs. 1,600 an acre and to planting companies at the rate of Rs. 2,100 an acre. Loans will be given only to those who plant more than 15 acres, and will be given through scheduled banks. The Rubber Board has formulated another scheme in consultation with State land mortgage banks and State Governments for subsidising the major portion of the



Caltex "STOP LOSS" reduces your paper work by 10% to 60%

If your purchase order costs are anywhere near today's high industry average, it can pay you to look into Caltex's "Stop Loss" Programme. You'll find numerous ways to reduce purchasing department time and expense.

Too often, purchasing costs rise because each department in a plant specified the lubricants it wants without reference to the purchases of other departments. This duplication results in a flood of purchase orders... rising clerical costs... paper backlogs.

Caltex "Stop Loss" is a complete plan for organizing and centralizing lubrication on an efficient basis. There is no other programme like it. "Stop Loss" will help eliminate interdepartmental duplication, limit inventories to actually needed lubes, and reduce the number of lube purchase orders issued each month by 10% to 60%.

Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex office.

interest payable to the land mortgage banks by borrowers.

CASHEW

Decrease in Supplies from Africa Likely

The cashew-processing industry in India received 154,524 tonnes of raw nuts from Africa in 1963-64, as against a local supply of just about 50,000 tonnes. African countries are now taking steps to establish processing industries there. An Italian firm has designed machinery capable of processing raw nuts up to the peeling stage. Plants are being erected in Portugal, Italy and Tanganyika. Once the new plants start production, the availability of raw nuts from Africa will be reduced considerably to the detriment of the processing industry in India.

This threat to the cashew-processing industry was discussed at length at the seminar organised recently under the auspices of the Indian Institute of Foreign Trade and the Cashew Export Promotion Council. The seminar felt that there is considerable scope for increasing the production of raw nuts in this country provided the plan targets are adhered to by the State Governments. During the seminar, it emerged that the machinery now entrusted with the task of achieving plan targets in regard to cashew requires to be strengthened. Cashew is not at present treated as a plantation crop for purposes of assessing land ceilings under land legislation. Unless it is accepted as a plantation crop for that purpose, it is felt that it will be difficult to persuade growers to take to cashew cultivation and thus increase the indigenous production of this valuable raw material.

Mr. M. K. K. Nayar, chairman of the Cashew Export Promotion Council, sounded a warning against the threat posed by the setting up of processing plants in other countries, while addressing the recent annual conference of the Council. In his opinion, the processing industry in India is going to face tough competition, and should prepare for it. "Wherever economies are possible, wherever standardisation in technology is advantageous, wherever the quality of the products can be improved, we should not hesitate in spending", he said. India should make it a point to produce the raw nuts necessary to feed her processing plants.

TEA

North Indian Output Increases

A Special Correspondent writes: The north Indian tea crop up to 30th September this year was reported at 441,223,796 lbs, compared with 397,644,191 lbs on the same date last year and 435,707,550 lbs in 1961.

The Tea Finance Committee, which is now investigating the financial conditions in the industry, is reported to have found that the planting side of the business requires assistance in two forms—relief from taxes and development funds from external sources. These views were reportedly expressed at a meeting held recently in Calcutta. Another meeting will be held in the first week of November. Meanwhile, details to support the above proposals will be worked out.

The general opinion is that the planting industry should be given some relief from Central and State taxes, or from both, so that producers are in a position to secure profits to plough them back into development. Further, additional finance should be arranged from the Agricultural Finance Corporation and/or banks on easy lending terms.

Under the fourth plan target, an additional 24,000 acres a year have to be planted. The estimated cost is given as Rs. 4,000 an acre, which would require Rs. 9.6 crores a year. This works out to Rs. 48 crores in five years. Of this sum, it is suggested that Rs. 25 crores, say, more than half, would have to be raised by loans.

In south India, it is reported, there is little scope for extensions. More intensive cultivation is recommended with greater use of fertilisers. These are moves in the right direction provided there are buyers for the larger supply.

As a matter of fact all the major producing countries are fast increasing production for export, but it is equally important that some sort of price stability is maintained. All indications point to the F.A.O. forecast of a surplus by 1965 proving correct. Then there remains the question of costs. At Rs. 4,000 an acre making a profit on extensions look problematical. If the charge of Rs. 4,000 is to be debited to revenue in future and a garden planting ten acres a year will incur an outlay of Rs. 2 lakhs on a five-year programme, that much less will be available for dividends.

A Tea Board release published recently draws attention to the upward trend of exports, but it adds, "On a financial year basis, tea exports as well as foreign exchange earnings from it recorded a fall in 1963-64 as compared to the previous year, the total value of exports being 209.3 million kilograms worth Rs. 123.2 crores, and 220.8 million kilograms worth Rs. 129.6 crores. It stated that the internal consumption of tea in India had risen steadily from 82.7 million kilograms in 1953-54 to 139.6 million kilograms in 1961-62: but in the 1964-65 season, according to annual reports by Calcutta tea booking firms there has been a drop in the home consumption.

With reference to prices this year, the Tea Board notes "that the average prices of tea sold particularly at Calcutta and London auctions during the current season showed a downward trend, but prices realised were not by and large unfair." Thanks to fortuitous circumstances such as less tea from south India and Ceylon, and the trouble in London docks which has restricted the supply offering for sale in the U.K., prices to-date are reasonably good.

It is reported that the West Bengal Government will halt further steps to acquire land from tea companies in this State, and will arrange for the return of land already taken over from tea interests where such land is suitable for tea planting. This assurance was given by Mr. P. C. Sen, Chief Minister, at a conference held in Calcutta recently for the formation of the State Export Advisory Board.

another order for CELCON® came the other day

®
Celcon is the new engineering material which has excited interest of buyers from the automobile industry, the electrical industry, the building materials industry, the hardware industry, the packaging industry, the office equipment industry and the weapons-making industry. Celcon was developed after many years of research by the Celanese Corporation of America, one of the world's major producers of formaldehyde and trioxane.

Celcon is fast displacing iron, steel, brass, zinc, aluminium, magnesium, thermosets, laminates and wood in the manufacture of many articles. As contrasted with many die-cast metals, Celcon components require little or no finishing when they emerge from the mould and may almost immediately be put to use. Considerable amounts of money are thus saved when Celcon is used. Celcon maintains its high mechanical strength, stiffness, toughness and resistance to impact force over a long period and through broad ranges of temperature and environment.

Celcon is available in natural translucent white and 18 standard colours; it is easy to fabricate; has excellent frictional characteristics; it can be readily sawed, drilled, turned, milled, filed and threaded. It can be fabricated by injection moulding, extrusion, blow moulding and other high volume thermoplastic processing techniques. Processing ease and economy are its greatest advantages.

COMPANY AND PUBLIC NOTICES

INDUSTRIAL DEVELOPMENT BANK OF INDIA

APPLICATIONS are invited for the following posts in the Industrial Development Bank of India:—

(A) *POSTS AND SCALES OF PAY:*

(i) Deputy Managers: Rs. 850-60-1150.

(ii) Officers Grade I: Rs. 430-430-55-815 EB 55-925-60-1045.

(iii) Officers Grade II: Rs. 375-20-535-25-560 EB 25-660-30-720.

Note: Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scales.

In addition to pay, the selected candidates in all categories mentioned above will be eligible to draw local pay, house allowance, dearness allowance and other allowances at rates prescribed by the Bank from time to time. The present rates for local pay and other allowances are:

(i) Local pay at 10% of pay.

(ii) House rent allowance at 15% of pay with a minimum of Rs. 60/- and a maximum of Rs. 300/-.

(iii) Dearness allowance:

(a) *Deputy Managers:* Rs. 125/-, provided the pay plus dearness allowance does not exceed Rs. 1250/- per mensem.

(b) *Officers Grade I:* 20% of pay upto pay of Rs. 500/- and thereafter at 16⅔% with a maximum of Rs. 125/-, with marginal adjustments where necessary.

(c) *Officers Grade II:* 20% of pay with a maximum of Rs. 100/-.

(iv) an ad hoc allowance of 10% of pay with a maximum of Rs. 100/- per month payable upto 31-3-65.

(B) *QUALIFICATIONS:*

(i) *Deputy Managers and Officers Grade I:*

Applicants should have high academic qualifications—preferably a first class Master's degree or a Doctorate with proficiency in one or more of the following subjects—or should be members of the Institute of Chartered Accountants of India:

(a) Investment
(b) Banking
(c) Accountancy
(d) Cost Accounts
(e) Company Taxation
(f) Company Law and Management
(g) Corporate Finance
(h) Industrial Economics
(i) Techno-economic Surveys
(j) Statistics and Econometrics
(k) Marketing Economics
(l) Economic Planning

For posts of Deputy Manager preference will be given to applicants who have had practical experience and/or have done research work in the above fields and who have worked in banks or institutions financing industrial units or in industrial units in a responsible position for at least 5 years.

(ii) *Officers Grade II:*

Applicants should have a good academic record, preferably a first class Master's degree in Economics or Commerce or Statistics; weightage will be given to specialisation in subjects like Banking, Industrial Economics, Industrial Finance, Accountancy, Company taxation, Company Law and Management.

(C) *AGE LIMITS AS ON 1st NOVEMBER 1964:*

(i) *Deputy Managers:* Candidates should be between 30 and 40 years of age but the age limit may be relaxed in the case of candidates possessing exceptional qualifications.

(ii) *Officers Grade I:* Candidates should not ordinarily be over 35 years of age but the age limit may be relaxed in the case of candidates with exceptional qualifications.

(iii) *Officers Grade II:* Between 21 and 27 years. The maximum age limit is relaxable but not beyond 32 years in the case of:—

(a) candidates possessing special qualifications

(b) candidates belonging to the Scheduled Castes or Scheduled Tribes.

2. Candidates who wish to apply for more than one category of posts must submit separate applications accompanied by separate application fees and should clearly indicate the post for which they have applied.

3. Applicants for the above posts must remit with their applications a fee of Rs. 7.50 for each post by cheque or bank draft on a scheduled Bank payable at Bombay or by Postal Order. *The application fee is in no case refundable.* In the case of candidates belonging to Scheduled Castes/Tribes, the fee will be Rs. 2/- for application for each post.

4. Applications in the candidate's own handwriting in the prescribed forms obtainable from the Industrial Development Bank's Office at Bombay, accompanied by copies (originals should not be sent) of certificates regarding age and educational qualifications, statements of marks secured in the graduate and post-graduate degree examinations and copies of two testimonials should be forwarded to the General Manager, Industrial Development Bank of India, Post Bag No. 10042, Reserve Bank Bldg., Mint Road, Fort, Bombay-1, so as to reach him on or before the 14th November 1964. Requests for supply of forms through post should be accompanied by a self-addressed and stamped envelope of size 9" × 4".

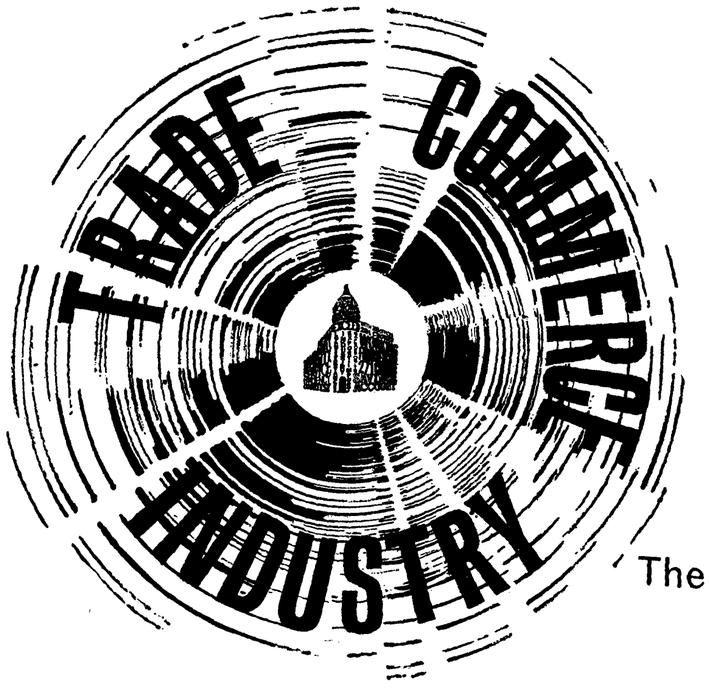
5. Candidates already in service will be required to produce a proper discharge certificate from their employers at the time of their appointment in the Bank's service.

6. Candidates belonging to Scheduled Castes/Scheduled Tribes should mention this fact prominently in their applications and also enclose a copy of the certificate to that effect from competent authority.

7. Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

8. If any candidate desires to have his application acknowledged, he should send it by "Registered Post—Acknowledgement Due". Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

9. Candidates called for interview will be reimbursed single return railway/bus fares by the shortest route from their place of residence to Bombay, applicants for posts of Officers Grade II being paid II Class fares and those for higher posts, I Class fares.



10. Canvassing in any form will be regarded as disqualification.

Thermocole® keeps your room so cool!

THERMOCOLE is foamed polystyrene: The lightest rigid insulation material. Its closed cells provide an effective barrier against heat, noise and moisture.

THERMOCOLE is versatile. It is ideal for insulating roofs, walls and floors in all kinds of buildings. One inch of THERMOCOLE insulates better than four feet of concrete!

THERMOCOLE false ceilings are very attractive. It is excellent for fabricating light-weight insulating partitions and doors.

THERMOCOLE is feather-light, yet strong, durable and easy to work with. It cuts structure and labour costs. Efficiency with economy—that's the insulation THERMOCOLE provides.

STERLING UNDER A LABOUR GOVERNMENT

BRITAIN'S new Labour Government has made a great show of getting down to tackling the country's economic problems without delay; and it has no doubt done its electoral image much good in the process. On Monday, it announced its decision to levy a temporary surcharge of 15 percent on imports, and to offer certain indirect tax rebates to promote exports, as part of an eight-point programme to boost the economy. On the evidence of the latest statistics, the British balance of payments is in an even sorrier state than was previously supposed, and certainly worse than was revealed by the outgoing Government. The Conservatives based their stated views on the absence of any immediate "financial" crisis, a fact which Mr. Wilson has conceded partly for reasons connected with international confidence in the pound, and partly because there are ample borrowing facilities available to overcome short-term difficulties. Yet with the prospect of a payments deficit this year in the region of £800 million, it was difficult to excuse the former Government's attitude of "wait and see" on the import question and "something will turn up" on the export one. By contrast, Labour is showing itself determined to find the solution to both the long- and the short-term problems, although whether it will be successful in doing so is another matter. The bleak fact it has to face is that although the growing deficit on current account, and the immediate threat it represents to the pound and to the sterling area's reserves, may respond to whatever measures it has at its disposal, there is no guarantee that anything more than a mere breathing space will have been gained. The lessons of the past few years are that the British economy is structurally unsuited to earning its living in a world where it no longer enjoys any large and captive markets for its exports.

It cannot be denied that Mr. Wilson has grasped this fundamental truth, or that, unlike his predecessors, he does have some firm ideas as to what must be done to change things. The doubts arise on two main points. The first is that what he has in mind might in the event prove wrong or ineffective. The second is that due to the small majority the Labour Government enjoys in the House of Commons, it will be impossible to implement his ideas anyway. Fortunately, there is some excuse for confidence on this point. Neither the Conservatives nor the Liberals are particularly anxious for another election in the near future, or at any rate until Labour has been allowed sufficient rope to hang itself. So, provided Mr. Wilson's proposals for dealing with Britain's economic problems do not contain too much socialism, it can be reasonably expected that his political opponents will co-operate at least until such time as the electorate has been able to form fresh judgments.

Labour's prospects are, therefore, best in the short term. This means it has a relatively free hand in choosing the temporary measures necessary for coping with the recent alarming growth in the balance-of-payments deficit. The two weapons readiest to the new Government's hand were much the same as those which would probably have had to be used by the Conservatives if they had stayed in power, namely, Bank rate and import restrictions. Labour has never opposed Bank rate increases on principle, provided longer-term rates can be effectively insulated from them. The main difficulties in using this method of safeguarding the reserves against a run on sterling are that it might damage internal confidence and arouse foreign resentment. The new Government has already declared its intention not to interfere with internal growth. But its promises in this field will be accepted by British industry in direct proportion to the extent it eschews its old predilection towards austerity and controls for their own sake. It is going to be difficult enough for Labour to persuade industrialists that they have an honoured and vital rôle in the plans for scientific growth and prosperity without frightening them with the long-discredited policy of monetary restraint. Besides an increase in Bank rate would not have been acceptable to foreign opinion. The United States, itself under balance-of-payments pressure, has already expressed disapproval and has stated the firm view that external economic problems should be tackled in other ways. Even a temporary change in the U.K. Bank rate would embarrass the United States, and it might have the same effect on some European countries. That is one reason why feeling in Labour circles is against it; another is that it has still to be proved that long-term interest rates can be kept at their present level, much less reduced, if short-term ones are allowed to rise. Labour is committed to a policy of cheaper credit for house buyers. It might damage its chances at the next election irreparably if this were the first of its promises to be broken.

Problems of equal complexity would have faced any Labour decision to use physical controls on imports. Again, these may only have been practicable in the short-term; over a longer period they might have not only attracted retaliation, but also deprived British industry of its main spur to greater competitiveness. Generally speaking, import controls in Britain should be confined to manufactures, chiefly consumer goods. Much the same can be said for surcharges on imports, otherwise industrial costs would be increased. From this point of view, the flat surcharge of 15 percent on imports may be subject to criticism.

The ideas so far expressed by the new Government about exporting are mostly of a longer-term nature. The latest statistical information indicates that exports are more likely to fall than rise during coming months, if only because what limited buoyancy does exist in the internal economy is diverting the attention of those companies which find it most difficult to export anyway, namely, the small ones. Labour intends to overcome this problem by providing group facilities to the smaller exporters. The eight-point programme announced by the Government allows exporters rebates on some indirect taxes such as on oil and petrol and vehicle licences. The rebates may average only 1 percent to 1½ percent of the value of exports. But any direct move to subsidise exports could not only attract retaliation; it would.

in effect, amount to a devaluation of the pound, or at least to selective exchange rates. Such expediencies have proved dangerous and ineffective in other countries, and might in the long run be more damaging to sterling than the current British balance-of-payments situation threatens to be. It is something which any Government as precariously in power as Labour would be anxious to avoid.

It is on its long-term plans for the British economy that Labour will be judged, although this is where its narrow majority will undoubtedly prove most troublesome. The new Ministry of Economic Affairs, under the Party's deputy leader, Mr. George Brown, has been established for the purpose of tackling the structural economic weaknesses which are responsible for the rare capacity Britain has shown among developed countries to combine balance-of-payment deficits with a very low growth rate; the Treasury is now restricted to the limited creative rôle of reforming the tax system. Too slow an increase in productivity is, of course, at the root of the trouble, and it is on this that the Economic Affairs Ministry will have to focus its main attention. Some of its suggestions may smack of socialism, and the subsequent opposition would undoubtedly place a severe strain on the Government's slender majority. But others, such as increased tax incentives for labour-saving investment, should be reasonably acceptable to both sides of the Commons, as indeed will the proposal to intensify the work of the "little Neddies". These are the industrial sub-committees of the main National Economic Development Council set up by the outgoing Government, and their task is to investigate the reasons for low productivity in individual industries and make suggestions, even perhaps exert pressure, to get them put right. The whole concept is excellent in theory, and in practice it should be acceptable enough provided it does not disguise any socialistic moves, especially nationalisation. But because the life of the new Government promises to be a short one, even under the most favourable circumstances, it seems unlikely that there will be time for substantial results to show in Britain's growth and exporting potential.

The fact of a narrow majority is at once the strength and weakness of the Labour administration. On the one hand, it sharpens the instinct to choose only those policies which will ensure survival at the next election, and so permit Mr. Wilson, if he so wishes, to defy his left-wing extremists. On the other, it severely limits the power to introduce controversial measures, however desirable. The determined way Labour has set about the problems facing Britain would appear to bode well for the future of sterling, as indeed for its own future as a Government. Yet it must be remembered that Mr. Wilson is balanced on a political razor's edge, and this is not the best location from which to launch far-reaching policies of reform. The verdict on sterling, therefore, must remain an open one for many months to come, whether the short-term policies Labour is introducing prove effective or not. Indeed, it is in the longer term that the main danger lies, because structural problems take a considerable time to solve; and time, as distinct from good intentions, is what Labour probably has least of.

BANKS FACE STRINGENCY

THE Reserve Bank of India has decided that it will give advances to commercial banks against usance bills only from November to June, instead of from October to September. The main object of reducing the period is to restrain the supply of credit during the coming busy season which is expected to start in a few days' time. It is true that most of the advances against usance bills are taken between November and April which virtually represent the duration of the busy season. But with the industrialisation of the economy the seasonal character of advances has been fading away and they are tending to become more perennial in character. This is why the advances given by banks, having risen during the busy season, do not drop correspondingly during the following slack season. During the last busy season (1963-64) the rise in the advances of scheduled banks amounted to Rs. 377 crores, but in the 1964 slack season they have dropped by only Rs. 124.38 crores. Since most of the advances have been used to finance genuine economic activity, their expansion should not by itself cause concern. But having failed to check inflation, the Government and the Reserve Bank find a convenient scapegoat in the banking community. They forget that if the Reserve Bank really exercises its control over banking operations with the efficiency and vigilance it claims, very little credit could have gone for speculative purposes. In fact, as Government spokesmen have themselves admitted, speculation and hoarding have been financed mainly by the large amounts of unaccounted money.

In view of the changing character of the economy, banks have found it necessary to give advances against usance bills even after the busy season, although such advances are naturally much smaller during the slack season. In fact, they amounted to only Rs. 1.70 crores during the week-ended 16th October, 1964. But under the new regulations of the Reserve Bank, commercial banks are likely to advance money against usance bills only between November and June, because they will not obtain any corresponding accommodation from the Reserve Bank in the other months. This apart, banks will be chary of giving loans against usance bills after April since these bills attract a quarterly stamp duty of 0.50 percent. The cost of such borrowings will tend to rise every day after 1st April. In the circumstances, it is clear that accommodation from the Reserve Bank against usance bills will drop. To discourage bank advances against usance bills is a retrogade step; these advances are about the most liquid ones and the Reserve Bank itself introduced the bill market scheme about 13 years ago to encourage banks to borrow against usance bills.

The latest step, combined with the earlier measure to link commercial banks' borrowings from the Reserve Bank with their liquidity ratio, is worrying financial circles. It is wondered whether the banks will be able to meet adequately the genuine credit requirements of the coming busy season. The Reserve Bank seems to think that expansion of bank credit during the next busy season should not be as large as during the last one (1963-64). But it is difficult to support this view. Prices of almost all commodities have risen sharply, so the cost of inventories has increased. Industrial production has grown, albeit at a slow pace, in recent months, and more funds are required to finance the increase in turnover. It is also expected that agricultural production during 1964-65 will be larger than in 1963-64. In the circumstances, credit requirements during the coming busy season are expected to be as large as, if not more than, those of the previous one.

The question is whether commercial banks will have enough funds to finance the large credit demand. As far as their own resources are concerned, the prospect is not encouraging. Deposits of scheduled banks have been growing at a slow pace. The rate of growth has slowed down during the past couple of months. Deposits rose by more than Rs. 40 crores a month between April and August, but they increased by only Rs. 20 crores a month in September and October. The recent adjustment in deposit interest rates does not seem to have stimulated the growth of deposits. The small rise in deposits since April has been counteracted by the slow return of advances during the current slack season. Although the investment portfolio of scheduled banks has risen by Rs. 185.12 crores since April, they will not be able to obtain much cash by selling their holdings as they did formerly, since the statutory liquidity ratio of banks has been raised to 28 percent. This apart the sale of securities has also become difficult due to the restricted open market operations of the Reserve Bank.

The supply of Reserve Bank credit constitutes about the most important source of funds under present circumstances. But commercial banks have been restrained from borrowing from the Reserve Bank by the new regulations. Although no restriction has been put on the volume of borrowings, they have been limited indirectly. If the net liquidity ratio of a bank drops below 28 percent, it has to pay a penal rate of interest on its borrowings from the Reserve Bank. Since the liquidity ratio of commercial banks (other than the State Bank of India) is slightly above 28 percent, they will be reluctant to borrow much. Furthermore, their borrowings will be restrained because they cannot lend money at a rate of more than 9 prcent. As far as the State Bank is concerned, it will be able to borrow substantial sums from the Reserve Bank at Bank rate due to its high liquidity ratio. In the circumstances, it looks as if many constituents of banks will switch over to the State Bank since that will enable them to borrow more funds. It is noteworthy that the deposits of the State Bank have tended to increase at a faster rate for this reason. Besides its deposit rates too have been raised in line with those of other banks.

FOODGRAIN PRICES

THE best that can be said of the Government's policy for fixing foodgrain prices (in the case of paddy and rice, wheat, gram, bajra and maize) is that—on paper—it indicates a more orderly approach to the problem. It is, however, too early to judge the effectiveness of any measures devised in support of the policy. In any case, it is not going to have any immediate impact. The producers' prices now fixed for the five foodgrains, particularly for the standard varieties of paddy, are higher than the average of the prices prevailing in the post-harvest period during the past three seasons. This should make it attractive for the cultivators to offer their produce to the Foodgrains Trading Corporation which will be entering the foodgrains market in due course on behalf of the Central Government. It is estimated that at least one-third of the foodgrains produced are disposed of immediately after the harvest by the weaker sections of the farming community. The Foodgrains Trading Corporation should not, therefore, find it difficult to acquire a fair proportion of the marketable surplus in the 1964-65 season—provided it has the absorptive capacity.

State Governments have been asked to fix the prices of other varieties of rice in relation to that fixed for the standard grades. But this is likely to pose a problem for deficit States like West Bengal. This State has to import a substantial quantity of rice from Orissa, and the latter may not accept the prices which the former may fix for non-standard varieties. This has been a major difficulty during the past year. West Bengal has not got even one-third of its usual supply from Orissa as producers in the latter State consider West Bengal's prices unremunerative. Unless the Centre takes a hand in such disputes (which it has so far been reluctant to do) or it makes up the deficit from its own stocks (which it cannot easily do), such controversies are likely to hold up free movement between States. But much greater difficulties will centre on the enforcement of the rice prices which State Governments have to fix at the ex-mill level, at the wholesale level in consuming centres and for retailers. These prices are, of course, based on those fixed for paddy and allow a margin of profit for intermediaries as well as traders. Mr. Subramaniam has said that should prices tend to go above the ceilings at any of these points, the Government will requisition stocks at the statutorily fixed prices. But this does not look like much of a safeguard for the consumer if, for example, the behaviour of the fish market in Calcutta since price control is any guide.

In a rather petulant mood, the Prime Minister, Mr. Lal Bahadur Shastri, on Monday urged the States to give summary punishment to offending food traders. But even the application of the Defence of India Rules against certain wholesalers or retailers has not ensured a better supply in many cities. The threat of the Government might be more effective if it could ensure an alternative channel of supply all over the country. This is to be attempted through the establishment of the Foodgrains Trading Corporation; but it lacks the administrative machinery, and there is not even enough storage space yet to keep a buffer stock of 5 million tons of foodgrains with which to stabilise prices. As for the proposal to introduce statutory rationing in all cities with a population of 1 million or more, there is a considerable difference of opinion among the State Chief Ministers. While Mr Naik of Maharashtra thinks it will be too costly, Mrs. Kripalani of Uttar Pradesh considers it unworkable, as cities with smaller populations might suffer seriously. The idea of introducing statutory rationing in big cities is based on the theory that they suck in too much of the food surplus from the countryside; and their cordoning off is, therefore, likely to leave more food for the rural population. But here again, much will depend on the administrative competence and the resourcefulness of those entrusted with the work.

It is expected that price-fixing will continue from season to season for the major crops. But the measures for controlled distribution, through rationing, more fair-price shops and large-scale food procurement operations by the Government, cannot provide a permanent answer to the food shortage. Other measures have to be taken so as to increase food output by at least 5 percent a year. This is what the fourth plan draft visualises, but considering that the annual rate of growth in farm production has stagnated around 2.2 percent between 1953-54 and 1960-61, and since then there has been virtually no increase in output, the task is a difficult one. Meanwhile, the population continues to increase by a steady 2.2 percent or more each year, while money supply has gone up at much faster rate. On top of this, producers and traders have been withholding supplies in the cool expectation that prices will rise further. The Chief Ministers who have gathered in the capital have to consider the short-term and long-term aspects of the food crisis in all seriousness, and implement the measures they devise with all the resources at their command.

Current News and Comment

Incentives for Sugar Production

There was a shortfall of nearly 700,000 tons in the production of factory sugar in 1963-64, as the total output was about 2.6 million tons, against the target of 3.3 million tons. The 1964-65 crushing season will start shortly. The incentive which the Central Government has announced in the shape of a 50-percent rebate in the basic excise duty on sugar production in October-November 1964 in excess of the output during the corresponding period of 1962, is not likely to prove effective. The reason for this is obvious. The price which *gur* and *khandsari* producers are able to pay for sugarcane is higher than what the sugar factories can possibly afford with the present ex-factory prices for their product. Even the ex-factory sugar prices for the four zones ranging from Rs. 116.50 a quintal to Rs. 125 a quintal which the Sugar Price Enquiry Commission has recommended, are not likely to provide the necessary incentives to the mills to increase this production in the next crushing season, in spite of the fact that the standing sugarcane crop is better than last year's. The real point is that unless the diversion of sugarcane to *khandsari* and *gur* units is effectively prevented or the sugar factories are given the means to offer competitive prices for sugarcane it may not be possible for them to get an adequate supply of the raw material.

In the 1963-64 crushing season, the Government allowed the sugar industry a rebate of 50 percent for additional production during the early part, 20 percent during the middle part and again, 50 percent for the last part of the crushing season. But this did not prove effective. What hope could there be that the Sen Commission's recommendation that an excise rebate of 20 percent should be allowed if additional production of 10 percent is achieved and a rebate of 40 percent should be allowed if production is in excess of 10 percent over the 1963-64 output, would provide an adequate incentive? As experience of the 1963-64 crushing season shows the Government might lose excise revenue through these rebates without the production of factory sugar increasing to any marked extent. The Sen Commission has recommended that restrictions should be placed on *gur* and *khandsari* units, and ceiling prices should be fixed for their output. There are great practical difficulties in enforcing this recommendation.

Modernisation of Woollen Industry

The Government of India some time ago asked the International Wool Secretariat to study, from both the economic and technical points of view, the advisability of modernising equipment in the Indian wool textile industry. The I. W. S. has submitted its report, and the modernisation plan it has recommended visualises the installation of some 200 new "complex loom assemblies" at an estimated cost of £1.7 million. In making its recommendations, the Secretariat has been guided mainly by the Government's expressed wish that the modernisation operations should be self-financing in view of the continuing shortage of foreign exchange. The report concedes that the proposed modernisation programme will be far short of the industry's absolute needs, but it adds that it would have been quite useless to make recommendations that could not be justified from the point of view of India's national interest and would consequently have been unacceptable to the Government. The national interest, it says, will be best served by modernising just enough capacity for the output required to increase exports.

The Government's main concern is to get the maximum increase in exports for any foreign currency it may provide. It would, therefore, be wasteful to provide more modern equipment than is necessary to produce the volume of cloth that is likely to be exported. This means that the problem has to be viewed in the light of the maximum increase in exports that is likely to be achieved in the foreseeable future. The I. W. S. says that with modern equipment, the industry will be able to produce cloth of excellent quality and will be in a position to export even to the most sophisticated markets. It has expressed the confidence that the annual exports of cloth can be stepped up from the present 400,000 to 2 million linear metres within a period of four to five years. This five-fold increase in exports is not a formal economic or statistical estimate; it is in the nature of a sound commercial judgment. However, the report points out that the industry is not export-oriented and a great effort will be necessary on the part of the Government to persuade wool textile industrialists that their only chance of making fuller use of their severely underemployed capacity is to export.

The Government has been urged to do its best, both in terms of financial incentives and administrative arrangements, to facilitate the industry's task. The Secretariat has recommended that the Government should establish a strategic reserve or stockpile of wool on which manufacturers can draw against export orders with the minimum delay and formality. The I. W. S. says that taking into account the relevant technical factors (type of new looms to be installed, their likely output, given local conditions, etcetera) some 200 new " complex loom assemblies" will be required to achieve the proposed export target of 2 million linear metres. The Secretariat is against piecemeal modernisation. It has, therefore, recommended that each new piece of machinery should be part of a balanced plan of modernisation in the firm concerned, the whole to be within the limits suggested in the report. While the opportunity to modernise will no doubt be given to the whole industry, it is obvious that some firms will be able to take better advantage of it than others.

The report says that there is no point in providing a mill with the most up-to-date machinery if it is not in a position to take advantage of such equipment. For modernisation to be effective in terms of being self-financing, those firms that have the greatest potential for increasing exports will need to be given priority in the allocation of new machinery. The Secretariat says that if the proposed export target of 2 million linear metres is achieved, there will be a sizable foreign exchange surplus, well over £500,000 a year, over and above the foreign exchange required for servicing the loan and paying for the additional imports of raw materials. Apart from satisfying the basic condition that modernisation be self-sufficient in terms of foreign exchange, the plan recommended by the Secretariat will give India a wool textile industry of which a sizable proportion (in terms of output) would operate up-to-date, efficient machinery for export purposes. The foreign exchange earning capacity of the country would go up, although modestly, and the benefit to the Indian consumer would be far from negligible in the long run.

Prospects for Art Silk

The rayon industry in India has made remarkable progress over the past decade, which is quite in line with the world trends in the production of synthetic fibre and fabrics. The industry seems to have a bright future as the production of natural fibres may not be able to keep pace with growing requirements because of the increasing pressure on land for cultivating foodgrains and other cash crops. While man-made fibre might well be described as a fibre of the future, the further development of the rayon industry in India will depend to a considerable extent on its ability to rehabilitate and modernise itself. The need for modernisation can scarcely be overemphasised. Some of the machinery in the industry is so old that it will soon become unserviceable. Furthermore, foreign competition in the export markets for fabrics is growing keener. This competition is not confined only to price but also extends to the quality and designs of fabrics. The planning sub-group had recently estimated the total requirements of machinery for the industry at Rs. 31.50 crores, and it had recommended that Rs. 14.25 crores should be spent on rehabilitation and modernisation of the industry during the remaining period of the third plan. The import component in an outlay of Rs. 14.25 crores is estimated around Rs. 6.25 crores.

The Government is not unaware of the pressing need for modernisation in the art silk industry. Since June 1963, manufacturer-exporters have been allowed to utilise the total value of the licence granted against exports of rayon and synthetic fabrics for importing machinery. But the tendency mostly has been to prefer import of yarn on considerations of higher premiums available thereon with the result that the volume of imports of machinery under the export promotion scheme has been negligible. The Government now proposes to link export assistance with modernisation. The Central Minister of Commerce, Mr. Manubhai Shah, told a special meeting of spinners and exporters convened in Bombay on 21st October under the auspices of the Silk and Rayon Textiles Export Promotion Council, that 20 percent of the import entitlements against fabric exports will have to be compulsorily used for importing machinery for the rehabilitation and modernisation of the industry. Imports of yarn under the export promotion scheme for fabrics would be restricted to only 50 percent of the value of fabric exports.

Those who would not like to import machinery would be required to surrender the 20-percent portion of the entitlement against cash compensation to a pool from which imports of machinery would be allowed to others for modernisation and rehabilitation purposes under an easy hire-purchase scheme. The Textile Commissioner has been asked to work out the scheme in consultation with the representatives of the Silk and Rayon Textiles Export Promotion Council and of financing institutions, namely, the Industrial Finance Corporation and the Export Credit and Guarantee Corporation. It is about a year ago that the Board of Trade's study group had suggested that a provision should be made in the export promotion scheme requiring manufacturer-exporters to utilise compulsorily 20 percent of their entitlement for import of machinery. But this suggestion had remained unimplemented all this while. It is good

that the Government has now made up its mind to link export assistance with modernisation. On the basis of current exports of rayon fabrics, about Rs. 2 crores to Rs. 2.5 crores worth of foreign exchange should be available every year for the pool that is proposed to be created. This will go a long way in helping the art silk industry to rehabilitate and modernise itself during the next few years. This will make it possible for the industry to turn out quality fabrics which will be acceptable to overseas buyers.

Decentralising Managerial Decisions

Indian managers should ponder over the observation of Mr. Harold F. Smiddy, former vice-president for management of the G.E.C. of America, that top management should make only vitally important decisions leaving the lesser ones to subordinates. Mr. Smiddy made the observation at the recent two-day seminar in Bombay sponsored jointly by the Bombay Management Association, the All-India Management Association and the United States Agency for International Development. This would make it possible for top management to see the trees as distinct from the forest, and to devote time to decisions which really matter. It would also give the subordinates a feeling of importance and would ensure better co-ordination of work.

It is doubtful, however, whether much use could be made in Indian conditions of technological developments like automation, computers and communication media for providing information to top management for making the necessary decisions. The cost involved is enormous. Moreover, the value of such information is fully realised when the economy is sufficiently developed and large scale production is possible. Some of the units in India are already using such facilities, but the scope for their expansion, under existing conditions, is limited. As was emphasised by Dr. Howard K. Hyde, Chief Management Adviser to the United States A.I.D. Mission in India in his inaugural speech, the application of scientific methods to the solution of managerial problems in the U.S.A. has resulted in improved production and cost saving of a spectacular nature. The time for that has not arrived in India yet, but it will come to this country sooner or later if an effort is made to keep abreast of modern technology in as many ways as possible.

Cloth Output and Stocks Up

Indian cotton mills' output of cloth in September is provisionally placed at 441 million yards, compared with 421 million yards in the preceding month and 401 million yards in September 1963. The September figure raises the total output for the first nine months of the current year to 3,794 million yards, which shows an increase of 168 million yards over the figure, in the same period last year. Yarn output in September is placed at 183 million lbs, compared with 176 million lbs in the previous month and 169.6 million lbs in September 1963. The output of yarn during January-September comes to 1,565 million lbs, against 1,456 million lbs during the corresponding period last year.

Cloth stocks with the mills at the end of September at 339,000 bales (of 1,500 yards each) showed a marked increase of about 50,600 bales over the previous month, the unsold stocks having risen from 113,100 bales to 141,700 bales. The increase in stocks is due to reduced offtake mainly because of the continuing uncertainty about cloth prices under the new scheme of statutory control over production and prices. Offtake is expected to pick up with the end of uncertainty about prices for the controlled varieties.

Shipments of cotton piecegoods from Bombay port during September are provisionally placed at 30.85 million yards, valued at Rs. 2.740 crores; compared with 27.87 million yards valued at Rs. 2.413 crores in the preceding month. The September figures raise the total exports from Bombay during the first nine months of the current year to 337.74 million yards, valued at Rs. 30.23 crores, which compares with 343.23 million yards worth Rs. 25.03 crores in the same period last year. Thus while the volume of exports are lower, export earnings are higher which indicates an improvement in the price realisation a unit. This is attributable partly to firm conditions in international markets, and partly to diversification of the country's textile export trade in the direction of better grades of textiles and processed materials.

An Uneasy Compromise

The demand for an increase in the official price of gold, repeated by the South African Finance Minister in Tokyo, is an annual routine. Some observers predicted before the I.M.F. meeting that this increase was ultimately inevitable, but after the meeting even they were inclined to admit that it might be delayed so long that the world would lose interest in monetary gold. The French Finance Minister, strongly critical of the gold exchange standard, emphasised in Tokyo the beilef of some European monetary authorities—particularly his own country's—that the world's monetary system should be firmly based on gold. When a journalist suggested that the logic of this belief implied a realistic revaluation of gold, M. Giscard d'Estaing answered dryly that the French authorities recognised $35 an ounce as the correct price. It is arguable that the French policy, interpreted strictly, would be unworkable. But as the Fund is substantially increasing its resources, whether the deflationists approve or not, the problem of inadequate liquidity, in a system based on gold, will not soon become urgent.

The I.M.F. meeting did not resolve (it was not expected to resolve) the differences of opinion between the deflationists, as represented by M. Giscard d'Estaing, and the expansionists, as represented by Mr. Reginald Maudling, former U.K. Chancellor of the Exchequer. But its decisions implied a unity of policy on the method of easing the problem of liquidity, regardless of differences of opinion whether at any particular time the problem existed or not. When reserves are inadequate they may be augmented directly or they may be supplemented by outside assistance. The policy of the Fund, as a whole, is to provide such assistance. It is not self-evident that this is the better policy, although it is, in present circumstances, the easier. Britain, representing the sterling area, suffers from a chronic deficiency of reserves of gold and foreign currency. Periodic crises are feared, and sometimes occur, as a consequence of this deficiency. Outside assistance is available and is sometimes used; but in the past it has merely delayed, not avoided the need for, the "appropriate corrective measures" that the Fund mentioned approvingly in its latest annual report.

The difference between the two methods of relieving strain is not superficial but basic. If Britain, for example (indeed, Britain particularly), had adequate reserves, so that the need to rely on outside help would not arise, she could use these reserves as a shock-absorber when changes in external markets (for money or goods) caused temporary disequilibrium in her payments, and her internal economy could maintain a steady course. "Corrective measures" are "appropriate", of course, if the cause of the disequilibrium is internal and permanent; but it is too easy to assume that any disequilibrium that requires external assistance requires also internal correctives. With adequate reserves in the first place it would be necessary to apply for external assistance only in exceptional circumstances. The I.M.F. is presumably not deaf to such reasoning, but it is, of course, aware that the quickest means of adjusting the level of aggregate reserves (the proper distribution of them is another problem) is by raising the price of gold, and its policy against this revaluation seems unalterable. Yet both the I.M.F. and "the Group of Ten", in their reports on international liquidity, have recognised the deficiency of the gold content of reserves.

The simple solution of the problem, raising substantially the price of gold, would not only increase the value of existing monetary reserves but also draw into monetary reserves a large proportion of private stocks—if the authorities emphasised that the change was a once-for-all adjustment, not the start of a continuing process. But it is arguable from the opposite point of view that the persistent official resistance to revaluation will have the same effect, by discouraging holders whose patience must at some time be exhausted. Analysis of recent American statistics suggests, indeed, that in the first half of this year the flow of gold into private stocks virtually ceased.

This apparent change of inclination is important, but it does not imply that stocks of monetary gold, at the current price, will soon be adequate In the last ten years or so the total of available national monetary reserves (gold and foreign currency combined) has increased by about one-third, while the value of international trade has approximately doubled. Such a comparison is not clear proof that reserves are now inadequate, but it shows a disparity much wider than the flow of newly-mined gold could correct within a reasonable time.

"CAPITAL" CHRISTMAS TOY FUND

STATEMENT OF ACCOUNTS FOR 1963

	Rs. P	Rs. P
Balance from 1962	306.25	
Collection for 1963	4,174.94	4,481.19*
Less cost of toys distributed to 10,267 children in 1963	4,339.68	
Postage	15.00	
Miscellaneous	6.80	4,361.48
Balance in 1963 B.F.		119.71

3. P. S. Shavaksha	25.00
	186.00

CALCUTTA PORT TRUST

THE Calcutta Port Trust was inaugurated about thirty-five years ago, and from the first was an unqualified financial success. The revenue largely exceeded expenditure, extravagance was the order of the day, and frequent representations were made by the mercantile community on the subject. The late Mr. George Yule in his address to the Chamber of Commerce in 1879, specially drew attention to the subject. As a result remissions of dues were made from time to time, and the Port-Due of 4 annas per ton on vessels in entering the port was gradually reduced until it was finally abolisned In 1885 a Bill was introduced into the Bengal Legislative Council to authorize the construction of wet docks at Kidderpore. Mr. H. J. Reynolds, who was then the Senior Member of the Board of Revenue, and the Government Chairman of the Port Trust, emphatically stated that the construction of these Docks would lighten the burdens on trade and enable Calcutta to compete on more favourable terms, with places possessed of greater natural advantages There was considerable opposition to the construction of these Docks, and a memorial was submitted to the Government in March 1885 signed by a very large number of Calcutta firms strongly deprecating their construction, but Mr. Reynolds' party prevailed and the Docks are here. To begin with the estimate was largely an estimate of 230 lakhs. So far from lightening the burdens on the port the Docks have worked at a steady deficit. The figures for the last two years are not given in the Administration Reports, but we may fairly assume that the loss on the working of the Docks for the last 11 years has not been less than 150 lakhs of rupees. In other words so far from lightening they have increased the burdens on the Port to the tune of at least one million pounds sterling. As a consequence the Port-Dues of 4 annas per ton have been re-imposed on the shipping and a Special Toll of 4 annas per ton levied on goods.

A Ditcher's Diary

"CAPITAL" DOES NOT, IN POINT OF FACT, CELEBRATE its birthday. It falls next week, as we cross into our seventy-seventh year of publication, and a traditional modesty nurtured by age is alone enough to remind us that this is no time for lavish rejoicing or bacchanalian orgy. Anniversaries punctuating one's seventies, it appears to us, are more appropriately an occasion for quiet thought and sentimental reflection; and it is perhaps only right that, at this time of year, our thoughts should turn to the favourite of our progeny, by which I refer, of course, to the *Capital* Christmas Toy Fund, which this week opens for subscription. The progress of the Fund has been giving us cause for anxiety for some years: collections last year totalled Rs. 4,174.94 which, although better than on some previous occasions, was still rather short of the Rs. 4,410 we managed to get in 1961. The purpose of the Fund, as readers know, is as good as any: to try and bring a little warmth and happiness into the lives of thousands of poor children, many of them orphans, by presenting them with a toy for Christmas each year. The trouble, however, is that while subscriptions to the Fund have fluctuated unpredictably from year to year, the cost of toys has risen steadily, with the result that the little we have been able to give has had to be more thinly spread. I am well aware that it is not toys alone that have become more expensive; in both magnitude and intensity, other demands on one's purse have multiplied so rapidly these days that not many have much to spare. But allowing for the paradox that the country has reached the stage where only life is cheap but living is dear, I should like to suggest in all humility that our obligation to the children the Fund serves is not thereby diminished. The Fund makes no distinction of race, colour or creed in choosing its children. By contributing generously, you can bring a ray of light and cheerfulness on Christmas morning to many young and needy ones to whom life otherwise has very little to offer. So please give all you can, whether it be cheques, cash or toys—addressed to the *Capital* Christmas Toy Fund, 5 Mission Row, Calcutta 1.

ONLY A LITTLE WHILE AGO ALL THE EXPERTS WERE telling us that China could not possibly make an atom bomb in years. Now they seem all agreed that China can make a hydrogen bomb before you can say Jack Robinson Either way I am, by and large, unworried. Some in this country seem convinced that we should now go and make an atom bomb: whether this has in part been inspired by Dr. H. J. Bhabha, I have no means of knowing for certain. Reactor plants are by nature non-vegetarian. I have no time at all for people who are all the time considering costs; accounting minds are some of the most obstructionist I have known. On the other hand, it seems already time for India to count the cost of the emergency. As it happened, I recently came across a man engaged in road making for the last four years or so. He told me that roads were being built all right, "but . . . . ." I promptly told him that I was delighted to hear this because in general terms the difference between India and the United States was that in the States plenty of dollars might be salted away but the road was there, while in India rupees vanished with no road to show. Then I was told that our frontier roads were costing us about ten times the money any auditor was likely to pass. Money nowadays is, of course, what your press in Nasik can churn out; but there is a great deal to be said for enquiring at some point where the money is going and how it is likely to be used in the days to come. I put it to the Government of India that a fantastic amount of waste is now going on in the name of the emergency, and it is no longer in the sense that we have to do certain things and it does not matter what the cost may be. What I am up against is, in the plainest of terms, an emergency in aid of contractors. Mr. Lal Bahadur Shastri has already called for smaller cars; he should soon demand a less expensive emergency.

WHEN THE *Sun*, WHICH ROSE AFTER THE *Daily Herald* went down, recently wrote to thank God that Sir Alec Douglas-Home's son was not the editor of *The Times*, it was not very clear whether the comment was a compliment to Sir William Haley or otherwise. To be the editor of an important national newspaper is fine; to be, in addition, son-in-law of the supreme executive of the country may seem paradise enough. Although it never seemed that Mr. Adzhubei was a full-time working journalist, for he was too often travelling abroad, I have no reason to think that he was appointed editor of *Izvestia* only because he had had the good fortune (?) to marry Mr. Khrushchev's daughter. Quite possibly he was a good newsman. One does not, of course, know how these things are organised in the Soviet Union; but one suspects that Mr. Adzhubei was not exactly comfortable when writing for his paper; a certain hot breath ran down his neck. To be punished for one's father-in-law's sins can hardly be a pleasure; yet it seems more than likely that Mr. Adzhubei is now a freer man. He has not indeed the freedom of speech or writing but he has the freedom of silence. And the more I reflect on the world we live in, the more I am aware of the value of this particular freedom. Ordinary readers of newspapers will never know how strenuous it is to have to pronounce on every problem in the world and appear knowledgeable. I daresay I am letting my trade union down; to argue that knowledge is only another name for the technique of concealing one's ignorance is to my profession sacrilege. Yet there it is. It is good to be reminded still that a writer derives his power, such as it is, not from his father-in-law but from his quill. Last week I offered a job for Mr. Khrushchev in India: if Adzhubei can survive the competition he may have it too.

THERE SEEMS TO BE SOMETHING QUITE SYMBOLIC in the fact that the first difficulty the new Labour Government has come up against in its programme for active reform should be the House of Lords. Under a law passed in 1707, it appears, a certain proportion of Ministers in any British Government must come from the upper house. Whatever justification the ruling may have had in the days of good Queen Anne, it certainly has none now, especially since peers have been able to renounce their titles. When this latter provision was enacted just in time to enable Lord Home to succeed Mr. Macmillan as Prime Minister, it was said that in future members of the Lords who desired to serve in the Government would automatically be expected to give up their titles and seek election to the lower house. That seemed sensible enough in these democratic times. But while this ancient law stands in the way, it will not be possible to build any such admirable custom, and this must be particularly irritating to the progressive-minded Mr. Wilson. Of course, the best way out would be to undertake the entire reform of the House of Lords, which is now far and away Britain's most picturesque anachronism. But this might not be possible with Mr. Wilson's small majority, and he may not want to reserve time anyway for such long-term reforms when immediate problems are obviously pressing. What seems more likely to happen is that the law of 1707 will be amended, leaving the House of Lords much as it was before, although, of course, no longer entitled to an automatic share in the country's government. Such action would be unsatisfactory enough, but it would certainly be better than the alternative course of appointing some Ministers to life peerages. This could prove far too inconvenient, especially if by-elections had to be fought in marginal constituencies or when the Minister concerned subsequently wished to relinquish his title and found himself unable to do so. The fact is, of course, that the House of Lords ought to have been reformed years ago, and would have been too if such a move had not seemed likely to strengthen its influence and prestige. As things are, unlike India's Rajya Sabha, the upper house is weak and unrepresentative; which

A SYMBOL OF SERVICE

United Bank of India Ltd.

REGD. OFFICE : 4, CLIVE GHAT STREET, CALCUTTA-1

is something most British Governments have found highly convenient. This could apply particularly to Mr. Wilson's Ministry, which is, after all, weaker in the Commons than any Government has been since Mr. Attlee's in 1950.

I SEE THAT THE ANNUAL SERIES OF SYMPHONY concerts organised by the Calcutta School of Music will be starting less than four weeks from now. These concerts have always provided excellent entertainment for lovers of western music, and figure as major events in the cultural life of Calcutta. From the prospectus I have received, I notice that the fare for the 1964-65 season is an unusually rich and promising one. The famous London Symphony Orchestra will be giving two concerts at Rabindra Smarani on 22nd November and 23rd November—playing old favourites from western classical music, including Beethoven's famous First Symphony. The list of soloists for the season is equally impressive, and it suits a particular predilection of mine that it should be weighted in favour of pianists. Erich Gruenberg, the Viennese-born leader of the London Symphony Orchestra, will play the violin on 26th November. Luigi Infantino, the celebrated tenor, will appear on 10th December. George Vasarhelyi, Ruth Slenczynska, Raffi Petrossian and Calcutta's own Liesl Stary will be the distinguished pianists of the New Year. The concerts given by the Calcutta Symphony Orchestra, playing as usual under the baton of Bernard Jacob, will be held at the New Empire Theatre. In order to encourage local talent, it is hoped that the principal soloist will be followed by a local performer on all the days. I have always looked upon the concerts organised by the Calcutta School of Music as a welcome interlude in the otherwise humdrum cultural life of this city. Year after year, it has managed to present to local audiences music from internationally renowned virtuosi. But by its very nature this is an expensive business. The ability of the Calcutta School to continue its good work depends on the measure of public support it receives for its concerts. It deserves their wholehearted patronage, and the coming season will provide an excellent occasion to show that it is going to get it.

NOBODY TO THIS DAY SEEMS TO KNOW THE ANSWER to what a contemporary a year ago craftily called "The 1,000-KW Question". (I never could make up my mind whether the oblique hint was at $64,000 or a couple of Keelers; but let that pass.) I have since seen reports, if so they may be called, of efforts, if so they may be called, to obtain a powerful medium-wave transmitter from a source less tainted than the Voice of America. I think of all this because I have just had a letter from a friend now holidaying in North Bengal who says that, although he is of some mornings perverse enough to want to hear the All India Radio news bulletin, he can get little or none of it. It is possible, he says, that his tiny transistor set, on which he paid a large Customs duty and for which he holds a licence, hasn't got the hottest of batteries (they're ageing, like him) but, how come, he asks, that every time he turns the set on he gets Radio Peking close and clear? Surely, Siliguri is nearer home. The only announcement he ever heard from Siliguri, my friend says with translucent exaggeration, was that, because of a breakdown in the power supply, there had been an unavoidable interruption in transmission. My friend, with his congenital contrariness, asks, "When, oh when, on earth is this station on the air; and then to what purpose?" What I gather is that there is a total failure of communication between the heart of Indian Authority and its very vulnerable limbs around the knee and the ankle. Mrs. Indira Gandhi will promptly be shown a cutting of this paragraph and told that somebody needs to go to Canada or Scotland to study broadcasting problems in mountainous regions. (I do *not* apologise to the gentlemen who can no longer show the cutting because I've spilled the beans.) My dear Mrs. Gandhi, they'll tell you they need more equipment and personnel to do the job; perhaps they do, although the job may still not be done. Nobody has yet explained to me why reports from those regions by Desmond Doig of the *Statesman* have always had a greater immediacy and intimacy than those filed by Indian correspondents full of aloofness. It's men, not personnel, Mrs. Gandhi wants.

THE DITCHER

Guide for Investors

CALCUTTA ELECTRIC SUPPLY SALES AND PROFIT INCREASE

ALTHOUGH sales of energy by the Calcutta Electric Supply Corporation have tended to increase, the clear profit for 1963-64 has for the first time been equal to the "reasonable return" in several years because of the substantial saving in Indian taxation, combined with a large development rebate. Since these two factors are unlikely to recur, the Company has had to increase the charge for electricity towards the close of 1963-64 to ensure that the clear profit is at least equal to the standard return which is based on a standard rate of 6.5 percent, instead of the former 6 percent. This result is expected to be achieved during the current year.

In his review circulated to the shareholders along with the report and accounts for 1963-64, Mr. I. A. Macpherson, chairman, pointed out (a full text of the statement is printed on a later page in this issue of *Capital*) that the revenue from the sale of electricity and from metre rents rose by 13 percent to £14.8 million. Expenditure also rose correspondingly. All tax savings, sums transferred to the development rebate and contingencies reserve have been invested in the undertaking. The allocation to depreciation of more than £1 million, combined with retained funds, has played a major part in financing the expansion undertaken. Capital expenditure during 1963-64 amounted to £2.7 million. In addition to normal transmission and distribution expenditure, large sums have been spent on the new Cossipore extension. The cost of the southern receiving station has also been considerable.

As for raising funds, the Company has to bear in mind that it can be taken over by the Government of West Bengal or by the State Electricity Board on 1st January, 1970. After negotiating with the Government, the Company has arranged for a loan of Rs. 4.7 crores from the State Bank of India repayable on 30th December, 1969. The bank will charge an interest of 7 percent. Since the "reasonable return" for the Company amounts to 6.5 percent, the directors will apply to the State Government to rectify the anomaly. If the Government takes over the Company in 1970 and repays its loan, the Company will refund the amount to the Government in three equal annual instalments beginning from January 1971. If the undertaking is not taken over, the Company will arrange to raise money from the market. The chairman also mentioned that capital expenditure from 1963-64 to 1969-70 may amount to about £18½ million, but the bulk of the funds will be obtained from internal resources.

Referring to the Company's growth, Mr. Macpherson pointed out that the commissioning of the 50 MW extension to the new Cossipore generating station and the southern receiving station, combined with the increased supply of power from the West Bengal State Electricity Board, has permitted relaxation of the restrictions on power supply. Although the consumption of power during the first five months of the current year is not as high as it was expected earlier, it is likely to increase soon as industry instals power-consuming plants, which have so far been held back. There has been a substantial rise in the consumption of high tension power. It has been largely used by the jute industry, engineering workshops, cotton mills, steel works, rolling mills, chemical works and paper mills. Small industries consume a substantial part of low tension power. Larger sales of energy for lights and fans reflect the growth of housing in and around Calcutta.

Periakaramalai Tea Profit Up

THE chairman of the Periakaramalai Tea and Produce Co. Ltd told the shareholders at the annual general meeting that despite the shortfall in crop, the gross income from tea had shown an increase of about Rs. 2 lakhs or a net increase of 29 paise a kilogram, for the year ended March 1964. Although there was a general rise in tea prices, the main factor which brought about this substantial increase in price was finer plucking and the resultant improvement in quality.

Another encouraging feature is that the management is not only trying to improve the quality, but effort is also being made to bring down the cost. The saving in the year's expenditure is considerable, being about Rs. 2¼ lakhs, compared with the previous year's. The chairman, however, added that the Company's efforts in bringing down costs were being nullified by the enforced increase in the wage structure and the rise in the cost of materials. The second interim wage increase for tea plantation workers, now announced by the Government, would cost the Company about Rs. 1,80,000 a year. The chairman stated that in view of the increasing costs, the only way to bring down the cost a kilogram was to increase the yield. So the Company is planting high yielding clones.

The chairman added that the decision of the European Economic Community to exempt tea from import tariffs from this year would help India. While the Government's gesture in allowing a rebate on income tax, supertax and surtax was appreciated, the chairman said that the continuance of the excise duty on tea was causing concern, as it was diluting the benefit of the above rebate.

Tube Investments Earns More

A MARKED rise in the profit of Tube Investments of India Ltd for the year ended July 1964, has enabled the directors to recommend a higher dividend of 11¼ percent for the year, against 10 percent. According to advance figures available, the net profit of the Company for the year amounts to Rs. 48,52,954 after providing Rs. 43,20,080 for depreciation, Rs 75,795 for development rebate reserve and Rs. 51,00,000 for taxation. The net profit for the previous year amounted to Rs. 40,08,091 after providing Rs. 40,43,127 for depreciation, Rs 3,22,390 for development rebate reserve and Rs. 45,25,000 for taxation.

Adding to the year's net profit of Rs. 48,52,954, a sum of Rs. 50,510 brought forward from the previous year and a sum of Rs. 3,13,150 as provision for taxation written back, the total available for appropriation comes to Rs. 52,16,614. Out of this, a sum of Rs. 22,50,000 is transferred to general reserve, against Rs. 13,00,000. A sum of Rs. 1,50,000 is transferred to dividend equalisation reserve, against Rs. 2,00,000. The proposed dividend of 11¼ percent absorbs Rs. 28,12,500. The balance of Rs. 4,114 is carried forward to the next year.

Dunlop Rubber Expanding

DUNLOP Rubber Company (India), which makes tyres, foam rubber products, hoses, belting and cycle rims, is embarking on major expansion schemes costing £2.6 million at its factories in West Bengal and Madras. The capital expenditure involved will be largely met by one-for-three rights issue to ordinary shareholders at Rs. 20 a Rs. 10 share. This will produce about £2,250,000.

Dunlop of England, which holds 51 percent of the ordinary capital, is subscribing for its proportion of new shares in full in the form of plant and machinery from the United Kingdom. The expansion scheme is part of the Dunlop group's £60 million three-year capital expenditure programme announced in May by the chairman, Sir G. Edward Beharrell.

Larsen and Toubro Sales Rise

LARSEN and Toubro's sales for the half-year ended September 1964 amounted to Rs. 3.54 crores, compared with Rs. 2.75 crores for the corresponding period of 1963. This represents an increase of 29 percent. The value of the output from the Company's workshops at Powai, Bombay, is up by 21 percent, compared with the value of output for the same period last year.

Simon-Carves Share Offer

SIMON-CARVES India Ltd is offering 599,993 ordinary shares of Rs. 10 each for subscription at par. (Details of the issue appear on a later page in this issue of *Capital.*) Simon-Carves Ltd of the U.K. will be allotted 350,000 shares for consideration other than cash. It has also agreed to subscribe for 10,000 ordinary shares. The directors and their friends will take up 19,993 shares. The remaining 220,000 shares are being offered to the public. The list opens on 12th November, 1964, and will close on 18th November, 1964, or earlier at the discretion of the directors. The board of directors consists of Messrs Jagjivandas Hiralal Doshi, Leslie Dobson, Norman Hinton, Barendra Prasad Ray, Victor Robinson, Ronald Frank Orme, Stuart Roy Horner, Peruvamba Seshaiyer Vanchi and Ashoke Kumar Sinha Roy.

The Company was incorporated on 11th February, 1963 with an authorised capital of Rs. 1 crore divided into ordinary shares of Rs. 10 each. The Company is a leading firm of mechanical, chemical, civil, electrical and constructional engineers. It carries out engineering work in the field specialised by Simon-Carves Ltd of England. It will be a subsidiary of the U.K. Company, enjoying technical assistance from the latter. It will take over the Indian assets of the U.K. Company. Since the commencement of business on 21st June, 1963, orders for Rs. 10.5 crores have been received by the Company.

Hasimara Industries Earns Less, Pays the Same

HASIMARA Industries Ltd has repeated the taxable ordinary dividend of 15 percent for the year ended March 1964. The yield amounts to 11.4 percent at the present price of Rs. 13.19 a share of Rs. 10 each. Although the weather was favourable, the production of tea suffered due to the attack of red spiders and a crop of 2.99 million kilograms was produced. The average sale price rose from Rs. 5.78 to Rs. 5.97 a kilogram. The crop for 1964 has been estimated at 3.1 million kilograms costing Rs. 1.24 crores. The Company is running the Seksaria Cotton Mills in Bombay as a licensee of the Mills. The licence fee has been cut from Rs. 2 lakhs to Rs. 1.80 lakhs a month. The directors of Hasimara Industries have persuaded Seksaria Cotton Mills Ltd and its shareholders to give the former the right to control the composition of the board of directors of Seksaria Cotton Mills.

The trading profit has dropped from Rs. 36.46 lakhs for 1962-63 to Rs. 29.90 lakhs for 1963-64, after providing Rs. 2.68 lakhs (against Rs. 2.64 lakhs) for repairs to buildings and Rs. 7.27 lakhs (against Rs. 3.79 lakhs) for repairs to machinery. Depreciation is allocated Rs. 4.44 lakhs (against Rs. 4.45 lakhs), development rebate reserve Rs. 11,000 (the same) and taxation Rs. 13.55 lakhs (against nil). A sum of Rs. 14.50 lakhs has been provided for taxation relating to the previous year. General reserve absorbs Rs. 3 lakhs (against Rs. 6 lakhs) and the carry-forward is Rs. 1.26 lakhs, against Rs. 1.60 lakhs brought in.

Deccan Sugars Repeats on Increased Capital

THE directors of Deccan Sugars and Abkhari Co. Ltd have recommended a final dividend of 11¼ percent on the increased capital, making a total of 18 percent for the year ended May 1964 (against 18 percent). The working results for the year are encouraging, showing a rise in profit over the previous year.

According to advance figures available, the net profit subject to taxation amounts to Rs. 33,73,758 (against Rs. 29,00,521). Out of this, the provision for taxation amounts to Rs. 18,55,367 (against Rs. 16,82,923). This leaves a net prot of Rs. 15,18,391 after taxation (against Rs. 12,17,598). With the amount of Rs. 9,587 brought forward from the previous year, the total available for appropriation comes to Rs. 15,27,978. Out of this, a sum of Rs. 1,35,000 is transferred to development rebate reserve (against Rs. 1,80,000). A sum of Rs. 5,30,000 is transferred to rehabilitation reserve (against Rs. 2,50,000).

Interim preference dividend at 4.55 percent has absorbed Rs. 31,850. The final preference dividend at 4.55 percent amounts to Rs. 31,850. The interim ordinary dividend of 6½ percent has absorbed Rs. 2,58,960. The final dividend of 11¼ percent now proposed on the increased capital will absorb Rs. 5,34,520. The balance

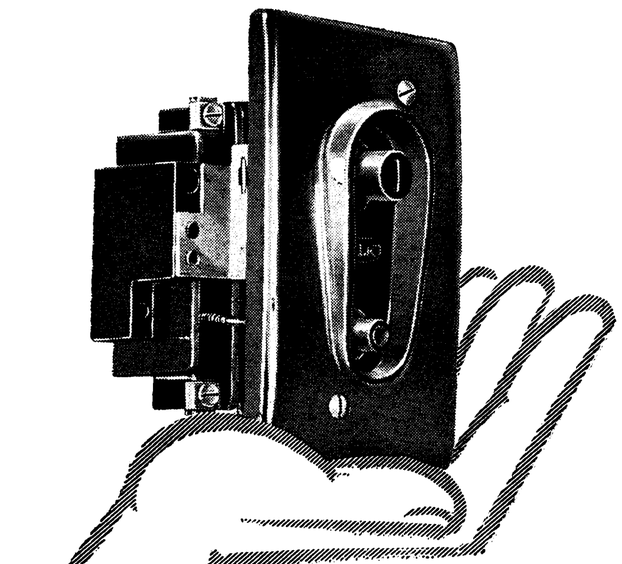
of Rs. 5,798 is carried forward to the next year.

Bayer (India) Expanding

BAYER (India) Ltd which is at present engaged in the manufacture of insecticides, fungicides, weedicides and pharmaceuticals at its factory in Dadar (Bombay) is embarking on a huge expansion programme which is estimated to cost about Rs. 3.50 crores. The Company has been licensed to manufacture annually 250 tons of ethyl parathion, 200 tons of methyl parathion, 1,903 tons of chemicals and 6,703 kilograms of basic pharmaceutical chemicals. The Company proposes to set up a plant in Thana (Bombay) for the manufacture of these items. The Company hopes to be able to reach full production within three or four years and when in full production, the annual turnover will be of the order of about Rs. 5 crores.

The cost of the expansion programme, estimated around Rs. 3.50 crores, it is proposed, will be met by the issued capital of Rs. 2.65 crores and borrowings from financial institutions. The Life Insurance Corporation and the I.C.I.C.I. are reported to have agreed to give loans amounting to Rs. 1 crore and Rs. 50 lakhs, respectively. The Company has received the permission of the Controller of Capital Issues to increase its authorised capital from the present Rs. 10 lakhs to Rs. 3 crores and the paid-up capital from Rs. 4 lakhs to Rs. 2.65 lakhs. The Company's foreign collaborators, after whom the Indian Company is named, will subscribe up to 56 percent of the capital, and this has already been approved by the Government of India The promoters, directors and their friends are taking up 58,570 equity shares of Rs. 100 each and the remaining 56,270 equity shares will be offered for public subscription shortly. The entire public issue has been underwritten. In the year ended March 1964, the Company earned a net profit of Rs. 3.66 lakhs and it paid a dividend of 20 percent on a capital of Rs. 4 lakhs.

Morarjee Mill Cuts Dividend Again



THE Morarjee Goculdas Spinning and Weaving Co. Ltd reports disappointing results for the year ended June 1964, and the directors have been obliged to effect a further cut in the dividend for the second year in succession. The dividend for 1963-64 has been recommended at 15 percent, compared with 20 percent in 1962-63 and 24 percent in 1961-62. In spite of an increase of about 31 percent in the sales from Rs. 5.83 crores to Rs. 7.65 crores, the gross profit has declined by about 28 percent from Rs. 71.17 lakhs to Rs. 51.22 lakhs. The profit margin has been reduced from 12.2 percent to 6.7 percent. This is attributed to the all-round increase in costs, some dislocation in production arising from the implementation of the expansion programme and the supply of cloth for defence purposes at uneconomic prices.

After providing Rs. 40.37 lakhs (against Rs. 36.21 lakhs) for depreciation, Rs. 2.10 lakhs (against Rs. 13 lakhs) for development rebate reserve and Rs. 2.25 lakhs (against Rs. 1.65 lakhs) for taxation, the net profit amounts to Rs. 5.45 lakhs (against Rs. 18.75 lakhs). After taking credit for Rs. 1.15 lakhs (against nil) being refund of excess managing agency commission of the previous year, transferring Rs. 10.710 (against nil) from unclaimed dividends account and writing back Rs. 1.45 lakhs (against nil) being excess provision for 1962-63 and withdrawing Rs. 3.37 lakhs (against Rs. 6.26 lakhs) from general reserve, the directors have provided Rs. 11.52 lakhs (against nil) for additional depreciation for the previous year. In 1962-63, the directors had set apart a sum of Rs. 18.85 lakhs being additional provision for bonus for previous years and Rs. 7.25 lakhs being provision for taxation of earlier years. The preference dividend claiming Rs. 1.11 lakhs (the same) and ordinary dividend claiming Rs. 7.76 lakhs (against Rs. 10.35 lakhs) will be paid out of the reserves. No dividend is being paid on the 22,976 new equity shares issued in June 1964. The Rs. 100-paid share of Morarjee Mills is quoted around Rs. 260, offering a gross return of about 5.7 percent.

Less from Cooper Engineering

COOPER Engineering Ltd has maintained the dividend for the year ended June 1964 at 8 percent. This is on the increased capital, though the total distribution is not much larger at Rs. 7.91 lakhs, against Rs. 7.23 lakhs in the preceding year. Sales and gross profit show an increase, but as against a rise of about 19 percent in the turnover from Rs. 2.617 crores to Rs. 3.11 crores, the increase in gross is only marginal, from Rs. 22.97 lakhs to Rs. 23.18 lakhs. After providing Rs. 22.60 lakhs (against Rs 18.69 lakhs) for depreciation and Rs. 1.35 lakhs (against Rs. 3.92 lakhs) for development rebate, the year's working shows a loss of Rs. 1.11 lakhs, against a net profit of Rs. 11,375 in the previous year. After taking credit for Rs. 3.76 lakhs (against Rs. 83,065), being provisions no longer required and including the small surplus of Rs. 153 brought in from the previous year, the directors have transferred Rs. 2.65 lakhs (against Rs. 95,000) to the general reserve. The proposed dividend is being paid out of the general reserve.

The directors state that production at both the factories continued to rise and sales kept pace with it and set a new record. The decline in the profit margin is attributed to the increased cost of raw materials, labour and several other items without a corresponding rise in selling prices of the Company's products. Currently, diesel engines and shaping machines constitute the major product lines of the Company and account for the bulk of the current year. Deliveries of furnaces are being made to clients in different parts of India. The Company has received several good orders.

Presenting the new

FLUSH MOUNTING STARTER

The popular LT-LK push button operated type MF 1 starter is now available for flush mounting—provided with an attractively finished die cast aluminium front plate. This is eminently suited for mounting on control panels, machine tools, etc.

SWT 209

remained unchanged for several years and applications for suitable revisions are pending with the Government. The Company has, however, recently received the Government's approval to raise the selling prices of some of the diesel engines and shaping machines and it expects to get the approval for some more products. The full impact of the upward revision of prices will be reflected in the results of the current year.

The I.C.I.C.I. has sanctioned a foreign exchange loan of Rs. 18.5 lakhs for the proposed manufacture of vertical turret lathes. All the preliminaries connected with the loan have been completed and the requisite machinery is being ordered. Progress has also been made on the automatic loom project and parts necessary to produce for the first 50 looms have been received. Import licence for the next set of parts is likewise in hand and the components are expected towards the end of 1964. The collaboration agreement with a West German firm for the manufacture of gear hobbling machines has been approved by the Government with some amendments and the agreement has been finalised.

Investment Corporation Pays More

THE Investment Corporation of India Ltd has raised the dividend for the year ended June 1964 from 7.5 percent to 8.5 percent. This restores the cut effected in the preceding year. The preliminary report shows that the Company has fared much better than in the preceding year. Income by way of net dividend on shares and interest on securities has risen by nearly 31 percent from Rs. 22.69 lakhs to Rs. 29.71 lakhs and the pre-tax profit has gone up by about 41 percent from Rs. 21.81 lakhs to Rs. 30.83 lakhs. The provision for taxation is slightly higher at Rs. 9 lakhs, against Rs. 8.12 lakhs.

A sum of Rs. 1 lakh (against nil) has been transferred to the general reserve and Rs. 2.69 lakhs (against nil) have been transferred to the general reserve A, being the amount of foreign dividends. The reserve for retiring gratuity gets Rs. 50.000, against nil in the preceding year. The directors have set aside Rs. 17.50 lakhs (against Rs. 15 lakhs) to the dividend reserve. The proposed dividends—preference and ordinary—absorbing Rs. 17.62 lakhs (against Rs. 14.84 lakhs) are to be paid out of the dividend reserve. The Rs. 100-paid share of the Investment Corporation is quoted nominally around Rs. 95, offering a gross return of about 9.6 percent.

Wellman Incandescent India Incurs Loss

WELLMAN Incandescent India Ltd has incurred a loss of Rs. 6.02 lakhs for the year ended March 1964, against one of Rs. 3.84 lakhs for 1962-63, after providing Rs. 82,999 (against Rs. 25,340) for depreciation. The dividend has been passed and a debit balance of Rs. 9.82 lakhs has been carried forward. The sales value of contracts was slightly lower than was expected earlier. There was considerable delay in the issue of import licences for components to be built into the furnaces on order. There was also delay in the supply of bulk power by the West Bengal State Electricity Board. But the directors hope that the results for the current year will be more satisfactory. Bulk import licences have been received concerning orders due for execution during

Bharat Bijlee Maintains Dividend

BHARAT Bijlee Ltd has maintained the dividend for the year ended June 1964 at 8 percent. The dividend for 1963-64, however, is on the increased capital, the new 10,000 shares being entitled to a proportionate dividend of Rs. 7 a share, against Rs. 8 on the old 20,000 shares. The total distribution by way of dividend will be larger at Rs. 2.30 lakhs, against Rs. 1.90 lakhs in the preceding year. The preliminary report shows that the Company has fared reasonably well. Despite a small decline in the sales from Rs. 1.08 crores to Rs. 1.07 crores, the gross profit is slightly higher at Rs. 14.38 lakhs, compared with Rs. 14.21 lakhs in 1962-63. After providing Rs. 3.27 lakhs (against Rs. 2.91 lakhs) for depreciation, Rs. 48,000 (against Rs. 45,000) for development rebate and Rs. 6.90 lakhs (against Rs. 6.92 lakhs) for taxation, the net profit is shown at Rs. 3.73 lakhs, against Rs. 3.93 lakhs. After writing back excess provisions made last year amounting to Rs. 61,000, the directors have transferred Rs. 4.35 lakhs (against Rs. 3.45 lakhs) to the dividend reserve, leaving a sum of Rs. 2,000 to be carried forward, against Rs. 2,745 brought in. The proposed dividend is to be paid out of the dividend reserve. The Rs. 100-paid share of Bharat Bijlee is currently quoted around Rs. 139, offering a gross return of about 6 percent.

Assam Frontier-Budla Beta Merger

PLANS for a merger of Assam Frontier Tea and Budla Beta Tea involve the exchange of one 6 percent £1 preferred and four £1 ordinaries of Assam Frontier for every five £1 units of Budla Beta.

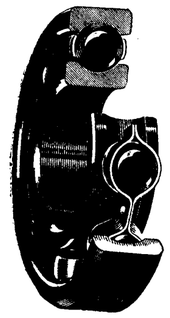
With Assam Frontier preferred at 24s and the ordinary at 26s, the terms value Budla Beta at about 25s 6d, or 5s 9d above the market level. The two companies have identical boards, the same secretaries, R. G. Shaw and Company, and the same agents in the East. Seven of the Assam Frontier estates are in the same area as the Budla Beta properties.

Inchcape Earns Less

DIRECTORS of Inchcape, general merchants and shipping agents, are proposing to pay a final of 7½ percent for the year ended 31st March. This makes 11½ percent against the equivalent of 10 2/3 percent in 1962-63. Pre-tax profits fell from £1.21 million to £1.17 million, but tax took £71.000 less at £394,000, leaving the amount attributable to the parent company £19,000 higher at £679,000.

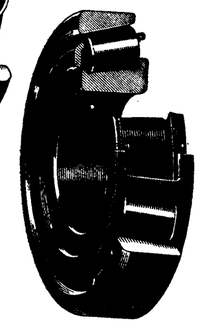
The figures only include dividends receivable in Britain from Indian subsidiaries, not the fell earnings. In 1963 earnings amounted to £399,000 net, after tax of £1.59 million, compared with £324,000 after tax of £1.09 million in the previous year. Indian dividends paid or payable to Inchcape and its British subsidiary were £195,000, against £197,000.

Cannanore Spinning Repeats



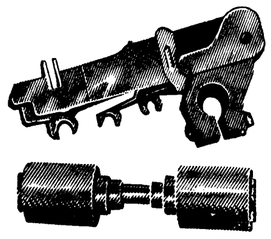
A RISE in profit and sales and the maintenance of the dividend at 8 percent are the main features of the working of the Cannanore Spinning and Weaving Mills Ltd for the year ended March 1964. The profit for the year amounts to Rs. 8,59,499 after providing Rs. 1,76,107 for depreciation, as against the previous year's profit of Rs. 3,89,408 after providing Rs. 1,96,009 for depreciation.

With Rs. 33,804 brought forward from the previous year and Rs 3,03,527 transferred from general reserve, the total available for appropriation comes to Rs. 11,96,830. Out of this, bonus for employees amounted to Rs. 42,726. A sum of Rs. 8,50,577 is transferred to development rebate reserve (against Rs. 737). No provision is made for taxation (against Rs. 1,60,000 in the previous year). The dividend at 8 percent on the increased capital has absorbed Rs. 3,03,527. As no surplus was available for payment of dividend, the directors transferred the sum of Rs. 3,03,527 from general reserve. Total sales for the year amounted to Rs. 86,10,389 (against Rs. 81,62,412).

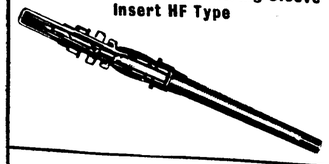


The directors' report says that the working results of the Company

NEWS from SKF



Here is a preview of some of the SKF specialities which will be manufactured in India, when the new plant at Chinchwad goes into operation. Meantime, part manufacture and assembly has already commenced in Bombay—maintaining all the technical skill and know-how which has made the name SKF world famous.



SKF BALL & ROLLER BEARINGS

would have been better but for the stoppage of the mills for 11 full days due to power cut and peak-load restrictions. The second unit at Palloor, Mahe, was formally inaugurated in February 1964. The Industrial Finance Corporation of India has sanctioned an additional loan of Rs. 17 lakhs for meeting the increased capital expenditure at the Mahe unit.

Rajesh Textile Fares Well

RAJESH Textile Mills Ltd has raised the dividend for the year ended June 1964 from 9 percent to 10 percent. The preliminary report shows that the Company has fared well during the year, with the gross profit up by about 8 percent from Rs. 41.65 lakhs to Rs. 45.07 lakhs. Appropriations include depreciation Rs. 14.83 lakhs (against Rs. 11.01 lakhs), development rebate Rs. 2.01 lakhs (against Rs. 3.47 lakhs), taxation Rs. 21.26 lakhs (against Rs. 15.37 lakhs), donations Rs. 25,500 (against Rs. 1.40 lakhs) and general reserve Rs. 1.60 lakhs (against Rs. 3.50 lakhs). A sum of Rs. 1.84 lakhs has been transferred from the development rebate reserve to meet the shortfall in dividend distribution. After providing for the proposed dividend which absorbs Rs. 4.96 lakhs (against Rs. 4.46 lakhs) there remains a surplus of Rs. 1,912 to be carried forward, against Rs. 41,527 brought in.

Gammon India Raises Dividend

GAMMON India did very well during the year ended March 1964. Its turnover increased by about 22 percent from Rs. 5.55 crores to Rs. 6.80 crores and the gross profit shot up by nearly 58 percent from Rs. 52.08 lakhs to Rs. 82.48 lakhs. The shareholders have been duly rewarded by the increase in the dividend from Rs. 1.10 to Rs. 1.20 a share of Rs. 10. The directors' report holds out the promise of encouraging results during the current year. The Company continues to have a full order book. New contracts secured during 1963-64 were of the order of Rs. 11.5 crores, whereas the work completed amounted to Rs. 6.80 crores. The Company has been making extensive efforts to equip itself with additional modern plant so that it can competently meet the demands, judged by the highest modern standards, being made on it for the economical execution of works of the greatest technical difficulty.

Expenditure incurred on plant and equipment during 1963-64 was of the order of Rs. 1.307 crores, against Rs. 36.33 lakhs in the preceding year. In the current year, expenditure on plant and equipment is expected to be around 50 percent of that in 1963-64. The directors feel that the large sums spent on plant and equipment will enable the Company to achieve to a substantial extent the vital aims in view. The directors add that the management is compelled to keep its capital needs continuously under consideration, which, if too stringently restricted, would influence the amount of work which it could finance.

Prices and costs, however, continued to increase during 1963-64 and the same trend continues in the current year. Construction contracts frequently run for several years and the effect of rising costs has to be kept in mind when assessing the trend of earnings. The directors state that the demand for the Company's services continues, but due to the limited resources available, the intake of new work has been limited to Rs. 11.5 crores, compared with Rs. 16 crores in the previous year. The Company's capital structure remains small in relation to its turnover and it is utilising bank borrowings to the maximum degree possible.

The paid-up capital of the Company was increased during the year from Rs. 1.15 crores to Rs. 1.38 crores by the issue of 230,000 equity shares of Rs. 10 each at a premium of Rs. 1.50 a share. It has received permission to issue preference shares worth Rs 50 lakhs, but these have not yet been issued. The various subsidiaries of the Company showed satisfactory results during 1963-64. Only Gamsha Pipes showed a loss of Rs. 52,583, bringing the total loss to-date to Rs. 1.14 lakhs. The performance during the current year is not expected to be any better. The Gammon group companies, in which Gammon India Ltd. is interested as a shareholder, following are the details:

New Capital Issues

SIX companies have been authorised to raise fresh capital aggregating Rs. 9.52 crores. Of these, one is issuing bonus shares, three are issuing equities, the fifth is floating debentures and the sixth equities and preference shares. One company involves foreign collaboration. The consent of the Controller of Capital issues is valid for a year in all the cases except one in which it is valid only up to 1st May next year. The following are the detalis:

Geep Flashlight Industries Ltd, Allahabad, will issue a further capital of Rs. 3 lakhs dividend into 3,000 equity shares of Rs. 100 each as bonus shares on capitalisation of the Company's reserves to a like extent.

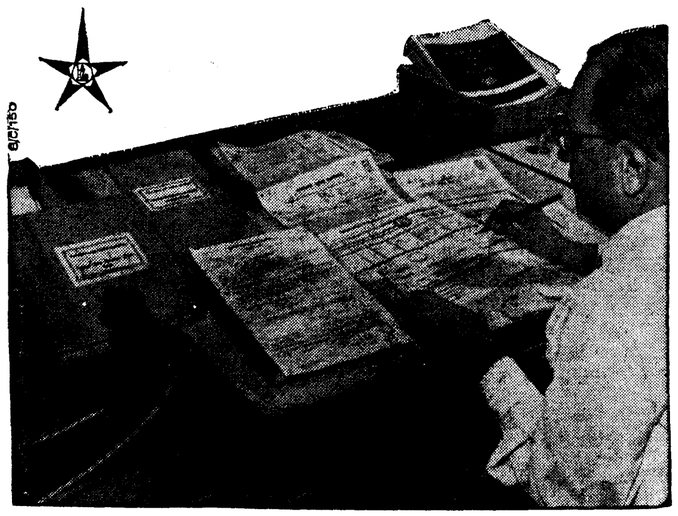
Electric Construction and Equipment Co. Ltd, Calcutta, is to issue a capital of Rs. 84,56,600, divided into equity shares of Rs. 59,06,600 and preference shares of Rs. 25,50,000. The capital is required to complete several projects of the Company in Hyderabad, Budge Budge, Bandel and Sonepat estimated to cost Rs. 1.37 Crores.

Associated Cement Companies Ltd, Bombay, is to issue a capital of Rs. 7 crores in 7 percent a year debentures of Rs. 1,000 each, for cash at par. The debentures will be offered to the public with first option to the existing shareholders of the Company. The money will be used to finance the Company's expansion, renovation and new factories.

Lucas-TVS Ltd, Madras, is to issue a further capital of Rs. 50 lakhs, divided into 50,000 equity shares of Rs. 100 each, for cash at par, to be subscribed privately by the Company's foreign collaborators—Messrs Joseph Lucas (Industries) Ltd., U. K., and Messrs T. V. Sundaram Iyenger & Sons Pvt. Ltd, Madras. The money will be utilised to meet the increased capital requirements of the Company's project.

Benger Laboratories (India) Ltd, Bombay, is to issue Rs. 50 lakhs in equity shares of Rs. 100 each at par. to be offered to the existing shareholders of Tata-Fison Ltd on the amalgamation of the latter with the former as approved under the orders of the Bombay High Court. The shares will be issued in the proportion of 10 shares for one share of Rs. 1,000 each (fully paid up) of Tata-Fison Ltd.

Goodyear India Ltd, Calcutta, is to issue a further capital of Rs. 64,00,000 divided into 640,000 equity shares of Rs. 10 each for cash at a premium of Rs. 7 a share. The entire issue will be made to the existing Indian shareholders in the ratio of eight shares for every five shares held. The capital will be used to finance the expansion scheme involved in the manufacture of rubber tyres and tubes, etc. The consent is valid up to 1st May, 1965.



EXPERT ATTENTION TO YOUR EXPORT PROBLEMS

We can help EXPORTERS to expand their business by providing pre-shipment finance. We can advise EXPORTERS of trade enquiries, put them in touch with foreign buyers, and obtain credit information and status reports on foreign buyers. We can give to EXPORTERS effective Letters of Introduction on our Foreign Branch Managers and Correspondents, provide them with Travellers' Cheques, Foreign Currency Notes, and Letters of Credit—when they travel. We can collect and negotiate for EXPORTERS all types of foreign bills; give Excise guarantees where necessary and guarantees under Export Promotion Schemes; and buy various foreign currencies, at the finest rates, both "spot" and "forward". We can advise EXPORTERS on matters concerning import restrictions, duties, etc. in foreign countries. With our 14 branches overseas and correspondents in almost all parts of the world, we are well equipped to handle FOREIGN EXCHANGE BUSINESS of any description.

SPECULATIVE SUPPORT LIFTS SHARE PRICES

Wednesday Evening.

THERE has been a fair improvement in the Calcutta stock market during the past week. The support has, nevertheless, been mainly speculative in character. So the prices of clearing shares have been substantially marked up. There has also been a considerable volume of short-covering. Excepting scattered support for selected scrip, turnover in cash shares is small. Jessop, in particular, have met with hectic support and risen sharply. But they have reacted towards the close due to profit-taking.

Operators seem to have been influenced by several rumours. One is that Mr. T. T. Krishnamachari, Central Finance Minister, will soon abolish the taxes on bonus shares and dividends. There is no doubt that these taxes have impaired the confidence of investors, but it is doubtful whether the Government will withdraw these taxes before the next Budget. In the meantime, the depression in the capital market continues in spite of support from Government financing institutions. Unless the outlook for corporate profits and dividends improves due to a modification of the fiscal policy, investors will not take the risk of putting money in equities.

Lyons Range is impressed by a New Delhi report that the Advisory Committee on Capital Issues has made two significant recommendations. Firstly, the restriction on the transfer of shares allotted privately by a public limited company should be removed. Secondly, the margin on carryover transactions needs to be relaxed. But such relaxation will tend to promote speculation in shares and it is not likely to help in restoring confidence.

In the meantime, the economic and political situation has worsened. Despite the efforts of the Government, inflation has not been checked. The new credit policy of the Reserve Bank will tend to reduce the flow of funds into the stock market. The meeting between the Home Ministers of India and Pakistan due to be held towards the close of November is awaited with keen interest. In view of these uncertainties, the improvement in the stock market is not expected to continue. A fall in share prices in the near future is not ruled out.

Indian Iron have risen smartly, although they have reacted towards the close due to profit-taking. The support is largely based on rumours that the prices of controlled items of steel may soon be raised. Jessop have reacted, after an earlier sharp rise. Other engineering shares like Guest, Keen, Williams, Texmaco. Britannia Engineering, J. K. Steel and Braithwaite are about steady.

The prices of clearing miscellaneous shares have tended to drop towards the close due to profit-taking. Dunlop Rubber have, nevertheless, attracted support on the prospect of a bonus issue. Goodyear India are steady on the prospect of an ordinary rights share issue. but it is doubtful whether the support will be sustained in view of the heavy premium at which the new shares will be issued. The losses so far increased by the Company will be an additional deterrent. Support has been forthcoming for Alkali and Chemical. Associated Battery and Union Carbide.

Among new shares, Hindusthan Twyfords are steady. New Asiatic Insurance have attracted attention on the prospect that the Company will undertake industrial and trading ventures. Managing agency shares are hesitant since Mr. T. T. Krishnamachari observed that the Government will seek to eliminate the system as early as possible. Bank and electric shares have been neglected. Paper shares are about steady.

Jute and cotton mill shares are being dealt in cautiously due to fears that the export of these commodities will suffer because of the levy of a surcharge on imports by the U.K. Except for Birla, other jute shares have been neglected. Stray business has passed in coal and tea shares around previous levels.

Government securities are quiet and turnover has been negligible. The 3 percent Conversion Loan 1986 has dropped to Rs. 62.60. Institutional support is absent. Nearly all State Government loans are available at a discount.

Bombay

TAX CHANGE RUMOURS BOOST SENTIMENT

STEELS RISE ON FURTHER DECONTROL PROSPECTS

Wednesday Evening.

DALAL Street pushed its way further up last week. The going was by no means easy, which, however, should cause no surprise because there was no particularly encouraging news to give the market a real drive. Interest remained very selective, but there was a considerable increase in turnover although activity continued to be predominantly professional. Fluctuations in the leading scrip were irregular and, barring certain counters, net changes over the week were rather small. However, the market, which had long been under persistent pressure at every small rally, now seemed to be attracting considerable support at setbacks. It might be rash to read too much into the recent recovery, but the mood of subdued optimism obtaining now is in pleasant contrast to the feeling of despondency that had prevailed in the market until very recently.

It seems significant that the market should be veering round to the constructive side in face of the political uncertainty that has been created by the Moscow shake-up and the nuclear explosion by China. In its constructive frame of mind, Dalal Street did not express any great concern over the draft memorandum on the fourth plan and the prospect of increased taxation in order to mobilise resources for financing it. In fact, the stock exchange operators noted with satisfaction the hint in the draft memorandum that the public undertakings should earn at least 12 percent on investment; the market is not perhaps unjustified in thinking that this marks a change in official attitude towards reasonable return that an industry should earn on its investment.

The mood of the market has no doubt undergone a change, but it is difficult to say how the recovery will progress. This is because outside participation in the market is still virtually absent. Activity is mostly centred round the popular speculative scrip; cash shares continue to be neglected although selling pressure seems to have nearly dried up. The market has recently been thick with rumours that the capital gains tax on bonus issues is likely to be abolished shortly, and that the dividend tax will also be suitably modified.

Rayon shares which had led the recent recovery and had recorded impressive gains in the preceding week were unable to make further important headway, and came under heavy pressure at the week-end. National Rayon rose further from Rs. 367 to Rs. 371.50, but reacted sharply from

INDIA STEAMSHIP CO., LTD.

"INDIA STEAMSHIP HOUSE", 21, OLD COURT HOUSE STREET, CALCUTTA-1
Managing Agents:—LIONEL EDWARDS (PRIVATE) LTD.

Rs. 371 to Rs. 357. Century moved down in sympathy from Rs. 619 x.d. to Rs. 615 (ex dividend); earlier in the week, they had been marked up from Rs. 168 c.d. to Rs. 623 c.d.

Steels which had been dull and subdued for a long while recorded a spectacular rise near the week-end on keen bull support induced presumably by hopes of further decontrol of certain items and increase in the retention prices of controlled varieties. In a matter of few days, Indian Iron shot up from Rs. 25 to Rs 26.50 but shaded slightly to Rs. 26.20 at the close. Tata Steel advanced from Rs. 147.50 to Rs. 151, but later reacted to Rs. 149. The week-end quotations were slightly lower due to corrective profit-taking.

Cotton mill shares maintained a steady tone, but business was limited. Operators seemed disinclined to increase their commitments until a clear picture emerges of the cloth price pattern and of the trend of cloth offtake.

Shipping shares were firm, particularly Great Eastern because of the upward revision of the dividend from 73 paise to Rs. 1.08 a share. The increase in the dividend which has been made in response to strong representation by the Bombay Shareholders Association has been welcomed, but not without adverse comment. Great Eastern which had been marked down from Rs. 13.56 to Rs 11.88, following the disappointment over the initial dividend announcement, have recovered to Rs. 12.68 after the recent announcement about the increase. Scindia subsequently recovered from Rs. 15.30 to Rs. 16.12 but later fell back to Rs 15.95.

Motor-vehicle and engineering shares have been attracting fairly good support at setbacks, but net changes over the week were small. Chemical and cement shares have been distinctly steady. There has been little doing in sugar shares, which, have, however, been keeping fully steady. Electric, bank and insurance shares kept steady without much business. Cash scrip were steady mainly due to scarcity of offerings.

Madras

SHARES STEADY DUE TO BOMBAY ADVICES

FEARS OF DECLINE IN BANK CREDIT

Tuesday Evening.

THE Madras stock market has been steady during the past week in response to the improvement in Dalal Street. The prices of clearing shares in particular have tended to harden due to a fair amount of support from outside sources. Selective support has been extended to cash shares. Operators and investors take a bullish view of the recommendation of the Advisory Committee for Capital Issues that the restriction on the transfer of shares allotted privately by a public limited company should be relaxed.

Towards the close, operators have become cautious because of fears that the supply of bank credit to the stock market will shrink due to the Reserve Bank's policy of credit restraint. Support has centred on selected tea and coffee shares on reports of good crops. Good miscellaneous shares have also attracted attention following encouraging corporate news. A fair amount of business has been transacted in Government securities. Selected preference shares have met with support.

Despite a limited turnover in bank shares, Indian Overseas have improved to Rs. 150.50. In electric companies, Karaikkal have attracted support at Rs. 10.25 on paying a taxable ordinary dividend of 10 percent. South Madras have been taken at Rs. 12 on declaring an interim taxable ordinary dividend of 5½ percent. In sugar shares, Deccan are sluggish at Rs. 11.10 despite the repetition of the dividend of 18 percent, including a final of 11½ percent on the increased capital. E.I.D. have improved slightly to Rs. 35.75, while Kothari are sluggish around Rs. 6.20. Travancore are steady at Rs. 8.12 and India have attention up to Rs. 8.90.

In the planting section, Consolidated Coffee have been a smart feature at Rs. 23.90. Blue Mountain have dropped slightly to Rs. 2.26, while Cochin Malabar are steady at Rs. 6.22. Ouchterlony and Periakaramalai have been maintained. Interest has been taken in rubber shares like Thamarapally, Travancore and Mercara. In tea shares, Nelliampathy, Emerald Valley and Nonsuch have been supported. In composite gardens producing both tea and coffee, Stanes Amalgamated have been steady at Rs. 13.75. In the coffee section, Kumergode, Ossoor and Rajendra have been prominent.

In textile shares, South India Viscose have dropped to Rs. 115, while Travancore Rayon have improved to Rs. 19.75. Madura have gained at Rs. 35.60, but Lakshmi have been maintained. Loyal are being offered freely down to Rs. 40 on paying a poor dividend of only 3 percent, subject to tax. Asher have declared a taxable ordinary dividend of 10 percent. Bangalore Woollen, Buckingham and Ramakrishna are steady. Mettur, Anglo-French and Cannanore have attracted support.

Among miscellaneous shares, Aluminium Industries are very steady at Rs. 23.35 on prospects of expansion. Ashok Leyland have hardened to Rs. 6.90 and Mettur Chemical have been maintained. In cement shares, India have improved to Rs. 5.20, while Dalmia are steady at Rs. 13.25. In engineering shares, Indian Steel Rolling have been taken at Rs. 9.85. In paper shares, Seshasayee and Mysore have been bought. Standard Motors and Tube Investments have gained fractionally. A. V. Thomas are steady at Rs. 4 on declaring a taxable ordinary dividend of 7½ percent. Kirloskar Electric have hardened to Rs. 19.62 on replacement buying, while Madras Rubber have weakened to Rs. 9.50. Parry's Confectionery, Spencer and Textool are fully steady.

THE WEEK'S TRANSACTIONS

London

MARKET IMPROVES ON POLICY STATEMENT

GILT-EDGED RISE: GOLD SHARES NEGLECTED

London, 28th October.

IT was an eventful week in the stock market last week. In view of the many conflicting influences at work, it gave a creditable performance. After shaking off the election result, buyers soon became active again. Then last Friday, came a rumour that the dollar premium would be abolished and the week ended somewhat nervously with dollar stocks being lowered sharply and the dollar premium declining. The same conditions were experienced on Monday morning in advance of the Government's economic policy statement, but when its contents were disclosed, which contradicted the rumours, the market took on a distinctly firm appearance.

I.C.I., Turner and Newall, Bowaters, B.M.C., Distillers, Associated Cement and G.E.C. were the leaders to show up well. Gilt-edged met with a good investment demand and prices were better. Gold shares were wanted at one time, but neglected later.

THE CALCUTTA MONEY MARKET

CALL RATE DECLINES FURTHER

Wednesday, 28th October.

THE general level of advances in the Calcutta money market has remained unchanged during the past week. Advances to cotton mills are slightly down, whereas the credit given to jute mills has risen slightly. There is no change in the requirements of the other major categories of borrowers, namely, sugar factories, the iron, steel and engineering industries, and the foodgrains trade. In the interbank market, conditions have been easy and the call rate has declined further from 1½ percent to ¾ percent.

The exchange market has been active, with a good supply of tea and gunny bills. The demand for remittances has been fairly good. In London, sterling shows improvement against all important currencies in response to the measures announced by the Labour Government for reducing the trade deficit.

SILVER WAS STEADY DUE TO THE demand for the Diwali festival. The price rose from the previous week's level of Rs. 253.25 to Rs. 254.75 a kilogram, quoted today. It was quoted at 113d in London and at 129.3 cents in New York.

In spite of the rise in silver gold was quiet due to the lack of demand and the rice of 14-carat declined from Rs. 70.25 to Rs. 69.25.

DURING THE WEEK ENDED 23RD October, Government of India Treasury bills for Rs. 20,59,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 27th October. The total amount offered was Rs. 47,00,000. Tenders at Rs. 99,400 percent accepted in full. Lower tenders were rejected. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.400 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 2nd November.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 28th October to 31st October at Rs. 99.416 percent subject to the conditions previously announced that sales can be stopped at any time without notice, if the Government thinks it necessary. These bills sold from 21st October to 24th October amounted to Rs. 27,63,75,000.

ACTIVE NOTES DROPPED BY Rs. 28.64 crores to Rs. 2,409.29 crores during the week ended 23rd October, 1964, according to the return of the Reserve Bank of India. The total note issue also declined by Rs. 13.95 crores to Rs. 2,431.11 crores. Notes held in the Banking Department consequently rose by Rs. 14.79 crores to Rs. 21.82 crores. The currency contraction was adjusted by reducing rupee securities by Rs. 14.99 crores to Rs. 2,121.17 crores. Deposits of the Government of India rose by Rs. 29.32 crores to Rs. 83.45 crores while those of State Governments decreased by Rs. 3.07 crores to Rs. 12.59 crores. Balances of scheduled banks at Rs. 100.92 crores showed a drop of Rs. 8.56 crores. Balances held abroad declined by Rs. 37 lakhs to Rs. 8.76 crores and investments by Rs. 29 lakhs to Rs. 107.01 crores. Loans to scheduled banks declined from Rs. 3.99 crores to Rs. 43.80 lakhs of which advances against usance bills amounted to nil, against Rs. 1.70 crores. Ways and means advances stood at Rs. 44.96 crores (Rs. 39.29 crores).

THE RETURN OF THE STATE BANK OF India for the week ended 16th October, 1964, shows a drop of Rs. 4.95 crores to Rs. 664.34 crores in total deposits Investments in Government securities are down by Rs. 4.01 crores to Rs. 290.60 crores, while other authorised investments remain unchanged at Rs. 8.98 crores. Advances, including loan, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 1.72 crores to Rs 329.30 crores Cash and balances are, in consequence, shown at Rs. 17.12 crores or Rs. 11.85 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 16th October, 1964, shows Demand and Time liabilities at Rs. 1,343.72 crores (Rs. 31.60 crores on account of borrowings from banks) and Rs. 1,398.97 crores (Rs. 16.77 crores), compared with Rs. 1,322.20 crores (Rs. 28.42 crores) and Rs. 1,423.34 crores (Rs. 21.43 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 4.15 crores and Rs. 9.78 crores to Rs. 65.91 crores and Rs. 104.46 crores, respectively. There is a drop of Rs. 10 crores to Rs. 817.64 crores in investments. Advances and bills discounted at Rs. 1,733.44 crores show a rise of Rs. 2.66 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 6.2 percent and 63.2 percent, against 5.7 percent and 63.0 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 30-10-64

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate

THE CALCUTTA ELECTRIC SUPPLY CORPORATION

MR. I. A. MACPHERSON'S REVIEW

The Sixty-seventh Annual General Meeting of The Calcutta Electric Supply Corporation, Ltd., was held on October 23 at Victoria House, Vernon Place, London, W. C., Mr. I. A. Macpherson, M.B.E., the chairman, presiding.

The following is his review which had been circulated with the report and accounts for the year ended March 31, 1964 :—

Shortly after our last Annual General Meeting Sir William Lamond intimated that he wished to vacate the chair and my colleagues did me the honour of electing me in his place. I am sure that stockholders will agree that my first duty in this Review must be to thank Sir William for all he has done for the Company since he became a director in 1949 and particularly since November, 1961, when he agreed to become chairman on the sudden death of Sir Harry Burn. Fortunately for us Sir William remains a director and we still have the benefit of his advice and guidance.

The event which, for us, as for everyone in or connected with India, overshadows all others has been the death, on May 27, of Pandit Nehru. It would be a presumption for me to try to add to the world-wide tribute already paid him, but I may perhaps be permitted to remark that it would be difficult, if not impossible, for a company such as this to operate under any other system than that of the parliamentary democracy of which, in India, Pandit Nehru was the architect and custodian

At our last meeting stockholders confirmed the election to the board of Sir Waler Michelmore. To our great regret, Sir Walter has recently advised us that for personal reasons he has felt obliged to tender his resignation which the board have, although with great reluctance, accepted. His wide experience of Indian affairs has made him a valued counsellor and, although he was with us for only a short time, he was able to make a valuable contribution to our discussions for which we are indeed grateful to him.

Growth of Undertaking

In his review of our operations for the last few years my predecessor has referred to the power shortage in India in general, and in Calcutta in particular, and to the regulative measures which the Government had to adopt to ensure the optimum utilization of available power resources. These measures were aimed primarily at reducing the peak demand on the Company's system and (as the following table indicates) have had relatively little effect on the number of units sold and consequently on the Company's Revenue Receipts. The commissioning last October of the 50 MW extension to our New Cossipore Generating Station and more recently of our Southern Receiving Station designed to take in power from the West Bengal State Electricity Board have already allowed several of the restrictions to be relaxed. At present we are importing a permitted maximum of about 110 MW from the Damodar Valley Corporation and 50 MW from the State Board, and there is already a significant increase in our maximum demand which has not, however, been accompanied by a corresponding increase in units sold. Towards the end of this year, when the output of further generating plant will be put at the disposal of the State Board, our off-take at Southern Receiving Station will be stepped up to 80 MW and the position will be further relieved when, during the first half of next year, we commission our Belur Receiving Station, designed to take in 100 MW of power from the State Board's Bandel Generating Station which is expected to begin generating at about the same time. Provided they are backed by adequate State Board resources, the commissioning of these two Receiving Stations should enable Government to relax the restrictions remaining.

Restrictions notwithstanding our outturn during the year again broke all previous records as the following figures will show.

	Year ended March 31 1960	1961	1962	1963	1964
Units sent out from generating stations (millions)	1,663	1,736	1,565	1,730	1,955
Units imported (millions)	303	390	665	803	804
Units delivered to the System (millions)	1,966	2,126	2,230	2,533	2,739
Units sold (millions)	1,817	1,955	2,049	2,328	2,525
Maximum demand in MW sent out	370	392	410	416	464
Load factor	60%	62%	62%	69%	68%

The year 1961-62 is not typical because the figures were seriously affected by the major plant breakdown which occurred during the first half of that year and which led to the introduction of the restrictions, the effect of which is disclosed in the sharp increase in the load factor after 1962. Over the period as a whole the average rate of growth in terms of units (as opposed to demand) was about 8¼ per cent compound and although this rate has not been maintained during the first five months of the current year it is reasonable to expect that as industry in general installs power consuming plant which has been held back pending the full availability of supplies from the State Board, the rate of growth will assume a more buoyant trend.

Sales of Energy

Most of the increase in terms of units sold came from the high tension power consumers. Every large industry on our supply consumed more energy. The most important is the jute industry which had a record production and the largest export for 15 years. Other industries in order of energy consumed were engineering workshops, cotton mills, steel works, and rolling mills, chemical works, and paper mills.

The low tension power consumers comprise many small scale industries which in total had another buoyant year, consumption again showing an appreciable increase. There was again a marked increase in power consumption for domestic purposes mostly due to the increasing use of air-conditioners.

The larger sales of energy for lights and fans reflect the continued construction of residential accommodation mostly in the outer suburbs of Calcutta, but also in certain of the small municipalities in the Company's Licensed Area

Nearly 96 per cent of the Bulk Supplies are for the State Board whose consumption increased by more than 28 million units The Board distributes entirely outside the Company's Licensed Area and will shortly substitute power from their own generating stations for the main bulk supply now being provided by the Company. The increased sales under special contracts came from our special tariff for large buildings, such as blocks of offices and flats, hotels and cinemas.

Revenue Account

Revenue from the sale of electricity and for meter rents at £14.8 million was over £1.7 million (13 per cent) up on last year. This is a much higher rate of increase than is suggested by the increase in units sold. The main reason is that the monetary figure of sales includes coal surcharge revenue which arises by reason of increases in the delivered cost of coal—increases which, of course, are also reflected in additional revenue expenditure. The revenue account shows that revenue expenditure increased by almost £1.2 million; of this £885,000 was due to enhanced generation transmission and distribution costs. During the year our stations, in generating 2,077 million units, burnt 1.49 million tons of coal at a cost of £4.48 million, comparative figures for the previous year having been 1,841 million units, 1.38 million tons and £3.51 million. Quite apart from the 10 per cent increase during the year in the controlled price of coal and freight (which was, of course, recovered through our coal surcharge) this increased expenditure on coal was a natural consequence of increased output and would in fact have been even greater but for the continued success of our new policy for the procurement of coal to which a reference was made last year Administration and general establishment charges increased by £100,000, of which £40.000 was for additional premium payable to the Government of India for emergency risks insurance, now discontinued. Interest charges increased by £108,000 because we had to make almost the maximum use of our overdraft facility with National & Grindlays Bank to which I refer again later.

Indian Taxation

The net revenue account shows that despite an increase of about £560,000 in the balance brought down from the revenue accont for the charge for Indian taxes declined by nearly £150,000. This is, for the most part, due to the fact that our estimated Indian income tax liability on the profits of the year has been greatly reduced by income tax development rebate claimed on new plant commissioned during the year, including the New Cossipore extension and the Southern Receiving Station. This saving of Indian tax (not all of which is admitted by the Indian tax authorities) amounts to some £575,000 the equivalent figure for the previous year having been £132,000. It is this saving of tax, stemming from the income tax development rebate, that gives rise to the appropriation in the net revenue account of £201,021 to the development reserve. This is a mandatory appropriation under the Electricity (Supply) Act and has the effect of equating the Company's clear profit with the reasonable return allowed by that Act.

Reference is again made in the notes on the accounts to a contingent liability now estimated at £801,000 in respect of Indian taxes under appeal. As explained last year, this claim concerns the admissibility of development rebate on capital expenditure on mains, service connexions, &c. Although the Company has been successful in the first stage of its appeal against the authorities' ruling in this matter, they will, we understand, take the matter further and in the circumstances we have thought it prudent to build up a taxation contingency reserve with an initial appropriation of £250.000, which is accordingly debited in the net revenue account. As last year, we have again made a special appropriation to plant expansion and contingencies out of net revenue, although this year it has been increased to £550.000 I would emphasize that this latter appropriation, together with those to the development rebate and to the taxation contingency reserve, remained invested in the undertaking where, in conjunction with the revenue account allocation to depreciation of over £1 million, they played a major part in financing the expansion of the undertaking during the year. a matter to which I refer again in my comments on the balance-sheet.

Increase in Rates

Although the Company's clear profit was, for the first time for several years, equal to the reasonable return this was in large measure due to the substantial saving in Indian taxes, to which I have already referred, arising out of development rebate. Had it not been for this, the clear-profit would have been substantially less than the reasonable return. As it was foreseen that we would not again benefit from development rebate on the same scale and that our clear profits would in consequence be less than our reasonable return, we have had no option but to put into effect the further increases in our charges for electricity which were introduced towards the end of the year 1963/64. These increases were designed to enable the Company, in a normal year, to earn its reasonable return which, as was explained last year, is now based on a standard rate of 6½ per cent instead of the former 6 per cent. In the absence of unforeseen circumstances we hope to be able to achieve this result in the current year.

Balance-sheet

I come now to the balance-sheet and, dealing first with the assets side, I refer stockholders to the separate account of capital expenditure and depreciation from which it will be seen that capital expenditure during the year totalled £2.7 million. In addition to normal transmission and distribution expenditure, this figure includes the balance of the cost of the New Cossipore extension and also the cost of the Southern Receiving Station. Among current assets, the large increase in sundry debtors calls for comment. To the extent of about £400,000 it is due to arrears of coal surcharge revenue collected after the end of the year; as to the balance, it reflects the increase in rates, to which I have already referred and normal growth. Stores were down. Our quite large holding of Treasury Bills at the beginning of the year was realized to meet our commitments on capital account. On the liability side, the overdraft at £1¼ million is up by £500,000 and the figure of £3.8 million for sundry creditors is still unusually large, although marginally down compared with the previous year. This figure includes about £1 million owed to manufacturers in the United Kingdom who supplied plant for the Cossipore Extension. I shall now briefly recount the steps we have recently taken to place the financing of this £3½ million project on a more permanent basis.

Finance

In ordinary circumstances we should have achieved this by an issue of shares or debentures, or both, as we have done in the past, but we were advised that this would not be practicable in view of the fact that, under its licence, the

Company can be taken over by the Government of West Bengal or by the State Electricity Board on January 1, 1970, provided either of those authorities gives one year's notice of its intention. We had, therefore, to explain to the Government of West Bengal that if Government could not tell us now either that we would not be taken over in 1970 (in which case we would have hoped to be able to raise medium term finance), or alternatively, that they would be taking us over in 1970 (in which case a short term loan repayable out of the compensation monies would have been possible) we saw no prospect of being able to raise the money unless Government themselves would guarantee repayment on January 1, 1970. These were the alternatives that Sir Owain Jenkins and I discussed with Government during a visit we made to India in September last year. Government's decision was that they would be prepared to guarantee repayment and on receipt of this assurance we were able to go ahead and arrange a loan from the State Bank of India. The terms of this loan, as finalized by Mr. Hobson, Mr. Gauntlett and myself on a further visit we made early this year, are briefly that it is for a sum of Rs. 4.7 crores (£3½ million) repayable on December 30, 1969, and secured by a floating charge ranking after the charge securing the existing debenture stock, the rate of interest being 1 per cent above the State Bank of India advance rate (at present 6 per cent). This means that we are at present paying 7 per cent for this money and it will strike stockholders that the Company is being penalized by having to pay at this rate on money on which it is allowed by the Electricity (Supply) Act to earn a reasonable return of only 6½ per cent. That Act does, however, make provision for rectifying an anomaly such as this and it is the board's intention to apply to the State Government to put this right.

Our agreement with the Government of West Bengal provides that if the Company is taken over the outstanding balance of the loan will be repaid by Government to the Bank and will be deducted from the compensation monies due to the Company on acquisition. If, on the other hand, by the 1st day of January, 1969, the Company has not received notice that it is to be taken over on January 1, 1970, which will mean that its licence is automatically extended for a further period of 20 years, then it will take immediate steps to raise money on the market, or otherwise so as to be in a position to repay the Bank in full on December 30, 1969. If the Company is unsuccessful and in consequence Government have to repay the Bank under the terms of the guarantee then the amount so repaid by Government will be refunded by the Company to the Government in three equal annual instalments commencing in January, 1971. The documents incorporating these arrangements were executed early in June and the first tranche of the loan, namely Rs. 325 lakhs, was drawn later that month, whereupon our overdraft with National and Grindlays Bank was repaid as were also certain of the large sums owed to plant manufacturers. The remaining tranche of the loan, namely Rs. 145 lakhs, will be drawn on April 1, 1965. I should like to place on record how greatly we have appreciated the help and cooperation that we have received from Government and from the State Bank of India in making these arrangements. Our sincere thanks are due also to our friends National and Grindlays Bank without whose help the extension at New Cossipore, which has made such a vital contribution towards the relief of the Calcutta power shortage, would not have been possible.

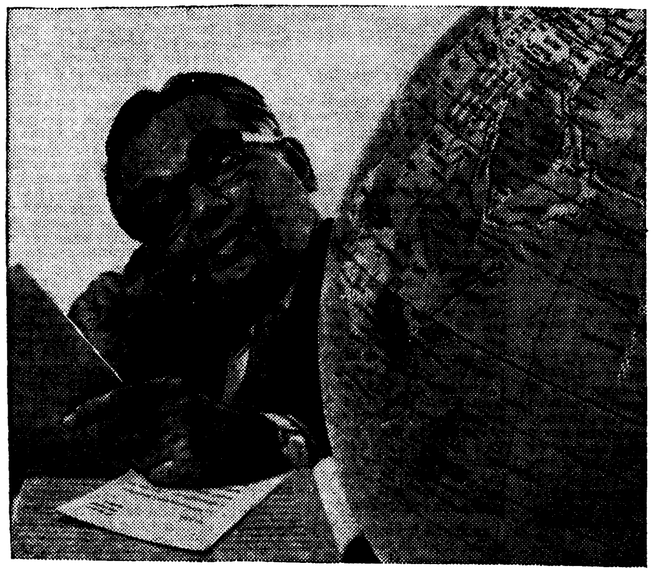
Forward Capital Expenditure

Our forward estimates indicate that during the period 1963-64 to 1969-70 capital expenditure will amount to some £18½ million (Rs. 25 crores) inclusive of the unpaid balance of expenditure on April 1, 1963 on the New Cossipore extension. Provided the Company can continue to earn its reasonable return we estimate that we can look to internal sources (mainly depreciation and retained earnings) to provide about £15 million of this sum. The recent loan from the State Bank will bridge this gap which means that, as far as can at present be foreseen, it should provide the balance of the funds we shall need for the development of the undertaking in order to fulfil our statutory obligations until 1970. The overwhelming bulk of this expenditure is, of course, on transmission and distribution and in our estimates provision is made for four 132 kV receiving stations at a cost of nearly £5 million to cater for the ever increasing supplies from the State Board. As already mentioned the first of these was commissioned earlier this year and Mr. Hobson and I had the opportunity of inspecting it when the final tests were being made. We were greatly impressed by the high standards of design and construction which had been achieved and which reflect great credit on our own engineers who have not previously been called on to provide 132 kV equipment or to lay and joint gas filled cables at that pressure. Mr. Hobson also assures us that the Company's plant in general is being efficiently operated and well maintained. The new machine at New Cossipore, first put on load almost a year ago, is making a significant contribution to our output and has helped to reduce overall generating costs.

Training

The continuing growth of the undertaking makes it necessary to ensure that adequately qualified men are available for senior appointments in the Company and these are now increasingly being filled by those of our Indian engineers who have received post graduate training in the United Kingdom under the Company's training scheme introduced shortly after the war. This scheme has proved a great success and there are at the present time more of our engineers being trained under this scheme than at any time previously. Our thanks are due to the Electricity Council, the Area Boards and the various manufacturing companies who provide facilities over here for this training.

Tribute to Staff



More important than the machines are the men that operate them. A public utility such as this calls for ability, energy and devotion to duty quite out of the ordinary on the part of the men that serve it and our very sincere thanks are due to our officers, staff and workmen who, I am proud to say, are never found wanting. Mr. Kanga has now completed 18 months in the exacting position of Agent and has in full measure justified the board's confidence in him. To him, as to Mr. Gunther, Chief Engineer, and Mr. Sen Gupta, Commercial Manager, our special thanks are due. To Mr. Colley, in London, we are also indebted for his valuable services during the year in his responsible position of Secretary.

The report and accounts were adopted and the other formal business having been transacted the proceedings terminated.

(This statement is not a report of the proceedings of the Annual General Meeting referred to above.)

Get local help for your foreign exchange problems

Your State Bank Agent is just a telephone call away!

The State Bank of India and its Subsidiaries have 1700 branches at home and several branches abroad to deal with your problems regarding import and export trade.
Services rendered include
- Exchange Control Formalities
- Foreign Bills • Letters of Credit
- Packing Credit Facilities
- Guarantees and Indemnities
- Forward Exchange • Remittances
- Foreign Travel Regulations and Facilities.

World wide network of Correspondents.

Our special information service deals with all your questions on:

(a) trading opportunities in other countries and names of likely buyers or suppliers
(b) reports about the standing and financial status of business people in any part of the world, and their ability to fulfil contractual obligations
(c) the currency and customs formalities of the country you do business with

In approved cases, we also furnish Letters of Introduction entitling you to the courtesies of our offices and correspondents in all principal centres of the world.

ANNOUNCEMENT REGARDING THE PROPOSED ISSUE OF CAPITAL

This is NOT a Prospectus. Persons interested in full details may obtain copies of the Prospectus from the Registered Office of the Company, or from the Bankers to the issue and Brokers mentioned hereinafter.

SIMON-CARVES INDIA LIMITED

(Incorporated on 11th February 1963 under the Companies Act 1956)

Registered Office: 'Simon House', Transport Depot Road, Calcutta-27.

EXISTING AND PROPOSED ACTIVITIES OF THE COMPANY

The Company carries on and will carry on, as its main business, all or any of the trades, businesses or professions of mechanical, chemical, civil, electrical, constructional or nuclear engineers, builders, contractors, manufacturers, hirers, exporters and importers of and dealers in plant, machinery, apparatus, instruments, utensils, tools and implements of all kinds and spare parts therefor and also the construction, either for itself or as contractors for any other company, firm or person of plant and coke ovens for the carbonising of coal according to methods known as the Simon-Carves principle or in accordance with such other methods or principles as the Company may from time to time decide upon whether the same are now or may hereafter become known or discovered.

Besides, the Company will carry out engineering work in the field of specialities of Simon-Carves Limited of Cheadle Heath, Stockport, England, including preparation of designs and drawings, procurement of machinery, equipments and tools, and the construction and commissioning of plants. The Company will also undertake the preparation of designs and drawings, the procurement of machinery, equipments and materials, and the construction of plants which are not specialities of Simon-Carves Limited of U.K., in accordance with customer's specifications.

It is intended that the Company will be a subsidiary of Simon-Carves Limited of U.K. The Company will have technical consultancy with and technical assistance from Simon-Carves Limited of U.K. while carrying out its business.

The Company has been incorporated with the intention of taking over the appropriate assets in India (including a number of essential items of heavy plant and equipment) of Simon-Carves Limited of U.K. and accordingly an Agreement and a Supplemental Agreement dated 28th June 1963 and 22nd November 1963 respectively have been entered into with the said U.K. Company.

Since the commencement of business on 21st June 1963, orders valued at approximately Rs. 10.5 crores have been received by the Company.

BOARD OF DIRECTORS

Names and Addresses	Descriptions & Occupations
1. **Mr. Jagjivandas Hiralal Doshi,** Chairman, "Bindu", Ghodbunder Road, Bombay 57.	Industrialist & Businessman. **Director of:** Amar Dye-Chem Ltd. Amritlal & Co. Private Ltd. & other companies.
2. **Mr. Leslie Dobson,** 5, Sandy Lodge, Lane Northwood, Middlesex England	Engineer. **Director of:** Simon-Carves of Canada Ltd. Simon Engineering Ltd. & other companies.
3. **Mr. Norman Hinton,** "Sevenoaks" Chester Road, Mere, Cheshire, England.	Chartered Accountant. **Director of:** Simon-Carves Ltd. Simonacco Ltd. Simon Engineering Ltd. & other companies.
4. **Mr. Barendra Prasad Ray,** 29, Netaji Subhas Road, Calcutta-1.	Solicitor. **Partner of:** Orr Dignam & Co. King & Partridge. **Director of:** Birds Investments Ltd. The Bisra Stone Lime Co. Ltd. Braithwaite and Co. (India) Ltd. The British India Corpn. Ltd. Goodyear India Ltd. Howrah Mills Co. Ltd. Wellman Incandescent India Ltd. & other companies.
5. **Mr. Victor Robinson,** 282, Bramhall Lane South, Bramhall, Cheshire, England.	Engineer. **Director of:** Simon-Carves Ltd. Metallurgical Equipment Export Co. (Phoenix) Ltd. Newsham Construction Ltd. & other companies.
6. **Mr. Ronald Frank Orme,** 210B, Golf Links, New Delhi.	Engineer **Director of:** Simon-Carves (Export) Ltd.
7. **Mr. Stuart Roy Horner,** 2B, Burdwan Road, Alipore, Calcutta-27.	Engineer & Managing Director.
8. **Mr. Peruvamba Seshaiyer Vanchi,** 91/S Block E, New Alipore, Calcutta-53.	Business Executive and Deputy Managing Director.
9. **Mr. Ashoke Kumar Sinha Roy,** 38/1, Broad Street, Calcutta 19.	Engineer & Wholetime Director.

POYSHA MAKES QUALITY CANS FOR MAJOR INDUSTRIES

FOR FOODS. Poysha is one of the very few producers of open-top sanitary cans needed by the foods industry.

FOR OILS. Leading brands of lubricating oils, greases, cooking oils and vanaspati come in lithographed Poysha cans.

FOR PAINTS. Last year, paints worth crores of rupees were packed in decorated Poysha cans.

FOR PHARMACEUTICALS... and chemicals, dyes and defence requirements, too. Poysha supplies a large part of their needs.

WILL SERVE OTHERS WITH THREE NEW FACTORIES

One of India's two largest manufacturers of tin containers, Poysha will soon be a nation-wide organisation that will offer on-the-spot services with 3 new factories. At Dighe (Bombay), Poysha will make 4 million cans a month, to serve industries in Western and Central India. At Cochin, Poysha's second new factory will make 3 million cans a month for the fishing, pineapple and other industries in the South. At Ghaziabad (Delhi), Poysha's third factory will also produce 3 million cans a month for the rich fruit and vegetable districts of Northern and Eastern India.

This production is on a single-shift basis. If at any time circumstances demand more output, this can readily be achieved by working multiple shifts.

To finance this increase of Poysha's capacity to a crore of cans every month, the Company is raising its Paid-Up Capital from Rs 25 lakhs to Rs 110 lakhs.

OVERSEAS COMMUNICATIONS OF INDIA NEED MODERNISATION

(FROM OUR NEW DELHI CORRESPONDENT)

INDIA'S overseas communication system is regarded as inadequate by modern standards. This country's communications with overseas countries at present take place almost wholly through short-wave wireless transmissions. The service is subject to fading and interruptions and is not as reliable as other modern forms of communications. In addition, the number of circuits which can be operated is severely limited by the shortage of interference-free frequencies in the international sector.

India's overseas communications have thus been very restricted. It has not been possible to put through more than 1,200 minutes of conversation a day to all destinations in the world. Without going in for modern forms of communication, it is not possible to increase this service substantially. The demand for telephone and telex services is considerably in excess of what can be provided at present.

In the last eight years, two forms of overseas communication have been developed, namely, submarine cable telephone wideband system and satellite communications. The wideband submarine telecommunication cables are already in extensive use, especially across the Atlantic and the Pacific. More are being laid. The satellite communication systems have been very much in the news with Telstar and synchronous satellites.

India needs communication channels with the U.K., north-western Europe, North America, Japan and south-east Asia. The traffic to other parts of the world is not yet substantial. The establishment of either submarine cables or satellite communication will provide reliable, 24-hour telephone circuits, in almost unlimited number, to most parts of the world. The expenditures involved in setting up these types of communication are: (a) capital investment; and (b) the financial and operational arrangements in exploiting these circuits of communication to different areas of the world.

Commonwealth Cable System

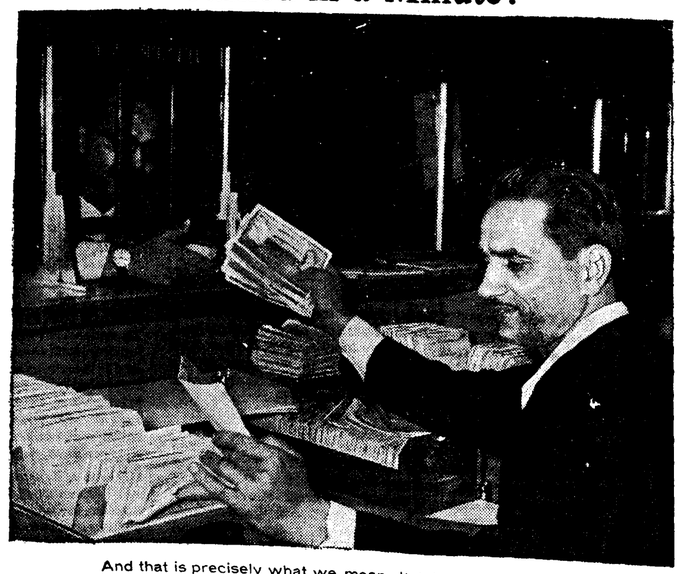
The submarine cable system of interest to India is the Commonwealth cable system. Cables have already been laid between England and Canada, and from Canada to New Zealand and Australia, and are being laid to connect North Borneo, Singapore and Hongkong. Other cables across the Pacific from Hongkong to Japan and from Japan to America are also available to Commonwealth users. India is interested in extending the cable from Malaysia to India.

The capital cost of this extension will be of the order of £5 million, of which India may be expected to contribute £1 million. The cable will provide 80 or more circuits. Under the Commonwealth wayleave scheme, India will have access to south-east Asia, Australia, North America and the U.K., without having to invest further capital, through the circuits existing in the Commonwealth pool. There are no rental charges for the circuits, but the total revenue is shared among the participating countries according to certain well-defined principles. Since the bulk of the traffic is across the Atlantic, extension of the submarine cables should benefit India financially. The scheme can be completed by the middle of 1966, provided India is able to persuade the other Commonwealth partners to accept this extension. This is a matter for negotiation. Apart from the capital cost, which earns profits based on the total Commonwealth traffic, there is no other expenditure. All the operational, financial and technical aspects have already been completed.

All the countries in the world are embarking on both cable and satellite communication. Thinking in India also proceeds on these lines. If the plans are approved by the Government, India can expect a reliable worldwide communication from 1966 onwards.

FOURTH PLAN

N.C.A.E.R. Study on Strategy



The National Council of Applied Economic Research has published a study on the strategy for the fourth plan, in the course of which it says that the plan puts emphasis more on the shifts in policies as well as on new measures which need to be taken to ensure the attainment of certain urgent objectives than on the size of the investment and outlay targets *per se*. These objectives have been stated repeatedly. Among these one was specially emphasised by the Prime Minister, Mr. Lal Bahadur Shastri, in his recent broadcast. Mr. Shastri said that it had become essential to ensure by all possible means that every man gets the necessary quantity of food at reasonable prices. The Planning Commission also stresses this and other urgent objectives, namely, (a) to ensure a minimum level of living to every family, (b) to provide employment to all those who seek it, and (c) to narrow economic and social disparities.

According to the Council, it is not enough to repeat these objectives unless the required measures are taken to ensure their attainment. This has not been done adequately. One of the reasons for this is the all-comprehensive terms in which these objectives are put which gives them a somewhat nebulous character. The time has come to give a more concrete content to these objectives, both in terms of the tangible results sought to be achieved and the time span in which these are to be achieved. Keeping these ends in view, the Council has suggested the following measures:

(1) As it may be difficult to ensure a minimum in all consumption needs, let the Government undertake the responsibility for providing a minimum consumption of foodgrains to all within the fourth plan itself. Since this objective cannot be achieved in spite of a 5 percent rate of growth in agriculture and a 6.5 percent rate of growth in the national income as postulated, the Council suggests measures which would deliberately change the distributive system in order to attain the end in view. These measures are rationing in urban areas and rural public works in the countryside.

(a) Rationing is recommended not only as a temporary measure for the year in which stress is felt, but as a more or less permanent mechanism for a more equitable distribution of scarce consumer goods. The Council recognises that in face of a rapidly rising population and the intense desire to accelerate the growth of the

Cashed in a Minute!

And that is precisely what we mean. It takes no longer than a minute to cash your cheque at any PNB office with the Teller System.

The streamlined Teller System eliminates tokens, queues, all tedious and unnecessary waiting and delay.

PNB was the first bank to have introduced the Teller System as far back as 1954. Today, PNB has 90 branches operating this system and plans to introduce this on-the-spot service in 60 more branches throughout the country.

PNB 3022 C

Gaharoo has the secret of keeping young...

Gaharoo Kaloo used to be the champion wrestler in his village. Today, no one would guess that he is fifty...and a grandfather. Dumb-bells. Ten press-ups every morning. Regular sessions at the gym. This is how Gaharoo keeps fit, young and on top of the job. His personal philosophy: 'Keep to the straight path. Never quarrel. Put your whole self into your work...'

THE RIGHT ATTITUDE

It is just this attitude which has won Gaharoo the respect of his work-mates and which makes him good at his job in the Benzine Installation, Sewree, Bombay. He attends to the blending of Chemicals and the filling of containers. Accuracy matters. If too much were to go in...the Company would lose. If too little...the customer would complain. A careful check on the dips and meters is a must. Gaharoo is careful.

TODAY, AS EVER, PEOPLE LIKE GAHAROO ARE WORKING FOR YOU

To understand Gaharoo one must know that he comes of farming stock—yet, even as a little boy he felt the city's pull. And to the city he migrated when still only a youth. The adjustment was made long ago. Gaharoo spends his holidays on a farmstead at Pratapgarh... which he has added to with his own savings. His working life with Burmah-Shell is equally active and rewarding. After 22 years with the Company, Gaharoo says, quite sincerely, 'This is a job I like.'

Gaharoo and people like him—at all levels of responsibility—are Burmah-Shell. Today, as ever, they are hard at work... working to ensure that vital petroleum products, essential to India's growth and progress, are brought to you at the right place and time, in the right quantities.

BURMAH-SHELL

BURMAH-SHELL are People in the service of the People

economy, there is bound to be a scarcity of essential consumer goods for several years. It also feels that it would be impossible to provide resources for such development as is desired, unless the minimum requirement of the masses is safeguarded. This is an essential condition for allocating resources for heavy, basic and other industries. The establishment of a rationing system on a more firm basis would in time make it more efficient and hence less costly. This in turn would enable other essential commodities to be brought within the scope of rationing if this is found necessary.

Surplus Rural Manpower

(b) In the rural areas, a different approach will need to be adopted. Here there is a large surplus of manpower, a good part of which is also poor and ill-fed. This manpower is a potential capital asset in as much as it can be used for increasing capital formation in the rural areas. This has not been done—at least not adequately. The Council believes that the utilisation of this surplus manpower in the rural areas is a most urgent task—a task which will also be rewarding. The urgency arises out of the need to provide employment to those millions who cannot even afford a minimum consumption of food. It is rewarding because, if organised properly, it can within a span of five years provide the workers sufficient income to make it possible for them to have a minimum level of consumption.

The surplus manpower in rural areas is sought to be used through a nation-wide rural public works programme. These rural public works will engage village folk whose level of consumption is below the minimum in works which are of a capital nature. The workers will be paid in foodgrains (about 75 percent) as well as in cash. A good part of the foodgrains required for payment would come from the better-off families in the village who will gain substantially from the capital assets created through the rural works.

The Council wishes to emphasise that the current thinking in the Government has been mainly in terms of reducing inequalities between the rich and the moderately rich. This has missed the real issue, which is that there are millions in this country who lack incomes even for a minimum level of food consumption. This is the real cause of poverty and also of disparity.

An advantage of the rural public works, which will be organised in close co-ordination with other agricultural and related programmes will be that through adding to the pace of capital formation, it would further increase both agricultural and industrial output. While the rural works would be conducted essentially at the village and district levels, the programme itself should be conceived as a national programme and the organisation to handle it must be built on national lines. It should be financed from PL 480 funds.

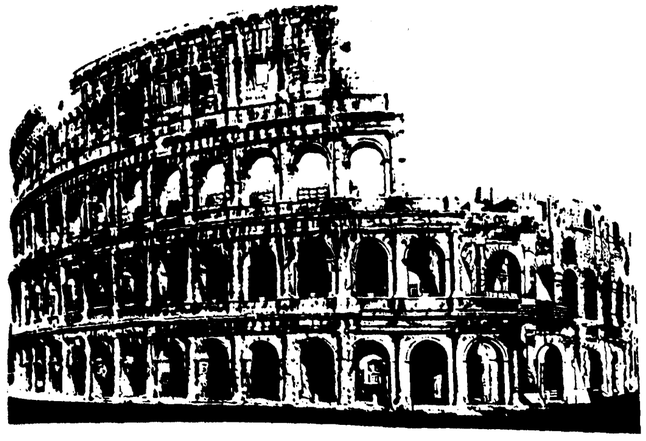
The Planning Commission has been unable to get over the traditional thinking on unemployment. While in each successive plans, they have talked of backlogs and new employment, the country is no nearer a solution. The concept of backlog of unemployment in the rural sector is of doubtful value and help. The so-called unemployment in rural areas is really serious under-employment. To cull out a category of backlog out of this has no statistical basis and it only takes the attention away from the basic nature of the problem as it is found in rural areas. The National Council's approach, as already outlined, is in terms of providing employment opportunities to all those who seek employment from the rural areas, at least to the extent that would ensure minimum consumption of foodgrains. It may be added that the Council is pressing for a minimum 5 percent annual rate of growth of agriculture which would also help in bringing about a reduction in the present inequalities of income between the rural and urban areas.

Even on the assumption that the rate of growth of 5 percent in agriculture would be maintained during the fourth plan, the level of productivity in this sector would still be far below the productivity in other sectors. If this gap is to be covered within a reasonable period of time, it is essential to make rapid strides in industrialisation to enable larger transfers from the agricultural working force into industry. It is partly with this end in view and partly recognising that rapid industrialisation is necessary to bring about a self-generating economy in the near future that the National Council has laid equal stress on industrialisation.

The Council has also suggested that the plan itself should contain a method by which, if there is a shortfall in the rate of growth in the agricultural sector, proper co-ordination measures can be taken to ensure that the injury to the rest of the economy is minimised. The Council has pleaded for definite measures to be taken to ensure a 5 percent rate of growth in agriculture over the plan period, making full allowance for the weather factor.

It is recommended that services and social overheads should be further strengthened. In this field, recommendations made are in line with the Planning Commission's thinking. It is felt that there should be no attempt to slow down the pace of expansion in mass education. The Council is supported in this view by its study of the use of fertilisers which has shown that the literate and educated farmers have got a greater propensity to use fertilisers than the uneducated. To educate the farmers, schooling alone is not sufficient. It is also necessary to build up a corps of technicians whose help and guidance should be easily available to the farmers.

Maintenance Imports



The Council feels that the need for maintenance imports must be met by exports and that the present export target of Rs. 5,100 crores falls short of the requirements of Rs 5,500 crores of maintenance imports. It is suggested, therefore, that the export policy should be more clearly defined and that towards this end, the Industrial Policy Resolution should be amended with a view to giving due importance to industries with export potential. This is stressed specially because it appears that not only the State Governments but even the Ministries at the Centre have not properly appreciated the importance of exports.

In line with the above, it seems necessary that there should be a much deeper economic analysis of the relative value of investment in terms of foreign exchange gains in import-saving industries *vis-à-vis* export promotion industries.

Apart from the deviation in approach outlined above, the Council's suggestions on the investment and outlay targets are more or less in line with the Planning Commission's current thinking. The Council postulates a rate of growth of 6.3 percent a year for the fourth plan and puts the level of investment required for the achievement of this rate of growth at Rs. 18,520 crores and the level of total outlay at Rs. 20,765 crores at 1960-61 prices. To what extent these investment targets and outlays will be feasible will depend not only on the resources, but also on the country's ability to maintain a stable price level. Both of them present some uncertain elements.

If the agricultural target of 5 percent is realised and the targets indicated in other sectors are also realised, it is obvious that the raising of the necessary financial resources will not be too difficult. To some extent, therefore, the physical and financial resources are closely interrelated.

London

U.K. BUSINESS REACTION TO LABOUR VICTORY

(FROM OUR LONDON CORRESPONDENT)

WILD fluctuations were recorded on the London Stock Exchange as the election results came through. At first jobbers marked down prices sharply, and the heaviest falls were, of course, in steel and property shares. But when the figure revealed Labour's small majority there was a strong recovery.

It was being said that the Government would probably be unable to get some of its more controversial measures through, such as steel nationalisation and the fiercer types of business taxation. Some City people positively warmed to the prospect of a Labour Government with a tiny majority. But the foreign trade figures quickly recalled the stern economic realities.

With exports in September sharply lower than in August and imports only slightly lower, the trade gap, on the basis of seasonally adjusted figures, rose to £111 million, against £93 million in August. In balance of payments, the estimated deficit is £59 million compared with £49 million in August. In the first nine months of the year exports have been 4 percent higher than the average for 1963 and imports 14 percent higher. The payments deficit on "visible trade" for the first three quarters of 1964 has been running at an annual rate of over £500 million.

There was no significant pressure on sterling, but after the trade figures and the election outcome the exchange rate was allowed to drop to its "floor" of $2.78¼. From enquiries which poured into the City from all parts of the globe one got the impression that people abroad are holding their hands until they can see more clearly what kind of Government is taking over in Britain and how it will deal with the economic difficulties which are becoming urgent.

Prospects for Shares

A leading broker's reading of the stock market outlook was that share prices would go lower. Financial trouble, he thought, would come to a head almost at once and must lead to restrictions of one kind or another. He suspected that Mr. Wilson might choose to bring the crisis quickly into the open so as to pin the blame clearly on the outgoing Government. Amid confusion investors as a whole were sitting tight and waiting; but he expected selling to develop within a few days.

The investment manager of a large insurance company also took a generally pessimistic view. He pointed to an unprecedented situation with three areas of extreme uncertainty—economic, internal politics and world politics. He thought the market would fall gradually between now and January-February, when he felt that another election might be held and the polls might favour the Tories. Markets would be very thin, and it would be difficult to transact business. He said there was very little weight of accumulated funds, and this factor had been exaggerated. His fund would examine equity sections as a whole, but would not devote as much of its funds to U.K. equities as before.

The Association of Unit Trust Managers said there had been no marked decline in unit trust values. There was no backlog of funds. Nobody was likely to buy for at least a few days. A leading pension fund manager said he was not alarmed by the situation. His fund bought for the very long term. He was not worried about Labour getting in with a precarious majority because he did not think the situation would last longer than 18 months. Meanwhile he had to buy for 20 to 30 years ahead. There was no weight of funds uninvested, and new funds would continue to be invested as they came in. But they would not do anything before the Queen's Speech or an informative policy speech from Mr. Wilson. The market had discounted Labour with a working majority off and on for 18 months, and there was not likely to be any great fall in share prices, though this was subject to what Mr. Wilson did to put the balance of payments right. He looked for idle markets without large rises or falls.

A stockbroking firm, commenting on the election in a circular to clients, considered the result especially unfortunate in view of the urgency of the balance-of-payments position. On the trade figures, it said no eleventh-hour revival in exports had occurred. A degree of liquidity was still advisable for investors, though it would also be a prudent move to invest a proportion of funds abroad. It picked out leading Canadian equities as offering worthwhile opportunities.

Advance Trade Figures

The trade figures are bad enough to shatter the hope that the payments deficit will gradually diminish without any deliberate action. Seasonally adjusted, exports in September were down to £346 million—August £370 million—and imports to £471 million, against £479 million. With exports once again disappointing, the deficit on trade in the balance of payments is estimated at £59 million, bringing the gap for the first nine months of the year up to an annual rate of over £500 million. What is known of the trends in the invisible earnings and long-term capital account does not suggest much help from those transactions for the overall payments gap.

Exports in the third quarter were 1 percent less than in the second quarter, and in the first nine months of the year they were 4 percent more than the average for 1963. Imports in the third quarter were the same as in the previous three months, and in the first nine months of the year they were 14 percent up on the previous year. These figures have two meanings: the economy has failed to export goods at the rate required to sustain economic growth at 4 percent a year; and the steep rise in imports, which was thought to be a passing phase of the growth experiment, turns out to be distressingly persistent.

Clearly it will be one of the first tasks of the new Government to make an urgent review of the foreign trade situation and to devise remedies. Fortunately the crisis is not such as that have passed a number of times before. There is no run on sterling. Though there was some precautionary selling of sterling and some support was given after the rate had been allowed to fall to its virtual floor of $2.78¼, this was not costly for the reserves.

LET A LATHE MAKE HIS LIFE

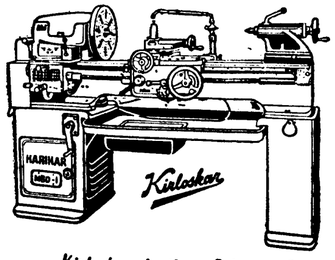
Ramlal: Abdul, I have brought my son Narayan to show him your workshop.

Abdul: With pleasure, Ramlal. Narayan, now that you have finished your studies what you wish to do for the future?

Narayan: Uncle, we came here to seek your advice in this matter.

Abdul: I shall gladly give it. Let us go on our round of the workshop.

Ramlal: Abdul, I am seeing your workshop after some years and I am glad to observe that you have very much increased your operations.



Abdul: You are right. I had only one Harihar Lathe when I started. I have built up by intelligent and hard work a reputation for good workmanship and my business is growing every year. We insist here on always doing a thorough job.

Ramlal: I am very happy about your progress. But tell me, Abdul, why you have all Mysore Kirloskar Lathes only installed here?

Abdul: Ramlal, the first lathe gave me such satisfactory work that I bought another of the same model. I then made a rule that we should have only Mysore Kirloskar Lathes in this workshop. Made by a pioneer manufacturer, these Lathes are dependable, sturdy, always uptodate in design and construction. They are economical and need practically no servicing.

Ramlal: Now turning back to the question of Narayan's future what do you suggest?

Abdul: Well, seeing my workshop is an advice in itself. I suggest that you get him started as I did with a Kirloskar Lathe and lead him to a life of independence. If he wants I shall arrange for his training in my workshop where he will learn to operate these various lathes made by Kirloskar.

Jute

GUNNY OUTPUT AND OFFTAKE UP, BUT PROSPECTS NOT ROSY

IN spite of the erratic conditions prevailing in the gunny market and the high price of raw jute since the beginning of the new season, the industry seems to have done fairly well during the quarter ended September 1964. Compared with the production and offtake during the corresponding period of 1963, the industry's performance has been good this year. Working for the same 624 hours, mills reporting to the I.J.M.A. have produced 333,200 tonnes in July-September this year, against 316,300 tonnes in the corresponding period of 1963. Output of hessian has risen from 135,700 tonnes to 142,700 tonnes, of sacking from 127,200 tonnes to 134,400 tonnes and of miscellaneous goods from 28,700 tonnes to 32,400 tonnes; output of carpet-backing cloth has, however, dropped fractionally from 24,700 tonnes to 23,700 tonnes.

Total despatches have increased from 303,000 tonnes to 331,900 tonnes—of hessian from 136,600 tonnes to 141,500 tonnes, of heavy goods from 117,300 tonnes to 135,700 tonnes, of carpet-backing cloth from 18,500 tonnes to 20,700 tonnes and of other goods from 30,600 tonnes to 34,000 tonnes. The consumption of burlap in the U.S.A. has also risen from 217.1 million yards to 225.7 million yards. But exports show a fractional decline from 237,000 tonnes to 236,200 tonnes. Shipments of hessian have risen from 126,900 tonnes to 127,900 tonnes, of carpet-backing cloth from 18,500 tonnes to 20,700 tonnes and of other goods from 23,300 tonnes to 23,500 tonnes; but sacking shipments have dropped by 4,200 tonnes to 64,100 tonnes, mainly due to the competition from Pakistan.

Internal consumption has picked up appreciably during the quarter from 66,000 tonnes to 95,700 tonnes. The offtake of sacking has risen from 49,000 tonnes to 71,600 tonnes mainly because of purchases by the Central Government. The offtake of hessian also has increased from 9,700 tonnes to 13,600 tonnes and of other goods from 7,300 tonnes to 10,500 tonnes.

Prospects Not Rosy

In spite of the fair statistical position so far, it would be wrong to paint a rosy picture about the prospects. For most of the deliveries effected during the past quarter, orders were booked by the mills well before the upsurge in fibre prices in the middle of July. Thereafter the price of raw jute has settled around Rs. 38.50 a maund, f.o.r., ready, Calcutta, basis Assam Bottoms, despite the adoption of various restrictive measures by the authorities and the exercise of voluntary restraint by the industry. Prices of jute goods have also risen, but the disparity between fibre and gunny prices has increased, narrowing down the margin of profit.

Industry circles feel that at the current level of fibre prices, mills can make very little profit on sacking, while the margin on hessian has been squeezed to practically uneconomic levels. Carpet-backing cloth has also become less profitable as demand has failed to keep pace with the supply. Since the beginning of the strike in the Pakistani industry, Clive Row has been led to believe that the loss of output in Pakistan will be considerable and that Indian mills will have a rush of orders from overseas. But so far the expected orders have not come. It remains to be seen what benefits will flow to India from the setback to the Pakistani industry.

To stabilise the industry in this country, it is imperative that all possible assistance should be given to the mills to cut their production costs. Besides, well-conceived measures are necessary to bring down the prices of raw jute to more realistic levels so that mills can continue production at the maximum levels, helping India to meet the expanding world demand for packaging materials without inviting the threat of substitutes.

Sharp Fall in September Output

In spite of an increase in the number of working hours from 200 in August to 208 in September, mills reporting to the I.J.M.A. have reported a sharp drop in the output of gunnies from 111,500 tonnes to 104,000 tonnes. The decline in production is attributed to the sealing of some looms by mills on their own initiative. No precise idea is available as to the loomage affected so far. But the decline in tonnage on the basis of production in August is of the order of 10.4 percent.

Circles close to the industry believe that the cutback is due partly to a shortage in the availability of matching fibre for batching and partly to the big stocks of gunnies. In view of the erratic conditions in the gunny market and the high prices of raw jute, mills may have considered it prudent to modify their production plans. The maximum decline has been in the output of miscellaneous goods from 11,300 tonnes to 7,100 tonnes. Heavy goods output has dropped from 45,100 tonnes to 42,900 tonnes, carpet-backing cloth from 8,100 tonnes to 7,400 tonnes and hessian from 47,000 tonnes to 46,600 tonnes.

In September 1963, the mills worked for 200 hours at the maximum level, producing 100,900 tonnes of gunnies—44,200 tonnes of hessian, 41,500 tonnes of sacking, 8,100 tonnes of carpet-backing and 7,100 tonnes of other goods.

Drop in Gunny Offtake

A decline in the export offtake from mills reporting to the I.J.M.A. from 80,600 tonnes in August to 74,900 tonnes in September has caused a drop in the despatches of jute goods from 114,900 tonnes to 109,100 tonnes. Of the total offtake, that of hessian has fallen by 2,300 tonnes to 45,200 tonnes, of miscellaneous goods by 2,600 tonnes to 8,800 tonnes, of carpet-backing cloth by 500 tonnes to 6,600 tonnes and of heavy goods by 400 tonnes to 48,500 tonnes.

Exports of hessian have declined by 2,400 tonnes to 40,400 tonnes, of other goods by 2,500 tonnes to 5,500 tonnes, of carpet-backing by 500 tonnes to 6,600 tonnes and of sacking by 300 tonnes to 22,400 tonnes. Internal consumption has been about maintained. The total has been 34,200 tonnes in September, against 34,300 tonnes in August. Of this, offtake of sacking has been 26,100 tonnes (against 26,200 tonnes), of hessian 4,800 tonnes (against 4,700 tonnes) and of miscellaneous goods 3,300 tonnes (against 3,400 tonnes).

In September 1963, the total offtake was 96,500 tonnes—45,800 tonnes of hessian, 35,500 tonnes of sacking, 6,600 tonnes of carpet-backing cloth and 8,600 tonnes of other goods. Exports absorbed 42,500 tonnes of hessian, 19,100 tonnes of heavy goods, 6,600 tonnes of carpet-backing and 5,800 tonnes of other goods, making a total of 74,000 tonnes. Internal consumption totalled 22,500 tonnes—3,300 tonnes of hessian, 16,400 tonnes of sacking and 2,800 tonnes of miscellaneous goods.

U.S. Burlap Consumption Up

Burlap consumption in the U.S.A. has risen fractionally from 80.8 million yards in August to 81.3 million yards in September. The country consumed 79.7 million yards in September 1963. The total offtake for the nine-month period ended September 1964 is 662 million yards, against 680.8 million yards for the corresponding period of 1963. The monthly average so far comes to 73.55 million yards this year, against 75.64 million yards last year. U.S. stocks at the end of September also declined to 274.5 million yards from 280.9 million yards a month earlier. Of these, 150.1 million yards (against 152.3 million yards) were spot stocks and 124.4 million yards (against 128.6 million yards) were afloat.

In September 1963, the closing stocks were 288.6 million yards—161.6 million yards spot and 127 million yards afloat. At the September level of consumption, the stocks will last 3.37 months. The corresponding stock duration on the same basis at this time a year ago was 3.62 months.

THE JUTE MARKETS

Manufactured Goods: Despite brisk buying by the Government of India, easier conditions prevailed in the Calcutta gunny market during the past week. A setback in exports, coupled with a decline in overseas business, produced a bearish impact. Reports of an increase in the consumption of burlap and a decline in stocks in the U.S.A. during September, combined with scattered hessian business with that country, and woolpack sales to Australia failed to arrest the drift. Earlier in the week mills emerged as keen sellers for all positions, depressing prices. Towards the close, the possible effect of the levy of a 15 percent surcharge into the U.K. on imports, rumours about the end of the strike in Pakistani jute mills, end-of-account considerations and some amount of short-selling caused big fluctuations in the prices of sacking for November. Hessian also softened somewhat after minor movements in sympathy with heavy goods. The hedge market trend depressed sentiment in the spot market as well. Prices eased appreciably in heavy goods and to a small extent in hessian. Completed business included an Indian Government tender for about 20,000 bales of B Twills for October-November delivery. Turnover was fair in heavy goods and moderate in hessian. The undertone was hesitant at the close.

Wednesday's quotations were as follows:

40in. 7½oz.	37.10	37.30	37.50	37.85
40in. 8oz.	39.75	—	—	—
40in. 10oz.	49.10	49.60	49.85	50.45
B Twills	147.15	145.90	145.00	144.25
Cornsacks	150.25	150.00	148.00	146.75
Heavy Cees (Plain)	148.00	145.90	144.75	143.75
A Twills	175.50	175.50	175.50	174.00
Liverpools	158.50	159.50	159.50	160.00

Raw Jute: Prices of raw jute softened by about Re. 1 a maund during the past week because of an easier trend in the terminal markets and the keenness of weak holders to dispose of their stocks even at a discount. With the feeder roads drying up, daily arrivals of fibre improved from 110,000 maunds to 175,000 maunds. Growers and stockists were eager to sell part of their holdings to meet their Diwali festival expenses. But upcountry prices continued to rule above the Calcutta parity levels. After practically completing the maximum purchase quota of 175,000 bales for the week ended 31st October, mainly in selected-grade jute for ready and near delivery, mills became cautious. They were awaiting a further decline in prices, and transacted business with weak holders at slightly lower levels. It produced a bearish impact. In view of the priority allotted by the railways for the movement of jute from the agency stations to Calcutta and the brisk transport of fibre by river, arrivals were heavier in the Cossipore market. Sellers seemed anxious to clear their stocks. The forthcoming end-of-account considerations were bearish. Turnover was moderate, and the undertone hesitant at the close.

Wednesday's quotations were as follows:

Assam-Agartala Jute	40.00	37.00	107.17	99.13
Northern Jute	39.50	36.50	105.83	97.79
Western Desal Jute	38.50	35.50	103.15	95.11
Selected Daisee	40.50	37.50	108.51	100.47
Assam-Agartala Tossa	40.00	37.00	107.17	99.13
Mesta: Assam-Northern	38.00	35.00	101.81	93.77
Local Daissee	37.50	34.50	100.47	92.43
Bihar Dist.	36.50	33.50	97.79	89.75

THE U.K. JUTE MARKETS

LITTLE CHANGE IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

VERY little change took place in the raw jute market during the past week. The position was quiet, and shippers refused to accept less than their quoted rates. There was nothing to indicate that any major alteration should take place in values. The actual size of the crop is the main factor, and it is impossible to ascertain any reliable estimate at present.

Dundee spinners showed very little interest in shipment jute and the business passing was mainly for ex warehouse parcels. A substantial quantity of jute will be coming to the U.K. within the next two to three months and a portion of this is still unsold to spinners. This is making the position very irregular here, as there are always sellers willing to accept less than the generally quoted rates.

Offers were made at £150 for Mill Firsts, at £137 for Export Firsts, at £124 10s for Export Lightnings and at £118 for Export Hearts, c.i.f. U.K., for October-November shipment. Offers of Grade Tossa-2/3 were scarce with the lowest price at £150. Grade Tossa-4 and Dacca Tossa-6 were available at £137. Outport Tossa-2/3 ranged from £125 10s and Outport Tossa-4 from £117 10s, October-November.

Prices of cuttings were firm at £92 10s for S.N.C. and at £84 for N.C. Only a few offers of mesta were made and prices were dear at £112 10s for A. at £103 10s for B and at £97 10s for C. for November-December shipment.

The Calcutta goods market was steady and sellers here took much more interest in the position as the import of hessians for bag-making purposes are being returned to private trading. Prices are at 83s 3d for 40in. 10oz. and at 63s 1d for 7½oz. a 100 yards c. and f. U.K. for October shipment, at 83s 9d and 63s 5d November and at 84s 2d and 63s

8d December. B Twills were at 257s 7d, 255s 4d and 254s 7d for the respective shipment periods.

THE PAKISTANI JUTE MARKETS

FIBRE UNCHANGED

(FROM OUR DACCA CORRESPONDENT)

THERE was little change in the market during last week, although Russia and China made substantial purchases. Other communist countries have been buying but this has had no effect on the pucca bale market. It has had even less effect on the overseas market. More and more spot and afloat jute is being offered at discount prices. In the meantime the markets remain firm in the interior with occasional spurts of buying by odd balers, who have managed to find some finance.

I.J.M.A. PRODUCTION FIGURES FOR SEPTEMBER

The Indian Jute Mills Association reports the production of jute goods for the month of September as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	
8,946 tonnes	(8,805 tons)
2,32,67 thousand metres	(2,54.5 lakh yds.)
1,70,8 lakh nos.	
(b) Sacking	
41,869 tonnes	(41,208 tons)
9,18.50 thousand metres	(10,04.5 lakh yds.)
4,78.5 lakh nos.	
2. Gunny cloth	
(a) Hessian	
37,669 tonnes	(37,074 tons)
12,81.53 thousand metres	(14,01.5 lakh yds.)
(b) Sacking	
1,070 tonnes	(1,053 tons)
23,70 thousand metres	(25.9 lakh yds.)
3. Carpet backing	
7,358 tonnes	(7,242 tons)
56,10 thousand metres	(61.4 lakh yds.)
4. Other manufactures	
7,053 tonnes	(6,941 tons)
5. Total production	
(All kinds)	
1,03,965 tonnes	(1,02,323 tons)

Summary

	(000 metres and 00,000 yds.) Sept. '64	Aug. '64	Sept. '63
Hessian	15,14.20	15,22,78	14,56,12
	(16,56)	(16,65)	(15,92)
Sacking	9,42,20	9,79,49	9,04,13
	(10,30)	(10,71)	(9,89)
Carpet Backing	56,10	63,16	62,75
	(61)	(69)	(69)
	(000 tonnes and tons)		
	Sept. '64	Aug. '64	Sept. '63
Hessian	46.6	47.0	44.2
	(45.9)	(46.2)	(43.5)
Sacking	42.9	45.1	41.5
	(42.3)	(44.4)	(40.8)
Carpet Backing	7.4	8.1	8.1
	(7.2)	(8.0)	(7.9)
Others	7.1	11.3	7.1
	(6.9)	(11.2)	(7.1)
Grand total	104.0	1,11.5	100.9
	(102.3	(1,09.8)	(99.3)
Hours worked	208.0	200.0	200.0

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are in British units.

DR. MACMILLAN GETS BRITISH TEXTILE INSTITUTE AWARD

Dr. W. G. Macmillan, Research Director of the Indian Jute Mills Association, is to receive the British Textile Institute medal for 1964. This award was instituted in 1921 as a means by which recognition could be given to distinguished service to the textile industry in general and to the Textile Institute in particular.

Dr. Macmillan will be retiring from India next year after more than 27 years as head of the Association's Research Institute (originally Research Department). The award of the British Textile Institute medal is a notable tribute to Dr. Macmillan's services in the field of jute textiles research.

Commodity Markets

BUMPER TEA OUTPUT IN NORTH INDIA

(FROM OUR SOUTH INDIAN CORRESPONDENT)

TRADE estimates place tea production in south India during September at 17.4 million lbs, against 12.7 million lbs in the same month last year. This brings the crop for the first nine months of the year to about 127.4 million lbs. When compared with the production figures for the corresponding period of 1963, this represents a fall of 15.9 million lbs. Planting opinion is that it is almost impossible to cover this gap in the remaining quarter of the year although some reduction of the shortfall is possible. North India has, however, produced a record crop exceeding its 1961 output. From the present trend it appears that this area will produce over 600 million lbs this year. This excellent performance by north Indian gardens, which were lucky in having very favourable weather this year, might completely wipe off the deficit in the south; according to one estimate, the total Indian production in 1964 may show a 40-million-lb gain over the 1963 output of about 760 million lbs.

Tea exports from India are lagging behind last year's. Exports up to the end of July are placed at 166 million lbs, against 203 million lbs in the same period last year. Although production in north India has been higher, exports have been lower up to the end of June. The explanation given is that very little tea was available during the first few months of 1964 as a consequence of two successive years of lower production and higher exports. The new season's tea was available only from last June. It is said that exports from June have been on the high side. Exports from south India also have been lower and this is attributed to lower production resulting from the unprecedented drought in this region in the first half of the year. Conditions have improved since then and production has been picking up. The shortfall in south Indian exports, it is expected, will be covered with the increase in production. Official expectation is that despite the initial shortfalls the export this year will reach at least 510 million lbs.

A special correspondent adds: A notification dated 18th October from New Delhi states. "There has been a substantial fall in the exports of tea during the first half of this year. This is partly explained by a smaller carryover from last year's crop and also by a fall in production in south India. The exports during June, July and August have, however, shown a trend of increase. If this continues, the exports of tea this year might reach last year's level." North Indian output up to 15th October shows a further increase at 487,087,774 lbs. This compares with 451,937,446 lbs in 1963 and 486,405,512 lbs in 1961. This takes this year's production to an all-time high as far as north India is concerned. Exports have improved since July, and the figures suggest that final results for the year as a whole will be good. The doubtful factor is prices. Teas have so far sold at somewhat better rates than expected, and the commodity continues to realise satisfactory prices on the London market also, where good Assam and Dooars types have fetched high prices up to the sale on 19th October.

COFFEE

Pool Receipts Touch New High

Our South Indian Correspondent writes:

Actual receipts of coffee in the Coffee Board's pool until last month from the 1963-64 crop have touched a new high of 68,450 tonnes, comprising 28,400 tonnes of Plantation, 10,450 tonnes of Arabica Cherry and 29,600 tonnes of Robusta. Corresponding receipts for the last season were 55,336 tonnes—24,405 tonnes of Plantation, 9,199 tonnes of Arabica Cherry and 21,732 tonnes of Robusta. Out of the 1963-64 crop, 28,623 tonnes comprising 17,050 tonnes of Plantation, 3,976 tonnes of Arabica Cherry and 7,597 tonnes of Robusta have been sold for export by the Board up to the end of September 1964. Releases in the internal market during the first nine months of the year were for a total of 25,454 tonnes. The corresponding figure for the previous year was 25,110 tonnes. The Coffee Board has carried out a large marketing operation by disposing of 28,623 tonnes of coffee for export and 25,454 tonnes for internal consumption during the first nine months of 1964.

How much of the internal consumption of around 34,000 tonnes a year is due to the release policy of the Coffee Board and how much of it is due to a marked sense of adequacy is not clear. But with production reaching about 70,000 tonnes in 1964-65, the export quota granted to this country of just over 22,000 tonnes under the International Coffee Agreement is wholly inadequate. Given favourable weather, the Indian production could be well over 80,000 tonnes of which 45,000 tonnes should be easily available for export. The special study group deputed to India by the International Coffee Organisation to study on the spot the country's export potential may be convinced of this fact.

CASHEW NUTS

Sales Promotion Office in Brussels

The Cashew Export Promotion Council's office for sales promotion in western Europe is expected to start functioning in Brussels shortly. West European countries offer a great market potential for Indian cashew, and the attempt of the Council is to tap this market fully. With the coming into being of a rival industry based on mechanisation in other parts of the world, India's monopoly in cashew trade will be disturbed. Mechanised units are being set up in some of the African countries from where India gets the bulk of her raw material supply at present. This is a real challenge for the cashew processing industry. If the processors here make a conscious effort towards improving the product and instituting appropriate measures to project the image of the Indian cashew nuts in the consumers' mind, it will not be difficult to meet this challenge.

CARDAMOM

Preliminaries for Setting Up Board

Mr. H. Sitarama Reddy, chairman of the Cardamom Development and Marketing Committee, has disclosed that the preliminaries for setting up a Cardamom Board have been finalised and it will come into existence after Parliament approves the scheme for its constitution in its December session. He said this while addressing the cardamom growers of Bodinayakanud recently.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to September 1964. As compared with August, the September index for Food shows an increase of 9 points. The indices for Fuel & Lighting, Clothing and Miscellaneous remain unchanged at 308, 620 and 331 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcuta shows that the cost of living rose by 5 points during September 1964.

COMPANY AND PUBLIC NOTICES

BROOKE BOND ESTATES INDIA LIMITED

Notice of the Seventeenth Annual General Meeting

NOTICE is hereby given that the Seventeenth Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, "Brooke House", 2, Metcalfe Street (Ganesh Chandra Avenue), Calcutta on Tuesday, the 1st December, 1964 at 2-30 p.m. for the following purposes:—

1. To consider and to adopt the Profit and Loss Account for the year ended 30th June, 1964, the Balance Sheet as at that date and the Reports of the Directors and Auditors thereon.
2. To declare dividends on Ordinary and Preference Shares.
3. To appoint Directors in the places of those retiring.
4. To re-appoint the Auditors and to fix their remuneration.

NOTICE is also hereby given that the Register of Members of the Company will be closed from the 6th November to 1st December, 1964 both days inclusive.

By Order of the Board,

BROOKE BOND ESTATES INDIA LIMITED,

D. A. SHARMAN,

Secretary.

Note: 1. A member entitled to vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

CALCUTTA, 28th October, 1964.

THE BARNAGORE JUTE FACTORY COMPANY, LIMITED

(Incorporated in England with Limited Liability)

DIVIDENDS.

THE following Dividends have been recommended in respect of the year ended 31st March, 1964, payable on the 9th December, 1964:—

1. On the Preference Shares @5% (Five Shillings per share) less U.K. Income-tax of Seven Shillings and Nine Pence in the £ Sterling.
2. On the Ordinary Shares @ 30% (£1-10s-0d per share) less U.K. Income-tax of Seven Shillings and Nine Pence in the £ Sterling.

Payment of any Dividend declared will be made only to those Members whose names are registered in the Books of the Company on 2nd December, 1964 or to their Mandatees.

Dividend Warrants to Members on the Calcutta Register will be made payable in Calcutta.

No applications for warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

The Share Transfer Books will be closed from 19th November to 2nd December, 1964, both days inclusive.

By Order of the Board,

JARDINE HENDERSON, LIMITED,

C. EVANS,

Secretary,

Agents.

4, Clive Row,

Calcutta-1, 19th October, 1964.

DHELAKHAT TEA COMPANY, LIMITED

21st October, 1964.

Explanatory Statement as required under Section 173 (2) of the Companies Act, 1956

To

THE SHAREHOLDERS:

DHELAKHAT TEA COMPANY, LIMITED.

SIR/MADAM,

The Company often purchases from its Managing Agents, namely, James Warren & Co Ltd., tea garden supplies of all kinds including tea machinery, motor-vehicles, tractors and implements, accessories and spare parts therefor and tools and other tea garden requisites in all of which James Warren & Co. Ltd. regularly trade or do business and which the Company may require for the purpose of its business. The Company finds it advantageous to have normal trading transactions in respect of the said tea garden supplies with the Managing Agents which they had in the past. It is considered desirable that the Company should execute an Agreement with its Managing Agents to be effective from 1st September, 1964 for the said tea garden supplies. An Agreement on the lines indicated in the Special Resolution set out in the annexed notice will be executed after its approval by the shareholders.

The Managing Agents of the Company hold 37,409 shares in the Company and may accordingly be deemed to be concerned or interested in the resolution to the extent of such shareholding.

To the extent of their qualification shares and additional shares held by Mr. A. N. Roy, a Director in the Company, the Directors may be deemed to be interested in the proposed Resolution.

Mr. A. K. J. Henderson may also be deemed to be interested as a person appointed to the Board of the Company by the Managing Agents under a provision in that behalf contained in the Company's Articles of Association.

By Order of the Board,

JAMES WARREN & COMPANY, LIMITED,

Managing Agents.

DHELAKHAT TEA COMPANY, LIMITED

NOTICE is hereby given that an Extra-ordinary General Meeting of the members of Dhelakhat Tea Co. Ltd. will be held at the Registered Office of the Company at 31, Chowringhee Road, Calcutta, on the 21st day of November, 1964, at 9 a.m. to consider and if thought fit to pass the following Special Resolution:—

"RESOLVED that pursuant to Section 360 of the Companies Act, 1956 the Company hereby approves of a contract (a draft of which is placed before the meeting and signed by the Chairman for identification) being entered into between the Company of the one part and James Warren & Co. Ltd., the Managing Agents of the Company, of the other part in respect of purchase by the Company from the Managing Agents, of Tea Garden supplies of all kinds including tea machinery, motor-vehicles, tractors and implements, accessories and spare parts therefor and tools and other tea garden requisites in all of which the Managing Agents regularly trade or do business and which the Company may require for the purpose of its business, PROVIDED that the Company shall pay for such supplies from James Warren & Co. Ltd. at such times as may from time to time be mutually agreed and at such prices as may from time to time be mutually agreed but so that any such prices should not be less favourable to the Company than market rates or which are otherwise reasonable."

By Order of the Board,

JAMES WARREN & COMPANY, LIMITED,

Managing Agents.

Registered Office:

31, Chowringhee Road, Calcutta.

Dated the, 21st October, 1964.

Notes: (1) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(2) The draft of the Agreement referred to in the resolution is available for inspection by any member of the Company at the Registered Office of the Company between the hours of 10 a.m. and 5 p.m. on any working day prior to the meeting.

(3) The Share Transfer Books of the Company will remain closed from 14th November, 1964 to 21st November, 1964, both days inclusive.

For a nominal charge "Capital's Statistical Department can provide you with a certificate of share prices.

(V) May be redeemed at par on 30-6-56 or any subsequent interest date on one month's notice.

(W) After giving six months notice

(X) Rs 5,00,000 will be redeemed each year from and after 1964.

These Debentures are registered and are transferable by transfer Deeds.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends. T means that dividend tax is deducted at source.

COAL COMPANIES

O., Po., F. and Dd Indicate Ordinary, Preferred Ordinary, Founders and Deferred Shares respectively. 'P' next to the name of the company indicate that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

MANY SPEECHES BUT FEW DECISIONS FROM N.D.C.

THE two-day session of the National Development Council which was held in New Delhi last week does not appear to have been a particularly fruitful affair. The fact is not surprising: the Council is supposed to be the country's top economic policy-making body, but it is several years since it degenerated into a forum for windy speeches and sectional protests from which vital policy decisions rarely emerge. The first major issue before the session related to the size and pattern of India's fourth five year plan. The second major issue—second only because it was discussed more fully at the meetings of State Chief Ministers just before and after the formal N.D.C. session—centred on the measures necessary to deal with the food crisis now afflicting the country. In the case of both, there was a wide measure of agreement on generalities, so the usual resolutions were cheerfully made and heartily endorsed. But when specific measures to implement the resolutions came to be mentioned, the area of agreement seemed suddenly to shrink: asked to sanction positive action, many of the Chief Ministers responded with a stony silence implying that the suggestions were beyond comprehension, while others spoke up only to point to their local difficulties. That debates of this genre should sometimes be rambling and inconclusive, is understandable. The National Development Council, however, has yet to demonstrate that it is moving from the stage of a debating society to a fount of leadership and action.

The handicaps under which the Council laboured are not difficult to appreciate. The chief of these was that the main subject under discussion —the fourth five year plan—is still a vague fantasy, dreamed up by the perspective planners and endorsed puzzlingly by the Planning Commission and the Central Cabinet. The Council might have been expected to look a little more closely into the feasibility of a Rs. 21,500-crore or Rs. 22,500-crore plan. The cue for such an examination was provided by the Central Finance Minister, Mr. T. T. Krishnamachari, who declared in a curious and unnecessarily obscure phrase that "we tried to stretch the resources position to an extent almost co-terminus with elasticity"—thereby presumably implying that the resources for so large a plan might not be available. The point was put more directly by Mr. Asoka Mehta, deputy chairman of the Planning Commission, when he said: "The resources in sight are anything between Rs. 10,500 crores and Rs. 11,500 crores, while we have suggested a public sector investment outlay (sic) of Rs. 15,000 crores. But we feel that, by better planning and better effort, we may be able to perhaps raise resources".

The National Development Council might have been expected to ask, specifically, by what miracles of "better planning and better effort" it was hoped to find another Rs. 4,000 crores or Rs. 5,000 crores. But it did nothing of the sort. Nor did it bother to question the deception underlying the planners' outlay estimates in that they are based on 1963-64 prices, whereas prices are already about 17 percent higher than they were a year ago and there is no sign of their coming down appreciably in the foreseeable future. Mr. Mehta casually highlighted another weakness of the fourth plan proposals when he mentioned that although "the size of the fourth plan is twice that of the third plan, . . . still the foreign assistance or exchange component of it is kept where it was in the third plan". But the learned Chief Ministers and others at the N.D.C. meeting could not be persuaded to take interest in such egregious anomalies either.

What then, might one ask, did the distinguished members of the National Development Council talk about? Judging from one official summary of the results, it seems they agreed, to begin with, that for India a big plan would be a Good Thing. The annual rate of growth to be aimed at would be "not less than 6 percent"—a minor but welcome departure, perhaps, from the mathematical mumbo-jumbo which earlier led the planners to postulate such precise growth rates as 6.3 percent, 6.5 percent or 7 percent. It was agreed that a lot of things would be expanded and improved—agriculture, consumer goods industries, other industries, power, transport, productivity, family planning programmes, and employment. It was also agreed that progress would be accelerated by "appropriate advance action programmes", "preparation of detailed project reports", "careful selection of quick-yielding schemes" and "completion of administrative arrangements by starting training programmes and placing the trained staff in position". If these struck outside observers as fashionable slogans whose emptiness had been proven by a decade of experience, the Council was not dismayed. The only dissonant contribution it proceeded to make was that while agriculture was rightly to receive top priority, and the allocation for social services had been substantially increased, the provisions for power, major irrigation, transport and industries "had not been stepped up adequately." Many will now hope that if any such stepping up has to be done, it will be at the cost of social services and not of agriculture.

More important than the question of allocation of resources between various sectors of the economy was how the resources were going to be raised for a start. Few of the members of the N.D.C. seemed to be particularly interested to know where the money for the private sector's investment target of Rs. 7,000 crores would come from; the assumption appeared to be accepted that private entrepreneurs would always somehow manage to pluck money off trees or secure it by alchemy out of thin air. But even on the question of raising money to finance the public sector's outlay the discussion was vague and directionless. The Centre has for some years now been getting angrier and angrier that the States do not raise enough money; the Prime Minister, Mr. Shastri, said so politely, and so did Mr. Krishnamachari. On Mr. Asoka Mehta's showing, however, the States have not done too badly, for they "promised Rs. 610 crores in the third plan and by now Rs. 570 crores are likely to be raised"—with one more set of State Budgets still to come before the current plan ends. (It is hoped that these figures are reliable, since the official Prog-

Mr. Mehta's speech contains some surprising inaccuracies.)

The burden of Mr. Krishnamachari's speech at the session was that most of the extra Rs. 3,000 crores to be raised through additional taxation, etcetera, would have to be raised by the States themselves This the State Chief Ministers were quite clearly reluctant to accept. They presumably could not shake themselves away from their old view that the States have hardly any new sources of revenue left to tap, so the Centre should give more aid and also share more of the proceeds of income tax with them. Mr. Shastri made the specific suggestion that betterment levies could be imposed, and that State taxes would be more acceptable to the rural population if they could be related directly to the benefits they financed. Mr. Krishnamachari offered other suggestions: that evasion could be checked by merging sales taxes into excise duties in the case of a larger number of commodities; that agricultural income tax could be collected along with the ordinary income tax; and that the Centre could take over the financing and implementation of individual projects which the States might find burdensome. On all these points, however, the response was indifferent, if not negative. The States were more concerned with protecting their rights and their autonomy than with seeking a practical via media for implementing plan programmes vigorously.

In the course of his speeches that were otherwise admirable for their directness and simplicity, Mr. Shastri made two controversial proposals. The first was for setting up a National Planning Council, consisting of scientists, engineers, economists and experts, to help the Planning Commission on a wholetime basis. If the intention was to dilute the influence of politicians and amateur busybodies who now dominate the Commission, there might have been something to be said for the idea. But, many might ask, if the Commission does not already have such expert talent at its disposal, what on earth is it doing? Rather than set up yet another Council, might it not be better to rid the Commission of the surplus fat it has acquired over the years, let it induct the experts it needs and then become a technical body far less susceptible to political pressures than it is at present? Mr. Shastri's second suggestion was that the Government should establish basic consumer goods industries in the public sector to manufacture such essential requirements as cloth, sugar, cement, drugs and medicines. But he perhaps forgot that if the supply of these commodities is short, it is to a large extent because of the Government's own industrial and import licensing policies. Secondly, the main problem which most of these industries face is that of getting enough raw materials for full-capacity working; to establish new capacity in the public sector without first attending to the raw material supply would be a waste of effort and money. Finally, there is one category of consumer goods which is more important than all these, which Mr. Shastri's Government is supposed to be looking after, and of which it has made a complete hash—agricultural products, and in particular food. It is time the Government attended to this one first and talked about the others later.

CODE FOR MINISTERS

THE code of conduct for Central and State Ministers announced last Thursday is based, although only to a limited extent, on the Santhanam Committee's report, which drew pointed attention to popular feelings about the prevalence of corruption in high places. In order to strengthen public confidence in the integrity of the Government at the highest levels, the Committee recommended that a code of conduct should be evolved for Ministers, under which they should be required to disclose their assets and liabilities, property acquired and gifts accepted. After some initial hesitation, stemming no doubt from the delicate nature of the task and the embarrassments that might arise, New Delhi has at last brought a code into force. It prescribes that Central and State Ministers should not only declare all their assets, including cash holdings and jewellery, to the Prime Minister or the Chief Minister concerned; they should also sever their connections with the conduct of any business in which they were interested before assuming ministerial responsibilities. In the case of business concerns supplying goods or services to the Government, or which primarily depend on licences, permits, quotas or leases, the Ministers have to sever all connections, while in the case of other firms they are permitted merely to retain their ownership. The code also forbids such things as the acceptance of valuable gifts by a Minister except from a close relative and the contracting of certain types of debts by members of his family.

While the restrictions written into the code of conduct should go some way towards giving the administration a cleaner look, it suffers from certain weaknesses. The code lays down that the authority for dealing with breaches of its injunctions will be the Prime Minister in the case of Central Ministers, the Prime Minister and the Home Minister in the case of Chief Ministers, and the Central Home Minister and the Chief Minister in the case of State Ministers. However, experience does not suggest that this procedure will always ensure a satisfactory solution. The leader of a Party inevitably has strong political loyalties, which may well cause him to turn a blind eye to things he does not wish to see. Occasions could arise when the prestige of the Party and its prospects at the polls may outweigh the desire to bring an errant colleague to book. In any case, if the decision happens to be favourable to a Minister accused of corruption, it is liable to be suspect in the eyes of the public. A fundamental principle of jurisprudence is that justice must not merely be done, but must also be seen to be done. It will be difficult for the Prime Minister or the Chief Ministers, in view of their primary position as leaders of political Parties, to satisfy this requirement.

Perhaps foreseeing this difficulty, the Santhanam Committee suggested that specific allegations of corruption against a Minister should be promptly investigated by "an agency whose findings will command respect". It wanted that the President should constitute a national panel on the advice of the Prime Minister, and that an *ad hoc* committee selected from this panel by the President should ascertain whether there was a *prima facie* case. It is surprising that this recommendation has been ignored The procedure as laid down in the code may bring the Prime Minister or the Chief Ministers, as the case may be, into the vortex of a distasteful controversy if the verdict on a suspect Minister happens to be favourable to him. Recent charges of corruption against certain Chief Ministers should illustrate the point.

Referring to the raising of funds, the code lays down that no Minister should accept contributions for any purpose, whether political, charitable or otherwise. In the same breath, it permits Ministers to associate themselves with the raising of funds for a political Party. The only condition that it puts is that the Minister concerned should ensure that such contributions are sent to a specified office-bearer of the Party and not to himself. Obviously, this is more a step against personal corruption than against collective corruption. The use of ministerial influence for Party purposes, including the collection of funds, is among the most prolific causes of corruption. As the Santhanam Committee pointed out, "the public belief in the prevalence of corruption at high political levels has been strengthened by the manner in which funds are collected by political Parties, especially at the time of elections". The licence-permit raj, to use Mr. Rajagopalachari's phrase, has created ample opportunities for dispensing political favours. Contributions to Party funds have often opened the door to corruption, since a *quid pro quo* is sought in the shape of official favours. Unfortunately, New Delhi has chosen to shut its eyes to this glaring impropriety.

U.K. SURCHARGE CRITICISED

THE British Government's decision to levy a surcharge of 15 percent on processed and manufactured imports has caused widespread anxiety in India, particularly among exporters of leather goods, coir products and engineering items. The Federation of Indian Chambers of Commerce and Industry says that while the motives of the Labour Government are understandable, "the measures announced, howsoever temporary, represent a reversal of the liberal trading system which the U.K. has been following *vis-à-vis* Commonwealth products". India's exports to Britain account for over 20 percent of her foreign exchange earnings. According to rough estimates, Indian exports to Britain may fall by about Rs. 5 crores or Rs. 10 crores as a result of the levy. Among the major exports which might be hit, it is said, are jute, yarn and cloth. Shippers in India are not yet sure to what extent Britain's consumption of gunnies will be affected. India's competitive position in relation to Pakistan might not suffer since the levy will fall equally on imports from all sources. But the Dundee industry will regain a measure of protection—thus reversing the trend of recent years, when the mark-up on the U.K.'s jute goods imports has been steadily reduced.

There is some doubt about the impact of the levy on exports of cotton textiles. While many feel that they may be affected, official circles think that in view of the long-term agreement with Lancashire, the surcharge should not affect the quota already fixed for next year. However, in order to remain competitive, Indian exporters may have to accept lower prices. Critics have pointed out that most of the Indian industries which will be affected are labour-intensive and so the import surcharge may cause widespread distress here. For instance, about 90 percent of this country's coir products are exported, more than half of them to Britain. Again, leather goods worth about Rs. 14 crores are shipped to Britain every year. Indian exporters of leather have already been advised by importers in the U.K. to suspend further shipments until the question of exemption for the commodity from the new levy is settled. A particular cause for anxiety is the effect of the levy on India's developing lines of export, such as engineering goods. Britain's purchases of items like sewing machines, fans, electrical appliances, diesel engines, steel pipes and other rolled steel products are not large. But she has started buying these items from India only recently, and the Indian engineering industry has been hoping to step up its exports. The Government too has been trying to develop the export of non-traditional items; the British surcharge now deals an unexpected blow to such ambitions.

It is true that the world expected the new British Government to devise fresh methods of dealing with its recurring economic problem. The traditional increase in Bank rate and restrictions on the supply of credit would have convinced no one that Britain had entered a new era in which economic growth would be continuous and sterling would be protected by the nation's strength, not by expedients. However, resentment is widespread and bitter against the methods adopted. Even Britain's friends in the Commonwealth and the E.F.T.A. have expressed pained surprise at the undiscriminating 15 percent surcharge on processed or manufactured imports. (The surcharge does not discriminate between G.A.T.T., the Ottawa Agreement, and the E.F.T.A. Convention: it contravenes all of them.) The sympathetic reaction of the U.S. Treasury is exceptional.

Yet, as seen from London, the simple truth is that no corrective for sterling's troubles could be painless, either for Britain or for other countries. Although nearly half of U.S. exports to Britain (reckoned on the basis of last year's trade) is subject to the new levy, the U.S. Treasury for one has said frankly that the surcharge is preferable to a rise in the U.K. Bank rate. From Britain's point of view, the primary objection to an increase in Bank rate is that it would rapidly "cool" an economy that is not "overheated". There is the secondary but important objection that it would increase the cost of servicing the overseas-owned sterling balances held in Britain. Nearly all of these balances, aggregating some £4,000 million, are employed in media whose rates are linked with Bank rate, and an increase of one point in Bank rate (the minimum increase that could be effective in the present situation) would immediately add some £30 million to the annual cost of servicing the debts. It seems an illogical method of reducing a payments deficit in the short run. And in the long run its effects might be even worse; for industrialists' investment plans are sensitive to changes in Bank rate, and if these plans were scaled down the necessary modernisation of British industry would be delayed.

Despite these strong arguments against the orthodox methods, the U.K. Government's prompt introduction of new methods has surprised the City of London. In the weeks preceding the general election, leaders of the Labour Party had stated clearly that they were prepared to use short-term interest rates as a defensive weapon in a critical situation—and the City is not yet convinced that this weapon has been permanently withdrawn from service. But it can be assumed henceforth that the U.K. Bank rate will be changed only if the U.S. authorities do not object. It is significant that in a peculiarly difficult situation the two countries' monetary policies have coincided even more closely than before, while the U.K. has risked (and incurred) the wrath of other foreign countries. The monetary link between the U.S.A. and the U.K. has undoubtedly been strengthened; and some observers see significance in the fact that an important policy statement on the U.K. Bank rate was uttered, for American ears, not by one of Britain's economic Ministers but by her Foreign Secretary, Mr. Gordon Walker.

There remains the problem of European hostility towards the new U.K. policy. The Europeans say that Britain has evaded her responsibilities and imposed on her trading partners the burden of correcting her payments deficit. The British (and American) reply to this argument is that other methods of correction would harm her trading partners even more. The short-term alternatives, in the official British view, are a general deflation of demand in the home market, which would probably reduce imports more than the surcharge will do, or devaluation of the currency, which would throw the whole world's monetary system into confusion. If India's reaction to the U.K. import surcharge has been milder than Europe's, it is partly because she feels that one of these alternatives—to devalue sterling—would have been even more unpalatable to her. Britain's arguments for restricting her imports temporarily are well understood in this country. But it is regretted that no way has been found to exempt the simpler manufactures of the underdeveloped countries from the surcharge. India cannot get away from the fact that her own payments difficulties are far more intractable than Britain's; anything that tends to accentuate those difficulties by harming her exports cannot but be deplored.

Current News and Comment

The Capital Market Slump

The annual statement of Mr. J. R. D. Tata, chairman of the Investment Corporation of India, which has been circulated with the directors' report, will be read with interest not only by the shareholders of the Corporation but by all those who are concerned with the continuing slump in the capital market and the problem of unaccounted money. Both the depression in the capital market and the growth of unaccounted money are attributed to the Government's fiscal policies. It is the fiscal policy, more than anything else, concerning individuals which has driven ever more of the country's trade underground in a frantic attempt to escape from the intolerable burden of taxation. Mr. Tata says that raiding the houses and offices of suspected tax evaders and black marketeers will no doubt bring some unaccounted money to the surface, but it is unlikely to form more than a minute fraction of the total of such funds A lasting and effective solution of this problem can be found only in a lightening of the total burden of taxation on capital and income, coupled with powerful deterrents against tax evasion as exist in the U.S.A.

Mr. Tata has blamed the twin forces of inflation and taxation for the depressed state of the capital market. Corporate profitability has improved, but it is the individual who promotes and builds the corporate body and he must be left with the wherewithal to save and the desire to invest if the flow of individual savings to the corporate sector is to continue. The Life Insurance Corporation and other financial institutions have done everything which can be expected of them to support a sagging and dispirited market, but such pump-priming can only bring about temporary rallies unless the root causes of the country's economic malady are removed.

Mr. Tata has strongly criticised the action of the tax authorities in seeking to change, for no apparent or justifiable reason, the treatment for tax purposes of the surplus realised on sale of investments and to tax the corporation as a dealer in shares, thus subjecting all capital gains to a higher rate of tax. Mr. Tata says that the principal rôle of an investment corporation is to hold investments and not to deal in them, changes in the portfolio being incidental and only for the purpose of protecting and improving the portfolio. The new taxation procedure is also discriminatory as the Unit Trust of India enjoys immunity from such taxation. Since the nature of the corporation's activities has remained the same over the past 25 years, the new taxation procedure is very unfair. The chairman has expressed confidence in the concern's potentiality in serving the corporate community and the investing public. The corporation has come to be looked upon as specialists in the field of administration and management of new corporate issues and company transfer registers and records.

Survey of Indian Exports

About 100 countries imported more goods from India during 1963-64 than in the preceding year, but 76 countries reduced their offtake of Indian goods, according to a survey made by the World Trade Department of the Indian Chamber of Commerce of this country's export performance during the year. The countries whose offtake of Indian goods increased were Argentina, Belgium, Ceylon, Czechoslovakia, Malaysia, West Germany, Japan, the U.S.A. and Russia. Among those who reduced their purchases, Indonesia, Iran, Nigeria, East Pakistan, Poland and Yugoslavia were important. Exports to the dollar area increased from Rs. 143 crores in 1962-63 to Rs. 157 crores in 1963-64, to the European Common Market from Rs. 48 crores to Rs. 57 crores, to east European countries from Rs. 92 crores to Rs. 109 crores, to the sterling area from Rs. 268 crores to Rs. 283 crores and to other soft currency areas from Rs. 170 crores to Rs. 188 crores. During 1963-64, India had a deficit in the balance of trade with 28 important countries. The deficit continued to be large especially with the U.S.A. (Rs. 262 crores), West Germany (Rs. 70 crores) and Iran (Rs. 43 crores).

In a detailed analysis of India's export trade with individual countries, the survey draws attention to the increasing competition which indian tea is facing in the U.K. For instance, Kenya stepped up her tea exports to the U.K. from 20.14 million lbs in 1962 to 21.19 million lbs in 1963, the Netherlands from 2.34 million lbs to 4.75 million lbs, Indonesia from 7.97 million lbs to 10.89 million lbs, China from 3.53 million lbs to 5.93 million lbs, Formosa from 430,000 lbs to 1.11 million lbs and Japan from 690,000 lbs to 770,000 lbs. India and Ceylon, of course, continue to remain the major suppliers, but the competition from the new sources should not be under-estimated.

India's exports to the U.S.A. increased to Rs. 128 crores in 1963-64 from Rs. 114 crores in 1962-63, but her share in the total U.S. imports continued to be negligible being less than 2 percent. Similarly, this country's trade with Latin America is also very little. Out of the total import of Rs. 4,000 crores a year by South American countries, India's share was only Rs. 17 crores. The survey also indicates the vast scope there is for increasing India's exports to the countries of west Asia and south-east Asia.

Tracing the trend of exports over a long period, the survey says that although India's export performance in recent years has been improving steadily, there is a great need to intensify the efforts. World exports went up from $54,000 million in 1948 to $836,000 million in 1933, a rise of 152 percent, but India's exports improved only by 20 percent. The country's share in world exports, in fact, fell from 2.5 percent to 1.2 percent in this period; and, more significant, its share in the export of under-developed countries also declined from 8.3 percent in 1948 to 5.2 percent in 1963. India's *per capita* figure in 1963-64 was just £1 6s, compared with £123 in Canada, £150 in the Netherlands and £79 in the U.K. In 1963-64, only 78 percent of India's imports was financed by exports.

Export Council for Woollen Goods

Indian exports of woollen manufactures in 1963-64 were valued at Rs. 8.017 crores of which woollen fabrics (1.05 million metres) accounted for Rs. 1.47 crores and hosiery (200,000 kilograms) for Rs. 59.1 lakhs. In terms of international trade in woollen fabrics, this country's exports are infinitesimally small, around 0.7 percent. This indicates that there exists a vast scope for stepping up the export of woollen goods from India. In its report on the economics of modernisation in the Indian wool textile industry, the International Wool Secretariat has expressed the view that with modern machinery, some additional expertise and freedom to buy raw wool, Indian wool textile firms could produce cloth of quality and price that could compete successfully anywhere in the world. Given modernisation of equipment, the biggest obstacle to increasing exports of Indian woollen products would be lack of initiative on the part of potential exporters and not its scope in the foreign markets.

It is in this context that the setting up of the Export Promotion Council for Wool and Woollens should be welcomed. By focussing attention on the various problems facing the export trade, the Council should be able to give a new push to the export drive. To begin with, the Council, which was inaugurated by the Central Minister of Commerce, Mr. Manubhai Shah, on 30th October, has decided to impose a levy of 10 percent on the face value of import licences issued for the import of wool. The levy is voluntary in the sense that the Government has nothing to do with it and it would be irrespective of the membership of the Council. The proceeds would be used exclusively for promoting the exports of woollen goods in a manner which has been left to the discretion of the Council. It has been advised to form a sub-committee to look after the question of cash incentives for exports as this would facilitate speedy decisions on these cash incentives and any alterations that might be required to be made in future. Among other things, the Council would be required to enforce strict quality control and look into the industry's needs of modern machinery.

The chairman, Mr. R. K. Birla, who is also the president of the Indian Woollen Mills Federation, has rightly pointed out that crusading efforts are needed to increase India's exports of wool and woollen products. All that is produced in the country is practically consumed in the home market, and there is very little inducement for manufacturers to traverse over untrodden fields. For competitive price and quality, the two important factors on which exports depend, the woollen industry needs to use its capacity fully and to undertake large-scale modernisation. Mr. Birla has urged the Council to build a stockpile of good quality wool so that manufacturers can draw their raw material from it and work to full capacity. It is comforting to hear from the Central Minister of Commerce that Australia has agreed to supply Rs. 3 crores worth of wool to be used as a stockpile. As for the replacement of obsolete and outmoded machinery which is essential for producing export-worthy quality cloth, Mr. Manubhai Shah stated that the import of machinery would have to be

financed out of export earnings. He discounted prospects of an increase in the rate of import entitlements from the present level of 85 percent. Mr. Shah said that out of a 4 million yen credit, licences valued at Rs. 95 lakhs had actually been issued for the import of woollen machinery from Japan and the balance had to be utilised for the import of certain woollen machinery from other countries like Italy as such machinery was not available in the former country. He also announced that an agreement had been finalised with Russia for the import of woollen machinery worth Rs. 1 crore. It would be up to the Council to consider how much machinery had to be imported from Italy or Russia and who should be the parties to whom import licences should be issued. Mr. Shah assured the hosiery industry that the issue of import licences for machinery would be expedited and urged the Council to form panels to avoid unfair competition among exporters of hosiery goods. He suggested that each exporter might be allotted a specified market in order to intensify the export drive.

Management Development Programme

Management and productivity have now become bywords. With so many management associations and productivity councils, there are also many programmes on productivity and management matters. A man of business would naturally want to know the practical outcome of all this activity and the energy and efforts invested in it. Not only the business man, but also the executives themselves often complain of being subjected to too much of it. It was quite refreshing to hear a new note being struck in the management development programme organised recently in Bombay by the Business and Industrial Consultations Combine (B.I.C.C.). The programme was inaugurated by the vice-chairman of the National Productivity Council, Mr. Prabhu V. Mehta, in the presence of a small but selected audience of about 80, including some from business and industry, the Productivity Council, management associations and industrial associations.

In his inaugural speech, Mr. Mehta highlighted the three chief goals of any business enterprise—satisfaction of the capital, satisfaction of the consumer and satisfaction of employees. All the three being vital and mutually interdependent, it is difficult to give priority to any one goal. Mr. Mehta said that if these goals were kept constantly in view and one kept asking questions as to where things might be wrong and how matters could improve by understanding each other's view point, "we cannot be far out." But just as common sense is not so common, this attitude which appears so obvious is really uncommon in practice.

While introducing the programmes, the programme director, Dr. R. M. Shah, brought out some novel features. He explained that these programmes aim not only at an intellectual acceptance on the basis of individual's own experiences, but also at psychological acceptance and integration so that even unconscious attitudes and reactions may tend to work in directions most fruitful in a given realistic situation. These programmes put equal emphasis on all techniques and technologies, including management technology itself, and put special emphasis on operational actions and adjustments for results. The approach underlying the programme is important not only to business and industry, but also to any field where conditions need to improve especially. In a country like India, it applies more particularly to Government administration which sets the pace for economic growth of the country as a whole. Dr. Shah added that it was possible almost to double the rate of national economic growth if the leaders of business and industry and the Government could tap the best philosophy, know-how and action for this purpose.

Increasing Engineering Goods Exports

India's engineering goods exports have improved over the years. The volume as well as value have both increased, and the range of products sold overseas has also widened. From only Rs. 4.39 crores in 1957, the value of goods exported increased to about Rs. 14 crores in 1963, that is, an increase of nearly 300 percent in seven years. The significance of this achievement looks small if one takes the earning figures as a proportion of the country's total exports, but judged from the point of view that it represents a healthy diversification of the country's foreign trade, and India is now able to export relatively more sophisticated goods, the achievement is praiseworthy. A wide range of capital goods like machine tools, and machinery for sugar, jute, oil, textile, tea, printing and paper-making industries are now being sold abroad. The many items of producer goods exported include electric motors, transformers (power and distributor), generators, switchgears, gas plants, pumps and diesel engines. The consumers goods items show an even wider range. The main markets naturally lie in south-east Asia (41.5 percent of the total) and west Asia (22 percent) and Africa (17.9 percent). But it is encouraging that European countries are taking as much as 13.5 percent.

Good though the achievement is, it is not considered satisfactory even by the industry. The country's total production of engineering goods at present is worth about Rs. 500 crores, and exports form only 3 percent of this total. Considering the need to diversify India's foreign trade, in step with industrial progress, the engineering industry should at least be able to export 8 percent to 10 percent of the output in a few years' time. According to a market survey by the Engineering Goods Export Promotion Council, the opportunities for expansion are quite considerable, especially to the developing countries in Asia and Africa. So the main obstacle to expanding India's engineering goods are mainly internal. A seminar jointly organised by the Indian Institute of Foreign Trade and the Engineering Export Promotion Council was a welcome move. It provided a forum to discuss the difficulties and visualise future prospects. This was attended by leading manufacturers, and exporters, the trade associations concerned and representatives of the Central Ministries of Commerce, Industry and Finance. Sir A Ramaswamy Mudaliar, who inaugurated the seminar, rightly stressed that costs and quality are fundamental factors which not only help the expansion of exports, but also in projecting the image of India as a manufacturer of quality goods. The seminar discussed all aspects of export promotion, including specific problems like machinery and transport equipment assistance for exporters and overseas marketing strategy with a view to raising the value of exports from the present level of Rs. 13 crores to Rs. 50 crores by 1970-71. Among the main recommendations was the suggestion that the Government should set up an export industries materials corporation in order to deal with the present critical raw materials situation better.

Promoting Foreign Investment in India

While inaugurating the Indian Investment Centre's European office in Düsseldorf, West Germany, last Thursday, Mr. G. L. Mehta, chairman, praised the Government of India's policies in promoting the inflow of foreign capital to India. Many of his observations are correct, for the Government has taken some positive steps in recent years to encourage foreign investors. The inflow of foreign investment into a country is admittedly a two-way process—it depends not only on the capacity of the capital-exporting country but also on the receptivity of the capital-importing one. It is true that in India, foreign capital has been welcome, and there are growing opportunities for its profitable employment. Mr. Mehta said that the higher rate of earnings and the plough-back of profits in foreign-controlled enterprises and the increased rate of inflow of capital into the manufacturing sector are indications of the wide investment opportunities in India and the growing interest of foreign investors. High production targets under five year plans offer immense opportunities to foreign investors. Furthermore, the Indian economy offers assurances of suitable markets, a diversified industrial structure, a growing demand for manufactured products and a well-developed infra-structure.

The success of economic planning, which the Government has undertaken for the past 14 years, depends primarily on the consent and co-operation of the people and not on coercion and regimentation. In all this development, private enterprise, including ventures with technical and financial collaboration of foreign entrepreneurs, plays a laudable rôle. The Indian Constitution also provides for compensation in case of acquisition of property by the State and prohibits discrimination. Mr. Mehta said that he knew of no single case of discrimination between an Indian and a non-Indian concern since the country's independence; once an industry is permitted to be established, it is treated on a basis of equality. Moreover, the Government offers all facilities for the remittance of interest, dividends and profits as well as the repatriation of capital. The country has also an enviable record in meeting its foreign obligations —Government and private.

But in this assessment of prospects for foreign investors in India, Mr. Mehta did not refer to any of the discouraging factors. He could have referred to the industrial policy of the Government which pampers public enterprise at the cost of the private sector. The Prime Minister, Mr. Lal Bahadur Shastri, in fact, proposed at the recent meeting of the National Development Council the starting of even consumer goods industries in the public sector. This apart, the spate of labour legislation which Parliament has passed in recent years and the crushing burden of taxation have deterred the flow of foreign investment to this country.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge with thanks, the receipt of the following donations for the 1964 Fund:

Rs. 160

Managing Directors and Directors of Bird & Co. (Private) Ltd. and F. W. Heilgers & Co. (Private) Ltd.

Rs. 100 each

Ramnath Anandilal Podar, the Gramophone Co. Ltd., E. C. Benthall Charitable Trust.

Rs. 50 each

C.G.U., B. M. Khaitan.

Rs. 20

R. H. Wright.

The Fund totals Rs. 699.71, including a carry-forward of Rs. 119.71.

A JUTE MILL IN KERALA

A CORRESPONDENT in Ellore writes that the Mothay family, the zemindars of Vissannapett, bankers and merchants, whose rice mills have proved a success in that quarter are floating a limited company for the manufacture of gunnies under the style of the Krishna Jute and Cotton Mills Co., Ltd., with a capital of Rs. 5 lakhs divided in Rs. 100 shares. He further states that a site has been selected for the works at Ellore, by a Calcutta Jute expert of thirty years experience. The locality chosen has access to an abundant supply of water, is in the neighbourhood of plenty of cheap labour, and has a gunny market at its door. It is also stated that the extensive lands surrounding the Kolar Lake, four miles distant "can well afford to supply sufficient raw jute to the mill at a very cheap rate." "I hae ma' doots" on this point, and would also observe that to entrust the erection of the mill and its machinery as well as its future management to two of the Mothay gentlemen (as is to be done, according to my correspondent) merely because they have a natural turn for mechanics, and managed to erect a rice mill "without any assistance of outside engineers," is not a statement likely to make outsiders rush in and take shares in the concern. We are always glad to welcome the appearance of native enterprise, and there can be no objection to wealthy people like the Mothay family experimenting with their own money in trying to erect and run a Jute Mill under the management of totally experienced youngsters of their own connection, but they would have been better at the outset to import experienced management, otherwise nothing but mistakes accompanied by much loss will be first results.

A Ditcher's Diary

THE AMERICANS HAVE IN THEIR WISDOM DECIDED that President Lyndon B. Johnson is a lesser evil in the White House than Senator Barry Goldwater might be. This is certainly not a very generous way of summing up the verdict of the U.S. Presidential elections; but, somehow, I cannot bring myself to be more full-throated. Nearly a year after the assassination it is permissible to say that President Kennedy was more promise than fulfilment; but I think it was Oscar Wilde who once said that the only map that interested him was the map of the future. President Johnson evokes no dreams, inspires no visions. He is a little too empirical, sleek and calculating for my taste. That the world has been spared the disaster that Barry Goldwater threatened to be is something to be thankful for: no doubt about that. But all will agree that the campaign did little credit to either candidate. States like Mississippi and Alabama went Republican; changes in voting habits are no bad thing, but everyone knows what brought about the change this time. Of both the popular vote and the electoral college President Johnson secured a considerable majority: what mandate the majority is for is overwhelmingly obscure, for Mr. Johnson is a master of the art of evasion. It is not true, however, that the extremism of Barry Goldwater had a very great or dangerous impact on Democratic stances. From the point of view of countries like India, it is a great thing that foreign aid will not be much affected: with a fairly comfortable majority in Congress, President Johnson should, if he so wishes, be able to increase foreign aid. On foreign policy, it may be some time before the Administration sizes up the new leaders in the Kremlin; in south-east Asia commitments may neither expand nor contract, unless China chooses to alter the *status quo* drastically. But the most important thing is that Mr. Johnson will for the next four years act with greater confidence than hitherto. In Mr. Hubert Humphrey the President has a mate known for his liberalism: he is certainly very conscious of America's world rôle. Yet the world outside will not easily forget that so many Americans found it in their heart to vote for Barry whose Goldwaterism has not yet been finally buried. Whether the presence of two Kennedys instead of one in the Senate is a matter of unmitigated joy to President Johnson may not be known for some time.

DISSIDENT CONGRESSMEN—MAY THEIR NUMBERS increase!—can be up to anything, including bringing down a Congress Government, as in Kerala a few weeks ago; but their responsibility for the recent rioting in Orissa may have been exaggerated by gentlemen whose incompetence and worse may explain the affair better. I have not the time to examine the rights or wrongs of what the students have to say about a bus conductor or a radio dealer; they were downright culpable when they took the law into their hands and turned it into lawlessness of a kind that has covered them with disgrace. The Orissa administration, never among the most competent in the country, soon realised that it was simply not equal to the challenge; the army was called in, although, as I write, only the Orissa Government seems to believe that all is "under control". While the immediate task, obviously, is to stop disorder and the destruction of property and life, New Delhi should think hard on the evils it has so long connived at. The heart of the matter in Orissa is that, ever since Mr. Biju Patnaik took over, the "bitch goddess", success, has seized the mind and soul of Orissa. The mid-term election victory was a personal *tour de force* for Mr. Patnaik; the manner in which he dismissed questions on the means adopted has been well imitated by his *chela*, Mr. Biren Mitra; and, all these months, the Centre and the Congress High Command did not so much as indicate the slightest disapproval. In fact, in Mr. Nehru's time, Mr. Patnaik was treated with extreme reverence in the Ministry of External Affairs and the Ministry of Defence; for what reason and purpose, the people may never be told. Nothing has yet been proved against the financial activities of Messrs Patnaik and Mitra; but around them has been created an atmosphere of such vicious suspicion that they have lost their moral right to suppress the erring students or the rowdies who inevitably took advantage of the trouble started by them. It may sound very old-fashioned that I speak of the moral right of Governments to govern; but it remains a powerful factor even in the debased politics of our time. Not by votes alone can a Government sustain itself.

THAT THE LABOUR GOVERNMENT WILL FIND IT very difficult to rule for long without the co-operation of the Liberal Party is clear from the small majority it has won. So it is inevitable, I suppose, that the old suggestion for a merger between the two Parties should have been heard again. This time it has come from the Labour side, no doubt with an eye on that majority, as well as from Mr. Jo Grimond, the Liberal leader. What Mr. Grimond has in mind is a marriage between his own Party and Labour's right wing; interestingly enough, he has included the more progressive elements of the Conservative Party as well. This would leave the two extremes, the diehard Tories on the one side and the equally diehard socialists on the other, out in the cold. If the latter then joined the communists, or more likely after the Khrushchev episode, absorbed them, then that would tidy up the British political scene even further. The idea has its merits. Certainly the evidence of last month's elections supports the view that although the majority of voters plumped for radical reforms, there was no corresponding mandate given for socialistic experiments. I think the point is that Britain has outgrown socialism, as indeed Russia would soon have done had that arch-capitalist, Mr. Khrushchev, stayed in power a little longer; and indeed the new spirit of progress in the world is too strong to tolerate *dogma for long*. So far Mr. Wilson appears to have rejected the idea of a Lib-Lab combination against the Conservatives. Apart from being too preoccupied with tackling the economic situation, he is no doubt hoping that Labour's record between now and the next election will be impressive enough to take care of the *majority problem for him*. But if, as I suspect, he finds his position being endangered by the demands of his own left wing for more socialism, he might begin to take a different view. It was the first Labour Prime Minister who decided that the only way he could serve his country's interests was to split his Party and govern with the active co-operation of his former opponents. Mr. Wilson, who would then undoubtedly be the last one, could easily find himself in a similar position. Which might be unfortunate for the Labour Party, but could quite conceivably be the best thing for Britain.

HOW UNGRATEFUL THE WORLD'S COMMUNIST Parties have shown themselves in questioning Moscow about the new leadership! For years they have had all their difficult thinking done for them; they have simply not needed to do anything for themselves. Now, instead of dutifully performing the mental somersault required of them, something any sensible communist should have reconciled himself to in advance, they are busy pestering their betters about matters which really concern them not at all. Have they not realised yet that their only purpose is to serve the interests of Russia's foreign policy? Certainly it is not to reason why. Anyway, if they are anxious to avoid this unseemly nonsense in future I suggest they do a little preparation now. I mean that they should get themselves mentally adjusted to the idea of accepting as their leader whoever emerges

from the present struggle for power in the Kremlin. This is rather difficult because we do not yet know who it is going to be. But one thing we can deduce from past experience is that some personality will emerge, only to be eclipsed, of course, in his turn, either during his lifetime like Khrushchev, or posthumously like Stalin. After each successive Russian leader since Lenin there has always been a period of joint responsibility until a single figure has achieved predominance. So far, it has been the Party Secretary—Stalin, Malenkov, Khrushchev—which would suggest that this time it is going to be Brezhnev, although that might be altogether the wrong conclusion to draw. Somewhere behind the new pair, Brezhnev and Kosygin, may be lurking a comparatively unknown individual who is at present battling his way to the top. The point I am trying to make is that whereas non-communists can sit back and watch the Kremlin's power struggles with detached amusement, or occasionally a little apprehension, for the dedicated communist this is just not possible. Mental agility of the highest order is what is required of him. I remember in George Orwell's *1984* the hero marvelling at the ease with which a public spokesman who was loudly condemning an enemy State was able to switch names in midsentence when told there had been a change in alignment. This is the kind of talent that communists have to cultivate. It simply does not become them to behave like normal bewildered human beings and show an interest in what is going on in the higher ranks of their leadership.

IT IS ALL TO THE CREDIT OF MR. LAL BAHADUR Shastri and Mr Swaran Singh that they have started paying serious attention to India's immediate neighbours rather than settling other people's disputes in Timbuktoo or somewhere, but I am unable to participate in the orgy of jubilation that has followed the recent agreement between Mrs. Sirimavo Bandaranaike and Mr. Shastri. It is one thing to say that this pact was the best India could get; quite another to pretend that there has been a great diplomatic triumph. Considering the natural expected increase in the Indian population in the next fifteen years, the number India has agreed to take back from Ceylon is not very large; but the principle of taking back people of Indian origin creates a precedent. Indian emigrants abroad have much to answer for; their unpopularity seems almost universal. But they are not in their new countries without performing specific economic functions. Moneylenders are nowhere loved; money is, everywhere. And Tamil money in Ceylon keeps a good part of the business there going. I once met a U.N. official, a man from Jaffna. He was full of bitterness against the Ceylon Government; he could speak Sinhalese but felt that he should not be forced to do so. Nor should his children be educated in Sinhalese. What language, then, would he choose? I was surprised when he said that he did not very much care whether his children learnt Tamil as long as they knew English well. Then came up the question of shrinking economic opportunities for Tamils. This may well be the gravamen of Tamil complaints. The economy of Ceylon has not been making much progress; in sectors, it has been running down. There is not an awful lot India can do to help; but it is not generally known that Peking buys tons and tons of rice in Burma and sells it to Ceylon for rubber. Time was when India could have got in on this deal, with great political advantages which China is now enjoying to India's acute embarrassment. If there were any economic advisers in the team that negotiated the agreement with the Ceylon Premier, the public has not heard of them. The political is not the only level at which diplomacy has to be conducted.

A LADY DRIVER STOPPED AT THE TRAFFIC LIGHTS AS they changed to red. When they turned to green again, she couldn't find the correct gear to move off. By the time she found it, the lights had turned red again.

After all this had happened four times, a fuming quarter-mile queue of hooting cars had collected behind her.

A policeman strolled across. "What's the matter, madam. Haven't we got the shade you like?"

Guide for Investors

STOCK EXCHANGES OPPOSE CURB ON BLANK TRANSFER SYSTEM

(FROM OUR BOMBAY CORRESPONDENT)

THE eight recognised stock exchanges in India have made a joint representation urging the Central Government to drop Clause 13 of the Companies (Second Amendment) Bill, 1964, which seeks to limit the currency of blank transfers to six months in the case of shares dealt in on recognised stock exchanges and to two months in any other case. The memorandum is detailed and well-reasoned and deserves to be considered by the authorities carefully. The proposal to retrict the currency of blank transfers has emanated from the Vivian Bose Commission which investigated the affairs of Dalmia-Jain concerns.

The Commission recommended the restriction on the ground that the system led to (a) concealment of beneficial owners' identity behind their nominees, (b) tax evasion by investment of secret profits in holdings on blank transfers, (c) window-dressing of balance-sheets through substitution of inter-company loans and advances by investment and (d) the creation of ficticious investment losses for reducing taxable profits. The stock exchange authorities have submitted that the Vivian Bose Commission was appointed in 1956, and, primarily, its enquiry related to the period before that year. And for the most part, it pertained to private limited companies and companies not listed on the stock exchanges.

Even if the evils pointed out be assumed as due to the blank transfer system, they could not be attributed to companies listed on the stock exchanges. In any event, the evils have been remedied by post-1956 legislation, such as the Companies Act, 1956, the Securities Contracts (Regulations) Act, 1956, and the Income Tax Act, 1961. The amending Bill also contains provisions prohibiting holding of shares in ficticious names and seeking to enforce compulsory disclosure of beneficial interest when a nominee's holding exceeds 5 percent of the Company's equity capital.

The memorandum says that these statutory provisions have gone far beyond what any restriction on the currency of blank transfers could possibly achieve. It is further pointed out that blank transfers are not the same as nominee holdings which exist independently of the blank transfer system. The proposed restrictions would not, therefore, bring about disclosure of beneficial interest, nor would they solve the problem of nominee holdings. Restrictions on currency of blank transfers may divert investment of secret profits from shares to other channels, but it cannot check tax evasion. Government securities in the form of promissory notes transferable by endorsement are more perfect forms than shares on blank transfer for holding secret profits.

The memorandum points out that the blank transfer system has a historical justification. It has been in vogue since the inception of joint-stock enterprise. It is found in all parts of the world in one form or another. It is an integral part of the stock exchange mechanism and it gives the market its essential and indispensable qualities of liquidity, continuity and stability. Any restriction on the currency on blank transfers will impede the free negotiability of shares, seriously impair market liquidity, disrupt the structural balance of the market by penalising long-term operations, and adversely affect price continuity by producing sharp fluctuations. It would also lead to multiple rates for same shares at the same time according to the duration of transfer deeds and create other technical problems such as the uncertainty about what is to happen to the shares when registration is not effected within the prescribed period because the holder is either ill or dead or abroad, or when the transfer deed is lost or stolen, or when delay occurs either in transit or due to other causes too numerous to mention outside the control of the holder.

It is further pointed out that the proposed restriction would render the financing of corporate activity more difficult and would curtail banking and other credit facilities. This will affect business practices and upset the habits of the commercial community. The stock exchange authorities have suggested that instead of seeking to restrict the currency of blank transfers, the legitimate interests of holders on blank transfer should be safeguarded and the same status should be conferred on shares as is enjoyed by Government securities and negotiable instruments in general, by including in the Companies Act appropriate provisions on the lines of the Uniform Commercial Code and the Uniform Stock Transfer Act which have been adopted throughout the U.S.A. At a time when the economy of the country is severely strained and the stock exchanges have scarcely recovered their poise, there could be no better way of improving market liquidity and negotiability as well as of reviving stock exchange activity and the confidence of investors, than by withdrawing the proposed law.

Rights Issue by Philips India

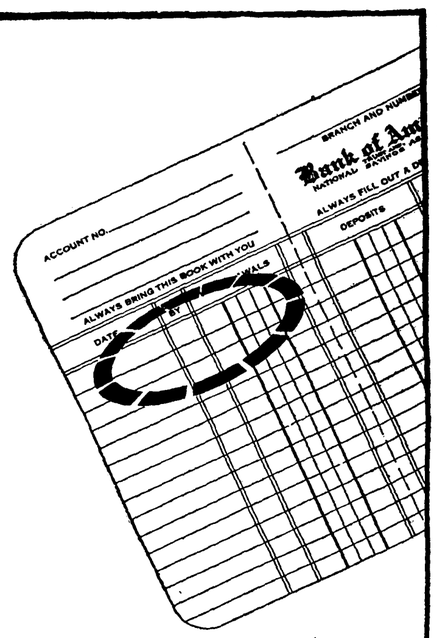
THE ordinary shares of Philips India Ltd have met with support around Rs. 27 on the prospect of a rights issue. The Company is approaching the Controller of Capital Issues for consent to issue 400,000 rights ordinary shares of Rs. 10 each at premium of Rs. 6 a share. Although N. V. Philips' Gloeilampenfrieken of Holland is entitled to 309,090 shares on a rights basis, it will subscribe for only 100,000 shares. The remaining shares will be offered to the existing shareholders in India in the proportion of three new shares for every five held. As a result, the proportion of shares held by the Indian shareholders will increase from 23 percent to about 31 percent.

The issue is being bullishly interpreted since the Company is expected to maintain at least the taxable ordinary dividend of 15 percent declared for 1963. The profit for that year amounted to Rs. 1.66 crores, out of which the dividend absorbed only Rs. 33 lakhs. If the same dividend were to be paid on the new shares, a further Rs. 6 lakhs would be required. The Company should find no difficulty in paying this amount. On the basis of the present price, the ex-right value of each share works out to Rs. 22.87. So on the basis of a 15-percent dividend, the shares look attractive. Their growth value has been indicated by the steady progress the Company has made during the past three years. Sales rose from Rs. 6.82 crores in 1961 to Rs. 10.63 crores in 1963. The percentage of profit to sales improved from 10.4 to 15.8, and the dividend rose from 12 percent to 15 percent. The Company has, in fact, made all-round progress since 1957 when it first issued shares to the Indian public.

The factory in Loni, near Poona, is now well established as the leading integrated manufacturing centre of radio sets and components. In 1960, the Company acquired its own light factory in Bombay. It is at present manufacturing incandescent lamps, fluorescent lamp starters and burners. It is also producing tungsten, molybdenum wire and tungsten coils which were hitherto imported. It is building a new factory in Kalwa, near Bombay, to produce various kinds of lamps and components. Production is expected to begin next year. It is expected that manufacturing activities of the Company will increase in the near future. It is intended to install modern capital equipment, use greater manpower and build a wider marketing organisation. The proceeds of the new issue will be largely used to finance modernisation and expansion. The net block of the Company rose from Rs. 1.66 crores in 1961 to Rs. 2.58 crores in 1963. It may be relevant to point out that the earlier idea of issuing new shares for only Rs. 16.66 lakhs has now been revised. The increased new shares are intended to provide funds for meeting the short and long-term requirements of the Company.

Goodyear India Rights Offer

THE shareholders of Goodyear India Ltd have been dealt in cautiously due to the decision of the Company to issue 400,000 rights ordinary shares of Rs. 10 each at a premium of Rs. 7 a share to existing Indian shareholders in the proportion of eight new shares for every five shares held. After the issue has been completed, the Indian participation in Goodyear India will rise from 20 percent to nearly 40 percent. The ex-rights value of the shares on the basis of the current price of Rs. 21.25 a share works out to Rs. 18.63 a share. Whether the ex-rights price will succeed in commanding the same premium as at present remains to be seen. Judging by the performance of the Company during 1962 and 1963, the premium at which the new shares are being issued looks excessive. The Company incurred substantial losses in both the years. It is true that the working has improved during the current year. During January-September 1964, sales have amounted to Rs. 9 crores, against Rs. 7.2 crores for the corresponding period of 1963.



The Company has earned a profit of Rs. 22 lakhs during the first nine months of 1964, against a loss of Rs. 51 lakhs incurred for the corresponding period of 1963. If the progress is maintained up to the end of 1964, it is doubtful whether the Company will pay any dividend considering that substantial sums are needed to finance the expansion which is being undertaken. At the same time, the payment of a dividend has been long overdue because the Company has paid no dividend since 25th April, 1961, when the Indian public were offered the ordinary shares of the Company at a premium of Rs. 7 a share for the first time. The decision of the directors to issue bonus shares, subject to the approval of the Government, by capitalising the share premium account has caused little cheerfulness. Judging by the premia collected earlier and the premia to be collected on the present issue, it looks as if the Company may not be able to issue bonus shares, if it decides to do so, in the ratio of more than one bonus share for every four shares held. Anyway, to issue bonus shares before reaching the dividend-paying stage is not convincing.

Although operating costs during the current year are believed to have decreased, the profit earned has largely been due to the increase in the prices of tyres and tubes sanctioned since the beginning of 1964. It is also hoped that the difficulties relating to the supply of power and water at the Ballabgarh factory, near Delhi, have now been relieved. The proceeds of the new issue will be largely used to finance the expansion which is being undertaken. The output capacity will be raised from 210,000 tyres to 310,000 tyres a year before the end of 1965. The Government has also renewed the overall industrial licence of the Company to manufacture 510,000 tyres until December 1968. The parent Company—Goodyear Tire and Rubber Co. of the U.S.A.—will not participate in the new share issue, but it will provide a dollar loan equivalent to Rs. 80 lakhs to the Indian Company for buying foreign plant and machinery.

Delhi Cloth Earns More, Pays More

THE Delhi Cloth and General Mills Co. Ltd reports encouraging results for the year ended June 1964, with sales up by about 12 percent from Rs. 41.77 crores to Rs. 46.78 crores and gross profit up by nearly 16 percent from Rs. 3.39 crores to Rs. 3.94 crores. The directors have raised the dividend from 13 percent to 15 percent and, in addition, the shareholders will receive a diamond jibilee dividend of 2 percent, raising the total distribution for 1963-64 to 17 percent. The directors have had to draw on the reserves in order to provide for the payment of higher dividend, but they have justified it on the ground that the Company is expected to do better in coming years as the new units will be yielding promising results. After providing Rs. 2.41 lakhs (against Rs. 1.10 lakhs) for depreciation, Rs. 95 lakhs (against Rs. 33 lakhs) for development rebate and Rs. 27 lakhs (against Rs. 1.05 crores) for taxation, the net profit amounts to Rs. 21.36 lakhs, compared with Rs. 77.43 lakhs in the preceding year. After adding Rs. 60 lakhs (against Rs. 5.25 lakhs) transferred from past reserves, Rs. 27 lakhs (against nil) from surplus provision made for taxation, Rs. 95,675 (against nil) refunded by managing agents and Rs. 1.47 lakhs (against Rs. 4.03 lakhs) brought forward from the previous year, the disposable surplus amounts to Rs. 1.11 crores. Out of this, the dividend reserve has been allocated Rs. 73.90 lakhs (against Rs. 36.45 lakhs), jubilee dividend reserve Rs. 8.80 lakhs (against nil), development rebate reserve for previous years Rs. 3.51 lakhs (against nil), and depreciation of triple shifts for 1962-63 Rs. 21.79 lakhs, leaving a sum of Rs. 2.80 lakhs to be carried forward.

In the context of increasing cost of materials and wages, the working of

the textile units is considered to be satisfactory. The Hissar Textile Mills has started manufacturing mixed fibre yarns which are in good demand. The working of the chemical units, including the *vanaspati* factory, has continued to be satisfactory. The sugar factories, however, worked for only a part of the season because of the inadequate cane supplies and this hampered the working of the distillery also. The directors state that the Company has been able to maintain its position in the export market in spite of restrictions on imports enforced in several foreign countries. The expansion of the crushing capacity of the Mawana sugar unit from 1,500 to 3,000 tons a day has been progressing well. The P.V.C. plant has gone into operation and its products have been well received. The erection of buildings and installation of machinery of the rayon tyre-cord project is progressing according to schedule and the plant is expected to go into production by the end of this year. As the Company was able to obtain medium-term loans of Rs. 1.50 crores from banks for machinery needed for the rayon tyre cord project in Kota, the directors did not consider it necessary to issue ordinary and preference shares for which the shareholders' permission had been taken at the last annual general meeting. The question of the issue of these shares will be considered again as and when necessary.

Brooke Bond Raises Dividend

IN line with the best expectations, Brooke Bond is raising its tax free dividend from 6 to 7½ percent by repeating the 4½d a share payment on capital increased by a one-for-four scrip issue. When the issue was made last year, the chairman said that some increase could be expected, but not necessarily as much as this.

Profits have done better than expected. From sales of £122.8 million (£5.4 million higher) the Company has managed a jump of 19 percent in pre-tax profits to £7.2 million. Tax is again high at 57½ percent, but at £3.08 million, net profits are still comfortably over the £3 million indicated in April. The net profit excludes a sum of £21,000 arising in Ceylon, but which is not at present remittable. Earnings on the £14.1 million ordinary capital of this tea growing, merchanting and distributing group have increased from 17.3 percent to 21.2 percent tax free.

The best feature of the results is the way the Company has managed to go on widening its margins—the ratio of profits to sales rising from 5.2 percent to 5.9 percent. This, in turn, suggests that the running is being made overseas rather than in the home market, where there is little growth and increases in sales are not usually accompanied by commensurate rises in profits. Probably the South African Company helped as it did last year, and there could have been further benefits from the merger of the three U.K. trading subsidiaries. At around 12s 3d, Brooke Bond gives the useful yield of 5 percent, covered 2.8 times by earnings.

New Asiatic to Change Business

THE New Asiatic Insurance Co. Ltd will soon undertake industrial and trading ventures. The Company stopped accepting insurance business in 1961. Since then the Company has been trying to get the necessary permission from the Controller of Insurance to do other business in order to ers. The Court has now ordered the refund of deposits under the Insurance Act. So it will now be possible for the Company to divert its funds to trade or industry.

An extraordinary general meeting of the shareholders for the change of objects, articles and name of the Company has been convened. The name of the Company will be changed to "the New Asiatic Industries Ltd" or such other name as the Central Government allows and the directors think fit.

Scindia Steam Results Disappoint

THE increase in the dividend for the year ended June 1964 from Re. 1 to Rs. 1.25 by the Scindia Steam Navigation Company had raised expectations that the Company had fared much better during 1963-64 than in the preceding year. The preliminary report belies these expectations. The gross profit has recorded only a nominal increase from Rs. 3.306 crores to Rs. 3.328 crores. It is little comfort that the profit is higher in spite of a decline in the turnover from Rs. 18.22 crores to Rs. 17.64 crores, which is attributed to a decline in the cargo and less number of voyages undertaken. The directors' full report alone can provide an explanation as to why the cargo and the number of voyages were less during 1963-64. Since the Company has had to provide a substantially larger sum of Rs. 97.5 lakhs against Rs. 9 lakhs for development rebate because of the acquisition of new ships during the year, the tax liability is considerably less at Rs. 14.45 lakhs, against Rs. 61.23 lakhs.

The provision for depreciation is only slightly higher at Rs. 1.98 crores, against Rs. 1.92 crores. After making these appropriations, the remaining surplus is too small to provide for the payment of the proposed dividend which absorbs Rs. 70.40 lakhs, against Rs. 56.23 lakhs. The directors, therefore, have had to withdraw as much as Rs. 50 lakhs (against nil) from the general reserve to meet the dividend liability. The surplus of Rs. 1.79 lakhs has been carried forward, against Rs. 7.74 lakhs brought in. The directors have stated that 18 percent of the proposed dividend has been provisionally determined to be exempt from taxation under the provisions of the Income Tax Act.

Burmah Oil Raises Dividend

SHARES of Burmah Oil, which have been a firm market recently in front of the group's interim dividend statement, reacted slightly after the interim and half-yearly profit figures were announced. They fell 9d. The board is paying 8d free of tax a £1 unit, plus a capital distribution of 3d. The two together equal 4 7/12 percent tax free. Last year's interim payments were equivalent to 4 percent on the capital since increased by the one-for-four scrip issue.

Group trading income, including dividends from trading investments, reached £5.88 million in the six months ended 30th June, compared with £11.09 million in the whole of last year. The apparent increase over 1963 would have been more impressive but for a jump in the depreciation charge to £2.21 million from the 1963 total of £3.26 million. Other dividends and interest (mainly the income from the holdings in British Petroleum and Shell) are given as £7.65 million. This represents one-half of the estimated receipts for 1964. The figure for the whole of last year was £12.97 million. The capital distribution from B.P. is excluded.

Group pre-tax profits from all sources, therefore, amounted to £13.54 million during the six months, against the 1963 total of £24.06 million. Tax took a slightly higher proportion at £5.51 million, leaving net profits applicable to the group of £7.64 million. Last year's total was £13.91 million. Net trading profits appear to be running at about £6½ million, against the forecast of £8 million by 1966 made at the time of the unsuccessful bid by B.P. and Shell. Burmah's own trading assets are now being valued by the market at around 15s to give a prospective earnings yield of about 12½ percent.

P. and O. Shares in South India Shipping

P. AND O. Steam Navigation Company of Britain and the Anglo-Norness Shipping Company, which are associated in bulk carrying trade, have decided to take up a 35 percent and 5 percent share, respectively, of the initial issued capital of Rs. 2 crores (£1.5 million) of the newly formed South India Shipping Corporation. The project has been approved by the Shipping Development Fund Committee of the Government of India. The Corporation has already placed an order with the Bremen Vulkan Shipyard for five 38,000-ton bulk carriers designed to carry foodgrains and other bulk cargoes.

Mr. A. D. Shroff is the chairman of the Corporation. P. and O. Steam Navigation Company will be represented on the Corporation's board by Mr. K. M. Campbell of London and Mr. J. W. Anson, Bombay. Lord Inchape who has large industrial interests in India has also agreed to join the board of directors.

Jokai Bids for Three Tea Groups

Proposals for the merger of Jokai Tea Holdings with Jhanzie Tea Holdings, and two other tea companies, were announced the other day. The plan would produce a group with gross assets of about £8 million and a stock market capitalisation of about £3 million. The other two companies involved are British African Tea Estates (Holdings), and the British Indian Tea Company. This is a subsidiary of British Indian Tea Company (Holdings) for which no offer is being made.

All three offers by Jokai are on a share exchange basis. Terms are nine £1 ordinary of Jokai for every 10 £1 ordinary in Jhanzie; eight Jokai for every ten in British African and seven Jokai for every ten ordinary in British Indian. The £1 ordinary of Jokai closed before the bids and latest results were known, at 26s 3d. On this basis, Jhanzie Ordinary are valued at 23s 7½d, against a market quotation of 21s 9d. British Indian also owns 128,000 of the 580,000 £1 shares in the unquoted British African. Jokai holds 144,000 shares in British African and Jhanzie 120,000 shares. The offer is for the shares not already owned by these two companies.

Results for the latest years are also announced by the companies. Jokai is cutting its tax-free dividend total from 11 percent to 8 percent with a 5 percent final: profits after tax are down from £246,133 to £132,497, Jhanzie's final of 2½ percent makes a tax-free total of 5 percent, against 11½ percent, with profits down from £81,193 to £24,665. British Indian is paying 9 percent tax free, a 1 percent cut, and its profits are down from £33,953 to £21,056, after tax.

Assam-Dooars Merger Plan

THREE tea companies in the Walter Duncan and Goodricke group—Assam-Dooars, Hope and Lankapara—are preparing to merge. The new group would have gross assets of about £3.4 million. Assam-Dooars, the biggest in the group, offers one of its £1 ordinary shares plus 1s cash for each Hope Ordinary, and one of its £1 shares with 2s cash for each Lankapara share.

Hope preference holders will receive a one-for-one exchange in 6 percent preference shares. A dividend of at least 15 percent is forecast on Assam-Dooars enlarged capital.

Baranagore Jute Dividend Cut

AS had been expected, profits of Barnagore Jute were lower last year than in 1962-63, and the dividend is being cut from 40 percent to 30 percent. Pre-tax profits have fallen from £510,306 to £309,474 and net earnings, after a sharply lower tax charge, are down from £220,306 to £116,474.

Tata Chemicals Pays More

THE chairman of Tata Chemicals Ltd, Mr. J. R. D. Tata, had stated last year that the Company had attained the stage of self-sustaining growth and that, barring unforeseen circumstances, shareholders could look forward to the enjoyment of the fruits of their investment and of their faith in the Company. This forecast has been fully borne out by the Tata Chemical's performance

Agents for The Oriental Fire & General Insurance Co., Ltd.

during the year ended June 1964, which, incidentally, marks the silver jubilee of the Company. For the first time, the daily average production of soda ash exceeded 400 tonnes, this putting a seal on the effective completion of the expansion programme. Soda ash output during 1963-64 at 153,000 tonnes showed an increase of 19 percent over the previous year's figure of 128,000 tonnes. The Company's turnover increased from Rs. 7.15 crores to Rs. 7.56 crores and the gross profit rose from Rs. 1.40 crores to Rs. 1.83 crores. The dividend has been stepped up for the second year in succession from Re. 1 to Rs. 1.40 a share, inclusive of a bonus of 15 paise a share.

The chairman says that the Company is planning to increase its soda ash capacity from 400 tonnes to 600 tonnes a day which can be achieved relatively quickly—within two years—and financed from the Company's internal resources. The increased output will not only lead to higher revenues, but also reduced costs. Mr. Tata says that while no final decision has yet been reached as the full ultimate expansion of soda ash making capacity that could be undertaken in Mithapur, taking all the relevant technical and economic factors into account, it would seem that a production of the order of 1,000 tonnes a day would not be an unduly optimistic goal, thanks largely to the Company's greatly decreased dependence on fresh water in the manufacturing processes.

Modella Woollens Pays More

MODELLA Woollens Ltd has raised the dividend for the year ended June 1964 from 6 percent to 7 percent—60 paise to 70 paise a share—and what is more, the increased dividend is payable on the enlarged capital of Rs. 65 lakhs following the allotment of 163,300 shares of Rs. 10 each to the foreign collaborators, Robt. Jowitt and Sons Ltd on 1st October, 1963. The new shares are entitled to a proportionate dividend for nine months. The increased dividend distribution seems fully justified by the Company's improved performance during the year. The preliminary report shows an increase of 26.5 percent in the gross profit from Rs. 18.11 lakhs to Rs. 22.91 lakhs.

Appropriations include depreciation Rs. 11.46 lakhs (against Rs. 5.25 lakhs), development rebate Rs. 65,000 (against Rs. 5.82 lakhs). taxation Rs. 3.55 lakhs (against Rs. 1.32 lakhs), general reserve Rs. 2.50 lakhs (the same), preliminary expenses written off Rs. 50,000 (against Rs. 56,626) and dividend Rs. 4.32 lakhs (against Rs. 3.10 lakhs). The marked increase in depreciation is due to provision of full depreciation for the Chandigarh wool top unit which commenced production in February 1963; in addition, the amount includes Rs. 93,666 being extra depreciation for third shift for the previous year. The Company is making an application under Section 197 (3) of the Income Tax Act for ascertaining the percentage of dividend exempt from tax under Section 85, last year, the dividend of 6 percent was exempt from tax to the extent of 76.625 percent. The Rs. 10-paid share of Modella Woollens is currently quoted around Rs. 12.76.

Gangapur Sugar Disappoints

GANGAPUR Sugar Mills Ltd—a subsidiary of Belapur Co. Ltd—reports disappointing results for the year ended June 1964. Sales of sugar dropped sharply from Rs. 1.37 crores to Rs. 43.30 lakhs and the working resulted in a loss of Rs. 11.39 lakhs, against a profit of Rs. 10.05 lakhs in the previous year. No provision has been made for depreciation and development rebates; in the preceding year, a sum of Rs. 8.99 lakhs had been set aside for depreciation and Rs. 4,988 had been provided for development rebate. Arrears of depreciation have risen from Rs. 44.68 lakhs to Rs. 48.30 lakhs, but arrears of development rebate are a little lower at Rs. 17.47 lakhs, against Rs. 18.73 lakhs due to the adjustments made under assessment orders passed by the incometax department for the previous years. There is also a liability of Rs. 6.70 lakhs on account of arrears of dividend on preference shares.

The directors state that the Company's working results were adversely affected because the Company could not secure sufficient cane to run the factory. The nomal suppliers were reluctant to sell cane to the factory because of the high prices of *gur*. Despite the help given by the Maharashtra Government in securing cane, the Company could obtain only about 30,000 tons. The Company had the further misfortune that after running for 28 days and crushing 18,678 tonnes of cane, the bearings of the rotor got burnt and consequently, the turbine failed. As repairs normally take more than a month it was thought advisable to close the factory and send the balance of the cane to Belapur for crushing. As for the current season, the directors state that with the help of advances, they hope to secure more cane, but the quantity would hardly be sufficient for an economic crush by the factory. They are, however, making all efforts to get as much additional cane as possible.

Asher Textiles Cuts Dividend

ASHER Textiles Ltd, Tirupur, has fared badly during the year ended June 1964, and the directors have been compelled to reduce the dividend from 12.5 percent to 10 percent —Rs. 12.50 to Rs. 10 a share. The Company's sales are down by about 10 percent from Rs. 91.47 lakhs to Rs. 82.29 lakhs, and the gross profit has fallen by nearly 26 percent from Rs 13.16 lakhs to Rs. 9.81 lakhs. Explaining the decline in profits, the directors state that while yarn prices remained fixed at the same ceiling as in the preceding year, the cost of cotton consumed was about Rs. 100 a candy more than in the previous year. Moreover, the Company's production suffered as a result of the strike and lock-out for 14 days. The working also suffered on account of loss of production and payment of lay-off compensation to workers for 17 days due to 100 percent power cut which was in force in the beginning as well as at the end of the accounting year of the Company.

Appropriations of the year's profits include depreciation Rs. 4.50 lakhs (against Rs. 3.67 lakhs), development rebate reserve Rs. 1.07 lakhs (against Rs. 60,000), taxation Rs. 1.20 lakhs (against Rs. 5.55 lakhs), gratuity reserve Rs. 50,000 (against Rs. 20,000), bonus relating to previous years Rs. 77,900 (against Rs. 42,368), charity and donations Rs. 6,215 (against Rs. 23,703) and dividends Rs. 1.20 lakhs (against Rs. 1.50 lakhs). After making various appropriations, there remains a surplus of Rs. 8,263 to be carried forward, against Rs. 9,862 brought in.

The Company has a paid-up capital of Rs. 11.98 lakhs which is supported by reserves and surplus amounting to Rs. 12.08 lakhs. The gross block of the Company valued at Rs. 71.17 lakhs has been written down to Rs. 31.93 lakhs.

Ahmedabad Electricity Repeats Dividend

AHMEDABAD Electricity did fairly well during the year ended March 1964. It realised Rs. 8.12 crores from the sale of its energy—17 percent more than in the preceding year. The gross profit increased by 22.8 percent from Rs. 1.75 crores to Rs. 2.15 crores. The dividend, however, had just been maintained at 8 percent. The chairman, Mr. Kasturbhai Lalbhai, assured the shareholders at the annual meeting that they could look forward to still better results for the current year; the revised rates of electric energy raised in November 1963 would be fully reflected in the accounts for the current year. The chairman stated that the benefit of the increase in the Bank rate from 4½ percent to 5 percent would not, however, be reflected in the reasonable return permitted to electrical undertakings in the current year. The standard rate applicable for 1964-65 remains unchanged at 6½ percent. The Company will be able to earn a return of 7 percent from 1st April, 1965, provided Bank rate remained at 5 percent at the commencement of the next financial year (1965-66).

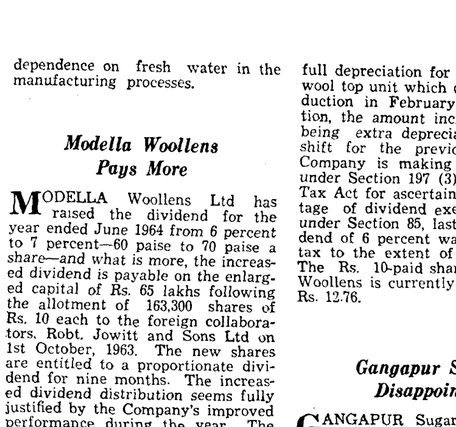
Justifying the dividend policy of the management, Mr. Kasturbhai Lalbhai pointed out that in the past the Company paid a maximum dividend that could be paid under the Electricity (Supply) Act, the dividend having been stepped up with the increase in the reasonable return. While unwilling to make any firm commitment, the chairman hinted at the possibility of a higher dividend for the current year. He disclosed that the directors are considering the diversification of the Company's activities by undertaking new lines. A scheme is already under active consideration for the manufacture of fractional horse power motors with foreign technical collaboration. The directors have no intention at present of asking the shareholders for fresh capital for financing the expansion schemes. Mr. Kasturbhai Lalbhai stated that by 1966, the existing generating capacity of the Company would fall short of the rising demand in the Company's area of supply.

Ruby Mills Steps up Distribution

THE Ruby Mills Ltd has raised the dividend for the year ended March 1964 from 10 percent to 12 percent (Rs. 2.50 to Rs. 3 a share of Rs. 25) which seems to be well justified by the Company's improved performance during the year. Sales of cloth, yarn and waste are up by about 12 percent from Rs. 1.27 crores to Rs. 1.42 crores, and the gross profit has gone up by nearly 20 percent from Rs. 13.01 lakhs to Rs. 15.61 lakhs. The provision for depreciation has been raised from Rs. 6.33 lakhs to Rs. 9.43 lakhs, but allocation to the development rebate reserve is lower at Rs. 1.50 lakhs, against Rs. 3.70 lakhs. Taxation absorbs Rs. 3 lakhs, against Rs. 1.15 lakhs. The proposed dividend absorbs Rs. 1.80 lakhs, against Rs. 1.50 lakhs, leaving a sum of Rs. 24,674 to be carried forward, against Rs. 36,676 brought in. The Rs. 25-paid share of Ruby Mills is quoted around Rs. 40.

Shah Construction Fares Well

SHAH Construction Co. Ltd has maintained the dividend for the year ended June 1964 at 10 percent, which, however, is payable on the enlarged capital as raised by the issue of Rs. 10 lakhs during the year, the new capital ranking for proportionate dividend. The preliminary report shows that the Company has fared much better than in the preceding year, with the gross profit up by 23.6 percent from Rs. 14.06 lakhs to Rs. 17.39 lakhs. The provision for depreciation is higher at Rs. 3.89 lakhs, against Rs. 2.95 lakhs and development rebate gets Rs. 1.64 lakhs, against Rs. 1.46 lakhs. Taxation accounts for Rs. 7.55 lakhs, against Rs. 6.20 lakhs. The proposed dividend absorbs Rs. 4.25 lakhs, against 4 lakhs, leaving a sum of Rs. 83,000 to be carried forward, against Rs. 77,000 brought in.



The directors state that during the year, various large contracts have been secured by the Company and by partnership and total work on hand is estimated at over Rs. 15 crores. These include the construction of a 23-storeyed building at Nariman Point, construction of office buildings and residential apartments. The Company has also secured the construction of head works in Mahi river bed under a French patent for the Gujarat refinery project in Koyali, Baroda. The work has already commenced and all the accessories are now being imported from France. The Company has secured an import licence for Rs. 12.57 lakhs for the import of most modern equipment for pile driving manufactured by a French firm. After the import of the machinery, the Company will be able to undertake piling work for the construction of docks, jetties, bridges, etcetera. The Rs. 100-paid share of Shah Construction is currently quoted around Rs. 125, offering a gross return of 8.5 percent.

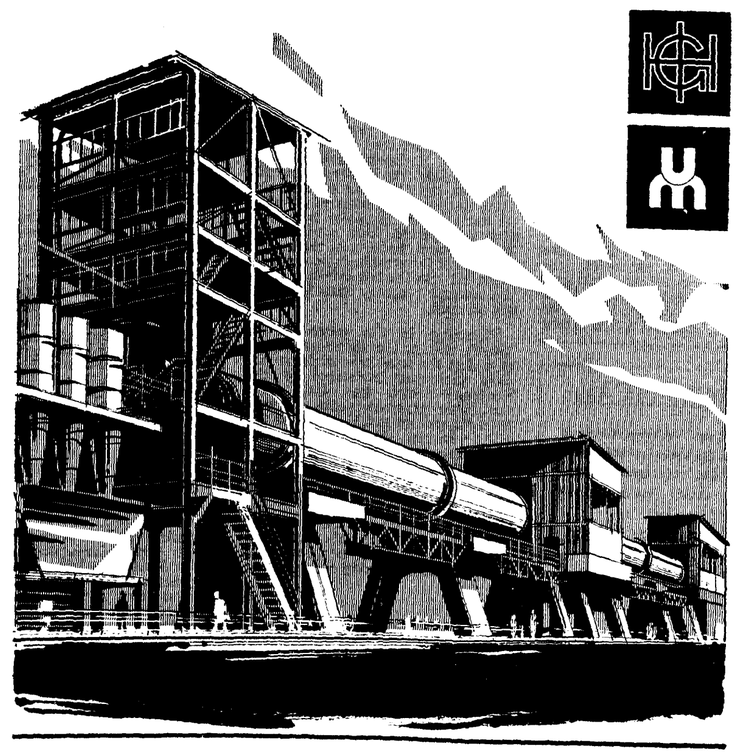
Nuboard Manufacturing: A New Chipboard Venture

NUBOARD Manufacturing Co. Ltd is a new Company which proposes to set up a factory in Rampur, Uttar Pradesh, for the manufacture of chipboard. The Company has been licensed to manufacture 7,200 tons of chipboard a year. Considerable progress is reported to have already been made in the implementation of the project. The construction of the factory has been completed and machinery has reached the site. Erection of machinery is likely to be completed within the next three or four months. If all goes well, the factory is expected to go on stream in April 1965. The project is estimated to cost Rs. 37 lakhs, which will be met by the issued capital of Rs. 25 lakhs, a loan of Rs. 5 lakhs from the foreign promoters and the remaining Rs. 7 lakhs by borrowings from directors and banks.

Mr. Mahendra R. Patel, Mr. Somabhai V. Patel and Mr. Dayabhai V. Patel, the three non-resident directors from British East Africa who have promoted the venture, will subscribe for shares worth Rs. 12.50 lakhs —half the issued capital—in sterling to meet the cost of machinery imported from West Germany. The authorised capital of the Company will be Rs 50 lakhs—all in equity shares of Rs. 10 each, of which Rs. 25 lakhs is being issued in the first instance. The non-resident promoters are taking up shares worth Rs. 12.50 lakhs, the Indian promoters and their friends will take up shares of the value of Rs. 6.37 lakhs. The balance of Rs. 6.13 lakhs will be offered for public subscription very shortly. The board of directors includes Mr. Mahendra J. Shah, Mr. Harshavadan J. Shah and Mr Vasantlal D. Mehta

BIRD'S CENTENARY YEAR

ENGINEERING TO AID INDUSTRY



The expansion of industry depends largely on the timely supply of engineering products and services.
The Bird-Heilgers Group, with water treatment, coal washeries, castings and structurals, refractories, pneumatic equipment, springs and research, is playing a significant role in providing basic requirements for a wide variety of industries.

Deploying the skills acquired over a hundred years, the Bird-Heilgers Group is making important contributions to the economy . . . through planned diversification and expansion.

Poysha Industrial Share Offer

POYSHA Industrial Co. Ltd is offering 600,000 equity shares of Rs. 10 each at par for public subscription to raise funds for financing its expansion schemes. The list will open on 13th November and will close on 23rd or earlier but not before 16th November. (Fuller details appear on a later page in this week's issue of *Capital*.) The Company is engaged in the manufacture of a wide variety of containers ranging from simple slip-cover-cans such as are used for cosmetics and other dry products to friction-top cans for paints, open top sanitary cans for fruits and vegetables and other precision-made containers. Metal cans, mostly decorated and lithographed, are manufactured by the Company in a variety of sizes and shapes to meet the needs of the different products to be packed. It also makes other light-gauge tinplate and sheet-metal products. Its wholly owned subsidiary, Colrige Ltd, is engaged in the manufacture of rigid containers and collapsible metal tubes for cosmetics, pharmaceutical and other industries. Another subsidiary, Kaia Can Co. Ltd, will be manufacturing containers at its factory to be established near Anand, mainly for the requirements of Kaira District Co-operative Milk Producers' Union Ltd.

Poysha Industrial now proposes to establish two additional factories, one in Cochin to cater to the requirements of south India and the other in Ghaziabad to take care of north and east Indian requirements. The Company's existing main factory in Bombay is proposed to be shifted to the Kalva industrial area near Thana and it will be fully modernised. The modernisation and expansion programme will increase the Company's capacity from 4 million to 10 million cans a month on a single-shift basis. The factory of Colrige, which is now in rented premises, is also being shifted to Kalva. Poysha Industrial has an authorised capital of Rs. 1.50 crores, of which Rs. 25 lakhs has been issued so far. It is now proposed to make a further issue of Rs. 85 lakhs, raising the issued capital to Rs. 1.10 crores. Out of the proposed issue, shares worth Rs. 25 lakhs are being offered to the existing shareholders and the remaining Rs. 60 lakhs to the public. The entire public issue has been underwritten.

Prospects for Kothari Sugars and Chemicals

THE Working of Kothari Sugars and Chemicals Ltd for the year ended June 1964, has resulted in a gross profit of Rs. 12,31,471 before providing for depreciation. As no depreciation was provided in last year's accounts, depreciation to the tune of Rs. 23,02,889 has to be provided in the current balance-sheet for two years. After setting off the profit against this provision, there is left a balance depreciation of Rs. 10,71,418 still to be provided for. No development rebate could be provided for want of adequate profits.

The directors state in their report that by and large, the Company had no serious trouble with the machinery and plant. It started crushing on 14th December, 1963, and closed the season on 18th May, 1964, with a total crushing of 129,005,457 metric tonnes of cane and a production of 11,431,682 tonnes of sugar, at 8.86 percent recovery, against 9.42 percent recovery during the previous season. The report adds that the percentage of recovery in the trial season in the previous year was higher due to the fact that the Company crushed the came during the months of January to April, which normally is a peak recovery period. But during the 1963-64 season, because of the longer duration of the crushing season which extended into the hot month of May, the overall recovery was lower at 8.86 percent.

Referring to the prospects for 1964-65 season, the directors' report says that the total area under sugarcane plantation registered by the Company which was 4,000 acres during the previous season, has now been stepped up to 6,300 acres for the 1964-65 season. At the average rate of 30 tonnes an acre, it will be possible to obtain 189,000 tonnes of cane. Hence they feel that it will be possible for the Company to step up its crushing by 45 percent, and if the climate conditions are not unfavourable, it should be possible to produce 17,000 tonnes of sugar, compared with 11,431.682 tonnes during the year.

Antifriction Bearings Making Good Progress

THE Rs. 10-paid share of Antifriction Bearings Corporation Ltd is currently quoted around Rs. 7. But from what the Company's joint managing director, Mr. Dhirajlal S. Gandhi, told the members of the Bombay stockbrokers' social forum when they recently visited the factory, investors can look forward to better times ahead. It was in November 1963 that the Company commenced production of its main item of manufacture—taper roller and cylindrical roller bearings. The teething troubles are over and production is increasing gradually. The products are stated to be according to international standards and precision.

The Company's turnover in 1964 is likely to be of the order of Rs. 25 lakhs, against Rs. 9.69 lakhs in 1963 and sales during 1965 are expected to reach Rs. 50 lakhs. Mr Gandhi stated that the Company hoped to produce 210,000 pieces of bearings of which thrust bearings would be about 100,000 pieces. In 1965, the production was likely to increase to around 470,000 pieces of which 360,000 pieces would be of roller bearings and cylindrical bearings and the balance would be thrust bearings. It is hoped that during 1965, the Company would be able not only to wipe out all the carried forward losses, but it would be in a position to provide the full amount of depreciation and development rebate. Mr. Gandhi made no commitment on the dividend, but it might not be too optimistic to expect a maiden dividend for 1965.

Share Offer by Podar Mills

THE Podar Mills Ltd, Bombay, is embarking on a big expansion programme which is estimated to cost about Rs. 2.45 crores. This is proposed to be met by the fresh capital issue of Rs. 95 lakhs, medium-term bank loans of Rs. 1.26 crores and foreign exchange loan of Rs. 24.15 lakhs from the I.C.I.C.I. Out of the proposed share capital issue of Rs. 95 lakhs comprising Rs. 55 lakhs in equity shares and Rs. 40 lakhs in 9.5 percent cumulative redeemable first preference shares, the directors and their friends will take up equity shares worth Rs. 15 lakhs. The remaining capital which will be offered for public subscription has been fully underwritten. The subscription list will open on 16th November and will close on the 30th or earlier. The existing shareholders will have preferential allotment and will be given full allotment applied by them and only the balance will be allotted to the public.

The Company has at present a composite textile mill in Bombay with a capacity of 38,880 spindles and 930 looms. It has spent nearly Rs. 1.25 crores over the past ten years on rehabilitation and modernisation. The Company is setting up a cotton spinning unit in Jaipur in the compound of Jaipur Spinning and Weaving Mills Ltd, which is a subsidiary of the Podar Mills. The new unit is expected to start production in 1965. Construction of the building has already started and orders for indigenous machinery have been placed.

Progress of Facit Asia

IN their second annual report for the year ended March 1964, the directors of Facit Asia Ltd state that the construction of the factory building was completed in record time and all the machinery, tools, etcetera, were duly installed. Since April 1964, the Company has assembled 400 units each of C1-13 calculators and H9S6 adding machines out of the components imported again *ad hoc* licences granted by the Government. During the first phase of the manufacturing programme which spreads over a period of nine months from October 1964, the Company plans to produce 1,200 units each of calculators and adding machines with 50 percent indigenous content.

Necessary raw materials and components have been imported and production of indigenous parts has been taken up. The working results of the Company for the year ended March 1964 show a loss of Rs. 1.61 lakhs, which, together with a deficit of Rs. 16,015 brought forward from the previous year, has been carried forward. Shares of the total value of Rs. 9.70 lakhs were issued during the year to AB Atvidabergs Industrier of Sweden in terms of the collaboration agreement against the price of machinery and tools supplied by them. Further, equity shares worth Rs. 1.60 lakhs were allotted to them in May last, raising the paid-up capital to Rs. 25.30 lakhs. The Rs. 100-paid share of Facit Asia is quoted nominally around Rs. 99.

Albright Morarji Pandit

ALBRIGHT Morarji and Pandit Ltd is a new company which has been formed to undertake the manufacture of phosphoric acid. The plant, it is proposed, will be located in Ambernath near Bombay. The factory will have an annual production of 17,500 tonnes of phosphoric acid to be used in the manufacture of detergents and industrial phosphates. A part of the output will be sold to Dharamsi Morarji Chemical for the manufacture of triple superphosphate fertiliser. The project is estimated to cost about Rs. 2 crores.

Details about securing the necessary finance for the project are being worked out. The Company is likely to have an issued capital of Rs. 1 crore in equity shares of which 45 percent will be taken up by the British firm of Albright and Wilson Ltd, which is collaborating in the venture. Dharamsi Morarji will take up another 27 percent and 3 percent of the capital will be held jointly by Mrs. Sharda Mukherjee and Mr S. P. Pandit. The balance of 25 percent will be offered for public subscription in the near future. The promoters are awaiting the Government's approval of the collaboration agreement.

More from Travancore Sugars and Chemicals

THE chairman of the Travancore Sugars and Chemicals Ltd discussed, at the annual general meeting of the Company, the difficulties experienced by the sugar industry in general and the Company in particular. Production of sugar at 9,032 tonnes fell substantially short of last year's figure of 12,000 tonnes, because of the high *gur* prices which resulted in the diversion of cane for jaggery making. The chairman, Mr. H. V. R. Iengar, observed in this connection that in the absence of any law prohibiting the manufacture of jaggery in the natural area of the sugar factory, such diversion of cane would hibiting the manufacture of *jaggery* prices were high. Sales of sugar were greater in 1964 because of a carryover of 7,000 tonnes and higher releases to meet sugar scarcity in Kerala. He pointed out that the profit margin was lower as the higher costs of production were not adequately compensated in the selling price of sugar.

Referring to the future outlook for the factory next year, Mr. Iengar said that the outlook was somewhat obscure as the Government has already increased the cane price by 25nP a maund from 1st November, 1964, but without any indication of a higher price for sugar. The Sugar Enquiry Commission is at present examining the cost structure of the industry and its recommendations are expected shortly.

The dividend on ordinary shares has been increased to 7.5 percent from 5 percent in the previous year. An application has already been made to the Government for capitalising the sum of Rs. 600,000 out of the sum of Rs. 6,50,000 available in the share premium account, by the issue of one bonus share for every five ordinary shares held.

The Stock Markets

MOVE TO CURB BLANK TRANSFERS WORRIES LYONS RANGE

Wednesday Evening.

DULL conditions prevailed during the Diwali session of the Calcutta stock market on Tuesday. The market was closed on Wednesday. Lyons Range is disappointed because there is no indication that the Government will modify the fiscal system to stimulate activity in the capital market until the next Budget. In the meantime, many unfavourable developments have taken place, so operators are inclined to lighten their commitments as soon as their holdings show a profit. Turnover has shrunk considerably, and it is largely confined to clearing shares. Business in cash shares has been small, although prices of selected scrip have tended to harden due to good corporate news.

The worry, for the time being, is due to the proposed amendment of the Companies Act to restrict the period of holding shares on blank transfer to six months. All the stock exchanges have, in a joint memorandum to the Government, protested against the prosposed measure. Despite some abuses of the system of blank transfer, it is thought that the move will do more harm than good. There is no doubt that blank transfer has contributed to the liquidity and negotiability of stocks and shares. The restriction will discourage investors by impairing the liquidity of shares. The supply of institutional credit, particularly from banks to the stock market, will also suffer. In view of the prevailing depression in the capital market, there is no point in reducing the negotiability of shares.

It may be relevant to point out that in the U.S.A. the system of blank transfer has been reinforced by statutory provisions to safeguard the interest of holders of shares under blank transfer. The restriction may divert funds from stocks and shares to channels which are not productive. There is enough scope for concealing unaccounted money in the form of gold, silver and jewellery. Since Government securities are transferable by endorsement and delivery, there is no reason to penalise holders of shares under blank transfer.

If the Government is determined to impose the restriction, the validity period of blank transfers should be extended at least up to the time when the share transfer book of a company is closed. Furthermore, the restriction should be followed by a substantial reduction in the stamp duty on share transfers, which is now very high.

The observation of Mr. T. T. Krishnamachari, Central Finance Minister, that the Government would terminate the managing agency system in selected industries next year has also caused a good deal of concern. The main point to consider is whether managing agents can be substituted by efficient directors. Not many qualified men are available who can serve as directors. There is no doubt that managing agents are still playing an important rôle in economic development. The abuses of the system have been eliminated to a large extent by the numerous restrictions imposed on their activities and remuneration.

Indian Iron have recovered slightly due to short-covering. In the engineering section, Jay Engineering have improved on replacement buying. Jessop have also recovered. Among clearing miscellaneous shares, Dunlop Rubber are steady. Goodyear India are sluggish due to the Company's decision to issue rights shares at a heavy premium. But Philips India have attracted support on the prospect of a rights issue. New Asiatic Insurance have gained on the Company's decision to undertake industrial or commercial ventures. Sirpur Paper are steady on paying a larger dividend.

Jute shares are hesitant since the surcharge of 15 percent on imports of manufactured goods into the U.K. may reduce the offtake of jute goods by that country. Coal and tea shares have lacked interest. Cotton mill shares are being cautiously dealt in due to the introduction of partial control on cloth. Government securities are dull and quiet. Institutional interest has been lacking. The 3 percent Conversion Loan 1986 has dropper to Rs. 62. State Government loans are available at a discount.

Bombay

DULL TRADING IN THE MOORAT SESSION

TURNOVER SMALL DESPITE GOOD CORPORATE NEWS

Wednesday Evening.

MOORAT trading in the Bombay Stock Exchange was unusually dull on Monday and the normal Dewali enthusiasm was not in evidence. There was a limited turnover, since both speculatives and investment interest was generally at a low ebb. Dalal Street had a rather difficult time last week. It not only failed to push its way beyond the previous week's high reached on 26th October but it lost most of the ground it had gained after 14th October. Although the preceding rise had been fairly impressive, last week's setback was not due merely to corrective profit-taking. There was a considerable amount of tired bull liquidation because of the continued lack of any worthwhile outside support. Bears too took their chance as the flow of news was not favourable from the market angle. Although the corporate news continued to please operators with several instances of higher dividend announcements, the market had to contend with many adverse factors.

The deliberations of the National Development Council on the fourth plan draft memorandum brought no cheer. Apart from the prospects of heavier additional taxation implied in the financing of the massive outlay of Rs. 2,100 crores to Rs. 2,500 crores, the market felt uneasy at the Prime Minister's suggestion that the public sector should enter the field of consumer goods industry. This was regarded as a further encroachment on the private sector's sphere of activity. Misgiving were also expressed over the possible impact on India's exports to the U.K. of Britain's decision to levy a surcharge of 15 percent on imports. The Central Finance Minister, Mr. T. T. Krishnamachari's statement that the Government was considering the gradual abolition of the managing agency system and his hint about the possible revival of the compulsory deposit scheme for the corporate sector had also an unsettling effect on the market.

Later in the week, however, the market turned a little steadier. Short covering and modest replacement buying enabled it to stage a modest rally, and the price pattern over the week-end showed a sprinkling of small, though widespread, losses. Sentiment during the latter part of the week was helped by the Russian Prime Minister's statement that there would be no change in that country's economic, technical and military aid to India because of the recent shake-up there. Reports suggesting that the steel producers might be allowed a special element in the retention prices to enable them to repay their loans to the Government also aided sentiment. There were also reports that the Government would resume negotiations with Tatas for the expansion of capacity at the Jamshedpur works from 2 million tons to 3 million tons because of the likely delay in the setting up of the Bokaro plant.

That the stock market should be unable to present a firm appearance in spite of improvd corporate profitability and higher dividends shows that investors' confidence has been rudely shaken. It appears that confidence is unlikely to revive unless the Government suitably modifies its fiscal policies. It is possible that the

PRESSMAN

Government might be obliged to have a fresh look at the stock market if it finds that the Unit Trust is running into difficulties. The latter cannot hope to do well if equity prices remain subdued. Although the Government has not been altogether unconcerned about the continuing slump in the stock market, it has *failed to take* appropriate measures to restore confidnce in the market. It is rported that the officials of the Industrial Development Bank have had discussions with stockbrokers and institutional investors to find out their views on the prolonged depression in the capital market. The Government is possibly thinking of taking some fresh measures to tone up the investment market. The least that the Governmnt can do without affecting the revenue to the exchequr is to abolish the capital gains tax on bonus issues and also the dividend tax.

Sectionwise, rayons continued to be distinctly weak, with Century Mills declining sharply from Rs. 617 to Rs. 599 on reports that the Company might be forced to reduce its rayon and tyre-cord production due to an acute shortage of caustic soda. Textiles were subdued, and the weakness was pronounced in Morarjee Mills because of the Company's disappointing results. Steels eased mainly on corrective profit-taking; the preceding rise had been very steep, particularly in Indian Iron. Shipping shares were easier. Scindia's results failed to impress and the spurt in Great Eastern which followed the upward revision of the dividend attracted heavy profit-taking. Engineering shares held comparatively steady. Among miscellaneous scrip, Sirpur firmed up after the announcement of a substantially higher dividend. Business in other sections was limited and the general tone was quietly subdued, except in electrics which were distinctly steadier.

For a nominal charge "Capital's Statistical Department can provide you with a certificate of share prices.

Madras

BOMBAY ADVICES SUBDUE MARKET

SHORTAGE OF FUNDS AFFECTS SENTIMENT

Tuesday Evening.

ALTHOUGH the Madras stock market was officially closed on 3rd November, the members were permitted to transact business in Deepavali *moorat* trading. The earlier improvement has not been maintained towards the close due to the drop in the Bombay stock market. Turnover in clearing and cash shares has been poor, although selling pressure has been absent. Buyers are restrained in view of some unfavourable developments.

If the restriction on blank transfer, as is proposed in the amendment to the Companies Act, is imposed, the liquidity of stocks and shares will suffer greatly. Investors are worried since the Government is likely to terminate the managing agency system in selected industries. The market has also been suffering from the shortage of funds. The supply of bank credit for stocks and shares is expected to shrink further due to the approach of the busy season.

Government securities have been dull, and stray business is being transacted. Interest has been shown in good preference shares. Selected electric companies have been bought. South Madras have been done at Rs. 12 and Vellore at Rs. 14.42. Despite limited business in bank shares, Indian Overseas are steady at Rs. 150.50 and Indian at Rs. 159. *Support has been forthcoming* for selected sugar shares. Deccan are steady at Rs. 11.10 and E.I.D. at Rs. 35.87. K.C.P. have been taken at Rs. 24 and Jeypore at Rs. 16.50. Travancore have come to hand at Rs. 7.80 and Mysore at Rs. 27.75.

Selected tea and coffee shares have been steady in the planting section. Consolidated Coffee have changed hands at Rs. 24.84 and Cochin Malabar have been bought at Rs. 6.22. Blue Mountain have reacted to Rs. 2.24, but *Periakaramalai are steady* at Rs. 3.38. Business in Ouchterlony has been done at Rs. 3.50. In rubber shares, Rajagiri have come to hand at Rs. 22.60 on declaring a taxable final ordinary dividend of 15 percent. In tea shares, Nelliampathy are steady at Rs. 5.20 on paying a taxable ordinary dividend of 20 percent. The payment of a final taxable ordinary dividend of 10 percent has helped to improve Nonsuch to Rs. 22.50 Parkside are quoted at Rs. 25.20 on declaring a taxable final ordinary dividend of 15 percent. Among composite gardens producing both tea and coffee, Stanes Amalgamated have hardened to Rs. 13.50 on declaring a taxable ordinary dividend of 12 percent. Among coffee shares, Bababudin are quoted at Rs. 5 and Cowcoody at Rs. 4.92. Swinton have been taken at Rs. 2.68 on declaring an interim taxable ordinary dividend of 10 percent. Interest has been taken in Kumergode, Ossoor and Rajendra.

Textile shares have shown mixed trends. South India Viscose have lost at Rs. 113.50, but Travancore Rayon are steady at Rs. 19.50. Madura have been maintained at Rs. 35.40 and Lakshmi at Rs. 132. Bangalore Woollen have met with support up to Rs. 267 and Buckingham are quoted at Rs. 278. Rajapalayam have come to hand at Rs. 138, Ramakrishna at Rs. 139.40 and Vijayamohini at Rs. 89.

In miscellaneous shares, Aluminium Industries have reacted to Rs. 23.12, but Ashok Leyland are steady at Rs. 6.93. Dalmia Cement have been taken at Rs. 13.20 and India Cement at Rs. 5.18. Mettur Chemical have been maintained at Rs. 14.40. F.A.C.T. have met with support up to Rs. 5.30. Seshasayee Paper are easier at Rs. 7.30 and Mysore Paper at Rs. 11.78. Tube Investments have been done at Rs. 174 and Kirloskar Electric at Rs. 20.70. Mysore Coffee Curing have come to hand at Rs. 12.14 on declaring a taxable ordinary dividend of 10 percent. Parry's Confectionery have been maintained at Rs. 2.90, Spencer at Rs. 21.50 and Textool at Rs. 144.

London

INDUSTRIALS RISE ON GOOD COMPANY NEWS

GILT-EDGED IN DEMAND

London, 4th November.

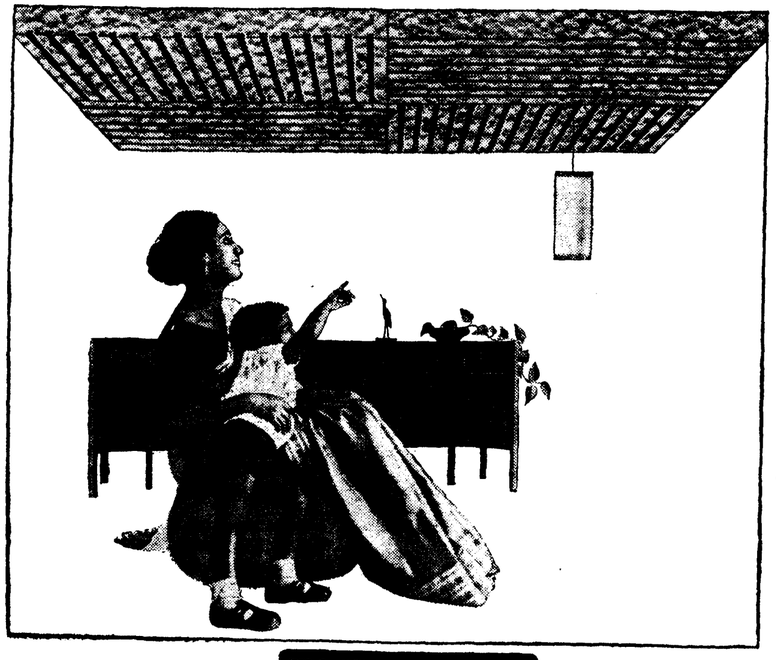
IT was another eventful week in the stock market with sentiment almost completely dominated by politics. A major item was the Government's measures to improve the economic situation and although the 15-percent import surcharge has caused some fairly violent criticism from abroad, it jolted the foreign speculative sellers of sterling and rates moved in favour of London. The move to stimulate exports has started a search for the shares of those companies with important export outlets. These was a general disposition to hold off in front of the Queen's speech at the opening of parliament, but its contents had been fairly well discounted. Gilt-edged had a good following at times and prices responded well.

5% PER CENT MADRAS STATE ELECTRICITY BOARD BONDS, 1976.

FOR Rs. 300 LAKHS.

(PAYMENT OF INTEREST AND REPAYMENT OF PRINCIPAL, GUARANTEED BY THE GOVERNMENT OF MADRAS.)

The Bonds will be trustee securities under the Indian Trusts Act and also approved securities for the purposes of the Insurance Act and the Banking Companies Act. The Bonds will be treated on par with Government Securities for the purpose of advances under Section 17 (4) (a) of the Reserve Bank of India Act, 1934.



ISSUE PRICE Rs. 99.75 PER CENT.

REDEEMABLE AT PAR ON THE 16th NOVEMBER, 1976.

Subscriptions will be received in cash or cheques from the 16th November, 1964. But the lists will be closed without notice as soon as the total subscriptions amount to approximately Rs. 300 lakhs and in any case not later than the close of business on the 21st November, 1964.

Applications will be received at all branches of the State Bank of India within the State of Madras and at the State Bank of India at Madras, Bombay, Hyderabad, Calcutta, Delhi, Bangalore and Bangalore City.

Copies of the Notification announcing the terms of issue and application forms are available at all the receiving offices mentioned above, at all treasuries and sub-treasuries in the State of Madras and at all offices of the State Electricity Board.

Thermocole

keeps your room so cool, so gay!

THERMOCOLE is foamed polystyrene: the lightest rigid insulation material. It is available in white slabs, as well as in gaily patterned tiles that make attractively gay false ceilings.

THERMOCOLE is efficient. Its closed cells provide an effective barrier against heat, noise and moisture. In fact, one inch of THERMOCOLE insulates better than four feet of concrete.

THERMOCOLE is versatile. It is ideal for insulating roofs, walls and floors in all kinds of buildings. It is also excellent for fabricating light-weight insulating partitions and doors.

THERMOCOLE is feather-light yet strong, durable and easy to work with. It cuts structure and labour costs. Efficiency with economy—that's the insulation THERMOCOLE provides.

Money

THE CALCUTTA MONEY MARKET

SHARP RISE IN CALL RATE

Wednesday, 4th November.

THE general level of advances has decreased a little in the Calcutta money market during the past week. Almost all the main categories of borrowers have contributed to the fall—the jute and sugar mills, the iron, steel and engineering industries, and the foodgrains and seeds trade. The requirements of the textile mills, however, are unchanged. In the interbank market, conditions have been tight, and the call rate has jumped from 1 percent to 5 percent.

The exchange market is fairly active, with a good supply of both tea and gunny bills. The demand for remittances is fair. In London, sterling has shown a mixed trend, but fluctuations have been within narrow limits.

SILVER WAS STEADY IN CALCUTTA during the past week due to the Diwali demand. The price closed at Rs. 249.50. It was quoted at 112⅛d in London and at 129.3 cents in New York.

Gold was quiet and the price of 14-carat amounted to Rs. 69.25.

DURING THE WEEK ENDED 30TH October, Government of India Treasury bills for Rs. 46,89,25,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 3rd November. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.375 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.500 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 9th November.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 4th November to 7th November at Rs. 99.391 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 28th October to 31st October amounted to Rs. 7,01,50,000.

ACTIVE NOTES DROPPED BY Rs. 12.01 crores to Rs. 2,397.28 crores, according to the return of the Reserve Bank of India during the week ended 30th October, 1964, while the total note issue was Rs 31 lakhs larger at Rs. 2,431.42 crores. Notes held in the Banking Department consequently rose by Rs. 12.33 crores to Rs. 34.15 crores. Deposits of the Government of India increased by Rs. 12.48 crores to Rs. 95.93 crores while those of the State Governments dropped by Rs. 86 lakhs to Rs. 11.73 crores. Balances of commercial banks at Rs. 89.15 crores showed a fall of Rs. 11.76 crores. Balances held abroad decreased by Rs. 42 lakhs to Rs. 8.33 crores. Investments at Rs. 104.39 crores showed a decline of Rs. 2.92 crores. Loans to scheduled banks dropped from Rs. 2.35 crores to Rs. 1.68 crores, of which there was no advance against usance bills. Ways and means advances stood at Rs. 47.27 crores, against Rs. 44.96 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 23rd October, 1964, shows a rise of Rs. 6.72 crores to Rs. 671.06 crores in total deposits. Investments in Government securities are up by Rs. 9.88 crores to Rs. 300.48 crores, while other authorised investments remain unchanged at Rs. 8.98 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have risen by Rs. 1.55 crores to Rs. 330.85 crores. Cash and balances are, in consequence, shown at Rs. 49.05 crores or Rs. 31.93 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 23rd October, 1964, shows Demand and Time liabilities at Rs. 1,365.77 crores (Rs. 28.98 crores on account of borrowings from banks) and Rs. 1,392.27 crores (Rs. 15.58 crores), compared with Rs. 1,343.72 crores (Rs. 31.60 crores) and Rs. 1,398.97 crores (Rs. 16.77 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have risen by Rs. 2.77 crores and Rs. 15.33 crores to Rs. 68.68 crores and Rs. 119.79 crores, respectively. There is a rise of Rs. 21.81 crores to Rs. 839.45 crores in investments. Advances and bills discounted at Rs. 1,721.93 crores show a drop of Rs. 11.51 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.8 percent and 62.4 percent, against 6.2 percent and 63.2 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 6-11-64.

Registered Office : Messent Road, P.O. Tank Road, Bombay-33 DD.

EXISTING AND PROPOSED ACTIVITIES OF THE COMPANY

The Company is engaged in the manufacture of a wide variety of containers ranging from simple slip-cover-cans such as are used for cosmetics and other dry products to friction-top cans for paints, open top sanitary cans for fruits and vegetables, and other precision-made containers. Metal cans, mostly decorated and lithographed are manufactured by the Company in a variety of sizes and shapes to meet the needs of the different products to be packed. The Company also makes other light-gauge tinplate and sheet-metal products.

The Company's wholly owned subsidiary, Colrige Limited, is engaged in the manufacture of rigid containers and collapsible metal tubes for cosmetic, pharmaceutical and other industries.

Another subsidiary, Kaira Can Company Limited, will be manufacturing containers at its factory to be established near Anand mainly for the requirements of Kaira District Co-operative Milk Producers' Union Limited.

The proposed activities of the Company as well as of subsidiaries will be the same as described above.

LOCATION OF THE FACTORIES.

The Company's existing factory is at present situate at Messent Road, P. O. Tank Road, Bombay-33 DD. The Company has a branch factory viz., a reforming unit at Najafgarh Road, Motinagar, New Delhi-15.

The Company proposes to establish two additional factories, one at Cochin in the South to cater to the requirements of South India and the other at Ghaziabad in North India to take care of North and East Indian requirements.

The main factory situate at Messent Road, P. O. Tank Road, Bombay-33 DD., is proposed to be shifted to the Kalva Industrial Area near Thana of the Maharashtra Industrial Development Corporation and fully modernised.

The modernisation and expansion programme will increase the Company's capacity from 40 lakhs to 1 crore of cans per month, on a single shift basis.

The factory of Colrige Limited, a wholly owned subsidiary which is now in rented premises at Sewri, is also proposed to be shifted to the new site near Thana of this Company.

The factory of another subsidiary of this Company, Kaira Can Company Limited, is proposed to be established near Anand in Gujarat State.

N.D.C. DISCUSSES FINANCING OF FOURTH PLAN

(FROM OUR NEW DELHI CORRESPONDENT)

AN image of India very different from the one painted for the last 17 years emerged from the two-day session of the National Development Council held here last week. In contrast to the meetings held during the late Mr. Nehru's *régime*, the latest one indicated the lack of a unity of purpose and of an all-India outlook.

The past week commenced here with the much-advertised Food Ministers' Conference. The Prime Minister, Mr. Lal Bahadur Shastri, and the Central Minister for Food and Agriculture, Mr. C. Subramaniam, had already elucidated the Government's food policy. Statutory rationing, it was decided, should be introduced in Calcutta and Bombay, which were to be cordoned off from the rest of the States. This experiment was to be followed with the introduction of rationing in other cities with a population of 1 million or over. Provision has to be made for a larger number of fair price and cheap price shops, the latter for labour and other depressed localities. The plan aims to abolish the existing zonal system.

The Scheme Opposed

The scheme was largely opposed by the surplus States, who declined to share in the scarcity of the deficit ones. The Chief Ministers of Maharashtra and West Bengal were opposed to statutory rationing, largely on administrative grounds. So the conference deferred its decision till the Guntur session of the All India Congress Committee.

The session of the National Development Council was inaugurated by Mr. Shastri who was sympathetic to the common man and urged that some essential consumer goods industries should be started in the public sector. The State Chief Ministers, however, expressed dissatisfaction over the provisions made for their States and made it clear that the financing of the fourth plan by raising additional resources was the sole responsibility of the Centre. They were worried over the debts the States owed to the Centre and the growing interest burden on them. They also criticised the scheme of priorities devised by the planners and, in particular, the enhanced provisions made for education. They demanded larger allocations for irrigation, power and transport. The States, however, agreed to the size of the plan—Rs. 21,500 crores or Rs. 22,500 crores. Thereafter, the Council set up committees to appraise resources, (2) on industries, power and transport, (3) on social services, (4) on agriculture and irrigation and (5) on hill areas.

The Central Finance Minister, Mr. T. T. Krishnamachari, said that he did not want to take the responsibility of financing the States' plans and saddle himself with that responsibility. "I tell you, it will be wrong for you to depend upon the Centre for everything you want to do. The resource mobilisation for Rs. 3,000 crores must be a joint effort and your contribution and help and guidance are very necessary for this purpose. Secondly, we should also investigate the outlay on the plan and how much could be definitely earmarked as a Central responsibility, which will mean interest, but interest on the investment for which the Centre will be responsible to see that it is adequately serviced and processed, and how much will be the matching contribution," he added.

New Suggestion from T. T. K.

Mr. Krishnamachari made a new suggestion. He said that "the Centre should take up some specific responsibilities. The Centre cannot operate the States' spheres but specific responsibility in relation to some major items like power, even transport if you want, maybe, some hydraulic schemes and maybe even industrial ventures. The advantage of a direct responsibility is this. I have not got the figure for the current year but up to last year the States have taken loans up to Rs. 3,000-odd crores and every time you have to pay the interest. The interest is adjusted according to the nature of the loan, like the loan for social overheads, the loan for industry and so on. But even so, there is the current responsibility for adding interest to the principal and adding interest on the interest. It might be an advantage if the Centre keeps the account and keeps the interest as a Centre's liability. And, ultimately, the State has got the benefit of it; and if the Centre gets the benefit, the State gets it in turn."

It is a matter for some concern that the thinking of the Chief Ministers, as reflected by the discussion, was not influenced by the memorandum circulated to them by the Planning Commission. Similarly, the keystone of planing—namely, implementation through an efficient administration—was hardly mentioned except by the Central Home Minister, Mr. Gulzarilal Nanda. It is also significant that the members of the Hindi bloc—U.P., Madhya Pradesh and Bihar—laid greater emphasis on industrialisation than on education in which they are regarded as backward areas. Side by side, provincialism is running riot. The contradiction is evident. In the absence of education, outside technical and trained personnel will have to be imported to manage the industries which the Chief Ministers of the Hindi bloc want in their States.

There will be another meeting of the National Development Council after the reports of the five committees have been received. Meanwhile, the Planning Commission is embarking on a discussion of the plan in its first draft form.

THIRD PLAN

Defects Analysed

For the second time during the current year, the Planing Commission has been engaged in introspection. A paper was circulated to the recent two-day session of the National Development Council. The study has broadly grouped the shortcomings of the third plan under the following heads:

(1) Gaps between the declared social objectives and the means and instruments envisaged in the plan;

(2) Contradictions between current economic and social policies and plan objectives and policies;

(3) Difficulties arising from the nature of the federal structure and

CASA-126

from weaknesses in State administration;

(4) Inadequate emphasis on the management function in relation to planning;

(5) Setting of inappropriate targets;

(6) Balance between projects and schemes requiring long and shorter periods of gestation and the lengthening out of gestation periods;

(7) Dispersal of resources in place of concentrated deployment;

(8) Problem of achieving effective administrative and technical coordination at the area level;

(9) Insufficient attention to costs, productivity and returns;

(10) Role and functioning of the organised private sector in relation to planned development;

(11) Inadequacies in reporting, evaluation and appraisal of progress and shortcomings; and

(12) Weaknesses in the organisation for planning at various levels and in data and analysis for planning.

The study claims that "between the statement of social objectives and the practical ability to achieve them, there has been a gap, whose very continuance now throws increasing doubt on the process of planned development. This statement is true, for instance, of such objectives as the establishment of greater equality of opportunity, bringing about reduction in disparities in income and wealth and a more even distribution of economic power, ensuring adequate expansion of employment opportunities, using the country's manpower resources and meeting the minimum needs of the bulk of the population. During any given period, there is a conflict between measures and policies for attaining economic growth and for enlarging social justice.

In its analysis, the study admits that "the degree of discipline in policy, so essential for effective and continuous administrative action, had not been available in many key areas. This has been the position over the years, both at the national and State levels and, in spite of the existence of the National Development Council and several favourable political factors, between the Centre and the States.

A Wide Gap

"There has hitherto been a wide gap between plan objectives and policies and current policies. This has reduced the effectiveness of plans without giving corresponding advantage in managing the current problems of the economy. This observation is true, for instance, in the manner in which the Government has dealt for several years with such problems as food distribution, fixing of relative prices of agricultural and industrial commodities, control of inflationary pressures, implementation of land reform, and growth of corporate enterprise in the private sector.

"It is pointed out by way of explanation that the distribution of subjects under the Constitution between the Union and the States did not give to the Central Government sufficient power to ensure economic and social development for the country as a whole either on an adequate scale or on uniform lines. The plans have sought to overcome this limitation to some extent. Through various forums, the Central Government is able to initiate consultations over a wide field and thus exert a certain advisory influence with the States. Through the resources for development which the Centre makes available, a measure of direction can be given to the scheme of development in the States. Rigid procedures for the administration of Central assistance inhibit action in the States. On the other hand, if agreed priorities are not observed and Central assistance meant for given purposes is not well applied or is diverted to other purposes, planning breaks down.

"There have been indications of this during the third plan. In particular, in States whose financial situation was not satisfactory, planning has suffered and priorities have been affected in several aspects. An important lesson for the fourth plan, therefore, is that procedures relating to Central assistance, while permitting a reasonable measure of change and flexibility, should have built into them certain sanctions which will ensure that plan programmes and priorities are not disregarded in any State simply because, for the moment, this seems to be the easier way. This is a matter which merits consideration as much from the point of view of individual Ministries and State Governments as in a larger national perspective.

Fixing Realistic Targets

"One error which has often occurred is to propose targets and judge achievements in terms of expenditure incurred. Wherever the targets are fixed, they should be related to physical tasks and achievements. Against these, certain estimates of expenditures have to be set. Any expenditure is intended to represent a certain performance in physical sense. It is of the utmost importance, therefore, that performance budgeting should be developed as a tool of planning and plan implementation.

"If the gestation period of a project is longer than has been planned, this should ordinarily be regarded as a failure in the management function. As suggested earlier, the failure constitutes a blot both on planning and on implementation. In the past, the lengthening out of gestation periods has frequently been ascribed to foreign exchange difficulties. That there have been foreign exchange problems is not denied. However, it is also true that in many instances, there have been other and more serious factors. Delays, for example, in making steel or cement available during the construction phase or in organising procurement of raw materials and components, both from within the country and from abroad, indicate that materials planning and management have not been given that central place in planning and plan implementation which is due to them. This has been realised for the past two years, but the steps taken to correct this known deficiency have been quite inadequate. As an important preparatory step for the fourth plan, a programme

BI-MI-15

MUKAND IRON & STEEL

regular flow of key materials to projects under construction and procurement of raw materials and components for projects in operation should be taken in hand from now on.

"The main reason why it is possible to neglect what is accepted in theory as the correct approach, is that in Indian planning there has so far been very little insistence on the appraisal of costs and benefits and on comparisons between returns on alternative investments. This is a key area for action in the fourth plan.

"There should be greater emphasis on sound technical and economic investigation, on taking correct decisions on the basis of requisite information and date, and on implementation and smooth flow of benefits. Secondly, each year every large enterprise should undertake forward planning, both in physical and in financial terms, for a further period of five years. This would ensure that their estimates of cost and time and of physical benefits were reviewed systematically and, whatever changes or replanning were needed, could be undertaken as a matter of normal practice and incorporated into the plan. Current economic policies could then be more closely related to plan objectives and targets.

"Ten years ago, when the approach to community development and national extension was being worked out, it seemed hard to contemplate that, for years on end, only a proportion of the villages of India should receive the benefits of the proposed development. It was then thought that there would be no contradiction between the extension of community development so as to cover the entire countryside and the growth of agricultural production, provided (a) the necessary priority which the plans contemplated was always given to agriculture and (b) extension services were established by each State Government first in areas which already had irrigation or assured rainfall or which were likely to come under irrigation in accordance with plan programmes.

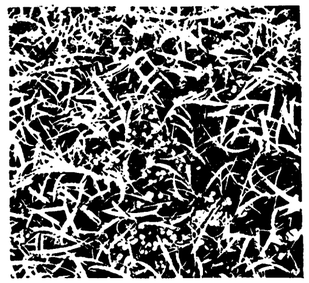
Intensive Development

"Neither of the two assumptions were fulfilled to the extent plans and policies had postulated. Be that as it may, the fact that growth in agricultural production—after attaining a certain level—seems to have come to a halt, has led the Government to stress the strategy of intensive area development. This has special application for agricultural and rural development. In other fields, areas selected for intensive development have a more limited purpose, such as testing of improved methods, training of personnel, etcetera. A common danger in planning is that certain lables may be used, but the content may be quite different. This aspect has to be watched in applying the idea of intensive development in every field and specially in agriculture.

"The choice between dispersed and concentrated deployment of resources arises in other fields as well, for instance, in determining locations for industrial development, in considering how speedily the less developed areas are to be brought to a level with the more advanced areas, or in considering how the rural industrialisation programme should be implemented. In practice, it is not possible to pursue either course completely at the cost of the other. Where the fourth five year plan should differ from earlier plans is in posing the issues in each case, working out its implications with the tools of economic and statistical analysis, and in formulating a precise programme in which there would be proper time phasing and assessment of costs and benefits. Admittedly, economic criteria alone will not be decisive, but they should be applied and political after considering the results of the economic appraisal.

"Cost productivity and returns are an aspect, firstly, of the criteria of investment which are followed and, secondly, of management at each stage of a project or scheme, but something more is also involved. Technological improvement and raising of levels of productivity are basic to economic progress. They have to be built not only into the general design of a plan but into each of the activities included in it. In other words, productivity has to be a matter of continuing concern. Costs and returns are in themselves both tests of productivity and instruments for achieving higher productivity. In the past, these aspects have received only casual consideration.

Rôle of Private Sector



"Rôle and functioning of the organised private sector in relation to planned development. At the beginning of the first plan, a general view was taken of the place of the private sector in the national economy. This led to the passing of the Industries (Development and Regulation) Act of 1951. The Industrial Policy Resolution of 1956 carried the matter a little further, specially by way of demarcating fields of industrial development in which the public sector or the private sector would play a major part. In the light of experience over the past several years, it is necessary to review the 1956 Resolution and bring it in line with present-day needs.

"It is also necessary to review the 1951 legislation because, apart from the provisions made for the licensing of industries, provisions concerning the machinery of development in the private sector (Development Councils and the Central Advisory Council of Industries) have not fulfilled their purpose. In an economy which is to develop according to a plan and at the same time assign a considerable rôle to the private sector, it has now become necessary to give fresh thought to the structure of industrial organisation, to the rôle of the newly emerging managerial and technical cadres and to the part which labour should play in responsible decisions affecting industrial development and economic policy. Recent experience of difficulties in ensuring development of priority industries in the private sector, in obtaining resources, in promoting the application of scientific and technological research and attaining higher levels of productivity, in negotiating collaboration agreements and, finally, in working with the Development Councils and Industrial Associations, deserves close and critical attention."

F.B.I.

Team Expected in India

The Federation of British Industries is likely to send to India a team of British industrialists interested in investment and collaboration in Indian ventures in the near future.

LET US TAKE A WALK

Now let's take a deep breath, and go forth into the open air. Now for the open road, the world out of doors, source of all health and pleasure. Surely there's no more healthy and enjoyable pastime than walking. And to keep on walking, two feet deep in comfort, in a pair of Bata shoes.

U.K. MEASURES TO DEAL WITH THE ECONOMIC CRISIS

(FROM OUR LONDON CORRESPONDENT)

THE new Government lost no time in tackling the economic crisis, and in a blaze of publicity on Monday of last week—a White Paper, Ministerial Press conference, a television and radio broadcast to the nation by the Prime Minister, and discussions with representatives of the T.U.C. and employers' organisations—the measures to be adopted were made available to one and all. The main measures include:

(1) A levy of 15 percent on all imports other than foodstuffs, basic raw materials, and unmanufactured tobacco. (2) Tax relief measures for exporters and improvements in export credit facilities. (3) Immediate action to establish an incomes policy and a price review body. (4) The establishment of severance payments, improved transfer grants, and other measures to increase mobility of labour.

(5) Rapid development in underemployed areas. (6) A "strict review" of Government expenditure, including an urgent re-examination of the Concord supersonic air liner project. (7) A careful costing of the social programmes to be announced in the Queen's Speech. (8) Consultation with the International Monetary Fund on Britain's use of its drawing rights.

Apparently when the Ministers got down to studying the situation, it was found to be even worse than had been anticipated, for the payments deficit for 1964 threatened to work out at between £700 million and £800 million. Something had to be done at once to call a halt and direct action to reduce imports and to stimulate exports was decided on, as the situation did not seem to demand a damper on demand at home and the Government rejected deflation given to the fact that the shock tactic measures were short-term and, therefore, temporary, but they would have to be followed by more fundamental action to remove the recurrent threat of financial crises whenever the economy was allowed to expand.

The "surcharge" of 15 percent on nearly one-third of British imports is expected to save something like £200 million a year. Just how much is saved depends, of course, on how far the British public insists on buying imported goods in spite of the extra charge. At home, the surcharge should bring in additional revenue at about £170 million a year. On the other hand, the cost of the tax rebates for exporters (averaging 1½ percent of the value of goods and based on indirect taxation) is likely to cost the Exchequer about £70 million a year.

Temporary Surcharge

While the "strictly temporary" surcharge will apply equally to imports from all countries, the fact that foodstuffs, raw materials, tobacco and certain other products are exempted, means that the charge will fall with different weight on the imports from different groups of countries. Thus it will affect 57 percent of British imports from the Common Market, 36 percent of imports from E.F.T.A. countries, 48 percent of purchases from the United States, and 13 percent of imports from all other countries, including the Commonwealth. These percentages are based on 1963 trade.

Even without any change of policy, next year's payments gap would have been much smaller. The £200 million import saving might bring it down to a reasonable level that could be held until the longer-term policies begin to take effect. The real key to success will be higher productivity and all round stabilisation of costs. The speed with which the new Labour Government has been able to move owes at least some acknowledgment to help from the work the Conservative Government did just before the election. Mr. Brown referred at the Press conference to the "problems inherited from the Conservative Government." Mr. Maudling admitted later in the day that this was true, but pointed out that the Labour Ministers had also inherited the solutions from the same source. He pointed out that they had accepted the diagnosis which had been made at the Treasury when he was Chancellor, and the spadework already done by the civil servants. In consequence, they had adopted policies which the Conservatives would not oppose in principle, but they would examine very carefully the details.

The Finance Bill needed to give effect to the immediate measures has been promised "at the earliest possible moment after Parliament meets," but this cannot be until the debate on the Queen's Speech has ended. It is not clear yet whether the Bill, when it comes, will include any or many proposals not mentioned in the White Paper. The parties at Westminster will judge the White Paper by two standards: the adequacy or necessity of the special measures now promised, and the indications of longer-term policy which made parts of it read like a re-issue of Labour's election manifesto. The tion and "stop-go" as remedies for a payments deficit. Emphasis was final test will be how quickly and completely the Government can realise the two conditions which the White Paper lays down for putting Britain on its own feet again:

(1) That the energies of "all its people" are enlisted, and

(2) That "all sections of the community share in the efforts and in the contributions they are asked to make on a basis of social justice and equality."

Both sides of industry have endorsed the Government's short-term plans, which were expounded to them at separate meetings in Downing Street. They are, however, somewhat less forthcoming concerning the longer-term proposals. The employers, for instance, were unconvinced that the proposed price review body could work without taking excessive wage settlements and restrictive practices into its calculations, and declared themselves unhappy about the re-examination of the Anglo-French Concord project. "The future of our aircraft industry may be at stake. We counsel deliberation in reaching a decision." On this question, French reaction was also cautious, awaiting clarification from Mr. Roy Jenkins, the Minister of Aviation, who is now in Paris for discussions, but it carried the suggestion of retaliatory moves if the project were to be cancelled.

Overseas Reaction

Overseas reaction has been mixed. The United States Treasury welcomed the moves as prompt and effective, and a spokesman for the West German Economics Ministry said that while his Government regretted any restriction of international trade, it understood the British measures in view of her balance of payments position. The Danes accused Britain of breaking the terms of the European Free Trade Area agreement and the Norwegians have also entered a protest along the same lines. The Irish claim that the Anglo-Irish trade agreement of 1938 has been contravened. The Common Market countries as a whole take a strongly critical view of the proposals and deplore the fact that there was no prior consultation before the Labour Government brought in the new measures. On the whole, the reactions of the Commonwealth countries are sympathetic if not entirely approving, but then Commonwealth trade is, after all, probably the least affected.

Long-term Plans

Mr. Wilson's broadcast was aimed at bracing the country for a much stronger effort to increase exports. The surcharge, he said, would not ultimately shelter the inefficient firm, and to think of it as providing an easy way out would be a recipe for industrial and national suicide. The Government regarded its long-term plans to stimulate exports as being more important than the emergency measures. Britain must make a real drive for economic strength. There must be a sharper cutting-edge in sales—and the impetus must come from the board room now. "We have to think less of what can get out of the economy and a great deal more of what we can put into it."

He condemned those who spent so much time on tax-avoidance and on trying to secure capital gains rather than more production. "We cannot afford attitudes anywhere on either side of industry which stand in the way of higher production or lower costs. The old-fashioned restrictive ideas have no place. We must get rid of monopoly practices, over-manning the job, costly demarcation arguments and the temptation to indulge in wild-cat strikes."

F.A.O. EMPHASISES SCOPE FOR STABILISING FIBRE PRICES

A RECENT report prepared by the U.N. Food and Agriculture Organisation says that there is great scope for international collaboration in stabilising the prices of jute and allied fibres and the products made from them. It has suggested some basic improvement in marketing, including the revision of grading practices and expansion of warehousing facilities. It has recommended that the scope for adopting a buffer stock policy at the international level should be examined. The carryover stocks held by the major producing countries may be taken over by a buffer stock agency. The report examines methods of stabilising the jute economy on a world scale by adopting various means, ranging from the setting up of advisory committees for co-ordinating national buffer stocks and price policies to the establishment of an international buffer stock financed by world agencies.

World production and consumption of jute, kenaf and allied fibres, says the report, have increased by more than 4 percent annually during the past ten years. A steady increase is visualised in the demand for jute products until 1970 throughout the world, but more so in the developing countries than in the industrialised countries of the West. The present levels of output and offtake are about 40 percent higher than before the second World War. With the emergence of more countries as manufacturers of jute goods and also with the expansion of facilities in most of the erstwhile producing countries, western Europe's share in the manufacture of gunnies has declined from 34 percent of the world total to 18 percent. India's share has fallen from 55 percent to 42 percent. Now the developing countries, including China, consume as much of jute and allied fibres as the rest of the world because of the remarkable increase in their industrial and farm production. In the advanced countries, the consumption of jute goods and other packaging materials has kept pace with the increase in gross national product. Although jute goods have lost some of their former uses in packaging, new uses have been evolved for them in floor paving, wall decoration and carpet backing.

Indian Share in Fibre Output

While Pakistan's share of the world jute output has dropped from 70 percent in 1948-49 to 46 percent in 1963-64, a substantial increase has been achieved in India and some other countries, including China, Formosa, Thailand, Burma, Russia and Brazil. Pakistan's jute production at 1.1 million tons in 1963-64 has remained more or less stationary since 1947, while India's production has gone up fourfold from 300,000 tons to 1.3 million tons during the same period. Burma, which was not growing any jute in 1949, now produces 14,000 tons. Between 1949 and 1963 China's production has gone up from 35,000 tons to 356,000 tons, Brazil's from 18,000 tons to 73,000 tons, Formosa's from 6,000 tons to 10,000 tons and Thailand's from 5,000 tons to 163,000 tons.

Apart from the geographical shifts in cultivation, there has been a marked change in the composition of jute cultivation during recent years, with increasing emphasis on the production of mesta, an inferior variety of fibre. Mesta production, which constitued 22 percent of the world output in 1952-55, has now risen to 39 percent. The main reasons for the switchover to mesta production have been the desire of the developing countries to reach self-sufficiency in producing their own bagging material and the difficulty experienced by most countries in producing high quality jute, which only grows in rich alluvial soils under tropical climatic conditions.

Sharp Rise in Demand

As for consumption, the study shows that it was only 3.5 percent higher in 1959-61 than the prewar level of 1937. In the U.S.A., one of the largest buyers of jute products, there was a sharp drop in demand in the immediate postwar period due to a shortage of jute goods. But subsequently the demand for jute products, particularly for tufted carpets, floor coverings and wrapping materials for textiles, has increased sharply. Analysing postwar trends in the consumption of jute goods in Far Eastern countries, the study says that India has emerged as the foremost consumer in the region. The offtake has risen at an annual rate of 9 percent since 1955. But in Pakistan it has not been more than 1.5 percent due to the country's emphasis on increased exports.

The report warns that the long-term expansion of the market for jute goods will depend on the degree of stability in the prices and supplies of these materials. With increasing competition from synthetics and substitutes, whose prices are comparatively steady, the problem is becoming serious. During the last decade and a half, jute prices have appeared to be very unstable. In the last few months, too, there have been sharp fluctuations.

Hedge Trading

Hedge trading has commenced from Tuesday in sacking and hessian for February delivery with the approval of the Forward Markets Commission. Trading is subject to the same conditions of free limits and limits on price increases and special margins as are applicable to hedge contracts in jute goods for November delivery. The East India Jute and Hessian Exchange has fixed ceilings on the total volume of daily transactions in the hedge contracts (of a ring member) in jute goods for February 1965 delivery at 2.5 million yards of hessian cloth and 3,500 bales of sacking bags during the period of simultaneous trading in the same goods for November delivery. After the closure of the latter contracts, the daily ceilings will be raised to 3 milion yards of hessian cloth and 4,000 bales of sacking bags.

By another notification the authorities have withdrawn from 3rd November the free limits concerning special margins against November delivery hedge contracts. From that date the ceilings for the total volume of daily transactions in November delivery hedge contracts of a ring member have been fixed at 1,000,000 yards of hessian and 1,000 bales of sacking.

Strike Threat by Jute Mill Workers

A number of jute mill workers have for some time now been agitating for a bonus in terms of the Bonus Commission's recommendations, instead of what is being paid to them under the Wage Board's award since last year. There has been a wastage of man-hours, as a result of which the production loss during September is estimated at around 3,000 tonnes. A meeting of the National Union of Jute Workers, affiliated to the Indian National Trade Union Congress, decided in Calcutta last week to organise a day's token strike in December "as a protest against the non-implementation of the recommendations of the Bonus Commission". The meeting criticised the attitude of the employers, and felt that the State Government had also shown "dilatoriness in tackling the dispute". Labour leaders stated at the meeting that with the Central Government's acceptance of the Bonus Commission's recommendations, jute mill operatives were eligible for a bigger bonus than is being drawn by them under the Wage Board's award. The guaranteed minimum, irrespective of profit or loss, under the Bonus Commission's report is 4 percent of the total wages, including dearness allowance, earned by a worker during a year, or Rs. 40, whichever is higher. The maximum limit is 20 percent of the total earnings as specified before or about 75 days' total wages.

THE JUTE MARKETS

Manufactured Goods: Divergent trends marked trading in the Calcutta gunny market during the past week. There was rapid covering in sacking for November following the large Burmese Government tender on Wednesday of last week. But prices declined sharply from the week's highest levels on tired long liquidation combined with some short-selling. Sacking for November closed with a comfortable gain from the week's opening levels after wide fluctuations. Prices eased in the spot market as more mills emerged as keen sellers for all positions. Overseas interest was small. Routine hessian business was reported with the U.S.A. and Russia. Besides, due-date and shipper-covering helped sentiment. A squeeze was felt in heavy goods for October and November deliveries helping their prices to rise sharply. But offerings exceeded enquiries for December and later deliveries, so there was a sharp setback in their closing prices. Hessian continued to move in sympathy with the general trend after narrow fluctuations. Trading in hessian cloth and sacking bags for November delivery commenced from Tuesday. The Moorat trading on Diwali eve was dull, and prices hovered around the previous levels. Turnover was fair in heavy goods and moderate in hessian. The closing undertone was steady in the close of the week. Trading in Upper Assam White Bottoms for December delivery had not yet commenced in the hedge market.

IMPORT DUTY IMPOSED ON MANUFACTURES

(FROM OUR DUNDEE CORRESPONDENT)

THE main feature of the past week was the announcement by the British Government that an import duty of 15 percent was being imposed on most manufactured articles. This includes jute yarns and cloth. The announcement more or less brings back the protection the Dundee jute industry lost in September, when 10 percent of the mark-up on imported hessian cloth, used mainly for bag-making purposes, was eliminated and the range widened by the addition of other goods. In effect, a mark-up of 15 percent is now in force. It is, however, stated that the duty now imposed will be of a temporary nature.

The import of hessians into the U.K. in bag-making widths is in the process of being transferred from public to private trading, and the import duty of 15 percent will make the position difficult for firms in the trade. It is unfortunate for sack sewers in the U.K., since it will increase the cost of their commodity before they have had the benefit of cheap cloth which they have striven to obtain for so long.

Jute manufacturers in the U.K. are busy, and some fair orders have been received during the past week. It is difficult to increase production because of the shortage of skilled labour. Meanwhile, more enquiry has been made for such heavy goods as sacking and tarpaulins.

It is impossible for Dundee to supply the whole needs of the carpet trade as far as yarns are concerned, so fair quantities are imported every year. The imported yarns will now be subject to an import duty of 15 percent.

The raw jute market is much quieter than in the previous week. Sellers are anxious for business and although lower prices are being demanded, it is not bringing out much business. Holders of secured parcels are anxious to dispose of their stocks and some low prices are being accepted. Offers are being made at £150 for Mill Firsts, at £136 for Export Firsts, at £123 15s for Export Lightnings and at £115 10s for Export Hearts, c.i.f. U.K., for November-December shipment. Grade Tossa-2/3 is at £150 and Grade Tossa-4 at £134 15s. Output Tossa-2/3 ranges from £129 and Outport Tossa-4 from £114, November-December. As far as afloat parcels are concerned, less than the above rates would be

Liverpools	166.00	167.00	166.50	165.50

Raw Jute: Steady conditions prevailed in the raw jute market during the past week. Daily arrivals declined somewhat in the terminal markets. Growers became cautious. The maximum purchase quota of 175,000 bales for the week ending 7th November proved to be meagre. Against a monthly consumption of about 600,000 bales, mill offtake under the quotas was of the order of 700,000 bales. Selective mill support for better-grade fibre, of which there was a shortage, helped its price to harden appreciably. Routine "lucky day" transactions were reported on Diwali evening around the previous levels. Turnover was moderate, and the undertone steady at the close. Trading in Upper Assam White Bottoms for December delivery had not yet commenced in the hedge market.

with offers at £90 for S.N.C. and at accepted. Cuttings are also quieter £80 for N.C. Mesta is steady and the prices asked for are of no interest to Dundee spinners. The prices are at £112 10s for A, at £102 for B, at £94 for C and at £76 for cuttings, c.i.f. U.K., for November-December shipment.

The Siam jute market is also quieter. Offers are at £84 10s for grade A, at £79 10s for grade B, at £76 for grade C and at £73 10s for cuttings, delivered mill Dundee for November-December shipment.

Prices of Calcutta goods are at a lower level and fairly substantial reductions have taken place in the case of sackings. Quotations, which are subject to a 15-percent import duty are at 80s 8d for 40in. 10oz. and at 61s 5d for 7¼oz., c. and f. U.K. for prompt shipment, at 81s 5d and 61s 10d November and at 81s 9d and 62s 1d December. B Twills are at 245s 7d, 244s and 242s 6d for the respective shipment periods.

THE PAKISTANI JUTE MARKETS

ARRIVAL OF POOR QUALITY FIBRE CONTINUES

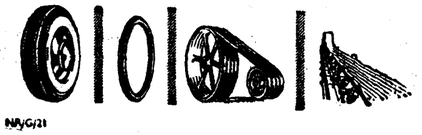
(FROM OUR DACCA CORRESPONDENT)

LOOSE jute arrivals continue to be of poor quality, and arrivals last week were spasmodic. Once again, prices in the interior varied considerably according to the financial status of the majority of the balers in the area. Where there is a shortage of finance, sellers are beginning to allow credit and charge relatively higher prices. Shortage of finance is probably the most serious problem in the market this year and is of course one of the most bearish factors. Despite this, in no baling centre does the supply exceed demand. It is, therefore, easy to imagine what will happen when finances improve. Except for the areas which traditionally supply wet jute, the condition of jute this season is quite good.

In the local pucca bale market, there were small transactions in Export Hearts and Export Lightnings mostly from northern areas, but little or no transactions in tossa. It is only the shortage of finance and the lack of consumption by the mills, which is keeping the market so dull. If it were not for this reason, prices at least for tossa would be considerably higher. In cuttings, there have been some transactions in the ready position round about E.P.C. prices at about £73 f.o.b. The forward position has been neglected completely, and already extensions are being asked for sales made for October delivery. There is no doubt that the large quantities transacted for the January-February-March position will remain largely undelivered and there will be settlement resulting in a glut of cuttings in the market. India might take some but generally speaking, one must expect this market to go down. The question is whether E.P.C.s for cuttings will be similarly reduced.

The market in Pakistan itself was largely neglected during the last week. Attention was centred more than ever on the overseas market where buyers, taking full advantage of the situation in Pakistan, have been forcing prices down. Despite reports to the contrary, there is no doubt that even if overseas consumption is reduced by 20 percent, there will be a shortage of raw jute, or at least no carryover, which amounts to the same thing.

On December 15th 1946, NATIONAL RUBBER MANUFACTURERS LIMITED was incorporated. Today, the House of NRM has grown into *the largest single unit in India*, manufacturing Industrial and Mechanical Rubber products.



The story of the growth of NRM is a search for progress within a growing national economy. Conceived primarily, to meet the contemporary needs of the nation in Rubber, NRM programmes include the manufacture of Cycle Tyres and Tubes and a versatile range of Industrial and Mechanical Rubber Products. Some of the latter are: Hoses of all types, Industrial 'V' Belts, Railway Rubber Fittings, Fan Belts, Transmission and Conveyor Belting.

NRM

Inchek Tyres Limited

Recently, NRM sponsored INCHEK TYRES LIMITED—the first wholly Indian-owned Automobile Tyre Company. Manufactured specially to suit Indian road and climatic conditions, INCHEK TYRES have received widespread consumer acceptance.

Today, the scope of NRM activities has widened. With the implementation of its *second major expansion programme*, the House of NRM hopes to adequately supply the growing demand for its products in many foreign markets, and at the same time earn the country vital foreign exchange.

STEADY RISE IN CASHEW EXPORTS

(FROM OUR SOUTH INDIAN CORRESPONDENT)

INDIA'S cashew exports are climbing new heights. During September, 4,300 tonnes of cashew kernels were exported, bringing the total for the first nine months of the year to 39,300 tonnes. The earning was Rs. 19.24 crores. Both were the highest on record. Compared with the export earning in the same period of last year, it was Rs. 2.77 crores higher. The export of cashew shell oil during this period was to the tune of 10,200 tonnes, valued at Rs. 1.52 crores compared with 5,900 tonnes worth Rs. 73 lakhs exported during the same period of 1963. If the present trend continues, India's export earning on cashew products will be another record in 1964. The main buyers of Indian cashew kernel during this period were the United States, Russia, East Germany, the U.K., Australia and Canada.

The 1964 production of almond and filberts, two edible nuts which are in a way rivals of cashew in the world market, was larger than the previous year's. Almond harvest is placed at 125,300 short tons, shelled basis. Production this season is large, exceedng the five year (1958-62) average of 104,300 tons as well as the harvests of 75,600 and 115,900 tons in 1962 and 1963, respectively. However, the 1964 crop will be below the 1961 crop which was a record at 155,500 tons. Total supplies including stocks in producing countries for 1964-65 are now indicated at 136,100 tonnes. The 1964 filberts harvest is now forecast at 230,400 short tons, unshelled basis, compared with 175,900 tons in 1963 and the previous record of 194,900 tons in 1956. The average for 1958-62 was 162,600 tons. The United States which is the main market for cashew is a producer of both these nuts. Her harvest of almond in 1964 is estimated at 37,000 tons, slightly above the 1963 harvest and about 9,000 tons more than the five-year average. As far as filberts is concerned, U.S. production at 8,400 tons was a 1,500 ton gain over the 1963 crop, but 800 tons less than the five-year average of 9,200 tons.

TANNIN

Award for Invention

The Inventions Promotion Board, New Delhi, has awarded a prize of Rs. 1,000 to Dr. K. S. Madhavan Pillai, Head of the Industrial Research Laboratory attached to the Industries Department of the Kerala Government, for his detection and production of tanning materials from cashew skins. It has been found by Dr. Pillai that the brown skin peeled off the roasted cashew kernel contains 40 percent of extractable tannin, which could be used as a substitute for wattle bark. India now imports about 10,000 tons of wattle bark worth over Rs. 1 crore from east Africa. The use of the process developed by Dr. Pillai would help to extract more than 1,000 tons of tannin worth over Rs. 10 lakhs from about 3,000 tons of cashew skin annually thrown away as waste.

SPICES

Exports Rise

The Spices Export Promotion Council reports that India has earned Rs. 10.15 crores during January-July 1964 through the export of spices. This was Rs. 1.87 crores more than the export earning on spices in the same period of last year. The items that showed increases were cardamom, ginger, pepper, chillies, turmeric, cassia, fennel seed and aniseed. Pepper exports from India have been lesser this year. Exports during the first seven months of 1964 were to the tune of 11,537,477 kilograms, compared with 12,114,903 kilograms. However, the value realised thereon was higher by about Rs. 14 lakhs this year. Trade circles attribute this quantitative fall in export to the poor offtake by the U.S.A. which is India's main buyer. The U.S.A. has turned to Singapore and Indonesia where prices have been cheaper by a few cents a lb. More than 50 percent of the exports this year were to the communist countries which are new markets for Indian pepper.

CARDAMOM

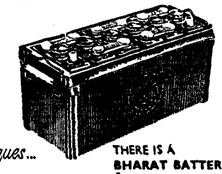
Higher Auction Price

In the first auction sale for new season cardamom at Cochin last week (26th October) buyers were active and they lifted the 2,935 kilograms on offer at prices which, on an average, were Rs. 2 to Rs. 4 a kilogram above the last season's prices. The sale average was Rs. 19.10, against Rs. 14.99 a kilogram of the corresponding sale of last year. The highest price of Rs. 22.65 a kilogram was realised by a 90-kilogram lot of the Chulika Estate.

COFFEE

Growing Export Surplus

The chairman of the Mysore State Planters Association, Mr. A. M. Appaiya, made a plea for getting India's export quota raised, under the International Coffee Agreement, from the present 22,000 tonnes to 50,000 tonnes a year. Addressing the annual general meeting of his association recently he said that the fixing of export quotas on the basis of past exports, without taking into consideration the production trends was particularly disadvantageous for a country like India. The Indian export quota represented a meagre 33 percent of the production, as against a quota of up to 80 percent of the maximum production fixed for the chief coffee growing countries. Mr. Appaiya said that he was sure the investigation team of the International Coffee Council which was due to visit this country later in the year, would appreciate the Indian position and recommend to the Council a suitable export quota commensurate with the country's production and surpluses. Production during the third-plan period would suffice to meet the internal demand at present levels, and above a surplus of 50,000 tonnes for export.



Reviewing the record performance of the coffee planting industry during the last decade, Mr. Appaiya said that the year just completed had seen the crop touch 68,000 tonnes, the highest crop ever harvested. Mysore's share in this was roughly 53,000 tonnes. The 1965-66 crop was expected to touch the 75,000 tonnes mark. On the basis of this production forecasts, big surpluses of the order of 45,000 to 50,000 tonnes of coffee would be available in the coming year, he said.

To meet the growing internal demand and increased exports it would be necessary to raise the level of production by about 25,000 tonnes over the third plan target. The industry had already taken steps to maximise production. The development scheme submitted by the industry would seek to make it available the requisite financial assistance for the rapid rehabilitation of old stands of coffee, thus increasing production by about 10,000 tonnes a year. This would leave a gap of 15,000 tonnes which could be met only by increasing the area under the coffee crop. Trends in production had indicated that a substantial portion of this increase in crop would have to come from Mysore State. Attempts to grow coffee in new areas had not been very successful. The aim should be to bring an additional 30,000 acres under coffee cultivation during the course of the next six years. The Government should give serious consideration to making available land for genuine coffee cultivation at the rate of 5,000 acres a year.

In an address to the conference, which was read out in his absence, Mysore's Chief Minister, Mr. Nijalingappa, assured that the proposed land revenue revision would not cripple the plantation industry in the State. The objections filed by the industry under the rules of the Land Revenue Act would be considered by the Government, and also discussed by the State Legislature before a final decision was taken. The Government, the Chief Minister pointed out, was very much interested in increasing the production of coffee and other plantation crops.

The Mysore Government, he disclosed, had decided to undertake rubber plantation to expand the area under rubber. There was also suffi-

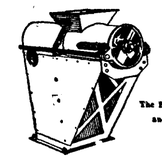
GRIP ON **tea**

Growing good tea isn't enough. You have to show quality after manufacture—and at an economical cost! The key of course lies in mechanising to a continuous system of manufacture.

THE McTEAR ROTORVANE CONTINUOUS TEA ROLLER gives you the stronger liquors and brisleness that buyers are now looking for. Add to this negligible expenditure on spares and small power consumption and you have the machine which you have long been waiting for.



The Rotorvane will help you make good tea.

Rotorvanes are offered in two sizes. The Automatic Initial Feed is shown with the larger machine

The Portable intermediate feed conveys leaf to another Rotorvane or to a Ball Breaker.

The Rotorvane Ball Breaker and Aerating Machine.

cient scope for expansion of the areas under coffee, cardamom, tea, pepper and orange. In this connection, he said that if the various schemes for stepping up production were to succeed, research was definitely an important factor that would demand attention.

COTTON TEXTILES

Higher Activity

The improved level of activity in the cotton textile industries of the non-communist world was maintained in the second quarter of the year, according to the Cotton Board's latest *Quarterly Statistical Review* just published. In that quarter, cotton yarn output in those countries for which regular statistics are available is estimated to have been about 3 percent greater than in the same period of 1963. This compares with the 5 percent increase recorded in the first quarter. As in the previous quarter, the expansion compared with a year earlier was very widely spread, with increases in cotton yarn production reported for the U.K., Continental Western Europe, the U.S.A., India, Pakistan and Japan.

The statement in the previous issue of the *Review* that world trade in cotton piecegoods in the first quarter was rather greater than in the same period of 1963, needs to be revised in the light of later information. In fact, it appears that exports from the main non-communist exporting countries were about 1 percent less than a year earlier. In the second quarter, on the other hand, shipments seem to have been about 6 percent greater than in the second quarter of last year, thus reversing a three-year-long downward trend. Exports from Japan, India, the U.S.A. and Continental Western Europe were greater than a year earlier, but British shipments still continued to run slightly below last year's level.

World trade in man-made fibre fabrics continues to boom. In the second quarter of this year, exports from the principal non-communist exporting countries were about 8 percent greater than in the same period of 1963, a similar percentage increase to that recorded in the first quarter. The U.K., Continental Western Europe as a whole, Japan and the U.S.A. all exported more than in the second quarter of last year.

The longer-run prospects for the U.K. industry are clouded by two unfavourable factors, the disappointing performance of retail sales and the large increase in imports this year. The lack of buoyancy in retail sales, coupled with the greatly increased volume of imported cotton piece goods and made-up goods has led to a disquieting increase of stocks "in the pipeline." Stocks of cloth held by weavers, converters and grey cloth importers are estimated to have increased by about 44 million square yards in the second quarter, the increase being entirely in cotton cloth. Moreover, stocks beyond the converting stage also seem to be rising. The situation is not quite as bad as might appear at first sight, since a good deal of the increase has been caused by India shipping the bulk of her annual quota in the first half of the year. Nevertheless, there is no doubt that supplies of cotton textiles this year will be appreciably in excess of the final offtake.

The Indian cotton industry continues to enjoy boom conditions. Cotton yarn production in the second quarter of the year was about 3 percent greater than a year earlier. Over the same period, the increase in mill production of cotton cloth was about 2 percent while the expansion in the output of the decentralised handloom and powerloom sectors has been much greater. The "voluntary" price regulation scheme which has been in operation for the last few years is apparently to be scrapped and replaced by a system under which there will be statutory price controls on popular varieties of cloth, amounting in total to 45 percent of production for the home market, and no controls over the remaining types.

Indian Piecegoods Exports

In the first quarter of 1964, Indian exports of cotton piecegoods were slightly greater than in the same period of 1963 while in the second quarter, according to preliminary information, they were considerably greater than a year earlier. This expansion is largely illusory, however, since it is entirely accounted for by the "bunching" of most of the permitted exports to the U.K. into the first half of the year. Shipments to other markets have been smaller so far this year than in the corresponding period of last year, the main losses being in exports to the U.S.A., East Africa, the Sudan, Burma and Singapore.

In the first quarter of 1964, exports of cotton piecegoods from Hongkong appear to have been slightly smaller than in the same period of 1963, which was a record year for this trade. As an indication of the success of the efforts being made to move into higher qualities of production, it is reported that the average count of cotton yarn spun in the industry is now 30's. It is also reported that 100,000 new spindles have been installed in the last 12 months, mostly as replacements for old spindles which have been exported as second-hand. It is considered that spinning capacity has just about reached its maximum limit now. On the other hand, several extensions to finishing capacity are planned. Some of these are designed to cope with synthetic fibre fabrics.

With the commissioning of the smelter with a capacity of 10,000 tonnes in Mettur in December this year and the first stage of the expansion of the Alwaye smelter by 5,000 tonnes early in 1965, the installed capacity of aluminium during 1964-65 is expected to increase by 15,000 tonnes to 68,000 tonnes. A further increase to 100,000 tonnes a year during 1965-66 is expected following the expansion of the Rihand smelter and Alwaye smelter.

The actual production of the metal will also increase from 55,000 tonnes to 60,000 tonnes during 1964-65 to 70,000 tonnes during 1965-66 and to 100,000 tonnes during 1966-67. The third plan targets for installed capacity and production of aluminium were 87,500 tonnes and 80,000 tonnes, respectively. These targets were later revised to 110,000 tonnes and 100,000 tonnes. The demand for aluminium by the end of the fourth plan is placed at 260,000 tonnes.

Steps are being taken for setting up an integrated aluminium project in Korba, Madhya Pradesh. As already reported, Hungarian experts are already in India and are having talks with the Government of India on this matter.

NON-FERROUS METALS

Production and Demand

Our New Delhi Correspondent writes: The Central Ministry of Steel and Mines has estimated that the demand for aluminium will go up to 260,000 tonnes by the end of the fourth plan, compared with 100,000 tonnes by the end of the third. The demand for copper and zinc is similarly expected to reach 250,000 tonnes and 225,000 tonnes, respectively, against the third plan consumption of 138,000 and 136,000 tonnes. The consumption of lead is placed at 145,000 tonnes by the end of the fourth plan, against the third plan estimate of 65,000 tonnes.

Capacity of Korba Project

The Korba project will have a capacity of 120,000 tonnes a year of alumina, 30,000 tonnes a year of aluminium metal supported by facilities to manufacture aluminium semis. In addition, the Government has already finalised three schemes for producing 85,000 tonnes of aluminium and two schemes for the expansion of the two existing units; increasing the present installed capacity from 62,500 tonnes to 113,000 tonnes.

As for copper, the Ministry has taken up four projects to produce 58,000 tonnes of the metal during the fourth plan period. These are likely to cost Rs. 39 crores.

Requirements of copper, according to present indications, are expected to go up to 250,000 tonnes by the end of the fourth plan, compared with 138,000 tonnes by the end of the current plan.

To meet the enhanced estimated requirements of zinc, the Ministry has drawn up various projects where investigation, research and pilot-plant tests are necessary to prove reserves. These projects, when fully implemented, will go a long way in meeting the additional requirements and are estimated to cost about Rs. 72 crores.

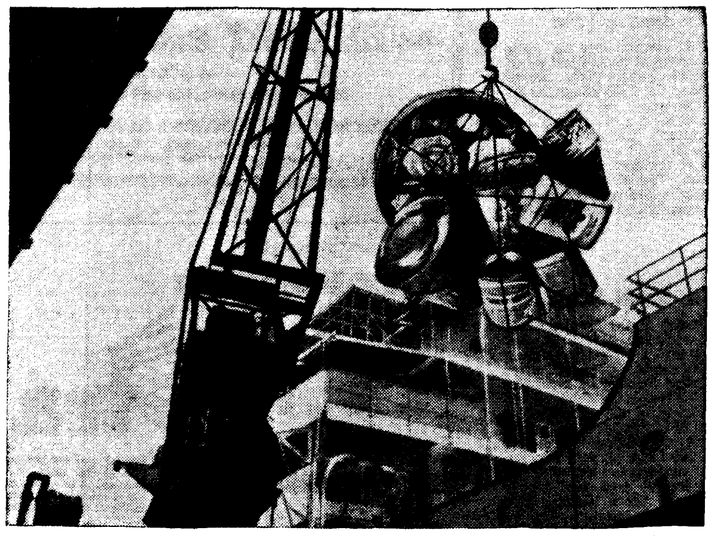
The demand for the metal at the end of the fourth plan is placed at 225,000 tonnes, compared with 136,000 tonnes at the end of the third plan.

The Ministry has also initiated talks for foreign collaboration with Polish experts for setting up a zinc smelter in the country. The smelter, which will be based on imported concentrates, will have a capacity of 30,000 tonnes and is estimated to cost about Rs. 12 crores.

TEA

Joint Indo-Ceylon Move for Export Promotion

(BY A SPECIAL CORRESPONDENT)



IT has been decided to set up a joint Indo-Ceylon Tea Commission to promote export sales in the principal tea consuming countries. The decision was taken at a recent meeting between the Ceylon Minister for Internal and External trade and the Central Minister for Commerce of India. The Commission is expected to "consist of three officials from each Government." It will meet periodically to chalk out measures for the development of the tea industry in the two countries, for sales promotion and for the fixing of tea prices". When the auctions of leaf teas were resumed in Calcutta in the last week of October, there was a good general demand for Dooars B.O.P. grades, but fannings and some Assams were lower. Sale of Dusts reported a similar mixed tendency. Colombo advices report a strong general demand with good bidding for Western high growns. But some of the best liquoring teas were irregular, as were medium grades.

At the London Auction on 28th October, there were 26,632 packages from north India. Demand was less and buyers more selective and prices for Assams were easier. Others showed little change from Monday's rates.

Sales of tea in Calcutta up to 7th October, totalled 42,064,507 kilograms at the rate of Rs. 5.75 a kilogram, compared with 43,669,157 kilograms at the rate of Rs. 5.74 a kilogram a year ago. In spite of the larger crop offerings have not been very heavy, which of course means larger supplies will follow. Dust prices at Rs. 4.95 a kilogram this year compare with Rs. 4.94 a kilogram a year ago.

Exports from 1st July to 15th October, 1964, total 70,197,519 kilograms, compared with 64,645,033 kilograms. Of this, exports to the U.K. amounted to 49,593,732 kilograms, compared with 46,226,483 kilograms a year ago.

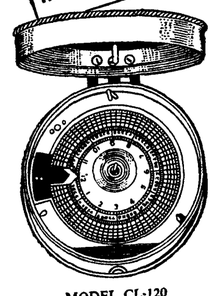
In quest of gold

More and more Indian manufacturers are today earning valuable foreign exchange by selling their products abroad. Exports of cashew nuts, fish, vanaspati, toiletries and other consumer goods in Metal Box packages alone earned over Rs 8 crores last year. That's a lot of foreign exchange, and for the nation it's as good as gold.

To sell in highly competitive overseas markets the product must be of the finest quality. *And so must the package.* It must be of the *right size* and must have the *right finish.* And an *attractive surface design* that will score over competition in sales appeal.

All this requires research, experience, resources. Metal Box have them. They also have access to the fund of marketing and technical know-how of their world-wide associates. This is why Metal Box can provide a comprehensive packaging service as no one else can. This is why, too, so many packers come to Metal Box for advice, send their goods abroad in packages designed and manufactured by Metal Box.

And Metal Box customers are not located in India alone. Last year Metal Box exported nearly Rs 30 lakhs worth of containers, closures and machinery direct to packers abroad.



You see, word gets around.

COMPANY AND PUBLIC NOTICES

THE BOMBAY BURMAH TRADING CORPORATION LIMITED

NOTICE

NOTICE is hereby given that the *One Hundred and First Annual* General Meeting of the Shareholders of the Corporation will be held at the Tata Auditorium, Bombay House, 24, Bruce Street, Fort, Bombay 1, on Wednesday the 25th November, 1964, at 4-30 p.m. (S.T.), for the purpose of transacting the following business:

1. To consider and approve the *Statement of Accounts* for the year ended 31st May, 1964 and the Balance Sheet as well as the Reports of the Board of Directors and Auditors.
2. To sanction the declaration of a dividend.
3. To appoint a Director in place of Mr. M. G. R. Aitken who has attained the age of 67 years and who retires by rotation and, being eligible, offers himself for re-appointment; and to consider and, if thought fit, to pass the following Ordinary Resolution of which special notice as required by Section 281 of the Companies Act, 1956 has been received by the Corporation:—

   "Resolved that Mr. M. G. R. Aitken who has attained the age of 67 years and who retires by rotation be and is hereby re-appointed a Director of the Corporation and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."
4. To appoint a Director in place of Mr. Arvind N. Mafatlal who retires by rotation and, being eligible, offers himself for re-appointment.
5. To appoint a Director in place of Mr. Neville N. Wadia who retires by rotation and, being eligible, offers himself for re-appointment.
6. To appoint the Auditors of the Corporation *to hold office* for the period until the conclusion of the next Annual General Meeting and to fix their remuneration.
7. To appoint Branch Auditors at a remuneration to be fixed by the Board of Directors.
8. To consider, and if thought fit, to pass the following resolution as an Ordinary Resolution:—

   "Resolved that the capital of the Company be and is hereby increased to Rupees Ten Crores (Rs. 10,00,00,000) by the creation of Twenty-eight Lakhs (28,00,000) shares of Rupees Twenty-five (Rs. 25) *each*."
9. To consider, and if thought fit, to pass the following as a Special Resolution:—

   "Resolved that Article 67 of the Company's Articles of Association be deleted."

By Order of the Board,
WALLACE AND COMPANY,
Secretaries and Treasurers.

Registered Office:
9, Wallace Street,
Fort, Bombay 1.
Dated the 8th day of October, 1964.

Notes: (1) Any member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

(2) *In respect of Items Nos. 3, 8 and 9, the Explanatory Statements as required under Section 173 of the Companies Act, 1956 have been posted to the shareholders.*

(3) The *Memorandum* and Articles of Association of the Company will be open for inspection at the Registered Office of the Company at 9, Wallace Street, Fort, Bombay on any working day, except Saturdays, between the hours of 3 p.m. and 5 p.m., and on Saturdays between the hours of 11 a.m. and 1 p.m.

(4) The Transfer Books of the Corporation will remain closed from the 3rd day of November, 1964 to the 24th day of November, 1964, both days inclusive, for the purposes of the Annual General Meeting.

(5) Warrants in respect of dividend, if declared, will be posted to shareholders on the 27th day of November, 1964. Dividend will be payable on and from that date to those shareholders whose names stand on the Register at the close of business on the 24th November, 1964.

JESSOP & CO. LTD.

NOTICE is hereby given that in compliance with the *provisions of* the Preference Shares (Regulation of Dividends) Act, 1960, the Board of Management has sanctioned the payment of an Interim Dividend on 5% Cumulative Preference Shares for the half-year ending 31st October, 1964, at the rate of Rs. 3.25 per share subject to deduction of tax in accordance with the *Finance* Act currently in force.

The Preference Share Transfer Register will be closed from 16th November, 1964 to 20th November, 1964, *both days inclusive*.

Dividends will be paid only to the Shareholders whose names are registered in the Books of the Company on the 20th November, 1964, or to *their Mandatees*.

By Order of the Board,
K. S BASU,
Secretary.

ATOM BOMBS, FOOD AND CHINESE CHICKENS

THE *three-day session of the All-India Congress* Committee held in Guntur this week appears to have been more notable as an occasion for noise and popular revelry than as a precursor of major policy decisions affecting the future of the nation. Of the multitude of subjects discussed, among a multitude of people present, it seems the three main ones, in ascending order of importance, were: (1) the justification for imposing a ceiling on holdings of urban property; (2) whether India should go in for the manufacture of an atom bomb; and (3) how the Government's *new policies for the production* and distribution of food might be made more effective. On the first of these issues, the discussion was less than perfunctory; the feeling *prevailed that India was somehow not being* "socialist" enough, so it culminated in the passing of a resolution recommending that "suitable legislation be enacted to introduce a ceiling on urban property *commensurate* with the ceiling imposed on agricultural land in terms of the election manifesto of 1962". The debate on the atom bomb was notable for *its length and vigour, if not for* the depth of its analysis, the quality of the reasoning or the attention to detail. As for the third and most important of the issues—food—the distinguished *members of the* A.I.C.C. *made* a variety of contributions, the usefulness of which in the final summation may prove to be approximately zero.

The highlight of the discussions on the atom bomb was that a large number of delegates were *in favour of India starting to manufacture one* straightaway. In this, they reflected a widespread and growing, but not necessarily justified, feeling in the country—a feeling which might perhaps have *been inspired to some extent by guilty* memories of stinginess about defence and its rôle in the N.E.F.A. débâcle of October-November 1962. On behalf of the Government, however, the Prime Minister, Mr. Lal Bahadur Shastri, and the External Affairs Minister, Sardar Swaran Singh, strongly opposed the idea; to their support rushed *gentlemen of varying political* complexion such as Mr. Krishna Menon and Mr. Biju Patnaik, whose verbosity about defence has been proven by experience to exceed the sureness of their knowledge or judgment. From the discussions emerged the disconcerting fact that no one had the slightest idea about how much it would cost if this country were to make the bomb. The estimate of Rs. 18 lakhs for a modest singleton implicitly offered by the chairman of the Atomic Energy Commission, Dr. H. J. Bhabha, in a recent broadcast, was revised to Rs. 25 crores for two by Mr Krishna Menon, and then to Rs. 40 crores or Rs. 50 crores for one by Mr. Shastri. Having advocated the manufacture of the bomb, few of the *delegates cared thereafter to look into the* cost and feasibility of the essential corollary—an effective delivery capability. The assumption seemed implicit that the world was a Congress paradise *where atomic weapons transported in bullock*carts across the snowy Himalayan wastes would alone be enough to strike terror in the hearts of the chickens in charge of the Chinese army.

If the discussions on the bomb were forceful and vigorous, those on food were desultory and *timid.* Mr. Krishna Menon may or may not have reflected the preoccupations of the gathering when he declared with great aplomb that peace was *more important than hunger or poverty. Few of* the delegates, however, showed much awareness of the possibility that not far from the home of Mr. Menon's ancestors, in Kerala, hunger was *already about to ravish peace* by erupting to the stage of widespread rioting. The A.I.C.C. instead chose to take refuge in the customary soporifics offered by the Central Food and Agriculture Minister, Mr. C. Subramaniam, in the form of assurances that the Government was in a desperate hurry to finalise its arrangements for implementing a co-ordinated, all-India food policy. Hardly any question was, therefore, asked as to why the agreement on such a policy, which was to have been obtained at the time of the National Development Council meeting late in October, had been postponed to the Guntur gathering this week—and has now again been postponed until the meeting with State Chief Ministers in New Delhi on 17th and 18th November.

The point which the members of the A.I.C.C. chose to ignore was simply this. It is food shortages, not atom bombs or socialism or urban property ceilings, that are the most important problem facing India today. To secure agreement on a *co-ordinated policy for dealing with the shortages,* with the approval of the States, has become primarily a political issue. As the Party in power, the Congress has a special responsibility in ensuring that the approval is obtained. An A.I.C.C. meeting which has dispersed without forcing the issue and precipitating agreed decisions has abdicated its responsibility. It cannot be enough *merely* to pass resolutions implying that to fix producers' prices for the major grains is a good thing; that the establishment of the Food Corporation of India is a stroke of genius; that consumers *must* be assured of a steady and well-regulated supply of foodgrains; and that the assumption of dictatorial powers under an ordinance which will in the final analysis be operated by the petty bureaucracy is going to prove the panacea for all ills. There are other, more basic issues which have to be looked into first, and this is what the A.I.C.C. failed to do.

The first issue is: have the States yet found within their hearts the political courage to embark on an aggressive procurement policy such as is being advertised as essential in a season of *(still)-to-be-seen)* bumper crops? Secondly, assuming that they have found the courage, do they have the administrative and physical equipment —in terms of trained staff, money, transport facilities and storage accommodation—to make even a moderate success of such a policy? Thirdly, given the courage and the equipment, are the *surplus States willing to go in for aggressive pro*curement of the sort that is necessary when they know that it is wholly for the benefit of the deficit States? No one denies that procurement operations are necessary. The limits set by the inflationary dangers of procurement in a situation of fundamental shortages are still not adequately recognised: but within these limits. the more *vigorous* and effective the operations are, the

better it will be. The uneasy suspicion, however, remains that the hesitation of the States—a hesitation which survives the passing of well-meaning resolutions—is rooted in doubts on these three points, particularly the first and the last. The A.I.C.C. could perhaps do little directly to cure the organisational weaknesses which are likely to hamper the satisfactory production, procurement and distribution of food. But it could do something at least to generate the political will to attend to those weaknesses with greater care and unselfishness than in the past. It did not do that. That is where, this week, its greatest failure lay.

COLOMBO PLAN ASSISTANCE

SINCE 1950, when the Colombo Plan was inaugurated, the countries of south and south-east Asia covered by the Plan have made impressive progress. Comprehensive development plans are being implemented, agricultural output has increased considerably, industrialisation has diversified national economies, and the infrastructure, including transport, communications and power, has been developed. National incomes too have risen, but the rise has not always been accompanied by an increase in real incomes because of the growth of population. The problems of the developing countries of south-east Asia are, broadly speaking, similar, although they may differ in detail. Their population has been growing at an average annual rate of about 2.5 percent, a fact which has upset all calculations of economic requirements for raising their living standards. So the benefits of development have not been felt by the people and living standards continue to be poor. Unemployment and under-employment remain almost chronic. The low income of these countries has affected their savings and investment. Furthermore, even the limited resources available have not been allocated efficiently or in a manner which can yield the maximum benefits. Too much attention has been paid to capital-intensive projects, even in such fields as agriculture. In some countries, heavy industrial projects, which are slow to mature, have claimed the major share of the limited resources.

The latest annual report of the Colombo Plan Council for Technical Co-operation points out that population growth and fluctuating world markets pose serious problems for the countries of the region. The report calls for "the most effective use of the growing resources for economic development programmes within the region as well as of the opportunities provided through the aid of more developed member-countries." Although the major portion of the resources required for development has been raised internally by the countries of the region, external aid has played a vital rôle. Foreign assistance has financed the import of machinery and equipment, maintenance requirements and essential consumer goods. The total value of assistance provided by the donor countries under the Colombo Plan since its inception in 1950 until 1962-63 amounts to about £4,935 million, while aid given during 1962-63 alone came to £650 million.

Most of the Colombo Plan countries are running chronic payments deficits and there are no prospects of their position improving in the near future. In fact, their foreign indebtedness has risen to such an extent that a substantial part of the external aid has to be used for servicing debts. Unless export earnings increase, the strain on the developing countries will worsen progressively. As most of the countries are exporters of primary commodities, the need for stabilising world prices assumes great significance. Almost as important as generous aid is the need to give the developing countries opportunities for raising their exports. At present the tariff policies of the developed countries make it difficult for the developing countries to export their goods, something which ill accords with the liberal aid programmes of the former. There is thus a growing demand from the developing nations that aid should be accompanied by greater trading opportunities.

A significant portion of the external aid under the Colombo Plan has taken the form of technical assistance. The aid has consisted of the supply of experts, training facilities and equipment for training and applied research. Technical assistance has grown both in volume and in scope, and it now covers practically every field of economic and social activity. The expenditure on technical co-operation in the region amounted to £36.4 million during 1963-64, which takes the total since the beginning of the Plan to more than £181 million. Although the expenditure on technical assistance in 1963-64 is £5.6 million less than the peak outlay of £42 million in 1962-63, the former represents a rise of about 36 percent over the average expenditure during the previous five years.

When the Plan was inaugurated in 1950, it appeared obvious that technical aid would have to come mainly from the developed countries. But now Burma, Ceylon, India, Indonesia, Malaysia, Pakistan and some other countries figure as donors. Thus the distinction between donors and recipients has worn off since many of the countries in the region are both recipients and donors at the same time. India is the largest donor, providing not only training facilities but also capital assistance. She has provided 284 places or 77 percent of the total in the region. India has also spent considerable sums of money in developing Nepal and some of the neighbouring countries. All assistance given within the Colombo Plan is negotiated bilaterally. Naturally, common ties like geographic location, historical bonds and language have influenced the flow of technical aid. Thus as many as 63 percent of the trainees in India are from Nepal and many are from Ceylon. Likewise, Britain has offered 73 percent of the training opportunities to India, Pakistan, Malaya and Ceylon. As an instance of language influencing aid may be cited the facilities provided by Canada to trainees from French-speaking countries like Laos, Cambodia and Vietnam.

The U.S.A., as before, has offered the largest number of training places (2,164) in 1963-64, accounting for 48 percent of the total. Indonesia has received the largest number of training awards (750); India (693), which has so far been the biggest recipient, has fallen to second place. The training facilities provided in 1963-64 extend over a wide field, covering such subjects as engineering, technical education, nuclear power, agriculture, medicine and public and business administration. Education accounts for the largest number of training awards, followed by administration.

PUBLIC-SECTOR PROFITABILITY

THE public sector in organised industry and commerce has grown rapidly in India in recent years. According to one forecast, if the plan targets are fulfilled, it will account for almost half of the nation's entire industry and commerce by the end of 1970-71. (The proportion was only 2.9 percent in 1950-51.) On this estimate, the public sector will have a capital base of not less than Rs. 5,691 crores by the end of the fourth plan, while the capital employed in the private sector will amount to about Rs. 5,857 crores. Whether or not the figures turn out to be accurate, the fact is that the public sector will continue to grow under the present policy of the Government. Some assurance is, therefore, required that public-sector undertakings are going to be managed efficiently and that the large financial outlay will bring adequate returns.

Two attempts have recently been made to assess the profitability of such undertakings. The first comes from Dr. V. K. R. V. Rao, member of the Planning Commission, who in a note circulated to members of the National Developmental Council painted a rosy picture of the working of Government enterprises. His analysis suffers from the fact that the sample he has chosen is too small to be representative. He has divided public-sector undertakings into four categories; the total investment in them amounted to Rs. 1,372 crores during 1962-63. The first category consists of undertakings under construction; they involve an investment of Rs. 274.8 crores. The second consists only of Hindustan Steel Ltd, in which an investment of Rs. 724.1 crores has been made. The third category consists of concerns other than Hindustan Steel Ltd in which Rs. 313.7 crores have been invested. The fourth category represents promotional and developmental undertakings in which Rs. 59.4 crores have been invested. Dr. Rao has based his sample on only 29 running concerns. By choosing the right ones, it has been possible to exaggerate the good features, like gross profits, net profits and dividends in relation to total capital employed.

The second study, which is more representative, appears in a recent issue of the *Reserve Bank of India Bulletin*. The study covers the finances of 48 Government companies out of a total of 154 during 1962-63. Hindustan Steel Ltd and the Neyveli Lignite Corporation Ltd, the two major operating Government companies, have been excluded. The paid-up capital of the 48 companies amounted to Rs. 181.6 crores and constituted about 69 percent of the total paid-up capital of all public-sector companies. Financial and investment companies, newly registered companies, and promotional and developmental organisations have also been excluded. The study shows that the resources of the 48 companies continued to expand in 1962-63, most of the expansion being in the form of gross fixed assets. Gross capital formation showed a relatively larger rise during 1962-63 than in 1961-62. The share of external sources in financing the formation of assets rose from 58.4 percent in 1961-62 to 64.9 percent in 1962-63. Borrowings constituted the major external source of finance, accounting for slightly more than half of the total. Borrowings from the Government, mostly in the form of unsecured loans, stood at Rs. 18.8 crores and constituted about one-third of the total external finance.

During 1962-63, the production, sales, income and profits of these companies improved in comparison with 1961-62, but the pace of improvement was slow. Since the efficiency of an industrial or commercial enterprise has to be judged essentially by its profitability, public-sector undertakings have not so far been managed as efficiently as they should be. Their rate of profitability is low by current standards. Under present circumstances, it is not easy to raise funds even by means of preference shares except by paying a return of at least 9 percent. Good debentures carry an interest of 7 percent or more. Although public-sector enterprises do not have to worry about raising funds because their financial requirements are generally supplied by the Government, it is reasonable to expect that they should earn enough profits to cover at least the cost of servicing capital. The profitability of the 48 operating companies is illustrated by the following table:

PROFIT ALLOCATION AND PROFITABILITY RATIOS OF 48 OPERATING GOVERNMENT COMPANIES

	All operating Companies	
	1961-62	1962-63
Profit Allocation Ratios		
Tax provision as percentage of profits before tax ...	38.5	38.8
Dividends as percentage of profits before tax ...	20.7	11.9
Retained profits as percentage of profits before tax ...	40.8	49.3
Profitability Ratios		
Gross profits as percentage of sales	8.0	9.0
Gross profits as percentage of total capital employed ...	4.3	5.4
Profits after tax as percentage of net worth	4.0	5.1
Dividends as percentage of paid-up capital	1.6	1.2
Dividends as percentage of net worth	1.3	1.0

The profitability of companies in the private sector (as is illustrated by the table below, is higher than of those in the public sector. But this is unlikely to worry the Government in its determination to expand the activities of the latter. The least it could do in the circumstances is to try to improve the working of the undertakings it owns. One reason why their profitability is poor is that they are inefficiently managed. Hamstrung by bureaucratic rules and regulations, managers do not have enough authority and responsibility, so they do not show initiative. During recent months, the Government's policies for the management of public enterprises have been changing: the men on the spot are being given greater powers. But the change is still too slow; there is a deplorable lack of quick decisions. The need for administrative flexibility and a greater emphasis on profits are something which public-sector undertakings still have to learn from private industry. The larger dividends paid by private-sector companies are understandable since they are obliged to obtain the bulk of their long-term finance from the open market by offering attractive returns to investors. Public-sector undertakings enjoy advantages in this respect. They get enough financial facilities from the Government or Government-sponsored institutions.

PROFIT ALLOCATION AND PROFITABILITY RATIOS OF 1,333 SELECTED MEDIUM AND LARGE PUBLIC LIMITED COMPANIES

	1961-62	1962-63
Profit Allocation Ratios		
Tax provision as percentage of profits before tax	43.3	50.6
Dividends as percentage of profits before tax	36.0	31.3
Retained profits as percentage of profits before tax	20.7	18.1
Profitability Ratios		
Gross profits as percentage of sales	10.2	10.1
Gross profits as percentage of total capital employed ...	10.0	10.1
Profits after tax as percentage of net worth	10.0	9 0
Dividends as percentage of paid-up capital	10.9	9.9
Dividends as percentage of net worth	6.3	5.7

Current News and Comment

More Oil Refineries in Public Sector

The Government of India has had two new refinery projects in mind, with a throughput capacity of 2.5 million tons each. One will be located in Madras, and the other in Haldia, West Bengal. The Madras and Haldia projects represent advance action for the fourth plan, during which India's oil requirements are expected to rise at a faster rate in view of the higher rate of growth planned. Latest reports show that the target for refining capacity has been scaled down to 25.25 million tons from the 28 million tons suggested by the Planning Commission. But it is not clear whether the authorities have revised their estimates of petroleum consumption downwards. It is possible that India does not see adequate prospects of obtaining the crude she will require for the higher refining target. In the case of the Madras project, for instance, there appears to be some hitch about the crude which the National Iranian Oil Company and the American International Oil Company of the U.S.A have together offered as part of their collaboration terms. The final agreement, it is said, will not be concluded until this question is satisfactorily settled.

A collaborator for Haldia is still to be found, but it is reported that some of the 14 parties who bid for the Madras project, have offered their co-operation for Haldia. According to a tentative construction schedule work on the Madras refinery will start by the end of this year and finish some time in 1967, while the Haldia project will be taken up next year to be completed by 1968. These two projects together will contribute 5 million tons of throughput capacity to the fourth plan oil refining target. If another 500,000 tons is added to the capacity of the Madras refinery later, as is likely, India's existing refining capacity of 17 million tons will have gone up by 5.5 million tons to 22.5 million tons during the next five-year period. No expansion of the existing private sector refineries is being visualised in the next plan, although on economic considerations their case for further expansion is very strong.

The question of India's own crude production acquires extra importance in view of the decision to set up the new refineries, and expand the Koyali and Barauni units by 1 million tons each in the next few years. The crude output is much too inadequate to meet the country's present requirements. New Delhi is trying hard to expedite prospecting activities, although the effort has been successful only in the Gujarat area so far. The Oil and Natural Gas Commission, whose activities have expanded in keeping with the country's long-term objectives, has been strengthened. More technical personnel have been recruited, and a full time chairman has been appointed to plan and co-ordinate the O.N.G.C.'s activities. Its chances of winning offshore concessions in Iran to prospect for crude there, in collaboration with E.N.I. and Phillips Petroleum, may have now improved with the Government of India preferring the National Iranian Oil Company as collaborator for its Madras refinery project.

Report on Plan Evaluation

Planners in India have hitherto paid little attention to evaluating the progress of various development projects. It has not been realised that the formulation of plan programmes and the laying down of priorities constitute only the preliminary steps. More important is the appointment of agencies which are well qualified to evaluate the work of project authorities. Much wastage and extravagance could have been avoided if the Planning Commission had laid stress on establishing proper evaluation machinery in the Centre and the States. The Commission's decision to appoint a working group to assess the impact of plan projects on the States was, therefore, welcome. In its report now submitted to the Commission, the working group has referred to a host of anomalies which are retarding the progress of projects. Planning has not yet been fully organised as a separate department in a number of States. Besides, the planning machinery appears to stand in need of not only larger staff but also better technical and organisational set-up. The working group has referred to the wide diversity among the States in the matter of progress analyses and the implementation of projects. "There is room for qualitative improvement in progress reporting and analysis in a number of plan sectors like irrigation, power, co-operation, education and health. In a number of States, there is scope for the systematisation and streamlining of the existing arrangements for reporting, e.g., co-ordinating and rationalising the progress reporting system in the districts and the routing and analysis of such data at higher levels."

As it happens, due to the absense of adequate evaluation machinery, continuous analysis of the progress of projects has hitherto been the primary responsibility of the Ministries concerned, while the Planning Commission has only cursorily reviewed the implementation of projects in some States. However, a periodical assessment of selected schemes is carried out by the Programme Evaluation Organisation of the Planning Commission. This is hardly satisfactory, so the working group has recommended that all State Governments should have an evaluation organisation as an integral part of their planning machinery. This organisation should function either as a wing or division of the Planning Department or as a directorate attached to it. The State evaluation organisation, the working group suggests, should have a headquarters unit and a field organisation, composed of a task force and three to six field units according to the size of the State. Considering the magnitude of the investment involved, the provision of Rs. 1.5 crores for the evaluation of the fourth plan schemes, as suggested by the working group, does not appear to be too big. Another useful recommendation of the group is the appointment of a Central Advisory Council on Evaluation, on which the State Governments, the Planning Commission and the Central Ministries would be represented.

There is no doubt a necessity for advance action in recruiting personnel for the evaluation machinery in the Centre and the States. The working group says that in view of the shortage of qualified and experienced people, the State Governments should try from now on to formulate a policy for the recruitment of personnel. It has also been suggested that the States may approach the Centre with a request for deputing officers from the Indian Economic and Statistical Service for manning these posts, along with an advance indication of such officers required in different years and on different scales.

Making More Textile Machinery

THE textile machinery industry, although still in its infancy, has made considerable progress over the past decade. The growth has been particularly marked in recent years. From a mere Rs. 7.7 crores in 1958, the value of the industry's output rose to Rs. 20 crores in 1963. The figure for the first six months of 1964 is placed at Rs. 11 crores, and the output is likely to be of the order of Rs. 25 crores for the year as a whole. These figures do not include accessories which are produced to the extent of Rs. 18 crores or Rs. 20 crores a year. Between 1960 and 1963, the production of carding engines rose from 1,075 to 1,696, of speed frames from 45 to 96, of ring frames from 1,127 to 1,990 and of reeling machines from 50 to 466. In spite of this encouraging picture, the output is far too inadequate to meet the textile industry's demands for replacement, renovation and modernisation, with the result that large sums of foreign exchange have to be spent on importing machinery.

Imports of textile machinery and parts have averaged around Rs. 22 crores annually over the past three years. The requirements during the fourth plan have been estimated at around Rs. 347 crores, whereas from the maximum that the indigenous industry can be expected to provide is estimated at Rs. 275 crores. In view of the acute shortage of foreign exchange, the need for rapid development of the textile machinery industry can scarcely be over-stressed. The gap between requirements and availability is considerable in the lines already well-established, and it is necessary that this gap is filled either by the expansion of the existing units or by setting up new ones. In spite of the fact that the demand far exceeds the supply, there exists a large volume of unutilised capacity in the industry in some of the main items like carding engines, ring frames, draw frames and speed frames. The idle capacity for carding engines is stated to be of the order of 704 units a year and for ring frames 686 units; this sounds extraordinary in the context of the heavy demand for these items.

In his presidential address at the fifth annual general meeting of the Textile Machinery Manufacturers Association in Bombay recently, the chairman, Mr. Prabhu V. Mehta, drew pointed attention to the factors responsible for keeping the production of textile machinery at a low level. He said that the industry desired to expand its productive capacity by 30 percent in the coming year, and expressed the hope that it would be possible to achieve the target of Rs. 45 crores at the end of the third plan. Of course, to reach this target, it would be necessary to have the raw materials, pig iron of the requisite grade, special steels, cement, coke, and other items. In addition, the industry would need some imported machine tools. Mr. Mehta also stressed the need for expanding the manufacturing capacity and for a design-oriented textile machinery research organisation. The scope for financing deferred payment sales of machinery to indigenous textile units has also

to be considered. Mr. Mehta conceded that the Government was aware of the industry's problems, but he pointed out that there was no proper co-ordination between the various departments, with the result that the industry suffered a great deal. He suggested that a committee of secretaries of the various Ministries connected with the textile machinery industry should arrive at a policy decision for a period of two years for the industry.

The Central Minister for Heavy Engineering, Mr. T. N. Singh, who inaugurated the meeting, emphasised the need for achieving a fair degree of self-sufficiency in the industry by the end of the fourth plan. The country could ill afford to spend vast sums of foreign exchange on textile machinery imports. The Minister did not share Mr. Mehta's optimism about reaching the target of Rs. 45 crores by the end of the current plan, and he did not hesitate to add that the shortage of raw materials was not the only reason for idle capacity. But he assured that the Government would help in procuring the raw materials and also render other assistance. Mr. Singh disclosed that the Government would soon be setting up a study team to examine the needs of pig iron of various user industries from the quality point of view. In future, it would be necessary to set up small pig iron plants for producing special varieties. Referring to the foreign collaboration problem, the Minister said that it had been decided not to pursue the suggestion of bulk purchase of know-how for the present. He said that the country could not afford to remain dependent on foreign know-how for an indefinite period. It was necessary to develop an efficient and well-equipped research and development organisation for the textile machinery industry. Leading textile machinery manufacturing firms should share their know-how with new units.

Replying to Mr. Mehta's suggestion that the textile machinery branch, which was attached to the Textile Commissioner's office, should be retained in Bombay and not transferred to the Directorate-General of Technical Development, the Minister said that the decision had already been taken, and could not be rescinded. As for textile machinery imports, Mr. Singh said that only such items would be allowed to be brought in as were not indigenously available. Recently, the import of some carding engines and ring frames under the Platt Brothers' deal had been permitted as a special case and after consultation with the industry. The Minister stressed the need for exporting textile machinery. Indian manufacturers are trying to develop export markets, but before substantial progress can be made in this direction, the quality of the machinery produced in India will have to be brought up to the level reached by leading textile machinery manufacturers abroad. Prices too will have to be competitive.

Preventing Tax Evasion

Tax evasion has assumed serious proportions in India, and every effort should be made to stop it. But it might do harm to the country if the problem is tackled in a wrong way. Mr. J. P. Singh, chairman of the Direct Taxes Board, told a Press conference in New Delhi last week that persons giving information leading to the detection of large-scale tax evasion would in future get a tax-free reward of 7½ percent—going in some cases to 10 percent depending on the extent of help rendered and the risk or sacrifice incurred by the informant. Such rewards amount to 2½ percent at present. The identity of the person supplying information would, if so desired, be kept secret. The Commissioner of Income Tax would be authorised to sanction rewards up to Rs 10,000 without prior reference to higher authority.

The assessee who makes voluntary disclosure of concealed income would in future be treated more leniently in the imposition of penalty on him and no prosecution would be launched in such cases. It should, however, be possible to give some new incentives to persons to disclose concealed incomes. It has been suggested that as in Ceylon a 30 percent rebate in tax liability could be allowed for voluntary disclosure. Mr. Singh expressed the view that the newly acquired power of search and seizure by the Income Tax Department had been "exercised effectively" in a number of cases, and about Rs. 93 lakhs worth of unaccounted wealth has been detected. The manner in which these searches and seizures have been done has created a feeling of insecurity in the business community. Even honest and straightforward business men have begun to fear the whims and moods of income tax officers. It is of the utmost importance that this power is exercised with great caution if the business life of the country is not to suffer.

It is quite possible that in the near future, the number of income tax assessees might exceed 2 million, and the annual revenue from direct taxes might reach the Rs. 1,000-crore mark, as the Central Finance Minister has claimed. But in order to prevent tax evasion and to increase the yield of direct taxes it is necessary not only to rationalise the tax system, but to reduce the overall incidence of direct and indirect taxes in the country. Tax evasion is bound to increase if the rates of taxation are in excess of the taxable capacity of the people. An important cause of tax evasion is that the Income Tax Department is greatly under-staffed. The work has increased, but the number of income tax officers and inspectors has not increased correspondingly. It might not serve any worthwhile purpose to attach a secret investigation branch to the Income Tax Department, but it will serve a useful purpose in preventing tax evasion if the staff in the income tax offices, not Commissioners or Assistant Commissioners but income tax officers, is considerably increased.

U.K. Jute Machinists to Co-operate

Vertical co-operation between firms which do not commit themselves to financial amalgamation is attracting increasing attention in the textile industries, and there are no doubt numerous instances where co-operation on horizontal lines could be helpful. A recent announcement from the textile machinery industry records an arrangement reached between two companies for collaboration with no financial stake by either in the other.

The chairman of Fairbairn Lawson, of Leeds, Mr. W. Walker, reminds shareholders in a circular of the reference in his statement in August to negotiations for rationalising the jute textile machinery industry, and reports that one arrangement has been completed concerning U.K. manufacture. The arrangement covers a minimum period of five years, with provision for continuance and termination. The arrangement is between Fairbairn Lawson and its wholly owned selling Company, Fairbairn Lawson Textile Machinery Company, on the one hand, and Wilson and Longbottom of Barnsley, with its associated companies, Wilson and Longbottom (Engineers) and Butterworth and Dickinson, of Burnley, on the other, and it provides for full co-operation in the sales, production, research, and development of looms for the jute and kindred trades in widths under 100 inches reedspace.

The productive capacities of the works of both groups, the statement says, will ensure that the needs of the jute industry throughout the world can be met by what will now become one of the largest manufacturing units in the world for the production of standard jute looms. Production of the latest Fairbairn Lawson Falapak loom, together with Wilson and Longbottom Mark 5 sacking loom, will continue, but the policy of gradual rationalisation will be conducted. Considerable importance is attached in this agreement to the sharing of future research and development work combining the very long years of experience of Fairbairn Lawson in all types of jute machinery with that of Wilson and Longbottom and their associates.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following donations for the 1964 Fund:

Rs. 250

The Imperial Tobacco Company of India Ltd.

Rs. 100

National and Grindlays Bank Ltd, 19 Netaji Subhas Road.

Rs. 50

Anonymous.

Rs. 25 each

J. W. Perry, Ram Chandra Singhi, Mr. and Mrs Maneklal Premchand.

Rs. 20 each

Rs. 15 each

Meenakshi Khanna, B. B. Palekar.

Rs. 10 each

P.A.L.P., J. Ritchi.

Rs. 5 each

W. J. Corby Jones, Sisir Banerjee.

Rs. 3 each

Ajit Mitra, Prokash Mazumdar, Parimal Ray Asim Sen.

Rs. 2 each

Irene Smith, Zarin Kapadia.

Total Rs. 631.

Previously acknowledged Rs. 699.71.

Grand Total Rs. 1,330.71.

INDIAN TURPENTINE

A HOME contemporary interested in drugs and chemicals has called attention to the recent state of anxiety that has been aroused in the United States in the turpentine market. It appears that the National Turpentine Operators' Association, formed about three years ago, and entirely controlling the market, has decided to curtail the production for the coming year by 10 percent. The main reasons for making the Association hold out for higher prices are the high prices of timber, the demoralized labour conditions, and the increased cost of supplies used in the production and manufacture of naval stores. Dealers and paint manufacturers are at their wits' end as to the course to be taken to combat the squeezing process of the Association. Endeavours are being made to interest the Standard Oil Company in the manufacture, and enquiries are on foot as to the employment of natural substitutes for the oil. The effect of the policy is already beginning to be felt in the London market, and values have shown a sharp advance. The position of affairs is of some interest to us in India and should cause us to study the state of the industry where, under the auspices of the Forest Department, the manufacture of turpentine oil and rosin has been carried on for some years. The turpentine industry is confined to pine forests of the Himalayas in the United Provinces and the Panjab. In the United Privinces the first distillery was erected in the Imperial Forest School, Dehra Dun, 1888. The crude resin is collected from the Chi pine (*Pinus Longifolia*) in Jaunsar and the leased forests of the Tehri-Garhwal, chiefly at Daragadh, Ninur, Obra, Sangared, and the Mautar and Lunar working circles. The trees are tapped soon after the rains are over, and cuts or "blazes" are made in the stem at the base of which pots are placed to catch the excluding resin. In the lower forests of Kumaon the resin begins to flow in March and as the warm weather advances the flow increases and the greatest amount is obtained in June. On reviewing the state of the turpentine industry in India it will occur to some that the time has arrived to consolidate the operations in the form of a limited liability company. The manufacture should be supervised by one director thoroughly interested in developing the industries and the prices of the products at the factories controlled uniformly according to the state of the market, and to meet any combination make in America or on the continent. Government have pioneered the manufacture so far, and it is understood that they are open to consider any new arrangement in the administration of what is at present a section of the Forest Department. The Secretary of the Revenue Department in reviewing the Forest Report of the United Provinces for 1902-03 expresses his opinion in the following terms: "The Government of India have waited with considerable interest the progress made during the past few years in the manufacture of turpentine in the Jaunsar and Naini Tal divisions. The industry has now apparently reached a successful commercial stage and the local Government might with advantage consider what steps can be taken with a view to its extension, and whether it might not be more profitably conducted by private enterprise."

A Ditcher's Diary

I AM SURPRISED THAT NO SUB-EDITOR HAS THOUGHT of a heading like "The Guns of Guntur" for the A.I.C.C. story. One reason may be that guns now seem obsolete, in view of the apparently widespread demand for India's own atomic deterrent. It was funny enough when India kept saying she could make a bomb but wouldn't; Messrs Shastri, Menon and Bhabha have now added to the gaiety of nations by giving us wildly contradictory estimates of what a bomb might cost. I just don't understand what all this pother is in aid of. Nobody had ever said before that India's decision not to join the nuclear race was forced by economic circumstances. What, then, does it matter whether a bomb costs a few lakhs or several crores? I can't at this distance remember who first started the hare about there being a competition between India and China; even that was supposed to be only democratic and economic competition. A section of the Indian people has now evidently persuaded itself that anything China does must be matched by India, including nuclear weapons. Nobody has yet suggested that India should make the bomb and drop it on Peking; what is wanted, apparently, is a "status symbol". But what price status? The time may have arrived for India to ask the question, for status has already cost her a great deal. What did the A.I.C.C. do in other respects? Going by newspaper reports, my chief source of information, precious little. The resolution on urban property ceilings was useless; and the Congress Party knows it. I have said in the past that A.I.C.C. sessions are now useless rituals; I am unable to revise the opinion after Guntur. It says something for the tenor of the transformation of the Congress in this country that the Party changes without revising its labels. There can be little doubt that the Congress as left by Mr Nehru was a very different thing from the Congress today; but nobody will dare say it.

NO, THESE LAST-MINUTE *ad hoc* MEASURES WILL not do. It was all very well for the Centre to rush rice to Kerala on Tuesday; but a great deal of mischief had already been done. Whether or not the Prime Minister failed to talk the Chief Ministers into immediate rationing, for reasons I need not elaborate, it is by now obvious that the people have lost confidence in the Government's capacity to ensure sufficient supplies of foodgrains at reasonable prices. This loss of confidence is itself a factor in the manipulation of markets that has been in progress for some time, and confidence is not restored when the Government of India is seen to take hurried decisions on perfectly foreseeable situations. The Kerala affair is the more deplorable because the State has had President's rule for some time now: and Parliament, when it meets, will no doubt want to know why appropriate measures had not been taken before trouble started; the State is now, through the President, Parliament's responsibility. This brings me to a point which has been agitating me for some time. To what extent are we journalists justified, in the present context, in concentrating our criticism on Ministers or politicians and in sparing the officials? Suspension of democracy in Kerala lends urgency to the question, for the President now rules Kerala through a body of officials. Did they report to New Delhi that the food situation was approaching a crisis? If they did, what did New Delhi do about it? It needs to be known that the gentlemanly responsibility that Ministers acknowledge for the actions of their officials is now obsolete It is not, in general, necessary to deny that it is a bad Minister who lets his officials down; but no good Minister will allow himself to be let down by his officials. In Kerala the responsibility rested squarely on officials; and democratic correctitude is taken too far when guilty parties are not named just because they are officials and not politicians. I have very little to say in defence of politicians, anywhere; but it does seem to me necessary to re-examine the immunity from criticism so long enjoyed by officials.

WITH ANOTHER FOUR YEARS' PRESIDENCY FIRMLY under his belt, so to speak, it seems to me Mr. Johnson might now with profit be concentrating his external attentions on two points of critical importance to the United States. The first, of course, is South Vietnam, where Mr. Goldwater at least had the seeds of a policy, even if it was only a carbon copy of the concede-defeat-and-clear-out-as-quickly-as-possible one on which ex-President Eisenhower came to power when the problem was how to deal with Korea. But it is the second which could prove the more vital in the long run. Even if we must now reconcile ourselves to writing off the fact of a continued U.S. presence in south-east Asia altogether, it would be a serious matter indeed if we had to do the same with Europe. I do not think President de Gaulle is bluffing when he threatens to leave N.A.T.O.; nor do I believe the organisation can survive for long without him. There is little point in trying to frighten the French with the threat of a multilateral nuclear fleet, with Britain and West Germany as members, because France will only do what she has traditionally done under similar circumstances in the past and draw closer to the Russians. The new men in the Kremlin have already grasped this fact; it was no coincidence that one of their first fraternal messages after seizing power was addressed to President de Gaulle. I have had the feeling for some years now that N.A.T.O. is a dying force. Unless it can somehow be revived, we are likely to see a sharp increase in Russian influence in western Europe, with an offsetting, though dangerous, increase in West German power. In the interests of world peace, this would be better avoided; and whether or not it can be depends on President Johnson. The one fault I had to find with the late President Kennedy's foreign policy was its brusque and rather tactless approach to the United States' west European allies: it took too little account of their growing strength and abounding exasperation with the U.S.A. On this point, President Kennedy followed too closely the policies established under his predecessor, who, had he remained in power much longer, might have soon divested his country of all her European allies, with the possible exception of Britain. Now it is President Johnson's task to live down this legacy and seek the basis for a new Atlantic partnership, and one that is based on something more substantial than waiting for President de Gaulle to die. The price of failure, I might add, will represent an upset in world power patterns of far greater danger to the United States than a few Russian rockets in Cuba.

MR. WILSON HAS BEEN IMPLEMENTING WITH vigour his pre-election promise to make greater use of expert advisers who are not necessarily either Members of Parliament or civil servants. His choice of Sir Charles Snow, who has been given a life peerage, to undertake departmental responsibilities in the new Ministry of Technology, seems a particularly happy one to me. I wish I could say the same about the appointment of Mr. Nicholas Kaldor as special adviser to the Chancellor of the Exchequer. Not that I have anything less than profound respect for Mr. Kaldor and his imaginative schemes for tax reforms; it is just that once these get into the hands of politicians the temptation to adopt all suggestions for new taxes, and for increases in old ones, appears to become irresistible, while those for reductions are quietly forgotten. This is what happened in India, with the result that Mr. Kaldor must rank as an economic disaster to this country comparable with a series of bad monsoons. Elsewhere, of course, his presence has been known to cause rioting and civil commotion. But in India we tend to take our tax burdens with a certain stoical resignation, and on this point Britain may be surprisingly like us. So my advice to Mr. Wilson

would be to take Mr. Kaldor, or leave him; but not to take some parts and leave out others, since in that case the consequences for the economy could be catastrophic, and no less for the future of the Labour Government. About Mr. Wilson's other choice from among professional economists, Dr. Thomas Balogh, I am about equally doubtful. Dr. Balogh writes excellent, thought-provoking articles, some of which, I am glad to say, have featured in the pages of *Capital* and its annual numbers in past years. But in my opinion he has a unique talent for being wrong in almost every prognostication he makes. Like Mr. Kaldor, Dr. Balogh is a Hungarian, and it is my experience of mid-European intellectuals that they are either fanatically liberal or fanatically socialist; the two words in the English language they never seem to master are "empirical" and "practicable". I am told that they make stimulating after-dinner companions, and we may rest assured that Mr. Wilson and his Cabinet colleagues will not find them boring company. But I cannot imagine it is Mr. Wilson's intention to pay a total of £12,600 a year of taxpayers' money in salaries to advisers and then not take serious notice of a word they say. And for the British people, that could be an ominous thought.

ALL GOING WELL, MR. LAL BAHADUR SHASTRI WILL soon join India's considerable army of the "England-returned", the two words which still make a difference in the case of others, at least in the marriage and employment markets. What today is their rating on the country's political stock exchange? One does not know for certain; but it's a safe bet that, after Mr. Shastri's *dhoti* and *kurta* have been laundered in London, his world "image" will be greatly improved; at least the Press Trust of India can be trusted to tell us so in due course. I like London myself. With Mr. Wilson heading the British Government, there are clear prospects of improving Indo-British relations; and Britain remains one of India's most important trading partners, even after the 15 percent surcharge. Yet some may see in the Prime Minister's decision to go to London first traces of a hangover of days long past. Why not Washington or Moscow? (To mention Peking in the same breath would probably be treason.) The visit to London, I repeat, is an excellent idea; I am all for it, although in November Mr. Shastri will need warmer clothes than Mr. Nehru persuaded him to take before an earlier visit to Kashmir. Where doubts linger is that the decision to go to London first may be indirectly indicative of an old way of thinking which persists in New Delhi, especially among senior officials whose influence on Congressmen, even the Prime Minister, may be greater than the people know. I was not at all surprised when I read some years ago that Mr. Nehru had gone to a Savile Row tailor for a new suit; I simply cannot imagine Mr. Shastri in a Savile Row suit, even if some of his secretaries succeed in persuading him to order one. (More improbable things have happened, like the Rolls-Royces of Mr. Krishna Menon and Mr. Jomo Kenyatta.) It is altogether too late to question the necessity of V.I.P. tourism; but Mr. Shastri's own emphasis on austerity emboldens me to suggest that he look rather closely into the size and character of the entourage that will accompany him. He may well find that somebody has promoted a trip for himself to see his son at Oxford or consult a specialist in Harley Street.

THE NEW CLUB MEMBER WAS A BIT OF A BORE AND lost no time in proving it with an inexhaustible supply of unfunny conundrums.

"Can anyone tell me," he asked for the fifth time in ten minutes, "can *anyone* tell me the difference between a Scotsman and a coconut?"

He looked around upon the gloomy faces at the bar, and beamed. No one replied.

"Well," he said triumphantly, "you can get a drink out of a coconut, but....."

"Excuse me," interrupted one of the members, "but I happen to be a Scotsman. Would you like a drink?"

"Indeed I should. Delighted."

"Then get yourself a coconut."

THE DITCHER

Guide for Investors

NEW SUGAR PRODUCTION POLICY WORRIES INVESTORS

(BY A SPECIAL CORRESPONDENT)

INVESTORS *in sugar shares are* greatly worried over the decision of the Government to prohibit the *manufacture of bold-grain sugar. The* move is unfortunate as it will interrupt the working of several sugar *factories in the 1964-65 season which* has just begun. The supply of sugar is already short of demand, and the new season has started with little carryover. In spite of its good intentions, the Government has failed to stimulate production during the 1963-64 season. The output was only 2.5 million tonnes, against a target of *over 3 million tonnes.*

There *are about 36 carbonation* factories which have installed costly equipment to produce the bold grain variety. *This sugar has met with* good demand because its quality is assured. The manufacturers installed *expensive plant and machinery* because they were compensated by the higher prices paid for this variety. Due to the *sudden prohibition of the* manufacture of bold-grain sugar, the working of the carbonation factories will *suffer. Since they will be forced* to produce small-grain sugar instead, their output will drop at a time when *it is urgent to increase the supply.*

The worry of investors arises particularly because of the fact that large *investments* have been made in carbonation factories, which are earning some profits under the present unfavourable *conditions. The bulk of* sugar shares have virtually been ignored because of the poor results of sugar *companies in recent years.* If the new move of the Government is enforced, transactions in even the shares of *companies running carbo*nation factories will come to an end.

Although details relating to the Government order are not yet available, it looks as if the Government has taken the new step for two reasons. Firstly, control on distribution of sugar has been difficult to administer because the two varieties of sugar—bold grain and small grain —need to be sold at two sets of prices. Secondly, the Government believes that stopping the production of the bold-grain variety will ultimately help raise the overall output. But the people concerned with the trade seem to think that the increase in the output, if any, will be far too small to justify the step. Anyway, the switch of equipment from the manufacture of bold-grain size to small grain size cannot be made immediately, and production may actually suffer. In the circumstances, the Government should postpone the move until a more propitious time.

As far as consumers are concerned, they will suffer. The merit of bold-grain size is that it cannot be adulterated easily, whereas the small-grain variety is at present extensively adulterated. The prospect for the 1964-65 season, therefore, does not look encouraging. It is true that the cane crop will be about 10 percent larger than that of 1963-64, but there is no assurance that sugar factories will get a bigger supply of the raw material. Since political pressures have prevented the Government from placing control on *gur* and *khandsari*, the diversion of cane to the production of these two commodities will continue as before.

The token incentive that has been allowed to sugar factories during the current season under the interim recommendations of the Sen Commission is unlikely to stimulate production. The Government has sanctioned a rebate of the basic excise duty on the excess production during only November. Whether the rebate on production will also be given during the rest of the current season has not yet been decided. Judging from experience, it does not look likely that there will be any improvement in production during the current season in spite of the small relief of the basic excise duty. In fact, in view of the new move to prohibit the manufacture of bold-grain sugar, the output may be smaller than that of the previous season.

Rights Issue by Dunlop Rubber

THE ordinary shares of the Dunlop Rubber Co. (India) Ltd have met with support around Rs. 32.50 ex *rights due to the issue of rights shares* in the proportion of one new scrip for every three held at a premium of *Rs. 10 a share.* Support has been reinforced because the Company has shown good performance in the past, and is doing well during the current year. The profit amounted to Rs. 3.28 crores for 1963, out of which taxation *absorbed Rs. 1.59 crores.* A taxable ordinary dividend of 17 percent absorbed only Rs. 78.75 lakhs.

Whether the Company will pay the same dividend on the increased *capital is now agitating* the minds of shareholders. Due to the increase in prices of tyres and tubes since the beginning of 1964, the profit during the current year is expected to be higher than that of 1963. So the Company should have no difficulty in paying the same dividend on the increased share capital since only a further sum of Rs 26.25 lakhs will be required to service the new share capital at the same rate of dividend. Meantime, the Company has already recommended an interim dividend of 8¾ percent, subject to tax, for 1964. The support has been reinforced by the belief that the Company will soon seek the permission of the Government to issue bonus shares by capitalising the share premium account which at present stands at Rs. 70 lakhs. With the premiums on the new shares, the share premium account will rise to Rs. 2.20 crores. It has been indicated that a sum of Rs. 2 crores out of the share premium account may be capitalised. So the Company should be able to issue bonus shares in the proportion of one bonus share for every three held. Since the proceeds of the new issue will be largely used to finance expansion, the shareholders feel more or less assured that even after issuing the bonus shares, the dividend might be maintained.

Brooke Bond Estates India Pays Less

IN their report for the year ended June 1964, the directors of Brooke Bond Estates India Ltd say that the world tea crop is increasing. In view of the rise in the north Indian output during the current season, it is possible that the price of tea will fall in proportion to the increase in the crop. The Company has so far realised good prices for teas in the current season. A third C.T.C. machine has been installed and more new equipment have been set up. The quality of teas is expected to improve due to the introduction of improved manufacturing methods. The vegetative propagation extension has made good progress and replanting in a limited area may take place by 1966. The immediate extension programme has been completed and young tea is in good order.

The profit has dropped from Rs. 9.51 lakhs for 1962-63 to Rs. 8.08 lakhs for 1963-64, after providing Rs 3.03 lakhs (against Rs. 3.11 lakhs) for depreciation. The taxable ordinary dividend has been reduced from 7½ percent to 5 percent. The yield amounts to 4.9 percent at the present price of Rs. 10.25 a share of Rs. 10 each. Capital reserve is allocated Rs. 5,090 (against Rs. 7,244) and development rebate reserve Rs. 18,764 (against Rs. 1,200). The carry-forward is Rs. 1,199, against Rs. 7,816 brought in. The crop amounted to 1.43 million kilograms, against 1.35 million kilograms. The prospect is considered good in view of young tea coming into bearing.

Bombay Burmah Fares Well

THE Bombay Burmah Trading Corporation Ltd reports fairly satisfactory results for the year ended May 1964. Despite a substantial decline in the gross trading receipts from Rs. 5.928 crores to Rs. 5.375 crores, the gross profit is down only slightly from Rs. 1.506 crores to Rs. 1.492 crores. The working results reflect the effect of the cessation of timber operations by the Company's Wallace Bay branch since January 1964, these activities having been taken over by the subsidiary, Wallace Bay Ltd. Sales of timber fell sharply from Rs. 2.708 crores to Rs. 2.072 crores; sales of tea and coffee, however, were higher at Rs. 2.499 crores, against Rs. 2.423 crores. The Company's other income increased from Rs. 54.20 lakhs to Rs. 62.12 lakhs. After providing Rs. 18.63 lakhs (against Rs. 36.64 lakhs) for depreciation and Rs. 60 lakhs (against Rs. 47.30 lakhs) for taxation, the net profit is higher at Rs. 70.56 lakhs, against Rs. 66.63 lakhs in the preceding year. Bringing in the previous year's surplus of Rs. 2.66 lakhs (against Rs. 2.03 lakhs) and taking into account the income attributable to previous years, the directors have transferred Rs. 24.78 lakhs (against Rs. 7.99 lakhs) to various reserves and other accounts. The dividend has been raised from 16.8 percent to 18 percent but in 1962-63, the Company had also paid an additional centenary bonus of 3.2 percent (80 paise a share of Rs. 25) absorbing Rs. 8.56 lakhs. The total distribution among the shareholders amounts to Rs. 48.15 lakhs, against Rs. 53.50 lakhs. After making various appropriations, there remains a surplus of Rs. 68,775 to be carried forward.

Reviewing the activities of the Company during 1963-64, the directors state that the forest operations of the Wallace Bay branch covered a period of only seven months during which the production of hardwood logs amounted to 88,046 tonnes, while the production of sawn timber amounted to 3,702 tonnes. There were certain cost increases, but selling prices on log shipments yielded a satisfactory margin and selling prices of sawn timber also showed some advance. Since January 1964, the Wallace Bay branch has continued in operation, supplying transport, agency, equipment and other services, and, as in the previous years, it has made a very useful contribution to the corporation's overall profit.

During the subsequent five months, Wallace Bay Ltd, which took over the timber operations of the Company, has incurred a loss, but no provision has been made in the Company's accounts for this loss amounting to $(M) 104,365. In recent months, there has been an improvement in the working of this subsidiary. The production of tea in south Indian estates rose from 3.836 million kilograms to 3.977 million kilograms, while unit cost increased from Rs. 3.20 to Rs. 3.39 a kilogram and the average gross return fell from Rs. 5.42 to Rs. 5.28 a kilogram—the drop being mainly attributable to difficult trading conditions in Middle East markets. Tea packeting continued on a small but increasing scale in the Company's existing factory in Bombay. But the facilities there being limited, it has been decided to erect a full-scale modern tea blending and packeting plant in Bangalore. The new factory is expected to come into production early in 1965. Coffee crop for the year amounted to 1,020 tonnes, against 930 tonnes in 1962-63. The increased crop was mainly from the Coorg estates, but there was also an encouraging improvement on the developing Pambra estate and the crop on the diminished Singampatti the acreage likewise showed an advance.

The cardamom crop increased from 10,627 kilograms to 19,549 kilograms and sale prices also registered an increase. The output of made tea from the Herkulu factory amounted to 224,944 lbs, against 130,880 lbs in 1962-63 and sales were made in the Nairobi and London markets. A tea factory is being constructed at the Marvera estate. Bombay Burmah's subsidiary and associate companies made satisfactory progress. Thai Tapioca reported better results, Formica India Ltd has made good progress and the factory is expected to go into production early in 1965. The turnover of Afco Ltd increased appreciably and work-in-progress at the year's end stood at a high level. The asbestos cement plant and the concrete products plant, both in Rangoon, showed improved results. However, working conditions there have been generally difficult and the future of the branch is under review in the light of taxation, remittance and other factors in Burma bearing on the continued viability of the Company's operations there.
