From the employers' side too some angry noises are being made, although it must be said in fairness to them that there is general appreciation, among them, of the fact that the Government has shown reasonable concern for the financial stability of the corporate sector by providing for higher returns on capital in the calculation of 'available surplus'. It may however be conceded that anxieties and apprehensions still persist. Mr. Naval Tata, for instance, has expressed the fear that the linking of wages with dearness allowance in computing the bonus might result in "a perpetual demand on the part of workers for higher dearness allowance to jack up the quantum of minimum bonus to an indefinite amount by progressively pushing up the dearness allowance to a higher figure". Of greater concern is the fact that the Government has not found it possible to desist from accepting the Bonus Commission's highly controversial recommendation that all industrial units should be required to pay a minimum bonus, irrespective of whether they make a profit or not. This compulsory distribution will be equivalent to four per cent of the annual basic wages and dearness allowance or Rs. 40

whichever is higher.

The sole merit of the Government's decision is that it has set at rest all the familiar controversies about the true nature of a payment of bonus. The employers claim that bonus as an ex-gratia payment has long been ignored in law and practice. Bonus, again, has ceased to be treated as an incentive or reward for special or additional effort. The contention that it must at least be regarded as workers' share in the prosperity of a company or industry where there is prosperity to be shared has also now gone overboard. The position is that bonus has become indistinguishable from wages except to the extent that it is a deferred payment with, however, the compensating advantage that the bonus amount could rise above the prescribed floor by an amount depending on the size of the available surplus for any particular concern or in any particular year. It is idle to pretend that Government has been a free agent in coming to this obviously illogical conclusion on the nature and status of bonus payments. Having substantially modified the other main recommendation of the Bonus Commission with regard to the calculation of surplus, it has evidently thought that the Commission's recommendation of a minimum bonus would have to be accepted as part of a compromise. We for our part would hesitate to say that the principle of expediency has been wrongly respected here. Employers in any case have at least the assurance now that bonus disputes have been freed of the attentions of tribunals which had notoriously been vagarious in their verdicts.

Highlights of the Week

FOOD FOR DEBATE

THE MONSOON Session of Parliament started on Monday, September 7, against a background of alarms and excursions. On the previous day, the Prime Minister, addressing the Congress Parliamentary Party, had advised its members to be on their guard against possible provocative tactics on the part of Opposition groups. He had also said that, while Congress MPs should abide by Parliamentary rules and conventions, there was no need for them to hesitate to "hit back" in debate. On the same day, lending point to the Prime Minister's observations, leaders of Opposition groups, going into consultations among themselves on Parliamentary strategy, agreed to sponsor jointly in Lok Sabha a no-confidence motion on the opening day of the Session. The Swatantra Party, however, decided not to associate itself with the move on the ground that a no-confidence motion would not serve any purpose at this stage. This is evidently a gesture from Rajaji to "Shastriji". A statement issued by the Swatantra Party in this connection said that, although the party was thoroughly dissatisfied with the policies of the Government, it felt that time should be given to the latter for reconsideration of those policies and for changing them.

The Swatantra Party is the largest single Opposition group in the Lok Sabha at present. In spite of this there was never much doubt that, even without the Swatantra participation, the Opposition groups, aided by Independent Members, would be able to muster enough strength to secure admission of the no-confidence motion. Even so, Opposition benches showed both relief and joyous excitement when the Speaker, in counting those who stood in favour of the motion being admitted, came to and crossed the fateful 50-mark. The Treasury benches, for their part, scored a minor triumph when the Speaker accepted the Prime Minister's proposal that the no-confidence motion may be taken up immediately after, but not before, an official motion on the food situation had been debated. Some Members of the Opposition had claimed precedence for the no-confidence debate, but their argument that the Government was trying to take the wind out of their sails by getting the official motion on food discussed and carried first apparently failed to carry conviction where the Chair was concerned.

Proceeding to discuss the food situation, the House heard with some amusement Prof. Hiren Mukerjee (Communist) and Mr. M. R. Masani (Swatantra) differing from each other even more than they differed from the Government both on what had gone wrong and on how the Government should act to put this right. The former, predictably, put the blame for shortages and high prices on the trade, while the Swatantra leader pertinently pointed out that the food difficulties were not an isolated problem but were simply one of the results of the Government's economic policies failing to promote a proper economic climate. On the issue of remedial action, Prof. Mukerjee demanded immediate state trading in food-grains so that the "unholy trinity of the hoarder, high finance and the Government", which, according to him, had brought about a food crisis, could be broken. Advice of an entirely different nature, however, was given to the Food Minister by Mr. Masani who asked for the removal of zonal barriers and for a farm policy which would create the right atmosphere for better farming. In his view, the increase in food prices was the result of deficit financing and inflationary pressures and he therefore called for a cut in government expenditure, including investment on heavy industries and advocated reduced taxation. Even within the ruling party opinion seemed to be divided on state trading. Both Mr. A. P. Jain and Mr.

H. K. Mahatab, for instance, warned the Government against undertaking state trading without first equipping itself with a proper administrative machinery. Fifteen hours have been allotted for the food debate which is, therefore, likely to occupy the time of the House up to and part of Thursday (September 10) after which the no-confidence motion moved by Mr. N. C. Chatterjee (Independent) will come up for discussion.

PILGRIM'S PROGRESS

AFTER HIS successful visit to Kathmandu and Kabul, Mr. Swaran Singh, Minister for External Affairs, established last week another milestone of goodwill and friendliness in Rangoon. His talks with the Burmese leaders, according to the joint communique issued on September 5, "provided a welcome opportunity for a free and frank exchange of views in an atmosphere of cordiality and mutual understanding on matters of common interest to the two countries as well as on certain international issues affecting peace and security, particularly in Asia". The communique specifically underlined the "identity of approach" and stressed the need for "periodical exchange of views", which would not only help in further strengthening the bonds of friendship between the two countries but also propagate the cause of peace and friendly relations among nations. While Mr. Swaran Singh's visit to Rangoon has helped in dispelling doubts and misunderstandings, it is undoubtedly true that the traditional ties between India and Burma have suffered a setback in the recent past. It was, therefore, just appropriate that the Minister for External Affairs, immediately after landing on the Burmese soil, should have invoked the treaty of 1951, which calls for "everlasting and unalterable friendship" between the two countries and stipulates that "their representatives should meet as often as necessary for exchange of views on matters of common interest and consider ways and means for mutual co-operation in such matters".

Both India and Burma are striving towards the establishment of a socialist society, although there are ideological differences in the use of means for achieving this. Mr. Swaran Singh noted with satisfaction that the various measures taken by the Burmese Government for accomplishing its objective were not discriminatory against foreigners as such and applied to Burmese nationals and foreigners alike. The affirmation of the Burmese Government that it had no intention of forcing out of the country any resident foreigner belonging to the "working class" needs to be appreciated. Nevertheless, a broad conclusion may be drawn that the legal measures, however sanguine the intentions of the Government, have hit the upper middle classes among the foreign nationals more than they have done their Burmese counterparts. Further, the axe has fallen rather more heavily on the Indian nationals, who, among the foreign nationals, are in majority. It was only to alleviate the panic among the Indian nationals, who were affected by the measures of nationalization of shops and business establishments, that the Indian Embassy in Rangoon had started accepting in good faith deposits of their assets and personal jewellery. This act was branded by the Burmese press and the public as "unneighbourly conduct". The situation, however, was saved with the intervention of the two Governments, and the visit to Rangoon three months ago of Mr. Y. D. Gundevia, Foreign Secretary, proved helpful in reaching an understanding on this important matter.

The promise that the Burmese Government gave on its part was rather vague. It had stated that "taking into consideration the friendship that exists between India and Burma", it would make all possible arrangements to enable Indian nationals desiring to return to India to do so. By all available

accounts this promise does not appear to have been kept. There has been a continual stream of Indian nationals returning to this country, but their plight is miserable in that they have not been able to bring with them the barest minimum of assets with which they could pursue their vocations here. Hopes were being entertained that Mr. Swaran Singh's visit to Burma would, among other things, explore possibilities of compensating these Indian nationals. Although the problems arising out of the departure of a large number of Indian nationals from Burma were discussed, no concrete solutions seem to have been forged. While the intention of the Burmese Government to accord sympathetic treatment to the persons of foreign origin who sincerely desire to stay in Burma must be appreciated, it is doubtful if foreign nationals, belonging to the working class or otherwise, will, under the present circumstances, find the atmosphere and working conditions as congenial as were obtainable a few years ago. But with abroad agreement between the two countries on national and international levels, it is sincerely to be hoped that the problems being faced by the Indian nationals in Burma will be solved amicably and soon. This might well be the outcome of General Ne Win's projected visit to India.

KUALA LUMPUR MEET

THE CUSTOMARY meeting of the Commonwealth Economic Consultative Council on the eve of the annual conferences of the World Bank, the International Development Association and the International Monetary Fund, held this time at Kuala Lumpur, proved, as could be expected, uneventful. The communique issued at the end of the meeting, though decorous in wording, betrays that there still remains a wide gulf between the points of view of the developing and the developed nations in the Commonwealth on the development of world trade and liquidity of the international monetary system. The developing countries in the Commonwealth reiterated at the Kuala Lumpur meeting the need for providing greater access of their manufactured goods to the markets of the industrialised countries as well as for devising means to ensure stable and reasonable commodity prices — a plea put forth by them at the World Trade and Development Conference held at Geneva earlier this year. Hope was expressed that the "Kennedy Round" trade and tariff negotiations in the GATT would achieve positive results of benefit for all the members of the Commonwealth. But as the Geneva Conference revealed, agreement on broad aims is much easier to be obtained than an understanding of details.

There can be no two opinions on strengthening the international monetary system and augmenting of international liquidity. The communique suggests that the Finance Ministers of the 18 Commonwealth countries represented at the Kuala Lumpur meeting expressed the hope that the Tokyo conference of the IMF would be able to reach an agreement on the need to increase the resources of the IMF and extend the facilities of the Fund to whose position in international monetary matters they attached the highest importance. A common approach of the Commonwealth countries to the Tokyo conferences of the World Bank, the IDA and the IMF is said to have been evolved at Kuala Lumpur. But how far it will be sustained is yet to be seen in view of Britain being a signatory to the recommendations of the "Group of Ten" and her own balance of payments difficulties. The developing countries are anxious that the balance of payments difficulties created for them by the restricted world liquidity should be attempted to be removed at a fast rate. It is, however, heartening to note that Britain has agreed to press at the Tokyo conference of the IMF modifications in the Paris formula on strengthening the resources of the IMF which envisages all the contributors to the IMF to subscribe one-fourth of the

additional quotas that might be allotted to them, in gold. If Britain is able to persuade the other richer members of the IMF for getting this requirement relaxed, it will help in achieving the objective of increased world trade.

AID WITHOUT STRINGS

IN CONSONANCE with the policy of non-alignment followed by the Government of India, the Union Defence Minister, Mr. Y. B. Chavan, is currently leading a high-powered mission to the Soviet Union for securing military equipment for bolstering India's defences against the Chinese menace. Special significance is attached to this visit of Mr. Chavan inasmuch as it aims at securing military assistance from a Communist country against aggression by another member of this bloc. It is true that the relations between Moscow and Peking are not as cordial today as they used to be only a few years ago. But Russia's agreeing to assist India in building up her defences against China obviously does not follow from this. It has its genesis in the wider aims of the two countries to preserve peace in the world and to do away with resort to armed action for solving territorial differences between two nations.

Mr. Chavan's primary task during his current visit to the Soviet Union is to get the completion of our plan to manufacture MIGs expedited. He has also indicated that he would explore the possibilities of getting from the Soviet Union some naval equipment and light tanks and technical assistance for their manufacture in India. The forthright statement of the Soviet Defence Minister, Marshal Malinovsky, that the Soviet Union would give assistance to India, as far as possible, to preserve her non-alignment and independence, and that too without any political strings, evokes optimism about the success of Mr. Chavan's visit.

Eastern Economist 20 Years Ago

SEPTEMBER 8, 1944

The magnitude and nature of the population problem will be directly affected by the magnitude and nature of the economic plan we envisage and an adequate population policy must necessarily form an essential adjunct of an adequate economic plan. Indeed, a population policy and an economic plan can only be looked upon as an integral part of a comprehensive socio-economic planning. Those who had pinned their faith upon the policy of 'discriminating protection' during the inter-war period as a means of industrialization to face the pressure of population on our economy, were indeed severely disappointed, for while discriminating protection did lead to some growth of industry, it was far out-paced by the growth of population. The formulation of the Bombay Plan which undertook to absorb a rate of growth of population as large as during the last inter-censal period or 5 million per annum, was therefore eagerly acclaimed and it was thought that at last we have a specific to meet the population pressure and if only we put the Plan through energetically, the birth-rate will fall in due course and the population will look after itself. However, as we averred, the execution of the Bombay Plan itself will in no wise attenuate the urgency of our population problem — will indeed aggravate it — and unless an energetic population policy is simultaneously pursued, the economic plan itself will stand in peril of being wrecked.

Is Competition Declining?

ANALYST

ONE OF the important ways in which the leading producer of an article meets his competitor is by getting control of the competitor's business, by purchasing as many shares as possible in the latter's company. It is the object of this article to examine from the available official statistical data the extent of inter-corporate investments in general in the corporate sector, the extent of its practice in the big company sector and the statutory restrictions on such investments.

During World War II and in the immediate post-war years, many cases of reckless inter-company investments had come to light. In order to prevent similar abuses in future, the Bhabha Committee on Company Law Reform then recommended that suitable restrictions should be imposed on inter-company investments and suggested that the amount invested in the shares of any company in the same group (companies within the same managerial control will broadly come under the same group) should not ordinarily exceed 10 per cent of the subscribed capital of the company in which the investment was made and the total amount invested in companies in the same group should not exceed 20 per cent of the subscribed capital of the investing company and that if these limits were to be exceeded, the approval of the company in a general meeting and also of the Central Government should be obtained. The Committee also recommended that even the investments within these limits should require the approval of all the directors of the company. These recommendations of the Committee were incorporated in the Companies Act in 1956. This section, however, did not apply to banking or insurance companies or to private companies which are not subsidiaries of public companies or to investments by holding companies in their subsidiaries or to investments by managing agents, secretaries or treasurers in companies managed by them.

Section 373 of the Companies Act of 1956 required that all inter-company investments which exceeded the limits laid down in Section 372 made after April 1, 1952 should be regularised within six months from April 1, 1956 (the date of commencement of the Act) by obtaining the necessary approval of the Government. In the event of failure to do so, a company should dispose of its investments in excess of the limit specified in Section 372 within two years of the commencement of the Act. These restrictions were imposed with retrospective effect with a view to forestalling possible attempts at making large-scale investments following the publication of the Report of the Bhabha Committee. Although Section 372 of the Act exempted investments made by financial institutions, managing agencies in managed companies, holding companies in subsidiaries, from the point of view of decline in competition

any increase in such investment has no effect. However, the investments made by a private company in another company might in some cases result in the decline of competition provided both are engaged in the same manufacture. Subject to this limitation the data published in the Annual Reports of the Department of Company Law Administration on the extent of inter-company investments approved by them will show whether competition has been sought to be restricted by increasing control. Table I shows the extent of inter-company investments approved by the Government.

It will be seen that the inter-company investments, which stood at Rs. 329 lakhs in 1956-57, fell to Rs. 46 lakhs in 1960-61, mainly because of the retrospective effect given to Sections 372 and 373 of the Companies Act from 1952 as referred to earlier. The increase in the next two years was due to the

TABLE II
INDUSTRIAL SECURITIES IN PUBLIC LIMITED COMPANIES

(In crores of Rs.)

	1955-56	56-57	57-58	58-59	59-60	60-61	61-62	62-63
1. Industrial Securities	56	57	60	62	63	69	74	77
2. Paid up Capital	474	504	538	567	595	721	762	800
3. Total net assets	1452	1683	1881	1998	2098	2627	2872	3138
4. 1 as % of 2	11.8	11.3	11.1	10.9	10.6	9.6	9.7	9.6
5. 1 as % of 3	3.8	3.3	3.2	3.1	3.0	2.2	2.6	2.5

amendment in the Companies Act in 1960, which made it obligatory for managements to take the approval of Government before investing in the shares of companies falling outside the controlling group of the investing company. Further, in 1961-62 and 1962-63 "the majority of the applications approved by the Government related to investments by existing companies in new companies formed for setting up industrial undertakings sanctioned by Government" (vide Seventh Annual Report of the Department of Company Law). Since a majority of investments have been so made, it also cannot be said to be aimed at getting control to prevent competition. Section 372 of the Companies Act, therefore, has effectively prevented a decline in competition resulting from control over other companies.

Since Section 372 of the Act does not apply in case the investing company invests less than 30 per cent of its subscribed capital and 10 per cent of the subscribed capital of the company in which investment is made, it would be useful to see whether, in general, companies have invested up to this permissible limit. It may be added that in view of the existence of a large number of sleeping shareholders, even a 10 per cent holding of share capital might enable a company to get one of its own directors elected to the Board of the company and thus get some control over its management. The Reserve Bank publishes data on the extent of investments made by the non-official corporate sector in industrial securities. In the case of 1,001 public limited companies during

TABLE I.

INTER-COMPANY INVESTMENTS

(In lakhs of rupees)

Year	No. of companies	Amount
1956-57	42	329
1957-58	5	171
1958-59	12	166
1959-60	18	198
1960-61	7	46
1961-62	30	549
1962-63	60	730
TOTAL	174	2189

1955 to 1959 and 1333 public limited companies during 1960 to 1963 the position is summarised in Table II (page 473).

It will be seen from Table II that investments in the shares of other companies which are permitted up to a maximum of 30 per cent of the subscribed capital ranged between 11.8 per cent and 9.6 per cent of the paid-up capital of the public limited companies during 1955 to 1961. Thus competition is not sought to be reduced by increasing investments in other companies.

In the case of private limited companies data for 333 private limited companies during 1955 to 1960 and 501 companies for 1961 are published by the Reserve Bank. Table III summarises the position. Although investments by private limited companies in shares of other companies form a more important part of the paid-up capital than in the case of public limited companies, even then it is well below 30 per cent of the subscribed capital of these companies. Data is not available regarding the subscribed capital of these companies but since subscribed capital will be higher than paid-up

TABLE III.
INDUSTRIAL SECURITIES IN PRIVATE
LIMITED COMPANIES

(In crores of Rs.)

	1955	1956	1957	1958	1959	1960	1961
(1) Industrial securities	14	12	13	13	14	14	19
(2) Paid-up capital	67	69	71	74	74	76	90
(3) Total net assets	220	243	258	266	284	317	396
(4) 1 as % of 2	20.9	17.4	18.3	17.5	18.9	18.4	21.1
(5) 1 as % of 3	6.3	4.9	5.0	4.8	4.9	4.4	4.8

capital, lower percentages would be indicated in terms of subscribed capital.

Since it is the big companies that may resort to investing in other companies to a greater extent in order to gain control over them, it may be useful to study the data relating to investments made by them. The Reserve Bank has published information regarding the investments made by companies having a paid-up capital exceeding Rs. 1 crore in shares of other companies.

It may be seen from Table IV that in the case of big public limited companies also investments in shares of other companies are very low.

TABLE IV
INDUSTRIAL SECURITIES IN BIG COMPANIES
(In crores of Rs.)

	1959-60	1960-61	1961-62	1962-63
1. Industrial Securities	30	33	38	39
2. Paid-up Capital	347	401	445	468
3. Total net assets	1169	1342	1556	1697
4. 1 as % of 2	8.7	8.2	8.5	8.3
5. 1 as % of 3	2.6	2.5	2.4	2.3

The conclusion then must be that the available statistical data does not support the view that competition is sought to be declined by increasing the control on other companies obtained by increasing inter-corporate investments. It may be added that it is wrong to presume that all investments in other companies are made only to secure control. Some of the other reasons why investments are made in other companies include availability of surplus funds in the investing company and payment of higher dividends by the investee company.

Driving on wet, slippery roads is as dangerous as stepping on a banana peel. Avoid skidding by taking these simple precautions.

- See that your tyres are in good condition and always at correct pressure.
- Drive more slowly and smoothly on wet and slippery surfaces.
- Don't brake, accelerate or turn sharply.

Never brake sharply in a skid. Leave the clutch engaged for better control of your car through the engine.

If however your car does skid, here are a few points to help you control it.

REAR WHEEL SKID. Remove your foot from the accelerator and turn front wheels into the skid, e.g. if the rear of the car swings to the left, steer left. Then steer in the desired direction, and gently accelerate.

FRONT WHEEL SKID. Remove foot from accelerator. Straighten the front wheels.

FOUR WHEEL SKID. Release brakes at once to allow free rolling of wheels. Then apply brakes gently, gradually increasing pressure, to avoid wheels locking again.

Road Safety

is a matter of life...and death

WINDOW ON THE WORLD

The Sterling "Mystery"

PAUL EINZIG

LONDON:

UNTIL QUITE recently it was widely expected that a major sterling crisis would develop during the late summer and that it would come to a climax during the early autumn, on the eve of the election. It was assumed that foreign funds would be reduced to the indispensable minimum required for financing international trade in sterling and for keeping London bank accounts alive. It was also assumed that there would be a wholesale flight of British capital in anticipation of the advent of a Labour Government, and that there would be once more a wave of speculative short selling of forward sterling. On the basis of these assumptions it was widely expected that sterling would decline to its lower support point of \$2.80 early in August; that the authorities would lose gold heavily in connection with supporting sterling against persistent adverse pressure; and that forward sterling would go to a heavy discount. It was expected that demand for dollar securities by law-abiding UK residents would cause a widening of the premium on investment dollars.

Considering all these pessimistic assumptions, the extent of the selling pressure on spot sterling during August was remarkably moderate and the amount of gold lost by the authorities in supporting it was well under expectations. The premium on investment dollars declined, instead of widening. Strangest of all, forward sterling remained remarkably steady and tended even to appreciate as and when spot sterling was approaching its lower support point. All this was all the more remarkable as the deficit of visible trade during July and August was very heavy and, even in the absence of any hot money withdrawals, capital flight and speculative selling, it would have justified much heavier gold losses.

Favourable Trend

Possibly the indications of an increase of the Government's popularity in the country, as it appeared from public opinion surveys, may have been responsible for the unexpectedly favourable trend of sterling. It is conceivable that during the long months, while public opinion surveys, by-election results and local election results were pointing inexorably towards a sweeping Socialist victory, the anticipation of such a landslide may have induced residents and non-residents alike to make their arrangements on the certain assumption of such a victory, so that when the Government's chances improved many of them felt justified in undoing their hedges arranged on the basis of that assumption. This at any rate may be indicated by the decline in the premium on investment dollars, showing a desire on the part of U.K. residents to switch back from dollar securities into sterling securities; by the increase in foreign short-term money during the summer; and by the steady tone of forward sterling.

But none of these changes can safely be relied upon as a barometer indicating a revival of confidence in sterling. Quite conceivably the decline in the premium on investment dollars may be due to exactly the opposite cause — perhaps a major loophole has been discovered, through which British capital could evade exchange control unlawfully, in order to find its way into dollar securities without having to accept a loss of 10 per cent or more by financing the dollar security purchases through the legitimate channel of the investment dollar market. The increase in foreign short-term funds may have been due to the high interest yield on short investment in Local Government bonds or in hire-purchase finance house deposits. And in some quarters the steady tone of forward sterling is

attributed to official support in the forward market.

Opinion in the foreign exchange market is sharply divided on the question whether in fact there has been such official support to forward sterling. The remarkable steadiness of forward dollar rates which remain virtually unchanged for some weeks, especially in July, is interpreted in some quarters as indicating systematic support. But other equally reliable quarters are prepared to swear that there was no consistent official selling of forward dollars, even though they do not rule out the possibility of occasional operations in that sense.

One thing is certain. The standby credit arranged with the International Monetary Fund, the reciprocal swap arrangement with the Federal Reserve, and the substantial official British holdings of dollar securities in addition to the Sterling Area gold and dollar reserve equalling nearly £1,000 million, together with the known existence of close co-operation between Central Banks, were in themselves sufficient to deter speculators from taking a hand. Had sterling developed acute weakness, no doubt speculative operations would have greatly accentuated it.

Subdued Speculation

In the absence of any signs of a recurrence of the acute flight from the pound, however, speculators kept off the market. If the rate at which the authorities were supposed to support forward sterling had been obviously artificial they would have had to be called upon to absorb a very large amount of forward sterling. The chief foreign exchange manager of one of the continental Central Banks once told me that whenever the market encountered an official attempt at pegging the forward rate at an overvalued level immense amounts came to be dumped on them from all directions. When such a situation arises its presence is quite unmistakable. But there was no sign of it in July or in August.

It would be idle to pretend, however, that the danger of a sterling crisis is over. Public opinion is quite incalculable, and it is possible that in the course of the election campaign the Gallup Poll might show once more an increase in the popularity of the Labour Party. Other developments, too, might easily revive fears of a Socialist victory, and unstatesmanlike Socialist utterances might give rise to fears of exchange control or devaluation in case of a Socialist victory. Mr. Harold Wilson himself is aware that a sterling crisis would help his opponents, for it is the habit of the British electorate to vote Tory in an emergency. Hence the moderate tone of his public utterances. But some of his supporters might be less cautious. Or some of the trade unions might lose their patience during the prolonged suspense that precedes polling day.

Precisely because hot money has accumulated in London, the possibility of its sudden withdrawal must be envisaged. Disrupting politico-military developments in the Middle East or Far East, too, might trigger off a speculative attack. On the other hand, sterling might obtain unexpected support through a weakening of the dollar during the course of the election in the United States, especially if the British election date should be fixed towards the end of October.

However this may be, to date sterling has behaved better than most of us would have dared to hope. It is a pity that, owing to gross inadequacy of our information on changes in the balance of payments, its steadiness is treated as a mystery. If only we knew more about leads and lags in commercial payments and about capital movements we would be in a much better position to explain and even forecast its trends.

Steel Loans Issue: Bokaro Vs. Dastur

By Our Special Correspondent

NEW DELHI:

DESPITE THE guarded statements of the President of the World Bank on the attitude likely to be taken up by that organization towards requests from private steel companies in this country for new loans for further expansion, there appears to be a feeling in responsible quarters that the authority taken under the Companies' Act to convert government loans to companies into equity shares is bound to come in the way of steel development in the fourth Plan. While, as was disclosed by Mr. J.R.D. Tata in a speech to the shareholders of the Tata Iron and Steel Company Limited on September 3, discussions on this issue are proceeding between the Government and the steel companies with a view to finding a way out of the difficulty, the Minister for Steel and Mines, it is learnt, has already expressed his inability to accept a suggestion that the Government should give an assurance to steel companies that it will not exercise in their case the option given to it by law to convert its loans into equity capital. The Minister seems to have taken the stand that it will not be proper for him to nullify by executive action a specific provision in law. Mr. Sanjiva Reddy, in other words, does not feel free to bind himself or his Ministry to any formal abandonment of a right vested in the Government by an Act of Parliament.

★★

While negotiations between the Governments of the USSR and India on the nature and extent of Indian participation in design, supply and erection of equipment for the Bokaro steel project are progressing satisfactorily, it is now practically certain that the role of Messrs. Dastur and Company, whom the Government was planning to appoint as consultants, cannot be anything like what it was originally envisaged — assuming, of course, that Messrs. Dastur are at all going to be retained as consultants. This, it must be made clear, is not because the Soviet Government is insisting on retaining control over the project. On the contrary, it is a fact that Moscow has wholly agreed that New Delhi should have full control of management of the project. At the same time, so far as the technical side is concerned, the Soviet authorities are quite firm that, so long as they are expected to assume responsibility for design, supply and erection of equipment as well as for running in and commissioning the plant to full production, there could be no question of their designers or other experts being expected to act under the over-riding authority of Messrs. Dastur or any other outside consultants.

In the circumstances, it would be neither necessary nor proper for the Government of India to retain or pay for the services of Messrs. Dastur on the terms envisaged earlier. Apart from the fact that the proposed consultancy fee of Rs. 6.5 crores would be far too high for any services which Messrs. Dastur may be placed in a position to render under an Indo-Soviet project agreement, there is the even more important consideration that in the case of a Rs. 400-crore plan of such immense economic and strategic significance as Bokaro, the Government of India simply cannot take the risk of the lines of responsibility getting snarled. The Steel Ministry, consequently, is exploring ways and means of devising revised arrangements which would be fair both to Messrs. Dastur and to the Government. It is true that no formal contract has been signed with Messrs. Dastur for the Bokaro consultancy, but there is at least an understanding in terms of which Messrs. Dastur have been encouraged to incur a certain amount of

expenditure on technical and other personnel for building up the consultancy organization for Bokaro. It is possible that the Government may consider it fair to reimburse the firm on this account.

There is also genuine interest in government circles in putting to the best possible use the pool of expert personnel and knowledge which Messrs. Dastur have painstakingly created. This firm is already active in important public sector projects, such as the alloy steel plant in Durgapur, and it is believed that more use could be made of the Dastur organization on some of the fourth Plan schemes in the heavy industry field. Incidentally, it may be mentioned that the negotiations with Messrs. Dastur regarding the Bokaro consultancy were pursued by the former Steel Minister in the face of resistance from the Finance Ministry. It is rumoured that one explanation of Mr. Subramaniam's keenness could be that the late Prime Minister was in favour of the technical command for Bokaro being entrusted to Indian consultants. Since the issue of Messrs. Dastur's status in Bokaro has got involved in the larger issue of the progressive Indianisation of India's industrialization, it is possible that Members of Parliament may seek to raise a discussion. It is, however, reasonable to expect that, in a matter of Bokaro versus Dastur, victory will go to Bokaro and sympathy to Messrs. Dastur.

★★

The Union Government last week decided to further amend the Companies Act with a view to simplifying certain procedures and dealing with the cases of dishonesty and fraud more effectively. This new set of amendments will complete the Government's action on the recommendations of the Vivian Bose Commission.

Under the new amendments, it is proposed to enlarge the definition of 'books and papers' to include 'vouchers'. Companies will be asked to maintain vouchers along with the books required by Law. The definition of 'officer' under the Companies Act is also envisaged to be enlarged to include 'any person in accordance with whose instructions the Board of Directors or a Director is accustomed to act.' This will eliminate dummy directors. It is further proposed to make it an offence to apply for shares in the name of fictitious persons. Allotment of shares to fictitious persons will also be made an offence. Restrictions are proposed to be imposed on blank transfers of shares.

By virtue of another amendment, it will be made obligatory on the promoters and directors of companies to ensure that the share capital of a company reflects cash and other valuable assets and is not supported merely by book adjustments. Still another amendment will make it clear that underwriting commission is not to be paid except in respect of debentures offered to the public.

It is contemplated to prohibit companies from starting new lines of business without the prior approval of shareholders even though such activities fall within the purview of the companies by virtue of their Articles and Memoranda of Association. Beneficial holdings above 5 per cent would be required to be disclosed so that the names of the real shareholders as distinct from the nominees are revealed. Provision is being made to safeguard the money paid by applicants for shares until such time as the minimum subscription is collected by a company.

The amendments seeking to simplify procedures in-

clude doing away with the necessity of obtaining Government's approval for the mere addition and deletion of the word "private" in relation to companies.

★★

The Union Minister for Industry, Mr. H. C. Dasappa, indicated here last week that the private sector would be provided a sizable role in the development of electronics in India. There was no bar on participation by the private sector in this field. Electronics had not been listed in the Industrial Policy Resolution of 1956 and participation by private sector in this industry would, therefore, not mean any violation of this Resolution. Mr. Dasappa felt that it might be necessary to have an electronics project in the civil sector in addition to Bharat Electronics, the public sector undertaking engaged in the production of electronic equipment for defence.

Referring to the Prime Minister's directive on the postponement of the heavy industry projects on which real work had not yet started, Mr. Dasappa said that the directive had been misunderstood in many quarters. It was not the intention of the Prime Minister that expansion of the existing projects should be put off. The Prime Minister was only against incurring fresh expenditure on projects which might not yield quick results. Mr. Dasappa said that there was no project under his Ministry which would attract the guidelines laid down by the Prime Minister. The Industry Ministry, however, proposed to effect an economy of Rs. 2 crores in the execution of the Heavy Engineering Project, the Heavy Electricals Project and the Hindustan Machine Tools expansion programme.

★★

The Union Minister of Petroleum and Chemicals, Professor Humayun Kabir, disclosed at a Press Conference here last week that the exploration efforts during the last six or seven months had given definite indications of the existence of crude oil reserves at two more places in the country. These were expected to be of the same order as Oil-India's in its Nahorkatiya and Moran oilfields and of ONGC's in its concessions in Gujarat. In view of these indications, Prof. Kabir felt confident that the third Plan target of producing 6 to 7 million tonnes of crude oil annually would be reached. During the fourth Plan, Prof. Kabir said, we should aim at a crude output of 14 million tonnes per annum.

The oil exploration programme, Prof. Kabir said, was proposed to be accelerated during the fourth Plan period. A sum of Rs. 225 crores is envisaged to be earmarked for this purpose. The foreign exchange component of this outlay will be between 40 and 50 per cent. The Soviet Union has been approached for making available a credit of Rs. 50 crores.

Regarding ONGC's efforts for securing oil concessions in Iran, Prof. Kabir stated that the result would be known by the end of this year. India, Prof. Kabir reiterated, would continue to make efforts to get crude from her own sources from abroad as and when occasion arose.

Referring to augmenting the oil refining capacity in the country, Prof. Kabir said that the Union Government had proposed to set up during the fourth Plan period, at least one, if not two, refineries besides the Madras and Haldia units. After the construction work on the Madras and Haldia refineries was started, the question of expanding the existing three private sector refineries would be considered, the Minister added. The decision on the foreign collaborations for the Madras refinery, Prof. Kabir said, would be taken by the end of this month. The construction of this refinery would start by the end of the current calendar year. The refinery, would go on stream in the middle of 1967. The decision on the Haldia refinery, Prof. Kabir revealed, would be taken by March 31, 1965. The construction of this refinery would be taken up in October or November next year so that it should be commissioned into production early in 1968. The first one-million-

tonne unit of the Barauni refinery, which went on stream about a month ago, Prof. Kabir stated, was working satisfactorily. The Koyali and Cochin refineries also were making good progress. The Koyali refinery, Prof. Kabir expected, would go on stream next year and the Cochin refinery in 1966. All the future expansion of the oil refining capacity in the country, Prof. Kabir said, would be in the public sector. By this he meant that at least 51 per cent share in the future refineries would be held by the State.

Prof. Kabir also dwelt at some length on the setting up of petro-chemical complexes in the country. He indicated that an investment of Rs. 600/800 crores might be earmarked for the development of petro-chemical industries, both in the public and the private sectors, during the fourth Plan period. He envisaged setting up at least some petro-chemical units around each refinery in the country. Naphtha cracking, Prof. Kabir reaffirmed, would in future be confined solely to the public sector. The Government would also reserve the right to participate wholly or as a major partner in the manufacture of end-products of petro-chemical complexes whenever it was strategically important or exceptionally profitable. Prof. Kabir disclosed that he had fruitful talks in Rumania, Italy, France and Britain on setting up of petro-chemical industries in India.

Regarding fertilizers, Prof. Kabir stated that the third Plan target of putting up one million tonnes nitrogenous fertilizers capacity would be achieved only by 1968. Currently, there is a capacity to manufacture about 250,000 tonnes of nitrogenous fertilizers. Another 150,000 tonnes may be expected from the factories now under construction. Prof. Kabir was, however, hopeful that the fourth Plan target of having 2 million tonnes nitrogenous fertilizers manufacturing capacity would be achieved. The Union Government, he said, was negotiating with a US consortium for setting up one million tonnes nitrogenous fertilizers capacity during the fourth Plan period. Feasibility studies in this regard had already been undertaken by the US consortium.

Henceforward, Prof. Kabir said, great emphasis would be laid on the development of local technical know-how for the purposes of both projects designing and production of chemicals.

★★

The proposed Foodgrains Trading Corporation, it is learnt, will play an important role in making available credit to the small cultivators having holdings up to 5 acres. The Corporation, it is further understood, will be providing credit to the small agriculturists in kind against their crops instead of their other material assets.

Meanwhile, the Union Government has finalised a scheme for the creation of a special Price Fluctuation Fund to meet losses that co-operative marketing societies at different levels may suffer as a result of outright purchases of agricultural produce. To begin with, the scheme will be introduced in 200 selected co-operative marketing societies in 1964-65 and another 300 societies in 1965-66.

The State Apex Co-operative Marketing Societies and the lower level marketing societies selected under the scheme will contribute at the rate of 10 per cent of their profit every year to the Price Fluctuation Fund to be created by these societies. Government will contribute at the rate of 2 per cent of the value of outright purchases of agricultural produce made in the preceding year by the selected co-operative marketing societies at different levels. This will, however, be subject to a ceiling of Rs. 20,000 for each selected primary marketing society, Rs. one lakh for a regional or State Apex Marketing Society and Rs. 2.5 lakhs for the National Federation. The contribution of the Government will be made at the level of the

Apex Marketing Societies in respect of outright purchases of the Apex Marketing Societies, as also in respect of the outright purchases of the lower level marketing societies working under the scheme. The scheme will be in the State sector and Government's contribution will be shared by the Centre and the State Governments on a 50:50 basis.

The Price Fluctuation Fund will be operated by State Apex Co-operative Marketing Societies. To the extent purchases of any agricultural commodity are made by co-operative marketing societies on behalf of the Government or the Government-nominated agencies, such as the State Trading Corporation, the scheme will not be applicable. Commodities for which there is a minimum or maximum guaranteed price fixed by Government will also not be covered by the scheme. These include sugarcane.

The outright purchases will be made only from growers who are members of a marketing society or of service societies in the area of operation of the marketing society. In the event of the scheme being discontinued in a State, the amount accumulated from the Government's contribution may be converted into the share capital contribution of the societies concerned or used as directed by the State Government concerned for developing co-operative marketing.

Outright purchases under the scheme may be made by a primary marketing society on its own account or by a higher level marketing society acting through the primary society. Government contribution would, however, be made available only at a single point where the risk is borne.

Each society selected under the scheme will fix a suitable upper limit up to which outright purchases can be made in one year from an individual grower who may be a member of a marketing society or a service society in the area of operation of the marketing society. The limit, however, would not exceed Rs. 750 per individual member. To the extent practicable, outright purchases would be made only after the produce is properly graded.

The State Apex Co-operative Marketing Societies will maintain the account of each society and also their own in respect of contributions received from Government. The Apex Societies will reimburse each marketing society from within the Fund to the individual society's account according to the amount of loss incurred by the society. The State Apex Marketing Societies will advance a part of such reimbursement immediately the society incurs such a loss and the balance after the audited accounts of the society are available and the Apex Societies have satisfied themselves that the loss incurred is due to fluctuation of price and not because of any neglect on the part of the society or other reasons.

★★

Inaugurating the 14th meeting of the National Shipping Board in New Delhi last week, the Prime Minister, Mr. Lal Bahadur, called upon the public and the private sectors to co-ordinate in the development of shipping in the country. The private sector, he stated, had made a very valuable contribution in this field.

It may be indicated that between 1958 and 1964, private sector shipping has expanded by more than 150 per cent from 456,000 GRT to 1,117,000 GRT. The addition to public sector's tonnage during this period has been slightly less than 100 per cent — from 126,000 GRT to 242,000 GRT. An important factor in the expansion of private sector shipping has been the growth of the Jayanti Shipping Company which acquired its first cargo vessel towards the end of 1962 and now owns nearly 22 carriers, including tankers, with a capacity of 450,000 DWT. This company's tonnage is proposed to be increased to 550,000 DWT by 1964-65.

The Prime Minister emphasized the need to develop Indian shipping in view of the expanding export trade which is expected to be worth nearly Rs. 5,100 crores during the fourth Plan period. At present, nearly 18 per cent of the country's total foreign trade is being carried by Indian ships. The Prime Minister proposed that by the end of the fourth Plan, India should be in a position to have at least 50 per cent of her foreign trade through Indian vessels. He suggested, therefore, that the fourth Plan should aim at raising the Indian shipping tonnage to 3/3.5 million GRT. It has been estimated that a tonnage of nearly 4.5 million GRT might be required to carry 50 per cent of India's foreign trade cargo. To raise the present capacity of around 1.3 million GRT, which is expected to go up to 1.5 million GRT by the end of the third Plan, to the proposed 3/3.5 million GRT by 1970-71, a special bias in favour of shipping will be necessary.

To achieve a target of 3/3.5 million GRT by the end of the fourth Plan, India will have to acquire vessels to the tune of 600,000 GRT from abroad because according to the tentative estimate of the National Shipping Board, the output from the shipyards in the country, including the proposed one at Cochin, will not be more than 300,000 GRT. The total cost of this expansion programme is expected to be around Rs. 265 crores — Rs. 146 crores in Indian currency and Rs. 119 crores in foreign exchange. The immediate payments in terms of rupee finance and foreign exchange may be brought down to Rs. 82 crores and Rs. 55 crores, respectively, if the new tonnage is acquired on deferred payment basis.

Mr. Raghunath Singh, the new Chairman of the Shipping Board, referred to the principle of self-financing which had been introduced by the Government to acquire ships on deferred payment basis. He indicated that it could not be carried too far because it added to the capital cost of ships to the extent of 20 to 30 per cent, both by way of premium on the price and interest charges on the outstanding instalments. This factor consequently tended to jeopardize the competitive position of Indian ships in the international trade. Moreover, a considerable amount of foreign exchange will also be required to replace the uneconomic units, aggregating about 150,000 GRT, now operating as coastal fleet, which will become due for scrapping during the rest of the current Plan. The replacement of this tonnage would be possible only if adequate foreign exchange were available for the purpose. The final shape of the shipping target for the fourth Plan, along with the problems of coastal shipping, will be discussed at the next meeting of the Shipping Board to be held towards the end of October at Cochin after which a comparatively clearer picture will be available.

★★

An agreement has been signed between the Union Government and the Government of Japan in regard to the fourth 21.6 billion yen (\$60 million) credit promised by the latter for India's economic development, at the last May meeting of the Aid-India Consortium. The credit is to be used mainly for further financing the Gorakhpur fertilizer factory, the Gujarat State fertilizer factory and the Durgapur alloy and tool steel plant. Part of the credit will also be available for financing some other projects and import from Japan of plants, machinery and commodities required for accelerating the rate of economic growth. The procedures for utilisation of this credit will be similar to those followed in regard to the previous three yen credits.

A sum of 14.4 billion yen (\$40 million) out of this new credit is repayable over a period of 15 years, including a grace period of five years. The remaining amount of 7.2 billion yen (\$20 million) will have to be repaid in 18 years. The grace period in this case will also be five years. Including the new

Dunlop Gold Seal tyres are being bought by car owners in unprecedented numbers. There are good reasons. They give the highest mileage. Their proven grip on wet roads means that they are the safest tyres. Further, the strength of the casing assures maximum retreadability. You too can have these advantages by fitting a set of Dunlop Gold Seal car tyres.

The judgment of the Election Tribunal on the petition of the Swatantra nominee, Mr. N. Dandekar, against the Congress candidate, Mr. Ram Rattan Gupta, in the Gonda parliamentary election has been received here with a sense of shock. The Prime Minister, Mr. Lal Bahadur Shastri, has been extremely distressed and pained at the revelations made by the Tribunal and has indicated that necessary step would be taken against the officials and others on whom strictures had been passed by the Tribunal.

The judgment delivered by Mr. E. K. Chaudhary, constituting the one-man Election Tribunal, revealed that Mr. C. M. Nigam, the Returning Officer, acquiesced in the tampering of ballot papers (he allowed the bags containing ballot papers to be moved from one place to another) so that on recount

the defeat of the Congress candidate by nearly 1,500 votes turned into a victory by about 500 votes. The Returning Officer is also said to have flouted specific directions of the Election Commission to withhold the declaration of the election result, pending an enquiry.

The Prime Minister and the Union Home Minister last week discussed the judgment of the Tribunal with the Chief Minister of Uttar Pradesh, Mrs. Sucheta Kripalani. As a result of these discussions Mr. C. M. Nigam, now Commissioner of the Gorakhpur Division, has been suspended. An inquiry is proposed to be instituted in the whole affair.

Mr. Ram Rattan Gupta has filed an appeal against the Tribunal's judgment. The appeal has been admitted by a Division Bench of the Allahabad High Court. The proceedings will obviously be watched with great interest. Meanwhile, Mr. Dandekar has been sworn in as a Member of the Lok Sabha.

Mr. Bowles on "Business and Society"

From Our Correspondent

CALCUTTA:

MR. CHESTER BOWLES, US Ambassador in India, participating in the All-India Management Association's seminar on "Business and Society" in Calcutta last week, delivered a most stimulating talk on the subject under discussion. Mr. Bowles, quite appropriately, devoted the best part of his address to a discussion of the Indian conditions, to the environment of restrictions and constraint in which private enterprise has to function, to the role of the Government in the country's developing economy, and to the need for closer understanding between the Government and business for advancing the common cause of economic progress. Development trends in many countries show that full benefits of modern industrialisation can be realised most effectively if the people are free to seek more efficient methods. The human initiative symbolised by free enterprise is the yeast which makes the wealth of a nation grow. Speaking as a friendly foreign observer, Mr. Bowles wanted this to be clearly recognised, but at the same time, he emphasised the fact that free enterprise must serve the canons of social justice, the primary objective of all free people. In all the democratic countries of the world including the United States, West Germany and Japan, there is one basic ingredient in common — they manage to distribute the benefits of modern industrial production equitably through the society without crushing private economic initiative.

The situation in developing countries is in many ways different from that in industrially mature economies. But that need not produce any conflict between government and private business. As American experience suggests, Mr. Bowles pointed out, a mutually beneficial relationship between business and society is not only possible but profitable. The mistrust which exists between the entrepreneur and the Government can be removed once the long-range interests and needs of each are clearly recognised. Mr. Bowles suggested that there were four areas in which attitudes and practices must be changed in democratic countries on the threshold of rapid development if business and government were to become genuine partners in the establishment of a free and dynamic society. The first is the relationship between industry and agriculture. The American Ambassador had heard business men in India complain that the Government is spending too much money on rural development while the peasant is not willing to change his ways easily. This attitude, Mr. Bowles

observed, is extremely short-sighted. At least 80 per cent of the Indian people live in villages and a society which neglects the interests of the four-fifths of its members cannot really maintain its free way of life. Even from the crudest materialistic point of view, this outlook is self-defeating. Every step which tends to improve the lot of the rural people broadens the market for manufactured goods. As he tours through Indian countryside, Mr. Bowles is struck by the fact that so few entrepreneurs are taking advantages of the market that already exists in the villages. It is true that the number of bicycles and sewing machines in the rural areas has been increasing steadily and that cloth and pots continue to sell well. But these are all standard goods, invented generations ago. One sees very little of the new products and new designs. India already has a vast rural market waiting to be tapped by any manufacturer with a product which meets any of a hundred of the rural needs, provided that it is well made and is fairly priced. Moreover, agriculture's own contribution to economic development, in the shape of foodgrains and industrial raw materials — in brief, "the surplus" for development — cannot be overlooked.

Secondly, there is the entrepreneur's own investment policy and his assessment of future prospects. Mr. Bowles observed that it was perhaps inevitable that in a rapidly developing economy, there would be a tendency to go in for short-term investments capable of yielding quick profits, and because of inflation, real estates would be preferred to investments which are intrinsically more useful for the economy. Also, speculation in scarce commodities would be rife and insufficient attention would be paid to the quality of goods, since anything produced would sell. For the same reason, prices would be high. In the circumstances, no responsible Government could sit by idly and simply watch the situation. Regulations and controls would become inevitable. Mr. Bowles observed that there was a good deal that business men themselves could do to avoid such drastic measures. In fact, in the Indian economy which is now beginning to show definite signs of growth and vitality, a business man who has not begun to think in terms of long-range investments in a solid productive venture is missing a major opportunity to expand his operations and profit. There is a measure of competition in the Indian economy, but it is still far from being severe. There is therefore, time to begin to build up customer confidence

by manufacturing and distributing quality products at reasonable prices.

Mr. Bowles' comments on the public enterprise, in the first place, was frank but constructive. In any well governed developing nation, the public sector is bound to be substantial. Many basic industries, such as power, transport, mining and some heavy manufacturing, demand investments of capital and management which are beyond the immediate capacity of the private sector to supply. Yet there are practical limits to the resources that the government of a developing country can devote to such enterprises. Administrative experience is rarely adequate even for sound needs, such as education, transport, health, rural development and basic industrial needs. Technological skills are also inadequate. In brief, the government should limit itself to those spheres where private resources are inadequate for the task at hand or where for some other reasons, the needs of the society are not being met by private means. Mr. Bowles, however, did not suggest that the government could regulate the economic life of the people through State enterprise, especially when the resources are so limited. In his view the national interest is better served by allowing private enterprise to operate in an atmosphere of encouragement and responsible regulation, and such public enterprise as there must be should be well run.

★★

The tentative target of coal for the fourth Plan, fixed at about 140 million tons, has been criticised by private collieries for two reasons; first, it assigns a much bigger role for the public sector collieries than what their dismal record in the two previous Plans would justify; and secondly, while the private sector is required to raise its production of only superior grades, the public sector will be producing large quantities of inferior grades which are already in excess of requirements. These points need to be explained. The private sector's record of raising additional output during the third Plan is excellent; even of the reduced target of 76.73 million tons, the private sector will have raised 57.8 million tons by the end of 1965-66. The public sector, on the other hand, will have produced only

18 million tons against a target of 37 million tons. In the circumstances, to allocate 40 million tons of the additional 60 million tons to be raised during the fourth Plan to State collieries would appear surprising not only to private coal producers but to any impartial observer of the coal industry's affairs. There is, however, a reason for it. The National Coal Development Corporation has already made large investments during the current Plan for opening new mines which must be justified by setting a high target in the next Plan, although the output from these new mines will be of inferior grade coal. The private collieries have already enough capacity to raise coal of inferior varieties to the extent considered necessary in the fourth Plan, and this would require no additional capital investment. Yet to serve the purpose of some vested interests in the public sector, this is going to be the pattern of production targets under the fourth five-year Plan. Another curious matter is that while the private collieries will be called upon to produce 10.67 million tons of coking coal, of which they produced 15.65 million tons during the current Plan period, no scheme of assistance for fulfilling what is obviously a difficult target is being considered.

★★

The questions raised by the World Bank about the Haldia port project have naturally caused some pessimism about the prospect of this project going through, since its execution now so heavily depends on World Bank assistance. But it appears from the speech of Mr. Raj Bahadur, Union Minister for Shipping, at the last week's annual meeting of the Calcutta Clearing Agents Association, that the project will not be given up, although some modifications to the existing plan may be necessary. The World Bank is cautious about lending funds for this project because of Paradip port's conflicting claims, but the Union Minister wished to make it clear that the inquiry by the World Bank did not mean that it would not finally extend assistance. The Haldia port project involves a total cost of Rs. 30 crores of which Rs. 17 crores will be in foreign exchange. According to the informed circles in Calcutta, the Union Government is determined to implement this project with or without World Bank help.

New Turn in Bank Credit

From Our Correspondent

BOMBAY:

IF BANKERS are practical people, the Governor of the Reserve Bank must be particularly so. And he proved this when he addressed the Bombay Bankers' Annual Dinner on August 31. His address was far from being a light after-dinner chat, though. There is certainly much more in it than meets the eye, and much too that bankers must surely ponder over. In fact, it seems to be a deliberate attempt at unfolding to them the new philosophy of credit that is being evolved by the powers-that-be. Curiously enough, while this philosophy appears to be extra dynamic in some respects, it seems to be equally conservative in others. If this reading of mine is correct, it follows that the Governor of the Reserve Bank clearly intends it to be known that commercial banks should concentrate more on garnering people's savings and providing short-term credit than on indulging in medium or long-term credit to industries, which is being taken care of by a host of other institutions, including the Government's latest creation, the Industrial Development Bank. In other words, mixed banking continues to be taboo in this country. Whether one agrees that this is a desirable development or not — especially in the context of the persistent criticism that commercial banks are not helping agriculture and industries (both long-term propositions), a criticism that is often trotted out in justification of the demand for nationalisation of banks — one cannot but welcome the clarification.

All this has mainly stemmed from the large increase in bank credit during the last busy season. In the words of Mr. Bhattacharyya, "credit expanded in the 1963-64 season by a record figure of Rs. 376 crores — not much less than twice the earlier seasonal expansion. Over the year as a whole, i.e., till the end of June, credit totals have risen by Rs. 245 crores to a level 16 per cent higher than a year earlier. Even making allowance for the price increase in the intervening period, this is an impressive expansion." If it is not irreverent to seek an elucidation of the Governor's observations, is not credit expansion determined primarily by the rate of growth in the economy, especially a developing economy? While the rise in prices also must be taken into account, what is equally — perhaps more — important is the correlation between the extent of the growth and the demand for credit that this growth must necessarily generate, if it can be precisely measured. I don't mean to suggest that this aspect has been forgotten — Mr. Bhattacharyya was only too conscious of the growing credit needs of a rapidly developing economy as is obvious from this sentence in the same address: "The problem of resource mobilisation has become urgent, for, with the increasing diversification of our economy and the growth of industries with a non-agricultural base, we are witnessing a secular increase in credit needs which would place further demands on banks' resources." But I am afraid that there is the possi-

Yes, it's
safe—because
it's in a
tamperproof
container

The diaphragm you see here is one of the most reliable means of making sure that the product you buy has not been tampered with or contaminated on its way from the factory to the shop.

The foil diaphragm is a widely used pilfer-proofing technique. Others that you are familiar with are Roll Seal closures on bottled drugs and foods, laminated strip packs for tablets, sealed cans for processed foods, tear-off seals on pharmaceutical phials.

Pilferproofing methods, combined with indelible printing of trade marks and brand names on packages, introduced and promoted in India by Metal Box, are doing a good job in protecting public health and life.

Metal Box currently supply packages to more than 1,500 manufacturers who pack

over Rs 120 crores worth of consumer products—all of them kept safe and pure in protective packages.

These figures are impressive—but they are not big enough. Adulteration of foodstuffs and racketeering in spurious drugs continue to be major evils in our public life. Strong, concerted action by Government and Industry alone can help to wipe them out. And Metal Box hope to play a major part in getting this good work done.

WTMB 1001A

bility of taking an unduly alarmist view of credit expansion, if, even unwittingly, there is any underestimation of the degree of demand for additional credit engendered by rapid economic growth, and also of all the consequences that follow from taking such an unduly alarmist view.

I do not wish to suggest that the Reserve Bank Governor's unequivocal assertion that "the banking system can ill-afford to lock up a large order of its resources in financing long-term investments" is one such consequence. But it has followed a close study of the trend of clean advances granted by commercial banks, as well as their composition, which may have been prompted by entirely different considerations, such as the need to discourage mixed banking, even indirectly, or perhaps the anxiety to earmark this sphere of financing activity to the Industrial Development Bank or the Unit Trust of India. Mr. Bhattacharyya's suggestion that the industries now enjoying medium and long-term credit facilities from commercial banks, in whatever guise, should issue public debentures, which the Unit Trust of India and the Industrial Development Bank could be expected to take up, seems to lend support to such a view. His specific mention of the relaxation in the matter of the observance of a reasonable debt-equity ratio for financing expansion projects is perhaps by way of offering of a further attraction to resort to this. But will industries be equally ready to accept this advice from their bankers' banker? That apart, save in the case of the Industrial Development Bank, which has its Development Assistance Fund to fall back upon, will this process of "gearing" be beneficial in every case and to every institution accepting the debentures? Although it is known to work well so long as the basic trend of fortune of the companies in which money is invested is upwards, when the economy turns sour and dividends start to fall, "gearing" is said to operate in the reverse direction. Indeed, an authority on the working of Investment Trusts in the UK has opined that "gearing" has tended to enlarge the crises that have severely tested the movement and, in some cases, have set investment trusts so far back that they took years to recover. In view of this, it is perhaps worthwhile to consider whether the Unit Trust of India which has yet to establish itself on a sound basis, should, so early in its career, be encouraged to go in for debentures of companies.

Commercial banks may not altogether disapprove of the Reserve Bank Governor's suggestion as above, but, then, will there be adequate alternative profitable outlets for the resources of the banks, besides provision of working capital to industries and financing trade and commerce, especially if these banks, following the exhortation of Mr. Bhattacharyya himself, succeed in increasing their branches and raise their deposits substantially? Evidently, the concern of the authorities today is more to ensure that as much money, i.e., purchasing power, as possible is immobilised and thereby prevented from adding to the pressure of the aggregate monetary demand. The Banking System has been told to play its role in this behalf. At the same time, it is reminded that it must subject itself to the Reserve Bank's credit policy which, while it is not opposed to the promotional aspect of building up credit, is also concerned with current credit levels to see that credit expansion in the short run does not outstrip the productive needs of the economy, or is diverted to speculative channels. The Reserve Bank has already shown that it can find outlets of its liking for the resources of commercial banks, e.g., higher liquidity ratio and increased investments in Government Securities. All these may neatly fit in with the Reserve Bank's new philosophy of credit, but it requires to be clearly stated here that the wisdom or otherwise of this philosophy will eventually be determined by how far this will not or will come

in the way of the private sector getting all the credit it needs to fulfil the share assigned to it in the country's economic development.

★ ★

Export interests, in particular banks financing export trade, can no longer complain that they have still to brave too many hazards, thanks to the further guarantees introduced by the Export Credit and Guarantee Corporation (ECGC). The two new guarantees which have just been introduced by the Corporation are: (1) post-shipment export credit guarantee and (2) export finance guarantee. These fill an important gap in the country's export effort, while, at the same time, meeting a need which bankers financing exports were finding to be necessary. As a matter of fact, bankers who welcomed the Packing Credit Policy introduced earlier by the ECGC had been suggesting that, if an instrument similar to the one providing security for the banks against risks involved in pre-shipment advances could be devised to cover their post-shipment advances also it would help them to liberalise their lending policy. And the Corporation has assured it by providing the two guarantees referred to above.

The Post-Shipment Export Credit Guarantee will be issued to banks to protect them against any loss which may arise from purchase, discount or negotiation of an export bill. Normally, it will be a condition of the Guarantee that it will be issued only in respect of such exporters as obtain a Shipments/Contracts Policy. The Guarantee will cover any loss sustained by a bank or financing institution due to the protracted default or insolvency of the exporter; and the Corporation's indemnity to the banks will be of the order of 66 2/3 per cent of the loss incurred. In view of this Guarantee, the banks would be in a position to discount bills which they may ordinarily accept only for collection. A variant of the Post-shipment Export Credit Guarantee, the 'Export Finance Guarantee' seeks to find for the exporter post-shipment finance in line with what he can get on the basis of the domestic value of his goods. This Guarantee enables the bank to offer, on a selective basis, discounting facilities to exporters up to 125 per cent of the shipping documents and the bank advance (i.e. 25 per cent of the f.o.b. value of the export bills) will be guaranteed by ECGC; and its indemnity to the banks will be to the extent of 75 per cent of the loss incurred in the event of the loanee's insolvency or default.

★ ★

It was encouraging to be told by no other than Mr. M. P. Pai, Chairman of the Tariff Commission, that the quality of the indigenous dyestuff products is, by and large, satisfactory. The Dyestuff Industry, which has been enjoying protection for the last nine years, has increased its production, by more than ten times. While opening the public industry into the question of continuance of protection to the Dyestuff Industry, the other day, the Tariff Commission Chairman said that, during this period, the industry had also commenced production of some intermediates. But many varieties of dyes and most of the intermediates still continue to be imported, he added.

When protection was first accorded to the Industry in 1954, there were eight units producing dyes in the country. Since then, the industry has expanded considerably, and many new small-scale units have also gone into production. Presently, the number of units in the organised sector and the small-scale sector has increased to 21 and 120, respectively. The total capacity of the industry, which was 2,022 tonnes in 1954, has risen to 21,306 tonnes in 1964. Of this the share of the protected sector is 12,496 tonnes and that of the non-protected sector 8,810 tonnes. Over the last ten years, the growth of the small-scale industry has been very significant, its capacity, which was negligible at the time of the 1954

Inquiry, having increased to 11,722 tonnes now.

The production of dyestuffs in the country also has shown a steady rise from 674 tonnes in 1953 to 8,689 tonnes in 1963. Of the total production in 1963, protected dyes accounted for 4,520 tonnes and non-protected dyes for 4,169 tonnes. Production in the small-scale sector in 1963 was as much as 3,055 tonnes. From these figures, it is computed that, in 1963, only about 60 per cent of installed capacity was utilised in the organised sector and still less, that is, only 26 per cent, in the small-scale sector.

As regards future expansion, four new units in the organised sector have been granted licences to manufacture dyes with a total capacity of 602 tonnes. The small-scale sector also is said to have an approved expansion programme of 1,266 tonnes. Domestic demand at the time of the first inquiry had been estimated at 5,177 tonnes. Although there was no projection made into future demand, it is estimated that the consumption of dyes, on the basis of actual domestic production and imports, worked out to 11,668 tonnes in 1961, 11,276 tonnes in 1962 and 10,629 tonnes in 1963. Surely this steady decline is disturbing and the interests concerned are relieved to note that the Commission is to go into the question of this fall in consumption.

Giving a talk here last week on "Trade Possibilities Between India and South American Countries", the former Chairman of the All-India Manufacturers' Organisation, Mr. Prabhu V. Mehta, was constrained to point out that the Government of India had not yet established any trade links with some of the South American countries, such as Bolivia, Chile, Peru and Venezuela, which offered tremendous possibilities of developing trade with India. India did not even

have its embassies or trade commissions in these countries which, consequently, were starved of information pertaining to commerce and industry as well as political and economic conditions in our country. There was complete absence of any journal on trade and industry — either of any of the Indian Chambers of Commerce or of the Government of India — in these countries. Giving details regarding possibilities of trade with Bolivia, Peru, Chile, Brazil, Argentina and Columbia, he said that these countries offered a potential market for a large number of Indian goods, ranging from domestic hardware to textiles, sugar and cement machinery. Bolivia, for instance, needed jute bags, domestic hardware, sanitary-ware, oil mill machinery, paper mill machinery, sugar plants, solvent extraction plants, pharmaceuticals and chemicals and sulphuric acid plants. India, in turn, could import sulphur, zinc and copper concentrates from Bolivia, provided trade relations were established on Government-to-Government level.

While India could sell to Brazil sugar refining equipment, jute and textile mill machinery, machine tools, tea processing machinery, spices and jewellery, it could buy steel plates and ships from that country. There were possibilities of exporting cattle, non-packing jute goods, textile dyes and plastic goods to Argentina. To Chile, India could sell domestic engineering equipment and textiles. Peru, on the other hand, was quite anxious to enter into technical collaborations with jute mills in India for establishing jute industry of its own. Columbia was interested in importing textile machinery and selling cotton to India. Venezuela, which had a high standard of living, was interested in buying Indian superfine textiles, handloom and silk fabrics, toys and sports goods, utensils, shoes and chappals, sarees, canned fruit pulp, domestic refrigerators, all kinds of machinery and diesel engines.

Fresh Approach to Plantations

From our Correspondent

MADRAS :

THE DELIBERATIONS at the 71st annual conference of the United Planters' Association of Southern India held at Coonoor early last week promise to be much more fruitful for the plantation industries and agriculture in general than its predecessors. It is only now the importance of agriculture on a scientific and organised basis is being keenly appreciated. Indeed, the main theme of the speeches of Mr. C. Subramaniam, Union Minister for Food and Agriculture, and Mr. J. R. Henshaw, the outgoing President of the UPASI, related to the need for a modern and pragmatic approach to the problems pertaining to improvement of yield and diversification of production. The Food Minister admitted that land reforms and a multiplicity of taxes had a devitalising effect on agriculture and in spite of the need for securing revenues for the Central and State Governments, some way had to be found by which the necessary incentives could be provided and agriculture could be taken up more seriously as a profession and business by farmers and landowners. It has even been latterly suggested that experiments should be conducted in joint-stock farming and, as the UPASI President stated, the successful experiments in plantation agriculture should be applied with some vigour for bringing about a significant increase in the yield per acre when cultivating other cash crops and fine cereals.

It is expected that, as a result of rethinking on the subject of land reforms and improving efficiency of agriculture, the plantation industries will not be unduly discouraged and that they may actually be given further encouragement because

it is being realised that the spectacular progress recorded in the past decade and a half by the tea and coffee industries particularly cannot be repeated if the existing estates were not permitted to reclaim additional acreage and improve agricultural techniques continuously. The Food Minister has indicated that a conference of State Finance Ministers should be convened at an early date for examining the adverse effects of the various taxes levied by them on the growth of plantation industries. As Mr. Henshaw pointed out, the burden of taxation on agricultural incomes in some States is even heavier than that borne by non-agricultural incomes without the corresponding rebates and reliefs being available for the latter group. It has been represented to the State Governments concerned that the plantation industries should be enabled to claim depreciation on the value of estates as the life of tea bushes and coffee plants was limited in the same way as machinery and it was necessary to pursue a planned programme of replantation and expansion. The benefit of development rebate also should be made available.

In fact, the principle of allowing depreciation has been recognised in the case of the rubber industry on the life of the trees, on the recommendations of the Tariff Commission. It has, therefore, been emphasized that what is required is the extension of this principle to other industries besides: reducing the rates of taxation where they happened to be in excess of those levied by the Centre. In respect of Central indirect taxes also it has been complained that the tea industry has not benefited to any extent by the abolishing of the export duty last year as it was decided at the same time that the

facility for drawback of excise duty on the quantities of tea exported should be withdrawn. The rates of excise duty were also raised. Since Indian tea and other plantation productions are facing keen competition in the international markets, it is felt that, without a streamlining of taxation imposed by the Central and State Governments and without some measure of stability regarding land and labour laws, the plantation industries cannot hope to continue to earn large sums in foreign exchange for the country. It is only to be hoped that the proposed conference of State Finance Ministers would examine the whole question sympathetically and arrive at a favourable decision regarding the grant of depreciation allowances and development rebate. The Union Finance Minister, too, should help the industries to a greater extent than now in the task of export promotion by according judicious tax reliefs.

★★

In pursuance of the announcement made by Mr. R. Venkataraman, Minister for Industries and Electricity of Madras State, some time back, the Madras State Electricity Board has decided to revise the rates charged for consumption of electricity to various classes of consumers effective from December 1. The recommendations of the Expert Committee appointed for this purpose had been forwarded to the State Government for its approval. As it is felt that the Board should help to secure larger revenues for itself, the increase in rates was agreed to by the Government. The authorities of the Electricity Board had some justification for revising the rates upward as they found it difficult in 1963-64 to meet fully the interest charges payable to the State Government and there was actually a shortfall of Rs. 1.64 crores. The Board had not defaulted in its interest payments since it was constituted in 1957, and it was naturally felt that its proud financial record should not be sullied in any way. It must be pointed out, however, that the difficulties experienced in the last year were peculiar in character as heavy expenditure was incurred on many projects which had not started yielding results. Besides, larger quantities of thermal power were purchased at higher rates from the Neyveli Lignite Corporation. An effort was made to overcome these difficulties by levying surcharges on consumption of electricity, except in the case of domestic consumers, and it would have been reasonably expected that the revenue from this source in a full year would take care of the real shortfall. The ways and means position would, no doubt, be affected if interest payments had to be met in the absence of adequate income. The State Government, however, could have agreed to the capitalisation of interest charges in the case of projects which would take some time to be completed as, otherwise, consumers of electricity would have to be heavily penalised with upward adjustments in rates.

The peculiarities of the recent developments have not, however, been recognised and it has been decided to make electricity more costly. It would not have been possible to avoid the step altogether as, in the coming years, the proportion of thermal power to the total quantity generated, would tend to increase and it has been proved by the experience of the Basin Bridge Power Station and the Neyveli Thermal Station, that thermal power would cost 60 per cent more to generate because of the larger capital expenditure involved and higher running expenses. The consumers, however, have a feeling that the net burden of the electricity bill has not been taken into consideration as the revenue secured from the electricity duty, which is over Rs. 2 crores in a full year, has been conveniently overlooked. Even in 1963-64 the revenue was expected to be Rs. 2 crores against the shortfall in interest payments of Rs. 1.64 crores while in 1964-65 the

yield may be over Rs. 2.5 crores on account of rising consumption. In 1965-66, when all the new projects are in operation, it is expected that the income of the Electricity Board will be over Rs. 33 crores and the yield from the electricity duty may probably be Rs. 3.5 crores. It must be pointed out in this connection that the electricity duty is levied on a graded basis and the heavy industrial consumers are being charged at five per cent and the light consumers like textile industries as high as 30 per cent. Domestic consumption has to bear a rate of 10 per cent.

Under these circumstances, there is justification for the view that the tariff rates should have been adjusted only in the case of consumers who are being heavily subsidised and that the Electricity Board should be given the benefit of some share from the proceeds of the electricity duty. This would mean a lowering of the duty to 7½ per cent or even five per cent with a corresponding increase in the rates applicable to various classes of consumers.

The principle advocated by the Central Water & Power Commission that there should be a gross return of 10 per cent on investment is, no doubt, sound, but if the experience of the Tata Hydro-Electric group of companies is any guide, greater care should be exercised when bringing about a wholesale revision of electricity charges. The consumers will, no doubt, be agreeable to pay more for assured supply but it should not happen that they pay additionally merely for the existing method of supply when there has to be inconvenient working hours, staggering on an uneconomic basis and so on. Besides, it has been borne out by the experience of some companies that a higher electricity bill can have an upsetting effect on profit margins. It has been found even necessary to raise prices in the case of the producers of caustic soda, fertilizers, etc. Since the example of Madras Electricity Board might be followed by others, it is of the utmost importance that the electricity duty levied already should be taken into consideration when determining new rates.

★★

Arrangements are being made by another group of promoters in Madras State to start a new industrial unit for manufacturing galvanised tubes and black steel tubes. The Madras Tube Company Limited will be sponsored by the Raja of Chettinad and the factory will be located near Madras, the total outlay being around Rs. 4 crores. The company has concluded an agreement with a French firm for securing technical know-how. The foreign collaborators will also be interested in the equity capital of the Indian company to some extent. An industrial licence has been obtained for the manufacture of 48,000 tons of tubes of various sizes.

Plans are also under way for starting a steel plant for manufacturing special steels and stainless steel in collaboration with Vickers of the UK. The project is expected to cost over Rs. 6 crores. The site of the new unit selected is in Katpadi which is served by the metre gauge and broad gauge systems. Steel scrap is expected to be available in the required quantity and it is confidently felt that the products will be of high quality because of the assistance provided by Vickers. There are some other schemes which are in various stages of finalisation. If there is a genuine confidence about the future outlook, there may probably be satisfactory response from the investing public for the new issues though it is pointed out that, in the absence of a significant recovery in prices for shares of new companies, which are now quoted at heavy discount, the disposition on the part of investors would be to respond more readily for the right issues of established companies rather than entirely new issues.

The moving finger writes

THE ECHOES of the AICC debate on the Kamaraj Plan are unlikely to die down soon. Mrs. Indira Gandhi, for instance, has reacted rather sharply and rather oddly. It is natural that the tenor of that debate should have hurt her feelings, but why did she not say what she had to say on that occasion itself? It was surely not necessary for her to have waited for a platform to be provided by what is still being described as a group of Socialist Congressmen, despite Mr. Krishna Menon's forthright declaration some time ago that there was no such thing as a Socialist Congressman.

★★

There have been some interesting appointments to public offices lately. I welcome particularly the selection of Mr. T. A. Pai for the Chairmanship of the proposed Foodgrains Price Stabilization and Trading Corporation. He has not only the great merit of being a young man but he is also, by any reckoning, a most talented young man. His dynamic leadership as Managing Director has been responsible for the spectacular progress of one of South India's leading banks and I am quite sure that in the field of state trading in food he may at least be relied upon to make the best of a bad bargain. The selection of Mr. A. L. Dias, Chairman of the Bombay Port Trust, as Secretary in the Ministry of Food and Agriculture (in the place of Mr. V. Shankar), again, is a happy one. Since the most important and immediate problem in food administration is the efficient handling of food imports at the ports and farther down the line of distribution, the new Secretary has the advantage of an appropriate background.

★★

In the year ended March, 1964, we exported to the value of Rs. 794 crores. This was a considerable advance on the amount of Rs. 680 crores for 1961-62. By the end of the third Plan, that is, in the year 1965-66, we hope to export at an annual rate of some Rs. 870 crores. The third Plan has many failures to its discredit, but in the sphere of exports, it has managed to do not too badly. The question is how much better it could be expected to fare in the fourth Plan. The Planning Commission was in favour of a target of Rs. 1,200 crores in 1970-71. The Ministry of Commerce, however, has been successful in persuading it to agree to a less exacting figure of Rs. 1,100 crores. Even this lower target would be a big assignment. Fortunately, the Minister for Commerce is a man with big ideas. To Mr. Manubhai Shah figures of less than nine digits have ceased to have any value where the export drive is concerned. Take, for instance, our export earnings from the film industry. The screening of Indian motion pictures abroad earns us now about Rs. 2.5 crores a year in foreign exchange. But Mr. Manubhai Shah is convinced that this is only a fraction of a vast potential. He believes that an export trade of Rs. 20 crores a year could and should be built up over the next few years. I hope the Minister is allowing for the deleterious effects on the morale of film personalities of the hunt for unaccounted money!

Although himself a vegetarian, such is his devotion to duty that Mr. Manubhai Shah revels in making plans for the mass massacre of fish in the coastal waters of India. In 1963-64 this country exported fish and sea-foods of the value of Rs. 5.7 crores. Mr. Manubhai Shah is keen on stepping up this export trade to Rs. 20 crores by 1970-71. It must be said to his credit that he is fully aware that he must catch his fish

before he can export it. Indeed, so vigorously practical is he about this business that the opportunity of the Commerce Minister of Iceland passing through this country a few days ago on his way to attend the meetings of the IMF and the World Bank in Tokyo was adroitly seized upon by him for some very useful talks. As a result, the Government of Iceland may be persuaded to co-operate in a big way with our programmes for the development of deep-sea fishing. Apart from the supply of modern equipment on a grant basis, Iceland may agree to collaborate with commercial enterprises in this country in deep-sea fishing for export purposes.

Incidentally, I wonder whether Mr. Manubhai Shah is aware that there are no snakes in Iceland. Since there are plenty of snakes in India, I suggest that he should get hold of the Commerce Minister of Iceland on his return journey from Tokyo and try to talk him into a trade agreement for the regular import into Iceland, of our cobras, kraits and Russell's vipers. If anybody could pull off this Alice-in-Wonderland deal at all, it is Mr. Manubhai Shah!

Which makes me wonder why our very alert and alive Minister of Commerce has been caught napping in the matter of the import of jute cuttings from Pakistan. The Government is fully aware that these imports, marginal in volume, are nevertheless quite essential to our jute industry. The foreign exchange spent on them is, therefore, in the nature of an essential investment which brings a return in the form of export earnings from our finished jute goods. By every canon of sensible business practice, the Government should have seen to it that the industry is enabled to import jute cuttings at the right time and at the lowest prices possible. In fact, since the jute industry is organized in a responsible association and the Government has its own special office in Calcutta under the Jute Commissioner to guide and supervise the industry, it should be possible for the authorities in New Delhi to make a long-term allocation of foreign exchange for jute cuttings from Pakistan covering, say, the full period of each five-year Plan. Instead, the Government has chosen to make the industry wait on annual releases. Worse still, these releases are seldom made in time. This has been demonstrably the case this year.

Although the industry had been advising the Government as far back as in February last that, due to a shorter crop in Pakistan, raw jute prices there might go up and it would therefore be prudent to make our purchases there earlier rather than later, it was not until July this year that mills in Calcutta got their first quota of import licences. By that time raw jute prices in Pakistan had gone up, which meant import costs had also been added to by about Rs. 2 crores. It should be interesting to find out who is to be held responsible for this loss or waste of foreign exchange. It appears that while part of the delay had taken place in the Finance Ministry, part of it also occurred subsequently in the Ministry of Commerce. I am sure that wherever the responsibility lies or however it is to be shared, neither Mr. Krishnamachari nor Mr. Manubhai Shah could be really happy over the performance of the Government machinery. It is all very well to talk of films and fishes, but I suggest that it would be unsafe to neglect jute, tea or textiles.

V. B.

INDUSTRIAL FINANCE CORPORATION OF INDIA

4¾% Bonds 1976

PAYMENT OF INTEREST & REPAYMENT OF PRINCIPAL

GUARANTEED BY THE GOVERNMENT OF INDIA

Amount of issue: Rs. 6,00,00,000

Issue Price Rs. 99.25 Per Cent

Redeemable at par on the 15th September 1976

The Bonds are approved securities under the Indian Trusts Act, the Insurance Act and the Banking Companies Act and are also eligible for grant of advances to scheduled Banks by the Reserve Bank of India. They are on the approved list of securities of the State Bank of India.

Subscriptions will be received in cash or by cheques at the branches of the Reserve Bank of India at Bombay, Calcutta, Madras, New Delhi, Nagpur and Bangalore from Tuesday, the 15th September, 1964 but the list will be closed without notice as soon as the total subscriptions amount to Rs. 6 crores and in any case not later than the close of business on Monday, the 21st September, 1964. The Corporation reserves the right to retain subscriptions received up to 10% in excess of the sum of Rs. 6 crores.

Copies of the prospectus and application forms can be had from the offices of the Reserve Bank of India as also from the Head Office of the Corporation at Reserve Bank Building, 6, Parliament Street, New Delhi and its Branches at Liberty Building, 8, Marine Lines, Bombay-1, 23, Rajendranath Mukherjee Road, Calcutta-1 and Keshav Bagh, 38, Whites Road, Royapettah, Madras-14.

Arrangements will be made for listing of these Bonds at the Bombay, Calcutta and Madras Stock Exchanges.

Brokerage will be paid at the rate of 6 Paise per Rs. 100/- to recognised banks and brokers on allotments made in respect of applications for the Bonds bearing their stamp.

NEW DELHI,
Dated: 24th August, 1964.

Trade Winds

TARIFF RATIONALISATION

RECENTLY, WHILE inaugurating the first meeting of the Tariff Revision Committee, set up in March this year, the Union Minister of Commerce, Mr. Manubhai Shah, emphasised that rationalisation of the tariff structure was a matter of basic importance at a time when India was going all out to achieve an expansion of international trade as well as the elimination of barriers to trade. A rapid increase in the export earnings of developing countries is considered imperative to enable them to meet the growing demands on their meagre foreign exchange resources for financing their economic development programmes. The United Nations Conference on Trade and Development, held earlier this year, discussed the ways by which greater access to world markets might be secured for the exports of the developing countries. One point which came out clearly from these discussions was that increased trade with the market economy countries, which form the majority, whether developed or less-developed, would have to be achieved through suitable adjustments in the commercial and tariff policies. The experience of India's membership of the GATT also leads to the same conclusion. India is no longer an exporter of only raw materials and semi-finished products, the international trade in which is not generally faced with serious tariff barriers or other formidable obstacles. As India's economy gets industrialised, an increasing proportion of her exports will consist of manufactured goods. Fresh markets will, therefore, have to be developed for many of these goods and accordingly, the tariff and other barriers to such exports will have to be reduced as far as possible. On the international plane, a revision of Indian tariffs is called for so as to make it an effective instrument for trade negotiations. The modernisation of the tariff system is equally important on the national level.

During 1963-64, the customs authorities dealt with approximately five lakhs of foreign bills of entry, and made as many individual assessments. Each of these assessments involved the application of one or more items of tariff. Many of the consignments were of machinery or raw materials or other articles vitally necessary for the country's internal needs or export manufactures. Delays in the clearance of such goods, for whatever reason, obviously cause serious damage to the country's economy. In this situation, India cannot afford to have a customs tariff that is out of date or unduly complicated or leads to frequent disputes between the customs administration and the trade. The basic structure of the present tariff in the country was adopted in 1934. But during the last 30 years, there have been a number of important developments which in one way or another affected the tariff. India's accession to the GATT resulted in a number of commitments, and the creation of new tariff items to provide for them. The balance of payments difficulties, and the introduction of import trade control, changed the pattern of India's imports, and greatly reduced the importance of many tariff items. The industrial progress since independence led to a change in the pattern of imports, in favour of machinery, component parts and raw materials, and against finished articles. New international nomenclatures and classifications, such as the Brussels Tariff Nomenclature and the Standard International Trade Classification, have appeared on the scene. For many reasons, therefore, the tariff structure which was modern in 1934 has now become inadequate and out of date. The amendments made from time to time, even though quite extensive, cannot

take the place of comprehensive revision which is now the main concern of the Tariff Revision Committee.

Making some general observations regarding the considerations to be kept in mind by the Committee, Mr. Manubhai Shah pointed out that a customs tariff, like all legal enactments, had to be precise, so that difficulties might not arise, or if they arise, they could be satisfactorily settled, thus reducing the scope for dispute, harassment, malpractices and abuses. As it would be handled daily by people who are not lawyers, it should be simple and practicable. Uniformity of tariffs between different countries, where possible, would help in trade and tariff negotiations and facilitate matters for overseas importers. It might not be possible to reconcile all these considerations in the first instance. Even then, the Minister emphasised, the Committee should arrive at the best possible compromise consistent with the country's needs.

The Tariff Revision Committee, which is expected to submit its report in about a year's time, will also consider whether India should adopt a standard classification such as the Brussels Tariff Nomenclature or the Standard International Trade Classification.

POST-SHIPMENT GUARANTEE

With a view to protecting the commercial banks against any loss from purchase, discount or negotiation of export bills, the Export Credit and Guarantee Corporation has introduced a new "post-shipment export credit guarantee". The guarantee under the existing "packing credit policy" enables an exporter to receive from his bank pre-shipment finance for the purpose of purchasing, processing and packing goods destined for the export market, somewhat above the bank's rating of his financial capacity. While the "packing credit policy" has come to be regarded as a good security for the banks against risks involved in giving pre-shipment advances, it was felt by banks that if a similar instrument could be devised to cover their post-shipment advances, it would help them to liberalise their lending policy. Accordingly, two new guarantees have been introduced by the Corporation, namely, (i) Post-shipment Export Credit Guarantee and (ii) Export Finance Guarantee. The post-shipment guarantee, which will protect banks against losses arising from purchase, discount or negotiation of export bills, will be issued only in respect of such exporters as obtain a Shipments/Contracts Policy. The guarantee will cover any loss sustained by a bank or financing institution due to the protracted default or insolvency of the exporter, while the Corporation's indemnity to the banks will be of the order of 66-2/3 per cent of the loss incurred. In view of this guarantee the banks will be in a position to discount bills which they may ordinarily accept only for collection. As the banks will be protected by the ECGC Shipments/Contracts policies, the risks involved would be relatively small. The premium charged will, therefore, be small, namely, 5 paise per month per Rs. 100.

As a variant of the Post-shipment Export Credit Guarantee, the ECGC has introduced the 'Export Finance Guarantee', with a view to finding for the exporter post-shipment finance in line with what he can get on the basis of the domestic value of his goods. This guarantee enables the bank to offer, on a selective basis, discounting facilities to exporters, upto 125 per cent of the shipping documents, and the bank advance (i.e. 25 per cent of the f.o.b. value of the export bills) will be guaranteed by ECGC whose indemnity to the banks will be

HINDALCO ALUMINIUM

FOR THE DEVELOPMENT OF INDUSTRIES

The Rs. 200 million Birla-Kaiser aluminium project at Renukoot, near Rihand, in U.P., has, since December 1962, attained and surpassed the initial target capacity of 20,000 tonnes per annum. While the Renukoot plant is already the biggest integrated aluminium manufacturing complex in India, Hindalco is forging ahead with its programme of rapid expansion, for raising the primary aluminium capacity to 60,000 tonnes per annum (and to provide fabrication facilities totalling 37,000 tonnes per annum), to help the country's fast growing industries in their march towards progress and prosperity.

HINDUSTAN ALUMINIUM CORPORATION LTD.

SALES & MARKETING OFFICES:

PRINCIPAL SALES & MARKETING OFFICE: P.O. Renukoot, Dt. Mirzapur, U.P. (Phone: Pipri 79, Gram: HINDALCO)
CALCUTTA & EASTERN REGION: 5, Clive Row, Calcutta-1. (Phones: 22-8616/8 Gram: HINDALCORP).
BOMBAY & WESTERN REGION: (also Regd. Office) Industry House, 159, Churchgate Reclamation, BOMBAY-1. (Phones: 24-5181/3, Gram: HINDALCORP).
DELHI & NORTHERN REGION: United Commercial Bank Building, Parliament Street, New Delhi-1. (Phones: 43541/3, Gram: TEXMACO).

to the extent of 75 per cent of the loss incurred in the event of the loanee's insolvency or default. To start with, the guarantee will apply only in respect of such exports as come within the purview of the export promotion schemes; but other items are not excluded and will be considered on merits. The premium rate for this guarantee will be the same as for the Packing Credit Guarantee, viz., first month 10 paise per Rs. 100, second month 10 paise per Rs. 100, third and each subsequent month 8 paise per Rs. 100.

In the event of a claim, the amount due to banks in respect of the aforesaid guarantees will be reimbursed after four months of the due date of payment. The ECGC's financial guarantees are in the nature of gilt-edged securities, furnishing the banks unconditional indemnity against the protracted default or insolvency of the exporter. These measures have been devised to help the exporter to find export finance at relatively easy terms so that he may enlarge his export business without unduly deploying or straining his financial resources.

As revealed by the past experience, the arrangement in respect of "packing credit policy" has worked satisfactorily. Last year, exporters were able to obtain from banks as much as Rs. 4 crores on the strength of this guarantee, and in the first six months of the current year this figure has already been bypassed. In view of the increasing popularity of this guarantee and its utility to exporters and banks, the ECGC has increased its indemnity to banks from 50 per cent to 66-2/3 per cent and has also reduced the waiting period in respect of claims from six months to four months.

COFFEE EXPORT QUOTA INCREASED

According to a decision taken at the recent London Conference of the International Coffee Council, India's coffee export quota has been increased to 47 million bags of 60 kilograms each. About one million bags are expected to be exported before the end of 1964. A technical mission to study coffee industry is expected to arrive in India before the end of the year. At present coffee is grown on three lakh acres of land. It is proposed to undertake re-planting operations on 1,20,000 acres.

OIL CORPORATION

With a view to securing greater co-ordination, economy and efficiency, the refining and marketing organisations of the Indian oil industry in the public sector, represented by the Indian Refineries Ltd. and the Indian Oil Company Ltd., have been merged (with effect from September 1, 1964) to form Indian Oil Corporation Ltd. with the share capital of Rs. 75 crores. This merger, which is on the model of the State-owned Oil Organisation of Italy, was suggested by the Estimate Committee of Parliament. The Indian Oil Corporation is headed by Mr. P. A. Gopalakrishnan, the erstwhile Chairman of the Indian Oil Company. In the integrated set-up, there will be two divisions — refining and marketing. The refining division will be under the charge of Mr. N. N. Kashyap, Joint Secretary, Ministry of Petroleum and Chemicals, who will act as its Managing Director, with Headquarters in New Delhi. The marketing division will be in Bombay under the charge of Mr. Gopalakrishnan. The co-ordination between the two divisions will be done at the Chairman's level.

It may be recalled that in 1959, the Government of India set up two companies, namely, the Indian Refineries Ltd. and the Indian Oil Company Ltd., the former for establishing public sector refineries at Gauhati and Barauni and the latter for the distribution of petroleum products imported from non-conventional sources, such as the USSR and Rumania, and the products of the public sector refineries. With the discovery of oil in Gujarat, it was decided to set up a refinery at Koyali under the auspices of the Oil and Natural Gas Commission and also

to set up a petro-chemical complex in Gujarat. The newly formed Corporation will operate the public sector refineries at Gauhati and Barauni as well as construct and operate the pipelines. The co-ordination, however, cannot be fully achieved unless the Gujarat refinery is also brought within the orbit of the integrated set-up. It is, therefore, intended to transfer this refinery also to the Indian Oil Corporation in due course. This will enable the Oil and Natural Gas Commission to concentrate more intensively on the exploration and production of crude oil within the country. The pipeline projects connecting Barauni refinery with Haldia (West Bengal) on the one hand and Kanpur (UP) on the other, and the pipeline projects connecting Siliguri with Gauhati and Ahmedabad with Koyali will be in the charge of the refining division. The marketing division of the Corporation will handle the entire production of the public sector refineries as well as the production of the Cochin refinery, now under construction. The present annual turnover of the marketing division is of the order of 1.5 million tonnes of imported plus indigenous products. This is expected to be doubled by the end of the third Plan.

The refinery at Gauhati, constructed with Rumanian technical aid, has a capacity of 0.75 million tonnes with prospects of expansion to 1.25 million tonnes. The Barauni refinery, being built with Soviet technical assistance, has the ultimate capacity of three million tonnes. The Gujarat refinery at Koyali, also being built with Soviet assistance, will refine three million tonnes of crude oil from the Ankleshwar oil fields. The two plants for processing lubricants, one in Bombay and the other in Calcutta, have been completed — the annual turnover of the Bombay plant being 60,000 tonnes and of the Calcutta plant 40,000 tonnes.

REFINANCE CORPORATION TAKEN OVER

According to a Government of India notification, with effect from September 1, 1964, the Industrial Development Bank of India, which was established in July this year under the Industrial Development Bank of India Act, 1964, has taken over the Refinance Corporation for Industry. As the functions of the Development Bank covered those of the Refinance Corporation, there was no particular advantage in the Refinance Corporation continuing to function as a separate institution after the establishment of the Development Bank and, therefore, the merger has been effected as a corollary to its function of co-ordination of the activities of various financial institutions engaged in providing term finance to industries. As compensation, the Development Bank has paid to the Refinance Corporation an amount equal to its paid-up capital of Rs. 2.50 crores for distribution to the shareholders as provided in the Act. The facilities extended by the Refinance Corporation will be continued by the Development Bank. The present limit of refinance of Rs. 50 lakhs for any one industrial concern has been raised to Rs. 100 lakhs and the limit will be related not to sanction but outstanding balance in a refinanced loan account. Further, the upper limit of Rs. 50 lakhs in respect of refinance for medium-term export credits has been altogether removed.

During its existence of over six years, the Refinance Corporation fulfilled its role effectively and had not only utilised the entire initial allocation of Rs. 26 crores out of the PL 480 funds for re-lending to private enterprise through specified credit institutions, but had also drawn a further sum of Rs. 7.50 crores out of Rs. 10 crores subsequently allotted to it. The Corporation had also actively associated itself with the various proposals for providing rupee finance to the private sector collieries in order to help them utilise the World Bank foreign exchange loan of \$35 million for importing equipment etc. to step up output.

Company Affairs

BIRLA JUTE

THE BIRLA Jute Manufacturing Company Ltd. entered the capital market on September 9 with an offer of 20,000 debentures of Rs. 1,000 each. The subscription list will close on September 15 or earlier at the discretion of the directors but not before September 11. The debentures carry interest at the rate of 7 per cent per annum to be repaid at par on April 1, 1977 or at the option of the company at any time after April 1, 1975 by giving not less than six months' notice for this. The entire issue has been underwritten by the Life Insurance Corporation, the Oriental Fire and General Insurance Co. Ltd., Indian Guarantee & General Insurance Company Ltd., Messrs. Harkisondass Lukhmidass, Messrs. G. M. Pyne, Messrs. Chimanlal J. Dalal & Co. and Place, Siddons & Gough (Private) Ltd. This amount of Rs. two crores is being raised to provide a part of the expenditure to be incurred on the cement plant to be set up at Chittorgarh and oxygen and acetylene gas plants at Birlapur and partly to reduce the company's indebtedness to its bankers.

The cement plant is expected to cost nearly Rs. 3 crores and Oxygen and Acetylene Gas Plants Rs. 27 lakhs and unsecured repayment of cash credit account comes to nearly Rs. 50 lakhs. This amount of Rs. 3.77 crores is to be raised to the extent of Rs. 2 crores by issue of these debentures, Rs. 47 lakhs through deferred payment credit for import of cement plant and Rs. 1.30 crores through retained profits or other sources of the company. Besides, having Jute Manufacturing Mills at Birlapur, near Calcutta, the company also owns a calcium carbide factory which has a capacity of 40 tons of carbide per day. It also has a staple fibre spinning plant with a capacity of 30,800 spindles. The cement plant at Satna, completed in 1959, has a capacity of 1,750 tons of cement per day.

It is now setting up a cement plant at Chittorgarh in Rajasthan with a rated capacity of 600 tons of portland cement per day for which it has already been granted a licence. Land for cement works has been acquired and construction work is in progress. Arrangements have been made for the import of machinery valued at nearly Rs. 50 lakhs from Messrs. F.L. Smidth & Cie of Paris who are leading manufacturers of cement machinery. The principal raw material, limestone, is available locally and Rajasthan State Electricity Board has already agreed to supply sufficient electricity.

The company has also set up Oxygen and Acetylene Gas Plants with a capacity of 45.36 million cubic feet of oxygen and 15.12 million cubic feet of acetylene gas. Both the gases are widely used in the various industrial processes. Acetylene gas will be manufactured out of carbide which is also being manufactured by the company and the oxygen will be compressed from air. The power requirements for these plants will be met from the company's own power house at Birlapur. The plants have already been put into commission from August, 1964.

HINDUSTAN MOTORS

The over-all performance of Hindustan Motors Ltd. is quite satisfactory for the year ended March 31, 1964. Despite a fall in the production of vehicles and steady increase in production costs, the turnover has increased which is largely due to the impressive rise in production in the heavy engineering division. Sales increased by a little over 11 per cent from Rs. 29.29 crores to Rs. 32.56 crores. Net profit after providing for depreciation and taxation is also higher at Rs. 148.89 lakhs against Rs. 127.50 lakhs in the previous year. While the provision for taxation is lower at Rs. 143.00 lakhs against Rs. 222.50 lakhs, the appropriation for depreciation is substantially

higher at Rs. 106.25 lakhs as compared with Rs. 71.50 lakhs in the preceding year. The allocation to the general reserve is maintained at Rs. 25 lakhs. A sum of Rs. 93.09 lakhs against Rs. 93.13 lakhs is set apart for dividend reserve, Rs. 14.21 lakhs for managing agents' remuneration against Rs. 16.37 lakhs, and Rs. 30 lakhs for development rebate reserve against Rs. 9.75 lakhs. The dividend is being maintained at Rs. 1.15 a share less tax.

Production was interrupted frequently during the year due to non-availability of requisite licences for raw materials and components in time. In fact the company had to stop production of cars during the period July to September, 1963. Production of trucks during this period, however, continued on a limited scale. With the commencement of production from October 1963, every effort was made by the company to step up production and as a result, an all-time record in production of 2,689 vehicles was reached in March 1964. Nevertheless, the overall production was lower than in the preceding year. The production was also adversely affected by the irregular and inferior supply and consequent rejection of components manufactured by ancillary industries.

The company is making steady progress in increasing the indigenous content of its Ambassador cars and Bedford trucks. With the installation of machinery, which is being imported against various loans, the company will be able to reach the target of 90 per cent. The company has applied to the US Agency for International Development for a loan of \$23 million. This loan will enable the company to cover the import of plant and machinery required for the manufacture of Bedford engines and also to increase the truck production capacity to 15,000 a year. This loan has already been sanctioned by AID. Negotiations are under way for securing a further loan for the same purpose from the general currency area.

A licence has been sanctioned to the company to import some capital goods for the manufacture of cranes in the heavy engineering division. The company also proposes to set up a steel foundry shop which will make the company self-sufficient in respect of steel castings. Arrangements are also being made to take up the manufacture of certain types of machine tools. The Government of India has approved the proposal and negotiations are in progress for entering into foreign collaboration agreements for the manufacture of these machine tools.

HINDUSTAN MACHINE TOOLS

Hindustan Machine Tools Ltd. recorded considerable progress during the year ended March 31, 1964 with an all-round rise in production, sales, gross revenue and profits. Gross revenue increased significantly from Rs. 7.68 crores to Rs. 10.88 crores during the year under review, representing an increase of more than 41 per cent. Thanks to the efficient working by all the units of the Company and the encouraging rise in production, the net profits for the year, before providing for taxation but after providing for depreciation and paying interest to the Government, are substantially higher at Rs. 3.01 crores as compared with Rs. 2.16 crores in the preceding year. This represents a return of 37.6 per cent over its share capital of about Rs. 8 crores as compared with 33 per cent in the previous year. The directors have recommended a dividend of 10 per cent for the fourth consecutive year.

At present three units of Hindustan Machine Tools, two in Bangalore and one in Pinjore, are in production. The aggregate production of the Bangalore factories, HMT I & II, is around two thousand standard machines. Production was

Cashed in a Minute!

And that is precisely what we mean. It takes no longer than a minute to cash your cheque at any PNB office with the Teller System.

The streamlined Teller System eliminates tokens, queues, all tedious and unnecessary waiting and delay.

PNB was the first bank to have introduced the Teller System as far back as 1954. Today, PNB has 90 branches operating this system and plans to introduce this on-the-spot service in 60 more branches throughout the country.

further diversified with the addition of special purpose machines and Turret lathes. The Pinjore unit has commenced production and the first batch of "all-electric" milling machines will be despatched from the factory by the middle of 1964-65.

The fourth unit of the HMT is coming up in Kalamassery, near Ernakulam in Kerala. This is the second factory to be financed entirely from the internal resources of the company and will be the third machine tool factory to be designed, built and commissioned entirely by the Indian personnel without any foreign collaboration. Construction work of the Hyderabad plant, the fifth unit of HMT, has commenced and production is expected to start by the end of next year.

The Watch factory continued to show steady progress. During the year, it turned out 1,21,602 watches against 51,562 watches produced last year. Sales jumped up from 36,059 last year to 1,19,035 during the year under review.

Demand for machine tools at the of the fourth Plan is expected to exceed Rs. 100 crores a year. HMT has offered to meet approximately 50 per cent of the demand by establishing five more new factories during the fourth Plan period. The capital of Rs. 20 crores required for this purpose will be met entirely from the internal resources of the Company.

Allocations include Rs. 102.78 lakhs for depreciation (Rs. 78.59 lakhs), Rs. 56.00 lakhs for taxation (Rs. 45.19 lakhs), Rs. 37.00 lakhs for development rebate (Rs. 10.40 lakhs), Rs. 40.00 lakhs for replacement reserve (nil), Rs. 70.00 lakhs for general reserve (Rs. 90.00 lakhs), Rs. 6.04 lakhs for writing off licence rights (nil) and Rs. 17.13 lakhs (Rs. 7.83 lakhs) for writing off development and commissioning expenditure.

SYLVANIA & LAXMAN CO.

Sylvania and Laxman Co. Ltd., Delhi is expected to enter the capital market shortly with a public issue of Rs. 24 lakhs in equity shares of Rs. 10 each. The company has an authorised capital of Rs. 2 crores and an issued capital of Rs. 80 lakhs. The company proposes to set up a factory in Delhi for the manufacture of fluorescent tubes, lamps, mercury vapour lamps and photo flash lamps. It has entered into a collaboration agreement with a reputed US firm which will invest a sum of Rs. 36 lakhs in the company's capital. A plant is also to be set up for the production of glass tubes and shells used in fluorescent tubes and lamps. A technical collaboration agreement has been arranged with Nippon Glass Company of Japan. The capital outlay on the project is estimated at Rs. 1.50 crores. Orders for machinery have already been placed and production is expected to commence in early 1966.

INDIAN BRIGHT STEEL

Indian Bright Steel Company Ltd. proposes to set up a unit at Madras — the only unit in the South — for the production of bright bars instead of at Bombay as originally licensed by the Government of India. Five acres of developed land have already been allotted to the company by the Government of Madras at Ambattur. The company is negotiating with the Madras Industrial Investment Corporation Ltd. and a leading bank in the South for loans. The directors hope that the company will be able to start production in the near future. The working results for the year ended March 1964 show a loss of Rs. 37,064. This amount together with the loss of Rs. 54,386 for the previous years is being carried forward to the next year's account.

CENTRAL PULP MILL

The Export-Import Bank has announced recently a \$6.33 million (Rs. 3.25 crores) loan to Central Pulp Mills Ltd., Poona, to assist in the establishment of a bamboo pulp mill at Fort Songad, near Bombay. The Export-Import Bank loan will be repaid over eight years beginning in 1967. The interest rate will be 5½ per cent. Central Pulp Mills was set up in 1960.

The initial annual capacity of the new mill will be 24,800 tons and it will be increased to 33,000 tons in the seventh year of operation. The pulp mills, which will supply the basic raw material for paper-making to several existing units in western India and elsewhere, will go into production after about two years. The capital outlay on the project is estimated at Rs. 6.54 crores, of which the Export-Import Bank loan amounts to Rs. 3.25 crores. The company proposes to raise the balance by way of share capital and loans. The Maharashtra and Gujarat Governments have agreed to underwrite a portion of the share capital of the new project.

MYSORE ACETATE LOAN

Mysore Acetate and Chemical Company has been authorised a \$2.1 million loan by the Export-Import Bank to purchase American equipment and services for the construction of a cellulose plant. The loan carries an interest at the rate of 5½ per cent over a period of eight years. The proposed \$8.7 million plant, to be located near raw material sources of cotton, acetic acid, and anhydride, at Mandya near Bangalore, is expected to produce cellulose acetate at an annual rate of some 3,300 metric tons. The product is used in film manufacture and as a moulding compound.

ALUMINIUM CORPORATION

Aluminium Corporation of India Ltd. had reported encouraging working results during the year ended March 31, 1964. New records were set in sales and gross profits during the year. Sales recorded a sharp rise from Rs. 233.82 lakhs to Rs. 345.15 lakhs, an increase of more than 47 per cent. Gross profits too showed a significant improvement from Rs. 46.78 lakhs to Rs. 63.37 lakhs. The directors have decided to raise the equity dividend from 5 per cent to 9 per cent. Better working results are expected next year when the working of the company will be further stabilised and the advantages from other fabrication facilities will be available.

The expansion having been completed, the company has decided to issue further capital of Rs. 42.81 lakhs in the form of 1,78,125 ordinary shares of Rs. 10 each at par and 25,000 cumulative preference shares of Rs. 100 each, bearing an interest of 9.3 per cent per annum. The preference shares are redeemable at the company's option after five years but not later than 12 years from the date of allotment.

The capacity of the alumina plant is now trebled. The new melting shop facilities and extrusion plant commissioned during the year have attained full production. The cable plant for manufacture of ACSR and AAC (conductors) and the new rolling mills have been commissioned. The foil plant is nearing completion and production is expected to commence shortly.

GREAVES COTTON

The year ended March 31, 1964 had been one of encouraging progress and rapid expansion for the Greaves Cotton and Co., Ltd. The trading during the current year continued to show good progress and unless some adverse circumstances materially alter the position, the company expects a further expansion in its turnover. The profits are also expected to show a progressive improvement.

The company's own manufacturing activities in the cone plant and the diamond bit manufacturing division continue to be encouraging. The diamond bit division is being equipped for the production of drill rods and casts. The company has already on hand orders equivalent to one year's production.

Of the associated companies, both Crompton Parkinson (Works) Ltd. and Greaves Cotton and Crompton Parkinson have recorded commendable progress during the year. A substantial expansion of Crompton Parkinson (Works) Ltd

has already been approved by the Government of India. Greaves Foseco Ltd., another associated company has two works, one at Chinchwad and another at Calcutta. With the substantial increase in steel production now taking place and being planned, the future prospects for this company are considered bright. Mather Greaves, after consolidating the manufacture of calendar bowls, has now embarked on the production of complete calendars, Schreiner Calendars, Stenter clips, mangles, printing machines etc.

Of the subsidiary companies an appreciable improvement in 1964 is expected of Rustan and Hornsby (India) Ltd. The works is now operating at near optimum level in relation to its present facilities. The order book for both horizontal and vertical air cooled engines is quite satisfactory. The outlook for David Brown Greaves Ltd. is encouraging. Plans are afoot for raising its production capacity.

BAJAJ AUTO

Bajaj Auto Ltd. proposes to expand its manufacturing capacity to 30,000 scooters and 6,000 autorickshas per year. The company will soon apply to the Government for necessary permission. ICICI has sanctioned a foreign exchange loan of \$1.05 million (Rs. 50 lakhs) for the purchase of machinery. Arrangements in respect of the loan were finalised last month and the company has started withdrawals from the loan. An import licence to import plant and machinery worth Rs. 48.07 lakhs has already been received and the company expects to receive another import licence for Rs. 1.08 lakhs. A loan of Rs. 20 lakhs from a bank for the purchase of indigenous machinery and payment for import is under negotiation. The import of machinery is expected to be completed by the middle of 1965 and this will enable the company to increase the indigenous content of both the scooters and autorickshas to 90 per cent by the end of 1965. The company expects to reach the indigenous content of scooters to 75 per cent and of autorickshas to 70 per cent by the end of this year. In the current year the company has placed orders for machinery worth Rs. 17.80 lakhs.

TAN-INDIA

Tan-India Wattle Extracts Co., Ltd., a new company incorporated in Madras, will enter the capital market shortly with a public issue of Rs. 12.50 lakhs in equity shares of Rs. 100 each. The company has an authorised capital of Rs. 50 lakhs and an issued capital of Rs. 25 lakhs. The company proposes to set up a plant near Ooty, for manufacturing blended tanning extracts using wattle barks, myrobalan nuts, babul and other barks.

COROMANDEL FERTILISERS

Mr. John Quincy Cope and Mr. Charles Stuart Dennison, the two directors of Coromandel Fertilisers Ltd. arrived last month from the United States to endorse the building up of the Rs. 32½ crores fertilizer complex in Andhra Pradesh, the largest venture of its kind in the private sector. The building of this fertiliser complex includes the construction of the plant at Visakhapatnam and the creation of an organisation to sell and transport some 1,200 tonnes of fertiliser per day to a market which would be receptive to and capable of absorbing this vast quantity of fertiliser by the time the plant comes into production at the end of 1966.

The Board of Directors has approved the expenditure of approximately Rs. 4 crores and commitments of expenditure of about Rs. 8 crores during the next eight months up to March 31, 1965.

The rated capacity of the plant will be in the region of 81,000 tonnes of nitrogen a year and 73,000 tonnes P₂O₅ or 365,000 tonnes in terms of 20N:20P₂O₅ Ammonium Phos-

phate. It is anticipated that the factory will be achieving its rated capacity from the start.

ANDHRA VALLEY

The Andhra Valley Power Supply Company Ltd. reported a sharp rise in net profits before providing for taxation during the year ended March 31, 1964. The profits jumped up to Rs. 103.25 lakhs from Rs. 56.97 lakhs in the preceding year. The provision for taxation was higher at Rs. 31.98 lakhs as against Rs. 8.42 lakhs in 1962-63. A sum of Rs. 6.35 lakhs was transferred to contingencies reserves as against Rs. 3.62 lakhs in the preceding year, while Rs. 1.18 lakhs were provided for arrears of depreciation, the same as in the previous year. After writing off Rs. 93,565 (Rs. 66,975) towards intangible assets and other expenditure, the development reserve was allocated Rs. 1.62 lakhs as against Rs. 8.68 lakhs in the previous year. Tariffs and dividends control reserve received Rs. 3.59 lakhs (Rs. 1.02 lakhs) while Rs. 3.59 lakhs (Rs. 1.15 lakhs) were appropriated towards consumers' benefit account. General reserve received (Rs. 14.10 lakhs (Rs. 1.72 lakhs) and debt redemption reserve Rs. 6.60 lakhs as against nil in the previous year. Dividend reserve was credited with Rs. 22.93 lakhs as against Rs. 19.90 lakhs in 1962-63. The total revenue from sales of energy increased substantially from Rs. 3.16 crores to Rs. 4.57 crores. The directors have recommended a final dividend of Rs. 35.00 per share on preference shares and Rs. 70.00 per share on ordinary shares.

TATA HYDRO-ELECTRIC

Striking improvements in working results were reported by the Tata Hydro-Electric Power Supply Co. Ltd. for the year ended March 31, 1964. Income from sales of energy increased sizably from Rs. 2.31 crores to Rs. 3.46 crores. Net profits, before providing for taxation, too, recorded a significant rise from Rs. 59.21 lakhs to Rs. 112.31 lakhs. Provision for taxation was higher at Rs. 43.44 lakhs as against Rs. 22.79 lakhs in 1962-63. Contingencies reserve absorbed Rs. 5.00 lakhs (Rs. 2.55 lakhs) while development reserve claimed a larger sum of Rs. 12.16 lakhs as against a lakh of rupees only in the previous year. A sum of Rs. 2.97 lakhs (Rs. 12,655) was set aside for tariffs and dividends control reserve while a similar amount was allocated towards consumers' benefit account. Other allocations included Rs. 9.50 lakhs for general reserve (Rs. 3.10 lakhs), Rs. 4.50 lakhs for debt redemption reserve (nil), Rs. 19.93 lakhs for dividend reserve (Rs. 17.60 lakhs), Rs. 37,243 for arrears of depreciation (same) and Rs. 1.36 lakhs (Rs. 0.75 lakhs) towards write-off of intangible assets and other expenditure. The directors have recommended a final dividend of Rs. 3.50 per share on preference shares and Rs. 7.00 per share on ordinary shares.

TATA POWER

The Tata Power Company Ltd. reported encouraging working results during the year ended March 31, 1964. The total revenue from sales of energy rose steeply from Rs. 5.56 crores in 1962-63 to Rs. 8.00 crores in 1963-64. Net profit, before providing for taxation too, showed a significant rise; it went up from Rs. 1.30 crores to Rs. 2.27 crores. Taxation claimed Rs. 90.59 lakhs against Rs. 50.48 lakhs while provision for arrears of appreciation absorbed Rs. 9,516. General reserve received Rs. 34.00 lakhs as against Rs. 1.50 lakhs while Rs. 10.77 lakhs were set apart for contingencies (reserve as compared with Rs. 5.60 lakhs in the preceding year. Other allocations included Rs. 2.44 lakhs for development reserve (Rs. 2.70 lakhs), Rs. 15 lakhs for debt redemption reserve (Rs. 7.00 lakhs), Rs. 7.17 lakhs for tariffs and dividends control reserve (Rs. 0.34 lakhs), Rs. 39.36 lakhs for dividend reserve (Rs. 34.20 lakhs), Rs. 7.17 lakhs towards consumers' benefit account (Rs. 2.58 lakhs) and Rs. 2.00 lakhs (Rs. 1.18 lakhs) as write-off of intangible assets and other expenditure. The directors have recommended a final dividend of Rs. 37.50 per share on preference shares and Rs. 70.00 per share on ordinary shares.

COMPANY MEETING

ADITYA MILLS LIMITED

Speech of the Chairman, Shri B. Kanoria

The following is the speech of Shri B. Kanoria, Chairman of the Aditya Mills Limited, at the Annual General Meeting held on 31st August, 1964 :

Gentlemen :

It gives me great pleasure to welcome you to the Annual General Meeting.

We are meeting today under the gloom cast by passing away of our beloved Prime Minister, Shri Jawaharlal Nehru, a little over three months back. His qualities as an illustrious fighter for freedom, an outstanding statesman and a universal leader were well known throughout the world. He played a dynamic role in shaping the history of our country nearly for two decades and as a maker of modern India will long be remembered.

The Balance Sheet and Annual Accounts together with Directors' Report for the year ended 31st December, 1963 have already been in your hands for some time now and with your permission I shall take them as read.

The operating results for the period of eighteen months has shown a profit of Rs. 23,234 after providing fully for interest on loans but without providing for depreciation and development rebate. Upon adjusting this from the debit balance of Rs. 23,910 brought forward from last year's debit balance, Rs. 676 has been left over which is being carried forward to next year. Looking to the fact that the mill started the working of a few thousand spindles in March 1963 and faced innumerable teething troubles on account of untrained workers and high speed machines, I hope you will not consider the results to be too bad.

POWER SUPPLY

The position of power supply by the Rajasthan State Electricity Board from the Chambal Hydel Project has not been quite satisfactory. There were long and frequent interruptions which ranged from a few minutes to 103 hours at a stretch, causing big loss of production to the Company. We have approached the Rajasthan State Electricity Board as well as the Government of Rajasthan to give their serious thought to the matter and take necessary steps to ensure perennial supply. We only hope that necessary steps shall be taken to ensure regular and uninterrupted supply in future.

INADEQUACY OF POWER LOOMS & HOSIERY INDUSTRY IN RAJASTHAN

There are very few power looms in Rajasthan compared to those in other States such as Maharashtra, Madhya Pradesh, etc. In absence of adequate number of power looms, the spinning mills in the State have to sell their production of yarn outside the State incurring a heavy burden of transport charges. Another handicap is that hosiery industry has not developed here. This industry which is a small-scale one can, besides providing employment to the people, also help in increasing the consumption of yarn and thus assist the textile industry in the State.

PRICE REGULATION

Under the Price Regulation Scheme, the prices of yarn have been fixed since 1960 and they were nominally revised once in February 1963. Since then though the cost has gone up considerably on account of rise in cotton and stores prices and higher wages, there has been no increase in the yarn rates in spite of several representations made. It is understood that it is more profitable these days to spin man-made fibre rather

than cotton and, therefore, your company has purchased a small quantity of such fibre to take a trial and, if met with success, intends to divert towards the bulk production of the same.

SECOND WAGE BOARD

The Government of India have already announced the formation of a Second Wage Board for the textile industry. The main terms of the Wage Board are :

- The recommendations of the First Wage Board for the cotton textile industry and the Government's decision thereon;
- The various elements of labour costs (excepting bonus) from wages.
- The need for adjusting wage differentials in such a manner as to provide incentive to workers for advancing their skill; and
- The desirability of extending the system of payment by results.

You must be aware that when the First Wage Board had submitted its report it had recommended large-scale rationalisation along with increase in wages. In actual effect, the wages went up without the Mills getting much of the benefit, I hope that the present Board will keep in mind that fact, while submitting its Report as also the Government enforces the implementation of its recommendations to both sides in case the recommendation be unanimous.

WATER

I had made a reference to the water scarcity in my last report. We were advised by an expert to dig a tube-well at a site suggested by him. The job was undertaken and though we have now dug to a depth of more than 400 feet, the results have not yet been very encouraging. It is the good fortune of your Company that one of the wells dug earlier is yielding a lot of water and the mills for the time being are not posed with any water problems as such. However, the weaving project cannot be undertaken unless we are fully convinced of the quantity of water at our disposal.

Before I conclude, I would like to express the Board's appreciation to the workers, the staff and officers for their wholehearted co-operation.

BOOKS BRIEFLY

Trade Trends

New Directions In India's Trade Policy: By P. G. Salvi; Vora & Co., Publishers Pvt. Ltd., 3, Round Building, Bombay-2; Pp. 110; Price Rs. 9.

MR. SALVI has done more justice to the collection and compilation of facts than making an analytical study of the foreign trade of India. In view of the fact that there are not many books on the subject, the volume under review should prove a useful reference material as it contains a statistical appendix comprising a set of 16 informative tables on the country's imports and exports, area-wise and commodity-wise. In his 'foreword' Mr. Manubhai Shah has made a reference to the last chapter entitled "New Directions in India's Trade Policy" where the author says, in an optimistic vein, that "woollen industry, paper and pulp industry, fisheries and animal products industries can easily give an additional foreign exchange of three hundred crores of rupees to finance the future economic development of the country". Though anybody would agree with Mr. Manubhai Shah in wishing that the assertion made in this sentence comes true in the near future, the author, on his part, has not taken pains to explain anywhere in the book the concrete steps that should be taken to develop the exports of these items.

Almost all the important features of India's foreign trade such as its structure, the fluctuations in imports and exports, the role of State Trading Corporation and foreign trade agreements, have been reviewed in the book. The author has repeatedly pointed out that the time has now come to view the five-year Plans in relation to the need of promoting exports because India will have to earn foreign exchange in increasing quantities for meeting not only the growing needs of developmental and maintenance imports but also for ser-

ving her loans by way of interest payments and capital repayment. Product on opportunities will, therefore, have to be created with a view to generating export surpluses. Since independence in 1947 India has made considerable efforts to build up her economy and thereby reduce her dependence on imported foodgrains, raw cotton and raw jute. But in spite of all efforts to increase agricultural and industrial output the adverse balance of trade has continued to occupy a prominent place in the country's foreign trade statistics. The corrective has still to be found not in curtailing imports by artificial means but in increasing domestic production so that on the one hand the need to import is diminished and on the other the country's export potential is increased.

As regards the pattern of India's foreign trade, Mr. Salvi points out that the United Kingdom and the USA continue to be India's leading partners in trade. The East European countries in general and the USSR in particular, have emerged as new markets for Indian exports.

The chapter on trade agreements lists 35 countries which have entered into trade agreements with India. Many of the bilateral trade agreements have been made with countries where trade is in the hands of the State. In recent years there has been a tendency towards bilateral trade so as to encourage the balancing of imports and exports.

The domestic market may absorb whatever is produced, even at relatively high prices, but the export markets are competitive and as such highly susceptible to price increases. The prices of most of our goods have been rising steadily with the result that raw materials as well as finished goods are not in a position to compete in the world market. Mr. Salvi has, therefore, advocated an early inquiry into the cost conditions of our export industries.

Readers' Roundtable

STATE TRADING IN FOODGRAINS

Sir,

At the foodgrains dealers' convention in New Delhi on May 3, the Union Minister for Food and Agriculture said that neither the Government nor the society would tolerate the operation of the law of supply and demand in this field.

Economic laws like that of supply and demand have not been formulated by foodgrains dealers, but have been evolved on the basis of observation of human nature (as it is, and not as it ought to be) over the centuries. This and other laws of the market cannot be legislated out or overcome by use of governmental power. In this connection, it is interesting to note that after pursuing economic policies based on such ideological considerations for over four decades, today even a communist country like the Soviet Union is retracing its steps by allowing the play of market forces in order to increase production and give a better life to the people.

Food prices have been rising because of a number of factors: inadequate production to meet the needs of an increasing population; government planning which attempts to invest resources beyond the available savings of the community, thus occasioning deficit financing and upsetting the balance between money supply on the one hand and goods and services on the other; a huge bureaucracy (81 lakhs) which is, by and large, unproductive and a drag on the economy; ideological priority to heavy industries, which take years to mature and which are at the cost of agriculture — nation's basic asset.

The trade, which operates according to the laws of the market, is always a convenient scapegoat. The recent Food-grain Licensing Order, instead of controlling foodgrain prices, has thrown the market into confusion at the State and district levels.

The annual foodgrains trade involves a turnover of the magnitude of the Union Budget, around Rs. 2,000 crores. At present there is no adequate distribution machinery to replace over six lakhs of traders spread all over the country. This is the main reason for Government's inability to resort to state trading in foodgrains. Moreover, state trading would mean (a) compulsory procurement of foodgrains from farmers; (b) not only rationing of the quantum of foodgrains, but also rigorous restrictions on food to be served in restaurants, at functions, etc.; (c) inevitable inefficiency of the bureaucracy, which will be exposed year after year in the Audit Report; (d) widespread corruption, and (e) public dissatisfaction with the Government as a result of all this.

The remedy does not lie in continuing the warfare on the trade nor in ill-considered measures like nationalisation of rice mills. It is, on a short-term basis, effective deployment of PL 480 buffer stocks, removal of the zonal system and curtailment of wasteful Government expenditure; on a long-term basis, reversal of the present planning strategy of concentration on heavy industries to the neglect of agriculture and consumer goods industries, of wasteful governmental expenditure on an unproductive bureaucracy, of an ideological Public Sector, of unnecessary controls on private enterprise of citizens, of heavy taxation of the public, and of a spree of deficit financing.

If the Government persists in the measure and present economic policies, not only will corruption and bureaucratic tyranny increase, but also an increase in the foodgrains prices by about 15 to 20 per cent will take place in the next two months.

another order for CELCON[®] came the other day

[®] Celcon is the new engineering material which has excited interest of buyers from the automobile industry, the electrical industry, the building materials industry, the hardware industry, the packaging industry, the office equipment industry and the weapons-making industry. Celcon was developed after many years of research by the Celanese Corporation of America, one of the world's major producers of formaldehyde and trioxane.

Celcon is fast displacing iron, steel, brass, zinc, aluminium, magnesium, thermosets, laminates and wood in the manufacture of many articles. As contrasted with many die-cast metals, Celcon components require little or no finishing when they

emerge from the mould and may almost immediately be put to use. Considerable amounts of money are thus saved when Celcon is used. Celcon maintains its high mechanical strength, stiffness, toughness and resistance to impact force over a long period and through broad ranges of temperature and environment.

Celcon is available in natural translucent white and 18 standard colours; it is easy to fabricate; has excellent frictional characteristics; it can be readily sawed, drilled, turned, milled, filed and threaded. It can be fabricated by injection moulding, extrusion, blow moulding and other high volume thermoplastic processing techniques. Processing ease and economy are its greatest advantages.

CELCON is a trademark

COMPANY NOTICES

THE BIRLA JUTE MANUFACTURING COMPANY, LIMITED

NOTICE is hereby given that the Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at 15, India Exchange Place, Calcutta-1, on Monday, the 28th September, 1964, at 4-00 P.M. for the following purposes:

1. To receive and consider the Report of the Directors and to pass the audited accounts of the Company for the year ended 31st March, 1964.
2. To declare Dividends on Preference, Second Preference and Ordinary Shares.
3. To elect Director in place of Shri J. M. Goenka, who retires by rotation, but, being eligible, offers himself for re-election.
4. To appoint Auditors and to fix their remuneration.
5. As special business to consider and, if thought fit to pass, with or without modification, the following Resolutions:—

(i) **As Ordinary Resolution:**

"RESOLVED that Shri Rasiklal Naneklal Dalal, a Director of the Company who ceases to hold office under Article 138 of the Company's Articles of Association, be and is hereby re-appointed a Director of the Company.

(ii) **As Special Resolution:**

"RESOLVED that Shri Brijratan S. Mohatta, a Director of the Company who is an associate of the Managing Agents under the Companies Act, 1956, who ceases to hold office under Article 138 of the Company's Articles of Association, be and is hereby re-appointed a Director of the Company liable to retire by rotation."

(iii) **As Ordinary Resolution:**

"RESOLVED that the authorised capital of the Company be increased to Rs. 6,00,00,000 (Rupees Six crores) by the creation of 20,00,000 further ordinary shares, being equity shares, of Rs. 10 each and that the conditions contained in the Company's Memorandum of Association be deemed as altered accordingly."

(iv) **As Special Resolution:**

"RESOLVED that the provisions of the Articles of Association of the Company be altered in the manner following, that is to say that in Article 4 the words and figures 'At the date of the adoption of these Articles the share capital of the Company is Rs. 4 crore divided into 20,00,000 Ordinary Shares of Rs. 10/- each, 25,000 7½% (subject to Income Tax)

Cumulative Preference Shares of Rs. 100/- each and 1,75,000 2nd Preference Shares of Rs. 100/- each' be deleted and the following words and figures be substituted therefor:

"The Share capital of the Company is Rs. 6,00,00,000 divided into 40,00,000 Ordinary Shares of Rs. 10 each, 25,000 7½% (subject to income-tax) Cumulative Preference Shares of Rs. 100 each and 1,75,000 Second Preference Shares of Rs. 100 each."

The Register of Members and Share Transfer Books of the Company will remain closed from the 10th September, 1964 to the 28th September, 1964, both days inclusive.

By Order of the Board,

Per Pro: BIRLA BROTHERS PRIVATE LIMITED,
G. MAKHARIA,
Managing Agents.

Registered Office:

15, India Exchange Place,
Calcutta-1.

Dated, the 29th July, 1964

N.B. (i) The Directors have recommended the following dividends for the year subject to deduction of tax under the Income-tax Act, 1961:

On Preference Shares @ 7.5% per annum (increased by 11% under the Preference Shares (Regulation of Dividends) Act, 1960, and after deducting Company's Income-tax).

On Second Preference Shares @ 7.86% per annum.
On Ordinary Shares @ Rs. 1.50 per share.

If dividends on shares as recommended by the Directors are declared at the Meeting, THE DIVIDENDS WILL BE PAYABLE TO THE REGISTERED SHAREHOLDERS whose names are on the Company's Register on the 28th September, 1964, or to their order or to their Bankers. No application need be sent for dividends, as relative dividend warrants will be posted to such shareholders.

(ii) A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(iii) AN EXPLANATORY STATEMENT IN RESPECT OF THE ABOVE ITEMS OF SPECIAL BUSINESS IS BEING FORWARDED TO THE MEMBERS OF THE COMPANY ALONG WITH THE CONVENING NOTICE OF THE MEETING.

BALLY JUTE COMPANY LIMITED

NOTICE is hereby given that the Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at 15, India Exchange Place, Calcutta on Monday, the 28th September, 1964, at 3-00 P.M. for the following purposes:

1. To receive and consider the Report of the Directors and to pass the audited accounts of the Company for the year ended 31st March, 1964.
2. To declare Dividends on Preference and Ordinary Shares.
3. To elect Directors in place of Shri M. P. Birla and Shri Arvind C. Dalal who retire by rotation, but being

eligible, offer themselves for re-election.

4. To appoint Auditors and to fix their remuneration.
5. As special business to consider and, if thought fit to pass, with or without modification, the following Resolutions:—

(i) **As Ordinary Resolution:**

"RESOLVED that subject to the approval of the Central Government and the terms of such approval Messrs. Birla Brothers Private Ltd., be and are hereby re-appointed Secretaries & Treasurers of the Company as and from 1st April, 1965, for the period, at the remuneration and upon terms and

conditions set forth in the draft agreement placed before the meeting and initialled for the purpose of identification by the Chairman of the Board and that the Directors of the Company be and are hereby authorised to enter into an agreement with Messrs. Birla Brothers Private Ltd., in terms of the said draft subject to any modification thereof as may be agreed upon between the Directors of the Company and Messrs. Birla Brothers Private Ltd., for the purpose of complying with any modifications required or conditions imposed by the Central Government in granting their consent aforesaid".

(ii) **As Ordinary Resolution :**

"RESOLVED that the consent of the Company be and is hereby accorded to the Board of Directors for borrowing moneys in excess of paid-up Capital and free reserves of the Company that is to say reserves not set apart for any specific purpose upto a sum not exceeding in aggregate Rs. 1 crore outstanding at any one time and that such borrowings shall be exclusive of the temporary loans obtained or to be obtained by the Company from its bankers in the ordinary course of business."

(iii) **As Ordinary Resolution :**

"RESOLVED that the authorised Capital of the Company be increased to Rs. 1,00,00,000 (Rupees one crore) by the creation of 60,000 further Ordinary Shares being Equity Shares of Rs. 100 each and that the conditions contained in the Company's Memorandum of Association be deemed as altered accordingly."

(iv) **As Special Resolution :**

"RESOLVED that the provisions of the Articles of Association of the Company be altered in the manner following, that is to say that in Article 4 the words and figures 'At the date of the adoption of these Articles, the Capital of the Company is Rs. 40,00,000 divided into 20,000 Ordinary Shares of Rs. 100 each and 20,000 Preference Shares of Rs. 100 each,' be deleted and the following words and figures be substituted therefor:

"The Share Capital of the Company is Rs. 1,00,00,000 divided into 80,000 Ordinary Shares of Rs. 100 each and 20,000 Preference Shares of Rs. 100 each".

COMPANY MEETING

MUKAND IRON & STEEL WORKS LIMITED

Statement of the Chairman, Shri Kamalnayan Bajaj

PASSING OF PANDITJI

Since independence there has been a tremendous upsurge in all fields of national activity. Our beloved Prime Minister, Pandit Jawaharlal Nehru, was the inspiring and guiding force behind it.

Gandhiji lifted us from despondency, taught us to be upright and fearless, and led us to freedom, while Panditji was the architect of new India. He strove with dynamic energy and vision to build a prosperous country with the ideals of secular State and parliamentary democracy. His sobriety in international affairs and zeal for peace in the world and welfare of humanity attained for us a status and prestige in the comity of nations.

He has left us a great legacy, which casts on us a tremendous responsibility. Let history not judge that we proved unworthy of the heritage. May God give us wisdom and strength to fulfil it.

THE NEW PRIME MINISTER

There was criticism and even genuine concern abroad that Panditji's consistent refusal to name a successor might lead to a war of succession, confusion and chaos. But his faith in his people was immense and he believed that they would do the right thing after him. This confidence was fully justified when the country unanimously chose Shri Lal Bahadur Shastri as his successor within a week. During these few months Shastriji has demonstrated the qualities of an eminent leader. We are happy with him. Let us lighten his burden by giving him our fullest co-operation. We wish him good health and long life in the service of the country.

FOOD SHORTAGE AND REMEDIAL MEASURES

The immediate problem before the country is the grave situation created by shortages and spiralling prices, especially of foodgrains. Shastriji has rightly pointed out that an agitational approach will not help to solve the problem; on the contrary, it may lead to further complications. It is incumbent on us to seek a solution of our problems by mutual co-operation and understanding. The tendency to make political capital out of the people's sufferings is to be highly deplored and should be severely dealt with.

The Government has already taken a series of short-term measures which may yield results. But the disease is chronic and requires radical cure. The traditional approach, instead of bringing relief, has aggravated the problem. We must re-examine the whole issue with a fresh mind and find a new approach.

Artificial zonal controls, maldistribution, psychological fear of shortages, distrust of normal channels of distribution, curtailment of bank credit which has resulted in bringing out unaccounted money for hoarding, inflationary pressures, increase in direct and indirect taxes, gold control, ceilings on land holdings, rumours regarding demonetisation, and strikes and go-slow by dock workers and other essential services are among the main causes which have led to abnormal increase in prices.

Confidence should be created in the people that the Government is alive to their problems and is taking appropriate measures. There is no shortage of foodgrains to the extent it is commonly believed. The shortages are mainly felt in the ports and bigger towns. If ports are taken care of by freely supplying imported grains at controlled prices which should be fixed slightly lower than the prices prevailing in the

interior, the pressures on interior areas will automatically be relieved. There will then be no need for zonal controls. If the prices gradually go down, cultivators will also start unloading their stocks.

Co-operation of normal trade channels should be enlisted and their services utilised for distribution as far as possible. The Government, employers and cultivators should pay part of the wages of their employees in foodgrains.

While holding of stocks for legitimate trade is a service to the people and should be encouraged by giving proper facilities, hoarding and profiteering are anti-social and should be put down with a firm hand.

A long-term solution rests on our capacity substantially to increase production in both agriculture and industry. The Government should reappraise its policies so as to ensure balanced development on all fronts and take measures to implement them.

FOURTH PLAN TARGETS

A mid-term appraisal of the third Plan has revealed a serious gap between the targets and achievements. It is heartening that the Planning Commission has recognised that while formulating the fourth Plan it is desirable to divide the projects into two specific categories consisting of core projects comprising basic industries and agriculture which will be fully implemented from available resources and non-core projects which are to be implemented depending upon availability of further funds. A somewhat similar suggestion was made in my address to the shareholders at the 22nd Annual General Meeting in September 1960.

RETARDATION IN INDUSTRIAL TEMPO

Fears were expressed when the Finance Minister announced his taxation proposals in the last Central Budget that capital formation and industrial development would be retarded to a large extent. Certain marginal benefits were given later on, but on the whole there has been a set-back in industrial tempo. Unless constructive and positive fiscal policies are framed, there is not likely to be any substantial improvement in the situation.

UNIT TRUST AND DEVELOPMENT BANK

Two important institutions set up by the Government are to be commended. The Unit Trust of India is designed to be an effective medium for transferring the savings of small and middle income groups to the corporate sector, at the same time ensuring reasonable return with minimum risk to the investors. The Industrial Development Bank of India will serve as an apex institution for co-ordinating the financing of industries through the existing agencies and also providing long-term finance for development. The assurance by Shri P. C. Bhattacharyya, Chairman of the Bank and Governor of the Reserve Bank of India, that no deserving industrial enterprise, which has a priority in the plans, would suffer for want of financial resources is very welcome.

STEEL IN THE FOURTH PLAN

The country has been suffering from a chronic shortage of steel. It was feared that the situation would be further aggravated by the failure of negotiations with the USA for setting up the Bokaro Plant. The determination of our Government to go ahead with the project has made it possible to get assistance from the USSR. The misunderstanding of the Western countries has also been largely cleared and we can expect help from them for two more plants in the public

sector as well as for increasing the capacity of the two Main Producers in the private sector.

EXPANSION OF RE-ROLLERS' CAPACITIES

It has been repeatedly brought to the notice of the Government that while available capacity in the Re-rolling Industry remains idle it would be a national waste to allow the Main Producers to increase their capacity for similar products. It is to be hoped that while formulating the steel expansion projects in the fourth Plan due consideration will be given for the allocation of adequate supplies of billets to the Re-rollers, not only to utilise fully their present installed capacities but also to develop additional capacities which they are in a position to do with much less investment. The Government should also encourage the Re-rollers to install large-scale billet making plants.

DECONTROL

There has been a misapprehension in the public mind that consequent on decontrol from March 1964 many items of steel have become scarce and there is a spurt in prices. As far as the Re-rolling Industry is concerned, the Steel Re-rolling Mills' Association periodically announces the selling prices of its members. In spite of the increase in costs of production, the selling prices have remained comparable with the prices at which identical products of the Main Producers are sold, although the Government's billet pricing and freight policies place the Re-rollers at a considerable disadvantage.

INCREASE IN COSTS

Ever since the price of scrap were decontrolled in August 1962, there has been a continuous upward movement in prices. Increases in excise duty on steel castings and D.A. to the employees have resulted in further increase in costs.

EXPANSION PROGRAMMES

The Company's expansion programmes both at Kurla and Kalwe are well under way. It is hoped that the Kalwe project will go into production by July 1965. The machine building and structurals project at Kurla is being implemented. In the steel foundry we expect to reach the target of 10,000 tonnes during the current year.

EXPORTS

Our exports during the year were about Rs. 7.5 lakhs. Efforts for export promotion are being intensified.

DEFERRED SHARES

On representations made by the Company and the Federation of Indian Chambers of Commerce and Industry, the Central Government has amended the Income-tax Act with regard to tax liability on the notional capital gains deemed to arise on conversion of deferred into ordinary shares. However, the wording of the amendment still leaves some room for doubt. We are seeking expert opinion and further representation will be made to the Government, if necessary, to clarify the position.

SUBSIDIARY

The progress of our subsidiary, The Batala Engineering Co. Ltd., has been satisfactory. The Ballabhgarh project and expansion schemes at Batala are being implemented. With a view to broaden the capital base, 73,636 Ordinary (Equity) Shares of Rs. 10 each are being offered to the public.

CONCLUSION

I thank the Workers, Staff and Management for their efforts in achieving the progress which the Company has made so far. I am confident that with their co-operation the Company will continue to grow in the years to come.

DAGGER BRAND CUTTERS FOR LASTING PRECISION PERFORMANCE

BACKED BY 25 YEARS OF TRADITION and rigid control at every stage of production DAGGER BRAND CUTTERS (available in metric and inch sizes) assure precision performance. They are made of superior quality steel, specially heat-treated to ensure long life, and manufactured in India's biggest and most modern factory for Small Tools. **THE INDIAN TOOL MFRS. Ltd.** 101 Sion Road, Bombay 22

RECORDS AND STATISTICS

New Registrations in 1963-64

ACCORDING TO the monthly returns received from the Registrars of Companies in the various States, there were 1,227 new companies registered in the country during 1963-64 as against 1,497 new companies formed in 1962-63. The total authorised capital of all the newly registered companies of 1963-64 amounted to Rs. 340.4 crores as against the total authorised capital of Rs. 257.5 crores during the previous year. Thus the total authorised capital of the new companies registered during the year under review recorded an increase of Rs. 82.9 crores over the preceding year even though the number declined by 270 companies. This sharp increase in the authorised capital was due to the registration of Bokaro Steel Ltd., with an authorised capital of Rs. 100 crores in January 1964. During the six months ended, March 1964, 670 new companies were registered with a total authorised capital of Rs. 227 crores as against 557 new companies formed with a total authorised capital of Rs. 113 crores during the preceding six months ended September 1963. There was thus a substantial improvement in new registration during the second half of 1963-64 over the preceding six months in that the number of new registrations rose by 113 and their total authorised capital doubled itself. The total number of companies registered during the six months period October 1962 to March 1963 was 690 companies having a total authorised capital of Rs. 134 crores as compared to 807 companies incorporated during April to September 1962 with an aggregate authorised capital of Rs. 123 crores.

The turning point in new company registrations, which followed a downward course from August 1962 and became more pronounced from April 1963, synchronised with the Finance Minister's policy statement that Government were set on following a positive policy of economic growth which was intended to lift the economy from the low pitch at which it then stood. With every subsequent policy announcement of the Finance Minister, corporate activity as exhibited by new company formations has improved. The important point is that, notwithstanding market reactions to the Budget proposals made in February 1964, the sentiment of the entrepreneurs as disclosed by the new company registrations has not been affected. The available data show that, in March, new registrations stood at 120 as against 83 in the preceding month and out of the total of 120 companies newly formed 18 were public companies as against 12 in the preceding month.

Industrial Pattern

The total number of 1,227 new companies formed during the year 1963-64 was reported to comprise 155 Public Companies and 1,072 Private Companies accounting for total authorised capital of Rs. 148 crores and Rs. 192 crores respectively, as against 227 Public Companies and 1,270 Private Companies registered with a total authorised capital of Rs. 175 crores and Rs. 82 crores respectively in 1962-63.

A study of the industrial pattern of the 1227 companies registered during 1963-64 discloses that, as in the previous years, the highest number of 624 companies were registered for purposes of processing and manufacturing food stuffs, textiles, leather, metals, chemicals and other goods with a total authorised capital of Rs. 284.11 crores of which Bokaro Steel Ltd., a Government company registered in January 1964, alone accounted for an authorised capital of Rs. 100 crores. Thus more than half of the total number of new companies

was registered for manufacturing various kinds of articles accounting for more than 80 per cent of the total authorised capital of all new registrations of the period under review.

In the second important industrial group, Commerce — Trade and Finance, 368 companies were registered with an aggregate authorised capital of Rs. 19.77 crores. The number of companies registered in the Community and Business Services came to 56, and the authorised capital amounted to Rs. 3.79 crores, and in the Transport and Communication Group, the number of newly registered companies stood at 64 with an authorised capital of Rs. 6.11 crores.

During the last quarter of 1963-64, 317 new companies were formed as against 353 new companies registered during the third quarter, October-December 1963, 285 new companies registered during the second quarter July to September 1963 and 272 new companies registered during the first quarter of this year. The number of new companies registered during the last quarter of 1955-56 was larger than the number of new companies registered during the corresponding quarter of any year during the last nine years. The total number of new companies registered during the last quarter January-March 1956 was 455 while the total number of new companies formed during the corresponding quarter of other years ranged between 211 and 401.

INDUSTRY-WISE DISTRIBUTION OF NEW REGISTRATIONS

(Authorised capital in crores of Rs.)

Industrial Classification	Total No. of Cos.	Authorised Capital
1. Agriculture & Allied activities ..	19	2.17
2. Processing & Manufacture — Food-stuffs, Textiles, Leather and Products thereof ..	101	15.10
3. Processing and Manufacture — Metals and Chemicals & Products thereof ..	364	213.62

8. Community & Business Service ..	56	3.79
9. Personal and other Services ..	29	2.25
TOTAL ..	1227	340.49

The total number of new registrations during the year under review was highest in the State of Maharashtra, the number being 243. West Bengal, in which the largest number

of companies used to be registered in earlier years was relegated to the second position in 1963-64 with 238 new registrations followed by the Union Territory of Delhi (223) and the State of Madras (158). These four major States together accounted for 862 new registrations or 70 per cent of the total. The number of companies registered in the Union Territory of Goa was 10.

NEW REGISTRATIONS (STATEWISE): 1962-63 — 1963-64

Regionwise Distribution

A study of regionwise distribution of new companies reveals that the Eastern Region which ranked first in recording the largest number of new registrations in the earlier years yielded its pride of place to the Western Region in which was registered the largest number of new companies in 1963-64, the number being 340.

In fact, the Eastern Region was relegated to the third place with 294 new registrations, the second place being occupied by the Northern Region which accounted for 335 new registrations. The number of new companies registered in

the Southern Region was the lowest at 258. The Northern Region registered the lowest number of companies in earlier years. The largest number of 340 companies was registered in the Western Region (comprising Gujarat, Maharashtra, Madhya Pradesh and Goa). Next came the Northern Region (comprising Delhi, Punjab, Himachal Pradesh, Rajasthan and Uttar Pradesh) with 335 new registrations followed by the Eastern Region (comprising West Bengal, Bihar, Orissa, Assam, Manipur and Tripura), and the Southern Region (comprising Madras, Andhra Pradesh, Mysore and Kerala) which registered 294 and 258 companies respectively.

New Govt. Companies

During 1963-64, 19 Government companies were set up in the country with an aggregate authorised capital of Rs. 169 crores of which Bokaro Steel Ltd., alone accounted for an authorised capital of Rs. 100 crores as against 8 Government companies registered with an authorised capital of Rs. 20.5 crores during 1962-63. Of the 19 Government companies registered during 1963-64, 7 were public limited companies having a total authorised capital of Rs. 35 crores and 12 were private limited companies having a total authorised capital of Rs. 134 crores. The share of Government companies in the total authorised capital of all the 1227 new companies registered during 1963-64 came to 50 per cent.

Total	7.9%	49.8%

External Assistance: Authorised and Utilised

DURING THE period 1963-64, as in the previous year, there was a perceptible increase in the rate of utilisation of aid according to the latest Report on Currency and Finance. Over the nine months up to end-December 1963, the latest period for which complete data are available, an amount of Rs. 404 crores was utilised as against the utilisation of Rs. 451 crores during the full year 1962-63 and Rs. 339 crores during 1961-62 (see Table I). This higher rate reflected mainly the larger availability of non-project assistance, that is, aid not tied to any specific project. Earlier, with aid being overwhelmingly tied to specific projects, it was inevitable that there should be a supply of funds in pipe-line awaiting disbursement, because most of the major projects take from three to five years for completion. For non-project assistance, the time-lag between authorisation and actual disbursement is shorter, and reflects mainly the time taken for complying with procedures laid down by the aid-giving agencies.

External assistance authorised during the first nine months of 1963-64 amounted to Rs. 323 crores, bringing total assistance authorised so far during the third Plan to Rs. 1,405 crores (see Table II). Taking into account the carryover of assistance from earlier years, the total assistance available for utilisation in the three quarters upto end-December 1963, amounted to Rs. 1,917 crores consisting of Rs. 1,454 crores (76 per cent) as loans, Rs. 31 crores (two per cent) as grants and Rs. 432 crores (22 per cent) as assistance under the PL 480 programme. The amount of assistance promised but not yet authorised as at end-December 1963, totalled Rs. 321 crores, of which Rs. 105 crores were to be authorised by the IBRD | IDA and Rs. 183 crores by the USA.

The amount authorised during the first nine months of 1963-64 comprised Rs. 316 crores in the form of loans, Rs. 2 crores in the form of grants and Rs. 5 crores by way of assistance under the PL 480 programme. Except for the Swiss and Danish credits of Rs. 3 crores and Rs. 1 crore respectively, the entire loan assistance authorised during the period was from the Aid-India Consortium members. For the year 1963-64, the members of the Consortium promised assistance totalling Rs. 501 crores, raising the total assistance promised by them for the first three years of the third Plan to Rs. 1,627 crores.

The composition and pattern of the loan assistance authorised during 1963-64 were generally comparable to that

of preceding year. A sizable part, nearly a third of the loan assistance, was in the form of non project aid. Among Consortium members, practically the entire loan assistance authorised by the UK, Italy, Austria, Belgium, and the Netherlands was on a non-project basis. The credits authorised by the UK since July 1963, besides providing for an extension of the grace and repayment periods, were free of interest during the first 7 years of the currency of the loan. The US

AID, on the other hand, which, except for a service charge of $\frac{1}{2}$ of 1 per cent per annum, was hitherto extending interest-free loans, abolished the concession, and the loans extended by it from January 1964 were subject to an interest charge of 2 per cent per annum after the first ten years.

Cumulatively, external assistance authorised by various friendly countries (excluding international institutions) up to end-December 1963 amounted to Rs. 3793 crores. Country-wise, the USA accounting for authorisations of Rs. 2299 crores

TABLE I.
UTILISATION OF EXTERNAL ASSISTANCE: 1961-62—1963-64

or 61 per cent of the total, ranked first among the donors. Other major contributors were the USSR (Rs. 385 crores or 10 per cent), West Germany (358 crores or 9 per cent) and the UK (273 crores or 7 per cent). All other donor countries together contributed Rs. 478 crores accounting for 13 per cent of the total. Aid authorised by International institutions as of end-December 1963 aggregated Rs. 546 crores, comprising Rs. 403 crores from the IBRD and Rs. 143 crores from the IDA.

The purpose-wise break-up of external loans and credits authorised and utilised up to end-December 1963 (see Table III) indicates that a major part of the amount authorised (Rs. 1582 crores or 57 per cent) was for industrial development followed by transportation (Rs. 420 crores or 15 per cent), steel and steel projects (Rs. 381 crores or 14 per cent) and power projects (Rs. 259 crores or 9 per cent).

The assistance authorised by the USA under the PL 480 programme during the first nine months of 1963-64 amounted to Rs. 5 crores, of which Rs. 4 crores were for the import of corn and Rs. 1 crore for the import of tobacco. With this, the total assistance authorised under the PL 480 programme till the end of December 1963 amounted to Rs. 1161 crores. The rupee counterpart funds originating from the import of surplus agricultural commodities under the programme have been allocated for disposal, as mutually agreed, in the following manner:

ALLOCATION OF P.L. 480 COUNTERPART FUNDS

	(Rs. crores)
Loans to the Govt. of India	558.9
Grants to the Govt. of India	375.3
Loans to private enterprises under Cooley Amendment	79.0
For the use of the US Govt.	148.1
TOTAL	1161.3

During the last three months of 1963-64, the additional assistance authorised amounted to Rs. 126 crores, comprising loans totalling Rs. 109 crores by the US AID and credits amounting to Rs. 17 crores by the UK. Except for Rs. 2 crores of assistance authorised by the USA and Rs. 10 crores extended by the UK, which were tied to specific projects, the entire additional assistance authorised by the two donor countries was in the form of non-project assistance for financing maintenance and capital goods imports from the respective countries. For assessing the foreign exchange requirements for 1964-65

which are estimated to be between Rs. 524 crores and Rs. 543 crores, the ten-nation Aid-India Consortium met in March 1964 under the auspices of the IBRD. After reviewing the position and seeking clarifications on various key issues, the consortium met again in May 1964. At this meeting the members pledged assistance to the tune of Rs. 490 crores for the fourth year of the third Plan (vide Table IV). Nearly half the assistance promised is expected to be in the form of non-project assistance, which could be utilised to finance imports required for maintenance of the economy. The memberwise details of the assistance pledged for 1964-65 are: Austria: Rs. 0.5 crores; Canada: Rs. 19.5 crores; France: Rs. 9.5 crores; West Germany: Rs. 45.2 crores; Italy: Rs. 17.1 crores; Japan: Rs. 28.6 crores; Netherlands: Rs. 5.2 crores; UK: Rs. 40.0 crores; USA: Rs. 207.1 crores and the IBRD/IDA Rs. 116.7 crores.

Besides adopting the Indian word for tea, the U.K. in the month of March 1964 alone, also took Rs. 1.04 crores worth of tea. The rest of the world took Rs. 4.89 crores worth. A year's export of tea will earn enough foreign exchange to finance a project twice as large as the nuclear power plant at Tarapur. That's how important tea exports are—how important exports are to India.

World Money Talks

WHEN SIR ERIC ROLL, speaking for Britain at the Fund-Bank meeting in Tokyo, said that a behind-the-scenes compromise had been reached among the leading trading nations on the question of increasing the Fund quotas, he was surely not letting any cat out of the bag. Of the leading industrialized countries, Britain alone is really keen on major surgery for the world's monetary system; most others in that category are inclined to believe that an occasional aspirin would do. It is true that the United States had, in the last year, shown a little more interest in radical reform than it was disposed to contemplate earlier. But the American position in the debate is by no means sufficiently strong. It is true that should that country succeed fully in mastering the deficit in its balance of payments, the leading trading nations of Western Europe would be more inclined than hitherto towards proposals for the evolution of the IMF into a credit-creating institution, if not a real international central bank. It is true also that the US deficit, though still considerable at about \$2,000 million a year, is now running at a rate significantly lower than the 1963 level of \$3,300 million. But even so, France and like-minded countries across the Atlantic would still be justified in feeling that the urgency of an extensive operation to forestall a possible crisis in world liquidity is not by any means obvious. This is for the reason that the improvement in the US balance of payments and even more interestingly the gain in the US gold reserves from the beginning of the current year are substantially due to such props as the network of swap arrangements established during the past three years by the United States with 10 other industrially advanced countries and with the Bank for International Settlements. It is obvious that should the United States manage to reduce drastically its balance of payments deficit in the coming years, the other trading countries concerned in the swap arrangements could and would enforce a reconsideration of those arrangements. This apart, many Western European countries, notably France, are quite exercised over the influx of American industrial capital into the Continent. That many leading US banks have lately been lending freely in Europe through their local branches has further strengthened the feeling that the prospects of a scarcity of dollars in world trade or finance could be easily exaggerated. In the circumstances, the agreement in principle formally announced at the Tokyo meeting on an increase in IMF quotas by a general rate of about 25 per cent (with larger increases in the case of a few specified countries) must be considered a realistic, if not a wholly adequate, response from the member-countries of the Fund to the probable needs of growing world trade for increased liquidity. If nothing more dramatic had been attempted for or announced at Tokyo in the matter of reforming the world monetary system it was simply because France and quite a few other European countries refused to concede that they should let themselves be dictated by Britain or the United States, whose currencies, though formally enjoying the status of reserve currencies, have had to be supported themselves with drawings from the Fund as well as inter-central bank credits from other member-countries. Some indication of this state of power politics in international finance was provided by French and other European demands that a part of the increases in quotas should be contributed in the form of gold.

In contrast with the under-current of tensions and reservations which ran through the discussion of IMF quotas, the Tokyo session dealt readily and smoothly with the series of resolutions designed to increase the power and resources of the World Bank and its affiliates—the International Development Association and the International Finance Corporation — to aid the economic progress of developing countries. The IDA is to receive

\$50 million from the earnings of the World Bank in the last year. This amount which would otherwise have been available for distribution as dividend is being placed at the disposal of the IDA in the form of a grant. The IDA's resources will be further strengthened through new contributions from some of the more well-to-do members of the Bank. The resources of the Bank's other affiliate, the International Finance Corporation, are to be augmented by authorising the Bank to lend to the Corporation for re-lending private industry in the less developed countries. This arrangement is designed to overcome the technical difficulty that the Bank itself is not competent to lend directly to private borrowers except on a guarantee by host governments. In discussions of international development finance, it is being increasingly recognized that developing countries should not only be aided but aided on terms which do not strain or stretch their economies. Thus Mr. Pierre-Paul Schweitzer, Managing Director of the International Monetary Fund, warned the Fund's Board of Governors in Tokyo that experience had already shown that in the long-run it was to the disadvantage of the debtor and creditor countries alike if there were to be a backlog of commercial payments which could not be paid off except over a long period.

HMT-Prices and Profitability

ONE OF the important Government projects which have demonstrated that Government can run a business efficiently and profitably is Hindustan Machine Tools Ltd. It would, therefore, be of interest to analyse the operations and profitability of this company during the last five years 1959 to 1964 from the data published by the company.

Table I shows the progress of production during the last five years.

TABLE I.

PRODUCTION

Production	(No. of machines)				
	1959-60	60-61	61-62	62-63	63-64
(a) High Precision Lathes	240	137	185	246	253
(b) Milling Machines	252	310	443	543	573
(c) Radial Drills	78	204	228	272	360
(d) Low priced lathes	131	317	378	518	585
(e) Grinders	—	30	14	36	177
(f) Turret lathes	—	2	3	—	32
(g) Special Machines	1	2	—	—	3
TOTAL	702	1002	1251	1615	1983
(h) Watches	—	—	14439	51562	121602

It would be seen from Table I that the production of machines by the company has almost trebled during the last five years from 702 in 1959-60 to 1983 in 1963-64. This company had also one of the best records of pro-

This was a point which India's Finance Minister, Mr. T. T. Krishnamachari, took up for further analysis later in the session. Quick to take advantage of Mr. Schweitzer's argument, he very pertinently inquired whether it was not necessary to take steps to alleviate the distress experienced or about to be experienced by countries such as India which, having started availing themselves of international credits at a time when the terms were more stringent than in the more enlightened days of the present or the near past, were now confronted with the necessity of liquidating an onerous accumulation of repayment liabilities. We are sure that this presentation of the Indian problem would not have failed to arouse sympathy, but it remains to be seen how its practical implications are followed up. The World Bank possibly might take the initiative in organizing consultations between India and its creditor countries. Fortunately, in Mr. George Woods, President of the World Bank, this country has not only a warm friend but a wise one. This is all the more the reason why we, on our part, should pay heed to his statement in Tokyo that it would help the flow of assistance from industrialised countries if developing countries demonstrate genuine readiness to take the hard domestic decisions required to accelerate economic growth.

duction during the second Plan period when it exceeded the target as detailed below.

TABLE II.
SECOND PLAN PRODUCTION

	(No. of machines)				
	1956-57	57-58	58-59	59-60	60-61
(a) Second plan target	57	131	238	314	400
(b) Actual production	135	402	552	702	1002
(c) Percentage increase over target	237%	300%	232%	223%	250%

The profit earned by the company before taxation and interest on Government and other loans but after depreciation which gives an idea of the return on capital employed and the profit margin on sales is given in Table III.

TABLE III.
RATE OF PROFIT

	(Rs. lakhs)				
	1959-60	60-61	61-62	62-63	63-64
(1) Profit before taxation and interest	49	83	140	234	326
(2) Capital employed (Total net assets)	784	964	1237	1537	2185
(3) Sales	226	336	487	708	983
(4) 1 as percentage of 2	6.3	8.6	11.3	15.2	15.0
(5) 1 as percentage of 3	21.7	24.7	28.3	33.1	33.2

It would be seen from Table III that the rate of profit on sales which stood at 22 per cent in 1959-60 has increased to 33 per cent and the rate of profit on total

capital employed has increased from six per cent to 15 per cent. A comparison of the profitability in 1959-60 and 1963-64 with the total capital employed would show that while the total value of capital employed in the Hindustan Machine Tools has almost trebled, the rate of profit on the capital employed increased by two and half times. Thus the efficiency in the use of capital appears to have improved during the period. However, the rate of profit on sales did not improve proportionate with the increase in sales. Thus while the value of sales increased during the period four-fold, the rate of profit on sales increased only by one and half times. It would therefore seem that the company was not able to effect much economies with the increase in production. Such a conclusion is strengthened by the fact that the company did not reduce the price of the machines sold by it with an increase in production, but increased it in 1963-64. Table IV shows the sale prices of the machines sold by the company.

TABLE IV.
SALE PRICES

(In Rupees)

	1959-60	60-61	61-62	62-63	63-64	Compara- ble landed cost of imported machines
(a) High precision lathe	29500	33000	33000	33000	41100	48362
(b) Milling machine	36000	39500	39500	39500	44000	51802
(c) Radial drill	29000	36000	36000	36000	37700	44314
(d) Low priced lathe	16750	19250	19250	19250	20000	23467
(e) Grinder	35000	35000	35000	35000	35000	41138
(f) Turret lathe	Nil	56000	44000	44000	47700	56116

Although the price of the machines sold by the company was less than the landed cost of imported machines, the fact remains that in all items of machinery (excepting turret lathe) the company's price did not go down up to 1963-64. In 1963-64, the prices of all machinery were raised. When production increases and prices do not go down, it should be possible for an efficient management to increase the profit. The rate of profit of this company on sales did not increase *pari passu* with the increase in sales, up to 1962-63. In 1963-64 even though the prices of machinery were raised, the rate of profit did not increase by either of the two standards mentioned in Table III.

That the reason for there being no increase in the rate of profit proportionate to sales was not due to any progressive increase in the indigenous content of the machines might be evident from Table V.

It would be seen from Table V that during the last three years, the indigenous content in the machines has remained unchanged (except in Grinders). Another important fact is that during all the five years no foreign

technicians were employed by the company in the machinery sections.

TABLE V.
INDIGENOUS CONTENT OF HINDUSTAN MACHINE TOOLS
(Per cent)

	1959-60	60-61	61-62	62-63	63-64
High precision lathes	97	97	97	97	97
Milling machines	94	94	94	94	94
Radial drills	75	91	91	91	91
Low priced lathes	57	95	95	95	95
Grinders	—	43	43	90	90
Turret lathes	—	95	95	95	95

An important reason for the lower rate of growth of profit on sales seems to be the increase in the wages paid by the company to its employees during the period. Table VI shows the increase in wage level.

TABLE VI.
INCREASE IN WAGE LEVEL

	1959-60	60-61	61-62	62-63	63-64
No. of employees*	2643	4200	4670	5817	8930
Minimum earnings of lowest paid employee (Machine Tools Factories I & II, Bangalore)	Rs. 94	111	111	122	127
Average earnings per month** (Machine Tools Factories I & II, Bangalore)	Rs. 160	180	186	215	235

*Including Trainees.

**Excluding Trainees.

It would be seen from Table VI that the minimum and average earnings per employee has increased during the last five years by Rs. 33 and Rs. 75 respectively. In addition, the workers also get non-monetary benefits like free clothing including shoes, free watches, free education of children, free milk, subsidized housing, subsidized canteen meals, subsidized transport etc. One of the important reasons why a higher rate of wages is recommended is that it would improve the efficiency of labour. In the case of Hindustan Machine Tools, the increase in the rate of wages has not appreciably improved the efficiency, since the profit of the company did not increase even when the sale price was raised in 1963-64.

The inability of Hindustan Machine Tools to increase the rate of profit on sales in 1963-64, even though the prices of the machines sold by it were increased should be regarded as an "eye opener" to the management of this company which has otherwise had a fairly good record. The whole of the increase in price could not have been possibly offset by the increase in "un-productive" wages and so a part of the responsibility for the absence of higher earnings should be placed on the management of the company.

Highlights of the Week

THE FUND-BANK MEET

DELEGATES FROM 102 nations gathered last week at Tokyo to attend a joint five-day meeting of the boards of the World Bank, the International Monetary Fund, the International Development Association and the International Finance Corporation. At the opening session Mr. George Woods, President of the Bank, warned the developing countries that the industrialised nations were unlikely to meet their demand for more aid until they "demonstrate genuine readiness to take the hard domestic decisions required to accelerate economic growth". The hard decisions were "such imperatives as political and economic stability, land and tax reform, appropriate educational expansion, and above all, the adoption of policies and conditions conducive to the productive investment of capital".

The Chairman of the International Monetary Fund, Mr. Francisco Aquino of El Salvador, pleaded that the rich industrial nations should help in raising living standards in developing nations. Mr. T. T. Krishnamachari also set the tone for the stand taken by the developing nations and emphasised that the Fund was meant to be of assistance to all members, industrialised and not-so-industrialised, in overcoming their balance of payments difficulties. The activities and the policies of the Fund, he added, should be adapted progressively to the emerging needs of the members.

Mr. Pierre-Paul Schweitzer, Managing Director of the International Monetary Fund, strongly recommended an early increase in the quotas of all countries subscribing to the Fund. Mr. Dillon, the US Secretary of the Treasury, supported this plea and pointed out that such a step was necessary when greater needs were likely to centre on the enlargement of credit facility for transferring reserves among countries rather than on increase in the overall supply of reserves. Mr. Krishnamachari also lent full support to the idea and proposed that the executive directors should proceed to formulate more precise recommendations on the subject. He added that the international financial system has shown unquestionably greater resilience in recent times, and an increase in Fund's resources through additional subscriptions was imperative for providing adequate international liquidity.

On the issue of how the additional subscriptions to the IMF should be raised, Britain and the US were opposed to the French and West European insistence on that 25 per cent of the additional contributions should be made in gold. Mr. Krishnamachari advocated a flexible approach.

Towards the conclusion of the session, the International Monetary Fund adopted a resolution to augment its resources currently standing at \$15,750 million by between \$4,000 and \$5,000 million. The increase was to become effective by next autumn. It would be achieved through a total increase in the contributions paid by the 102 member-countries and by a bigger increase in the contributions paid by Germany, Japan and Canada, whose economies had shown a marked development for the past few years.

A further series of resolutions were designed to increase the powers of the World Bank and its affiliates in aiding the economic progress of developing countries. It was indicated

that the Bank would disperse nearly \$600 million this fiscal year and the International Development Association would be stepping up aid to developing countries in the next couple of years. Mr. Woods announced, however, that no accommodation would be provided to Indonesia, Ceylon or the United Arab Republic, because the Bank refused to give loans to countries which expropriated foreign owned assets without compensation, within a reasonable time. He also hoped that the new arbitration council approved by the Bank's board of governors, would come into being in the first six months of the next year. The recommendation to permit the World Bank to make loans to the International Finance Corporation was also welcomed by various delegates.

Mr. T. T. Krishnamachari declared that India was willing to explore the possibilities of using Indian currency contribution to International Development Association for assistance to other countries. "Some of the developing countries, though themselves in need of large-scale assistance, may yet be able — within the limitations of their capacities — to contribute to the cause of development elsewhere".

The meeting concluded with the election of the Ethiopian representative as Chairman for the next annual meeting, with the representatives of Brazil and Norway as Vice-Chairmen. In his closing speech, Mr. Pierre-Paul Schweitzer stated that the IMF in co-operation with the World Bank would be occupied, especially this year, with two problems: credit facilities to be given to compensate sudden drops in exports from developing countries and ways of lightening the burden of their foreign debt.

THE TOPPLED TWO

THE GOING out of office of the Ministries in Kerala and Orissa last week should make the Congress High Command burn some midnight oil. Although the circumstances that led to the downfall of the two Ministries ostensibly had nothing common between them — the Kerala Ministry headed by Mr. R. Sankar was voted out of power as a result of a no-confidence motion and the Orissa Chief Minister, Mr. Biren Mitra, decided to relinquish office having been aggrieved over a students' demonstration in front of the Legislative Assembly — the allegations of corruption against both Mr. Sankar and Mr. Mitra obviously had a lot to do with their exit. The Congress High Command needs to learn a lesson from these two events. If it has to avert such happenings in some other States as well, it will have to take expeditious action on the charges of corruption brought against Ministers by none else than the Congress legislators themselves. There can be little doubt that after Mr. Partap Singh Kairon's ignominious exit from the helm of affairs in Punjab as a sequel to the Das Commission's verdict, the Congress legislators in other States have been emboldened to bring forth corruption charges against Ministers in their States. But to dub all these charges as frivolous is apparently not judicious.

The crisis in Kerala had been brewing for quite some time. It came to a head when the grievances of the 15 dissident Congress MLA's of the late Mr. P. T. Chacko's group were paid no heed to by the Congress High Command. The last minute efforts of the Union Railway Minister, Mr. S. K. Patil, who dashed to Trivandrum to retrieve the situation and

to close up the Congress ranks, could not be of any avail. The dissident Congress legislators voted for the Samyukt Socialist Party's no-confidence motion which, with support from the other Opposition members, was carried by 73 votes to 50. The unity among the Opposition groups, however, was only a marriage of convenience and was never meant to be stretched beyond achieving the immediate objective of toppling the Sankar Ministry. With the Opposition parties not in a position to form a new Ministry because of the fundamental ideological differences among them and also owing to the dissensions in the second largest party in the State legislature — the Communist Party — President's rule has been promulgated in Kerala. The next elections in Kerala are expected to be held in February, 1965.

The Congress Party in Orissa, however, is better rooted. After the resignation of Mr. Biren Mitra, the election of the new leader is being arranged. The name of Mr. Bishwanath Das, at present Governor of U.P., is being mentioned as a candidate for new leadership. A former Chief Minister of the State, Mr. B. Patnaik, who laid down office under the Kamaraj Plan, is also in the field. Whether he will be allowed to contest or not is yet to be seen.

FERTILISERS: A CRASH PROGRAMME

THE AMERICAN Ambassador, Mr. Chester Bowles, who has often expressed concern over the food crisis in India, observed recently that this problem could be solved by the use of more fertilisers which could be produced in sufficient quantity, provided there was determination and competence. He disclosed that in response to an official Indian request for technical assistance, a consortium of leading American companies was being formed to help raise the present production of 300,000 tonnes of nitrogenous fertilisers by an additional quantity of one million tons. As a consequence of this move two American engineers, General Lucius D. Clay and Mr. Stephen D. Bechtel, who represent the proposed consortium, were on a five-day visit to New Delhi last week to discuss the proposed fertiliser expansion programme. General Clay, who has a varied experience as construction engineer, has come as a senior partner in the New York banking and investment firm of Lehman Brothers and will be concerned with the problem of capital for the proposed programme. Mr. Bechtel has come as a chief of the Bechtel Corporation engaged in a wide range of construction projects.

The consortium is likely to assist in providing the technical skill, foreign exchange and management planning to build at least five new plants, each with an annual capacity of 200,000 tonnes of nitrogenous fertilisers. These firms are reported to be prepared to participate in \$400 to \$500 million investment in the fertilizer production programme. The two representatives of the consortium discussed the initial outlines of an operational study that is expected to be completed by December on the economics and technical problems of the fertilizer plants. Location of plants, fertilizer distribution and marketing in an attempt to bring down high prices will also be examined in the next four months by experts working under the direction of the Stanford Research Institute, California, and the Bechtel Corporation. This study will attempt to assess the overall fertilizer situation in India, particularly the specific regional requirements which would provide basis for determining the size and location of each of the proposed new fertilizer units. The study will also explore the

possibilities of finance at low interest rates in an attempt to produce fertilisers at lower prices.

It was indicated that if the study establishes the feasibility of the envisaged plants, a detailed proposal to the Government of India will be submitted which will be prepared by a consortium of Indian and American companies working in collaboration with the Government of India and the existing Indian fertilizers manufacturers. If this programme goes through, it is quite likely that within the next five to six years India can expect a positive response in agricultural production. A ton of nitrogenous fertilizer, it is revealed, produces ten additional tons of foodgrains, which on a cumulative basis means a substantial quantity.

" FRUITFUL AND FRIENDLY "

THE DEFENCE Minister, Mr. Y. B. Chavan, returned last week from Moscow, satisfied with the outcome of his mission. It was obvious, even before his visit, that the Soviet Union was inclined to assist India in her defence efforts, but Mr. Chavan seems to have returned with some precise offers. The expected supply includes MIGs, missiles, transport aircraft, light tanks and even naval equipment on comparatively easy repayment terms. As a consequence of this visit, a Soviet technical team led by a Deputy Minister or a senior official is soon expected to visit India to finalise the production schedule of the MIGs. A number of Soviet experts will follow to provide the necessary technical assistance in setting up the three MIG factories. Arrangements have also been made to train a large number of Indian technicians to run these factories and progressively assume complete control of the manufacturing programme.

India is also acquiring a number of MIG-21s, in addition to the six which are still to be delivered under the original agreement entered into in 1962 for the supply of 12 planes. The necessary agreement has been signed in Moscow for the purchase of additional aircraft and by the time deliveries are completed towards the end of next year, India will be having nearly three squadrons of supersonic MIGs. The Chief of the Army Staff, who accompanied Mr. Chavan to Moscow, returned to Delhi after inspecting light tanks which India wants to acquire from the Soviet Union on deferred payment. Indian Naval officials who accompanied the Defence Minister, inspected the Soviet frigates and submarines which Moscow is prepared to sell to India. Further talks are, however, expected between the two governments before the necessary agreements are signed.

No Lean and Hungry Cassius This

By Our Parliamentary Correspondent

NEW DELHI:

ON THE eve of the Monsoon Session of Parliament, one could see an unusual atmosphere of seriousness in Ministerial circles. One Minister after another was declining sadly, but firmly, all engagements outside Delhi. To curious inquirers they were explaining gravely that the Prime Minister had instructed his colleagues to remain in the Capital and attend Parliament regularly during the current Session as an example to all MPs and as a discouragement to absenteeism among the latter. So impressed I for one was with all this parade of Ministerial responsibility that I was eagerly looking forward to the no-confidence debate, imagining that the strong and wise men on the Treasury Benches would not merely be physically present, but also intellectually active during this important discussion. It was rather a disappointment to me, therefore, that, in the first two days of the debate, no Minister thought it necessary or desirable to stand up and speak for the Government or its policies. This Ministerial self-denial, I dare say, will not last throughout the debate and that some big guns from the Treasury Benches will have fired their salvos before the debate is ended. Nevertheless, I am quite sure that tactically the Government has been weak in not thrusting forward some of its spokesmen into the debate at the earlier stages.

Not that the Opposition groups, jointly sponsoring the no-confidence motion, have shown any exceptional military genius. In my view, it is a psychological misconception on their part to have permitted Mr. N. C. Chatterjee, a plump and prosperous lawyer, to initiate a condemnation of the Government in the name of a starving and otherwise abjectly miserable mass of people. I must confess, of course, that I have never been an admirer of Mr. Chatterjee's parliamentary debating style. His voice lacks warmth, while his phrases do not have any note of sincerity. Often the effect, therefore, is that of an advocate speaking for a fee as well as speaking to a brief. In contrast, Mr. N. Dandekar, making his maiden speech, was far more impressive. Since, however, the Swatantra Party had already decided not to associate itself with the no-confidence motion, passages in Mr. Dandekar's speech critical of the Government's performance were largely of academic interest so far as the business before the House was concerned. It must, however, be said that he did sound quite convincing when he pleaded that the present Government should not be judged before it had had time to study — and reconsider, if it would — some of its inherited policies the unmodified maintenance of which may not be in the best interest of the country.

Food Debate

The food debate in the Lok Sabha, as could be expected, turned out to be an acrimonious and a marathon affair. But apart from taking the Government to task for rise in food prices only a few Opposition members could throw up any constructive suggestions to tackle the problem.

Mr. M. R. Masani suggested three short-term and four long-term measures for dealing with the food shortages and high prices. The short-term measures suggested by him were: (1) food zones should be abolished and movement of foodgrains throughout the country permitted at the most by October; (2) the urban poor should be supplied foodgrains from fair price shops at subsidised rates; (3) not even an ounce of food should be exported as long as the food shortage lasted, no

matter how important it might be to earn foreign exchange. Mr. Masani's long-term measures for solving the food problem were: (1) correction of the order of Plan priorities; (2) stoppage of tinkering with the security of land tenure. (3) reduction in taxation; and (4) avoidance of recourse to deficit financing. In regard to Plan priorities, Mr. Masani called for judicious apportionment of allocations to agriculture, light industry and heavy industry. Mr. A. P. Jain, a former Union Food Minister, called for strict enforcement of the Guest Control Order, announcement at the time of sowing of food-grain prices which should be paid to farmers at the harvest time (the prices, he recommended, should be fixed keeping the farmer's interest and needs in view), making available of cheap and sufficient supply of fertilisers and adoption of a liberal policy in respect of import of tractors and other agricultural implements. Most of these remedies also found favour with many other members who participated in the debate.

State Trading

The members differed widely on the question of State trading in foodgrains. While those with leftist leanings urged concerted action for instituting State trading in foodgrains, many, both from the Congress and the Opposition benches, opposed it on the ground that resort to State trading in foodgrains would only complicate matters further. The same was the case with land reforms. Many members wanted further restrictions on bank advances against foodgrains.

The Prime Minister's advice to the States some time ago that they should refrain from imposing restrictions on the movement of foodgrains to other States in the national interest found an echo in the speeches of Mr. A. C. Guha and Mr. Jaswant Rai Mehta. Mr. Guha suggested that the Government should adopt a policy of providing foodgrains at "equalised prices" all over the country. Mr. Mehta went a step further and urged that the States should be asked to surrender their autonomy in respect of food and agriculture till the food situation in the country is improved. Mr. M. S. Aney opined that the main cause of each State being concerned about its own interest, without caring for the national interest, was the irrational reorganisation of States on linguistic basis. This, he said, had corroded national patriotism.

Dr. P. S. Deshmukh did not agree with the criticism of many members that there was hoarding of foodgrains either at the farmers' or the traders' level. The present food crisis in the country, he said, had arisen because there was no proper assessment of the country's food requirements and necessary steps had not been taken in advance to meet shortages. Dr. Deshmukh suggested utilisation of waste land in the cities for growing vegetables and foods.

The reply of the Union Food Minister, Mr. C. Subramaniam, to the debate was a hard-hitting one. He took the Opposition parties to task for creating "a crisis of confidence" in the country which had led the consumers, producers, traders and even State Governments to play safe by holding on to whatever stocks they had. The Opposition parties, Mr. Subramaniam added, had thus become a colluding factor in the hoarding of grains. Mr. Subramaniam reiterated that the main problem today was to bring out hoarded stocks. The tendency to hoard stocks, he added, was there both at the producer and the trade levels. It had been accentuated by

the trade providing finance from unaccounted money to the big producers who by themselves could not hold back their produce for more than 4 to 5 months.

Mr. Subramaniam defended the Government's decision to import large quantities of foodgrains to meet the present difficult situation. While re-affirming that he was a believer in State trading and controls "to the extent necessary", he expressed the view that all the hoarded grains could not be secured by the Government by simply launching State trading. The Food Minister listed the measures he had taken to tackle the food problem both in the short and the long terms. He drew attention of the House particularly to the attempts being made to strengthen the enforcement machinery in the States, setting up of the Foodgrains Trading Corporation and provision of credit, fertilizers and other pre-requisites to agricultural production.

Another important discussion held in the Lok Sabha last week was on the non-official Bill, sponsored by Mr. Prakash Vir Shastri, seeking to abrogate Article 370 of the Constitution, which confers a special status on the State of Jammu and Kashmir. The Bill received enthusiastic support from all the sections of the House. The debate, however, could not be concluded for lack of time; it will be resumed this Friday.

Press Council Bill

The inconclusive debate on the Press Council Bill provided the highlight of the proceedings in the Rajya Sabha. The Bill, which seeks to establish a 26-member statutory body, consisting largely of newspaper representatives, charged with the function of improving the standards of newspapers in the country, was generally welcomed by the House. Some clauses of the Bill, however, came in for vehement criticism. While Mr. A. D. Mani, a newspaper editor himself, wanted the Press Council to function in an informal way on the lines of the British Council, and not like a court of law, Mr. G. S. Pathak, a lawyer of repute, supported the provision in the Bill to confer judicial powers on the Council. These, Mr. Pathak said, were necessary for the proper discharge of the Council's functions and for safeguarding the interest of the witnesses appearing before it. The provision in the Bill authorising the Chief Justice of India to select the Chairman of the Council, also was objected to by Mr. P. N. Saprú, another legal luminary, and by Mr. M. Ruthnaswamy on the ground that this would not be in keeping with the dignity of the judiciary which would be exposed to criticism. Mr. Saprú suggested that the chairman of the Press Council should be selected by a panel consisting of the Speaker of the Lok Sabha, the Chairman of the Rajya Sabha and the Chief Justice of India. Mr. Pathak also challenged the legal validity of the provisions in the Bill seeking to empower the Government to take action against newspaper editors and journalists who are censured by the Press Council more than once and making the Council's decision final and not questionable in any court of law. The Supreme Court, Mr. Pathak contended, could not be prevented from exercising its constitutional prerogatives and responsibilities or from granting leave for appeal against decisions of quasi-judicial bodies like the Press Council. There was general consensus of opinion that the Press Council should not be used by the Government as an instrument for suppressing the freedom of the Press in India.

The Rajya Sabha passed the Industrial Disputes (Amendment) Bill, 1963, which, while making some other minor changes in the Industrial Disputes Act, provides (i) for retrenchment compensation on closure of an undertaking to workmen who have been in continuous service for one year, (ii) makes the arbitration awards binding in the same force as an award of a tribunal; and (iii) prohibits strikes and lock-outs during arbitration proceedings. The Bill also prohibits termination of a settlement or an award at the request of only

a group of workmen. In future, a majority of workmen only shall have the right to terminate a settlement or an award.

The Joint Select Committee on the controversial Gold Control Bill has effected a number of modifications in this Bill. All persons having gold ornaments not exceeding Rs. 25,000 and all families having gold ornaments not exceeding Rs. 50,000 have been exempted by it from making declarations to the Government about the gold ornaments in their possession. The Committee has also exempted a family consisting of husband, wife and one or more minor children, or any two or more of them, if the total weight of gold other than ornaments owned by it does not exceed 100 grammes. The Committee has, however, suggested that the Government should retain the power to ask for declarations in this regard in order to enable it to administer gold control effectively.

The Committee has clarified that there will be no restriction as to the purity and form of gold which may be received as offering by any religious institution such as a temple, mutt, church, mosque, gurdwara or any other place of public worship. Powers have been given by the Committee to the Union Government for imposing, by rules, restrictions on the purity and weight of gold in ornaments re-manufactured out of old ornaments.

Some of the other changes effected by the Committee in the Gold Control Bill are: (1) the Gold Control Administrator can cancel the licence of a dealer or refiner if the dealer or the refiner is guilty of smuggling offences under the Customs Act or the Foreign Exchange Regulation Act; (2) the Administrator can exempt certain cases from the requirements of stamping of primary gold; (3) only an authorised officer can seize any gold or document which he finds secreted about one's person after conducting a search in accordance with the provisions of the Act. When an officer arrests a person or seizes any gold, document or other goods from the possession of a person, a copy of the statement, if any, made by such a person before that officer shall be furnished to the person concerned on demand.

Severe Criticism

The Gold Control Bill, however, has come in for severe criticism in the nine minutes of dissent appended to the Joint Committee's report. In his dissenting note, Mr. M. R. Masani, says that the only way to make people lose the glamour for gold is to offer an "honest rupee" the value of which tomorrow and 10 years hence will be the same as it is today. The rupee, Mr. Masani adds, has already depreciated so much that it is now worth only about 17 per cent of its pre-war value. Mr. Masani feels that goldsmiths will continue to make 20-carat gold ornaments and the Gold Control Bill will tempt the honest people also to become dishonest. He has advocated import of some gold within the scope of the various export promotion schemes. Mr. Dahyabhai Patel, in his note of dissent, has called for scrapping of the Gold Control Bill in its present form and has urged bringing in of a new properly considered piece of legislation. Mr. B. L. Chandak, Mr. M. M. Haq, Mr. Balgovind Verma and six others in a joint minute of dissent have said that the insistence on 14-carat purity gold ornaments is not going to bring down demand for gold. They have, therefore suggested that no restrictions should be placed on the purity of gold ornaments. They have also opposed the unlimited powers proposed to be conferred by the Gold Control Bill on the Administrator. They want a ceiling to be put on the possession of gold by an individual. They have further suggested that purchase and sale of gold should be entrusted to a statutory body like the State Trading Corporation or the Khadi Gramodyog Commission. Mr. Tridib Kumar Chaudhri has also expressed the view that the Government should have gone in for quantitative control on gold

Question Hour

Oil: — Questioned about the main features of the new agreement proposed by Burmah-Shell to replace the 1951 agreement on its Trombay refinery, the Union Minister for Petroleum and Chemicals, Mr. Humayun Kabir, informed the Rajya Sabha on September 11, that the revised agreement with Burmah-Shell had not been finalised as yet. It was, therefore, not possible for him to disclose the new terms. Asked whether proposals for the revision of the agreement on the Caltex and Esso refineries had also been received, the Minister said that though these companies had also expressed willingness to revise their existing agreements, no formal proposals had yet been received from them.

The Minister also revealed that discussions were being held with AGIP, a company in the Italian E.N.I. group, and Phillips Petroleum of the United States for associating the Oil and Natural Gas Commission as an equal partner with them in a bid to obtain a concession in District I, Area 2, in the off-shore region adjoining Iran. The joint bid, if the National Iranian Oil Company agreed to the partnership, would be submitted towards the end of October, 1964. In the event of an area being awarded to the group, a new company would be formed jointly by the group and the NIOC for carrying out oil exploration. Asked whether the foreign oil companies operating in India had agreed to utilize the crude that might be available through these efforts of the ONGC, Mr. Kabir said that the matter was under examination.

In a written reply to another question, Mr. Kabir stated that the targets for production of oil during the fourth Plan period were being formulated in consultation with the Planning Commission. It was difficult to make a precise calculation about the break-up of consumption of oil in industrial and domestic sectors.

Khetri Copper Project: In a written reply to a question, the Union Minister for Steel and Mines, Mr. N. Sanjiva Reddy stated in the Lok Sabha on September 11 that one of the principal items of work which was presently in progress at the Khetri Copper Project site was the sinking of the shaft through the departmental agency under the technical direction of the consultants of the project. Excavations for the shaft collars had been completed. The production shaft had been sunk to a depth of about 17 metres and the service shaft to about 8.5 metres. Concrete lining had been done in the production shaft over 16.5 metres below the foundation slab level, and over 8 metres in the service shaft. The headframe for the production shaft had been concreted to a height of 17 metres above the foundation. Some shaft sinking equipment had to be imported. As soon as this was procured and erected at the site, the shaft-sinking work would proceed at a faster rate. Mr. Reddy further disclosed that it had been decided to instal at flash-type smelter at the project instead of a reverberatory type as originally envisaged. This was done with a view to facilitating the recovery of by-products and for improving the economics of the project. A team of technical officers had been deputed to Helsinki (Finland) for preliminary discussions with M/s. Outokumpu, a Finnish firm which had developed the techniques of flash-type smelting. The detailed offer regarding the terms of consultancy and the cost of the flash-type smelter and other connected equipment were awaited. Mr. Reddy also indicated that the Government proposed to increase the scope of the Khetri Copper Project by adding a pyrite-pyrrhotite roaster and a sulphuric acid plant. Action had been initiated for the preparation of a revised project report for the enlarged scheme. The revised capital outlay and the revised time-schedule for the project were being worked out.

rather than qualitative control. Mr. P. Ramamurti and Mr. B. K. Gaekwad have advocated dropping of the measures altogether as the only effective way of saving foreign exchange in their opinion is the Government taking over export trade in principal commodities. Mr. Homi F. Daji and Mr. Prabhat Kar have also refrained from lending support to the Bill despite the slight improvements made in it by the Joint Select Committee. They say it is not likely to succeed in its objective and has caused great misery and unemployment. Mr. Era Sezhiyan has suggested that the remedy for smuggling lies in tightening the enforcement machinery and curbing of the anti-social activities of black marketeers and financial tycoons instead of coming down heavily on the poor goldsmiths or petty dealers. The other two minutes of dissent are by Mr. Yudhvir Singh Chaudhary and Dr. M. L. Singhvi. Among other things, Mr. Yudhvir Singh has objected to the wide powers being given to the executive in the matter. Dr. Singhvi says that the Gold Control Bill has not been based on proper analysis of the working of the Gold Control Order. He wonders if this "bull-in-a-china-shop experimentalism" has been unleashed by the Administration in a fit of absent-mindedness.

The Minister of State for Finance, Mr. B. R. Bhagat, introduced three new Bills in the Lok Sabha last week, seeking to amend the Direct Taxes Act, the Wealth Tax Act and the Company Act.

Procedural Amendment

Most of the amendments proposed in the 41-clause Wealth Tax (Amendment) Bill are of a procedural nature. There are, however, a few which will form new sections of the existing Act. Clause 34 of the Bill, for instance, introduces a new section in the Act empowering the Central Government to give immunity from prosecution to a person giving evidence relating to the concealment of particulars of net wealth or evasion of payment of tax on the net wealth. Such immunity can be withdrawn if it appears to the Central Government that that person had not complied with the conditions on which the immunity was granted or is willfully concealing anything or giving false evidence. This is in line with Section 291 of the Income Tax Act. Similarly, Clause 35 substitutes a new section for the existing Section 37 of the Wealth Tax Act and vests additional powers in the Wealth Tax Officer, Appellate Assistant Commissioner, Commissioner and the Appellate Tribunal to compel the production of account books and also vests these authorities with the power to impound and retain in custody such books and other documents. The authorities empowered to issue summons have also been vested with the power to impose upon persons who deliberately default from complying with the same a fine not exceeding Rs. 500. It is also provided that any proceeding under the Act before a wealth tax authority or the tribunal shall be deemed to be a judicial proceeding for the purpose of Section 196 of the Indian Penal Code. Clause 36 introduces a new section enabling the Commissioner of Wealth Tax to authorise in certain circumstances the Inspecting Assistant Commissioner or the Wealth Tax Officer to make a search for any account books or documents in any premises and seize them and also make an inventory of the articles or things so seized. A person objecting to such seizure may make an application to the Direct Taxes Board.

The Companies Act (Amendment) Bill seeks to provide protection to employees giving evidence against their firms to Government inspectors. The Direct Taxes (Amendment) Bill seeks to amend the Income-tax Act, 1961, the Estate Duty Act, 1953, and the Expenditure Tax Act, 1957, with a view to removing unintended hardships and providing relief to assesses in certain cases.

Exporters of Asia Unite!

JOSSLEYN HENNESSY

INDIA, AS one of the UK's "traditional suppliers" of cotton textiles, has a direct interest in the action recently taken by the Singapore government in prohibiting the import of 46 listed UK exports and in requiring specific import licences for all other UK commodities. As seen from Singapore, the UK government took "precipitate" action in barring Singapore's exports of textiles to the UK, and Singapore is merely taking retaliatory measures in self-defence.

As seen from London, the UK government's measures are intended to protect the UK's "traditional suppliers", of which Singapore is not one. In 1962, Singapore's cotton textile exports were worth a mere £1,068 (repeat £1,068). In 1963, they rose to £180,000, of which all but £2,000 came in the last five months of the year. In the first six months of 1964, Singapore exported £904,000 of finished goods to the UK. Since the UK market is extremely sensitive to changes in the volume and prices of supplies, £904,000 worth of goods constitutes a visible threat to traditional overseas suppliers and to domestic manufacturers.

Hong Kong and India have voluntarily agreements with the UK to restrain the volume of their exports, which run to the end of 1965, while an agreement with Pakistan is due for renewal at the end of this year. Voluntary agreements also exist with Malaya and other overseas centres. Some people have, however, been getting round these agreements by exporting to Macao and to South Korea, whence a rising tide of exports began to arrive in the UK. It was to control this that the Board of Trade introduced on May 1 a new system of specific import licences — "the ring fence policy" for all cotton textile imports from countries which have no long established trade with the UK in these goods. Macao, for example, has neither a spinning nor a weaving industry. Singapore appears to have six factories, but the Board of Trade's ruling cuts off the market for all new factories, amongst which these six must presumably be included, because they have not been able to produce evidence of long standing exports to the UK.

Orderly Contraction

I have repeatedly expressed my view in this column that the UK in common with all other advanced Western nations should contract their production of goods, such as textiles, which can be imported more cheaply from the developing nations, and should switch their production to goods which the developing nations are as yet incapable of producing. At

the same time, in a commodity, such as textiles, capable of virtually limitless expansion, which could throw hundreds of thousands of European and American textile employees out of work within a few months, the organisation of an orderly contraction, spread over a period jointly agreed between the several governments concerned, would be reasonable. If, without such previously organised joint action, Western markets were allowed to be dislocated by a flood of Asian cotton textile imports, the result would only be to provoke a Western outcry, which would damage East-West relations, and would do nothing to improve the prospects of Asian exports of either textiles or any other commodities.

I submit that the unilateral and isolated action of the Singapore Government is unhelpful not only to Singapore but to all Asian cotton textile exporters, because it ignores the facts of the case, and that the UK is acting in good faith towards other members of the Commonwealth. What would be constructive would be if Singapore — or failing her India — were to seek to inaugurate joint action with Hong Kong and the other exporting countries concerned, to negotiate a joint agreement with the Western governments. Perhaps the easiest way to initiate this would not be to approach all these governments separately but to go straight to the headquarters of the European Free Trade Association and the European Economic Community, which cover the whole of Europe, to which might be added the OECD in order to include the USA. I draw the attention of the Ministries of Commerce of the Asian governments concerned to an article on the advantages of EFTA-EEC market integration in textiles recently published by Mr. Mario Ludwig (director of the International Federation of Cotton and Allied Textiles Industries in Zurich) in the "Textile Mercury International".

In conclusion, it is fair to point out that, in choosing the UK to jump on, Singapore has chosen the least guilty of the Western nations in this matter. Whereas the EEC countries import only 6 per cent and the USA only 7½ per cent of their domestic requirements, the developing countries supply over 40 per cent of the UK's requirements in cotton textiles. This, I agree, is still not enough, but it is an admirable beginning, which Asian exporters could jointly hold up as an encouraging example to the EEC and the USA. But isolated action, like that of Singapore, is as useless to Singapore as it is harmful to the prospects of improved East-West trade in general.

WINDOW ON THE WORLD

Towards Higher Living Standards

M. DEKALO

SOFIA:

BULGARIA, formerly, was a country with a poorly developed industry and a fragmented and primitive agr culture, in which there was always both overt and latent unemployment. Its income per capita was among the lowest in Europe. After the War, however, Bulgaria's economy made rapid progress. The country's industrialization, the collectivization of agriculture, extended construction, modernization of transport and the advance in all sectors of material production brought about an appreciable increase in the national income. If we take the national income in 1939 as 100, by 1963 it had risen to 330. The average annual increase of the national income in the post-war years was eight per cent, whereas in the past the average annual growth of the national income had been about 3.4 to 4 per cent, dropping sharply in years of economic crisis.

The distribution of the national income in Bulgaria for accumulation and consumption is effected with a view to ensuring the development of the nation's economy at rapid rates and more fully meeting the material and cultural needs of working people in town and village. An average of about one fourth of the national income goes for accumulation, i.e. for reproduction, and three-fourths of it for consumption. This proportion has varied according to the needs of the economy during different periods of time. Irrespective, however, of the fluctuations in the ratio between accumulation and consumption, the absolute volume of the funds earmarked for consumption has steadily increased in the post-war years. Statistical data prove that, on the whole, the relative growth of consumption corresponds to the rates of increase in national income. Its average annual increase is about 8 per cent.

Incomes Double

Let us examine in brief the condition of wages, the public consumption funds and retail prices, which are in fact the main factors in determining the working people's incomes. The average wages of industrial and office workers have steadily increased in all sectors of material production as well as in the non-productive sphere. In the period of 1952-53 alone, they nearly doubled. During the same period, the real incomes of the peasant population were also doubled. Industrial and office workers of the low-income brackets received the largest wage increases in the last few years. Four years ago there was a rise in the salaries of 1.6 million people belonging to the low-income brackets. But although it is the main factor in the people's incomes, the working wage is not their only source. Retail prices play a substantial part in determining the people's real incomes. The main line pursued by the Government in its price policy is that of a systematic reduction of prices. During certain periods this factor is of paramount importance; during others its importance decreases (dependent upon the needs of the economy), but the general line is a systematic reduction of retail prices on the basis of the growth of labour productivity and the cutting down of production costs. The working people's incomes are indirectly increased through a steady reduction of prices of stable consumer goods.

Another important factor in determining the population's incomes is the public consumption funds. The significance

of these funds is constantly increasing and in the next few years they will play an ever increasing part in determining the population's incomes. During the period 1952-63 the public consumption funds have increased over 3.5 times, which means that they have increased more than the working wage and that their relative share in forming the population's real incomes has also been steadily increasing. It is a well-known fact that these funds are the only or the main source of meeting some of the population's most important requirements, such as public health, education, social security, and so forth. Expenditure on education, culture and the arts has increased 2.5 times in the period of 1952-1963, and that on public health, social insurances and physical culture over 4 times. Free medical aid and free education which have been introduced in Bulgaria are a great acquisition by the Bulgarian people. Today Bulgaria holds one of the foremost places in the world for the number of doctors and students per head of the population. There are 16 doctors to every 10,000 citizens. Bulgaria ranks fourth in the world after the USSR, the USA and Japan for the number of students per 10,000 citizens. This school year about 80,000 students study in Bulgaria, which makes approximately 100 students per 10,000 citizens.

This increase in the population's real incomes brought in its turn an increase in consumption, which is proved by the growth of retail trade. In 1963, the retail trade was four times bigger compared with what it was in 1959. Today the Bulgarian people eat and dress much better than in the past. The families of all social groups — industrial and office workers, and peasants — spend much more today on food, on goods other than foodstuffs, on various services and on cultural entertainments. These expenses have more than doubled in

Eastern Economist 20 Years Ago

SEPTEMBER 15, 1944

The question whether India should join the International Monetary Fund despite her failure to receive satisfaction on the two major points on which she had set her heart, viz., a permanent seat on the Executive and inclusion of sterling balances within its scope, will in due course have to be decided. But there is no need to be unduly hasty in coming to a judgment, as the non-official delegates to the Bretton Woods Conference have rightly pointed out. In the intervening months between now and early next year when the country will have to make up its mind, we shall be able to accumulate fresh evidence of other countries' reactions to the schemes as emerged from Bretton Woods. No one can reproach India for waiting to see how many countries ratify the scheme and agree to participate in the Fund and what amendments or reservations are proposed; for in this important matter we cannot have too much of relevant data before coming to a final decision. Knowledge of the course and outcome of the proposed talks between Britain and India regarding sterling balances will also be essential. In the circumstances the caution that has been exhibited by the public is not only justified but commendable.

the last 10 years. Expenditure on clothing, house furniture and cultural undertakings, however, has increased much more. The relative share of the expenses on food in the total of family expenses has been steadily decreasing: from 55.8 per cent in 1953 it was reduced to 44.5 per cent in 1963. This is an eloquent proof of the people's rising living standards.

The general long-term programme for Bulgaria's economic development up to 1980 has mapped out still brighter prospects for the Bulgarian people. Its main aim is the care of

man, meeting his constantly growing needs for his all-round and harmonious mental and physical development. It is envisaged that at the end of the 20-year term, the national income will have increased by four or five times compared with 1960. The population's real incomes are to rise by about 3.5 times during the same period. Consumption will also increase parallel with the rapid growth of the population's real incomes. The public consumption funds will mark the greatest increase. This will raise the Bulgarian people's living standards still further.

Balance of Payments Troubles

PAUL BAREAU

LONDON:

GREAT BRITAIN is emerging from a minor balance of payments scare. Nerves were set jangling by three developments: the overseas trade figures for July an ominous estimate by the National Institute for Economic Research that the payments gap this year would amount to £500 million and as a coping stone to this trilogy the news that in August the gold and convertible currency reserve fell by £33 million. The disturbance to confidence caused by this news was short lived. It was smoothed over by re-assuring words from the Chancellor of the Exchequer who is certain there is no crisis and that the British economy is performing wholly according to plan — save for the disappointing performance of exports which it must be said is a very important reservation.

Probably the most important of the re-assuring factors has been that the evidence of recent public opinion polls which strongly suggests that the trend of electoral opinion has recently been moving strongly in favour of the Conservatives. If this evidence is to be believed it removes one potential further factor of weakness in the situation of the foreign exchange market namely the virtual certainty of a run on sterling in the event of a Labour victory at the General Election.

Facile Explanation

The figures indicate a serious deterioration in the British balance of payments and cannot be dismissed by politically convenient re-assurances from Mr. Maudling or by the doubtful evidence of public opinion polls. There is in the first place the hard fact that in the first seven months of this year imports were 18 per cent higher than in the corresponding period of last year and exports only 4½ per cent higher. In the early months of this year this disparity received a number of facile explanations: the rise in primary commodity prices; the stocking up by industry with imported raw materials and semi-manufactured goods. But these re-assuring explanations began to wear thin when month after month the trade returns showed that the major factor in the growing volume of imports was the purchase of foreign manufactured articles. This together with the diminishing rate of expansion in British exports of manufactured goods carries the suggestion that British industry is becoming less competitive.

This conclusion has caused some astonishment given firstly the fact that most sections of British industry report a long and still growing export order book and secondly that all the evidence of recent wage and price movements indicates that inflation has been far more rampant among most of our competitors on the continent of Europe than in Great Britain. Hence all the talk about the "mystery of the missing exports". One explanation may well be that there has recently been a considerable increase in the orders for British capital goods. These take a long time to manufacture and will not appear in the trade returns until long after the order has been placed.

The position should be assessed in terms of the known facts and not of re-assuring suppositions. This is what has been

done in the National Institute's Economic Review to which I have already referred. Its estimate of a £500 million deficit for this year includes as its major component the export of long-term capital which probably accounts for more than £300 million of the total. Even so this leaves a residual current deficit sufficient to call for remedial action soon after the distractions of the general election have become a thing of the past. The National Institute says "towards the end of this year, therefore, it looks very much as if the Government will be faced with the old dilemma. It must either take measures which deal directly with the balance of payments, or it must deflate and face the prospect of another period of stagnation".

Clear Preference

The manner in which the alternatives are expressed indicates fairly clearly where the preference of the National Institute's economists lies. They would choose direct methods. Among these would be an intensification of exchange control including perhaps the operation of some restrictions on exports of capital to the sterling area and import restrictions. This is probably the choice that would be made by a Labour government though it is likely that the pressure on sterling that would follow a Labour victory in the election would also call for some use of at least one of the orthodox weapons of defence, namely dearer money.

A Conservative government would lean more heavily on the traditional mechanisms of control: taxation, Bank rate and other items of credit policy. But the Chancellor of the Exchequer has recently stated that he would not feel debarred by the label "Conservative" from using direct measures including import restrictions if he felt they were the correct answer to the problem. It seems highly unlikely that at this early and important stage in the Kennedy Round of tariff negotiations a British Conservative government would by import restrictions and higher tariffs give what would be the 'coup de grace' to this whole exercise. If a Conservative government is returned to power the resulting accentuation of the Stock Exchange boom and the further spur to private industrial investment superimposed on what is already a somewhat over stretched economy would without a doubt require the discipline of somewhat scarcer credit and a higher Bank rate.

What is decidedly 'not' on the cards is any tampering with the external value of sterling. The usual syren voices have again been heard pleading the attractions and virtues of greater flexibility of exchange rates and have used all the accepted euphemisms for devaluation. There is no support for them in official or indeed responsible quarters. Devaluation is unnecessary. It would strike a blow at the increasingly close collaboration between the monetary authorities of the world. It would leave unaffected the defects and inefficiencies which have led to the reduced competitiveness of British industry. The wherewithal to defend sterling is substantial and will be further increased as a result of the discussions at the Tokyo meeting of the International Monetary Fund.

MICROMETERS

Indian Tool Micrometers are of the finest quality, equivalent to the world's best. Yet, because the market is flooded with cheap, imported micrometers we find ourselves fighting for our right to survive.

We are determined to succeed To save this infant Indian industry, we prefer to sell below cost rather than shut down our plant. Our micrometers, all standard-equipped with tungsten carbide tipped anvil and spindle faces, are now available at the following prices:

0— 25 mm and 0—1"	...	...	Rs. 60.00
25— 50 mm and 1"—2"	...	...	Rs. 80.00
50— 75 mm and 2"—3"	...	...	Rs. 95.00
75—100 mm and 3"—4"	...	...	Rs. 103.00

Iron Ore in Fourth Plan

By Our Special Correspondent

NEW DELHI:

THE LATEST estimates prepared by the Union Ministry of Steel and Mines place the demand for iron ore in 1970-71 at 58 to 63 million tonnes — 25 to 30 million tonnes for export and nearly 33 million tonnes for consumption by the Indian steel industry. For meeting this demand, it has been decided that besides developing the existing iron ore mines, large-scale exploitation of the iron ore deposits in the Bailadila, Bellary, Goa, Hospet and Orissa areas should be undertaken expeditiously. Exploration work in these regions is envisaged to be carried out during the remaining period of the current Plan and the first half of the next one.

For meeting export requirements, it is proposed to develop iron ore mines in the Bailadila area to a capacity of 8 million tonnes per annum. The other areas where development of iron ore mines for export purposes is envisaged are the Malangtoli block in Orissa, Goa, Bellary and Hospet. The development of the Malangtoli area is proposed to be undertaken to an annual production of nearly 3 million tonnes. This, along with 2 million tonnes of iron ore from the Tomka-Daiteri mines, will make available 5 million tonnes for export through the Paradip Port. The Goa area, which is already exporting about 6 million tonnes of iron ore per annum, is expected to step up its exports to 9 to 10 million tonnes. Proving operations in the Bellary and Hospet areas have been started with a view to locating enough reserves to sustain a production of about 7 million tonnes of sized iron ore.

To meet the requirements of the Bokaro steel plant, the iron ore deposits of the Kiriburu and the adjoining area are being developed to yield about 3.5 million tonnes of lump ore and 3.5 million tonnes of beneficiated ore. The Union Ministry of Steel and Mines has also decided to have a public sector mine in the Barajamda area to produce about one million tonnes of high-grade iron ore for the public sector steel plants. Action has also been initiated for the development of the mines which are to supply iron ore to the existing steel plants, both in the public and the private sectors, under their fourth Plan expansion programmes.

The development of the iron ore mines in the Kiriburu and the adjoining area is expected to cost Rs. 45 crores, of those in Malangtoli block about Rs. 16 crores, in the Bellary and Hospet areas about Rs. 35 crores and in the Barajamda sector Rs. 5 crores.

Concerted action is also being taken for improving port facilities to handle ore exports. Work on improving the Visakhapatnam port has already been taken up with a view to enabling this port to receive 45,000-tonne ore carriers and loading them at the rate of 12,000 tonnes per hour. A number of other ports, both on the east and the west coast of India, are also to be provided with mechanised facilities to enable them to load at the rate of 2,000 to 3,000 tonnes of iron ore per hour. It is hoped that mechanisation of these ports will help in reducing ocean freight from India, thus making the Indian iron ore more competitive in the world market.

Japan has already entered into firm agreements with India for importing six million tonnes of iron ore per annum. This

will be in addition to Japan's normal purchases from this country. In its global iron ore procurement programme, Japan is understood to have put India down for 13.45 million tonnes. Italy and West Germany, which are currently importing from India about 2.2 million tonnes of iron ore, have shown interest in taking additional supplies to the tune of 2 to 3 million tonnes a year. The East European countries are expected to treble their iron ore imports from India by the end of the fourth Plan period.

★★

Addressing the Export-Import Advisory Council last week, the Union Minister for Commerce, Mr. Manubhai Shah, held out hopes of liberalisation in the new import policy to meet the requirements of defence, agriculture, export-oriented and basic industries as well as of the small-scale industrial sector. He, however, could not promise any liberalisation in the case of other imports due to the necessity of incurring somewhat larger expenditure in foreign exchange on rice imports from Burma, Thailand, Cambodia and Pakistan. In the long-run also, the import policy, Mr. Shah added, would have to be biased in favour of the requirements of the agricultural sector and the export-oriented and defence industries.

Mr. Shah assured that foreign exchange for export promotion would be made available to the extent required and greater facilities would be provided in future to the industrialists going abroad to market their products. He, however, made it clear that it could not be possible for the Government to meet the entire foreign exchange requirements of the industry. Certain old units still dependent on import of spares and components, should now rely on indigenous spares. He called on the bigger industrial units to develop ancillary industries.

Mr. Shah also promised to release adequate foreign exchange to units which wanted to import model tools for large-scale indigenous production. The small-scale licences, he said, would be clubbed in future up to Rs. 10,000 instead of Rs. 5,000 as at present.

Referring to the fourth Plan, Mr. Shah said that maintenance imports during the five years to 1970-71 were expected between Rs. 5,100 and Rs. 5,300 crores. Imports of capital goods and machinery were likely to be between Rs. 1,800 crores and Rs. 2,500 crores. The basic weakness of the balance of payments position in relation to the country's ever-increasing import requirements and debt-servicing obligations, Mr. Shah said, warranted maximisation of efforts to step up exports. The export target under the fourth Plan period, Mr. Shah added, had been fixed at Rs. 5,100 crores. To achieve this target, it was essential to diversify export trade. Export earnings, he suggested, could be raised substantially if greater resort was taken to export processed and finished goods.

Mr. Shah apparently did not agree with the Planning Commission that India could plan for a 7 per cent annual growth during the fourth Plan period on the basis of external assistance to approximately the same level as received during the third Plan period. Aid from foreign countries, he opined, would have to be of a much higher scale if the country was

to achieve a 7 per cent annual rate of growth between 1966-67 and 1970-71.

Talking about export prospects during the second half of the current financial year, Mr. Shah said that the last two years' up-trend in export earnings might not be continued due to the shortfalls in the production of some of the essential export items, such as oils and oil cakes, sugar, tea, etc.

The representatives of industry assembled at the meeting pleaded for bringing about greater degree of co-ordination in the action taken by the Directorate of Technical Development and import authorities in deciding what items could be allowed to be imported. They complained that delays occurred in the endorsement of lists in respect of licences for capital equipment. The Directorate, it was further alleged, took considerable time even in deciding the type of equipment that could be allowed to be imported. Early issuance of import licences for raw materials was stressed so that industry could plan production appropriately.

The representatives of industry also expressed doubts about the achievement of the contemplated fourth Plan export target. It was suggested that to push up export, a five-year industrial truce should be attempted and a crash programme drawn up for stepping up production of oilseeds as there was great scope for increasing exports in this line.

Seven loan agreements for an aggregate amount of £14.5 million have been signed last week between the Governments of India and Britain. They form part of the £30 million assistance pledged by Britain at the last May meeting of the Aid-India Consortium for India's economic development during the current financial year.

The loans are to be utilised for: (1) £4.00 million for improving the operating efficiency of manufacturers in India who traditionally look to Britain for their supplies and who are experiencing difficulties because of the tight foreign exchange position; (2) £2.00 million for import large components, such as transformers and switch-gear, by Heavy Electricals (India) Ltd., Bhopal; (3) £1.250 million for the development of the new colliery at Singareni in Andhra Pradesh (this is in addition to the aid already given by Britain for this new colliery); (4) £3.225 million for import of turbines for the power stations in Madhya Pradesh and West Bengal; (5) £1.5 million for import of oil exploration and development equipment by Oil India; (6) £1.525 million for import of capital goods by the private sector industries; and (7) £1.00 million for import of components by British-oriented industries.

The balance — £15.5 million — of the £30 million aid pledged by Britain for India's economic development during 1964-65 is to be provided in the form of general purpose loans from which the Government of India may, among other purposes, allocate funds for down payments on cargo ships to be built in British dockyards. An agreement covering £10 million credit under this form of assistance has already been signed between the Governments of India and Britain. The pact in respect of the remainder £5.5 million is expected to be entered into in the near future.

In the context of the general purpose loans being given by Britain this year, special arrangements have been made for import by India of certain types of steels, besides the quantities imported on "free" exchange account. The Government of India, in agreement with the British Government, will authorise orders up to £2.00 million for the purchase of high-speed and tool steels, steel castings and alloy, stainless and heat-resisting steels in any form of products.

All the loans signed last week are to be repaid over a period of 25 years, including a 7-year grace period. No interest is to be paid on these loans during the grace period. Taking note of the grace period, the rate of interest on these credits works out to approximately 3.5 per cent per annum.

The £30 million assistance pledged by Britain for the current year is in addition to the £7.00 million agreed to by her on July 31, 1964, for the setting up of the fifth blast furnace and associated installations at Durgapur Steel Works under this undertaking's second stage of expansion. The British Government has also indicated its readiness to discuss terms and conditions for aid in respect of the third stage of Durgapur under the fourth Plan, which will carry the capacity of this steel plant to around 3 million tonnes per annum from 1.6 million tonnes at the end of the second phase. No figure has yet been indicated in this regard, but it will obviously be quite large.

The Union Government has decided to assist Uganda in setting up four large-sized sugar mills in that country. The complex will be financed jointly by the industrialists and the Governments of the two countries. It is expected to cost £12/15 million (about Rs. 15/20 crores). To begin with an investment of approximately £10/12 million (Rs. 13/15 crores) is envisaged. Both India and Uganda will share this investment in near-equal amounts. The majority participation will be by Uganda. Most of the equipment for the entire complex will be supplied by India. A small portion of it, however, may have to be imported from other countries.

A high-powered delegation, headed by the Secretary to the Union Ministry of Commerce, Mr. D. S. Joshi, left for Uganda on September 13 for further talks on the project. Besides Mr. Joshi, the delegation consists of six technical and economic experts of the Government of India and four non-officials. The representatives of the Government are Mr. K. P. Jain, Director, Sugar and Vanaspathi Directorate; Dr. Thuljaram Rao, Sugarcane Breeding Expert of the Government of India; Mr. D. B. Anand, Member, Central Water and Power Commission; Mr. S. C. Banerji, Development Officer, Directorate-General of Technical Development; Mr. D. B. Dutt, Deputy Secretary, Ministry of Finance, Department of Economic Affairs; and Mr. N. S. Vaidyanathan, Under Secretary, Ministry of Commerce. The non-officials included in the delegation are: Mr. D. D. Puri, MP, Mr. J. P. Mukerji, Chief Engineer, Walchandnagar Industries; Mr. M. Bhandarkar, Chief Engineer, K.C.P. Private Ltd.; and A. N. Mahrotra, Development Officer, Birla Sugar Factories. The delegation will remain in Uganda for 5 to 10 days. It will have high-level discussions both with the Uganda Government and the leading businessmen in that country.

The first Industry Productivity Council to be set up in pursuance of the decision of the All-India Conference of Local Productivity Councils and Productivity Personnel held recently at New Delhi, will be for the printing industry. This Council is expected to be inaugurated by the NPC Chairman, Dr. P. S. Lokanathan, at Bombay on September 28.

According to the constitution drafted for the Council, it will concern itself with the following:

- (i) The building up of a body of knowledge of productivity techniques of interest to the printing industry;
- (ii) Disseminating information on the ways and means of promoting productivity in the printing industry;
- (iii) Organising training courses, seminars, conferences, study missions and other activities calculated to pro-

mote consciousness of productivity in the printing industry;

- (iv) Establishing liaison with the National Productivity Council, its Regional Directorates and local Productivity Councils for utilising their resources in the furtherance of the activities of the Council;
- (v) Conducting productivity surveys of individual units in the printing industry and advise management on better ways of utilising the industry's resources in manpower, materials and machines;

(vi) Providing a platform of common endeavour for management and unions in the printing industry and research and training institutions and other bodies concerned with the growth and well-being of the industry through higher productivity;

(vii) With such other activities as will contribute to higher productivity in the printing industry.

The Council will function in collaboration with National Productivity Council and its Regional Directorates and Local Productivity Councils. It will be an organising body and not

Three agreements relating to exchange of letter, insured and parcel post between India and Nepal were signed here last week. The agreements will come into force from April 30, 1965, after ratification by the two Governments. Prior to April 1959, when the provisions of the Universal Postal

Convention came into force in Nepal, postal services between India and Nepal were regulated under a bilateral agreement of 1936. This agreement provided for the exchange of only unregistered correspondence between the two countries. Since 1959, Nepal has developed her own international letter post service. The other services, like insurance and parcel facilities, however, continue to be provided for Nepali citizens by the Indian Embassy Post Office at Kathmandu. The agreements signed last week envisage the P & T Department of the Union Government extending all possible assistance to Nepal for the development of her own postal services.

Trade Trends : Jute Jitters

From our Correspondent

CALCUTTA:

INDIA'S FOREIGN trade trends during the first half of the current year were encouraging. The export and import figures during the second quarter were particularly so, and were considerably better than those for the same period in 1963. Exports in the April-June period were valued at Rs. 200 crores, compared with Rs. 180 crores in the corresponding months of 1963, while imports declined from Rs. 310 crores to Rs. 272 crores. The figures need to be looked into a little more closely in order to appreciate the real character of the improvement, and to assess the prospects for the second half of the year. On the export side, it was largely purchases by the East European countries, including Russia, which pushed up the export figure by Rs. 20 crores, but this special factor may not be present during the current half of this year. Secondly, the ban on the export of vegetable oils and the reduced export quota for sugar would almost certainly affect the country's export promotion efforts. Jute goods which contributed substantially to the increase in earnings are now facing stiffer competition abroad, while their own competitive capacity is being sadly undermined by the rise in raw jute prices. Cotton textiles, another major item of export, may not be able to maintain the record achieved during the second quarter. Although the effect of the latest increase in tea labour wages on the export of this commodity remains to be seen, there can be hardly any doubt about a sharp increase in the general price level hindering our export drive seriously.

In the circumstances, the actual export trends for the current year as a whole can be judged only when the figures for the third quarter are known. Imports, on the other hand, are not likely to keep falling; they may in fact increase during the current half of 1964 if the requirements of defence, agriculture, export-oriented and basic industries are to be reasonably met. Mr. Manubhai Shah, Union Minister for Commerce, indicated at the latest meeting of the Export-Import Advisory Council, that they would. The outlook for the country's balance of payments for the year as a whole does not, therefore, seem favourable. Mr. Shah has suggested that every industry must earmark a portion of its output for exports in order to attain the targets which have been set under the third Plan as well as those which will be fixed for the next five-year period. This is one way of bridging the trade gap, but it needs to be remembered at the same time that the export performance of a country does not depend only on quantitative offerings. It depends, almost entirely, on the quality and price factors. The quality of the products, in particular, has a strong appeal for the overseas buyer. Speaking at the latest meeting of the Indian Standards Institution, Mr. K. K. Birla, Chairman of the Advisory Committee, rightly stressed this aspect. He said that the quality of the Indian goods had to improve if exports were to be raised. Quality sells itself. Considering the prospects of increasing competi-

tion abroad and India's own need to keep the balance of payments in some order, Mr. Birla's concern about this all-important economic problem should be shared by all the exporters and manufacturers in the first place.

★★

The first meeting of the Jute Textiles Consultative Board and the Jute Goods Export Promotion Advisory Committee was held, as scheduled, in Calcutta on September 9. Inaugurating the meeting, the Chief Minister of West Bengal, Mr. P. C. Sen, emphasised the special importance of the jute industry to the economy of the State. Every fourth man in West Bengal makes a living directly or indirectly from the cultivation and manufacture of jute. The industry employs 200,000 workers in Calcutta and about 2 million farmers in the State are engaged in jute cultivation. Mr. Sen was, therefore, happy that the Union Government was taking all possible steps to safeguard the interests of the jute industry.

Best Exchange Earner

The jute industry has now acquired a special importance in the economy of the country too. It is the only industry which has been able to achieve the third Plan production and export targets two years ahead of schedule, and has been the country's best foreign exchange earner. In the fourth Plan period, a target of Rs. 180 crores per year has been set for jute goods exports. In view of the increasing cut-throat competition from Pakistan, it would not be easy to achieve such a target. Both Mr. Manubhai Shah, who is the Chairman of the Jute Textiles Consultative Board, and Mr. R. H. Morrison, Chairman of the Indian Jute Mills Association, referred to this problem at some length in their respective addresses. Both of them emphasised the need for co-operation between India and Pakistan in selling jute goods in world market, and Mr. Shah, in particular, appealed to "the Government and leaders of Pakistan to realise that through mutual understanding we get the legitimate price for our goods". If the move is understandable, it is not realistic. It is not for the first time that jute goods producers in this country have expressed a desire for some kind of understanding with Pakistan in the matter, but that country has chosen to ignore all appeals. It believes that it has definite competitive advantages, and is out to make the most of them.

In the circumstances, India must take measures to neutralise Pakistan's competitive advantages by modernising jute mill machinery and by raising the yield and quality from the existing raw jute acreage. In the course of its discussions, the Jute Textiles Consultative Board did right by urging prompt action on these two fronts. The spinning sector of the jute industry has been modernised, while the weaving section still remains untouched. Immediate steps are necessary to instal modern equipment in the latter section. Mr. Shah has promised all necessary help, but so did the other Ministers in the

past. It remains to be seen how the Union Minister's promises are followed up by positive action in New Delhi. Increasing fibre yield per acre may not be easy. The output at present is something like 2.77 bales per acre. In Mr. Shah's opinion this could be raised to 3.8 bales, provided better farming methods are introduced, fertilisers are used adequately and properly and better seeds are widely distributed. But all these require some efficient organisation to do the job — an organisation which could help farmers in taking to better techniques of farming and teach them how to use fertilisers properly. According to the current division of responsibilities, this kind of work must lie in the State sphere. And West Bengal has no proud record in agr culture.

Market Research

Yet another important need is market research in order to expand the market for jute goods. A certain degree of product diversification is also necessary from this point of view. The Jute Textiles Consultative Board has recommended that the jute industry should carry out market surveys through agencies which specialize in this work. But the industry by itself will not be able to carry out the whole operation without official assistance, financial assistance in particular. Liberal help from the Market Research Development Fund, now run by Mr. Shah's Ministry, might well be given. The Board has recommended that a delegation of the jute industry and shippers be sent to Latin American countries to explore market possibilities. The industry must do this, since there must be enough scope for expanding jute goods markets in the developing Latin American economies. While trade delegations have been regularly sent to other parts of this world, this region has been relatively neglected.

The Board was appreciative of the Jute Commissioner's recent measures to curb speculative rise in raw jute. Mr. Joneja has since reinforced his actions by fixing ceiling on purchase quotas for mills in order to stop panicky buying in

the market. The maximum a jute mill can now buy per week is 100,000 bales. But if the situation so demands, this system can be altered after a proper review is made at the end of each weekly period. Raw jute prices have at present steadied around Rs. 40 per maund (basis Assam Bottoms). It is unlikely that they will fall back further. There are a number of reasons for this. In the first place, the jute grower has been hit as hard as any other by the current rise in prices and he cannot afford to sell his fibre cheaply. Secondly, world crops of jute and mesta are about enough to meet global needs, but there would be a shortage if the mills' stocking requirements are taken into account. India, of course, has not much reason to worry about a serious imbalance developing between supply and demand, but the total world situation is bound to affect sentiment here. Still there is no real reason why prices should soar. The Jute Commissioner has released a sizable buffer stock which alone should suffice for the mills' needs until October. Moreover, arrivals in Calcutta have been increasing as floods have receded and rural communications have improved. The approach of the Puja season must also be forcing the farmer to part with his stocks. Arrivals in the month of July, for example, were as high as 326,000 bales, compared with only 203,000 bales in the same month last year. The Indian crop this year is reported to be a good one. In the circumstances, the mills must plan their buying rationally so that fibre prices do not again get out of hand.

Fortunately, the overseas buyer has taken a cautious view of the market situation and he is not rushing in with orders for jute goods. This explains that relative stability in the goods market. The mills have made it known that stocks with them are quite high, capable of meeting demands on a big scale. The August-end figure was a record for many months. Normally it should have been causing them much worry, which it in fact did when stocks rose sharply at the end of July, but this has now turned out to be a blessing in disguise.

Economics of Kerala Quandary

From Our Correspondent

MADRAS:

THE DEFEAT of the Sankar Ministry, as a result of the dissident group in the Congress voting with the Opposition on the 'no-confidence' motion, has brought about a ticklish situation again after two years. Following the resignation of the Sankar Cabinet, President's Rule has been imposed on Kerala and there is now speculation over the date of general elections. An Administrator has also been named and it has been indicated that any change in the date of elections will be decided upon by the Election Commissioner. There will no doubt have to be elections within the next four months as the Assembly was due to be dissolved in any case. But the whole picture has altered as a result of the dramatic developments in the past two weeks and there is an apprehension that it would not be possible for the Congress Party or the Communists to form the Ministry as the votes would be split between different parties. The demand for an inquiry into the charges against the Chief Minister, who has just resigned, could not be agreed to immediately as the Congress High Command was of the view that dissidents can create similar trouble in other States and that there was opportunity for unseating Mr. Sankar if the party could be convinced of the validity of the charges and the public also was made aware of the true state of affairs.

The future of the Congress Party in Kerala is itself in doubt as communal considerations have crept in and the dissidents along with the Muslim League candidates could always

have the determining voice in forming future ministries. The Communists are also divided in their ranks and it would be difficult to predict the opinion of the electorate and how exactly the various parties will emerge successful. It is rather unfortunate that the clock of progress has been put back and there is actually fear in particular quarters that the happenings of the first two Plans would not be repeated.

It was only by the end of the second Plan that significant progress was recorded in particular directions. Even though the State has a large hydel potential it was not properly harnessed. Even now the position in regard to availability of electricity is very difficult and many industrial units have been unable to utilise their capacity on account of the difficulties of the Kerala State Electricity Board to provide the full requirements of the industrial units in terms of electricity. It is only latterly that industrial progress has been gratifying and new complexes are emerging. In the next two or three years many new schemes would be completed and it should not happen that the newly created capacity at heavy cost could not be utilised fully for lack of power.

It is in the interests of the citizens of Kerala that a serious effort should be made to achieve political stability and eliminate mutual distrust. It is rather pathetic to note that in spite of a high level of literacy and intelligence of the population, political squabbles have created serious obstacles in the way of economic progress. Unless there was concentrated attention on the development of irrigation and power projects

An aerial view of L&T's Powai Works

OUT OF THE ACHIEVEMENTS OF THE PAST, A PROMISE FOR THE FUTURE...

Consider almost any field of national development. Food and agriculture? Oil and mining? Power and irrigation? Steel?...Larsen & Toubro is in it....

Blast furnaces at Rourkela. Mining lignite at Neyveli. The first oil refinery in the Public Sector. A power station for Madhya Pradesh. A complex dairy, meeting the daily needs of a large city. A mammoth irrigation scheme changing near-desert tracts into arable land... These are but a few of the major projects where L&T's manufacturing skill, technical know-how and engineering experience have been effectively utilised in the service of the nation.

L&T's Fabrication Shop and Switchgear Factory at Powai is a dynamic industrial unit where many ideas originate and take shape.

It fabricates and manufactures specialised plant and equipment for a variety of major industries; chemical and pharmaceutical, food processing, oil distribution, dairies, switchgear, fertilizers, petro-chemicals and paper. At Sion, Bombay, the Drilling and Mining Division manufactures drills and diamond bits used in mining enterprises all over the country.

Tractors, trailers, cranes and dredgers, supplied by L&T's Earth-moving and Agricultural Equipment Division, are busy at many of India's major projects. Other important L&T Divisions are: Heavy

Plant, Instruments, Industrial Appliances, Cooling Towers and Engineering Projects.

Behind many L&T undertakings is the collaboration from world-renowned manufacturers: GHH, Voith, Koppers, Caterpillar, Laur.Knudsen, Silkeborg, Christensen, Longyear, Audco...

With such varied activities, experience and world-wide contacts, L&T has steadily grown over the years. These significant achievements of the past hold a promise for a still brighter future.

IN SERVICE

LESS SUCCESS

and the promotion of new industries, the large number of educated unemployed cannot be satisfactorily absorbed in different occupations. The leaders of the different communities should ponder over the serious harm that would be caused by continued instability and resolve their differences so that democratic forces can have freer and fuller play.

That there is need for a vigorous effort in many directions will be evident from the fact that the per capita consumption of power is very low at present and it will be a long time before the level of other progressive States like Madras and Maharashtra can be reached. Indeed, it has been pointed out in the annual report of Fertilisers and Chemicals Travancore Limited that against the firm demand for power of 31,000 kW. only 22,220 kW. was made available. This restricted supply too could not be had in the summer months when drastic cuts had to be imposed on account of the poor water storage in the hydel reservoirs. As a consequence, the company could not utilise in full its capacity. FACT is now engaged in the implementation of the third stage of its expansion programme which is expected to cost Rs. 12 crores. The finances required for this scheme are being provided by the Central Government and it is expected that the project will be completed ahead of schedule in 1964-65. The requirements of power will naturally increase to 50,000 kW. But it is not expected that full power supply will be available before 1965-66 which would suggest that the expenditure of Rs. 20 crores incurred on the three stages over a period of years would start yielding full benefits only after a long period of waiting. Apart from the fact that there would be a substantial loss of output of fertilisers which are so badly needed for raising agricultural production, the profitability of investment has been impaired and the shareholders have to wait unnecessarily for a long time in order to receive satisfactory dividends.

Since in Cochin also a number of industrial units are coming up and around the new refinery new petro-chemical units can be started, the opportunity before the State for overcoming the losses sustained in earlier years, in the shape of slow economic growth, should not be missed. Some way should be found to resolve the political muddle and steps should be taken to ensure that there would be no repetition of the dismal happenings in recent years and months.

★★

The paper industry in this part of the country is growing in stature and the scope for further development has been greatly appreciated by the State Governments concerned. The Madras Minister for Industries was naturally proud that the large-sized paper mill of Seshasayee Paper and Boards Limited, constructed with the collaboration of Parsons and Whittemore of USA, was making a significant contribution to the total production of the country. He was participating in a function organised by the company for releasing the 50,000th reel by the Governor of Madras. The Chief Minister, Mr. M. Bhakthavatsalam, inaugurated the pulp plant for manufacturing pulp from bagasse. The location of this new unit costing about Rs. 8 crores has been selected at Pallipalayam, near Erode, because it will be centrally situated for receiving supplies of bagasse and bamboo, the former raw material from the Pugalur Sugar Factory of the Parry group and the latter from the forest

bate not to speak of declaring a satisfactory dividend on the equity capital. The difficulties facing the industry are such that it has not been possible for Mandya National Paper Mills, which is producing paper based on bagasse, to implement its expansion programme for raising capacity to 70 tons daily by issuing fresh equity capital. The required permission for such an issue has already been obtained from the Controller of Capital Issues. But the mill has not been able to operate on a profitable basis and attract fresh capital.

Further development of the industry can take place easily if only the necessary incentives can be provided by the Central Government. Besides Mandya National Paper Mills, Mysore Paper Mills can undertake a further expansion of its capacity to 100 tons daily. West Coast Paper Mills, also in Mysore State, can be encouraged to grow further in size as the management is in good hands. This company is also presently engaged in the development of Andhra Paper Mills while another unit, Sirpur Paper Mills in Andhra Pradesh, has its own expansion plans. Between these six units an output of 1.2 lakh tons can be easily achieved. In the fourth Plan the capacity can be raised further to 2 lakh tons, if not more. Only, the operations of the paper mills should be more remunerative. There are also schemes for starting two entirely new units, one at Bodhan in Andhra Pradesh, and another at Shimoga in Mysore. The availability of bagasse and forest products on a large scale should be very useful.

Mr. R. Venkataraman has also emphasised the need for manufacturing newsprint out of bagasse to the extent of 80 per cent and by importing chemical pulp for about 20 per cent. He has urged that the established paper mills should conduct further research in regard to utilisation of bagasse for the manufacture of newsprint and has promised that the State Government should provide the necessary financial assistance for entrepreneurs who were prepared to take up this work. There is, no doubt, genuine anxiety to undertake the manufacture of newsprint based on bagasse. But a close examination of the costs of production has revealed that newsprint mills can be erected only if the Centre agrees to offer a special development rebate and waive the excise duty now being levied on Nepa newsprint.

Also, it has been suggested that new projects should be allowed to manufacture newsprint as well as printing and writing paper so that the profitability of investment could be

Wanted a Policy for Labour

From Our Correspondent

BOMBAY:

IF IT has prompted so sober an employer as Mr. Naval H. Tata to suggest that "the time has come for Government to reconsider their approach and policy towards labour" and to assert that "labour legislation of the country is out of tune with the industrial requirements and it is far too out-moded to fulfil the ambitious planning of our Government to develop our national economy at an accelerated pace", then, there must be something really rotten in the Government of India's labour policy. And the few instances that he gave of the way in which labour matters are being handled, in the course of his Presidential Address at the Thirty-first Annual General Meeting of the Employers' Federation of India (EFI), last week, serve fully to confirm that conclusion.

Take, for example, the way in which the question of

ensured. There is no escape from the fact that newsprint can be manufactured on a large scale in this country only by utilising bagasse for producing pulp. Some quantities of chemical pulp can, of course, be imported for purposes of mixing. It remains to be seen whether any project for newsprint would fructify in the fourth Plan.

★★

The sugar industry is proving to be helpful to the economy in other respects as well. It has recently been announced that the US Export-Import Bank has agreed to grant a loan for \$2.1 million to the Mysore Acetate and Chemical Company Limited for purchasing plant and machinery to produce cellulose and acetate flakes. Alcohol will be manufactured from molasses by Mysore Sugar Company Limited while cotton linters will be available from nearby sources. The new company, in which Mysore Sugar will be interested as a shareholder, will have the advantage of technical and financial collaboration from American and Swedish interests. Another company is also engaged in the manufacture of cellulose and acetate flakes. The factory of East Anglia Plastics (India) Limited is being constructed at Vishakhapatnam in Andhra Pradesh. The required raw materials are available locally.

★★

Mr. T. T. Krishnamachari's observations in Hyderabad recently have been well received by the citizens of Andhra Pradesh. It is now more or less certain that big projects costing more than Rs. 50 crores would be taken over by the Central Government and financed fully. Indeed, the Union Finance Minister has indicated that support from the Centre for the schemes of the States in the fourth Plan period will be substantial and that the special requirement of individual States will be given serious consideration. It has, however, to be decided how the project financed fully by the Centre should be executed and the benefits derived in as short a period as possible. Under the new arrangement, the remaining work on the Nagarjunasagar Project could be completed more expeditiously. As large acreage will be brought under cultivation by this project and there will be need for developing intensively new acreage, the various problems should be carefully examined and the necessary arrangements completed early in order to derive substantial benefits out of the large expenditure that has been and will be incurred. Mysore, too, will benefit by the new proposals and the big projects that are proposed to be undertaken in the next Plan period should not be difficult of execution.

opening of fair price shops by employers has been handled. The whole approach seems to be: any stick is good enough to beat the employer with. If employers don't open fair price shops, whatever the difficulties in the way may be, a deliberate attempt is made by some circles, it is alleged, to mislead the workers into believing that prices are going up because employers have not opened fair price shops. If this is done by disgruntled labour leaders of a particular political hue, one can understand it, but if the Government also becomes privy to such misrepresentation of facts, however keen it may be to increase the number of such shops, maybe to make a debating point in the Union Parliament or the State Legislatures, the position of employers is bound to become unenviable, apart from the sheer unethicality of it. It is relevant to recall here that, whereas employers have scrupulously en-

deavoured to set up consumer co-operatives in their establishments in accordance with the Industrial Truce Resolution of 1962, the Government as well as labour leaders have been systematically campaigning for fair price shops, and the former has even gone to the extent of threatening to enact legislation to compel employers to open fair price shops. Mr. D. Sanjivayya, the Union Minister for Labour, only recently reiterated this threat. What is unfortunate is that the Government—why talk of some irresponsible labour leaders—has, by this insistence, created the wrong impression that consumers' co-operatives don't charge fair prices and thereby hampered the growth of such co-operatives. Apparently the authorities appear to believe that, in order to keep prices in check, all that they need do is to compel employers to open fair price shops. This may be all right to satisfy labour agitation or to meet the criticism of the Opposition in Parliament, but if these shops are not assured of a continuous supply of the essentials of life at a stable price level, which is Government's responsibility, what can ever these shops do? Who does not know that the Government has miserably failed to ensure this. Surely it cannot be Mr. Sanjivayya's thesis that to open fair price shops is the same as to hold the price line.

Then, again, look at the bungling with regard to recognition of trade unions. Can anything be worse than the Union Ministry of Labour's insistence on employers, lately, to deal with "unrecognised" unions, after propounding all the philosophy under the Code of Discipline in favour of progressive recognition of unions with the object of determining the ultimate sole bargaining agents in an industrial dispute? The Code of Discipline in industry was adopted in 1958 and, at that time, certain criteria were specifically evolved for recognition of trade unions, the main aim being to recognise one union only, either in a unit or in an industry. And it was to avoid all inter-union rivalry that the then Union Labour Minister, Mr. G. L. Nanda, secured the agreement of the four central labour organisations in the country to an Inter-Union Code of Conduct. Even a machinery was contemplated to implement the Code. But what has happened in the event? The Code has hardly been respected by the parties concerned, nor has the contemplated machinery been brought into existence. Meanwhile, the Union Labour Ministry wants employers to deal with even "unrecognised" unions! While employers have been resisting this, without appreciating it, labour leaders have been accusing them of exploiting the multiplicity of unions by resorting to a policy of "divide and rule". Here, too, the Labour Ministry has not bothered to visualise the repercussions of its new directive. As Mr. Tata has pertinently posed, what will the INTUC, which enjoys industry-wise recognition in the Bombay and Ahmedabad Textile Industry, say if a Bombay or Ahmedabad mill-owner chooses to deal with an "unrecognised" union? This is perhaps the coping stone in the structure that seems to be dedulously under construction, albeit unwittingly, by the Government itself to entomb the Industrial Truce Resolution. Mr. Tata is, therefore, fully justified in holding that "unless the Truce Resolution is enforced equitably, by insisting on the observance of all its obligations by both the labour and the employer uniformly — and I would add the Government also — the spirit behind the Resolution, let alone the letter, is

bound to be lost for ever." The Government has itself to thank if employers have lost their faith in the Truce. Its frequent and deliberate misinterpretations of the text of the Truce Resolution on such matters as arbitration have done the greatest damage.

★★

The truth of the old saying that union is strength appears to have dawned even on those ethereal beings of the film world. The recent raids on the houses and studios of some well-known film stars have undoubtedly precipitated the pace as regards the closing of the ranks in the profession. Three separate guilds, one for film stars, one for film producers and one for film distributors, are proposed to be registered, to look after the interests of each of these categories of film interests. The need for three different bodies is presumably because of the mutually conflicting interests of members of these different professions. There may also be certain cases of overlapping interests where one is both a star and a producer as, for example, in the case of Raj Kapoor.

Peculiarities of the Profession

The new organisations may not involve themselves in the question of the recent raids, but they seem to have quite a few points on which they need to seek and obtain clarification from the income-tax authorities and the Central Board of Revenue. Few will concede that the tax authorities are always fair, but film interests in India have special reasons to feel that their case has not been sympathetically treated by the Government. Indeed, they complain that the Department has not cared to pay any heed to the peculiarities of the profession and pattern its taxation scheme accordingly, as is being done in Japan and America. In Japan, for instance, film stars are taxed at a flat rate of 33-1/3 per cent and allowed to keep all the rest of their earnings for themselves. Similarly, in the United States film stars are allowed a tidy expenses account to enable them to live the sort of artificially high life they are obliged to live whilst they last as stars and have their fans to reckon with.

It may be argued: What is the need for a separate tax scheme for film stars? The answer is that every film star, whatever the degree of popularity, enjoys only a few years of vogue. After she or he has strutted and fretted her or his brief hour on the screen, she or he is heard of no more. If it is admitted that film stars play a useful role in society, the State has an obligation to devise for them a scheme of taxation which enables them to deposit the bulk of their earnings with the Government and withdraw them in subsequent years as and when they may come to feel the need for funds. Of course, they cannot escape paying taxes on the amount earned by them, but they may be allowed to pay tax only on that part of their earnings which they may retain for their expenditure during a given period, or draw over a period, as and when they draw, at the rates applicable to the fiscal year in which the withdrawal is made. I gather that it is primarily to persuade the powers-that-be to evolve some such scheme that they have decided to organise themselves, as stated.

The moving finger writes

I AM GLAD that the President has at last been able to fulfil his engagement of a State visit to the Soviet Union. Dr. Radhakrishnan is peculiarly well-qualified to make this gesture of friendship and goodwill on behalf of our Government and our people. After Nehru his is the Indian name best known and respected in the Soviet Union. Dr. Radhakrishnan's journey, however, is more than a formal assignment. It takes place at a time when the Soviet Government is giving impressive demonstrations of its desire for the continuance of friendship and co-operation between the two countries in the post-Nehru phase. There is, for instance, the Soviet offer of financial and technical collaboration with our Government on the Bokaro steel project. It is true that this offer of assistance was made during Jawaharlal Nehru's lifetime. But it is, nevertheless, of importance that the Soviet interest in the project is being fully maintained in the context of the new set-up in New Delhi. More significant still is the magnificent Soviet response to the military delegation under our Defence Minister, Mr. Y. B. Chavan, which returned from Moscow last week after discussing the supply of Soviet defence equipment for this country. President Radhakrishnan's State visit could well serve as a graceful acknowledgement on our part of Moscow's friendliness.

Incidentally, some days ago, "The Times of India" had a news story on Soviet preparations for our President's visit. The report said that the Soviet Government had decided to arrange for the President visiting a nuclear arms plant as a mark of its respect for and trust in the Indian President. The 'respect' I readily understand; but the mention of 'trust' rather intrigues me. The Soviet Government, I suggest, is taking little risk with classified information since our philosopher-President is hardly likely to be much wiser about the intricacies of nuclear weapon-making even after he has had a look at the Soviet plant. In any case, the Soviet Union, I dare say, is not much concerned over the prospects of a nuclear arms challenge from India. Let President Ayub worry if he will.

★★

Kerala, politically ill again, has once more been put on its favourite diet of President's rule. It is true that this arrangement is intended to be a temporary one pending the general election for the State legislature which, in the normal course, is due to take place early in the new year. But it is doubtful that the poll would be able to spawn a stable Ministry for the State. Kerala's Communists are as sharply divided as Kerala's Congressmen, while the Samyukta Socialist Party (SSP) cannot hope to govern the State except in uneasy alliance with one or more groups of Congress or Communist apostates. The Muslim League, of course, is very much there — able and willing to drive a hard bargain with the sponsors of any possible coalition. In certain quarters there is already speculation about the possibility of a Congress alliance with what is described as the official (or right-wing) Communist Party. That such a suggestion could have been made at all speaks eloquently of the mess which the Congress has made of itself in Kerala. It is possible that the so-called "progressives" within the Congress Party will attempt to sell some such idea to the Congress High Command and I expect gentlemen such as Mr. K. D. Malaviya, for instance, to be active in this cause. I do hope, however, that they will receive no encouragement from leaders, such as, Mrs. Indira Gandhi. I must hasten to add that I quite remember Mrs. Indira Gan-

dhi's role as Congress President in 1959 when President's rule had to be imposed on Kerala following the breakdown of administration under the Communist Ministry of Mr. E. M. S. Namboodiripad. But times are known to change as also men (which includes women).

★★

The tragic murder of the Solicitor-General has incited hysterical outbursts in high places demanding security arrangements for VIPs. I submit that much of this agitation is misconceived. The burglary which culminated in the murder was committed in a locality in the heart of a New Delhi area which must be presumed to have been reasonably policed in the normal manner. It would have been a different matter had the crime been committed in an outlying suburb, ill-served in the matter of normal police vigilance or maintenance of law and order. The mere fact that the victim of the Akbar Road tragedy happened to be a VIP should not make us lose our perspective. It is just not possible for the police of any city anywhere in the world to provide hundred per cent security for the person or property of any citizen, no matter how high his status is. It is, again, quite impractical to suggest that the police should make special security arrangements for all high-placed officials as a matter of course. While protection must be given to any citizen, high or low, who approaches the police for protection on reasonable evidence of a threat to his person or property, it is certainly not within the resources of the authorities concerned to organize constant vigil for VIPs as a class on the same or similar lines as is and must be done for a very limited number of holders of public office, such as the President or the Prime Minister. While we must certainly deplore crimes such as the one committed at 22, Akbar Road in the early hours of September 9, the brutal fact remains that so long as there are men who would kill from cupidity or other passions, there must always be occasions when they manage to find victims.

Incidentally, a highly imaginative staff reporter of "The Statesman", working on the story of the murder, spun out a yarn about a white Bull terrier which, according to him, was found to have mysteriously disappeared after the crime. Within 24 hours the story was curtly contradicted by an annoyed police official who said that the dog was not missing at all but had all along been in the servants' quarters of Mr. Sanyal's residence. In confirmation, he took Pressmen to where the dog was tied up and the animal, it turned out, was no ferocious mastiff but simply a likable mongrel. Now, why I am recounting all this is because I want to share with my readers my admiration of the slickness in the subsequent reporting in "The Statesman" of the "recovery" of the dog which, in the first instance, had not been missing at all. Said "The Statesman" with a perfectly straight face: ".....Mr. Sanyal's dog, Tippy, which was missing since Tuesday night, has been found. It was discovered in the servants' quarters on Thursday morning". That reminds me of Columbus' discovery of Red Indians. In the first place, they were neither "red", nor were they "Indians"; secondly, nobody had ever said that he had lost or mislaid any "Red Indians"; and, finally, Columbus did not discover them, but only invented them — just as "The Statesman" invented the white Bull terrier mysteriously lost somewhere on the murder trail.

INTERNATIONAL PAYMENTS

PRESENTING THE annual survey of the activities of the International Monetary Fund, at its meeting in Tokyo, on September 7, 1964, its Managing Director, Mr. Paul Schweitzer, paid glowing tributes to Japan where rate of growth in recent years had considerably exceeded that of any other industrial country and although the very rapid transformation of the economy had at times given rise to certain strains, this progress had been achieved with a substantial degree of monetary stability. For the developing countries, he said, the example of Japan was an inspiration. Here was a country which, although densely populated and not endowed with rich natural resources, had, through the efforts of its people, succeeded in developing into a major industrial power. Proceeding to the review of the past year, he pointed out that the exchange markets, generally, had been calm. Among the less developed countries, there were fewer cases of balance of payments strains than in other recent years. One of the most encouraging developments in world payments last year was a considerable improvement in the position of a large number of less developed countries, mainly as a result of the rise in their export receipts. This has naturally diminished the need of these countries for Fund assistance. Thus, since the two transactions in the summer and autumn of 1963, the Fund has received no further requests for drawings under the compensatory financing facility that was created last year to meet temporary short-falls in export receipts. The past twelve months have nevertheless been among the more active in the Fund's history in the field of its financial operations. Stand-by arrangements attained a record level and drawings have been higher only in three previous years. As external conditions have been relatively more favourable for the developing countries in the past year, the IMF's financial support to them has tended to be associated, more than has been usual, with imbalance arising largely from internal causes: in particular, large budget deficits seem often to have been the major cause of payments difficulties. In such cases, Fund assistance is normally granted only in association with a stabilization programme undertaken by the member.

Export prices, after years of decline, showed a marked revival in 1963 and, for the first time in some years, export receipts of developing countries grew at the same rate as those of developed countries. As a result, the over-all balance of payments positions of the less developed countries improved greatly, and a deficit of \$650 million in 1962 was replaced by a surplus of \$850 million in 1963. Though exports have expanded further in the first few months of 1964, there are signs that the surplus will be diminishing. The rise in prices seems to have levelled off in recent months, but economic activity in the industrial countries remains generally strong and the chances appear good that demand for primary products will continue on a high level. Nevertheless, judging from past experience, it is to be expected that the imports of the developing countries will sooner or later catch up with the improvement in their export earnings, bringing their reserve accumulation to a halt. Although pressures on the balances of payments of the developing countries are, therefore, likely to increase, a rise in their imports is in itself desirable, for without it the development of real resources will be much slower.

The general prosperity in the industrial countries during the past year provides the major part of the explanation of the recent strong export position of the primary producing countries. It is of major concern to the whole world that favourable conditions should continue in the industrial countries. Fortu-

nately, the immediate outlook in these countries is favourable. During the first half of 1964, industrial production has continued to increase in most of them although there have been significant changes in the rates of expansion. In the United States the rise in output accelerated in response to the tax cut introduced earlier this year. The official forecast is that the present expansion will continue well into 1965, with a further reduction in unemployment, which is now at its lowest level in five years. This continued expansion in the United States, which proceeds under conditions of virtual price stability, cannot fail to have a stimulating impact on business conditions in the world at large. At the same time measures in which balance of payments considerations have played a prominent part have recently moderated the economic expansion in both the United Kingdom and Japan, and indications are that their rates of growth will be slower in 1964 than in 1963. Although the current rate of increase of output in Japan is still high by the standards of the other industrial countries, it appears to be compatible with balance of payments equilibrium in the foreseeable future. In the United Kingdom, the moderating policies adopted earlier this year appear to have lowered the increase in demand to an annual rate of 4 per cent which is more in line with what the authorities consider sustainable over the longer run. During the past year, several countries on the European continent have also taken measures of financial restraint, but predominantly to counter inflationary pressures rather than on balance of payments grounds. For some time the restraining measures have been taking effect, and there has recently been a slowdown in the rate of increase in industrial production in several countries and, in some, a marked strengthening of their balance of payments positions. At the same time, cost increases in several countries have continued to cause concern and it is understandable that the authorities must continue to pay considerable attention to restraining pressures on prices.

PUNJAB CHAMBER

Speaking at a meeting of the Punjab and Delhi Chamber of Commerce held recently in New Delhi, the Chief Minister of Punjab, Mr. Ram Kishan, invited the industrialists to set up such industries as would help modernise agriculture. In this connection, he emphasised the importance of producing improved types of agricultural implements, tractors and power tillers and pesticides. He opined that Punjab had the potential to produce superior quality cotton comparable to that produced in the Sudan and Egypt. He visualised the development of the water resources of Punjab on the pattern of Switzerland and its dairy resources on the pattern of Denmark. The policy of his Government, he added, was to reduce the pressure on land by providing rural population with employment opportunities in the industrial field. With this aim in view, the State would take steps to ensure that shortage of land and power was not allowed to stand in the way of industrial development. He particularly emphasised the role which the new administration was going to play in the development of the State and said that all doors would be open to the industrialists and that they would no longer need to follow the back-door methods. In his welcome speech, the Chairman of the Chamber, Mr. Charat Ram, referred to the problem of 'food and prices' and emphasised that the hoarding of foodgrains at the producer's or distributor's level must be distinguished from normal stocking, for unlike green vegetables which were brought for day to day consumption, foodgrains were harvested two or three times in a year and were, therefore, stocked for sale in the ensuing months. The hoarding could, therefore, take place only till the arrival of the next crops. If the Government was

not interested in finding temporary scapegoats it should, he added, realise the inadequacy of indigenous production and take steps to increase agricultural yield.

METALS SCRAP CORPORATION

With a view to putting an end to the uncertainties resulting from disorganised efforts and unhealthy trade practices, a 'Metals Scrap Trade Corporation' has been constituted and registered in Calcutta, as a public limited company, for the purpose of collecting and processing of ferrous scrap for supply to the domestic furnace owners and for exports. It will be a tripartite joint enterprise of the Government-owned Minerals and Metals Trading Corporation, the ferrous scrap collecting and exporting interests, and the domestic users of scrap (indigenous melting furnace owners), all holding equal shares. It will negotiate long-term contracts with overseas parties for the export of scrap at favourable international prices. The authorised and issued capital of the Corporation will be Rs. 2 crores and Rs. 30 lakhs respectively. The annual turnover of the Corporation will be about Rs. 10 crores, consisting largely of exports.

The trade in metal scraps has hitherto been affected by quantitative and qualitative uncertainties, price fluctuations and disorganisation, both on the domestic and export fronts. While scrap exporters have been facing problems concerning availability, proper pricing and shipping for export, the indigenous furnace owners also have been experiencing difficulties in keeping their melting furnaces going. On the whole, these circumstances have led to slackness in the collection of scrap from all over the country on an organised mass scale. It is, therefore, of great significance that the divergent interests in this trade have become partners, along with the Government-owned Minerals and Metals Trading Corporation, in a joint enterprise aimed at not only augmenting the indigenous production of steel castings and re-rolled material, but also furthering the exports of scrap on a long-term export contract basis on the lines of the export contracts for iron ore. The main problem in this field is the collection on a mass scale of ferrous scrap which is available from big and small engineering factories and in the form of disused capital scrap (discarded iron and steel articles, vehicles, rails, worn-out machinery etc.) scattered all over the country. Whether for domestic use or for export, such scrap often needs processing in various forms like skull cracking, baling, briquetting and detinning. The Corporation will undertake the collection and processing of such scrap. Mr. K. J. Cleetus, former Director of the Hindustan Steel Limited, has been appointed as the Chairman-cum-Managing Director of the Metals Scrap Trade Corporation.

INDUSTRIAL PRODUCTION

Though generally the industrial production has been rising from year to year, the increase in the rate of growth has not been encouraging. Latest figures are available for the past five months (January to May) of 1964, during which the general index of industrial production rose by 11 points to 170.9 as compared to the corresponding period in 1963 when the general index had increased by 12.1 per cent as compared to the corresponding period in 1962. In terms of percentage, the rise in industrial production during January-May, 1964 was only 6.9 per cent as compared to the corresponding period in 1963 when the rise was 8.2 per cent as compared to the corresponding period in 1962. The industries leading in the increase in output in January-May 1964 as compared to the same period in 1963, include railway wagons (+33 per cent), automobiles (+31 per cent), caustic soda (+26 per cent), machine tools (+24 per cent), bicycles and sulphuric acid (+23 per cent each), rayon yarn, power transformers and electricity generation (+18 per cent, each). The industries that have shown a decline in production in January-May 1964, as compared to the same period in 1963, include sewing machines (-73.3 per cent), electric fans (-32.6

per cent), ammonium sulphate (-5.9 per cent), mining and quarrying (-4.3 per cent), coal (-4.1 per cent), tea (-3.3 per cent) electric motors (-2.4 per cent), chemicals and chemical products (-2 per cent) and iron and steel basic industries (-0.5 per cent).

PRICE BOOST TO CEMENT

In order to achieve maximum utilisation of the existing capacity for cement manufacture in the country, the Government of India has sanctioned an extra price, ranging from Rs. 2.50 to Rs. 5.50 per tonne, to cement producers in respect of production in 1964 in excess of the best annual production during three years ending 1962. This extra price is meant to compensate the producers for the additional expenditure which they may have to incur in maximising production with the existing capacity. The increase in the price payable to some of the producers will not affect the consumer prices which remain unchanged. Details of the gazette notification giving the name of the producer, the extra amount per tonne payable and the limit of the quantity in tonnes over and above which the extra amount is allowed are as follows:

U.P. Government Cement Works, Churk — Rs. 5.50 — 2,20,000 in any year ending October 31; K.C.P. Ltd., Machheria — Rs. 5.50 — 1,15,000 in any year ending October 31; Shree Digvijay Cement Co. Ltd., Sikka works — Rs. 2.50 — 2,60,000 in any year ending December 31 provided the combined production of the Sikka and Bombay works of the company is not less than 4,10,000 tonnes in that year, and the Bombay works — Rs. 2.50 — 1,50,000 in the year ending December 31, 1964, provided the combined production of the Sikka and Bombay works is not less than 4,10,000 tonnes in the said period; Dalmia Cement (Bharat) Ltd., Dalmiapuram — Rs. 5.50 — 4,95,000 in the year ending December 31, 1964; Andhra Cement Co. Ltd., Vijayawada — Rs. 5.50 — 1,72,000 in the year ending December 31, 1964; Orissa Cement Ltd., Rajgarh — Rs. 5.50 — 3,80,000 in the year ending December 31, 1964; Rohtas Industries Ltd., Dalmianagar — Rs. 5.50 — 3,27,000 in the year ending December 31, 1964 provided the combined production of the factories of Rohtas Industries and Ashoka Cement Ltd., Dalmianagar, is not less than 5,02,000 tonnes in the said period; Ashoka Cement Ltd., Dalmianagar — Rs. 5.50 — 1,75,000 in the year ending December 31, 1964, provided the combined production of the factories of Ashoka Cement and Rohtas Industries, Dalmianagar is not less than 5,02,000 tonnes in the said period; Mysore Iron and Steel Works Ltd., Bhadravati — Rs. 5.50 — 81,000 in the year ending December 31, 1964; Associated Cement Co. Ltd., Bombay, of which (A) Lakheri (Rajasthan) Works — Rs. 5.50 — 36,000, (B) Dwarka (Gujarat) — Rs. 5.50 — 2,61,000, (C) Banmore (M.P.) — Rs. 5.50 — 64,000, (D) Kymore (M.P.) — Rs. 5.50 — 5,03,000, (E) Shahabad (Mysore) — Rs. 5.50 — 4,98,000, (F) Madukkarai (Madras) — Rs. 5.50 — 2,93,000, (G) Khilari (Bihar) — Rs. 5.50 — 1,13,000, (I) Surajpur (Punjab) — Rs. 5.50 — 4,64,000, (J) Kistna (Andhra) — Rs. 5.50 — 2,53,000, (K) Chaibasa (Bihar) — Rs. 5.50 — 3,24,000, (L) Sevalia (Gujarat) — Rs. 5.50 — 2,03,000, (M) Sindri (Bihar) — Rs. 5.50 — 2,77,000, (N) Mancherla (Andhra) — Rs. 5.50 — 2,28,000 all in the year ending December 31, 1964; Dalmia Dadri Cement Co. Ltd., Dalmia Dadri — Rs. 5.50 — 1,76,000 in the year ending December 31, 1964; Bagalkot Cement Co. Ltd., Bagalkot — Rs. 5.50 — 1,80,000 in the year ending December 31, 1964; Jaipur Udyog Ltd., Sawaimadhopur — Rs. 5.50 — 7,55,000 in the year ending December 31, 1964; India Cement Ltd., Madras, Talaiyuthu Works — Rs. 2.50 — 4,52,000 in the year ending December 31, 1964; Birla Jute Manufacturing Co. Ltd., Cement Department, Satna — Rs. 2.50 — 2,44,000 in the year ending December 31, 1964; Kalyanpur Lime and Cement Works Ltd., Banjari — Rs. 2.50 — 1,42,000 in the year ending December 31, 1964; and Sone Valley Portland Cement Co. Ltd., Japla — Rs. 5.50 — 2,35,000 in the year ending December 31, 1964.

RESERVE BANK OF INDIA

Applications are invited for the following posts in the undernoted departments of the Reserve Bank of India:—

(A) POSTS AND SCALES OF PAY:

- (i) Deputy Directors : Rs. 850-60-1150.
- (ii) Research Officers : Rs. 430-430-55-815 EB 55-925-60-1045.
- (iii) Junior Officers Grade II in the Legal Department : Rs. 375-20-535-25-560 EB 25-660-30-720.

Note: Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scales.

In addition to pay the selected candidates in all categories mentioned above will be eligible to draw local pay, (at centres where it is admissible), house allowance and dearness allowance at the rates prescribed by the Bank from time to time.

(B) QUALIFICATIONS:

(i) **Deputy Directors, Economic Department:** Applicants should possess first or high second class Master's degree in Economics of an Indian or foreign University or a Doctorate degree in Economics of an Indian or foreign University. They must have experience of research work for at least five years in one or more of the following subjects: (a) Monetary Economics, (b) Banking Theory, and Practice, (c) International Trade and Finance, (d) Agricultural Economics and (e) Planning and Development.

(ii) **Research Officers, Economic Department:** Applicants should possess first or high second class Master's degree in Economics or Commerce of an Indian or foreign University or a Doctorate degree in Economics of an Indian or foreign University, and a period of research work in one or more of the following subjects: (a) Monetary Economics, (b) Banking Theory and Practice, (c) International Trade and Finance, (d) Agricultural Economics and (e) Planning and Development. Applicants are expected to be proficient in economic analysis. A period of practical banking training will be an additional qualification in respect of applicants with specialisation in (a), (b), and (c) above and experience of agricultural surveys in respect of (d) above.

(iii) **Junior Officers Grade II, Legal Department:** Applicants should be Advocates or Solicitors and should possess in addition to high academic qualifications in Law, practical experience of work in an Advocate's or Solicitor's office or have practised independently, for at least 3 years. Preference will be given to candidates having M.L. or LL.M. or other equivalent qualifications and special knowledge of Banking and Company Law.

THE SELECTION BOARD WILL INSIST ON A VERY HIGH STANDARD OF SUITABILITY IN MAKING SELECTIONS FOR THE ABOVE POSTS AND ONLY THOSE CANDIDATES WHO POSSESS HIGH ACADEMIC QUALIFICATIONS AND/OR ADEQUATE EXPERIENCE OF THE TYPE SPECIFIED ARE ADVISED TO APPLY.

(C) AGE LIMITS AS ON 1ST SEPTEMBER, 1964:

(i) **Deputy Directors:** Candidates should be between 30 and 40 years of age but the age limit may be relaxed in the case of candidates possessing exceptional qualifications.

(ii) **Research Officers:** Candidates should not ordinarily be over 35 years of age but the age limit may be slightly relaxed in the case of candidates with exceptionally good qualifications and/or experience of value to the Bank.

(iii) **Junior Officers Grade II:** Between 21 and 27 years. The maximum age limit is relaxable but not beyond 32 years in the case of:

(a) candidates possessing special qualifications and experience of value to the Bank; and

(b) candidates belonging to the Scheduled Castes or Scheduled Tribes.

2. Candidates who wish to apply for more than one category of posts must submit separate applications accompanied by separate application fees and should clearly indicate the post and the department for which they have applied.

3. Applicants for the above posts must remit with their applications a fee of Rs. 7.50 for each post by cheque or bank draft on a scheduled bank payable at Bombay or by Postal Order. The application fee is in no case refundable. In the case of candidates belonging to Scheduled Castes/Tribes the fee will be reduced to one fourth.

4. Applications in the candidate's own handwriting in the prescribed forms obtainable from the Reserve Bank's offices at Bombay, Calcutta, Kanpur, New Delhi, Nagpur, Madras, Bangalore, Hyderabad, Trivandrum, Lucknow, Patna and Jaipur accompanied by copies (originals should not be sent) of certificates regarding age and educational qualifications, statements of marks secured in the graduate and post-graduate degree examinations and copies of two testimonials should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay-1 so as to reach him on or before the 3rd October, 1964.

5. Candidates already in service will be required to produce a proper discharge certificate from their employers in the event of their being selected at the time of their appointment in the Bank's service.

6. Candidates belonging to Scheduled Castes/Scheduled Tribes should mention this fact prominently in their applications and also enclose a copy of the certificate to that effect from competent authority.

7. Candidates must be prepared to serve in any office of the Bank in India or group of departments to which they are posted and to undertake tours when required.

8. Selected candidates will have to appear for interview/s before the Selection Board at any of the Bank's offices.

9. Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

10. If any candidate desires to have his application acknowledged, he should send it by "Registered Post — Acknowledgment Due". Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

11. Canvassing in any form will be regarded as disqualification.

Company Affairs

MUKAND IRON

WHILE ADDRESSING the annual general meeting, Mr. Kamalnayan Bajaj, Chairman, Mukand Iron & Steel Works Limited, referred to the chronic shortage of steel in the country. It appeared that the situation would further deteriorate as a result of the failure of negotiations with the USA for setting up the Bokaro plant. The Union Government recovered from this setback as a result of its determination to go ahead with the project, possibly with Sov'et assistance. Although the final shape of the project was not yet clear, negotiations were proceeding smoothly. The Chairman pointed out that the misunderstanding of the Western countries had largely been cleared and India could expect assistance from the West for two more steel plants in the public sector as well as increased capacity in the two main private sector projects.

The Chairman highlighted the fact that the re-rolling industry found a considerable portion of its capacity idle for want of adequate supply of billets. It would, therefore, be a national waste to allow the main producers of steel to increase their capacity for similar products. This fact, the Chairman pointed out, had been brought to the notice of the Government repeatedly and he hoped that due consideration would be given for the allocation of adequate supply of billets to re-rollers while formulating the steel expansion project during the fourth Plan. They could also be allowed to develop additional capacity which they could do with much less investment. He also suggested that the Government should encourage the re-rollers to instal large-scale billet making plants.

Mr. Kamalnayan Bajaj indicated that the re-rolling industry through the Steel Re-rolling Mills Association periodically announced the selling prices so that the consumers did not have any complaint regarding their selling prices. He added that in spite of the increase in cost of production the selling prices had remained comparable with the prices at which identical products of the major producers were sold. The Government's billet pricing and freight policies placed the re-rollers at a considerable disadvantage.

The Chairman informed the shareholders that the company's expansion programmes both at Kurla and Kalwa were in their process of execution and it was hoped that Kalwa project would go into actual production by the middle of 1965. The machine building and structurals project at Kurla was being implemented. In the steel foundry, the Chairman expects a target of 10,000 tonnes to be achieved during the current year. The progress achieved by a subsidiary of the company, the Bata Engineering Co., in the Rallabgarh project was also quite satisfactory.

The Chairman welcomed the recognition by the Planning Commission that in the formulation of the fourth Plan, it was desirable to divide the projects into two specific categories consisting of core projects comprising basic industries and agriculture which would be implemented fully from available resources and non-core projects which were to be implemented depending upon availability of further funds.

ADITYA MILLS

Mr. B. Kanoria, Chairman of the Aditya Mills Limited, while addressing the annual general meeting held recently, expressed considerable satisfaction about the working. He stated that a few thousand spindles started operating in March 1963 although the mill faced various teething troubles on account of untrained workers and high speed machines. Among the problems that the mills faced, power supply was considered to be a major one. There were frequent interruptions

which ranged from a few minutes to long intervals of as much as 103 hours at a stretch, which caused a big loss of production. The company has, however, approached the Rajasthan State Electricity Board which supplies power from the Chambal Hydel project, with a request to give more serious thought to the matter. The Chairman was hopeful that necessary steps would be taken to ensure regular and uninterrupted supply of power.

The spinning mills in Rajasthan State were also at a considerable disadvantage because they have to sell their production of yarn outside the State in the absence of adequate number of power looms in the region. This means a considerable amount of additional expenditure on transport charges, as against the spinning mills in other States such as Maharashtra and Madhya Pradesh, where an adequate number of power looms exist. Handicap is also felt by the spinners in the absence of a properly developed hosiery industry in the State. The Chairman observed that it could be run on small scale and could help in increasing the consumption of yarn and also provide employment to a larger number of population. The Chairman added that it was more profitable to spin artificial fibre rather than cotton and, therefore, the company had purchased a small quantity of such fibre to take a trial.

Referring to the Second Wage Board for the textile industry announced by the Government, the Chairman indicated that the recommendation of the First Wage Board regarding the large-scale rationalisation along with wage increase was not put into practice. In actual fact the wages went up without the mills getting much of the benefit. He hoped, therefore, that the present Board will keep in mind these recommendations.

BIRLA COTTON

The Birla Cotton Spinning and Weaving Mills Limited had reported encouraging working results during the year ended March 31, 1964. Sales went up steeply from Rs 7.3 crores to Rs. 9.7 crores while profits after providing for directors' and managing agents' remuneration showed a distinct improvement from Rs. 42.39 lakhs to Rs. 65.90 lakhs. The directors have maintained the dividend at Rs. 2 per ordinary share (subject to deduction of tax) which absorbs Rs 7.99 lakhs.

Though there was further increase in the manufacturing cost on account of the increase in prices of raw materials, stores and spare parts, fuel, power, dyes and chemicals, and rise in the wage bill due to the enhanced dearness allowance paid to the employees, the working results of the Textile Mills have been better. The stock of finished products has gone down to a considerable extent at the close of the financial year.

The ginning and pressing factories also have shown satisfactory results during the year under review. Steps are being taken to establish two more ginning and pressing factories, one at Fatehabad (Punjab) and another at Sangar (Rajasthan). The directors hope that these factories will start working in the ensuing cotton season.

At the request of the defence department, the capacity of the Tent factory was stepped up during the year. The production of this factory is significantly higher than in the previous year. The working results are also better than last year.

The Chenab Textile Mills could not go into production in the beginning of 1964 as scheduled. This was mainly due to the delay in providing electric power load to the factory by the State Electricity Undertaking and partly due to the late arrival of Blow Room machine from Japan. The

Two Powerful Tyres for Heavy Duty

Here are two Dunlop tyres of tremendous strength and durability. Massive tyres. Working under the killing sun or deep into the night by the powerful beams of scores of flood lights. Propelling the gigantic earthmoving machines amidst the loud clangour of incessant work... at Koyna, Nagarjunasagar, Kosi, Sharavathi, Beas... in the iron ore mines of Bihar, Madhya Pradesh, Goa... in the farflung coalfields of the National Coal Development Corporation and at many other project sites all over India. These are tyres proved in service.

LONGEST TYRE MANUFACTURING EXPERIENCE IN INDIA

Two distinctive shirtings by BINNY

COROLIN

Available in a wide variety of check designs suitable for wear in your leisure hours.

DOUBLE DIAMOND

This fine new cloth woven from Egyptian cotton is cool and comfortable to wear and handsome in appearance.

The hidden value of Binny's Double Diamond, and Corolin lies in the fine imported cotton which guarantees the built-in durability characteristic of every Binny fabric.

Buy your requirements of BINNY fabrics at controlled rates from authorised BINNY Stockists who display this sign board.

JMT/87/2668

THE BUCKINGHAM & CARNATIC COMPANY LIMITED. A SUBSIDIARY OF BINNY & CO. LIMITED, MADRAS.

factory is expected to go into production very shortly.

Some land has been purchased at Khurja for the U.P. Textile Mills. As it was not possible to get the entire land directly, the company has requested the U.P. Government for acquiring the necessary land. In spite of the company's continued representations and strenuous efforts the U.P. Government has done nothing so far in this respect. Orders for most of the machinery and plant have already been placed for this unit.

The provision for depreciation is substantially higher at Rs. 13.68 lakhs as compared with Rs. 9.19 lakhs in the preceding year. Development rebate reserve claims Rs. 5.44 lakhs against Rs. 2.44 lakhs while general reserve absorbs Rs. 16.60 lakhs against 11.75 lakhs. A sum of Rs. 22.20 lakhs is set apart for deferred taxation reserve against Rs. 12.50 lakhs while Rs. 6.44 lakhs (Rs. 3.67 lakhs) is provided for managing agents' and directors' remuneration.

HINDUSTAN DOWIDAT TOOLS

The building and the construction of the plant and equipment of the Hand Tool Factory of the Hindustan Dowidat Tools Limited were successfully completed towards the close of the year 1963-64 and the plant commenced production in the first week of April 1964. Though there were a few teething troubles in the initial stage, the working of the factory after the start-up has been very satisfactory. The production started with Open Ended Spanners of various sizes which is being followed by the inclusion of other items like Ring Spanners, Adjustable Wrenches, Multigrip Pliers etc. The company's products have been well received by the market and their reputation for quality is well established.

The training of Indian workers and personnel under the guidance and supervision of foreign technicians is proceeding satisfactorily and efforts are being made to accelerate the training programme so that the company could introduce the second shift as early as possible.

The company had been experiencing some difficulties in the import of raw materials. But the position has improved lately and the directors hope that adequate import licences will be available to meet the requirements.

The profit and loss account for the year ended March 31, 1964 shows a deficit of Rs. 9,613, after capitalising a sum of Rs. 5,57,300 (including Rs. 29,849 for depreciation) as Project Cost, making the total cost of the fixed assets at Rs. 44.43 lakhs. The deficit of Rs. 9,613 is carried forward to the next year's account.

HIND CYCLES

Despite a steady increase in production and sharp rise in sales, Hind Cycles Limited has earned a lower gross profit of Rs. 6.95 lakhs for the year ended March 31, 1964 as compared with Rs. 7.87 lakhs in the previous year. Provision for depreciation is slightly higher at Rs. 6.28 lakhs against Rs. 6.21 lakhs, while the allocation to development rebate reserve is substantially lower at Rs. 0.25 lakh as compared with Rs. 0.94 lakh in the previous year. No provision has been made for arrears of depreciation aggregating Rs. 11.45 lakhs and arrears of preference dividend amounting to Rs. 7.13 lakhs. As the working results are not encouraging no dividend either on preference shares or on equity shares has been declared for the year.

During the year under review the company produced 1.60 lakh cycles against 1.28 lakh cycles in the preceding year and 1.12 lakh cycles in 1961-62. In spite of the steady rise in production, the financial results have not shown any marked improvement over the previous year. This is mainly due to the steep increase in the prices of raw materials and stores such as steel tubes, wires, tyres etc. and the rise in wage bill.

Despite this all-round rise in manufacturing costs the Government has forzen the price of bicycles on the basis of the price prevailing in July, 1963.

The company has been appointed as selling agents of looms, spare parts etc. of CIMMCO in the territory of Greater Bombay with effect from April 1, 1964. The company has applied to the Government for the approval of the selling agency.

FRICK INDIA

Frick India Limited will enter the capital market shortly with a public issue of Rs. 10.25 lakhs. It has been sanctioned a Cooley loan of Rs. 25 lakhs under PL 480 against the guarantee of its collaborators, Frick Company of Waynesbone, USA. It has been granted an import licence of the value of Rs. 11.36 lakhs to import machinery against foreign capital participation. Orders for indigenous machinery have also been placed. It has an authorised capital of Rs. one crore and issued capital of Rs. 25 lakhs, all in equity shares of Rs. 10 each. Bombay Ammonia Private Limited, the Indian promoters, have been allotted 5,000 shares and additional 15,037 shares have been taken up by the directors, their friends and associates. The foreign collaborators have agreed to subscribe for 127,500 shares. The balance of 102,493 shares of Rs. 10 each will be offered for public subscription.

The company will manufacture refrigeration equipment for cold stores, food processing plants, ice plants, etc. The capital outlay on the project is estimated at Rs. 78 lakhs which will be financed to the extent of Rs. 25 lakhs through share capital, Rs. 25 lakhs through US AID loan and Rs. 23 lakhs through bank borrowings. The technical collaborators will also act as technical advisers and will lend their trade name "Frick."

CAPITAL ISSUES

Six companies have been authorised to raise capital aggregating Rs. 139.43 lakhs. Of these, three will be issuing bonus capital, one is issuing debentures, another equities, and the sixth equity plus preference shares. Foreign collaboration is involved in the case of one company. The consent of the Controller of Capital Issues is valid for 12 months in all cases.

Polychem Limited, Bombay, is to issue Rs. 24 lakhs bonus capital in 48,000 equity shares of Rs. 50 each, on capitalisation of the Share Premium Account to a like extent. The bonus shares will be offered on the existing equity shareholders of the company in the proportion of 3 bonus shares for every 7 equity shares held.

The Deccan Sugar & Abkhari Company Limited, Madras, is to issue shares of the value of Rs. 6.64 lakhs on capitalisation of share premium account. The bonus shares will be issued in the ratio of one bonus share for six shares held now.

Alcock Ashdown & Company Ltd., Bombay, is to issue Rs. 3,47,000 bonus capital in shares of Rs. 100 each, on capitalisation of Share Premium Account to a like extent. The bonus shares will be allotted to the existing equity shareholders in the proportion of one bonus share for every fifteen shares held.

Bharat Collieries Limited, Calcutta, is to issue 29,853, 6½ per cent unsecured perpetual debentures of Rs. 100 each at par to the preference shareholders in lieu of their 5½ per cent cumulative preference shares of Rs. 100 each, in accordance with the Calcutta High Court's order dated January 29, 1963.

Sundaram-Clayton Limited, a public company, is to issue privately a further capital of Rs. 35,47,700 divided into 35,477 equity shares of Rs. 100 each, for cash, at a premium of Rs. 7 per share. Of the issue, 17,477 equity shares will be offered to Adwest Engineering Limited, England, for cash in sterling to be utilised for the purchase of plant and machinery and the balance shares of the value of Rs. 18 lakhs would be subscrib-

ed by T. V. Sundram Iyengar & Sons Pvt. Ltd. and their associates. The money will be extended for implementing the company's steering gear manufacturing project.

Hub Bolts & Nuts India Limited, a public company proposed to be incorporated in the State of Gujarat, is to issue capital of Rs. 40 lakhs, for cash at par, divided into 27,000 equity and 13,000 preference shares of Rs. 100, each carrying dividend not exceeding 9.5 per cent. The money will be utilised for financing the manufacture of starter gear rings, wheel bolts, nuts, etc.

LICENCES ISSUED

The following licences were issued under the Industries (Development and Regulation) Act, 1951 during the week ended August 22, 1964. The list contains the names and addresses of the licensees, articles of manufacture and annual installed capacity.

AUTOMOBILES

Sankey Wheels Ltd., Wakefield House, Sprott Road, Bal-lard Estate, Bombay-1 (Durgapur, West Bengal) — Tractor Wheels — 20,000 Nos. per annum.

MINING MACHINERY

Meameco Limited, 4, Clive Row, Calcutta-I (Dhanbad, Bihar) — 15", Anderson Boyes Coal Cutting Machines & Spares 36 Nos. per annum.

MACHINE TOOLS

Beegee Corporation Pvt. Ltd., 25, Factory Area, Patiala (Patiala, Punjab) — Special Hydraulic Presses up to 100 tonnes — 600 Nos. per annum.

DRUGS AND PHARMACEUTICALS

Boots Pure Drugs Co. (India) Pvt. Ltd., Sion Works, Bombay-22 (DD) (Bombay, Maharashtra) — Intramammary Injections of Penicillin B, Vet. C.—720 litre per annum, Paxedin tablets—60,00,000 tablets per annum. Burroughs Wellcome & Co. (India) Pvt. Ltd., 16, Bank Street, Bombay-1 (Bombay Maharashtra) — 'Mantadil' Cream — 1,00,800 tubes of 5 grams each per annum; Pfizer Private Ltd., ICICI Building, 163, Backbay Reclamation, Bombay-1 (Maharashtra) — Fenocin-Sulfa Tablets (Penicillin V+Triple Sulfas) — 60,00,000 tab. per annum; Isozone Tablets (Isoniazid with Thiaciazone) 6,00,000 tablets per annum; Diapec Liquid (Ant-diarrheal liquid) 15,600 litres per annum; British Drugs Houses (India) Private Ltd., Graham Road, Bombay-1 (Bombay, Maharashtra) — Tova tablets — 20,00,000 tablets per annum.

Burroughs Wellcome and Co. (India) Pvt., Ltd., 16, Bank Street, Bombay-1 (Bombay, Maharashtra) — (Substantial Expansion): Cyclizine Hydrochloride (antihistamine) 26 kgs.; Diethylcarbamazine Citrate (antifilarial) 1,640 kgs.; Isoprenaline sulphate (Vaso constrictor for Asthma Sympathomimetic agent) 44 kgs.; d-N-Methylamphetamine (Vasodilator, Sympathomimetic Agent) 5 kgs.; Zinc Undecylenate (Antifungal) 40 kgs.; Regularisation of Increased Production Capacity: Tablets 116 million; Ampoules 2.36 million; New Articles: Angised Brand tablets of Glyceryl Trinitrate 24,00,000 tablets; Cardilate Brand tablets of Erythrityl Tetranitrate 12,00,000 tablets; Midarine Brand injection of Suxemethoniumchloride B.P. 16,000 ampoules; Keradrin Brand tablets of Procyclidine B.P. 3,00,000 tablets; Puri-Nethol Brand tablets of Mercaptopurine B.P. 36,000 tablets; Lanoxin Brand injection of Digoxin 50,000 ampoules.

MAN-MADE FIBRES

Bharat Commerce & Industries Ltd., 9, Parsee Church Street, Calcutta (Thana, Maharashtra) — Staple fibre yarn: (Shifting from Agra Road, Ghatkopar, Bombay, to Kolshet Road, Thana Distt. Maharashtra); Ambika Silk Mills Co. Ltd., 11/12, Haines Rd., Mahaluxmi, Bombay-13 (Maharashtra) — Knitted fabrics out of nylon, Perlon, Terylene viscose and Acetate filament and spun rayon yarn — 4 warp knitting

machines; Eldee Velvet & Silk Mills (P) Ltd., Opposite Bawla Mosque, Delisle Road, Bombay-13 (Maharashtra) — Cotton fabric 12 looms; Artsilk fabric 27 looms.

ALCOHOL

Ugar Sugar Works Ltd., Ugarkhurd, Distt. Belgaun (Ugarkhurd, Mysore) — Industrial Alcohol — 6,00,000 gis.

LETTERS OF INTENT

The following statement shows the letters of intent issued during the week ended 22nd August, 1964, under the Industries (Development and Regulation) Act, 1951.

M/s. Textile Machinery Corporation Ltd., Belgharia, 24, Parganas Distt. (Belgharia, West Bengal) — Ward 3C capstan lathes 100 Nos. per annum (after expansion 200 Nos. per annum); M/s. Perfect Valves & Machine Tools Corporation, 29/B, Aichambers, Dean Lane, Fort Bombay- (Maharashtra) — Bicycle tube valve; Brass reeds; M/s. Digvijay Spinning & Weaving Co. Ltd., Lalbag, Parel, Bombay-23. (DD) (Baroda, Gujarat or Kalyan Maharashtra)—Vinylon-Polyvinyl alcohol fibre. Mr. B B. Bhargava, Barakhana, Gwalior (Gwalior, Madhya Pradesh) — Heavy Duty low nickel cast iron S.G. Iron castings and Malleable Iron casting 3,000 tons per annum; M/s. Berkeley Guest Switchgears, Maramar, Opp. Colaba P.O., Bombay-5 (Punjab) — Transformers up to 33 Kv 150,000 KVA per annum; M/s. J.B. Advani-Oerlikon Electrodes (P) Ltd., Radia House, 6, Rampart Row, Fort, Bombay-1 (Maharashtra) — Automatic submerged Arc Welding Machines — 120 Nos. per annum; Automatic & Semi-automatic Gas shielded welders (AD-40-Argon Arc) 120 Nos. per annum; Automatic & Semiautomatic Gas shielded welders (citrofil) 30 Nos. per annum; Automatic & semiautomatic Gas shield welders (ASA-56 type) — 30 Nos. per annum; M/s. Sleeves India 3-B/5, Northern Extension Area, Poorvi Marg, New Delhi-5 (Maharashtra) — Cylinder liners and cylinder blocks — 10,20,000 Nos. per annum; Mr. Kishore Rasiklal, Vasant Vilas, Babulnath Road, Bombay-7 (Maharashtra) — Micrometers 8,400 Nos.; Verniers caliper 8,400 Nos.; Dial indicates 9,600 Nos.; Sine bars 6,000 Nos.; Sine Tables 3,000 Nos.; Straight edge 6,000 Nos.; Engine divided scales 6,000 Nos.; Precision Squires 6,000 Nos.; Vee blocks 6,000 Nos.; Combination sets 3,000 Nos.; Height & Depth gauges 3,000 Nos.; Ring, snap, plug & thread gauges 6,000 Nos.; Scribers 2,400 Nos.; Centre punches 6,000 Nos.; Revel Protractors 2,400 Nos.; M/s. Birla Jute Manufacturing Co. Ltd., (Cement Deptt.), 15, India Exchange Place, Calcutta (Jagdalpur, Madhya Pradesh) — Portland cement 2,00,000 tonnes per annum. M/s. Bose Investment Private Limited, D'Mello Bhavan, 4th Floor, 5A, P.D'Mello Road, Fort, Bombay-1 (Jagdalpur, Madhya Pradesh) — Portland cement 2,00,000 tonnes per annum.

CHANGE IN NAMES (Owners or Undertakings)

During the week ended August 22, 1964

(Information pertains to particular licences only)

From M/s. Parry & Company Ltd., (Kidderpur Works), Calcutta to M/s. James Warren & Company Limited, Calcutta; From M/s. The Ellore Electric Supply Corporation Ltd., Madras to M/s. Ellore Engineering Company Ltd., Madras; From Mr. Chandulal Virchand, Nasik to Mr. Sumantilal Chandulal, Nasik. From M/s. Punjab State Air Rifles Limited, Chandigarh to M/s. Punjab Air Rifles Ltd., Chandigarh.

COMPANY MEETING

THE INDIA CEMENTS LIMITED MADRAS

Speech Delivered by Sri P. Suryanarayana at the Eighteenth Annual General Meeting of the Company Held on the 7th September, 1964.

Gentlemen and friends,

On behalf of the management and on my own behalf, I extend to you all a cordial welcome to the Eighteenth Annual General Meeting of your Company and place before you the annual accounts of the Company for the year ended the 31st March, 1964, the Directors' Report and the Auditors' Report thereon.

Since we last met, as you are all aware, the nation has suffered an irreparable and grievous loss in the very sad and sudden demise of our revered leader and beloved Prime Minister, Pandit Jawaharlal Nehru. Jawaharlal Nehru was not only a valiant fighter for our freedom under the leadership of Mahatma Gandhi, but also the principal architect of the post-independent India. To Panditji, we owe a lot and in particular to the concept of planned development of this country. As Chairman of the Planning Commission during his full tenure of Prime-Ministership, he was the author and originator of the three five-year Plans, under which this country has made phenomenal progress in the social, economic and industrial development. May I request you all to observe two minutes silence in honour of the great departed leader?

(The members observed two minutes silence in memory of late Prime Minister, Pandit Jawaharlal Nehru, all standing.)

It is no doubt a source of great relief to all of us in this country and to people elsewhere that after the death of Pandit Jawaharlal Nehru, Sri Lal Bahadur Shastri has been unanimously and immediately elected to succeed the departed Prime Minister and it has been proved beyond doubt that we have an organised and disciplined democracy, that we can rise to the occasion in cases of emergency and we can set aside all petty differences. It is now certain that we can look forward with confidence to another era of peaceful, orderly and stable Government, which is a pre-requisite for planned development.

Printed copies of the statement of accounts have been circulated to all the members and with your kind permission, I will take them as read.

The year under review brings us to the close of the third year of the Third Five-Year Plan, and perhaps this has been the most anxious period for both the Planners and the people. On the one hand, the effect of spiralling prices on almost every commodity and particularly that of food and other essential articles keeps staring at one, while on the other hand, the lack of higher production both on the agricultural and industrial sectors, which is the need of the hour, is indeed perturbing the minds of the planners, the Government and the industrialists. The word "inflation" seems to be on everybody's mind and as far as I am able to see, none of the measures taken by Government so far appears to have curbed the tendency of rising prices. A developing country like ours, which is attempting to make the quickest progress, within the shortest time possible has to contend with the basic fact of fewer resources available than what is required, to achieve the desired object. As long as the tendency persists to spend more money than the production costs of goods and services available at a particular time, so long will the inflationary trend, as is being witnessed now, continue. With the cost of living rising rapidly the demand for more and more wages

cannot be avoided. Large wage increase, in turn, further raises the cost and inevitably leads to further upward rise in prices. In turn this phenomenon tends to make people lose faith in their money because they find past savings disappearing quickly. Unless very effective measures are taken immediately and put into action the inevitable consequences of the present trend is bound to lead to the most disastrous consequences. I trust both the Government and the people will present a united front to combat this situation.

Coming to our own affairs, I am glad to inform you that there has been an all-round improvement in the affairs of the Company. The production at the Company's Talaiyuthu factory has been almost to rated capacity. The first unit of the Plant at Sankari went into commercial production during February, 1964 and has been working satisfactorily since then. The Company will have the benefit of a full year's working of the Sankari Plant for the current year and an increase of 33-1/3 per cent over its present production is expected for the year ended 31st March, 1965. Work on the second stage of the Sankari Plant is well underway and every effort is being made to commission that Plant by the latter half of 1965. As I have already reported to you on a previous occasion, your Company will be producing nearly a million tonnes of cement on the completion of the second stage at the Sankari Plant.

During the year under review, we have produced 5,28,554 tonnes of cement as against 4,19,149 tonnes of cement in the previous year. The Statement of Accounts has been in your hands for some time now and you would have noted the profit before the deduction of Depreciation and the Managing Agents' Commission has increased by Rs. 25,40,097 in comparison with the previous year. This is no doubt due to higher production and the consequent large sales of cement. The production of clinker, cement and sales were higher at 5,34,349 tonnes, 5,28,554 tonnes and 5,26,777 tonnes, respectively.

There has again been a steady increase in the cost of production during the year on account of the increase in price of coal, freight rates and surcharge on electricity. As you know, these increases in the cost are beyond our control and naturally lower the profits of your Company. In spite of this, the Company has been able to show better working results during the year. Our appeals to the Government for adequate increases in the retention price have not met with full success. Between 1st November, 1961 and 31st March, 1964, the cost of production has gone up by Rs. 5.92 per tonne, while the price increases sanctioned by the Government during the same period has been only Rs. 3.75 per tonne. Even this ad hoc adjustment has not been given retrospective effect resulting in further losses to the industry. The recent increase of Rs. 1.25 per tonne announced by the Government is applicable only from 1-7-1964, while the impact of the increased cost has been there even prior to the last increase granted during June 1963.

In this connection I would like to mention a point which has to be taken serious note of, if the cement industry is to progress and contribute its share to the country's planned and developing economy. Cement is a vital construction material

required in every phase of the nation building activity and an overall shortage of this commodity is certain to slow down all construction activity. The target of 13 million tons set up for the Second Plan has still to be achieved, at the end of the third year of the Third Plan. It is rather surprising in this context to hear that the Government are envisaging a production target of 23 million tonnes during the Fourth Plan. The reasons for the shortage in the estimated plan targets are not far to seek. The cement industry is highly capital intensive and there is very little scope for any plough back of profits at the current level of return allowed by Government on the existing price structure. Unless the Government realise this and fix prices at more realistic levels to ensure at least a net return of 10 per cent to the shareholders there seems to be little hope of our achieving the phenomenal expansion in production capacity so much desired by the Government.

Some members have indicated their disappointment at the reduction in the dividend rate this year in spite of increased profits made during the period. You will appreciate that the entire profits came out of the existing unit at Talaiyuthu from which the expansion cost in the shape of Development Rebate on the new unit at Sankaridrug has to be met. A sizable appropriation towards the Statutory Development Rebate Reserve was required to be provided on the new unit at Salem. This has naturally reduced the profits which would otherwise have been available for distribution. It might perhaps be argued that a portion of the past reserves could have been utilised for payment of higher dividend than 6 per

cent. But in view of the fact that the second unit at Salem is well under way, it was considered prudent to conserve the existing resources so that the overall financial position of the Company is strengthened to meet any future contingencies.

The reserves of your Company have gone up to just over Rs. one crore, as on the date of the Balance Sheet for the year ended 31st March, 1964, you are now considering.

I am sure many members would have realised by now that with the completion of the expansion scheme the future working of the Company will considerably improve.

I am glad to inform you that our educational institutions have had another satisfactory year of working and the results of the Sankar Institute of Polytechnic are highly encouraging. A new hostel has been constructed for the Sankar Institute of Polytechnic.

The relations with labour at the factory and the staff at the head office and also at the factories continue to be cordial as usual. I take this opportunity, once again, both on my behalf and on your behalf, to tender our thanks to all the employees of the Company for their unstinted co-operation and hard work during the year. The Company looks forward to their continued services and co-operation in the years ahead.

I thank you all, gentlemen, for giving me a patient hearing.

N.B.: This does not purport to be a report of the proceedings.

NEVER COMPARE...

It is always frustrating! So it is when you compare metric weights and measures with obsolete units like seer or viss. You will only waste your time and often lose in the transaction.

BOOKS BRIEFLY

International Liquidity Again

International Currency Plans and Expansion of World Trade:
By K. Venkatagiri Gowda; Asia Publishing House, Bombay; Pp. 216; Price Rs. 18/-.

Reviewed by D. KRISHNASWAMI RAO

THIS IS a fuller study by Dr. Venkatagiri Gowda of a subject on which he had brought out a pamphlet two years ago. The author sets out the purpose of the book as follows: "In this book we trace the intellectual origins of the Triffin Plan, examine its provisions critically, make a comparative and critical study of the other rival but less radical plans and propose a few modifications so as to make them conform to the realities of the international monetary situation."

Since the Triffin plan owes its inspiration to Keynes's plan for an International Clearing Union, the latter is first explained and commented upon. In this context the author makes a statement which is puzzling: "Thus the monetary reserve of the country (under the Keynes plan) is actually the total monetary gold stocks plus the sum of the quotas of all the countries". (Page 11). It is difficult to see how any country under any scheme could count in the gold stocks and the sum of the quotas of all countries as its monetary reserves.

Dr. Gowda next takes up the Triffin plan for detailed consideration, devoting 92 pages (nearly half the book) to it. He sets out the usual counter-arguments to Triffin's rejection of a rise in the official dollar price of gold. The real argument in this regard, namely that the dollar price of gold today is the figure that was set when the US dollar was devalued in 1934 — since when the dollar has lost nearly 60 per cent of its purchasing power in terms of every other commodity—gets no mention. Alluding in this connection to the problem of gold shortage that contributed to the collapse of the gold standard in the inter-War period, Dr. Gowda remarks that the difficulty could have been overcome by raising the price of gold periodically (page 33). But under the gold standard such a thing is just not permissible.

At this point we are led off on an eleven-page digression on the causes of the breakdown of the gold standard in the 1930's (pages 35 to 45) which cannot be said to have any direct bearing on the subject of the book. Similarly in the

discussion of the Triffin plan we find ourselves led back into details of the Keynes plan to a greater extent than is necessary for purposes of comparison (vide pages 87 to 98).

It is Dr. Gowda's view that Triffin's proposal for the transformation of the IMF into an international central bank is too radical to be accepted now by national governments and financiers. This is what most people have said (and what Triffin himself expected them to say). But there is no ground for the assertion (made on page 103) that the British Government has been against such a transformation as a long-run objective. In fact, Mr. Harold Macmillan as Prime Minister had said: "Just as each individual country painfully acquired a central banking system, so there ought — ideally — to be a central banking system for all the countries of the free world". (Speech at the Massachusetts Institute of Technology, April 7, 1961).

Then follows a discussion of the Bernstein and Stamp plans, Jacobsson's scheme of stand-by credit for the Fund, and Mr. R. V. Roosa's bilateral currency "swap" agreements. The book takes no account of the modifications that Sir Maxwell Stamp made in his proposals, in an article that he wrote for 'Moorgate And Wall Street' Autumn 1962 number, to meet criticisms of his original plan. It is difficult to understand Dr. Gowda's view that "Roosa would like to revisit (sic) the traditional gold standard and make the countries sacrifice their internal stability for the sake of exchange stability" (page 128). The scheme of \$6 billion stand-by credits for the Fund is criticised on the ground that such credits carry a gold guarantee and therefore deprive the participating countries of "their right to manipulate their exchanges" (page 133). The IMF was itself born out of the realisation that this "right" was entirely wrong.

The next chapter, bearing the caption "Conclusion", treats us again to a comparison of the Keynes plan and the Triffin plan and to certain observations on other plans.

One finds that facts, arguments and conclusions are frequently repeated in this book. Even quotations from other books are repeated more than once: a passage from Triffin is reproduced at four places (pages 64, 71, 91 and 99), and one from Keynes at three (pages 81, 89 and 113).

Readers' Roundtable

HIGH COST OF STATISM

Sir,

Ideological cries of nationalisation and expansion of the Public Sector were raised at a recent A - ICC session in Bombay. A look at the contemporary scene, at home and abroad, shows the distressing record of nationalised and Public Sector industries, particularly if they are monopolies.

Year by year, travel by the Indian Railways and IAC, two state monopolies, is becoming an ordeal. During the holiday season, the woes of travellers become unbearable. State transport undertakings are known for their inefficiency and the recent abnormal rise in fares in Madras and Delhi should make people think whether private competition to these enterprises is not the easiest way of getting cheap and comfortable transport.

Another large state monopoly, P & T, not infrequently sends telegrams by post. Recently, it has raised telegraphic address charges from Rs. 25 to Rs. 50 per year, a 100 per cent increase. The Comptroller and Auditor-General has revealed that on an investment of Rs. 1,294 crores in 46 Public Sector undertakings, the net result of operation in 1962-63 was a loss of Rs. 12.38 crores.

Ceylon, which resorted to heavy doses of socialism, finds itself in economic distress. The Burmese experiment has thrown the economy out of gear.

Thus it is clear that nationalisation and the Public Sector as such do not lead to the best use of scarce resources; that they have an inherent tendency towards inefficiency and exploitation of consumers in the absence of competition: that the employees, working under monopoly conditions, get a rough deal; and, since those who run these enterprises have no personal stake in them there is complete divorce of power from accountability, thus subverting a basic democratic precept.

The present statist economic policy should be changed to allow competition by private enterprise to State monopolies like LIC and IAC and the example of the Andhra Government in selling majority shares of a losing paper mill to a private enterprise needs to be emulated. That will help to arrest prices, by increasing productivity and ensuring better use of resources.

M. R. PAI.

Bombay.

RECORDS AND STATISTICS

Troika of World Bank

THE WORLD BANK and its affiliates continued to broaden and intensify their efforts in 1963-64 to tackle the problems of economic development of developing countries by imparting increasing flexibility in their lending operations, widening technical and planning assistance to member countries, building up local institutions to mobilise capital for productive purposes and organizing international consultative groups to co-ordinate the flow of external aid. In spite of this all-round intensification of aid efforts, the Bank's financial strength continued to grow and its reserves have now reached the impressive figure of \$845 million.

For the second year in the Bank's history, economic development commitments were made in excess of \$1,000 million in loans, credits and investments. The total comprised 37 World Bank loans of \$810 million, 18 IDA credits of \$283 million and 18 IFC's loan and equity commitments for \$21 million.

Two developments were reported which foreshadowed higher levels of activity by IDA and IFC. Formalities have been completed for the replenishment of IDA's resources through new contributions from 18 of the wealthier nations to aggregate more than \$753 million. The proposed contributions in millions of dollars are: Australia 19.8; Austria 5.0; Belgium 16.5; Canada 41.7; Denmark 7.5; Finland 2.3; France 61.9; Germany 72.6; Italy 30; Japan 41.3; Luxembourg 0.75; Netherlands 16.5; Norway 6.6; South Africa 4.0; Sweden 15.0; the UK 96.6; the United States 312.0; and Kuwait 3.36. (Another commitment in favour of IDA was undertaken by the Government of Sweden which over and above its participation in the general replenishment of IDA resources, offered to make its third special supplementary contribution amounting to \$5,045,000 in convertible kroner). The new funds will be payable to the Association over a period of three years instead of five as in the case of the original subscriptions.

Grant to IDA

In a report to the Governors on the allocation of net income, which totalled \$97 million for the year, the Executive Directors found that only \$47 million was required for reserves and that amount has been applied to the Supplemental Reserve, increasing it to \$605 million. They proposed that the balance of \$50 million, which otherwise would be available for distribution as dividend, should instead be transferred to IDA in the form of a grant.

By the time the replenishment of IDA's resources became effective towards the close of the fiscal year, the Association had committed virtually all its funds available upto that time, totalling \$782 million. This figure will go up to \$1,540 million when all replenishment contributions have been made.

The Governors also had before them a proposal to amend the Articles of Agreement of the Bank and IFC to make it possible for the Bank to lend to the Corporation for re-lending to private industry in the less developed countries. The Bank itself is not authorised to lend directly to private companies except with a guarantee by the host government, which private entrepreneurs often hesitate to seek or accept and governments are often reluctant to grant; IFC neither seeks nor accepts government guarantees. If the proposal is approved, IFC's potential for the stimulation and support of private enter-

prise development will be substantially expanded, since IFC would be empowered to borrow from the Bank not more than four times its capital and surplus. IFC would thus have access to additional resources to increase its present activities, to make loans with no equity features when appropriate, and to enter into larger commitments than its present resources permit.

The Annual Report for the World Bank and IDA lists 37 Bank loans and 18 IDA credits in 34 countries. As in the past years, the heaviest volume of lending was in Asia and the Middle East, which accounted for more than \$527 million. Total loans and credits in Western Hemisphere were approximately \$269 million, in Europe \$145 million, in Africa \$111 million and in Australasia \$40 million. Most of European lending was in Portugal, Spain, Yugoslavia, and in three Scandinavian countries.

The Bank's 37 loans included its first loans to eight countries: China, Liberia, Malta, Mauritius, New Zealand, Portugal, Spain and Tunisia. IDA had four new borrowers during the year: Ecuador, Niger, Syria and Tanganyika.

Transportation again took the largest amount in both Bank loans and IDA credits, for a combined total of more than \$420 million. Electric power was a close second with \$375 million, followed by industry with \$163 million, water supply \$55 million, agriculture \$42 million, tele-communications \$19 million and education \$18 million.

While disbursements of the Bank loans to its borrowers were less by \$61 million than in the previous year to \$559 million, IDA's disbursements were up by \$68 million to \$124 million.

The membership of the Bank continued to rise rapidly during the year. Seventeen countries, including 16 in Africa, joined carrying the total membership to 102. Several mem-

SUBSCRIPTIONS OF NEW MEMBERS

(In millions of dollars)

Uganda	33.30	1.68

bers increased their capital subscriptions to the Bank: Ecuador from 12.8 to 17.1 million dollars. El Salvador from 6.0 to 10.7 million dollars; Israel from 33.3 to 66.6 million dollars and the Syrian Arab Republic from 20 to 33.3 million dollars. As on June 30, the total subscribed capital of the Bank stood at \$21,186 million.

The membership of the IDA also rose by 17 to 93. Including subscriptions of the new members, initial subscriptions of IDA increased to \$987,445,000. The new members of the Bank and IDA together with their subscriptions is given in the table on page 558.

The Bank and IDA Report reflects an active year for both organisations in action to carry out major new lines of policy which were forecast by Mr. Woods at the Annual Meetings last year in Washington. One of these is heavier emphasis on agricultural and educational projects. To help governments in identifying and preparing such projects for financing by the Bank or IDA and to help in their appraisal, the Bank worked out co-operative agreements during the year with the Food and Agriculture Organisation of the United Nations and the United Nations Educational, Scientific and Cultural Organisation. The agreement with UNESCO had already been ratified by both sides by the close of the fiscal year, while the arrangement with FAO was being carried out informally pending action by the FAO Council at its annual meeting in October.

IDA made its first loan of a new type during the year. It was not for a specific project, but to make it possible for major capital goods producing industries in India to import components and materials essential to full-scale operation of existing plants. The Executive Directors also confirmed the principle that the Bank or IDA should be prepared to finance part of the local currency cost of high-priority projects if lending for direct imports alone would not provide adequate support.

Major Steps

The Annual Report records action in several cases to lengthen the grace period and extend the term of Bank loans. Other major steps affecting financial policy during the year were a decision to discontinue the automatic allocation of 1 per cent per annum of charges on disbursed and outstanding Bank loans to a Special Reserve, in the form of a commission, and to reduce the commitment charge on the undisbursed portion of Bank loans from $\frac{3}{4}$ per cent to $\frac{3}{8}$ per cent per year. These decisions do not affect the Bank's interest rate, which remained at 5 $\frac{1}{2}$ per cent throughout the year.

The year saw the final disposition of the last of the Bank's holdings of its first and largest loan, of \$250 million made to France in 1947. During the fiscal year, the Bank sold the last \$58.6 million of its holdings to the Credit National of France.

No new money was raised by the Bank during the year and its funded debt was reduced for the second year in a row, by \$27.4 million. One refunding issue was placed during the year, consisting of \$100 million of Two-Year 4 per cent US dollar bonds; it was placed entirely outside the United States, with Central banks and governmental accounts in 29 countries.

The Bank's Executive Directors and staff continued work throughout the year on a proposal to establish a centre for conciliation or arbitration of investment disputes arising between foreign investors and governments. A preliminary draft convention incorporating the proposal was considered at four regional consultative meetings attended by legal experts designated by 86 governments. Under a proposal pend-

ing before the Board of Governors, the Executive Directors would be asked to work out a final draft with the advice of a legal committee representing interested governments, and to submit the convention to governments in 1965.

The Report reflects the expanded activities in the field of technical assistance, with particular emphasis on the problems of project identification and preparation and in the conduct of sector studies and general economic surveys. Altogether, the Bank has financed or is helping to finance 14 project and sector studies in 12 member countries. The Bank also continued to act as Executive Agency for project and sector studies financed by the United Nations Special Fund. Bank missions were concerned with advice on national development programmes in 10 countries; the Bank was helping to carry on a score of studies designed to further the development of particular economic sectors or to advance the planning of specific projects and help was being given in a growing number of special assignments.

The Economic Development Institute, a senior staff college maintained by the Bank for officials of the less developed member countries, continued to expand its teaching programme. To the end of the fiscal year, 317 officials from 84 countries had participated in EDI's courses.

International Finance Corporation

The fiscal year 1963-64 was a significant one for the International Finance Corporation. The Corporation's commitments during the year amounted to \$21 million. This was the first year during which IFC made more than half of its investments in the form of subscriptions to capital shares rather than in loans. At the end of the year, the proportion of its portfolio invested in equity stood at 30 per cent, compared with 17 per cent last year. The all-time total of IFC's commitments reached \$111 million, more than the total of IFC's subscribed capital.

Commitments made during the year numbered 18 for enterprises in 13 countries. Eleven of these commitments were for establishing or expanding private companies engaged in manufacturing or processing. The remainder were for the purpose of establishing or strengthening private companies for financing and assisting the development of industry. The geographic diversification of IFC's portfolio was widened by the first investments the Corporation has made in enterprises in Honduras, Malaysia, Nigeria, the Sudan and Turkey.

All but two of the year's investments consisted entirely of subscriptions to shares. Of the exceptions, one was a loan which carried rights to purchase shares; the other was a loan made as part of a capital reorganization in which IFC received shares for notes it had previously held (see table overleaf). Of investments in industry, two were made to expand the nascent textile industry of Africa (in Nigeria and the Sudan); another was to establish a tanning industry in Honduras, and another was to expand the output of refined sugar for domestic consumption in Tanganyika. Other investments of the year favoured heavier branches of industry: they were concerned with the output of cement in Peru, of alloy steel, cables and textile machinery in India, of steel forgings in Colombia, of heavy construction equipment in Mexico, and of steel in Venezuela.

IFC continued to take the lead in considering proposals for assistance to industrial development finance companies. IFC acted during the year to help establish new companies of this kind or to strengthen existing companies by helping to

recapitalize them and make substantial additions to their resources. IFC's investments in the Finnish industrialization Fund, Malaysian Industrial Development Finance Ltd., and Industrial Finance Corporation of Thailand were made in conjunction with loans to these companies by the World Bank; and a fourth IFC investment was made, in the Industrial Development Bank of Turkey, an institution which had already received loans from the World Bank and IDA. Other IFC investments were made in industrial finance companies in Columbia, Nigeria and Venezuela.

IFC has now assumed 87 commitments for a wide variety of projects such as steel and metals industries, chemical production, the manufacture of automotive equipment, the processing of wood products, cement production, copper mining and many other industries; it has helped in the capitalization of 13 different development finance companies throughout the world. In all, IFC investments have been made for projects in 29 different countries, on six continents. The gross total

of IFC commitments has reached \$111 million.

Five countries joined IFC during the year, increasing the subscribed capital by \$766,000. The new member countries with their subscriptions (in thousand dollars) are: Jamaica 148; Kenya 184; Korea 139; Malagasy Republic 111; Uganda 184. At the close of the year, 78 countries were members of IFC and their subscribed capital, totalled \$98.96 million. The Corporation's net income for the year was \$2.9 million. This amount, together with \$0.3 million net profit on portfolio sales, was added to IFC reserves which reached \$20.2 million.

Annuity Deposit Scheme

THE ANNUITY Deposit Scheme, provided for in the Finance Act, 1964 will come into force on October 1, 1964. A Gazette of India Extraordinary containing the text of the scheme has been published.

From the 1st of October, deposits under the Scheme will be accepted at all offices of the Reserve Bank and branches of the State Bank of India and its subsidiaries. Deposits may be made in cash or by cheque drawn in favour of the Bank at which the deposit is made. Accompanying the deposit money, will be an application for the issue of ten-year Annuity Deposit Certificates for the amount. Where the deposit is made by an unregistered firm, an association of persons or a body of individuals, a declaration regarding its constitution should be attached to the application. Deposits can be made in instalments during a year. When the deposit money is tendered at a Bank, an interim receipt will be given. This would, after a given period, be exchanged for Annuity Deposit Certificates issued by the Public Debt Office.

These Certificates will be issued in denominations of Rs. 10, Rs. 100 and Rs. 1,000. Beginning from one year after the date on which the deposit has been made, the depositor will receive an annuity of Rs. 1.25 for every ten rupees. The rate of interest works out at a little over 4½ per cent. Payment of the annuities will be spread over ten years. Depositors may draw their annuities either through their bankers or ask for remittance by postal money order. Individual depositors may nominate a person or persons who will receive the annuities in the event of their death. In computing the taxable income of the depositor, the amount of the deposit at the rates prescribed in the Finance Act will be allowed as a deduction. The annuities are, however, liable to tax as income. When a depositor receives his Annuity Deposit Certificates, he should inform the Income-tax Officer within fourteen days

that he has made the deposit and send him the counterfoils of the Annuity Deposit Certificates.

Application forms for ten-year Annuity Deposit Certificates and other relevant forms will be available at the deposit offices. The annuity deposits to be made during the financial year 1964-65 fall into two categories, namely:-

- (1) Deposits to be made for the assessment year 1964-65.
- (2) Deposits to be made in advance for the assessment year 1965-66.

For the current assessment year, deposits may be made on the basis of an assessment of income-tax made by the assessee himself or by the Income-tax Officer. Where a self-assessment has been made, the annuity deposit is required to be made within 30 days of an assessee's filing his income-tax return. However, assessee who have already filed their returns of income or file them by the end of September 1964, can make their annuity deposits by October 31, 1964.

In cases where the assessment is made by the Income-tax Officer, he will also determine the amount of annuity deposit due and call upon the assessee to make the deposit. In regard to deposits to be made in advance for the assessment year 1965-66, the Income-tax Officer will issue a notice of demand. He will also lay down the number of instalments in which the deposit could be made and the dates on which they should be made. However, individuals who have not been assessed to income-tax so far and who expect their assessable income to exceed Rs. 15,000, should themselves make an estimate of their annuity deposit liability. They should inform the Income-tax Officer accordingly before March 1, 1965 and also make the deposit by that date. Assessee may make their annuity deposits even before they are formally called upon to do so by the Income-tax Officer.

HINDALCO ALUMINIUM

FOR THE DEVELOPMENT OF INDUSTRIES

The Rs. 200 million Birla-Kaiser aluminium project at Renukoot, near Rihand, in U.P., has, since December 1962, attained and surpassed the initial target capacity of 20,000 tonnes per annum. While the Renukoot plant is already the biggest integrated aluminium manufacturing complex in India, Hindalco is forging ahead with its programme of rapid expansion, for raising the primary aluminium capacity to 60,000 tonnes per annum (and to provide fabrication facilities totalling 37,000 tonnes per annum), to help the country's fast growing industries in their march towards progress and prosperity.

Out of His Swaddling-Clothes?

THESE ARE, indeed, strange times. Roughly a year and a month ago the Opposition groups in the Lok Sabha attempted to castigate the Central Government through a no-confidence motion on the ground that it was dissatisfied with the then Prime Minister's policies in affairs, economic or international. Last week there was again a no-confidence motion, but on this latter occasion the main complaint appeared to be that the present Prime Minister seemed to be in the process of "deviating" from his predecessor's policies. To us, at any rate, this jugglery with political attitudes does not make sense. If the Opposition groups disapproved in August, 1963 of the late Jawaharlal Nehru's policies, it seems to us to be logical and proper that they should not have been in a hurry to come forward with a no-confidence motion against the present Government, especially when, according to their own admissions, Mr. Lal Bahadur and his Government show signs of fresh thinking in many directions of public affairs. We have, therefore, no hesitation in holding the recent no-confidence motion in the Lok Sabha to have been totally misconceived and singularly ill-timed. By the same token we could appreciate the wisdom of the stand taken by the Swatantra party which disassociated itself from the motion on the sensible plea that the present Government should be allowed reasonable time to think and act for itself. As it is, the principal beneficiaries of the no-confidence motion are the Communist groups in the Lok Sabha. Prof. Hiren Mukerjee cannot be blamed, of course, for making adroit use of the opportunity provided by the no-confidence motion to charge Mr. Lal Bahadur with the hypocrisy of paying lip service to the Nehru ideals while getting ready to scuttle them in practice. But, even a political innocent such as Mr. Dandekar cannot hope to escape criticism for having given the Communist spokesman his chance.

We said that the Communist party was the main beneficiary of the no-confidence debate. We must add, however, that the Government generally and the Prime Minister in particular have not done too badly either — and this in spite of the worst that Mr. Krishna Menon, speaking from the Congress benches, could do. If we allow for a difference in phrasing, Mr. Krishna Menon, surely, was hinting at what Prof. Mukerjee could more openly demand, viz., that the Prime Minister should give a solemn undertaking to Parliament and the nation that he and his Government would change not a comma in (nor introduce a foot-note into) the decisions, programmes and policies of the past 17 years. In many ways it was good that this monstrous challenge to the self-respect of the present Government from both within the Congress and outside was posed so early in the life of the Lal Bahadur administration. It certainly gave an opportunity to the present Prime Minister to display both grit and gumption and it must be said to Mr. Lal Bahadur's credit that he acquitted himself very well indeed.

The nation certainly has no use for a Prime Minister who would be content to reign in the shadow of a great name. The dead past must always be allowed to bury its dead. During a career of immense splendour, the late Jawaharlal Nehru did many wonderful things for our country. But no country's problems are ever solved fully or finally. It is even more true that adequate solutions for all problems are just not found during any single individual's lifetime. Our country particularly has so many unsolved or half-solved problems of political consolidation, economic development or social improvement that it cannot possibly make do with

leaders content merely to walk in a dead man's shoes. The tax-payer here pays a goodly amount of his meagre income for the expenses of government and he is certainly not going to be satisfied with any kind of a caretaker administration. The nation was proud of Jawaharlal Nehru as its Prime Minister. It cannot surely take any pride in having in Mr. Lal Bahadur a pale imitation of the Master. To put it bluntly, the present Prime Minister has not been chosen to be the faithful trustee or executor of any political testament of Jawaharlal Nehru. He has become Prime Minister because an overwhelming majority of his countrymen think — we believe, rightly — that he is the man who, in the present circumstances, is most likely to keep the nation's largest political party together and with its strength and support, make the Government function effectively to maintain or promote political stability and economic progress. To put it differently, Mr. Lal Bahadur will be judged not by his personal, political or ideological loyalties to his predecessor, but by his proved performance in giving the country a good and clean administration, greater political and social coherence and more substantial and rapid economic development. We, therefore, are glad indeed that the Prime Minister has promptly grasped the real import of the no-confidence motion and asserted very firmly his right to function as Prime Minister in fact as well as in name and to run the Government in terms of a total assumption of the authority and responsibility "that doth hedge" the Prime Ministers in parliamentary democracies. In our view, it is precisely this assertion of his democratic right to rule the country as the duly elected leader of the dominant political party which Mr. Lal Bahadur, in his courteous but characteristically unequivocal manner, made in his reply to the no-confidence motion that gave the debate such meaning as it had and justified the tax-payer's time devoted to it.

It is hardly necessary for us or, indeed, for the Indian Press to assure the Prime Minister that he will have the nation's backing in every practical programme he decides to implement for improving the living conditions of our people, giving them more employment opportunities, more not merely of the bare necessities of life but also of at least some of the good things of life. The Prime Minister himself has often said that the immediate purpose of economic development must be to show improvement in the conditions of the people with regard to such matters as food, clothing and shelter, but we would point out that modest as this purpose seems, its achievement in a country of 460 million people, steeped traditionally in mass poverty, is not going to be easy or simple. As the Finance Minister, in his excellent, analytical speech during the debate pointed out, the population of this country cannot be fed satisfactorily by primitive farming. It takes modern scientific agriculture to meet the food and raw material needs of the country. Modern scientific agriculture, in turn, demands a whole series of technologically advanced industries embracing many fields of development, such as

advanced mechanical engineering and the latest proliferations of the chemical industries. Not dissimilar is the situation with cloth. The illusion that the *charkha*, even an *Ambar charkha*, could clothe our people, unfortunately, is not yet dead but its days surely are numbered. The world is moving fast and any government which finally believes that it can solve the cloth problem by selling standard cloth at controlled prices through fair price shops is deceiving itself. People are not going to be satisfied with austere definitions of utility. They yearn for comfort and even elegance. And there is nothing particularly ethical in lecturing them on the virtues of self-denial. Science and technology today are competent to give man what he wants to the limits, if any, of his desire for variety. No sensible society, therefore, need accept the incompetence of the government of the day as the decisive factor in determining the extent to which science and technology can be left free to serve it.

The Prime Minister speaks of housing. Here again, thatched roofs over mud walls are not going to be accepted as a social good for very long. Modern housing is the end-product of a diversified industrial structure. There is thus great substance in the Finance Minister's firm plea that the country should not demand that the Government should be half-hearted about industrialization in the fourth Plan. It is sometimes made to appear that if we demand more for the future it is because we think that little has been done in the past. This is not necessarily so. It is because in 12 or 13 years of planning we have achieved some results in many fields that we are now becoming intolerant of stagnation and impatient for more rapid progress. If some of the old attitudes are to be revised, if fresh thinking is needed to speed up the rate of progress, it is not only the right of the present Government to change policies or programmes, but it is its obligation to do so. The Prime Minister showed that he was not afraid of change when, in discussing agricultural development, he made it clear that he was convinced of the importance of more realistic down-to-earth programmes. Characteristic of his attitude is the fact that he accepts the community development programme while rightly refusing to accept its fleet of jeeps. Mr. Lal Bahadur stressed the importance of helping the small man in agriculture in small ways. We fully endorse his view, but would also submit that the small man in agriculture is not, nor can he be, the only man in agriculture.

Indian agriculture — if we may use a phrase which seems to cause some uneasiness to the Prime Minister — is a "split personality". There is, first, that large part which is subsistence agriculture, that is, agriculture carried on mostly in uneconomic holdings as a way of life rather than as an adequate means of livelihood. Possibly some 50 per cent of the nation's food production is on a wholly subsistence basis of this kind. But the subsistence which this agriculture affords to its practitioners is merely bare subsistence. Here are the small

men of whom the Prime Minister spoke and who could be helped in small ways by the Government and its agencies to improve their subsistence by getting a little more out of their land. But subsistence agriculture, by definition, does not and cannot feed those who are not living on the land or are not dependent on it directly or indirectly. Here is where the other personality in Indian agriculture enters, to wit, market agriculture. It is because market agriculture has not only been neglected but penalized by many of the agrarian measures, alleged to be reforms, carried out by the Government from time to time, that there is today this food-grains crisis in the country. We submit that the Government, while supporting and even subsidising subsistence agriculture, should at least permit market agriculture to function in terms of its own economic validity.

We have no doubt in our mind at all that neither social purpose nor economic profit for the community testifies a redistribution of land away from market agriculture on the justification that every man who tills must also own. Given the land-man ratio in this country, the proposition is arithmetically absurd and politically grossly dishonest. It is true that from 50 to 60 per cent of our population is directly or indirectly dependent on agriculture, but the main interest of the bulk of this population lies largely in finding employment outside agriculture, and to the extent that this cannot be done, in securing more regular employment in and higher wages from farming operations. The first part of this desire could be fulfilled only by industrial expansion, while the second part can be met by market agriculture attracting sufficient capital, enterprise and technical skills. Not until the Government realizes the split personality in Indian agriculture and is able to formulate satisfactory policies for subsistence agri-

Hanging in the Air

FOR FOUR days from September 9, IAC Caravelles were off the air. For quite some time previously most of IAC services were apt to be in the air only off and on. The resumption of Caravelle flights from September 13 does not mean that normalcy has returned to IAC operations. An Indian Airlines advertisement announces that full restoration of services by various aircraft and on various routes will be progressively carried through in the period ending October 4. The advertisement has been preceded by a cryptic statement issued by the Minister for Civil Aviation through a news agency that an understanding had been reached during the discussions between the Secretary of his Ministry in consultation with the IAC management and Indian Commercial Pilots' Association. The public must naturally be interested in the particulars of this reported understanding. We hope Mr. Kanungo will make a more detailed announcement in Lok Sabha where he was handled rather roughly during question hour last week.

culture and market agriculture separately will there be any prospects of dynamic agriculture in this country. Mr. C. Rajagopalachari, during his recent visit to the Capital, happened to touch on this problem in the course of a public speech. If the present Food and Agriculture Minister at the Centre, whose association with the founder of the Swatantra Party was at one time that of a *chela* to his *guru*, is still willing to learn from his former preceptor, he would do well to mull over what we have written here.

It is possible that the Government also needs similar admonition where industry is concerned, although the speech of the Finance Minister, at any rate, shows that the Government is at least aware of what needs to be done. Mr. Krishnamachari, describing the build-up of industry that will be needed in the fourth Plan, rightly said that effort had to be concentrated on a wide spectrum of basic as well as consumer goods industries. The question is whether the Government may be relied on to take steps promptly to create the climate appropriate for the vast effort envisaged. We have read carefully through the Finance Minister's speech, but we are sorry to say that we find there no positive assurance or even indication of how the Government proposes to energize capital and enterprise in the nation on an adequate scale. It is true that the Soviet Union has offered to take up Bokaro. It is true also that the Americans have volunteered to mount a crash programme for a series of fertilizer projects. But it surely cannot be the intention of the Government of India that the Americans and the Russians develop this country for us. It should be interesting to know whether Mr. Lal Bahadur and his esteemed colleagues in the Central Government have any idea of letting Indians too take some part in what Jawaharlal Nehru used to describe as the mighty adventure of building a new India.

The annoyance exhibited in Parliament was natural and legitimate. It is only a reflection of the irritation in the public mind over the inefficiency and irresponsibility of the IAC operations, as a result of which conditions of travel by our domestic airlines have become the greatest single deterrent to foreign tourists and a punishment inflicted on travellers of all descriptions who fly because they must. It is true, however, that the Minister did his very worst to provoke hostile supplementaries. His statement on September 9, on the nature and course of the dispute between the Indian Airlines Corporation and the Indian Commercial Pilots' Association, did nothing to improve the public image of the Corporation as a feckless and drifting mass. In particular, his disclosure of the contention on the part of the Corporation that for a considerable time it was not aware of an agreement which its Chief Operations and Planning Manager had admittedly entered into with its pilots providing for duty and flight-time limitations

has damned beyond redemption the chaotic manner in which the Corporation is conducting its house-keeping. Surely, there must ordinarily be some line of communication between the Chief Operations and Planning Manager and those above him who lay down or manage policy for the Corporation. If a situation is to be conceded in which the Corporation could reserve to itself the right to remain blissfully ignorant of discussions or agreements which its Chief Operations and Planning Manager may have with its pilots or other employees, it follows that the Corporation's staff would be justified should they begin to insist that they would discuss their problems only with the Chairman in the presence of the General Manager and preferably under the auspices of the Secretary, Ministry of Civil Aviation and with the blessings of the Minister for Civil Aviation. In the circumstances, it is not surprising that Mr. S. M. Banerjee was moved to ask in sheer exasperation, at one stage during the supplementaries, whether there was at all any apparatus in the IAC to deal with employees' problems.

It seems to us that the Indian Airlines Corporation is taking its employee relations far too casually for its staff to respect it or its customers to trust it. A com-

plaint was heard in Lok Sabha that an assurance given to the pilots by an earlier Minister that a commission would be asked to go into their claims or complaints was being quietly dishonoured. The Prime Minister, intervening, explained that the Civil Aviation Minister, as well as the Finance Minister, was taking a personal interest in bringing about a settlement of the dispute. To the labours of those dedicated men presumably was due the triumph of September 13, when the suspended Caravelles took to the skies again. But we must confess that we are not impressed. On the contrary, we would urge that the Indian Airlines Corporation should attempt to manage its domestic affairs without calling for such special aid. To begin with, the Chairman and the General Manager of the IAC, we suggest, had better start keeping themselves informed of what other senior officials, including the Chief Operations and Planning Manager, may be doing from day to day in an attempt to earn their salaries.

The agreement between the pilots and the Chief Operations and Planning Manager was made on July 29, 1963. The Corporation which claimed to be unaware of the agreement "for some considerable time", seems somehow to have obtained knowledge of it by

I.O.B. is big enough to serve you...

THE INDIAN OVERSEAS BANK LIMITED

Central Office: Madras 2 • Over 100 Branches in all important places in India
M. Ct. Muthiah, Chairman, K. M. Nanjappa, General Manager

I.O.B. is an international bank with offices throughout India and South-east Asia and correspondents the world over. It offers a wide range of services to suit the needs of varied customers. Indeed, I.O.B. is big enough to serve you.

We asked our customers, thousands of them at random, what they thought of our service. They replied: "We are pleased." They also made several helpful suggestions which we are implementing. Indeed, I.O.B. is small enough to know you.

Range of I.O.B. services: Savings and Current Accounts—Recurring and Fixed Deposits—Personal and Business Loans—Bills Payment Service—Gift Cheques—Travellers Cheques—Safe Deposit Lockers—Trade and Export Information and Advice—and whatever other specialised help you may need.

101-102-210

April-May, 1964, when the duty and flight-time limitations mentioned in the agreement were enforced as an experimental measure. This experiment, it is stated, did not work satisfactorily, but gave rise to dislocation of services as well as rostering difficulties and anomalies. Thus the last phase of the dispute began, and skipping merrily from one deadlock to the next, ended up with the Government making a reference to the National Industrial Tribunal for adjudication, but the Pilots' Association decided unilaterally to enforce the duty and flight-time limitations, thereby bringing about a progressive curtailment of services since August 22. Thus for at least some four months, the Corporation does not seem to have displayed any sense of urgency in settling a dispute, the prolongation of which was bound to damage the morale of a strategically very important category of its staff. It is possible that the chopping and changing of Ministers in the Ministry of Civil Aviation might have led to a situation where key decisions could not be promptly made. But had the Corporation been successful in developing some personality of its own, it could still have acted effectively even during this unsettled period. Harsh words were said in Lok Sabha about the present Minister of Civil Aviation, but in fairness to Mr. Kanungo, it must be said that he did inherit a frightful mess.

The dislocation in air services, following the enforcement of duty and flight-time limitations by the Pilots' Association started on August 22, and it was on September 9 that the Corporation finally gave up and suspended its Caravelle services. During this interval of 18 days, those who travelled or attempted to travel by the Indian Airlines did so with inconvenience, sometimes very serious. We wonder whether it was really not possible for the Corporation to have avoided causing this harassment. In his statement in Lok Sabha on September 9, Mr. Kanungo said, in conclusion, that he was "very sorry for the inconvenience, hardship and discomfort that have been caused to so many passengers every day, but, as my brief account of the happening would show, every attempt was made to prevent this development, but without success." We are not satisfied that this expression of regret was more than formal nor are we convinced that the claim in the latter part of this observation is not open to dispute. In fact, it is evident that the Corporation did not competently act at any stage in the dispute, but on the contrary allowed it to fester in the earlier stages, when it was callous in its indifference to the pilots' demands even to the point of making the outrageous assertion that it was not aware of what its Chief Operations and Planning Manager might have agreed to. Later, after arriving at the point where the Government took a decision to refer the dispute to the National Industrial Tribunal and being faced with the unilateral enforcement of the duty and flight-time limitations by the Pilots' Association, it failed to act with firmness or with a sense of responsibility to the taxpayer who finances it or to the travelling public. It should be interesting to know whether it is

the Corporation's and the Government's view that, in the event of non-co-operation from the pilots, the Corporation just cannot take any step at all to maintain the services. While we concede readily and fully the desirability of the just demands of pilots being met promptly and fully, we are reluctant to accept the position that the pilots, acting arbitrarily, may always have the air services grounded until the Corporation or the Government is prepared to yield. We urge very strongly that the Government ought to be prepared with a scheme or schemes for keeping the flights operating in emergencies such as the one recently brought about by the Pilots' Association.

In any case, where it becomes impossible to operate all the services according to schedule, the Corporation should immediately cut down the number of flights, but see that those flights at least are operated to schedule. Rationalization of this kind could considerably reduce the inconvenience or discomfort caused to travellers or would-be travellers. It certainly indicated gross neglect of the travellers' interests on the part of the IAC when, during some 18 days, the scheduled flights were reduced to chaotic timings and those who would travel by them driven crazy by anxieties and uncertainties. We wonder whether in emergencies such as the recent one it is not open to the Corporation to indent on the IAF for pilots or other flight personnel. It may not always be a happy thought that the personnel of the defence services should be employed to break strikes or near-strikes in the civil community, but the fact remains that defence personnel have been so used where strategic or vital services are concerned. The IAC pilots having demonstrated their capacity to ground the airlines on any occasion when they feel that they are justified in so doing, the community is surely not to be left unprotected against their tactics. Finally, as we had said at the outset, we do not yet know on what terms the Pilots' Association has made it possible for the Corporation to resume its flights. Mr. Kanungo confessed to discomfort at the thought of apportioning blame between the Corporation and its pilots, but there is no need for the public to share his nervousness or embarrassment. Knowledge of the understanding now reached between the pilots and the Corporation will help us in judging the merits of the dispute as well as the Corporation's handling of it. This apart, the Government has taken a decision of referring the dispute to the National Industrial Tribunal. Does this reference still stand or the understanding now arrived at provides for any alternative agency or means of settlement? It is obvious that answers to questions such as these are needed and must be provided, since they have a bearing not only on the capacity and competence of the IAC in the future to deal fairly and firmly with its staff or responsibly with its customers, but also on the much larger problem of the Government's ability and willingness to preserve industrial peace on terms which are fair to the community.

PARTICULAR SERVICING FOR PARTICULAR PEOPLE

It means more life, more mileage if your Jeep is serviced by Jeep Dealers. It is oiled, cleaned, tuned and adjusted by people who know each nut and bolt of the Jeep. They have been trained to give you factory specialised servicing. There are over a 100 dealers spread throughout the country with a complete range of equipment. Trust your Jeep to a JEEP DEALER for reliable, efficient servicing.

Highlights of the Week

BOOSTING FERTILIZER MANUFACTURE

ADDRESSING A Press Conference after the five-day confabulations they had with the Union Government last week, General Lucius D. Clay, the US Military Engineer now turned a well-known business manager and investment planner, and Mr. Stephen D. Bechtel, Chairman of the internationally-known Bechtel Corporation, gave some details of the crash programme they had suggested for stepping up production of fertilizers in India through setting up of a complex of five giant plants, each with a capacity to manufacture 200,000 tons of nitrogen per annum, with assistance from a consortium of American fertilizer manufacturers. The scheme, they outlined, envisages formation of a new fertilizer corporation in India with a share capital of approximately Rs. 60 crores (\$125 million) which will be subscribed by the Government of India, private entrepreneurs and the general Indian investing public on the one hand, and by the industrialists and other citizens of the United States on the other, in 50:50 ratio. The US participation in the venture may, however, be scaled down slightly if the Government of India so desired.

The entire foreign exchange component of the complex, nearly half of the Rs. 250 crores (\$500 million) estimated cost, will be made available by the US collaborators in the form of their participation in the equity capital of the proposed corporation or in the shape of loans to be contracted from various sources, including the USAID and possibly the World Bank. Suppliers of fertilizer manufacturing equipment from outside the United States would also be welcomed to extend commercial credits for this massive programme. Supplies of equipment and services from indigenous sources will be made use of to the fullest extent so that machinery manufacture in India gets a new impetus.

It will be the endeavour of the Corporation to make use of the most modern fertilizer manufacturing techniques so that the plants to be set up are able to produce fertilizers at the most competitive rates in the world. With a view to keeping the manufacturing cost at the barest minimum, it is proposed to set up standardised plants. Stress will be laid mostly on the production of nitrogenous fertilizers. But composite fertilizers may also be manufactured, if necessary. The Corporation will also launch an ambitious programme for educating the agriculturists in the use of fertilizers as application of chemical manures is not a hit-and-miss process.

A feasibility study has been agreed to be undertaken by the Bechtel Corporation with assistance from the Stanford Research Institute, California, and the Government of India, for drawing up detailed proposals for this project. The study will cover such aspects as actual location and sizes of the new plants, the pattern of end-products, financial pattern, marketing and distribution arrangements, pricing, raw materials to be used, etc. It is expected to be completed by the end of this year. The plants are anticipated to be commissioned into production in about 2 years' time from the date of the scheme being improved.

This one million tons fertilizer production crash programme, energetically being pursued by the US Ambassador in India, Mr. Chester Bowles, will not only help in achieving the proposed fourth Plan target of raising the fertilizer manufacturing capacity in India to 2.25 million tonnes, but will also enable foodgrains production being stepped up by about 10 million tonnes.

BONN AID

AN AGREEMENT has been signed last week between the Governments of India and the Federal Republic of Germany for the utilisation of the DM 380 million (Rs. 45.24 crores) assistance committed by the latter at the last May meeting

of the Aid-India Consortium for India's economic development during the current financial year. Of this, a sum of DM 270 million (Rs. 32.14 crores) is being provided as aid on governmental account and the balance of DM 110 million (Rs. 13.10 crores) as guarantees for suppliers' credit.

The DM 270 million assistance on governmental account is to be utilised as follows:

- (i) DM 90 million (Rs. 10.71 crores) for refinancing liabilities of the Rourkela Steel Plant;
- (ii) DM 55 million (Rs. 6.55 crores) for purchase of goods and services in Germany (in the use of this money, the requirements of Indo-German enterprises in India will be taken into consideration);
- (iii) DM 40 million (Rs. 4.76 crores) for further financing of certain German-aided development projects nearing completion;
- (iv) DM 60 million (Rs. 7.14 crores) for spending on new development projects.
- (v) DM 25 million (Rs. 2.93 crores) for the Industrial Credit and Investment Corporation of India, the Industrial Finance Corporation of India and the National Small Industries Corporation for granting loans to medium and small undertakings.

Of the DM 110 million credit, which is in the nature of a suppliers' credit, DM 82 million (Rs. 9.76 crores) is to be used for the purchase of new ships from German shipyards and DM 28 million (Rs. 3.34 crores) for purchase of other goods and services from Germany.

The Rourkela refinance credit of DM 90 million carries interest at the rate of 5.5 per cent per annum and is repayable in 16 years. The other loans, totalling DM 180 million (Rs. 21.43 crores), carry interest at the rate of 3 per cent per annum and are to be repaid over a period of 25 years, including a grace period of 7 years. The terms of the suppliers' credit will be settled between the buyers and the sellers both in the private and public sectors.

Including the new credit, the total assistance made available by the Federal Republic of Germany for India's economic development so far aggregates DM 3,409.56 million (Rs. 405.90 crores). Of this, a sum of DM 1,176.6 million (Rs. 140.06 crores) was made available during the second Plan period. The remainder DM 2,233 million (Rs. 265.83 crores) has been provided under the current Plan. India has been importing from Germany equipment for various industries viz., automobiles, chemicals, engineering, power, steel, etc. Among the important projects undertaken with German assistance are the Rourkela Steel Project, the Rourkela and Neyveli fertilizer factories, the Neyveli Briquetting and Carbonisation Plant, the Durgapur Power Station (5th Unit), expansion of the Mysore Iron and Steel Works and its conversion into an alloy and special steel plant, the Government Electric Factory, Mysore, expansion of the Kalinga Pig Iron Plant, the Kargali coal washery extension and TELCO.

"FULL" AND FAR-REACHING

IF THE RECENT visit to the Soviet Union of Mr. Y. B. Chavan, Minister for Defence, was "fruitful and friendly", the nine-day State visit of the President might well be described as "full" and far-reaching. The joint communique issued on Saturday last on the conclusion of Dr. Radhakrishnan's visit bears sufficient testimony to this. While the communique

is fairly vocal on many points where agreement on and identity of approach has been reaffirmed, it is more than suggestive on a good deal of others. Among the many subjects on which accord has been reiterated are the solution of international disputes by peaceful means, peaceful co-existence, complete disarmament, the elimination of colonialism and imperialism, and the stoppage of racial discrimination. These were the ideals which the late Jawaharlal Nehru had always held very dear to his heart and in which the present Government has declared its unequivocal faith. It was only natural, therefore, that the personal equations that the late Prime Minister had forged with the Soviet leaders should have been carried forward. The President's visit has confirmed that while Jawaharlal Nehru, as the architect of India's foreign policy, was instrumental in the formulation of these equations, the cordial relations built on personal levels must certainly endure between the two countries. The projected visits to this country of the Soviet President and the Prime Minister will surely strengthen these bonds.

What is, perhaps, more important than anything else in the communique is that it calls upon the nations of the world to "refrain from the use of force in the solution of their territorial and border disputes". The communique pleads that they should "pay due regard to historically formed boundaries". The suggestion is obviously directed at China, who, having pitched its guns against India, is now claiming one and a half million square miles of the Russian territory. China might as well profit from another piece of sound advice contained in the communique; the communique stresses the need for good relations among countries with different political and social systems.

A REPORT ON POWERLOOMS

THE COMMITTEE appointed under the chairmanship of Mr. Asoka Mehta to enquire into the problems of the powerloom industry has recommended the adoption of various measures to strengthen this industry. As a broad measure of providing more facilities for production by powerlooms and handlooms, the Committee has suggested that the gap in the present output and demand of cloth should be filled by stepping up production in the decentralised sector. Cloth production at the end of the current Plan is estimated around 8,500/8,600 million yards which requires an additional output of 500 to 600 million yards during the remaining period of the Plan. The report expects the mill cloth production to go up to 5,000 to 5,100 million yards (which was the level at the end of the second Plan) from the current output of 4,850 million yards. The gap of 250 to 350 million yards, it is recommended, should be made up by increasing the number of handlooms and powerlooms at various places.

The total investment in the cotton powerloom sector at current prices has been estimated at about Rs. 18 crores. The Committee opines that adequate working finance for the proper functioning of the powerloom industry has to be provided at fair rates of interest. The State Finance Corporations, Government loans under the State Aid to Industries Act and commercial banks, particularly the State Bank of India, may have to step in in a big way to fill the gap.

It is stated that the scheme sanctioned during the second Plan period for the conversion of handlooms into powerlooms did not meet with full success, not because the weavers did not take to the scheme with enthusiasm but mainly because of insufficient financial assistance provided for working capital. This scheme has now been recommended to be resumed and it is proposed that 10,000 powerlooms should be introduced in the handloom sector, with official assistance at the rate of Rs. 8,700 per loom.

The technical opinion placed before the Committee indicated that the economic size of the medium range powerloom establishments should be 24 to 36 looms, although a unit of four powerlooms is considered as a fairly average sized unit

to be worked by a weaver's family. It has also suggested that powerlooms in clusters of 300 each within convenient distance of one another, in and around a small town, would provide a feasible pattern.

The Committee does not consider it proper that the rate and pattern of growth of industry should be left to be determined by the vagaries of excise levy. It should be so employed as to keep in view the paying capacity and the differentials as between different sections of the industry. Moreover excise duty should be levied to realise the developmental objectives. The Committee feels that the system of charging excise duty at different rates for different sizes of powerloom units and concessions allowed for small units has been a major factor in causing an unhealthy and undesirable distortion in the structure of the powerloom sector.

The Committee has recommended that the All-India Handloom Board, which at present functions in an advisory capacity, should be made a statutory body and entrusted with the implementation of all the development schemes relating to the handloom and powerloom industry. The Board, it says, should be given adequate funds for the purpose.

BATTLE AGAINST CORRUPTION

VARIOUS MEASURES are proposed to be taken to translate into action the recommendations of the Santhanam Committee for eliminating corruption among ministers, politicians and officials. The Union Cabinet last week approved a comprehensive code of conduct for ministers and politicians. The ministers will be required to declare their assets and liabilities before assuming office and submit annual returns as long as they remain in office. They will also be required to eschew ostentatious living and not accept hospitality from business men having dealings with departments under their charge. The code also prescribes the procedures to be followed in the event of allegations of graft against ministers. The authority to inquire into these allegations has been vested in the Prime Minister in the case of Central ministers and in the Chief Minister of the State concerned and the Union Home Minister when charges are levelled against State ministers. The Union Home Minister, Mr. G. L. Nanda, has made it clear that investigations would start as soon as the Government received relevant information about any person in high office, but has emphasised that the tendency to make frivolous charges would not be encouraged.

The Union Government has also decided to amend the existing anti-corruption laws with a view to curbing corruption among officials. It will ensure speedy trial of cases of bribery, corruption and criminal misconduct in discharging of official duties. The anti-corruption laws to be amended are the Indian Panel Code, the Criminal Procedure Code, the Criminal Law Ordinance, 1944, the Delhi Special Police Establishment Act, the Prevention of Corruption Act and the Criminal Law (Amendment) Act, 1952.

The changes proposed in the anti-corruption laws will provide for attachment of money and other property obtained by committing certain offences under the Prevention of Corruption Act. The possession of disproportionate assets by public servants is envisaged to be made a substantive offence. So also the practice of habitually corrupting public servants and attempts to commit certain offences covered by the Prevention of Corruption Act. It is also proposed to give powers to the police to inspect bank books and to take certified copies of relevant vouchers while investigating suspected cases of corruption. As a precaution, these powers will be allowed to be exercised only by police official not below the rank of the Superintendent of Police. The definition of "public servant" is to be enlarged so as to cover certain additional categories of public functionaries such as those in the public undertakings. Some new offences are also being created. Multiplicity of proceedings in the case of certain offences and unnecessary adjournments or stay of proceedings are to be avoided.

U.S. Industry in Europe

ANALYST

OF THE total value of US direct investments abroad of \$37 billion in 1962, Europe accounted for \$8.8 billion, that is, a fourth of the total investments. It would be interesting to analyse the structure of this investment in recent years as also the earnings from all these investments.* Since, for our economic growth, US capital is likely to play an important part, such an analysis is also likely to throw light on the characteristics of US capital investments abroad.

Table I shows the value of US direct investments in Europe as also its composition in certain important industrial groups. It will be seen from Table I that the total value of US investments abroad which stood at \$12 billion in 1950 increased to \$37 billion in 1962, that is, a three-fold increase whereas the investments in Europe have recorded a five-fold increase from 1.7 billion in 1950 to 8.8 billion dollars in 1962. Owing to this, 1.7 billion in 1950 to 8.8 billion dollars in 1962. Owing to this, investments in Europe, which accounted only for 15 per cent of US investments in 1950, formed, in 1962, 24 per cent of the total investments. The European countries in which US investments are concentrated are United Kingdom (\$3.8 billion), Germany (\$1.5 billion) and France (\$1 billion). Since the United Kingdom is not in the Common Market, US investments in non-Common Market countries of Europe are higher than in the Common Market. As regards the main fields of US investments, it would be seen from Table I that investment in Manufacturing which formed \$4.8 billion is more than half of the total investment of \$8.8 billion. The other two important fields of US investments are Petroleum (\$2.4 billion) and Trade (\$1 billion).

Table II shows the share of US stock-holders and US parent companies in the earnings of the foreign subsidiaries, affiliates

* Statistical data for this analysis have been derived from August & October 1963 issues of the 'Survey of Current Business'.

and branches, the investment of which is shown in Table I.

It would be seen from Table II that of the total earnings from direct investment of \$4 billion in 1962, 0.9 billion, that is about a quarter, comes from Europe. The earning from non-Common Market countries of Europe is slightly higher than from the Common Market countries. The United Kingdom accounts for more than a third of the total earnings from Europe for the United States.

The rate of earnings on direct investments may be seen in Table III. It would be seen that the rate of earnings in Europe is almost the same as the rate of global earnings, except in Petroleum where the rate is comparatively low in Europe. It would further be seen that the rate of earnings in Germany is higher and that in France lower than the rate of global earnings.

Since investments in Manufacturing and earnings from them constitute the largest part of US investments in Europe, it would be interesting to see the trends in sales in these manufacturing enterprises in Europe and how much has been exported to USA. Table IV shows the trends in sales during 1957 to 1962 and Table V the amount of local sales and exports

TABLE IV.

SALES OF U.S. MANUFACTURING ENTERPRISES
ABROAD

(\$ million)

Country	1957	1959	1960	1961	1962
Benelux	416	461	602	740	800
France	763	789	965	1195	1440
Germany	1116	1572	1835	2265	2600
Italy	230	244	350	475	575
United Kingdom	3303	4050	4715	5070	5265
Total Europe (including other European coun- tries)	6313	7690	9310	10670	11780
TOTAL WORLD	18331	21100	23570	25580	28120

to the United States and other countries by these manufacturing enterprises in 1962.

It will be seen from Table IV that while the total world sales of US manufacturing companies abroad increased from \$18 billion in 1957 to \$28 billion in 1962, the sales in Europe almost doubled from \$6 billion to \$12 billion. It would further be seen from Table IV that US companies in the United Kingdom account for about half of the European sales.

Table V gives the break-up of the European sales in 1962 of \$12 billion under various commodities and also the amount exported to the United States.

TABLE V.

EUROPEAN SALES IN 1962

(\$ million)

Industry	Total Sales	Local Sales	Export- ed to U.S.	Export- ed to other countr.es
Food Products	1185	1130	5	50
Paper and allied products	80	70	—	10
Chemicals	1760	1360	50	350
Rubber Products	460	385	5	70
Primary and fabricated metals	715	610	5	100
Machinery excluding electrical	1850	1340	50	460
Electrical machinery	1220	990	10	220
Transportation equipment	3280	2440	40	800
Other products	1230	970	10	250
TOTAL	11780	9295	175	2310

It would be seen from Table V that a substantial part of the products of US direct investments in manufacturing is sold in the country of manufacture and not exported to the US, suggesting thereby that US investments in Europe are not for securing some essential supplies required by her but only for profit.

The main features of US investments in Europe may now be brought together.

- Europe accounts for about a fourth of the US investments abroad;
- In Europe, US investments are the highest in UK and this is followed at a distance by Germany and France;
- In Europe, the rate of earnings on US investments is the highest in Germany;
- Sales in Europe accounts for four-fifths of the total world sales of US foreign manufacturing companies.
- A substantial part of the sales of US manufacturing companies abroad is in the country of manufacture.

FROM THE PRESS GALLERY

Censure Motion Defeated

By Our Parliamentary Correspondent

NEW DELHI:

THE MARATHON five-day debate in the Lok Sabha on the motion of no-confidence in the Lal Bahadur Government and a three-day discussion in the Rajya Sabha on the food situation in the country provided the highlights of the proceedings in Parliament this week.

As anticipated, the censure motion was defeated by an overwhelming majority; only 50 votes were cast in favour of the motion and 307 against it. Thirteen members, presumably belonging to the Swatantra Group and a few independents, abstained from voting. Although the no-confidence motion was hardly justified in view of the fact that Mr. Lal Bahadur has been at the helm of the Government for not more than four months and because of his recent illness he has had not enough time to grapple with the country's problems squarely, it served a very useful purpose inasmuch as it provided an opportunity to the new Government to enunciate its domestic and foreign policies in unambiguous terms. The need for such an enunciation of the domestic policy was obviously imperative as Mr. Lal Bahadur's advice to the Union economic ministries and the State Governments in July last that heavy industry projects on which real start had not been made as yet, should be deferred in the interest of reducing public expenditure for containing the expanding spiral of prices, had given rise to speculation that the development of the country might be slowed down. A public pronouncement of the foreign policy also appeared to be called for to set at rest all conjectures about Mr. Lal Bahadur's thinking on the matter.

Planned Approach

In their replies to the debate, the top three in the Union Cabinet — the Prime Minister, the Home Minister and the Finance Minister — reiterated in no mistakable terms that the present Government intended to follow the basic foreign and domestic policies laid down by the late Prime Minister, Jawaharlal Nehru. While the Home Minister, Mr. G. L. Nanda, characterised the thinking of the Communist and the Swatantra parties on this issue as an "alarmist view" and "wishful thinking", respectively, the Finance Minister, Mr. T. T. Krishnamachari, stoutly defended Government's adherence to the planned approach of building up the economy (with a judicious emphasis on heavy industry) and defence of the country simultaneously. Summing up the position in his characteristic style, the Prime Minister reaffirmed his faith in non-alignment and co-existence — the sheet anchors of India's foreign policy — and building up of democracy and socialism and steadfast adherence to secularism — which provide the bases for the domestic policies — but pointed out that this did not imply hugging the beaten track. If the situation called for certain changes within the broad framework of these policies, they had to be made.

The Prime Minister laid great emphasis on the amelioration of the lot of the common man and stressed the need for arresting the uptrend in prices not only of foodstuffs, but also of the other articles of common use — sugar, cloth, vegetable oils, matches, salt, vegetables and even bicycles. These commodities, he said, should be sold at fixed prices. The Prime Minister expressed confidence that his Government would be able to tide over the present difficult situation on the food front, although the difficulties might continue till the end of October.

Both the Prime Minister and the Home Minister refuted the charge made by the Swatantra Party that nothing had been achieved by the Congress Government in the past 17 years. Besides pointing out that foodgrains production during the

first two Plans had gone up by 46 per cent and industrial production by as much as 95 per cent and that per capita consumption of food, cloth, sugar, tea, vegetable oils, paper, cycles, sewing machines and electric fans, among other things, had gone up to an impressive extent, they referred to the signs of progress scattered all over the country.

Replying to the Opposition's charge that corruption was rampant, both Mr. Lal Bahadur and Mr. Nanda listed the measures being taken to eliminate this evil at all levels. The Prime Minister deprecated too much talk about corruption lest it should give an erroneous impression to the world that India was seething with corruption. This country, he said, attached the greatest importance to integrity. The Prime Minister referred to the code of conduct drawn up for Ministers and observed that if he or the Chief Minister of a State thought that there was a prima facie case against any of their colleagues or there was something which was not correct, the Minister should immediately tender his resignation. The Prime Minister wanted the Government officials, particularly the field officials, to shed officiousness. He also declared that, when needed, he would be quite tough with the Communists. The Home Minister declared that emergency would continue till the time it was considered essential, but assured the House that the emergency regulations would only be used to make effective defence preparations as in the past.

Pruning Expenditure

Mr. T. T. Krishnamachari refuted the suggestion of the Opposition members, especially the Communists, that the Government intended either to slow down industrial progress or to stop advance action on future projects. A short-term view, such as reversing the earlier decision to go ahead with the defence and development expenditure just because of the current failure of supplies — shortage of food supplies, which had aggravated the price situation, the Finance Minister pointed out, was due to adverse weather conditions during the last two years — would be disastrous for the country's long-term progress. There was, however, no denying the fact, the Finance Minister added, that some pruning of expenditure was necessary for avoiding waste. Mr. Krishnamachari asserted that the lesson of the last three years was not that they should reverse the strategy of the Plan and slow down development; it was that they should continually strive to improve the returns from investment in every field so that the rate of growth of the economy was speeded up. An average increase of 2 to 3 per cent per annum in prices, the Finance Minister said, appeared to be a general phenomenon in the world and India could not escape a general rise in prices. To this he referred in reply to the charge that the value of the Indian rupee had gone down. The Finance Minister denied that there was a conflict between the component parts of the Government and the Planning Commission in regard to the dimensions of the fourth Plan. In the formulation of the Plan, it was natural that there should be different views. The Finance Minister pointed out that the country should not rest content with anything less than 5 per cent rate of growth in agriculture during the fourth Plan and development of agriculture could not proceed without adequate support from industry. The fourth Plan, thus, had to be treated as an organic whole; there was no competition between the progress in agriculture and development of industry, be it consumer, small or heavy industry. The fourth Plan, Mr. Krishnamachari declared, must endeavour to concentrate on:

- Production of goods such as fertilizers, insecticides, agricultural implements including tractors, pumps,

diesel engines, etc., required so urgently for giving boost to our agricultural programmes;

- (ii) Early completion of heavy engineering and other engineering industries already taken in hand and such additional projects as are deemed necessary for balancing the programmes and providing a sound basis for future industrial development;
- (iii) Stepping up of production of both pig iron and steel from the expansion schemes in hand as well as those already contemplated at the present units besides Bokaro, and the establishment of additional capacity for non-ferrous metals, aluminium, copper and zinc;
- (iv) Increased production of consumer goods such as textiles, sugar, drugs, kerosene, paper, etc.;
- (v) Expansion of production of cement and other construction materials to meet the increasing demands; and
- (vi) Production of petrochemical products like synthetic fibres to substitute imported cotton and wool, based on products obtained concurrently with kerosene in our refineries.

In view of the shortage of foreign exchange, efforts had to be made during the fourth Plan in the following directions:

- (a) Completion of the programmes in hand and securing of as much output from each of them as possible;
- (b) Utilisation of idle capacity by augmenting supplies of required components and materials to existing units and giving preference to priority and essential industries, wherever the availabilities fall short of overall needs;
- (c) According of preference to expansion of existing units over establishment of new units wherever conditions justify, as this would help to secure additional capacity with minimum investment; and
- (d) Working out 'inter se' of priority between schemes of equal importance, to give preference to fast maturing schemes over those which are likely to have longer gestation period.
- (e) Similarly in the case of industries which offer export possibilities or import substitution, they would get preference over others not similarly placed.

In the organisational field, Government policy during the fourth Plan, Mr. Krishnamachari said, would continue to be on the lines set out in the Industrial Policy Resolution of 1956.

The Union Minister for Rehabilitation, Mr. Mahavir Tyagi, refuted the charge of Mr. N. C. Chatterjee, who had moved the censure motion, that the Union Government was against settlement of displaced persons from East Bengal in West Bengal. Nearly 50 per cent of the displaced persons, who had recently come from East Bengal, he said, had been settled down in West Bengal. West Bengal was now becoming overcrowded and there were other States in the country where these kith and kin of ours could be settled. Mr. Tyagi assured that the question of paying compensation to refugees coming to India from East Pakistan would be raised at the forthcoming meeting of the Home Ministers of the two countries.

Besides taking the Government to task for failures on the price and food fronts, the seeping in of corruption and deviation from the Nehru policies, the Opposition criticised the Congress Party for its internal bickerings, which, it alleged, was hampering the progress of the country. Mr. J. B. Kripalani (Independent), though he disassociated himself from the censure motion, vehemently criticised the Government's foreign policy. He cautioned against the danger of another 'buffer area between India and China — the one in Tibet has already gone — being destroyed, resulting in a threat to the country's

security. He stressed that India, Japan, Australia and the other free countries of South-East Asia should come to an understanding, not necessarily a military alliance. Another independent member, Mr. Frank Anthony, hoped that there would soon be an understanding with Pakistan. He also disassociated himself from the no-confidence motion and denounced it as a 'political stunt'. A good deal of din was also raised in the House over the "Murud affairs".

The Rajya Sabha debate on the food situation in the country, though it went on for three days, failed to throw up any new suggestion for solving the problem. Opinion among the Opposition members continued to be divided on the question of State trading in foodgrains. There was, however, near-unanimity in the demand for abolition of wheat zones. The diagnosis of the causes for the abnormal rise in food prices differed as widely as during the debate in the Lok Sabha. The members from Uttar Pradesh vociferously advocated the case of their State for greater food supplies, in view of the acute situation there. The Union Food Minister, Mr. C. Subramaniam, also traversed mostly the same ground as he had covered in the lower House, but announced that he would soon place before Parliament a comprehensive White Paper on the Government's plans for agricultural development. He felt aggrieved at the accusation of the U.P. Chief Minister and the Rajya Sabha members from the State that the Centre had failed to keep its promise of supplying adequate quantities of foodgrains to the State. Distribution of foodgrains among the various States of the Union, the Food Minister asserted, had been done on an equitable basis as possible. Mr. Subramaniam promised to review the position in regard to abolition of food zones at "the proper time". As another weapon in his armoury to fight the battle on the food front, the Food Minister hinted at a nation-wide anti-rodent campaign.

The Rajya Sabha passed a Congress member's Bill seeking to raise the monthly salary of Members of Parliament from Rs. 400 to Rs. 500 and the daily allowance from Rs. 21 to Rs. 31. It also adopted the official motion to refer the Press Council Bill to a Joint Select Committee. The Lok Sabha voted the Finance Minister's Bill seeking to give "temporary protection against victimisation" to employees for furnishing information to Government inspectors investigating a company's affairs.

The Finance Minister introduced in the Lok Sabha two new Bills — one seeking to further amend the Companies Act in the light of the final instalment of Government's decisions on the Vivian Bose Commission's report and the other seeking to amend the Foreign Exchange Regulation Act with a view to prohibiting unauthorised dealings in foreign exchange brought in by tourists and tightening of control over such dealings.

The changes proposed in the Companies Act were reported in "Eastern Economist" dated September 11, 1964 on page 478. The main features of the Foreign Exchange Regulation (Amendment) Bill are given in this issue on page 588.

Question Hour

Coal Production Pattern: Mr. Sanjiva Reddy, Union Minister of Steel and Mines, stated in the Rajya Sabha on September 17 that the coal production pattern was being adjusted to the demand to prevent the existing imbalance, partly due to unforeseen increase in the output of lower grades. The demand for coal, he said, had not come up to the expected level. Therefore, the demand in the next two years had been re-assessed in consultation with the consumers. The same approach was being applied in the fourth Plan. Ultimately, the matching of resources with the production pattern would be done. As regards the falling prices of lower grade coal, Mr. Reddy said that the decline had been caused by slack

market conditions and accumulation of lower grade coal stocks at the pit-heads. Certain measures to ease the situation had been negotiated and the situation was being watched.

Zinc Plant: Mr. Reddy also told the Rajya Sabha on September 17 that some Polish experts would be visiting India shortly in connection with the setting up of a zinc smelter plant. It would take three to four years for the plant to be commissioned.

Pig Iron: Speaking in the Lok Sabha on September 11, Mr. Reddy had revealed that two firms had already been selected for the preparation of feasibility studies of sites for the proposed blast furnaces to produce pig iron. The total cost involved was Rs. 3 lakhs and the reports were expected by June, 1965. Mr. Reddy had also informed that when the third Plan was formulated, the demand for foundry grade iron by 1965-66 was placed at 1.5 million tonnes. Of this, one million tonnes was to come from integrated steel-works and half a million tonnes from units in the private sector. The actual demand for pig iron had, however, outstripped these forecasts. He had further informed that according to the latest estimates, by 1965-66 the annual demand for pig iron would be about two million tonnes. Against this level of demand, the current production, mainly from the integrated steelworks, was about 1.2 to 1.3 million tons. The shortfall was of the order of 0.7 million tons. Besides arranging for immediate imports to the extent of 100,000 tons to tide over the present shortage, he added, steps had been taken in hand to ensure greater availability of pig iron during the early years of the fourth Plan.

Heavy Electricals: The Minister for Heavy Engineering, Mr. T. N. Singh, informed the Lok Sabha on September 11 that the Government had asked International General Electric Company of the USA to prepare a feasibility study report and submit preliminary proposal for the setting up of a new Heavy Electricals Plant. This plant, he added, would mainly manufacture big turbines.

Bombay Harbour Expansion: Mr. Raj Bahadur, Minister of Transport, told the Lok Sabha on September 15 that the possibility of providing some additional berths at a suitable site on the eastern side of the Bombay harbour was under investigation. The Port Trust's consulting engineers were preparing a Master Plan for the expansion of the port. The work might take about two years to be completed. The scheme would, therefore, have to be considered for execution in the fourth Plan period.

Incentive Scheme for Port Workers: The Deputy Minister of Labour and Employment, Mr. R. K. Malviya, informed the Lok Sabha on September 14 that the Government proposed to introduce an incentive scheme for the registered dock workers of the Calcutta Dock Labour Board. The incentive schemes applicable to shore workers in Calcutta and stevedore workers at other ports were being kept in view in framing the scheme for stevedore workers by the Dock Labour Board, Calcutta. Until the Dock Labour Board had finalised the scheme in consultation with the interests concerned, it was not possible to indicate how it would compare with the other schemes, he added.

Engineering Industry Wage Board: Mr. R. K. Malviya also told the Lok Sabha on September 14 that the terms of reference and the composition of the wage board for engineering industry had been nearly finalised and that the Government resolution appointing the wage board be issued shortly.

Provident Fund Rate: The question of extending the enhanced rates of contributions to the provident funds under the Employees' Provident Funds Act, 1952, is under consider-

ation in respect of 12 more industries and classes of establishments. The industries are: tea plantations (other than the tea plantations in the State of Assam), coffee plantations, rubber plantations, cardamom plantations, pepper plantations, iron-ore mines, manganese mines, limestone mines, gold mines, industrial and power alcohol industry, asbestos cement sheets industry and coffee curing establishments. This information was given in the Lok Sabha on September 15 by the Deputy Minister of Law and Social Security, Mr. Jaganatha Rao.

Social Security: Mr. Jaganatha Rao also informed the Rajya Sabha on September 14, that the Department of Social Security was processing certain new schemes relating to old age pension, relief and assistance to handicapped persons and family or retirement pension for subscribers to the Employees Provident Fund and the Coal Mines Provident Funds. Steps were also being taken, he added, to extend the scope of the various schemes transferred from different Ministries to the Social Security Department. The Employees State Insurance Scheme was being extended to Ahmedabad, benefiting over two lakh workers and their families. The Employees Provident Fund Act would be extended to six more industries. Mr. Rao said that the social welfare schemes meant specifically for the scheduled castes and tribes were also being extended.

Ranchi Fire: Mr. H. C. Dasappa, Minister for Industry and Supply, informed the Lok Sabha on September 18 that a fire, which had broken out in the custody stores of the Foundry Forge Plant, Ranchi, on the night between 10th and 11th of September, was not caused by short circuit. The Chief Fire Officer of the State Government had already inspected the place and his report was awaited. A departmental enquiry committee, associating two Czech experts, had also been set up to investigate and report on the probable cause of the fire. The godown, the Minister stated, contained packages of imported equipment, mostly for the Fetting Section of the plant and consisted of electric motors, control panels, pressure pumps, etc. The thirteen packages which had been affected by the fire contained equipment worth Rs. 1,60,000. The actual loss, Mr. Dasappa pointed out, was estimated to be below Rs. 1,00,000 because a part of the equipment could be put to proper use only after minor repairs. He further informed that the equipment was insured with the Indian Insurance Pool which has already been requested to send their representatives immediately for the necessary survey.

High Power Transmitter: Mr. C. R. Pattabhiraman, Deputy Minister for Information and Broadcasting, informed the Rajya Sabha on September 15 that the first offer to the AIR's need for powerful medium and short wave transmitters came in October, 1963, from a local Indian firm with Czechoslovak connections. They promised to contact their principals and submit concrete proposals. This was, he admitted, much before the issue of the tender enquiry, for high power medium wave transmitter, by the Director General, Supplies and Disposals, on February 11, 1964, at the request of the Ministry of Information and Broadcasting. But it was only in response to this enquiry, the Minister emphasised, that the formal offer was received from M/s. Skoda India Ltd., Bombay (agents for a Czechoslovak firm) together with other offers from other countries. The tenders were opened by the Director General, Supplies and Disposals, on March 24, 1964, in the presence of the parties. While the offers were being examined, an indication was also received from the USSR, from where there had been no response to the earlier tender enquiry, that they might be able to supply transmitters of the type required. In the meantime, Mr. Pattabhiraman added, some rethinking on the whole question had become necessary for various reasons and a final decision in the matter had yet to be taken.

WINDOW ON THE WORLD

Britain's Future Economic Policy

PAUL EINZIG

LONDON:

ALTHOUGH the outcome of next month's general election is bound to affect British economic policy in some respects — especially in respect of national ownership of industries — in most respects any difference between the measures to be adopted by a Conservative or a Socialist Government would be largely one of degree. The fundamental changes that occurred in 1951 when the Conservatives took over from the Socialists are not likely to repeat themselves. It is true, the progressive decontrol of exchanges and of foreign trade might become reversed under a Labour Government. But it is far from certain that they would not be reversed in any case even if the election were to confirm the Tory Government in office.

The Labour Party is no longer wedded to the pursuit of a cheap money policy at all costs. There will be no return to Dr. Dalton's 2 per cent Bank rate that remained unchanged in face of acute sterling crises in 1947, 1949 and 1951. Although in spite of Mr. Wilson's promise (or threat) of an 8 per cent Bank rate, a Labour Chancellor of the Exchequer would be in all probability most reluctant to raise the bank rate to anything like 7 per cent or to adopt other measures of credit squeeze, even in this respect the difference between the attitude of the rival Parties is largely one of degree. For there is a growing hostility in influential Conservative circles to the post-war "stop-go" policy. A Conservative Chancellor of the Exchequer would be almost as keen as a Socialist Chancellor of the Exchequer to avoid causing a setback in industry by defending sterling with the aid of deflationary measures.

Alternative Methods

There are two alternative methods of defending sterling — by borrowing abroad or by restricting imports and artificially stimulating exports. The Government of either Party would resort to the former after the election in generous measures. Mr. Maudling's name is associated with one of the innumerable international liquidity plans under which the Government would be able to run up a short-term indebtedness abroad. This would obviate the necessity of deflating, at any rate for some time, until the newly-created source of borrowing has reached its limit. Borrowing abroad might assume the form of undisguised long-term issues by the Government, or of encouraging British industrial firms to issue loans abroad, or the encouragement of selling out industrial firms to American or other foreign buyers.

In all these respects a Socialist Chancellor of the Exchequer would go even further than a Conservative — except in respect of selling the control of industries to Americans — but the difference would be merely one of degree. In respect of the alternative, that of defending sterling with the aid of foreign trade controls and subsidies, a Socialist Chancellor would of course go much further than a Conservative. But even the latter is not likely to be opposed dogmatically to the imposition of import restrictions, whether directly or in the form of applying exchange control to certain types of current trade transactions. The liberalisation of international capital movements would be reversed under a Socialist Government, but to some extent it might be reversed even under the present Government if it should remain in office and if the balance of payments deficit should prove to be intractable. For there is a limit to which any Chancellor of the Exchequer would be prepared to accept the progressive increase in Britain's foreign short-term debts as a result of an increase in her foreign long-term claims. The main difference in the attitude

of the two Parties in respect of a return to exchange controls would be that the Tories would restore them with the utmost reluctance and regret while Socialists would restore them "with a song in their hearts", and at any rate they would make virtue of necessity.

Socialists are certain to introduce some degree of bilateralism in foreign trade and would go a long way towards adopting disguised subsidies to exports. If pressed hard by the perennial import surplus, a Conservative Chancellor of the Exchequer, too, might go some way in those directions, but not very far.

The Government and the Conservative Party have committed themselves so heavily to increasing public expenditure that any difference between Conservative and Socialist policies in that respect is bound to be one of degree. Indeed a Conservative Government is in a better position to overspend than a Socialist Government, for the latter would have to contend with the firm resistance of a Conservative Opposition to further increases of expenditure, while a Conservative Government would be criticised by a Socialist Opposition for not spending nearly enough. Any additional taxation to meet part of the increased spending would encounter less resistance under a Conservative Government than under a Socialist Government, even though the bulk of it would fall on the long-suffering middle classes and other Conservative supporters. But then, it is much less painful if we slap our own

Eastern Economist 20 Years Ago

SEPTEMBER 22, 1944

Strangely enough, the most damning indictment of the economic policy of the Government of India in the war period is provided by the Report of the Reserve Bank on Currency and Finance for 1943-44 which is just published. The survey it makes of the economic war effort of other countries records facts which cannot but compel a contrast with the miserable tale of missed opportunities in this country. We shall quote facts and figures. In the USA, there was a phenomenal expansion of output. The physical volume of total industrial production (base 1935-39=100) reached a new high level in December 1943 at 241 as against 223 and 176 respectively in 1942 and 1941; income payments during December 1943 stood at 224.8 as compared with 193.4 and 153.9 at the end of 1942 and 1941; and the national income is estimated at \$135 billion for 1943 as against \$117 billion in 1942. Although nearly half of the production is devoted to war purposes, the increase in production has been so great that the standard of living in America has risen above the pre-war level, in marked contrast to the position in every other country in the world at present, whether belligerent or neutral. The position of the United Kingdom is also quite comfortable. While British living costs have been successfully stabilized at only 28 per cent above pre-war, there has been a revolution in food production which in 1943 was 70 per cent in excess of the pre-war average and now accounts for two-thirds of the nation's requirements. Contrast this with the bankruptcy and callousness of policy in India which with a less than 10 per cent dependence on food imports permitted three million deaths from famine.

With the longest tyre manufacturing experience in India behind them, Dunlop have developed the Highway truck and bus tyre to give you the maximum mileage on long heavy hauls. In addition to the high initial tread mileage, the excellent casing of the Highway tyre can take a greater number of retreads and assures the lowest cost per mile of operation.

faces than if our enemies slap our faces, even if the blows are of exactly the same physical strength.

It is for this same reason that a Conservative Government is likely to be able to make more concessions than a Socialist Government could make for the benefit of employees at the expense of employers. If re-elected, Sir Alec Douglas-Home's Government is committed to legislation to ensure compensation to redundant workers. It would legislate to provide for the transferability of pension rights from one firm to another, even though in doing so it would destroy the last remaining incentive for employees to remain loyal to some extent to their firms, and it would greatly accelerate the already excessive turnover of labour, thereby increasing the wastage of experience gained through long employment with the same firms. It might legislate providing for the right of employees to appeal to some tribunal against their dismissal, which again would further weaken the already inadequate discipline in

factories. It might legislate to reinforce trade union legislation and reverse the effects of some recent Law Court decisions protecting the rights of trade union members against their unions and upholding claims of victims of strikes for compensation in certain circumstances.

In respect of restrictive practices, too, the Conservative Government would continue its present unilateral policy which is directed exclusively against employers and not against trade unions. In all these respects it is conceivable that a Labour Government would not dare to go as far as a Conservative Government. Taking everything into account it seems to be a fair conclusion that, whatever may be the outcome of the election, the trend towards an increasingly Socialist economy would continue. The only respect in which it would become distinctly accelerated under a Labour Government was in respect of nationalisation and other forms of acquisition of Government control over private industry.

U.S. Economy: Virile and Vibrant

GUY SIMS FITCH

WASHINGTON:

WITH THE advent of September, the American economy usually begins to break out of a normal summer slowdown. But in one important respect, this has not been a normal year. The economy barely slowed down at all this summer, and now it appears to be off and running again. A few key indicators will suffice to tell the story. One can start with retail sales, the final reflection of consumer demand. These sales reached not only a new record, but also a new milestone in the usual "doldrums" month of August, exceeding a seasonally adjusted monthly total of \$22,000 million for the first time in history. This total was seven per cent ahead of August 1963. Indicative of what may lie ahead is the surge apparently under way in September. Retail sales in the week ended September 5, were five per cent ahead of the previous week, and no less than 16 per cent ahead of the same week last year.

Record Automobile Buying

Looming large on the sales picture has been the continued high rate of automobile buying, which has been proceeding at a record rate of better than eight million new cars a year. This is reflected in some new patterns of automobile production. While September normally is a month of rising output after the usual change-over period to new models, it rarely comes close to anything resembling a peak production level. But this year, after a slightly earlier change-over period than usual, schedules of automobile makers call for a record September output of nearly 700,000 cars. Moreover, with new labour-management contracts in the automobile industry effectively being negotiated, without a strike, the talk is that output will soar to a monthly high of 900,000 cars in October, and continue at a record pace through the year. It takes just a little figuring to determine that these trends, coming on top of the high output level earlier in the year, virtually assure another record automobile production year, perhaps of eight million new cars or more.

An important element in automobile production, of course, is demand. And here, the outlook also is bright. Demand, in fact, is so strong — it has been coming not only from the automobile industry but from a wide range of metal-using industries — that delivery problems could begin to show up in the not too distant future. The third quarter of the year, embracing the months of July, August and September, now seems headed for a steel production total of more than 300 million short tons (one short ton equals 0.9 metric tons) — a figure that seemed almost beyond reach only a few months ago. That would be enough to carry the production total for

the first nine months of 1964 to some 92 million tons. Without any seasonal expansion at all — and both historically and on the basis of present trends one can expect the fourth quarter to be better than the third — the year's production mark should exceed 123 million tons, and might even reach the 125 million tons mark. It seemed only a few months ago that steel makers were pondering whether they would surpass the 117 million ton record established in 1955.

This same type of vitality is evident in aluminium, copper and other non-ferrous metals. In fact, some producers — particularly in the steel and aluminium industries — have begun to reactivate obsolescent plants to help meet the vibrant demand. Another highly significant indicator of economic strength is the steady rise in business investment plans. The latest Government survey issued in August shows that American business spending on new plant and equipment will continue to accelerate through the rest of 1964. The year's outlays are expected to total \$44,200 million, which would exceed the 1963 total by some 13 per cent. In May the survey has predicted an investment gain of 12 per cent, and February's gain at 10 per cent. For the fourth quarter of this year, investment outlays are projected at an annual rate of \$46,100 million, representing a rise of fully 38 per cent from the rate in early 1961, when the current economic expansion began. This rise in spending plans is typical of a period of economic expansion, and demonstrates continued business confidence in the future, but again, 1964 has put its own vibrant stamp on these plans. Not only are the plans going up, but the year has seen the relatively rare occurrence of actual spending exceeding the quarterly estimates by significant margins.

This investment surge will help the American industry expand and modernize its facilities and thus keep pace with the rising demand while holding its costs in check. How long this non-inflationary situation will continue may be open to question but it is significant that while there have been some increases in metal prices in recent months, the overall wholesale price index has maintained its general stability. The index for August has been estimated at 1.3 per cent of the 1957-59 average — no higher — in fact a shade lower than the readings for July 1964 and August 1963. This means that the all-important wholesale index has been stable not only during the past year, but during the three and a half years of the current expansion — and indeed, for the past half-dozen years. This is just what economists have been looking for — continued price stability in the context of a strong and sustained economic growth.

From elephants—to egg timers everything is carried by BOAC's Jet-Cargo Service

BOAC aids your exports—speeds imports— with 36 flights a week in and out of India.

Secure that contract, make ahead-of-time deliveries with BOAC's Rolls-Royce jet-cargo service. You save on packing and warehousing costs, and your insurance rates are less. And with BOAC's fast, direct deliveries and efficient ground handling your freight arrives on time, trouble free.

MICROMETERS

Indian Tool Micrometers are of the finest quality, equivalent to the world's best. Yet, because the market is flooded with cheap, imported micrometers we find ourselves fighting for our right to survive.

We are determined to succeed To save this infant Indian industry, we prefer to sell below cost rather than shut down our plant. Our micrometers, all standard-equipped with tungsten carbide tipped anvil and spindle faces, are now available at the following prices:

0— 25 mm and 0—1"	...	...	Rs. 60.00
25— 50 mm and 1"—2"	...	...	Rs. 80.00
50— 75 mm and 2"—3"	...	...	Rs. 95.00

Move for Compulsory Amalgamation of Uneconomic Collieries

By Our Special Correspondent

NEW DELHI:

DISAPPOINTED at the voluntary amalgamation of uneconomic collieries, the Union Ministry of Steel and Mines, it is understood, is contemplating to bring forth during the Budget session of Parliament a Bill providing for compulsory amalgamation of such coal mines, as recommended by the Balwantrai Mehta Committee. The draft Bill prepared for this purpose in 1960, which had been kept in abeyance following the decision of the Economic Sub-Committee of the Cabinet to postpone consideration of the matter till the middle of the current Plan period, it is learnt, has been re-examined. Certain amendments are now to be effected in it. The revised Bill is currently under the consideration of the Union Law Ministry.

The most crucial amendment proposed in the 1960 draft Bill is said to be that in case amalgamation is proposed by an uneconomic colliery-owner with an adjoining uneconomic colliery and if this amalgamation is opposed by the latter, the Government will have the power to take over the latter colliery or to authorise any other entrepreneur favouring this amalgamation to purchase it at a negotiated price, if possible, or at a price to be determined by the Government. The two collieries will then be amalgamated.

The unsatisfactory working of the voluntary amalgamation scheme can be gauged from the fact that the Collieries Voluntary Amalgamation Committee had till lately received only 300 proposals for amalgamation or adjustment of boundaries. Of these, only 52 proposals could be approved. The Committee had to drop 139 proposals for one reason or the other. The remaining cases are still under its consideration. Amalgamation of uneconomic collieries has been actually effected so far in respect of only 33 cases. The term of this Committee has been extended up to February 28, 1965.

Partial control on cotton cloth is expected to be introduced with effect from November 1, 1964. A scheme in this regard is understood to have been finalised more or less on the lines indicated in these columns a few weeks ago. Stamp-ing of prices on the varieties of cloth to be controlled — the popular varieties consumed by the masses — is likely to be started from October 1. Adequate stocks of controlled varieties are proposed to be built at strategic distributing centres and with the mills during the month of October. Actual sale of the controlled cloth will start from November 1.

Supervisory machinery is envisaged to be set up for each mill to examine texture of cloth and to make sure that there is no variation. The Government plans to utilise the existing trade channels to the maximum for distribution of the controlled varieties. With a view to safeguarding against anti-social elements trying to create a climate of scarcity, it is proposed that production of the controlled varieties should be raised to levels somewhat higher than warranted by the past trends of demand. The controlled varieties will also be sold through fair price shops. Arrangements are as well being made to supply the controlled cloth to industrial units for sale to workers.

The Union Minister for Finance, Mr. T. T. Krishnamachari, disclosed at a meeting of the Informal Consultative Committee of Parliament last week that the Government at present had no intention of demonetising currency notes of any denomination. Demonetisation of higher denomination currency

notes, the Finance Minister opined, alone would not be effective in bringing out unaccounted money because the trend in recent years had been towards conversion of such notes into 10-rupee notes. Citing figures in support of this, Mr. Krishnamachari stated that out of the total notes worth over Rs. 2,500 crores in circulation, 40 per cent notes were of the denomination Rs. 100 and above, while 10-rupee notes constituted 46 per cent. Among the higher denominations, 1,000-rupee notes accounted for Rs. 50 crores, 5,000-rupee notes for Rs. 15 crores and 10,000-rupee notes for Rs. 10 crores. Thus, the total value of the currency notes in the denominations Rs. 1,000 and above aggregated Rs. 75 crores or 3 per cent of the total notes issued. In view of this, no purpose would be served by demonetisation unless 10-rupee notes were also demonetised. But this was a physical impossibility.

The Finance Minister added that the total issue of high denomination notes increased from Rs. 71 crores at the end of March, 1956, to Rs. 95 crores at the end of March, 1962. But there was a sudden drop of as much as Rs. 26 crores to Rs. 69 crores by the end of March, 1963. This sharp fall was accompanied by a sharp increase of Rs. 96 crores in 10-rupee notes and Rs. 67 crores in 100-rupee notes. The emergency, which was declared in October, 1962, created fears of demonetisation, leading to flight from higher denomination currency to lower denominations. Mr. Krishnamachari, however, declared that the Government would use all the means at its disposal to unearth unaccounted money.

Gold Control

Defending gold control, the Finance Minister claimed that the demand for gold had declined since the promulgation of the Gold Control Order. This should be evident from the steep fall in the number of dealers and refiners from 27,000 to 12,000, in the smaller turnover of dealers, and reduction by 50 per cent in the quantity of gold used for industrial purposes. The loans advanced by scheduled banks against gold, the Finance Minister added, had also gone down from Rs. 42 crores in October, 1962 (prior to introduction of the Gold Control Order) to Rs. 18 crores in June, 1964.

Referring to gold prices, Mr. Krishnamachari said that prior to the promulgation of the Gold Control Order, the prices of gold used to rise by four to five per cent every year. But after the introduction of this Order, prices had been ruling almost consistently at lower levels. Since April this year, there had been an uptrend in prices, but decline had again set in in August. The Finance Minister said that the fact that the price of gold was still lower than the 1962 price was of particular interest because the intervening period of two years had witnessed a 20 per cent rise in prices in general and 25 per cent in the case of food articles.

With a view to canalising the money with the villagers into productive uses and developing the banking habit among them, the Finance Minister said that he was thinking of asking the State Bank to extend its network of branches in the country-side. These branches would give credit to agriculturists for increasing farm production. For checking tax evasion, the Union Finance Ministry is understood to be thinking in terms of setting up an intelligence wing in the Directorate of Inspection. An economic offences division has already been set up in the Ministry of Home Affairs, with an additional Inspector-General as its head, to process big cases of fraud. The Income-tax Department has decided that, in future, in-

stead of levying a penalty in cases of tax evasion, prosecution should be launched against the evaders.

★★

Addressing the first meeting of the recently constituted Panel of Experts on Agricultural Administration, the Union Minister for Food and Agriculture, Mr. C. Subramaniam, disclosed that the Foodgrains Trading Corporation, which would begin functioning in January, 1965, was likely to be a statutory body rather a corporation registered under the Companies Act, as envisaged earlier. The legislation for the constitution of this Corporation will be introduced early in the next Parliament session in November.

The FTC will purchase foodgrains on Government account. Initially, it will purchase only rice in the Southern States in January, 1965. The next rice crop is expected to come into the market in Punjab and U.P. next month, in Madhya Pradesh by November, in the rest of the States between November and December and in the Southern States in the beginning of the next year. It would, therefore, be necessary to intensify the present arrangements for procurement of rice or paddy from the next crop till the Corporation starts its operations.

The members of the Panel reviewed the machinery for procurement that existed in various States. It was generally agreed that the Central Government should collect the necessary information from the States regarding the purchasable surplus in each State, capacity for storage, the procurement agency and the milling capacity for paddy. On the basis of this information, an interim plan for procurement would be prepared. While it may not be possible to evolve a uniform pattern, a plan of action will have to be prepared for each State after taking into consideration all these factors.

The Union Food and Agriculture Minister informed the Panel that he would shortly be having discussions with State Governments about the recommendations of the Ad-hoc Committee on Foodgrain Prices. He hoped that after completing these discussions he would be in a position to make an announcement on the Committee's recommendations and Government decisions on these before the end of the current session of Parliament.

The Panel also discussed the distribution arrangements for foodgrains. Mr. Subramaniam asked the Panel to consider the functioning of fair-price shops, the prices at which imported foodgrains are sold, and their effect on the consumption pattern and the demand for various foodgrains produced within the country.

The members of the Panel coming from various parts of the country informed the Minister that the condition of the kharif crops was very good. Only in Punjab some six to seven lakh acres had been flooded and this had adversely affected the kharif crop. However, the rice crop was not likely to be affected.

The Panel reviewed the position regarding supply and demand of fertilizers for the forthcoming rabi crop and sowings which will begin next month. The demand for fertilizers has increased in all States. The Panel was informed that against 391,000 tons of fertilizer in terms of nitrogen last year,

it was expected that the consumption of fertilizers this year would be over 600,000 tons. In view of the world shortage of fertilizers it had not been possible to secure more fertilizers, but efforts were being continued to import fertilizers to the extent possible. The Panel came to the conclusion that in view of the shortage of fertilizers, there was urgent need for speedy implementation of schemes for utilisation of urban waste which had been recently taken up as a part of the special development programmes.

A Memorandum of Agreement has been signed between the Government of India and Uganda for the development of sugar industry in Uganda. Initially, it is proposed to set up four sugar factories in this African country in collaboration with India. These factories will augment Uganda's sugar manufacturing capacity by about 100,000 tons per annum.

Under the terms of the Memorandum of Agreement, India's participation in this complex will be in the form of sugar machinery and materials for factory building manufactured in India. India will also install this machinery in Uganda and operate the factories as well as the estates from where raw materials supplies are to be secured. A Sugar Development Corporation will be established which will directly own these factories and estates.

The total investment required will be determined when the precise location of the estates and the financial structure of the Sugar Development Corporation have been decided. Indian participation in the equity capital of the Corporation will be 45 per cent. The balance 55 per cent will be shared by the Uganda Government and the private investors from there in the ratio 45:10. The Board of Directors of the Corporation will be constituted in these proportions.

The Memorandum of Agreement also provides that the Indian side will arrange for training in India of Ugandans for managerial and technical posts in the sugar industry. It is intended that at least 90 per cent of the employees in the industry will be Ugandans with the ultimate objective of having the project wholly staffed by Ugandan nationals. However, in order that the Sugar Development Corporation can draw upon the experience and knowledge of the Indian side, an Indian will be the General Manager of the Corporation for six years after the commencement of sugar production.

The Indian side will also arrange for such feasibility and project studies of the proposed sites for the four factories and estates as may be necessary.

★★

The Union Minister for Industry, Mr. H. C. Dasappa, revealed at a meeting of the Informal Consultative Committee of Parliament last week that in view of the lack of adequate limestone resources, which were proving a handicap to the growth of cement industry, the proposed Cement Corporation would give priority to exploration of new limestone deposits. Apart from prospecting on its own, the Corporation would co-ordinate the work of the various other organisations which were now engaged in this line. These included the Geological Survey of India, the Indian Bureau of Mines and the Geological Departments of State Governments. The Cement Corporation, Mr. Dasappa added, would act as a storehouse and a clearing house of all the knowledge about limestone reserves

Blind man at the wheel

Blinded. By the dazzle of oncoming headlights.

In those blind moments a life can be lost.

When driving at night, dip your headlights for oncoming traffic. Regulate your speed to pull up within the limit of your lights.

Always light up in good time. When it's misty or rainy, put your lights on even during daytime, to let others see you.

You wouldn't drive blind. Why blind others?

in the country. In this way, it would help materially the private sector in the cement industry as well. Mr. Dasappa also disclosed that in co-operation with the Council of Scientific and Industrial Research and cement industry, a Cement Research Institute was expected to come up near Delhi in the near future.

Referring to the further development of cement industry, Mr. Dasappa said that the fourth Plan would aim at raising cement manufacturing capacity in the country to 25 million tonnes. This would yield an annual production of about 23 million tonnes and make the country self-sufficient in cement. The fourth Plan programme of expanding cement manufacturing capacity, Mr. Dasappa pointed out, called for a massive effort as the installed capacity at the end of the current Plan would be of the order of only about 15 million tonnes. The private sector alone might not be able to cope with the task of building up the additional capacity. The Cement Corporation, therefore, would have to set up some units on its own.

The Minister for Heavy Engineering, Mr. T. N. Singh, told the Committee that with a view to bringing down the cost of indigenous plants, the Government had proposed to standardise cement plants at a capacity of 600 tonnes.

★★

In a statement made in the Lok Sabha last week, the Union Minister for Labour and Employment, Mr. D. Sanjivayya, clarified that in the legislation to be promoted to give effect to the recommendation of the Bonus Commission, as accepted by the Government (Government decisions on the Bonus Commission's Report were published in "Eastern Economist" dated September 4, 1964), suitable provisions would be included so as to safeguard that labour got in respect of bonus the benefits on the existing basis or on the basis of the new formula whichever was higher. Mr. Sanjivayya added that it was not the intention of the Government that the benefits which labour might have been enjoying in the matter of bonus in any establishment or industry should in any way be curtailed by the adoption of the new formula for the payment of bonus.

In pursuance of the Government's decision that bonus beyond a certain limit should be paid in the form of savings certificates or other suitable investments, Mr. Sanjivayya proposed to convene a meeting of the representatives of the parties concerned so as to reach an agreement on the level beyond which bonus payment in cash would not be desirable and the various forms of savings in which bonus beyond that level might be invested. No date has yet been fixed for this meeting. It is, therefore, very unlikely that the proposed legislation will be brought before Parliament during the current session.

★★

Besides the Singareni and Talcher low temperature carbonisation plants already being set up, the Union Ministry of Steel and Mines is considering establishment of three other such plants — one at Singrauli or Delhi based on Singrauli coal, the second in the Charcha-Jhilimili area and the third one in Karanpara area. All the three plants will be set up by the National Coal Development Corporation on the aforementioned priority basis.

The Central Fuel Research Institute is currently examining the quality of coal samples from Singrauli. It has also initiated steps to prepare a feasibility report regarding the Charcha-Jhilimili project.

★★

The terms of reference of the 7-member Committee, set up by the Union Government with Dr. P. S. Lokanathan, as chairman, to examine the allotment and utilisation of scarce raw materials as between the different sectors of industries, have been announced.

The Committee will examine how best to secure equitable distribution of available scarce raw materials among the three large, medium and small-scale industrial units, having capital over Rs. 25 lakhs, above Rs. 5 lakhs and not more than Rs. 25 lakhs, and not exceeding Rs. 5 lakhs, respectively. The Committee will also examine steps to ensure that the materials allotted in accordance with its recommendations are utilised to the fullest advantage for the purpose for which they are allotted.

The scarce raw materials, distribution and utilisation of which will be examined by the Committee, shall include: raw materials and components licensed by the Chief Controller of Imports and Exports; steel, both indigenous and imported.

non-ferrous metals and basic organic chemicals and intermediates; basic inorganic chemicals such as caustic soda, soda ash and titanium dioxide; pharmaceuticals and drugs; plastics; synthetic and natural rubber, etc. The Committee will submit its report within three months.

★
Mr. T. T. Krishnamachari introduced in the Lok Sabha last week a Bill to amend the Foreign Exchange Regulations Act with a view to prohibiting unauthorised dealings in foreign exchange brought in by tourists and tightening of control over such things. The Bill seeks to confer additional powers on the officers of the Enforcement Directorate similar to those conferred by the Customs Act on the officers of the Customs Department, in regard to search and arrest of persons, search of conveyances and premises and summoning of persons to give evidence and produce documents. The Bill also provides that if any person is found or is proved to have been in possession of any foreign exchange exceeding in value Rs. 250, the burden of proving that the foreign exchange came into his possession lawfully would be on him.

Pampering the Powerloom Industry

From Our Correspondent

BOMBAY:

THE APPREHENDED freeze on mill production has come, though not to the exclusive benefit of the handloom industry as there was good reason to believe in the context of the avowed concern of the powers-that-be for the handloom weaver. This, in fact, is one of the main recommendations of the Powerloom Inquiry Committee. It is not clear how the implications of this recommendation to the handloom sector have failed to be taken note of even by so shrewd a person as Mr. Asoka Mehta, the Chairman of the Committee. By the almost blank cheque to the powerlooms that the Committee has given, it has only enabled the powerloom sector further to strangle the handloom sector. Perhaps it is the Committee's intention that, eventually, the entire decentralised sector should consist of only the powerlooms. The specific recommendation of the Committee that the scheme of conversion of handlooms into powerlooms (originally recommended by the Kanungo Committee and enforced till 1961, but discontinued thereafter) should be revived lends support to such a view. So also the other recommendation for the introduction of 10,000 powerlooms in the handloom or the co-operative sector during the rest of the third Plan period and for the installation of an additional 60,000 powerlooms in the cotton mill sector as well as an additional 40,000 powerlooms in the man-made fibre sector during the fourth Plan period. And the powerlooms are to be actively and financially assisted too to achieve the target, as if the powerloom sector has only been waiting for such assistance to expand. All the expansion that has taken place since the first Plan has been mainly in the powerloom sector, although the illusion has continued that the handloom sector has been the main beneficiary, thanks to an antediluvian method of calculating the production of the two sectors (namely, division of yarn between the handloom sector and the powerloom sector in the proportion of 76 per cent and 14 per cent, respectively). Surely, this cannot be unknown to the authorities, but, for some inexplicable reason, no attempt has been made to stop the systematic depredation by the powerloom sector on the field allocated to the handloom sector. A feeble attempt was made three years ago to "regularise" all unauthorised powerlooms by demanding a paltry fee of Rs. 100 per loom and that too in easy instalments. But nothing is known to this day of the number of powerlooms that chose to "regularise" themselves. The Asoka Mehta Committee has shown further indulgence now by suggesting that all powerlooms should be registered on

The Bill confers a right of appeal to the High Court on questions of law from decisions or orders of the Appellate Board whose strength is proposed to be increased from two to three members.

The other amendments proposed by the Bill in the Foreign Exchange Regulation Act seek, (a) to empower the Reserve Bank (i) to control the transfer of shares of a foreign company from a register outside the country to a register in the country and to regulate the giving of guarantees by persons resident in the country in respect of debts or liabilities of persons resident outside the country, (ii) to control and regulate payments or remittances in favour of a non-resident in pursuance of any settlement of property by will as well as by gifts; and (iii) to control and regulate the appointment of foreign companies, firms or branches thereof as the agents or advisers of companies and firms in the country, and (b) to require airlines, shipping companies and travel agents to obtain the general or special permission of the Reserve Bank of India in respect of international travel bookings.

the payment of a fee and insisting that there should be no control in regard to acquisition and installation of powerlooms.

All this does not mean that powerlooms should not be allowed to expand, but expansion on the sly to evade excise duty, as has been going on all along, cannot certainly be condoned. The objection to powerlooms also stems from another consideration, and that is that they neither give proper wages, nor provide proper working conditions, nor even contribute to employment, which is at least one of the redeeming features claimed for the handloom sector. If it is the belief of the Asoka Mehta Committee that, by raising the status of the All-India Handloom Board from an advisory to a statutory body and entrusting both the handloom and the powerloom sectors to it, the future of the handloom industry is assured it is only necessary to remind it of what the Fact Finding Committee said as far ago as February, 1942, when the powerlooms were still not the menace that they have since become:

"A more serious rival to the handloom industry than mills has arisen in the small-scale powerloom factories. This rival combines in itself, owing to its medium-scale production, the advantages of both mills and handlooms. It can utilise cheap electric power and avail itself of the modern appliance; in weaving. The competition of powerlooms is a growing phenomenon; fifteen years ago, the handlooms had nothing to fear from them. Powerlooms are not subject to any irksome restrictions, such as the Factories Act or special taxes. As such they are a source of competition in important lines to the mills as well. The cost of production in powerloom is comparatively low owing to small overhead charges and economies of mechanical production."

Be that as it may, it is difficult to reconcile the almost wholesale reliance on powerlooms of the Asoka Mehta Committee with either the prevailing textile policy of the Government of India, or the proposed scheme of partial control drawn up by the Union Commerce Ministry in respect of such popular varieties of cloth as 'sarees', long cloth, 'dhoties', shirting and drill, to which a reference was made by the Prime Minister in the Lok Sabha on September 18. It should be obvious to anyone that, if the Government were to accept the recommendations of the Powerloom Inquiry Committee, it would be abandoning its present policy which has been hailed as being at once sound and flexible. Whether such a policy is in the best interests of either the handloom sector or the

public exchequer or the consumer at large is a debatable point.

After all that happened prior to the appointment of the Asoka Mehta Committee, one thought that the Committee would have recommended something to import some organisation and infuse some discipline into this disorganised (wrongly described as decentralised) sector. It is a pity that no note has been taken of the extent to which the country's exchequer has been a loser by the unauthorised inroads of the powerloom sector on the domain of the handloom sector. According to an unofficial estimate, if the present trend continues (i.e. even without implementing the recommendations of the Asoka Mehta Committee), the country would be a loser to the tune of Rs. 100 crores. It is this aspect that has provoked mill

Power Prospects in Eastern India

From our Correspondent

CALCUTTA

A COMPREHENSIVE picture of power supply and demand in eastern India, as it is now and as it is likely to develop by 1967-68, is provided by the Central Electricity Authority in its second annual electric power survey of the country. The survey was published only recently, and is, therefore, the latest of such publications. It supplies all essential data about production, supply and consumption of electricity in India, but the manner of presentation is so highly technical and complicated that some of the conclusions would appear mysterious to all but the initiated few. For example, the figures of comfortable surpluses representing the difference between "energy required" and "energy available" as estimated in the survey, are by no means convincing. The actual experience of industrial managements in the country would point to a different conclusion. But before discussing this point further let me summarise the findings of the survey first.

Eastern India is divided into two regions for the purpose of co-ordinating activities relating to power generation and distribution. (The country as a whole is divided into five regions for this purpose). Eastern India, as defined by the Central Electricity Authority, comprises the States of West Bengal, Bihar and Orissa, while Assam, Nagaland, Manipur, NEFA and Tripura form the north-eastern region. According to the survey, the installed power capacity (this is defined as the sum of the maximum continuous ratings of all installed generating equipment) in the States of West Bengal, Bihar and Assam stood at 1,226 MW in 1961-62; at 1,315 MW in 1962-63 at 1,470 MW in 1963-64; at 2,271 MW in 1964-65; it is expected to rise to 2,782 MW in 1965-66; to 3,415 MW in 1966-67 and to 3,549 MW 1967-68. As against these increases in installed capacity, capability of the systems (capability is defined to mean the maximum kilowatt output ability of the systems at the time of system peak load with no allowance for outages and — for systems with hydel installations — with sufficient kilowatt hours available to supply the energy requirements of the system) stood at 1,078 MW in 1961-62; at 1,237 MW in 1962-63; at 1,339 MW in 1963-64. at 1,956 MW in 1964-65; capability is estimated to increase to 2,424 MW in 1965-66; to 2,981 MW in 1966-67 and to 3,094 MW in 1967-68. It needs to be pointed out here that the figures for capability are necessarily lower than those of installed capacity as the former must provide for scheduled maintenance, emergency outage and system operating requirements in addition to the estimated load, and any unforeseen load.

Peak load (that is, the maximum simultaneous ultimate customer demand which occurs during the fiscal year as measured by actual deliveries at bulk power sources) for these

interests to describe the powerloom sector as "a parasite on the economy gaining at the cost of the handloom sector, the mill sector, and the public exchequer."

One wonders whether, in its anxiety to placate the powerloom sector, the Committee has cared adequately to weigh the consumer's interests and the overall requirements of developmental planning. There is scope to argue that the Committee has not given sufficient thought to what might happen to the country's economy, what with the prevailing degree of inflation, in the event of the decentralised sectors failing to achieve their targets of production. It is only necessary to recall here, if only as a measure of caution, the experience that the country had to go through during the second Plan period when the handlooms could not deliver the goods by their failure to fulfil the quota of production assigned to them.

years are shown respectively at 938 MW, 1,088 MW, 1,210 MW, 1,587 MW, 2,185 MW, 2,590 MW and 3,131 MW. The gross margin (which represents the difference between capability and peak load) is placed at 140 MW (or 15 per cent) for 1961-62; at 149 MW (or 14 per cent for 1962-63; at 129 MW (or 11 per cent) for 1963-64; at 369 (or 23 per cent) for 1964-65; at 239 MW (11 per cent) for 1965-66; at 392 MW (or 15 per cent) and 37 MW or (1 per cent) for 1966-67 and 1967-68, respectively. On the basis of these calculations, the total energy available for those years has been placed at 6,059 million kWh, 6,838 million kWh, 7,818 million kWh, 10,918 million kWh, 14,248 million kWh, 17,640 million kWh and 18,794 million kWh, as against which energy required is shown at 4,892 million kWh, 5,795 million kWh, 6,394 million kWh, 8,445 million kWh, 11,620 million kWh, 13,769 million kWh and 16,577 million kWh; therefore, a surplus of 1,167 million kWh, 1,043 million kWh, 1,424 million kWh, 2,473 million kWh, 2,628 million kWh, 3,871 million kWh and 2,217 million kWh is seen to exist against the respective years.

Precise Survey Required

It is, of course, not clear whether the "surplus" also includes the gross margin which we are told "should be of sufficient magnitude to provide for scheduled maintenance, emergency outages and system operating requirements, if practical operating conditions are to be maintained". "Energy available" is defined to mean the total of energy that can be produced under normal water conditions for hydel stations and at normal availability for thermal units, while "energy required" is the aggregate of the energy consumption of all ultimate consumers, as measured at the busbar of the generating stations. The energy required estimates obviously do not include an assessment of the unsatisfied demand for power, especially from new ventures which cannot still commission their plants for lack of electrical energy or those which cannot undertake expansion for the same reason. Therefore, it is not a correct demand estimate and any calculation of "surplus" or "deficit" is bound to be misleading in its absence. The third and all future surveys by the Central Electricity Authority should be more precise and comprehensible to as wide an audience as possible.

We have also an account of the power position of individual States comprising these regions, but here again, the same difficulty of understanding arises. There is, however, a useful brief summary of all developments. In Assam, for instance, power development is expected to be rapid over the next few years by which time the per capita consumption of electricity will have gone up to 34 kWh from the present meagre 4 kWh. Poor transport facilities are said to be the reason for the slow development so far. But in view of the appreciable occur-

World's most advanced WATER COOLING SYSTEMS for India's new industries

Induced draught crossflow cooling tower of timber and asbestos cement construction

Larsen & Toubro brings to Indian industries the combined technical skill and manufacturing experience of two of the world's foremost specialists in water cooling equipment—Film Cooling Towers (1925) Limited, England and their American associates Slough-DeFlon Incorporated. Indian industries can now choose any type of cooling system to suit their particular need. The facilities at L&T's Powai Works enable manufacture of all components for a variety of towers.

Choice in cooling towers: The range of towers offered covers all applications. Cooling equipment of the smallest to the very largest capacity, is available with a choice of no less than six different types of pack. As with all L&T manufactured equipment, the latest improvements are incorporated in the design and construction of towers, giving you the best value for your money.

Serving many industries: FCT and S have supplied cooling towers to industrial organisations

throughout the world; L&T is currently supplying cooling towers to:

- Punjab State Electricity Board, Faridabad • Industrial Development Corporation of Orissa, Barbil
- Chemical Construction Corporation, Trombay
- Chemical Construction Corporation (GB) Ltd. (2 towers), Namrup • Heavy Electricals India Limited, Bhopal • Central Power & Water Commission, Bhopal • Hindustan Lever Limited (2 towers), Bombay & Calcutta

LARSEN & TOUBRO LIMITED

P.O. Box 278, Bombay 1 • P.O. Box 323, New Delhi • P.O. Box 619, Calcutta • P. Bag 5247, Madras
Also at: Bangalore • Ernakulam • Ahmedabad • Hyderabad • Lucknow • Bhopal • Panjim • Rourkela

rence of oil and natural gas in the Naharkatiya area and with the setting up of the refinery at Nunmati, the development is going to be quick in the next few years. The State has also considerable hydro and coal resources. The industries likely to come up in the near future are rayon and paper pulp plants based on the bomboo and sabai grass resources, and petrochemical industries based on oil and natural gas. At present, two power systems are being developed which in due course will cover the entire State of Assam. One is the Umtru-Umum power system which serves the southern and western parts of the State; the other is the Naharkatiya power system which serves the eastern and northern parts of Assam.

Orissa is much better off than Assam in the matter of power, for the per capita consumption in this State is already 57 kWh. and this is expected to rise to 141 kWh over the next five-year period. Orissa is at present served by two power systems, namely, the Hirakud power system and the Machkund power system, but these two are not interconnected. It is proposed to interconnect them by the end of 1965-66 when the Talcher thermal power station is to be commissioned. The important industrial loads in this State at present are the Rourkela steel plant and the aluminium plant at Hirakud. The Machkund system, which is a shared project between Orissa and Andhra Pradesh, will serve the new industries which have been planned for the south-eastern areas of the State.

Interconnected Operation

The per capita consumption of electricity is naturally highest in West Bengal of all States in eastern India, and in all India. It is 99 kWh at present and is expected to rise to 166 kWh over the next five years. Bihar has at present a per capita electric consumption of 49 kWh, that is, less than in Orissa, and this is expected to grow to 106 kWh by 1967-68, also behind the anticipated figure for the latter State. In the survey the position of these two States however discussed together because even within the States themselves, there are wide disparities. There are areas which are served by more than one power system and have a high degree of consumption, and there are others which are poor in power development. For example, South Bihar and Lower Bengal are served by the Damodar Valley Corporation, the Calcutta Electric Supply Corporation, the Durgapur project's power station and a few small utilities. In the next few years, the power supply in this area will be considerably augmented through the commissioning of the Bandel thermal power station (330 MW) of the West Bengal State Electricity Board and the Pathratu thermal power station (400 MW) of the Bihar State Electricity Board. These power systems are expected to operate interconnected.

The Damodar Valley Corporation continues to supply 100 MW of bulk power to the Calcutta Electric Supply Corporation and is also serving the loads in lower Bengal and South Bihar. The DVC system continues to exchange power with the Rihand system in Uttar Pradesh. In view of the large volume of middlings which may become available by the end of the fourth Plan due to the setting up of coal wharves, particularly in the south Bihar area, large pit-head thermal power stations may come up in this region based on low-grade coal rejects.

Upper Bengal, in contrast, is poor in power development. The present requirements are met from small isolated power stations. Since Upper Bengal along with Assam State forms an important part of the tea-producing area in the country steps have been taken to generate electricity out of the hydro resources in the region. A small grid network based on the Jaldhaka hydro project is at present being constructed which is going to be ready by the end of the third Plan. North Bihar, like Upper Bengal, is at present poorly served by power, but since this is an agriculturally rich area, ample grid power will be provided in the next few years. The oil refinery at Barauni is also expected to help. The Kosi and Gandak hydro-

projects, which are Indo-Nepalase ventures, will provide substantial quantities of energy.

At the end of this summing up, it is necessary to stress an important aspect. The data for power availability and consumption are the arithmetic sum of the data for the power systems in the regions as a whole, and these would be more meaningful when the regional grids come into operation. A reliable estimate of power supply and demand can then be made.

★★

One of the first engagements of Prime Minister Lal Bahadur's first (in his present capacity) visit to Calcutta was to inaugurate the 175th anniversary celebrations of Jessop and Company. As one of the oldest firms in Calcutta, its history is full of romance. At 175 it is still going strong. This once British-owned and managed company (now in Indian hands) is producing a number of strategic goods for the country's economy like electric multiple unit coaches and wagons for the railways, fabricated structural steel work and road rollers. Thanks to the rapid progress of industrialisation, the order books of the company are overfull, that is, it is unable to supply the demand for its products, particularly for wagons. The activity has considerably expanded in recent years and will expand further in the next few years. In fact lack of sufficient accommodation has been the main bottleneck to its expanding activity. However, the company is about to acquire a new site for the construction of more factory buildings in which to house the extra plant and equipment in fulfilment of its expansion programme. A particularly large order which the company has executed is that of vertical wheel gates for the Kosi Barrage project in north Bihar. As part of its current expansion programme, the management has taken steps to raise the output of electric overhead travelling cranes, wharf cranes and sluice gates. A start has also been made to manufacture high-speed cold sawing machines and saw sharpeners. These explain the expanding scale of the company's output and sales. During the working year ended 31st October, 1963, the company's sales reached a new record of Rs. 1,472 lakhs, compared with Rs. 1,282 lakhs in the previous year. The net profit, after providing for all taxation and depreciation, amounted to Rs. 76.83 lakhs, against Rs. 65.42 lakhs. The company has paid a higher dividend of 10 per cent for the year and hopes to maintain the same rate next time.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

Notice is hereby given that the Board of Directors of this Company have decided to recommend to stockholders at the forthcoming Annual General Meeting that a final Dividend for the year ended 31st March, 1964 on the Company's Ordinary Stock at the rate of £4 per cent net (Tax applicable at 7s. 9d. in the £) be paid on the 27th October, 1964 to those stockholders whose names are registered in the Company's Stock Register on the 12th October, 1964.

Applications for transfers received in this office before 12 O'clock noon on Monday, the 12th October, 1964, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above Dividend.

BY ORDER OF THE BOARD,
C. A. GUNTHER
Actg. AGENT

Victoria House,
CALCUTTA, 17th September, 1964.

The moving finger writes

A JOINT communique issued at the end of the Indian President's nine-day State visit to the Soviet Union reaffirms the "unshakable conviction" of both parties that the policy of peaceful co-existence of States with different political and social systems "is today the sole alternative to a devastating thermo-nuclear war". It is evident that here the politician has been permitted to score heavily over the philosopher and I certainly do not think much of this Indo-Soviet testament which has merely elevated expediency to the status of a principle. It is easy to see that a statement of this kind evades issues rather than seek to understand them or come to some judgment, whether rational or ethical, about their rights or wrongs. My point is that, after having agreed that the co-existence of conflicting ideologies has become unavoidable because either side could resort to nuclear weaponry as its final argument, can we just sit back and refuse to think or talk about the respective or relative validities of different political or social systems? I do not think that the mere invention of the hydrogen bomb is enough justification for mankind to surrender without protest its right to reason. Surely, it is not to this end that the philosopher Radhakrishnan should put his signature to a plea to the human mind to stop inquiring that Sankara and Socrates had many hundreds of years ago dared to teach the world to keep on asking why and why and why.

★★

Many harsh things are being said of Mr. Biren Mitra in the Press and elsewhere for allegedly pulling a fast one on the Congress High Command. But is there not something to be said on his behalf and on behalf of Mr. Biju Patnaik, whose not-so-invisible hand is clearly to be suspected in Mr. Mitra's tactics of resigning to remain? For months complaints and charges have been made against Ministers or ex-Ministers of Orissa. The Congress High Command as well as the Central Government are known to be discussing them. Only recently the Home Ministry decided to send investigating officials to Orissa to study or collect evidence. In these circumstances it would not be unreasonable were Mr. Patnaik or Mr. Mitra to feel that either a formal decision should be taken to institute a commission of inquiry or their colleagues in the party should come forward to protect them from prolonged mudslinging. I interpret Mr. Mitra's recent attitudes in the matter of the Orissa Chief Ministership as a deserved rebuke to the Congress High Command for not being able to make up its mind one way or the other. Here perhaps it is the Central Government and the Prime Minister who are more to blame than the Congress President or the Working Committee. Until Mr. Lal Bahadur is able to make up his mind on how to deal with the Orissa complaints or whether to deal with them at all at the government level, the Congress President cannot obviously move in the matter at the organizational level. I hope Mr. Lal Bahadur would act boldly and quickly so that the Central Government as well as the Congress Party may avoid the risk of being brought into ridicule by the defiance in Orissa.

★★

Calcutta did well by the nation by giving Mr. Lal Bahadur a great welcome on his first visit to that city as Prime Minister. I like to read into Calcutta's characteristically generous acclamation of the Prime Minister's presence a warm appreciation of his statement in Lok Sabha two days earlier that he would not follow blindly any beaten track, but would be receptive and responsive to changing circumstances or the changing needs of the country. Addressing a crowded public meeting at the Calcutta Maidan — audience, I learn, was close to half

a million —, Mr. Lal Bahadur reportedly declared that he would quit rather than promote groups or groupism as a means of remaining in office. It should be easy for the people to believe him since it was by conscientiously keeping away from factionalism that Mr. Lal Bahadur had, in fact, built for himself that wide respect and support in the Party which ultimately fetched him the Prime Ministership. The Congress Party is such a vast and sprawling mass that group leaders must always be at a disadvantage when it comes to a trial of strength with some one else who could appeal to broader interests or loyalties. Mr. Lal Bahadur seemed to have learnt this trade secret early enough in his political career and there is no reason why he should now depart from attitudes which have served him so well so far.

★★

Among the more effective speeches of the no-confidence debate was the one by Mr. G. L. Nanda. The Home Minister was in fine form as he ranged over many issues with quiet confidence. I would like to reproduce here the passage in which he dealt with the familiar complaint that he was demoralizing the country by exaggerating the extent of corruption. Mr. Nanda explained:

"...I submit to you and to the House, Sir, that there should be no tendency either to exaggerate or to minimize things but we must face the situation as it is and fight it. I will not enter into any comparison with other countries. Even a little corruption here is bad for us; it is a drag on our economic and social progress. It creates risks for the stability — I say deliberately — and security of the nation. That is my understanding of the situation. In this connection, I would like to refer to a statement which I made some time ago, and I would read a few lines of that, so that my own attitude is made clear. I said in that statement on 7th May, 1964: 'Our people are prone to exaggerate their own faults. Very often the picture of corruption is overdrawn. There are many government servants whose careers are free from any taint of corruption, applying even the strictest test. It is also true that not every businessman has recourse to dishonest ways, and it is demoralizing for the nation that because of the lapses of a few, sweeping statements should be made about persons in political life generally'. This is a very clear and categorical statement."

An earlier passage in the Home Minister's speech also deserves to be printed here because of its entertainment value:

Mr. Nanda: Among the principal counts of charges of the Opposition against the Government, food figures profusely, in spite of the fact that there was a special debate and the food policy of the Government was approved and adopted by an overwhelming majority. This word "majority" brings to my mind an observation made by the Hon'ble Member, Shri Hiren Mukerjee. In a moment of self-forgetfulness, he used the word "brute majority". Sir, I have great admiration for his eloquence. He is a cultured man, familiar with the delights of good literature. But it seems at that time he departed from dignity in his choice of words and phrases.... Instead of dubbing the majority of this Government as a brute majority, he should think of another word.

Mr. Solanki (Kaira): He should speak a little louder. We cannot hear him.

Mr. Nanda: How did this majority come about?

An Hon. Member: The Gonda way

V.B.

Trade Winds

SUGAR PROBLEM

WITH THE approach of the new sugar season, people's thought must naturally turn to the prospects of increased, if not adequate, availability of sugar. Judging from reports of higher production of sugarcane generally, one could normally hope for more sugar production in 1964-65. But nothing happens to be normal these days. Mere increase in the production of sugarcane may not lead to more sugar production particularly when there are competing demands for cane. The problem is further complicated by the existence of rigid control on the less sophisticated sweetening agents such as 'gur' and 'khandsari'. The demand for 'gur' has been perceptibly inflated in recent years as a result of its being put to uses other than sweetening, such an illicit distillation. Addressing a press conference recently, Mr. Gordhandas J. Ruparel, President of the Deccan Sugar Factories' Association, pointed out that the Sugar Industry in the country did not suffer from shortage of capacity to produce up to the target of 3.3 million tons of sugar or more, but that its problem was primarily one of inadequate supplies of sugarcane. What has, in fact, been happening all over the country is that cane is diverted to the manufacture of 'gur' and 'khandsari'. In the absence of any control on their production or prices, producers of 'gur' and 'khandsari' have been offering stiff competition to sugar factories. Being free from such obligations as the Factories Act, fixation of wages and so on, they offer higher prices than the sugar factories for the cane they buy. In the present circumstances, when we are in the fortunate position of being able to compete in the world markets for the export of sugar, the authorities do not appear to appreciate the fact that for every ton of cane diverted to 'gur' or 'khandsari', in which case the recovery is less, the country loses about 12 lbs. of potential sugar. This means a double loss, first, because of uneconomic use of sugarcane and, second, because of the non-availability, for purposes of export, of sugar that might have been produced had the same quantity of cane that was diverted to 'gur' been made available to sugar factories.

The consumer of sugar may not bother about all these. He is interested only in getting his requirements of sugar at a reasonable price. According to the spokesmen of the sugar industry this may be possible if the Government adopts a policy of partial free sale. In support of this they recall the success of such experiments in the past — in 1950-51 and 1951-52. It is difficult to understand why the Government is not prepared to accept this suggestion. Mr. Subramaniam can at least give it a conditional trial for a limited period. The present may prove to be the most propitious time for such a trial because of there being good prospects of a substantial increase in the production of sugar in the coming season.

WOOLLEN TEXTILES' EXPORT PROSPECTS

There is a considerable scope for stepping up the exports of Indian woollen textiles if at least a part of the industry is modernised. This is revealed in the report of the team of experts of the International Wool Secretariat who made a study on the advisability of modernising the woollen industry in the country. The study, which was undertaken at the instance of the Government of India, points out that as a result of the modernisation of about 200 loom assemblies, it should be possible to earn additional foreign exchange to the extent of £650,000 a year. The experts are of the view that

the industry will be able to produce cloth of excellent quality and will be in a position to export even to the most sophisticated markets at competitive prices. It should be possible, they say, for the Indian woollen textile industry to export up to two million metres of cloth within a period of four to five years. The foreign exchange requirements for the modernisation will have to be obtained on the basis of long-term loans at reasonable rates of interest. The report also recommends the establishment of a strategic reserve or stockpile of imported raw materials as a measure of safety to be used for supply to the industry against prospective export orders. This would save time and ensure that the requirements of raw materials are readily available to meet export orders. An increase in the quantum of export assistance has also been suggested in order to enable the industry to achieve the export target within a very short period. The report is, however, under consideration by the Government.

INDO-AMERICAN COLLABORATION

The possibilities of further expansion of trade and economic and technical collaboration with African countries will be explored by a delegation of leading industrialists which left India on September 20 on a tour of nine African countries. The delegation, which is led by Mr. A. M. M. Murugappa Chettiar and which has been sponsored by the Federation of Indian Chambers of Commerce and Industry with the active support of the Union Ministry of Commerce, will visit Ethiopia, Ghana, Kenya, Malawi, Nigeria, Northern Rhodesia, Sudan, Tanganyika and Uganda during its 25-day tour. At a recent meeting which the Union Minister of Commerce, Mr. Manubhai Shah, had with Mr. Murugappa Chettiar and other members of the delegation, all the aspects of expanding trade and economic relations between the countries of Africa and India were considered. It was felt that besides fostering goodwill between India and these countries, the delegation should study the scope for expansion and diversification of trade as also for joint industrial ventures. The delegation's tour would also help in establishing and strengthening personal contacts between African and Indian entrepreneurs. The main industries in which the possibilities of industrial collaboration are to be explored by the delegation are textiles, sugar, cement, cement products and asbestos cement, solvent extraction, toilet requisites and soap, engineering goods of various kinds and chemicals, including fertilizers and sulphuric acid. At present, the Indian participation in industrial projects in Africa covers Ethiopia, Kenya, Uganda and Nigeria (for details vide page 337 of 'Eastern Economist' dated August 21, 1964).

The nine countries, which the delegation will be visiting, account for about 50 per cent of our total exports (worth Rs. 4,633 lakhs) to Africa and 45 per cent of our total import (worth Rs. 5,097 lakhs) from Africa. Sudan occupies the first place in this trade, followed by Kenya, Tanganyika and Nigeria. One or two items dominate our imports from almost all of these nine countries viz., raw cotton from Sudan, Uganda and Kenya; cashewnuts and copper from Tanganyika; hides and skins from Ethiopia, copper and asbestos from Rhodesia and Nyasaland; palm oil from Nigeria; and manganese ore and cocoa from Ghana. As regards exports from India, textiles (both cotton and synthetic fibres and made-up articles) comprise about 38 per cent of our exports to these nine countries, followed by jute manufactures (29 per cent), tea (8 per cent) and cotton yarn (6 per cent). The balance is made up of spices, machinery, a range of engineering goods and various other items. Our

trade (both ways) with each of the nine countries during 1963-64 was as under:-

1963-64 was as under:-		(Figures in lakhs of rupees)	
Country		Imports	Exports
Ethiopia	..	Neg.	170
Ghana	..	66	147
Nigeria	..	76	278
Rhodesia and Nyasaland	..	340	166
Kenya	..	345	502
Tanganyika	..	498	247
Uganda	..	80	66
Sudan	..	852	784

FORWARD TRADING IN GROUNDNUT & OIL

The Government of India has decided, in consultation with the Forward Markets Commission, that recognised associations in the country be permitted to resume forward trading in groundnut and groundnut oil for the new season's contracts subject to such safeguards as may be imposed by the Forward Markets Commission. The decision has been made after considering the representations that the next season's groundnut crop was expected to be very large, in fact higher than last year's crop, and that the orderly marketing of the crop might be very difficult in the absence of hedging facilities. It urged that if the forward markets were permitted to function again, the farmers might also realise a good price for their produce.

FOODGRAIN PRICES

FOODGRAIN PRICES

The prices of indigenous wheat are likely to touch a new high in the Capital within a week's time. This view was expressed by Mr. Ram Narain Jain, General Secretary of the Federation of Indian Grain Trade Chambers, while talking to newsmen earlier this week. He said that wheat would sell at Rs. 70 per quintal in Delhi because of the rise in prices in Punjab which is the supplying State and where the prices ranged from Rs. 53 to Rs. 62 per quintal. Adding seven per cent transport and commission charges, the prices would come to about Rs. 70 per quintal in Delhi. Referring to measures that should be taken to keep prices down, Mr. Jain opined that if coarse grains like Bajra, Maize and Jowar were made available freely in the deficit areas pressure on wheat would

decrease. The rice zones had outlived their utility, he said, and now only created wide price disparities. While Punjab dealers were in search of buyers at the rate of Rs. 25 per maund, rice was not available in U.P. even at Rs. 38 per maund. As regards state trading, Mr. Jain stated that traders would welcome the proposed foodgrains trading corporation provided it operated in competition with the normal trade channels and was not given any preferential treatment in the allotment of wagons. He attributed the abnormal price rise to irregular supply of imported wheat during the past two months. Imported wheat, he added, should be made available at all times at fair price shops, and the Government should release 7,00,000 tons of imported wheat every month.

AMERICAN WHEAT

India has brought all the wheat it wanted to receive from the United States in September and October and has ships lined up for transporting it. This was revealed in Washington by the head of India's Supply Mission there, Mr. Prem Aggarwal. The quantities are 600,000 tons for September and 550,000 tons for October. The programme for November and December will be worked out during the last week of September and the first week of October. According to Mr. Aggarwal, India can revert to the normal position of purchasing monthly quantity of 3,50,000 tons by the end of the year. This was the average during the last fiscal year when India's purchases amounted to \$360,000 excluding transport cost. The delivery of American wheat this time had to be stepped up because of India's urgent appeal for more wheat mainly because of the flood damage to crops in the Punjab and Delhi area. India's Supply Mission in the USA remains in constant touch with grain exporters and effects contracts with American ship-owners who must carry at least 50 per cent of the commodities according to the US law.

INDO-U.A.R. AGREEMENT

India and the UAR have agreed to set up a joint scientific board to promote the widest possible collaboration between the two countries in the field of scientific research. The contemplated board will be composed of ten eminent scientists, five from each country, and its chairmanship will rotate annually between the two countries. The decision to appoint the

board is a part of a scientific and technical co-operation agreement signed earlier this month, in New Delhi, by the Union Minister of Education, Mr. M. C. Chagla, and the UAR's Minister of Scientific Research, Mr. Ahmed Riad Torky. Under the agreement, the two countries will also undertake greater co-operation in atomic research. The UAR has a nuclear reactor in Cairo and another is expected to be set up early next year. The agreement specifically provides for the exchange of a large number of scientists between the two countries. Between thirty and forty scientists from the UAR will come to work in the Indian laboratories, one of them will work in the 'solid state' division of the National Physical Laboratory in New Delhi. The agreement also provides for liberal import and export of scientific materials, equipment and information between the two countries.

TEA FOR FRANCE

September 17 marked the launching of a colourful campaign in Paris to increase India's tea sales to France. India's roving ambassador in Europe, Mr. K. B. Lall, came especially for the occasion from Brussels. A grand reception and an exhibition was held in Paris at the famous Cafe De la Paix. Mr. Lal informed press correspondents that the French Government had co-operated in India's export drive by agreeing to reduce to zero the import duty on tea. The Director of the Indian National Tea Office, Mr. J. Mukerjee, revealed that a tripartite agreement had been drafted between India, Ceylon and the French tea trade for the import into France of substantial quantities of Indian and Ceylonese tea. A part of the Indian tea propaganda campaign in Europe, and especially in France, will be the touring of four vans, each of the shape of a kettle. In France the vans will have two hostesses, one Indian and one French, who will introduce Indian tea to the public. The plan is to introduce two best qualities of tea — Shalimar tea with orange slices and a top grade brand for serving as iced tea. In view of India's tea drive, two internationally known tea firms have expanded their packing centres in France.

INDO-G.D.R. TRADE

The existing trade arrangements between India and the German Democratic Republic have been extended for a further period of three years up to 1967. The volume of trade between the two countries which has been increasing gradually is expected to reach a level of over Rs. 400 million, both ways, by 1966. The German Democratic Republic will import from India such engineering goods as motor vehicle components, textile machinery and accessories, radiators, machine tools, tropicalised and electrical equipment, storage batteries, drugs and chemicals, and textiles (cotton and artsilk). This is in line with the agreed policy between the two countries to diversify and extend the export and import of non-traditional goods. The German Democratic Republic will also continue to import such items as coffee, tea, deoiled cakes and other traditional goods. India's imports from the GDR will include fertilizers, and various items of industrial raw materials such as alloy steel, pig iron, caustic soda, heavy soda ash, dye intermediates and various chemicals. GDR will also supply machine tools, rotary printing machines and other printing machinery, textile machinery and various other capital goods.

EXPORTS THROUGH WORLD'S FAIR

As revealed by the Union Minister of Commerce, Mr. Manubhai Shah, in the Rajya Sabha, the value of orders on trade so far done, within the knowledge of the Government, at the Indian pavilion in the New York World's Fair, is Rs. 90,55,743 and the value of another supply under negotiation is Rs. 45 lakhs. Articles for which orders have been placed include all kinds of manufactured goods such as mill-made textiles, handloom and khadi textiles, handicrafts, jewellery, cigarettes and soaps.

We also deal with PEOPLE**

**The Foreign Transactions
Officer**

There's something quite refreshing about our foreign transaction man. All those strange far-away countries he has to deal with. And yet he's very much with you... for prompt courteous service. Is it an overseas remittance you want? Or a letter of credit? Or just valuable trade information? Just leave it to him. It's his job to solve your problem.

Drop in and see him anytime you want. It's almost as refreshing as a trip abroad.

 **Union Bank
Helps People**

When you order the Union Bank to transact business abroad, they do things in double quick time using Telex. Union Bank's streamlined methods can help you whether you are interested in Import or Export trade, or have business connections abroad. There are branches in all the important centres in India and correspondents in 72 countries with 22,414 offices. You will benefit from the fast, personalised and comprehensive banking service.

THE UNION BANK OF INDIA LTD.
66/80 Apollo Street, Fort, Bombay.
Branches all over India.
Telex contact with countries all over the world.

Company Affairs

Gross profit also went up significantly from Rs. 81.85 lakhs to Rs. 95.99 lakhs.

Depreciation gets Rs. 19.96 lakhs against Rs. 26.36 lakhs while development rebate reserve receives Rs. 0.13 lakh as compared with Rs. 0.30 lakh in the preceding year. A sum of Rs. 30 lakhs has been transferred to general reserve. The provision for taxation is Rs. 20 lakhs while Rs. 10 lakhs is allocated towards tax reserve. The proposed dividend absorbs Rs. 29.41 lakhs, leaving Rs. 6.85 lakhs to be carried forward to next year's account.

The company proposes to expand its capacity from 30,000 tonnes to 75,000 tonnes per annum. The expansion programme is expected to cost about Rs. 8 crores. Orders for plant and machinery for Paper machines, Stock preparation, and Finishing house have already been placed with a Finnish firm at a cost of Rs. 1.50 crores. Tenders for the expansion of the pulp mill, recovery plant and water works are under scrutiny and orders for the same are expected to be placed shortly. Good progress has been made in the erection of 12/10 tonnes caustic soda/chlorine plant during the year. The Plant is expected to be commissioned during the third quarter of the current financial year. The company repaid during the year Rs. 11 lakhs of the loan due to the Madhya Pradesh Government, leaving a balance of Rs. 55 lakhs at the end of March, 1964.

INDIAN TELEPHONE

The sales of the Indian Telephone Industries Ltd., Bangalore during 1963-64 exceeded Rs. 9 crores. Besides meeting the indigenous demand for telephones and other tele-communication equipment, the ITI is exploring markets for exports. During the year Ceylon, Nepal, Uganda, Egypt, Singapore and Malaysia were supplied with equipment worth Rs. 5.6 lakhs and equipment worth Rs. 3.45 lakhs is likely to be despatched soon.

During the year several new lines of production were started such as co-axial line equipment supplied to the Posts and Telegraphs Department for the Patna-Sasaram section. Special signalling equipment of remote control type was manufactured and supplied to the Indian Railways for their electrification projects. Other important equipment among the 37 new items manufactured were flasher units, private automatic branch exchanges, telephones with visual indicators, 15-way intercom telephones and master clocks. The research and development wing of the ITI developed 60 different types of new equipment. Among these were flashing beacons, monitoring telephones, push-button control room equipment, light-weight field telephones and head phones for simultaneous language interpretation system.

INDIA CEMENTS

Mr. P. Suryanarayana, Chairman, India Cements Ltd., reviewed the working results of the Company for the year ended March 31, 1964 at the annual general meeting held recently. There was an all round improvement in the affairs of the company and cement production at 528,554 tonnes was considerably higher as against 419,149 tonnes last year. The production of clinker was also higher at 534,349 tonnes. The production at Talaiyuthu factory has been almost to the rated capacity. The first unit of the plant at Sankari went into commercial production during February 1964 and has been working satisfactorily. As a result of this improvement, the company recorded a higher profit which increased by Rs. 25.40

INDIA STEAMSHIP

MR. A. RAMASWAMI MUDALIAR, Chairman, India Steamship Company Limited informed the shareholders at the annual general meeting held recently, that during the year ended March 1964 the company had turned the corner and recorded a net profit of over Rs. 9 lakhs, after setting aside Rs. 1.28 crores for depreciation, as against a deficit balance last year. This improvement assumed an even better performance in the coming years. The Chairman pointed out that the Indian ships were functioning under certain heavy odds. For instance the delays at Indian ports had been a major factor in their low efficiency. On account of berthing delays India Steamship lost 432 days in the year, out of which 300 days were lost in Indian ports alone. Bad weather and rains caused a further delay of 76 days and the slow arrival of cargoes held up the ships for another 54 days. The Chairman added that with the exception of Madras port, the situation had not improved.

The Chairman indicated that facilities available at Indian ports for repairs and dry docking were not sufficient. He added that during the year under review the ships belonging to the company had to spend on an average 15 days for dry docking and special survey which could have been done at foreign ports in about five days. Such lack of facilities and consequent delays meant higher costs which made the Indian shipping less profitable.

During the year under review the company's ships on the liner trade spent 3,379 days in ports and 2,301 days at sea and on the coastal trade they spent 936 days on port and 282 days at sea which meant that nearly 60 per cent of the time of the liner trade ships and 77 per cent of those on the coastal trade was spent in the ports, which apparently meant something radically wrong.

The Chairman observed that certain shippers were taking undue advantage of the anxiety of the Government to increase exports in order to earn more foreign exchange. These shippers were consistently clamouring for lower freight rate and resisted even small increases. It is true that the proper incentives should be provided to promote export, but the Chairman felt that a more realistic attitude towards shipping should be taken by both shippers and the Government.

The Chairman added that Indian shipping capacity has to be increased in order to earn more foreign exchange which will require more tramp shipping, tankers and bulk carriers of appropriate size. The new entrepreneurs should try to explore possibilities on routes which were not sufficiently served by Indian shipping companies. It would be disastrous he stated, if Indian shipping companies entered the liner trade to cut into the established business which will only divide the income already being earned by the Indian shipping companies.

NEPA MILLS

Thanks to substantial improvements in the working results, the directors of National Newsprint and Paper Mills Ltd., have recommended a maiden dividend of 6 per cent for the year ended March 31, 1964. Better efficiency and record production account for the improved performance of the company during the period under review. For the first time, the rated capacity was attained with a production of 30,078 tonnes of newsprint, recording an increase of 3,563 tonnes over the previous year. With the rise in production, sales of newsprint also improved from 26,675 tonnes to 30,338 tonnes, raising the income from sales from Rs. 280.91 lakhs to Rs. 318.08 lakhs.

lakhs (before deduction of depreciation and Managing Agents' commission) in comparison with the previous year. Work on the second stage of the Sankari plant is also under way which is likely to be commissioned by the second half of 1965 which will mean an output of nearly one million tonnes of cement.

The Chairman indicated that this increased output was not accompanied by equivalent return to the company because the cost of production increased very rapidly. The cost of coal, freight rates and surcharge on electricity have increased considerably so that between November 1, 1961 and March 31, 1964, the cost of production had increased by Rs. 5.92 per tonne. During the same period, price increase sanctioned by the Government was to the extent of only Rs. 3.75 per tonne. In fact the recent increase of Rs. 1.25 per tonne announced by the Government was applicable only from July 1, 1964, while the increase in cost had been recorded even prior to the last increase granted in June, 1963. The Chairman added that this increase in cost had made it impossible for the company to reinvest sufficient resources. He pointed out that the Government should realise this difficulty and fix prices at more realistic levels to ensure at least a net return of 10 per cent to the shareholders to make reinvestments possible.

ALUMINIUM INDUSTRIES

The Aluminium Industries Ltd. had reported improved working results during the year ended March 31, 1964 with the income from sales and service charges rising from Rs. 5.74 crores to Rs. 6.22 crores and gross profit from Rs. 73.80 lakhs to Rs. 83.87 lakhs. The net profit recorded a sharp rise from Rs. 15.90 lakhs to Rs. 29.86 lakhs after providing Rs. 3.77 lakhs (Rs. 3.53 lakhs) for managing agents' commission, Rs. 20.24 lakhs (Rs. 14.87 lakhs) for depreciation and Rs. 30 lakhs (Rs. 39.50 lakhs) for taxation. The allocation to the general reserve is stepped up by Rs. 1 lakh to Rs. 2 lakhs but no addition had been made to the dividend equalisation reserve which received Rs. 2 lakhs last year. Dividend will absorb Rs. 22.72 lakhs as compared with Rs. 15 lakhs last year.

The construction of the plant for the manufacture of low voltage aluminium underground cable at Kundara is nearing completion and the unit is expected to go into production shortly. The import licence and foreign exchange for the expansion of the aluminium rod rolling mill at Kundara have been obtained. The expansion work is expected to be completed in the third quarter of 1965. The bare conductor manufacturing facilities at Kundara and Hirakud are also being enhanced through the installation of suitable balancing equipment. ICICI had already approved a loan in foreign exchange of Rs. 5.2 lakhs for the rod mill expansion scheme and another application for Rs. 4.5 lakhs for equipments for expansion of the capacity of bare conductor is under consideration of ICICI.

During the year 11,750 tonnes of bare conductor and 11.04 million core metres of covered aluminium conductor were produced while the production of aluminium rod rolling and accessories is maintained at a satisfactory level. The acute shortage of raw materials did not permit the full utilisation of the capacity for the manufacture of high tensile galvanised steel wire.

MYSORE ELECTRICALS

Mr. R. D. Char, Chairman, Mysore Electrical Industries, Bangalore, presided over the inauguration of the second plant of United Electrical Industries, Quilon, for the manufacture of AC motor control gear, which will be manufactured under licence agreement with the former company. The Chairman indicated that within the limits of manufacturing facilities and technical skill available in the factory all possible efforts will be made to diversify the activities because the nature of demand for a particular item cannot be anticipated precisely. It was prudent to follow the policy of not keeping all the eggs in one basket. He was also of the opinion that the Indian

entrepreneurs should resist the temptation of perpetuating the trade names and brands of foreign manufacturers in the Indian market. Though it was easier to sell the known names, it worked against the indigenous interest, especially in export efforts. He, therefore, congratulated the United Electrical Industries for working in collaboration with an Indian firm rather than taking the easiest course of a foreign collaboration.

KRISHI ENGINES

Krishi Engines Private Limited, Hyderabad, has recently been licensed to manufacture power tillers in collaboration with a Japanese firm. Already four prototype tillers have been manufactured with 90 per cent indigenous content, and successfully tried out in various types of soils. Regular production of these power tillers has been taken in hand and the final production is expected to be in the market shortly. A Krishi Power Tiller with a five H.P. kerosene oil engine and other standard accessories will cost about Rs. 4,500. These small tractors or 'walking tractors' are particularly useful for intensive cultivation of small farms of 10 to 15 acres. A power tiller can easily do the work equivalent to 3 to 4 pairs of bullocks.

ROHTAS

Rohtas Industries Ltd., had reported a steep fall in the pre-tax profit from Rs. 122.07 lakhs to Rs. 76.94 lakhs during the year ended March 31, 1964. This is attributed mainly to in-

BUY THE BEST— BUY "SAUKEM" PRODUCTS.

We at Remington Rand have been with typewriters a long time—you can say we have always been the first with typewriters. That's why we are so careful about them—careful about things that matter, like precision, touch.

The equipment we've invested in at our factory—the Optical Profile Grinder and the Type Aligning Projector—are for just this reason: that the typewriter you invest in is perfect. The care we take over accuracy—1/10,000 th of an inch in machined parts,

tools and dies, and the perfect alignment of types and typebars, you can call us fussy—even finicky. But then that's why Remington Typewriters are such a good buy.

Our attention to detail means you get precision balanced typebar action that flashes to and from the paper, keys that don't stick even with several typebars in flight, finger-fitted keys designed to cushion finger tips, smooth carriage and lighter, more rhythmic, highly responsive typing.

Remington Typewriters are now better than ever
That's why we are so proud of....

THE EXCLUSIVE REMINGTON TOUCH

Remington Rand of India Limited

AA/G/189

creased provision for depreciation, settlement of raw sugar claim, increase in the cost of power and fuel, and general rise in manufacturing costs without an increase in selling prices. The ordinary dividend has been slashed to 8 per cent from 9 per cent which will absorb Rs. 40 lakhs against Rs. 45 lakhs in the preceding year.

With the re-introduction of triple shift depreciation allowance, the provision for depreciation has been enhanced to Rs. 76.72 lakhs from Rs. 61.93 lakhs. General reserve fund No. 1 gets nothing against Rs. 12.59 lakhs in the previous year, while the allocation to managing agents' remuneration is reduced drastically to Rs. 4.93 lakhs from Rs. 7.35 lakhs. The appropriation for development rebate reserve is lower at Rs. 5.95 lakhs against Rs. 6.60 lakhs and contingency reserve at Rs. 33.50 lakhs against Rs. 56 lakhs. No specific provision has been made for taxation and will be made out of the contingency reserve when the liability is determined.

The production of paper and boards declined during the year to 49,919 tonnes from 52,243 tonnes, of cement to 3.18 lakhs tonnes from 3.20 lakh tonnes and of clinker to 2.89 lakhs tonnes from 2.91 lakh tonnes. Production, however, has increased in the case of caustic soda, vanaspati and asbestos cement. ICICI has sanctioned a loan of Rs. 15 lakhs in foreign exchange for the modernisation of the soda recovery plant. In view of the non-issue of import licences, the company has not been able to implement the expansion programme of its pulp and paper units. The vulcanized fibre plant is still operating below capacity due to the inadequate availability of imported base paper.

A.C.C. DEBENTURES

The directors of the Associated Cement Companies Ltd., propose to issue debentures worth Rs. 7 crores subject to the sanction of the Government. The debentures will carry an interest of 7 per cent per annum and they are redeemable after a period of 15 years. The company is negotiating with ICICI and other financial institutions for underwriting the issue. The proceeds of the issue will be utilised for financing the company's expansion schemes.

F.A.C.T.

Improved working results have been reported by the Fertilizers and Chemicals, Travancore, Ltd., during the year ended March 31, 1964. Sales recorded a significant rise from Rs. 4.80 crores in the 15 months ended March 1963 to Rs. 5.30 crores in the 12 months ended 1963-64 while gross profits increased from Rs. 28.22 lakhs to Rs. 68.85 lakhs. Net profit, after providing Rs. 56.54 lakhs (Rs. 63.88 lakhs) for depreciation, came to Rs. 12.51 lakhs as compared with a net loss of Rs. 35.66 lakhs last year. The surplus of Rs. 12.51 lakhs along with the credit of Rs. 3.85 lakhs brought in from the previous year had been transferred to the development rebate reserve.

The better performance during the year has been due to an all-round rise in the production of fertilisers and chemicals. The production of ammonium sulphate nearly doubled from 28,985 tonnes to 57,374 tonnes while the output of ammonium phosphate increased significantly from 8,084 tonnes to 13,492 tonnes. The third stage expansion of the factory designed to raise the production capacity in terms of nitrogen from 30,000 tonnes to 70,000 tonnes and P2O5 from 13,500 tonnes to 33,500 tonnes is progressing ahead of schedule. The plant is now expected to be commissioned by the end of the current financial year instead of in 1965-66 as originally scheduled.

The company is not in a position to make full use of its new capacity on account of acute shortage of power supply

in Kerala. As against the demand of 31,000 Kw the maximum permitted during most of the months in the year was only 22,200 Kw. This has meant a permanent cut of 29 per cent besides drastic restrictions during the summer months every year. It is therefore feared that the third stage expansion also may not yield the desired results, unless the total demand of 50,000 Kw is met at an early date.

In addition to expanding the present production facilities the company is also examining the feasibility of diversifying its activities. It has already obtained a licence to establish a fabrication shop for the manufacture of specialised equipment such as pressure vessels, heat exchangers, and stainless steel equipment required for the fertiliser, petroleum refining, chemical and petrochemical industries. It has also been granted a licence for setting up a cement factory with a capacity of one lakh tons of cement per annum based on calcium carbonate, a byproduct of the ammonium sulphate plant. The Government of India has entrusted the company with the task of planning, designing, constructing and running three more fertiliser plants in South India during the fourth Plan period. The preliminary work connected with these projects has already started.

JAIPUR METALS

The share capital of Jaipur Metals and Electricals Ltd., is proposed to be increased by Rs. 18 lakhs to Rs. 78 lakhs by the issue of preference shares of Rs. 100 each. The new preference shares will carry a dividend of 9.3 per cent and will be redeemed at par on March 31, 1980 or earlier but not before March 31, 1977. The new 18,000 preference shares will be offered, in the first instance, to the existing shareholders of the company. The shares which are not taken up by the shareholders will be offered for public subscription. The company is expected to enter the capital market by the end of October for the public issue. Further capital of Rs. 18 lakhs is being raised to finance company's expansion plan which include doubling the capacity to manufacture ACSR and aluminium conductors and to raise the capacity to manufacture copper wires by 1,200 tons a month. It will shortly commence

the production of permanent magnets and intends to manufacture different components for electrical metres. The company also proposes to raise the rate of dividend on the existing 8,000 preference shares from 6 per cent to 7 per cent. Its authorised capital is also proposed to be raised from Rs. one crore to Rs. two crores.

SANDVIK ASIA

Mr. Nawal S. Phaterphekar, Chairman, Sandvik Asia Limited, indicated recently that the company is likely to issue right shares to meet a part of the capital cost of its expansion. The company has been invited by the Government of India to consider a substantial expansion in the tungsten carbide production in view of the higher estimated demand. The directors of the company accepted the invitation and submitted an application for substantial expansion which has been approved in principle. The company will, therefore, implement this expansion to complete all phases by 1966. The Chairman also indicated that the Swedish technical collaborators had expressed their willingness to make themselves available for this expansion programme.

The Chairman, however, indicated that its production capacity of finished rock drill steel has been operating at around 50 per cent because imports of rock drill steels have continued. Consequently the company has approached the Chief Controller of Imports and Exports and other official authorities pointing out the difficulty. In other spheres the company has performed quite well.

CAPITAL ISSUES

Six companies have been authorised to raise fresh capital aggregating Rs. 5.87 crores. Of these, three are issuing equity shares, one is floating debentures and another is issuing equities plus preference shares. The consent of the Controller of Capital Issues is valid for 12 months in all cases. The follow-

ing are the details:

Renusagar Power Company Limited, a new public company registered at Renukoot, District Mirzapur (Uttar Pradesh), is to issue capital of Rs. 350 lakhs in equity shares of Rs. 100 each, to be subscribed wholly by Hindustan Aluminium Corporation Limited, for cash at par. The money will be utilised for financing the setting up of a captive power plant capable of producing 125 MW.

Lakshmi Machine Works Limited, Madras, is to issue debentures of Rs. 165.70 lakhs to be issued in five series in favour of the International Finance Corporation of the USA, Industrial Credit and Investment Corporation of India and scheduled banks. The loan capital is required for the establishment of a plant for the manufacture of textile machinery.

The Bank of Rajasthan Limited, Jaipur, is to issue further capital of Rs. 1,81,800 divided into 1818 shares of Rs. 100 each for cash at par.

Indian Air Gases Limited, a new company having its registered office at Kishori Niwas, Birhana Road, Kanpur, is to issue capital of Rs. 29.49 lakh divided as to 2,04,900 equity shares of Rs. 10 each and Nine thousand 9½ per cent cumulative redeemable preference shares of Rs. 100 each, all for cash at par. The capital will be utilised for financing implementation of the industrial licence for the manufacture of oxygen and acetylene gases.

Sivanandha Steels Limited, Coimbatore, will be issuing capital of Rs. 30 lakhs in 30,000 equity shares of Rs. 100 each for cash at par. The capital is required for establishing a plant for the manufacture of steel castings of a capacity of 3000 tons per annum.

Mazagon Dock Limited, a government company, is to issue capital of Rs. 10 lakhs divided into 10,000 equity shares of Rs. 100 each to be issued privately. The money will be utilised for financing its expansion programme.

Indian Refineries Ltd. merge with Indian Oil Co. Ltd. to form **INDIAN OIL CORPORATION LIMITED**

The Indian Refineries Limited and Indian Oil Company Limited have merged to form the Indian Oil Corporation Limited. With an authorised capital of Rs. 75 crores, the Corporation will rank among the 10 biggest companies of the country, judged from the capital investment.

The Corporation has two divisions—Refineries Division and Marketing Division. The Refineries Division will manage the public sector refineries and the Marketing Division will distribute not only the entire production of public sector refineries but also the deficit

products imported from abroad. Spurred by the increased tempo of industrialisation, mechanisation and growing defence requirements, India's demand for petroleum products is bound to grow and INDIANOIL will contribute its share towards meeting the nation's needs.

The Corporation will ensure that only such quantities and qualities of products as preferred by the market would be produced by the refineries. Better co-ordination and greater efficiency will result in economical operation and better service to consumers.

BOOKS BRIEFLY

Employment Planning in Under-Developed Countries

Employment and Economic Growth: International Labour Office, Geneva; 1964; Pp. 217; Price \$2.25, 15s. 9d.

Reviewed by **BANARSI DAS**

THE VOLUME under review is concerned with the problem of unemployment and under-employment, and the measures that can be taken to deal with it. It is the revised version of a report prepared by the International Labour Office for discussion at the ILO Preparatory Technical Conference on Employment Policy held in Geneva in 1963.

The report consists of eight chapters. Chapter I presents background of statistics of employment, unemployment and under-employment in selected countries, both developed and under-developed. This helps to set in proper perspective the employment problems and policies discussed in Chapters III to VIII. Chapter II is devoted to a discussion of employment objectives and their relationship to other economic and social objectives.

The main theme of the report is that employment policies must form part of the policies designed to promote rapid economic development. Economic development provides the only hope of an escape from abject poverty by making available more goods and services to the mass of the people. Employment is not so much of an objective in itself as a means to other ends. The case for using more labour in production of goods and services in an economy with surplus labour rests on the fact that the increased employment would add to current output. The report rightly points out that while giving jobs to the unemployed, it must be ensured that the wages paid to them will generate additional demand for consumer goods. If the newly employed earn and consume more than they produce, it will tend to slow down growth. It is only when the newly employed produce more than their additional consumption that resources available for investment are not diminished. This can conceivably happen when jobs of low

productivity are taken up as subsidiary occupations. Thus in India we might well give encouragement to khadi and village industries only as avenues of subsidiary employment for the under-employed rather than as avenues of main employment for the unemployed.

The rapid growth of population is, undoubtedly, the major cause of unemployment in many developing countries. However, any crash programme to check the population explosion of a country, the report emphasises, is not likely to affect the size of the adult population in the next 20 years. Bringing down birth rate even as drastically as was done in Japan and Greece to counteract the rapid fall in death rates is a fairly long-term solution for tackling the unemployment problem of the immediate or foreseeable future.

Capital is a limiting factor in the creation of employment opportunities for the unemployed in underdeveloped countries. While transfer of capital from the developed to the under-developed countries is definitely helpful in increasing employment opportunities, the report emphasises the need for better utilisation of existing capital equipment. Fuller utilisation of the existing capacity could create more employment and produce more output with little or no additional capital outlay. Inquiry into the extent and causes of under-utilisation of capacity in individual industries and measures to encourage capacity utilisation, similar to the ones suggested by M. J. Solomon in his study, entitled "Better Plant Utilisation in India; A Blueprint for Action", should therefore form an important part of industrial planning in underdeveloped countries.

The report is a rich storehouse of the several attempts made for the creation of more employment opportunities in various underdeveloped countries, which the planners will find very helpful and the students very instructive.

Readers' Roundtable

ACCOUNTANTS AND FIRM NAMES

Sir,

Are accountants entitled to carry on their profession in partnership names other than their own? Some are able to acquire the name and goodwill of reputed firms whose original partners have either retired or died, and "catch" good business and established connections, while others less financially equipped, though equally or even more competent, have to struggle through.

In the case of any profession, be it law, medicine, accountancy, or other, the services of a particular individual or a firm of partners are sought for their personal skill, ability and intelligence, though a minimum qualification standard is prescribed or expected of all members of such profession. If so, is it not misleading or deceptive, besides being dishonourable, on the part of those who carry on their professional business in the names of certain reputed firms of the past whose partners are now either dead or have retired?

At annual general meetings of companies, shareholders are called upon to appoint as their auditors, certain reputed accountants' firms without the fact being disclosed to them that the original partners of the firms have ceased to be partners long ago and that others are carrying on their profession in those names. Is this a desirable state of things which should

be allowed to continue either in the interests of the investing public or in general public interest? Are no shareholders entitled to a fuller information regarding those professionals who are appointed to take up the audit of their companies? Madurai.

A. RAMAIA.

A CRISIS OF CONFIDENCE

Sir,

It was very interesting to read an analysis of the reasons of hoarding by the farmers in the "Readers' Roundtable" column of "Eastern Economist" dated August 28. ("High Prices — A Crisis of Confidence"; Page 409). I must confess that it is really a fact that the farmers have nothing to gain by selling foodgrains and that is why they are hoarding it. When somebody suggested to the Finance Minister the other day at Bombay that he should permit some import of gold, he jumped up with a very spirited reply by saying that such a relaxation would mean import of gold of a thousand crores per year. Does the Finance Minister mean to say that we have saved one thousand crores by banning import of gold? What happened to this foreign exchange equal to one thousand crores and why it is not visible anywhere? What to speak of thousand crores, we don't seem to have saved even five-hundred crores of foreign exchange by stopping import of gold.

R. K. MUKHERJEE,
(Advocate Supreme Court)

Calcutta.

In quest of gold

More and more Indian manufacturers are today earning valuable foreign exchange by selling their products abroad. Exports of cashew nuts, fish, vanaspati, toiletries and other consumer goods in Metal Box packages alone earned over Rs. 9 crores last year. That's a lot of foreign exchange, and for the nation it's as good as gold.

To sell in highly competitive overseas markets the product must be of the finest quality. And so must the package. It must be of the right size and must have the right finish. And an attractive surface design that will score over competition in sales appeal.

All this requires research, experience, resources. Metal Box have them. They also have access to the fund of marketing and technical know-how of their world-wide associates. This is why Metal Box can

provide a comprehensive packaging service as no one else can. This is why, too, so many packers come to Metal Box for advice, send their goods abroad in packages designed and manufactured by Metal Box.

And Metal Box customers are not located in India alone. Last year Metal Box exported nearly Rs 30 lakhs worth of containers, closures and machinery direct to packers abroad.

You see, word gets around.

COMPANY MEETING

INDIA STEAMSHIP COMPANY, LTD.

Address of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon.), Chairman, Delivered at the Annual General Meeting of the Shareholders of the Company, on September 24, 1964, at Calcutta.

Gentlemen,

The Audited Accounts and Directors' Report for the period ending March 1964 have been in your possession for some time and with your permission I shall take them as read.

At the outset I would like to refer to the great loss that the nation has sustained in the passing away of Prime Minister Shri Jawaharlal Nehru in May of this year. For over 16 years since the attainment of Independence by India, Shri Nehru guided the destinies of the nation and steered the country clear through many dangers and pitfalls, both external and internal. His outstanding contribution to the nation has been the great impetus that he gave to the industrial and social development of the country. His broad vision, great insight and deep appreciation of modern advances in science and technology enabled him to guide the industrial progress of the country. More than that, his vision of a society broad-based on social justice and affording equal opportunities for all citizens, led to his determination to prevent the nation from falling back into archaic and superstitious ways of thought and life and saved the country at a time when the tendency was to enshrine all the past as glorious, irrespective of merits and demerits of the tradition we inherited. Whatever reservations some may have regarding Shri Jawaharlal Nehru's stewardship of the nation, none can gainsay the invaluable worth and value of the two distinctive assets which he has left to the nation. I trust that no corroding influences will destroy these precious assets.

For some time, it was a hackneyed question in India and elsewhere: "After Nehru, Who?" Some believed with faith in providence that "the hour will find the man". It is a matter of supreme thanksgiving that the nation, in its saddest and most critical hour, was destined to find in Shri Lal Bahadur Shastri the right person to be Prime Minister and leader of the nation. I can testify from my own experience how the unanimous choice of Shri Lal Bahadur Shastri was received with great relief and with equal admiration by the many nations of the world as it was received by the Indian public. Shri Lal Bahadur Shastri, without being personally known to many abroad, had somehow impressed his character and integrity, his modesty and sense of fair dealing as much on the people abroad as on his own countrymen. His leadership of the nation and the guidance that he will give to the country in the solution of its many perplexing problems, both internal and external, will be safe, prudent and practical. We join with others of our countrymen in wishing him all success in the great task and willingly offer our full co-operation in the work that lies ahead.

We, who are connected with Indian shipping, have reason particularly to welcome his Prime Ministership as he has been the architect of modern Indian shipping development. It was during his Ministership of the Transport Department that Indian shipping got a special impetus for expansion, development and courageous progress. His sympathy and understanding of the needs of Indian shipping, both in the public and private sectors, was responsible for the turn that Indian shipping took in its expansionist activities since 1954. I feel certain that his beneficent influence will be felt by Indian shipping.

PROGRESS:

In my speech at the last meeting, I indicated that it was inevitable that the freight rates from East to West would be increased and that it was generally recognised both by shippers and Government that this increase was justified in the circumstances in which shipping lines were working on the India-UK-Continent route. I had stated that the Conference had increased the rate by 12½ per cent while the Indian lines had pressed for an increase of only 10 per cent. The percentage proposed by the Conference was justified on the ground that, with the many exceptions that were made, with reference to commodities which were called sensitive and could bear only a lower percentage of increase, the effective rate would only be a total increase of 10 per cent. The increase proposed was not approved by the Maritime Freight Commission and by the shippers, and the Indian lines, at a later meeting of the Conference, induced their colleagues to accept the lower figure of 10 per cent. This increase was effective from 1st October, 1963, so that, as the Directors' Report points out, the effect of this increase was felt only for three months of the year under review through the completed voyages that took place after 1st October.

The year resulted in a net profit of a little over Rs. 9 lakhs after setting aside Rs. one crore and 28 lakhs for depreciation and after deducting all other charges. As you are aware, the result of the working of the company last year showed a loss of nearly Rs. 30 lakhs. I trust that the continued loss over the last few years has been definitely arrested and that a period of profit making has begun. Even so, I cannot feel happy or satisfied any more than the shareholders, of the small profit that has been made this year.

PROBLEMS OF INDIAN SHIPPING:

It is unfortunate that, in spite of repeated statements of Chairmen of Indian shipping companies about the handicaps that they are seized with, there has been little achieved in solving these problems or mitigating the hardships and handicaps that face shipping and particularly Indian shipping. The delays in Indian ports have been referred to more than once and it has been pointed out how Indian shipping loses by the number of days it is held up unnecessarily at loading and unloading ports in India. Except for one or two ports, delays have continued to the same extent in the major ports of Calcutta and Bombay. Owing to berthing delays your Shipping Company lost 432 days in the year out of which 300 days were in Indian ports alone; rain and inclement weather has resulted in a further delay of 76 days. These artificial and natural handicaps have been aggravated by lightning strikes and labour troubles of various kinds which resulted in a further delay of 25 days. The slow arrival of cargoes to some of the ports, necessitating the holding up of ships which were ready to sail, has contributed a further delay of 54 days. Thus, through avoidable causes except for rain and inclement weather, the days lost by your Shipping Company apart from the normal holidays were over 500 days. It must be admitted with appreciation that there was considerable improvement over the situation last year only at the port of Madras. The piece-rate system, which has not been accepted so far as Calcutta port is concerned, has further added to the delay in the turn-round of ships. The rate of discharge

or loading is only a third of what it is in the port of Bombay where the piece-rate system prevails. When it is realised that more than half the trade of India moves through the port of Calcutta and that it serves a vast hinterland, the importance of energetic action being taken in Calcutta at various levels for remedying this acute state of affairs becomes obvious. Plans are no doubt under way for execution of long-range solutions of these difficulties; but the immediate present is of more concern to all shipping lines and particularly the Indian shipping lines.

To the delays in ports in India has been added in recent months similar delays encountered in some of the western ports owing to labour strikes and even go-slow tactics. The delays in western ports, though comparatively shorter, are of considerable significance because the harbour and port charges and other incidentals of ships' delays in western ports are very much higher than similar charges in eastern ports. It is under these conditions which prevailed during the year that the earning capacity of shipping lines in the U.K.-Continental-India trade has to be judged.

EXTRANEOUS FACTORS:

There are certain extraneous factors which are having an increased impact on the consideration of freight rates and on normal profits, particularly for Indian shipping lines. The problem of earning foreign exchange and the consequential question of balance of payments has necessarily loomed large in recent times. India particularly and the less developed nations are seeking to meet their requirements of foreign exchange for imported plant and machinery and raw materials for their industrial development and must therefore, to a reasonable extent, concentrate on increasing their exports to various markets of the world. There have been many incentives considered in this connection for promoting exports. While I agree with this policy, I must reiterate that some shippers at least are taking advantage of the anxiety of the Government to increase exports and are constantly clamouring for a decrease in freight rates and objecting to even small increases. Shipping is as much an industry as any other industry and while land-based industries can cope with increasing cost of production due to a rise in labour cost or raw materials by an increase in the prices of the articles they produce, it is considered by some that shipping, in spite of the fact that all these increases affect them equally, could not adjust its freight rates suitably. It is essential that a more realistic attitude towards shipping should be taken by both shippers and ultimately by Governments and I feel certain that better results, even from the point of view of foreign exchange, will accrue from this altered attitude towards shipping lines.

The facilities that are available at ports in India are so poor in other directions also that they form a severe handicap to Indian shipping lines. It has been a matter of great concern that the dry docking and repair facilities in Indian ports leave very much to be desired. If, with this factor, Indian shipping lines are compelled to do the dry-docking and shipping repairs only at Indian ports as is often the case, not merely the resulting cost, but even more the resulting delay in carrying out this work, seriously affects the earning of these companies. During the year under review, your ships had to spend on an average 15 days for facilities for dry docking and special survey. If this was done in a foreign port to which the ship had to go for discharge or loading, the average number of days would have been about 5. The cumulative effect of all the factors I have referred to above makes it difficult for Indian shipping, whether coastal or overseas, to make a reasonable profit unless one of two things occurs: either the freight rates are fairly increased or the amenities

and conveniences at Indian ports are radically improved.

I feel that the time has come when the Committee in charge of national harbours is reconstituted with defined aims and objectives consistent with the needs of the times and their recommendations are not only seriously considered but given prompt effect to, so that, apart from long-term suggestions, immediate improvement may be made in the directions mentioned above.

I have referred to this long catalogue of grievances and deficiencies merely to explain the financial position of the Company. I feel confident, as I said, that we have turned the corner and that a more favourable balance-sheet may be presented in the succeeding years. But shipping companies must be assured of fair conditions of working in Indian waters and in overseas ports. When I find as a result of the year's working in the Liner trade that your ships spent 3,379 days in port and 2,301 days at sea and that on the coastal trade they spent 993 days in port and 282 days at sea, that is, nearly 60 per cent in port in the Liner trade and 77 per cent in the coastal trade, I must confess that there is something radically wrong in the manner in which Indian shipping companies generally were obliged to work. The loss is as much to the nation as to individual shipping companies.

EXPANSION OF SHIPPING:

The need to expand Indian shipping is obvious and it is in this direction that some additional earning of foreign exchange may be expected. But the immediate increase in foreign exchange earnings of Indian shipping lines can well be brought about — and comparatively easily — with altered conditions in Indian ports. I have advocated the expansion of Indian shipping but always with the basic idea that they will really increase the cargo carried to and from India. There is need for more tramp shipping, for tankers and for bulk carriers of appropriate size, and if attention could be concentrated by new entrepreneurs or even by established shipping companies on these kinds of ships, it will help the country as much as it will be of help to them. It will be disastrous if shipping companies which have an ambition to enter the Liner trade cut into the existing trades of Indian shipping companies on routes in which they have established themselves after great difficulty and considerable initial loss. They will only be dividing the income which the Indian shipping lines are now earning to the detriment of both themselves and of old-established lines. Given proper guidance by the Ministry of Transport in increasing the tonnage of Indian shipping and in fair and proper utilisation of such tonnage, there is every reason to believe that Indian shipping can expand on healthy lines.

THANKS:

Our thanks are due to the Minister of Shipping for his continued help and guidance and to the officers of the Ministry, the Secretary, the Director-General of Shipping and his deputies and assistants, who have always given useful advice and timely help.

TRIBUTE:

I should like, on behalf of the Board and myself, to convey our sincere appreciation of the work of the officers and staff, both afloat and ashore. Theirs has been devoted service in the interests of the Company. I should also like to express my thanks to the shippers, brokers and forwarding agents for their firm support and for the confidence they have reposed in us and in the quality of our service.

N.B.: This does not purport to be a record of the proceedings of the Annual General Meeting.

RECORDS AND STATISTICS

Reserve Bank Directors Urge Fiscal Stability

IN USING the tax instrument for securing resources for defence and development "it is important", says the Central Board of Directors of the Reserve Bank of India, "to bear in mind the unsettling effects of frequent changes in the general structure of taxation on the climate of investment activity". Expressing this opinion in its annual report for the year ended June 1964, the Board urges a strict scrutiny of Government expenditure with a view to weeding out less essential items. Extracts from Part I of the Report dealing with the major economic developments are reproduced below:

The economic developments during the year July 1963 to June 1964 can be viewed as in the nature of an aftermath to the Emergency which had dominated events in the preceding year. The Emergency generated pressures on the economy which were superimposed on those arising from the developmental programmes. With the passage of time, these pressures have increased and, more recently, the economy has had to meet substantial expenditure on relief and rehabilitation of refugees. In the result, the overall economic situation which was already a difficult one has become even more so.

There has been a rapid expansion in liquidity in the economy stemming from the large magnitude of total bank credit extended not only to the Government sector but also to the private sector whose requirements of bank finance have increased rapidly. The seasonal expansion in scheduled bank credit during the busy season of 1963-64 touched an all-time peak. Another striking feature of the monetary situation was the increase in money supply during the slack season of 1963 when normally the supply of money contracts. Equally noteworthy is the faster rate of expansion in deposit money witnessed during the year under review, which accounted for nearly one-half of the increase in money supply.

Stagnation in Agriculture

The inflationary pressures emanating from the greater liquidity were accentuated by the virtual stagnation in agricultural output. It is significant that the resulting gap between aggregate demand and aggregate supply persists, despite the unprecedented taxation measures contained in the previous year's budget and the other corrective measures that were taken since then. There has been a strong and persistent increase in wholesale commodity prices which has also been transmitted to the cost of living. The increase in the index of wholesale prices during the year was larger than in any previous year, except 1955-56, since the commencement of the five-year Plans in 1951. The major components of the increase were in the prices of commodities of agricultural origin, such as foodgrains, oilseeds and vegetable oils, sugar, gur, etc. The magnitude of the recent increase in prices associated with the failure of the post-harvest decline in prices to wipe out the increase in the preceding lean period has imposed considerable hardship on sections of the community.

In contrast to the commodity markets, the capital markets have been in a state of quiescence and still show the bearishness which first set in in the wake of the Emergency. While there has been a rise in industrial production, its rate of growth is still below the target of the third Plan.

In the external sector of the economy, despite a relatively better performance of exports and improved utilisation of external assistance, there was pressure on the foreign exchange

position. Thus, there is still a considerable leeway to be made up in regard to exports, if dependence on foreign assistance is to be significantly reduced in the near future.

The general level of prices showed a significant rise during the year (July 1963-June 1964) mainly on account of agricultural commodities, and except for a small short-lived seasonal decline during September to November 1963, it moved up continuously, the upsurge being pronounced in the second half of the year. Over the year, the rise in prices (9.4 per cent) was double that in the previous year. The deterioration in commodity prices which was marked in articles of mass consumption, was also reflected in the All-India Consumer Price Index for working class (base: 1949=100) which rose continuously from 134 in June 1963 to 150 in June 1964, and affected all centres. The seriousness of the price situation is emphasised by the rise of 11.9 per cent in the consumer price index, as against a rise of only 3.1 per cent in 1962-63.

Price Spiral in Food Articles

Among the constituent groups, the most significant rise was in food articles (13.3 per cent) followed by industrial raw materials (11.4 per cent). Moreover, the price increase was all pervasive among food articles, covering all the major cereals and pulses. The rise in prices is largely due to the setback in agricultural production which is reflected in the decline of 3.3 per cent in the index (1949-50=100) during 1962-63 to 136.8 from the level of 141.4 attained in 1961-62. The shortfall in production affected foodgrains and all commercial crops, except cotton, coffee, rubber and tobacco. There has been virtual stagnation in foodgrains production around the level of 81 million tonnes in the past three years, although the production of rice during 1963-64 has been larger than in the previous years. The problem of shortages in foodgrains appears to have been aggravated by the restrictions on inter-State movement and the present system of compulsory levy together with the increase in the holding capacity of the big farmers and speculative activity by the trade. The delays in unloading foodgrains at the docks also contributed to the rise in prices. The shortfall in agricultural production relatively to the requirements of the economy in conjunction with the abovementioned factors has created a psychology of scarcity, raising prices beyond the level justified by the basic supply and demand position. Compared with the rise in prices of agricultural commodities, the rise in prices of manufactured products was modest (at 2.5 per cent).

Industrial output expanded at a faster rate (9.1 per cent) during the financial year 1963-64 than in the preceding two years (7.9 per cent in 1962-63 and 6.4 per cent in 1961-62). However, the rate is still below the third Plan's annual target of 11 per cent. On the other hand, there are some significant features of industrial production which are indicative of the successful results of the strategy of investment pursued in the past few years. The output of basic industries increased at a faster rate than that of many of the consumer goods. The overcoming of bottlenecks in the supply of coal, power and transport enabled industries like jute textiles and iron and steel to achieve full capacity output. However, despite the overall increases in the output of commodities, certain essential industrial raw materials are still in short supply.

The future prospects of industrial production will depend both on the availability of foreign exchange and fresh invest-

ment as well as maintenance imports and the success achieved in preventing bottlenecks from arising in strategic sectors, such as in power and transport. The position in regard to financial resources for new investment is somewhat indeterminate. The cost structure of industry has already been raised by the increases in prices of raw material inputs, stemming from price increases granted by way of incentives to producers and increases in indirect taxation, and, to the extent they are linked to costs of living, by the increases in wages. Bids for further increases in wages by organised labour, if successful, are likely to aggravate the problem of industrial costs. A co-ordinated wage and incomes policy geared to productivity remains a vital 'desideratum'.

It is against this background that the more salient features of price policy may be briefly reviewed. Although official action was constantly focussed on holding down the prices of essential articles of mass consumption through a variety of measures, such as increased imports, larger internal procurement of foodgrains as well as their distribution through a wide net-work of fair price shops and co-operative stores, the all-round co-operation to hold the price line, which looked so assured in the critical months after the Emergency, was not much in evidence subsequently. Steps were also taken to exercise a stricter control over private trade through measures, such as the introduction of Foodgrains Dealers' Licensing Orders, so as to restrict the ability of the traders to exploit the situation of marginal shortages. In March 1964, the Government announced its programme which envisaged, among others, fixation of maximum prices of foodgrains, effective regulation of wholesale trade and tightening of selective credit controls. The zonal arrangements in respect of wheat, which were abolished in April 1961, were reintroduced in a modified form in March 1964. Among the important decisions bearing on price policy, following the Chief Ministers' Conference in June 1964, mention may be made of the removal of restrictions on the movement of rice from surplus to deficit States and of coarse grains throughout the country and the decision to establish a Foodgrains Trading Corporation and to reduce the Central Government's expenditure by about Rs. 70 crores. In order to check a speculative rise in prices, forward trading in 14 agricultural commodities including groundnut and groundnut oil was banned from June 1964. The selective credit controls in respect of advances against paddy and rice and groundnut were tightened and those against wheat were reimposed.

Higher Procurement Prices

On the other hand, the sluggishness of output necessitated upward revisions in the procurement prices of rice and wheat and in the minimum prices of sugarcane. Likewise, price increases were also announced in certain non-agricultural controlled commodities like coal, with a view to meeting the increase in costs and to stimulate production. Price and distribution controls which were found to be inhibiting the production of certain commodities were withdrawn, among which were rayon yarn, staple fibre, certain chemicals, tyres and tubes, caustic soda, certain types of steel and steel products, etc. Thus, the year witnessed a greater Government control over prices and distribution of certain agricultural commodities as also relaxation and abolition of controls over certain other products. In spite of these measures, the price level remains a highly disturbing factor in the economy.

Notwithstanding a substantial stepping up of taxation at the Centre and in the States from 1960-61 onwards, the budgetary position especially of the States has deteriorated. According to the revised estimates for 1963-64, the overall budgetary deficit of the Centre was smaller at Rs. 78 crores as compared with Rs. 182 crores originally anticipated for that year. But this does not take into account ad hoc Treasury bills of Rs. 75 crores funded in January 1964, and if account is taken of this

funding operation the overall deficit would work out to Rs. 153 crores which is slightly smaller than in 1962-63 viz., Rs. 168 crores. This has happened owing to the marked buoyancy in tax receipts and a fall in expenditure on revenue account. The overall deficit of the Centre during 1964-65 (B.E.) is estimated to be of the order of Rs. 86 crores. The overall budgetary position of the States worsened from a surplus of Rs. 37 crores in 1962-63 (Accounts) to a deficit of Rs. 18 crores in 1963-64 (R.E.), mainly on account of larger repayments of loans to the Centre and larger provision for development expenditure and debt services. Additional taxation at the Centre in the first three years of the third Plan is estimated to yield about Rs. 1,900 crores over the entire Plan period, thus exceeding the five-year target of the Plan (Rs. 1,100 crores). The tax proposals for 1964-65 are expected to yield an additional Rs. 40 crores in the current year, made up of Rs. 15 crores under direct taxes—mainly amendments to corporate taxation—and Rs. 25 crores under indirect taxation. For the States, the five-year target of additional taxation in the Plan was fixed at Rs. 610 crores. Measures taken by the States in the first three years would yield over the Plan period an aggregate revenue of about Rs. 460 crores. During 1964-65, an amount of Rs. 7 crores is estimated from additional taxation. Additional taxation during 1964-65 (B.E.) is expected to raise the ratio of Central and States' tax revenue to national income from 9.6 per cent at the end of second Plan to 14 per cent.

Individual Incentive

The tax proposals for the year 1964-65 avoid any material increase in indirect taxes. Income-tax and other direct taxes have been remodelled to maintain individual incentives consistently with the objective of reducing inequalities of wealth. The reintroduction of expenditure tax is to be viewed more as a part of the comprehensive personal taxation rather than as a revenue expedient. While the new tax measures may at best soften the impact of high levels of expenditure, the tax potential of the agricultural sector is still inadequately tapped. This has to be viewed from the angle not only of fiscal equity but also of the efficacy of the tax instrument in raising resources from all the strata of the economy.

The position in regard to the mobilisation of resources for the public sector through loans is somewhat of a mixed character inasmuch as, despite the subdued response to market loans, there was an exceptional outturn in small savings. Net collections from small savings during the financial year 1963-64 reached an all-time record of Rs. 132 crores showing an increase of Rs. 57 crores over 1962-63. There was a fall of Rs. 29 crores in the net market borrowings by the Centre and the States which amounted to Rs. 155 crores, as against Rs. 183 crores in the 1962-63 financial year. Lower response to the new issues accounted for a deterioration of Rs. 15 crores, the remaining change being accounted for by the discontinuance of the 4½ per cent National Defence Bonds 1972 (November 10, 1962 to April 29, 1963) and the 6½ per cent Gold Bonds (November 12, 1962, to February 28, 1963). Despite the none too favourable response to the new loans, the gilt-edged market remained firm and a number of short and medium-dated issues recorded handsome gains.

It was decided that from the financial year 1964-65 the States should float their own market loans. Consequently, the Union budget assumed credit for Rs. 295 crores under gross market loans, while eleven States (excluding Jammu and Kashmir, Maharashtra, Orissa and the Punjab) have taken credit for market loans aggregating Rs. 79 crores. The net borrowings of the Union Government for 1964-65 will amount to Rs. 103 crores. The Union Government entered the market on April 15, 1964 with an offer to holders of two maturing loans viz., the 3½ per cent National Plan Loan 1964 and the

3 per cent Loan 1964 for conversion into (1) the 4 per cent Loan 1970 at an issue price of Rs. 99 and carrying a redemption yield of 4.19 per cent and (2) the 4½ per cent Loan 1989 to be issued at par. The total amount of maturing loans tendered was approximately Rs. 142 crores as against outstandings of Rs. 189 crores, the balance of about Rs. 47 crores was repaid in cash. On July 3, 1964, the Central Government announced a second instalment of its borrowing programme for 1964-65, comprising a further tranche of the 4 per cent Loan 1970 at Rs. 99 and the 4½ per cent Loan 1989 at par, for a sum of Rs. 150 crores. The total subscriptions amounted to Rs. 151 crores and brought gross market borrowings during the financial year 1964-65 to Rs. 293 crores.

The flow of resources to the private sector from the open market remained restricted during 1963-64 (July-June), with the result that reliance was increasingly placed on the existing financial institutions for loan assistance as well as for underwriting support. Although there was a distinct improvement in new issue activity during the pre-budget months (October 1963—February 1964), induced by a moderate recovery in the stock markets on expectation of reliefs in the 1964-65 budget, investor confidence did not show any significant revival and the response to new issues was, by and large, unsatisfactory. The stock market's adverse reaction to the 1964-65 budget proposals and the renewed down-trend in share prices since March again adversely affected new issues. These developments reflect the sluggishness of the share market, despite the slight improvement of 3.7 per cent in share prices over the year in contrast to the fall of 14.2 per cent in the preceding year.

Shift in Investment Preference

The magnitude of consents by the Controller of Capital Issues, amounted to Rs. 138 crores during 1963-64 (July-June), which was about the same as in 1962-63 (after excluding the Rs. 30 crores debenture issue of Oil India Ltd.) A significant feature was the decline in the consents for equity issues, accompanied by an increase for preference shares, reflecting a shift in investor preference for fixed yield securities.

During the year, certain steps were taken to revive the capital market. The exemption limit for capital issues as well as industrial licensing was raised from Rs. 10 lakhs to Rs. 25 lakhs. The resources of the term lending financial institutions, such as the IFC, ICICI and the Refinance Corporation for Industry were also augmented. The year also witnessed the establishment of the Unit Trust of India from February 1, 1964 and the Industrial Development Bank of India from July 1, 1964. Besides, some fiscal reliefs were given to the corporate sector in the 1964-65 budget.

As in the preceding year, the shortfall in market resources for the private sector was made up by the substantial increase in finance from the various term lending institutions and the Refinance Corporation for Industry. Loans sanctioned by these institutions, comprising IFC, ICICI, NIDC and State Financial Corporations, amounted to Rs. 70 crores in the financial year 1963-64 as against Rs. 54 crores in 1962-63, an increase of 30 per cent. Disbursements stood higher at Rs. 41 crores as compared to Rs. 37 crores in 1962-63, though the ratio of disbursements to sanctions declined from 69 per cent to 58 per cent. Loans sanctioned by the Refinance Corporation for Industry (Rs. 23 crores) were nearly twice as much as in the previous year. A notable feature was that the financial institutions devoted special attention to new industries, while continuing to help traditional industries, and rendered valuable assistance to new issues. The amount of new issues underwritten by the LIC during the fifteen-month period ended March 1963 showed a more than two-fold increase compared to the year ended December 1961. The Corporation's investments in shares and debentures of joint stock companies in India out of its total investments rose from Rs. 103 crores in December 1961 to Rs. 125 crores in March 1963 — from 17.6 per cent to 19.4 per cent.

Viewed from the purely monetary angle, an important factor contributing to the deterioration in prices was the rapid increase in liquidity, which outstripped the sluggish growth of output in the economy. Money supply, which represents the monetary demand in the economy, expanded by Rs. 447 crores (or by 13.3 per cent) during the accounting year 1963-64 as against Rs. 310 crores (or 10.2 per cent) during the previous year.

The faster rate of growth in money supply was mainly induced by the more rapid credit creation by the banking system for private trade and industry. Governmental indebtedness to the banking system, comprising investments in Government securities by the Reserve Bank and other banks (excluding the investments of PL 480 and PL 665 funds) and ways and means advances adjusted for Government's cash balances with the Bank, continued, as in the preceding two years, to be the dominant expansionary factor, although its impact was smaller (Rs. 281 crores) than in 1962-63 (Rs. 316 crores) and in 1961-62 (Rs. 327 crores). Net bank credit to the private sector, comprising both banks' advances and holdings of private securities adjusted for time deposits (excluding PL 480 and PL 665 funds), had a substantially larger expansionary effect on money supply in 1963-64 (Rs. 183 crores) than in 1962-63 (Rs. 72 crores). Government's net currency liabilities to the public were also greater by Rs. 17 crores as compared to Rs. 11 crores in the previous year. The balance of payments position, as measured by changes in the Reserve Bank's net foreign exchange assets, which had an expansionary impact (Rs. 7 crores) in the previous year, had a nominal contractionary effect (Rs. 1 crore) on the money supply in the current year. The combined effect of the foregoing factors was partially offset by a rise of Rs. 33 crores in net non-monetary liabilities of the banking sector (including the Reserve Bank) as compared to Rs. 96 crores in the previous year. A notable feature of the trends in money supply was a contra-seasonal expansion of Rs. 30 crores in the 1963 slack season as against a contraction of Rs. 63 crores in 1962 slack season. The expansion in money supply during the 1963-64 busy season was Rs. 407 crores as compared to Rs. 362 crores in the 1962-63 busy season.

A Secular Trend

An unusually large credit contraction (Rs. 121 crores) in the 1963 slack season was followed by an unprecedented expansion (Rs. 376 crores) in the 1963-64 busy season. In the 1963 slack season, the contraction in advances against seasonal commodities was larger than the previous seasonal expansion recorded by them; advances against non-seasonal commodities, which had shown a secular rise, also increased at a markedly lower pace than in the previous slack season. This was a reflection of a rapid depletion of stocks with industry and trade, especially in sugar and textiles, but it may also have been induced by some slackening in the rate of industrial growth and in investment activity. The pace of deposit expansion was at the same time faster than in the previous slack season, due in no small measure to the continuing budgetary deficit in the period. This, together with the unusually large credit contraction, brought down the credit-deposit ratio over the slack season from 78.6 per cent to 67.4 per cent and enabled the banks to build up their liquidity position by strengthening their portfolio of Government securities and augmenting cash reserves.

This rapid credit contraction focussed attention on the need to give a fillip to productive activity. Coupled with the anticipated larger requirements of crop finance, it underlined the need for some relaxation in credit policy. Accordingly, on October 30, 1963, the Reserve Bank modified its system of lending rates and borrowing quotas to enable banks to satisfy all credit demands for productive purposes. The nor-

yarn, two new export promotion schemes were announced in respect of tobacco and the sale of jewellery and gold articles to tourists.

Imports which had risen by Rs. 85 crores in 1962-63, rose even faster during the year. At Rs. 1,231 crores they were higher by Rs. 139 crores than in 1962-63. The whole of the increase was due to larger payments on Government account for developmental as well as non-developmental items. Imports of capital equipment for Government projects increased by Rs. 86 crores and Government food imports by Rs. 31 crores. On private account, almost all items except machinery, mineral oils and raw wool recorded declines, with the result that total private imports fell by Rs. 6 crores. Larger availability of internal supplies, as in the case of cotton where imports fell by Rs. 10 crores, partly enabled the reduction in private imports.

In view of the general stringency of foreign exchange, the import policy for the year 1964-65, announced on March 31, 1964, was, as in the past, basically restrictive and the total level of imports permissible for established importers and actual users was broadly of the same order as in 1963-64. Among the more important changes in the new import policy were the widening of the scope of annual licensing to all imports except capital goods, raw jute, cotton and wool, textile machinery and cashewnuts.

Private Capital Inflow

In the field of private capital inflow, as evidenced, among other things, by the rise in the consents given for issue of capital to non-residents, which rose from Rs. 567 crores in 1962 to Rs. 130.5 crores in 1963 the climate for foreign investment in India seems to have improved in the period under review. This also reflects the efficacy of the various measures taken during the year to encourage the inflow of foreign capital, notably the tax concessions in the budget for 1964-65 and the reduction of procedural delays in industrial licensing.

The foregoing survey has shown that as a result of increased outlays on defence and development over a period during which the rise in output, particularly in agriculture, was not commensurate with expectations, the Indian economy was subject to considerable stresses and strains. These pressures were reflected in a significant increase in the level of prices, particularly of foodgrains. The stabilisation of prices of prices, particularly of foodgrains. The stabilisation of prices must be a major objective of policy, in order that defence and development may be secured while strengthening the balance of payments. A sizable expansion in the output of consumer goods, and particularly of agricultural products, will be necessary if rising levels of investment are to be secured, while maintaining the stability of the economy.

A purposive and positive price policy presents indeed the greatest challenge to economic statesmanship. Such a policy has to be framed taking into account both the short-term aspects and the longer-term strategy required to prevent the recurrence of difficulties that are being currently experienced. The short-term measures should be so designed that they could be meshed into a long-term strategy. It would also be well to remember that while the short-term measures must deal with hoarding, profiteering, etc., the aim should be to seek to eliminate or at least to reduce the impact of the primary causes behind the price increase. It is as well to recognise that the country has clearly not reached the stage of self-sufficiency; thus, the short-term solutions should also include measures, such as planned imports and distributional arrangements which will ensure that the hardship to the vulnerable sections of the community is reduced to the minimum. In the long-term, the highest priority must be given to the increase in agricultural output, and the price policy should be such as to offer a reasonable return to the cultivator to encourage him to maintain high levels of production. Such a policy coupled with a buffer stock operation geared closely to the agricultural

cycle, so that in good years the procurements both internally and by import is intensified and the stock built-up and in bad years stocks are released, should considerably help in achieving the desired degree of progress in agricultural output and contribute significantly to price stability.

Simultaneously with the adoption of measures which operate on the supply side in the economy, it is essential to pay close attention to the factors operating on aggregate demand. To raise outlays for development in the public and private sectors have been added the heavy load of defence expenditure and, more recently, expenditure for rehabilitation of refugees from Pakistan and persons of Indian origin coming from abroad. In the context of a shortage of financial resources, these have been financed by increasing recourse to bank credit, giving rise in the process to the price problem which has been further accentuated by the pressure of money outside the banking system.

Heavy Defence Expenditure

In the conflict between development and stability is to be resolved satisfactorily, it is essential to maintain a continuous watch on the pace and direction of development. As defence has a certain priority, the onus of adjustment falls on other sectors. A good deal of the adjustment has been made through altering structure and rates of taxation. In using the tax instrument for this purpose, it is important to bear in mind the unsettling effects of frequent changes in the general structure of taxation on the climate of investment activity. All this underlines the importance of a strict scrutiny of Government expenditure with a view to weeding out less essential items. Even if this results in temporarily slowing down of developmental activity in some areas, it may in the long run prove beneficial.

The credit policy of the Bank has a dual role to perform. In its short-term aspects, the policy has to ward off against pressures on the price level that might arise as a result of the use of bank credit. At the same time, the interest of development in the priority sectors has to be ensured. Further, the unusual pressure of development and other demands calls for the most effective mobilisation of genuine savings—a task in which the banking industry has a major part to play.

An encouraging feature of the country's economic situation is the progressive improvement in exports recorded in recent years. It is very essential that not only is the pace of progress in this sector maintained but improved further. The magnitude of the export effort has to be stepped up not only to meet current imports, both developmental and maintenance, but also the growing burden of external debt, the servicing of which is an important determinant of the country's external credit. This calls for a vigorous and sustained nation-wide export drive including in its purview not only the adoption of appropriate measures by the Centre and the State Governments but also greater efforts by the leaders and associations of the business community.

The stresses and strains the economy has run into by the middle of the third five-year Plan have an important bearing on future planning. The ability of the economy to withstand these stresses and strains is very much dependent on the progress it is able to achieve in the spheres of agriculture and exports. But, even with the utmost optimism in regard to agricultural production and the availability of foreign exchange, the resources budget of the nation may well remain strained. The size as well as the content of the developmental effort have to be carefully considered from this angle and a solution worked out which will enable development to take place in an environment of stability, so that the benefits of development are passed on in the right measure to the masses. This in its turn points to the need of formulating policies which would have to comprehend not only monetary, fiscal and physical controls but also a co-ordinated price and incomes policy.

mal quota for borrowings by scheduled banks, both against bills and Government securities, was raised from 100 to 150 per cent of their average statutory reserves. Banks could borrow half this quota (i.e. 75 per cent of the average statutory reserves as against 50 per cent till then) at the Bank rate, viz., 4½ per cent, and the other half at 6 per cent. Borrowing beyond this limit (i.e. in excess of 150 per cent of banks' statutory reserves) was to be in the nature of special accommodation to be granted by the Bank, after an overall assessment of the borrowing bank's position, at a rate of 6 per cent as against 6½ per cent till then.

Record Credit Expansion

In the busy season that followed, credit expansion attained record dimensions, the main underlying factors being a larger credit demand for marketing of crops, especially commercial crops like cotton, raw jute and groundnuts, the higher level of prices and the higher tempo of industrial activity. As compared to the previous busy season, there were larger increases in seasonal and non-seasonal as well as unsecured advances, though their respective shares in the total varied. Seasonal credit accounted for somewhat over half the expansion in the 1963-64 busy season as against over two-thirds in the 1962-63 busy season. Among seasonal advances, the rise in advances against sugar and gur and raw cotton, and among non-seasonal advances that against manufactures and minerals was more pronounced. The increase in advances against shares, Government and other trustee securities, assets of industrial concerns and real estate was also appreciably larger. The expansion of deposits in the 1963-64 busy season (Rs. 110 crores), though somewhat larger than in the previous busy season, was barely sufficient to meet one-third of the increased credit demands, the credit-deposit ratio (excluding PL 480 and 665 funds) reaching a peak of 81.4 per cent on May 8, 1964.

The supply position of agricultural commodities which seemed good at the commencement of the marketing season, turned less favourable as the season advanced; at the same time, there was renewed pressure on commodity prices. In view of this as well as the rapid expansion in bank credit financed by increased recourse to the Reserve Bank, the Bank reduced on March 11, 1964 the borrowing quotas and lending rates to levels prevailing before the end of October 1963. Banks were permitted to borrow a sum equal to 50 per cent of the statutory reserves at the Bank rate of 4½ per cent and the remaining 50 per cent at 6 per cent; any borrowing beyond this limit was to be in the nature of special accommodation, calling for a careful assessment of a bank's overall position and was to be charged a higher rate of 6½ per cent. In view of the sharp increase in clean advances, which had risen by 30 per cent in the year ended February 1964, banks were requested to review their portfolio of clean advances and bring down such advances.

Over the year as a whole, bank credit rose by Rs. 245 crores to a level which was about 18 per cent higher than a year before. The higher level of economic activity as well as the rise in prices partly accounted for the higher level of bank credit. The increase in cash reserves and the gilt-edged portfolio of banks was much smaller than in 1962-63. Deposits rose by Rs. 276 crores.

As regards selective credit controls, the main developments were the (i) relaxation of the control on advances against shares, (ii) tightening up of the control on advances against paddy and rice and groundnuts and (iii) reimposition of the control on advances against wheat. The last two measures were taken in the face of shortages of supplies in relation to demand and the prevailing higher level of prices of the commodities concerned. The minimum margin of 40 per cent in respect of advances against shares was removed in October 1963,

mainly with a view to revitalising the capital market. The main feature of the revised directive in regard to paddy and rice issued in February 1964 was the fixation of the overall ceiling as well as the secondary ceiling in respect of non-warehouse advances at 90 per cent of the level of such advances maintained in 1962. In groundnut, the Bank increased in March 1964 the minimum margin on advances from 45 to 50 per cent and also reimposed the ceilings on such advances which had lapsed at the end of February 1963, the limits so fixed being 150 per cent of the actual level of such advances maintained in the corresponding months of 1963 for the two-month period March-April 1964 and 120 per cent for each subsequent two-month period. In wheat, the control on advances which had been withdrawn in May 1961 was re-instituted in April 1964. Banks were required to maintain a minimum margin of 35 per cent (25 per cent for advances against warehouse receipts), while the ceiling limit for each two-month period beginning from May-June 1964 was fixed at 80 per cent of the levels maintained in the corresponding two-month period in 1962.

The experience of selective credit controls shows that, while they have had salutary effects in regulating bank credit for the commodities concerned, equally, they have their limitations, especially in an environment of overall monetary expansion, which makes it possible for operators to resort to non-banking sources of finance. This underlines the necessity of maintaining harmony between monetary policy and fiscal policy. Thus, while credit policy, in its long-term aspect, continued basically to be attuned to the needs of development, with preferential treatment to special sectors like small-scale industries, co-operatives and exports, in the short-term, adjustments in the cost and availability of credit were made to suit the needs of the emerging situation.

External Position

As in the past, the availability of foreign exchange continued to be a severe constraint on the development programme, despite an encouraging performance in exports and a sizable inflow of external assistance. The foreign exchange reserves which had risen by Rs. 48 crores in 1962-63 (July-June), fell by Rs. 10 crores in 1963-64 to Rs. 279 crores at end-June 1964. The draft on the foreign exchange reserves during the year is mainly attributable to the repayment of Rs. 24 crores of the outstanding indebtedness to the International Monetary Fund.

The most heartening development in the balance of payments field during the financial year 1963-64 was the substantial rise in exports which touched a level of Rs. 802 crores. This was largely due to the generally buoyant conditions which prevailed in the world economy, world trade in 1963 registering a growth rate of about 8 per cent. Almost all commodities, except manganese ore and raw hides and skins, recorded increases during the year with sugar, jute goods and cotton manufacturers accounting for more than one-third of the total increase. Although exports of items which were covered by special promotional measures did show a rise, it is even more gratifying to note that about two-thirds of the expansion in exports was effected without any special assistance. While most of the export incentive schemes were continued, greater emphasis was placed in respect of export policy on fiscal and such other measures as would directly help in cost reduction, better utilisation of capacity, quality control, etc. Among these may be mentioned the abolition of export duties on soft cotton waste, lac and raw jute cuttings and the concession on railway freight to an additional 65 engineering items as also the extension of rebate and drawbacks in customs and excise. Besides the removal of export restrictions on certain varieties of raw goat skins, ferrous metals, precious stones, woollen and carpet

our way is clear . . .

“ India is on the move and the old order passes . . . The initiative comes to our people now and we shall make the history of our choice. Let us all join in this mighty task and make India, the pride of our heart, great among nations, foremost in the arts of peace and progress. The door is open and destiny beckons to all. ”

—Jawaharlal Nehru

“ Our way is straight and clear—the building up of a socialist democracy at home with freedom and prosperity for all, and the maintenance of world peace and friendship with all nations abroad. ”

—Lal Bahadur Shastri
Prime Minister

Our economic planning and the policy of non-alignment have laid firm foundations for progress, prosperity and peace.

Let us work together to build a strong and prosperous India.
Discipline and united action are the only answer to the challenge of today.

Calling All Bankers

NOTWITHSTANDING the element of surprise incidental to the certainly well-guarded secret of timing of the announcement, the latest — and the second during the third Plan period — increase in the Bank rate effected by the Reserve Bank cannot be said to be unexpected. Almost everyone in banking circles expected it, but no one knew precisely when it would come. Earlier this year, when in the midst of the busy season the Reserve Bank applied the credit squeeze, we had observed that such an announcement was bound to come sooner than later. In fact, it is only the logical conclusion of a process that was set in motion by the reference to "realistic rates" in the last Economic Survey and the budget speech last February, or perhaps earlier still, i.e., in January, 1963, when the first increase in the Bank rate during the current Plan period was announced. A section in banking circles had expressed the view that any further enhancement in the Bank rate would come only if the return of funds in the slack season fell below that during the last season. Evidently the recent sharp uptrend in prices precipitated the decision.

Last Friday's decision to raise the Bank rate from 4½ per cent to 5 per cent — the highest rate ever in this country, — has not only a quantitative import but also a qualitative significance. In this respect the Reserve Bank has gone to the maximum extent that a Central Bank can go in prescribing the minimum and the maximum rates of interest on banks' borrowings as well as advances. The underlying objective, as claimed by the authorities, is to make credit costlier, though not scarcer, and to augment deposits, the former by the adoption of the differential interest rate system in respect of the Reserve Bank's rediscount facilities and the latter by the rationalisation of the deposit rate structure of scheduled banks.

How far these objectives are going to be achieved in the event remains to be seen. If tighter credit and greater mobilisation of savings are effectively to serve their anti-inflationary purpose, the good effect of these measures must not be allowed to be eroded by a reckless expenditure spree on the part of Government, especially on non-developmental and unproductive accounts. Mr. T. T. Krishnamachari has not only recognised this but has, in fact, been the first to start with a cut of Rs. 70 crores in the Centre's expenditure. Unless this is followed by sizable cuts in expenditure by every one of the State Governments, the country will not reap the full benefit of the increased Bank rate. At this point, it is also necessary to note, if only to dispel exaggerated notions of the effect of an increase in the Bank rate, that whatever the degree of perfection of the Reserve Bank's latest monetary measure, its effectiveness is directly proportional to the extent that our money market is organised. In other words, to the extent that we have still a vast non-monetised sector in the economy and a non-banking sub-region within the monetised sector itself, there are some very effective built-in limits to its success.

Although, from the Government's point of view, the timing of the announcement of the decision may be ideal or appropriate, in that it has come after the borrowing programme of both the Centre and the States is over, from the point of view of banks and other institutional investors, such as Life Insurance Corporation, who subscribed to government loans, the decision entails a degree of capital depreciation (in case they have to dispose of these loans). Although not intended, perhaps, this has served as a second deterrent to liquidation of government securities by banks, the first, of course, being the 28 per cent liquidity ratio on all banks which

became effective on September 15.

To what extent the half per cent increase in the Bank rate would push up costs, it is difficult to estimate. If, however, the resulting higher costs also lead to higher prices, as they are bound to, what is gained in the swings will be lost in the roundabouts. Here it is to be hoped that the Government will be prudent enough not to adopt the line of least resistance, viz., to rush to impose a ceiling on prices, but to bring down the present heavy incidence of taxation and thereby make a positive contribution to the imperative need of holding the price line.

The increase in the Bank rate is accompanied by a modification of the mechanism of credit control. The Reserve Bank's decision to abandon the system of quotas for regulating scheduled banks' borrowings from it and to introduce instead a pattern of linking the cost of commercial bank borrowings from it to the actual level of credit extended by commercial banks in relation to their own resources is certainly a move in the right direction. Apart from its chief virtue of flexibility, the revised approach could act as an incentive to the banking system to show more enthusiasm in mobilising deposits. In this connection, the Finance Minister has rightly noted that monetary discipline in a developing economy is better exercised by increasing the cost rather than through a direct restriction of the availability of credit, first, from the Reserve Bank to the banking system and, subsequently, from the commer-

cial banks to industry and trade. We hope both the Finance Ministry and the Reserve Bank would be fully alive to the implications of this policy. This awareness could not be better demonstrated than by the Reserve Bank changing some of its present tactics of credit restraints. We strongly recommend that the practice of detailed scrutiny of individual advances by commercial banks should be given up by the Reserve Bank and that the latter should restrict itself to a general supervision of the liquidity position of individual banks. There is certainly no justification in the normal course for a regular scrutiny by the Central banking organization of day-to-day transactions relating to advances portfolios of commercial banks.

Finally, while decisions on and developments in monetary control undoubtedly have a certain technical importance, their economic significance should not be exaggerated. It is not, of course, going to be the case that a five per cent Bank rate would change the price situation or production or employment prospects. The urgent need is to make the economy move faster and here restraints or restrictions, however useful in their narrow context, are not going to make any basic difference to the situation. It is now nearly a year since the Finance Minister promised the country a dynamic economic policy which would stimulate production, investment, employment and growth. That promise still remains to be made good. The nation, consequently, waits not only in ill-concealed impatience but also with a regrettable weakening of hope.

Money in Steel

TWO GREAT steelworks, which have become symbolic of the growth of Indian industry, are the Tata Iron and Steel Company Limited (TISCO) and the Indian Iron and Steel Company Limited (IISCO). Notwithstanding the recent development of public sector steel plants, these two great companies will continue to play an important role in the industrialisation of the country. It would, therefore, be of great interest to analyse the relative performance of these two companies in recent years, say, the last four years from the data published by them. Of the two companies, TISCO is older, having completed 57 years whereas IISCO has completed only 47 years in 1963-64. A comparison of the performance of the two companies is made easier by the fact that both present their annual accounts as at the end of March of each year.

On the basis of the total net assets employed in the business, TISCO ranks first and IISCO second among all the non-government companies at work in the country. Table I shows the relative size of the two companies in 1963-64.

TABLE I

SIZE
(Rupees lakhs)

	TISCO	IISCO
Total net assets	15,924	10,336
Share capital	3,897	1,514
Reserves and Surplus	5,026	4,106
Secured loans	3,581	1,773
Unsecured loans	1,146	1,018
Sales	11,044	7,604
Profit before tax	1,647	1,151
Tax	475	387

A comparison of the performance of the two companies by the rate of profit earned by them is relevant, in spite of the government regulations in their production and distribution owing to the fact that both these companies have been subject to these regulations to the same extent. The rate of profit has been measured by the rate of profit before tax and interest on the total capital employed and sales, which give some idea of the relative efficiency in the use of capital and the relative efficiency of the cost of production and also by the rate of profit after tax on the net worth, which shows the return to the shareholders. Table II shows all these rates of profits for the last four years.

It will be seen from Table II that IISCO earned a higher rate of profit than TISCO by all the three standards in 1960-61 and 1963-64 and that during all the four years the rate of profit after tax on net worth was also higher in the case of IISCO. Another fact that emerges

from Table II is that although in 1960-61 the rate of profit after tax on net worth was significantly lower in the case of TISCO, gradually during the period this return has increased with the result that, in 1963-64, it had almost reached the rate earned by IISCO.

TABLE II
RATE OF PROFIT

(Per cent)

Year	TISCO			IISCO		
	(a)	(b)	(c)	(a)	(b)	(c)
1960-61	5.1	10.5	7.6	9.2	14.3	13.5
1961-62	5.6	10.3	8.9	5.8	8.5	12.0
1962-63	11.0	17.1	11.9	5.6	7.7	12.1
1963-64	11.6	16.7	13.1	12.5	17.0	13.6

- (a) Profit before tax and interest on capital employed (total net assets).
(b) Profit before tax and interest on Sales.
(c) Profit after tax on net worth.

A rate of return of 13 per cent on shareholders' funds cannot be considered low in the case of a basic industry such as the iron and steel. It would be interesting to see how this profit after tax has been allocated as between dividends and retention by these two companies.

TABLE III
ALLOCATION OF PROFITS

(Per cent)

	TISCO		IISCO	
	Dividends	Retention	Dividends	Retention
1960-61	91	9	50	50
1961-62	76	24	41	59
1962-63	50	50	39	61
1963-64	45	55	30	70

It will be seen from Table III that IISCO has followed a prudent policy of distribution of dividend during all the four years in which it has retained a greater part of the profits after tax, as compared to TISCO.

The rate of dividend paid on equity shares by both the companies is given in Table IV.

A comparison of Tables III and IV would show the

even though IISCO had retained a greater part of its earnings after tax, it had paid a higher rate of dividend on its equity shares during all the four years. This was made possible for the IISCO by the slightly higher rate of profit after tax on the net worth during all the four years and by raising preference shares which carried a lower rate of dividend than in the case of TISCO. Thus the rate of dividend on preference dividend in the case of IISCO was fixed at 5 per cent, whereas in

TABLE IV
RATE OF EQUITY DIVIDEND

	(Per cent)	
	TISCO	IISCO
1960-61	13.8	16
1961-62	13.8	16
1962-63	14.6	16
1963-64	16.0	17

the case of TISCO a major part of its preference shares carried a rate of dividend of 7½ per cent and a small part a rate of six per cent. The fact that IISCO had raised preference shares carrying a rate lower than TISCO, even though it was younger than TISCO, would appear to indicate that IISCO had planned and timed the raising of preference shares better than TISCO.

Apart from raising preference shares carrying a lower rate of dividend, IISCO has certain other financial advantages over TISCO. Table V shows the structure of liabilities in the case of TISCO and IISCO in 1963-64.

TABLE V
STRUCTURE OF LIABILITIES, 1963-64

	(Rs. lakhs)	
	TISCO	IISCO
Equity shares	2,756 (17)	1,244 (12)
Preference shares	1,140 (7)	270 (3)
Reserve and Surplus	5,026 (32)	4,106 (39)
Secured loans	3,581 (23)	1,773 (17)
Unsecured loans	1,146 (7)	1,018 (10)
Current liabilities and provisions	2,275 (14)	1,925 (19)
TOTAL	15,924 (100)	10,336 (100)

It would be seen from Table V that equity shares and preference shares were more important liabilities in the case of TISCO, whereas in the case of IISCO Reserves and Current Liabilities were the more important ones. In the case of IISCO, Reserves were more than three times the equity shares, whereas in respect of TISCO it was less than double. IISCO appears to have

resorted to financing its assets to a greater extent by current liabilities which carry practically no interest.

Table VI shows the value of production of TISCO and IISCO and the principal items of expenditure in the cost of production.

TABLE VI
COST OF PRODUCTION (1963-64)

	(Rs. lakhs)	
	TISCO	IISCO
Value of Production	11,170	7,582
Manufacturing Expenses	3,841 (34.4)	2,553 (33.7)
Salaries and Wages	2,062 (18.4)	1,267 (16.7)
Depreciation	797 (7.1)	441 (5.8)
Miscellaneous Expenses	3,159 (28.3)	2,312 (30.5)
Total Expenses	9,859 (88.2)	6,573 (86.7)

It will be seen from Table VI that the cost of production as a percentage of the value of production is slightly lower in the case of IISCO, where it forms only 86.7 per cent as compared to 88.2 per cent in the case of TISCO. Miscellaneous expenses in relation to the total value of production is slightly higher in TISCO, whereas all the other principal items such as manufacturing expenses, salaries and wages and depreciation are lower in IISCO.

The advantages which IISCO had over TISCO may be brought together:

- The rate of profit after tax on net worth was higher;
- IISCO retained a greater part of the profit after tax;
- IISCO paid a higher rate of dividend on equity shares;
- IISCO had raised preference shares carrying a lower rate of dividend;
- Cost of production was slightly lower in the case of IISCO;
- In the result, the shares of IISCO were quoted, on an average, at a higher rate during the period as the following table shows:

TABLE VII
QUOTATIONS

	1960-61	1961-62	1962-63	1963-64
TISCO ordinary Rs. 75	151.70	148.45	133.90	141.50
IISCO ordinary Rs. 10	24.47	25.90	24.03	23.62

Highlights of the Week

THE PLANNERS . . .

A MAJOR reorganisation of the Planning Commission is stated to have been finalised at a meeting of the Commission held last week under the chairmanship of the Prime Minister. It has been proposed to set up a National Planning Council, composed of experts in different branches drawn from the private sector industries and institutions. The Council will be a permanent body and its members will be expected to spend some time periodically with the Planning Commission for sustained work on specified problems. The present system of having bodies and panels of experts to help the Commission by comments on a purely ad hoc basis on subjects proposed to them, it is felt, is not conducive to intensive studies of the issues.

Another proposal of far-reaching consequences is to make a drastic change in the staff pattern of the Planning Commission. According to this proposal, while the Commission will retain the core of its expert staff, it will mainly depend on the expert and technical staff of the Ministries which would be strengthened. The effect of this step will be to reduce the powers of the Commission in relation to Ministries in Plan formulation and its capacity to supervise Plan implementation.

The third important change proposed is that the Planning Commission should look after a subject collectively instead of the subject being dealt with by it in a compartmentalised manner under the present system where the subjects are divided among the members of the Commission on the pattern of Cabinet-like distribution of portfolios. This, it is thought, will impart greater cohesion to and inject extensive thinking in the Commission's work. The tenure of the members of the Commission is envisaged to be fixed at five years, co-terminus with the period of a Plan.

. . . AND THE FOURTH PLAN

AT A long meeting this Monday, the Union Cabinet considered the dimensions of the fourth five-year Plan, but deferred decision on the matter till the middle of this month. The Planning Commission had proposed to the Cabinet three alternative figures of the overall outlay — Rs. 21,000 crores, Rs. 22,500 crores and Rs. 24,000 crores. After dovetailing the sectorial programmes, the Commission had been able to scale down the total outlay, without reducing the physical targets proposed by the various working groups, from Rs. 25,000 crores to Rs. 24,000 crores. An outlay of Rs. 24,000 crores contains a provision of Rs. 3,400 crores — Rs. 2,700 crores in the public sector and Rs. 700 crores in the private sector — for agricultural development and Rs. 5,500 crores — Rs. 3,500 crores in the public sector and Rs. 2,000 crores in the private sector — for industrial growth. Expenditures to these orders, it has been estimated, can step up the rate of development in the agricultural sector to 5.6 per cent (linear) per annum and in the industrial sector to 12 per cent per year. The overall rate of growth of the economy will go up to 6.7 per cent per annum. If the total outlay is scaled down to Rs. 22,500 crores or Rs. 21,000 crores, the rates of growth in the various sectors as well as the overall rate of growth will go down slightly.

No final estimate of the resources likely to be available for financing the fourth Plan, however, has yet been prepared. The latest estimate puts the resources figure around Rs. 18,000 crores for investment which will make an overall outlay of about Rs. 20,000 crores a feasible proposition. The Planning Commission, however, feels that resources will also be generated by an accelerated development of the economy and the fourth Plan total outlay can be easily stepped up to around

Rs. 22,500 crores. The Resources Division is expected to finalise its assessment of the funds likely to be available for the fourth Plan, in about three months' time.

STRENGTHENING DEFENCES

UNMITIGATED inquisitiveness as a general rule, either seeks solace in unhealthy conjectures or, if allowed to persist, degenerates into a morbid mistrust. Vulnerability to such tendencies is rather more where the vital question of the defence of a country is involved, and especially when the faith of the people in this regard has once been shaken. Judged in this perspective, the Defence Minister's graphic statement, which he made in the Lok Sabha last week, on the country's defence preparations must create a salubrious effect. He made public, for the first time, the details of the five-year defence plan which this country has embarked upon to "ensure systematic development of our defence potential in the light of the threat facing the country". The defence plan envisages the maintenance of a well-equipped army with a strength of 8.25 lakh men, a 45-squadron Air Force (including the programme of replacement of the obsolete aircraft and improvement of the radar and other communication facilities), a phased programme of strengthening the Navy, improvement of road communications in the border areas, making the defence production reach the level of self-sufficiency, and, finally, the overall organizational overhaul to ensure economy in the utilization of funds allocated for defence build-up. The last point assumes great significance when the programmes of modernization of the defence forces and improvement of facilities for logistic support to them are estimated to require 10 to 12 per cent more rupee expenditure than what is currently being incurred. Nothing will bring more happiness to the tax-payer, who has eventually to bear this burden, than to know that the public money spent on the country's defence is being utilized wisely.

The Defence Minister's statement, however, was primarily meant to apprise Parliament of the outcome of his visits to the United States and the Soviet Union. That both these countries, as also Britain, have come forward in no small way to help India in fortifying her defence potential is no secret. But the credit must go to Mr. Y. B. Chavan for eliciting this co-operation without playing the military assistance from one country against such assistance from another. The U.S. Government has agreed to provide to this country an immediate credit of \$10 million for the purchase of defence articles and services, with a promise for a further credit to the extent of \$50 million during the fiscal year 1965. Apart from this, India will continue to receive U.S. military assistance on grant basis in 1965 at the same level as during the fiscal year 1964.

During his visit to the Soviet Union, the Defence Minister concluded a series of agreements under which the Soviet Government will supply a certain number of MIG-21, 20 Mi-4 helicopters, and a certain number of light tanks and associated equipment. An earlier agreement, concluded in August, 1962, for the manufacture in this country of MIG aircraft, has been extended to include the supply by the Soviet Union of certain types of equipment which would help expedite the establishment of the MIG complex of factories. Payment for the above purchases will be made in rupees which can be used by the Soviet Government for purchases of goods and articles in India according to existing arrangements. Perhaps the major attraction of the Soviet defence assistance is that no stipulation has been added for using it against China.

During his projected visit to Britain, Mr. Chavan intends to discuss with the British Government, India's requirements

for destroyers and the possibility of manufacturing them here. Meanwhile, Britain has agreed to provide financial assistance for the reconstruction of the Mazagaon Dock in Bombay and the subsequent construction there of three Leander-class frigates. The Defence Minister has stated in categorical terms that our defence requirements are strictly guided by the country's foreign policy of non-alignment.

PERSPECTIVE SET RIGHT

PRESIDENT RADHAKRISHNAN returned to New Delhi last week after completing his State visits to the Soviet Union and Ireland. His tour has been most appropriately described as a resounding success. The joint communiques issued both at Moscow and Dublin have been widely welcomed in this country. The statesman in Dr. Radhakrishnan throughout his tour has tended to excel the philosopher in him. While his visit to the Soviet Union has been helpful in carrying forward personal equations established by the late Jawaharlal Nehru with the Soviet leaders, in Ireland his achievement, on a different plane, ought to be described as remarkable. The Irish Government has expressed the hope that Indo-Pakistan differences, including those on Kashmir, would be solved through direct negotiations between India and Pakistan. This provides a sure indication that Ireland has resumed from the stand it took on the Kashmir issue in 1962, when it sponsored in the Security Council a resolution to solve the Kashmir tangle. Its attitude towards the Kashmir dispute was not much different when President Ayub Khan of Pakistan visited Ireland in July after the Commonwealth Prime Ministers' Conference. How with "extraordinary clarity" the President explained the issue that it was not purely a legalistic or territorial problem was told to the Indian correspondents accompanying the President by the Irish Prime Minister, Mr. Sean Lemass.

One thing that emerges very clearly is that Ireland had been provided by Pakistan a distorted picture of the Kashmir dispute, and the Indian Ministry of External Affairs had, to a great extent, failed to set the perspective right. The resentment that had been caused in this country over the Irish Resolution in the Security Council was not, therefore, wholly justified. It is true that such a resolution ought not to have been moved by a country with whom we have always had close and cordial relations. But it must be realized, at the same time, that the responsibility, fairly and squarely, falls on India for keeping the friendly countries well-posted with all the facts regarding Kashmir, or, for that matter, any other dispute between this country and Pakistan or China.

BAKSHI'S ARREST AND AFTER

THE NEWS of Bakshi Ghulam Mohammed's arrest was received in nearly all circles with surprise but particularly without any resentment. During the past few months, an impression had been growing that the charges of corruption against the Bakshi had not been examined properly and that he was allowed to escape scot-free under the garb of the 'Kamaraj Plan'. It is, however, felt that the timing of his arrest has been inappropriate. The Sadiq administration, by arresting the Bakshi and six other associates of his, gave the impression that the arrests were partly to assure for itself a majority support of the National Conference members in the Kashmir Legislative Assembly, where a censure motion was in the offing. This view, however, has been countered by the fact that 45 National Conference members of the Kashmir Assembly, which has a total strength of 75, have expressed full confidence in the Sadiq Ministry and have reiterated their full support in 'implementing the Conference policies'.

It is understood that something quite sinister was brewing during the past few weeks. It was suspected that certain dissident leaders had a hand in encouraging Bakshi Ghulam Mohammed to embark on a religious path. It was for this reason that the Union Secretary for Kashmir Affairs was

directed to proceed immediately to Srinagar. But the way the situation developed, the State Government could not have any opportunity to seek guidance from the Union Cabinet. It had, therefore, no option but to act on its own initiative.

After a round of talks between the Union Government and the Kashmir authorities, the Sadiq Government has been advised to re-convene the adjourned session of the Kashmir Assembly as early as possible. Mr. Sadiq has responded to this advice. It has been decided to recall the Assembly into session in the beginning of October. The Union Home Minister, Mr. G. L. Nanda, has told the members of the Parliament's Informal Consultative Committee that the charges of corruption against Bakshi Ghulam Mohammed had been there for some time past. Mr. D. P. Dhar is reported to have stated that there is no intention to keep the Bakshi in detention for a long time and that an independent commission for inquiry, headed by an eminent judge from outside Kashmir, would soon be set up to go into the serious charges of corruption against the former Premier of Kashmir and several others. The State Government, he has pointed out, is determined to root out corruption and the appointment of the commission would be one of the important steps in this direction. It is hoped that the enquiry would take only reasonable time so that it does not become an excuse to keep Bakshi Ghulam Mohammed in detention.

INDO-U.A.R. TRADE AND COLLABORATION

INDIA AND the United Arab Republic have proposed to step up trade between them this year to as much as Rs. 45 crores (Rs. 22.5 crores each way) from Rs. 25 crores (Rs. 12.5 crores each way) last year. An agreement to this effect was signed here last week. Besides tea, jute goods and numerous engineering and chemical products which India has been exporting to the UAR in recent years, her revised export list includes such new goods as cotton yarn, coca-cola concentrates, tissue paper and in-reinforced steel bars. The UAR will export to India such new products as fertilizers, mazout, flax and printing paper, in addition to stepping up her traditional exports — Egyptian cotton, rice and rock phosphate. Both the sides have agreed to examine the possibilities of introducing more new items; sufficient scope has been left in the agreement for this purpose.

The more significant fact about this new Indo-UAR agreement, however, is that the two countries have agreed to collaborate with each other in jointly establishing industrial projects in other developing countries and for extending joint co-operation to such countries in the implementation of their economic development programmes. This assistance will be provided to the countries seeking it for strengthening their infra-structure. It is expected that separate delegations from India and the UAR will examine such proposals shortly.

Both India and the UAR have been hitherto assisting the developing nations in their economic growth separately. India has extended help for setting up many a new industrial project in various African countries, particularly in Ethiopia and Nigeria where it has financed with the local interests establishment of cotton textile and engineering industries. It also signed a couple of weeks ago an agreement with the Government of Uganda for setting up four sugar mills in that country. A textile mill is also envisaged to be put up in Kenya shortly as a joint venture between India and Kenya. The provision in the Indo-UAR agreement on extension of assistance by the two countries jointly to the developing nations should augur well for the solidarity of the under-developed nations and for the fulfilment of their resolve to depend, as far as possible, on their own resources for economic emancipation. This, however, does not obviate the need of both technical and financial assistance being provided to the developing nations on an increasing scale by the developed countries.

Job Satisfaction: Its Nature & Context

RAJA RAM JAIPURIA

THE PROBLEM of human efficiency is a very broad one and involves many aspects of the individual. It has only been in the last 20 or 25 years that industry has given any significant recognition to workers as human beings. While it would be stretching the truth too far to say that in the past the worker had been regarded as a mere machine, it is nonetheless true that behaviour was thought of as being determined in a simple mechanical fashion. In more recent times, however, the human aspect of the worker has been subject to much closer scrutiny. As a consequence, there has been increased understanding of the dynamic factors underlying his behaviour and motivation.

Among the various factors affecting the human behaviour towards work, there is probably no other factor so important as the feeling of satisfaction of a worker in his job, which in turn affects his capacity or willingness to work or his efficiency, as "the ideal of human efficiency would be the production of the maximal output of the highest quality in the shortest time, with the least expenditure of energy and with the maximum of satisfaction."

Job satisfaction is the outcome of various attitudes possessed by a worker. Taking it in a narrow sense, the various attitudes connected with the job relate with such factors as wages, supervision, conditions of work, continuity and steadiness of employment, chances of promotion and advancement, recognition of ability and appreciation for work, wages, social relations in the job, quick settlement of grievances, just and fair treatment by the employer, and so on and so forth. But for a more comprehensive approach in completely understanding job satisfaction, many additional factors such as worker's age, health, mood and temperament, desires and level of aspirations should be included and considered. Besides the worker's family relationship, social status, recreational outlets, his activities, political, economical or social, are of tremendous importance which ultimately contribute to the job satisfaction. Job satisfaction, therefore, is a general attitude which is the outcome of many specific attitudes which can be broadly classified under specific job factors, individual adjustment, and group relationship outside the job.

General Satisfaction

Estimates in regard to the incidence of satisfied workers in the general working population are in fairly close agreement. Studies have revealed that, as for the majority of workers, about two-thirds are in general satisfied with their work. People, again, are in general agreement that individuals working in the higher occupational levels are more satisfied with their jobs than those in the lower levels. A review of about 2,000 articles on the subject in America unequivocally confirmed the above point of view, i.e., the higher the level of occupation, the higher the level of job satisfaction. More persons in professional and managerial jobs are thought to be satisfied with their work than those in office job, and so on down to unskilled jobs. Investigations of the relationship between occupational levels and extent of satisfaction do not, however, indicate the above hypothesis to be wholly true. Super found that there is an increase in the proportion of satisfied workers from the lowest manual jobs up to the skilled occupations. At this point a break occurs, so that, with the lowest office occupations, less satisfaction is again in evidence. From this level upward, increases in occupational level result in further increases in extent of satisfaction. This suggests that workers make a distinction in their minds between manual and non-manual work and that at the higher levels of each type more satisfaction is obtained than at the lower levels.

Security, of course, is a strong reason for liking the job, and is generally mentioned as one of the most important factors contributing to job satisfaction. It is observed that

the lower one gets in occupational scale, the greater the importance attached to the security factor. The greater skill and responsibility demanded in high level jobs gives the employee more salability, and hence creates a demand for his services both within his own company and in others.

Security as a job satisfaction factor increases in importance with an increase in age. Besides this, for an educated employee security is of less importance than for an illiterate one. At the same time, it is equally important to the workers regardless of their dependants, except in the case of a single man who is entirely on his own and has no responsibility or liability of any kind.

The chances of promotion are yet another factor of considerable importance, particularly to men of ambition. It is true that the attitude of an employee to work is greatly influenced by the possibilities of promotion, and naturally, therefore, a worker feels more satisfied in a job with opportunities of further advancement rather than one where the chances are not so easily available. It has, therefore, been stressed that there should be a promotion policy free from favouritism, intelligible and comprehensible to the employees, so that those who are prepared to work harder and acquire the requisite qualifications and experience can be properly and suitably placed, and allowed opportunities to make use of their exceptional capabilities.

Working Conditions

Working conditions affect the degree of satisfaction from work. Temperature, lighting, ventilation, parking facilities, cafeteria, etc., have been termed as factors contributing to satisfaction. Working conditions are substantially more important to men. Hours are more important to men than any other specific aspect of working conditions. Similarly, it is found that rest periods introduced at appropriate intervals give satisfaction, not so much for the relief from fatigue but for the mere fact of change.

Wages play a dominant role in the determination of the feelings of job satisfaction among the workers. Wage for work done has many aspects. Is it an adequate reward for the services rendered? Is it adequate for a man to live on? Is it relatively adequate? These are some of the questions which naturally arise when we are considering job satisfaction. In regard to the adequacy of reward for services rendered, much would depend on the question of supply and demand of labour at any given time. In regard to the second question, we can roughly interpret as that amount which is sufficient for him and his family to be reasonably clothed, fed and housed, and lastly in regard to wages being relatively adequate, it may be pointed out that human nature is such that employees are constantly comparing and contrasting their income with those of others. It means, therefore, that if there are some employees doing roughly the same work and carrying the same responsibility, but are receiving more than others, who actually deserve more, bad feeling is caused resulting inevitably in an embittered attitude to work.

The various aspects of job also have their desired effect on the feeling of satisfaction in one's job. There are many reasons why people like their job, simply for the sake of their job. One may like what he is doing because he has the right ability, background and training for it, for another it may be the other way. He may like his job because it brings him recognition. Yet, another may like his job because it is easy and gives him an opportunity to travel, or is free of tension and pressure. Whatever may be the reason, what the man does at his particular job contributes to both satisfaction and dissatisfaction. It has been found for example that a reduction in the skill requirement of a job increases dissatis-

faction of the more skilled worker whereas it would not affect the less skilled worker.

The relationship between management and employees is affected by the kind of immediate supervision provided for employees. To the worker a supervisor is both a father figure and an irritating boss, who is equally strong contributor to both satisfaction and dissatisfaction. It has been found that women seem more sensitive to supervision than do men, but for both bad supervision can be a primary reason of absenteeism. Supervision seems less important at the high level, in spite of the fact that people in high positions have a greater tendency to verbalise the things that are wrong with their particular supervisory structure. Investigations carried out in this direction show some evidence that educated persons like criticism of their supervisors, more than less educated people, and also that married workers with dependants are more conscious of the problem of good supervision than are single men.

There is sufficient evidence which indicates that workers' satisfaction is established through improving employer-employee relationship, so that the worker will be led to believe that his problem will be given due consideration and that he is an important part of the organisation. Obviously, such morale can be developed through the medium of good supervision.

A good company and management also contributes a lot towards job satisfaction in a worker. The employee believes that with a good company he can feel some stability in his job, which is a matter of substantial satisfaction to him. It may also be pointed out that the reputation of the company and the management has a lot to do with the spirit of satisfaction in the worker.

Role of Efficiency

Efficiency of management is another factor which contributes largely to job satisfaction. There is no doubt that an employee's attitude to work is very much affected by the functional efficiency of his employer. Nobody likes to work for an incompetent or inefficient management. Under an efficient management, one feels a sort of joy and satisfaction. The spirit of satisfaction is spontaneous.

It is an undisputed fact that a round peg in a square hole is not so fitted as a square one. It is, therefore, true to say that methods of selection and placing of employees cannot be left to amateurs, with individuals and selection committees conducting interviews with only hazy conceptions of what an interview proposes to do and with no clearly defined principles as to how to assess a candidate's fitness for a job.

The greatest hope of satisfaction from work lies in the skill in putting each person into the type of occupation for which he is best fitted. A proper inter-relation of the strength of the worker and the strength required of him is a condition precedent to job satisfaction. The same is true of physical endurance, intellectual capacity, and of other significant traits. Individuals have been found differing in these respects, and it is, therefore, of vital importance to recognise the importance of such differences. With the right person on the right job there would be an abundance of satisfaction from work.

Again, nobody can reasonably feel happy in a job for which he has not been properly trained. An employee must not well act entirely to his own devices, and proper training, therefore, must be given to him to ensure better output and more production.

Success and enthusiasm resulting in job satisfaction must start right in the place of employment itself. Conditions of employment must be as good as the type of employment allows, and the establishment of such conditions should be one of the first obligations to be discharged by the management.

One of the most difficult factors affecting the job satisfaction relates to the social aspects of the job. The man who feels himself a member of a productive, cohesive group is

happier with his job than one who finds himself a misfit. This factor appears more important to women than to men, and it is relatively independent of age and occupational level. Work may also create satisfaction through the opportunity for social intercourse. Gilbreth, during the course of an investigation, made special effort to organise congenial groups by selecting their members according to race, creed and politics. The working environment frequently affords the best opportunity for associating with congenial people. More use could be made of these factors in industry. Whitehead in his study of industrial workers has attached great importance to the worker-group as a social system, in which each member contributes something or the other to the activity and variety of the group, and the group enjoys "the immediate social satisfaction of doing things together."

Employees' benefits such as pension provisions, medical services, vacations and holidays and insurance plans have been found to affect the degree or degrees of satisfaction among the workers. It is not surprising, therefore, that workers attached due consideration about the benefits they would get in a particular organisation, at the time of seeking employment.

It is very correct to say that a sick man cannot be expected to put in his best in the work, nor will he have a right attitude to work. It has, therefore, been suggested that the management should ensure that the employee is protected, wherever possible, from working in conditions which are positively injurious to health, and that adequate medical facilities are available in the organisation.

Joint consultation is also a contributory factor to job satisfaction. It means the sitting down together of employees and employers in order to discuss matters such as welfare, safety, efficiency, health and such other matters lying outside general conditions of service and rates of pay. This offers management an opportunity of coming closer to the employees, and by giving them patient hearing of their views it can enlist in turn their active support and co-operation in all their policies and aims. This would also give the employees a sense of participation in the undertaking.

Non-Work Needs

So far we have studied the reaction of satisfaction, and the satisfaction towards work and its conditions. It may, however, be emphasised in addition that many of the human needs that demand satisfaction are what might be called non-work needs. They are not connected with the performance of the job, but belong to the home, to recreation, to pleasure and to food. Hersey intensively studied a small group of workers engaged in different occupations. He found that when the workers were in a positive and happy mood their output increased by 2 per cent and when they were disturbed, the production decreased by seven per cent. The life of the worker at home and in the factory is so closely bound together that the troubles and joys of home life could not be put aside when reporting for work in the morning, nor could factory matters be dropped when returning home after work.

Job satisfaction is a necessity for an industrial worker. It is equally important for the management, for it pays high dividends in the shape of more and efficient production. No single factor can create the spirit of satisfaction in a worker. It is the cumulative effect of many factors detailed above which contributes a feeling of satisfaction in the job. The writer of this paper agrees with Goodwin Weston when he states that "without in any way denying the need of many workers for higher wages, it may be recognised that sometimes workers vaguely dissatisfied with the way things are going, know no other way of meeting the situation. They ask for more pay or shorter hours and perhaps they should have these. But if these demands were attained the relief could be only temporary. The underlying cause of dissatisfaction may not be in the pay envelope or the time-clock, but in the work itself."

Goodlass **NEROLAC** Paints

What a smooth, glossy appearance Goodlass Nerolac paints give! The colours go on so easily...resist all kinds of weather...bear up under wear and tear...to retain their beauty for years. It's taken decades of research to do it... and now you have the perfect paints... Goodlass Nerolac paints!

Foreign Affairs Debate Minus Nehru

By Our Parliamentary Correspondent

NEW DELHI:

THE TWO Houses of Parliament this week approved the Union Government's foreign policy. The first foreign affairs debate without the towering personality of the late Prime Minister Jawaharlal Nehru, who always had a world audience whenever he spoke on this subject and who attracted large crowds in the public galleries, could not be but different. One missed the late Prime Minister's gentle voice. The public galleries too were not so crowded. Credit must, however, go to the first full-fledged Foreign Affairs Minister of India, Mr. Swaran Singh, for presenting to Parliament a well-documented and comprehensive review of international events and how India looked at them. Mr. Swaran Singh reiterated the Union Government's adherence to non-alignment and co-existence — the two planks on which Mr. Nehru had built India's foreign policy.

Mr. Swaran Singh exploded the myth of Chinese willingness to quit the seven posts in the demilitarised zone of Ladakh on the basis of which India could take the initiative for a direct dialogue with Peking for resolving the Himalayan border dispute. He disclosed that his recent discussions with Mrs. Bandaranaike, Ceylon's Prime Minister, did not give him the impression that she had any evidence with her to indicate Chinese willingness to withdraw from these posts. While reaffirming that India was prepared to sit on a conference table with the Chinese on the basis of Colombo proposals, Mr. Swaran Singh accused the Chinese of starting a new kind of cold war and advocating revolutionary wars in other countries. This, together with their glorification of nuclear war, bode ill for world peace, he added.

Border Incidents

Referring to India's relations with Pakistan, Mr. Swaran Singh observed that in spite of the complexities of the problems bedeviling Indo-Pakistani relations and the complications further added to them by the unprovoked incidents on the Kashmir border and the unhelpful attitude of some Pakistani leaders, India would try to explore all possibilities of restoring cordial relations between the two countries. He asserted that India had no designs against Pakistan and recalled in this connection the offer of no-war declaration made by him to Pakistan's Foreign Minister, Mr. Z. A. Bhutto, some time ago. Mr. Swaran Singh indicated that he would be visiting Pakistan as early as possible in response to an invitation from Mr. Bhutto. During his visit of his, he proposed to go over the entire gamut of Indo-Pakistani relations with the Pakistani leaders, with a view to creating a proper atmosphere for the proposed meeting between President Ayub Khan and Mr. Lal Bahadur. The Home Ministers of the two countries, he added, would be meeting in the second half of this month to consider the questions of communal harmony, refugees from Pakistan and Pakistani infiltrators. Mr. Swaran Singh regretted that too much was being read in the reference to the Kashmir issue in the communique issued at the end of the Commonwealth Prime Ministers' Conference in July last. He brushed aside the suggestion that India should quit the Commonwealth on this score.

Referring to the ensuing Cairo Conference of the non-aligned nations, Mr. Swaran Singh stated that the Government of India attached great importance to this Conference. India's aim at the Conference would be to reaffirm the policy of non-alignment, particularly in the light of the changing world situation. The Conference, he hoped, would attempt codification of the policy of peaceful co-existence and provide support

for disarmament, strengthening of the U. N. Organisation and fight against colonialism and imperialism, besides discussing ways and means for further strengthening economic co-operation between the participating countries.

Mr. Swaran Singh also dwelt at some length on the difficulties being encountered by Indians in Ceylon and Burma, the conflict between Malaysia and Indonesia and the Laotian problem. He expressed hope that during Mrs. Bandaranaike's visit to India this month, efforts would be made to resolve the problem faced by the people of Indian origin in Ceylon on a basis acceptable to both the Governments and the persons concerned. The people of Indian origin, Mr. Swaran Singh added, were not wholly unwelcome in Ceylon as they had played a very useful role in the development of that country's economy. About the Indians in Burma, Mr. Swaran Singh said that he was convinced that the Burmese Government's step to nationalise distributive trade was not discriminatory against any nationality. This, of course, did not mitigate the hardships of those affected. The solution of this problem, he opined, should be attempted on human considerations.

Political Approach

Mr. Swaran Singh hoped that the dispute between Malaysia and Indonesia would be resolved without recourse to arms. India wished both the countries well as she had cordial relations with both of them. He acknowledged publicly the support Malaysia had given to India against Chinese aggression. Talking about the Laotian problem, the Foreign Minister emphasised that this issue could be solved only through political approach.

The foreign policy of the Government, however, came in for severe criticism at the hands of the independent member, Mr. J. B. Kripalani, and the Swatantra group, who suggested that a country should make military alliances if its interests so required. The Swatantra leader, Mr. N. G. Ranga, argued that because the leaders of the two main power blocs in the world — the USA and the USSR — had come closer to each other, non-alignment could be held in abeyance, and since China posed a big threat to world peace, India could find allies against China only among the democratic nations. He, therefore, advocated for having a firm understanding with the countries such as the UK, the USA and Canada, for counteracting Chinese expansionism. Mr. Ranga laid great stress on cordial and decent relations with Pakistan. This, he added, must be given the first priority. Mr. Kripalani expressed the opinion that nothing could be more harmful for India than to treat non-alignment as if it were a moral principle from which the country could not depart, no matter what happened. Massive military aid from the United States, Mr. Kripalani said, was one of the reasons for the Chinese withdrawal in 1962. The South-East Asian countries, he added, could hope to maintain their independence only with the co-operation of India and the West. If India remained indifferent, the West was bound sooner or later to give up in disgust all efforts to counteract Chinese imperialism in this area.

The Lok Sabha last week approved the proclamation of President's rule in Kerala and also passed the Bill seeking to raise the salaries of M.Ps. from Rs. 400 to Rs. 500 per month and their daily allowance from Rs. 21 to Rs. 31. This revision in the emoluments of the Members of Parliament will have retrospective effect from June last. The Rajya Sabha adopted the Companies Act (Amendment) Bill seeking to provide temporary protection against victimization to employees for fur-

nishing information to Government inspectors investigating a company's affairs, the Wakf (Amendment) Bill providing for better administration and supervision of Muslim wakfs and the Legal Tender (Inscribed Notes) Bill aiming at restricting the negotiability of currency and other notes inscribed with messages of a political character.

The Union Finance Minister, Mr. T. T. Krishnamachari, introduced in the Lok Sabha a Bill to extend to 75 days the period of authorisation to the Government to collect new and enhanced customs and excise duties provisionally from the day the Finance Bill is introduced in Parliament. Under the present Act, such provisional collections are stopped and the amounts collected already are refunded if the Finance Bill is not passed within 60 days of its introduction.

Question Hour

Heavy Projects: The Prime Minister, Mr. Lal Bahadur, assured the Lok Sabha on September 21 that plans for the projects of national importance, such as Bokaro, would not be slowed down. He pointed out that of the heavy industries projects commenced since the beginning of the third Plan, the progress towards completion in several cases was lagging behind the schedule. It was, therefore, considered better to concentrate attention on those projects with a view to securing their completion before the new projects were taken in hand. This would help the most economic use of the available resources such as finance, steel, cement, etc., he added.

Atomic Power: Mr. Lal Bahadur, informed Rajya Sabha on September 22 that the Rana Pratap Sagar atomic power station would have an initial installed capacity of 200 MW (electrical) with provision for a second unit of equal capacity. The first unit was expected to be commissioned during 1969. The cost of generation of power per unit, the Prime Minister said, was expected to be about 2.64 Paise/kWh based on the assumptions that the life of the station would be 25 years, interest 5 per cent and the 'Load Factor' 75 per cent. The power would be sold by the station authorities to the State Electricity Board which would supply it to consumers.

Mr. Lal Bahadur also informed the House that no firm decision had been taken regarding the setting up and location of an experimental fast reactor. A suitable site near Madras was, however, under consideration. It was expected, the Prime Minister added, that the unit energy cost of power that would be produced in nuclear power stations based on fast reactors would be lower than the cost of power produced in reactors using moderators to slow down neutrons.

Heavy Water: The Prime Minister told the Lok Sabha on September 21 that the heavy water plant at Nangal, which was the only source of heavy water in India, produced approximately 12 metric tons of heavy water per annum. As this quantity was not sufficient to meet the requirements of the country a proposal to set up a heavy water plant with a capacity of 200 metric tons per annum was under Government's consideration. This, Mr. Lal Bahadur said, was necessary to sustain the nuclear power programme envisaged during the coming years.

Radioisotopes: Mr. Lal Bahadur also informed the Lok Sabha on September 21 that about 8,000 consignments of radioisotopes had been sold by the Trombay establishment since 1958 for use in agriculture, industry, hospitals and medical and research institutions, both here and in other countries such as Afghanistan, Australia, Ceylon, France, Pakistan, South Korea and Thailand. An order has also been recently received from the International Atomic Energy Agency.

Foreign Investment: Mr. T. T. Krishnamachari, the

Union Minister for Finance, told the Rajya Sabha on September 23 that there had not yet been any tangible increase in private foreign investment in India as a result of the tax concessions announced by him in the last budget. He, however, added that there might have been an increase in the interest shown by foreign investors. By and large, he said, the country depended on ploughing back of profits by foreign firms.

Making a statement in the Lok Sabha on September 24 the Minister of State for Finance, Mr. B. R. Bhagat, revealed that the U.S. private capital investments in India (based on the approval orders issued) in 1961, 1962 and 1963 were Rs. 5.57 crores, Rs. 111.48 crores and Rs. 17.02 crores respectively. The Minister denied that the U.S. businessmen's delegation had been asked by the Government to invest at least \$300 million annually in selected Indian industries.

Mr. Bhagat also informed the House that Belgium would be willing to pledge additional aid to India after the amounts previously promised had been committed.

Kharif Prices: The prices of Kharif crop foodgrains at various levels, on the basis of the Jha Committee's recommendations, will be announced by the Government before October 15, 1964. This was revealed in the Lok Sabha on September 22, by the Union Minister of Food and Agriculture, Mr. C. Subramaniam. He said that this would be well in time for growers to chalk out their programmes of production.

Mr. Subramaniam also informed the House that as a new PL-480 agreement with the United States was still under negotiation, it was not possible to indicate the quantities of wheat and rice that would be covered by it. As regards wheat production he said that the estimated yield this year was 9.7 million tons. The total stocks imported from abroad during the eight months, January to August, 1964, were about 3.2 million tons, he added.

Sugar: Mr. Subramaniam also told the Lok Sabha on September 22 that the Centre wanted to continue sugar exports to the extent possible under the present conditions of shortage. The Government, he added, was anxious to build up exports even if there was some shortage of sugar for internal consumption. Owing to a better cane crop, the Minister expected higher sugar production next year. He hinted that this might lead to increased exports.

Collieries: The Union Minister of Steel and Mines, Mr. N. Sanjiva Reddy, admitted in the Lok Sabha on September 25 that the progress of utilisation of the World Bank loan by private sector collieries was slow. The loan could, however, be utilised till the end of September 1965, he added. He also informed the House that the Government had advised the private sector collieries to put in fresh applications for the issue of licences against the unutilised portion of the Rs. 16.67 crores World Bank loan.

Hotel Development: Mr. Raj Bahadur, the Union Minister of Transport, told the Lok Sabha on September 22 that the Government of India was considering the setting up of a hotel development loan fund for giving loans to the hotel industry.

Koyali Rubber Plant: Mr. O. V. Alagesan, Minister of State in the Ministry of Petroleum and Chemicals, affirmed in the Lok Sabha on September 23 that there was a proposal to set up a synthetic rubber plant at Koyali. A preliminary assessment of the economics of production of synthetic rubbers, he added, had been made and the detailed analysis was in progress. Final decision would, however, be taken only when the details of the complex had been clearly established, permitting accurate calculations of the manufacturing costs.

WINDOW ON THE WORLD

Background of the U.K. Election

JOSSLEYN HENNESSY

LONDON:

WHAT DECIDES elections in the U.K.?

Nobody knows, but Mr. David Butler, a Fellow of Nuffield College, Oxford, who specialises in electoral problems, recently pointed out that academic studies have swept away many ideas once widely held; they have mostly thrown light on what does not, rather than what does, sway the British voter.

Does the quality of the candidate make much difference? Local organisations interview many candidates and make strenuous efforts to pick exactly the right man to suit their local interests, conditions and peculiarities. But with exceptions, such as some extraordinary personality like Sir Winston Churchill, the academics have found no evidence, at least in a general election (as opposed to a bye-election), that the quality of the candidate makes any difference.

Does local party organisation count? Mr. Butler suggests that the devoted work of volunteer canvassers "should surely make some mark" — which is a subjective supposition, not a quantitatively assessable fact, and he admits that he doubts that, at least in general elections, and in marginal seats where the turn-out tends to be high anyway, the net effect of local party work is high. At the last election, Mr. Butler asked a number of senior officials in both parties to name a few seats where, because of improved party organisation, they thought that they would do better than before. In the event, the swing in these seats proved to be in line with all the rest.

Cancel Each Other

Does national advertising make much difference? Many Conservative and Labour authorities believed that the Conservatives owed part of their 1959 victory to the £500,000 spent on advertising in the previous two years. Again, there is no quantitative assessable evidence, but Mr. Butler "finds it hard to believe" (sic) that the result would have differed greatly if the Conservatives had not spent a penny! This year Labour is advertising on a scale comparable to the Conservatives, so that if advertising does have any influence, one presumes the two sets of posters will cancel each other out!

Is television now a deciding factor? Obviously TV has modified the public's image of parties and MPs, but I would say that it has influenced the technique of presenting personalities and programmes rather than their content. Moreover, TV time is allotted equally to the two leading parties, so that, here again, they may cancel each other out.

Does the campaign as a whole alter many votes? The evidence of the public opinion polls suggests that most electors remain consistent in their loyalties over long periods, and that those who change their party allegiance are more likely to do so years or months before — rather than during — the actual electoral campaign. The conclusion seems to be that the 1964 election has already been decided by the electors' cumulative judgement on the performance of the Conservatives and of Labour in their periods of office and of opposition over the years. Three quarters of the voters will vote for the party that they have always supported, whether because of family tradition, class loyalty, or assessment of personal interest. Those who waver are probably swayed by emerging conflicts in these interests, such as a young man who votes Tory in rebellion against what he feels to be his father's suffocating Socialism, or vice versa, or the citizen who has begun to save

and invest and has therefore developed new fears and hopes about the repercussions of government policies on investment, and so on. Nevertheless, economic self-interest is no longer given the priority as an influence on votes that it used to have. "A government is never turned out when times are good" was an old piece of electoral folk-lore that it is now difficult to reconcile with the opinion polls.

Many Labour supporters feel that the mere fact of 13 years of Conservative government gives them an advantage in that "It's time for a change" should appeal to the voters' sense of fair play and also to their reluctance to give too long a spell of power to one party. But this must also be balanced against fear of change. An opposition that is seen as disunited or inefficient (or even "revolutionary" — while the French enjoy revolutions, the British shrink from them. The 1926 general strike was dead from the moment that legal opinion

Eastern Economist 20 Years Ago

SEPTEMBER 29, 1944

MR. B. M. BIRLA'S presidential address to the Indian Chamber of Commerce, Calcutta, is remarkable alike for the wide field it covered and the liberal spirit that informed it. We are not concerned here with the political aspects although it may be said that by his insistence on a National Government as an essential preliminary to full-blooded industrialisation, he courageously laid the ghost conjured up by certain interests, into whose bona fides it is needless to inquire, that the industrialists are prepared to strike a bargain with the powers-that-be. After emphasising the importance of industrialization and what it means in terms of popular well-being, political power and strategic potential, he rightly pointed out that without the Government's full backing and protection, Indian industry, a late comer on the scene, may not be able to establish itself against entrenched foreign rivals. He therefore urged the Government, now that the Planning and Development Department has been set up under Sir Ardesair, to pursue "a vigorous policy making up for apathy and neglect in the past". His emphasis on consumer goods industries is necessary and timely, as being relatively more labour-consuming and needing less capital per worker, they have obvious advantages in the initial phases of planned industrialisation. Besides, by assigning them their due place in the economy, the too rapid pace of forced capital formation may be eased to some extent. Mr. Birla's reference to the question of agricultural prices is particularly opportune and welcome. It is no secret that attempts have been made in the past and will, perhaps, continue to be made in the future to cook up an artificial conflict of interests between agricultural development and industrialisation and in this connection it has often been glibly alleged that the industrialists are out to exploit the agriculturists. Mr. Birla's plea that "in any economic plan which may come to be adopted, care should be taken to see that agricultural produce has not to be sold again at the low prices at which it was selling before the war and the agriculturist is guaranteed freedom from want and distress" should be enough to give the quietus to all such baseless propaganda.

pronounced it illegal) will not be able to win votes, even at the expense of a government that is itself inefficient or disunited. Hence the efforts made by Sir Alec Douglas-Home and Mr. Wilson to iron out the personal animosities simmering below the surface in their parties.

So, ultimately, what decides elections is, perhaps, a question of confidence. Electors seeking the lesser of two evils will be more influenced by the impression of competence and unity which a party conveys over a period of time than by any pledges in its election manifesto.

On this score, Labour goes to the polls with a better chance of winning than for many years, not because of any particular points in their policy or in that of the Conservatives, but because the Tories ran into a streak of bad management (or bad luck, according to your sympathies) in 1962-63, culminating with the scramble for the party leadership after Mr. Macmillan's resignation through ill-health. The sight of the Tories in difficulties, together with Mr. Wilson's adroit professional leadership, stimulated Labour to push out of sight, or at any rate out of hearing, the strife which had raged in their ranks ever more keenly the longer that they were out of office.

Mr. Wilson has led Labour only eight months longer than Sir Alec has led the Conservatives, yet he gives the impression to many as more experienced, established, and professional a

leader than the Prime Minister. He is never at a loss. He either gives the impression that he knows all the answers, or he slips away from a difficult question behind a smoke cloud of smooth ambiguous generalities, which can be interpreted according to the listener's choice. This professionalism is Mr. Wilson's strength and his weakness. As a professional, he calculated that it would be impossible for the Conservative government to continue in office beyond mid-summer, and he accordingly set the momentum of his campaign to attain a mid-summer climax, only to find that the amateur Sir Alec saw no reason to bow to what seemed obvious to Mr. Wilson. That is why Labour's campaign lost weight in July and Sir Alec took over the initiative, as the opinion polls revealed.

That Sir Alec is an amateur is one of his strong points. He appears as a straight-talking chap, who makes no difficulty about candidly admitting in public that he does not know all the answers. On his nation-wide "meet the people" tours, hecklers have however found him a dangerous "simpleton" to attack: his quick wit and good humour have paid off handsomely. His honesty, sincerity, and avoidance of political astuteness in his speeches are electoral assets.

We should know soon whether the UK prefers the "professional" tradition of Lloyd George, Clem Attlee, and Harold Macmillan, or the "amateur" tradition of Stanley Baldwin, Winston Churchill, and Anthony Eden.

Two Conferences on Agriculture

ASHOK V. DESAI

OXFORD:

AS IF to celebrate a magnificent summer and bumper harvests, France played host to two international conferences on agriculture: the First World Congress of Rural Sociologists in Dijon from 17th to 22nd August, and the Twelfth World Conference of Agricultural Economists at Lyon from 24th August to 3rd September. The hospitality in both places excelled in very different ways: the Dijon conference had the atmosphere of a house party thrown by Professor Cepede, its organiser, in which we ambled at leisure between the restaurant, the bar and the conference hall; while in Lyon, we stayed in six massive blocks of residence on top of the hill of St. Irene, and a fleet of buses was organised for invasions on the city's congress hall, the old city of Lyon, the swimming pool, the countryside — in fact, everything that the organisers thought would entertain or edify the agricultural economists, their wives and children.

Rural Sociologists

The pioneer spirit was much in evidence at Dijon. The programme of papers and discussions was designed, not to produce a record of professional achievements, but to bring together the work being done by rural sociologists in the farthest corners of the world. There were only four working sessions, and the themes were correspondingly few, but besides the main paper and comments, a paper was prepared on every theme from each continent. As far as the public discussion went, this resulted in chaos; the time devoted to discussion was short, and the points taken up by discussants diffuse. But there was, on the other hand, a great deal to learn for someone with open ears, and even more for one who took time off from conversation to read the papers. One learnt about the changing relationship between farmers and their sons in England, and between pygmies and Bountoms in Gabon; about the effects of polygamy upon the birth rate in northern Nigeria, and of urbanisation on Brazilian feudal estates.

While there was such a wealth of experience and infor-

mation at the conference, there was also much questioning and self-criticism. It seemed that the basic cause of the unease was that there was little in the theory inherited by the rural sociologist that helped him meet the demands made by the policy-maker. It was pointed out by Kaufman, Polson and Ramsey in a joint paper that everywhere, except in the United States, the growth of rural sociology had been in response to the needs of policy-making. The questions the policy-maker posed were questions of change and adaptation. He wanted to know how a community could be induced to adopt technical, sanitary and social changes more rapidly; alternatively he wanted to introduce changes disturbing the lives of settled communities and wanted to know how they could be prepared for the changes.

The training of rural sociologists, on the other hand, gave him considerable descriptive knowledge of rural institutions; it also taught him something about the outlook of villagers. Neither took him very far towards the problems of changing societies. Most of those present were working rural sociologists; and it was remarkable what a small debt they acknowledged to the main body of sociological literature. I can remember only three references to Max Weber and one to Talcott Parsons in the entire conference. This was very encouraging since it indicated that the rural sociologists considered their own experience more relevant than the experience of the masters. On the other hand, they still seemed in need of ways of learning from experience; the conference was a very welcome first step in this direction.

The change of venue from sleepy little Dijon to the bustling industrial Lyon was appropriate, for the pace of conferring quickened appreciably. Two papers were read in each half-day session, and thanks to the alertness of the President, Professor Westermarck, there was a great deal of discussion on papers as well. Further, there were a large number of discussion groups that met in the sweltering afternoons and

sweated over special problems. Add to this the conversation generated by a concourse of six hundred people. There was, thus, no dearth of activity at the conference.

At it turned out, the problems that received greatest attention at the conference were those arising from industrialization. Agricultural population is falling very rapidly in many European countries following a rapid rise in urban employment. The rural population declined by a quarter in France between 1952 and 1960; farms are being abandoned in southern Italy, and some East European farmers are suffering shortages of agricultural labour as a result of the exodus to the towns. How much this problem preoccupied European economists will be evident from the suggestion of Professor Schiller that underdeveloped countries should go slow on educating their people since education caused flight from land.

On the other hand, the problems of increasing agricultural production and marketed surplus received scant attention. In fact, one could not but be struck by the distance between the news of food shortage in India that one read in the morning newspapers and the papers on co-ordination

Growth Potentials in Perspective

GUY SIMS FITCH

WASHINGTON:

THE PROLONGED and vigorous nature of the current economic expansion in the United States is leading to new and in some respects rather startling reappraisals of the American economy and its continued potential for sustained growth. The extent to which these reappraisals are influencing American economic thinking is evident from the proceedings of a meeting in New York last week of the National Industrial Conference Board (NICB), a highly regarded private voice in the field of business research and analysis. Emerging from that meeting, which examined the present and prospective state of the US economy, is the dramatic assessment that no end is in sight for the current expansion of the economy. Not only is the outlook for business activity favourable for 1965, but there appear to be no serious obstacles ahead that would prevent the expansion from extending well beyond next year.

Baby Boom

This view, which had the concurrence of virtually all the economists who participated in the meeting, is set forth effectively in a 56-page study prepared by the expert research staff of the NICB itself. Titled "The Economic Environment of the Middle Sixties," the study propounds the thesis that the American economy, already in the midst of a sustained and buoyant upswing, may be only at the threshold of a continuing period of rapid, non-inflationary growth that could carry at the very least into the 1970's. The main impetus for this advance would come from several factors. One, for example, is the rapidly increasing adult population — the harvest, so to speak, of the early post-war baby boom — which is creating both more demand and more productive workers. Another is the nation's accelerating technological progress, which is accompanied by continued and substantial increases in industrial productivity. These twin stimuli, in particular, could lead to such increased business activity that the normal markets of the late 1960's and early 1970's would be larger by far than anything yet experienced.

No economic outlook can be considered completely cloudless. Even if it appeared to be so, economists in their prudence would soon uncover some incipient or possible problems ahead. Thus, it is possible, even probable, that some diffi-

between economics and sociology or on vertical integration contracts that one then went to hear. There was no mention of the economics of irrigation or cost-benefit analysis. C. P. McMeekan of the International Bank, who talked about the co-ordination of technical and economic research, pointed out the paucity of work done on the subject, and deplored the professional specialization that had this result.

Is it really professional divisions that are responsible for this state of affairs? No doubt they play a part. One could not, for example, help being struck by the ignorance among sociologists of the economic factors behind the phenomena they studied, or of the unawareness of the sociologists' work on diffusion of innovations among the economists. But there is also the tendency, well known among economists, to tackle problems years out of date. The tendency is less strong in the more applied sciences, since current problems are forced into the notice of empirical workers. After all, the agricultural economists have caught up with the current problems of European agriculture. Perhaps it is not too much to hope that they will turn their attention to the problem of the poorer parts of the world in their next conference.

culties may be faced in the years ahead — perhaps with regard to the high level of private debt, or an overbuilt construction market, as some experts have suggested. Nevertheless, even after taking such possibilities into account, it is the study's conclusion that the US economic outlook points to a continuation of growing markets, expanding supplies, an abundance of investment opportunities and technological excellence — all of which combine to generate real economic growth. Putting a statistical touch to this happy projection is a report made to the NICB meeting by James W. Knowles, Executive Director of the Joint Economic Committee of Congress. Examining the various factors going into the nation's economic prospects, he comes up with the prediction that unemployment, which has come down from a level of more than six per cent of the labour force to barely five per cent in the past three and a half years of expansion, will continue to dip to four per cent.

By 1970, Mr. Knowles says, the gross national product (GNP) — total output of goods and services — will have grown to \$850,000 million, figured in 1964 prices, from the present annual rate of better than \$620,000 million. This implies a real GNP growth of the five per cent a year between 1964 and 1970. Contributing strongly to these achievements, he observes, will be continuing rises in personal income and expenditures, along with expected sizable increases in state and local outlays to help meet a growing population's growing need for public services and facilities. Lending substance to Mr. Knowles' predictions, over and above the persuasiveness of his own analysis, is the high calibre of the Congressional Committee's staff and the reliability of its past forecasts. A projection the committee staff made 10 years ago about the shape and size of the 1965 US economy Mr. Knowles has indicated, promises to be highly accurate in the light of actual developments. To anyone who attended the NICB meeting or who reviews its findings and discussions, one idea seems to take from above all. If what all the distinguished experts had to say is really so — and the preponderance of evidence points in that direction — then economists no longer have to reconcile themselves to the idea of periodic cycles of alternating rise and fall as the inevitable companion of long-term growth. The American economy can proceed, and is proceeding right now, into a new period of sustained expansion.

This is the house that Joseph built

It's typical of Kanakapally Joseph's energy and enthusiasm that he saved up and bought a plot of land and then designed and supervised the construction of his own house. He reads and writes Malayalam and buys good books for his children, wants a University education for his elder son. His hobby, since 1940, has been rare coins. His whole collection—totalling nearly 800 coins—cost him less than Rs. 100/-. It all began in Cochin Port where he found sailors were tipping the local boys with old foreign coins, which they were very glad to exchange for Indian coins. 'New coins for old!' was a bargain both ways.

HIS SECOND HOME IS A BARGE

Joseph is a Khalasi with Burmah-Shell Ernakulam Installation. For over twenty days a month he is aboard 'Lady Myrtle' or one of the other barges plying between Ernakulam and Quilon, carrying petroleum products from the installation to the Depot. Joseph's day starts early. At 7 a.m. he helps to operate the winch...and the loaded barge weighs anchor. Sometimes, it chugs through the backwaters of Kerala. At other times, she is bunkering in midstream, delivering fuel to ocean-going ships. Then there is cleaning, chipping, painting on the deck...a familiar routine at which Joseph is adept. 'These boats are a second home to me' he says.

TODAY, AS EVER, PEOPLE LIKE JOSEPH ARE WORKING FOR YOU

His coins are Joseph's passport to faraway places and bygone ages. 'They make history and geography fascinating for my six children' he says. And there's social work, too. A road being built, a marsh cleared...Joseph's there, helping, full of characteristic drive and application.

Joseph and people like him—at all levels of responsibility—are Burmah-Shell. Today, as ever, they are hard at work...working to ensure that vital petroleum products, essential to India's growth and progress, are brought to you at the right place and time, in the right quantities.

BURMAH-SHELL are People
in the
service of the People

Partial Control on Cloth

By Our Special Correspondent

NEW DELHI:

THE GOVERNMENT of India has announced its decision to introduce price and production controls over the manufacture and sale of mill-made dhotis, saris, longcloth and shirting, covering about 45 per cent of the total annual mill production excluding sales for exports and defence requirements. These statutory controls will come into effect from October 15, 1964. The existing scheme of voluntary price regulation by the textile industry will come to an end on that date. It is expected that the controlled cloth will become available in the market in appreciable quantities in early November.

Under the statutory controls scheme, formulae have been prescribed for working out the cost of cotton, the conversion charges for spinning and weaving and the processing charges for such processes as bleaching, dyeing, printing, mercerising, etc., which go into the making of a piece of cloth of the controlled variety. The price so worked out will be stamped on each piece of cloth as the ex-mill price. The retail price of the cloth, the excise duty, the category and description of the cloth and the tex-mark of the mill will also be stamped on the cloth. In addition, the controlled categories of cloth will bear on it the words "controlled cloth". All these details will be printed on the cloth in red colour, to distinguish such cloth clearly from cloth of the non-controlled varieties. The question of inclusion of drill among the controlled categories is under the active consideration of the Government.

No mill will produce the controlled varieties of cloth i.e. dhotis, saris, longcloth, and shirtings, in the non-controlled sector. Also no mill will print these words, i.e. dhotis, saris, longcloth, and shirting, on any non-controlled varieties. However, mills will also print their names, specifications of the cloth, tex-mark number, brand or popular name, if any, of the variety and month of manufacture on non-controlled varieties in any other colour than red.

Price Differentials

While most of the textile mills in the country will readjust their production programmes and bring up their production of controlled cloth to the required quantum as per control orders, some mills in West Bengal and Northern India, which at present produce a larger percentage of dhotis and saris on account of their existing machinery and equipment, can continue to have this larger production of dhotis and saris. The Textile Commissioner has worked out a suitable price differential for special varieties of saris produced by these mills so as to enable them to work under the control orders in a satisfactory manner.

Mill-made cloth of the non-controlled categories will not be subject to price control. But Government trusts that the industry, the trade and the consumer will exercise the necessary restraints to see that these categories are sold at reasonable prices and do not show any undue rise in prices.

Mills are being instructed to begin to produce and price stamp from October 7 onwards and complete the switch-over by October 15 after which date all controlled varieties will be produced and price stamped as per control orders.

In order that exports should not suffer and should continue to increase and also that the mills producing cloth for defence requirements should be enabled to produce such cloth on a priority basis, full consideration has been given under the control orders for sales by each mill for export and defence. On the basis of every 10 per cent of sales made by any mill for defence and export out of its total production, credit will be given at the rate of 2 per cent as if produced as controlled cloth.

In calculating the retail price of cloth of the controlled categories, a margin of 18 per cent over the ex-mill price (excluding excise) will be allowed to the trade. The retail price and the excise duty will be printed on the cloth. It is expected that, as a result of the introduction of the statutory controls, there will be a reduction of about 5 to 8 per cent in the prices of most of the cloth of the controlled categories as compared with the prices prevailing today under the Voluntary Price Scheme. In a few old varieties of controlled categories (prices of which continue at the pre-1961 level, and which constitute less than 5 per cent of the controlled cloth), the new prices may, however, show an increase by about 7 to 8 per cent.

To ensure that the controls scheme is effectively implemented, a new wing has been created in the Textile Commissioner's organisation under an Additional Textile Commissioner, with adequate enforcement staff in every region of the country, particularly where large textile mills complexes exist. Government also proposes to set up a "Textile Control Advisory Committee" under the Chairmanship of Mr. V. P. Naik, Chief Minister of Maharashtra, to advise the Government on all aspects of the work relating to the administration of controls. This Committee will consist of 15 members and will include representatives of industry, labour, technologists, wholesale traders, retail traders, fair-price shops, consumer co-operative societies, consumers, economists and public workers.

Vigilance Committees

A "Central Consumers Vigilance Committee" will also be constituted under the Chairmanship of Mr. S. V. Ramaswamy, Union Deputy Minister of Commerce, to keep watch over the working of the distribution of controlled and non-controlled cloth especially from the point of view of consumers. The State Governments have been requested to set up local consumer vigilance committees of 10 to 15 members to look after the consumers' interests in all Municipal towns having an urban population of 25,000 and above. These committees will consist of consumers, public workers, traders, representatives of co-operative societies, fair-price shops and local officials, etc.

The retail trade will continue to distribute all cloth in the normal way. Fair-price shops and consumer co-operatives will be supplied as much cloth (controlled and non-controlled varieties) as they would need.

★ ★

The Union Minister for Steel and Mines, Mr. N. Sanjiva Reddy, is understood to have told the Informal Consultative Committee of Parliament last week that the main considerations for selecting the site for the fifth steel plant in the public sector would be the cost of production and the preference of the foreign collaborators who would be making available financial resources for covering the foreign exchange component of the project. A delegation of the Anglo-American consortium of the steel manufacturers is expected here this month for talks in this respect. The three sites being considered for the project are Salem, Goa/Hospet and Bailadila/Visakhapatnam areas. The Technical Committee appointed by the Ministry of Steel to suggest, on the basis of the feasibility studies prepared by Messrs. M. N. Dastur and Co., for the Goa/Hospet plant and Hindustan Steel Ltd., for the Bailadila/Visakhapatnam unit, has favoured Tornagalu, near Hospet, as the most appropriate site for the fifth public sector steel plant and has recommended that provision for adequate advance action on the Bailadila/Visakhapatnam complex should be incorporated in the fourth Plan. Messrs. M. N. Dastur and Co. have also submitted a detailed project report on the Salem unit and are understood to have justified setting up of a half-million-tonne ingots capa-

city plant at Kanjamalai, near Salem, on the basis of a survey of the regional requirements of steel. They have estimated the capital cost of this project at Rs. 95.4 crores, with a foreign exchange component of Rs. 38.6 crores. These studies have been made available to the Consortium so that it may be able to clinch the issue at an early date.

About the Bokaro plant, Mr. Reddy is believed to have told the Informal Consultative Committee that the Union Government was in touch with the Government of USSR for determining the role which Dasturco could play in setting up this project. Mr. Reddy expressed the hope that the position would become clearer in the next few days after the final round of talks with the Soviet technicians who are currently touring the project area. The Soviet technicians are expected in New Delhi by the end of this week. Mr. Reddy assured that the Union Government was sympathetic towards Dasturco, although no formal agreement had been signed for the appointment of this concern as technical consultant for the Bokaro plant. He emphasised that at no time had the Soviet authorities suggested that they should take over the technical management of the plant or that they should supply the entire equipment from the Soviet Union. They were eager to associate as many Indian technicians with the construction of the plant as possible. The fact, Mr. Reddy asserted, was that the general and technical management of the plant would remain with Bokaro Steel Ltd. The supply of equipment from indigenous sources would be made to the maximum. Mr. Reddy indicated that setting up of the 1.5-million-tonne ingots capacity at the Bokaro plant would cost approximately Rs. 390 crores.

Bhilai's Performance

Reviewing the progress of the three public sector steel plants already set up, Mr. Reddy stated that the Bhilai plant had been consistently working above the rated capacity. During the first eight months of the current calendar year, production of hot metal, ingots and salable steel at this Soviet-aided plant was around 116 per cent, 112 per cent and 112 per cent of the rated capacity. Production at the British-assisted Durgapur plant also was very encouraging. The hot metal output here amounted to 105 per cent of the rated capacity, production of ingots equalled to the rated capacity and that of salable steel was 93 per cent of the rated capacity. Production at Rourkela, however, had not so far reached the rated capacity, mainly because of the disturbances in the latter half of March, 1964, and the need for relining of the blast furnace No. 1. The average output of hot metal during the first eight months of the current calendar year at this German-aided unit was 75 per cent of the rated capacity, that of steel ingots 79 per cent and of salable steel 77 per cent. The situation at this plant, of course, improved considerably in August. Production of pig iron in August increased to 83,333 tonnes from 68,884 tonnes in July, that of steel ingots to 75,133 tonnes from 70,920 tonnes, and of finished steel to 64,529 tonnes from 57,092. The capacities of the Rourkela and Durgapur plants, Mr. Reddy indicated, would be expanded to 1.8 million tonnes and 1.6 million tonnes ingots, respectively, by the end of 1966. The work on these expansion programmes was now progressing satisfactorily. The Bhilai plant would be expanded to a capacity of 2.5 million tonnes ingots by March, 1966.

Mr. Reddy revealed that the completion of the alloy steel plant at Durgapur had been delayed slightly because of labour trouble. The steel metal shop No. 2 at this plant is now expected to be commissioned into production in January, 1965, instead of October this year. The commissioning of the last unit — the blooming and billet works mill — has been delayed by 6-8 months. This unit will now go into production in February, 1967.

★★

A Rs. 23.8 lakh (\$500,000) contract has been signed by Bokaro Steel Ltd., with the Soviet trade organisation "Machino-

export" for the supply by the latter of a multi-bucket excavator and several cranes, including lorry-mounted cranes of 3.6 and 10 tonnes lifting capacity, and a locomotive crane. The cranes and the excavator will be delivered in 1965 and the locomotive crane in 1966.

★★

At a meeting with cement producers and manufacturers of cement machinery here last week, the Union Minister for Heavy Engineering, Mr. T. N. Singh, revealed that the Government would not allow import of complete cement plants by private entrepreneurs. He advised the cement plant licensees to tie up their programmes with the indigenous manufacturers of cement machinery to whom the Government would make available the necessary foreign exchange for the import of essential components. A four-week period has been specified for these tie-ups after which the position will be reviewed again.

According to the latest assessment made by the Ministry of Industry and Supply, the third Plan target of 15-million-tonne cement manufacturing capacity is expected to be achieved only by the end of the first year of the fourth Plan. Currently, the installed capacity is 10.5 million tonnes. Additional capacity to the tune of 745,400 tonnes is likely to be installed by the end of the current financial year, another 1,774,780 tonnes by 1965-66 and still another 1,815,530 tonnes by 1966-67. The installed capacity in the cement industry is proposed to be increased to 25 million tonnes by the end of the fourth Plan. This is expected to yield an output of 23 million tonnes annually, the likely demand in that year.

For realising the fourth Plan cement capacity target well in time, advance action has already been taken and additional capacity to the tune of six million tonnes is covered by the letters of intent or approval already issued to private entrepreneurs. The Governments of Orissa, Andhra Pradesh, Maharashtra, Madras and Assam have proposed to set up one cement plant each in the public sector in their jurisdiction. Efforts are being made to utilise blast furnace slag from the steel mills and pozzolanic materials from power stations for the production of cement. Three units for making cement from blast furnace slag have already been licensed to be set up at Bhilai. One of these is expected to go into production by the end of this calendar year and the other two towards the end of 1967. The granulated slag to be produced at Durgapur Steel Works has also been tied up with two schemes for the manufacture of slag cement. The slag at Rourkela, according to the experiments conducted so far, however, has not been found suitable for producing cement in view of the comparatively high MnO content in it. So far as manufacture of pozzolanic cement is concerned, a good deal of activity has been witnessed during the past few years. Some applications for industrial licences for this purpose are stated to have already been received by the Union Government.

Massive Programme

As already indicated in this column, the proposed Cement Corporation of India will be launching a massive programme of surveying, prospecting and proving of limestone deposits in the country. Of the factors responsible for the rather tardy growth of the cement industry in the recent years, one of the most important has been lack of adequate knowledge about limestone reserves. Limestone supplies will become a more serious bottleneck in the future years as cement production of the order of 23 million tonnes by the end of 1970-71 will necessitate consumption of limestone to the tune of 43 million tonnes a year. Since high-grade limestone is being reserved for steel production, the cement industry will have to depend mostly on low-grade limestone. For improving the quality of such limestone, beneficiation is to be taken resort to. The Cement Corporation of India will also be setting up

such cement manufacturing capacity as may be considered necessary for achieving the fourth Plan target.

★★

The Union Minister for Labour and Employment has indicated that another bill to amend the Industrial Disputes Act would be introduced in Parliament shortly. One of the new amendments will enable an individual workman to approach the conciliation officer for redress of grievances relating to discharge and dismissal. If conciliation failed and the employer declined to agree to arbitration, the appropriate State Government might at its discretion refer the dispute to adjudication. Another amendment will seek to make non-implementation of settlements and awards a continuing offence, entailing day-to-day penalty. A third amendment will necessitate payment of compensation for all the days of lay-off beyond 45 days, whether the period is continuous for a week or not.

★★

The Union Government is understood to have approved the grant of a letter of intent to M/s. J.K. Industries, Calcutta,

LIC Staff Salary Structure Needs Revision

From Our Correspondent

BOMBAY:

IN NEARLY every one of the addresses of leading public men these days, the basic theme happens to be the fast-vanishing sense of discipline and national consciousness all round. Hitherto, strikes, 'morchas' or go-slow demonstrations were being resorted to, by and large, only by the working classes. But, now, even educationists, medicos and legislators, let alone students, seem free to resort to it, and worse, on the least pretext or provocation. Whatever may be said in justification of such demonstrations to register one's protest against, or of dissatisfaction with, a given state of affairs, the frequent resort to them even by senior and responsible white-collared workers has begun to worry the more serious minded among public men.

Adverse Effects

It was not long ago that the rather unfortunate, if not indiscreet, pressing of the security bell by a senior officer of the Reserve Bank when there was a demonstration by thousands of bank workers outside the Bank and the developments that followed — so it is said — that made the senior supervisory staff also to make common cause with the strikers and even join their union, a step that they had been hesitating to take all these years. To what extent this would render the Bank's work more vulnerable to avoidable delays and surprise stoppages in the future remains to be seen. But there is no denying that the certain prospect of frequent and irritating impediments to smooth working is in store for the Bank. What is seldom realised by those that are behind these demonstrations is that, besides inconveniencing those whose attention it is the purpose of such demonstrations to attract, their act on also entails adverse repercussions on economic growth and stability, which may not at all be intended by the strikers or go-slowers themselves. Being interested parties, perhaps, the unawareness — wittingly or unwittingly — or lack of appreciation of the serious implications of their action on their part is understandable. But such want of awareness and, therefore, inability to take timely action to prevent senior and more responsible officers in statutory bodies and corporations from organising themselves into unions and resorting to direct action is quite inexcusable. This is precisely the charge-sheet against the Government of India by the Federation of LIC Class I Officers' Associations. Unless something is done promptly to redress their grievances, the meeting being held in Bombay between the spokesmen of the Federation and the Federation President, Mr. K. K. Shah, Mr., may well mark the beginning of a stiff fight on the part of those on whom the LIC has to depend so much to show results. It is therefore,

for setting up an aluminium smelter in Kerala. A letter of intent is also expected to be issued to Aluminium Corporation, Calcutta, for the expansion of its Asansol smelter to a capacity of 12,500 tonnes per annum as soon as the firm's proposal to set up a captive thermal plant is cleared.

The Jeevanlal Aluminium Rolling Mill, Madras, has expressed its inability to put up the rolling mill. The industrial licence granted to this firm will have to be revoked.

★★

The Governments of India and Kenya have accorded their approval to M/s. R.S. Gokuldas and Co., Bombay, for setting up a cotton textile mill in Kenya in collaboration with the Kenya Government and Kenya nationals. To begin with, the mill will have a capacity of 6,000 spindles and 150 looms. This will be subsequently raised to 24,000 spindles and 600 looms.

Two-thirds of the capital for the enterprise will be subscribed by the Kenya Government and Kenya nationals. The remaining one-third will be made available, in the form of machinery, plant and equipment, by the Indian company.

worthwhile recording here, at this stage, the background to this impasse.

Exactly eight years ago, the Life Insurance Corporation of India came into existence. During this period, all the employees of the LIC, except class I officers, have had their pay scales revised more than once, have fought for and got their bonus (which the Government originally wanted to do away with) and have also had their dearness allowances enhanced. But the unfortunate Class I officers have been left high and dry, despite their clear hints to those at the helm of affairs about this neglect. Thoroughly frustrated because of this, they have every reason now to complain that the picture for them even at the end of eight years is so gloomy that they feel discarded, as it were, by the authorities. The most unkind cut of all seems to have been inflicted on them, when, some time ago, the Union Finance Minister seemed to suggest, in reply to a question regarding the demand of these officers for revision of pay scales, how fantastic it was that such a demand should come from officers of the LIC drawing salaries of more than Rs. 2,500. But not all Class I officers draw such salaries, there being hardly 50 who do so even today. The remaining 2,550 or so draw salaries ranging from Rs. 350 to Rs. 1,800. Surely, the Finance Minister could not have been unaware of this break-up of Class I officers when he made his sarcastic remark about an officer drawing over Rs. 2,700 demanding an increase to Rs. 3,000, although the members of the House may not have been — and still be — aware of it. That their demands for an improvement in their emoluments should have been dismissed so cavalierly is clearly unfair to a majority of the Corporation's Class I officers.

The Class I officers of the LIC, it would seem, have suffered not only as compared to other employees of the Corporation but also as compared to their counterparts in other public institutions, such as, for example, the State Bank of India, the Reserve Bank, and the Airlines Corporation. First, as stated earlier, their pay scales have not been revised to date, these remaining where they were in 1956. Secondly, although the Government has gone back on its earlier decision to do away with the payment of bonus to LIC employees (it had, however, to revise this decision when the ministerial staff agitated for it), this reversal does not apply to Class I officers. In respect of dearness allowance, again, all employees, save Class I officers, have benefited from an 'ad hoc' payment in 1960, an increase in 1962, and a merger of this allowance in the basic salary, in addition to the linking of it with the cost of living index. Further, Class I officers have also been denied other

allowances and benefits, such as house rent and medical aid. In a detailed memorandum submitted by the Federation, there is a comparative chart showing pay scales and total remuneration to Class I officers in the LIC and other public sector undertakings. This chart shows that grade-wise, minimum-and-maximum-pay-wise, allowance-and-other-benefits-wise, Class I LIC officers stand at the very bottom. The irony of it all is that, following nationalisation, many of them have not only not got any increase, but lost quite a good bit of the emoluments they had been having at the time of nationalisation. Prior to September, 1956, a majority of them enjoyed the benefit of bonus, there being no differentiation between junior and senior officers in this regard. It has been estimated that the average to the LIC on this account is almost equal to Rs. 2 crores—the estimated cost of the LIC's new building 'Yogak-hema'. The worst hit among Class I officers are junior officers with a basic salary of Rs. 350. It is surprising, as also unfair, that for the doubtful distinction of being designated as officers, these should be denied a bonus, while Class III employees drawing a basic salary of even Rs. 500 are allowed to have it. And, to add insult to injury, as it were, while the benefit of bonus has been extended even to officers in the Corporation's subsidiaries, it has not been made applicable to Class I officers of the Corporation itself.

All these apart, as a result of the improvement in emoluments of one class of employees without taking into account the resulting effect on the pay scales of Class I officers, several anomalies have arisen, especially as the scales happen to overlap. This is to be expected in the case of a sprawling

organisation of the type of the LIC, and, if only because of this, it is high time that a committee was appointed to look into these grievances without delay. This is perhaps the least that the Government can do, to be consistent with its own assurances to the LIC staff in the past. That this has not been done so far is not only unfair but also inexplicable, especially in view of what the Union Finance Minister himself stated in the Lok Sabha last year. He then said: "In relation to the salaries paid to commercial executives, I do not think that it (salaries paid to insurance executives) is very high. I do not think that even now it is a very attractive proposition, because, so far as commerce is concerned, people are getting much more, and I think that, in due course, unless there are other advantages, insurance will become a less attractive field for the person who gets a fixed income. Increases have to be given, because, otherwise, what is it that we are spending for? We want an increase in the standard of living. I would not say, therefore, petrify the wages of the insurance employee or the field worker or the insurance agent and so on. The wages have to go up because he has to raise his standard of living."

Considering the progress in the face of so many odds achieved by the Corporation between September, 1956 and March last alone and no other factor, there would appear to be ample justification for conceding the demand of the LIC's Class I officers. They have waited patiently and it would both be unwise and undiplomatic, if not dangerous, to try their patience any longer in the prevailing explosive atmosphere.

West Bengal Fourth Plan on the Anvil

From our Correspondent

CALCUTTA:

THE DEPUTY CHAIRMAN of the Planning Commission, Mr. Yashwantrao Chavan, is scheduled to come to Calcutta very shortly to discuss with the West Bengal Government the latter's tentative proposals for the fourth five-year Plan, so that these can be presented in a more acceptable form at the next meeting of the National Development Council. According to broad indications, this State wants a plan of at least Rs. 600 crores, roughly about double the size of the current one which itself represents twice the investment undertaken in the second quinquennium. According to planning officials a plan of Rs. 600 crores should be the minimum programme of development for West Bengal; they also assert that with the State's expanding internal sources of revenue a plan of even Rs. 900 crores could be feasible provided the Centre extends its assistance little generously.

The arguments advanced in favour of a big-sized plan are mainly two — first, the State Government has consistently managed to raise more than its allotted share of resources in each of the three five-year Plans, and secondly, as a border state harassed by an unceasing flow of refugees and the large urban educated unemployment problem, West Bengal deserves special Central help. It is also felt that the State has all long been denied its due share of the divisible pool of taxes and is likely to press strongly for a higher allocation when the Fourth Finance Commission comes for collecting evidence.

A particular reason why West Bengal would insist of the minimum size of Rs. 600 crores for the fourth Plan is its own excellent record in raising resources internally. For example, this State had originally drawn up a plan of Rs. 327 crores for the third quinquennial period. The National Development Council pruned it to Rs. 250 crores because it was thought that resources in excess of this limit would be hard to raise. If the reduced outlay, the Centre was to provide Rs. 180 crores, the remaining being the share of the State, but West Bengal was given the option that provided it raised re-

sources of more than Rs. 90 crores from its own sources, it could increase the size of the Plan. This West Bengal has been able to do. According to the Finance Minister's Budget statement last March, the State Government will be able to find Rs. 140 crores from out of its own resources; in other words, it is now able to implement a plan of Rs. 300 crores. In fact, the State Government has already moved the Centre to raise its assistance by Rs. 27 crores so that the former can implement its third Plan as originally drawn up. It is not known how the Centre is responding to this request, but Mr. Mehta was reported to have been very impressed with West Bengal's performance when he was here a few months ago and had some discussions with the Chief Minister, Mr. P. C. Sen, on some of the latter's new ideas regarding agro-industrial development in the rural areas.

It is, therefore, unlikely that Mr. Mehta will dispute in principle West Bengal's claim to larger Central assistance, although he is expected to scrutinise the various physical targets in the light of the Prime Minister's emphasis on relatively quick-yielding projects and the need to cut down developmental expenditure without sacrificing the essentials. But he is most likely to agree with the broad approaches and priorities fixed by the State Government for its fourth five year Plan. These are quite sound and are in line with what Mr. Mehta himself has been advocating. For instance, agriculture has been given the topmost priority in the next Plan. This is wholly correct. West Bengal has been a chronically food deficit State with a man-land ratio in agriculture which is among the lowest in the country. There is little scope for expanding the acreage, but a good deal can be done to intensify agricultural operations.

The State's record in agriculture during the third Plan has unfortunately been disappointing; in fact, a fair proportion of the provision of Rs. 37 crores may remain unspent. But apparently, the Government wants to make up the leeway in the next Plan. Its record in power generation — which is given a priority next to agriculture — has been good. The original provision under the third Plan has been substantially raised

and the plan target for power generation will be very nearly attained. Yet to attain a capacity level of over 2,000 MW during the next five-year period (from exactly half this level at present), a lot more investment will be necessary. The State Government wishes to attain the fourth Plan power target mainly through a 1,000 MW super thermal plant at Santaldih for which some preliminary steps have already been taken. When brought into full commission, this plant will perhaps be the largest of its kind in the country.

Education is another field in which West Bengal can claim a reasonably good record. It is confidently expected that the third Plan provision of Rs. 8 crores will be appreciably exceeded. It now proposes to introduce free compulsory primary education throughout the State in the fourth Plan period, and it goes without saying that a substantial proportion of the Plan outlay will have to be set apart for this. But the Planning Department officials are not in a position to make any tall claim about reducing unemployment, especially among the educated, through the plan programmes. They put it rather defensively that the problem might have been a good deal worse but for the substantial development expenditure which has been incurred over the past 13 years. It is, however, generally agreed that not much can be done about it unless there is a further substantial expansion of industries. If West Bengal is lagging behind Maharashtra and Madras in the rate of economic progress, it is because industrial development in this State has been greatly restrained by a number of factors including power shortage and the foreign exchange crisis of the country. It is, therefore, natural that West Bengal should want to regain the lead in industrial race. Various projects have been drawn up for implementation during the fourth Plan, for expanding some existing industries and for starting altogether new ones. The details as well as the feasibility of these projects will be known after Mr. Mehta and his experts in the Planning Commission have scrutinised them.

★ ★

The export performance of India's engineering industries has been strikingly good. The latest survey of the exports by the World Trade Department of the Indian Chamber of Commerce, Calcutta, provides a detailed account of it. The value of engineering exports was relatively a small sum of Rs. 14 crores in a total export earning of Rs. 767 crores in 1963-64, but as the Chamber points out, the significance of the performance lies in the fact that India has made an encouraging

beginning in exporting non-traditional products which require large capital and considerable technical skill. Moreover, this is a sphere which offers vast possibilities for diversifying the country's pattern of export trade. A study of the composition of engineering exports reveals striking facts. The engineering products exported are not only consumer goods, but include a wide variety of producer and capital goods. The latter category includes an impressive range of machinery such as machine tools and equipment for sugar, cotton textile, jute, oil milling, shoe-making, tea, flour, paper-making, rice-milling and printing industries. Producer goods include electric motors, transformers (power and distribution), generators, switch-gears, industrial switch boards, control panels, weighing scales, railway signalling equipment and many others.

Engineering goods are exported not only to the developing countries of South-East Asia, West Asia and Africa, but also to highly industrialised countries like the USA, the UK, Canada, France, West Germany, Belgium, Australia and New Zealand. In fact, Europe accounted for 13.5 per cent of all engineering exports in 1963. South-East Asia is by far the largest market, accounting for 41.5 per cent of the total, while West Asia and Africa took 22 per cent and 17.9 per cent respectively. North and Central America took 2.8 per cent of the total, but exports to these parts of the world have steadily, although not spectacularly, risen. The conclusion is hard to resist that but for the existing impediments like serious raw material shortages, the performance would have been very much more satisfactory. According to a study of steel supply and demand in engineering industries made by the Engineering Association of India, in no year between 1957-58 and 1962-63 has the demand for iron and steel been met more than 30 per cent of what is required.

The prospects for export are encouraging, but the raw material impediment has to be removed in the first place. With suitable incentives, the engineering industries could raise their exports from the existing level of 3 per cent of their total annual output, valued at about Rs. 500 crores, to 8 to 10 per cent. The Chamber is right in urging the Government that it should evolve a correct export policy, fairly stable over a long period and based on a realistic appreciation of expanding sales in highly competitive overseas market. The least the Government should immediately do is to adjust its fiscal and industrial policies suitably, so that the development of engineering industries, and of the economy as a whole, may regain its vigorous momentum soon.

Reaction to Bank Rate Increase

From Our Correspondent

MADRAS:

THERE HAS been no significant reaction to the announcement relating to the increase in the Bank Rate to 5 per cent from 4½ per cent with immediate effect. But it is felt that the Union Finance Minister has conveniently timed the announcement and that the investors who had lent large support to the new loans issued by the Central and State Governments have been deliberately misled. It is admitted that the borrowing programme of the Governments for the current year was completed on a dearer basis and that even without a higher Bank Rate an increase in the effective borrowing rate by about a quarter per cent was conceded. Even so, the psychological effect of a higher Bank Rate will be depressing on the gilt-edged market and it is feared that the State Electricity Boards particularly will find it difficult to raise their requirements.

Even otherwise, the gilt-edged market was rather depressed and it was necessary to effect some influential buying in order to prevent a further decline in prices for the State loans. It was reported a few days back that large parcels of the Andhra Government loan, recently issued, changed hands at the low rate of Rs. 96.80 against the issue price of Rs. 99.50 and that some institutions were busy selling securities on be-

half of their constituents. This has been a feature of the gilt-edged market in the past few years clearly indicating that individual applicants, who had subscribed to the loans on the basis of credit from banks, had no intention of sticking on to their holdings. In the altered circumstances, it has, therefore, been asked whether there will be a further decline in prices for the State loans and whether it would be possible for the Madras, Andhra Pradesh and Mysore State Electricity Boards to raise their requirements without agreeing to an increase in the interest rate on their loans.

The rise in the Bank Rate has not come as a complete surprise in banking circles in Madras City. For, it had been complained that the Reserve Bank has been pursuing a policy which was designed to enable the Government to secure its requirements on a cheap basis and that, even without a higher Bank Rate, there has been an increase in lending rates by ½ to 1 per cent in the past year and more. What has really happened, therefore, is an adjustment of the Reserve Bank's lending rate to the prevailing structure of interest rates in the open market and that in future Government borrowing will have to be effected on a costlier basis.

It is difficult to say, however, how the latest developments

in the money market will influence the course of new floatations. A number of new companies are planning to enter the market for raising capital in various forms. The established companies particularly have found it advantageous to issue preference and loan capital as in the present context an assured yield is considered more dependable than a fluctuating yield on equities. The new policy is designed to stimulate savings as an attempt is being made to alter the structure of deposit rates. But the operators in the Stock Market here are of the view that it would not be possible to ensure good support for new issues unless the Union Finance Minister agreed to reduce direct taxes and make it worthwhile for small savers to invest additional sums in industrial securities. The activity in the Madras Stock Market noticeable recently was due mainly to the purchases effected by the Life Insurance Corporation and the Unit Trust of India. As sellers were inclined to be reserved, prices for select scrips were marked higher following heavy buying on behalf of institutional investors. There has not been, however, a broadening of interest and individual investors have not effected replacement buying except by extending support to right issues where a definite return in investment was assured. It is pointed out that the Standing Committee of Presidents of the Stock Exchanges will have to consider the problems confronting the capital market and make suitable representations to the Government for according relief in direct taxation and for improving the profitability of investment by new industrial undertakings. Unless there was a positive approach it is felt that mere tinkering with monetary policy will not be of any great help in reviving activity in the capital market.

★★
The powerloom industry, which is considered a serious rival to the handloom industry particularly by the State Governments of Madras and Andhra Pradesh, will come to occupy an important place in the textile economy of the country in the coming years. While the full implications of the Asoka Mehta Committee report, which has recommended the installation of two lakh powerlooms during the fourth Plan, in order to meet, to a great extent, the additional demand for cotton textiles, have not been understood and the reactions of the State Governments concerned are not available, it has become amply clear that the handloom industry has to carve out a new path for itself and concentrate on the production to certain types of fabrics which would be more profitable. It will also be necessary at the same time to pay greater attention to the development of artistic fabrics for which there has been increasing demand latterly within the country and in the export markets.

At the 22nd meeting of the All-India Handloom Board held in Madras recently, the report of the Working Group on Handlooms, and the recommendations of the Asoka Mehta Committee came up for discussion. As the various problems need careful consideration and the reactions of the different State Governments have to be obtained, a clearer picture of the future role of the handloom industry can be had only after some time. But it was announced by Mr. S. V. Ramaswami, Union Deputy Minister for Commerce, when he inaugurated the meeting that the Government had decided to set up an Export Promotion Council for handlooms and that the delay in forming this body was due to the need for finalising arrangements for the required financial resources. The Silk and Artsilk Export Promotion Council has now agreed to give the new Council the proceeds of the levy it was collecting from the exporters of artsilk fabrics.

While thus a regular income would be assured annually, Mr. Ramaswami felt that it would be necessary to augment these resources by liberal contributions from leaders of the handloom industry. The Government have, for their part, agreed to provide the necessary foreign exchange for helping the new Council to carry on its activities in export markets. It has been stated that even after the Council begins functioning the existing rebates and facilities would continue to be available and that associations of exporters and co-operative societies would no longer be required to produce income-tax verification certificates as in the case of individual exporters.

The Council will have the task of supervising the arrangements for achieving the target of Rs. 20 crores for exports in the fourth Plan. This should not be found difficult if the new organisation goes about its work in the right way. While it has now been definitely established that there can be a regular off-take of Bleeding Madras fabrics and other goods for export to the USA and other countries, keen interest has been shown in artistic fabrics. There is a feeling in export circles in Madras that this line could be usefully developed and the skill of the handloom weavers in different centres of Madras particularly could be utilised to the maximum extent for earning foreign exchange. It is even stated that, with a careful study of the requirements of the overseas markets, handloom goods can easily earn Rs. 20 crores and even more in a short period.

But the Madras Government and other State Governments who were keenly interested in maintaining a revitalised handloom industry must be worried about other problems as well. It is natural to expect that the allocation of the production targets for the fourth Plan as between the handloom, powerloom and mill sectors would be determined only after considerable controversy and hard bargaining, it will probably be necessary for the handlooms in Madras and elsewhere to be sustained for another decade as the switchover from handlooms to powerlooms, as visualised in some quarters, can come about only over a longer period. Besides it has been asked whether a hastening of this process will not lead to other problems and the net advantage arising out of additional employments in the powerloom sector might be nullified to some extent by the displacement or part-time labour elsewhere. The handloom industry has its own advantages as a family occupation and it should be worthwhile to find out whether the efficiency of the handloom should be raised further by enabling it to concentrate on the production of popular varieties which could be produced on a larger scale. In view of the fact that quite a large number of persons are employed in this industry and the problems regarding marketing may not present serious difficulties as before, if the existing looms themselves can produce larger quantity of cloth, the lot of the handloom weaver would improve considerably. Mr. S. V. Ramaswami has indicated that a target of 5,200 million yards has been proposed for the decentralised sector in the fourth Plan. The target for the handloom industry alone is likely to be 3,200 million yards. While there will be an improvement necessary over the third Plan target, as stated earlier, the powerloom sector will become more important as its share would be 2,000 million yards. Madras is the largest producer of cotton handloom goods in the country. In recent years, the weavers have used with success staple fibre yarn and art silk yarn along with cotton yarn. The silk sarees produced on separate looms are, of course, famous for their quality.

The moving finger writes

IF THE fourth Plan fails to provide impressive reading, it will not be for want of trying. An ocean of sweat and tears is pouring into its preparation, which makes me pray that the Plan may nevertheless manage to find some firm earth under its feet. Lest I should be misunderstood, I hasten to make it clear that it is not my intention at all to treat lightly the extremely earnest and the extremely learned labours of Mr. Asoka Mehta and his colleagues. That they must indeed be working hard is evident from the fact that a certain ex-officio Member of the Planning Commission, who is famous for his passion for work, has been heard to say that he is being "slave-driven" by the Deputy Chairman.

★★
I read in the papers that the Government of Jammu and Kashmir may appoint a commission to probe into the charges of corruption and other malpractices levelled against Bakshi Ghulam Mohammed. This provokes me to ask whether we are settling down to a state of affairs in which there is to be one law for politicians and another for mere mortals. It passes my comprehension why the ordinary investigatory procedures of the police or the normal judicial processes of the law courts should not be allowed to take their course even in respect of a politician who is no longer in office and who, in fact, is under detention. There is surely not much chance of the Bakshi influencing police investigations or court proceedings in his favour in the present circumstances. I hope commissions of inquiry are not going to become the rule where there are allegations against or suspicions about the conduct of politicians in or out of office.

This apart, the detention of the Bakshi under the Defence of India Rules must give rise to some very disquieting thoughts. Precisely why has this particular step been taken? Nobody has so far given a satisfactory answer. Both Mr. Sadiq and Mr. Dhar are obviously at pains to conceal more than they would or could reveal. The press note issued by the State Government is of course no help at all. It says that the Bakshi is being detained because he had been indulging in activities calculated to disrupt law and order with a view to frustrating official investigations into the charges against him. In my view this is no adequate justification for invoking the Defence of India Rules.

Even less satisfying is the explanation, left vaguely floating in the air, that the Bakshi had been preparing to exploit means, more or less constitutional, to divest the Sadr-i-Riyasat and Mr. Sadiq of the offices they are holding. This explanation would amount to a fatal confession that the Defence of India Rules have been abused for political purposes by the Government of the day.

There are also a whole series of reports or rumours attributing sinister designs to the Bakshi. It is being suggested that he is being detained because he is getting ready to conspire or plot against the territorial integrity of India in Kashmir. In that case, it is strange indeed that the Prime Minister could tell Parliament that the Central Government was not aware that the State Government was going to detain the Bakshi under the Defence of India Rules. Since when has the Government of India chosen to parcel out its responsibility for the security and territorial integrity of the country among the satraps in the States? Are we now to

suppose that the Central Government has decided to acquiesce in a situation in which State Governments would be free to act in alleged defence of the country without even having to consult the Centre or at least keep it informed of their intentions sufficiently in advance? When Sheikh Abdullah was removed from the Prime Ministership and placed under detention, New Delhi disclaimed neither knowledge nor responsibility. But the decision taken earlier this year to withdraw the conspiracy case against him and set him free was claimed to have been taken by Kashmir's present Prime Minister, Mr. Sadiq, on his own. Now, the State's Home Minister, Mr. Dhar, cheerfully declared that he is prepared to assume responsibility for the Bakshi's detention. Where, I wonder, does the Government of India come into the picture?

Incidentally, if it is true that the Bakshi is being detained for anti-national or disruptionist activities, how is it that certain other politicians in the Valley, who have been avowedly and agitationally secessionist, are not only being permitted to be politically active but have even been given the freedom of the Capital, including the most generous access to the Prime Minister's time and attention? The Bakshi's detention does not make sense except on the supposition that he is really guilty of subversion in Kashmir — and that is a supposition which could be credited by the public only if the Central Government is seen to be willing and able to accept responsibility for his detention and follow it up by taking adequate action against disruptionists whoever they may be.

★★
There is a Tamil saying that a barber's sweepings should not be stirred up lest they clutter up the place with endless clippings of hair. The Santhanam committee's report, which found corruption everywhere, including educational institutions, bore testimony to the truth of this observation. The Home Minister, Mr. Nanda, however, seems fated to learn only from his own experience. But, even he must at least occasionally have doubts and misgivings. It is not businessmen or film stars only who stack away large amounts in low denomination currency. Even in the learned professions, such as Law or Medicine, the practice seems to be quite popular — where incomes rise to five or more figures. Similarly, it is not only on buses or trains that one's age is juggled with: the higher judiciary is alleged to be not entirely free from this weakness of cheating on the date of birth. The question is who is to throw the first stone? Not, surely, the politician whose residence, admittedly, is a glass house.

★★
I must congratulate Maharashtra on the child-like innocence of its Chief Minister, who seems to believe everything that he hears. Mr. Naik talked the other day of a car which, according to the information given to him, had been made wholly with indigenous parts and could be manufactured at a cost of about Rs. 4,000. The Chief Minister has expressed his intention of taking this good news from Bombay to New Delhi. I have no doubt that an air journey will be justified. In fact, I would recommend that he should take the car with him on the plane. A vehicle of such extraordinary attractions deserves to be taken the greatest care of — it would not do to trust it to our savage roads and even more savage traffic.

ITALIAN CREDIT FOR TELEPRINTERS

An agreement for a commercial credit of Rs. 170 lakhs was signed in New Delhi on September 19, 1964, between the Hindustan Teleprinters Ltd., a Government of India enterprise, and the Olivetti & Co. of Italy. The credit will be provided in foreign currency and will help in raising the production of the Hindustan Teleprinters from 1,300 units a year to 5,400 units a year on single shift basis. The factory has a plan to produce by 1969-70, 8,500 teleprinter units a year by operating two shifts. The overall capital expenditure on the factory's expansion programme is estimated to come up to Rs. 150 lakhs. This includes Rs. 40 lakhs as cost of capital goods such as machinery, production tools and equipment, which will be financed out of Rs. 170 lakhs of commercial credit. The remaining Rs. 110 lakhs of the capital expenditure will be met from the Indian sources. Part of the commercial credit would be used for importing raw materials and consumable stores. According to the terms of the agreement, the loan is repayable in 10 years in half-yearly instalments. Four years ago in 1960, the Hindustan Teleprinters and the Olivetti & Co. of Italy entered into collaboration for manufacturing teleprinters. The company went into production in 1961, assembling machines from imported components. The indigenous content of the machines now is about 70 per cent. By the middle of next year, it will be possible to produce 1,300 units with wholly indigenous content.

EXPORTS OF TOBACCO, OIL & LAC

The exports of both manufactured and unmanufactured tobacco from India increased appreciably during the first quarter of the current financial year. During the period April to June, 1964, about 2,44,00,000 kilograms of unmanufactured tobacco worth over Rs. 10 crores was exported. This was about Rs. 1.8 crores more than the value of the exports in the corresponding period of 1963. Exports of manufactured tobacco during April to June, 1964 also increased to over Rs. 43.8 lakhs from Rs. 16.4 lakhs during the corresponding period of the previous year.

During the first three months of the current financial year (April — June, 1964), the exports of major essential oils increased in value to Rs. 34.56 lakhs as compared to Rs. 30.21 lakhs in the corresponding period of the previous year. The increase was mainly due to the earnings from sandalwood oil exports of which went up from Rs. 25.7 lakhs in April-June 1963 to Rs. 30.1 lakhs in the corresponding period of 1964. France and Japan were the major buyers.

The export of lac during April to June, 1964 was of the order of about Rs. 1.2 crores. This was Rs. 15 lakhs more than the value of the exports in the corresponding period of the previous year.

MICA EXPORT PRICES

In its press note dated the 30th January, 1964, the former Ministry for International Trade announced the minimum f.o.b. prices of certain varieties of mica. It was stated that shipment of mica splittings other than specified in the press note will not be allowed for export from or after February 15, 1964 (for details, vide page: 289 of "Eastern Economist" dated February 14, 1964). It has now been decided that subject to the conditions in regard to the opening of letter of credit, etc., specified in the above mentioned press note, shipment of the following varieties of mica will also be allowed at or

TEXTILE MACHINERY COUNCIL

INAUGURATING THE first meeting of the Development Council for Textile Machinery in New Delhi on September 19, 1964, the Minister for Heavy Engineering, Mr. T. N. Singh, said that the production of textile machinery, which was of the order of Rs. 19 crores in 1963, was expected to rise to Rs. 27 crores in 1965-66. During the fourth Plan, as against the total requirements estimated at Rs. 347 crores for the five-year period, the indigenous production, he added, was expected to cover as much as Rs. 272 crores, leaving a gap of Rs. 75 crores. There were also gaps in regard to certain items of textile machinery which were not manufactured at all in the country, e.g. draw-frames, speed-frames, warping machinery, etc. Referring to certain complaints that the existing capacity for textile machinery production was not being fully utilised, Mr. Singh said that shortage of raw materials such as pig iron, steel alloys etc., uncertainty of demand, lack of finance and fear of obsolescence were the factors responsible for this. He, however, assured the manufacturers that the Ministry would take up with the steel authorities the question of adequate supply of the required quality of pig iron. The question of financial assistance, he added, was also being looked into and credit agencies like I.C.I.C.I. and other development institutions would do whatever was possible. Mr. Singh also stressed the need for a Central Research and Development Organisation to keep in touch with the latest technology in the field of textile machinery. Government, he said, would be willing to assist in setting up such an organisation if a proper scheme was evolved by the industry.

Mr. Manubhai Shah, Union Minister for Commerce, also addressed the meeting and pointed out that unless adequate quality control was exercised at the different stages of production, the industry would experience difficulty in selling the machinery. Referring to the need for continuous exploration of the export possibilities in this field, he said that there was nothing wrong in exporting some textile machinery while at the same time we imported some. This was a feature even of developed countries like Japan. In this connection, Mr. Shah referred to the setting up of textile mills by Indian industrialists in developing countries of Asia and Africa. Earlier, the Chairman of the Council, Mr. Prabhu Mehta, said that a scheme had been prepared for setting up an Institute for Research in Designs for indigenous textile machinery.

ANGLO-SOVIET TRADE

The British Industry is attempting to penetrate behind the 'Iron Curtain' in an all-out drive for new markets in Russia. Already a number of British firms, particularly in the agricultural, chemical and heavy industry fields, have broken down the barriers of trade between the two countries, and now the British industrialists intend to take part in a three-year plan to show what free enterprise has to offer to the centrally-planned State trading economy of the Soviet Union. Specialised trade fairs in Moscow in 1965, 1966 and 1967 will provide the opportunity for Britain's largest sample bag yet to be taken behind the Iron Curtain. Fairs, in which Britain is planning to take part, include 'chemistry in industry'; construction and agriculture; agricultural machinery and equipment; mechanisation methods for engineering and technical work; mechanised and automated equipment; packaging and transport for the food industry; 'automation of production processes' and measuring instruments for research, industry and agriculture. In most of these fields Britain has much to offer, measuring instruments and agricultural machinery being just two examples. Britain's overseas sales of agricultural equipment are running at the highest ever, while in measur-

No kinks in our links

When would you call equipment reliable? When reliability is built into it from the stage of initial design.

To meet every specification of design, selection of materials, manufacturing experience, up-to-date plant & techniques and rigid testing are all essential. This is an intelligent engineer's concept of reliability.

But if an equipment fails in even one of its functions it becomes just as unreliable as a broken one. And equipment designed for facile manipulation is the

joy of its operator. Rightly so too, for avoiding a protracted struggle with your equipment is well worth paying for.

Two or three extra units of reliability would cost more for us, and you too. But these have secured for our motor starters the highest sales in the country and a very successful entry into the markets of Europe!

When you pay for any LT-LK product you should know that you are paying for equipment that has satisfied every criterion of reliability.

ASIAN TRADE FAIR

An Asian International Trade Fair on the theme "Peace and Prosperity Through Trade Co-operation" will be held in Bangkok between November 17 and December 10, 1966. It will cover all aspects of industry, agriculture and trade. Exhibits from the industrially developed countries will consist mainly of capital goods and technical equipment appropriate to the development of agriculture and industry in Asian countries. The Fair is organised by the Government of Thailand and supported by ECAFE. The three objectives of the Fair are: (i) to increase trade among Asian countries and between Asian countries and the rest of the world; (ii) to promote co-operation in trade and economic development in the countries of Asia and the Far East; and (iii) to encourage new investment in Asian countries.

KATHMANDU EXHIBITION

In agreement with the Government of Nepal the Government of India is organising an exclusive Indian exhibition at Kathmandu. The exhibition will be of one month duration and will start in the fourth week of November, 1964. A wide range of goods, including capital goods and equipment, light engineering goods and consumer goods of various types, which India can offer, will be displayed at the exhibition. The social, economic and industrial developments taking place in India under the five-year Plans as also the efforts in the field of science, technology and allied subjects will be portrayed at the exhibition.

RATNAKAR EXPANSION

The Ratnakar Shipping Company of Calcutta, which has at present only four vessels, plans to achieve a steady and balanced expansion of its fleet over the next few years. In view of the limited scope in the regular overseas liner services, the company will concentrate on the international tramp and tanker trades where there is a crying need for more vessels. It will also ply on the Indian coast where there is a shortage of tonnage. In addition to two super tankers of 53,000 d.w.t. each — the order for the first of which has already been placed with a Japanese shipyard for delivery during the first half of 1966, while the decision to build the second is likely to be taken soon — the Ratnakar Shipping intends to acquire two bulk carriers as well as half-a-dozen new or second-hand ships of medium size. Two secondhand vessels of about 12,000 d.w.t. each are being purchased by the end of this year under the package deal, one of them to be placed overseas and the other on the Indian coast. The company

also proposes to charter three or four bulk carriers for the specific purpose of engaging in the transport of foodgrains to India from the USA over a long period of a few years. The necessary arrangements in this connection are being made. The bulk carriers may be chartered from London or some other international tramp market and if the operation proves successful, more freighters may be engaged later on.

Efforts are now under way by the Government of India and the shipping companies of the country to bring as much as possible of the 50 per cent of the foodgrains cargo allowed to be carried in non-USA flag tonnage, in Indian vessels. Recently, the economic aspects of the foodgrains movement were discussed in detail at the National Shipping Board meeting in Delhi. As the Government of India is now very serious about the attempts to carry foodgrains in Indian ships, a higher freight rate is being considered. So far Indian companies have not lifted any of the foodgrain imports because they did not have the necessary type of tonnage for the purpose. The inadequate freight rates and the uncertainty of outward cargoes had also made the proposition uneconomic and unattractive.

TAXATION ON MOTOR VEHICLES

The Government is considering the question of appointing a high-powered body to examine the present incidence of taxation on motor vehicles/operators and to report whether it is a disincentive to the growth of road transport industry. This was revealed to the Informal Consultative Committee of Parliament for his Ministry by Mr Raj Bahadur, the Union Minister of Transport. The recommendation for appointing such a committee had in fact been made by the Transport Development Council at its meeting held at Srinagar in July this year. The Minister also told the Consultative Committee that the recommendations of the Study Group on Transport Co-operatives were being examined by the State Governments and decisions would be taken on them in a few months' time. The members were informed that a tentative provision in the fourth Plan period of Rs. 1,150 crores for roads had been suggested by the Working Group on Roads and approved by the Transport Development Council which had also laid down that an integrated plan for construction of roads based on economic justification should be drawn up. It had also proposed that emphasis should be laid on rural roads.

LOANS FOR COTTON & JUTE MILLS

According to a press note issued by the Ministry of Commerce, the Industrial Development Bank, which has started functioning with its head office in Bombay, will consider the applications of the cotton textiles and jute mills for rehabilitation loans. The press note adds that the Indian Jute Mills' Association and the Indian Cotton Mills' Federation have been advised to discuss and finalise the procedural details regarding these loans with the Bank.

EMERGENCY RISKS INSURANCE

The Emergency Risks (Goods) Insurance Scheme and the Emergency Risks (Factories) Insurance Scheme have been modified so as to provide for the automatic extension, by a further period of three months from October 1, 1964, of the policies already issued under these two schemes. No premium will be charged on these policies and no fresh applications will also be necessary for the renewal thereof. In respect of properties which become insurable for the first time on or after October 1, 1964, applications are to be made to the Oriental Fire and General Insurance Company, in the prescribed manner, but without treasury chalang, for the issue of policies as provided for under the schemes. The question whether any premium should be levied in these cases at any later date will be decided at an appropriate stage, but for the time being, no premiums will be due, and no payments should, therefore, be made.

Company Affairs

1.50 lakh fully paid-up equity shares had been allotted to this company.

The chairman stated that the company proposes to manufacture four basic types of glass fibres such as wool, staple tissue, yarn and reinforcement for plastics. In all these fields the company through its association with Fibreglass Limited of England will take advantage of the new developments in other countries both of production methods and sales outlets.

Considerable progress had been made in the construction of the factory. Plant and equipment are expected to be installed in the latter part of this year and commercial production is expected to commence in June 1965.

CAMPHOR AND ALLIED PRODUCTS

Mr. C. C. Desai, Chairman of Camphor and Allied Products Ltd., had given the shareholders an optimistic picture of the company's activities. The plant has gone into operation and it has already produced about 100 tons of camphor. Total sales so far have amounted to Rs. 30 lakhs and are expected to exceed Rs. 80 lakhs by the end of the current year. In view of the contracts that the company has entered into for the sale of camphor, the company's entire production has been sold out for a period of three years.

The Chairman stated that the production will not be hampered for want of raw materials. The company is getting its regular supplies of turpentine, the chief raw material, from U.P., Himachal Pradesh, Punjab and Jammu and Kashmir. But the directors have thought it desirable to plan ahead for self-sufficiency. It has, therefore, negotiated with the Governments of Assam and Nepal for permission to tap pine trees and to establish turpentine distilleries.

Apart from residual turpentine which is being marketed, the company is also exploring markets for its other by-products such as Terpene B, D, G & H. Permission has also been obtained from the Government for the import of capital goods for the manufacture of formic acid.

RAMON AND DEMM

Ramon and Demm Ltd., a new company formed for the manufacture of automobile gears, will be entering the capital market shortly with a public issue of Rs. 22 lakhs. The company has an authorised capital of Rs. 2 crores and an issued equity capital of Rs. 60 lakhs. Of the issued capital, foreign collaborators will take up Rs. 15 lakhs, directors and their friends Rs. 22.95 lakhs, leaving the balance for public subscription.

The company proposes to put up the factory at Thana, near Bombay. The target of production has been set at 2,000 tonnes. The gross value of production, in the first stage, is expected to be Rs. 1.6 crores, in the second stage Rs. 3 crores and in the third stage Rs. 4.5 crores. The company expects to earn reasonable profits from the fourth year of its operation.

Besides the equity capital of Rs. 60 lakhs, the company intends to borrow Rs. 38 lakhs from ICICI, Rs. 15 lakhs from the Maharashtra State Financial Corporation and Rs. 10 lakhs as over-drafts and cash credit from banks. The company has entered into a collaboration agreement with a reputed Italian firm for providing the technical know-how, supply of machinery and equipment worth Rs. 15 lakhs and the training of Indian engineers in Italy.

INDO-BURMA PETROLEUM

The directors of Indo-Burma Petroleum Co. Ltd. have decided to invest Rs. 25 lakhs in two new companies registered in Delhi. The investment of the company in Shama Forge Co., Ltd., will be of the order of Rs. 15 lakhs which will be made up of one lakh equity shares of Rs. 10 each at par and 5,000 cumulative redeemable preference shares of Rs. 100 each at

JAY ENGINEERING

MR. CHARAT RAM, Chairman, the Jay Engineering Works, Ltd., while addressing the annual general meeting, referred to the unfortunate strike in the Calcutta factories from the middle of December, 1963 to the end of May, 1964. In spite of its adverse impact on the profits, the directors proposed the payment of dividend on equity shares at a comparatively low rate of eight per cent by drawing upon the reserves. The company will, however, be able to replenish its reserves in a normal year. The Chairman gave a broad analysis of the causes of this unfortunate strike which meant an enormous loss of over a crore of rupees. The workmen lost the r wages, bonus etc., the Government lost excise duty and direct and indirect taxes and the community lost its much needed supplies. It is all the more unfortunate because the ostensible demands of the workers had already been revived by the West Bengal Government and some of them had been referred to the Industrial Tribunal for adjudication. It is, therefore, a matter for serious examination if strikes leading to so much disruption are caused by genuine economic grievances of the workers or by some political workers who want to make capital out of them. The Chairman rightly indicated that there has been much evidence to show that there was more pre-occupation on the part of a section of our labour leadership with political and other extraneous considerations than ship with political and other extraneous considerations than the ultimate good of the working people and the industry. It is time that the labour leadership learnt to take more responsible attitude at such instances.

Mr. Charat Ram indicated that the company has been making considerable progress in its current operations and has been maintaining satisfactory production trend. "Given sustained hard work by the workers without being diverted by self-seeking men, there should be increased earnings and bonuses for the workmen, increased profits for the investor, increased exports for the country and increased supplies for the domestic market". He added that there existed considerable confusion about the character and nature of profits because a section of opinion in the country considered profits as a crime. He added that making losses, on the other hand, should be considered a crime. Higher rate of business profit was essentially a reflection of efficient functioning of a unit and there was a direct relationship between business profits and economic growth. It was only through larger profits that larger investments could take place.

The Chairman referred to the rising cost structure, particularly in the engineering industry. The management did try to reduce cost by seeking more efficient ways of manufacturing and marketing products but certain costs were beyond their control. For instance, rising prices of consumer goods led to higher rates of dearness allowance. If manufacturing costs continued to increase, he added, sooner or later they were reflected in selling prices.

FIBREGLASS PILKINGTON

Mr. John Creek, Chairman of Fibreglass Pilkington Limited, stated that the public issue made in November last year had substantially been oversubscribed and the final call also had been made for payment of the remaining before 31st August, 1964, as funds were urgently needed to meet the capital expenditure of the project. The directors are confident that the unstable economic situation will not hinder the implementation of its plans.

The company has entered into a collaboration agreement with the Fibreglass Limited of St. Helens, Lancashire, England for furnishing the manufacturing know-how, supplying designs of the plant and equipment, and undertaking to provide consultancy and technical services for a period of 11 years from the date of first commercial production of glass fibres. About

par, carrying interest at the rate of 9.5 per cent per annum. The company also proposes to invest in Shama Pistons and Rings Ltd. to the tune of Rs. 10 lakhs, which will be in the form of subscription to 80,000 equity shares of Rs. 10 each at par and 2,000 cumulative redeemable preference shares of Rs. 100 each at par, bearing an interest of 9.5 per cent per annum.

Shama Forge Co. Ltd. was incorporated in October 1963 with the object of manufacturing forgings of mild steel and alloy steel and other metals. The company has entered into a collaboration agreement with Kropp Forge Co., of Chicago, USA who will supply the plant and equipment. In turn, they will be allotted 2.14 lakh equity shares of Rs. 10 each and will receive a royalty of 2.5 per cent on the net sales, subject to deduction of tax. The Agency for International Development has approved the loan of Rs. 47.50 lakhs to the company. The factory will be situated at Bhopal.

Shama Pistons and Rings Ltd. was registered in December 1963 for the manufacture of pistons, pins, and piston rings for automotive and stationary engines of all kinds. The company has secured the collaboration of Karl Schmidt GMBH of West Germany for the manufacture of pistons and pins, and SIM, S.A. of Switzerland for piston rings. Karl Schmidt and SIM, S.A. will receive a royalty of 4 per cent and 3 per cent respectively on net sales, subject to deduction of tax. The collaborators in turn will invest in 4.88 per cent of equity capital and 4 per cent of preference capital. The company is negotiating with ICICI for a loan of Rs. 37 lakhs. The factory will be put up at Ghaziabad, U.P.

GAMMON INDIA

Substantial improvements in working results have been reported by Gammon India Ltd. for the year ended March 31, 1964. While gross profits jumped up from Rs. 52.08 lakhs to Rs. 82.48 lakhs, the turnover increased significantly from Rs. 555 lakhs to Rs. 680 lakhs. As the company has a large volume of work on hand, the turnover for the current year is expected to be at a higher level. There has been an addition of Rs. 122.78 lakhs to plant and equipment and of Rs. 15.08 lakhs to land and property during the year against Rs. 32.37 lakhs and Rs. 11.85 lakhs respectively for the previous year. The subsidiary and other associated units of the company are also reported to be working satisfactorily. Thanks to the encouraging working results, the directors have recommended an increase in equity dividend from 11 per cent to 12 per cent. The proposed equity dividend will be paid on the old capital of Rs. 1.15 crores. Following the rights issue made during the year, the paid-up capital of the company increased to Rs. 1.38 crores but the new shares will not be eligible for the dividend for 1963-64.

The provision for depreciation is stepped up from Rs. 17.09 lakhs to Rs. 28.32 lakhs, development rebate reserve from Rs. 4.39 lakhs to Rs. 16.40 lakhs and taxation from Rs. 16 lakhs to Rs. 20 lakhs. The allocation to general reserve remains unchanged at Rs. 5 lakhs. The proposed dividend will absorb Rs. 13.80 lakhs against Rs. 12.65 lakhs, leaving Rs. 0.96 lakh to be carried forward to next year's account.

TITAGHUR PAPER

Titaghur Paper Mills Co. Ltd. has reported satisfactory working results during the year ended March 31, 1964. Thanks to the encouraging rise in production from 55,425 tonnes to 57,822 tonnes, sales increased substantially from Rs. 10.47 crores to Rs. 11.74 crores. The working of the multistaged bleaching plant in mill No. 1 is expected to be completed by the end of the current year and it is hoped that the unit would be able to reach a daily output of 100 tonnes towards the end of 1965. The No. 2 mill has been able to achieve an average production of 70 tonnes per day but it will not make the desired contribution to the profit till the output is substantially increased by the installation of No. 6

machine by the middle of 1965. The present daily capacity of the No. 3 mill is about 40 to 45 tonnes. Even this output cannot be achieved until the ancillary equipment is installed. The immediate objective of the company, therefore, is to increase the output of this mill to a level where it ceases to be a financial burden on the company as a whole.

The provision for depreciation is higher at Rs. 46.82 lakhs against Rs. 35.55 lakhs, while the allocation for Managing Agents' remuneration is maintained at Rs. 53,000. Capital reserve claims Rs. 3.03 lakhs (n.a.) while debenture redemption sinking fund absorbs Rs. 10 lakhs against nil last year. The directors have withdrawn Rs. 9 lakhs from the previous year's account for payment of the proposed equity and preference dividends.

MSORE KIRLOSKAR

Mysore Kirloskar had reported considerable progress during the year ended June 30, 1964. Gross profits recorded a sharp rise from Rs. 65.08 lakhs to Rs. 90.72 lakhs while sales improved significantly from Rs. 224.15 lakhs to Rs. 308.68 lakhs. The encouraging rise in sales is shared by almost all the company's products. Apart from making steady progress in the manufacture of existing lines, the company also made considerable headway in the manufacture of capstan and turret lathes. The company has taken on hand the manufacture of grinders and monomatic lathes. These products are expected to be placed on the market by about 1966. The substantial improvements in working results have enabled the directors to increase the equity dividend from 10 per cent to 12½ per cent.

The provision for depreciation is stepped up from Rs. 13.86 lakhs to Rs. 18.97 lakhs, development rebate reserve from Rs. 6.08 lakhs to Rs. 10.56 lakhs and taxation from Rs. 27.40 lakhs to Rs. 31 lakhs. The general reserve is strengthened with an allocation of Rs. 12.22 lakhs against Rs. 1.05 lakhs in the previous year while Rs. 7.80 lakhs is transferred towards managing agents' remuneration against Rs. 4.71 lakhs. The debt redemption reserve absorbs Rs. 5 lakhs against Rs. 1.25 lakhs while contingency reserve claims Rs. 1 lakh against Rs. 2 lakhs in the previous year. The replacement and rehabilitation on reserve is credited with Rs. 4.40 lakhs against Rs. 2 lakhs. No provision has been made to the dividend reserve as compared with Rs. 5.75 lakhs last year. The directors have transferred Rs. 9.30 lakhs from the development rebate reserve to the dividend reserve, out of which the dividends will be paid. The provision for taxation made in the previous year was found in excess of Rs. 2 lakhs and this surplus has been transferred to general reserve.

SHALIMAR ROPE

With a view to getting enlistment for quotation on the Calcutta Stock Exchange and meeting the requirements of the Calcutta Stock Exchange Association Ltd., the Shalimar Rope Works Limited is offering 31,000 issued, subscribed and fully paid-up equity shares of Rs. 10 each to the general public for sale at Rs. 16 per share. The equity shares now being offered will be entitled to any dividend declared in respect of the year ended June 30, 1964. The offer will be open for acceptance from October 6 to October 10. It may close earlier at the discretion of the "offerer" but not before October 8.

The offer for sale is being made by Bangur Brothers Ltd. who accepts the full responsibility of the offer. The authorised capital of the company is Rs. 25 lakhs and the subscribed capital is Rs. 12.38 lakhs divided into 1,23,750 fully paid-up equity shares of Rs. 10 each.

The company which was incorporated in 1917 as a private limited company was converted into a public limited company in 1946. It is manufacturing and dealing in fibre ropes and cordages manufactured from fibres of different varieties such as manila hemp, sisal, jute, cotton, coir etc. The working of the company is satisfactory. The company has earned a reputation for its products in India and abroad and its products are being exported regularly.

COMPANY MEETINGS.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

Speech by the Chairman, Mr F. A. Collett, at the fifty-third Annual General Meeting of the Company on 24th September, 1964

Ladies and Gentlemen,

The year under review saw two changes on your Board necessitated by the departure from India of Mr C. N. Kirkus and Mr. H. C. Reeve on retirement. Mr. Kirkus had served the Company for 28 years and Mr. Reeve for 31 years and so had well earned their retirement, and with them go our best wishes.

In their places Mr. Patrick Evan John and Mr. Balwant Kumar Nehru were appointed to the Board on 1st April. Mr. John joined the Company in 1938 on the accounting side, and Mr. Nehru in 1950 on the engineering side. They bring with them a wealth of experience and drive which is already apparent in our deliberations.

Turning to the Accounts I am afraid that, as I foreshadowed in my speech a year ago, the Company has come through a difficult year.

The reduction in profit from the high figure of 1962-63 is almost entirely due to two main causes, indirect and direct taxation; indirect taxation in the form of excise adversely affecting our Company's gross trading profits, and direct taxation reducing the net profits available for distribution.

As a result of the 1963 budget, when not only were the basic rates of excise raised, but an additional 20 per cent special Emergency excise imposed, your Board decided to absorb a large part of the extra taxation on some of the lower priced brands as it was considered probable that had we not done so the higher prices would have put these brands at prices which many consumers would have been unable to pay.

Despite the disappointing financial results of the year under review your Directors are still of the opinion that that decision was a right one because even despite it, cigarette consumption during the year showed a reduction for the first time for many years: and had prices been still further increased this reduction would have been even more marked. I should perhaps point out that the value of our sales as shown in the Profit and Loss Account shows an increase of some Rs. 5 crores but this figure is largely offset by additional excise paid and does not therefore represent an increased volume of sales. Nevertheless it does mean that this extra money was paid out for your Company's products.

This overall reduction in volume is a clear indication of the fact that we have, anyhow for the time being, reached a point at which many consumers, particularly those in the lower income groups can no longer afford to smoke cigarettes. This must of course soon be reflected in Government revenue: and it is my opinion that if the revenue from the cigarette industry is to maintain its buoyancy, this is most likely of achievement by a reduction of excise, particularly in the lower categories and the removal of the special Emergency excise.

I now come to the incidence of direct taxation because for the excise to which I have already referred only accounts for part of our reduction in profits, another large part of which is accounted for by retroactive corporate taxation for which we could not possibly have budgeted.

In the last three budgets there have not only been changes in excise rates: but our liability to direct taxation has been increased by retroactive new impositions and increases in rates. The 1962 budget increased the rate of corporate taxation from 45% to 50% at a cost of Rs. 18 lakhs; the 1963 budget introduced Super Profits Tax at a cost of Rs. 20 lakhs,

and there is an unfortunate possibility that the 1964 budget may raise, perhaps unintentionally, our rate of corporation tax to 60 per cent at a cost of Rs. 31 lakhs. I say "perhaps unintentionally" because there are varying interpretations of the provisions of the Finance Act, 1964 relating to Super Tax on companies. In view of this uncertainty we have thought it wise to provide for the higher rate of 60% in our Accounts.

In the case of a change in excise duty which is primarily a tax on the consumer the difference becomes effective from the date of imposition, and your directors are free to decide how much of the change should be passed on to the consumer, and on this decision is the Company's forward pricing policy fixed. In the case of direct taxation being imposed or increased retroactively in the last trading month of the year, forward planning becomes, to put it mildly, difficult.

These very frequent changes in two major forms of taxation, particularly in a trade where on average 50% of the sale value of our product is represented by excise, are bound to lead to erratic results: and if we cannot have a reduction in taxation, then at least a period of stability is overdue.

Your Directors have in previous years considered it advisable to appropriate part of the profits earned to Reserves in order to retain in the business funds needed to replace fixed assets and stocks at current price levels and to finance expansion. Having reviewed the whole situation they have decided to recommend to you that this year no such appropriations should be made and that reserves previously made should be drawn upon in order to cover taxes retrospectively levied for the previous year. It will then be possible to pay a final dividend of 2½%, making a total of 6½% for the year, which I now recommend.

Now to turn to the more cheerful side of the picture.

A more healthy aspect of the current situation is the more intense competition between the manufacturers but your Company is maintaining a satisfactory position and I have no doubt at all will continue to give a good account of itself.

Competition has a stimulating effect on your Company's management, and the results of our various training programmes which we have carried out continuously for several years are now standing us in good stead in overhauling old, and evolving new techniques on all sides of the business.

The year 1963 marked the Diamond Jubilee of our famous SCISSORS brand and we celebrated this by giving it a modern dress which, judging by the reception it has received, has been warmly appreciated by its loyal followers. I mention this particular item because in fact it is probably not untrue to say that this rejuvenation is symbolic of the many changes that we have made, and shall continue to make to keep abreast, and indeed ahead, of today's trading conditions.

In addition, and with an eye to the future, we have been concentrating on the increasing filter tipped trade where we now have the two leading brands in WILLS NAVY CUT Filter and SIMLA which have recently been followed by SAVOY Mentholated for those who like this variation.

Perhaps I should not leave this subject without a lament for the passing away of the round 50s tin, which has been a feature of the market for so long and which has now become a casualty of the Emergency. The Government can undoubtedly put the tinplate, which is in short supply, to a more vital

severe strain. It is a matter of satisfaction that the Prime Minister has already instituted studies for determining the extent to which our economy can bear the load of gigantic long-term investments. I have no doubt that this will result in a review of national priorities with a view to upgrading projects which will yield goods and services in a relatively short time, thus countering inflationary forces and facilitating further investments from earned surpluses.

The other kind of unproductivity arises from confusion about the character and nature of profits. There seems in some lobbies in our country a view that it is a crime to make profits; I submit that on the other hand, it should be considered an economic crime to make losses. The idea that business profits are good for the economy is difficult for many to accept. What the critics of profit say on the surface is that business aims not at helping people, but at making profits through people. Their instinct tells them that one man's profit is another man's loss, and so they conclude that profit means exploitation. Now the relationship between business profits and economic growth is basically very simple. Profit determines investment, for you obviously cannot invest from losses, and investment is essential to growth. Thus declining profits must mean a serious drop in investment, and therefore a slower growth for the economy; per contra, higher profits would mean higher investment and faster growth. It is no accident that business profits, business investment, and unemployment are the three economic indicators that have remained at recession levels during the current economic downswing.

The matter of rising costs of manufacture is certainly one of alarm. The "cost-price" squeeze situation about which I referred last year has worsened for industry in general and for engineering industry in the metropolitan Calcutta region in particular. Management has the primary responsibility for controlling costs by seeking more efficient ways of making and marketing products. But many of the costs of doing business today in our country lie wholly or partially beyond the control of management. To cite only one and latest example, the runaway price situation has led to increases in rates of dearness allowance payments to our workers in the last three months, which would mean increases in costs for your Company to the extent of about Rs. 10 lakhs per year. If manufacturing costs continue to mount up, they must sooner or later be reflected in increase in selling prices. If the goal of our society is to provide the basic necessities of life at prices which the people can afford, we seem to be somehow awfully

off the track in achieving it. To me there appears to be some confusion between ends and means.

SATISFACTORY TREND

Before closing, I should say that our current operations are maintaining a satisfactory trend, considering the aftermath of the strike. Given sustained hard work by the workers without being diverted by self-seeking men, there should be increased earnings and bonuses for the workmen, increased profits for the investor, increased exports for the country and increased supplies for the domestic market. Our shareholders and others concerned with us can feel reassured that the intrinsic strength of the Company remains unimpaired by the strike. The principal asset of any undertaking is its men, and I feel proud to say that the strike has given ample proof of the worth of our management personnel, as well as our rank and file and operating personnel.

A CALL TO WORKMEN

Our relationship with our work-force remains good in spite of the fact that most of them had to make common cause with aggressive elements due to compulsive forces that bear upon the working class. To the leadership of our Company's labour, and to the workmen themselves, I take this opportunity of making a personal appeal. Strike against production can never, never be in the interest of either the labour group or the country at large. Management has responsibilities to the consumer, the labour and the investor alike. Let us all work in the coming years to make Jay Engineering the lowest cost factory in India, for that is the only way to also making it the highest profit factory, from which increased investments and payments to labour can come.

All of you are aware that our old and close colleague, Shri T. R. Gupta, left the Company during the year to take up the chairmanship of the mammoth public sector undertaking, the Heavy Engineering Corporation Ltd. We are sorry to lose him, but take pride in this singular recognition. Personally to me it has been a great loss, but he remains basically a part of us and we seek his advice in any difficult situation constantly. I am sure you will join me in wishing him a successful career in his new challenging job.

Shri B. S. Agarwal, along with the officers of the Company, supported by the staff and workers, deserve more than our usual thanks for the manner in which they conducted the affairs of the Company in an eventful year.

NOTE: This does not purport to be a record of the proceedings of the annual general meeting.

INDUSTRIAL FINANCE CORPORATION OF INDIA

Speech delivered by Shri A. Baksi, Chairman, at the 16th Annual General Meeting of the Corporation held on the 29th September, 1964.

Gentlemen,

I have great pleasure in welcoming you to this Annual General Meeting of the shareholders of the Corporation.

2. We have assembled here only four months after the demise of Prime Minister Jawaharlal Nehru. It is fitting that we should begin by paying our respectful homage to his memory.

3. Printed copies of the Sixteenth Annual Report of the Board of Directors and the Accounts of the Corporation are already in your hands and I shall, with your permission, take them as read.

4. During the year ended the 30th June, 1964, the Corporation sanctioned a total financial assistance of Rs. 38.27 crores made up of rupee and foreign currency loans of Rs. 25.12 crores, underwritings of Rs. 5.41 crores and guarantees of deferred payments and foreign loans of Rs. 7.74 crores. The quantum of assistance disbursed or made available during the year was Rs. 21.38 crores out of which the cash outgoings amounted to Rs. 17.99 crores. To meet the immediate needs of our borrower concerns, we disbursed during the year interim loans amounting to Rs. 3.42 crores.

5. The gross income for the year was Rs. 507.28 lakhs. Deducting interest of Rs. 262.04 lakhs on borrowings, and other expenses including establishment of Rs. 18.18 lakhs, the gross profit subject to provision for taxation is Rs. 227.06 lakhs. After setting apart a sum of Rs. 101.62 lakhs towards taxation, the net profit for the year comes to Rs. 125.44 lakhs. These results, I hope you will agree, are satisfactory.

6. As for appropriations out of the profits, a total sum of Rs. 106.19 lakhs has been transferred to Reserves which now total Rs. 409.19 lakhs as against a paid-up capital of Rs. 7 crores on the 30th June, 1964. The balance profit of Rs. 19.25 lakhs is being distributed as dividend.

7. The gross financial assistance sanctioned by the Corporation during the last 16 years up to the 30th June, 1964 aggregated Rs. 240.97 crores. The net figure for this period, after taking into account cancellations and withdrawals of Rs. 44.19 crores, totalled Rs. 196.78 crores, made up of rupee loans of Rs. 134.29 crores, foreign currency loans of Rs. 16.89 crores, underwritings and direct subscription to capital of Rs. 14.13 crores and guarantees of Rs. 31.47 crores. Out of the 14.13 crores and guarantees of Rs. 196.78 crores, about Rs. 137.16 net assistance sanctioned of Rs. 196.78 crores, about Rs. 137.16 crores (70 per cent) was for new projects and Rs. 59.62 crores (30 per cent) for existing concerns for expansion, modernisation and diversification. As against the net assistance sanctioned of Rs. 196.78 crores, Rs. 124.45 crores had been disbursed or made available up to the 30th June, 1964. Assistance outstanding on that date, after providing for repayments, aggregated Rs. 84.02 crores.

8. Cash disbursements up to the 30th June, 1964 in respect of loans sanctioned and shares and debentures subscribed to, or taken up by the Corporation as a part of its underwriting commitments, amount to a total of Rs. 105.78 crores. These have been financed to the extent of Rs. 26.87 crores (25 per cent) out of repayment of loans, Rs. 28.24 crores (27 per cent) by borrowings from the market, Rs. 35.60 crores (34 per cent) by borrowings from the Central Government, Rs. 3.98 crores (4 per cent) from foreign credits and the balance of Rs. 11.09 crores (10 per cent) from the paid-up capital and reserves.

9. Projects assisted during the year under review numbered 75, covering a variety of industries such as Textiles (20), Metal Products (15), Electrical and other machinery (14), Glass (7), Basic Industrial Chemicals (5), Paper (4) and Iron and Steel (3). The total number of projects assisted by

the Corporation since the beginning up to the 30th June, 1964, was 334 out of which 224 are new undertakings. The total cost of the 334 projects, for which we sanctioned assistance of Rs. 196.78 crores, is estimated at Rs. 558.00 crores. The last figure is significant because an institution like ours is often judged by the extent to which the projects financed by it are able to mobilise resources from other quarters.

10. The Corporation's contribution to industrial development in terms of production is also significant. For example, in the Paper industry the additional capacity created as a result of our assistance is 1,58,000 tonnes per annum as against the total installed capacity of 5,49,000 tonnes per annum. In Basic Industrial Chemicals, the additional capacity set up is 61,800 tonnes of caustic soda, 2,83,000 tonnes of sulphuric acid and 23,100 tonnes of soda ash per annum. In the Cement industry the additional capacity created is 19,20,000 tonnes and in the Refractory industry 2,09,000 tonnes per annum. In Sugar the additional cane crushing capacity amounts to 67,000 tonnes of sugarcane per day. In Cotton Textiles, the additional capacity installed is 6,44,000 spindles.

11. The Corporation has progressively increased its underwriting activities. During the year, we sanctioned 40 applications for a total amount of Rs. 5.41 crores comprising of equity shares of Rs. 3.86 crores and preference shares of Rs. 1.55 crores. In a number of cases underwriting facilities were sanctioned in addition to loans and other forms of assistance.

12. Up to the 30th June, 1964, the Corporation had sanctioned underwriting facilities in 77 cases for a net aggregate amount of about Rs. 12.31 crores made up of equity shares of about Rs. 6.02 crores, preference shares of about Rs. 3.86 crores and debentures of Rs. 2.43 crores. During this period 52 issues involving an aggregate commitment of over Rs. 9.48 crores were placed in the market and shares and debentures of Rs. 7.55 crores devolved on the Corporation as a result of these operations. The main reason for this was the unsatisfactory condition of the capital market in the last two years.

13. While rupee loans constitute the bulk of our operations, sub-loans in foreign currency have been on the increase. Loans sanctioned during the year under the lines of foreign credit available with us amounted to Rs. 8.04 crores as against Rs. 3.04 crores in the previous year. The net amount of foreign currency loans sanctioned up to the 30th June, 1964 totalled Rs. 16.89 crores. Out of the two loans of \$30 million from the Agency for International Development (AID) of the United States of America, the Corporation had committed itself to a total of \$23.78 million (Rs. 11.32 crores). We have repaid to the AID three half-yearly instalments of principal amounting to \$150,000 (Rs. 7,14,000) up to the 30th June, 1964. Two lines of credit aggregating DM 40 million from the Kreditanstalt für Wiederaufbau, Frankfurt have been fully committed and the demand for DM loans continues unabated. The utilisation of the credit of 50 million Francs from the Banque Française du Commerce Extérieur (BFCE), Paris has unfortunately been slow. We have so far sanctioned four sub-loans aggregating 8.59 million Francs out of this credit.

14. The industry-wise pattern of our assistance has been changing. For some years till 1962, the Sugar industry was at the top of the list of our beneficiaries. In 1963 Sugar made way for Non-ferrous Metals. During the year under review Metal Products headed the list with 18.7 per cent of the total assistance, followed by Textiles (16.7 per cent) and Basic Chemicals (15.1 per cent).

15. As regards the State-wise distribution of our assistance, Maharashtra topped the list in the year under review

use: and we hope that our public will be satisfied with our various alternative packings.

Generally your Company's products have been able to give a good account of themselves against increasing competition and despite increased prices: but in the few exceptions where this has not been the case you may rest assured that the most vigorous action has been and still will be taken.

In the export field we have exhibited in a number of trade fairs, have sent a representative to various European countries and received assistance from our British associates; and we have also made numerous quotations at competitive f.o.b. prices: but all on the whole with disappointing results. The vast majority of countries now have their own cigarette industries which are equally well protected against imports as is the Indian domestic market. There is a limited market in Rupee payment countries, which seems better handled on a Government to Government basis: and it has been arranged to investigate such an arrangement.

Aside of our business which is not perhaps as well known as it might be is the Printing side. We have two printing factories, one in Monghyr and another at Tiruvottiyur near Madras. These were originally set up to supply our own requirements for packaging materials: and they still do this. However Tiruvottiyur, which does some of the most high class offset printing in the country, has of recent years been taking on a certain amount of outside work which we are hoping to develop still further.

I have already referred to the changed outlook of management to meet today's trading conditions and I should now like to say something of our Labour relations, and our relationship with the many trade Unions who represent the workers and clerical staff employed here in Head Office and in our branches throughout the country, in which sphere we consider that our record is good.

The changes in trading conditions to which I have referred necessarily involve changes in working conditions, and these have been under discussion with many of the Unions during the year. Earlier this year we arranged a conference between Management and the leaders of the Unions at which it was agreed, with the unfortunate exception of a small minority

of branches, to set up a Committee composed of four members each from Management and the Unions to review working conditions in Head Office and all the branches represented with a view to rendering recommendations to the Board at the end of this year: and it was further agreed to call a moratorium on demands, apart from local adjustments, during this period.

This Committee has already had several meetings in different parts of the country and I have been struck not so much by the constructive work that they are undoubtedly doing, but by the atmosphere of mutual trust in which they are doing it. On the Committee at least there appears to be an understanding on both sides that the interests of Management and Labour in the prosperity of the Company are the same: and if this is really accepted, and although there will certainly be some bargaining on the way, I think that the fact that these matters are being discussed in a free atmosphere and under no form of duress on either side is a major step forward.

Finally it is usual at this meeting for the Chairman to attempt to give you some indication of our future prospects. I have already said a great deal about the difficulty of doing this. However as regards trading prospects in the long run I am still of the opinion that only the fringe of the eventual cigarette consumption potential has been touched: but that the rate of the increase depends entirely upon two factors, the rate at which the standard of living in the country increases and the rates of excise duty imposed. At present I believe these latter rates to have run ahead of the economic development to an extent that they are not able to be absorbed.

In the short term I believe your Company is well equipped to face the present competitive situation and in the absence of further retroactive taxation I would expect improved results during the current year but that these are not likely to be spectacular. As a result of these improved prospects it is possible to revert to our previous rate of interim dividend and the first interim for the current year of 2½% has already been notified to you. What we are eventually able to pay for the year will naturally depend on the final results we achieve.

JAY ENGINEERING WORKS LIMITED

COMPANY'S INTRINSIC STRENGTH UNIMPAIRED BY STRIKE

MR. CHARAT RAM ON NEED FOR ADEQUATE RETURN ON INVESTMENT

Addressing the shareholders of the Jay Engineering Works Limited, at the 27th Annual General Meeting of the Company, held in Calcutta on Wednesday, September 23, Mr. Charat Ram, Chairman, said:

Friends,

I have great pleasure in welcoming you to the Twenty-seventh Annual General Meeting of the Company.

We should begin our proceedings today, by paying our homage to the memory of Jawaharlalji Nehru. I can hardly add to all that has been said, and what all of us indeed must feel, about this great personality. Mahatma Gandhi secured us freedom from foreign bondage and was truly the Father of the Nation; Panditji attempted to bring freedom from material want in the lives of the people. Few peoples are so lucky as to have as their leader a man of such deep humanism and scholarliness. May I request you to pay homage to Panditji's memory by standing up silently for a while.

We are lucky that a person of Lal Bahadur Shastriji's calibre has succeeded Pandit Nehru as our new Prime Minister. Shastriji is known as a man of sagacity and independence. The pragmatism and the determination with which Shastriji has set about his task is indeed gratifying. In the difficult situation that he has inherited, he has shown firmness of purpose and a sense of realism that augurs well for the future.

STRIKE AND AFTERMATH

The annual report of the Company for the year ended March, 1964, has been with you for some time. The profit for the year bears the mark of a part of the period of the strike in the Calcutta factories of the Company from 17th December, 1963, to the end of May, 1964. However, your directors have decided that, as the decline in profits has been due to an abnormal occurrence, the Company should draw upon its reserves to pay a dividend on equity shares, although a lower one at 8 per cent. This is considered equitable, having regard to the overall responsibilities of the Company. I am hopeful that in the course of the year, the Company will be able to replenish its reserves, while compensating the investors adequately.

LABOUR LEADERSHIP

I should, to begin with, make a reference to the most unfortunate strike which the Company had to face determinedly. A broad analysis of the causes may help to prevent a recurrence of such unfortunate events. The strike affected not only the Company's profits, but also the country's export earnings. It caused enormous loss running to over a crore of rupees to the workmen in terms of loss of wages, bonus etc.; the Government lost large amounts of excise duty and direct and indirect taxes; and the community lost much-needed supplies. The strike certainly did not win any rewards for the workmen. The demands, which were the ostensible cause of the strike, had already been reviewed by the West Bengal Government and some of them had been referred to the Industrial Tribunal for adjudication. The same position obtains after the strike. On the other hand, the tempo of production achieved over many years was broken, and production-based earnings of workers have been maintaining a low level; there is no work for a large number of workers; and, as violent activity must feed on its own perpetrators, scores of workers, including many basically good, honest men, have had to be charged for indulging in violence and intimidation. This picture of desolation and disruption, in an undertaking which has been known for its very high remuneration levels and progressive personnel policy, is certainly most unfortunate. I must repeat what I said last year here, that political and

agitational considerations must give way to the paramountcy of the needs of working men and the industry, if labour leadership is to be meaningful and constructive in the economy of the nation. During the year there has been much evidence in the country, apart from our own strike, to show that there is more pre-occupation on the part of a section of our labour leadership with political and other extraneous considerations than with the ultimate good of the working people and the industry. It is clear that labour leadership needs to have a fresh outlook in the matter of labour relations, if the working class and the economy of the nation are to be spared the tribulations brought about by pseudo trade unionism having political overtones. I consider the workmen of Jay Engineering Works capable of making a dynamic shift in this matter, as they have shown dynamism in the past on so many other occasions.

MORE OUTPUT NEEDED

Of the several factors in the economic situation, making for what is now recognized as an economic crisis, the foremost pertain to food production and prices. Responsible people in all walks of life have their own analysis of the situation. I am not a defender of any anti-social business men, but if a disease is not rightly diagnosed, the cure may be hard to come by. There may or may not be some hoarding of foodgrains and other agricultural produce, at the primary level of the producer, or at the secondary level of the distributor; a part of this hoarding must however be distinguished from normal stocking, for unlike green vegetables which are bought for day-to-day consumption, foodgrains are harvested two or three times in a year and stocked for consumption in the coming months. Furthermore, any hoarding could at worst take place only till the arrival of the next crop. I am sure that our Government is not interested now in finding temporary scapegoats, but in a continuing long-term solution of the problem. The fact is that for over a decade now, the price curve of foodgrains has been steadily going up, in spite of shiploads of American bounty food increasing in number year after year. Some economists even fear that at this rate, some day America might be itself short, to meet the widening gap of our demand and supply position. The answer in my view is to be found in inadequate production, and the inadequacy seems to grow year after year. With some hesitation I would like to suggest that the Government might have a second look on some of the so-called socialist objectives, which have become so sacrosanct, at least so far as agriculture is concerned. There is no question that we have to increase our yields from land, and a great many of our policies may satisfy ideology in some quarters not responsible for results, but may not give the much-needed food that the people of this country need. Socialism, democratic or otherwise, or communism, or even capitalism may remain a paper satisfaction for the people, if they fail to make for more production, and availability of goods.

PRODUCTION INVESTMENT

Another problem of our country is expensive and unproductive investment. Unless capital investment is done with stringent economy, and unless the overall economic return on total investment exceeds the economic cost of the investment, the economy of the country is bound to be under continuing

with 15.8 per cent, closely followed by Andhra Pradesh with 14.5 per cent and Madras with 12.5 per cent. A sizable proportion of our assistance was claimed by the less developed areas the industrialisation of which, as you are aware, the Corporation is keen to assist.

16. The net financial assistance sanctioned up to 30th June, 1964 to industrial co-operatives amounted to Rs. 37.86 crores representing about 19 per cent of our total net financial commitment. This covered 51 sugar co-operatives, three co-operative spinning mills and one unit for extraction of vegetable oil.

17. A review of our loan accounts has shown that no additional provision is necessary towards the Reserve for Bad and Doubtful Debts, the balance in which now stands at Rs. 14.47 lakhs. The existing provision relates to three old accounts, action in regard to which is already being taken.

18. The credit record and the financial position of our borrowers, including industrial co-operatives, continues on the whole to be satisfactory. The percentage of default in respect of instalments of principal and interest as on the 30th June, 1964 was negligible, being 0.88 per cent and 0.66 per cent respectively. Many of the concerns assisted by us have earned sizable profits and 21 concerns have, during the year, declared dividends of 12 per cent or more. The Corporation received during the year a sum of Rs. 77.15 lakhs from borrower concerns on account of premature repayments of principal. The total amount received on account of premature repayments of principal up to the 30th June, 1964, was nearly Rs. 7 crores which included a sum of Rs. 1.12 crores from sugar co-operatives. We welcome such premature repayments and do not charge any premium on them.

19. Among events of interest to us during the year, the establishment of the Unit Trust of India was a major one. We welcome this step taken for the mobilisation of the savings of the public for industrial development.

20. Mr. Robert Michel Titus of the Agricultural and Industrial Credit Corporation of Liberia visited the Corporation during the year to study our procedures and working. Dr. G. Varade Gowda, a senior official of the Mysore State Government and two officials from the Indian Overseas Bank Ltd. and the Punjab National Bank Ltd. were also with us.

21. The General Manager of the Corporation participated in the Second Regional Conference of Development Banks in Asia held at Tehran in October, 1963. During the year, one of our senior officers was deputed to the Economic Development Institute of the I.B.R.D., Washington, for a special course in the appraisal of industrial projects. He also studied the organisation and procedures of the International Finance Corporation in Washington and the Commonwealth Development Finance Company Ltd. in London. We thank these institutions for the valuable facilities given.

22. Our relations with the various Chambers of Commerce in the country and with the borrower concerns continue to be cordial. We appreciate the constructive suggestions made by them from time to time.

23. Our cordial thanks are due to the U.S.A. Agency for International Development (AID), the Kreditanstalt Fur Wiederaufbau and the Banque Francaise du Commerce Exterieur for the consideration they have shown us. Their assistance has added to the capacity of the Corporation to serve the development of industries in the country.

24. Shri K. P. Mathrani, I.C.S., who held with distinction the Chairmanship of the Corporation from the 1st July, 1961, relinquished his office on the 16th May, 1964 on appointment as Secretary to the Government of India in the Ministry of Rehabilitation. On behalf of the Board of Directors I would like to express our high appreciation of the valuable services rendered by him to the Corporation.

25. During the year Sarvashri C. C. Desai, M.Ct. Muthiah

and V. P. Varde retired from the Board. Their active participation in the affairs of the Corporation was of great value and I thank them on behalf of my colleagues on the Board. I also take this opportunity on behalf of the Board to convey our thanks to the members of the Advisory Committees for the able and objective assistance they gave to the Corporation throughout the year. I would also like to thank the non-officials nominated by us on the boards of our borrower concerns for the interest they have taken in their work.

26. Considering the time which elapses between the end of our financial year and the Annual General Meeting it will not be out of place for me to refer to a few recent developments without which the picture before you would be left incomplete.

27. The most notable of these has been the setting up of the Industrial Development Bank of India on the 1st July, 1964. The provisions of the I.D.B.I. Act have been commented upon in the newspapers and journals and the charter of the new body and the role it is expected to play have already received wide notice. Without dilating on these matters I may usefully draw your attention to certain important amendments which the I.D.B.I. Act, 1964 has made to the Industrial Finance Corporation Act, 1948 with effect from the 1st August, 1964. The shares held in the Corporation by the Reserve Bank of India and the Central Government have been transferred at par value to the Industrial Development Bank and the latter has acquired additional shares so as to bring its total holdings up to 50 per cent of the paid-up capital of the Corporation which now stands at Rs. 834.60 lakhs. Certain changes have been made in the provisions relating to the composition of the Board of Directors and the arrangements for the audit of the Corporation. The power of giving policy directives to the Corporation has passed from the Central Government to the IDB. The limit of loans assistance by the Corporation to a single industrial concern has been increased. It has been made possible for the Corporation to have access to financial assistance from the IDB in certain specified ways.

28. I expect that the formation of the IDB and the consequential changes in the IFC Act will enable the Corporation to play a more fruitful role in industrial development. Already, we have done some joint financing with other bodies. Now, co-ordination between sister institutions in the field will grow in depth, lacunae in the requirements of industry will be filled in more easily and very large projects which the Corporation could not handle alone will be assured of comprehensive attention by a consortium of financial institutions.

29. The recent amendments to the IFC Act tend to reduce considerably the Corporation's dependence on the Central Government. It is now incumbent on the Corporation to raise funds for its operations to the maximum extent practicable through its own endeavours assisted, of course, by the provision which remains intact in the law that its bonds will be fully guaranteed by the Central Government. As our requirements of outside funds during the current year will be quite substantial we entered the market a few days ago with bonds of Rs. 6 crores @ 4½ per cent per annum at an issue price of Rs. 99.25 per cent with 12 years maturity. The issue was handsomely oversubscribed within a few hours. We thank our shareholders and other investors for the support they gave us. This was our seventh bond issue, the total raisings by this means from the market up to now being over Rs. 39 crores.

30. It is our duty in the Corporation to review from time to time our own procedures to see if we can relax any of the conditions on which we render assistance to industrial concerns. A recent review has enabled us to take three or four decisions which may be of interest to you and the industrial circles.

31. As you are aware, it has been one of the standard

conditions of our loans that borrower companies shall not declare equity dividend at a rate higher than 8 per cent per annum without the prior approval of the Corporation. In view of the prevailing yields on equity and preference shares and the conditions in the capital market, we have decided to raise the limit of equity dividend from 8 per cent to 10 per cent per annum.

32. Loanee concerns so far had to seek the prior approval of the Corporation to the disposal of any item of assets mortgaged to it. It has now been decided to permit assisted concerns to sell or write off specified items of assets of a minor nature within prescribed limits, where they find it necessary to do so, without the prior approval of the Corporation.

33. It has also been decided that the restriction on the disposal and pledge of shareholdings should not apply to all directors or members of the managing agency but should be confined to those who have a real stake in the assisted concern. The Corporation has already decided to liberalise the condition about personal guarantee of directors and/or managing agents in suitable cases.

34. We have also decided that our right to appoint nominee directors on the boards of assisted concerns should be exercised more selectively in future.

35. I trust that these relaxations in the standard terms and conditions will be welcomed by our clients. It will be my endeavour to maintain a flexible attitude in these matters and make, from time to time, such variations as experience may show to be useful so long as these are in accord with the basic principles of sound financing.

36. Thoughts for the future are a natural concomitant of a review of the past. The Corporation has lived through sixteen years of change, has met with new challenges from time to time and has tried to evolve suitable responses. Now, with the progress of sister institutions set up at the all-India and the State levels and with the growth in the demand for long and medium-term financing of industry we shall face new tasks which will need imaginative handling. It is essential that we take stock of the changes in the situation and adapt ourselves increasingly to a versatile approach.

37. For this purpose we shall need a great deal more of foreign credit than has yet come to us. Negotiations for fresh lines of credit have been under way with the Kreditanstalt and the AID. We have just had news that a further line of DM 15 million has been allotted to us. I hope that from the

AID, too, we shall get further credit. We must, nevertheless, look for more assistance from institutions abroad to make good our deficiency, particularly in the line of convertible currency. Our record will show that we, as a single institution, have been associated with investment of over Rs. 550 crores in the private sector of industry since 1948. While not oblivious to considerations of profit we have consistently laboured to give help where help is needed most and not where it can be most easily given. We have tried and shall try harder in future to ensure that the foreign lines of credit that we have and that we get are utilised to the best and promptest advantage of industry and that no procedural obstacles stand in the way.

38. As for our rupee resources we have to do our best to add to them by revolving our investment portfolio at every suitable opportunity. In August this year we added Rs. 1 crore to our funds by sale of certain debentures.

39. We have to see that while industrial concerns receiving or seeking our assistance are not subjected to excessive rigours or fruitless inquiries, projects are prepared with circumspection and probity, with full attention to technical, financial and managerial details and are implemented promptly and with vigour. A sensitive balance has to be struck by the Corporation all the time between generosity and prudence. An excess of the latter will retard development; an excess of the former may use up valuable resources without bringing an economic dividend. This balance is now particularly necessary when the Corporation has taken a long stride into the field of underwriting. If industry is to flourish, underwriting must go on. At the same time, if the Corporation, which borrows money at 5 per cent interest and is not, basically, an investor in securities on the stock exchanges, has to subscribe in a large measure to new shares, its underwriting has to be wise. In this context, I feel that the staff of the Corporation for technical and financial scrutiny of projects and for advice to entrepreneurs needs strengthening. I am giving my best attention to this matter.

40. The tasks before the Corporation are not easy. But I am confident that we shall fulfil them and pass on to more difficult ones. To my colleagues on the Board I wish to express my sincere thanks for their valuable co-operation and wise counsel. And to conclude, I record with pleasure the appreciation and thanks of the Board of Directors and my own to the General Manager, the other officers and the entire staff for yet another year of devoted work.

THE MYSORE PAPER MILLS, LIMITED BANGALORE-9

Speech delivered by Sri M. D. Shivananjappa, IAS, Chairman and Managing Director, The Mysore Paper Mills, Ltd., at the Twentieth Annual General Meeting of the Company held at Bangalore on Wednesday the 30th September 1964.

As you are all aware, we are meeting under a shadow of depression due to the sad demise of Pandit Jawaharlal Nehru, our First and Illustrious Prime Minister. India and the World have mourned the irreparable loss. May I request you kindly to stand up in silence for a minute and pay homage to the memory of the Departed Soul.

Ladies and Gentlemen,

I have great pleasure in extending to you a cordial welcome to the Twentieth Annual General Meeting of the Shareholders of the Company and place before you the Report of the Directors and Audited Balance Sheet for the year ended 31st March, 1964. These have been circulated already and with your permission I shall take them as read and would proceed to review the salient features of the year's operations.

I am happy to report that your mills have produced 8922

tonnes of paper which exceeds last year's production by 643 tonnes and the rated capacity by 922 tonnes. Sales during the year amount to Rs. 130,30,769 exceeding the turnover of the previous year by Rs. 7,32,009. Curiously enough, production and profits are running in opposite directions and profits are declining year by year. Decline in profits is largely due to the fact that production costs have increased and show no signs of decline, whereas there is a ceiling on the prices of paper. The present satisfactory working results are due mainly to increased production and operational efficiency.

It should be recalled that the Government of India, on the recommendations of the Tariff Commission, fixed prices in 1960 which were disappointing. On the repeated representations of the Industry, Government of India granted an increase of Rs. 60 per tonne in 1962, as against an increase in

cost by Rs. 270 per tonne. It could be seen that this slight increase did not meet the demand of the situation. The representatives of the Industry have been making repeated requests and appeals to the Government of India and have also presented their case supported by facts and figures. I take this opportunity again to repeat my appeal to the Government of India immediately to take steps to issue revised price lists, lest the incentive for expansion of production in the country should disappear altogether.

Turning to the Balance Sheet, I have to state that depreciation on fixed assets calculated in accordance with the rates allowed for normal depreciation and extra shift allowance as per Income-tax Act amounting to Rs. 5,76,201 has been provided. No provision is required for tax on as the Company has no assessable income for the year on account of Development Rebate allowance. However, provision has been made towards tax on dividends as per the Finance Act, 1964 amounting to Rs. 78,750.

Your Directors have carefully considered the question of dividend. In this context, I should bring to your notice that dividend was declared and paid on Rs. 25 lakhs (old capital) and proportionate dividend on Rs. 25 lakhs (new capital) absorbing Rs. 5,46,500 for the year ended 31-3-1962, and Rs. 6,75,000 for the year ended 31st March, 1963 on old Capital of Rs. 25 lakhs and new Capital of Rs. 50 lakhs for the proportionate period, though the new Plant had not gone into production. Having regard to the increased production and turnover, your Directors felt reasonable and fair to recommend declaration of dividend at 9 per cent subject to tax or at the rate of 90 Paise (taxable) per Share on the old capital absorbing Rs. 2,25,000 and at the same rate on the new Paid-up Capital also for the proportionate period absorbing about Rs. 825,000 for the year ended 31-3-64, the total being Rs. 10,50,000. It should be noted that though there is a small cut in the rate of dividend, yet it is paid on an enlarged capital which has not begun to earn.

I am happy to inform you that the Industrial Finance Corporation of India have communicated their approval to our declaration of 9 per cent dividend subject to tax in terms of the Agreement for which I am grateful to them.

I have no doubt that in the light of what I have said, you will not be slow to appreciate and approve the proposals. In regard to the future, I can certainly assure you that increased production and high operational efficiency would be maintained but how far these factors reflect in accounts mainly depends on the attitude and action of the Government of India regarding revision of prices of paper. I should content myself by reiterating the hope that the Government of India would afford the Industry the much needed relief speedily and assuring the shareholders that every endeavour would be made to improve the position.

I am very happy to inform you that the Labour-Management relations continue to be cordial. Your Directors have been pleased to sanction a bonus of 3 months salary or wages and one more month's salary or wages as ex-gratia for having co-operated with the Management in increasing productivity and the same has been disbursed to all our employees.

I am glad to inform you that the implementation of the scheme of expansion has made very satisfactory progress during the year under review.

Before going into details, I have pleasure to inform you that the new paper machine was serviced during the early part of March 1964 and the complimentary pads in your hands have been made on the fine paper turned out of the new machine. The expenditure on development work till the end

of March 1964 amounted to Rs. 278 lakhs inclusive of Rs. 150 lakhs incurred last year.

The foreign currency loan of Rs. 70 lakhs sanctioned by the Commonwealth Development Finance Co. Ltd., London, has been drawn in full, a sum of Rs. 61.97 lakhs against a sanctioned loan of Rs. 70 lakhs has been drawn from the Industrial Credit and Investment Corporation of India, Ltd., Bombay, and a sum of Rs. 55 lakhs against a sanctioned loan of Rs. 60 lakhs from the Industrial Finance Corporation of India, Delhi, in rupee currency up to 31-3-1964 has also been drawn.

I am glad to state that the full range of equipments viz. Paper Machine, Stock and Chemical Preparation Plant and other Paper Machine parts for which orders had been placed with M/s. Escher Wyss of Ravensburg, Germany and M/s. Millspaugh of Sheffield, England and Boiler and Steam Distribution equipment from M/s. Babcock and Wilcox have been received, installed and taken to service during the year. The Duplex Super Cutter from M/s. Masson Scott is received and erected. The erection of Black Liquor Recovery Unit ordered with M/s. Babcock and Wilcox is almost completed.

M/s. J. M. Voiths of Germany, in execution of the contract for supply of bamboo pulp plant have despatched the entire machinery which has also been received at site. But there was considerable delay in receiving the three Digesters and other indigenous equipments ordered in the country. However, I am glad to say that these three Digesters ordered have now been received at site and all the other machinery equipment is also received and erection work is going on in full swing and will be completed by end of November 1964.

The new paper machine and other equipments now installed would help increase production during the current year by the use of imported and indigenous pulps.

It is a matter of special gratification to all of us that while high level of production and efficiency was maintained during the year, the scheme of expansion is also speedily and successfully being implemented.

Your Directors have contributed a sum of Rs. 1001 to the Swami Vivekananda Centenary celebrations.

On behalf of the Company, I should express my grateful thanks to the authorities of the Commonwealth Development Finance Co. Ltd., London, the Industrial Credit and Investment Corporation of India Ltd., Bombay and the Industrial Finance Corporation of India, Delhi, State Bank of Mysore, State Bank of India, and the Canara Banking Corporation Ltd., for their support and valued assistance in the implementation of the Development Plans.

I would also like to express on behalf of the Directors and Shareholders our grateful thanks to the Central and State Governments for their abiding interest in the progress of the Company.

I am grateful to my colleagues on the Board for their whole-hearted support and valuable guidance.

I wish to express on behalf of the Directors and my own, our warm appreciation of the willing and efficient co-operation of all our employees.

Ladies and Gentlemen, with these observations, I now move that the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended March 31, 1964 be APPROVED AND ADOPTED.

N.B.: This does not purport to be a Report of the proceedings of the Shareholders' meeting, a copy of which shall be sent to the Shareholders separately.

ASP/TT-84

KERALA STATE INDUSTRIAL DEVELOPMENT CORPORATION LIMITED

Speech delivered by Shri K. R. K. Menon, Chairman, at the Third Annual General Meeting on 28th September, 1964.

Gentlemen,

1. I have great pleasure in placing before you the accounts of the Kerala State Industrial Development Corporation Ltd. for the year ending 31st March, 1964, and the Report of the Board of Directors of the Corporation on the working of the Corporation during that period. With your permission I shall take the report as read.

2. It is only less than twelve months since we held our previous annual general meeting, but, during this short period, two events have occurred which have caused us all much sorrow and concern. Firstly, we in Kerala, along with the whole nation, were plunged into grief by the sudden demise of our late beloved Prime Minister, Shri Jawaharlal Nehru, who, by his dynamic leadership and far-sighted policies had striven assiduously to set our country well on the path towards the goal of a properly integrated social and political unit. And, secondly, less than four months after this national calamity overtook us, we have had a major incident in our own State where the mounting political tension of some months' duration, culminated recently in the termination of the Cabinet form of government and its substitution by President's rule. The untimely passing away of our late Prime Minister has, I believe, served as a grim — and none too early — reminder to the entire nation that we cannot afford to rest on our oars and enjoy the luxury of living snugly in the protective shade of a great leader's umbrella for ever. The passing away of our Government's Cabinet of Ministers will, I hope, bring us Keralites — from the lowliest to the highest among us — to the realisation of the fact that sheer political immaturity of the kind that we have witnessed for some time past in our State in all its naked ugliness must inevitably result, sooner than later, in the sacrifice of the economic progress of the State. In my speech last year I had referred to the feeling of uneasiness and insecurity which even the then political instability in our State had engendered in the minds of outsiders, and the baneful consequences that this had entailed so far as our industrial development was concerned. I sincerely hope and trust that, whatever may be the form of Government we have, our Government will pay due atten-

tion to the urgent and immediate problem of industrial development on the massive scale and rapid pace that the dire economic plight of our people today undoubtedly calls for.

3. The Corporation's work in the year covered by the report placed before you has, on the whole, been rewarding, and financially successful, as the report and accounts placed before you will show. Our gross income rose from Rs. 2.55 lakhs of the previous year to Rs. 6.25 lakhs in the year under report. This has enabled us not only to write off the entire amount of our Preliminary expenses, but also to provide for a Reserve for Depreciation on our investments, and another Special Reserve for general purposes, amounting to a total of Rs. 1,33,000, and also to carry forward a sum of Rs. 90,369 to the following year. Our issued capital on 31st March, 1964 stood at Rs. one crore ninety-five lakhs, as against Rs. one crore on 31st March, 1963.

4. While we had no lack of funds during the year under report wherewith to finance the industrial schemes approved by us, I regret to say that there was a slight fall in the total number of applications received for assistance from us. Ordinarily, there should have been an appreciable increase in this number rather than a fall, even though slight. I must attribute this unsatisfactory feature to the rapidly dwindling number of industrial licences which have been granted for units in this State. This is a matter which I have repeatedly stressed as deserving the urgent attention of both the Central and the State Governments, as nothing less than some kind of special preferential treatment for us at the hands of the Central Government will help to solve this problem satisfactorily. I regret to say there is no sign yet that a solution on these lines will be forthcoming. All that I can do on this occasion, therefore, is to re-stress this point with all emphasis, and to request the Kerala Government to take up the matter with the Centre as one of immediate urgency brooking no further delay.

5. While we must wait patiently for necessary action in this regard being taken by the two Governments, there is a

good deal that can also be done by all of us in the way of paving the way for attracting industrial capital and entrepreneurship into our State. The first and foremost is the achievement of a modicum of political stability; this I have already mentioned, and needs no further expatiation. Secondly, we would do well to try and achieve a greater measure of stability in the labour — employer relations in the industrial units already established in our State. We have in our State special facilities for developing the sagacity and maturity of judgment that this calls for, in view of the general education and literacy prevalent here; we could profit greatly by capitalising on this. A third thing that our State Government can — and must — do is to take immediate steps to ensure a plentiful and regular supply of electric power for industrial users. We must take note of the hard fact that cheap electricity alone will just not suffice; a regular supply is even more vitally important.

6. Last, but not least, in drawing up and presenting to the Central Government our State Government's suggestions for the fourth Five-Year Plan our Government must keep prominently in mind the primary need for trying to reduce by the maximum possible extent the growing pressure of population on our meagre land resources, and diverting it to industrial enterprise, be it in the public sector or in the private sector.

7. The question of raising additional financial resources for the Corporation will soon have to engage our serious attention, and I hope that we shall find adequate ways and means of solving this problem. We are at the moment engaged in active negotiations with certain foreign companies for securing their technical collaboration in several worth-while schemes, all of which, I hope, it will be found possible to

implement in due course with the assistance of Indian industrialist parties, who will be willing to take over the management. I must, in this connection, make special mention of the assistance and co-operation we have received from the concerned officials of the U.S.A. Agency for International Development organisation in New Delhi in regard to industrial schemes in which we have sought American technical and financial collaboration. While expressing my sincere gratitude to the A.I.D. for their invaluable assistance and advice, I should also like to add that a team of experts from that organisation has recently completed an on-the-spot study of Kerala's economic — and particularly industrial — needs and potentialities, following the discussions which took place between the U.S.A. Ambassador, Mr. Chester Bowles, and our then Chief Minister. I am keeping in close touch with the A.I.D. officials in this matter, and I hope that appreciable results in the form of substantial aid to Kerala will follow from this in due course.

8. In conclusion, I should like to express, on behalf of the entire Board of Directors, our heartfelt thanks to all the industrial entrepreneurs, Indian as well as foreign, who have helped us, in the course of the year under review, with their co-operation and assistance, often in the face of heavy odds. Our grateful thanks are also due to the Kerala Government for the assistance and co-operation we have received from them, and in particular to the former Industries Minister of Kerala, Shri K. A. Damodara Menon, whose warm and enthusiastic support of our Corporation's activities had always been a source of inspiration and strength to us all.

BUSINESS & SERVICE

The Bank receives deposits, gives advances against approved securities, purchases bills, sells drafts and telegraphic transfers and transacts all types of Foreign Exchange business. Through its internal net-work of branches and world-wide business arrangements it provides every kind of banking service.

R. B. SHAH

General Manager.

CHAIRMAN'S STATEMENT

THE FERTILISERS AND CHEMICALS TRAVANCORE LIMITED

Addressing the Twentieth Annual General Meeting held at the Registered Office, Udyogamandal, on 29th September, 1964, Mr. T. A. Joseph Said :

Gentlemen,

I am glad to welcome you to this the 20th Annual General Meeting of the Company and to present to you the accounts of the Company and the Report of the Directors for the year ended 31st March, 1964.

2. As in the previous year inadequate power supply was the Company's major problem during the year under review. There was a drastic power cut in the first three months of the year. Again power cut was resumed in February 1964 and continued till the end of June. During the periods of power cut there were several occasions when the posit on became so critical that there was no alternative but to close down the entire plant as it would have otherwise constituted a grave risk to continue to operate it under marginally safe conditions. The total loss in the sale value of production on account of power cut amounted to over Rs. 2.5 crores during the year. Consequently the Company's results have not been as good as one could have expected. In spite of this position it is gratifying to note that the Company has been able to break even and to make a small profit of about Rs. 12 lakhs, after meeting charges on account of depreciation. This has been possible only due to the unstinted efforts of the Executives and the workers and I would like to take this opportunity to record our appreciation of their efforts.

3. Power supply continues to be our major problem. A solution to this has to be found as early as possible if the Company should work on a satisfactory basis. There are several major hydro-electric projects under various stages of progress in Kerala State now. I am not aware if any of them will be commissioned this year. Even with all the hydro-electric projects coming into operation we will continue to be at the mercy of nature unless adequate insurance against its vagaries is provided in the shape of a reasonably large thermal power station. Your Company has been making representations to the Government of Kerala since 1960 for the installation of such a station. I am glad to say that our request has at last been taken up during this year and I gather that the Government have decided to put up a thermal station with a minimum capacity of 100,000 KW at Coch'n. I do hope that the work on that project will be taken up expeditiously.

4. In the light of what I have stated so far you will appreciate that the Company has not been able to declare a dividend this year. The current year also has started with a drastic power cut that lasted for three months resulting in a loss of production amounting to a sale value of approximately Rs. 1 crore.

5. The Third Stage of Expansion is well under way. Although scheduled to be completed in 1965-66, it is expected that most of the plants will be ready for commissioning by the end of this year. But we will be requiring another 20,000 KW of power for operating the plants when the expansion is completed. We are hoping that the Kerala State Electricity Board will be able to give us this power; but if they do not,

the Company will not be able to take any benefit from the expanding capacity till the required power is made available.

6. Another factor that has been causing us concern is the possibility of a severe shortage of water in the Periyar river when the Idikki power project is completed. The Idikki project is designed to generate 800 to 1,000 MW of power. It is based on the waters that flow into the Periyar now. When the project is completed, all that water will be diverted to the Moovattupuzha river as the power house will be located on one of its tributaries. Such a situation can have dangerous consequences as the Ernakulam - Alwaye industrial belt is bound to suffer during the summer months on that account. Your Company has represented this matter both to the Government of Kerala and to the Government of India. We had suggested that the Government revise the plans for Idikki in such a manner as to provide at least a part of the water to flow back into the Periyar. If the water in the Periyar turns saline near the industrial area, factories like ours may have to be closed down for about 3 to 4 months in the year. I understand that the seriousness of this situation has been realised by the Government and that they are considering this proposal along with certain other alternatives.

7. As most of you must be aware, raw naphtha is the feed-stock used in your Company's Oil Gasification Plant for production of Hydrogen, which is one of the constituents of Ammonia. As this is a very important raw material in the manufacture of chemical fertilisers, the Government of India were pleased to exempt it from the excise duty payable on it to the extent of 95 per cent. This position is recognised in States like Madras and Maharashtra where fertilisers are being made out of raw naphtha. In Kerala the situation however is different. Originally raw naphtha was charged sales tax

at 3 per cent. Recently the Government of Kerala seems to have decided to treat it as a petroleum product and charge sales tax at 15 per cent. This will seriously upset the economics of production of your Company. A representation has therefore been made to the Government of Kerala to reconsider the matter and restore the original position. Raw naphtha is the raw material for most petrochemical industries. In Kerala, fertiliser industries can be developed only on the basis of raw naphtha being used as a raw material. If this raw material is charged this high rate of Sales Tax like a finished product, it will cripple the fertiliser industry in Kerala. I hope the Government will realise the gravity of the situation and revise the sales tax on raw naphtha.

8. Last year I had informed you of the directions received from the Government of India that your Company should plan, design and construct three more major fertiliser plants in South India during the fourth Plan period. Your Company has since then been advised by the Government of the location of two of these plants. One of them is proposed to be built at Madras and the other at Cochin, as near to the Refineries as possible. The project reports for these projects have been prepared by the Company and submitted to the Government of India for approval and further directions.

9. I had mentioned to you last year of the Company's intention to promote a Fabrication Shop in collaboration with the Davy-Ashmore group of the UK for the manufacture of specialised items of equipment required for the fertiliser and chemical industries. I am glad to say that a formal agreement has been drawn up between your Company and Messrs. Davy & United Engineering Company of the UK, one of the units of the Davy-Ashmore group, for the establishment of such a Workshop. As soon as the Government of India's approval to the agreement is obtained, further steps will be taken to organise the new Company.

10. Your Company has also been able to secure the consent of Messrs. Power-Gas Corporation of the UK, a member of the Davy-Ashmore group and a well-known engineering and contracting organisation in the field of chemical engineering, to collaborate with your Company for setting up an Engineering & Contracting Organisation. The Heads of Agreement drawn up in this regard are being submitted to the Government of India for their approval. Further steps will be taken on receipt of Government approval.

11. Most of you must be aware of the steps taken by your Company to promote the use of fertilisers in South India. These measures have been appreciated by the State Governments as well as the Centre. The Fertiliser Festival, a new concept introduced by your Company in the field of fertiliser promotion, has now been accepted as one of the best means of propagating fertiliser use. The Madras Government for example has started organising fertiliser festivals on their own initiative and with the co-operation of suppliers.

The distribution net-work has also expanded considerably during the year under review. Today, your Company has 53 Central Depots and about 1,900 Authorised Agents in Kerala State alone. In Madras, Mysore and Andhra Pradesh, your Company has been spreading its distribution system at a rapid pace. Recognising the efficiency of the methods followed by your Company in fertiliser distribution, the Government of Madras have invited your Company to assist them in the distribution of nitrogenous fertilisers, sales of which were so far confined to co-operatives. Your Company has gladly accepted the invitation and will be starting distribution of nitrogenous fertilisers in Madras State within a few days.

Your Company's agronomists continued to render useful services to the farmers of South India. The nature of services

included the maintenance of demonstration plots, supervision of manuring operations, supervision of application of pesticides and speedy analysis of soil samples.

12. Employee-employer relations continued to be cordial during the year under review. But in July this year a new situation has developed. A member of our Managerial cadre has been elected as the President of the Union. The Union has been insisting on our recognising him as the President of the Union. It is most embarrassing for any Management to recognise one of its own members as an office-bearer of the Union; especially so when he has been the Assistant Personnel Manager of the Company and has conducted negotiations on behalf of the Management with the Union. It will be difficult to find such an instance anywhere else in trade union history. Along with this the Union had also raised an issue relating to the grant of bonus for the year 1963-64. Bonus payment is governed by the long term agreement between the Union and the Management. Any difference of opinion relating to any of the clauses of the agreement has to be referred to the Labour Commissioner for arbitration according to the agreement. The issues were therefore referred to the Labour Commissioner in terms of the agreement for arbitration.

As the Union has refused to accept arbitration, the Government of Kerala have referred the issue relating to Bonus for adjudication. In regard to the other point, namely the anomalous position of a manager holding an office in the Union, the Union has been conducting an agitation for over a month now. A strike notice was given on the 21st of August. The Union has been extending this notice on the dates of expiry. So far no strike has taken place. The Management believes that for the efficient running of an industrial unit a healthy and strong trade union is necessary; but at the same time no management can afford to compromise on fundamental principles. The question now posed by the Union has very grave implications and if conceded shall strike at the very roots of management and trade union relationship. The Management have therefore advised the Union that so long as their President continues to be a member of the Managerial cadre of the Company they will find it difficult to hold any discussions with him. I do hope that the Union will appreciate the difficulty of the Management and take a realistic view of matters.

13. I now move that the Directors' Report and the Audited Statement of Accounts for the financial year 1963-64 be adopted.

N.B.: This does not purport to be a report of the proceedings of the General Meeting.

RECORDS AND STATISTICS

Annual Survey of Industries

THE ANNUAL Survey of Industries just released by the Industrial Statistics Wing of the Central Statistical Organisation gives a comprehensive picture of the industrial progress made in 1962 as compared with 1961. The survey covers all the factories which employ 50 or more workers with the aid of power or 100 or more workers without the aid of power. Such factories account for 86.6 per cent of the total productive capital employed in all industries in India and 81.6 per cent in terms of employment and gross output.

It is encouraging to find that all the important indices of industrial growth have recorded increases during the year 1962. While the number of workers employed in reporting factories increased by about 5.4 per cent, their salaries, wages and fringe benefits have gone up by as much as 7.1 per cent. Value added by manufacture, however, has not kept pace with the rate of growth in productive capital. Thus, while the productive capital went up appreciably by 29.7 per cent, value added by manufacture gained only by 8.1 per cent.

	1961	1962	Percentage increase 1962 over 1961
1. Number of factories	9,161	9,733	6.24
2. Number of factories reporting	8,930	9,314	4.30
3. Productive capital (Rs. crores)	2,374	3,078	29.65
4. Employment (In thousands)	3,050	3,215	5.41
5. Salaries, wages and benefits (Rs. crores)	536	574	7.09
6. Ex-factory value of output (Rs. crores)	3,693	3,966	7.39
7. Value at factory of input including depreciation (Rs. crores)	2,716	2,892	6.48
8. Value added by manufacture (Rs. crores)	987	1,074	8.10

Value added by manufacture is a measure of the contribution of the manufacturing industries as a whole to the national income. Taking this as an index, textiles rank first followed by iron and steel industries, miscellaneous chemical

products, miscellaneous food products, machinery except electrical and sugar and gur. The pattern is more or less similar to that of 1961 in so far as these six industrial groups are concerned.

PERCENTAGE SHARE OF VALUE ADDED BY EACH INDUSTRIAL GROUP TO TOTAL

Industrial Group	1961	1962
1. Spinning, weaving and finishing of textiles	31.16	29.33
2. Iron and steel basic industries	6.32	7.72
3. Manufacture of miscellaneous chemical products	4.84	5.62
4. Manufacture of miscellaneous food preparations	5.79	5.19
5. Manufacture of machinery except electrical machinery	3.87	4.35
6. Sugar factories and refineries	4.76	4.04
7. Manufacture of rail-road equipment	3.99	3.71
8. Basic industrial chemicals including fertilisers	3.93	3.51
9. Manufacture of electrical machinery, apparatus and appliances	3.82	3.20
10. Printing, publishing and allied industries	2.54	2.80
11. Manufacture of rubber products	2.71	2.65
12. Electric light and power and gas manufacture and distribution	2.75	2.44
13. Manufacture of metal products (except machinery and transport equipment)	2.20	2.26
14. Tobacco manufactures	2.02	1.79

The position of the States in the industrial sphere is brought out in the following table. It will be seen that Maharashtra, West Bengal, Gujarat, Madras, Bihar, and Uttar Pradesh are the most industrially advanced States in the country. In the year 1962, these six States accounted for 67.0 per cent of the reporting factories 65.9 per cent of the productive capital, 72.8 per cent of employment and 81.5 per cent of the value added by manufacture. The position is almost similar in 1961 in so far as these six States are concerned. The table overleaf gives a comparative picture of the remaining States in respect of these main characteristics in 1961 and 1962.

PERCENTAGE SHARE OF STATES IN SELECTED ITEMS IN 1961 AND 1962

State	No. of Reporting Factories		Productive Capital		Employment		Ex-factory Value of Output		Value added by Manufacture	
	1961	1962	1961	1962	1961	1962	1961	1962	1961	1962
1. Maharashtra	20.33	21.70	22.60	20.23	21.31	20.85	24.45	24.96	26.96	28.58
2. West Bengal	16.07	16.05	21.88	17.42	22.28	21.53	22.04	21.36	20.60	22.48
3. Gujarat	9.48	10.31	7.94	7.24	10.09	9.40	8.75	8.47	10.20	8.60
4. Madras	8.75	8.94	6.13	6.38	7.45	7.39	7.58	7.93	8.15	8.20
5. Bihar	2.97	3.35	11.45	9.40	5.76	5.77	8.29	7.78	6.80	7.85
6. Uttar Pradesh	6.64	6.81	7.06	5.25	8.27	7.88	7.83	7.28	6.34	5.80
Total Share of six States	64.24	66.96	77.08	65.92	75.16	72.82	78.94	77.78	79.05	81.51

PERCENTAGE SHARE OF STATES IN SELECTED ITEMS IN 1961 and 1962 (Contd.)

State	No. of Reporting Factories		Productive Capital		Employment		Ex-factory Value of Output		Value added by Manufacture	
	1961	1962	1961	1962	1961	1962	1961	1962	1961	1962

A Fraud on the Nation?

FROM THE trend of discussions in the Planning Commission on the size of the fourth Plan, there is reason to fear that the Prime Minister may have arrived at his ideas on reorganizing that body too late. It would be attaching too much value to the Planning Commission as it has been functioning over a period to accuse it of seeking power without responsibility. While it had certainly exhibited much irresponsibility at critical stages of the nation's development, it must be conceded that it has never had real power, barring, of course, some power for occasional mischief. In this sense, the Planning Commission must be rated rather lower than a harlot in the social scale attaching to Mrs. Warren's profession and there is surely more than a touch of gay abandon in the spirit in which the Planning Commission has been talking of a fourth Plan stretching between Rs. 21,000 crores and Rs. 24,000 crores.

To talk of outlay on the fourth Plan more than twice that on the current Plan in the economic circumstances and prospects which the nation has to reckon with at present does not seem to us to be a sane, let alone a sensible, exercise. On any objective assessment of the economic context, it must surely be conceded that virtually none of the factors which could justify an immediate, large increase in the rate of Plan outlay exists at present. First and foremost is the fact that it is not open to the country now, as it was during the first Plan and at least part of the second Plan, to assume that non-development expenditure could reasonably be expected to be kept under some degree or other of planned restraint. The Government itself has admitted often enough that the highest priority in resources unfortunately belongs no longer to development. That entitlement has now gone to defence. It follows that it has become more important now than ever before to consider the size of the Plan in relation to other essential calls which must be met from the total resources available within or to the community.

Secondly, the rate of growth of population being above 2.5 per cent rather than below, the encroachment of current consumption on investible resources must naturally be expected to go far deeper than is convenient. It is true that there is greater awareness now of population control and that it is proposed to make large allocations of financial and technical resources for family planning programmes in the fourth Plan. But it is evident that these measures can have no moderating effect in the very short period over the increasing pressure of population. Therefore, so far as the fourth Plan is concerned, the investment programme must necessarily allow for the sustenance and consumption needs of a population growing more rapidly than hitherto.

This leads us to the question of price stability. Thanks partly to the rapid growth of population and partly to the increase in aggregate demand from other causes in the context of disappointments and delays in the expansion of current production, especially in the agricultural field, the nation is now playing reluctant host to inflationary pressures. The Planning Commission has become accustomed to make projections on the sizes of succeeding Plans on the assumption that the price line could and would be held irrespective of projected development spending. It is not possible any longer to nurse such wishful thinking. Over the last one year or so it has been conclusively proved that the price line cannot, in fact, be held in the context of current policies and programmes which the Planning Commission, by advocating a Rs. 20,000 crore-plus fourth Plan, evidently wants to see pushed towards their extreme limits. Surely, if in 1964 it could be held to have become urgently necessary for the Central Government to prune its expenditure in order to avoid a further aggra-

vation of instability in the economy, there cannot be much seriousness or sense in suppositions that some miracle would enable the country to contemplate vastly larger expenditures in 1966 or 1967. Is the Planning Commission imagining that after limping for four years, the third Plan is going to take a great leap forward in the fifth?

It is of course being argued in favour of a Rs. 20,000 crore - plus Plan that this magnitude of outlay is necessary for certain rates of agricultural, industrial or aggregate economic growth which are *per se* reasonable. We must bluntly say that this is a dishonest argument. There is the record of 13 or 14 years of Plan execution to show that assumed ratios of inputs and outputs never work themselves out in practice. Actually in many sectors of the economy the correspondence between outlay and output has been so nebulous as to be negligible. This is because, for one thing, output and growth in the vast area of agricultural production still continue to be influenced by data inaccessible to planners. More important still, for some mysterious reason, economic planning in this country has come to be synonymous with the concept that much the greater part of development expenditure should be directly undertaken by government agencies. The public sector having not succeeded in being a prudent or productive employer of capital, the return in terms of economic growth from the greater part of the investments undertaken in the name of the Plans has been very low. There is no reason to believe that the public sector is going to become spectacularly more efficient suddenly simply because the Planning Commission desires to write up a big fourth Plan.

Finally, it seems to us extremely important that our Government and our people must face up to the fact that, we as a nation, are rather slow in doing things. It has been said that one of the more important impressions which the Finance Minister has brought back from Tokyo, which he visited for the Fund and Bank conferences, is of the speed with which the Japanese have executed projects in their country. In Tokyo a mono-rail has been put up in 10 months and a major overhead highway in about 11 months. The Japanese seem to be able to build 1,000-room hotels in less time than it takes the Delhi Administration to patch up stretches of monsoon-washed roads in the city. It is true that this is a deplorable state of affairs and that something must be done about it. But our point is: Is the Planning Commission justified in planning as if this problem of national efficiency does not exist at all?

Surely, neither the Planning Commission nor the Government is entitled to plead that the public should trust in professions or promises of vastly enhanced competence in the years immediately ahead. If there are, indeed, so much resources and powers with these august bodies, it is right to ask the simple question why all this wonderful potential is not being tapped here and now

so that in the 18 months or so still left of the third Plan, something may be achieved to wash up a little its tainted image as a crippled and crawling creature. The back-room boys of the Perspective Planning Division of the Planning Commission may talk till they are blue in the face of the essentiality of high investment in order to secure reasonable living conditions for the population down to the lowest tenth. The fact remains that expenditures unrelated to the circumstances determining their efficient direction and utilization impoverish the nation instead of enriching it. A policy of posing paper outlays out of touch with preceding performances has robbed succeeding Plans of more and more of their substance and stamina. To persevere obstinately in this policy would be to take unnecessary and unjustifiable risks with economic and social stability. The Planning Commission is wont to argue that targets should not be determined by resources within sight at the time of drawing up a Plan, since that would undesirably cramp the style of perspective planning. We wish it were also aware at least to some extent of the even greater danger of distorting economic policies and developments which is inherent in superimposing on the Government fiscal and other obligations which it cannot reasonably assume in the given context. To force the pace unduly in the matter of the mobilization of resources is, as has been proved over and over again, to court inflation. Should a Rs. 20,000 crore-plus fourth Plan ultimately come to be foisted on the country, it would be tantamount to serving the community notice of intolerably oppressive fiscal, monetary and physical economic disciplines. It has been suggested in some quarters that since the first year of the fourth Plan

Eastern Economist 20 Years Ago OCTOBER 6, 1944

IN FRAMING the proper price policy for India after the war, there are two sets of considerations to be taken into account. In the first place, wide disparities in national price levels have emerged under war-time controls and, although Indian price level has risen steeper than in such countries as the U.S.A. and U.K., there are other countries, viz., China, Middle East and Turkey, which have registered a much bigger increase in prices than India, and in the readjustment which will be necessary, the correct height of prices will have to be decided in the light of the occurred inflation in those countries and the averted inflation in others capable of coming to the fore when wartime restrictions are relaxed.

If, from the competitive point of view, reasonable parity with external prices is essential, proper relationship between the different groups of relative prices within the country itself is no less essential for internal harmony and equilibrium. The general price level is, after all, composed of the prices of the diverse groups of commodities, and it is the reasonable relationship among them which we decide upon as being desirable which should determine the height of the general price level.

would be a pre-election year, it would not be politically advisable to initiate in that year the process of revenue gathering for that Plan. It must be equally clear that after at least two draconian budgets, the final year of the third Plan would be even more unsuitable not only politically but also economically for ante-dating the revenue effort of the fourth Plan. It follows that most of the resources efforts of the monstrously large fourth Plan now being canvassed will in fact have to be concentrated in the four years after 1966-67, with nothing to show that, between now and then, the nation's — and

the Government's — economic capabilities would have greatly grown. It may of course be suggested that since there have been shortfalls in the second and the third Plans, too much need not be made of prospects of shortfalls in the fourth Plan as well. This contention ignores the vital point that planning in that spirit, which is deceptive as well as self-deceiving, leads to a rate of economic progress which is slower than it might otherwise have been and to a degree of social instability which could well have been avoided. It would, therefore, be an impermissible fraud on the nation.

Export Credit and Guarantee Corporation

AN IMPORTANT step taken by the Government towards export promotion is the setting up of an organisation to provide exporters from India insurance against export risks. It is the object of this article to analyse the functions and performance of this Government-owned Export Credit and Guarantee Corporation during the last six and half years of its existence ending 31st December, 1963 from the data published by the company.

The main function of the Export Credit and Guarantee Corporation Limited (formerly known as Export Risks Insurance Corporation Ltd.) is to encourage, facilitate and develop trade by providing exporters from India, insurance against certain commercial and political risks resulting in non-payment by foreign buyers. The insolvency of and the protracted default in making payment by buyers and the commercial risks and changes in import policy, delay in the transfer of funds stemming from payments difficulties of buyers' countries, war and civil war are the important political risks which are covered by the Corporation. These are the risks over which exporters cannot have any control and no insurance against such risks is available from private insurers. Generally, the corporation protects insured exporters against losses arising from circumstances outside their control and that of the buyers. As such,

the Corporation does not cover the risk of non-acceptance of goods by a buyer. It does not also cover the risk of non-acceptance of and/or non-payment where goods are exported on payment against documents. Covering this risk would be contrary to the basic principle of credit insurance. Further, it is likely to encourage unscrupulous persons to put the Corporation in jeopardy through exports of goods of substandard quality. The Corporation however compensates the exporter for a percentage of the loss if he can establish that the exporter is not at fault by obtaining a final judgment against the buyer. Where an exporter obtains a judgment against the buyer for his failure to accept delivery of goods or pay for documents where goods are exported on payment against documents and that judgment being not final because an appeal has been filed against it, the exporter could obtain an advance against the amount payable as claim by furnishing a bank guarantee.

The Corporation bears the main burden of risk — 80 per cent in the case of commercial risks, such as default or insolvency of the foreign buyer and 85 per cent in the event of political risks arising from insurrection or war, unforeseen import restrictions, embargoes on transfer of funds in the buyer's country and other similar causes. The Corporation also endeavours

TABLE I.

Maximum Liability (Rs. lakhs)	771	1291	1926	1995	3.6	54.6
III. Risk value covered during the year (Rs. lakhs)	697	1201	2069	2945	42.3	145.1
IV. Bank Finance availed of (Rs. lakhs)						
(a) Packing credit policies (FRESHSHIPMENT)	0.6	54	258	395	53.1	626.5
(b) Assignments (Postshipment)	237	320	251	412	64.1	28.8
V. Premium Income (in thousands of rupees)	236	348	563	647	14.7	85.6

to examine the probity and financial status of every overseas buyer on its record, with a view to improving the quality of its own risks and, at the same time, offering its policy holders an insight into the standing and credit worthiness of their clients. The Corporation claims to have built a library of credit information on as many as 15,000 overseas buyers — and this service is being improved and enlarged.

Altogether, the Corporation is offering credit insurance facilities in line with those of the leading credit insurers of the world. It offers a wide range of policies, ensuring protection against credit risks from the “date of shipment” or the “date of contract” in accordance with the requirements of the exporter. It also provides a “Packing Credit Policy”, by arrangement with the commercial banks, which enables the exporter to secure from them preshipment credits — above the line of the banks’ normal rating of their clients — for the purpose of purchasing, processing and packing goods destined for the export market.

Table I (page 673) shows the business done by the Corporation during the last four years—

It will be seen from Table I that during 1963, the number of policies issued has risen by 31.1 per cent, the “maximum liability” in force by 3.6 per cent, the value of risks covered — the real measuring rod of growth — by 42.3 per cent. The average premium rate for overseas risks insurance continued to remain around 1¼ of a per cent. In 1963, the value of risks covered was of the order of Rs. 29.45 crores, which corresponds roughly to about 4 per cent of India’s total exports. Although 60 per cent of our exports are in traditional items in respect of which the exporters have old and established connections and do not feel the need of risk insurance so keenly, the small coverage of the exports by the Corporation only points out the need for augmenting the resources of the Corporation. The Mathrani study group set up by Government in 1962 had recommended that an export oriented credit institution should be set up as an adjunct to the export promotion machinery in the country. In pursuance of this recommendation, the Export Risks Insurance Corporation has been transformed into a full-fledged Export Credit and Guarantee Corporation which, besides covering the schemes of export risks insurance formerly administered by ERIC, will also furnish various kinds of guarantees to banks, with a view to securing for the exporters more liberal credit facilities at finer rates of interest. The guaranteeing functions of the Corporation will be substantially enlarged by the ECGC; and there are plans to evolve new covers to make it possible for banks not only to “discount” bills which they would ordinarily accept only for “collection”, but to provide more liberal credit facilities at the postshipment stage as well. The ECGC is expected to co-operate with banks in the provision for credit facilities for exports. Government have

also decided to raise the paid-up capital of the Corporation from Rs. 50 lakhs to Rs. 2 crores.

The need for augmenting export risk facilities would also be evident from the claims experience of the Corporation from the commencement of its operations in 1957 to December 1963, given in Table II.

TABLE II
CLAIMS

Nature of Claim	(In Rs. '000)			
	Claims paid	Recoveries	Written off	Net outstanding
Insolvency	394	2	55	337
Default	1204	720	97	387
Exchange Transfer	38	10	—	28
Other	53	2	19	32
TOTAL	1689	734	171	784

It would be seen that the Corporation had paid claims amounting to Rs. 17 lakhs, of which it has been able to recover only Rs. 7 lakhs and about Rs. 2 lakhs have been written off. The premium income received by the Corporation from its commencement in 1957 to the end of 1963 amounted to Rs. 20 lakhs and it has paid claims amounting to Rs. 17 lakhs, of which only Rs. 7 lakhs has been recovered. Although the above data would not be adequate for reaching any definite conclusions, it may broadly be inferred that there is need for increased insurance facilities. The Corporation has been compelled to write off already claims amounting to Rs. 1.7 lakhs and the amount finally written off might be higher.

The fact that some payments underwritten by the Corporation have failed raises an important question as to whether in the case of these payments not underwritten by the Corporation, the amount of loss to Indian exporters might not have been higher. In the case of these other exports, the screening by the Corporation of the credit-worthiness of the importer was not there and so possibly the amount of loss to the Indian exporter was higher. To the extent to which these exporters did not take a policy due to the limited facilities at the disposal of the ECGC is another reason why the facilities of the Corporation should be augmented. There may also be cases wherein the exporters allowed certain uninsured payments “to fail” so that a part of the unaccounted money could be held abroad. Increasing the facilities of ECGC and making it progressively compulsory for exporters to insure with this organisation will go a long way in preventing this drain in our foreign exchange resources.

Highlights of the Week

I.F.C.: SWEET AND SIXTEEN

THE INDUSTRIAL Finance Corporation of India has faced a variety of challenges through its sixteen years of existence and has played a significant role in the advancement of Indian industry. Mr. A. Baksi, Chairman of the Corporation, while tracing its progress during these years at the annual general meeting held recently, stated that net financial assistance sanctioned during the last sixteen years was to the extent of Rs. 196.78 crores — rupee loans of Rs 134.29 crores, foreign currency loans of Rs. 16.89 crores, underwriting and direct subscription to capital of Rs. 14.13 crores and guarantees of Rs. 31.47 crores. Out of the net assistance sanctioned, the new projects claimed 70 per cent while the remaining 30 per cent was utilized for expansion, modernisation and diversification of the existing concerns. The Corporation has assisted during the past sixteen years 224 projects covering a variety of industries and its contribution in terms of production meant an additional capacity in the paper industry to the extent of 158,000 tonnes, caustic soda 61,800 tonnes, sulphuric acid 283,000 tonnes, cement 1,920,000 tonnes, sugar 67,000 tonnes of sugarcane crushing capacity per day and in cotton textiles an additional capacity of 644,000 spindles. Its contribution by way of underwriting facilities was also substantial and aggregated to Rs. 12.31 crores for 77 cases — Rs. 6.02 crores in equity shares, Rs. 3.86 crores in preference shares and Rs. 2.43 crores in debentures. During this period 52 issues involving an aggregate commitment of over Rs. 9.48 crores were placed in the market. Shares and debentures of Rs. 7.55 crores devolved on the Corporation as a result of these operations which indicated that the response in the market was comparatively poor. This fact was conceded by Mr. Baksi, who attributed the poor response to the unsatisfactory condition of the capital market during the last two years in particular.

The Chairman referred to the setting up of the Industrial Development Bank of India which now holds 50 per cent of the paid-up capital of the Corporation. The Industrial Development Bank has acquired the shares held by the Reserve Bank and the Central Government and this change is likely to offer the Corporation a more fruitful role. Recently the Corporation took some significant decisions which will make its assistance acceptable to a larger number of entrepreneurs. It was one of the standing conditions of the loans offered by the Corporation that borrower companies would not declare annual equity dividend at a rate higher than 8 per cent without the prior approval of the Corporation but this limit has now been raised to 10 per cent. Similarly the Corporation has relaxed the condition regarding the prior permission of the Corporation for the disposal of any item of assets mortgaged to it. It has now been decided to permit assisted concerns to sell or write off specified items of assets of a minor nature within the prescribed limit without the prior approval of the Corporation. It has also been decided that the restrictions relating to the disposal or pledging of shareholdings would not apply to all directors or members of the managing agency but would be confined to only those members who have a real stake in the assisted concerns. The Corporation has also decided to liberalise the condition about personal guarantee of directors and managing agents in suitable cases. It has been decided that the right of the Corporation to nominate directors on the boards of assisted concerns should be exercised more selectively. All these relaxations have a far-reaching significance and will, without doubt, enhance its popularity.

In order to discharge all its obligations creditably, the Corporation will need much larger volume of foreign exchange

than it has been able to obtain in the past. It has already initiated negotiations for credit from the AID while a line of credit for DM 15 million has been allowed to it by the Kreditanstalt. The Corporation has to seek further credits in terms of convertible currency and unless sizable volumes of foreign currency come its way, its activities may not rise to the anticipated heights.

CALLING KISANS

MR. LAL BAHADUR, ever since taking over the office of the Prime Minister, has been vociferous about the need for raising the level of living of the masses. He has, without doubt, a soft corner for the cultivator. It is perhaps for this reason that while broadcasting from the All India Radio on Friday last, he appealed to the 300 million people of this country who live in 600,000 villages and till over 350 million acres of agricultural land to do “everything possible” to increase the agricultural output of the country in an endeavour to put an end to the current food shortage, and ultimately, defeat “want and misery”. He has assured them of a return commensurate with their investment through the fixation of minimum prices for agricultural commodities. To a large number of his listeners Mr. Lal Bahadur may have sounded something like a believer in fatalism when he referred to “the bounty of Mother Earth” and “the smiles of Fortune”, but he was necessarily speaking the language of the cultivator to bring home to him that hard work seldom went unrewarded. It has to be conceded that a small percentage of those to whom the broadcast was directed heard the Prime Minister speak—evidently, for lack of radio receiving sets in the villages.

Mr. Lal Bahadur provided in a nut-shell, for the consumption of those who till the soil, some very useful tips for increasing agricultural production. Proceeding point by point, he told the cultivators to depend largely on local resources for the supply of manures, seeds, etc., to make the fields more productive. Judicious use of seed, instead of using too much of it, he said, had produced far better results. He urged the cultivators to make the maximum use of the existing irrigation facilities, and to construct masonry wells, tanks, etc., where irrigation facilities were not presently available. Rotation of crops, the sowing of early-ripening crops, the use of pesticides and improved agricultural implements were the other useful tips for the farmer. But before many of his listeners might have been tempted to describe it all as a trite recipe, Mr. Lal Bahadur, in his characteristic humility, thought it fit to make it clear that the cultivators must know much better than he did.

Directed though it was mainly to cultivators, the Prime Minister’s appeal was all-pervasive in the sense that it equally demanded “everyone of us” to take part in what he described as agricultural campaign by going “from village to village, enthusing the cultivators and helping them to resolve their difficulties”. Equating this campaign with the “National Movement”, he wistfully remarked that such an atmosphere might well be recreated. The solution to the serious problem of food shortage, however, is not so simple. What the farmer needs to be dispensed is expert knowledge, and not the symbolic helping hand of his sophisticated urban counterpart. The inadequacy, if not the failure, of the various official agencies, such as the Community Development Programmes, the National Extension Service and the Panchayats, in disseminating the knowledge that the cultivator ought to be equipped with if he is to show better results has been acknowledged by the Government. It is only appropriate that the Union Government should have called this week a four-day conference of the key personnel connected with the implementation of

Intensive Agricultural Programmes. It is to be earnestly hoped that some pragmatic decisions will be taken for the implementation of these programmes.

FLOURISHING FERTILISER CORPORATION

IN A lucid analysis of the problems facing the Fertilizer Corporation of India Ltd., the Chairman, Mr. B. C. Mukharji, presented a creditworthy picture of working results for the year ended March 31, 1964. The gross profit of Rs. 9.29 crores indicated an improvement of more than Rs. 2 crores over the performance of the preceding year. While the provision for depreciation absorbed Rs. 4.95 crores, and Rs. 63.71 lakhs were paid to the Government of India by way of interest on loans, the balance of Rs. 3.70 crores was retained and appropriated to the reserves in order to cover the financial needs of the Corporation for completing the projects under construction. An outstanding feature of the working for the year under review was that the Nangal unit registered a new record in output. The profit disclosed by the Corporation was partly due to the increase in the output of the Nangal factory and partly because of the retrospective revision of retention prices of fertilizers by the Government of India. The Chairman also drew attention to the fact that nearly Rs. 48 crores had been mobilized by the Corporation since its inception out of internal resources which were utilized for the payment of dividends, repayment of loans, expansion of the Sindri plant and meeting the requirements of capital outlay of new projects.

The future profits of the Corporation will, without doubt, depend upon the prices of fertilizers fixed by the Government. The Corporation, according to the Chairman, was conscious of the fact that economies were possible in the working of its units and all efforts were being made to make them more efficient so that the cost of production may be reduced significantly.

Discussing the cost of manufacture of Sindri, Mr. Mukharji stated that the process of manufacture and the raw materials which are used in the manufacture of fertilisers in Sindri are the two basic causes for keeping it at a high level. Again, the Nangal unit, which had a record production during the year under report, is based upon an expensive electrolytic process, the basic raw material for which i.e. electric power, has increased in price and this factor alone has upset the calculations in reducing the cost of manufacture. Referring to the new projects of Namrup, Gorakhpur and Korba, he gave the opinion that it would not be wise to anticipate large profits from these units as, from the feasibility point of view, they were "just viable". Even if the operational efficiency of these plants were improved, the profits, he said, would be only marginal. On the other hand, the Trombay unit and the Durgapur unit held out promise of improved working results.

Dealing with the expansion plans of the fertiliser industry, Mr. Mukharji said that the needs of the country for fertilisers was massive though the indigenous resources for fabricating production units were not sufficient. Even to import the minimum quantum of essential equipment for the expansion programme, a sizable volume of foreign exchange was needed. Many friendly countries have shown keen interest in providing assistance in this regard. USAID has shown willingness in assisting India's fertilizer production both in the public and the private sector. An American consortium has recently offered to undertake feasibility studies preparatory to its participation in construction of a large number of major fertiliser factories. Technical manpower exists in the planning and development division of the Corporation located at Sindri to set up two fertilizer plants a year provided the essential machinery is procured; this particular division needs further encouragement.

Plea for Raising Tax Exemption Limit

By Our Parliamentary Correspondent

NEW DELHI :

ADOPTION OF the Direct Taxes (Amendment) Bill and referring of the Press Council Bill to a Joint Select Committee provided the highlights of the Lok Sabha proceedings last week. The Rajya Sabha approved the proclamation of President's rule in Kerala. The Supreme Court's verdict on the U.P. constitutional tangle and the havoc played by floods in the country this year also figured prominently — the former issue in both the Houses and the latter in the Lok Sabha.

Although the Direct Taxes (Amendment) Bill had a limited purpose of seeking to amend the Income-tax Act, 1961, the Estate Duty Act, 1953, and the Expenditure Tax Act, 1957, with a view to providing relief to assesseees in certain situations and removing certain difficulties arising in the operation of these acts, the opportunity was seized by the Opposition for making a vociferous plea for raising the income-tax exemption limit to at least twice the present level so that the "white collar brigade" could get some relief from the crushing burden of rising prices, and for checking tax evasion. The criticism of the Bill mainly centred around two of its provisions; one relating to the grant of tax exemption to donations to the Nehru Memorial Fund and the other providing for the production of income-tax clearance certificate at the time of registration, by those who intended to transfer their properties worth more than Rs. 50,000.

Welcome Provisions

The other important provisions of the Bill, however, were generally welcomed. These included: (1) in the case of companies which went into liquidation as a sequel to compulsory acquisition of their undertaking by the Government or by a Corporation owned or controlled by the Government, the distribution attributable to the accumulated profits of such companies prior to the period of the three successive accounting years before the acquisition of the undertakings will not be taxed as dividends in the hands of the shareholders. Such distribution will be taken into account only for computing capital gains arising to the shareholders. The provision is to take effect from April 1, 1962, the day on which the Income-tax Act, 1961, came into force; (ii) enabling the income-tax officers to revise the original demand of advance tax and advance annuity deposit with reference to the total income of the latest year for which tax had been paid by the assessee on self-assessment; (iii) rounding of the annuity deposit amounts to the nearest multiple of Rs. 10, instead of Rs. 5 as under the existing provision, so that issue of a large number of annuity deposit certificates of low denominations could be avoided; (iv) allowing as deduction from estate duty the tax which an assessee would have paid on capital gains arising on the transfer of assets comprised in an estate, provided the proceeds were utilized for payment of estate duty — this provision has been made to ensure that the cumulative incidence of estate duty and capital gains tax did not exceed 85 per cent of the value of the estate; (v) enabling an estate duty assessee to offer to the Government any assets comprised in an estate, whether it was movable or immovable property, in payment of estate duty; (vi) exempting from expenditure tax such gifts as were exempted from the Gift Tax Act under sub-section (1) of section 5 of Gift Tax Act.

Opinion was divided on the provision in the Bill requiring production of income-tax clearance certificate at the time of registration by those who intended to transfer their properties worth more than Rs. 50,000. While the Swatantra member

Mr. N. Dandekar, suggested that this limit should be raised to Rs. 100,000, the Congress member Mr. R. R. Morarka wanted the limit to be scaled down to Rs. 10,000 in the interest of unearthing unaccounted money. Replying to the debate, the Finance Minister, Mr. T. T. Krishnamachari, defended the various provisions of the Bill and countenanced the criticism that evasion of tax was practised on a large scale and no effective steps were being taken by the Government to plug the loopholes in the tax system. He observed that this year although the book value of tax arrears stood at Rs. 419 crores, the effective arrears amounted to only Rs. 195 crores. The Finance Minister denied that the Bill would help only the affluent sections of the society and not the middle class.

Fostering Small Papers

During the debate on the Press Council Bill, many a Lok Sabha member pleaded for greater representation for journalists on the Council and for fostering the growth of small and medium newspapers. Concern was expressed at the development of monopolistic trends in the newspaper industry. Intervening in the debate, the Minister for Information and Broadcasting, Mrs. Indira Gandhi, declared that Government desired to help the small and medium newspapers; these newspapers were the best check on the growth of monopolies in the newspaper ownership. Although newspapers generally maintained a high standard in India, Mrs. Gandhi asserted that a machinery for self-regulation of the Press was necessary to guard against breaches and departures from the norm and against the possible misuse of the power of the Press. The Bill, Mrs. Gandhi emphasised, sought to protect the freedom of expression and at the same time to ensure healthy growth of the industry. In his reply to the debate, Mr. C. Pattabhiraman, Deputy Minister, revealed that originally it was proposed that the selection of the Chairman of Press Council should be made by a committee consisting of the Chief Justice of India, the Speaker of the Lok Sabha and the Chairman of the Rajya Sabha, but the latter two had declined to serve on the committee saying that they did not want to get involved in any controversies. The Government, therefore, had to remain content with this selection being made only by the Chief Justice of India who had agreed to do so. This provision, it may be recalled, had been vehemently criticised by two legal luminaries of the Rajya Sabha, Mr. G. S. Pathak and Mr. P. N. Saprú. The Deputy Minister indicated that the Press Council would look into the question of setting up of an institute for providing advance training and facilities for in service training of journalists.

The Supreme Court's verdict in the reference made to it by the President on the U.P. constitutional crisis, vindicating the competence of the judiciary to entertain cases of persons sentenced by a legislative body on charges of contempt of the House provoked a furore in the two Houses; the members zealously asserted the sovereignty of legislatures. Tempers, however, cooled down on calmer reflection and on the suggestion of the Prime Minister that this was a matter which had to be carefully considered in all its implications before a definite conclusion to amend the Constitution could be arrived at. The Law Minister, Mr. A. K. Sen, however, expressed the opinion that the Supreme Court's verdict was likely to cause an erosion of the rights and privileges of legislatures. He promised an early decision by the Government on the issue.

BUSINESS & SERVICE

The Bank receives deposits, gives advances against approved securities, purchases bills, sells drafts and telegraphic transfers and transacts all types of Foreign Exchange business. Through its internal net-work of branches and world-wide business arrangements it provides every kind of banking service.

R. B. SHAH
General Manager.

was a heated one. There was a general demand for the appointment of a high-powered commission to go into the question of flood control. Some members attributed the periodical floods to the unplanned construction of railway embankments and roadways and building of multipurpose dams, which, they alleged, obstructed natural drainage. The Minister for Irrigation and Power, Dr. K. L. Rao, accepted in principle the suggestion for the appointment of a high-powered commission on flood control. He, however, added that a decision in this regard would be taken in the light of the report expected to be submitted by the end of this year, by a Committee of Ministers of the various flood affected States appointed some time ago by the Union Government to review and assess the flood control measures taken so far by the Central and State Governments. Dr. Rao revealed that the Government proposed to set up a number of radar stations along both the east and the west coasts for accurately forecasting rainfall in the surrounding areas. He refuted the contention that multi-purpose dams interfered with natural drainage.

The Rajya Sabha adopted the State Bank of India Bill as passed earlier by the Lok Sabha. This Bill seeks to facilitate the creation of a large number of local head offices of the State Bank and provides for certain changes in the composition of the Central and local boards of the bank. It also discussed inconclusively a non-official resolution seeking placing of ban on contributions by companies to political parties. The resolution received wide support from the Opposition benches, but was opposed by the Congress member, Mr. Abid Ali, who refuted the allegation of the Opposition that because big industrialists contributed large amounts to the Congress funds, they could influence Government policies. Besides adopting the Direct Taxes (Amendment) Bill and referring the Press Council Bill to a Joint Select Committee, the Lok Sabha debated the Industrial Disputes (Amendment) Bill and unofficial resolution for the appointment of an "independent, non-political statutory board" to deal with the distribution of licences, permits and quotas. The discussion on the non-official resolution remained inconclusive. While the resolution was supported by the Opposition members, the Minister for Industry and Supply, Mr. H. C. Dasappa, characterised the suggestion as impracticable and nothing more than slogan-mongering.

Accurate Estimates

The Public Accounts Committee in its Audit Report (Civil) on Revenue Receipts, 1964, has again urged the Union Finance Ministry to prepare budget estimates more accurately so that the risk of the public being taxed unconsciously more than necessary is avoided. The Committee has pointed out that the total revenue receipts of the Government of India for the year 1962-63 amounted to Rs. 1,585.30 crores, as against an anticipated revenue of Rs. 1,380.93 crores. While accepting fully the explanation of the Finance Ministry that certain difficult factors adversely affected the process of making an aggregate estimate of revenues in India, the Committee has reiterated its earlier view that variations exceeding 3 to 4 per cent in revenue estimates should be regarded as a matter for concern, requiring special remedial measures. The Committee has also commented critically on the abnormal delay in the levy of customs duty on ships' stores, arrears of customs duty, import of contraband goods, incorrect levy of excise duty at concessional rates and lower fixation of the tariff value on motor vehicles.

Before the two Houses adjourned sine die on October 3, the Union Minister for Food, Mr. C. Subramaniam, held out an assurance that since the prospects of procuring rice internally were good and imports of both wheat and rice were picking up, it would be possible to arrange reasonable supplies of foodgrains to the deficit areas.

Question Hour

Fourth Plan: The Finance Minister, Mr. T. T. Krishnamachari, told the Rajya Sabha on September 30 that a growth rate of 6.5 to 7 per cent during the fourth Plan seemed imperative according to the present thinking. He also said that the rate of growth in agriculture should not be less than 5 per cent. Mr. Krishnamachari pointed out that the question of outlay for the next plan was still under discussion and that the Planning Commission would give some glimpse of the fourth Plan to Parliament during the Budget Session. No assurance has so far been received about the availability of foreign exchange and the investment of Rs. 18,000 crores that was earlier proposed, he said, was based on the existing availability of resources including something out of repayments. As regards the question of re-organisation of the Planning Commission, the Minister stated that the Prime Minister was seized of the problem.

Third Plan Shortfalls: The Minister for Food and Agriculture, Mr. C. Subramaniam, told the Lok Sabha on September 29 that shortfalls were expected to occur in the third Plan targets in respect of foodgrains, cotton and oilseeds production. The targeted levels of production were likely to be achieved only in the case of jute and sugarcane. As against the index number target of 176 envisaged for the production of all agricultural commodities by the end of this third Plan, the figure for 1963-64 was 140.5. The shortfalls, Mr. Subramaniam added, were expected to occur in almost all States.

Nuclear Weapons: The Prime Minister, Mr. Lal Bahadur, stated in the Lok Sabha on September 29 that the Government had not considered the question of manufacture of nuclear weapons because it held the firm view that atomic energy should be used only for peaceful purposes and for the welfare of humanity. The requisite technical know-how for the manufacture of nuclear weapons could be developed within a reasonably short time, he added.

Antibiotics: Mr. O. V. Alagesan, Minister of State in the Ministry of Petroleum and Chemicals told the Lok Sabha on September 30 that orders had been placed for the bulk of the machinery and equipment required for the antibiotics plant at Rishikesh. A portion of it had already arrived at the site. Mr. Alagesan further informed that the plant was scheduled to be commissioned for trial production in the middle of 1966. It was being set up with Soviet collaboration and the approximate cost (excluding township) was estimated at Rs. 18.70 crores, he added.

Fertilizer Project: Mr. Alagesan also told the Lok Sabha on September 30 that it had been decided, in principle, to establish a fertilizer factory in Durgapur in the public sector and entrust its execution to the Fertilizer Corporation of India Ltd. The factory, estimated to cost Rs. 34.50 crores, would produce 100,000 tonnes of nitrogen and 108,500 tonnes of P2O5 in the form of ammonium phosphate sulphate, he added.

Petro-Chemical Industry: Mr. O. V. Alagesan stated in the Lok Sabha on September 30 that a six-member technical delegation of petro-chemical experts from Japan, sponsored by the Japan Consulting Institute in India, was presently touring India to get acquainted with the various petro-chemical manufacturing programmes in India and to explore the possibilities of collaboration. The technical delegation would be returning to Japan by October 10, 1964. The outcome of the delegation's visit, Mr. Alagesan added, would be known after it returned to Japan and submitted its report with any proposals for collaboration.

Associate these numbers with Pure Protection. Why? Because "point-two", "point-two-three-four" and "point-two-five-four" millimetre represent the gauge thicknesses of aluminium foil from which Pilfer-proof Closures and Vial Caps are made. Extensively used by Pharmaceutical Manufacturers and other industries which market products in which purity is not merely desirable but absolutely vital. An Alfoil closure virtually guarantees the contents. Further, it protects the consumer from the spurious re-use of a pharmaceutical container.

Sterling on Eve of Elections

PAUL EINZIG

LONDON:

THERE HAS been no trace of the much-feared pre-election sterling scare. The absence of a wholesale flight from sterling and of large-scale speculative selling may be explained mainly on two grounds. As a Socialist victory was taken widely for granted since the middle of 1963 until quite recently, hedging arrangements against such an event were completed by most pessimists long ago. Even so, had the anticipation of a Socialist victory been maintained, the approach of the election date would undoubtedly have induced additional people to hedge against it in the eleventh hour. Fortunately from the point of view of sterling's stability, the last few months and more especially the last few weeks witnessed a revival of Conservative hopes, as indicated by public opinion surveys. Consequently any new hedging must have been more than offset by the undoing of many hedges previously entered into.

The other reason for the absence of a sterling scare lies in the arrangements made for the defence of sterling in the form of drawing rights with the International Monetary Fund, reciprocal swap arrangements with the Federal Reserve, and other forms of co-operation between monetary authorities. The potential support to sterling from all these sources is so formidable that speculators are deterred from committing themselves to a gamble in which the dice are loaded so obviously against them.

Needless to say, if a persistent adverse balance of payments should in the long run deplete the British gold reserve, the possibility of using temporary credit facilities in support of sterling would not deter speculators for ever from taking action. That stage is, at the time of writing, very remote and need not give cause for concern in respect of the immediate prospects of sterling.

Vague Uneasiness

Finally, the possibility of Senator Goldwater being elected President is causing some vague uneasiness about the prospects of the dollar. But for this uneasiness there would be more inducement for transferring funds from London to New York. As it is, some funds are being transferred to Germany and Switzerland, but both countries are doing their best to discourage such transactions.

As a result of the improvement of chances for a Conservative victory the sterling dollar rate rose slightly from the middle of September having covered during the first half of that month a shade above its lower support point of \$2.78. There can be no doubt about it that, should the Conservative Party be returned at the election with a clear working majority, the prospects of four or five years of Conservative Government would result in an immediate demand for sterling. Such short positions in sterling as exist would be covered in haste and there may be speculative buying in anticipation of a rise. Foreign residents who are in the habit of keeping sterling balances in London and who have reduced their balances to the indispensable minimum would replenish their balances. Foreign investors would buy security sterling in order to invest in sterling securities. There would be a selling of investment dollars by British investors wanting to switch back into sterling securities, and the resulting decline in the premium on investment dollars would produce a favourable psychological effect on sterling. British residents who had transferred capital abroad by taking advantage of some loopholes in exchange control would reverse the process.

The combined effect of all these influences would be exaggerated during the interval between the British and American

elections by anticipations of a Goldwater victory in the United States. While at present those who are afraid of the effects of such a victory on the dollar would not think of transferring their funds from New York to London, once fears of a Socialist Government in Britain are removed London would become the obvious centre towards which funds from New York would gravitate.

All these factors might well result in an appreciation of sterling above par immediately after the election. To some degree the rise might be halted as a result of a defeat of Senator Goldwater. But should a Conservative victory in Britain be followed by a Stock Exchange boom in London, the resulting influx of capital would cause an accentuation of the rise.

It would be unduly optimistic, however, to expect sterling to be able to maintain its firmness over a long period unless and until the balance of payments problem is solved and inflationary overfull employment is corrected. To that end the Conservative Government is bound to adopt disinflationary measures, which again would tend to accentuate the firmness of sterling. But for political reasons it would not be in a very good position to do so immediately after the election. Otherwise it would admit by implication that such measures, however necessary in the national interest, had been unwarrantably deferred for electioneering purposes. An interval of a month or two at least would have to be allowed to pass before it would become possible to argue that since the election the economic situation had changed in a sense as to call for corrective measures.

Stepping Up Wage Demands

In any case, there is no reason to suppose that such an argument would lack justification. For it seems more than probable that a Conservative victory will be followed by an all-round stepping up of wage demands. For one thing the trade unions would be in a bad temper about the election result and would be in no mood for compromise. In any case it is the declared intention of some trade union leaders not to co-operate with a Conservative Government to the end of elaborating and applying an incomes policy. Last but by no means least, amidst the boomlike conditions that are likely to prevail, most employers would be only too willing to concede wage increases which they would be in a position to pass on to the consumer. They would be keen on competing for the scarce labour resources by outbidding other industries in respect of wages and other terms.

In such circumstances it would become absolutely vital for the Government to adopt firm disinflationary measures. Notwithstanding the growing unpopularity of the much-denounced "stop-go" monetary policy, the Government would have to resort to it, since the alternative would be a non-stop inflationary boom. A higher Bank rate would of course help sterling both directly through attracting funds and indirectly through tending to improve Britain's relative competitive position in international trade. But it is conceivable that the painful corrective measures might be delayed for some months, in which case sterling's appreciation resulting from a Conservative victory would be followed by a decline, necessitating official support.

Should the election result in a Socialist victory or a deadlock or near deadlock in the form of the absence of a working majority (a majority of less than, say, twenty would make the Government's position precarious and would foreshadow the possibility of an early election), sterling would necessarily weaken.

*march together
work together*

"Let people in different parts of the country, however strong their feelings might be on particular issues, never forget that they are Indians first, and that all differences must be resolved within the unalterable framework of one nation and one country. Let us make every endeavour to foster this feeling of oneness and to carry forward the work of national integration."

*—Lal Bahadur Shastri
Prime Minister*

*Our way is straight and clear—to build a strong India with freedom and prosperity for all.
Let us march together, work together as one nation, imbued with courage and determination, goodwill and tolerance.*

JAI HIND
PRESERVE UNITY, PROTECT FREEDOM

"in need or in old age" will receive "two-thirds of their previous pay" as benefits, and prescription charges for medicines will go.

The Conservative Manifesto looks somewhat different from the Labour Manifesto. It is against the Labour Party's policy of "extended state ownership and centralised control". It believes that in a rapidly changing world of industrial technology, flexibility, which is essential to progress, is best provided by a "system of free competitive enterprise". It will not further extend nationalisation; it would complete denationalisation of steel.

But it is afraid to discard the magic word planning. It would continue its policy of planning with consent through the agency of the National Economic Development Council, with development committees for individual industries, "bringing together government, management and unions in a co-operative venture". If this concept of planning should develop into anything more than indicative planning — i.e., setting up economically feasible targets to be attempted by private enterprise and public sector undertakings, followed by periodic assessments of performance — it may detract from economic and social progress through the inevitable leakages from, and misdirections of, resources, which must attend any attempt at their centralised allocation.

The Conservatives dare not economise either on the give-away programme. They would "reshape" social security so as to step it up and to link it with output. The resulting increase in expenditures will be debited to the "savings of

the nation" and to taxes and rates; the expectations would seem to be that, with the target of a 4 per cent increase in national income, savings, taxes and rates would rise sufficiently to take care of the expanded social security payments without adding to the strain on the national finances. But national income achievements have, hitherto, fallen short of targets.

The modernisation of industries to improve their competitive efficiency, on which all the three Manifestos rightly lay great emphasis, is just not possible without generating savings on a scale comparable with Britain's rivals in world trade. The U.K.'s share of world trade, on which British national income so largely depends, has been tending downward in the post-war period, West Germany snatching from it the second rank since 1959. The weakening export position is doubtless related to the rising domestic costs and the retarded modernisation, the incidence of social security measures contributing to both.

The actual alternatives before the British electors are not, however, very promising. If Labour is voted to power, the economy may slip down an inclined plane with retarded incomes, deficit budgets, inflation, widening balance of payments deficits and a continuing threat to the stability of the pound. If, on the other hand, the Conservatives are returned to power, these developments may be resisted, though a march forward of the economy may be doubtful. These prospects, however, may change if the policies actually pursued should be an improvement over those outlined in the Manifestos.

Industry in the GDR

From A Correspondent

THE GDR, which celebrated on the 7th October, 1964, its 15th anniversary, has achieved a tremendous development since 1949. Now the industrial production of the GDR takes the tenth place in the world. The GDR whose territory does not even amount to one quarter of the old German Reich reached the same production volume in 1963 as the industry of the entire old German Reich in 1936. Industrial output increased from 1959-1963 to 344 per cent. The production per capita of the population increased from 1950 to 1961 on an average of 10 per cent every year.

Estimating the progress the GDR made during these 15 years the starting position in this part of Germany should never be forgotten. The eastern regions of Germany were the most backward parts of the country in respect of the general economic level and the living standard of its population. In the eastern part of Germany up to the world war II only a few textile, machine building and chemical plants existed which could not rely on a metallurgical basis after the division of the country. Prior to the war, only six per cent of the iron ore, two per cent of the hard coal, one per cent of the pig iron and seven per cent of the raw steel was produced in this part of Germany. Before world war II the main upsurge of German industry had taken place in the western regions of the country, especially in its Ruhr district with its decisive raw material base.

The chemical industry is the largest industrial branch of the GDR. Its share in the overall industrial production was 16.6 per cent in 1963, i.e., 13,000 million marks production value. Alone between 1959 and 1963 100 new chemical plants were erected. The GDR ranks second in the world after the USA in chemical production per capita of the population.

A modern industry came into existence in the GDR on the basis of lignite. For many years the German Democratic

Republic has been leading in the world with an annual production of more than 200 million tons (in 1963: 247 million tons) and a per capita production of 14,000 kg.

For the first and only time in the world metallurgical high temperature coke was successfully extracted from lignite with which iron can be smelted in low shaft furnaces. Now long and constantly increasing quantities of petroleum are flowing into the GDR through the longest continental "Friendship" pipeline from the Soviet oil fields on the Volga. On this basis an entirely new branch of highly productive chemical economy, petroleum chemistry, is coming into existence. Before the end of this year 100 of the new 200 chemical plants or branch works under construction will start production.

As far as the production of electricity is concerned the GDR belonged already in 1962 to the 7 top-most electrified countries in Europe. The metal working industry (engineering, electro-technics, precision mechanics etc.) being the largest supplier of the means of production, agricultural machinery and industrial consumer goods increased its production by 65% from 1958 to 1963. About half of the export of GDR is made up by products of the metal working industry.

It is quite natural that such a highly developed industrial country with one of the world's largest chemical industries and highly modern engineering industry also had a modern consumer goods industry. The textile machine industry with its exports to most of the countries of the world had a well-known reputation. Very large new works for the processing of synthetic fibres have come into existence. In 1963 every 3rd family had a TV-set, every 5th family a washing machine, every 6th family a refrigerator. At the end of 1962 there were 330 flats per 1000 inhabitants.

another order for CELCON[®] came the other day

[®] Celcon is the new engineering material which has excited interest of buyers from the automobile industry, the electrical industry, the building materials industry, the hardware industry, the packaging industry, the office equipment industry and the weapons-making industry. Celcon was developed after many years of research by the Celanese Corporation of America, one of the world's major producers of formaldehyde and trioxane.

Celcon is fast displacing iron, steel, brass, zinc, aluminium, magnesium, thermosets, laminates and wood in the manufacture of many articles. As contrasted with many die-cast metals, Celcon components require little or no finishing when they

emerge from the mould and may almost immediately be put to use. Considerable amounts of money are thus saved when Celcon is used. Celcon maintains its high mechanical strength, stiffness, toughness and resistance to impact force over a long period and through broad ranges of temperature and environment.

Celcon is available in natural translucent white and 18 standard colours; it is easy to fabricate; has excellent frictional characteristics; it can be readily sawed, drilled, turned, milled, filed and threaded. It can be fabricated by injection moulding, extrusion, blow moulding and other high volume thermoplastic processing techniques. Processing ease and economy are its greatest advantages.

[®] CELCON is a trademark

British Election Manifestos

An Economic Analysis

B. R. SHENOY

WEMBLEY (MIDDLESEX) :

THE LABOUR Party Manifesto offers to the country a "New Britain", the Conservative Manifesto "Prosperity with a Purpose", and the Liberal Manifesto, which is avowedly without hopes of the Party being called to form a Government in the "short run", merely appeals, "Think for yourself — Vote Liberal".

The manifestos demonstrate that once welfarism becomes part of national politics, the appetite of the voters for welfare measures grows with every hand out and there is apparently no limit to which rival parties may not go to feed this appetite in the race for power. The contribution of welfarism to economic growth seems to have been, on balance, negative, through its corrosive incidence on national savings and the resulting retardation of investment. This aspect of the matter seems to have received less than adequate attention in the reckoning of the rival policy strategists. These developments should be a warning to the under-developed economies with loan finances, many of whom wish rapidly to metamorphose themselves into model welfare states; and no less to the more affluent economies which are still beyond the full sway of social security measures.

The "New Britain" of the Labour Party will be fashioned through a "national economic plan", which will have before it two "giant" tasks; first, to "energise and modernise" British industries and, second, to "ensure" that a due share of the "new wealth" created through planning goes to meet the "urgent and now neglected human needs".

Its first task will be to equal, and if possible, surpass, the rate of progress of the Western powers, through mobilising the resources of "technology", the national wealth in "brains" and the British "genius" for scientific invention and medical discovery. Each industry will know both what is expected of it and what help it may receive in respect to exports, investment, production and employment; and commodity commissions will regulate the main imported food stuffs for balancing imports with home production. The steel industry will be nationalised.

National Income Policy

The second task of the plan will be implemented through a "national income policy" and "drastic" reform in the major social services. All incomes, not merely wages, will be linked up with the vicissitudes of production. There will be a "major overhaul" of the tax system to eliminate, among other things, the inequity of the rewards of "hand work" contrasting with the capital gains accruing from the passive ownership of stock exchange scrips. The reforms of the social services will provide for a long list of security benefits; these benefits will be subject to a national minimum floor determined by "minimum levels of human need"; there will be a new wage-related scheme of retirement, sickness and unemployment allowances; the prescription charges for medicine under the National Health Service will be abolished; and so on.

The Manifesto asserts that the "root" cause of Britain's economic difficulties was the abandonment by the Conservatives of the "purposive planning of the post-war Labour Government" and the attempt to restore a free market economy; it adds that it is not "possible in the second half of the twentieth

century to hark back to a nineteenth century free enterprise economy and a nineteenth century unplanned society."

Even as in the case of a family, the economic well-being of a people hangs on the level of its income; and the main lever for a continued rise in incomes is to step up savings and their economically most effective investment of savings. Economic policies which infringe adversely on the flow of savings must, therefore, sooner or later, react adversely, too, on the volume of investment, incomes and economic well-being. This economic truth, even as the law of gravitation, has no functional date line. The root cause of the economic difficulties of Britain seems to lie in the low level of its savings and investments. Aggregate national savings and investments are much lower than that of almost any of the West European countries. They are about 26 per cent of the gross national product in Germany, 24 per cent in Italy and 21 per cent in France. The corresponding percentage in UK is less than 17. Little wonder that the other Western powers have been making — to quote the rather exaggerated language of the Labour Manifesto — "roaring progress" while "Tory Britain has moved sideways, backward but seldom forward". The national income of the EEC countries during the past three years has risen at an annual rate of over four per cent, as against a rise of under 2½ per cent in Britain. The contrast was greater before this period.

Consumption Expenditures

The low level of national savings would appear to be the outcome, principally, of the massive consumption expenditures of the welfare state. The total expenditures of the Public Authorities in U.K. are about 40 per cent of the net national income and about 55 per cent of this expenditure is on social services, including the National Health Service. Part of the finance for these expenditures is drawn from national savings, tapped through government debt, and by far the largest part from taxation.

Taxation shifts incomes from the pockets of the people into the coffers of the state. If the taxes were reduced and the incomes were left in the pocket of the people, part of these incomes would be saved and invested. This obtains particularly under the prevailing steeply progressive tax system. These developments would correspondingly propel forward national income and economic well-being. Wages and salaries, the worker's share of the national income, should rise faster than under the welfare state. Every welfare pound, therefore, costs the nation much more than a pound, through the foregone expansions in savings in investment and income. This is not a matter of indifference even to the beneficiaries of social security. Workers, numerically the largest sector of the community, cannot expect to forge ahead when the economy as a whole slides downward.

Apart from a reference to the need for a "lavish flow" of goods, people and ideas — the term free trade is, apparently, politically inexpedient — the Liberal Manifesto is in large part similar to its Labour counterpart. It sees no alternative to planning for ushering in a "new age of abundance" and is not much behind Labour in its giveaway programme. Among other things, it would raise pensions to half the average national earnings, widows pensions would be stepped up, insurance stamps will be replaced by a social security tax; those

Fresh Look at Fifth Public Sector Steel Plant Sites

By Our Special Correspondent

NEW DELHI:

AN UNDERSTANDING is said to have been reached between the Union Ministry of Steel and Mines and the Fred Foy delegation of the Anglo-American Consortium of Steel Manufacturers on having a fresh look at the possible sites for the fifth steel plant to be set up in India as a wholly public sector undertaking. The Consortium is being entrusted with the task of surveying the proposed sites in the Goa/Hospet, Visakhapatnam/Bailadila, Salem and Orissa areas. The results of this survey, which will indicate both the advantages and disadvantages of locating the plant in each of these areas, are likely to be available by the end of January, 1965.

After the selection of the site on the basis of this survey, the Consortium will be asked to draw up a detailed project report for the plant for a specified fee. The project report will be ready in about nine months after the contract commissioning it is signed by the Union Government. The Consortium is understood to have submitted a draft agreement for this purpose for consideration and ratification by the Union Cabinet.

The Consortium has offered to arrange loans in the United States and the United Kingdom for financing the foreign exchange component of the project. A steel plant with an ultimate capacity of 3 million tonnes ingots is favoured. Capacity to the tune of 1.00 to 1.25 million tonnes ingots may materialise by the end of the fourth Plan period.

Co-ordinating Activities

With a view to making the fourth Plan iron ore export programme an unqualified success, the Union Ministry of Commerce has set up a 9-member Committee, called the Iron Ore Export (Project) Committee, to co-ordinate all the activities connected with this massive scheme — the development of mines, roads, railways and ports. The Committee is headed by Mr. Govind Narain, Chairman, the Minerals and Metals Trading Corporation. Its other members are: Dr. Nagendra Singh, Director-General, Shipping; Mr. Vasu Deva, Joint Secretary, Ministry of Mines; Mr. K. Srinivasan, Development Adviser, Ministry of Transport; Mr. K. Narayanan, Deputy Secretary, Ministry of Transport; Mr. Jagjit Singh, Director, Railway Board (Transportation); Mr. M. N. Berry, Director, Railway Board (Planning); Mr. S. N. Bilgrami, Chairman, National Minerals Development Corporation; and Mr. D. N. Banerjee, Joint Secretary, Ministry of Commerce. Mr. Banerjee has also been appointed as the full-time secretary of the Committee.

The Committee will be held responsible for any failure in the implementation of the project which envisaged stopping up iron ore exports by 1970-71 to 25-30 million tonnes per annum. It will be required to submit monthly reports to the Ministry of Commerce and the Union Cabinet.

In order to give further policy considerations and directions to the working of this Committee and to any important recom-

mendations which this Committee makes to the Government for implementation by different Ministries from time to time, the Government has also appointed a Co-ordination Committee of Secretaries under the chairmanship of Mr. S. Boothalingam. The other members of the Co-ordination Committee are the Secretaries of the Ministries of Commerce, Transport and Mines and Metals; Financial Commissioner, Railway Board; Member for Transportation, Railway Board; Adviser for Industry and Minerals, Planning Commission; and the Chairman of the Minerals and Metals Trading Corporation.

The working of the project is stated to be progressing fairly satisfactorily and is expected to gather further momentum in the near future. The World Bank is extending credit for financing the foreign exchange component of the project which is estimated around 20 per cent of the expected total investment of Rs. 300 crores.

Further Fillip

Iron ore exports during the fourth Plan period should receive further fillip if the proposal put forth by Esso Standard Eastern for setting up an iron ore reduction plant to process iron ore fines into pellets or lumps materialises. Esso Standard intends to use a special process for this purpose discovered by it. By means of this process, the ferrous content in the ore fines can be raised to about 80 per cent. There is a ready world market for pellets and high-grade iron ore.

The proposal, however, is linked with crude supplies to the tune of 1.25 million tonnes per annum to a public sector oil refinery. If Esso is taken as a partner in the proposed Madras refinery and crude supplies for this unit are to be arranged by Esso, the stipulation of 1.25 million tonnes of crude to be supplied by the company in consideration for setting up the iron ore reduction plant will be waived.

The net foreign exchange earnings from the iron ore reduction plant, it is estimated, will exceed the cost of importing 1.25 million tonnes of crude annually from Esso sources at posted prices minus the usual discount. The surplus naphtha which will be available from processing of this 1.25 million tonnes crude at a public sector refinery will be taken by Esso for use in its iron ore reduction plant.

The proposal is under consideration of the Union Ministries of Finance, Petroleum and Chemicals, Steel and Mines and Commerce. Exports of pellets or lumps from this plant will be in addition to the Commerce Ministry's iron ore export programme.

With a view to boosting Indo-African trade, official circles feel that an independent Indo-African shipping service on a round-the-continent basis should be started. Starting from Bombay, the service would touch Djibouti or Magdishu (Somalia), Dar-es-Salaam (Tanganyika), Tanatave (Malagasy), Port Louis (Mauritius), Matadi (Congo), Douala (Cameroons), Port Harcourt or Lagos (Nigeria), Takoradi (Ghana), Free-town (Sierra-Leone), Dakar (Senegal), Casablanca (Morocco),

Algiers (Algeria), Tunis (Tunisia), Port Said (UAR) and Port Sudan (Sudan).

Lack of shipping facilities is stated to be a serious hurdle in the way of promoting India's trade with Africa. Scindias, who were operating a service to West Africa, have discontinued their service. The only services now operating to East and West Africa are some foreign lines. Recently, quite a few complaints have been received about the unwillingness of these lines to carry certain types of cargo from India. Further, no direct lines exist for India's trade with such countries as Mauritius and Madagascar; goods have to be transhipped to such countries.

The present level of trade between India and Africa — about Rs. 100 crores both ways — it is felt, can make an Indo-African shipping service a feasible proposition. This trade should grow with India's participation in the economic development of various African countries. The Union Ministry of Commerce has plans to step up exports to Africa to about Rs. 70 crores during the current financial year.

★★

India has been the beneficiary of what is described as the "most far-reaching bilateral" agreement so far concluded by Sweden with any developing nation on financial development co-operation. Under the agreement, Sweden will make available to India economic assistance to the tune of 36 million Swedish kronors (Rs. 3.24 crores) — 12 million kronors (Rs. 1.08 crores) as grants in kind and 24 million kronors (Rs. 2.16 crores) as development credit.

Of the 12 million kronors grants, a sum of 8 million kronors (Rs. 72 lakhs) will be utilised for financing deliveries from Sweden of 8,000 tons of textbook paper for primary education in India. This is the third Swedish gift of paper of this size to this country. The rest of the assistance in grants is to be extended by Sweden in the form of forestry tools in connection with a U.N. project for training of logging instructors at different sites in India and for financing an eco-

nomic and technical study on grain storage problems in certain Indian States. The forestry tools will be distributed to the locally trained Indian instructors in order to facilitate training of logging workers by them. The grain storage problems study will be carried out by Swedish and Indian experts and will be specially focussed on the development of an efficient grain storage system in the country.

The 24 million kronors development credit is to be extended on soft terms; it will be remarkable over a period of 20 years, including a five-year grace period, and will carry interest at the rate of 2 per cent per annum. Half of this credit will be utilised for import of equipment for 15 dairies. A sum of 8 million kronors will be used for purchase of electrical switchgears and control equipment, transformers etc., for seven electric power schemes. The remaining four million kronors (Rs. 36 lakhs) are proposed to be utilised for various other projects, including Indo-Swedish joint ventures. It has already been agreed to allocate two million kronors to the Sandvick-Asia project for the manufacture of tungsten carbide tools. Orders for imports to be financed out of the proceeds of the Swedish development credit will be allowed to be placed in any country but the Swedish suppliers will be given an opportunity of bidding for them.

★★

The Union Minister for Industry and Supply, Mr. H. C. Dasappa, is understood to have told the Informal Consultative Committee of Parliament last week that the restrictions proposed to be imposed on the entry of new units in the small-scale industrial sector would be applicable only when such units required scarce raw materials. No fresh restrictions were envisaged to be imposed on small-scale units which did not make use of scarce raw materials.

Mr. Dasappa clarified that in respect of even units based on scarce raw materials, it was not intended to resort to

Why I am Going to Vote Tory

JOSSLEYN HENNESSY

LONDON:

WHETHER THE Tories or the Socialists win the coming election, the questions before the incoming government will be the same.

Must the present "Go" end in a "Stop"? Can the inch by inch creep of prices be halted? Pensions be increased? Income-tax cut? More spent on roads, schools, and hospitals? Industry made sufficiently competitive to keep exports rising fast enough to pay for all these, and other, desirable expenditures?

These are the questions. Neither party gives clear cut answers.

The trouble is, of course, that the answers involve complex economic problems (and social responses) that cannot be expressed in simple slogans: the answers are largely beyond the comprehension of the average citizen—a fact which is no compliment to our economists. Astronomers have long ago popularised such elementary points of astronomy as that the world is a sphere which travels round the sun on its axis in such a way as to produce night and day and the seasons. Anyone who maintains that if you are not careful, you'll fall over the edge of a flat world is treated as a harmless eccentric. On the other hand, the views that pensions can be raised, more houses built, and exports promoted by subsidies, without raising taxes, are just as eccentric but are widely believed. The economists have a long way to go before they catch up with the astronomers.

Investment in Progress

Neither party can guarantee economic growth unless the government refrains from creating inflationary credit to pay wage increases unjustified by higher productivity, and unless it creates conditions, and seeks to promote social attitudes, which lead entrepreneurs to invest in change and progress, to eliminate obsolescent industries, and induce the willing transfer of workers and capital into expanding industries.

Both parties claim that they are out to achieve these aims. Is it, then, a question of choosing the more competent team?

When Mr. Gaitskell led Labour there was a hope that this was the only question for the electors to answer. Unfortunately, he died before he could turn his old fashioned Socialist followers into a modern progressive party. Although Labour contains many modern progressives, like Roy Jenkins and Patrick Gordon Walker, Harold Wilson has either not wished, or been unable, to get rid of the party's commitments to emotional concepts that have their historic origins and interest, but which all those countries in Europe with fast growing economies have discarded. And although the Communist countries still pay lip service to some of them, they are, in fact, ignoring these concepts more and more.

Labour's first emotional commitment is its faith in centrally directed national planning, compulsorily imposed. Attempts to convert Socialists to the pragmatic view that a national plan in a mixed economy can only be hammered out in co-operation between the state, private enterprise, and the unions, have failed. A central plan, with a ministry to run it, remains Labour's leading idea. Allied to this is a cast-iron faith in nationalisation—the embodiment of the belief that because a man is an official he can run industry better than a man who is trying to earn a living out of industry—despite the post-war record of the nationalised industries of millions wasted in investments, which give the lowest returns in the country. The Socialist argument is that prices are kept below costs "in the national interest". But to bolster demand artificially for gas, coal, electricity, houses, etc., by lower than

market prices is not in the public interest: it merely distorts and wastes the allocation of resources.

The Socialists shrink from tackling the problem of restrictive practices and feather bedding in unions. At the TUC annual conference, Mr. Wilson undertook to strengthen union power without asking for anything in return.

Next, the Socialists do not admit that if you limit a man's permissible earnings to £ x, once he has attained that level, he has every incentive to raise his expense account and none to raise his productivity. Equally, if all profits above a "reasonable" percentage are taxed, first, waste follows, since there is no point in economising labour or materials if the additional return is to be taken away from you; secondly, no one will venture on untried techniques and products involving unknown risks. In 1912, when young William Morris (the future Lord Nuffield) launched his motor venture, there were only 23,200 cars in the UK. By 1925, there were 165,000 and Morris alone was turning out over 50,000 a year. His effort had transformed the UK car market from one of high priced vehicles for the few into one of low priced vehicles for the multitude. He would not have found the backers to launch out if all that he could have offered them for their leap into the unknown had been a "reasonable" 5 per cent. Nuffield's millions not only have given employment to millions, they have financed the biggest charitable trust in the UK and provided the ancient university of Oxford with a new college devoted to the study of contemporary social sciences.

Finally, Labour leans strongly towards protectionism by quotas or tariffs. A prominent Labour MP was recently quoted in the "Daily Telegraph" as declaring that there was no case for letting in more goods from developing countries; the answer to their problem was more aid; they were already getting too much of our trade. The same view was also expressed by a leading Labour MP in my hearing at a private gathering to discuss ways and means of helping developing countries.

What all this adds up to is that Labour's claim to be the party of "modernisation" is nonsense. Have the Tories a better claim?

Lacking in Courage

The trouble with the Tories is that they have, in my view, many of the right ideas, but they lack the courage of their convictions. That is why the country has inched forward under their charge instead of striding ahead.

I don't happen to believe in planning. I know of no western country which can prove that its advance has been due to its plans. But if you do believe in it, it is no good being half hearted about it. At the top level, Neddly is all right for voluntary "indicative" planning, but it needs spreading out into a score of industrial co-operative planning groups if it is to do anything more than merely shout exhortations.

The Tories believe, rightly, that competition promotes efficiency, but their use of the Monopolies Commission has been lukewarm and their actions against restrictive practices in the unions and in industry half hearted. The Tories believe in free trade, yet the UK remains the highest tariff country in Europe. They believe in tax reform and incentives, but they have done little more than tinker with them. If Labour has its eyes fixed on the past and its back turned to the future, the Tories are pointed in the right direction—and stay pointed, letting "I dare not" wait upon "I would".

I am, however, going to vote for the Tories, not because I have any great faith in them, but because if they win it will mean the break-up of the antiquated Socialist party, and we will stand a chance of getting a progressive radical alternative in 1969.

rigid licensing. The procedure would be made as simple as possible. The proposed screening, Mr. Dasappa added, would be advantageous to the small-scale units since they would be assured of the raw material supplies at reasonable prices once they were recognized for the production of specific items. Mr. Dasappa revealed that State Governments were strengthening their machinery for effecting checks on the use of scarce raw materials allotted to various small-scale industrial units.

★★

The installed capacity for producing aluminium is expected to increase to 68,000 tonnes during 1964-65 with the commissioning of the 10,000 tonnes smelter at Mettur in December and the first stage expansion of the Alwaye smelter by 5,000 tonnes early in 1965. During 1965-66, the installed capacity is expected to go up further by 45,000 tonnes with the expansion of the capacity of the Rihand smelter by 40,000 tonnes and that of the Alwaye smelter by another 5,000 tonnes. Actual production of the metal is expected to be around 60,000 tonnes during the financial year, 70,000 tonnes in 1965-66 and 1,00,000 tonnes in 1966-67. The third Plan targets of installed capacity and production of aluminium were originally fixed at 87,500 tonnes and 80,000 tonnes, respectively. These were later revised to 1,10,000 tonnes and 1,00,000 tonnes. While the revised capacity target may, thus, be attained by 1965-66 the revised production target will be achieved only by the end of the first year of the fourth Plan.

The present installed capacity of the aluminium industry is 53,100 tonnes — Indian Aluminium Co. (Orissa) 20,000 tonnes, Hindustan Aluminium Corporation (U.P.) 20,000 tonnes, Aluminium Corporation of India (West Bengal) 7,500 tonnes; and Indian Aluminium Co. (Kerala) 5,600 tonnes.

★★

Recognising the importance of soil and water conservation as the basis for development of agriculture, the Conference of State Directors of Agriculture and Chief Conservators of Forests, held in New Delhi last week, recommended the fourth Plan targets for soil and water conservation which will be three to four times those of the third Plan. The Conference further recommended that in the fourth Plan soil conservation should not be limited to contour bunding or dry farming. The programme should be taken up on catchment basis in a comprehensive way to include conservation and management of soil and water.

The planning of the soil conservation programme will be based on appropriate soil survey data. The programme will

include soil and water conservation on a catchment basis and in the watersheds of the river valley projects, reclamation of saline and alkaline soils, reclamation of ravines, field drainage, land levelling and conservation, irrigation for effective utilisation of irrigation potential.

The other two important recommendations made by the Conference were: (i) in the watersheds of the river valley projects, measures should be taken to prevent sedimentation from road-side erosion and bank cutting; and (ii) the soil conservation programme in the watersheds of the river valley projects should be Centrally sponsored and States should strengthen organisations for soil conservation and soil survey. For creating widespread awareness for conservation and management of soil and water, the Conference stressed the need for building of education and information cells in each State. Advance action in this connection, it was recommended, should be taken up during the current Plan period.

Soil conservation work was started only towards the end of first five-year Plan when about 700,000 acres were covered under contour bunding. In the second Plan a more co-ordinated programme, covering survey, research, demonstration, training and development, was formulated. An area of about 3 million acres was protected with various soil conservation measures during the five years to 1960-61. Soil conservation has been accorded a high priority during the current Plan period. The important targets fixed for the programme include contour bunding 11 million acres; dry farming 22 million acres; reclamation of ravines 36,000 acres; reclamation of saline and alkaline soils 200,000 acres; afforestation and pasture development 700,000 acres and soil conservation in the watersheds of the river valley projects about 740,000 acres.

★★

The Government of India has decided that bona fide gift parcels imported by post will now be exempt from payment of the whole of the customs duty leviable on them subject to the considerations that (i) where the post parcel contains articles of food, including provisions and confectionery (but not including liquor and alcoholic drinks), and medicines, the value of the articles does not exceed Rs. 25; and (ii) in any other case, the value of the goods does not exceed Rs. 10. Under the existing orders, goods imported by post on whose contents the total duty payable is not more than Rs. 3 are exempt from whole of the customs duty leviable on them.

Liquidity to the Fore

From Our Correspondent

BOMBAY:

ADDRESSING the University School of Economics, Bombay, Mr. Pierre-Paul Schweitzer, Managing Director of the International Monetary Fund (IMF), remarked that, by and large, international liquidity was adequate. However, he was not opposed to an increase in the quantum thereof, but his thesis was that the mere provision of additional liquidity would not solve all the problems being faced by the developing economies. The question of providing adequate liquidity itself, let alone additional liquidity, is quite urgent from the point of view of developing countries. And what are the prospects? These do not appear to be bright, especially if, as the IMF Chief apprehends, the rate of increase of reserves during the next decade should fall short of requirements, the rate of

growth of international trade should slacken (from the present level of six per cent to about four per cent per annum) and the magnitude of payments disequilibria should fail to decline relative to the volume of trade. As regards the first, Mr. Schweitzer's fear seems to be mainly based on the expectation that the US payments deficits are likely to slow down. But this view is not shared by many who feel that, for a long time to come yet, the US may have to reconcile itself to learn to live with payments deficits.

All this is not to deny the need for continuing and broadening international action aimed at increased international liquidity. While there is more or less a general consensus on the need therefor, there seems to be some apprehension

their latest interest is in plastics and paper

"What are Metal Box doing with plastics and paper?" people wonder.

Blow-moulded plastic containers for chemicals and toiletries, laminated pouches for dehydrated vegetables and other foods, strip packs for pharmaceuticals, polyethylene bags for garments, foods and chemicals...and precision made paper cartons for a wide range of products.

It's news to many that almost 25% of all Metal Box sales comes from non-tinplate products.

This branching out in new directions is not new with Metal Box...in fact, Metal Box started working with plastics a decade ago. But this process has been accelerated by the shortage in tinplate, which many people think is about the only material Metal Box

can turn into a package. Small wonder—with a name like Metal Box.

Actually MB Research set out several years ago to develop substitute packaging materials. And so, today, Metal Box are busy in the exciting world of plastics, paper and foil—materials which have already proved to be right for a wide variety of products. And, with every day, the range continues to grow.

So that, in time to come, flexible and paper packages could well make 'Metal Box' an even bigger misnomer.

BIRD'S CENTENARY YEAR

PAPER FOR THE EXTENSION OF EDUCATION

"Education is the most important single factor in achieving rapid economic development . . .", reports the Planning Commission. To spread education, paper is a vital requirement. The Bird-Heilgers Group, one of the largest manufacturers of a wide range of quality paper, is helping in this task with an ever-increasing supply for books, journals, charts and other needs of education.

Deploying the skills acquired over a hundred years, the Bird-Heilgers Group is making important contributions to the economy . . . through planned diversification and expansion.

as to whether such pre-supposes a drastic overhaul of the prevailing arrangements. According to the IMF Chief, experience of the last 20 years, notwithstanding occasional problems and difficulties, has been happy enough on the whole. Even so, he did not rule out the relevance of efforts at ensuring a more effective functioning of the present system to the benefit of all countries. If all the countries have to benefit, they have also to pull together. Hence the emphasis on multilateral action through the Fund.

From the point of view of developing countries, the IMF has not only played an important role but has been imaginative enough to adapt its policies and action to the changing needs of these countries. This has, in fact, been publicly recognised by our Union Finance Minister in Tokyo, at the time of the annual meetings of the Fund when he said: "The Fund's activities and policies have been adapted progressively to the emerging needs of the members, and I have no doubt that the Fund has to be a focal agency and point of action in respect of whatever decisions we reach for securing adequate international liquidity and strengthening the world's payments system."

Whilst meeting the challenging pressures for rapid economic development, many developing countries, including India, have been obliged to run down their reserves substantially. But, as the Managing Director of the IMF pointed out, there is a point beyond which this cannot be allowed. "It is important for each country", to quote him, "to maintain sufficient reserves to meet temporary savings in its balance of payments without unduly upsetting its import programmes or disturbing confidence." What precisely "sufficient reserves" mean naturally varies from country to country and at different points of time. What needs to be noted, as Mr. Schweitzer insisted, is that these resources should be maintained at an adequate level, notwithstanding the availability of a second line of defence in the form of the Fund's resources.

Available Assistance

The IMF Chief was at considerable pains to explain the extent of assistance that is available to a member-country, both in a virtually automatic way and under certain conditions after the first 50 per cent of a country's quota has been exhausted. There is no doubt that developing countries have amply drawn upon the facilities of the Fund under the prevailing system. This was indicated by the IMF Chief according to whom, developing countries have quotas totalling about 4.3 billion dollars (or 27 per cent of the total quotas) in addition to their own reserves of about 12 billion dollars. Since the beginning of the Fund operations in March, 1947 up to June, 1964, the drawings of these countries were 2.8 billion dollars, or about 37 per cent of the total drawings from the Fund. This is in addition to their use of the Fund's standby arrangements. Since 1952, when these arrangements were introduced, it is estimated, practically half the drawings have been on this basis. Of the total drawings outstanding on June, 1964 amounting to 1.8 billion dollars, the developing countries account for about 70 per cent.

In addition to the financing of balance of payments deficit arising from short-term fluctuations in primary products exports under its ordinary tranche policies, the Fund has also been providing other special facilities. Although there has only been a limited recourse to these special arrangements, the great psychological significance of their existence should be evident from the fact that the swing in the basic payments balance of the developing countries can be very wide indeed.

ranging from a deficit of 650 million dollars in 1962 to a surplus of 850 million dollars in 1963!

In view of its extreme usefulness to developing countries, the latter have a personal interest in strengthening the Fund, particularly if the Fund is to be enabled to meet the growing requirements of its members in the dynamic world of today. This was, in fact, the main theme of the Tokyo meeting and a decision has already been taken to increase the quotas by 25 per cent, although the details of the composition of these increases in quotas have yet to be worked out. Of particular concern to India is the normal requirement of the Fund that any increase in quota means payment of 25 per cent thereof in gold. With India's gold reserves low enough in all conscience, this obligation would constitute a very heavy burden, which doubtless explains her particular interest in alternative modes of payment, such as, for instance, gold certificates.

Possible Ways

Mr. Schweitzer instanced the following three illustrations to indicate the various possible ways in which the Fund could contribute to an increase in the supply of international reserves:

- (1) Allowing members to draw a part of the credit tranches in the same virtually automatic manner as the gold tranche, to increase the supply of this 'almost unconditional liquidity';
- (2) Making greater use of Fund's power to waive the limit on drawings of 125 per cent of a member's quota, to increase the supply of 'conditional liquidity', and,

- (3) investments by the Fund in member-countries so as to create liquidity at its own initiative.

The actual implementation of any or all of them is, of course, subject to a close study of all the circumstances involved. Developing countries will await with interest the exploration of these possibilities. Meanwhile, their immediate concern relates to two proposals for changes in the Fund's policies put forward recently by their spokesmen, namely the introduction of greater flexibility in the time limit for repayments and the Fund's arrangements for financing fluctuations in the proceeds of primary exports. Mr. Schweitzer seemed practically to rule out the first proposal. He was averse to the extension of the time limit beyond five years, on the score that, while such extension could increase the leeway available to member-countries to some extent, it might also weaken the incentive to take corrective actions to reverse adverse swings in the payments position even when feasible. As regards the second proposal, although he seemed to appreciate it, he believed it fell outside the Fund's jurisdiction.

The most heartening observation of the IMF Chief in Bombay was that there is not only scope but need to do more in the field of providing an adequate flow of long-term international investment, both private and official, to developing countries. He significantly added that there was also need for adapting the forms of aid to meet the changing requirements, a point which the developing countries have all along been stressing, as witness the growing requests for soft loans and non-project assistance.

Mr. Schweitzer also pointed to what the developing countries themselves have to do if they do not wish — and no self-respecting country would desire — to see an indefinite continuation of aid programmes. First, he said, they have to adopt policies to increase their exchange earnings by laying greater stress on their developing programmes for promoting exports; secondly, they must establish conditions of stability and confidence to attract foreign private investment and dis-

courage capital flight. In particular, he emphasised the crucial importance of monetary stability. "Persistent inflation", he declared, "will make it impossible for a country to achieve and maintain international economic viability. What is more, under such conditions, no amount of international liquidity provided to it will be found adequate. The importance of monetary stability in the development process is, of course, even broader; by itself, it will not bring about development. But, without it, development will be stunted and distorted and its fruits will be maldistributed." Here, in essence, is the most timely and appropriate advice and, to the extent that it is heeded, the Fund may be expected to do its best to help this country both directly and indirectly.

★★

When, whilst inaugurating the 17th All-India Plastics Manufacturers' Conference in Bombay last month, Mr. Asoka Mehta, Deputy Chairman of the Planning Commission, quoted Mr. Khrushchev ("Had planning and economic organs studied economic problems more profoundly, they should have determined in what quantities ferrous and non-ferrous metals should be replaced by the synthetic materials"), he more or less accepted the complaint of the plastics industry that the Planning Commission had failed to provide the necessary stimulus for its growth. The complaint was categorically made by Mr. Kanthikumar R. Podar, Chairman of the Reception Committee, who illustrated his point by reference to the omission of the plastics industry in the priority list announced by the Union Finance Minister and the exorbitant rate of the excise levy of 24 per cent on the entire range of plastics. The Planning Commission has been not only unsympathetic to the industry's aspirations but also unrealistic as to its production potential, according to him. He was particularly critical of the Planning Commission's third Plan target of production of plastics at 74,000 tons. In this connection, he referred to the present capacity of the industry which has been established at 30,000 tons. This, incidentally, is also the present consumption demand. As against the latter, the industry has already been producing 25,000 tons, and this could easily be stepped up, if the industry were assured of an adequate supply of alcohol for the production of polythelene and reasonably liberal imports of the latest types of plastics machinery, which is imperative if the industry is to cater to the changing and exacting

needs of both indigenous consumers and foreign markets. Neither of these should present much difficulty to the authorities. While a more imaginative prohibition policy and a less onerous excise policy should ensure a greater supply of alcohol than at present, (not to speak of the relief which should be soon forthcoming from the establishment of the petro-chemical industry), a relaxation of the stringent import restrictions in respect of the more sophisticated and up-to-date plastics machinery should pay prompt dividends. The plastics industry, in particular, has demonstrated, along with its remarkable progress, its ability not only to replace imports of plastics materials but also its potentialities as a promising export industry. As has been claimed, the plastics industry has brought down the imports of plastics items from Rs. 7.77 crores in 1961-62 to Rs. 4.71 crores in 1963-64. Also, the industry has increased its exports from a mere Rs. 74 lakhs in 1959-60 to as much as Rs. 2.65 crores in 1963-64. In other words, the industry has materially contributed towards relieving the shortage of foreign exchange in the country.

Technical Progress

While agreeing with the need for technical progress in production, Mr. Asoka Mehta suggested that it was not the entire answer in so far as the consumer demand went. There were other factors, he said, such as the level of national income, the rate of growth of the economy, the economies involved in substituting plastics for traditional materials, the pattern of industrial structure, the progressive attitudes of user industries and the high-powered salesmanship of plastics products. No one questions the existence of any or all of these factors, but, at the same time, one cannot afford to underestimate the supreme importance of technical progress for a relatively newcomer in the field like India. And it is here that the exhortation of Mr. Mehta about the imperative need of intensive research and other processes in the industry becomes relevant. One need not waste time arguing as to who — producer or fabricator — should undertake such research. If either alone or both together can do it, let them. If not, let the authorities themselves lead the way. And why should they not do so, when they stand actually to collect as much as Rs. 160 lakhs by way of excise duty, as against the budget estimate of only Rs. 40 lakhs?

Fury of the Floods

From our Correspondent

MADRAS:

THE RECENT floods in the Andhra Pradesh have been the worst in living memory. With the river Krishna and its tributaries in spate, extensive damage has been caused to life and property. The huge spillover from Nagarjunasagar Dam, the breaching of its banks by the tributary, Chandravanka, and the bursting of the banks of some tanks were responsible for the flooding of Macherala below the Nagarjunasagar Dam and the washing away of a number of spans of the recently constructed bridge on the Krishna at a cost of Rs. 40 lakhs. Several lakhs of acres under paddy have been inundated while the town of Vijayawada was badly threatened and there were several breaches between Rajahmundry and Vijayawada. The districts of Krishna, East and West Godavari are the principal rice-growing areas while Guntur is famous for tobacco cultivation. It is not known what is the extent of damage to the standing food and cash crops. The Chief Minister of Andhra Pradesh, Mr. K. Brahmananda Reddi, has stated that the loss would run into several crores and there is need for active Central assistance in order to enable the grievously affected State to get over its difficulties. Apart from the damage to the crops which would cause heavy loss to

growers and great difficulties for other States which are dependent on the exportable surplus of Andhra Pradesh, valuable lives were lost in the cyclone that hit the Kakinada area and in the floods that devoured large tracts of cultivated land. It was feared that several hundreds of lives had been lost and over 600 fishermen were missing or dead. Fortunately, the casualties in terms of lives have not been so serious as apprehended earlier as many fishermen have returned to their homes after a severe ordeal in the sea. The rehabilitation problem will naturally cost heavily and it is only to be expected that the required financial assistance from the Centre will be forthcoming.

Some serious problems have been posed by the heavy floods and the collapse of the huge bridge below the Nagarjunasagar Dam. There are fears that work on the huge dam would be interrupted or delayed until communication facilities could be re-established on a basis which would ensure regular supplies of materials to the dam site. An assurance has, however, been given that every effort would be made to maintain the tempo of work on the dam and with the larger assistance promised by the Centre the whole work can be completed

earlier than expected. It is needless to emphasise the fact that the benefits accruing as a result of the completion of this huge project to the nation will be considerable as nearly 4.5 lakh acres will be brought freshly under cultivation while about 7 lakh acres will be able to yield a second crop. The full benefits are expected to be realised by the middle of the next Plan. The additional production in terms of foodgrains and other crops is expected to have a value of over Rs. 50 crores. It can be easily very much more if the land under the command of the project can be prepared sufficiently early and utilised in an intensive manner.

It has also been suggested that the problem of flood control should be tackled vigorously and that a committee should be appointed for this purpose. During the current year particularly severe damage has been caused by floods in East Punjab, Bihar, Assam and Andhra Pradesh. Luckily, in the last mentioned State the Godavari river did not play its usual pranks. But it is felt that an early decision should be taken in regard to the repair or reconstruction of the Dowleswaram anicut in which several cracks have been noticed recently. It is feared that in the absence of arrangements for strengthening this anicut or the construction of a new barrage, rice cultivation in East and West Godavari districts will be seriously affected. The Central Government are keenly aware of the problems confronting the State. Mr. C. Subramaniam, Union Food Minister, and Dr. K. L. Rao, Union Minister for Irrigation and Power, have inspected the areas affected by the floods in order to have a first-hand idea of the problems created by the damage caused. It is only to be hoped that the necessary remedial measures would be adopted without delay.

★★

Two Chairmen of chemical companies in Madras and Kerala have pointed to the need for giving careful attention to the problems affecting industries promoted at heavy cost. Apart from the serious effect of power shortage on production, there are also other problems which stand in the way of further development. The Chairman of Fertilisers and Chemicals Travancore Limited actually stated that there had been a loss of production to the value of Rs. 3.5 crores in the past 1½ years while it would not be possible to derive full advantage out of the third phase of expansion until power becomes available in the required volume. In fact, it is apprehended that even after the huge hydro-electric projects, now under construction, have been commissioned there will be a problem of shortage in the summer months. It had, there-

fore, been represented to the Central and State Governments that a thermal station should be erected in Kerala. It is now reported that a thermal station having a capacity of 100 MW will be constructed at Cochin.

New projects create new problems while solving many existing ones. The Chairman of FACT has pointed out that the diversion of waters of the Periyar river, as a result of the construction of the Iddiki project, would result in salinity in the Periyar river in the summer months in the Alwaye-Cochin industrial belt. Unless this problem is satisfactorily overcome, it is apprehended that chemical units might have to be shut down in the summer months even if there was power availability. It is gratifying to note that this question is being seriously considered and alternative proposals are being thought of.

Nuclear Power

As the power situation in Madras State also has been unsatisfactory, though not to the same extent as in Kerala, and power cuts have been imposed every year in the recent past, Dr. P. S. Lokanathan, Chairman of Mettur Chemical and Industrial Corporation, has emphasised the need for erecting a nuclear power plant at an early date. He has also emphasised the desirability of fixing realistic targets for producing caustic soda and bleaching power. The actual performance has been considerably below the targets in recent years as a result of the unattractive character of fresh investment in chemical industries and the acute shortage of foreign exchange. The decontrol of prices in December last year has no doubt been helpful but there is a feeling that the producers of heavy chemicals also should benefit by the concessions announced early this year. As for Mettur Chemicals, the results for 1963-64 were satisfactory and it is expected that there would be a further increase in output even in the current year. In 1965-66, there can be a doubling of output of caustic soda to 120 tons daily as the second factory for producing rayon-grade caustic soda having a capacity of 60 tons daily is expected to be completed by March next year. The Corporation has also a programme for manufacturing chlorine-based chemicals in collaboration with US interests. As there may have to be continuous expansion in the coming years and the requirements of working capital will increase considerably, the Chairman has hinted at the possibility of additional capital having to be raised at a later date.

Groping in the Dark

From Our Correspondent

CALCUTTA:

THE CONFERENCE which the Union Food Minister, Mr. C. Subramaniam, last week had in Calcutta with the Food Ministers of eastern States (of Assam, Manipur, Nagaland, Orissa and West Bengal; Bihar is not included in the eastern food zone) was useful in one respect at least. It provided the Union Minister with some definite idea as to the crop prospects for the next year, and this would no doubt help him in formulating the price policy for the food crops — paddy, rice and wheat — which he is due to announce very shortly after considering the Jha Committee's report on this very difficult question. No definite conclusions however emerged on two very important issues of the region, on which the Conference and the Union Food Minister were expected to give their views. These are: first, West Bengal's new food distribution and policy visualising statutory rationing in urban areas and modified rationing in rural areas backed by a suitable pro-

curement policy; secondly, the free movement of foodgrains within the zone, especially from Orissa to West Bengal.

If Mr. Subramaniam could not express any definite opinion on these matters except broadly endorsing such common-sense propositions that the new price policy must be realistic enough to provide the farmer with adequate incentives for growing more food and that it must facilitate the movement of rice from a surplus State like Orissa to a deficit one like West Bengal, it was not entirely his fault. The West Bengal Government's own scheme of distribution is still in a tentative stage which the Chief Minister hopes to finalise by the middle of this month, to be presented to the Chief Ministers' meeting in New Delhi at the time the National Development Council meets towards the end of this month. Moreover, although it is generally believed that the next crop in West Bengal is going to be a good one no reasonable estimate is available as to what exactly the size is likely to be. In the circumstances,

An aerial view of L&T's Powai Works

OUT OF THE ACHIEVEMENTS OF THE PAST, A PROMISE FOR THE FUTURE...

Consider almost any field of national development. Food and agriculture? Oil and mining? Power and irrigation? Steel?...Larsen & Toubro is in it...

Blast furnaces at Rourkela. Mining lignite at Neyveli. The first oil refinery in the Public Sector. A power station for Madhya Pradesh. A complex dairy, meeting the daily needs of a large city. A mammoth irrigation scheme changing near-desert tracts into arable land... These are but a few of the major projects where L&T's manufacturing skill, technical know-how and engineering experience have been effectively utilised in the service of the nation.

L&T's Fabrication Shop and Switchgear Factory at Powai is a dynamic industrial unit where many ideas originate and take shape.

It fabricates and manufactures specialised plant and equipment for a variety of major industries: chemical and pharmaceutical, food processing, oil distribution, dairies, switchgear, fertilizers, petro-chemicals and paper. At Sion, Bombay, the Drilling and Mining Division manufactures drills and diamond bits used in mining enterprises all over the country.

Tractors, trailers, cranes and dredgers, supplied by L&T's Earth-moving and Agricultural Equipment Division, are busy at many of India's major projects. Other important L&T Divisions are: Heavy

Plant, Instruments, Industrial Appliances, Cooling Towers and Engineering Projects.

Behind many L&T undertakings is the collaboration from world-renowned manufacturers: GHH, Voith, Koppers, Caterpillar, Laur.Knudsen, Silkeborg, Christensen, Longyear, Audco...

With such varied activities, experience and world-wide contacts, L&T has steadily grown over the years. These significant achievements of the past hold a promise for a still brighter future.

LIES SUCCESS

Mr. Subramanian could not commit the Central Government to any definite figure as to the quantity of rice that it should provide for a million-ton rice stock which West Bengal's Chief Minister proposes to build for the operation of his new distribution scheme. The Food Minister of Orissa also refused to give any undertaking on the quantity of rice that State could spare for West Bengal. He said he had to consult the Cabinet first, and moreover, no firm estimate of Orissa's crop was possible at this stage, which has suffered from some damage from the floods. For the same reason, no dependable estimate of Assam's food crop can be made. It is however expected that by the time the Chief Ministers meet in New Delhi towards the end of this month, most of the doubts and uncertainties about the food prospects in the eastern zone will have been cleared. At least, West Bengal would know the size of its own marketable surplus and how much more it would need from the Centre and the neighbouring State to build a reserve stock of one million tons of rice. It would also have drawn up the plan for a machinery which would handle the procurement and distribution of foodgrains for the ambitious State trading venture.

★★

With the Union Ministry for Steel and Mines estimating the Indian economy's coal requirements by 1970-71 at 136 to 137 million tons, it looks reasonably certain that the coal target for the next plan will be fixed around this level. But the problem involved in the fulfilment of the target in the aggregate has two opposite sides; one is to economise the consumption of superior or metallurgical grades and the other is to find new outlets for the lower grades, the consumption of which has of late fallen below expectations. Mr. D. C. Driver, President of the Coal Consumers' Association of India, has just suggested a rational line of approach to the coal problem which is worth discussing here. Mr. Driver starts with low-grade coal. He has little faith in such solutions as making low-grade coal a substitute for cow dung as fuel in the villages. Economic reasons are against it. The villager gets his cow dung practically free, whereas he would pay something like Rs. 50 to Rs. 60 per tonne for coal delivered to him by the railways over long distances. The Government will, therefore, have to subsidise coal consumption in the villages heavily, and with the ever rising cost of coal and freight the subsidy may become heavier than can be rationally justified. It seems, therefore, that substitution of cow dung by soft coke is not economically practicable in the circumstances.

On the other hand, the Central Fuel Research Institute's efforts at high-pressure gasification of low grade coal are a promising experiment. The Institute at present is working on a project through a pilot plant, in order to ascertain which of the country's low-grade coals can be economically and suitably gasified under pressure, for industrial and domestic uses, under Lurgi and other processes. The success of the experiment, Mr. Driver visualises, will revolutionise the prospects of the low-grade collieries, especially those producing the coal suitable for the purpose. Mr. Driver gave the example of the West Bengal Government's Durgapur Projects Ltd. which has pioneered the piping of purified gas under pressure to Oriental Gas Company at Calcutta, about 90 miles away, saving thereby one lakh tons of superior grade coal consumed annually by

the Gas Company and its freight from collieries to Calcutta. The National Coal Development Corporation is also planning to pipe gas from its Ramghar coke ovens to Ranchi for domestic use and also for the Heavy Engineering Corporation. Mr. Driver suggests that the Union Steel and Mines Ministry should consider whether in the interest of fuel economy and saving in rail transport, it should encourage the steel works in Bengal, Bihar and Orissa to have surplus coke oven gas capacity wherever possible, for industrial and domestic consumption, with pipe connections co-ordinating with existing Durgapur Coke Oven gas grid and its extensions. Such a gas distribution scheme in combination with that of large future units producing Lurgi gas under pressure, would be for the States of Bihar and West Bengal, a remarkable measure of rationalising the use of coal and its transport.

Economic Solution

Mr. Driver, discussing the country's metallurgical coal problem, says that coal washing does not appear to offer a proper economic solution to the problem as the coal cost to steel plants rises very high when they use washed coal for their blast furnaces. This is because of the high capital cost and the need to cover middlings, now mostly wasted, in the pricing of washed coal. The beneficiation, as a measure to preserve superior grade coking coal, has its limitations under Indian conditions, Mr. Driver observes. He would therefore like the consumption of metallurgical coal economised through technological processes such as have been adopted by the Bhilai steel works and which are going to be tried at Durgapur and Rourkela shortly for their expansions. Even by adopting the latest technological processes, India cannot make her metallurgical coal reserves go more than six decades or so. The only answer then would seem to be to use foreign coal with much lower ash content than ours, blended with Indian coal, not only for the coastal steel works but for most of the inland steel works also.

However, Mr. Driver's views on the amalgamation of un-economic and small collieries will not command the same measure of support. In Mr. Driver's view, only small coking collieries should be encouraged to amalgamate; the merger of lower-grade small collieries would create more problems than solve. The usual legal difficulties apart, it would lead to a rise of coal of the unwanted varieties. This view has been disputed by Mr. S. N. Mullick while presiding over the annual meeting of the Geological, Mining and Metallurgical Society in Calcutta last week. Mr. Mullick points out that according to the Amalgamation Committee, a colliery with an area of 100 acres and having a production potential of 7,000 tons a month is an economic and viable unit. Most collieries producing superior grades of coal, down to grade I, belong to this category, and the question of their amalgamation, therefore, does not arise. He however agrees with the view that the amalgamation of lower-grade collieries will lead to a burdensome surplus of these grades. But Mr. Mullick's view has been challenged by the Coal Controller, Mr. A. C. Bose, who argues (at the above Society's meeting) that amalgamation is basically an aspect of conservation, and even collieries producing more than 7,000 tons a month may have to be amalgamated.

The moving finger writes

THIS IS testing time, surely, for the Government. The Prime Minister, the Finance Minister and the Deputy Chairman of the Planning Commission, particularly, are on trial. The national economy is sadly and sorely strained. Prices of essential articles of everyday use are getting out of control. For some time now the spotlight has been on the increase in food prices. But the increase in food prices does not tell the whole story. As a matter of fact, some relief in food supplies and food prices may soon be expected as imports arrive in quantity and the kharif harvests are gathered in. But I doubt that an improvement in the food situation would make any basic difference to the aggregate inflationary pressure on the common man and his cost of living. Pulses, edible oils, vegetables and milk and milk products, fish and meat are all becoming dearer day by day. Prices of firewood and other fuels, house rents and fees and charges for miscellaneous services are also rising. As a result, the cumulative economic and social distress is reaching a point where conditions of instability — even political — could arise.

In such circumstances, incomes and costs in the economy are also naturally surging. I am afraid we are as yet only on the threshold of a wide and wild outburst of wage demands in industry and offices. Meanwhile, since it is impossible for wages to keep pace with prices in conditions of inflation, the will to work of the mass of the people is wearing away. I do not want to sound alarmist, but the fact is there to see that less and less work is being done in factories and offices. This must necessarily mean that the economy is getting enfeebled both in regard to current production and with regard to further expansion.

A problem of this kind admits of only one solution which is an intensification of a drive for more production. Unfortunately, the Government which today controls so much of the economic activity in the country, seems to be lacking in intentions of as well as ideas on such vigorous mobilisation of the economy. Its measures have been half-hearted. Granted that some relief could be given to the economy by cutting down wasteful or unproductive expenditures, the saving of Rs. 70 crores or so attempted in Central Government spending will surely be no more than a marginal contribution, especially in view of the fact that State Governments have so far shown no desire for participating in this economy drive. The increase in the Bank rate, again, may not make any positive contribution to the health of the economy, since the Finance Ministry and the Reserve Bank may find it easier to give than to keep the promise that sufficient credit would not be denied for productive purposes. As it is, the increase in the Bank rate appears only to have given a boost to higher costs and, consequently, prices, as industrial and trade borrowers are reportedly marking up prices in order to allow for dearer and scarcer money.

The country is facing now an economic emergency which could be graver than the military emergency of the Chinese invasion of October, 1962. I am saying this because the nation was at least aware of the danger, and the Government alive to it, when the Chinese struck. Today I find that the economic outlook is not only being viewed with complacency but even with highly irresponsible optimism. It is because there is this mood of irresponsibility in the Government that it has been possible for the Planning Commission to be talking of a Rs. 20,000 crore-plus fourth Plan. What I find particularly difficult to appreciate is the strange attitude of the

Deputy Chairman of the Planning Commission. Having fought and lost in two elections he at least should have got tired of playing the demagogue. This apart, he has the powerful backing of both the Prime Minister and the Finance Minister for taking a pragmatic stand on the size of the fourth Plan. Why then does he not do so? He is surely economist enough to realize that financial targets would mean little except in terms of fairly stable prices. Surely, money outlays have to be related to price levels just as real resources have to be related to production. With prices remaining more or less stable, much more could be achieved, say, with a Rs. 18,000-crore Plan than could be expected of a Rs. 25,000-crore Plan with inflation writ large on it. If I were Mr. Asoka Mehta, the one question for which I would demand an answer of the back-room boys of the Perspective Planning Division is what they imagine the purchasing power of the rupee would be at the end of a Rs. 21,000, 22,500 or 25,000-crore fourth Plan.

★★

Having no head for legal matters, I have always been apt to take refuge in the assurance contained in Mr. Bumble's magisterial pronouncement: "The law is a ass — a idiot". I am, therefore, grateful to the Legal Correspondent of "The Hindustan Times" for presenting in a convenient, casual form the "highlights" of the judgment of the Supreme Court on the constitutional battle between the Allahabad High Court and the U.P. Assembly. Going through the "highlights", I as a citizen of the sovereign, democratic Republic of India, was particularly pleased to find the Supreme Court ruling that in our country the Constitution is supreme and that all other agencies of or authorities in the State are subordinate to the supremacy of the Constitution. It seems to me that it has now become all the more important for the people of this country to ensure that no government of the day tampers with the Constitution too much or too often in order to accommodate its own prejudices or provide for its own convenience or comfort.

★★

Although there was much discussion in Rajya Sabha last Wednesday regarding the identities of persons who might be having incomes exceeding Rs. 25 lakhs but who were being assessed on less than that amount, I find that the names of the individuals who did figure in the list of persons assessed on incomes of Rs. 25 lakhs and above (which the Finance Minister placed on the Table of the House) have not appeared in Press reports. This does not speak very highly of the news sense of our newspapers. The individuals concerned are the famous Mr. Haridas Mundra of Calcutta, who was assessed on an income of Rs. 38.58 lakhs for the year 1959-60; Mr. Mundra's current income, assessed or unassessed, I dare say, will be considerably less now. Then there is the name of S. Anantharamakrishnan, the Madras industrialist, who passed away earlier this year. In his case the income is Rs. 38.04 lakhs for the year 1963-64. Follows two interesting names, both women, and both from Madhya Pradesh, Smt. Jadavbai and Smt. Ujjambai, both care of "Messrs. Mohanlal Hargovindas, Jabalpur". Each lady is assessed on Rs. 33.06 lakhs for the year 1959-60. Incidentally, Messrs. Mohanlal Hargovindas are assessed on Rs. 66 lakhs for the same year.

★★

Finally, on a personal note. "Moving Finger" will rest for the next some weeks while its owner himself will be moving about in Europe.

U.S. FOOD ASSISTANCE

AN AGREEMENT for the supply of four million tons of wheat, 3,00,000 tons of rice and 75,000 tons of soya bean oil under the US Food for Peace Programme was signed in New Delhi on September 30, 1964. The values of the three commodities add up to \$398.3 million (Rs. 190 crores). This brings the total value of commodities, since the Food for Peace programme was extended to India in August 1956, to \$2,883.1 million (Rs. 1,372.9 crores), covering a total of 31 million tons of wheat, 1.7 million tons of rice, 800,000 tons of maize and other foodgrains, 2.4 million bales of cotton and considerable quantities of tobacco, soyabean oil, milk powder, cheese and canned fruits. Two other agreements were also signed on September 30. One agreement provides for a loan to the Government of India for economic development projects, out of the rupee fund created by the sale of commodities under the US Public Law 480. The loan will be repayable within 40 years and will bear an interest of 3 per cent. Under a similar agreement, a sum of Rs. 16.6 crores, accruing under an earlier 1962 PL 480 sales agreement, will be given as a loan to the Government of India.

Under an earlier PL 480 agreement concluded in May, 1960, wheat is being shipped to India at the rate of 20,000 tons a day. The United States is expected to complete the shipping of the entire quantity stipulated in that agreement before the end of this year. The new agreement under the US Food for Peace Programme ensures that wheat shipments will be maintained at this rate till the end of June 1965. Supplies of rice under the new agreement will soon start arriving in India. Early shipments are also expected in the case of soyabean oil. During the fiscal year ending June 1965, the United States would have made available to India as much as 6.7 million tons of wheat under the Food for Peace programme.

The arrangements with US authorities provide that the dollars for purchasing and shipping the foodgrains will be made available to the Indian Supply Mission in Washington. The Government of India will deposit the equivalent sum in rupees in New Delhi. The funds will be divided in three ways: 80 per cent for long-term development loans to the Government of India; 10 per cent for loans to Indo-American joint enterprises (Cooley loans), and 10 per cent for expenses of the US Government within India, including some joint scientific research projects.

A three-member Indian delegation has already left for the United States to purchase, for immediate delivery, 75,000 tons of soyabean oil. Mr. R. Ramaswamy, Vice-Chairman of the Hindustan Lever Ltd., is the leader of the delegation, while Dr. A. C. Chatrapati, Secretary of the Indian Vanaspati Manufacturers' Association and Mr. F. G. T. Menezes, Deputy Director (Vanaspati), Ministry of Food and Agriculture, are the other members.

BONN AID POLICY

The West German Government is considering a new scheme of cheap rupee credit with a view to facilitating greater flow of German private investment into India. The proposed assistance will be more or less on the pattern of the Cooley Amendment loans under PL 480. Preliminary studies are being made to set up a rupee counterpart fund comprising the interest payable by India on German loans and part of the rupee payments of the capital. Cheap rupee credits from this fund will be used to encourage German private investment in India. This will open up new avenues for Indo-German industrial co-operation. Dr. Hans Henckel, a top official of the Economics Ministry in Bonn, was in New Delhi last week

and had initial talks with the Indian authorities. Detailed negotiations on the scheme are expected to be held soon, after the signing of an Indo-German investment protection treaty. Bonn Government is also understood to be reviewing its aid policy generally in the context of the growing shortage of foreign exchange in developing countries. India, as one of the largest recipients of German assistance, may be the first country to benefit from the new policy. According to Dr. Walter Scheel, Minister for Economic Co-operation, the West German Government has accepted the need for liberal assistance to developing countries because of the persistent deterioration in their balance of payments position. He has estimated that the deficit in balance of payments of these countries, which is at present around \$2,500 million, will rise to \$15,000 million to \$20,000 million by 1970.

WOOLLEN HOSIERY YARN

The enquiry committee set up by the Government of India in July, 1964 has recommended the implementation of the woollen hosiery yarn distribution scheme by a governmental agency. In its report, the Committee has suggested that either the State Governments concerned or the Textile Commissioner should be in charge of the distribution of the woollen hosiery yarn; in the alternative, the States concerned and the Textile Commissioner should jointly do this work. At present the distribution is being done by the Hosiery Industry Federation, Ludhiana, which is an apex organisation representing the majority of woollen hosiery manufacturers. The Federation was responsible for working out the individual entitlements and for the issue of yarn permits. For the last one year, the issue of permits, on the basis of the Federation's recommendations, was being done by the Office of the Textile Commissioner, under the Woollen Textiles (Production and Distribution Control) Order, 1962. The Committee has proposed that the basic period for determining quotas should be 1st April, 1956 to 30th October, 1959, instead of 1st April, 1956 to 30th September, 1959, as at present. With regard to the newcomer hosiery units, which do not qualify for quotas under the revised scheme, the report says that there should be a reservation of 8 per cent of the total available supplies for ad hoc distribution to them. There should also be a reservation of 2 per cent of the over-all available supplies for distribution to bona fide public utility institutions like the Red Cross, hospitals, educational institutions and technical training centres. In order to narrow the gap between the maximum and minimum entitlements, a system of progressive cuts in the larger entitlements has been suggested.

Another important proposal made by the Committee is that a "Development Fund" should be created for the common purpose of development of the industry, market promotion and exports. The arrangement also envisages exemption from the levy of smaller quota-receiving hosiery units. It has also been suggested that the yarn quota-holders may form a Woollen Hosiery Yarn Quota-holders Association to collect and administer the Fund and to promote the development of the industry. The recommendations of the Committee are now under Government's consideration.

ANTIBIOTICS

At a special ceremony held in New Delhi on September 25, the Union Minister for Petroleum and Chemicals, Mr. Humayun Kabir, released to trade Chlorotetracycline Hydrochloride, a product of the Hindustan Antibiotics, Pimpri. This public sector undertaking, which had come into being as a result of the tripartite agreement between the Government of India, the World Health Organisation and the United Nations International Children's Emergency Fund, has made good

Look what you get with HONEYWELL instrumentation

Far more than just instruments, you get a complete control system, custom designed for your specific needs, by men who know your processes.

You get expert, interested assistance every step of the way, with your initial planning and long after your instruments are installed. Blue Star assume full responsibility for the engineering, installation and start-up of your system.

You get training for your instrument technicians in the most up-to-date

maintenance methods at the tuition-free Blue Star-Honeywell Instrumentation Education Centre at Bombay. You get prompt, competent service from your nearest Blue Star office and immediate replacement of emergency repair parts.

These are but some of the plus-values that comprise instrumentation by Honeywell...and they apply regardless of whether you buy a single instrument, a replacement part or a complete control system.

Sold and serviced in India exclusively by

NOW - A NEW VEE-BELT
WITH 40% INCREASED
HORSE POWER RATING

DUNLOP

introduces

MAXRATE

Maxrate is one more major development by Dunlop in the field of industrial rubber products in India. This premium rated belt will bring economy of drive space, weight and cost. How? Read on.

The basic factor in assessing the utility of any vee-belt is its horsepower carrying capacity. More hp means more profitability. Maxrate is developed to do exactly this. Besides, it is backed by the technical know-how and expertise of Dunlop and manufactured from the finest materials for top performance.

Here's why Maxrate 40% higher hp capacity means more economy than normal vee-belts.

1. Higher hp capacity results in compact drives.
2. Compact drives mean savings in space, weight and cost.
3. No increase in price; thus increased value for your money.

Maxrate is manufactured by Dunlop in a wide range to suit every requirement. See your nearest Dunlop dealer for details or write to:

progress during the last few years. The factory is expected to produce 70 mmu in 1964-65. The production would go up to 84 mmu after the introduction of new strains and plant expansion. The Streptomycin plant of the company, with a rated capacity of 40 tonnes per annum, had gone into production in March 1962. This plant is now producing, to target capacity, Dihydrostreptomycin Sulphate and Streptomycin Sulphate. Proposals are afoot to double the production before the end of the financial year 1964-65. The entire capital cost of the plant namely, Rs. 2 crores, is financed from surpluses earned by the company in the short span of its working. Speaking on the occasion, Mr. O. V. Alagesan, Minister of State in the Ministry of Petroleum and Chemicals, said that the present market price of Chlortetracycline Hydrochloride was Rs. 4.19, even on the lowest DGS & D rate contract for supply. The Hindustan Antibiotics proposed to put this product in the market at a price of Rs. 2.95 for the public and Rs. 2.50 for hospitals, he added.

HINDUSTAN AERONAUTICS

With effect from October 1, 1964, the Hindustan Aircraft Ltd., Bangalore, has been merged with the Aeronautics India Ltd. and will henceforth be known as the Hindustan Aeronautics India Limited (HAL). Thus, the new company will retain the initials of the Hindustan Aircraft Ltd., the oldest aircraft manufacturing unit in India. With this merger there will now be one single public undertaking controlling the various manufacturing units in the country. The Aircraft Manufacturing Depot, Kanpur, was merged with the Aeronautics India Ltd. on June 16 this year. The AIL itself was a complex of three MIG-21 manufacturing units being set up at Nasik, Koraput and Hyderabad. The amalgamation of all the aircraft manufacturing units in a single State-owned undertaking is expected to streamline aircraft production and bring about economy in the utilisation of men and material.

PUBLIC RELATIONS IN BUSINESS

The benefits of sound and steady public relations are not measurable in terms of financial or other direct returns. This was emphasised by Mr. F. S. Mulla while speaking at a meeting held in New Delhi on September 30, 1964, under the auspices of the Forum of Free Enterprise. He pointed out that one of the main benefits of public relations was discernible only by the absence of trouble rather than positive proof of goodwill. The basic cause of strikes, he added, could be attributed to ill-treatment and neglect of workers and other employees in an establishment. The sense of dignity and belonging that is generally lacking in the subordinate staff could be replaced by good public relations fostered by the big bosses as well as the proprietors, he said.

INTERNATIONAL COMPUTERS

The interest of business and industry in electronic computers and their applications is constantly growing in India; there are at least 60 large computers installed, or on order, in the country, one of them costing more than a crore of rupees. In view of the high cost of the computers and of there being several types produced by various manufacturers, the selection of a computer has become a difficult job. One of the main reasons for this is that the technological advance in the field of computers being rapid the rate of obsolescence is very great indeed. With a view to solving this difficulty the firm of "International Computers & Tabulators" has evolved a new range of computers known as "ICT 1900 series", ranging from the basic 'configuration' costing Rs. 5,00,000, for routine accounting, to more sophisticated systems needed for complex commercial and scientific work and costing Rs. 1,00,00,000 or more. The main advantage provided by this "1900 series" is that it allows for the tailoring of each system to meet the present needs of the user and yet permits the

system to be modified and expanded easily and quickly to satisfy the changing requirements without the need to scrap out the previously installed machines. The introduction of this new range puts the British computer industry in a strong competitive position in the world markets.

LOAN TO NEPAL

Under an agreement signed in New Delhi on September 29, the Government of India has made available to His Majesty's Government of Nepal a loan of Rs. 1,00,00,000 in Indian currency. The loan, which will carry an interest of 3 per cent and will be repayable over a period of 15 years, will be utilised for the establishment of industrial enterprises in Nepal, particularly in the fields of jute, cement, paper, textiles and such other industries which would be beneficial to Nepal.

HIGHER EXPORTS AND LOWER IMPORTS

As compared to the corresponding period last year, during the first four months of the financial year 1964-65 (April-July) exports at Rs. 271 crores were higher by Rs. 27 crores and imports at Rs. 369 crores were lower by Rs. 53 crores. The increase of Rs. 27 crores in exports was widely spread. The highest increase was registered by jute manufacturers (+Rs. 6.6 crores) followed by cotton textiles (+Rs. 4.4 crores), coffee (+Rs. 3.3 crores), cashew kernel (+Rs. 2.5 crores) and raw wool (+Rs. 2.5 crores). Exports of tea, which were lagging behind up to June 1964 as compared to the previous year, also improved during April-July 1964. Exports of vegetable oils, however, declined by Rs. 4 crores. The decline of Rs. 53 crores in imports was mainly because of the fall in cereal imports, followed by transport equipment and petroleum and petroleum products. Imports of machinery, iron and steel, non-ferrous metals and fruits and vegetables, however, remained high.

AIR PARCEL RATES REVISED

Air parcel postage rates from India to a number of Latin American countries have been revised. The new rates, exhibited at all post offices in India, came into effect from October 1, 1964, and will operate in respect of the following 24 countries: Argentina; Bahamas; Barbados; Bermuda; Bengal; British Guiana; British Honduras; Chile; Columbia; Cuba; Dominican Republic; El Salvador; Grenada; Guatemala; Haiti; Mexico; Nicaragua; Panama; Paraguay; Surinam; Tortola; Trinidad and Tobago; Uruguay and Venezuela.

INTERNATIONAL FILM FESTIVAL

A regional advisory committee has been constituted for advising on and looking after the arrangements for the third International Film Festival to be held in New Delhi in January, 1965. The Committee is headed by the Chief Commissioner, Delhi, and the 15 persons who have been invited to become its members are: Dr. B. Gopala Reddi, MP, Mrs. Sharda Mukerjee, MP, Mrs. Amita Malik, Mrs. Sumitra Charat Ram, Mr. I. K. Gujral, MP, Mr. E. Alkazi, Mr. Sham Lal, Mr. Chanchal Sarkar, Mr. K. Kishore, General Secretary, Delhi Administration, Mr. H. K. L. Bhagat, Deputy Mayor, Mr. C. P. Gupta, Joint Secretary, Ministry of Works and Housing, Mr. S. D. Kalelkar, Director, Information Services of India, Ministry of External Affairs, Mr. S. Sarkar, Under Secretary, Ministry of Finance, Mr. B. Israni, Chief Traffic Manager, Indian Airlines Corporation, and Mr. K. Saravanai, Assistant Collector of Customs. Mr. P. C. Bhagat, Joint Secretary, Ministry of Information and Broadcasting and Director of the Film Festival, will be the Member-Secretary of the Committee.

CORRECTION

In the "Trade Winds" column of the issue dated September 25, 1964, the caption "INDO-AMERICAN COLLABORATION" on page 594 should be read as "INDO-AFRICAN COLLABORATION".

U.K. to establish the Engineering and Contracting Organisation and for this also the official approval is awaited. The Chairman gave a picture of the company's expansion which today had 53 central depots and about 1,900 authorised agents in Kerala State alone. In other Southern States also the company has been spreading its distribution system rapidly. In fact the Government of Madras has invited the company to assist in their distribution of nitrogenous fertilizers, the sales of which were so far confined to co-operatives. This again is a measure of the company's strength in the field of distribution.

DUNLOP RIGHTS ISSUE

The directors of the Dunlop Rubber Company (India) Ltd. have decided to issue, 1,50,000 ordinary shares of Rs. 10 each at a premium of Rs. 10 in the ratio of one ordinary share for every three held to its shareholders, subject to the consent of the Central Government. The above issue is to be followed with a bonus issue out of the share premium account. This matter was considered at a meeting held recently and it was decided to submit, in due course, an application to the Controller of Capital Issues for consent to make a bonus issue. Meanwhile the Directors have decided to recommend an interim dividend of 8½ per cent, less tax, for the year ended December 31, 1964.

ROCKWELL INDIA

The Rockwell India Limited has received an industrial licence for the manufacture of light weight gasoline engine. Negotiations are in progress with Rockwell International S.A. Switzerland, for the necessary technical assistance and manufacturing rights for implementing the project. Its plant for the manufacture of drilling machines was commissioned in July 1964 and the first batch of drilling machines are expected to be ready during the first quarter of 1965. The company has negotiated a loan of Rs. 16.90 lakhs with the US Agency for International Development out of the Cooley Fund. The final documentation is likely to be completed soon.

BRITANNIA ENGINEERING RIGHTS

The Britannia Engineering Company Limited has proposed to offer 25,000 cumulative redeemable preference shares (9.3 per cent) of Rs. 100 each for cash at par, as rights shares to its shareholders in the proportion of one cumulative redeemable preference share for every 40 ordinary shares held.

DEVIDAYAL TUBE

Devidayal Tube Industries Ltd. has earned a higher gross profit of Rs. 16.2 lakhs for the year ended June 30, 1964 as compared with Rs. 14.0 lakhs in the previous year. Despite the closure of the factory in April and May 1964 for certain major repairs, the turnover has increased by about 8 per cent. The higher turnover is due to a more scientific running of the plant No. 1. Most of the machinery for plant No. 2 has arrived at the factory site. The construction of buildings and the installation of plant and equipment are progressing satisfactorily. The plant is expected to be commissioned by the middle of next year. The dividend remains unchanged at 10 per cent but this is payable proportionately on the new equity shares. The proposed equity dividend claims Rs. 5.43 lakhs against Rs. 2.46 lakhs last year.

The directors have allocated Rs. 5.41 lakhs for depreciation against Rs. 5.14 lakhs and Rs. 4.16 lakhs for taxation against Rs. 2.77 lakhs. No provision has been made for development rebate reserve against Rs. 1.70 lakhs; while general reserve absorbs Rs. 2.75 lakhs as against nil in the previous year.

Company Affairs

TAN INDIA WATTLE ISSUE

THE TAN India Wattle Extracts Company Limited will enter the capital market on October 16, 1964 to raise Rs. 12.50 lakhs with a public issue of 12,500 equity shares of Rs. 100 each. The subscription list will close on October 27 or earlier at the discretion of the board of directors but not before October 23. The company has an authorised capital of Rs. 50 lakhs and issued and subscribed capital of Rs. 12.50 lakhs. The entire present issue has been underwritten by the Madras Industrial Investment Corporation Ltd., (Rs. 5 lakhs), Messrs. Somayajulu & Co. (Rs. 2 lakhs), Messrs. Subramaniam & Co. (Rs. 2 lakhs), Messrs. V. S. Krishnaswami & Co. (Rs. 2 lakhs) and Messrs. Paterson & Co. (Rs. 1.5 lakhs). The company has been licensed to produce wattle extract from the bark of wattle trees grown in Ooty and Kodaikanal in Madras State. Wattle extract is an important product used in the tanning of leather. The production of wattle extract in this factory will save foreign exchange to the extent of Rs. 35 lakhs immediately and later on up to Rs. 90 lakhs every year. The bulk of the machinery for the project is to be supplied by Messrs. Niro Atomizer Copenhagen, Denmark who have erected similar factories at other places and are considered to be the leading manufacturers of such equipment. The Industrial Credit and Investment Corporation of India, Bombay, has agreed to sanction a loan in foreign currencies to the extent of \$277,300 in order to meet the cost of imported machinery. The entire project is estimated to cost around Rs. 41.5 lakhs and land for the project has already been acquired.

METTUR CHEMICALS

DR. P. S. Lokanathan, Chairman, the Mettur Chemical and Industrial Corporation Limited, reviewed the working of the company at the annual general meeting held recently. The total sales during the year 1963-64 increased to over Rs. 2.65 crores as against Rs. 2 crores last year. The net profits also increased by about Rs. 10.67 lakhs which enabled the directors to maintain their dividend of 12½ per cent on equity shares on increased capital of Rs. 2.50 crores from Rs. 1.60 crores. The output of caustic soda achieved a peak of 12,700 tons and the production of other chemicals was also large as compared to the previous years. The company was also able to adjust its prices to the increased production costs because control on prices of caustic soda, liquid chlorine, bleaching powder and hydrochloric acid was removed by the Government in December, 1963.

The Chairman referred to the expansion undertaken by the company during the year under review. The machinery for the production of a further 20-ton capacity for caustic soda in the existing factory was commissioned in March 1964 and this additional capacity has been in full production since August. He indicated that efforts are being made for arrangements with well known organic chemical manufacturers in the USA for technical assistance for the manufacture of chemicals like methyl chloride, methylene dichloride, chloroform, carbon tetrachloride and pentachlorophenol. The production of these, he expected, will start early in 1966. The company has also made arrangements for the further cells and other auxiliaries required for the manufacture of rayon grade caustic soda.

Talking about the chronic problem of power shortage, the chairman pointed out that this problem had caused consider-

able hindrance in the smooth working of the unit. In spite of the commissioning of the thermal unit at Neyveli the power shortage persisted. He, however, expressed hope that the construction of two large thermal power stations in Madras State might solve the problem to some extent.

Dr. Lokanathan touched the recent report of the Bonus Commission and indicated that it was much more desirable to have bonus related to production rather than having profit sharing bonuses. The introduction of a minimum bonus, he added, changed the entire concept of bonus and gave it more the character of a deferred wage. He hoped that at the time of the introduction of legislation the Government would give full consideration to the views of the minority report which had considerable weight in its arguments.

IMPERIAL TOBACCO

Mr. F. A. Collett, Chairman, the Imperial Tobacco Company of India Ltd., discussed at the annual general meeting held recently, the impact on the company of the recent tax measures. It was decided, he indicated, to absorb a large part of the extra taxation on some of the lower price brands as it was considered probable that increased prices might take these brands beyond the reach of the consumers. As a result, this company recorded an increase in its sale value by nearly Rs. 5 crores although the overall cigarette consumption during the year declined slightly. This increase was largely offset by additional excise duty. The Chairman, however, indicated that if the Government revenue from the cigarette industry is to be maintained, excise duty on lower categories of cigarettes will have to be reduced and the special emergency excise will have to be abolished. The Chairman also referred to the impact of the corporate taxation which had continuously increased, and due to frequent changes, made forward planning considerably difficult. In view of the increased taxation the directors found it necessary not to separate any amount for reserves. In fact a part of the reserves was proposed to be drawn in order to cover taxes and to make possible the payment of a final dividend of 2½ per cent adding upto a total of 6½ per cent for the year.

The Chairman indicated that there was also a cheerful aspect of the whole situation as it meant an intense competition between the manufacturers and stimulated the management. It has been able to overhaul old techniques and evolve new ones to improve efficiency. The Chairman also pointed out that the year 1963 marked the diamond jubilee of its famous Scissors brand which revealed a sense of loyalty of its consumers as well as rejuvenation in the sales and publicity procedures. The company was also alive to the future demand and has been concentrating on the increasing filtered tipped trade. It has now two leading brands in Wills Navy Cut filtered and Simla which have been recently followed by Savoy mentholated for those who like this variety. The company also made efforts to explore markets abroad and the Chairman stated that in rupee payment countries possibilities were being investigated. The company also has improved its position as a printer and its two printing factories — Monghyr and Tiruvottiyur — originally set up to supply the company's packaging material, have done some offset printing for other clients too.

The company, the Chairman added, was alive to the problem of labour management and a committee composed of four members each from management and the Unions was

set up to review working conditions in Head Office and all the branches. It was also agreed to call a moratorium on demands, apart from local adjustments during the year. This represents a very healthy trend and speaks of the constructive attitude adopted by both management and labour of the company.

KERALA STATE INDUSTRIAL CORPORATION

Mr. K. R. K. Menon, Chairman, Kerala State Industrial Development Corporation Limited, stated at the annual general meeting held recently that the gross income of the Corporation increased from Rs. 2.55 lakhs last year to Rs. 6.25 lakhs during the year ended March 31, 1964. This improvement enabled the Corporation to write off the entire amount of preliminary expenses and also provide a reserve for depreciation on investment and also a special reserve for general purposes. The issued capital of the company at the end of the year was Rs. 1.95 crores as against Rs. one crore last year.

As against this improvement, the Chairman indicated that there was a slight fall in total number of applications for assistance. Ordinarily the number was higher every year and this decline was a reflection of the dwindling number of industrial licences granted for units in the State. He advocated strongly that some special preferential treatment had to be given to the State because of its poverty and over-population. The Chairman added, however, that something more than preferential treatment was necessary to attract industrial capital and entrepreneurship. Political stability, steady labour-employer relations and the supply of electricity were three important factors which could attract more capital. He believed that immediate steps should be taken to ensure these things. A regular supply of cheap electricity was of vital importance, the Chairman added.

Mr. Menon pointed out that the issue of raising additional financial resources for the Corporation would soon be taken up. At the moment negotiations were being carried on with certain foreign companies for securing technical collaboration for some worthwhile schemes and it was hoped that with the assistance of Indian industrial parties, considerable success would be achieved. The Chairman referred to on-the-spot survey of industrial requirements and potentialities of the State by a team of experts from the USAID, which might result in more industrial schemes financed by American technical and financial collaborations.

MYSORE PAPER

Mr. M. D. Shivananjappa, IAS, Chairman and Managing Director of the Mysore Paper Mills Ltd. reviewed the working of the company for the year ended March 31, 1964 at the annual general meeting held recently. The output increased considerably to 8,922 tonnes of paper which was more than last year's production by 642 tonnes. Consequently sales were higher at Rs. 1.30 crores — Rs. 7.32 lakhs more than last year. The Chairman added, however, that the profits, on the other hand, declined, essentially due to increase in production costs. The prices of paper have been fixed while costs have continued to increase. The Government of India fixed the prices in 1960 which were not considered satisfactory. An increase of Rs. 80 per tonne was granted in 1962 but it was not sufficient because the corresponding increase in cost had been nearly Rs. 270 per tonne. The representatives of the industry, the Chairman added, have continuously approached the Government to make the necessary adjustments in prices. He again appealed for a revision lest the incentive for expansion of production should disappear altogether.

The Chairman indicated that the company has maintained a

continuous increase in production and high operational efficiency and the new paper machine was in operation early in March 1964. Moreover the full range of equipment — paper machine, stock and chemical preparation plant and other paper machine parts — for which orders had been placed in Germany and England had been received and installed and progress in these new units was satisfactory. The bamboo pulp plant has been received from Germany and the three digesters and other indigenous equipment were slightly delayed but this unit also was likely to be completed by November this year. This will add to the company's production capacity. The Chairman was specifically pleased to state that the scheme of expansion was speedily implemented while production was efficiently maintained at the existing units.

FERTILISERS AND CHEMICALS

Mr. T. A. Joseph, Chairman, the Fertilisers and Chemicals Travancore Limited, gave a detailed position of power supply in the State of Kerala while addressing the annual general meeting of the company. The shortage of power supply caused a major damage to the company as during the period of power cut in the first half of 1964 there were several occasions when the entire plant had to be closed down to avoid grave risk. The total loss in sale value of production on account of power cut amounted to over Rs. 2.5 crores, which was a considerable loss. In spite of this handicap the company was able to show a small profit of about Rs. 12 lakhs after meeting the depreciation. Mr. Joseph indicated that a solution of this shortage was possible only if a reasonably large thermal power station was established. The State Government, he added, had decided to put up a thermal station with a minimum capacity of 100,000 KW at Cochin which would make the position better.

The Chairman referred to the third stage of expansion which will be commissioned in 1965-66. This will require another 20,000 KW of power and he hoped that the Kerala State Electricity Board will be able to provide it, failing which the company will not be able to take any benefit from the expanding capacity. Mr. Joseph also talked about the possibility of a severe shortage of water in the Periyar river when the Idikki power project will be completed. The Idikki project will require the diversion of Periyar water to the Moovatupuzha river which will leave less water for Periyar. If the water turns saline the factories like the Fertilisers and Chemicals Travancore will have to close down for three to four months in a year. The Chairman, therefore, hoped that the Government will reconsider the proposal in the context of this problem.

Mr. Joseph indicated that raw naphtha, a raw material for the company's products, was exempt from excise duty payable on it to the extent of 95 per cent. This position was recognised in States like Madras and Maharashtra, where fertilisers were being made out of raw naphtha. Recently the Government of Kerala seems to have decided to treat it as a petroleum product and charge sales tax at the rate of 15 per cent instead of original 3 per cent. The company has, therefore, made a representation to the Government of Kerala to re-consider the matter and restore the original position. This being a strategic industry, it is hoped the Government will realise the significance of lower sales tax.

The company has entered into an agreement with Messrs. Davy and United Engineering Company of the U.K. for the establishment of a fabrication shop. The Government of India's approval to this agreement was awaited. It has also secured the consent of Messrs. Power-Gas Corporation of the

share in nation's growing industrial prosperity

When you buy Units of the Unit Trust of India, you acquire an interest in various types of securities of over 150 industrial enterprises, that is, in the entire portfolio of investments of the Trust. The aim of the Trust is to spread out the investments to minimise risk.

Also Units give a steady income. The dividend to Unit holders will be based on the average income of a well-balanced portfolio consisting of Government securities, industrial debentures, preference shares and equities.

Other Important Advantages

Liquidity of Investment

Investment in Units is liquid because the Unit Trust is ready to sell and buy back its Units at prices determined and announced by it every day. Unit holders can also borrow against Units from banks.

Tax Concessions

The income earned by the Trust is exempt from taxes and income upto Rs. 1,000/- distributed by the Trust to individual Unit holders is excluded in computing their total income for purposes of income-tax.

Each Unit is of the face value of Rs. 10. You can buy ten or a multiple of ten Units. Units are sold at prices determined daily by the Trust on the basis of the current value of its investments and other elements as provided in Clause 8 of the Unit Scheme, 1964. Units can be sold back to the Trust from November 15, 1964 at prices announced daily. A Unit holder can always transfer Units in favour of a bank for purposes of borrowing.

Application forms and details of the Unit Scheme, 1964 are available at any branch of the leading scheduled banks throughout the country. In case of any difficulty, call at or write to the Unit Trust of India direct.

CHAIRMAN'S STATEMENT

ALIND'S EIGHTEENTH ANNUAL GENERAL MEETING Mr. S. Narayanaswamy Reviews Activities

Addressing the Eighteenth Annual General Meeting of Office, Kundara, on 28th September, 1964, Mr. Narayana

the Aluminium Industries Limited held at the Registered swamy, Chairman, said:

At the outset, let me perform the solemn and melancholy duty of expressing our sorrow on the passing away of our esteemed Prime Minister, Pandit Jawaharlal Nehru. It is not given to every country to have in unchallenged helmsmanship of affairs, a person of his moral and cultural stature, for a cycle of seventeen years — particularly in the wake of discarding the fetters of foreign rule, which was accompanied by the pains of partition. It was good to have had a statesman of his calibre, with an unshakable distaste for wrong doing, in administrative captaincy of India. This exalted the country's image before the world. The sorrow caused by his passing is mitigated in some measure, by one whom he loved, esteemed and trusted becoming his successor. Mr. Lal Bahadur Shastri's unanimous choice as Prime Minister of India has been well received and been acclaimed by the world as sagacious and sound. Let me wish Mr. Shastri a purposeful and long term of office.

The year 1963-64 has been for ALIND a period of fulfilment and consolidation, no less of expansion and preparation for greater expansion. From the point of view of distribution, it has been the year of restoration of dividend to what may be called its classical level, this having been rendered possible by the abolition of the Super Profit Tax — which is of course not saying much for its twin successors — the Surtax and Dividend Tax. It was not necessary to substitute a retrograde tax by other imposts that tend to render the reliefs somewhat unsubstantial in content. In particular, the Dividend Tax is infelicitous in concept — in so far as it implies that distribution of any dividend on risk capital is among things that Government disapprove, which is far from being Government's intention.

Taxes imposed in post-independence years have proved that the psychological damage done by tax levies has a sinister way of outliving the financial damage done to corporations as to individuals. The long term victim of such damage is the New Issue Market, which Government are so anxious to see revived.

SOLIDAL PLANT

The company's "Solidal" plant for the manufacture of low voltage underground cables has just been erected and will go on stream next month. Members of our Engineering staff that went to Europe to receive training in operating and field-laying of these cables are back in Kundara. The problem of acquainting the Indian consuming market with the properties and high-keeping qualities of this comparatively unfamiliar type of underground cable, is being actively tackled. "Solidal" will take ALIND quite a distance on the highway to comprehensive cable production.

Our production of welding cables — the first attempted with Aluminium metal in India — has been well received by consuming markets and the indications are that we shall be considerably augmenting our production of these. Production of microgauge aluminium wire required for stranding in the manufacture of cables has opened up a new field of possibilities in the manufacture of welding and trailing cables.

Your company has received Central Government's approval for substantial expansion of bare conductor capacity at Kundara

and Hirkud. Items of balancing equipment are required to be imported to put this expansion through and the required foreign exchange is being secured in part by a loan from the ICICI. Licences for the erection of a second rod rolling mill have been received and orders have been placed with the suppliers. This is expected to go into production in the third quarter of 1965.

The company has been in correspondence with Japanese friends with a view to establishing a plant for the manufacture of cable making machines. This has now reached an advanced stage and the Board is actively considering the details of terms of collaboration offered by a reputed Japanese firm for establishing the manufacture of a diversified range of cable making machines. This is but a logical step from cable making in which this company has been engaged for 14 years now. At the appropriate time, your Board will be making a supplementary share issue to finance this project.

The company having set up a tradition of drawing on its current resources for sundry capital programmes, has frequently experienced ways and means discomforts. These are aggravated by the added needs of working funds, generated by the very expansions so put through. The Board has been wrestling with this problem from time to time but beyond a stage it is unwise to subject the company to stresses and strains, stemming from undercapitalisation, which has the direct result of swelling our bank obligations. I may assure you that the Board has this matter under constant review. Consistent with the large draft made on the company's profits by current levels of corporate taxation, we are straining every nerve to plough back funds into the company.

While it is not my purpose to repeat what has been stated in the Annual Report, I think you will be glad to know that the orders for bare conductors currently on our books are of a magnitude as to keep both our bare conductor units occupied for well over two years.

EXPORTS

The company has contributed its modest mite towards export promotion — and has during the first four months of the current financial year exported about Rs. 2.75 lakhs, with orders pending execution being Rs. 11.4 lakhs. We exported Rs. 1.11 lakhs worth cables in 1963-64. We are continually exploring external markets — the African Continent, East European countries, Middle and Far Eastern countries, with our Sales Manager, Mr. Peer Mohammed, keeping in personal touch with these developing markets.

In the manufacture of covered conductors, we have been using PVC. When we commence production of "Solidal," we shall be using PVC as the principal insulating and sheathing

material. Import of PVC has been banned as indigenous production of PVC has been on for some time. However, the price of PVC manufactured in India is somewhat on the high side and tends to push up the end price of our PVC cables of all descriptions, in such a manner as to impair our competitive capacity. Particularly when Indian rubber production is rather meagre in comparison with the mounting demands made on it, it becomes important to make alternative insulation material for cables available on reasonable terms to the cable industry. It is time Government paid attention to this important aspect of making processing material available to this vital engineering-cum-public utility industry.

HIGH CARBON STEEL

Your company depends on external sources for high carbon steel to operate its high tensile steel wire plant. Supply of this has been uncertain and fitful. The somewhat erratic supply position has compelled us to keep our steel plant idle on two occasions recently. After all, prompt erection of transmission lines for electricity supply depends on the bare conductor industry making cables available according to schedule. Capricious or poorly regulated licensing of high carbon steel can hold up these supplies through shortage of reinforcing wire. We, therefore, appeal to Government to ensure regular licensing of special steel rods until domestic producers commence manufacture of such steel.

ALUMINIUM METAL

Which brings me on to the larger question of aluminium metal. It is some time since the Government of India announced their policy decision that the cable industry in the country should switch over from copper to aluminium, on the ground that we have very little copper production in India and that having regard to our known bauxite reserves and the increasing output of aluminium metal in the country, it would be safer to depend on aluminium. The copper-using cable industries have accordingly been putting through a phased programme of switchover to aluminium cables. Meantime, the statistical position as to the demand for aluminium and supply of the metal from the limited number of reduction units functioning in the country, is far from reassuring. It is true some units are shortly increasing their production and some more units have been licensed. But having regard to the highly capital-intensive character of the industry, blue prints may take time to be translated into production units and it is prudent to expect that they will not be able to add to available metal for at least four years. Meantime the metal consuming engineering units are fast multiplying. The technical position of aluminium metal availability renders it necessary for Government to license liberal import of the metal for at least the next five years — if we are not to confront shortage and consequent under-utilisation of industrial units, which the country can presently ill-afford.

CORDIAL EMPLOYEE RELATIONS

Our relations with labour have been quite cordial. Workers in three out of four manufacturing units are covered by Long Term Agreements that provide for orderly collective bargaining, prompt disposal of grievances, a fair wage system and reasonable working conditions. These agreements further provide for "payment by results" in the matter of incentive bonuses evolved with the help of work study teams. The last of the Kundara Agreements was signed on June 1, 1963. The agreements have in the past secured undisturbed plant operations and a pronounced productivity consciousness among the works as is reflected in output.

The company has been endeavouring to build up a sound

framework of Supervisory and Managerial personnel through intensive training and affording of opportunities to the executives to prove their mettle. Apart from domestic facilities provided, we have availed of opportunities to send our men to Management Institutes, the Administrative Staff College, Hyderabad and the National Productivity Council Courses. Under the NPC and allied training programmes, we sent four of our executives abroad for training in Management. The company believes that investment in human material is of vital importance to the future of industry and managerial skills are a basic need of modern organisation.

I would like to conclude my observations with placing on record the Board's deep appreciation of the splendid work done by Messrs. Seshasayee Brothers (Travancore) Private Ltd., and in particular, by its Managing Director, Mr. B. V. D. Menon, and their sustained endeavour to expand and broaden the company's activities. The fine work done by the General Manager, by the Managerial and Supervisory personnel and by all ranks of workers and staff has been in good measure responsible for the year's results and the Board wishes to convey to them their grateful thanks.

I now move for adoption the company's Report and Accounts for 1963-64. In doing so, I shall be glad to answer any question concerning these.

CHAIRMAN'S SPEECH

THE METTUR CHEMICAL & INDUSTRIAL CORPORATION LTD.

(Regd. Office: METTUR DAM, R.S.)

Production of chemicals maintained at peak levels

Dr. P. S. Lokanathan Reviews Activities

Addressing the twenty-seventh Annual General Meeting of the Company held at Mettur Dam R. S. on 22nd September, 1964, Dr. P. S. Lokanathan, Chairman, said:

I have great pleasure in welcoming you to this, the twenty-seventh Annual General Meeting of your company.

At the outset I wish to refer to the great tragedy that has befallen our country in the passing away of our beloved Prime Minister, Shri Jawaharlal Nehru. The man who made India what she is today is no more and though some time has elapsed since his death, still we are not able to reconcile ourselves to this loss; it will be no exaggeration to say that the void caused by his death can never be filled. I count it as a great privilege that I had the fortune of personally knowing him from pre-independence days when I served as a member of one of the Committees appointed by him as Chairman of the Planning Committee of the Congress, — through all the years as Executive Secretary of U.N. Economic Commission in which Shri Nehru took a great and continuous interest, and as Chairman of the National Productivity Council, and as the Director-General of the National Council of Applied Economic Research. Shri Nehru's keen interest in science and his driving enthusiasm for the advancement of his countrymen made him follow the work of the National Productivity Council as well as that of the National Council with very great personal interest. Both the organizations benefited a great deal from his support and encouragement. Though he is no more, he would have wished nothing better than that everyone of us dedicating ourselves with all the energy at our command should strive to improve upon the performance of our allotted tasks so that the country will reach economic independence.

In our own immediate sphere, we suffered another great loss in the sudden passing away of Shri V. Swamy Iyengar on February 4, 1964. Shri Swamy Iyengar was a Director of this Company for more than eighteen years and his charming presence will be very badly missed by me and my colleagues on the Board.

Turning now to the affairs of our Company during 1963-64, the total sales went up to over Rs. 2.65 crores as against Rs. 2 crores in the previous year. We reached a new high of nearly 12,700 tonnes in caustic soda production, and I am glad to inform you that production of all chemicals was higher in the year under review as compared to the production in any previous year.

Control on the prices of caustic soda, liquid chlorine, powder and hydrochloric acid was removed by the Government of India in December 1963. This enabled us to revise our prices suitably in common with other alkali manufacturers in the country so that we could cover our increased production costs.

I had mentioned in my last year's speech that a scheme of technical collaboration with a leading chemical manufacturer in the USA had been finalised for the manufacture of organic chemicals and submitted to the Government of India

for their approval. However, due to certain reasons beyond our control, this collaboration arrangement could not be implemented. Therefore, Shri R. V. Ramani, ex-officio Director, once again visited the U.S. this year and we have now concluded a satisfactory arrangement with another very well-known organic chemical manufacturer in the U.S.A. for technical assistance for the manufacture of the new organic chemicals i.e. methyl chloride, methylene dichloride, chloroform, carbon tetrachloride and pentachlorophenol. I now confidently expect production of these new items to start by the end of next year or early in 1966.

Shri R. V. Ramani, during his recent visit to the U.S.A. and Europe, has also finalised the orders for the further cells and other auxiliaries required for the manufacture of rayon grade caustic soda in the No. II plant. The orders have been so placed that we get the maximum advantage out of the limited foreign exchange available to us for expansion. Construction work on the new plant is proceeding at a very fast pace and we can hope to start commissioning the caustic soda plant by the end of the financial year and bring it to full production shortly thereafter.

Thanks to our having sustained a satisfactory and increased rate of production, the net profits have shown a rise of about Rs. 10.67 lakhs over the previous year which has enabled us to maintain the usual dividend of 12½ per cent on equity shares though the paid-up capital of the Company has increased from Rs. 1,60,00,000 to Rs. 2,50,00,000. I am sure shareholders will appreciate this fact and join me in congratulating the Managing Agents on this excellent achievement.

You would also have noted with pleasure from our Directors' report for this year that the machinery for production of a further 20-tonne capacity for caustic soda in the existing factory premises was successfully commissioned in March 1964. I am glad to state that this extra capacity is in full production since August 1964.

During the fag end of the year under review, under the Finance Act 1964, Central excise duties on carbon dioxide gas, liquid chlorine and hydrochloric acid — three of the products manufactured by us — were abolished. Carbon-dioxide was being produced only for self consumption while the other items were sold as well as used for self-consumption. There has been a slight increase in the Central excise duty on soaps.

Super profits tax has been replaced by a surtax on company profits at 40 per cent on the residue of profits after tax and after deduction of 10 per cent on the capital base which includes capital, reserves and long term borrowings. Thanks to the enlarged capital base and increased limit of 10 per cent allowed as profit, our company will however not be called upon to pay surtax for the year ended 31st March, 1964.

Some basic industries will get a rebate of 10 per cent in corporation tax and 20 per cent in surtax, but our industry

is not one of them. Public companies will have to pay dividend tax at 7.5 per cent on the amount distributed as dividend on capital other than preference shares. I feel that this is an unnecessary burden on the companies and looks more like a penalty on the better managed and efficient companies. I hope the Government will be pleased to abolish this unwelcome tax at least next year.

While on the subject of development rebate, I wish to refer to the uncertainty currently prevailing regarding availability of this benefit after 1st April, 1966. I hope that Government will continue this rebate, as its withdrawal will affect adversely a highly capital-intensive industry such as ours and also there will be no incentive for the industries to plough back the profits into reserves, which is an absolute necessity for future expansion.

The Hon'ble Finance Minister, in his closing speech on the Budget, announced that by an amendment of the income tax rules the concession of additional depreciation for the working of the third shift of plant and machinery will be allowed with effect from the assessment year 1964-65. We derive some benefit by this concession.

At the risk of repeating myself, I wish to touch on the unsatisfactory power situation in our part of the country. Some years ago I had made a reference about this and since then it has almost been an annual refrain in my speech. In spite of the commissioning of the thermal units at Neyveli, the power shortage persists. I had stated that unless an atomic power plant was established shortly, we would not be able to see the end of these annual power cuts. From a recent news item, I see that the Government of Madras is indeed seized with the urgency of the situation and has obtained the approval of the Central Government for the construction of two large thermal power stations in our state as soon as possible. This is most welcome.

I would like to make reference to the recommendations of the Swaminathan Committee on the Industries Development procedures. The Committee had some important suggestions to speed up licensing procedures and I am glad to find that the Government has accepted almost all the recommendations.

The speed with which the Swaminathan Committee has submitted both the interim and final reports and the manner in which the Government has accepted the recommendations provided a gratifying instance of a new awareness and earnestness to ensure quick action and I hope the same expedition will be observed in the implementation of the decisions. The simplified procedures will, I hope, go a long way towards helping the establishment of new industrial units, expansion of the existing ones and fuller utilisation of industrial capacity. The efficacy of the techniques devised by the committee for the speedy disposal of applications for industrial licences can be known only after they have been tried for some time. The committee is fully aware of this and its suggestion that, after a year of its working, its scheme should be carefully examined by a similar committee, is a valuable one; for, such a study will provide an opportunity for prompt adjustment that may be necessary in the light of experience and the then prevailing circumstances.

While on the subject of Industrial Licensing, I have to comment in brief on the progress made by the Caustic Soda Industry as a whole. As has been revealed in the mid-term appraisal of the third Plan, the rate of growth of the industry has not been at the pace required by the targets fixed. As a matter of fact, the gap between the target and actual performance has been growing steadily since the second Plan. The reasons for this are many and not the least of which has been the paucity of foreign exchange. It is, therefore, neces-

sary, while framing targets for the fourth Plan, to take a much more realistic view of the capability to perform and set less ambitious targets, — targets which are realistic and capable of implementation according to schedule.

The Tariff Commission has recently held an enquiry in June, 1964 with regard to the continuance of protection to the Caustic Soda and Bleaching Powder industries. Their recommendations are awaited with interest.

I think the shareholders will agree that the affairs of the Company have been fairly consolidated so as to show tangible results. Although the Company has during the year under review as well as in the recent years shown excellent results, there are many important tasks ahead of us. The future will certainly throw up new problems in the spheres of finance, management, industrial relations, productivity, cost control and sales. However, with the sound inherent strength of your Company, I am confident that we shall be able to evolve rational solutions leading to greater stability and progress.

I would like to touch briefly on the recent report of the Bonus Commission and the decision of the Government thereon. As a firm believer in the necessity to sustain high production in all fields of industry, and in incentives to attain such production, I feel that as a general principle, it is much more desirable to have bonus correlated to production rather than having profit sharing bonuses. In any event, the introduction of a minimum bonus correlated to production rather than having profit sharing bonuses. In any event, the introduction of a minimum bonus changes the entire concept of bonus as such, and gives it more the character of a deferred wage. There are some recommendations in the majority report with which our Company cannot be in agreement. I trust that, at least, at the time of introducing legislation to implement their decision, Government will give full consideration to the weighty arguments contained in the minority report. If bonus legislation can ensure better industrial relations, we of course, should welcome it. As far as your Company is concerned, we have already been paying bonus slightly in excess of the maximum visualised in the Bonus Commission's report, but we are anxious that the scheme as finally approved in Parliament should be fair and equitable and help in maintaining peace and promoting goodwill in industry.

On behalf of the Board of Directors and on my own behalf, I wish to express our warm appreciation of the cordial management-labour relations and the devoted services of all ranks of staff and labour, as well as the Managing Agents of the Company.

N.B. This does not purport to be a report of the proceedings of the Annual General Meeting.

THE E.I.D. PARRY GROUP
1964

DARE HOUSE at PARRY'S CORNER

Soon after he had founded his business in 1788, THOMAS PARRY acquired a site for his office and godowns at the corner of Esplanade and First Line Beach, strategically situated, as close as it was then possible to approach Fort St. George. It was not long before this corner became known as Parry's Corner which name it bears to this day.

On January 1, 1819 PARRY took into partnership JOHN WILLIAM DARE—"not only a fine businessman but also a great character".

DARE HOUSE, the Head Office of the E.I.D.—PARRY GROUP is named after him.

One-hundred and twenty-six years have passed since JOHN DARE'S death in 1838. Eventful years of steady progress for PARRY'S!

The E.I.D.—PARRY GROUP of today consists of E.I.D.—PARRY LTD., PARRY & CO., LTD., and a number of subsidiary and associated concerns, in all nine companies of substance, contributing to the country's economy through the manufacture of sugar, confectionery, fertilisers, industrial and potable alcohol, acids, chemicals, carbonic acid gas, sanitary-ware, etc.

The GROUP provides employment to more than 10,000 people. The strong position it has achieved today gives it courage and confidence further to increase and broaden its activities to keep pace with the country's Five-Year Plans.

BOOKS BRIEFLY

Papers on Planning

Pricing and Fiscal Policies: A Study in Method; Edited by P. N. Rosenstein-Rodan; Allen and Unwin, London, 1964; Pp. 216; Price 35 Sh.

Reviewed by D. Krishnaswami Rao

THIS VOLUME is the third in the series of Studies in the Economic Development of India by members of the Indian team of the Centre for International Studies, Massachusetts Institute of Technology.

The book opens with a paper by Rosenstein-Rodan on 'The Economic and Social Objectives of India's Five Year Plans,' first written for the consideration of the Indian Planning Commission, in which he examines the conflict between India's two main objectives, a higher rate of growth and greater social justice, which it is more difficult to reconcile in an underdeveloped than in a developed economy. He emphasizes equality of opportunity rather than equality of income as a basic objective, and suggests greater expenditure on education to ensure equality of opportunity as well as higher productivity in agriculture and industry.

The second paper, also written originally for the Planning Commission, is by Louis Lefebvre who discusses the regional allocation of resources in India, a question that is inevitably loaded with political overtones. He recommends that resources needed for the creation of industrial and agricultural capacity that can yield immediate high returns should be allocated "with the strictest regard for economic efficiency" while investments undertaken to bring relief to 'retarded' areas "should be based on low-cost rural labour and locally available materials," and provide for such things as local irrigation, land reclamation, reforestation, road building and construction of village schools. These could be followed by projects for small-scale industries to produce goods to serve the local market and process the agricultural produce of the neighbourhood. It is doubtful, however, whether the exigencies of politics would permit such a compromising of 'regional balance.'

The next contribution, by I.M.D. Little, on 'Tax Policy and the Third Plan' is a revised version of an essay written by him in June 1959, "to investigate whether Rs. 1,000 crores of extra taxation by 1965-66 is possible; and also show that it would not represent an undue burden on the economy." He recommends ways of exploiting to the full "nearly every opportunity of taxation and public profit which is economically and administratively sound" with the assurance that such a policy "should not be inconsistent with stable final prices on average." The state of the economy today is comment enough on such recommendations.

Readers' Roundtable

DEFICIT FINANCING

Sir, — The big increase in prices of foodgrains and other goods and services is the cumulative effect of wrong economic policies pursued so far. Deficit financing, which was resorted to the extent of Rs. 333 crores during the first Plan and Rs. 948 crores during the second Plan, and which within three years of the third Plan has exceeded the Plan ceiling of Rs. 550 crores by Rs. 124 crores is the main factor in the increase in prices. In this context, it is alarming to note that the Planning Commission circles propose a fourth Plan (1966-71) of the order of about Rs. 20,000 crores.

The Economic Division of the Commission is reported to have suggested deficit financing to the extent of Rs. 1,100 crores

A further article, also by Dr. Little, is a theoretical demonstration of a point suggested by the case of India, namely that in a developing economy, unlike the situation in a developed economy in a slump, the employment of more labour in the capital goods industries necessitates additional investment in the consumer goods industries to provide for the extra consumption resulting from the additional employment. Only the possibility of "free" imports of food, the most important element of the increase in consumption, from abroad could affect the implications of this argument, as our experience has amply shown.

The paper on transportation policy in India by Louis Lefebvre and Mrinal Datta Chaudhuri, first written for the Planning Commission, contains a useful discussion of subjects like transport capacity, haulage rates in relation to investment in railways and road transport, and road-rail competition, in their bearing on our economic planning.

Amartya Kumar Sen who follows with a study of working capital in the Indian economy makes the important point that as economic development converts a household-based economy into one based on wage labour the requirement of working capital is to that extent likely to grow more than in proportion to output, a prospect that poses interesting problems for planners. He considers as exceedingly low, from this point of view, the provision for a total working capital requirement of Rs. 800 crores in the third Five-Year Plan.

A. Harberger and N. Andreatta present 'A Note on the Economic Principles of Electricity Pricing' in which they emphasize the dominant part which thermal costs are likely to play in setting 'norms' for electricity rates in a country like India, and recommend the abandonment of the present common practice of a rate structure that differentiates between peak-time and off-peak use of power, as additional supplies at the peak-load require extension of generation capacity.

Then follows another paper by P. N. Rosenstein-Rodan which is a refutation of H. J. Bhabha's proposal, made in 1958, for a nuclear power programme for India, a matter which anyway is of little immediate moment.

The concluding paper, on India's balance of payments problem, by Sir Donald Macdougall, is a modified version of his article published in the Bulletin of the Oxford University Institute of Statistics, May 1961.

One does close the book with the wish that it had given us more of writings which one had not come across already in print or in mimeographed form.

M. R. PAI.
Bombay.

RECORDS AND STATISTICS

I.F.C.: Achievements in Sixteen Years

THE INDUSTRIAL Finance Corporation of India, since its inception, has given financial assistance of the order of Rs 96.78 crores to 334 industrial units. In 1963-64, it provided Rs. 38.27 crores for 91 different concerns. Out of last year's assistance, Rs. 27.76 crores were sanctioned for new units and Rs. 10.51 crores for the expansion, renovation and modernisation of existing units. Public limited companies received Rs. 17.16 crores while Rs. 1.11 crores were provided to co-operative societies.

Apart from giving loans in rupees, which still remains its major activity, the Corporation, in recent years, has been able to provide its clientele with foreign currency loans, underwriting facilities, direct subscription to capital issues, deferred payment guarantees as well as guarantees for foreign loans. During the year ended June 30, 1964, the Corporation received 188 applications for different types of financial assistance aggregating Rs. 58.85 crores. In all, 123 applications for a total assistance of Rs. 38.27 crores were sanctioned to 90 concerns. Only two applications for Rs. 17.50 lakhs were not sanctioned. Thirty-five applications for Rs. 13.09 crores were treated as lapsed or withdrawn. At the close of the year, 109 applications from 74 concerns were under examination.

During the year, rupee and foreign currency loans totalled Rs. 25.12 crores as against Rs. 22.61 crores in the previous year. Disbursements amounted to Rs. 16.03 crores during the year as against Rs. 14.12 crores in the last year. No application for rupee and foreign currency loans was rejected.

Foreign Currency Loans

Foreign currency loans sanctioned during the year aggregated Rs. 8.04 crores and were given to 26 applicants. They included Rs. 449.54 lakhs in US Currency, Rs. 335.32 lakhs in West German Currency, Rs. 18.73 lakhs in French Francs and Rs. 0.60 lakhs in Japanese Yen. Letters of Credit aggregating US \$3.80 million and DM 2.05 million (total Rs. 205.62 lakhs) were opened in favour of foreign machinery suppliers. Disbursements amounted to US \$3.79 million and DM 0.33 million (total Rs. 184.44 lakhs).

Forty proposals for underwriting for about Rs. 5.41 crores were approved. They included equities for Rs. 385.93 lakhs and preference shares of Rs. 155 lakhs. Forty applications for an aggregate amount of Rs. 1025 lakhs were under examination at the end of the year.

During the year, 25 issues in which the Corporation's underwriting amounted to Rs. 342.75 lakhs were placed in the market. The extent of shares that devolved on the IFC in respect of 24 issues underwritten by it amounted to Rs. 304.44 lakhs. The subscription list for the 25th issue was not closed by June 30, 1964.

During the year, the Corporation approved 10 proposals for guaranteeing deferred payments of the value of Rs. 2.72 crores. No application was rejected, 7 were withdrawn and 7 were under examination. Guarantees actually issued during the year aggregated Rs. 73.78 lakhs. These guarantees were in respect of plant and machinery imported from abroad.

It may be recalled that the Corporation was authorised to

guarantee deferred payments only in December 1957. Since then, 41 proposals for deferred payment guarantees for Rs. 31.97 crores have been approved. The value of guarantees actually issued till date amounted to Rs. 13.49 crores.

Two applications for guarantee of foreign currency loans were pending at the close of the year ended June 30, 1963 and one application for guarantee of a loan in US dollars for Rs. 4 crores from the Exim Bank, Washington was received during the year under review. Out of the three, two for an aggregate amount equivalent to Rs 502.43 lakhs were sanctioned. The third application is under examination. Guarantees to the extent of Rs. 314.81 lakhs were actually issued during the year.

The total net financial assistance to industrial co-operatives approved till the end of the year under report amounted to Rs. 37.86 crores. This has been given to 51 co-operative sugar factories, 3 co-operative spinning mills and one co-operative unit for the extraction of vegetable oil. The net approved assistance represents about 19 per cent of the total financial assistance approved by the Corporation. It is indicative of the high priority accorded by it to this sector of the country's economy. Co-operative units in eleven States have received this assistance. Maharashtra leads with 21 units, while Madras has 6 and Andhra Pradesh and Punjab 5 each.

Resources

The resources of the Corporation have come through the public issue of bonds, borrowings from the Reserve Bank of India and from the Central Government as well as borrowings in foreign currency. These are in addition to the Corporation's own paid-up capital of reserves and surplus and repayments of loans.

During the year under review, a further sum of Rs. 11.00 crores was drawn from the Central Government, in addition to the earlier loans of Rs. 24.75 crores, out of which a sum of Rs. 0.15 crores was repaid; the balance outstanding at the end of the year being Rs. 35.60 crores. Interest paid on borrowings from the Central Government remained unchanged at 5 per cent per annum. Borrowings from the Reserve Bank were, as in the past, sparingly availed of. The rate of interest charged by the Bank continued at 4.5 per cent per annum. The Corporation has repaid to the AID US \$150,000 (Rs. 7.14 lakhs) up to June 30, 1964. It is continuing its efforts to secure further lines of credits in US dollars, Deutsche Marks and other currencies, with a view to meeting the foreign exchange requirements of its borrowers.

At the end of the year under report, a cumulative total of Rs. 21.09 crores was received by way of interest out of a cumulative total of Rs. 21.23 crores due. The amount of default of Rs. 14.10 lakhs constituted only 0.66 per cent of the total dues. A cumulative total of Rs. 20.47 crores was received up to the end of the year by way of repayment of principal out of a total of Rs. 20.74 crores. The amount in default (exclusive of extended instalments of Rs. 8.71 lakhs) was Rs. 18.24 lakhs representing 0.88 per cent of the cumulative instalments of principal due up to the end of the year. Defaults were committed by two concerns in payment of deferred payment instalments.

Thermocole® keeps your room so cool!

THERMOCOLE is foamed polystyrene: The lightest rigid insulation material. Its closed cells provide an effective barrier against heat, noise and moisture.

THERMOCOLE is versatile. It is ideal for insulating roofs, walls and floors in all kinds of buildings. One inch of THERMOCOLE insulates better than four feet of concrete!

THERMOCOLE false ceilings are very attractive. It is excellent for fabricating lightweight insulating partitions and doors.

THERMOCOLE is feather-light, yet strong, durable and easy to work with. It cuts structure and labour costs. Efficiency with economy—that's the insulation THERMOCOLE provides.

INDUSTRIAL DEVELOPMENT BANK OF INDIA

APPLICATIONS ARE invited for the following posts in the Industrial Development Bank of India :

(A) POSTS AND SCALES OF PAY :

- (i) Deputy Managers: Rs. 850-60-1150.
- (ii) Officers Grade I: Rs. 430-430-55-815 EB 55-925-60-1045.
- (iii) Officers Grade II: Rs. 375-20-535-25-560 EB 25-660-30-720.

Note: Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in prescribed scales.

In addition to pay, the selected candidates in all categories mentioned above will be eligible to draw local pay, house allowance, dearness allowance and other allowances at rates prescribed by the Bank from time to time. The present rates for local pay and other allowances are :

- (i) Local pay at 10% of pay.
- (ii) House rent allowance at 15% of pay with a minimum of Rs. 60 and a maximum of Rs. 300/-.
- (iii) Dearness allowance :
 - (a) **Deputy Managers:** Rs. 125/-, provided the pay plus dearness allowance does not exceed Rs. 1250/- per mensem.
 - (b) **Officers Grade I:** 20% of pay upto pay of Rs. 500/- and thereafter at 16-2/3% with a maximum of Rs. 125/-, with marginal adjustments where necessary.
 - (c) **Officers Grade II:** 20% of pay with a maximum of Rs. 100/-.
 - (iv) an ad hoc allowance of 10% of pay with a maximum of Rs. 100/- per month payable up to 31-3-65.

(B) QUALIFICATIONS :

(i) Deputy Managers and Officers Grade I:

Applicants should have high academic qualifications — preferably a first class Master's degree or a Doctorate with proficiency in one or more of the following subjects — or should be members of the Institute of Chartered Accounts of India :

(a) Investment; (b) Banking; (c) Accountancy (d) Cost Accounts, (e) Company Taxation, (f) Company Law and Management, (g) Corporate Finance, (h) Industrial Economics, (i) Techno-economic Surveys, (j) Statistics and Economics, (k) Marketing Economics, (l) Economic Planning.

For posts of Deputy Manager preference will be given to applicants who have had practical experience and/or have done research work in the above fields and who have worked in banks or institutions financing industrial units or in industrial units in a responsible position for at least 5 years.

(ii) Officers Grade II :

Applicants should have a good academic record, preferably a first class Master's degree in Economics or Commerce or Statistics; weightage will be given to special sation in subjects like Banking, Industrial Economics. Industrial Finance, Accountancy, Company taxation, Company Law and Management.

(C) AGE LIMIT AS ON 1ST NOVEMBER, 1964 :

(i) **Deputy Managers:** Candidates should be between 30 and 40 years of age but the age limit may be relaxed in the case of candidates possessing exceptional qualifications.

(ii) **Officers Grade I:** Candidates should not ordinarily be over 35 years of age but the age limit may be relaxed in the case of candidates with exceptional qualifications.

(iii) **Officers Grade II:** Between 21 and 27 years. The maximum age limit is relaxable but not beyond 32 years in the case of :

- (a) candidates possessing special qualifications
- (b) candidates belonging to the Scheduled Castes or Scheduled Tribes.

2. Candidates who wish to apply for more than one category of posts must submit separate applications accompanied by separate application fees and should clearly indicate the post and the department for which they have applied.

3. Applicants for the above posts must remit with their applications a fee of Rs. 7.50 for each post by cheque or bank draft on a **scheduled Bank** payable at Bombay or by Postal Order. **The application fee is in no case refundable.** In the case of candidates belonging to Scheduled Castes/Tribes, the fee will be Rs. 2/- for application for each post.

4. Applications in the candidate's own handwriting in the prescribed forms obtainable from the Industrial Development Bank's Office at Bombay, accompanied by copies (originals should not be sent) of certificates regarding age and educational qualifications, statements of marks secured in the graduate and post-graduate degree examinations and copies of two testimonials should be forwarded to the General Manager, Industrial Development Bank of India, Post Bag No. 10042, Bombay-1, so as to reach him on or before the 14th November, 1964. Requests for supply of forms through post should be accompanied by a self-addressed and stamped envelope of size 9" x 4".

5. Candidates already in service will be required to produce a proper discharge certificate from their employers at the time of their appointment in the Bank's service.

6. Candidates belonging to Scheduled Castes/Scheduled Tribes should mention this fact prominently in their applications and also enclose a copy of the certificate to that effect from competent authority.

7. Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

8. If any candidate desires to have his application acknowledged, he should send it by "Registered Post — Acknowledgement Due". Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

9. Candidates called for interview will be reimbursed single return railway/bus fares by the shortest route from their place of residence to Bombay, applicants for posts of Officers Grade II being paid II Class fares and those for higher posts, I Class fares.

10. Canvassing in any form will be regarded as disqualification.

amounting to Rs. 24.72 lakhs which had been guaranteed by the Corporation and which were met by it. In addition, guarantee commission of Rs. 1.45 lakhs on deferred payments guaranteed by the Corporation was in arrears by one concern on June 30, 1964. Over and above the normal repayments of principal in terms of the mortgage documents, the Corporation had received up to June 30, 1964 a sum of Rs. 698.87 lakhs from the borrower concerns on account of premature repayments of principal and sale of the mortgaged assets.

The rate of interest charged by the Corporation on its rupee loans remained unchanged, during the year, at 7½ per cent per annum with a rebate of ½ per cent per annum for punctual payment of instalments of principal and interest. There was no change in the rate of interest charged during the year on the foreign currency loans (sanctioned out of the dollar credit), viz., 8½ per cent per annum less a rebate of ½ per cent per annum for punctual payment of instalments of principal and

interest (net 7½ per cent per annum) plus an extra ½ per cent per annum to provide for incidental expenses. The rate of interest on the foreign currency loans sanctioned out of the credits in French Francs and Deutsche Marks has been fixed at 8.5 per cent per annum less a rebate of ½ per cent per annum for punctual payment of instalments of principal and interest, i.e. net 8 per cent per annum.

The year's working shows a gross income of Rs. 507.23 lakhs as against Rs. 394.72 lakhs in the previous year. After deductions for payment of interest on borrowings and other expenses, the gross profit for the year works out to Rs. 227.06 lakhs as against Rs. 167.62 lakhs in the previous year. As compared to the previous year the total income during the current year increased by Rs. 112.56 lakhs. The gross profit recorded an increase of about Rs. 59.44 lakhs. The net profit increased from Rs. 82.67 lakhs to Rs. 125.44 lakhs. The appropriations to reserves during the year are higher by about Rs. 42.77 lakhs.

that negotiations were possible only on terms dictated by Peking. On the credit side lies the consolation that the conference, while pronouncing itself in favour of "present borders and sovereignty", made an oblique reference to China's border war with India in 1962. It stated that "a situation brought about by threat or use of force should not be recognised and in particular established frontiers of States should be inviolable".

The communique issued at the end of the conference made the admission that sources of tension existed in many parts of the world; it laid down the considered views of the participants regarding the method of eliminating these fountains of friction. To eradicate colonialism, neo-colonialism and imperialism, the conference urged the colonised people to "resort to arms to secure full exercise of their right of self-determination and independence if the colonial powers persisted in opposing their natural aspirations." This, indeed, is a major departure from the early stand taken by the non-aligned nations at Belgrade. It is an obvious incitement to the peoples of South Africa, Angola, Mozambique etc. to take to arms for their liberation and the nations assisting in this regard would be, in the eyes of the non-aligned countries, fully justified. On Congo, the discontinuance of the recruitment of the mercenaries has been urged in order to facilitate an early solution. The racist minority rule in Southern Rhodesia has been condemned and all the non-aligned States have been asked not to recognise the independence of Southern Rhodesia if proclaimed under the rule of the minority. South Africa

Art Silk Industry Needs Modernisation

THE ESTIMATES Committee Report relating to the art silk industry, submitted to Parliament in June 1964, has been rendered obsolete in most of its recommendations except the one dealing with the modernisation of the industry. The concern exhibited by the Committee regarding the laxity of Government control on the distribution of indigenous yarn (and the consequent high prices) has already been taken note of by the Government. The last Budget introduced new elements with the result that while the evil of the sale of quota by the consumers was eliminated to a certain extent, no concrete action had been taken to provide the wherewithal for modernising the industry. The levy of additional excise duty in the last budget kept the prices of yarn at a relatively high level, leading to a curb on demand. It is a pity that for purposes of taxation the art silk industry has been classified as a luxury industry regardless of the fact that it serves today the requirement of a large number of families in the less-privileged sections of society.

The anticipated rise in population and increase in incomes during the next decade are likely to give a considerable push to the demand for all textiles. It has been estimated by the Association of Man-Made Fibre Industry that in case cotton textiles alone were

and Portugal have been condemned in unmistakable terms for their persistent refusal to co-operate with the United Nations in the implementation of pertinent resolutions of the General Assembly. Similar views have been expressed in favour of the freedom movements in Swaziland, Basutoland, Bechuanaland, French Somaliland, etc. On Palestine, the participants gave full support to the Arab point of view. Britain was condemned for holding an arms and military base in Aden. All these exhortations are not at variance with the stand taken by this country in the past, though the commitments in the latest communique have been made more sharp and pointed. The suggestion regarding the withdrawal of foreign troops from Viet-Nam is, perhaps, charged with hazards to which the non-aligned nations did not give careful consideration. The adoption of their recommendation will, without doubt, result in the occupation of South Viet-Nam by the Hanoi Communist Government with the assistance of Peking and will result in a dislocation of balance of power in this area.

All in all, it might be stated that the conference was not a great success from India's point of view though some favourable points did emerge. In any gathering of so many State chiefs with divergent interests and inclinations, it may not be possible for any one country to be able to orient thinking on preconceived lines. Some of the recommendations will, no doubt, remain on paper as they have in the past, but a feeling exists that the net result of all the pronouncements made at the conference is not altogether in our favour.

to meet the needs of the country in the next ten years an additional 2000 million yards of cotton fabrics would have to be produced. This means that the country will have to devote more acreage to cotton cultivation or, alternatively, spend valuable foreign exchange in importing cotton. Being a reliable and relatively cheap substitute as well as a blend for cotton, the rayon fibres can meet the nation's growing textile requirements without usurping additional acreage for cotton which could be diverted for food production.

Burdened with additional excise duty levied in the last budget, the industry is left with hardly any incentive to expand further to meet the country's internal as well as export requirements. The total excise duty at present ranges from 52.4 per cent to 72.6 per cent of the basic ex-factory prices. For instance, the ex-factory price of 150 deniers yarn is Rs. 8.26 per kg. whereas the total excise duty that it attracts is Rs. 6. The impact of a high incidence of excise duty becomes more evident when a comparison of the domestic prices of rayon yarn in India is made with those prevailing in other countries. For instance, the selling price of 100 deniers yarn in India is Rs. 15.50 per kg. as compared to Rs. 5.66 per kg. in Japan, Rs. 9.42 per kg. in the UK and Rs. 12.39 per kg. in the USA. The purchasing

power of the Indian consumer being much lower than that of his counterpart in these countries, the demand for art silk has been restrained.

As regards modernisation, again, the Estimates Committee has not made any far-reaching recommendations. The report has recommended that a mill-wise plan for rehabilitation and modernisation of art silk industry should be prepared by the Textile Commissioner and that the industry should be assisted by indicating the sources from which suitable machinery could be procured. The Committee has not bothered to examine the specific requirements of the industry and accordingly, to recommend for the allocation of a definite volume of foreign exchange for the purpose. A large part of the machinery now being used in the weaving industry was originally intended for cotton but was later on converted to process rayon. Due to the paucity of foreign exchange, new machinery was not imported in the past, and now, the urgency of rehabilitation and modernisation is more than ever before. However, unlike cotton, only a small allocation of foreign exchange will suffice for modernising the art silk weaving industry. According to the estimates of the Association of Man-Made Fibre Industry, less than Rs. 50 crores will be needed for the import of machinery required for the industry so as to meet the country's present needs. Needless to add that the foreign exchange spent on modernisation will be more than repaid by way of increased exports as the installation of up-to-date machinery will lead to reduction in the cost of production as well as improvement in quality. Again, the improvement in quality will open up a new range of art silk fabrics for export markets.

Without taking into consideration the export aspect of the art silk industry, the Estimates Committee recommended that even at the current stage of development of the industry it was as important to improve the quality of production as to maintain quantitative output and that, therefore, efforts should be made to improve the quality of art silk fibres. From the technical point of view the position is that in the manufacture of rayon yarn only about 90 per cent of the production can be in the first grade. The Indian rayon units, instead of spinning at the recommended speed of approximately 90 metres per minute for certain deniers, spin at 110 to 120 metres per minute with the result that their production of first grade yarn is only 75 to 80 per cent of the total. In the existing circumstances, it is not considered worthwhile to insist upon higher proportion of first grade yarn for the reason that it will reduce overall production by 20 to 25 per cent, leading thereby to a further shortage of the material in the country. Besides, an increase in the proportion of the first grade yarn will not result in an increase in the total production of this yarn. In the ultimate analysis, therefore, the efforts to increase the production of first grade yarn will lead to overall increase in the cost of production as well as to lesser availability of indigenously produced yarn.

This will obviously affect our exports adversely as reduced value of fabrics will be available for exports and that too at relatively higher prices.

The development of rayon industry needs to be welcomed not merely from the point of view of domestic requirements but also for earning additional foreign exchange through exports. While, on the one hand, the country's dependence on the import of rayon yarn is now considerably less, the export of art silk fabrics has gone up tremendously. In the case of fabrics alone, India's exports in 1963 amounted to 90 million metres valued at Rs. 10.4 crores, showing an increase of 22 times over the decade at an average rate of expansion of 200 per cent per annum. The fibre industry too accounted for a saving in foreign exchange of nearly Rs. 15 crores in 1963. India today exports rayon and synthetic fabrics to as many as 80 countries, and in spite of increasing foreign competition, the value of exports has continued to increase. Encouragement to the domestic rayon fibre and fabric industries must, therefore, come from the Government both by way of reduction in taxes, particularly, in excise duty on yarn, and by liberal provision of foreign exchange for the import of machinery required to modernise the weaving industry.

Eastern Economist 20 Years Ago OCTOBER 13, 1944

The second broadcast in the BBC series on Indian agriculture was, like the curate's egg, good in parts. Sir John Russell was certainly right in emphasising the importance of mixed farming. There can be no question that India should produce more fruits, more vegetables and above all more milk. The discussion brought out many of the defects of the unbalanced agricultural production that obtains today. The immediate benefits from cereal cultivation or cash crop farming are apparent, but there is the danger of the peasants ending up in monoculture, which is bad for the soil and bad for the cultivator. Bad for the soil because you get an accumulation of diseases and pests, and in some cases even soil erosion. Bad for the cultivator, because if the concentration is on grains, diet becomes poor and unbalanced and if the concentration is on commercial crops, it even becomes inadequate and precarious as the cultivator tends to get away from his source of food and has to depend on what he can buy or import. To a country such as India, especially, with its high density of agricultural population, the general adoption of mixed farm is the essential condition of prosperous agriculture. This should not, however, mean that we can afford to produce less of foodgrains, or even very much less of commercial crops. To take foodgrains first, the war has demonstrated that this country does not produce enough for its people even at the present inadequate level of consumption. In an ideal world, it may be to India's advantage to take up mainly the production of protective foods, importing foodgrains cheaply from Australia or Argentina, where extensive cereal cultivation can be practised more economically.

"CUPPACHA?"

Besides adopting the Indian word for tea, the U.K. in the month of March 1964 alone, also took Rs. 1.04 crores worth of tea. The rest of the world took Rs. 4.89 crores worth. A year's export of tea will earn enough foreign exchange to finance a project twice as large as the nuclear power plant at Tarapur. That's how important tea exports are—how important exports are to India.

Cairo Conference

THE NON-ALIGNED conference at Cairo was "a rewarding experience" for our Prime Minister, Mr. Lal Bahadur, as it provided him with an opportunity to meet the chiefs of no less than 47 countries in his first-ever overseas visit. His satisfaction with the conference is justified on the score of his having made personal contacts with so many of the non-aligned leaders, if not for any other reason. The Press reports which reached New Delhi from Cairo during the last week indicated that the Prime Minister's frankness, sincerity and humility had won him many a friend. All this is extremely encouraging though some vital questions are being currently asked in the country relating to positive gains, if any, which emerged for India at this conference. Has any concrete contribution been made by the Colombo Powers to resolve India's border dispute with China? Will the non-aligned nations pick up enough courage to ask China to abandon the projected nuclear test? Again, what far-reaching changes are expected in the international scene as a result of the deliberations at this conference? Have we given away more than we have gained? These are all relevant questions which cry out for clear and unambiguous answers.

The Prime Minister's speech at the non-aligned conference was, no doubt, a skilful one because it raised all the issues which directly or indirectly affected India, though it covered many broad issues of "peace, freedom and progress" in the world as a whole. His reference to the right of self-determination for dependent territories under colonial rule was in very clear terms. Tackling indirectly the Kashmir problem in the same sweep he said that "there can be no self-determination in different areas and regions within a sovereign and independent country for this would lead only to fragmentation and disruption and no country's integrity would be safe". Again, he dilated upon the question of racialism which he condemned in strong words. He also referred to discriminatory action against residents of certain racial origins implying the treatment being meted out to Indians in some of the African States. He urged that the problem of persons living in other lands — persons who were originally from another country — should be tackled after mutual discussion and consultation. To the credit of the Prime Minister is the suggestion that a delegation be sent to China to dissuade the Peking Government from detonating some kind of a nuclear device. Unfortunately this proposal yielded next to nothing, though it did attract wide attention. The Prime Minister gained in stature by declaring at the conference that India could, if it so desired, develop nuclear weapons within a year or 18 months as the country possessed both raw materials and technical skill. He hastened to add that India "did not intend to go down this trail". This policy of moderation and restraint was, without doubt, appreciated by all the heads of the States.

When the Colombo Powers were preparing to approach China for adopting a reasonable attitude on the border dispute with India, the well-timed statement by Peking smashed their hopes altogether for a possible early settlement. The declaration by the Chinese Government made it clear that "such consultations not only could not be of any help to the promotion of direct Sino-Indian negotiations, but will place more obstacles in their way, making it more difficult for the Six Colombo Conference nations to conduct meetings in the future". The door was slammed in the face of Colombo mediators; the obvious implication was

INDUSTRIAL DEVELOPMENT BANK OF INDIA

APPLICATIONS ARE invited for the following posts in the Industrial Development Bank of India :

(A) POSTS AND SCALES OF PAY :

- (i) Deputy Managers : Rs. 850-60-1150.
- (ii) Officers Grade I : Rs. 430-430-55-815 EB 55-925-60-1045.
- (iii) Officers Grade II : Rs. 375-20-535-25-560 EB 25-660-30-720.

Note : Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in prescribed scales.

In addition to pay, the selected candidates in all categories mentioned above will be eligible to draw local pay, house allowance, dearness allowance and other allowances at rates prescribed by the Bank from time to time. The present rates for local pay and other allowances are :

- (i) Local pay at 10% of pay.
- (ii) House rent allowance at 15% of pay with a minimum of Rs. 60 and a maximum of Rs. 300/-.
- (iii) Dearness allowance :
 - (a) **Deputy Managers :** Rs. 125/-, provided the pay plus dearness allowance does not exceed Rs. 1250/- per mensem.
 - (b) **Officers Grade I :** 20% of pay upto pay of Rs. 500/- and thereafter at 16-2/3% with a maximum of Rs. 125/-, with marginal adjustments where necessary.
 - (c) **Officers Grade II :** 20 % of pay with a maximum of Rs. 100/-.
- (iv) an ad hoc allowance of 10% of pay with a maximum of Rs. 100/- per month payable up to 31-3-65.

(B) QUALIFICATIONS :

(i) Deputy Managers and Officers Grade I :

Applicants should have high academic qualifications—preferably a first class Master's degree or a Doctorate with proficiency in one or more of the following subjects—or should be members of the Institute of Chartered Accountants of India :

(a) Investment; (b) Banking; (c) Accountancy, (d) Cost Accounts, (e) Company Taxation, (f) Company Law and Management, (g) Corporate Finance, (h) Industrial Economics, (i) Techno-economic Surveys, (j) Statistics and Economics, (k) Marketing Economics, (l) Economic Planning.

For posts of Deputy Manager preference will be given to applicants who have had practical experience and/or have done research work in the above fields and who have worked in banks or institutions financing industrial units or in industrial units in a responsible position for at least 5 years.

(ii) Officers Grade II :

Applicants should have a good academic record, preferably a first class Master's degree in Economics or Commerce or Statistics; weightage will be given to specialisation in subjects like Banking, Industrial Economics, Industrial Finance, Accountancy, Company taxation, Company Law and Management.

(C) AGE LIMIT AS ON 1ST NOVEMBER, 1964 :

(i) **Deputy Managers :** Candidates should be between 30 and 40 years of age but the age limit may be relaxed in the case of candidates possessing exceptional qualifications.

(ii) **Officers Grade I :** Candidates should not ordinarily be over 35 years of age but the age limit may be relaxed in the case of candidates with exceptional qualifications.

(iii) **Officers Grade II :** Between 21 and 27 years. The maximum age limit is relaxable but not beyond 32 years in the case of :

- (a) candidates possessing special qualifications.
- (b) candidates belonging to the Scheduled Castes or Scheduled Tribes.

2. Candidates who wish to apply for more than one category of posts must submit separate applications accompanied by separate application fees and should clearly indicate the post and the department for which they have applied.

3. Applicants for the above posts must remit with their applications a fee of Rs. 7.50 for each post by cheque or bank draft on a **scheduled Bank** payable at Bombay or by Postal Order. **The application fee is in no case refundable.** In the case of candidates belonging to Scheduled Castes/Tribes, the fee will be Rs. 2/- for application for each post.

4. Applications in the candidate's own handwriting in the prescribed forms obtainable from the Industrial Development Bank's Office at Bombay, accompanied by copies (originals should not be sent) of certificates regarding age and educational qualifications, statements of marks secured in the graduate and post-graduate degree examinations and copies of two testimonials should be forwarded to the General Manager, Industrial Development Bank of India, Post Bag No. 10042, Bombay-1, so as to reach him on or before the 14th November, 1964. Requests for supply of forms through post should be accompanied by a self-addressed and stamped envelope of size 9" x 4".

5. Candidates already in service will be required to produce a proper discharge certificate from their employers at the time of their appointment in the Bank's service.

6. Candidates belonging to Scheduled Castes/Scheduled Tribes should mention this fact prominently in their applications and also enclose a copy of the certificate to that effect from competent authority.

7. Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

8. If any candidate desires to have his application acknowledged, he should send it by "Registered Post — Acknowledgement Due". Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

9. Candidates called for interview will be reimbursed single return railway/bus fares by the shortest route from their place of residence to Bombay, applicants for posts of Officers Grade II being paid II Class fares and those for higher posts, I Class fares.

10. Canvassing in any form will be regarded as disqualification.

Highlights of the Week

SPACE RACE

THE USSR has once again asserted its lead in the space race by launching a three-man spaceship from somewhere in Soviet Central Asia on Monday, October 12. The pilot of the ship, Colonel Vladimir Komarov, is an engineer while his two companions are civilians. Lieut. Boris Yegorov is a doctor while Mr. Konstantin Feokistov is a scientist. The cosmonauts have been in touch with Moscow ever since the spaceship went into orbit; they answered questions of a commentator on television on the day of the flight.

About a year ago, the USSR had established a new record by launching two spacecraft simultaneously. The USA had thrown up Ranger VII which hit the moon and it was being speculated that the USSR would repeat the same feat. The Russians have, however, replied in a more dramatic manner by this three-man flight.

The present spectacular achievement has shown that the USSR scientists possess technical knowledge to build a large spaceship which can accommodate three cosmonauts and all the equipment needed by each one of them. An important feature of the new venture is that, for the first time, it will make possible the observation of biological changes produced in human beings while floating through space. During the third and the fourth orbits on the first day, the doctor — Lieut. Boris Yegorov — carried out some blood tests and made certain other physiological studies. He also checked blood pressure and lung reactions of his companions. An analysis of medical reactions in "prolonged flight" will be the key discovery of this space-flight.

The spaceship has been named Voskhod which means "Sunrise". Each one of its flights round the earth takes place in 90.1 minutes. The Russian scientists have made it known that it is making the highest flight ever attempted by any spaceship. At the farthest point, it is about 409 kilometres or 250 miles from the earth—nearly 100 kilometres farther than the earlier record by the first cosmonaut, Yuri Gagarin, in 1961.

The new three-man flight into space is the sixth Soviet-manned space venture. All earlier manned flights into space have been conducted before August while the latest one has taken place in October. It means that the Russian scientists are slowly attempting to experiment in months which, in relation to weather conditions, are not deemed congenial.

As we go to the Press, the news has been flashed that the spaceship returned to earth after 24 hours of flight discounting the earlier conjectures that the spaceship would be in orbit for 7 to 10 days.

FINANCE FOR DEVELOPMENT

MR. PIERRE-PAUL Schweitzer, Managing Director of the International Monetary Fund, has made some candid observations regarding the Indian economy. Expressing his admiration for India's positive achievements in the field of planned development, he desired that "this should not lead to any slackening but rather to redoubled development effort and continued monetary vigilance — particularly in the light of the current pressures on the general economic situation". The situation considerably confounded by the additional defence expenditure, he added, had been rendered even worse by India's failure on the agricultural front. He suggested that timely budgetary and credit policy measures could play an important role in the present need to avoid a further spiralling of prices and costs which could have serious consequences for India's development plans. He was convinced that the Indian leaders were fully seized of the situation. These ob-

servations of Mr. Schweitzer were made while delivering a lecture on "Some Financial Aspects of Economic Development" at the Indian Institute of Public Administration in New Delhi on October 5.

Perhaps of greater interest were his theoretical generalizations. Through the symptoms pointed out by him it is not difficult to diagnose the ailments of the Indian economy. It has been widely recognized that India, at present, is in the midst of a serious inflationary spiral, the repercussions of which are gradually becoming familiar. Mr. Schweitzer probably thought it appropriate to highlight the disastrous consequences of the rapid, or even mild, inflation at a time when there is every likelihood of this country embarking on a Rs. 20,000 crore-plus fourth Plan, which cannot conceivably be financed except by resorting to draconian inflationary measures. Rapid inflation, according to Mr. Schweitzer, breeds distrust in domestic money and, therefore, discourages savings, which are liable to be diverted to such unproductive uses as real estate speculation, excessively large inventories, or gold hoarding, or they may through various devices flow abroad. The government's attempt to check prices of basic producer and consumer goods discourages their output leading to serious shortages. Inflation also discourages foreign investment, eats into the exportable surpluses, and upsets balance of payments position. Finally, the social consequences of inflation can often lead to political instability.

Mr. Schweitzer also suggested corrective measures to put the country's economy back into the gear. He advocated the fostering of savings habit among the people, which could best be done with the assistance of a variety of savings media and financial institutions. The incentive of interest rate can also encourage savings, especially when there is danger of the value of the money being eroded by inflation. The promotion of exports is important because of the increasing requirements not only of imports but also of debt service charges. There was, however, a controversial suggestion which Mr. Schweitzer made. He said that as compared with a large number of other countries, the proportion of national income that is taken by taxation in India is still relatively low. In the existing circumstances of this country it might be stated that for the Indian people, the breaking point has already been reached and any further attempt to put additional tax burdens will result in a chaotic situation. What is needed, however, is an efficient tax-collecting machinery. In this respect the Government might well seek help from the Fund's Fiscal Affairs Department.

Talking of the functions of the IMF, Mr. Schweitzer made it clear that the Fund was not in business to provide capital for development. It extended short-term foreign exchange credit to assist countries in overcoming temporary balance of payments difficulties. The Fund is an increasingly important source of international liquidity for the developing countries which, under the pressure of their development needs, have been forced to reduce their own gold or foreign exchange reserves to low levels. Compared with their own resources of about \$12 billion, the developing countries have quotas in the Fund totalling about \$4.3 billion — about 27 per cent of Fund quotas.

PIMPRI : A CREDITABLE RECORD

THE 1963-64 Report of Hindustan Antibiotics Ltd., Pimpri, released to the press a few days ago, reveals the same encouraging story of success which enabled this company to win the Presidential Award for outstanding performance among the public sector undertakings in the previous three years.

in a row. With the net turnover increasing from Rs. 400.64 lakhs in 1962-63 to Rs. 447.39 lakhs in 1963-64 and the capital employed going up from Rs. 635.28 lakhs to Rs. 683.25 lakhs, the percentage of net turnover to capital employed improved from 63.1 to 65.5. The gross profit, after providing for a higher depreciation of Rs. 52.75 lakhs against Rs. 35.66 lakhs for 1962-63, at Rs. 142.35 lakhs, however, failed to show a proportionate increase from Rs. 139.64 lakhs. But this was due to the fact that the company had to incur an expenditure of about Rs. 30 lakhs in subsidising its sales of Streptomycin. The net profit at Rs. 72.35 lakhs, against Rs. 69.60 lakhs in the previous year, showed a better return on the paid-up capital of Rs. 247.26 lakhs, the percentage increasing from 28.2 to 29.3. The improved financial results have enabled the company to declare a dividend of 10 per cent for the year 1963-64, as against 6.25 per cent for the previous two years.

Two very encouraging features of Hindustan Antibiotics' working during its 10 years of operation have been the judicious use it has made of its surpluses and the progressive reduction it has effected in production costs. Every rupee invested in this company by the State has grown to be equal to Rs. 3.60. The net worth of the company at the end of March, 1964, amounted to Rs. 682.83 lakhs — Rs. 247.26 lakhs paid-up capital and Rs. 435.57 lakhs reserves and surplus. The company's costs of producing Penicillin G (first crystals) and Penicillin G (sterile bulk) in 1963-64 were 68 and 77 per cent, respectively, of the costs in 1958-59. The vialling cost too went down to 74 per cent during these five years. That production costs have been brought down despite increase in the prices of raw materials and operating expenses is a tribute to the company's management. After reducing Penicillin sale prices twice already, Hindustan Antibiotics is now contemplating a further price reduction.

The real criterion of the success of a drugs manufacturing concern, however, is the contribution it makes to the

discovery of new medicines. In this respect, too, the record of Hindustan Antibiotics has been creditable. Its anti-fungus drug Hamycin has already been well received even in the most advanced countries; the US Public Health Department has requested Hindustan Antibiotics to get FDA clearance for testing Hamycin against deep mycoses in patients in the USA. In view of the encouraging indications that the world demand for Hamycin may be more extensive than what was thought of in the initial stages, the company has approached the Union Government for enlargement of its Hamycin production programme from 50 kgs. to 250 kgs. per annum. The company has also experimented with another new antibiotic — Dermostatin — a supplement to Hamycin. The new antibiotic is expected to be released for sale shortly. Among several other new antibiotics under active study at the company's research laboratories, Auriofungin (for plant disease control) and Streptorubrin (antitumour properties) hold good promise. Still another important antibiotic of special use to ophthalmologists — Neomycin — has also been tackled with success by the company's research department. A project is now under preparation for the production of Neomycin at Pimpri.

Hindustan Antibiotics also has plans to export Penicillin for earning for the country valuable foreign exchange. A special reserve has been created for the purpose of offsetting the loss on these exports as is the case in most of the Western countries. Already a sum of Rs. 17 lakhs has been put in this reserve.

The company expects to raise its Penicillin manufacturing capacity from 60 mmu to 84 mmu per annum and Streptomycin manufacturing capacity from 40-45 tonnes to 80-90 tonnes per annum by the end of the current calendar year. Its other two projects — the Vitamin C production pilot plant and the antibiotic pilot plant — are also progressing well. So also its investigations on the production of APR-1 and Octacillin.

Population Control: Ways and Means

K. G. KRISHNAMURTHY

TODAY MOST people in this country agree that the control of population growth is essential for economic progress. But opinions differ on how to achieve this objective. There are three formulae familiar to demographers and sociologists: Raising of age at marriage, Contraception and Sterilization. Differences of opinion as to their relative desirability or effectiveness exist and have considerably enfeebled the national family planning effort.

Age at marriage is undoubtedly one of the important factors which influences the fertility rate. But the extent to which this variable does affect the birth rate in Indian conditions admits of discussion. Theoretically speaking, the physiological reproductive span of a female is 30 years or more — but not less — depending on the dietary habits, sanitation facilities and working conditions. But the study by Baljit Singh shows that in India it has been observed in some parts of the country that the physiological reproductive span of females is only 21 years. This can be attributed to a number of factors such as poor nutritional standards, lack of medical facilities and irregular work habits etc. This argument can also be substantiated by the fact that the average number of children born to Indian women are from six to seven whereas in the case of a European woman (where contraception is not practised) the average is from eight to ten.

Major Factor

The study by Chandrasekaran provides evidence that 'adolescent sterility' is one of the major factors for the lower fertility rates of Indian women. His data show that more women fail to conceive after a particular number of children (adolescent sterility). This study also found that the average interval between births among Indian women is about 33 months. In view of the low levels of usage of contraceptive techniques in India, this average period of 33 months between terminations is unusually large. This is so because there is a large gap between termination and the onset of menstrual cycle, induced by poor diet, lack of proper medical care and several other factors. The World Health Organization in their final report on family planning studies in 1954 have reported that about half of the village women near Delhi do not resume their menstrual cycle up to 12 months after the termination of pregnancy.

It might be deduced from the foregoing that if the physiological reproductive span were reduced, it would have the desired effect on the birth rate. In other words, a reduction in reproductive span of Indian women, say from 21 years to 16 years, will bring about a corresponding reduction in the number of births. Pursuing this line of logic some eminent economists have come out with the suggestion that the adoption of the practice of late marriage in India will go a long way in solving the population problem. It is possible, however, that this faith is exaggerated.

In India the 'effective marriage' i.e., the actual consummation, mainly in the rural areas, does not take place right after the marriage. It takes place only after a religious and social ceremony separate from and subsequent to the marriage proper is performed. This takes place only after the girls reach puberty although marriages in rural areas take place much earlier.

According to S. N. Agarwala the mean age at marriage increased from 12.6 to 15.5 years during the period 1921-1931. He argues that this factor might have lowered the birth rate by three per cent.

The study by Dasgupta, Som and Mazumdar, on the other hand, demonstrates that:

- (i) The age at marriage for rural couples in the last four decades remained almost the same whereas for the urban couples it has slightly increased;
- (ii) Rural and urban differences in fertility level were small; and
- (iii) Fertility levels in both rural and urban areas are on the increase.

Studies conducted in Central India showed that the mean number of children born was 5.3 for those who married before reaching 13 years of age; 4.1 for those who married when 13-17 years of age and 3.5 for those who married when they were 18 years or age or older. The results of the Study at Singur in W. Bengal support the argument that the age at marriage does not seem to influence the birth rate. The results of this study are presented in the following table:

AVERAGE AGE AT TERMINATION FOR MARRIED WOMEN AGED 25-34 YEARS AND 35 YEARS AND OVER, BY ORDER OF TERMINATION

	Ballygunje		Baniatola		Singur	
Order of Termination	Women aged 25-34 years*	Women aged 35 yrs & over	Women aged 25-34 years	Women aged 35 yrs. & over	Women aged 25-34 years	Women aged 35 yrs. & over
First	19.5	17.8	18.0	17.2	16.6	16.6
Second	21.6	20.3	20.2	20.1	19.6	19.5
Third	23.0	22.8	22.2	22.7	21.6	22.2
Fourth	24.3	25.0	23.8	25.2	23.7	25.0
Fifth	25.6	27.0	25.2	27.3	25.3	27.6
Sixth	—	28.9	—	29.1	—	29.5
Seventh	—	30.6	—	30.7	—	30.9
Eighth	—	31.9	—	32.3	—	32.6
Ninth	—	33.1	—	33.5	—	34.0

*"In view of the restricted age-range, it has not been considered advisable to give averages for terminations higher than the fifth order."

Note: A total number of 5,023 married women (Singur 1,868, Baniatola 1,541 and Ballygunje 1,614) of Ballygunje, Baniatola of Park Circus of Calcutta City and Singur, a rural area located within 20 miles distance from Calcutta City, during the period of 1947-1949 were selected for this study.

The above data shows that these three communities differed only in the ages at first conception, but by the end of the second termination, their averages at terminations levelled off. This demonstrates that for those who were married younger, the consummation did not take place for a period of time. Even if the consummation did take place the interval between the first termination and the second is longer for this group than the group that married when they were older.

A study by Sinha suggests that women married at the age of 16 years or less had fewer children than women married after the age of 16. Studies in Mysore showed that women who married when they were 14 years or less had larger

families than women who married later. However the differences that were found in the Mysore study were very small.

The majority of the above studies support the argument that small differences in ages at marriage will have no effect on birth rates. Ages at marriage will have a substantial effect on the birth rates in India only when the marriages are postponed beyond 20 years of age. Even if the postponement is achieved by means of social change there is no guarantee that there would be a corresponding decrease in the birth rates. This is because, by the postponement of marriageable age we will be reducing the physiological reproductive span from an unrealistic 21 to an unrealistic 14 years. Even within this span which may go up as high as 9 years, according to the accepted biological standards with the increasing levels of living it is possible for a woman to have 7 to 8 children with lower spacings between terminations, which equal the present Indian average birth rate. Moreover with the increasing standards of living and health facilities the present reproductive span of Indian women is expected to increase so that the expected standards of living would tend to increase births both by reducing the spacing and by increasing the reproductive span. Any advantage of higher marriage age is therefore likely to be upset by these adverse factors.

The Studies conducted so far in India on attitudes (about 29 studies were conducted) towards family planning reveal that urban population desires to have three to four children, whereas rural families expressed the desire to have four to five children. Therefore only the changes in the attitudes of the people and a deep motivation to have limited families alone will have any appreciable effect in the near future in the reduction of birth rates.

Fertility Period

The author is familiar with the argument that fertility among Indian women tapers off after 35 years of age. Therefore the most effective reproductive span of Indian women is only up to the age of 35. If we accept this, the reproductive span is limited to 20 years. The present average age of Indian marriages is 15 years. If this is postponed to the age of 20, then the reproductive span will be reduced from 20 to 15 years. According to biological scientists a woman within this given span of fertility period can have more than 11 children. The actual observed average interval between births among Indian women is three years. If we take this observation into our consideration a woman in fact can only have five children. Therefore by postponement of marriages by five years there will be a 29 per cent reduction in birth rate. But the essence of the argument advanced above is that the present average birth rate in India is six children. Let us assume that all the people in India marry only when they are 20 years of age. Let us also assume the past trend of average three years observed gap between pregnancies remains constant. Even then unless the people are strongly motivated to have limited families they can have five children on the average. Therefore if our aim is to substantially reduce the birth rates so as to prevent the nullifying effects on the economic development and the distribution of wealth, we will have to look to other means to lower the birth rate, than a mere wishful thinking of raising the marriageable age will solve the problems. At the same time in a country where the 80 per cent of its population is rural, illiterate and where betrothals usually take place right after birth, imagining a social change could be brought overnight is not an impossibility but a distant reality.

Some studies have been conducted to find out the relative popularity as well as the effectiveness of contraceptives.

The results of these studies will provide us some insight into the basic nature of the problem. Therefore, a brief discussion of the findings of these studies will enable us to visualize the picture more objectively.

Condoms: The study by Poti and others (a) did not find that condoms were more effective than 'rhythm' and coitus interruptus. Poti and others (b) found that the effectivity of condom method is lower in the lower socio-economic groups than the upper classes. Even those few among the lower socio-economic groups who used condoms, used them very irregularly. Agarwala's study (c) shows that condom was mainly used by the residents in Delhi area for the prevention of conception prior to their attendance to the family planning clinics. As to the use-satisfaction of this technique only 17 per cent reported that they were satisfied with this technique. The Singur study (d) reported that condom was somewhat more popular only in Beniatola (part of Calcutta City) but not in Singur, a rural area located nearby Calcutta city.

Diaphragm: Diaphragm is very popular among the urban residents of U.S.A., as well in other European countries. Only Agarwala's study attempted to assess the relative popularity of this method. But so far no attempt has been made to popularize this technique. Very few people know about this method.

Rhythm: From the studies conducted by Mr. C. Chandrasekaran and Mr. D. V. R. Murthy and others we can make the following observations on this technique: In view of wider fluctuation in the menstrual cycles of women it is very difficult for an average person to identify the 'safe' and 'unsafe' periods; this method is popular mainly among the educated and the upper income groups; knowledge of this method is not widespread; and only urban population have better knowledge about 'Rhythm' than the rural population.

Foam Tablets: Almost all studies report that knowledge about these tablets even in urban areas is very low. Even people who used them for a while gave up their use after a few months.

Coitus Interruptus: Poti and others (e) found that in Calcutta City coitus interruptus was more acceptable and was practised by the respondents than 'rhythm' and 'condoms'. Wyon (f) also found that in 16 villages near Ludhiana coitus interruptus was popular. The Singur study (g) shows that only two per cent practised coitus interruptus and three per cent foam and coitus interruptus and one per cent only rhythm, foam and coitus interruptus.

Conclusions: Knowledge about the contraceptives is meagre both in urban and rural areas; only a small fraction of those who are familiar with one or two methods ever used them; only people from upper income groups and those with higher education know more about and are using the contraceptives to regulate the fertility levels; and even of those small fraction of the population from the lower socio-economic groups who used some methods, were for many reasons not highly successful to lower birth rates considerably.

From the above it is clear that the appliance methods, if at all known to people, are known only to the urban population. Indian population is predominantly rural. It is in the rural areas where we have to limit the growth of population. To attain wide popularity for the appliance techniques we need to achieve two other goals; they are Education and Higher Standards of Living. There is enough evidence to prove that education beyond high school but not less will have any effect on fertility. In the next 30 years

it is highly improbable to expect more than 10 per cent of the total population to get education beyond high school. We are trying very hard since 15 years to increase agricultural production. We have invested hundreds of crores of rupees to improve our agriculture. In spite of all our concentrated efforts most of our farmers, in many parts of the country, are cultivating the lands in the same old methods as were used thousands of years back. Therefore to expect the rural population that they would quickly learn in the next 15 to 20 years about contraceptive techniques is quite unwise.

Now let us examine how far sterilization would be of some value to lower the birth rate in India. Thousands of sterilizations have been performed in the States of Maharashtra and Madras. Some attempts were made in these States to assess the after-effects of sterilization. In the follow-up studies, so far no attempt has been made to find out whether sterilization produced any serious psychological or social effects. However, there are also no known reports where a number of sterilized persons were psychologically maladjusted or mentally deranged or disruption of the family life took place. If there were such troubles in sufficient numbers they certainly would have been brought to the notice of medical authorities. In the follow-up studies on a number of sterilized persons by Madras Government an overwhelming majority of the respondents reported that they would recommend this method to others for family limitation. If there were serious cases of maladjustment there would have been wide circulation by now as to the injurious effects of sterilization, since in India now as to the rumours spread much faster than by any other channel of communication. In both Madras and Maharashtra the alleged after-effects such as dull pain, backache, indigestion and others were found to have no relation to the surgery as such. These sterilized persons were not the only ones that suffer from such ailments, about 50 per cent of the American population suffer from backache, about 85 per cent of the Indians have some sort of digestive trouble or the other. Therefore there is no known association between the sterilization and the reported maladies.

For any new programme, whether it be the introduction of new agricultural practices, change of food habits or the introduction of sterilization as a means of population control one should always expect hindrances from several quarters. Under the present circumstances, increasing age at marriage or proper propagation of contraceptives alone would not solve

our problem. Considerable emphasis should, therefore, be given to sterilization in any national programme of intensified population control.

WINDOW ON THE WORLD

Britain's Gap

PAUL BAREAU

LONDON:

IS BRITAIN slithering once again into one of its all too familiar balance of payments crises? This was the question uppermost in many minds as the country approached the General Election. Because of the General Election the comments on the balance of payments situation have been somewhat muffled. This is understandable enough as far as the Conservative Party is concerned. They are not overstressing what is unquestionably the main blot on the escutcheon of their economic policy. But even Labour Party spokesmen have kept quieter than might have been expected on this issue, no doubt because a gentlemen's agreement was reached between party leaders to keep the pound sterling out of the line of battle.

The queries concerning the possibility of a crisis have been prompted by the publication of the balance of payments statistics for the first half of 1964. They make a decidedly poor showing. The account of current transactions shows a deficit of £125 million for the first six months of 1964 as against a surplus of £162 million in the corresponding period of 1963. This indicates a massive adverse swing. It has been due partly to visible or merchandise trade but the invisible balance has also moved against the UK.

Reasons for Deterioration

All kinds of special reasons have been advanced to account for this deterioration. One of them, perhaps the most satisfactory, is that at long last the terms of international trade have been moving against the older industrialised countries and in favour of the primary producers who are, by and large, the poorer countries. Another is that in a period of rapid expansion of the British economy there was an inevitable tendency for imports of industrial materials to outdistance for a time the speed at which exports of finished products have been increasing. Yet another reason for the imbalance is the possibility of import restrictions being imposed under a Labour administration and the consequent anticipatory hoarding of imported goods of all kinds.

Whatever the special reasons the facts of the prevailing imbalance cannot be denied. They give a very poor promise for Britain's capacity to export capital or give economic aid to other countries. And yet there were substantial exports of long-term capital in the first half of this year. The net outflow on capital account was no less than £216 million. The figure was swollen in part by the fact that political uncertainties stemmed the investment of foreign capital in Britain. An even more potent influence was the incidence during this period of a £60 million investment by the Shell Oil group in the Italian Montecatini enterprise. This will no doubt prove a profitable investment but from the point of view of the immediate balance of payments position its timing was unfortunate.

Adding the net capital outflow of £216 million to the current deficit of £125 million, we arrive at a massive overall deficit of £341 million. This was the worst deficit for thirteen years. It was exceeded in 1951, the year in which the Conservative Party came in to clear up the economic mess that had been left by the previous Labour Government. There would be an element of irony and even of poetic justice if on

this occasion the tables were to be reversed and a Labour Government were left to deal with the aftermath of a Conservative administration's final fling.

In the face of these adverse figures, sterling has stood up with surprising strength and resilience. It has had to receive a certain amount of support from the Exchange Equalisation Account, but nothing commensurate with the deficit. One reason for this is that sterling is affected by the balance of payments of the whole sterling area. This has proved far more favourable than the balance of payments of the UK. Many members of the sterling area have been running surpluses and, abiding by the rules of the game, have banked these surpluses in London. The extent of the resulting support has been considerable. The sterling balances maintained in London by sterling area countries have risen by no less than £390 million between the 1st January, 1963 and June 30, 1964. The main creditors on whom Britain has been relying are Australia, Malaysia and the Middle East oil sheikdoms.

The most surprising aspect of the reaction to these balance of payments figures and to the political uncertainties in the midst of which they were published, is the complete absence of any appreciable speculative movement against sterling. If one takes one's bearings from rates quoted in the forward markets, one is led to the inevitable conclusion that sterling is not being hammered as it undoubtedly would have been in comparable circumstances a few years ago. The reason is the increased measure of collaboration between the central banks of the principal countries of the world. This is one of the phenomena of the evolution of international monetary relations over the past four years.

This collaboration has in the main been induced by two events. The first was the run on the US dollar in the autumn of 1960 and the concurrent run into gold which for a fleeting moment raised the free market price of gold to more than

Caltex "STOP LOSS" reduces your paper work by 10% to 60%

If your purchase order costs are anywhere near today's high industry average, it can pay you to look into Caltex's "Stop Loss" Programme. You'll find numerous ways to reduce purchasing department time and expense.

Too often, purchasing costs rise because each department in a plant specified the lubricants it wants without reference to the purchases of other departments. This duplication results in a flood of purchase orders... rising clerical costs... paper backlogs.

Caltex "Stop Loss" is a complete plan for organizing and centralizing lubrication on an efficient basis. There is no other programme like it. "Stop Loss" will help eliminate interdepartmental duplication, limit inventories to actually needed lubes, and reduce the number of lube purchase orders issued each month by 10% to 60%.

\$40 per ounce. This brought a threat of impending disaster to the structure of world exchange rates and led in due course to the collective arrangement between treasuries and central banks which now controls the free market price of gold and thus safeguards the parity of the dollar and of all other currencies linked to gold and the dollar.

Th's need for collaboration was further underlined by the shock to confidence and general unsettlement in the foreign exchange market which followed the unilateral revaluation of the German mark in the spring of 1961. This had been done without collaboration with other central banks and for a time undermined confidence and the stability of the exchange markets.

Government Policy Helps U.S. Economic Growth

GUY SIMS FITCH

WASHINGTON :

IN ASSESSING the confident projections about the future of the American economy, both short-term and long-term, one cannot ignore the role of public policy. In this modern world of complex economic relationships, very little occurs in a national economy that is not in some way influenced by government programme. In the United States, public policy is flexible, designed to meet whatever changing conditions may arise. It is directed towards the constant improvement of social and economic conditions, largely by stimulating private initiative and participation in socio-economic affairs which is consonant with the public interest and can best achieve economic growth within the general framework of a free society. There was a time when this government role was not clearly understood or appreciated. But in recent years, with a growing variety and sophistication of economic tools and a growing awareness of the constructive contribution government policy can make to economic improvement, public policy has assumed an increased and recognized importance.

The impact of this development is illustrated aptly by the National Industrial Conference Board (NICB), a private research organization, in its recently published and highly optimistic study of the present and prospective state of the American economy. As the study notes, until the post-World War II period, particularly during emergency and post-emergency situations, the American economy was subject to some boom and bust cycles of rather severe proportions. The depression of the 1870's, for instance was an aftermath of the inflationary boom that followed the Civil War of 1861-65. The great depression of the 1930's was largely an aftermath of the post-World War I boom. But here it is 19 years since the end of World War II, and no such economic collapse has occurred or is likely to occur. Quite to the contrary, the United States is in the midst of a strong and essentially non-inflationary advance to which most experts at this stage see no end in sight. Why is this so, and why is a depression or even a severe recession deemed unlikely in the years ahead?

Aside from the fundamental strength of the American socio-economic system itself, which shares with other free systems an undergirding of concern for personal welfare and jus-

These two events carried important lessons. They convinced the responsible people that no country profits by other countries' monetary instability. The days of crude competitive devaluation of currencies have disappeared. There is today a real sense and reality of interdependence and mutual assistance between the monetary authorities of the world. This is part of the current strength of sterling. Basically that strength must come from within; but in dealing with its balance of payments difficulties, Britain can rest assured that it will get every possible assistance from without. That potential assistance can now be measured in terms of billions — not millions — of dollars. It will be available to a Labour, as to a Conservative Government. In the face of this, speculation against sterling is not worth the candle.

tice, much of the credit must go to what the NICB report calls the "wise" fiscal and monetary policies of the Federal Government. According to the NICB analysis, the spectre of post-war inflation, which was the immediate post-war concern, was laid to rest by the basically conservative policies of the 1950's. Whether these policies may or may not have been pursued too vigorously for too long is not a matter at issue here. More importantly, as far as the present and the future are concerned, the threat of post-war deflation has been dissipated by the expansionary policies of the 1960's. These policies add up to what the NICB study characterizes as a "revolution" in US economic thinking.

With the recent tax cut — even in the face of sizable budget deficits — as an outstanding example, these policies have been used not merely to fight recession, but rather to spur economic growth. The premise, as the Study sees the situation, is that the danger of post-war boom has been safely traversed. The principal enemy is no longer inflation, but an under-utilization of resources, both manpower and material. Stimulative policies, the report says, will remain the appropriate course as long as the US economy is operating on an essentially non-inflationary basis below a full-employment level — in other words, below its full potential.

Much the same view of public policy has come from the US Treasury Secretary, Mr. Douglas Dillon. Citing the economic advances of recent years, Mr. Dillon emphasized in an address to the NICB last week that these things did not "just happen". They have been due in large measure, he stressed, to the conscious and successful efforts of government to provide a propitious climate in which economic activity and private initiative could flourish. Budget deficits, Mr. Dillon observed, are not the wilful products of wasteful spending. There are times when they serve as a useful tool to spur a lagging economy. But often they are the unwelcome and bitter fruits of an economy that has failed to live up to its potential. When understood in this light, expansionary US policies — such as carefully engineered tax cuts — hold out the promise of so stimulating activity as to carry the nation closer to its economic potential and towards the goal of a balanced budget in a balanced and thriving economy.

IMPRESSIONS OF AN EAST EUROPEAN TOUR—I

Lessons of Leipzig

S. P. CHOPRA

[In the month of September, our Senior Assistant Editor, S. P. Chopra, toured the German Democratic Republic, Czechoslovakia and the U.S.S.R. In a series of articles, he will present his impressions of this tour. This is the first article of the series — Ed.]

ABOUT 150 Kms. south of Berlin lies Leipzig — the second largest city of the German Democratic Republic (East Germany) — which has acquired world-wide renown as a foremost market place for the exchange of goods. In spring as well as in autumn an industrial fair is held here which attracts exhibitors from all over the world. This autumn, the fair — a consumer industries' fair only — was held in the shadow of the coming 800th anniversary of the Leipzig Fair in spring, 1965. It was apparent that massive preparations were being made in order to celebrate this anniversary on a gigantic scale. While the 800th anniversary Fair will concentrate its attention on both engineering and consumer goods industries, the autumn Fair dealt with such consumer goods industries as: Books and Publications, Chemical Products, Pharmaceuticals, Cosmetics, Christmas-tree Decorations, Artificial Flowers, Carnival Novelties, Fancy Goods, Food and Tobacco, Seeds, Footwear, Furniture, Glassware, Handicrafts, Hand-Woven Textiles, Household Utensils, Cutlery, Jewellery and Goods of Precious Metal, Lamps, Lampshades and Accessories, Leather, Drawing Office Requisites, Musical Instruments and Accessories, Office Appliances, Packaging Materials, Paper and Printed Products, Photographic, Cine and Optical Goods, Photochemistry, Porcelain, Earthenware and Pottery, Radio and Television Sets, Sound Recorders, Construction Kits, Sports Goods, Teaching Aids, Textiles and Clothing, Toys, Watches and Clocks, Office Machines, Electrical Measuring Instruments, Cooking Equipment for Hotels and Canteens, Stoves and Ovens for Domestic Use, Gear for Sports, Sewing Machines and Vehicle Accessories.

It is not possible for any visitor to the Fair to be able to cover each and every MESSEHOF — German equivalent for a fair building exhibiting a particular product — and a visiting journalist has no option but to make a selection and cover a few of them within the short time available to him.

Good Show

India being the biggest overseas trading partner of the GDR, took a leading part in this autumn Fair as there were no less than 51 exhibitors displaying a variety of goods. The Indian collective pavilion in the technical fair grounds exhibited both raw materials and manufactured goods of no less than 34 exhibitors. In the special MESSEHOFs also the Indian exhibitors put up a good show. The total covered area of the Indian stalls, including the collective pavilion, was 594 square metres — the largest for any Asian country.

It is not very widely known in India that the Leipzig Fair has an international character in the sense that the participants get an opportunity of conducting business not only with the various trading wings of the GDR Government, but also with many other countries. The total business completed at the Fair by the Indian participants with the departments of the GDR Government was worth Rs. 35 lakhs and there was hardly a participant who had not had a share in this trade. In other words, participation in the Leipzig Fair ensures business and that is why a very large number of Indian exhibitors have participated in it for more than eight years. Some of the Indian participants succeeded in negotiating busi-

ness with other countries, such as Yugoslavia, UAR, etc. though it was not possible to ascertain the total volume of such business.

The standard of display of the exhibits has steadily risen in recent years in all international fairs and exhibitions. In some of the pavilions, the Indian exhibits could perhaps be presented in a better way, but the considerations of overall expenditure stood in the way of a better display. From some other countries, there were certain exhibits which were perhaps the best to be seen in any of the international fairs. In the cosmetics section, for example, the small pavilion organised by the Parfums Christian Dior from Paris was a class apart. It stood out so conspicuously amongst the competitors that one involuntarily stopped before it to study not only the exhibits but also the layout, colour scheme and the lighting arrangement. For any one who is to take part in the future fairs — and the newly set-up Council of Fairs and Exhibitions may kindly note — the pavilion of this particular concern from Paris is a model to be studied. There is no doubt that its pavilion will be there in the Spring Fair and our delegates should make it a point to study it.

Businesslike Affair

It may be stated, however, that the Leipzig Fair is a sample fair. This implies that no retail sales are allowed in the Fair grounds, while in all the stalls the exhibitors anxiously await for prospective buyers for negotiating deals. It is a highly businesslike fair where the restrictions for entry are many so that those businessmen who visit Leipzig for fresh contracts are not hampered in their movements. It is not a common man's fair where he may just go round admiring the exhibits. Assembled in the various MESSEHOFs were technicians and salesmen with authority to conclude, on the spot, sales of any value. It is this businesslike character of the Fair that distinguishes it from many of the other fairs.

Textiles attracted wide attention at the Fair as suppliers from all over the world had participated in order to solicit business. Even Switzerland was represented at RING-MESSEHAUS (Textiles and Clothing) and many of the enterprises had brought not only the garments but also their own models in order to hold fashion parades to pressurize salesmanship. In MESSEHAUS UNION (furniture) there was a wide variety offered not only by the GDR but also by West European countries, including Scandinavian countries. New designs and new methods of polishing and decorating wood were presented. In footwear, the best pavilion was that of Centrotev from Czechoslovakia, though the Yugoslav firm of Koteks Tobus had also done extremely well. Ladies' shoes, in particular, were presented in an exquisite manner by the West German firm of Greiling Mannheim. The section dealing with electronics showed the technical revolution that is taking place all over Europe and the extremely high demands which are being made upon the industry for making data processing and business machines.

In addition to the display of all these items of daily use and consumer durables in the various MESSEHOFs, Leipzig had an army of interpreters in various languages. That is an

outstanding feature of Leipzig that it is able to gather for the purpose of the Fair so many interpreters that the journalists, the tourists and the business men who visit the Fair have no difficulty in completing their assigned tasks. It may perhaps be impossible to run a fair of this character without the assistance of a large army of interpreters, who are mostly young girls who have taken a degree and are specializing in one or more languages. Incidentally, it shows the rapid strides that education has taken in the German Democratic Republic. Education is free in the whole of the Republic and the State disburses stipends to scholars so that they have no problems of maintenance.

The German Democratic Republic, like the other socialist economies of Eastern Europe, has been looking out in recent years for increased trade with non-socialist countries. In 1962, 21.8 per cent of the foreign trade of the GDR was with the non-socialist countries. There are possibilities of increasing this trade still further and the salesmen of the various Departments roam all over the world for prospective customers. Many a delegation visits India every year in order to study the requirements of this country. The smart recovery of the economy during the last 10 years has contributed not a little to the growing foreign trade of the GDR. Some figures may be pressed into service in order to illustrate this aspect. Since 1949, its national production has multiplied more than three times. Currently, the level of output is equivalent to the total output of combined Germany in 1936. Again, the foreign trade of the GDR in 1963 in terms of rupees was valued at 2,250 crores — more than the total foreign trade of India which was placed at Rs. 1,800 crores only.

Indo-GDR Trade

The German Democratic Republic is in search of new trading partners everywhere in the world; it has trading relations with more than 100 countries including India, West Germany, Great Britain, France, Japan etc. The GDR is pursuing a vigorous policy of bilateral trade with all countries and it will be a mistake to ignore the present stature of this country which has gradually risen so as to occupy the fifth position in Europe; it is one of the most industrialised nations in Eastern Europe. Another interesting element which has emerged in recent years is that the trade of all these European countries, including the USSR and the GDR, has been on the decline with China, while India's trade with the GDR is larger than its trade with China; five years ago the volume of the GDR trade with China was five to six times of its present trade with India. It implies that the GDR is in a position to divert some of the industrial plants to India which a few years ago it had been selling to China. The technical know-how in the GDR is of a high level and in Indo-GDR trade no foreign exchange is involved as trade is balanced. That in itself is a great advantage.

Anyone visiting the German Democratic Republic cannot help being curious about the wall between East and West Berlin. Indian nationals have always enjoyed complete freedom of movement in both parts of the city. Among the Germans who hardly know any other language, the two words — Indian and Nehru — have a great fascination. An Indian doctor whose visa had expired and who wanted to cross over to West Berlin to have a glimpse of that part of the town, was politely asked to get his visa extended. The treatment meted out to him was certainly praiseworthy and one of the policemen at the gate was generous enough even to buy a ticket for him from his own pocket because the doctor had to deposit all his East German Marks before crossing over. The picture presented by West Berlin was that of a miniature New York. The city was bright and the stores were full. The super

markets offered anything from a tooth brush to a top coat. One could note the difference in the finish of consumer goods presented in the stores in West Berlin and those which were to be seen in the super markets in East Berlin.

West Berlin, at present, is overcrowded and its most important problem is housing. An Indian student whom I met in the streets told me that he had been able to obtain a single room with great difficulty at a monthly rent of 200 West German Marks, while the room had not even been completed and was still being furnished. On the other hand, rents in East Berlin were much lower. A flat of three rooms with all the modern amenities was available at 50 East German Marks per month. Incidentally, it may be stated that East Germany has made stupendous progress in re-building the houses which had been destroyed during the war. Housing position is comparatively better now, and new buildings continue to spring up every day. In 1963, there were 330 flats for 1,000 inhabitants which clearly shows that the GDR has, to a large extent, solved its housing problem.

Food is Cheap

The super markets in East Berlin, Leipzig and other cities were also full. Compared to West Germany, the necessities, particularly food, in East Germany were cheaper; but the luxuries were costlier. The price level in general had stabilised after the erection of the wall and comparative slowing down of traffic between the two parts of the city. The Deputy Foreign Minister explained to the Asian and African journalists that "socialism is not so easy to build even when the wall is there, but without the wall it will be impossible because the pressure exerted by West Berlin in order to sabotage the East German currency and to take away food and other consumer goods through the manipulation of the exchange rate between the two currencies was great". At present the food situation in East Germany is much easier than it was a few years ago. At least, it was so at the time I visited that country. The trade figures show that the Republic has been supplementing its supplies of food by importing from other countries. Imports of butter, cheese, canned fruit, vegetables etc. have increased appreciably.

An interesting feature of the present pricing system in the GDR is that all goods have the same price anywhere and everywhere in the country; prices for food and other necessary goods are, as stated above, relatively low. Even in the Press Centre at Leipzig where all the journalists had their meals, the prices were reasonable.

One peculiar feature which hits the eye of any outsider in the German Democratic Republic is the disciplined nature of the people. Even in Leipzig during the Fair when thousands of men and women came from all over the country and abroad, there were no traffic jams and there was no undue congestion either on the railway station or in the trams and buses. Again, the police was very strict with the drivers who were found to be at the wheel after having taken liquor. In many an evening party some of the East German journalists refused to take liquor if they had to drive themselves home. This strictness resulted in considerable safety on the road with the result that an accident was a rarity.

Wherever one went in the GDR two outstanding features of the socialist government were repeated over and over again. Free education and free medicine are two of the benefits which people appreciate very much. In all the hospitals patients get the most expert treatment at no cost. To the same class belongs housing since rents are very low. It may be mentioned here that all the houses which are being built are under the auspices of the State; the rents charged are barely sufficient

More Russian Aid for Bokaro?

By Our Special Correspondent

NEW DELHI :

AN AGREEMENT has been reached between the Union Government and the Goubert delegation on the preparation of a new project report by Soviet experts for the Bokaro steel plant. The new project report will not only cover the initial capacity of 1.5 million tonnes steel ingots for which financial and technical assistance has already been promised by the Soviet Union, but also the ultimate 4 million tonnes capacity envisaged for the plant. The 4 million tonnes capacity will be achieved in two stages without interruption. Under the first stage, there will be established a capacity to produce 1.5/2 million tonnes ingots and 700,000/800,000 tonnes pig iron for sale. The project report will be ready by June-July next year. Orders for equipment will be placed soon thereafter.

The fact that the two stages of building the Bokaro plant are to be implemented on a continuing basis, should imply that the Soviet Union is willing to enlarge its aid for the project as a whole.

According to the agreement reached, the designing and engineering of the plant will be the responsibility of the Soviet Union. It is, however, expected that the Indian engineering and manufacturing capacity will be used to the fullest extent possible for the construction of the plant. The management of construction and operation will be entirely in the Indian hands.

The time schedule for the construction of the plant is still to be settled between the Governments of India and the USSR. An inter-Government agreement on the project is expected to be finalised in November this year.

Meanwhile, following the offer made by the Anglo-US Consortium of Steel Manufacturers to collaborate with the Government of India for the setting up of the fifth steel plant in the public sector, a technical team representing the Consortium is expected here shortly for undertaking a survey of the various sites suggested for the establishment of this unit.

★★

The Union Government is considering a proposal to introduce statutory food rationing in the major cities of India, including Bombay and Calcutta. Informal rationing may also be introduced in Kerala. This follows the acceptance by the Government of the Jha Committee's recommendation that all such population pockets as exert an upward pressure on food prices should be cordoned off.

The Government is also examining another suggestion of the Jha Committee which envisages running of low-price shops from which foodgrains could be supplied to the vulnerable sections of the population at subsidised rates. How far the Government would be able to go in this direction, however, depends on the availability of finances.

Meanwhile, the Union Ministry of Food and Agriculture has announced new producer prices for the six major foodgrains — rice, wheat, gram, jowar, bajra and maize. The minimum prices fixed for paddy at assembling points in the various States are: (in rupees per quintal) Andhra Pradesh 38; Bihar 35; Gujarat 39; Kerala 40; Madhya Pradesh 34; Madras 38.50; Maharashtra 41; Mysore 36.50; Orissa 34; Punjab 35; Rajasthan 35; Uttar Pradesh 35; West Bengal 37.50; and Assam 34. These are higher than the post-harvest prices of 1963-64 by about Rs. 2.26 per quintal. Compared to the average of the last three post-harvest seasons, the new producer

prices are higher by over Rs. 4 per quintal.

The producer prices fixed for the other five foodgrains are: (in rupees per quintal) wheat — 45.50 for red variety, 40.50 for common white variety and 53.50 for superior varieties; (2) gram — 40 to 40.50; (3) jowar — 38 to 38.50 for the yellow variety (suitable discounts or premia have been fixed for the red and white varieties); (4) bajra — 40 to 40.50; and (5) maize — 36 to 36.50.

Wholesale Prices

In view of the nearness of the next rice harvest, the maximum wholesale and retail prices of rice at various consuming centres have also been announced. The wholesale prices fixed for some of the important cities are: (in rupees per quintal) Hyderabad 69.03, Patna 66.13, Ahmedabad 69.56, Trivandrum 71.76, Bhopal 62.95, Madras 67.72, Bombay 71.06, Bangalore 67.75, Rourkela 63.20, Chandigarh 65, Ajmere 65, Varanasi 65 and Calcutta 67.80. The retail prices at these places will be: (in paise per kg.) Hyderabad 71, Patna 68, Ahmedabad 72, Trivandrum 75, Bhopal 65, Madras 71, Bombay 73, Bangalore 71, Rourkela 67, Chandigarh 68, Ajmere 68, Varanasi 68, and Calcutta 70.

In most cases, the wholesale and retail rice prices fixed are slightly lower than the rates prevailing today. The wholesale and retail prices for the other foodgrains will be worked out in consultation with the State Governments before the next harvest. On the basis of producer, wholesaler and retailer prices announced for rice, the wholesalers' margin of profit will be 1.5 to 2 per cent and that of retailers 4 to 7 per cent. In case, prices show a tendency to rise above the maximum statutory levels, the Government will not hesitate to requisition foodgrains at the fixed prices.

In view of the wide disparity between the sale price of imported wheat and the producer prices fixed for indigenous wheat, the Union Government proposes to revise upward slightly the sale price of the former. This, incidentally, will reduce the burden on the public exchequer as the imported wheat is being sold at present at subsidised rates resulting in a loss of nearly Rs. 60 crores per annum to the Central Government.

★★

According to the latest thinking in the Planning Commission, the overall fourth Plan outlay may be fixed at Rs. 21,500 crores. This will require additional taxation to the tune of Rs. 2,500 crores and net external assistance (excluding the loans which may be available for servicing the credits already contracted) of approximately the same order as received during the current Plan. With a view to staggering the burden of taxation, start may be made for raising resources for the fourth Plan through additional taxation in the last year of the third Plan itself.

Opinion in the official circles is understood to be veering round fixation of the overall annual rate of growth during the fourth Plan period at 6.5 per cent instead of 6.7 per cent proposed earlier. If by the middle of the Plan, the resources picture brightens up, the overall outlay may be stepped up by Rs. 1,000 crores.

MEI safest for everything in electric power control

be in the public sector and the other three in the co-operative sector. If the experiment proves a success, the Union Government will expeditiously go in for setting up 1,000 such mills early in the fourth Plan period. All these mills, of course, will be in the public and co-operative sectors so that the Government can have adequate control over the rice industry both in regard to supplies and distribution.

The total cost of installing 1,000 modern rice mills of 2/4 tonnes per hour capacity, capable of processing about 20 million tonnes of paddy per annum, is expected to be Rs. 100 crores. The increase in outturn of rice from these mills is anticipated to be of the order of 1.6 million tonnes, worth about Rs. 112 crores.

The equipment for the six units to be set up initially is being imported from abroad. It will start arriving in the country in December. The deliveries will be completed by January.

With a view to assisting the establishment of modern rice mills in the co-operative sector, the National Co-operative Development Corporation has decided to provide 100 per cent financial assistance. The assistance will be provided out of the accumulated funds of the Corporation and will be routed through the State Governments. The programme will be outside the State Plan ceilings. Priority is envisaged to be given to proposals of assistance from the eastern States which are comparatively backward in the field of co-operation.

★★

The latest assessment made by the Union Ministry of Mines places the likely demand for coal in 1965-66 around 75 million tonnes, as against 98 million tonnes envisaged at the time of drawing up the third Plan and 90 million tonnes estimated in the mid-Plan appraisal. The industry has been advised to adjust its production programme accordingly.

This marked decline in the demand estimate is attributed to four main reasons:

(i) Reduction in the coal requirements of the steel in-

dustry — not only the establishment of the Bokaro plant has had to be postponed to the fourth Plan, the expansion programmes of the Durgapur and Rourkela Steel Works to 1.6 million tonnes and 1.8 million tonnes ingots capacity, respectively, are also expected to materialise towards the very close of the third Plan, with the result that full utilisation of these expanded capacities can only be had in the early years of the fourth Plan. Besides, due to improved blast furnace techniques, the coal-pig iron ratio has fallen substantially;

(ii) Reduction in the requirements of railways on account of extension of electrification and dieselisation and gradual withdrawal of over-aged steam locomotives;

(iii) General slackening of demand by other industries, including brick-burning industry; and

(iv) Switching over to furnace oil by some cement factories.

Currently coal production ranges around 65 million tonnes. The additional 10 million tonnes production during the next one and a half years will come from the existing projects and the schemes, both in the public and the private sectors, which have either been already implemented or are at an advanced stage of implementation. The Ministry does not anticipate any difficulty to arise in the way of producing adequate quantities of coal to meet the 1965-66 requirements fully. It is confident that even if demand picks up and goes beyond 75 million tonnes, production can be correspondingly stepped up.

There, however, is expected a big spurt in the demand of coal during the fourth Plan period. According to the tentative estimates of the Ministry, demand by 1970-71 should go up to 136.46 million tonnes — 46.04 million tonnes coking coal, 6.68 million tonnes blendable coal and the remainder 83.74 million tonnes non-coking coal. This estimate, according to the current thinking in the Ministry, may, however, be scaled down to 120-125 million tonnes when the final picture of the industrial development envisaged during the fourth Plan period is

Casting pearls before

known. Even then, stepping up of production from 75 million tonnes to about 125 million tonnes is going to be a big job.

In a target of 136 million tonnes coal output in 1970-71, the contribution of the private sector is expected around 76.49 million tonnes — 25.98 million tonnes coking coal, 3.44 million tonnes blendable coal and 47.07 million tonnes non-coking coal. The share of the public sector will be 59.51 million tonnes — 20.63 million tonnes coking coal, 3.24 million tonnes blendable coal and 35.64 million tonnes non-coking coal. Currently, the production of the private and the public sectors individually is around 53 million tonnes and 12 million tonnes, respectively. The public sector, thus, will be called upon to increase its production during the five years of the fourth Plan by nearly 400 per cent, while the private sector will be required to step up its output by about only 45 per cent. There is obviously a case for allocation of a larger role to the private sector in the development of the coal industry during the fourth Plan period.

★★
With a view to clearing the low-grade coal stocks at the pitheads, the National Coal Development Corporation has decided to launch a vigorous sales campaign. The NCDC feels that this type of coal can be put to a variety of uses at low cost, but there is need to make consumers familiar with its advantages. The Corporation is also making efforts to enter into a long-term agreement for the supply of low-grade coal to such major consumers as the thermal power stations. It also proposes to conduct research to determine how the inferior coal can be processed economically to meet the growing fuel requirements of a rapidly growing population.

★★
The Union Government has raised the additional excise and customs duties on major petroleum products. As in the past, this increase will be borne wholly by the oil companies and will not result in any increase in the wholesale or retail prices of the affected petroleum products. The increase in rates has been effected only to facilitate appropriation of a further sum of nearly Rs. 5 crores which has accumulated with the oil companies in favour of the Government since

April, 1962. The existing rates of the additional duties were fixed in April, 1962, in the light of the pricing structure recommended by the Oil Pricing Committee and have been in force from October 1, 1961.

Additional duties on major petroleum products are levied under the Minerals Oils (Additional Duties of Excise and Customs) Act, 1958. They are intended to appropriate amounts accruing in the account of the oil companies in favour of the Government and are, therefore, borne wholly by the oil companies.

★★
The introduction of production and price controls on the popular varieties of cotton cloth has been postponed to October 20, 1964. Originally, these controls were to be introduced with effect from October 15, 1964. The present voluntary price scheme of the cotton mill industry will now be discontinued from the mid-night of October 19-20, 1964, instead of the mid-night of October 14-15, 1964. The five-day postponement of imposing partial control on cloth has been caused by two factors: (i) the fixation of realisation multipliers, and (ii) the intervention of Dussehra holidays.

★★
In pursuance of the recommendation made by the Central Family Planning Board in August last, the Union Government has decided to set up a nine-member Committee under the chairmanship of Mr. Shantilal Shah, Health Minister, Maharashtra, to go into the question of legalisation of abortion as a measure to restrict population growth. The other members of the Committee will be a representative each of the Indian Medical Association, the Association of Medical Women in India, the Federation of Gynaecologists and Obstetricians, the Family Planning Association of India, the All-India Women's Conference, the Central Social Welfare Board and the Indian Council of Child Welfare and the Director, Family Planning, Directorate-General of Health Services. The last mentioned member will act as the Secretary of the Committee.

The Committee is expected to submit its report by the end of March next year. It will study the question of legalisation of abortion in all its aspects, with particular reference to the medical, social, legal and moral issues.

Exports Face Stagnation

From Our Correspondent

BOMBAY:

THE UPWARD trend witnessed in the country's exports in the first half of the current year has come to a disturbing halt in the latter half of the year. The exports in July 1964 rose only by Rs. 3 crores and in August 1964 they remained almost stationary at Rs. 67 crores as compared to exports in the corresponding months of July and August last year. It was in this context that the fifteenth meeting of the Board of Trade, held in Bombay last week, under the chairmanship of Mr. Manubhai Shah, Union Minister of Commerce, has assumed greater significance. It was hoped generally that the Board would come out with something more than it has done to provide some kind of impetus to the prevailing stagnancy in exports. It was, therefore, surprising to note that the Board has felt contented only by expressing its greater concern at these bleak developments. What was more disturbing was its claim that it had anticipated these developments earlier. In other words, the Board was aware of these possible hurdles on the export front developing in the form of lack of adequate export surpluses in critical commodities such as vege-

table oils and sugar and general inflationary pressures in the country's economy. The meeting, however, failed to spell out the measures the Board had taken in view of such an anticipation. On the other hand, the meeting simply emphasised the urgency by saying that "the general problem of prices needs to be more vigorously tackled by the Government", and called on all trade organizations, export promotion councils, commodity boards as well as individual trading houses to put forward their best efforts during the coming months in order to step up exports. When this was done, the Board felt, it would be possible to achieve an increase of at least Rs. 5 crores every month over the corresponding level of the previous year. It would indeed be hard to visualise such an increase when the current trends continue to pester the country.

With regard to long-term export problems, the Board observed that though appropriate institutional arrangement for promoting exports had been greatly strengthened during the past two years there was need for a purposive and determined implementation of these policies in different sector

of the economy so as to stimulate exports to the desired extent. The Board also realised the necessity to streamline further the procedures under these policies. However, the most important decision of the Board was to allow the export promotion assistance schemes to operate unchanged over the next seven years till the end of the fourth Plan. This was particularly welcome because it would not only ensure continuity and stability in our export promotion schemes and policies but would also enable the industries to plan their export programme on a long-term basis.

★★
It is heartening to note that the Indian Cotton Mills Federation has undertaken to participate effectively in the efforts for increasing the per acre yield of cotton in the country. India with 115 lbs. per acre production of cotton accounted for the lowest per acre yield when compared with the per acre yields of Pakistan (228 lbs), the USSR (435 lbs), the USA (457 lbs), Sudan (463 lbs), and UAR (586 lbs). With the largest acreage under plough for cotton — 19.7 million acres — India has still to depend on imported cotton. Cotton production in the country, for instance, was 5.3 million bales in 1962-63 season while in 1961-62 it was only 4.6 million age annual production of cotton amounted to only 3.7 million bales. Although there has been a progressive increase in cotton production the demand has also increased considerably, so much so that the country had to depend on imports on increased scale every year. Thus, the average annual imports of cotton during the first Plan period were 7.6 lakh bales

while in the first year (1961-62) and the second year (1962-63) of the third Plan imports amounted to 8.7 lakh bales and 8.5 lakh bales respectively. The value of such imports was estimated to be between Rs. 50 crores and Rs. 60 crores a year.

Phenomenal Increase

As was expected, with sustained increase in the standards of living of the people and a fast growing population, coupled with the imperative need to export more and more of cotton textiles, the demand for cotton increased considerably. It was this that has been instrumental for the phenomenal increase in the number of textile mills in the country which has increased from over 450 mills in 1951-52 to 540 mills in 1962-63. During the same period, the number of spindles also rose from 11.25 millions to 14.12 millions. Hence, the increase in the average annual consumption of cotton was from 4.53 million bales in the first Plan period to 5.12 million bales in the second Plan period. The first two years of the third Plan witnessed further increase in consumption to 5.69 million bales and 5.67 million bales respectively. It was this and the lack of possibilities for further increase in acreage for the production of cotton that had made it necessary to seek ways and means of increasing the productivity in this sector. That by adopting modern agricultural practices the level of productivity can be increased was amply proved by the demonstration conducted by the Regional Research Centres at

Sirsa in the Punjab and at Coimbatore in Madras. The 13-point package programme as drawn up by the ICMF was, therefore, a step in the right direction. To implement its package programme the Federation has selected five centres, with 1,000 acres under each centre, to form a demon-

stration unit. They will be situated in Punjab, Rajasthan, Gujarat, Maharashtra and Madras. The inauguration of the first centre, namely the Cotton Extension Centre near Coimbatore in Madras on October 13, should, therefore, be welcome to all.

Wanted: Design and Consultancy Services

From Our Correspondent

CALCUTTA:

AMONG THE resources that industrialisation demands, managerial and technical expertise is not the least important. In fact, without this resource being available in sufficient measure, a country is rarely able to make much headway in the industrial field. This explains why India has to "import" managerial and technical personnel at heavy cost and why so much of foreign exchange has to be spent on import in "know-how". There is not much that India can do to be self-sufficient in this field in the foreseeable future, for import substitution really does not work in this sphere as in some others, but a good deal can be done to make a more rational and economical use of some of the existing resources. Industrial designing, consultancy services and research are some of the fields in which such practices are not only very possible but highly desirable. The new Union Minister for Heavy Engineering, Mr. T. N. Singh, is credited with some ideas for initiating moves to establish organisations which can be of benefit to Indian industry as a whole and one of them is to establish a string of design and consultancy services in the country. When he recently met the members of the Committee of the Engineering Association of India, Calcutta, Mr. Singh discussed with them the scope and usefulness of such services and requested the Association to submit a note on their feasibility under Indian conditions. This the Association has already done.

Growing Specialisation

The Engineering Association's study first deals with the background to this country's rapid industrial growth with the inauguration of planning, in order to explain how most entrepreneurs are no longer in a position to play the old role of planner, designer and producer all combined into one. With growing specialisation and the complexities of mechanism, the old system has become unworkable. Specialised services of design and consultancy engineering now help him by providing ready information on technical matters, if his firm is not big enough to have special departments of its own for this purpose. Since India's industrial growth, both in the public and private sectors, is taking place mostly in collaboration with foreign firms, these services have been usually provided by the foreign collaborator, but at a price, often heavy and quite often exacting, always paid in foreign exchange. Even in some cases where foreign manufacturers have supplied the main plant on a turn-key basis, offering technical co-ordination and tender consulting service with that, extra foreign exchange expenditure has had to be incurred on account of auxiliaries, other plant facilities and utilities. These latter are as essential as the efficient setting up of the main process plant, because if the necessary auxiliary facilities and utilities are neglected, optimum utilisation of the main capacity is necessarily hampered, and production ultimately suffers as costs increase due to under-utilisation of the main plant, and the facilities and utilities built with it. The study makes the valid point that with the services of design experts and consulting engineers available to the entrepreneur within the country itself, much of the planning and plant lay-out problem can be solved in time.

The study then lists the number of distinct advantages which can be had from Indian technical consultants and design

specialists. They would, it is pointed out, naturally have the larger interest of the country at heart; while designing a plant or preparing its specifications, they would necessarily examine the potentiality of indigenous manufacturers so that the much-needed foreign exchange can be conserved and Indian enterprises encouraged. Secondly, while designing a plant or project, Indian consultants would train up a cadre of design engineers, thus augmenting the country's pool of technical expertise. The know-how would be transmitted to the younger people and thus kept within the country. The know-how could also be exported to sister countries after it has been tried and tested in the country. This would help the export of Indian plant and machinery also. Thirdly, Indian consultants would know the country's needs and conditions — physical, political and social — better, and would be naturally more conversant with the country's labour problems. As their own interests would coincide with the larger interest of the country, their aim would not always be mercenary. And finally, greater reliance on Indian technical talent would ensure that processes suited to Indian conditions are always adopted, equipment is standardised to facilitate work of new machinery manufacturers, and construction programmes are scheduled on a continuing basis to make the maximum use of scarce equipment, personnel and foreign exchange.

New Concept

Consulting engineering is a new concept as far as India is concerned. But in certain fields it has made a notable headway. In power production, for instance, where consulting engineering made its debut in this country, India is now completely self-sufficient in technical know-how and power engineering. In metallurgy also, India has made fair progress. If the Government will give the same encouragement to such enterprises in other fields as it has done in power and metallurgy, there is every reason to expect that technical consultancy engineering will develop to the great benefit of Indian industry. Quite a few of the large Indian manufacturers already have their own research and design sections, but their activities, in the first place, are concerned with solving their own technical difficulties, and secondly, their resources being limited, the scope of the study is circumscribed to a few particular items and processes; thirdly, the achievements which they make are not made public but naturally used for their own purposes. There is great scope, therefore, for setting up a strong and well-staffed design and consultancy organisation in the country modelled on the well-known Lungi Institute of West Germany at the industry level, at the group level (that is, with a few manufacturers participating), at the Government-cum-industry level (that is where both the Government and industry collaborate in joint ventures) and at the level of only the Government. The need, it is explained, for having separate organisations or institutions for these services arises from the fact that they shall have to be permanent bodies, with their activities widening continuously.

The Association also suggests how engineering industries might be selected for the purpose of organising the service. It divides them into three groups (1) those which have attained a measure of stability like sewing machines, bicycles, and electric fans, etc.; (2) those which were started with foreign

5 PER CENT ANDHRA PRADESH STATE ELECTRICITY BOARD BONDS, 1976

FOR Rs. 400 Lakhs

(PAYMENT OF INTEREST AND REPAYMENT OF PRINCIPAL GUARANTEED BY THE GOVERNMENT OF ANDHRA PRADESH)

The bonds will be trustee securities under the Indian Trusts Act and also approved securities for the purposes of the Insurance Act and the Banking Companies Act.

ISSUE PRICE Rs. 99.50 Paise PER CENT

Redeemable at par on the 19th October, 1976

Subscriptions will be received in cash or cheques from the 19th day of October 1964. But the lists will be closed without notice as soon as the total subscriptions amount to approximately Rs. 440 lakhs and in any case not later than the close of business on the 24th October, 1964.

Applications will be received at (a) the branches of the State Bank of Hyderabad within the State of Andhra Pradesh, wherever they exist and at Bombay and Madras, (b) the branches of the State Bank of India at Delhi, Calcutta and Bangalore and at places within the State of Andhra Pradesh, wherever the branches of the State Bank of Hyderabad do not exist, and (c) the Government sub-treasuries in the State of Andhra Pradesh at places not covered by items (a) and (b).

Copies of the Notification announcing the terms of issue and application forms are available at all the receiving offices mentioned above, at all treasuries and sub-treasuries in the State of Andhra Pradesh and at all offices of the State Electricity Board.

**This is the
most wanted,
most sold
motor starter
in India—
Why?**

Some buy LT-LK for its compactness, others buy it for its elegance. The majority however buy it for its functional superiority.

You know the function of a starter. It must protect your motor. How does it do this? When overloading occurs or supply voltage is low, your motor can overheat and burn out. Everytime this happens, your starter should, without fail, trip and disconnect the supply to the motor, before any harm is done.

For accurate tripping, every relay that goes into an LT-LK starter is individually calibrated and tested on an electronic test bench. It is 100% certain that the starter will trip, saving your motor from burning out! It is this reliability of the highest degree that is responsible for LT-LK's wide and mounting popularity. A second reason is the ruggedness of the coil; besides being vacuum impregnated and baked, the LT-LK coil undergoes a 4000 volts impulse test that no other starter coil undergoes. What does it mean? The coil which operates an LT-LK starter never fails in its function.

To protect your motors and valuable machines, insist on LT-LK Motor Starters—Type MK1, direct-on-line, reversing and two speed, available for motors upto 7.5 h.p. and Star-Delta starters for motors upto 15 h.p. Accept no substitutes.

*The only Indian starter
that has competed successfully
in the markets of Europe.*

collaboration but are now in a semi-settled stage and being worked to imported designs and for which skill is by and large available in the country. Industrial furnaces, industrial machinery, switch-gears, electric motors, diesel engines, etc., fall in the second group; (3) Industries which are relatively new and solely depend on foreign collaboration for guidance in the matter of designs, techniques and processes. This group includes automobiles, steel plants, fertilizer factories, ball bearings, industrial machinery and machine tools, etc. In the case of the first group, what is needed are designs for improvements based on experience and technical advancements made within the country and outside; in the case of the second group, a common design institute and technical consultancy service is needed as a big proportion of the units manufacturing the industrial items concerned have no collaboration with foreign firms, which the remaining have. As for the third group, which solely depends on foreign designs, techniques and processes, a consultancy organisation is overdue. For instance, India has now three new steel plants — in Bhilai, Durgapur and Rourkela — each of which is working to the design of the individual collaborating countries. A fourth one is coming up at Bokaro, also with Russian help. The study suggests that since Indian technicians have by now gained adequate experience of the working of machines and processes of the steel plants, given the opportunity, they would not lag behind "in their endeavour to bring in a new plant on a pattern which would combine the best of all available sources."

Encouragement to Designing

Finally, the problem is of spreading the consciousness among entrepreneurs that they must readily take to all modern developments in the field of industrial designing and manufacturing techniques. This can be done by active encouragement from the Government and by wholehearted co-operation from the chambers of commerce and various organised associations of industry. The Government, in particular, has a key role to play, for without it providing the necessary help and facilities for the institute which may be set up, a design and consultancy organisation can never grow. No difficulty need be feared about the Government accepting its responsibility for the organisation and maintenance of the services, but it is not so certain that individual entrepreneurs

will enthusiastically support such an organisation. It is for the Government to demonstrate to them the practical advantages of adopting the most-up-to-date techniques, designs and processes, and also make it worth their while when they do so on a co-operative basis.

★★
Small industries, in particular, stand to benefit a great deal from a common consulting engineering and design service. This is one of the conclusions of a survey recently made of the numerous engineering units of Howrah by Jadavpur University under the auspices of the Reserve Bank. There is an acute concentration of small engineering firms in this area, and still more and more new firms keeping springing up. The secret of course is the interdependence and complementarity which are noticed among these firms, for orders are usually farmed out among neighbours. Yet the disturbing thing is that a very large number of small units with relatively new machines have been working below capacity. One reason may be the raw material shortage, but according to the Econometric Research Unit of Jadavpur University which conducted the survey, lack of adequate loan facilities from the banks is a major hindrance to the successful working of these concerns. The survey therefore suggests that adequate financial and technical assistance should be made available to these units, which have adequate growth prospects and given the necessary help, could become viable and contribute effectively to the industrial potential of the region. The survey has covered intensively the operations of 200 units, each employing 20 or more persons, and there was a quick survey of 396 out of 943 smaller units, employing less than 20 persons. Perhaps for the first time in the field of small-scale industries in India, an intensive idle time, work time and machine study has been carried out. New ground has been broken in the enumeration of the capital goods with the units according to their type, specification and age. This will make a calculation of their replacement cost possible. Interesting data on capital intensity and labour productivity have also been collected. The survey is indeed a comprehensive enquiry into the financial, technical institutional and other aspects of small engineering units in Howrah and on the inter-connections between them. It provides a wealth of information which will be very useful in the assessment of the nature and magnitude of the problems of small-scale industries in general, and engineering units in particular.

HMT's Secret of Success

From Our Correspondent

MADRAS:

THE HINDUSTAN Machine Tools Limited has been expanding in a big way in recent years. Two States in the South have already benefited from its activities. In Bangalore, apart from two machine tool units, a watch factory has been functioning for some time past. The third machine tool unit has been operating in Punjab while the fourth new unit, again financed fully from the internal sources of the HMT and constructed by Indian personnel without foreign collaboration, was recently commissioned into production at Kalamassery near Ernakulam in Kerala State. This factory will concentrate on the manufacture of different kinds of lathes. It is expected that work on construction of the Hyderabad factory would be completed soon. During the fourth Plan the objective of this Government undertaking would seem to be to double its turnover to Rs. 50 crores. Those in management of this concern have a great sense of pride and confidence in their achievement and it is pointed out that the manufacture of machine tools can be undertaken economically and efficiently on a large scale. Though the machine

tools are manufactured in the public sector there is healthy co-ordination of the activities with the private sector as a large volume of casting and electrical equipment is supplied by outside sources.

★★
An agreement between Dr. Dharma Teja and the Andhra Pradesh Government regarding the erection of a thermal plant having a capacity of 200 mW at Ramagundem is expected to be signed shortly. The Planning Commission is reported to have given clearance to this scheme and signified its acceptance of the terms of Dr. Dharma Teja for implementing this project. The Government of India had earlier reported to have been favourably inclined and wanted the Planning Commission to take a policy decision as some important questions were involved. It was suggested by some that even though the deal was proposed by an outside party on a package basis the foreign exchange involved would not be different to any appreciable extent and the obligation to service the loan would ultimately vest with the Government. It was, however, finally admitted that the project had some at-

tractive features about it. Apart from the undertaking given by Dr. Teja that the project would be completed within 36 months from the date of the signing of the agreement and that there will be no problem of supervision, it is admitted that during the three years it would not be necessary to find either foreign exchange or rupees as repayment would begin only after one year from the date of handing over of the project. While the total cost may be around Rs. 17 crores, it is emphasised that the capital cost of Rs. 900 per kW is rather low for a thermal project and the terms of repayment were also considered satisfactory. The rupee part of the expenditure is to be repaid over a period of five years and the foreign exchange part over twelve years. The interest on the whole amount will probably not exceed 5 per cent. It is learnt that the equipment required for this project will be supplied by the Japanese manufacturers and that arrangements have already been made for early deliveries.

With the prospect of this project now materialising, the question has naturally been asked whether a similar deal would be concluded with Dr. Teja by the Madras Government. This shipping magnate has already had some preliminary talks with the Madras Government though it is not clear whether Dr. Teja would be able to offer the same terms to the Madras Government as in the case of the Ramagundem project. The Madras State Electricity Board has a scheme for constructing a 300 mW thermal station near Madras and it would be worthwhile to examine whether this project can be taken up by Dr. Teja. Alternatively, a big station can be erected at Tuticorin. The Madras State Electricity Board may not, however, feel enthusiastic over a project which would not require the services of its expert personnel because there will not be many projects in the fourth Plan and it would not be possible to utilise the experience of the expert team of M.S.E.B. if some of the new projects were implemented on a package basis.

★★

The food situation is getting complicated and there is as yet no precise assessment of the availability of rice in the four States of the Southern Zone. The latest reports about heavy damage to the standing crop in Andhra Pradesh have had a complicating effect. Earlier, Mr. C. Subramaniam was inclined to be of the view, after a tour of the affected areas, that the damage might not be serious and that, in any case, there would not be any crisis. It has, however, been pointed out by Dr. K. L. Rao and the Andhra Pradesh Food Minister that the crop over an area of four lakh acres has been totally destroyed and the yield might be affected in other regions. This would mean a decline in the yield of the crop by four to five lakh tons. The exportable surplus would naturally be affected, if the worst fears proved true. Luckily, however, the prospects for a good crop in Madras State are considered encouraging and total availability may not be affected to any great extent. The Union Food Minister, however, has expressed a great concern over the recent development and the traders have been blamed for the shortage in the open market. There are large queues before the co-operative societies and fair-price shops in Madras State while the deficit in Kerala is assuming serious proportions. It has even been suggested by Mr. C. Subramaniam that there would have to be some sort of informal rationing so that a minimum quantity of cereals can be issued to the population at a fair price. Additional quantities can be had from the open market at higher prices though every effort would be made to control the trade. To what extent the growers and traders are responsible for the bad turn in the food situation recently it is difficult to say. But the Union Food Minister would seem to be keen on making his experiment in an area where the

trade can be said to have behaved better than in other parts of the country. It is stated that the State trading corporation for foodgrains might make a beginning first in the rice zone apart from the export trade being conducted on a government-to-government basis. Whether these moves would not complicate matters further has to be borne in mind. Only if there are two good crops in succession the food situation will resolve itself. Meantime, the best course would be to release large quantities of wheat so that the pressure on wheat could be reduced to some extent. There should not be much difficulty in adopting this procedure because only recently arrangements have been made for importing wheat under the P.L. 480 agreement from the USA.

★★

Nearly all the established units in the private sector are having expansion plans and it has become necessary to raise additional capital on a large scale. Even though Mettur Chemical and Industrial Corporation has raised a substantial amount by issuing equity and preference capital in the past three years and ambitious expansion plans are being completed, the Chairman of the company recently referred to the need for a careful examination of the ways and means position following an increase in turnover and the additional requirements of capital for completing the schemes as they have been substantially modified in some respects. While this Corporation may think in terms of raising additional capital by the issue of debentures at a later stage, Aluminium Industries Limited has plans for issuing new equity shares at a small premium. In the case of this company also the chairman has stated that the continuous growth in activities had called for huge capital expenditure and that in the next two years there would be a problem in regard to working capital as well as fixed capital.

The erection of three factories under the same management and the diversification of the lines of manufacture at the principal centre, Kundara in Kerala, have necessitated the issue of new equity capital as debentures were issued only some time back. The additional equity capital may be for Rs. 75 lakhs with the premium on new shares not more than Rs. 2.50 per share. It is felt that it may not be necessary to effect a proportionate cut in the dividend on account of an increase in capital as earnings are increased appreciably during the current year and in 1965-66 they are expected to make excellent showing.

(Contd. from page 744)

for the maintenance of buildings. A new scheme has been introduced in East Berlin and other towns of the GDR under which people can own their flats by paying 40 per cent of the price outright and remaining 60 per cent in 15 instalments. Such houses are being built by the co-operatives and people are made full owners of those flats. The trend towards possession of flats, cars, refrigerators, heating apparatus, etc., shows that socialism itself is undergoing some changes. It was the general impression of most of the journalists attending the Leipzig Fair that the socialist countries cannot fail to be affected by some of the good points of free enterprise, whereas, on the other hand, free enterprise also will have to imbibe what is good in socialism so that the people in the lower strata of society benefit. The two systems, it was hoped, would meet somewhere whereby the sharp edges of socialism would be removed so as to bring it very near the present-day free enterprise and the similar process would be applied to free enterprise so that it could socialize itself. The day may be far off, but it will be a happy day for all mankind.

economical, efficient, finger tip management control

Install Telin transistorised intercommunication system and experience for yourself how at the gentle touch of a finger you can effectively and efficiently communicate with every section of your organisation.

Its maintenance cost is as low as Rs. 5/- per year. Sales and service facilities offered all over India.

DISTRIBUTION & PRICING OF FERTILIZERS

A SEVEN-MEMBER committee has been appointed by the Union Ministry of Food and Agriculture to examine the long-term and short-term problems connected with the distribution of chemical fertilizers. The committee will also examine the question of pricing of fertilizers, the role of co-operatives in marketing and the role of extension services in promoting the use of fertilizers. Besides its Chairman, Mr. B. Sivaraman, Chief Secretary, Government of Orissa, the other members of the committee are: Mr. M. K. K. Nayar, Managing Director, Fertilizers and Chemicals Travancore Ltd., Alwaye; Mr. D. Viswanatha Reddy, Director of Agriculture, Andhra Pradesh; Mr. L. W. Bongirwar, Registrar of Co-operative Societies, Maharashtra; Dr. J. P. Bhattacharjee, Director, Programme Evaluation Organisation, Planning Commission; Prof. Bharat C. Dalal, Indian Institute of Management, Ahmedabad; and Mr. M. Subramanian, Deputy Secretary, Ministry of Food and Agriculture, as member-secretary. The terms of reference of the committee are: (i) to consider short-term and long-term problems connected with distribution of fertilizers both in the States and at the Centre, and to recommend measures which would lead to the establishment of an effective system of distribution of fertilizers with a view to bringing about a rapid increase in their use for increased agricultural production; (ii) to study the pricing policy at different levels, and to suggest modifications, if any, that would lead to a substantial increase in the consumption of fertilizers; (iii) to study the role of distribution agencies employed in the States, namely, departmental, co-operative, and private trade, their distribution margins, and to suggest modifications, if any; (iv) to study the role of extension services in the promotion and popularisation of the use of fertilizers and suggest measures for increased sales promotion and (v) to study the role, if any, of the producing units, both in the public and private sectors, in marketing and promotional activities. The committee will submit its report within a period of four months.

FOODGRAINS CORPORATION

The Government of India has decided to introduce legislation in the next session of Parliament for the setting up of an entirely State-owned Foodgrains Corporation of India. It is proposed to run this statutory Corporation, which is likely to have an authorised capital of Rs. 100 crores, as an autonomous commercial undertaking. The object of the Government is to secure a commanding position in the foodgrains trade so as to ensure a minimum price to the producer and regular supplies of foodgrains to the consumer at fixed prices. The Corporation, which will come into being on January 1, 1965, will build up sufficient buffer stocks to regulate the prices. It will start its operations in the Southern zone with rice and paddy. The field of operations may, in course of time, be extended to other foodgrains. As and when necessary the Corporation will set up its subsidiaries in different States. The board of directors of the Corporation is likely to consist of 12 persons, with at least four non-officials. With a view to advising and assisting the Corporation in the discharge of its functions, the Government will take powers to set up advisory boards.

Besides making outright purchases at a pre-determined price, the Corporation may requisition stocks from any person with a view to discouraging private traders from offering higher prices to the farmers in the hope of selling the foodgrains at an exorbitant price and thus frustrating the very

purpose of the Corporation. The private trade may also be required to notify to a competent authority as well as to the Corporation about its movements of foodgrains by rail so that the Corporation, in order to build up stocks, may be able to advise the Government on restrictions of movement which may be needed in critical areas. Contrary to earlier indications, the Corporation is unlikely to have a monopoly on foodgrains movement by rail though it will have the power to ban movement from critical areas.

TRADE BOYCOTT

The official sources in New Delhi have described as completely baseless and unfounded the reports which recently appeared in some foreign newspapers that India is having trade relations with South Africa. The fact of the matter, however, is that the products of Indian origin might have gone to South Africa from third countries or as personal effects carried by travellers. It is, on the other hand, a well-known fact that India was the first country to break off trade relations with South Africa as far back as 1946 by way of a protest against the racial policy of that country. India also withdrew her High Commissioner and closed down Indian Mission in that country in 1954. Further, in pursuance of the UN General Assembly Resolution of November 7, 1962, India imposed a total ban on trade with South Africa.

Pakistan has also lined up with India and several other Asian, African and Western countries in the Trade Boycott of South Africa. After a Cabinet meeting on October 8, 1964, presided over by President Ayub Khan, it was announced that Pakistan had banned all export trade with the Government of South Africa with effect from October 7, 1964. It was stated that as a result of this decision, Pakistan will incur a loss of Rs. 10 crores per annum in foreign exchange. The Government of Pakistan also announced that it was already complying with the provisions of the UN Resolution of 1962. This decision of the Pakistan Government is, however, interpreted in political circles as an endeavour by Pakistan to mobilize the support of Asian countries, particularly newly independent African nations, on her dispute with India on Kashmir.

HANDICRAFTS EXPORT COMMITTEE

Measures to ensure steady production of handicraft goods of quality as well as to secure increased exports were discussed at the meeting of the Export Advisory Committee for Handicrafts held in New Delhi on October 8, 1964. At the suggestion of Mr. Manubhai Shah, the Union Minister for Commerce, it was agreed that an expert committee should immediately be set up to consider various issues relating to production and export of handicrafts. The Committee would make suggestions for evolving a suitable link between principal producers of handicrafts and their main exporters and recommend measures to assist them. Besides, it would also make recommendations relating to finance, raw materials and other connected subjects.

The meeting reviewed the encouraging trends in export of handicrafts during the last few years. It was pointed out that handicraft exports, which had been of the order of Rs. 19.35 crores in 1961-62, had risen to Rs. 30.68 crores in 1963-64 and that handicrafts now formed one of the 7 major foreign exchange earning commodities of the country. The meeting also discussed the annual export targets to be achieved by the end of the third Plan as well as during the fourth Plan.

It approved the annual export target of Rs. 41 crores to be achieved by 1970-71.

HOUSING FUNDS

In consultat on with the Planning Commission, the Union Ministry of Works and Housing has drawn up a four-point programme for meeting housing shortage in the country. The most important point in the programme is the decision to create revolving funds for bulk acquisition and development of land in and around the growing towns where land prices are rising rapidly. Large scale acquisition of land is considered the only way to check urban prices. The intention is to allot the land acquired under this programme to co-operative housing societies. With a view to ensuring co-ordination among various implementing agencies and checking diversion of funds from housing to other projects, the Ministry has decided that suitable machinery, such as Housing Boards, should be set up in the States to implement the housing schemes. Another point in the Ministry's programme emphasises the need to make efforts to reduce the building costs, expand the building materials industry and increase the supply of various categories of skilled personnel. The Ministry will also ask the State Governments to conduct sample housing surveys in big cities to assess the extent and characteristics of the housing shortages so that suitable programmes might be drawn up by the State Governments.

Since the housing projects are implemented by the State Governments, the Ministry's four-point programme will be discussed at the next Housing Ministers' Conference which is likely to be held some time in November, this year. The Planning Commission has also recognized the need for making a sizable provision for housing in the fourth Plan. It has been tentatively recommended that a provision of Rs. 700 crores be made for social housing schemes, of which Rs. 150 crores may be provided by the LIC, Rs. 100 crores from the Employees' Provident Fund and the balance of Rs. 450 crores from the Plan funds.

FORWARD TRADING IN GROUNDNUT & OIL

With effect from September 15, 1964, the Government of India extended the provisions of Section 15 of the Forward Contracts (Regulation) Act, 1952 to groundnut and groundnut oil throughout the country. With the new crop deliveries, the hedge trading in these commodities are expected to be resumed shortly. In the circumstances prevailing at present, the Central Government is of the view that it is necessary to regulate and control trading in non-transferable specific delivery contracts also in groundnut and groundnut oil in the State of Gujarat with a view to preventing unhealthy speculation in these commodities. The Government has accordingly issued notification under Section 18(3), applying the provisions of Section 15 to these commodities in the State of Gujarat. As a result, non-transferable specific delivery contracts in groundnut and groundnut oil in the State of Gujarat can now be entered into only between or through or with members of an association which has been granted recognition under Section 6 of the Act for forward trading in groundnut and groundnut oil. In order to avoid hardship to genuine parties, it has been decided to exempt the outstanding non-transferable specific delivery contracts in these commodities from the requirement of closing out and to permit them to run their course.

CO-OPERATIVE SUGAR FACTORIES

The share of the co-operative sector in sugar production increased from 21 per cent in 1962-63 to 23.4 per cent in 1963-64. Up to the end of August, 1964, sugar co-operatives pro-

duced 5.98 lakh tons, as against the country's total production of 25.12 lakh tons. Fourteen co-operative sugar factories manufactured 1.09 lakh tons of raw sugar, accounting for about 44 per cent of the total production of 2.43 lakh tons in the country during the season 1963-64. Of the 57 co-operative sugar factories licensed so far, 48 were in production in the 1963-64 season. The remaining 9 factories are in various stages of development. Six of these 9 units are likely to go into production in the 1964-65 season. The licensed capacity of the 57 co-operative sugar factories is 8.25 lakh tons, representing nearly a quarter of the industry's total licensed capacity of 33.6 lakh tons. Additional capacity of 5.52 lakh tons is now being licensed. Of this, 3.40 lakh tons will be in the co-operative sector. Licences have already been given for the establishment of four power alcohol units by co-operative sugar factories.

HOTEL INDUSTRY

About 1,500 beds are expected to be added to the existing strength of 11,000 beds available in hotels in the country. Several new hotels conforming to international standards are coming up in many cities. Some are nearing completion and will begin to operate this year. On some others work has started and is expected to be completed before the end of 1965. All the hotels will be air-conditioned, either wholly or partly, and in most of them special amenities like swimming pools, tennis courts and terrace gardens will be provided. It is estimated by the Department of Tourism, Government of India, that taking into account the anticipated increase in tourists and local demands, India will need about 9,000 additional hotel beds by the end of 1968.

Expected to be completed early next year, an ultra-modern luxury hotel with 350 rooms having 640 beds, will begin to operate in New Delhi. The International Hotels Corporation of USA is collaborating in the project. Among the hotels that have recently started functioning is one at Ernakulam with 25 double-bed rooms. Another hotel in Ernakulam is nearing completion. It is an eight-story structure with 108 beds and will be fully airconditioned. By the end of this year, Calcutta will have a new hotel with 100 rooms fully airconditioned. By the middle of 1965, another hotel will be ready with 204 rooms.

TRANSIT TRADE

The Secretary General of the U.N.O., Mr. U. Thant, announced on September 24, 1964, the appointment of a committee of twenty-four members to draft a new international convention relating to the transit trade of land-locked countries. The purpose of the new instrument would be to facilitate free transit by rail, road or waterway of transport from land-locked countries to ports of coastal States. Members of the Committee, selected from among the land-locked, transit and other interested States on the basis of equitable geographical distribution, are: Afghanistan, Argentina, Austria, Bolivia, Chile, Czechoslovakia, India, Ivory Coast, Japan, Liberia, Mali, Nepal, Netherlands, Niger, Nigeria, Pakistan, Paraguay, Senegal, Switzerland, the U.S.S.R., the U.K., the U.S.A., Upper Volta, and Yugoslavia. The Committee is scheduled to begin its work at the U.N. Headquarters on October 26, 1964 and is expected to meet for two or three weeks. The United Nations Conference on Trade and Development, which requested the Secretary-General to appoint the Committee, recommended that the latter take, as a basic text, a 20-article draft convention on transit trade submitted by Asian and African land-locked countries. The Conference also recommended that by the middle of 1965, the U.N.O. should convene a conference of plenipotentiaries to consider the draft and to adopt the convention.

Company Affairs

ALIND'S PROGRESS

WHILE ADDRESSING the annual general meeting of the Aluminium Industries Ltd., Mr. S. Narayanaswamy, Chairman, reviewed the progress of the company during 1963-64. He informed the shareholders that for Alind it has been a period of fulfilment and consolidation, no less of expansion and preparation for greater expansion. The 'Solidal' plant for the manufacture of low voltage underground cables has been erected and is likely to go into production shortly. He added that the Indian consumer has still to be acquainted with the properties and high keeping qualities of this comparatively less familiar type of underground cable, but Solidal will raise the prestige of the company. Mr. Narayanaswamy indicated that welding cables produced by the company have been well received and the production is likely to be augmented considerably. Similarly the output of microgauge aluminium wire required for stranding in the manufacture of cables has opened up a new field of possibilities in the manufacture of welding and trailing cables.

Mr. Narayanaswamy pointed out that the expansion of bare conductor capacity at Kandara and Hiraakud has been approved by the Central Government and items of balancing equipment are to be imported to put this expansion through. The necessary foreign exchange is being secured in part by a loan from the ICICI. The company is also in contact with Japanese manufacturers to establish a plant for the manufacture of cable making machines. This project has also reached an advanced stage and the terms of collaboration are being studied. This will further improve the functioning of this company. The Chairman added that at an appropriate time the company will move to raise additional capital by a supplementary share issue to finance this project.

The Chairman referred to the problem of raw materials, particularly PVC and aluminium material. For the production of Solidal, PVC is used as the principal insulating and sheathing material, the import of which is banned and the price of the indigenous quality has been on the higher side. This tends to push up the price of the final PVC cables so as to impair its competitive capacity. This is a substantial handicap and the Government should pay attention to this aspect of the problem. Similarly the official policy of shifting the cable industry from copper to aluminium on the ground that copper production is not sufficient in India is also posing a problem to this company. Mr. Narayanaswamy indicated that in actual practice the output of aluminium has not been sufficient to meet the demand although some units have been planning to raise their production capacity. Being a highly capital-intensive industry, additional capacity will take nearly four years to materialise. The emphasis is on shift from copper to aluminium should, therefore, be more cautious.

SUTLEJ COTTON

The Sutlej Cotton Mills Ltd. recorded a considerable increase in sales from Rs. 263.64 lakhs last year to Rs. 322.08 lakhs during the year ended March 31, 1964. The overall results in terms of profit, however, revealed a slight decline. After providing for depreciation, the net profit declined from Rs. 17.13 lakhs to Rs. 15.08 lakhs. After transferring Rs. 17 lakhs, being provision for taxation no longer required, a sum of Rs. 7 lakhs is set apart for taxation and Rs. 12 lakhs for development rebate reserves. The dividend on ordinary shares is maintained at Rs. 8.57 per share less tax. Although

the Rajasthan Textile Mill started production during the year, full production could not be achieved due to non-availability of skilled labour. However, the directors state that the position has now improved and the working of the mill in the current year is expected to improve. Steps are also being taken to add further spindles which will bring the total capacity to 20,352 spindles.

RATNAKAR SHIPPING

Ratnakar Shipping Co. Ltd. recorded satisfactory results for the year ended March 31, 1964. The profit and loss account shows a surplus of Rs. 22.62 lakhs, out of which a sum of Rs. 13.97 lakhs has been provided for depreciation, Rs. 7 lakhs for development rebate reserve and Rs. 1.50 lakhs towards general reserve. During the year under review, the company acquired two second-hand vessels and they have been renamed m.v. "RATNA CHANDRALEKHA" and m.v. "RATNA MANJUSHREE" respectively. The vessels were partly on time charter and were partly operated by the company on the coastal and the overseas trades. The working of the company during the year registered an improvement over the previous years.

The directors have indicated that the company has placed an order with a Japanese shipyard for building a tanker of about 53,000 DWT which will be delivered during the first half of 1966. All necessary sanctions for construction of the tanker have been obtained from the Government of India. This tanker is being built against a firm charter party with Messrs. Shell International Marine Ltd., London, for a period of 12 years. With the successful conclusion of the tanker deal, the company now proposes to pursue actively other schemes for expansion of their fleet. The fleet of the company as on March 31, 1964, was insured for £1.84 million in respect of hull and machinery, freight and disbursements against both marine and war risks.

INDORE WIRE CO.

Indore Wire Co. Ltd. entered the market on October 16 with an offer of 7,500 equity shares of Rs. 100 each for public subscription. The subscription list will close on October 21 or earlier but not before October 19. The company, which has an authorised capital of Rs. 25 lakhs comprising equity shares worth Rs. 20 lakhs and preference shares worth Rs. 5 lakhs, will issue in all equity shares worth Rs. 15 lakhs, out of which the promoters and their friends have taken up shares of the value of Rs. 7.50 lakhs. The balance is offered for public subscription.

The company proposes to set up at Indore a factory for the manufacture of special steel wires such as high tensile steel wires, mild steel wires and wire products. The production of high tensile steel wires will be 3,000 tons and that of mild steel wires 900 tons a year. The capital outlay of the project is estimated at Rs. 50 lakhs which will be raised partly from the equity capital and a loan of Rs. 15 lakhs from the Madhya Pradesh Financial Corporation. The balance will be raised from banks.

BAYER (INDIA) ISSUE

Bayer (India) Ltd. proposes to enter the capital market by the end of next month with a public issue of Rs. 56.27 lakhs to raise a part of the capital required to implement its expansion programme involving a capital outlay of Rs. 3.50 crores. It has received the consent of the Controller of Capital

Issues for increasing its authorised capital from Rs. 10 lakhs to Rs. 3 crores and the paid-up capital from Rs. 4 lakhs to Rs. 2.65 crores by issue of new equity shares. The foreign collaborators, Farbenfabriken Bayer A.G., have been allowed by the Government to subscribe up to 56 per cent of the total equity capital. Of the remaining 44 per cent, 58,570 shares of Rs. 100 each are to be subscribed by the promoters and their friends and the balance of 56,270 shares are to be offered for public subscription. The entire public issue has been underwritten.

The total capital outlay on the project of Rs. 3.50 crores is proposed to be met by way of issued capital to the extent of Rs. 2.65 crores and the rest by borrowings from financial institutions. The company at present manufactures insecticides, fungicides, pharmaceuticals and proposes to manufacture items like ethyl parathion, methyl parathion, rubber chemicals and basic pharmaceutical chemicals and for these the company proposes to put up a new plant for which it has acquired land at Thana.

BOMBAY SUBURBAN DEBENTURES

Bombay Suburban Electric Supply Company Ltd. proposes to raise a further debenture capital of Rs. 75 lakhs to finance its five-year development plan. This is on top of convertible debenture issue of Rs. 87.50 lakhs issued recently. Moreover, the company is accepting call and short-term deposits from the public as temporary capital finance. The company has extended its distribution system and during 1963-64 has incurred a capital expenditure of over Rs. 100 lakhs. During the current year too, a larger expenditure is expected to be incurred, the bulk of which will be on power and distribution transformers, high and low tension switchgear and cables. During 1963-64, the company found expansion of its operations with larger revenue realisation. The gross profit increased from Rs. 62.12 lakhs to Rs. 69.88 lakhs.

TRACTORS AND BULLDOZERS

Tractors and Bulldozers Ltd. proposes to enter the market shortly for additional capital of Rs. 50 lakhs. This additional amount is required for financing the new project undertaken by the company. It has manufactured more than 700 tractors during the period between February, 1963 and September, 1964, and has been allowed to increase its licensed capacity from 2,000 units per year—1,000 50 H.P. and 1,000 30 H.P.—on single shift basis to 4,000 units per year on multiple shift basis. It has also been licensed to import 2,000 complete tractors. A licence for 882 CKD units has already been issued and these tractors will be assembled for delivery before March, 1965. The Czech collaborators are sending an additional team of engineers to supervise the operations.

DALMIA CEMENT

Dalmia Cement (Bharat) Ltd. has sold its two cement factories in Pakistan to the Pakistan Progressive Cement Industries Ltd. for Rs. 233.67 lakhs. Along with the two factories, the buyer has also taken over cash, bank balances and investments in securities.

In June 1962, Dalmia Cement had entered into an agreement with the Pakistan Progressive Industries Ltd. for the sale of its two factories situated at Karachi and Dandot. According to the agreement, Dalmia Cement is entitled to a 6 per cent interest on the sale price with effect from October 1, 1962, the date with reference to which the sale price of

assets has been computed. The deal has been approved by the Governments of India and Pakistan.

Out of the sale price, a sum of Rs. 25.47 lakhs is to be retained in Pakistan to meet the company's liabilities in that country. The payment of the balance of Rs. 208.20 lakhs will be made by exporting cement from Pakistan over the next three years. The buyer will supply 75,000 tons minimum and 1,00,000 tons maximum of cement a year. The imported cement will be distributed in India by the State Trading Corporation. A major portion of the imports is expected to be supplied to Government consumers.

GREAT EASTERN SHIPPING

During the year ended June 30, 1964, the Great Eastern Shipping Company Ltd. recorded a slight set back with gross profit of Rs. 1.24 crores against Rs. 1.26 crores last year. The tonnage under operation increased from 156,810 DWT to 159,633 DWT. The quantity of cargo lifted moved up from 1,133,000 tonnes to 1,178,000 tonnes. It is observed that the company could not derive the expected benefit from the improvement in the international freight market as the actual movement of foodgrains to Russia and China fell short of expectations. The operations were affected adversely also by the cessation of ships at ports. Moreover, although the company's fleet increased with the addition of 5 new vessels, they operated only during the second half of the year and hence the benefit is reflected only partly in the results for the year under review. The directors feel that with the full benefit of the present large fleet and more favourable port conditions, the company will be able to show better results. It has ordered for supply of two bulk carriers from a Japanese shipyard which are expected to be delivered in 1966. The full benefit of these carriers will be reflected, therefore, in the results for the year 1966-67. The company has already submitted to the Government a proposal for the addition of five more vessels at a cost of Rs. 3 crores and if the acquisition is approved in time, its benefit will be reflected partly in the results in 1964-65 and fully in 1965-66.

TATA-MERLIN AND GERIN

A new company, Tata-Merlin and Gerin Limited, has been formed to manufacture various types of switchgear and allied power distribution equipment, including the high tension air-break circuit breakers, isolators, interrupters, current and potential transformers, and control panels. The production is likely to start at the end of 1965. The company has been formed jointly with French manufacturers of electrical equipment, Etablissements Merlin and Gerin of Grenoble, France and Tata Sons Private Limited, with an authorised capital of Rs. 12.50 crores. In the first stage, its issued capital will be Rs. 70 lakhs of which about 45 per cent will be issued to the public. The balance will be taken up by the three promoters, Merlin Gerin capitalising a part of the fees and royalties payable to them.

Though switchgear and controlgear are already under progressive manufacture in India, the output of these items is far below the present demand and the country has been importing switchgear and allied equipment worth about Rs. 11 crores a year. The fourth Plan envisages an increase in the installed electricity generating capacity in the country by approximately 6 million KW to approximately 16 million KW by 1970-71. It is estimated that thereafter the installed capacity will double approximately every five years.

YOU CAN COOL
A WHOLE
FLOOR
OR AN ENTIRE
BUILDING

WITH BLUE STAR-
WORTHINGTON
PACKAGED
AIR CONDITIONERS
5, 7½, 10 TONS

Give yourself a package deal. Buy comfort with Blue Star-Worthington Packaged Air Conditioners.

These versatile units may be used free standing or with ductwork. Individually they can cool from 1500 to 3000 sq. ft. of floor space; in multiples they form large tonnage central systems to cool a whole floor or an entire building effectively, economically, efficiently.

They offer you the added advantage of flexibility—you can add more units with minimum alterations, as your needs increase.

Blue Star-Worthington Packaged Air Conditioners are ideal for offices, banks, restaurants, canteens, clubs, showrooms, shops, stores... For your next air conditioning job, call in Blue Star.

Economics of Underdevelopment

People and Living: Vol. V in the United Nations' Reports "Science and Technology for Development"; U.N.; \$7.

Economics of Underdevelopment: Edited by A. N. Agarwala and S. P. Singh; Oxi. Uni. Press; 15sh.

Economic Transition in Africa: Edited by M. J. Herskovits and M. Harwitz; Routledge and Kegan Paul; 50sh.

Aid to Africa: By I.M.D. Little; Pergamon Press; 7sh. 6d.

Reviewed by **JOSSLEYN HENNESSY**

TWENTY YEARS ago no study of the economics of a developing country existed. Today, there is a vast literature on the subject, which has passed through two phases.

In the first, indigenous politicians and their foreign economic advisers tried to apply western economic theory and practice "neat" to the developing countries. The emphasis was on social advancement, partly because the masses in the developing countries so obviously lacked social amenities, partly because in the early post-war years western economic advisers brought out with them their pre-occupation with the problems of the just re-distribution, rather than the multiplication of wealth. They, and the politicians whom they advised, were impressed by the contrast between conspicuous concentration of wealth in the hands of a minority and the poverty of the masses. The politicians were particularly tempted to concentrate on social objectives — schools, hospitals, labour legislation, and "soaking the rich" — because these satisfied national desires to escape from the stigma of "backwardness" and because they had an obvious electoral appeal. It took time for the foreign advisers to realise, and still more for the politicians, many of whom have not yet realised, that such policies endanger social stability, because they feed the illusion that political promises are the equivalent of mass production in being and that the fruits of economic growth can be enjoyed before growth has occurred. Economically, soaking the rich erodes such saving and investing as there is without raising mass living standards. As a result of these policies, mounting industrial unrest and social upheavals overtook many emerging nations.

Reinforced with Sociology

The second phase of studies in development problems emerged as economic advisers, baffled by strong social resistances, began to reinforce economic theory with sociology. This combination has, in the past five years or so, begun with increasing success to reveal the mechanics of social change that open the door to economic growth. This is what, in essentials, these four books, each admirable in its sphere, are about.

All four recognise, implicitly or explicitly, that economic development itself creates new inequalities. Wage differentials for skill often need to be high; successful investment gives higher yields than mediocre investment, and this affects some investors and savers more than others, while incomes in industries with rising productivities rise faster than incomes in backward or declining industries. The pragmatic remedy for differing rates of rise in incomes is to pursue still more intensified policies of growth, for the greater the wealth the more is available for lower incomes. Government policy should avoid (a) excessive party dogmatism and excessive insistence on the immediacy of social objectives and (b) ineffectual dispersal of resources in response to diverse pressures, some of which may, indeed, be activated by the highest motives. For example, it is now held to be a reasonable criticism of India's Community Development projects that they have not come fully up to

expectations because their sponsors thought more of promoting social welfare than of spurring villagers to make themselves richer, of spreading amenities than encouraging productive activities. This puts the cart before the horse, because the costs of welfare can only be met out of the profits of production, and particularly — if like India, a country needs to import food to live — the profits of production for export, for without exports there will be neither food nor welfare. Nor have Export Councils, with their special allowances and other "incentives", proved as effective in boosting exports as the prospects of being allowed to earn "excessive" profits.

To offer such advice in the UK evokes protests against "obsolete reactionary" ideas, but to offer it, as the outcome of socio-economic researches, to developing countries apparently makes it acceptable. Sauce for the developing goose is evidently not sauce for the developed gander. Yet the United Nations' "People and Living" says that substantial though the contribution of the West to the solution of the problems of the underdeveloped should be, it is "impossible to over-estimate the importance of the unique opportunities in the developing nations to advance the knowledge of man in changing situations". Economic historians confirm current observation of developing countries by showing that where, in the past, an ideology did not favour economic growth, it did not take place. The old classical Greek scientists knew about steam engines but no industrial revolution followed because the Greeks valued statesmen, soldiers, and farmers, and despised "profiteers".

TAXATION

Taxation of Companies and Their Officers: By R. N. Lakhotia; Published by Asha Publishing House, Calcutta; Pp. 831; Price Rs. 30.

Reviewed by **A. P. AGARWAL**

THE BOOK under review is an exhaustive commentary on the provisions of the Income-tax Act, 1961, incorporating the various amendments brought about by the Finance Act, 1964. The Income-tax rules 1962 have also been brought up-to-date. It illustrates with specific examples such difficult topics as computation of income under different heads under the Income-tax Act and the distinction between capital and revenue incomes and expenditures. Elaborate description has been given to explain the allowable and disallowable expenditures with 143 practical examples under the Income-tax Act and also the problems connected with the loss in business, depreciation and development rebate. Special effort has been made to explain the various exemptions and rebates allowable for the new industrial undertakings, their assessment procedures including calculation of tax etc. Provisions as they apply to foreign companies, especially for their income from royalties, have also been explained in detail.

The Companies Profits Surtax Act, 1964, which was introduced this year and which is somewhat difficult in understanding has been clearly explained by providing suitable and exhaustive examples regarding computation of capital of the company, statutory deductions, chargeable profits, etc. It is a useful guide for company directors, executives, accountants, auditors, legal and taxation advisers and all others who have to deal with taxation matters especially relating to companies and personal assessment of directors and other officers. The book will also prove very useful to the Income-tax Departmental officers for their day-to-day work as well as for their departmental examinations.

RECORDS AND STATISTICS

Tariff Valuation

THE GOVERNMENT of India has fixed, with effect from October 1, 1964, the tariff values for more than 60 articles. The tariff value specified shall, unless otherwise expressly provided, apply whether the article is assessed to duty under the "item in the First Schedule to the Indian Tariff Act, 1934 (32 of 1934)" or under any other "item." The description of articles

follows the ordinary trade description and covers all reduced grades and mixtures unless they are specially provided for. The item number in the First Schedule to the Act under which the article is ordinarily chargeable, the name of the article, and the tariff value are given below :

Item No. in First Schedule to Act under which article is ordinarily chargeable	Name of the article	Unit	Tariff Value (Rs.)
(1)	(2)		(3)
	SECTION — I		
	Live animals and products of the Animal Kingdom.		
5(2)	Ivory, unmanufactured —		
	Elephants' tusks (other than hollows, centres and points) each exceeding 9.0 Kg. in weight and hollows, centres and points each weighing 4.5 Kg. and over	Per Quintal	3,200.00
	Elephants' tusks (other than hollows, centres and points) not less than 4.5 Kg. and not exceeding 9.0 Kg. each and hollows, centres and points each weighing less than 4.5 Kg.	"	3,200.00
	Elephants' tusks each less than 4.5 Kg. (other than hollows, centres and points)	"	2,600.00
	SECTION — II		
	Products of the Vegetable Kingdom		
8(2)	Khasta Badam without shell (Kernel of Apricot)	"	650.00
	Dates, Wet, excluding seedless, in containers other than bags, baskets, gunny cloth and matting bundles	"	80.00
	Apricots in all packings and containers	"	310.00
8(5)	Grapes in all containers	Per Kg.	1.40
9(3)	Spices, unground — Cloves (other than exhausted)	Per Quintal	410.00
	Cassia Lignea (unground)	"	360.00
	Nutmegs in the shell	Per Kg.	6.00
	Nutmegs without shell	"	11.00
9(4)	Mace, unground	"	10.00
12	Cumin seed —		
	(a) Zira, Kandhari, Badakhshani and Khanabadi	Per Quintal	1,000.00
	(b) Zira, not otherwise specified including Khar and Kajak	"	500.00
12(2)	Copra or coconut kernel in dried form	"	105.00
13(4)	Gum kordofan and Hashab, all sorts other than ground	"	205.00
	Acacia gums, gum Arabic, gum Senegal and gum African, other than ground, not otherwise specified excluding gum Bhimbri	"	70.00
	Dammer Batu, unrefined	"	60.00
	Gum Benjamin	"	325.00
	SECTION — III		
	Fatty substances, Greases, Oils and Products of their decomposition; Prepared Alimentary Fats; Waxes of Animal or Vegetable origin.		
15(7)	Coconut oil, other than deodorised coconut oil	"	30.00
15(9)	Lubricating grease	Per Kg.	1.55
	Petroleum Jelly, white	"	1.30
	Petroleum Jelly, all other sorts	"	1.10
	N.B. — The tariff values apply to articles packed in containers		
	SECTION — V		
	Mineral Products		
27(3)	Mineral Colza oil	Per Kilolitre at 15°C	580.00
	Transformer oil, including transil and switch oil, other than that assessed to duty under the proviso to Item No. 72(3) of the First Schedule to the Indian Tariff Act, 1934	"	710.00

Item No. in First Schedule to Act under which article is ordinarily chargeable	Name of the article	Unit	Tariff Value (Rs.)
(1)	(2)		(3)
	Liquid Paraffin	Per Kilolitre	1,200.00
27(7)	Furnace oil, naked in bulk	Per Tonne	66.00
	SECTION — VI		
	Chemical and Pharmaceutical products; Colours and Varnishes; Perfumery; Soap; Candles and the like; Glues and Gelatines; Explosives; Fertilisers.		
28	Ammonium carbonate	Per Quintal	102.00
	Ammonium bicarbonate	"	42.75
	Sodium sulphide	"	55.00
	Sodium Hydrosulphite	"	200.00
	N.B. — The tariff values apply to articles packed in containers of not less than 6.36 Kg.		
	Long pepper	"	290.00
	Cubebs	"	245.00
	Unab (Indian jujube or Chinese dates)	"	250.00
	Mulathi (Glyceriza Glabra or Indian Liquorice)	"	100.00
	Zoofa (Mysop)	"	550.00
28(8)	Sodium bicarbonate	"	34.00
	N.B. — The tariff values apply to articles packed in containers of not less than 6.36 Kg.		
	Asafoetida, other than Iranian —		
	(a) Asafoetida (Hing), namely, Khéwal, Charaghar, Chakkan, Nai Zamin, Choras, Hing Ghalbin, Hadda and Zulfikar in all packings	Per Quintal	1,950.00
28(8)	(b) Asafoetida (H'ng) Pir Naksir and Saibandi	"	1,100.00
	(c) Asafoetida (H'ng), not otherwise specified including Kabli Hing	Per Kg.	900.00
28(29)	Acetic acid	"	1.25
	Borax excluding anhydrous borax commonly known as borax glass powder	Per Quintal	56.00

Subsidiary Companies in India

ACCORDING TO the information received from the Registrars of companies there were 828 subsidiary companies in India with a paid-up capital of Rs. 218 crores as on 31st March, 1963 (vide table below):

	No. of subsidiary companies	Paid-up Capital (Rs. crores)	Paid-up Capital held by holding companies (Rs. crores)
Indian subsidiaries (Subsidiaries of companies in India)			
I. Public subsidiaries of Public Companies	393	61	42
II. Public subsidiaries of private companies	74	16	9
Total number of public subsidiaries	467	77	51
III. Private subsidiaries of private companies	141	11	9
	608	88	
Foreign subsidiaries (subsidiaries of companies incorporated outside India)	220	130	97
TOTAL	828	218	157

Since the provisions of Section 43A of the Companies Act, 1956 as introduced by the Companies (Amendment) Act, 1960 came into force with effect from the 28th March, 1961 all private subsidiaries of public companies have become public

companies and, therefore, at present there are no private subsidiaries of public companies registered in India.

The 608 Indian subsidiaries were held by 392 companies. The paid-up capital of these holding companies was Rs. 395 crores, out of which 241 companies with a paid-up capital of Rs. 351 crores were public companies while the remaining 151 companies with a paid-up capital of Rs. 44 crores were private companies. The 220 foreign subsidiaries were held by 194 foreign companies. The paid-up capital of the subsidiary companies, viz., Rs. 218 crores forms about 15.6 per cent of the paid-up capital of companies registered in India as on 31st March, 1963, excluding Government companies. Thus the companies belonging to the holding subsidiary companies complex registered in India came to 1220. Table I (p. 766) shows the statewide distribution of subsidiary companies registered and at work in India (Public and Private) and their holding companies (Indian) with their paid-up capital as on 31st March, 1963 excluding Government Companies.

Management Pattern

Out of the 828 subsidiaries, 111 companies with a total paid-up capital of Rs. 27 crores, including 10 foreign companies with a paid-up capital of Rs. 5 crores, were managed by managing agents/secretaries and treasurers. Out of these 111 managed companies, 56 companies with a paid-up capital of Rs. 13 crores, including 3 foreign companies with a paid-up capital of Rs. 4 crores, were managed by their holding companies. In 23 subsidiaries with a paid-up capital of Rs. 7 crores, the holding companies and the subsidiary companies were managed by the same managing agent. The remaining 32 subsidiary companies with a paid-up capital of Rs. 7 crores were managed by other managing agents, including 7 foreign subsidiaries with a paid-up capital of Rs. 82 lakhs. The remaining 717 subsidiary companies had other forms of management. Management pattern of subsidiary companies is summarised in the Table II (p. 766).

It is noticed that many foreign controlled managing

agency houses have a number of subsidiaries/sub-subsidiaries including some managed by them. These are Andrew Yule & Co. Ltd., Bird & Co. Pvt. Ltd., Macneill Barry Ltd., Shaw Wallace & Co. Ltd., Jardine Henderson & Co. Ltd., Gillanders Arbuthnot & Co. Ltd., Binny & Co. (Madras) Ltd., Balmer Lawrie & Co. Ltd., Turner Morrison & Co. Ltd. Among the Indian companies some prominent holding companies are Kesar Corporation Private Ltd. (Kilachand Devchand Group), Amalgamations Private Ltd., (Simpson group), Christian Mica Industries Ltd. (Ramkumar Agarwalla group), Rallis India Ltd., Mafatlal Gagalbhai & Sons Private Ltd., Larson & Toubro Ltd., Scindia Steam Navigation Co. Ltd., Mahindra & Mahindra Ltd., British India Corporation Ltd. etc.

Foreign Subsidiaries

There was 220 foreign subsidiaries with a total paid-up capital of Rs. 130 crores. There were also 54 Indian subsidiaries with a paid-up capital of Rs. 11 crores whose holding companies were subsidiaries of foreign companies i.e. sub-subsidiaries of foreign companies. The total paid-up capital of foreign controlled companies was Rs. 141 crores, i.e. about 10 per cent of the paid-up capital of companies registered in India as on 31st March, 1963 excluding Government companies. This will indicate to some extent of the quantum of foreign investments in India. Country-wise distribution of foreign holding companies having subsidiaries registered and at work in India as on 31st March, 1963 is shown in Table III.

TABLE III.
COUNTRY-WISE DISTRIBUTION OF FOREIGN COMPANIES HOLDING SUBSIDIARY COMPANIES AT WORK IN INDIA
(As on 31st March, 1963)

Country of origin	Holding Companies		Subsidiary Companies	
	No.	Amount held in subsidiary companies	No.	Paid-up Capital
U.K.	136	6728.8	156	8771.4
U.S.A.	28	1539.9	29	1981.6
Switzerland	10	306.7	11	354.6
Sewden	7	450.4	10	775.8
West Germany	4	40.8	4	79.0
Canada	1	286.6	2	495.3
Bahawa Island	1	59.2	1	71.9
Denmark	1	50.0	1	50.0
Holland	1	120.0	1	220.0
Hungary	1	0.02	1	0.03
Italy	1	0.9	1	1.0
Japan	1	79.8	1	80.0
Panama	1	65.0	1	65.0
South Rhodesia	1	6.3	1	16.0
TOTAL	194	9734.2	220	12961.9

Many well-known foreign companies which have world wide operations such as ICI, Dunlop Rubber, Metal Box, Unilever, Reckitt Coleman, Associated Electrical Industries, English Electric, Courtaulds from UK, Caltex, Esso Standard, Union Carbide, Firestone Rubber, Good Year, Ingersoll-Rand Sperry Rand from USA, Bayer and Hoechst from West Germany, Aluminium Ltd. from Canada, Philips from Holland, Sandvikens from Sweden, Ciba & Roche and Sandoz from Switzerland, operate in India through their Indian subsidiaries.

Some managing agency companies are subsidiaries of foreign companies e.g. Macneill & Barry Ltd., Gillanders Arbuthnot & Co. Ltd., Parry & Co. Ltd., Aspinwall & Co. Ltd. and its sister-concern, Aspinwall & Co. (Travancore) Ltd., W.A. Beardsell & Co. Pvt. Ltd., Bombay Co. Pvt. Ltd. One bank, Allahabad Bank Ltd., is a foreign subsidiary of the Chartered Bank, UK.

The UK, USA, Switzerland and Sweden had 156, 29, 11, 10 subsidiary companies in India with paid-up capitals of Rs. 88 crores, 20 crores, 4 crores and 8 crores respectively. The remaining 14 foreign subsidiaries were from 10 countries.

Indian companies had 37 subsidiaries in foreign countries, 18 in United Kingdom with a paid-up capital of £1.07 million, 19 in Pakistan with a paid-up capital of Rs. 24 lakhs, 5 in Ceylon with a paid-up capital of Rs. 70 lakhs, 2 in Switzerland and one each in USA, Indonesia and Malaysia. This will indicate to some extent the overseas investments of Indian companies. Among the prominent business houses which have got overseas subsidiaries are Duncan Brothers, Gillanders Arbuthnot, Octavius Steel, Jardine Henderson, Shah Wallace, Turner Morrison, Tata, Birla and Mafatlal. Shaw Wallace and Co. Ltd. has considerable interest in Ceylon through their five subsidiaries.

First Things First

IT IS somewhat difficult these days for the ministers to forget, whenever and wherever they stand up to address a gathering, the current inflationary spiral which is causing great hardship to the people. Last week both the Prime Minister and the Finance Minister made public speeches on widely different topics, but the central thread in both was the rising cost of living. Addressing the Commissioners of Income-tax at Bangalore, Mr. T. T. Krishnamachari dwelt on this subject also when he said that the cost of living had gone up progressively since 1956, owing mainly to the circulation of unaccounted money which provided funds to the commodity trade. The Prime Minister, Mr. Lal Bahadur, in a broadcast to the nation on the eve of the National Solidarity Day, made a direct reference to the shortages of food and the consequent rise in prices. His stress was, however, on increasing efforts for raising the production of food in the country; he listed a number of measures which needed to be taken in order to make the country self-sufficient in food.

In any discussion of the current price situation, it is necessary to put first things first. If food production in the country had taken the course indicated in the third five-year Plan, the current inflationary spiral would not have raised its head and the secondary and tertiary factors now being cited would not have been dangled before the public. In the creation of the present price situation, unaccounted money is not the main contributory factor. The primary cause, without doubt, is the shortfall in food production and in this respect the Prime Minister's broadcast breathed realism. Nearly half of his speech was rightly devoted to the ways and means of increasing food output in the country. The farmer, he said, had been assured of remunerative prices for his produce. The officers had been asked to assist the farmer in providing seeds, manures, water etc. at the right time. The Prime Minister also drew attention to the problem of water - logging and of adequate attention to irrigation. All this is relevant and central to the problem of increasing food production and restraining prices. To blame unaccounted money in the economic system to be the chief source of the present inflationary spiral is to provide an extremely distorted and imperfect picture of the situation.

It may be recalled that in June this year, when the realization had dawned upon the Government that price situation was slipping out of control, it was the Minister of Finance who had volunteered to curtail expenditure at the Centre up to Rs. 70 crores because he believed at that time that it was the excessive expenditure of the Union Government which had continuously pushed up prices. The State Governments had also been urged to reduce their expenditure. In the present-day discussions of the price problem and especially in the Finance Minister's speech at Bangalore there has been no mention of this reduction in Central and State expenditure. In fact it is not known if the promised cut in expenditure will come about at all because there has been an unexpected buoyancy in revenue, especially at the Centre.

The man-in-the-street is rightly bewildered not knowing precisely what were the factors which were shrinking the purchasing power of his purse. While it is conceded that a multiplicity of factors have operated in order to bring about the present situation, it is up to the ministers to focus the attention of the public on factors which have greater rele-

ance to the present situation and an adequate attention o which will help in solving the price tangle. In this regard the Prime Minister's broadcast to the nation on October 19 as also his broadcast on the eve of his departure for the Cairo Conference score over the Finance Minister's analysis at Bangalore wherein the latter described unaccounted money as the main cause for the present rise in prices.

The Prime Minister has given the right lead in stressing the fact that increase in food production is the prime necessity of the day and that agriculture will be accorded the highest priority in the next five-year Plan. Let us hope that the Finance Minister, while discussing the problem of prices at the next public meeting, will not forget this basic fact. Again, we hope that he will inform the public about his promise to cut down the Union Government expenditure which was also, according to his own analysis, a potent cause for pushing up prices. It is not our thesis that unaccounted money has had no effect on prices. We only contend that in the list of the relevant causes for the current price inflation, it enjoys a place of lesser importance. We wish the Finance Minister all success in tracking down unaccounted money wherever it exists, but let it not divert the attention of the people from

the main factor which has caused the present havoc in prices, namely, the shortfall in food production. Till we succeed in raising the level of food output on to the desired level, we have no option but to continue to import foodgrains; the Prime Minister has assured the public that the Government would do its best to supply to the people foodgrains at reasonable prices.

From a very intelligent analysis of the price and the food situation, the Prime Minister has, however, drawn the unfortunate conclusion that it is the dealers who are not co-operating with the Government in keeping the price situation under control. He has described the present system of distribution as defective requiring some drastic changes, though in the same breath he has agreed that any alternative system would not be hundred per cent satisfactory. Students of economics know that whenever supply fails to keep pace with demand, prices seek a new equilibrium. Any device to meet such a situation, however intelligently contrived, may not stand the pressure of demand; the alternative can be a stop-gap arrangement only. The key lies in increased output alone to which all efforts must be directed. Energy expended on less important factors or contrivances may not yield results commensurate with the effort put in.

Multipliers Will Multiply Difficulties

STATUTORY CONTROLS over the production and prices of dhoties, saris, long cloth and shirting were at long last introduced on October 20. And on the same day bowed out the four-year old Voluntary Price Regulation Scheme, unsung, unwept and unhonoured. As a matter of fact, the industry heaved a deep sigh of relief at the belated exit of his mis-called interim measure. That it should have managed to survive at all, notwithstanding the stout opposition of the entire mill industry all these years is not a little surprising.

After the Voluntary Price Regulation Scheme came to an end, the industry did not certainly bargain for the new statutory controls that have now been imposed. Nor did a large section of public opinion want controls when, admittedly, there were adequate stocks of cotton piecegoods in the country. The opposition of the organised sector of the industry to controls doubtless stems from the fact that over 50 per cent of the available supplies for the internal market comes from the decentralised sector. Regardless of all this and the vast organisation needed to ensure effective enforcement, the Government of India has thought it fit to bring under control about 45 per cent of the output of mill-made cloth, excluding the quantity sold for defence and export purposes.

After seeing the elaborate schedule of realisation multipliers and processing charges and other allowances and the lengthy instructions to the mills and processors

in the matter of stamping of mill prices with effect from the mid-night of October 19, — and these have had to be revised again — one wonders whether the game is at all worth the chase. He would unquestionably be an incurable optimist who could predict that the new control scheme would have smooth sailing, notwithstanding the assurance of whole-hearted co-operation by the industry and the trade, as also the offer of the textile authorities themselves to help any mill or processor which might find it difficult to follow the schedule to comply with the new regulations.

The unexpected change in the first schedule of realisation multipliers (the pink book) by the Government, after all the deliberations with the concerned interests and the obvious approval, of course, of the Government, has baffled the mill industry. The industry must have had a premonition of some last-minute shock when the commencement of the statutory control scheme was suddenly postponed from October 15 to October 20. The mills had already begun betimes to prepare themselves for the new scheme and were actually on the point of stamping the new prices on the controlled varieties of cloth. But like a bolt from the blue came the Government decision drastically revising the schedule of multipliers which had to be printed all over again. Evidently, the authorities were influenced by the interested propaganda in a section of the press

which created the impression that the new prices offered to the mills were over-generous and that there would be no reduction whatsoever in cloth prices.

Apart from the fact that this hurried action on the part of the Government smacks of playing to the gallery, the new schedule is likely to produce certain unforeseen results which neither the Government nor the industry will probably relish. Informed mill circles are of the considered view that big changes have been made in the final schedule which will defeat the very purpose of the proposed controls. As a result of the changes, they say, the prices of grey cloth in the category of higher medium, fine, and superfine varieties, will go down by four to five per cent, compared with those indicated in the first schedule. Bleached cloth and dyed cloth in the same categories will also suffer a reduction of 6 to 8 per cent and 8 to 10 per cent, respectively, according to them. In short, while the new schedules have left practically untouched the multipliers for coarse and lower medium cloth, they have had the effect of bringing down the prices in respect of a majority of varieties to levels much lower than even those fixed under the voluntary price control scheme. The worst affected undoubtedly are the varie-

ties the prices of which have been almost static for the last five to ten years at uneconomically low levels. The irony of it is that the producers of these varieties had been assured by the Government a rise in prices of at least 10 per cent. Instead of getting an increase, they have now been let down most unceremoniously.

Besides the reduction in the multipliers there have also been restrictions on combing allowance for Indian cotton which, to say the least, is most regrettable. For the immediate effect of these restrictions will be to discourage the industry's attempts to upgrade Indian cotton which, in turn, will bring about a deterioration in quality. Quality also will suffer as a result of the sharp cut in processing charges.

On a careful appraisal of all the relevant factors, it would seem that this last-minute reduction in the multipliers was not at all warranted. The resulting apparent gain to the consumer, it is feared, would be more than wiped out by the apprehended fall in production, thanks to the unattractive levels of the multipliers and, what is worse, by the psychological demoralisation born of the avoidable new fear of shortage of quality goods.

Highlights of the Week

EXCITEMENT ALL-ROUND

LAST WEEK was full of excitement and expectation due to some sweeping changes in the international political scene. China exploded an atom bomb and thus joined the ranks of the nuclear powers of the world. Mr. Khrushchev resigned from the offices of the head of the Soviet Government and the Communist party for reasons of health, according to an official communique from Moscow. In the United Kingdom, Labour recorded a victory over the Tories by a narrow margin. The political pundits had a free play of their skills in an effort to interpret these events for the bewildered newspaper reader.

Close on the heels of Mr. Lal Bahadur's demand at the non-aligned Cairo Conference of sending a delegation to Peking for dissuading China from exploding an atomic device, came the news on October 16 that China has become the fifth nuclear power of the world by conducting its first nuclear test somewhere in western China. The Prime Minister, Mr. Lal Bahadur, described the explosion of the bomb by the Chinese as "a menace to mankind and danger to the maintenance of peace". A pertinent question which is being freely discussed in New Delhi at the moment is if India will be forced to change its declared policy of not joining the nuclear armament race. It had been stated categorically by the Prime Minister at the Cairo Conference that India has in its possession the technical knowledge and skill to manufacture the atomic bomb within twelve to eighteen months but its policy was directed to peaceful use of the atom and that India would never take part in this mad race for acquiring nuclear armaments. This approach was justified so long as China had not joined the nuclear club. In view of the treacherous policy pursued by China in the past, it would be living in a fool's paradise to put faith in the Chinese Government's statement that "China will never at any time and under any circumstances be the first to use nuclear weapons".

A statement of much greater importance has been made by President Johnson regarding the implications of the Chinese detonation of the atomic bomb; he has assured all nations that the USA would come to the succour of the non-socialist countries if any nuclear threat emerged from China. He has also stated that the Chinese entry into the nuclear club should not be over-estimated as there is a long time lag between the first explosion and the acquisition of a stock-pile of atomic weapons.

It is patent that within the Congress Party the pressure will grow to shed the pious cloak for not manufacturing nuclear armaments because this will expose the country to atomic invasion from the North. India cannot afford a repetition of the humiliation of 1962 and has no option but to take to this disastrous course which, without doubt, will cut into the funds earmarked for economic development. The expenditure on defence has already produced a certain disequilibrium in the economy and any attempt to enter this highly expensive adventure will without doubt demand of the people much larger sacrifices — sacrifices which they have not made for the last two decades. The pros and cons of this question will need to be debated at various levels before a final decision to plunge the country into this hazardous adventure is taken.

Exit Khrushchev: Enter Kosygin

The announcement of Mr. Khrushchev's resignation from both the party and the Government came as a big surprise, though it was known that pressure against Mr. Khrushchev was building up within the party since the ideological dispute between the USSR and China had split many of the Communist

parties in the non-socialist countries with the result that the Communist Party of the USSR seemed to be losing some valuable support. China, in particular, had made Mr. Khrushchev its target implying that there could be no rapprochement between the two countries so long as Mr. Khrushchev remained at the head of both the Government and the Party in the USSR. His exit has been taken as a signal for bringing the two countries together and closing the ranks of the communist parties all over the world. This will naturally require some change in the USSR foreign policy, though the USSR diplomats have hastened to clarify that the foreign policy of their country would remain unchanged. The Charge d' Affaires of the USSR Embassy in New Delhi is reported to have informed the Prime Minister, Mr. Lal Bahadur, that the change in leadership in the USSR would not result in any shift in policy towards India. In Moscow also India's Charge d'Affaires was summoned to the Ministry of Foreign Affairs and was told almost the same thing.

Mr. Khrushchev has not left the Russian political scene alone; six of his senior colleagues have followed him. Particular mention needs to be made of the editors of "Pravda" and "Izvestia" along with the other trusted men of Mr. Khrushchev. The Chairman of the State Radio and Television Committee has also been ousted. Political commentators all over the world are agreed that Mr. Khrushchev lost a crucial battle and, hence, his dismissal would be followed by a change in policy, however slow the process may be. An inkling of this trend was provided by an editorial in the Soviet Communist Party newspaper "Pravda" which accused Mr. Khrushchev of "hare-brained scheming, immature conclusions etc."; may be, within a few days some more abuses will be hurled at. Already, amongst the ten top leaders of the USSR, the picture of the ousted leader is conspicuous by its absence. The future course of foreign policy of the USSR has become an amusing guess-work.

PRECARIOUS PERCH

THE LABOUR PARTY in Britain is back in the saddle after 13 years with a slender majority of only four in the 630-member House. The majority is fewer by three than the Attlee Government — which was toppled after a year's rule — had in 1951. It, therefore, does not sound uncharitable or unreasonable when people like Mr. George Woodcock, General Secretary of Britain's Trade Union Congress, predict another General Election in less than a year. Apprehensions of the Labour Government being voted out of office become more apparent when one takes into consideration the lack of governmental experience of the ruling party and the large number of ticklish issues that it will have to face. But the dynamic personality of Mr. Harold Wilson, under whose leadership the Labour Party has attained victory, has blunted the edge of such a fear to a certain extent. Another redeeming feature is the offer of broad support to the ruling party by the Liberal Party which has a strength of 9 in the House. Mr. Wilson surely will buy time — as did the Conservatives by postponing the General Election in order to make people forget the Profumo Affair — to enable his Government to carve out for itself an image in the public mind of courage, toughness and fresh ideas by taking new initiative in foreign, defence and economic policies.

If the election manifestos of the two parties and the pronouncements made during the election campaign by their leaders are any guide, it was less of an ideological battle. While the Labour Party's slogan was 'modernization and technological advance', the theme of the Conservatives was

Industrial Development Under Contract Labour System

Dr. A. TEMESVARY

IN SOME industrially advanced European countries a contract labour system functioned after World War II, whereby foreign entrepreneurs supplied home manufacturers with free imported raw materials, in return for which they received a certain allocation of the total output for sale in other countries.

The above arrangements resulted from increase in prices without the corresponding increase in money wages, i.e. reduction of labour costs in terms of goods which were sold on the free home market. Thus, those able to obtain imports for the free home market could supply export markets with cheap labour. Out of the cheapening of labour costs arose the high profits which the home manufacturer and foreign entrepreneur shared.

Considering reserve man-power in developing countries, one might ask why this could not be turned to the benefit of mankind similar to the way labour was utilized in Europe after World War II under a contract labour system.

True, on the whole, developing countries lack some of the factors required by secondary industries, such as local primary production, convenient supply of foreign markets, as well as skilled labour and organizing skill employed in manufacturing and distribution. And no doubt a good proportion of secondary industries cannot develop in countries which yet are unable to offer these factors at competitive level.

Still, one can assume that some secondary industries would develop where unskilled labour is cheapest even in countries which are in short supply of all other factors generally required for secondary production.

Exchange Rates

Acceptance of the idea that certain secondary industries can develop anywhere where unskilled labour is plentiful, raises the question how cheap unskilled labour works out in terms of hard currency, in countries with reserve man-power. In expressing costs of labour in terms of hard currency one of the main determining factors is exchange rates, which, as a rule, overvalue the currency of developing countries.

By overvaluing their currencies under foreign exchange, countries can promote the development of home industries which supply the home market. Overvaluation, by cheapening of imported raw materials and imported semi-processed goods, furthers the development of local industries by increasing return on capital investment. Thus part of profit does not arise from the value added to products by employing the country's labour force under the terms of the international division of labour, but simply out of conditions artificially created by trade restrictions between countries.

Whatever way developing countries utilize foreign investments, foreign investors are not expected to further the development of industries in these countries, unless the return on capital they can anticipate is higher than it is in hard currency countries. The return on capital investment a country pays foreign entrepreneurs should, however, not be more than some of the value added to the products by employing the country's labour force under the terms of international division of labour.

Any profit that does not arise out of the value added to products by employing the country's labour force under the

terms of the international division of labour, reduces the gain the country can expect from employing its labour force on manufacture. So, when it comes to seeking foreign capital for artificially favoured industries, such as all industries developed to supply the home market, in countries whose currencies are overvalued under foreign exchange, it is important that with the return the country provides in hard currency there is a corresponding increase in the value of products through manufacture.

In contrast to the way overvaluation of currencies under foreign exchange can help to develop secondary industries, countries with reserve man-power would have to create improved conditions under which some of the country's secondary products can sell for hard currency, if they wish to obtain foreign capital under contract labour arrangements.

Highly Competitive Field

To sell secondary products for hard currency, developing countries have to participate in a highly competitive field, in which more advanced countries have many potential advantages.

Short of using foreign capital for primary production, whatever way some countries would try to achieve improved sales for hard currency, whether through wholesale devaluation, or by subsidizing export industries, or otherwise, it would mean reducing the country's return for the man-power employed.

Without wholesale devaluation, which could hinder the development of industries supplying the home market, improved export sales for hard currency might be achieved most simply possibly by offering cheap labour for hard currency, to any investor who would not draw on the country's foreign currency reserves, but would earn all his requirements in raw material imports and capital return through supply of export markets.

It should go without saying that once foreign investors paid for the use of labour in hard currency the amount determined by the government of the country, it would then be up to that government to see that those employed under contract labour arrangements receive wages corresponding to award rates of the country, even if under the terms of foreign exchange the money paid for the use of labour by foreign entrepreneurs called for a subsidy to balance the effects of overvaluation of the country's currency.

Such arrangements would best not apply to any industry that draws on the country's hard currency reserves, for capital repayment and for raw material imports, even if these industries supply export markets, as profit arising from exports to any country whose currency is overvalued under foreign exchange is determined by similar factors as those stated in connection with home market supply.

Countries are able to develop for the supply of the home market many types of secondary industries only through employing certain import restrictions on manufactured goods, while supplying home manufacturers with cheap imported raw materials and semi-processed goods through overvaluation of their currencies under foreign exchange. This way, however, as has been stated already, the return on capital investment arises not entirely from the value added to products by employing the country's labour force under the terms of inter-

'modernization of Britain'. Except for the two major blemishes — the Suez debacle, and the Profumo Affair — the Conservatives had, during their 13-year rule, given the country prosperity and economic stability. Although Britain's 2.5 per cent annual rate of growth is relatively slow, the country is in a phase of affluence. What has, therefore, contributed to the Labour's ascendancy to power is perhaps the people's desire for a change. But a major factor that might be said to be responsible for this is the Kennedy-like personality of Mr. Wilson, as against the unassuming and melancholy face of Sir Alec Douglas-Home. Moreover, the Labour Party, which was a shambles after the exit of Earl Attlee, after having been provided a strong foundation by the late Mr. Hugh Gaitskill, has now become more broad-based under the present leadership. It would not have been surprising, therefore, if Labour had won by a comfortable majority, which according to Britain's Gallup Poll was 13 per cent at one time. Among the factors that are believed to have contributed in the contraction of the majority are, firstly, the prolonged postponement of the General Election, secondly, the people's affluence, and thirdly, Conservative exploitation of the immigration issue.

Labour is now off to a start and the first problem it has to face is the adverse balance of payments which will be about £25 million by the end of the current year. Mr. Wilson has decided to correct the imbalance through a phased programme of borrowings from the IMF, export incentives and import deterrents, and a possible increase in the bank rate. He may go slow with re-nationalization of steel, since Liberal support will not be forthcoming. He is likely also to postpone State takeover of urban land for housing development — a strong plank of the Labour election campaign —, but a curb on rents and housing prices might very soon be clamped. With regard to the foreign policy of the Labour Government, Mr. Wilson stands unequivocally for disarmament. He is in favour of abandoning Britain's independent nuclear deterrent, but this will have to be looked from the changed perspective of Mr. Khrushchev's exit and China emerging as a nuclear power.

In Labour, India has a staunch friend of India. Apart from the fact that it was the Attlee Government which was responsible for securing independence for India, this country has always received moral support from the Labour leaders of Britain. Mr. Wilson, in particular, was the first to propose a lend-lease arrangement for India at the time of the Chinese aggression, and more recently it was because of his efforts that the Conservative Government finalised the loan agreement for the construction of frigates for the Indian Navy at Bombay's Mazgaon Dock. There is every reason to hope, therefore, that during Mr. Wilson's premiership Indo-British relations will be strengthened further.

PROTECTION FOR W. GERMAN INVESTOR

THE PROTRACTED negotiations between India and the Federal Republic of Germany on affording protection to West German capital investments in India have at long last been fruitful. An agreement was signed in Bonn last week providing for fair compensation for West Government investments in India in case of nationalisation and adequate facilities for remittance of profits, dividends and capital in the case of liquidation and expropriation. The agreement came into force with effect from October 15, 1964.

The Indo-West German pact broadly follows the same pattern as the investment guarantee agreement concluded between the Government of India and the US Administration some time ago. The Federal Government which had earlier insisted that this agreement should cover all West German capital investments in India, irrespective of whether such investments were guaranteed by the German Credit Guarantee

Institution or not, has accepted the Government of India's view that protection under the agreement should be provided only to investments which are guaranteed by the Federal Government. The Federal Government, it may be mentioned, has recently introduced a scheme under which a West German investor can take out guarantees from his Government, on payment of a prescribed fee, covering (i) any risk of convertibility for remittance of his profits and repatriation of his capital, and (ii) payment of adequate compensation in case his investments are nationalised.

Under the agreement signed last week, it has been laid down that in the case of any investment so guaranteed by the Federal Republic of Germany, the Government of India will recognise the Federal Government as holding the rights and title of the West German investor. A detailed procedure has been prescribed for resolving any disputes that may arise in respect of quantum and mode of compensation. Attempts will be made first to settle such disputes by the two Governments in consultation with each other. If, however, these consultations do not result in an understanding, the question will be referred to an Arbitration Committee consisting of one nominee each of the two Governments and a third member to be chosen by the two together. Reference can also be made to this Arbitration Committee in case the Government of India refuses to transfer the West German capital on the score of balance of payments difficulty.

The agreement should give further fillip to West German investments in India.

Eastern Economist 20 Years Ago

OCTOBER 13, 1944

An interesting question arises whether the centralized distribution of food grains, which has come in the wake of the procurement and rationing activities of the Provincial Governments, has so worked as to increase the cultivator's share of the consumer's price, and if so whether the system has any lessons of permanent value for the post-war re-organisation of agricultural marketing. Taking the case of rice produced in Tanjore and sold at Coimbatore, which is about 180 miles from Tanjore, we find that the price paid to cultivator at village for 1.5 maunds of paddy (required to produce one maund of rice) is Rs. 7-1-8, whereas one maund of rice is retailed at destination at Rs. 9-13-8. In other words, the cultivator gets annas 11½ in the rupee or about 72 per cent of the price paid by the consumer. In another case, to wit, of Bezwada rice sold at Calicut, the retail price of one maund of rice at Calicut is Rs. 9-7-10, whereas the cultivator near Bezwada gets Rs. 6-14-1. Here, the cultivator's share is a little higher, about annas 0-11-7 in the rupee or 72.4 per cent. If these cases, which are typical enough, may be taken as a reliable general guide, it will not be incorrect to conclude that marketing costs have gone down under Government control, as before the war it was estimated that the producer got, on average, only about eight and a quarter annas for every rupee paid by the consumer. It may be that part of the economies is due to the avoidance of unnecessary transport, but this is negligible as, even in normal times, food grains were not transported over long distances, were generally consumed within the producing or adjacent areas and only rarely crossed provincial boundaries.

"Our Typewriters get their superior finish here"

"This is the HUMP BACK OVEN. Spray-painted parts are uniformly radiation-heated at controlled temperatures—moving along in a continuous flow. This revolutionary baking process gives Remington Typewriters their superior finish, which won't crack, peel, corrode, stain or catch dust."

The Hump Back Oven and Keshab Chandra Bose who works on it, are just one team of the multitude of men and machines at the Remington Rand typewriter plant. They are all engaged in a constant endeavour to improve the quality of each tool, die and part that goes into the making of your Remington typewriter.

national division of labour, which would be the only true indication of economic feasibility of any industry, in any particular country.

In contrast to secondary industries which supply the home market of countries whose currencies are overvalued under foreign exchange, under contract labour arrangements only industries could develop in those countries the economic feasibility of which rests on international division of labour.

Thus, by developing secondary industries under contract labour arrangements, on the whole higher value would be added to the manufacture of goods by employing the country's labour force, than with manufacture for home consumption. From this additional gain both the country and foreign investors might be able to benefit yet without increasing the country's indebtedness to capital-lending nations and because of imports of raw materials and semi-processed goods, as under most other arrangements.

Difficulties Involved

Some might question the wisdom to manufacture in countries without long-established industrial traditions, secondary products for sale for hard currency. It can, however, be argued that, as the difficulties involved in selling manufactured goods to hard currency countries result mainly from low prices there, this in turn assures countries trading for hard currency of proportionately cheap imports.

Industrial production under contract labour arrangements in European countries, after World War II, due to cheapening of labour, was very small in comparison to present industrial production of those countries, with still smaller rise in the national income. Nevertheless, the employment of man-power as contract labour provided imports which were vital for those countries at that time, and helped in re-establishing pre-war industrial production.

Thus, it is difficult to see why any objection should be raised by countries with ample reserve man-power against the use of contract labour arrangements, however small initial rise in their national income this might promise. And should conditions be established under which such arrangements could possibly exist, there is little doubt that whatever difficulties foreign investors might have to face to develop new industries and new export markets, some will seek to explore the opportunities that cheap labour is offering.

In short, assuming that countries with ample reserve man-power would develop secondary industries, with foreign capital, under contract labour arrangements, this should offer those countries the following special benefits:

1. Increased exports, without wholesale devaluation.
2. Use of raw material imports with increased secondary production, without adverse effect on the country's foreign trade balance.
3. Use of foreign capital, without corresponding increase in the country's financial obligations to capital lending nations.
4. More value added to secondary products by employing the country's labour force under the terms of the international division of labour.

To foreign investors, contract labour arrangements and corresponding rise in industrial production, could mean better return on capital investment, with the opening of new markets for their products, possibly under more rapidly improving political climate in developing countries.

WINDOW ON THE WORLD

Is "Stop - Go" Policy Obsolete ?

PAUL EINZIG

CRITICISM OF "stop-go" — the monetary policy under which pressure on sterling was sought to be checked from time to time by means of devices which halted and even reversed economic expansion — figured prominently during the electioneering campaign in Britain in October. The Government was taken severely to task for the periodically recurrent setbacks resulting from the application of that policy. And the Labour Party promised — though not very clearly — to discard it in the interest of progress. It did not occur to those responsible for running the Conservative campaign that the "stop-go" policy had been in full operation under the Labour Government between 1945 and 1951. It is true the "stop" was not applied in the form of high Bank rate and credit squeeze but in the form of cuts in public expenditure and of increases in taxation. The effect on the economy was, however, the same. Few people would prefer the Cripps style of austerity to the Thornycroft style or the Selwyn Lloyd style or austerity.

The fashion of denouncing "stop-go" some time ago was started some years ago by the Plowden Report which objected to the application of that policy in the form in which it had been applied under the Socialist Government — in the form of cuts in public expenditure — on the ground that Government officials in charge of spending feel frustrated whenever they are ordered to alter their plans and cut down expenditure. It did not occur to the Plowden Committee, or to politicians and journalists who enthusiastically welcomed its Report, that continued high expenditure might be too high a price to pay for shielding Government officials from frustration, and that the same result might be attained at considerable less cost if the officials concerned were subjected to appropriate psycho-analytical treatment at the public expense.

U.S. Example

In the meantime the anti - "stop-go" policy has come to be directed primarily against dear money and credit squeeze as a means of checking inflation and correcting the balance of payments. The school of thought opposed to "stop-go" triumphantly points out that the United States has been successful in avoiding it and in maintaining non-stop expansion in spite of the gravity of her balance of payments problem. What people who argue on such lines forget is that 10 years ago the United States was in the happy position of being able to afford to loose some 10 billion dollars of gold and the accumulation of an even larger amount of floating foreign debt. Neither Britain nor any other country is in such a fortunate position. The man of modest means who thinks he can afford to emulate the spending habits of a millionaire is liable to find himself in trouble, and so will Britain or other countries who imagine that they can afford to follow the American example of ignoring the outflow of gold.

For the time being the British alternative to "stop-go" is short-term borrowing abroad. The extent to which that policy can be pursued is not unlimited, however. Its great disadvantages are that it lulls the authorities and public opinion into a false feeling of security, and it provides the utmost temptation for abstaining from dealing with the basic causes of the balance of payments deficit. Since a run on the pound and a drastic reduction in the gold reserve could be avoided during the period preceding the election by means of arrang-

ing credit facilities abroad, trade unions and employers alike felt they could afford to adopt a course which necessarily increases domestic inflation and keeps down British exports.

Were the "stop-go" policy still in full operation trade union leaders might think twice before doubling their wage demands, for they would fear that a Bank rate and a credit squeeze might cause unemployment. Employers would be reluctant to bid against each other recklessly for the scarce manpower, for they would fear that a stepping up of the creeping inflation might lead to deflationary measures forcing them to cut down their output. But since it has become fashionable to regard "stop-go" as obsolete there is nothing to prevent both sides of industry from adopting a course that tends to aggravate inflation and the balance of payments deficit.

Two Alternatives

There can only be two alternatives to "stop-go". The one is non-stop inflationary boom, the other is self-restraint in the form of an incomes policy. Of course the ideal solution would be the adoption of an incomes policy which would enable us to go ahead with expansion uninterrupted. Even though inflation could not be avoided altogether since it is inherent in expansion, it could be kept down to tolerable proportions. But the Socialists, while emphatically rejecting "stop-go", would not dream of accepting incomes policy as its alternative. The chances for the adoption of an incomes policy in Britain are indeed negligible.

That being so, the only alternative to "stop-go" in practice is non-stop inflation. It was "stop-go" that had kept post-war inflation in Britain relatively moderate. Had it not been for its application in 1947, 1949, 1951, 1955-57 and 1961, the cost of living in Britain would have risen several times faster than it actually did. Sterling would have had to be repeatedly devalued in order to enable British industries to compete with foreign rivals.

Even repeated devaluation is no alternative to "stop-go". At the present moment prices in Britain are lower than in most continental countries or in the United States. If in spite of this there is an import surplus of uncomfortable size it is because, owing to the perpetual rise in wages unearned by increasing output, a too high proportion of the output is consumed within the country and there is not enough inducement to press sales overseas. Since there is no reason for expecting the trade unions to moderate their wage demands or for expecting employers to resist them so long as they can sell their goods at home, in the absence of checking the domestic demand by means of "stop-go" it will continue to absorb too much of the output.

Of course if only the British worker made an effort to work harder — his present exertions are probably less than 75 per cent of his pre-War exertions — the need for either "stop-go" or incomes policy would not be nearly so pressing, and excessive inflation could be avoided in spite of non-stop expansion. But to expect the British worker to work harder would be so utterly devoid of any sense of realism that I did not even mention it above as one of the alternatives to "stop-go".

It is a mistake to regard "stop-go" as a relic of the past. We shall learn it sooner or later at our cost that it is as necessary as ever.

Liberal Orientation of Trade Policies

GUY SIMS FITCH

WASHINGTON:

BY THIS time it certainly must be evident that in the field of foreign trade the United States is motivated, and has been for some time, by a clear adherence to liberal and expansionary policies. Yet this fact may be more appreciated at home, where it is more or less taken for granted, than it is abroad. For the benefit of our friends in other lands, then, let us state the case again, and once and for all end any lingering doubts about the matter. Only this week, the Secretary of State, Mr. Dean Rusk appeared before a bunkers' meeting in Washington and emphatically stressed — as he has so often in the past — the liberal orientation of US trade policies. Widening of markets in the United States and elsewhere, he noted, was in the best interests of all nations. But the most persuasive and most effective spokesman for US liberal trade policies probably remains the Head of the National Administration, President Johnson himself. Almost from the moment he succeeded to the Presidency following the assassination of President Kennedy, Mr. Johnson, has taken every opportunity to reaffirm both his nation's and his personal commitment to this position.

A few weeks ago, for instance, in a message to Congress accompanying a generally routine report on the conduct of the US trade agreements programme, he went out of his way to restate his Administration's full support of efforts to further liberalize and expand world trade. "I hope," the President said, "that our friend in other countries will neither underestimate nor undervalue the strength of American support for trade liberalization". He called the Trade Expansion Act of 1962 "one of the greatest monuments to President Kennedy's leadership," and he took note of the US determination to apply the Act's principles in the international arena. It is by authority of this Act that the United States is participating in the latest, and the most ambitious effort ever, to reduce international trade barriers under the General Agreement on Tariffs and Trade (GATT). In the light of this direct and forthright affirmation, it hardly seems possible that anyone, whatever his sentiments may have been, can continue to doubt the sincerity of the US liberal trade position. One can only wonder why there should have been doubts about this in the first place, particularly where President Johnson is concerned. For those who may not be aware of it, his record of sustained support for expanded and liberalized trade goes back many years, and speaks for itself.

Liberal Policies

Let us begin with his distinguished career as a US Senator. In a series of Senate roll calls on trade issues from 1949 on, Mr. Johnson consistently voted in favour of liberal policies embodying a broad delegation of tariff-cutting authority to the President. In 1958, as Democratic Party leader in the Senate, under the Republican Party Administration of President Eisenhower, Mr. Johnson was instrumental in salvaging the Eisenhower Administration's Bill extending the US trade agreements programme, after attempts had been made to trim its duration and authority. As majority leader, he designed the strategy for winning Senate approval of the measure, and personally sponsored an amendment that deleted from the final Act some proposed and objectionable protectionist provisions. The Committee for a National Trade Policy, a large and influential group of American businessmen who strongly support the principles of the Trade Expansion Act, gives Mr. Johnson a perfect mark on trade questions. Words, of course, may be one thing and deeds quite another. But in the case of Mr. Johnson, they are fully compatible. What he says

about trade liberalization matches his performance. It is against this combination of word and deed that one may judge the continuing US effort to co-operate with other nations in fostering a meaningful reduction of trade barriers under GATT, and to get on with the task as expeditiously as possible.

★★

The US Congress has wound up one of its most productive sessions ever — perhaps its most productive. In this last session, its eighty-eighth, the Congress enacted such landmark measures as a far-reaching Civil Rights Bill, a major Tax-Reduction Bill, and an Economic Opportunity Act to help eliminate remaining pockets of poverty in the United States. No major trade measures were approved, but nearly a dozen minor tariff bills were enacted. Nearly all of these provide for duty-free treatment of certain imports, such as manganese ore and soluble coffee. This basically liberal orientation was evident even in the widely publicized case of meat imports. Under Administration prodding, Congress successfully resisted domestic industry pressures and finally adopted a measure that would permit beef and veal quotas, but with an allowance for import expansion and with sufficient Presidential discretion to make it highly unlikely that the controls will be brought into play in the near future, if ever. Admittedly, some important matters were left uncompleted in the rush of business, particularly towards the end of the session.

Alleged Protectionism

Not all the acts of omission were unfavourable. In the final analysis, for instance, the Congress did not approve proposed restrictive import measures in such fields as steel, wool or brooms — measures which the Administration opposed. It is hardly in keeping with this record to say, as some critics apparently would, that the Congress has been insensitive to international requirements or has been drifting towards an alleged protectionism. To the contrary, the Congress has maintained its essentially liberal posture of the past three decades. Capping this basically liberal legislative record is the monumental Trade Expansion Act, which was proposed by President Kennedy and was approved by the eighty-seventh Congress two years ago. This Act delegates to the President new and unprecedented authority to reduce trade barriers, both tariff and non-tariff, in negotiations with other countries.

The problem now is to put the Trade Expansion Act to good use. And the main task in this regard is to get the Kennedy Round of the 62-nation General Agreement on Tariffs and Trade (GATT) going on a constructive basis. The United States has been co-operating whole-heartedly with other countries to that end, and is prepared to table its offers on the appointed date of November 16. It asks only that workable rules for agriculture be agreed to by that date, and that agricultural as well as industrial items be included in the negotiations in accordance with a unanimous GATT ministerial decision made in May, 1963 and reaffirmed in May, 1964.

In the meantime some of the effects of the Trade Expansion Act already are visible in the form of administrative decisions. These decisions confirm the widely-held view that operation of the Act is in good hands, given the firmly liberal trade position of the Johnson Administration, and the President's own consistent record in favour of freer trade. As an example, only 14 escape clause applications from American industry, to modify earlier US tariff concessions, have come up under the stringent provisions of the Act. And all of these have been denied by unanimous vote of the US Tariff Commission.

SPECIALIZED DESIGN, ENGINEERING AND CONSTRUCTION SERVICES — FROM MINE TO FINISHED STEEL

McKee can bring to your project, in a single world-wide organization, all the time- and cost-saving advantages of specialized, up-to-the-minute knowledge and long, practical experience in every branch of iron and steel production from raw materials to finished steel.

A large share of the important advances in mining methods, ore beneficiation, production practices and plant design and construction have originated in the Metals and WKE Divisions of Arthur G. McKee & Company.

Qualified technical experts for your specific project, as well as the diversified services of our entire staff are available to your company to any extent you require. Let us show you how they can produce results for you.

McKEE INTERNATIONAL ENGINEERING AND CONSTRUCTION SERVICES

ARTHUR G. McKEE & COMPANY, 2300 Chester Avenue, Cleveland 1, Ohio. METALS, PETROLEUM & CHEMICAL, WESTERN KNAPP ENGINEERING, and WEMCO DIVISIONS. Offices and Subsidiaries: New York, Chicago, San Francisco, Washington, Union, N.J., Hibbing, Minnesota, Toronto, Mexico City, Sao Paulo, Buenos Aires, Paris, England: Head, Wrightson & Co., Ltd. (British representatives of the Metals Division).

U.K. Election: Voters' No Confidence in Socialists or Tories

JOSSLEYN HENNESSY

LONDON:

MY FIRST feeling at the outcome of the election is dismay: not because Labour has won but because it has won by the slimmest majority in UK history, and this means that Mr Wilson's chances of forcing through the vast changes needed to make the UK a wealthy and (reasonably) powerful country are limited.

That the total votes cast for the Tories has fallen, and that cast for Labour has not risen, suggests that the voters have lost confidence either in the Tories as leaders or in their policies. Unfortunately, in my submission, it seems more likely that they have voted against the men rather than the policies, because on so many issues the differences between the two parties lie in emphasis rather than in content.

In the past, the UK achieved one of the world's highest living standards by manufacturing products for export at competitive prices, by ceasing to manufacture what would be imported more cheaply and switching to new technologies. But the great interwar depression turned our manufacturers into protectionists, and the memory of mass unemployment created thickets of union restrictive practices, intended to spread work among as many workers as possible. We are today one of the world's highest tariff countries. We believe that we enjoy full employment. In fact, we suffer from under-employment. Instead of working intensively for reasonable hours and then enjoying our leisure, we do a longer working week than any European country and take most of our time off in tea breaks and leisurely work on the job. Our shipbuilders, strangled by demarcations, use 50 per cent more labour per ton than the Germans, Japanese, or Swedes. Our nationalised air lines employ twice the workers per passenger mile more than the Americans and others. Our steel works employ between 50 per cent and no less than 100 per cent more. Our nationalised electricity industry used five times more workers to produce a unit than the Americans. We take up to six times longer to build an office block than the Americans, and sale prices per square foot are only slightly lower, although US builders' wages are thrice ours.

Heredity and Custom

Before the Industrial Revolution, mass living standards remained around subsistence level, because the people accepted occupations established by heredity and custom. War, famine, and pestilence kept the population within the capacity of the land and of traditional techniques of production. Among the factors which ended this was a population explosion in the late 18th and early 19th centuries, which burdened the land and traditional techniques with demands beyond their capacity. It became imperative to find new technologies. Adam Smith (1723 - 1790) pointed out that the easiest way to find out what changes were needed for greater efficiency, diversity, and cheapness, was to end monopolies and enforce competition. This inaugurated the change and growth of the Industrial Revolution, which created ever widening opportunities for new jobs at rising wages.

All change is painful, but it is not minimised by prolonging the agony of adaptation. It must be forced through as quickly as possible, accompanied by generous severance pay, retraining schemes, and grants for moving homes, as they do in Sweden. Resistance to change, since the interwar inauguration of protection, has, however, become formidable in the UK. Dr. Beeching's market research on the railways, carried out by independent consultants, disclosed that one half of total route mileage was carrying only 4 per cent of passengers and only 5 per cent of freight ton miles, and that no less than

93 million tons of freight, suitable for rail carriage, was adding to the congestion on precisely the most congested roads. This is a colossal waste in labour and in current expenditure, and ties up vast capital sums, which could be used for innovation that would speed up the national growth rate. The constructive side of Dr. Beeching's proposals has disappeared behind a smoke screen of protest against the closure of lines which the statistics show that the public does not use, and from the railway unions, who fear a loss of members to other industrial unions.

Need for Modernisation

A number of prominent Tories led by Harold Macmillan, Alec Douglas Home, Edward Heath, Reginald Maudling, and others, recognise all this. General de Gaulle was able to defeat Harold Macmillan's courageous effort to co-operate politically with Europe, and to infuse competition in the UK economy, by taking us into the European Economic Community, largely because he was able to point to the shrill critics of the EEC among too many Conservatives and still more among virtually all Socialists. The attempts of Sir Alec, and the others named above, to strengthen the Monopolies and Restrictive Practices Commission and to abolish resale price maintenance encountered similar opposition in both parties and were watered down. It can at least be said in favour of the Tories that a greater number of them than of Socialists favoured these measures of modernisation.

Mr. Wilson made modernisation the main plank of his campaign, but the largest group of his supporters, who provide the bulk of his party funds are the Trade Unions and Labour as a whole is protectionist, insularly inward looking, anti-European, and anti-German, although there are distinguished exceptions, like Roy Jenkins.

Mr. Wilson understands these arguments: he is an economist and not remotely a fool. But, at any rate in public, his pronouncements on modernisation include the re-nationalisation of steel, which all non-party economists dismiss as irrelevant to modernisation, and they include state intervention and direction and coping with the balance of payments by import controls (which means more protection and the building up of higher cost domestic industries to replace lower cost imports). Many Tories believe in all these things.

The Socialists have the strongest emotional resistance to Germany. They are blind to her postwar experience. When Erhard came to power in 1948 the view in the UK, the USA, and in Germany, was that the nation-wide devastation could only be tackled by national planning, that the problems of recovery were so vast that they were far beyond individual enterprise to solve, and that the millions of unemployed and refugees could only be put to work by Keynesian credit creation to establish full employment. If Erhard had acquiesced in this contemporary orthodoxy, an elite of administrators and planners would have organised the German people for recovery and would be in power today. But what Erhard sought was to enlist the energies of the masses to organise themselves for a recovery that would not be imposed from above but would give each participant, first, a sense of purpose and, secondly, of personal achievement.

Mr. Wilson's slim majority renders a second election probable in the new year. I hope that the economic crises, likely to blow up in the interval, will blast both parties out of their obsolete ideologies, and that the electors will enable new thought to be put into practice by giving one of the two parties — I do not care which — a working majority.

Overtaking needs good judgment too

Overtaking is no gamble. It requires concentration and good judgment of speed and distance.

Never overtake till you're SURE. Then do so quickly, and return (don't cut in sharply) to your appropriate lane. If someone is overtaking you, don't accelerate. Do not overtake rashly. Misfortune may overtake you.

Fourth Plan: Emphasis on Agriculture

By Our Special Correspondent

NEW DELHI:

THE UNION Cabinet has decided that the overall outlay of the fourth Plan should be of the order of Rs. 21,500 crores — Rs. 14,500 crores in the public sector and Rs. 7,000 crores in the private sector. The public sector outlay may be stepped up by another Rs. 1,000 crores in the second half of the Plan if the performance of the economy in the first half is encouraging.

This decision of the Union Government will now go before the National Development Council which is meeting on October 27 and 28.

The sector-wise fourth Plan financial allocations approved by the Union Cabinet last week disclose a major shift in emphasis as compared to the second and the third Plans. The relative share of the organised industry, power and transport in the overall public sector outlay has been scaled down to 55 per cent from 61.2 per cent in the third Plan. Compared to the second Plan as actually implemented, this percentage, of course, is higher by 2 points. The allocation for agricultural development has been stepped up. It will form 15.4 per cent of the fourth Plan public sector outlay, as against 13.3 per cent in the third Plan and 12 per cent (actual) in the second. Education and health taken together have also been provided a greater share in the fourth Plan outlay, the increase being from 11 per cent under the second and the third Plan to 16 per cent in the fourth Plan. A marginal increase of 0.3 per cent over the third Plan allocation is also envisaged for the development of small-scale industries. The share of the small-scale industry in the public sector outlay in the fourth Plan will be 2.9 per cent. The public sector outlay will be more or less equally distributed between the Centre and the States. But if the Union Government takes upon itself the responsibility of executing irrigation and power projects, the share of the Centre will go up.

The main guide-line for fixing the fourth Plan outlays for the various sectors of the economy has been the urgency to impart stability to the price-line. It has been decided that no deficit financing whatsoever should be taken resort to during the fourth Plan period.

The Rs. 21,500-crore fourth Plan envisages mobilisation of additional resources to the tune of about Rs. 3,000 crores by way of additional taxation, larger savings from the public sector undertakings and higher proceeds from the existing level of taxation. The foreign assistance required for execut-

(Contd. from P. 788)

shortages of food reported in the press are due to the fact that the consumption standards are pretty high.

Hitch-hikers

An interesting phenomenon which I observed while moving from Brno to Prague by car was that on the roadside a large number of young boys and girls showed up some cards with a red mark. On enquiries it was revealed that the practice of hitch-hiking had been regularised in Czechoslovakia and that each approved hitch-hiker was provided with a card which he or she displayed when requesting for a lift from one place to another. The amazing thing was the patience and fortitude of these youngsters of both the sexes who sometimes had to stand in bitter cold and rain waiting for someone

ing this Plan would be Rs. 2,500 crores. An important aspect of the financing pattern of the Plan will be that this time the States will be asked to share very substantial burden of additional taxation.

Most of the programmes to be included in the additional outlay of Rs. 1,000 crores, if it becomes feasible in the second half of the fourth Plan, will relate to industry, power and transport. The Planning Commission has yet to work out in detail the projects that should be left over to be included in this additional outlay. Even if the additional outlay does not materialise and only Rs. 21,500 crore Plan is implemented, it is hoped it will not create any imbalances in the economy.

In consonance with the great emphasis placed on development of agriculture during the fourth Plan, the Planning Commission is understood to be thinking in terms of having a separate Plan for agricultural development, setting forth two cycles of quick-yielding schemes worked out on the basis of 2½ years in each case.

The fourth Plan outlay figure of Rs. 21,500 crores, it is further learnt, is based on the assumption that defence expenditure would not be very much higher than the present levels.

★ ★

In a study of the transport requirements of the iron and steel belt of East India, the National Council of Applied Economic Research has reiterated the general belief that the fourth Plan traffic requirements of this region call for a radical improvement in the road transport system and large-scale stepping up of operational efficiency of the railways. The sea route and the inland water transport, the study says, provide only a limited scope for movement of coal and other heavy materials. The burden of transportation in the eastern region will, therefore, continue to be squarely on the railways. It can, of course, be lightened to some extent by the development of road transport.

The Council has given a good chit to the railways for their performance during the 12 years from 1950-51 to 1961-62 in view of about 45 per cent increase in wagon and engine usage. But the trends in regard to the average lead of goods traffic, the average speed of goods trains, the average turn-round time of wagons and detention of wagons in marshalling and terminal yards, it says, have been disconcerting.

To meet the growing demands of goods traffic on rail

to give them a lift to the nearest town or village. This seems to be a unique peculiarity of Czechoslovakia alone.

In Prague I had a brief session with our Ambassador who agreed with me that the Indian pavilions in Brno suffered from a number of deficiencies and the primary cause for all of these was that adequate preparations were not made to put up a good show. The goods which arrived at the eleventh hour in a damaged condition could also not be repaired because nobody had the necessary financial means of getting them set right locally. He also agreed that literature distributed was inadequate and it was for New Delhi to take up this question seriously. In any case the responsibility for organizing these fairs now vests in the new Council of Fairs and Exhibitions which has still to get into stride. Heavy duties await the officials of this Council who are mostly new to this business.

pride of place in Indo-Czech co-operation goes to the heavy engineering plant currently being set up at Ranchi. This plant is being provided by Technoexport, the Czechoslovak Foreign Trade Corporation which is responsible for providing complete plants to the importing countries. It will manufacture heavy machine-tools. In Ranchi another foundry forge plant is also being set up for manufacturing metallurgical equipment. The plant will be a versatile one as it will be capable of manufacturing diverse machine tools and will be in a position to adapt its manufacturing programme to a larger extent to the existing demand for a given type of machine tool. Technoexport has also provided two cement plants to this country. It has earned world-wide fame by providing complete plants to the USSR, Brazil, Turkey, Syria, Ceylon, Afghanistan, etc. Czechoslovakia has sufficient capacity to provide cement plants and during my talks with the officers of Technoexport, I learnt that cement plants could be sold to India at competitive rates, though the demand from other countries is currently high. All these facts point to the important part that Czechoslovakia currently plays in trade with India and is also likely to do so in the coming years.

Enhanced Trade

In line with other East European countries, Czechoslovakia has also enhanced its trade with the non-socialist countries. In 1962, 27.5 per cent of its foreign trade was with the non-socialist countries, the corresponding percentages for the German Democratic Republic and Bulgaria being 21.8 and 20.0. In this race for extending trade with the non-socialist countries, Poland is in the lead as 36.6 per cent of its foreign trade in 1962 was with the non-socialist countries. The table below compares the shifts in the trade of Czechoslovakia in 1948, 1953 and 1963. Between 1948 and 1953 there was a marked trend towards the socialist countries when the percentage of its trade with socialist countries rose from 39.6 to 78.5. Since then, there has been a gradual increase of its trade with the economically developing countries of Asia, Africa and also

TERRITORIAL STRUCTURE OF CZECHOSLOVAK FOREIGN TRADE TURNOVER

(In per cent)

Groups of countries	1948	1953	1963
Total	100	100	100
Socialist countries	39.6	78.5	74.6
Other countries	60.4	21.5	25.4
of which:			
Advanced non-socialist countries	45.7	14.9	16.2
of which:			
European countries	38.9	13.6	14.3
Economically developing countries	14.7	6.6	9.2
of which:			
Asiatic countries	7.5	3.3	4.7
African countries	3.4	1.8	3.1
American countries	3.8	1.5	1.4

with the advanced non-socialist countries. Whereas in 1953, 78.5 per cent of Czechoslovak trade was with the socialist countries, it fell to 74.6 per cent in 1963. The chief beneficiaries were the advanced non-socialist countries whose percentage rose from 14.9 in 1953 to 16.2 in 1963. The Asian countries increased their share from 3.3 to 4.7 per cent of the total.

Czechoslovakia is the one East European country which has extended welcome to the tourists by positive measures.

It has not only liberalized the granting of the visas, but has also made a liberal concession in the exchange rate. On a particular day if a tourist presents at the bank foreign currency for conversion into Czech crowns, he will get four times the normal rate for currency exchanged beyond the minimum daily allowance of 29 shillings. It means that whereas the first 29 shillings on any day will be converted at the rate of 20 crowns for a pound, any sum over and above that level will fetch local currency at the rate of one pound equivalent to 80 crowns. Through the Tuzex vouchers the tourists are known to have gained even 100 crowns to the pound. Tuzex — the foreign trade corporation for retail sale of goods — runs shops where imported goods are sold against foreign exchange. The foreign currency is converted into Tuzex vouchers for which the local rate is 5 crowns to the Tuzex while about 20 Tuzex are given for a pound. All this points to the fact that Czechoslovakia has opened its gates to the tourists and is willing to entertain them at one-fifth the normal cost.

Czechoslovakia is one of those countries in Europe which was damaged the least during the war and it has, therefore, preserved its charm. Prague, the capital of Czechoslovakia, had very little damage done to it and there were hardly one or two buildings which were destroyed; they have now been rebuilt.

Czechoslovakia is well-known not only for its heavy machinery, but also for its glasswork. The glass-makers of Czechoslovakia have proved their ability so as to retain an outstanding position in the international market not only in the decorative and table glass, but also in the field of technical and laboratory glass. Simax and Sial Glass which are used in the manufacture of complicated laboratory apparatus for various industrial branches are manufactured on a large scale. Special mention needs to be made of Anumbra Petri dishes which are distinguished for their perfectly even bottoms and the quality that they cast no shadow. These dishes are used in bacteriological research. Because these dishes are not affected by corrosion at all, they have captured a world wide market. Similar is the case with other glasses for laboratory apparatus purposes.

Gina in Brno

As I entered the pavilion of Glassexport at the Brno Fair, I was surprised to see a big photograph of Gina Lollobrigida — the renowned Italian actress — holding a large glass tumbler in her hands with an appreciative look. I asked the interpreter accompanying me why some Czech actress had not been selected for this honour; he came the reply that Gina was well-known throughout Czechoslovakia and, hence, the organizers perhaps thought it more desirable to put up her photograph at the entrance to indicate that even foreign artists had appreciated the Bohemian glass manufactured in Czechoslovakia. This is just an illustration to show that certain Western influences have penetrated into Czechoslovakia despite the restrictions on the movements of the people outside the socialist states. In addition to the popularity enjoyed by foreign film artistes one cannot help noticing the popularity of Twist, Cha-Cha and other Western dances and music which have won the hearts of the people.

The standard of living in Czechoslovakia has always been high and the consumption of food has been at a relatively high level. The export of heavy machinery and other engineering products has facilitated the import of food and the frequent

IMPRESSIONS OF AN EAST EUROPEAN TOUR—II

Briskness at Brno

S. P. CHOPRA

THE SIXTH international fair at Brno, Czechoslovakia, attracted this autumn traders and tourists from all over the world. The history of this fair goes back to 1922 when the first exhibition was held at the same place where the industrial fair has been held for six years. The fair was held between September 6 and 20 and was exclusively devoted to machinery and equipment. It was a gigantic affair by any standard and displayed machinery — especially heavy machinery — of almost every variety. The arrangement of machines and equipment according to industrial branches brought forth the relevant information about the latest stage of technical achievement.

The participants included both the socialist and the non-socialist countries. Whereas all the socialist countries, including Cuba, were represented at the fair, there was a long list of countries from non-socialist world; it included Belgium, Denmark, Finland, France, India, Italy, Japan, Lebanon, Libya, Luxembourg, Western Germany, Nigeria, the Netherlands, Norway, Greece, the UAR, Sweden, Switzerland, Turkey, Uruguay, Great Britain and West Berlin. The participation of the non-socialist countries in the Brno fair in recent years has led to increased flow of trade between the West and the East. Again, among the Asian countries, India and Japan were the major exhibitors, China, being conspicuous by its absence. The fair also highlighted the fact that trade knew no barriers and most of the West European countries found it profitable to display their goods in this exhibition.

India participated in this fair for the first time in 1959 on a small scale when there was a national stand in the Pavilion of Nations. This year, no less than 100 Indian firms exhibited their products. Not only that the usual stand in the Pavilion of Nations was put up, but India participated in different technical sections also. The Indian machinery displayed related to machine tools, castings, cutting tools, storage batteries, lead acid batteries, electric motors, starters and switches, water heaters, diesel engines, compressors, refrigerators, air conditioners, scientific instruments, sterilizers, etc. In the national stand, this country exhibited the traditional products such as tea, spices, cashewnuts, textiles, tobacco, oils, minerals, handicrafts, linoleum, coir goods, etc. Industrial goods such as razor blades, cigarettes, sea-foods, woollen knitwares, canned fruit juices, etc. were also displayed. In order to popularise Indian tea, free distribution to the visitors was arranged.

Much to be Desired

The display of Indian goods left much to be desired. In the Pavilion of Nations, for example, where mostly the consumer goods were displayed, there were no labels in the local language; amongst the many varieties of cigarettes exhibited, it was difficult for the foreigner to know if the packets with different colours contained chewing gum or cigarettes. In the technical pavilions, some of the Indian exhibits had obvious defects which had been caused mostly in transit; paucity of foreign exchange was given as the reason for not putting the defective exhibits into proper shape.

Special mention needs to be made of a large rotary Microtome which was exhibited by a Bombay firm and which is likely to fetch some orders; this automatic machinery has great utility for investigating the three-dimensional structure

of biological objects. It has been sent up for further tests in Czechoslovak laboratories and it is believed that it will yield some positive results. The machine tools exhibited by another Madras firm also were expected to result in some business. The tools which had some enquiries were twist drills, mill cutters, reamers and ground thread taps.

In all the technical pavilions, as in the case of the Pavilion of Nations, there was a general lack of literature to inform the people about the exhibits and their performance. Whatever literature was made available was in the English language and not in the local language. The impression was created that the paucity of foreign exchange stood in the way of making a good display of the Indian products. If a decision is taken to participate in a particular fair — there is no doubt that the decision to participate in the Brno fair was the right one because of the international character of this fair — the Government of India must not hesitate in spending foreign exchange in an adequate measure so that full justice is done to the exhibits. The large number of Indian students and trainees who are currently in Czechoslovakia were very much depressed by a poor showing of the Indian stands. Whereas they have been explaining to their colleagues in Czechoslovakia that India has taken rapid strides in industrialisation and is in a position to export some of the industrial products, they could not justify their claims in reference to the stalls that were put up on behalf of their country. This was the feeling conveyed to me by a band of young Indian trainees and I also got the same impression after I went round these stands.

Important Trading Partner

Amongst the East European countries, Czechoslovakia is an important trading partner for India. The first long-term trade and payments agreement dates back to 1959; since then, there has been substantial expansion in India's trade with Czechoslovakia. Currently, the level of trade is nearly four times the level in 1959. The value of total trade on both sides is put at Rs. 300 million. In November last year, a long-term trade and payments agreement was signed in New Delhi which envisaged doubling of trade between India and Czechoslovakia in the next three years. In May this year, another economic agreement was signed between the two countries according to which Czechoslovakia agreed to extend a credit of Rs. 400 million for supply of machinery and equipment for various projects to be set up in India with Czechoslovak collaboration. The repayment of the credit will be in easy instalments, not in any currency but in the form of exports of Indian goods to Czechoslovakia. In view of the growing trade relations between the two countries, it is necessary that India must participate actively every year in the Brno Fair because it will offer an opportunity for the Czechoslovak importing organisations to have a close look at what India can provide against imports of machinery. While the task of selling their machinery to us rests with the Czechoslovak foreign trade agencies such as Strojexport, Technoexport, Strojimport etc. we should not delegate the task of selling our goods to them. We must participate actively in the exhibition of our goods and this can happen if we take greater interest in the Brno Fair.

Czechoslovakia has entered into contract with the Government of India for providing large engineering plants. The

transport in the iron and steel belt — the originating goods traffic to be moved by the railways from this region is expected to go up to as much as 264 million tons by 1970-71 from about 161 million tons in 1965-66 and barely 76 million tons in 1960-61 — the Council has made several suggestions. Included in these are: (1) the railways should introduce "multiple cars" and "train-load" freight rates for the movement of coal, iron and steel; (2) the railway rates for "smalls" which are now carried at uneconomic rates must be revised upwards so that a more rational distribution of traffic between railways and road services might be effected; (3) the signalling system should be speedily and substantially improved with a view to speeding up the train movements; (4) the operational improvement should be effected in regard to the turn-round time of the wagons; (5) the present lack of weigh-bridges in adequate numbers should be made up; (6) the question of mechanisation of loading and unloading should be taken up immediately and the time consumed in loading and unloading should be greatly reduced; and (7) with a view to reducing the pressure on transportation, distribution centres should be established and regional warehouses built so that from these regional centres, the road system might take over the responsibility of distribution of the products.

National Transport Policy

The Council has emphasised the urgency for the formulation of a national transport policy indicating the priorities and functions of each mode of transport. With a view to lightening the pressure on railways, it has suggested that rail transport in the iron and steel belt should be relieved of the burden of carrying such types of industrial materials as go into general consumption. These goods, it has been recommended, should be concentrated at certain convenient points and between these points the goods should be delivered only by road. Rail movement of coal within 100 miles, the Council further suggests, should be substituted by other modes of transport such as road transport or conveyers. With a view to avoiding heavy rail transportation of coal, it has been suggested that power should be generated at the pitheads and should be transmitted to long distances by power transmission lines of high voltage.

The Council has urged the necessity of radically improving the road transport system in the iron and coal belt. Against the all-India average of 11.3 miles of surfaced roads per 100 square miles of area, the iron and steel belt, the Council's findings say, has only 10.1 miles. Only 308 miles out of the total length of 3,916 miles of the national highways in the

iron and steel belt are double tracked. The roads in colliery areas are in bad shape. The number of motor vehicles operating in the three States in this belt in relation to area, population and road mileage is substantially below the all-India average. The Council, therefore, has recommended that: (1) the position that very few of the State Plans have hitherto envisaged development of roads with a view to affording relief to the railways should be rectified; (2) improvements to the national highways, State highways and roads in the colliery areas should be taken up without further delay; (3) for economical operation, the roads should also be widened and strengthened to take the heaviest road vehicles with trailers, as only then can coal in bulk be transported at low cost; (4) road-railway crossings should be constructed at different levels at about 20 critical points in the iron and steel belt; (5) the cost of transport on road could be made more economical and acceptable by the use of larger vehicles and truck-trailer combinations — the production of heavier vehicles and truck trailers should be taken up in the industries sector; (6) pending the recommendation of the Committee on Transport Policy and Co-operation and the Government's decision thereon, steps be taken to cause to move by road traffic within the iron and steel belt now moving by rail and falling within specified distance limits — traffic from and to railway sidings for which the inherent advantage will generally be with rail transport should be treated as an exception; also traffic over sections where there are no road services due to absence of roads, missing bridges, etc.

In respect of the inland waterways supplementing the other modes of transport in iron and steel belt, the Council's finding is that only the Mahanadi canal system, leading to the Paradip port, has a substantial potential for the carriage of ores for export purposes. The chances of moving coal through the Ganges to places in Bihar and U.P. are not bright owing to the length and the cost of road haulage involved between the collieries and the riverside. About the Durgapur canal, the Council says that this route may prove economical for the supply of coal to the Calcutta area. Another suggestion of the Council in respect of the inland water transport is that in line with the West Bengal Government's action to improve the Haldi tidal canal connecting Calcutta with parts of Orissa through the Orissa coastal canal, the Orissa Government should also take steps to improve the coastal canal on its side so that the movement of traffic between the two States is facilitated.

About coastal shipping, the Council has opined that the low draft in the Hooghly river, the congestion at various ports causing serious delays in the turn-round of ships and the

freight rates below costs charged by the railways for long distance movements of coal are the three factors that militate against more extensive use of this mode of transport for carrying coal. The Council has suggested that these difficulties should be overcome if coastal shipping is to be harnessed for reducing the burden on railways.

★★
The Union Government, it is understood, does not intend to reverse the process of switch-over from coal to furnace oil by industrial units situated far away from coal-fields. This decision is understood to have been taken in view of the fact that in certain cases, it would be advantageous to the national economy as a whole to allow the consumers situated near the oil refineries and the centres of natural gas to use furnace oil or gas instead of transporting coal over long distances.

The switch-over to furnace oil has till now taken place in some 14 cement factories. The incentives given to them are: (a) concessional railway freight for transporting furnace oil

Reaction to Companies Bill

From our Correspondent

BOMBAY:

THE REACTIONS of the business community, in Bombay, to the Companies (Second Amendment) Bill, 1964, introduced in the Lok Sabha on September 21, 1964, are not very much dissimilar to those expressed by them at the time the recommendations of the Dathary - Sastri Committee for amending the Act were circulated to elicit public opinion. The Statement of Objects and Reasons to the proposed amendment makes it clear that the Bill is mainly directed to give effect to the recommendations of the Dathary - Sastri Committee, although it is also added that the opportunity is being taken to strengthen the provisions relating to investigations into the affairs of companies, to provide for more effective audit in dealing with cases of dishonesty and fraud in the corporate sector, and to simplify some of the present unnecessary but burdensome procedural requirements.

By and large, the provisions of the Bill may be said to achieve this object, albeit in quite an arbitrary manner in certain cases. While there is no doubt that, during the discussions on the Bill, opportunity will be taken suitably to modify some of these, the main criticism to the Bill will still be there, namely that it is a legislative measure mainly based on a few isolated cases of mismanagement of certain companies. It is felt that there must be greater justification than this for amending an already over-comprehensive enactment. As it is, as has been pointed out on several occasions by the spokesmen of the business community as well as Company Law experts, there are sufficient provisions, in all conscience, in the present Company Law itself to ensure a healthy administration of joint-stock enterprises in this country. In other words, there would appear to be no compelling need or a really convincing case for the proposed Bill, it is argued.

Emerging from discussions with the spokesmen of the business community are a few features that have evoked considerable interest. In order to counter the trend whereby dummy directors are appointed on boards of companies to implement policies of a dubious nature while master-minds evolving these policies manage to remain in the background, according to the "Notes on Clauses" of the Bill, it is proposed to expand the definition of "officer" so as to bring within its ambit any person in accordance with whose instruction the board or any of the directors of a company is accustomed to act. The underlying idea seems to be to bring "deemed director" also within the scope of the definition of "officer".

from ports to consumption centres; and (b) increase in the retention price of cement to the cement factories concerned.

★★
After Ethiopia, Nigeria, Kenya and Uganda, Zambia (formerly Northern Rhodesia) may be the next African country where Indian entrepreneurs may be setting up an industrial enterprise in partnership with local interests. The Union Government this week cleared the proposal of Messrs. Bengal Enamel Works Ltd., Calcutta, to establish in Zambia in collaboration with a local party a plant for the manufacture of enamel wares. The project is expected to be approved by the Government of Zambia shortly.

According to the agreement reached between the Bengal Enamel Works and the Zambian party, the Indian participation in the equity capital of the venture will be in the form of exports of machinery and technical know-how. The majority share in the enterprise will be held by the Zambian party which will also manage it.

There is nothing wrong in this, so long as care is taken to evolve a procedure to identify anyone as a "deemed director". There must be some substantial proof to establish that a particular person is directing from behind and that the board or any director is, in fact, acting according to these directions. If this is not done, it would be left to the sweet will of the Company Law Board to treat anyone it chooses as a "deemed director".

One of the clauses stipulates that underwriting commission should not be paid except in respect of shares or debentures offered to the public and also that the company concerned should file with the Registrar of Companies a copy of the contract for payment of underwriting commission at the time of delivery of the prospectus. This is wholly unacceptable in that it upholds the healthy principle that one must work to deserve one's wages.

Controversial Clause

Another, and perhaps the most controversial, clause relates to the new sub-section (1A) of section 108 which imposes restrictions on the period of currency of blank transfers. The proposed restrictions are that every instrument of transfer shall be in the prescribed form bearing the date of issue stamped by the prescribed authority and that the said instrument should be delivered to the company concerned within six months from the date of issue in the case of listed shares and within two months in the case of other shares. Undoubtedly a good deal of abuse has grown around the prevailing system of blank transfers. But one wonders whether the proposed restrictions will have the effect of mitigating, if not eliminating, these abuses, while, at the same time, leaving unaffected the mobility and liquidity of the concerned shares. Great care should be taken to ensure that the restrictions do not adversely affect the economic system. The whole idea — and a genuine one at that — of blank transfers is to facilitate the raising of finances on the security of these shares freely. It is well known that shares are pledged either with banks or other financial institutions, or with individuals. Often financiers have no objection to the transfer of the shares to their names, but, as often, they advance money without insisting on such transfers. Accordingly, any restrictions on blank transfers should see to it that where, for genuine purposes of raising a loan, blank transfers are employed, there should be no ban thereon. Similarly, where shares are held as stock-in-trade, the proposed restrictions would operate harshly, unless the position is suitably clarified. Here is a suggested re-wording

of the clause that merits consideration: "A person will be recognised as having beneficial interest in the shares only if they are transferred within the time prescribed in the section (1A) of section 108".

There are two amendments proposed in the Bill which require that beneficial holdings above the five per cent limit should be disclosed so as to distinguish between the real holders of such shares and the nominees by whom such shares are ostensibly held. The Bill also requires the furnishing of particulars as on the date of the general meeting regarding every person holding five per cent or more of equity capital, whether held in his own name or in trust for him, or of which he has any right to become holder on payment or otherwise. Whatever may be the justification for this, it imposes on the management an obligation to furnish particulars of which it may not always have full knowledge. No company can furnish an accurate return of this information, unless the shareholders themselves furnish the particulars to the company. The feasibility of inducing every shareholder, even after sufficient notice, to furnish such information is open to question.

Less Exacting

The provision regarding the efficiency audit and the powers proposed to be given to the Registrar of Companies or an officer authorised by him require to be more precise and less exacting, it is said. The object of any such audit or investigation should be to find out whether there is any fraud or activity against the interest of the company or members, and not to point out technical defects. Apart from the fact that it requires a high degree of specialisation to point out technical defects, there is also genuine room for difference of opinion about one particular technique and another.

About inter-corporate investments and loans, the proposed Bill has a very stiff clause — Clause 46 which amends section 270 of the Act. In trying to meet a situation created by the lapse or misfeasance on the part of the management of an

isolated company or two, the law should not be so changed as to retard the industrial growth of the country as a whole. Surely, India has not reached a stage where banks or other financial institutions are in a position freely to extend the required financial facilities whenever needed and without delay. That time is of the essence in the tiding over of a difficult period for a company is common knowledge. In the case of private limited companies especially, the more so if they happen to be family concerns, it is difficult, if not impossible, to arrange financial assistance promptly. There is, therefore, some thing to be said for the suggestion that loans by private companies where no public is involved should not be restricted and also that there should be no inhibition against one company making a loan to another company, even if one or either of them are public companies, so long as the loan is made against proper security. In other words, suggestion is that the proposed amendment should be made applicable only to public limited companies with considerably larger limits than those proposed in the amendment bill.

Finally, the proposed new section, namely section 635A, is considered to be at once serious and far-reaching. If, for instance, it is provided that information on the basis of which the Government acted in a given case need not be disclosed to the company concerned, the position is understandable. But one fails to understand how such information can be withheld even from a court. If the judicial authority cannot have access to information on the basis on which the Government is supposed to have acted, it would virtually amount to the removal of judicial process, even if it be limited to matters of special audit and investigation. It may also serve as an encouragement to blackmailers and there may be no protection too from possible vindictive action by prejudiced officials. Nothing can be so sacrosanct as to be saved from being justiciable by a Court of Law, it is rightly argued, if the fundamental rights guaranteed to the citizen under the Constitution are to be real and meaningful.

Tea Retains its 'Cup' as Exchange Earner

From Our Correspondent

CALCUTTA :

THE ANNUAL report of the Tea Board gives an encouraging account of India's tea exports during 1963. In terms of quantity as well as value, exports of India's second best foreign exchange earner were the highest since 1959, the respective figures being 223.5 million kilograms and Rs. 132.4 crores. The United Kingdom, as usual, remained the top customer, taking 135.6 million kilograms, compared with 119.9 million kilograms in 1962. The United Arab Republic came a distant second with 17.1 million kilograms, followed by Soviet Russia and the United States in that order with 16.6 million kilograms and 10.1 million kilograms, respectively. It needs to be pointed out, however, that the UAR and the USA took less during 1963 than in 1962, while Soviet Russia increased her imports by a little over 4 million kilograms. This last-named country has now become an important customer of Indian tea, although UK market remains as important for India's tea exports as ever.

Of more immediate interest however is what the Tea Board's report says about the current year's prospects, when tea output from north India is expected to be a record, perhaps surpassing even the 1961 production figure. South Indian tea production is running behind last year's level, yet this country's output as a whole is likely to be appreciably higher than that of 1963. According to the Tea Board's estimates, the crop output in 1964 is expected to be around 363 million kilograms.

Increased production in itself is a good thing, for the country as well as the industry, and is certainly pleasing from the Government's and the planners' point of view, but there are important qualifications. The first one is that proportionately more quality tea should be produced to cater to the foreign buyer's pronounced preferences for the better grades. Secondly, the prices fetched should be remunerative and thirdly, there must be an expansion of overseas markets in step with increased production.

Conditions on any of the three counts are not quite satisfactory. India's output of quality tea has not been increasing as much as it should if she is to maintain, let alone expand, her present position as a tea exporter. In fact, it is difficult to see how she can expand her quality tea production without undertaking replanting and new planting on a more adequate scale. The average prices realised at the Calcutta and London auctions during the current year are on the whole lower than in the same period last year. Although the Tea Board considers the lower average prices to be fair and satisfactory from the industry's point of view, the fact that prices have been declining will discourage measures which are necessary to raise tea production. There is nothing that the industry or the Government can do about auction prices as long as the country's dependence on export markets remains as great as it is now, but the effect can be mitigated by developing the internal market. India's domestic consumption of tea has

substantially expanded in recent years, but it should be expanded further so that an effective cushion can be provided for the industry when export markets prove to be less remunerative. The question of course is how this is to be done when the need is to maximise exports for the sake of earning foreign exchange even if the price trend is not very favourable. But if the industry's long-term interests are to be safeguarded, this has to be done. This does not mean that India could afford to neglect her export markets, which she cannot if she is to pursue a policy of steady expansion in output and earn more and more foreign exchange for financing her development and maintenance imports. A point of balance has, however, to be found, and efforts will need to be made to expand the domestic as well as foreign markets.

At the moment, India is concentrating on foreign markets, and the Tea Board's sales promotion propaganda is directed towards Europe and the United States of America where, it is rightly believed, a large body of potential consumers may be waiting to be tapped. Just now, the Indian National Tea Office has started a big campaign in the European Economic Community to promote tea consumption in the countries concerned. It is encouraging that the authorities there are co-operating with the Indian effort. West European tea importers have just concluded an agreement with the Indian and Ceylonese parties to import tea on a larger scale than before. This is heartening indeed, but the point to be borne in mind is that the Indian effort is benefiting other tea producers as well, like the Ceylonese for instance. As far ahead as one can see, the tea markets of the world are going to be more competitive and there is only a remote chance of the International Tea Agreement being revived. The Indian tea industry must, therefore, have a strong base of domestic market to meet the exigencies of a highly competitive trade.

★★

The meeting which the Union Deputy Commerce Minister last week had with the Chief Minister of West Bengal and the representatives of the major export industries in the State was the first concrete step towards the formation of State Export Promotion Advisory Boards, on which Mr. Manubhai Shah has been working for the last two years or so. Under the scheme, each State board would be formed with the Chief Minister, Finance Minister and Minister in charge of Commerce and Industry besides the representatives of export industries and trade. The Calcutta meeting provided an opportunity for the exporting interests concerned to voice their difficulties and demand remedial action by the Government where this was called for. For instance, Mr. B. S. Agarawal speaking for the Engineering Export Promotion Council urged that the Government must pursue a definite labour policy, at least in so far as export industries in the State are concerned. Mr. Tacker pressed the same point of view on behalf of the Chemical and Allied Products Exports Promotion Council, and drew the State Government's attention to the fact that because of too much labour trouble, there was already a tendency among the chemical units to shift their factories to Maharashtra. As for jute and tea, West Bengal's as well as the country's two major export industries, it was pointed out that if the fourth Plan production and export targets of jute goods (fixed at 1.7 million tons and 1.1 million tons, respectively) are to be achieved, the industry must be assured of an adequate power supply and what is more important, must have an adequate supply of raw jute at reasonable prices. This would also require an improvement in the yield to around 4 bales per acre, so that the 10 million bales or so of fibre needed can be had from domestic sources without difficulty. The tea industry's demands were mainly two; first, it should be given back

the land taken away under the West Bengal Estate Acquisition Act so that its programme of extending plantations can be pursued as planned; and secondly, the expenses incurred for the extension of plantation areas should be treated as revenue expenditure and further, these areas should be exempted from agricultural income-tax levied by the State Government.

The Chief Minister of West Bengal responded to these demands favourably. He has assured the jute industry that all its additional requirements of power will be provided. (On the basis of a production target of 1.7 million tons of jute goods extra energy requirements have been estimated at 40 MW). The mills could also install their own captive units as a stand-by provision for emergencies. To the tea industry, Mr. Sen assured that the land resumed under the Acquisition Act would be returned in all necessary cases, but he would consider the exemption from agricultural income-tax of new land brought under tea plantation only if the Fourth Finance Commission compensated the State Exchequer in some other way for the loss of revenue which would result. These proceedings show that the institution of State Export Promotion Advisory Boards is a useful idea, and these bodies could help the overall drive to boost this country's exports, the target for which under the fourth Plan has been fixed at a little over Rs. 5,000 crores.

which the Presidents are going to make a representation to the Government concerns the provision in the Income-tax Act which treats income from dividends and interest as unearned income even in the case of dealers in shares and securities. Mr. C. L. Jhunjhunwala, President of the Calcutta Stock Exchange, placed the matter of capital formation in the broader

perspective of increased industrial production and industrial growth, and pointed out that since the key to price stability lies in greater production from industries, the revival of the capital market which has an essential connection with industrial production and growth should be brought about through all necessary incentives.

Oil in the South

From Our Correspondent

MADRAS:

THE REPORTS that oil exploration in Karaikal in the Canavery Basin is likely to be successful are encouraging indeed. As the earlier efforts to drill a well in the Pattukottai area did not prove successful there was no disposition to adopt an optimistic view. It is now stated, however, that oil and gas deposits exist in the Karaikal area and that it may probably be necessary to carry out off-shore drilling as the belt is moving eastward. A Soviet ship has been conducting a seismic survey for some time past in coastal waters and valuable data has been collected. The operations could not, however, be carried on without interruption on account of many factors. If the search for oil proves successful, as it might, the requirements of the Madras refinery in terms of crude oil might be found to a great extent from this source. It is too early to say anything definite in this regard but the possibilities cannot be ruled out. It is expected that a decision relating to the choice of the foreign collaborator for erecting the oil refinery near Madras City would be taken in the next few weeks. This has been long delayed in coming as the Central Government has been finding it difficult to arrive at a quick decision because of the frequent changes in the offers made by the various competing foreign firms. The choice now lies between four firms and it is expected that, whoever agrees finally to co-operate with the Central Government in this new undertaking, there would be agreement to buy crude oil at prices and from sources acceptable to the Government. The capital cost of the project also will be the lowest among the public sector refineries. The Madras Government is naturally interested in an early decision as the scope for erecting a steel plant at Salem is being disputed.

As regards the steel project, the State Government is even now keen on implementing it during the fourth Plan as it is convinced about the feasibility and economic manufacture of steel based on Salem ore and Neyveli lignite. The Anglo-American consortium, however, is interested in a much bigger project and there would seem to be intense lobbying for the location of the fifth steel plant either in the Goa-Hospet or Vizag-Bailadilaha area. A Hungarian mission also will be visiting this country shortly in this connection. It is being canvassed that there is scope for a sixth medium-sized steel plant. As it will not be necessary to construct transport facilities on a large scale in the case of the Salem project, it is emphasised

that this project has the prospect of coming into being in the fourth Plan more definitely than the other schemes. How the various controversies would be got over and a satisfactory decision reached on this question it is difficult to anticipate at this stage.

★★

The rice situation in the Southern Zone is intriguing and the Madras and Kerala Governments are very much concerned over the situation that might develop in the next three months. The exact situation in regard to the availability of rice stocks and the relief that can be obtained from the short crop that is coming on the market, is not clear. There is a disposition on the part of the Governments and consumers to blame the growers and traders. But it cannot be denied that traders are not effecting large sales openly while there are long queues before the co-operative shops. In Madras State, the position in respect of boiled rice particularly is acute and consumers in the lower income groups are prepared to purchase raw rice which can be had at prices cheaper than those for boiled rice. Even in respect of raw rice a difficult situation might develop in Madras City in the next few weeks if the Andhra Pradesh Government does not agree to permit regular exports to the neighbouring areas from its territory. It is not known what exactly are the reasons for the action taken by the Andhra Pradesh Government in preventing lorries loaded with rice moving beyond the checkpoints on its borders. There is probably an anxiety to find out what precisely is the surplus available for export as there are fears that the damage to the standing crop on account of the recent floods has been heavy.

In the meantime, in Madras, there are encouraging reports to suggest that the kuruva crop in Thanjavur and Tiruchirappalli districts has been very satisfactory and that, in the absence of any keen buying by Kerala, boiled rice might be available at reasonable prices to consumers in Madras State. It is, however, pointed out that this variety is not generally consumed in this State and exports from Thanjavur and Tiruchirappalli districts are usually replaced by better varieties of rice from Andhra Pradesh. In the present difficult situation, even the bumper kuruva crop will be easily absorbed within the State and it will not be correct to expect that there will be any sizable decline in prices until the next crop comes on the market in a big way.

There is no doubt that there is a general scare and consumers do not want to be caught napping. With releases from

Whatever will Metal Box think of next !

The objective—an all-out drive to save foreign exchange. The means—over 30 years' experience in precision drawing and forming of sheet metal. The result—a national saving of almost Rs 1 crore in foreign exchange with industrial components for the radio, automotive, electrical and ordnance industries...and can-closing and bottle-sealing equipment. All these components and machines were previously imported.

And alongside this effort the Metal Box Research Department is busy developing local substitutes for many imported

packaging materials. Metal Box also earn foreign exchange by exporting annually some Rs 30 lakhs worth of packages and machinery.

Whatever will Metal Box think of next? More ways to earn and conserve foreign exchange, of course!

JWTH 2058A

Central stocks and heavy sales of wheat, the situation can be managed more easily than is generally imagined. What is all required is a diversion of demand from rice by about 5 per cent with liberal releases of wheat. As the position in Maharashtra, U.P. and other parts of the country has latterly been improving and arrangements have been completed for heavy imports of wheat, it should be possible to sell large quantities of wheat in the Southern States. In that manner, foreign exchange expenditure on imports of rice could be reduced to some extent.

★ ★
A new large-sized shipping company has been formed in Madras State in collaboration with foreign interests. As already indicated, this is the first shipping company to be promoted with foreign participation to the extent of 40 per cent in the issued equity capital. Jayanti Shipping Company, which was the first new unit to be floated in association with foreign interests; had only participation to the extent of 25 per cent. Even this share had to be absorbed by the Indian interests later as the arrangement did not operate satisfactorily. South India Shipping Corporation Limited has, however, the advantage of collaboration with the well-established Peninsular and Oriental Steam Navigation Company Limited of the UK and Anglo-Norwegian of Norway. The former will be taking up equity shares for 35 per cent and the latter for 5 per cent of the issued capital. It is expected that the new Indian company will be able to benefit considerably from the experience of the UK company in the liner trade while the Norwegian interests are among the largest carriers of bulk cargo in the world.

The issued capital will be Rs. 2 crores out of which equity shares for Rs. 80 lakhs will be allotted to foreign firms. Out of the balance of Rs. 120 lakhs, the directors and their friends will be taking up shares of the value of Rs. 50 lakhs. The balance will be offered for public subscription and it is expected to be underwritten by the Madras Industrial Investment Corporation.

The company has already placed orders for 5 bulk carriers, each of 38,100 d.w.t., designed for the carriage of ore, grain and other bulk cargo. These ships are being constructed in a shipping yard in West Germany and the company has been permitted by the Shipping Development Committee to use the credit provided by West Germany for this purpose. The first ship is expected to be delivered some time next year while the others will follow at intervals of three months. The foreign interests will be represented on the Board of Directors while Mr. A. D. Shroff of Bombay will be co-operating with the industrialists of the India Cements groups, on the Indian side. The company is expected to come on the market for raising the required capital in November. It is, however, noteworthy that in the case of the shipping companies nearly 90 per cent of the finance required for acquiring ships is obtained on a loan basis and the whole scheme is based on the assumption that the purchases of ships will be self-financing in character. As serious efforts are being made to secure for India a larger share in the trans-ocean trade and the exports of iron ore and imports of petroleum products are expected to increase significantly, the ships can be employed profitably.

INCENTIVE TO SUGAR PRODUCTION

WITH A view to boosting sugar production the Government of India has announced an increase in the basic minimum price of sugarcane to Rs. 5.36 per quintal, linked to a recovery of 10.4 per cent or less, for the 1964-65 crushing season. The minimum price has been raised by 40 paise a quintal from the current Rs. 4.96 but the recovery level has also been raised by one per cent from the previous level of 9.4 per cent. This means that to some extent the farmer will be deprived of the advantage of securing a higher price for better quality cane. As before, there will be a premium of four paise for a quintal of sugarcane for every 0.1 per cent of recovery above 10.4 per cent. The Government's decision is based on the recommendations of the Sugar Price Enquiry Commission headed by Dr. S. R. Sen, adviser to the Planning Commission, regarding the procedure for determining the price of sugar and its distribution and a policy for licensing new factories and expanding the existing units. With a view to providing an incentive for early crushing the Government will allow a rebate of 50 per cent in the basic excise duty on the excess sugar production during October and November, 1964 as compared to the production during the corresponding period of 1962. The other recommendations of the Sen Commission regarding the fixation of ex-factory price of sugar and related matters are still under consideration of the Government and an announcement is expected soon. The Commission has proposed that during the normal season the excise rebate should be allowed to the extent of 20 per cent, on additional production up to 10 per cent, over the output achieved in 1963-64. Where the extra production is in excess of 10 per cent, it has suggested a rebate of 40 per cent in excise duty. In the case of new factories, the Commission has recommended that the production in excess of 85 per cent of their capacity should be considered eligible for rebate.

The Government's decision, as announced on October 14, 1964, falls below the sugar industry's expectations. The incentive of excise duty rebate, it is argued, is unlikely to lead to expected results because the industry is not in a position to plan for more production. Last year, excise rebate covered the full period of the crushing season; it was 50 per cent for the first part, 20 per cent for the middle part and 50 per cent for the last part. The industry, as a matter of fact, has all along been demanding immediate decision on incentives as well as ex-factory prices.

Sugar production this year is estimated to be of the order of 25,60,000 tons. Of this 23,30,000 tons are needed for meeting internal requirements and 2,60,000 tons for fulfilling export commitments. This means that the current year's production falls short of the current year's demand. The shortage will, however, be met out of the carry-over stocks of last year without any difficulty except that the new crushing season will start with a carryover stocks of only 1,50,000 tons as against 1,76,000 tons last year and 10,26,000 tons in 1962-63. But the Government is hopeful of achieving production of 33,00,000 tons during 1964-65. The industry's view, however, is that production of this order is possible only if the Government follows a policy of selective controls. The industry wants the Government to adopt a policy which would ensure an equitable distribution of available cane supplies among sugar, Gur and Khandasari industries. It does not demand complete decontrol of sugar for fear that the prices may rise, but wants complete freedom to pay higher price for sugarcane. It feels that a policy of selective controls, as was adopted in 1950-51 and 1951-52, should again be introduced to enable the factories to sell a part of their produce in the

free market. The industry also wants fixation of sugarcane prices in different regions and sub-regions at economic levels and demarcations of cane zones for individual sugar factories in all States so as to ensure adequate cane supplies to the factories.

The Union Ministry of Food and Agriculture has sanctioned plans for the expansion of the existing mills and the setting up of new units, mostly in the co-operative sector, to the extent of 5,00,000 tons, though licences have not so far been issued in most of the cases due to paucity of funds. An expenditure of Rs. 40 crores is estimated to be involved in increasing the installed capacity to 35,00,000 tons from the present 30,00,000. But otherwise, only by prolonging the crushing season the industry may be in a position to produce sugar in excess of the current installed capacity. Moreover, the industry holds the view that it would be more desirable to allow expansion of the existing units rather than permit new units to come up, from both economic and financial points of view. The production per unit in India is said to be the lowest as compared to the major sugar producing country in the world. The profitability of the sugar industry is also considered to be among the lowest in the industrial sector in the country.

SAVING IN SHIPPING FREIGHT

India is likely to effect a saving of more than three million dollars per year in its foreign exchange resources as a result of the negotiations in the United States between a delegation of the Government of India and the American Shipping Conference serving the trade from the East Coast of the USA to India. This saving includes over one million dollars per year that India would have had to pay as 30 per cent surcharge on freight to Bombay, imposed by the Conference because of acute congestion that occurred in the port during the last monsoon. The Indian delegation explained to the Conference the extraordinary and special circumstances in which the congestion occurred and outlined the various measures, such as better co-ordination of arrivals of cargoes at various ports and improvement in unloading and handling of vessels, which had been taken to avoid recurrence of such a situation. After prolonged discussions the Conference representatives agreed to withdraw the surcharge which, if it had not been rescinded, would have set an example for other conferences and shipping lines to follow. The question of special freight for all cargoes for the Government of India, State Governments, Public Sector Projects and Undertakings was also taken up by the delegation. After detailed discussions it was agreed that a general 25 per cent discount on freight would be given on Government cargoes, apart from specially reduced rates negotiated for heavy lift cargoes and special equipment like Power plants. Besides, the delegation was successful in persuading the Conference to withdraw the additional arbitrary charge on cargoes to Kandla and Vizagapatnam.

The delegation also held discussions with the India Supply Mission in Washington, and the High Commission in London, on the question of implementation of the decision to transfer to the Central Chartering Organisation in New Delhi the work relating to the chartering of non-American ships for the import of PL-480 foodgrains from the USA. So far this chartering work was being done by the Baltic Exchange Chartering Committee in London; but with a view to achieving better co-ordination it was decided that all this chartering work should vest in the Central Chartering Committee in Delhi. Accordingly, the Chief Controller of Chartering has, with immediate effect, arranged the chartering of non-American vessels to the extent of 24 ships (including 3 tankers) cover-

ing shipments for November, 1964. All this chartering has been successfully done at competitive rates and future chartering will also be done by the Central Chartering Committee in the same manner, through its panel of brokers in New Delhi representing reputable brokers in London, New York and Tokyo, thus giving the Committee worldwide coverage for its requirements.

HALF-YEARLY IMPORT POLICY

The import entitlements for established importers during the period October 1964 to March 1965 will remain the same as during the first half of the current licensing period, April to September 1964. Supplementary or additional licences issued to established importers will also not be subjected to any cut. According to an import trade control notice issued in New Delhi on October 14, 1964 on the policy for the second half of the current licensing period, the annual licences granted to established importers will be automatically validated for utilisation of the second half of the licences. The validity period of such licences shall also be deemed to be extended by another six months. Where fresh annual licences are yet to be issued to established importers for the period April 1964 to March, 1965, the licences will be granted for the total yearly entitlements. The licences will be considerably endorsed to permit the import of goods in one lot within the validity period of the licences. An announcement is yet to be made in regard to changes, if any, in the licensing policy for actual users during October 1964 to March 1965.

When the annual import policy for April 1964 to March 1965 was announced, the established importers were required to submit their applications on an annual basis to cover their yearly entitlements. It had then been stipulated that the importers were entitled to order shipment of goods and make remittance to the extent of 50 per cent of the value of the licences during the first six months. For the second half year, i.e. with effect from October 1, 1964, the annual licence was to be presented to the licensing authority for validation subject to any change in value as might be decided upon by the Government.

U.S. MARKET FOR INDIAN PRODUCTS

Businessmen visiting the Indian pavilion in the New York World's Fair have shown keen interest in the imports of various items manufactured in India. A New York firm wants to import in bulk quantities non-ferrous forgings manufactured in India according to its specifications and designs. It also wants to buy drainage fittings, plastic distribution cables, linoleum and basket strainers for stainless steel counter sinks. Another firm is interested in buying large quantities of chinaware manufactured by a leading Indian firm. Enquiries were also made by the US business men regarding the import of cotton, silk and nylon dress materials, tinned fruits, fruit juices, chutneys, shrimps, candy, sweets and tea.

According to a recent on-the-spot study conducted by the Indian Cotton Textiles Export Promotion Council, several categories of Indian cotton textiles have good prospects in the US market. While the demand is much greater in the dress-making industry, there is considerable sale of cloth as such. The sale of cloth in the United States is approximately 700 million square yards per annum. According to the survey, India can sell many varieties as typical Indian motifs, bright colours making stronger appeal to the Americans who are well supplied with abstract designs in light pastel shades. As a result of Indian participation in the New York World's Fair, the Cotton Textiles Export Promotion Council has received numerous trade enquiries relating chiefly to printed dress materials, pillow cases, bed sheets, canvass tarpaulins, cotton netting, terry cloth, carded twill, braided tapes and embroidered emblems.

Following the success of the fashion shows arranged in

the Indian pavilion in the New York World's Fair, a fashion show is being arranged in Washington to popularise the Indian textiles in the United States. Mrs. Johnson, wife of the American President, many Senators and their families are expected to attend the show.

NSIC

Out of the fourth Yen credit, a sum of about Rs. 50 lakhs (\$1 million) has been allocated to the National Small Industries Corporation for the import of machinery to be supplied on hire purchase basis to the small scale industrialists in the country. The Corporation has so far made available machines, indigenous and imported, worth over Rs. 18 crores to the small industrialists in the country under its hire-purchase scheme.

TEXTILE ADVISORY COMMITTEE

With reference to the announcement made earlier by the Union Minister of Commerce regarding the Government's decision to introduce statutory controls over the production and prices of four categories of cloth viz., dhoties, sarees, long-cloth and shirting, the Government has now decided to constitute a Textile Control Advisory Committee, with its headquarters at Bombay, to advise the Government on the measures to be taken from time to time to ensure the efficient and smooth working of the Statutory Control Scheme. The Committee will keep a close watch on the working of the scheme and make suitable recommendations to the Government, as and when necessary, for removing defects or effecting improvements in the working of the scheme. The Committee will be headed by Mr. V. P. Naik, Chief Minister, Government of Maharashtra, Bombay, while Mr. R. Doraiswamy, Textile Commissioner, Bombay, will be the Vice-Chairman. Other members of the Committee will be: Mr. Ramnath A. Podar, Chairman, Indian Cotton Mills Federation, Bombay; Mr. Krishnaraj M.D. Thackersey, Bombay; Mr. S. R. Vasavada, Ahmedabad; Mr. Nath Pai, M.P.; Mrs. Tarkeshwari Sinha M.P.; Mr. Rameshchandra Vyas, M.P.; Mr. Devarajulu Naidu, Coimbatore; Mr. T. P. Chakravarty, Calcutta; Mr. Padampat Singhania, Kanpur; Mr. Chinubhai Chamanlal, Ahmedabad; Mr. D. P. Mandelia, Gwalior; Mr. Navn't Lal Shah, Bombay; Mr. Brij Bhushan Saran, Delhi; Dr. K. N. Raj, Director, Delhi School of Economics; Dr. T. S. Subramaniam, Ahmedabad; Mr. Ganglal Casewa, Co-operative Federation; a representative of cloth retailers and a representative of fair price shops. Mr. P. J. Fernandez, Additional Textile Commissioner, will act as member-secretary of the Committee.

The Chairman may invite any persons connected with the Ahmedabad Textile Industry's Research Association, the Bombay Textile Research Association, the South India Textile Research Association or other technical institutions and other organisations to attend meetings of the Committee. The Committee shall meet as often as may be necessary. The non-official members of the Committee have been nominated for a period of two years.

The Government has also decided to set up a panel of technologists to assist the Government and the Textile Control Advisory Committee on different technical and economic aspects of the 'Control Scheme'. Besides its Chairman, Mr. P. J. Fernandez, Additional Textile Commissioner, the panel will consist of: Dr. R. Balakrishnan, Member, Tariff Commission; Dr. K. N. Raj, Director, Delhi School of Economics; Dr. Lakdawalla, University of Bombay; the Chairman, Institute of Cost and Works Accountants Association; a member of Cost and Works Accountants Association; the Director, Ahmedabad Textiles Industries Research Association; the Director, Bombay Textiles Industries Research Association; the Director, South India Textiles Research Association; and Mr. S. A. Kher of Calico Mills Ltd., Ahmedabad.

Company Affairs

HYDERABAD ALLWYN

STRIKING IMPROVEMENTS in working results have been reported by Hyderabad Aliwyn Metal Works Ltd. during the year ended April 30, 1964. Gross profits recorded a sharp rise from Rs. 43.47 lakhs to Rs. 67.26 lakhs, while net sales improved significantly from Rs. 3.26 crores to Rs. 5.13 crores. The improved performance in sales and production has been made possible due to the expansion of the plant. Although production of refrigerators is rising steadily, the company has not been able to achieve the desired progress on account of scarcity of raw materials. The company has received a licence to manufacture hydraulic hoists, tipping gears, heavy duty trailers, and semi-trailers. The company has already entered into technical collaboration agreements with Anthony & Co. of USA and Carimore Six Wheelers Ltd. of UK and a consultancy agreement with Western Corporation of USA to manufacture new items.

The directors have enhanced the provision for depreciation from Rs. 14.63 lakhs to Rs. 21.97 lakhs and managing agents' remuneration from Rs. 2.61 lakhs to Rs. 3.31 lakhs. The allocation to development rebate reserve has been reduced from Rs. 9 lakhs to Rs. 3.50 lakhs while the appropriation towards general reserve is stepped up from Rs. 2.65 lakhs to Rs. 4.50 lakhs. A sum of Rs. 16 lakhs is set apart for taxation against nil in the previous year. The directors have maintained the dividend at 10 per cent which absorbs Rs. 12.04 lakhs, leaving a sum of Rs. 17,364 to be carried forward to next year's account against Rs. 26,824 brought in from the previous year.

MYSORE SPG. AND MFG. CO.

The working results of the Mysore Spinning and Manufacturing Co. Ltd. for the year ended February 29, 1964, showed a gross profit (subject to depreciation) of Rs. 5,672. Taking into account the balance from the preceding year valued at Rs. 38,874 and the provisions made in the previous year which are no longer required, valued at Rs. 20,259, the amount available for distribution came to Rs. 64,606. The directors have transferred from the "general reserve" a sum of Rs. 8,41,010 to provide depreciation on the fixed assets and to pay dividend for the year on the 4½ per cent cumulative preference shares. Out of the total of Rs. 9,05,616, depreciation for the year absorbed Rs. 8,72,089, while the dividend on the preference shares at the rate of Rs. 2.25 per share (less tax) absorbed Rs. 33,527.

The company received a setback in the year under report, for which reason the payment of dividend on equity shares had to be passed over. The directors have stated that although the prices of coarse and lower medium yarn under the voluntary price scheme were marginally increased in the year under report, they were not commensurate with the increased prices that had to be paid for the cottons used.

The weaving department also did not show happy results. Increased production of higher medium cloth, according to the directors, did not yield the desired result because prices higher than anticipated had to be paid for the required cottons. The company had to change the pattern of export production from ordinary coarse and medium sheetings to towels and finished fabrics. All these changes brought about dislocation in the working of the weaving shed, but the directors have expressed the hope that the benefits of these re-arrangements would be available in the current year.

The company started its programme of re-building and renovating the existing plain looms in 1961-62. During the year under report, 72 looms were re-built at a cost of Rs. 38,174. Uptodate, 282 plain looms have been re-conditioned while

nearly 75 are being replaced by automatic looms out of a total of 500 plain looms. The directors are planning to take the total loomage to about 700, out of which 288 will be automatic.

The directors have also reported that 14,869 new equity shares of Rs. 50 each were allotted as bonus shares in the ratio of 1:8 after capitalising Rs. 1,44,060 from the "share premium account" and a sum of Rs. 5,99,390 from the "general reserve." Since allotment was made before March 31, 1964, the bonus shares did not attract the capital gains in the shareholders' hands.

The company has also ordered for additional machinery after March 1, 1964. The details are: One West Point Sizing Machine valued at Rs. 1,55,000, material for conversion of 31 Ring Frames of the value of Rs. 217,750 and an Industrial Sewing Machine valued at Rs. 27,540. The company has issued 26,764 9½ per cent taxable redeemable cumulative preference shares of Rs. 50 each to the shareholders as right shares for the sake of strengthening the finances of the company. It has entered into partnership with Minerva Mills Ltd. and Modern Mills for the purpose of organising and conducting retail shops for the sale of cloth manufactured by the mills. The new enterprise has been named Messrs. Sundatta Fabrics which has opened a prestige retail cloth shop in Bangalore. The investment made by the company as a partner in this venture is Rs. 1,50,000.

PANIPAT WOOLLEN

Addressing the Annual General Meeting, Mr. G. L. Gupta, Chairman, the Panipat Woollen and General Mills Company Limited, Kharar, informed the shareholders that the paid-up capital of the company during the last financial year had been increased to Rs. 52,75,985, out of which Rs. 9,92,975 were in preference shares, the rest being in equity shares. The company succeeded in raising the required capital and also in getting a loan of Rs. 45 lakhs plus a guarantee for deferred payments from the Industrial Finance Corporation of India. The Life Insurance Corporation also came forward liberally to take up preference shares. The increased reserves (Rs. 22,10,170, including development rebate, but excluding reserve for taxation, etc.), which have widened the capital base of the company for the purpose of surtax, will help in the reduction of the surtax liability of the company in future years. The Chairman informed the shareholders of the decision of the directors to maintain the dividend on equity shares at 12 per cent on the increased capital, in spite of the fact that the company is liable for dividend tax at 7½ per cent on the amount of the dividend paid.

The Chairman also said that a major portion of the yarn produced had been consumed in the company's tent factory and a part only had gone to the market. The company had received an "essentiality certificate" for the import of cotton waste spindles. It has also been allowed to replace part of its old machinery on the woollen side with the machinery imported from abroad. Both these measures will curtail wastage on the one hand, and increase efficiency and productivity, on the other. With the slackening demand for woollen goods from the Defence Department, the company is now changing over to the production of woollen fabrics for civilian use.

COOPER ENGINEERING

Cooper Engineering Ltd. had reported satisfactory working results during the year ended June 30, 1964. Despite a sharp rise in sales from Rs. 2.62 crores to Rs. 3.11 crores, the company has earned only a slightly higher gross profit of Rs. 23.18 lakhs against Rs. 22.97 lakhs in the previous year. The re-

latively small rise in gross profit is attributed to the enhanced cost of raw materials, labour and other charges without a corresponding increase in selling prices of the company's products. The company has already received the Government's sanction to raise the selling prices of some of the items and hopes to get the approval for some more products shortly. The full impact of the upward revision of prices will be reflected during the current year. The ICICI has agreed to give a loan of Rs. 18.5 lakhs in foreign currency for implementing the scheme for producing vertical turret lathes. Satisfactory progress has also been made for the manufacture of automatic looms and the first 50 looms will be ready for despatch shortly. The company's collaboration agreement with a reputed West German firm for the manufacture of gear hobbing machines has been approved by the Government.

After providing Rs. 34,012 (Rs. 25,000) for managing agents' commission, Rs. 22.60 lakhs (Rs. 18.69 lakhs) for depreciation and Rs. 1.35 lakhs (Rs. 3.92 lakhs) for development rebate, the company shows a net loss of Rs. 1.11 lakhs against a net profit of Rs. 11,375 for the previous year. After adjusting the provision no longer required of Rs. 3.76 lakhs, a sum of Rs. 2.65 lakhs (Rs. 95,000) has been transferred to general reserve. The proposed dividend amounting to Rs. 7.91 lakhs will be paid out of general reserve.

CAPITAL ISSUES

During the week ended September 27, 1964

Five companies have been authorised to raise fresh capital aggregating Rs. 7.10 crores. Of these, three are issuing equities, one debentures and another equity shares plus preference shares. Two companies involve foreign collaboration. The consent of the Controller of Capital Issues is valid for 12 months in all cases.

Utkal Machinery Ltd., Kansbahal, Orissa, engaged in the manufacture of heavy vessels, structural and plate work and machinery and equipment, is to issue further capital of Rs. 60 lakhs in equity shares of Rs. 10 each for cash at par. The shares will be offered on rights basis except 3,12,000 shares which will be offered to Deutsche Entwicklungsgesellschaft mbH (DEG), a West German Development Bank, after observing formalities under the Companies Act. The money will be used for the purchase of balancing equipment and machinery and for working capital.

Madras Motor & General Insurance Co. Ltd., Madras is to issue further capital of Rs. 10 lakhs, divided into 10,000 equity shares of Rs. 100 each, for cash at par, on rights basis to the existing shareholders of the company. The capital will be utilised to strengthen the funds of the company.

Gwalior Rayon Silk Mfg. (Wvg.) Company Ltd., is to issue 7 per cent debentures of the value of Rs. 3 crores. The capital is required for several expansion schemes, viz., installation of additional spindles at Bhiwani and looms at Birlanagar textile units and manufacture of pulp and staple fibres at Kozhikode.

Widia (India) Limited, proposed to be incorporated in the Mysore State, is to issue Rs. 40 lakhs equity capital in shares of Rs. 100 each. Of this, 60 per cent shares will be allotted to Meturit AG of Zurich, Switzerland (Meturit Group) in consideration of supply of plant and machinery, 20.4 per cent will be taken up by Sak Industries Pvt. Ltd., partly against cash and partly against purchase of land, indigenous equipment, and construction of factory, and the balance of 19.6 per cent will be offered to the public 'for cash at par'. The money will be utilised in the manufacture of Sintered Hard Metal.

The Andhra Pradesh Paper Mills Limited, Rajahmundry, Andhra Pradesh, a new company incorporated in the State of

Andhra Pradesh, is to issue a capital of Rs. 3 crores, divided into 2 lakhs equity shares of Rs. 100 each and 1 lakh preference shares of Rs. 100 each, to be issued for cash at par, excepting 66,000 equity and 50,000 preference shares which will be allotted to the Government of Andhra Pradesh for consideration other than cash, i.e. against the assets transferred by the Government. Of the balance, such number of shares of each kind as will qualify for enlistment on recognised stock exchanges, will be offered to the public by prospectus and the balance subscribed privately. The money will be utilised for taking over the Andhra Pradesh Mills, a State Government owned undertaking, having a rated capacity of 10 tons per day as also for expansion of its production to 70 tons per day.

LICENCES ISSUED

The following licences were issued under the Industries (Development and Regulation) Act, 1951 during the fortnight ended September 5, 1964. The list contains the names and addresses of the licensees, articles of manufacture and annual installed capacity.

(During the week ended August 29, 1964)

RAILWAY ROLLING STOCK

Gresham & Graven of India Pvt. Ltd., 22, Cobra Road, Entally, Calcutta-14 (Calcutta, West Bengal) — Vacuum Brake Equipment for Railway Rolling Stock 21,000 sets per annum.

ORGANIC HEAVY CHEMICALS

Indian Organic Chemicals Ltd., 28, Apollo Street, Fort, Bombay-1 (Khopoli, Maharashtra) — Butyl Acetate 500 tonnes; Amyl Acetate 250 tonnes; Isomyl Acetate 250 tonnes; Propyl Acetate 200 tonnes; Isopropyl Acetate 200 tonnes; Sodium Acetate 500 tonnes.

DRUGS AND PHARMACEUTICALS

Hoechst Pharmaceuticals Ltd., Dugar House, Backbay Reclamation, Bombay-1 (Bombay, Maharashtra) — Eugastrid tablets — 1,00,00,000 tablets per annum; Potanal ointment — 1,50,000 tubes of 15 gm. per annum.

COTTON TEXTILES

Rajeswari Mills Ltd., Railway Station Road, Gudiyattam (Madras) — 11,000 spindles; Elgin Mills Co. Ltd., Kanpur (U.P.) (Kanpur, Uttar Pradesh) — 50 automatic looms for the manufacture of terry towelling cloth; Rai Sahab Rekhchand Mahota Spg. & Wvg. Mills (P) Ltd., Hinganghat, (Maharashtra) — 10,000 spindles.

ALCOHOL

Cawnpore Sugar Works Ltd., Sutherland House, Civil Lines, Kanpur (Chakia Tehsil, Bihar) — Industrial Alcohol — 16,84,800 gallons per annum.

(During the week ended September 5, 1964)

IRON AND STEEL CASTINGS & FORGINGS

M/s. Saxby & Farmer (India) Pvt. Ltd., 17, Convent Road, Entally, Calcutta-14 (West Bengal) — Cast Iron Castings (including cast iron castings for a capacity of 3400 tons to be produced for own use as components for the manufacture of finished items) — 6,000 tons per annum; M/s. Hindustan Steel and Metal Co. (Pvt.) Ltd., 9-Clive Row, Calcutta-1 (West Bengal) — Shifting from Calcutta to Durgapur.

ORGANIC HEAVY CHEMICALS

M/s. National Organic Chemical Industries Ltd., Mafatlal House, Backbay Reclamation, Bombay-1 (Bombay, Maharashtra) — Ethylene — 60,000; Propylene — 35,000; Benzene (and related quantities of Xylene and Toluene as extracted via the sulpholane process) — 14,000; Dicyclopentadiene — 700; Butadiene — 7,200; Methane 2,700; Ethylene oxide — 12,000; (i) Ethylene glycol — 10,000; (ii) By-product diethylene glycol — 600; Polyethylene glycol (400) — 1,000; Ethylene dichloride — 3,000; Vinyl chloride monomer — 30,000; (i) Polyvinyl chloride — 20,000; (ii) Processed PVC products —

Tokyo Hong Kong Bangkok Calcutta New Delhi Karachi

Why should you fly Lufthansa to these cities when so many other airlines also go there?

1. Because German pilots have the most enviable reputation for aviation competence in the world. 2. Because our flight crews are backed by factory-trained German ground engineers who check every inch of the plane at the end of each trip. 3. Because there's no other way you can get good German black bread, fresh sauerkraut, and Westphalian ham without setting a foot out of the Far East.

So why not fly Lufthansa? It's the surest way of getting the best of the West while you travel in the East.

BOOKS BRIEFLY

The Business of Money-Changing

The **ABC of the Foreign Exchanges**: By Norman Crump; Thirteenth Edition, Macmillan, London, 1963; Pp. viii + 405; 25 Sh.

Reviewed by D. KRISHNASWAMI RAO

THIS IS the thirteenth edition of a book first published in 1892, its original author being the late Mr. George Clare. Since 1924 the periodic revision of this book has been done by Mr. Norman Crump. So continuous are the changes in the practices and regulations of the foreign exchange market that even this edition embodies very considerable departures from the text of the last edition, which was in 1956.

As befits an "ABC", the book assumes no prior knowledge of the mysteries of money and foreign exchange on the part of the reader. We are taken through the elements of money, cheques, bills of exchange, international bank balances, gold-points and so forth in a few brief initial chapters. On this base is then built a description of the functioning of the London foreign exchange market as it was till its closure on the outbreak of war in September 1939 and as it has been since its re-opening in December 1951. The most interesting part of the description is that of dealings in forward exchange — that enigma of the lay reader and game of skill of the professional operator in the foreign exchanges — for which a wide measure of freedom has been restored to the market in the past few years.

Basic Forces

It is the great merit of the book that it considers the foreign exchanges not as a market apart, but in the proper setting of each country's monetary and banking activities and its general economy. Chapters XV to XXI are therefore devoted to a discussion of the bearing of central banking operations, the operations of the money market, and of internal price-levels on the foreign exchanges. Now that a large range of freedom has been restored to foreign exchange markets in the Western world, and greater importance is attached to monetary discipline, these chapters add to our understanding of the basic forces that have again come to underlie the working of the foreign exchanges.

Among subjects of recurring present-day interest that are dealt with next are devaluation, the functioning of the British Exchange Equalisation Account, and the genesis and structure of the Sterling Area. The International Monetary Fund receives adequate treatment — possibly one of the most serviceable discussions of this institution, considering the fact that the author does the constitution (with detailed citations from the Articles of Agreement) and actual working of the Fund in just fifty pages. The World Bank and its affiliates are also considered, though rather briefly, because they have much less to do with the main subject-matter of the book.

As European economic problems have centred so largely on foreign exchange difficulties since the last War, Mr. Crump deals with some of the main land-marks in the situation as it has developed since 1945. Thus he discusses the American Loan to England, the British Balance of Payments, Marshall Aid and European economic recovery, the European Payments Union, and the advance of Western Europe to currency convertibility.

Queering the international monetary pitch now and then in these years have been the tidal movements of short-term funds aptly known as "hot money" and an occasional flurry on the London gold market such as happened in October and November 1960. In the concluding chapters of the book Mr. Crump discusses these problems and the measures concerted by the US Federal Reserve and the European central banks to deal with them.

This new edition will keep up the book's standing as a "must" for university students of money and foreign exchange and for bank officials who have to do foreign exchange for their professional examinations. The intelligent citizen who finds it hard to understand some of the things that figure in the commerce and finance columns of his newspaper could also read this book with benefit.

PRODUCTIVITY AND BUSINESS

Productivity and Social Environment: K. Sreenivasan; Asia Publishing House; 35s.

Industrial Labour in India: Revised Edition, Edited by V. B. Singh; Asia Publishing House; 60s.

Government in Business: S. S. Khera; Asia Publishing House; 75s.

Reviewed by JOSSELYN HENNESSY

FOR ONE hundred and fifty years Indians experienced foreign scorn for their institutions. From this emerged schizophrenic attitudes. On the one hand, Indian intellectuals sought to resist change by recalling a vanished mythical golden age; on the other, they insisted that caste and other "evils" were yielding rapidly to western "progress". Since independence, a gargantuan spate of legislation has "abolished" untouchability and "established" universal education, labour laws, "fair shares", steel plants, dams, and all the paraphernalia of a "modern, secular, planned" state. Now, although "Industrial Labour in India" and "Government in Business" contain much that is valuable, they suffer from two handicaps (to offer a sweeping and therefore unfair generalisation): first, much of their analysis is based on Marxism (arising from the affinity between India's leaders and the British Labour party of Laski's generation), so that one constantly encounters views long exploded alike in the West and in the USSR; secondly, readers unfamiliar with India may not see through the universal assumptions that "planning" and accomplishment are identical, and that enactment of a law automatically ends centuries' old institutions and the attitudes of mind that made them work.

Standing out from these two books is that by Mr. K. Sreenivasan, who offers the unusual combination of practical industrial experience with the historical and social insights needed to explain (a) how far contemporary economic theory (in which he is widely read) can be effectively applied in India and (b) how far it is necessary to continue to push, shove, watch, and pray, in efforts to create the social attitudes without which industrial enterprise cannot succeed.

The caste system provided a stable society in which all enjoyed social security. But its satisfactions depended on a static economy and this began to be eroded (a) as the British released a population explosion by reducing war, famine, and pestilence, and (b) with increasing industrialisation which, based on contract and incentives, is incompatible with a hierarchy.

India's dilemma is that while her westernised political leaders have undermined the economic basis of caste (and in so doing have largely created the "evils" so universally condemned), the masses cling to their institutions, and it may take generations to eradicate their traditional attitudes (exemplified in e.g. family feeling, which is today denounced as "nepotism").

This bare summary does scant justice to Mr. Sreenivasan's complex and wide-ranging study, whose combination of historical perspective and down-to-earth observation of the contemporary Indian industrial scene makes it an outstandingly realistic contribution to sociological economics. He also has the gift of writing simply and clearly on a subject only too frequently obscured in polysyllabic abstractions.

5,000; Isopropanol — 1,500; Acetone — 11,000; Liacetone alcohol — 2,800; Methyl isobutyl Ketone — 3,700; Butanol — 8,000; 2-ethyl hexanol — 8,000.

COTTON TEXTILES

M/s. Rajeswari Mills Ltd., Railway Station Road, Gudiyattam (Madras) (Madras State) — 11,000 spindles for manufacture of cotton yarn; M/s. The Pudukotah Textiles Ltd., Namanasamudram P.O., Tiruchy Distt. (Madras State) (Madras State) — 12,540 spindles for the manufacture of cotton yarn; M/s. Muir Mills Company Ltd., Civil Lines Kanpur (Uttar Pradesh) — 50 automatic looms for the manufacture of terry towelling cloth; M/s. Vallabh Textile Mills Ltd., 59, Apollo Street, Fort, Bombay-1 (Maharashtra) — 120 spindles for manufacture of cotton waste yarn.

GYPSUM WALL BOARDS

Shri T. S. Chockalingam, 13, South Street, Santhome, Madras-28 (Vaiyampatti Kuttalai Taluk, Tiruchirapalli Distt., Madras State) — Gypsum Wall Boards — 30 million sq. ft. per annum.

LETTERS OF INTENT

The following statement shows the letters of intent issued during the fortnight ended September 5, 1964 to parties under the Industries (Development and Regulation) Act, 1951.

(During the week ended August 29, 1964)

M/s. Kotecha Agencies, C/o M/s. Overseas Plastic Moulders, Sadhana Industrial Estate, Jogeshwari, Bombay-60 (Bhavnagar, Gujarat) — Portland Cement — 2,00,000 tonnes per annum; M/s. The Associated Companies Limited, 'Cement House', 121, Queen's Road, Fort, Bombay-1 (Durgapur, West Bengal) — Cement Slag cement — 4,00,000 tonnes per annum; Mr. M. L. Maheshwari C/o M/s. Bharat Industries and Commercial Corporation, Chowringhee Square, Tower House, Calcutta-1 (Patna, Bihar) — (i) Mobile self propelled cranes (15/20 tons capacity) 24 Nos.; (ii) Truck Cranes (3-5 tons) — 48 Nos.; (iii) Truck cranes (7/10 tons) — 72 Nos.; (iv) Jib cranes (½ to 5 tons) — 60 Nos. Mr. H. S. B. Shyam, 19/1, Platform Road, Seshadri Puram, Bangalore-20 (Bangalore, Mysore) — Heavy Structural 9,000 tonnes per annum; Electric Overhead Travelling Cranes (3 to 150 tonnes capacity) 1200 tonnes per annum; M/s. Harbilas Baldev Raj, Old Railway Road, Jullundur City, (Sonapat, Punjab) — Threading dies, chasers, million cutters and slitting saws, gear hobs, carbide cutting tools, mine coal drill bits, jigs and fixtures, pressing drawing, cutting bending and straightening tools, arbors and mandrels — capacity to be determined; M/s. Rohit pulp and Paper Mills Ltd., Hassan Chambers, Parsee Bazar Street, Bombay-1 (Khadki, Gujarat) — Ivory and allied boards; Mr. Pritam Singh Sawhney, 44, Pusa Road, New Delhi (Faridabad, Punjab) — Injection moulding machines (up to 250 gms.) 90 Nos.; Extrusion Machines 36 Nos.; Dies for the above 250 Nos.; M/s. example, in India during the first (1951-52 — 1955-56) and second (1956-57 — 1960-61) five-year Plan periods, the growth rate stood at 3.4 and 3.7 per cent respectively; whereas in the first two years of the third five-year Plan (1961-62 — 1962-63), it fell to 2.5 per cent, barely exceeding the increase in population and remaining far short of the 5.4 per cent planned target.

It is too early yet to evaluate the progress achieved in the ECAFE region from the point of view of the goals of the United Nations Development Decade, but even incomplete statistical data for the first two or three years of the decade reveal that the general picture of economic performance in the region is by no means encouraging. Unless a fundamental change in the pace of progress takes place, the objectives of the Development Decade will hardly be achieved.

This immediately poses the question — what factor or factors have been mainly responsible for this serious inability? It is, even at this stage in the decade, generally agreed that much of the answer emerges from an examination of the performance of the agricultural sector. Agriculture's contribution to the gross domestic product ranges from 34 to 56 per cent in the developing ECAFE countries, and it is the main factor determining the overall growth rate of their economies. After recording a substantial increase of 7.7 per cent in 1961, their agricultural output increased by less than 1 per cent in 1962 and again in 1963. In foodstuffs, the deficiency was particularly marked. The region as a whole, once an important food exporter, has become, on balance, an importer of food. In the first three years of the Development Decade, food production registered an average annual increase of 0.5 per cent, as against an annual rate of population growth of 2.4 per cent. Thus the agricultural sector has failed seriously in its attempt to attain the 4.5 per cent growth target called for by the Development Decade.

The poor performance of the lagging agricultural sector exerts and is likely to continue exerting a depressing influence also upon the other sectors of the ECAFE economies. Lack of agricultural raw materials has tended to reduce the volume of current production in certain industries. Balance of payments difficulties, arising from increased imports and/or decreased exports of agricultural products (especially foodstuffs), have reduced the foreign exchange funds available for financing imports of both industrial raw materials and capital goods, thus adversely influencing both the current and future level of industrial activity. It should, however, be pointed out that, as far as some main export commodities were concerned (e.g. rubber), the failure to achieve desirable increases in export proceeds was caused not from within the domestic agricultural sector itself but by external factors on the demand side which were usually beyond the control of the developing ECAFE countries.

The second main contributing factor — lack of foreign exchange for financing imports needed for development — was thus closely connected with the first one, but at the same time stemmed from the general characteristics of the world market for primary products. Deteriorating terms of trade and relative (sometimes even absolute) declines in the physical volumes of the main export primary products were of great concern to the smaller, export-oriented Asian countries. These not only contributed to the slowing down of rates of growth and to increased difficulties in fulfilling the planned targets, but also sometimes forced the governments to revise the substance of their original plans.

A point arises here, in connexion with external trade, that is of importance when consideration is given to the overall measurement of growth. It has already been mentioned that national income is the commonly accepted yardstick, and that this is so because it gives a measure in money terms of the goods and services produced and available for use in an eco-

nomy. The question arises whether this should be expressed in current or constant prices, and again the procedure generally employed is to take constant prices. This is acceptable for closed economies, but its suitability for an economy in which international trade figures large is open to question. The output of the export sector, when use of real resources is the point at issue, is significant only to the extent that it allows the economy to import resources in exchange. Hence the terms of trade determine the final real contribution of the export sector to the supply of goods and services for each country. For example, an improvement in the terms of trade will have the same effect as an increase in productivity within the export sector itself, other things being equal. In this context, it does not matter whether the improvement in terms of trade results from an increase in export prices or from a decline in import prices. In order to measure the growth in "real output" of the export sector, it is necessary to deflate (inflate) the output expressed in terms of constant prices by means of a terms of trade deflator (inflator).

This is of obvious importance in the case of heavily export-oriented economies, for which the rate of growth measured in terms of constant prices may differ quite substantially from that obtained by taking terms of trade changes into account. A striking example in the ECAFE region is provided by the recent experience of the former Federation of Malaya. In the Malayan second five-year Plan, it was expected that the gross output would grow by 4.1 per cent annually and that this would result in an annual increase of 0.8 per cent in 'per capita' income. The plan realistically allowed for a decline in the prices of the main export product (rubber) which was supposed to lower the rate of increase in the real output to 2.7 per cent annually and cause a slight decrease in 'per capita' real income. However, the decline in rubber prices proved to be even sharper than expected and thus, in spite of an annual 4.6 per cent growth in GDP at constant prices in 1961-62 (0.5 per cent above the planned rate), the annual increase in GNP at current prices (reflecting the decline in rubber prices) stood as low as 1 per cent, and 'per capita' real income declined by more than 2 per cent annually. Ceylon provides a similar example. In both these cases, separate calculations taking into account the price movements within the foreign trade sector are given in Table I which shows generally the planned and actual rates of growth in constant prices.

(b) Terms of trade effect, taken into account.
(c) Gross National Product.
(d) Decline in price of rubber taken into account — GNP at market prices.
(e) The rates of growth for the recent years are not available officially. But it is tentatively calculated that, in Iran, the rate of economic growth after the introduction of the stabilization programme has been below the rate of population growth.
(f) In March 1964, this target was revised to 5 per cent per annum for the remaining period of the Plan, 1964-1966.
(g) 1955-1960.
(h) Net National Product at factor cost — prices of 1955.

Foodgrains Prices for 1964-65

IN PURSUANCE of its declared policy to ensure a fair price to the producer and to stabilise consumer prices by keeping the margins at different stages of marketing at reasonable levels, the Government of India has decided to fix the prices of paddy, rice, wheat, gram jowar, bajra and maize for the 1964-65 season.

Pending the setting up of the Agricultural Prices Commission which would recommend the prices of Agricultural produce on a scientific basis, Government had appointed the Foodgrains Prices Committee under the Chairmanship of Mr. L. K. Jha to advise on the determination of prices in respect of the coming season. On the basis of the recommendations of this Committee and in the light of the discussions held with the Chief Ministers and Food Ministers of State Governments, Government has fixed the producer's prices at which it will be prepared to purchase all paddy offered to it at the declared assembling points. These prices are given in tables I and II for standard varieties of paddy. The prices of other varieties of paddy would be determined by the State Governments in relation to the prices of standard varieties. In order to stabilise the paddy prices at reasonable levels, which in turn would impart stability to the rice prices, Government have also determined the maximum statutory prices of paddy at assembling points, including the mills and dealers' premises. These maximum prices will be higher by one rupee per quintal than

the producer's prices. If paddy prices tend to rise above these maximum prices, Government will step in to requisition paddy at these prices.

The paddy prices thus assured to the producer contain an element of incentive. These prices are higher than the average prices received by the producer in the post-harvest period during the past three seasons.

Having fixed reasonable prices of paddy for the producer, Government has decided to evolve a three-tier price structure for rice by fixing statutorily the ex-mill wholesale prices, the wholesale prices at the consuming centres and the retail prices. In determining these prices, Government has allowed reasonable costs and margins for the intermediaries.

The State Governments are being authorised to determine the rice prices at the three stages for different varieties and at different places and enforce them along with the paddy prices from appropriate dates, depending on the arrival of the new crop.

Reasonable costs and margins having been provided for in the price structure, it is hoped that the trade will co-operate in maintaining the prices at different stages within the statutory ceilings. In case the prices show a tendency to rise above the maximum statutory levels, Government would not hesitate to requisition rice at the statutorily fixed prices. The enforce-

RECORDS AND STATISTICS

Development Planning in ECAFE Countries

"TO AN increasing extent, countries in the ECAFE region are gaining experience in economic development planning as a technique for spelling out in more specific terms their national aspirations for progress, and for generating dynamic forces in both the public and private sectors which will induce vigorous economic growth. The degree of emphasis and the priorities determining the actual patterns of growth, the paths to the planned goals and the policies formulated to attain them have, of course, differed according to the political, social and economic conditions in each country", says the paper, entitled "Development Planning in ECAFE countries in the recent past — achievements, problems and policy issues", which was prepared by the ECAFE Secretariat as a preliminary draft for use at the session of Conference of Asian Economic Planners.

However, one thing that some ECAFE countries have had in common has been the difficulty of initiating the policy-oriented process of growth itself. Backwardness in institutional patterns has, for example, been an inhibiting factor in transplantation of modern economic organisation or techniques. Rudimentary infra-structures, inadequate in the extreme for encouraging industrialization, have made economic ventures both costly and risky. High illiteracy and low educational standards have limited the capacity of the economy to absorb these new ideas and techniques, particularly on account of the scarcity of skilled labour or managerial skills. In some countries, political instability or insecurity has negated attempts to map out meaningful economic goals for the nation's growth. In several others, a lack of adequate and reliable statistical data has proved almost fatal.

These are but some of the dire problems facing Asian planners today. In view of all these difficulties, the progress made, in a relatively short time, in terms of experience both in plan formation and in execution, has indeed been impressive.

A Broad Picture

The purpose of this paper is to provide a broad picture of the actual achievements of ECAFE countries over the recent past measured against what they hoped to achieve, as revealed in their economic plans. For one reason or another, actual achievements have usually fallen short of planned goals and this immediately gives rise to the question — just what are those reasons? These are discussed briefly and in this way is opened up the broader field of the problems and bottlenecks faced by Asian planners in attempting to formulate and execute their plans.

Any attempt at evaluating plan achievements immediately raises the problem of devising a satisfactory evaluation procedure; and, in this regard, it may be noted that, while planning techniques themselves have over recent years taken on increasingly sophisticated forms, evaluation procedures have received but scant attention and are still rudimentary. While the main reason for this is probably that the whole question bristles with seemingly intractable theoretical difficulties, the fact remains that evaluation of achievement is one of the most important steps in planning. If carried out thoroughly and soundly, not only does it highlight deficiencies in execution and thus indicate where administrative procedures need improving, but it also highlights the shortcomings of the plan itself and thus leads to improvements in the actual technique of planning.

In order to produce a more sophisticated method of evaluation than merely comparing the results achieved with the target planned, these theoretical issues must be thoroughly

explored and all the possible elements of an economic planning situation examined. For example, one may consider the stated plan in relation to an optimum plan in order to highlight deficiencies in the plan itself. In similar fashion one may isolate the effects of government execution of the plan and the effects of exogenous factors upon the plan. These three types of possible factors contained in a superficial evaluation must somehow be evaluated separately in quantitative terms, which can be done by relating them to ex-post data of the GNP assembled in different ways. The conceptual problems here are severe and need close consideration.

Ideally, this should be done in great detail with the use of a comprehensive macro-economic model, but first steps in this field must make more use of limited and modest analytical techniques for, in the first place, detailed data of the kind needed are not readily available and, secondly, the technique itself may change as it becomes more sophisticated. The methods must also be applied to particular countries, through the use of case studies, in order to give them an empirical content.

Lag in Agriculture

Economic growth in the ECAFE countries has slowed down in recent years and in most countries has fallen considerably short not only of current targets, but also of previous achievements. This has been mainly due to difficulties in the agricultural and export sectors and the effects have spread to other sectors. Structurally, there has been a distinct movement away from agriculture and towards industrialization in most countries, though the specific patterns of structural change have differed greatly throughout the region.

Some of the obstacles and bottlenecks lie beyond the control of the planners; others may be eliminated or modified by better plan administration based upon improved technical competence and fed by more reliable and comprehensive statistics. While these factors vary in intensity from country to country, some broad generalisations may be made which would apply to all the developing ECAFE countries. For instance, by and large, the problem of achieving adequate domestic savings and investment is widespread and is a crucial and continuing one. Likewise the strategic importance of the foreign sector and the problems generated therein have grown apace in recent years. Efficient utilization of manpower resources on all levels demands close investigation. Particularly in the fields of skilled labour and entrepreneurial ability, serious bottlenecks have developed to prevent the efficient utilization even of existing capital resources. Defence expenditures have eaten into meagre resources and held down rates of growth. Sociological factors — habits and conventional attitudes — have inhibited innovation.

The performance of the export sector of the ECAFE countries has also been far from satisfactory. To close the gap between export earnings and import payments, which is financed by the inflow of foreign capital and aid, governments have, with varying degrees of success, pursued programmes of import substitution and export diversification.

Apart from the above problems which emerge as obstacles to the easy realization of plans, the problems which confront the ECAFE countries in particular are those that are connected with the agricultural sector, capital formation, organisational capacity and the supply of labour.

In the sphere of agriculture, the main areas to which policy-makers should concentrate are: improvement of techniques and the material basis of production so as to lessen de-

pendence on natural phenomena; adequate supplies of agricultural inputs from industry, efficient administration down to the farm level of measures designed to increase agricultural productivity; adequate infra-structure development; institutional changes, including reforms of land tenure system and producer-distributor relationship; and a better man-land ratio.

Paucity of capital in general has been a serious problem confronting the developing ECAFE countries in the fulfilment of their plans. The main factors to which the planners should direct attention in this respect are: effective mobilisation and channelisation of domestic saving; transforming commercial capital into industrial capital; eliminating idle capacity in industry; adequate infra-structure development; and intra-regional and international co-operation for wider markets.

Good entrepreneurship and administration are the other two factors which are in short supply. The measures suggested to overcome this bottleneck are: expenditure on education and other social overhead capital; effective reform of the system of administration and management in general and for plan execution and evaluation in particular and development of applied research.

In addition to entrepreneurship and administration and forming part of the reservoir of "human resources" is the supply of labour. Here the emphasis is on quality rather than quantity and policy-makers should pay attention to improving skills by re-orienting general educational system to meet the requirements of the economies and by concentrating attention upon vocational and technical training.

One is also able to appreciate the comprehensive and complex nature of the obstacles confronting the nations of Asia and to appraise their creditable efforts to overcome them. Planning in the ECAFE countries, after all, does not just consist of applying a proved technique to a set of statistical data. It translates into objective terms the subjective responses of a group of planners to the fears, frustrations, hopes and ideals of a vast proportion of the Asian peoples. Apart from technical competence it calls also for courage and vision. The attainment of an ultimate result consonant with the dignity of the human spirit and able to provide the satisfaction of momentous achievement may well depend upon these qualities.

Rates of Growth

In most countries of the ECAFE region, the achievement of a certain rate of economic growth forms the principal objective of the development plans. It has usually been expressed in terms of an annual compound rate of increase in national income (alternatively gross domestic or national product) and per capita income. In the case of some countries (e.g., Nepal and Afghanistan), the absence of such quantified growth targets has been due rather to lack of adequate statistical data at the aggregate level than to strong preferences for any other basic aim. Other objectives such as increase in employment, more equal distribution of income, balance of payments equilibrium, internal financial stability, etc., have been regarded as more or less subordinate to the main one, or as representing side conditions in relation to the overall income growth target.

This is not to say that there have been no differences among national plans as regards the emphasis placed on different objectives. Some countries (e.g. Thailand) have explicitly stated in their plans that internal financial stability must not be sacrificed for the sake of achieving a higher

rate of growth. Some countries with population pressure (i.e. India) have laid more stress on employment objectives than have those countries in which population increases and the need for providing employment opportunities do not as yet present pressing problems (e.g. Burma). Balance of payments considerations have generally been accorded close attention and plans have taken account both of the present situation and of expectations in regard to foreign exchange reserves, export earnings and foreign aid. Some countries (e.g. India) have explicitly given as one of the main objectives in their long-term plans the elimination of the need for foreign aid at a certain future date.

However, in spite of various differences in the sets of objective and the importance accorded them, all countries have tried to use planning as an instrument for accelerating the process of economic development in aggregate terms; thus it seems appropriate, when evaluating the achievements made under development plans, to begin with an analysis of the countries' respective growth rates.

As can be seen from Table I, some countries were more ambitious than others when determining the planned rate of growth for the early sixties. China (Taiwan) at the top of the list planned for an 8 per cent annual rate and Pakistan and Indonesia at the bottom for a 3.7 per cent rate.* If the per capita income growth is taken as a yardstick, rather than national income or gross product, the ranking of countries changes slightly; the former Federation of Malaya goes to the bottom with a planned per capita income increase of less than 1 per cent. It should be noted that, with the exception of Malaya, Indonesia and Pakistan, the Asian countries set their growth targets at, or above, the rate of economic growth which was regarded both as desirable and as a feasible minimum for developing countries in the United Nations Development Decade.

However, the actual rate of growth achieved in the early sixties has so far fallen short of planned targets in most of the Asian countries. Almost all of them planned for an acceleration of economic growth and thus their planned rates for the first half of this decade were generally higher than those actually recorded in the last decade; but only two countries have so far been able to realize their expectations.**

Pakistan, after a 2.0 per cent annual growth rate during the last decade, planned for a 3.7 per cent annual increase in national income for the 1960-61 — 1964-65 period and during the first three years of it achieved a 4.2 per cent rate. This meant quite an important change from an economy which had previously been relatively stationary, in the sense of depressed per capita incomes (which decreased by 0.2 per cent annually in the 1950's), into a growing one. Thailand's rate of growth in 1961-63 (5.8 per cent) was also higher than both that of the fifties (4.7 per cent) and the planned target (5.0 per cent), but the income growth per capita was slightly lower than planned.

In one sense it cannot be said that the planned targets of the developing Asian countries were too ambitious; in fact the planned per capita income growth rates reflected in most cases minimum developmental needs. The cause of the failure to achieve planned targets lies rather in the fact that, in most of the countries, a general slowing down of economic development took place. The growth rates achieved in the early years of this decade generally were, in fact, not only short of the planned rate, but also lower than those of 1950's. Thus for

* Pakistan's growth target was later revised upwards to 4.4 per cent.

** The former Federation of Malaya achieved in 1961-62 a rate of growth in terms of constant prices which was higher than the planned rate. This was also higher than the actual record of growth in 1956-60. But, due to the decline in prices of rubber, the increase in real income was much lower than expected in the plan.

TRADE MARKS NOTICE

Notice is hereby given that Messrs. Atul Products Limited, Atul P. O. Via Bulsar, are the owners and Proprietors of the following Trade Marks:-

The said marks have been registered under Nos. 212207, 212208 and 212209 in class one, two and five in respect of Dyes, Chemicals and Pharmaceuticals respectively. Any infringement, colourable imitation or fraudulent use of the marks will be dealt with according to law.

"Where's your permit to carry gold?"

ment of this price structure should bring relief to the consumer.

Government has also decided to fix the producer's prices for wheat for the 1964-65 season starting from February-March 1965. These prices are as follows:

	(Rs. per quintal)
Red variety	45.50
Common White Variety	49.50
Superior Variety	53.50

The State Governments are being authorised to announce producer's prices for gram within the range of Rs. 40.00 to Rs. 40.50 per quintal for the 1964-65 crop, which would start arriving some time in February-March 1965. Government will be prepared to purchase all wheat and gram offered to it at these prices at the declared assembling points. The prices at subsequent stages of marketing will be determined before the new harvest.

As regards coarse grains, the State Governments are being authorised to fix prices for jowar, bajra and maize within the range of prices given below:

		(Rs. per quintal)
Jowar	Yellow	38.00 to 38.50 (with suitable discount for red variety and premium for white variety).
Bajra	F.A.Q.	40.00 to 40.50
Maize	F.A.Q.	36.00 to 36.50

The State Governments would be prepared to purchase these grains at the prices fixed by them at the declared assembling points, and, if necessary, to requisition these grains at these prices.

bling points, and, if necessary, to requisition these grains at these prices.

TABLE I.
PRODUCERS' PRICES FOR STANDARD VARIETIES
OF COARSE PADDY AT ASSEMBLING POINTS
(Rs. per quintal)

State	Variety	Producers' Price at Assembling Points
(1)	(2)	(3)
1. Andhra Pradesh	Akkullu	.. 38.00
2. Assam	Winter Sali	.. 34.00
3. Bihar	Coarse	.. 35.00
4. Gujarat	Sathi	.. 39.00
5. Kerala	Palaghat Matta	.. 40.00
6. Madhya Pradesh	Gurmutia	.. 34.00
7. Madras	Kattaisamba	.. 38.50
8. Maharashtra	**	.. **
9. Mysore	Dabbansala	.. 36.50
10. Orissa	Common	.. 34.00
11. Punjab	Begmi	.. 35.00
12. Rajasthan	Suthersaul	.. 35.00
13. Uttar Pradesh	Grade III	.. 35.00
14. West Bengal	Common	.. 37.50

**Maharashtra Government have already announced a price of Rs. 41.00 per quintal of paddy.

TABLE II.
MAXIMUM PRICES OF STANDARD VARIETIES OF PADDY AND RICE

State	Variety	Maximum Statutory price of paddy at assembling points	Ex-mill whole- sale price of bagged rice at assembling points	Name of the consuming centre	Wholesale price of rice at the consuming centre in Col. (5) (Rs. per quintal)	Retail price of rice at the consuming centre in Col. (5) (Paise per kg.)
		(Rs. per quintal)				
(1)	(2)	(3)	(4)	(5)	(6)	(7)
1. Andhra Pradesh	Akkullu	.. 39.00	64.33	Hyderabad	69.03	71
2. Bihar	Coarse	.. 36.00	59.67	Patna	66.13	68
3. Gujarat	Sathi	.. 40.00	64.10	Ahmedabad	69.56	72
4. Kerala	Palghat Matta	.. 31.00	66.68	Trivandrum	71.76	75
5. Madhya Pradesh	Gurmatia	.. 35.00	56.70	Bhopal	62.95	65
6. Madras	Kattaisamba	.. 39.50	64.45	Madras	67.72	71
7. Maharashtra	Jada	.. *	65.50	Bombay	71.06	73
8. Mysore	Dabbansala	.. 37.50	62.25	Bangalore	67.75	71
9. Orissa	Common	.. 35.00	59.50	Rourkela	63.20	67
10. Punjab	Begmi	.. 36.00	60.00	Chandigarh	65.00	68
11. Rajasthan	Suthersaul	.. 36.00	60.00	Ajmere	65.00	68
12. Uttar Pradesh	Grade III	.. 36.00	60.00	Varanasi	65.00	68
13. West Bengal	Common	.. 38.50	64.00	Calcutta	67.80	70

Note: (1) Prices of rice are inclusive of all taxes payable up to the previous stage.

(2) Prices in columns (4), (6) and (7) have been worked out on the basis of the paddy prices given in column (3) and after allowing for the costs and margins as agreed upon in consultation with the State Governments.

*Maharashtra Government have already announced a price of Rs. 41.00 per quintal for paddy.

Not by Regulations Alone

THE PERFORMANCE of India's exports is X-rayed almost every year. Special committees look into the problems of exports and suggest remedies which are supposed to bring about revolutionary changes in the export trade resulting in a substantial boost. Last year did witness a significant rise of nearly Rs. 100 crores in India's exports. The experiments in X-raying the activities of the exporters have been continued even this year and two reports were made available recently, one dealing with the proposals of the Selectivity Committee and the other with the Cost of Export Credit. While the latter report makes a plea that the cost of export credit should be reduced — and nobody will quarrel with this realistic recommendation designed to make Indian exports competitive and to reduce the burdens on Indian exporters — the former on selectivity lays down certain rules and regulations in regard to the organization of the export trade. On the face of it, the recommendations of the Selectivity Committee are designed to encourage the genuine exporter and to eliminate the fair-weather exporter who jumps in for quick gains and leaves the field when resistance shows its face. But there is a danger that the imposition of new hurdles and fresh red-tape will add to the difficulties of the exporters instead of reducing them. The exporters have frequently complained of the labyrinthic procedural delays, especially those relating to the incentive schemes; any further complication without careful thought may cut at the roots of the cause which the Committee wishes to see prosper.

The Selectivity Committee was set up in November last year under the Chairmanship of Mr. A. Ramaswami Mudaliar to evolve a selective approach whereby groups of competent and quality-conscious exporters working in co-operation would specialise in export trade with particular regions. The approach of the Committee was based on the desire to lay down guide lines whereby the export aids are extended selectively only to those exporters who have a genuine interest in export trade and have also the capacity to undertake it. The Committee realised that overseas marketing today is a highly specialised business and only those trading units which can reasonably be expected to deliver the goods and possessed the necessary expertise, capacity and resources, should be encouraged.

Already there is a certain measure of screening of exporters, but it does not seem to be working efficiently. For example, the scheme of recognition of certain business houses as export houses is an attempt in the same direction. As far back as 1958, it was stipulated that a business house would have to satisfy certain rigid criteria before it could be qualified for recognition as an export house. One of the tests for eligibility was "export performance." Even though the record of "export performance" of some of the export houses was not very encouraging, yet they remain on the list of export houses enjoying all the assistance provided for conducting market surveys, undertaking export publicity and the allocation of lumpsum foreign exchange to cover business travel requirements of their representatives.

Again, the Export Promotion Councils in recent years have provided another means of screening the exporters. In order to qualify for grant of benefits under the Export Promotion Scheme, the exporters must be registered with the appropriate authority which is the concerned Export Promotion Council. Any exporter who has a good record and experience is eligible for registration with the Export Promotion Council. But under the existing rules, an exporter of a single product is registered with the Export Promotion Council dealing in dozens of export items. This also

works against the principle of selectivity.

The Committee has suggested that the concept of selectivity should be applied by categorising exporters into a three-tier pattern. The registered exporters should be at the lowest level and they should be grouped into suitable panels. The export houses should form the second level while the third level should consist of consortia of exporters in a product or a group of products. At the first level of registration of exports, care needs to be taken in relation to the export of non-traditional commodities because exports in these cases are associated with grant of incentives which may be misused but which can certainly be employed as a measure of selectivity. The Committee has recommended that the criteria for registration should be "separate and distinct" for each product or group of products. The following five criteria have been suggested by the Committee:

- Installed capacity and actual production if the exporter is a manufacturer; tie-up arrangements with domestic suppliers if the exporter is a merchant;
- Quantum of domestic and export turnover in the product or allied products;
- Quality specifications of the product including inspection and testing facilities available prior to export;
- Record of commercial disputes and their settlement; general standing in trade;
- Overseas channels of trade and customer servicing facilities.

The formulation of the criteria as well as the rules of registration, in the opinion of the Committee, should be left to the Export Promotion Council, though the rules are suggested to be subject to the approval of the Government. It is recommended that omnibus registrations should be eliminated and all applications should be scrutinized in respect of the products for which they are qualified in terms of the rules. It will ensure that exporters with capacity and resources to undertake export trade will receive the incentives provided by the Export Promotion Scheme. It is also suggested by the Committee that all the registered exporters of any product should be formed into a panel within the framework of the concerned Export Promotion Council, and each panel should lay a voluntary convention of trading covering all or any of the following aspects:

- Maximum and minimum prices for different qualities and specifications;
- Quality control;
- Export quotas, global or regional;
- Agreements on delivery schedules, payment terms, commissions, packaging and after sales benefits and other customer services;
- Specification of the range of brands to be handled by each exporter wherever appropriate;

- Reporting and settlement of commercial disputes.

It means that only those transactions which conform to the convention of trading will qualify for the grant of incentives. Any member who does not abide by the convention of trading may be expelled from the panel.

In the case of the traditional exporters which normally do not attract any incentives, the Committee has made the following suggestions:

- Registration of exporters on the basis of well-defined criteria such as previous performance;
- Fixation of maximum and minimum prices;
- Quantity-wise limitation on exports and fixation of quotas;
- Registration of export contracts;
- Pre-shipment inspection and quality control;
- Regulation of trading practices such as prohibition of consignment sales, etc.

In many cases action on these lines has already been taken by the Government or by the trade so as to ensure some sort of regulation. In this category fall commodities as tobacco, coir, mica etc. Since cotton textiles form a part of India's traditional exports but still draw special incentives, the Committee has put forward the vague suggestion that "the procedure suggested by us for non-traditional commodities could be applied wherever circumstances so warrant."

The export houses, in the opinion of the Committee, need to be encouraged but on the condition that "good performance" will be the basic consideration for

"The movement is spreading — Prize Resistance."

continuance of recognition. The whole scheme relating to export houses, the Committee has opined, needs to be revised so as to eliminate partnership firms and proprietary concerns; there should be insistence upon a minimum share capital of a company and recognition should be made only in relation to specific commodities and markets for a period of three years, renewal being dependent upon export performance. Recognition should be granted to those business houses which possess the following qualifications:

- Substantial experience in handling the commodities in question for export generally and preferably to the selected markets.
- Exporters constituting a substantial proportion of production in the case of manufacturing concerns; and export turnover constituting a substantial proportion of total turnover in the case of trading concerns.

The Committee has suggested the formation of consortia of exporters for the sale of identical or complementary products. They are expected to be highly successful where the monopoly purchasers abroad have

Automation Without Tears

COMPUTERS HAVE been in the news lately. Mr. Harold F. Smiddy, a retired Vice-President for Management GEC, US, told a Seminar on "Organisation and Information for Top Management Control", sponsored by the Bombay Management Association and the All-India Management Association in collaboration with the USAID, in Bombay, that computers would play an increasingly vital role in the decision-making functions of future executives. The complexities of modern business, he said, have made it imperative for executives to rely more and more on machine-minded control file systems for taking the right type of decisions. Almost simultaneously, Mr. B. K. Kaul, Chairman of the Life Insurance Corporation of India, was trying to convince his employees that the proposed installation of electronic computers in the Corporation was an imperative need of the LIC. It is not known to what extent he succeeded, but he did make the impressive thesis that computers do not lead to retrenchment, certainly not on the scale apprehended, and that, contrary to popular belief, developing countries stand actually to benefit more from the use of computers.

We may not have gone as far as the other economically advanced countries in introducing automation, but we have certainly gone as far as, if not further than, such countries in opposing automation, to judge from the reactions of the employees of the Life Insurance Corporation to the installation of electronic computers. It is amazing how sensitive and quick trade unions everywhere are in reacting to any innovations that are likely to displace human labour.

to be dealt with. In the case of East Europe, for example, where every country has only one importing organisation for a particular product, competition amongst Indian exporters tends to create chaos through reduced prices and the consequent fall in quality, bringing a bad name to the country. In these cases particularly, the consortia can be of great utility and assistance. It is necessary, however, that the volume of new regulation should be kept at the lowest possible level so that the exporters do not feel hampered in their normal activities which, according to them, are already bedevilled with numerous obstacles. Again, the new frame-work of rules — to be framed by the Councils — should be simple and straight-forward so as not to escape the comprehension of the common exporter. As far as possible, the consent of a majority of exporters engaged in the export of a particular product should be sought. It will, however, be unrealistic to put too much faith in these regulations and the Committee has rightly concluded that all these suggestions alone may not raise exports; they must be supplemented by suitable actions on different planes. Then and then alone can the objective of increased exports be achieved.

When this is the case even in countries where shortage of manpower favours capital-intensive industries, it is but natural that, in developing countries with large populations like India, labour should view with suspicion not only industries that are not labour-intensive but also any new device that may even remotely lead to displacement of labour. But, in the rapidly shrinking and highly competitive sophisticated world that is emerging, where it is the relentless economic law of costs that prevails ultimately, labour-saving or cost-reducing applications are bound to prevail sooner or later. If this is recognised — and it is prudent to do so — the best minds in the country can engage themselves not in resisting automation but in ensuring how best to minimise loss of employment and human suffering to the maximum extent and to bring down unit costs as much as possible so as to enable our goods to meet the competition from any part of the world. In this connection, it is perhaps worth mentioning that labour in the US, which is a force to reckon with, while not going all out to welcome automation, has accepted the inevitability of it in the circumstances obtaining today. Even in the UK, labour's attitude to automation has undergone a refreshing reorientation.

One cannot say that labour's view on automation in India has as yet crystallised, notwithstanding the known opposition, for instance, of textile workers to the installation of automatic looms. But the Government's view has been more or less spelt out by the Planning Commission, and, more than the Planning Commission, by the late Prime Minister. Defining the scope of rationalisation in Indian conditions, Jawaharlal

Nehru said this as early as on May 31, 1955:

"We want higher techniques, greater efficiency, a more rationalised system of work, but we certainly do not want people to be thrown out of work. Therefore, the broad policy the Government have adopted is that, where any rationalisation takes place, the people must be guaranteed work, i.e., no one should be thrown out. Also, broadly speaking, our approach is this: All new plants that we put in must be of the latest techniques, the newest type and, generally speaking, we should throw in our resources on additional employment rather than on improving an old unit which might create unemployment. We do the latter only when we can provide employment for those who might become unemployed. That is the broad approach".

If we apply the above test, it would seem, there should be no opposition to the proposed installation of electronic computers, as outlined by Mr. Kaul. The LIC Chief has given a categorical assurance that "the introduction of computers will not lead to retrenchment of even a single employee." Besides, as he has explained, "a change-over to computer operation is an imperative need for the LIC", which has today reached a size over nine times that of the biggest insurer in pre-nationalisation days.

It should be evident to the meanest intelligence that the mammoth nationalised life insurance organisation has long outgrown either the old manual methods or the later punched card machinery stage. The punched card system has its limitations, as any LIC policyholder will corroborate, and the steady expansion of the Corporation has only made these limitations all the more obvious. Mr. Kaul is surely on unassailable grounds when he complains that these limitations have come to be a hurdle in the way of efforts being put in by the LIC for improving the efficiency of its administrative operations. Those who insist on greater efficiency and improved service to policyholders will, therefore, readily endorse his stand that it is now advisable for the Corporation to pass on to a more sophisticated form of mechanisation such as that offered by electronic computers.

But it is not merely greater efficiency and better service that the public want today. Life insurance cover at a cost considerably lower than today is the growing demand. That is also the desideratum that the LIC must seek to achieve, although Mr. Kaul does not seem to lay equal stress on it. But whether it is lower cost or fair and adequate return to the policyholder, or improvement of benefits to employees, or adoption of more progressive and attractive policy offers, the crux of the matter is costs. It is imperative that the LIC must do everything to secure a more effective utilisation of existing manpower and a greater husbanding of its resources by intensive and extensive control on costs. Here, Mr. Kaul is right in distinguishing between lower unit costs and reduced overall costs. The latter may inhibit growth and if this is not to happen and yet costs must

be controlled to make an input of every rupee yield a vastly improved output, the answer is more effective office systems and better utilisation of manpower. In other words, "the onslaught on rising costs is possible only through modernisation of office system and methods of work." Without this, not all the dedication of the staff, nor its abilities will yield results. To quote the LIC Chief himself, "with all the will on the part of employees to perform their work more efficiently, the limitations of existing office systems must necessarily act as a restraint on output". The remedy lies, therefore, in the instalment of computers, and the following claim is not from any advertisement legend but from a note on the subject by Mr. Kaul:

"Computers provide an efficient tool in the application of the science of information technology to office systems and thus provide a means of modernising them. They offer a system of mechanization which is efficient, accurate and calculated significantly to reduce unit costs."

This note is worth pursuing not only by the LIC employees but by all those who have misgivings about automation, for Mr. Kaul has extensively cited the experience of other countries effectively to establish that, far from being the curse that it is depicted to be, it has turned out to be a great blessing wherever it has been judiciously employed.

Eastern Economist 20 Years Ago

NOVEMBER 3, 1944

Last week-end at Bombay Sir Ardeshtir Dalal presided over the General Policy Committee (Post-War Reconstruction) and also at the first meeting of the Industries Policy Committee of his Department. Full proceedings of the meetings are not yet available to the public, but the opening speeches by Sir Ardeshtir convey some idea of the general trend of governmental thinking at the level of policy making, although they give the public no more than the haziest notions of the extent of useful spadework already done by the various authorities and also how far these several schemes could fall into the coherent patterns of a general plan. For, let it be admitted at once, frankly and fully, that the Government has not yet in all its labours for planning and policy-making taken the public into that measure of confidence which is warranted by the very nature of successful planning, viz., the necessity of eliciting and evolving massive popular support, which would be impossible if the people are conceived merely as passive beneficiaries. It is true that the essential framework of general policy can only be formulated by an expert, but even here, unless the expert discussions are carried out in open, the essential atmosphere of successful planning cannot evolve. Although Sir Ardeshtir himself, who is part author of the Bombay Plan, is the Member-in-Charge, there are already suggestions, no doubt unproven in some quarters, about powerful forces, not always above board, bearing on policy-making decisions and mellowing the enthusiasm of many radicals.

Highlights of the Week

BOOSTING SUGAR OUTPUT

THE SUGAR Prices Enquiry Commission, set up by the Union Ministry of Food and Agriculture a couple of months ago under the chairmanship of Dr. S. R. Sen of the Planning Commission, has expressed itself against partial decontrol of sugar as a measure to stimulate production. This plea of a section of the sugar mill industry rejected early this year by the then Union Minister for Food and Agriculture, Sardar Swaran Singh, on the score that it would create a dual price system in the market, leading to many a complication, has again failed to gain acceptance. The Sen Commission feels that partial decontrol of sugar in the present scarcity conditions will be undesirable as it may result in a spurt in consumption.

But with a view to stepping up sugar output, the Sen Commission has made a number of other useful recommendations besides the two — (i) increase in the minimum cane price; and (ii) grant of 50 per cent rebate of the basic excise duty on October and November production which is in excess of the output in the two corresponding months of 1962 — which have already been accepted by the Government. (The Government's decisions on these two recommendations were reported in "Eastern Economist" dated October 23, 1964).

In addition to the 50 per cent rebate of basic excise duty on excess production in October and November this year compared to the production in these two months two years ago, the Sen Commission has also recommended excise duty rebate to the tune of 20 per cent during the normal season of 1964-65 on additional production of 10 per cent over the output achieved in 1963-64 and 40 per cent if the additional production is over 10 per cent. In the case of new factories, it has been recommended that production in excess of 85 per cent of their capacity should be considered eligible for rebate.

As regards the fixation of ex-factory prices of sugar and re-delineation of zones for fixing ex-factory prices, the Commission has suggested that from the long-term point of view, the advice of the Tariff Commission or the proposed Agricultural Prices Commission should be sought. For the 1964-65 season, the present zones may be re-formed as follows: Zone No. I: U.P. (except Meerut, Muzaffarnagar and Bulandshahr districts), North Bihar, West Bengal and Orissa; Zone No. II: Meerut, Muzaffarnagar and Bulandshahr districts of U.P., Punjab, Rajasthan, Madhya Pradesh and South Bihar; Zone No. III: Maharashtra and Gujarat; Zone No. IV: Mysore, Andhra Pradesh, Madras, Kerala and Pondicherry. The ex-factory prices (per quintal) in the four zones should be fixed as follows: Zone I Rs. 120; Zone II Rs. 125; Zone III Rs. 116.50; Zone IV Rs. 119.50. Assam will not form part of any zone. The ex-factory price in this State should be Rs. 127.50 per quintal.

For curbing the competition offered by the gur and khandsari producers in respect of cane supplies to the sugar mills, the Commission has recommended: (1) licensing of all the existing khandsari and power crusher units and banning of new units in the areas reserved for sugar factories within 15 or 20 kilometres radius of a sugar factory; (2) re-delimi-

tation of the reserved areas so as to make them compact and to exclude existing khandsari and power crusher units completely from the reserved areas or to provide adequate cane supplies for both the sugar factories concerned and such khandsari and power crusher units as exist in the reserved areas; (3) shifting of the existing khandsari and power crusher units from the reserved areas; (4) imposition of excise duty or some other levy on khandsari and power crusher units up to a level which will restrict their ability to pay a higher price for cane than that fixed by the Government for the sugar factories; (5) regulation of cane supplies to khandsari and power crusher units in the reserved areas through co-operatives of cane-growers which should be formed to enable the Government to have control on the production of khandsari and power crusher units; (6) assessment of the cane crop in the reserved areas and judicious allocation of this crop between the sugar factories and gur and khandsari manufacturers — with a view to making such allocation effective, production of gur within the reserved areas should be permitted only after a specified date or be subjected to some other method of regulation; (7) fixation of ceiling prices for gur and khandsari at Rs. 60-65 and Rs. 100-105 per quintal, respectively, on all-India basis. All these measures should prove of great help in raising sugar output, but at least two of them, namely, shifting of the existing power crusher units in the factory reserved areas and prohibition of gur manufacture in the reserved areas up to any specified date, can be expected to entail political as well as legal difficulties.

For putting the sugar industry on a sound footing in the long run, the Commission has recommended creation of a development fund by each factory out of the profits accruing to it as a result of the excise duty rebate, which may be utilized for modernisation and expansion programmes as well as for other development works. In the interest of ensuring carry-over of stocks from one season to another, it has been recommended that every sugar factory should be asked to keep 25 per cent of its normal product on as carry-over stocks. For any additional carry-over stocks, the factory should be provided financial assistance by the Government or on Government account to enable it to build additional storage capacity.

WELCOME MEASURE

THE LABOUR Government in Britain took this week its first major policy decision. In a statement on the country's financial and economic situation issued in London on Monday, the Government announced "emergency plans for dealing with the extremely serious economic situation" which Britain, presently, is facing. The United Kingdom's balance of payments position — a reliable indicator of a country's health — has not been favourable over some years, and according to the latest estimates, the deficit threatens to cross the £700 million figure by the end of the current year. While the forecast for 1965 is slightly encouraging, the position is "wholly unacceptable" to the new Government. The decision of the Wilson Government, therefore, to levy a surcharge of 15 per cent on all imports, with the exception of foodstuffs, unmanufactured tobacco and basic raw materials, was not unexpected. Such a

step ought to invite criticism from abroad and might well result in reprisals. It was only natural, therefore, that both Mr. Harold Wilson and Mr. James Callaghan, Chancellor of the Exchequer, should have been at pains to explain that the measure was only a temporary one and that the surcharge would be abolished as soon as some improvement in the balance of payments position was recorded. There is no reason to doubt the sincerity of the measure, especially when the yawning gap in Britain's balance of payments is an open secret. It has, however, to be admitted that a large number of countries have been seriously hit by this step. It may not make a significant dent in the balances of trade of a country like the USA, and the countries of the ECM and EFTA, but it certainly will upset the razor-thin balances of the developing countries in the Commonwealth.

According to the estimates made by the Commerce Department of the Indian High Commission in London, India's export trade to the United Kingdom in a year will be affected by the new charge to the extent of 30 per cent. Among the more important Indian manufactured goods that come under the purview of the levy are cotton textiles, jute and coir manufactures, carpets and light engineering goods. India is, however, in a happy position since it has already exported its quota of cotton textiles for the current year. Another redeeming feature of the levy for India is that the export of tea, which is a major Indian export to the U.K., is not affected. Similarly, raw cotton, unmanufactured tobacco, oil-cakes and ores will not suffer any shrinkage in their exports.

In addition to the levy on imports, the British Government has decided to introduce a scheme for repayment to exporters of sums broadly equivalent to the amounts of certain indirect taxes which enter into the cost of production of goods meant for export. Both these measures might well be regarded as the first two of the several necessary to invigorate the economy and check inflation. The developing countries will agree with Mr. Wilson that an economically strong Britain will render better and more effective economic assistance to the weaker and poorer nations. Since a great deal of emphasis has been placed on the temporary nature of the import levy, the affected countries can only find solace in the assurance that it will be scrapped as soon as Britain's balance of payments situation permits.

INDEPENDENT ZAMBIA

THE STARS have seldom been so favourably placed for any country at the time of its independence, as, it seems, they are for Northern Rhodesia, which joined the comity of independent nations on October 24 as the Republic of Zambia. An announcement was made just a couple of hours before the country's independence that an agreement had been reached between the UK and Zambia in the dispute over the mineral rights of the British South Africa Company. With this amicable settlement, all possible ties of misunderstanding between the two countries are removed once for all. Furthermore, with a buoyant economy, a favourable balance of payments, the relative absence of racial tensions, and above all, a dynamic leadership, Zambia is, indeed, well set to face with confidence the strains of planned economic development on which it must embark very soon.

Africa's 36th independent State, and the first to acquire the status of a republic in the Commonwealth, Zambia is the ninth British dependency to attain freedom. It marks the

end of over 60 years of British rule. Zambia has had to pass through many a vicissitude during these years. The British Government assumed its administration in 1924 in terms of an agreement arrived at between the Crown and the British South Africa Company. Twentynine years later, in 1953, the territory joined with the Protectorate of Nyasaland (now independent Malawi), and the Colony of Southern Rhodesia to form the Central African Federation. The Federation was formed much against the explicit will of the African masses. Credit must go to Dr. Hastings Banda, now Prime Minister of Malawi, for his unrelenting efforts in the dissolution of the Federation in December, 1963. In Zambia, Dr. Kenneth Kaunda (the first President of the Republic) led his country's freedom struggle since 1953, as Secretary-General of the African National Congress, founded in 1948. Dr. Kaunda has been described as the greatest Gandhian leader of Africa, and Zambia's independence is the reward for his deep faith in the principle of non-violence, his characteristic humility and indefatigable endurance. That he is popular amongst his people is reflected in the overwhelming majority with which he was returned in the elections held earlier this year, and in his becoming the first unopposed President of the Republic.

Zambia is a large country of 290,587 square miles, with a population of 3.5 million, out of which 76,000 are Europeans and some 10,000 Asians and other coloured people. It is one of the richest nations in Africa, with good prospects for development. The share of mining in the gross national product is 47.3 per cent; valued in terms of money it stands at £94 million. Zambia's copper belt contains mineral reserves which are estimated to last for more than 100 years at the current rate of exploitation. On its debit side are resources of coal and electricity for which the country has to depend on Southern Rhodesia. It is a land-locked country, and its only routes to sea run through Southern Rhodesia, Angola and Mozambique.

Dr. Kaunda's deep faith in Gandhism and his strong belief in non-alignment bring Zambia closer to India. It should be our endeavour, therefore, to help Zambia in its economic development. A step in this direction, in fact, has already been taken. The Government of India has given clearance to an Indian entrepreneur to enter into collaboration with its counterpart in Zambia for the establishment of a mill to manufacture enamel wares.

Africa Goes to E.C.M.

MADAN M. SAULIE

AFRICANS ARE doing some very serious rethinking about seeking association with the European Economic Community. The waves of anti-European sentiments are settling down to make place for realistic thinking. Nigeria, it is interesting to recall, had spurned all ideas of association when eighteen African countries last year signed agreement of association with the 'Six' of the EEC. Ghana and Guinea had described it as a neo-colonialist move to perpetuate unequal relations between Europe and Africa and "making an economic mockery of their political independence and frustrating the Pan-African dream." Tanganyika has constantly been threatening to quit the Commonwealth should Britain join the ECM.

All this seems to be undergoing modifications. The full-scale discussions held some time ago in Brussels between the ECM Council of Ministers and the ambassadors of former British territories in Africa bear an eloquent testimony to this shift in African thinking. The most enthusiastic among the ex-British territories are Nigeria, Tanganyika, Kenya, Uganda and Zanzibar (now a part of the United Republic of Tanganyika-Zanzibar). Less enthusiastic, though equally eager, however, are the countries of the Maghreb — Morocco, Algeria and Tunisia — who were so far content with special protocols protecting their traditional rights in French markets, and who are now anxious for a full-fledged association with the EEC. Dr. Hastings Banda, Prime Minister of recently-freed Malawi, has also expressed his intention to seek association with the ECM for his country on the terms East African countries might agree to with the Six. The chain will thus continue to cover most of Africa in the coming few years.

The Pace Setter

The pace for African association with the ECM was in fact set in July last year by the pact of association signed between the EEC and 18 African States (14 of them ex-French, three ex-Belgian and one ex-Italian territories). The agreement, delayed for over six months by the in-fighting among the Six over Britain's admission, has taken almost a further whole year in being ratified. The pact supersedes the earlier 5-year interim agreement and exceeds it by \$50 million in providing for financial assistance from the Six to the Eighteen to the extent of \$730 million — \$500 million in development capital and \$230 million for diversification of their economies — besides providing for a step-by-step creation of a free trade area. Further, the treaty allows associated members to form customs unions among themselves or with other African countries provided they do not infringe the "principles and provisions of the present convention". This broad-minded approach certainly answers the main African allegation that association with the ECM will be "a bar to internal unity and a dangerous barrier to the growth of inter-African trade." Moreover, the developing countries would be able to draw upon the pooled resources of the ECM for their development plans.

The increasing French influence round the ECM has been noted by West Germany and Roumania, who out of anxiety to counterbalance it have insisted upon keeping open the doors for a second type of association for the Commonwealth countries. The new pattern of association provides for a free trade area without any institutional bindings and development assistance, which form the main thread in relationship of the Eighteen with the Six.

Consequently, Nigeria — a country with the largest population on the African continent — started negotiations with the EEC about association agreement early this year. These negotiations were calculated to be substantially changing the relations between Europe and Africa and boosting up the

concept of Eurafrica which has been taking shape all these years. Nigeria's move more or less shocked Britain and the Commonwealth and imperial preferences seemed to be shrinking to useless privileges. Against this, the image of the ECM looked brightened up, as it dazzled the eyes of still more African countries. The main attraction the ECM offers is the free entry African products can have into Europe as against the European products which may still have to face African tariffs. Moreover, the Common Market being the biggest single importing area, which even the Eighteen may fail to feed adequately with tropical products, the Commonwealth countries might think it worthwhile to step in to fill up the gap. But the Eighteen fear the association of the Nigerian colossus might rob them of their share of aid from and trade with the EEC.

India May be Hit

If Nigeria and East African countries get associated, a vast majority of African countries, would apply for similar association and those already seeking association might step up their efforts. This would bring major part of Africa under the economic and political influence of the EEC; political influence, however, will remain confined to the Eighteen. The Eighteen cover about ¼ of the Continent's population and when Nigeria, Tanganyika, Kenya, Uganda and Zanzibar, become associates over ½ of the population will be within the ECM's fold. Whatever this development means to African countries, it would certainly hit hard the developing non-African members of the Commonwealth like India, Pakistan and Ceylon. Their export trade with Africa will be sharply cut in view of the European imports coming to Africa on preferential terms.

Nigeria, on her part, does not stand to gain much from this association. Already 35 per cent of her exports go to the Six. Moreover, general tariffs on cocoa — Nigeria's main export product — are being reduced from 9 per cent to 5.4 per cent which would remove a serious obstacle from the way of all outsiders, not to speak of Nigeria alone. At Dutch insistence, Nigerian oilseeds are already being imported by the ECM without any duty.

For this little more than the removal of some European tariffs on cocoa or rather reduction of these tariffs, Nigeria will lose link with Britain and might have to give the same import treatment to the Six which she has been giving to Britain. As a result, Britain will feel free to revise Commonwealth preferences on Nigerian cocoa (now at 3 or 4 per cent).

Yet, there can be some point in Nigeria's seeking this association. She will establish a valuable contact with Europe and free of all political ties will reap the benefit of association with the ECM. She would still be able to safeguard her nascent industries and provide revenue for her budgets through tariffs on imports (as most African countries do). Nigeria also hopes that the present European tariff of 10 per cent on refined oils will be reduced.

This Nigerian thinking can also inspire even Ghana — another major cocoa exporter — for seeking association with the ECM. The interest with which the Ghanaian delegate at the last GATT meeting listened to the Nigerian representative without interrupting with attacks points to the line of Ghanaian thinking.

It looks, however, strange that the Organization of African Unity (OAU) has not taken significant note of these economic trends in Africa which would certainly limit the chances of inter-African trade and make the African common market a far-off dream.

WINDOW ON THE WORLD

Economic Growth in France and the UK

JOSSLEYN HENNESSY

LONDON:

EVERYBODY WANTS faster economic growth now-a-days. One way to ascertain how it can be promoted is to try to see how it was achieved in the past. Since the U.K. pioneered the industrial revolution and streaked ahead of all other countries, most theories of growth have been based on examining the U.K.'s record. A solid body of doctrine scattered among many weighty tomes exists. But, if the U.K. led the industrial revolution, France soon took up the running, and Mr. Kindleberger had the idea of bringing together in his newly published "Economic Growth in France and Britain: 1851-1950" (Oxf. Univ. Press 1964. 52sh. 6d.) the theories of growth propounded by British and French economic historians to see if it were possible to build up from them a general theory.

The result of Mr. Kindleberger's wide and exhaustive reading is startling. He demonstrates factually that no general theory of growth exists, since all the leading authorities contradict each other.

Some authorities hold that growth follows an increase in population leading to increased demand, but France experienced vigorous expansion with slow growth of population between 1851 and 1875, and no short-run link between bigger population and greater prosperity can be established in either the U.K. or France. Mr. Kindleberger suspects that population changes in response to other influences which also affect economic growth in the long run, with differential effects in the short.

Rising Exports

The repeal of the corn laws is held to demonstrate the efficacy of free trade, but most of the expansion in the UK exports in 1850-60 came from rising incomes generated by expanding exports and investment, rather than from the decline in tariffs. Tariffs have spurred industries to grow when the capacity to expand in new lines existed (as in the USA and Germany in the 19th century) and they have damped growth when they enabled an economy to refuse to submit to the strains of transformation (as in France before 1850). Vigorous competition does not help when demand is static or declining. Some firms respond to such a situation as some generals attack when their wings and centre crumble; others surrender. Nor is the case for or against monopoly historically clear cut. Small and large firms can be vigorous or torpid. Mr. Kindleberger shows that it is impossible to prove that restraint of competition was a proximate cause of the slow periods of growth, because one cannot explain the changes in a way that would at the same time allow for the periods of expansion.

What about government direction? Some authorities assert that the government should seek economies external to the firm through social-overhead capital — roads, ports, education, public health. French and UK experience is directly opposite in this. The UK launched out into prosperity while canals, roads and railways were being built by private enterprise, but Napoleon III's initiative and spending on canals, railways, town planning, and technology gave France vigorous growth between 1851 and 1875. Yet during exactly the same years the UK achieved its fastest 19th century growth rate under free enterprise. Nationalisation? After World War II, the nationalised industries staggered along in

the UK, without much to show for the vast sums invested in them, while in France they provided much of the stimulus to technological advance.

Family firms come in for criticism in both France and the UK. In France, the critics allege that they slowed growth because in order to retain control within the family, they refrained from maximizing their size. But (1) the average size of French firms tended to be smaller than the British, because it was normally operating in a smaller national market, whereas the proportion of the UK firms operating in world markets was higher, and (2) innumerable French family firms grew into vast enterprises in railways, mines, steel, motors, banks, and department stores. In the UK, the critics allege that family firms lost their pioneering vigour when the succeeding generations preferred to be landowners, M.P.s, statesmen, generals, or ambassadors, rather than business men. The owners either sold out or were content to let their businesses produce enough income to maintain their new status. This may often have been true (although there are plenty of examples to the contrary), but surely the decline in the drive of the old firms should have made it easy for up and coming new men to elbow their way to the front. What stopped them?

Social Transformation

But if the economic theories that Mr. Kindleberger cites remain contradictory and inconclusive, a sociological fact emerges from his analysis, which he does not explain, doubtless because within the present limits of sociological knowledge it is inexplicable, namely, that experience of defeat in World War II effected a social transformation in France. Up to 1939, France was pre-occupied with social stability and safety through redistribution of incomes, tariffs, price supports, and restrictions on competition, intended to ensure that economic and social changes hurt as little as possible — the "Magenot" mentality. After 1945, the French became agreed, in some way that eludes present means of analysis, that whatever their differences on other problems, redistribution, safety, and stability were less important than growth. Before the war the tradition of equality, dating from the revolution of 1789, was aggressively alive, personified in "le Français moyen": the small farmer, the small shop keeper, the artisan, the petty bureaucrat: these were the people whom popular opinion valued as the essence of France. Today, the socially approved type is the skilled worker, the technocrat, the business man, the man with ambitions to "get on". Prestige attaches to performance, to inequality. I suggest that this lies behind the self-confidence, and the sense of excitement in new developments, that one encounters among French industrialists and civil servants. On the other hand, in 1945, the belief in the UK was widespread that the success of financial policy and fair shares in war time was the prescription for post-war recovery, irrespective of hard work and technical ingenuity.

The moral that emerges from Mr. Kindleberger's study is that the will to succeed overcomes the weaknesses of doctrines and the uncertainties of policies. It is, therefore, now up to the sociologists to take over from where Mr. Kindleberger leaves off and to find out how we can rid ourselves of the prevailing national mood, which places the responsibility for progress on the shoulders of a group of fallible men euphemistically called "the government", and turn ourselves into a nation of self-reliant eager beavers. And this applies to India as much as to the UK.

Private Resources for Economic Development

GUY SIMS FITCH

WASHINGTON:

SIGNIFICANT NEW moves are under way to foster an enlarged flow of private capital to the less developed areas of the world. These efforts can help stimulate not only industrial and agricultural progress, but also the indigenous private enterprise and capital markets which are basic to the modernization process. The most ambitious of these private efforts is a recently organized venture to finance economic development in Latin America. It is called Adela Investment Company. Pooling resources to boost private investment in Latin America is a complex of more than 50 major banks and industrial companies from 12 countries. Represented are companies in the United States, Canada, Japan and Western Europe.

Some \$17 million has been subscribed by Adela participants so far, and by the end of this year its directors hope that capital available for investment will reach or exceed \$20 million, as more companies join. Of the total, US companies have contributed the largest share, \$7 million. The very formation of Adela has an added importance of its own. This unique venture represents an outstanding example of effective international co-operation in the private sphere. By establishing a multi-national basis for private enterprise efforts in Latin America, it makes a practical contribution to the unity of free nations on a realistic economic plan. This is in keeping with the growing realization that the responsibilities of economic and social advancement rest with all free nations, whether in the Americas, Europe or elsewhere. There may be a special advantage in starting such an ambitious undertaking in Latin America. That region, after all, has behind it a century and a half of independence, and over the years it has developed some strong national and regional institutions on which to build.

Nevertheless, Adela could set a pattern for joint private action in other developing areas as well. Within the past few weeks, for instance, United States businessmen joined to form an Afro-American Chamber of Commerce to help in

the expansion of commercial and industrial ties with that emerging continent. This is not a joint investment venture in the same sense as Adela, although some such undertaking conceivably could develop from it. Its primary aim is to help stimulate trade and investment by providing a variety of services in some 20 countries of tropical Africa, the area of its chief interest. Membership in this new organization would be limited initially to American companies, and about 50 leading firms have joined it thus far. Among its functions, the organization will be a repository of basic data on trade and investment opportunities, and it will be ready to assist developing African nations with these and other matters. Through the work of this new group, African lands could be put in touch with thousands of American companies capable of assisting them in their development efforts.

Asian Counterpart

Also under study is a Development Bank for Asia, along the lines, perhaps, of the Inter-American Development Bank for Latin America. The feasibility of setting up such an Asian bank could well depend, in the final analysis, on the adequacy, in terms of supply and training, of the kind of skilled manpower needed for its successful operation. As has been noted, private investment can bring not only capital but also the know-how that could help develop this kind of manpower. Contributing to the rising emphasis on private investment, foreign and domestic, is the realization that private enterprise has actual and potential resources at its command that in many instances have barely been tapped. Public — that is, government — assistance programmes now make up the bulk of the more than \$8,000 million a year flowing from the advanced to the developing areas of the world. By and large, private investment has not been keeping pace with the growth of public assistance, and in some parts of the world it actually has been waning for the past several years. Development programmes thus stand to benefit substantially from its encouragement and fruitful use.

IMPRESSIONS OF AN EAST EUROPEAN TOUR—III

Five Days in Moscow

S. P. CHOPRA

FROM THE vantage position of Lenin's Hill, with the University of Moscow on my back, I had a full glimpse of Moscow with its new multi-storied buildings. One element which stood out conspicuously was the large number of tall and heavy cranes with which the city seemed to be studded. I could not help exclaiming: "Moscow looks to be a city of cranes". There is no exaggeration in this because as I moved through the streets of Moscow for five days, I found construction activity going on at a break-neck speed. I tried to collect some factual data on the rate of construction in the city and was informed that about 350 families moved into new flats every day. I was also told that the construction activity was going ahead in the same feverish manner in other cities as well. May be, the allocation of funds for construction in Moscow has been larger in proportion to the size of population, but one cannot help admiring the speed and efficiency with which these new flats are being put up. The gigantic buildings give an inkling of the utilitarian architecture evolved in the USSR. There is not much attempt at ornamentation and finesse, while all the emphasis is on solidity. I also failed to obtain figures regarding the total national housing programme to make a correct estimate of the speed with which the USSR is catching up with the backlog of the housing problem. All that I could gather was that nearly four years ago, Mr. Khrushchev had promised that a satisfactory solution would be found for the housing problem within the subsequent 20 years which implied that the backlog was, no doubt, very large and from what I saw in Moscow, an impression was created that the Soviet Government was doing its best in order to proceed rapidly on the task of tripling the number of dwelling units in two decades.

Adzhubei and Satyukov

In the afternoon of September 25, I was deeply engrossed in a discussion on monopolies with the incharge of the Asian desk in the office of 'Pravda' when a telephone rang and the message came through that I was invited to the House of Journalists where Mr. Alexei Adzhubei, Editor of 'Izvestia' and son-in-law of Mr. Khrushchev, and Mr. Pavel Satyukov, Editor of 'Pravda', were holding a dinner (Russians do not take lunch; their dinner starts at 3 o'clock) to which were also invited the Indian journalists who had accompanied the President, Dr. S. Radhakrishnan, during his tour of the USSR. On reaching the House of Journalists, I found our Ambassador, Mr. T. N. Kaul, in the company of distinguished editors and the Indian journalists. Toasts were offered to Indo-Soviet friendship and brief speeches were made praising the economic achievements of the USSR and the strengthening of the friendly ties between the two countries. I still have a vivid memory of the small room in the hall of the House of Journalists where we met both the distinguished editors. One could not guess the dramatic changes which were to follow within three weeks, sweeping away in one stroke both these pillars of the Soviet Press.

What are food prices like in Moscow? This was a question which I wanted to investigate and on the last day of

my stay in Moscow, I visited one of the big food stores. The prices which I collected are given on page 827, both in terms of kopecks and Indian rupees. It may be remembered that 90 kopecks make a US dollar, while Rs. 4.76 are equivalent to a dollar; it means that 100 kopecks or a rouble are equivalent to a little more than Rs. 5. The table shows that most of the foodstuffs, especially butter, mutton, chicken, eggs, etc., when converted into rupees look relatively high in prices as compared to New Delhi prices. It may be conceded that conversion of the rouble into Indian rupees at the prevalent rate of exchange is artificial and, therefore, the comparison does not hold. What is more realistic is that the prices of these commodities should be related to the earnings of the people. On enquiries it was found that the minimum monthly wage in the USSR was around 50 roubles which is equivalent to more than Rs. 250. The minimum wage applied to unskilled labour or the old people who were not capable of doing arduous jobs. Earnings, on the average, ruled above 100 roubles per month which is more than Rs. 500. Since both men and women in the USSR go to work, it means that the earnings of a family are much in excess of the comparable average family earnings in this country. If the prices of these foodstuffs are related to the earnings of the people, it will be seen that they are not as expensive as a straight comparison with Indian prices would make us believe. It was found that the economy was suffering from an excess of purchasing power in the hands of the people. The demand for consumer goods was high and despite liberal imports of foodstuffs and consumer goods, people had surplus money left with them and they did not know what to do with it.

The stores in Moscow offered a variety of consumer goods so as to make life comfortable. In one of the new stores in the heart of a new colony in Moscow, I found on display Indian shaving blades which certainly gladdened my heart. A little depressing was the price of leather products, particularly shoes, which were quoted at five times the prices normally prevalent in New Delhi. Even after taking into consideration the artificiality of the exchange rate and the relative earnings of the people, it must be admitted that prices of shoes at 25 to 30 roubles (Rs. 125 to Rs. 150) were excessive.

This takes us on to the pricing policy in the USSR which is rather complex. If the policy were to make the consumer goods cheap and to raise the prices of the luxury goods, one could understand. But the shoes are not a luxury in the USSR and to maintain such a high price for them is something which does not admit of an easy and simple explanation. Again, woollen garments are also very expensive and, in view of the extremely cold climate of the USSR, they are an absolute necessity and cannot be classed as a luxury. Gone are, however, the days when the people had little choice in the matter of purchase and had to run to stores the moment they learnt that certain consumer goods were available. Now they have a plenty of variety to choose from, both of imported and indigenous products. The stores also patronise jewellery of various kinds, from glasswork to amber. The throngs of

We at Remington Rand have been with typewriters a long time—you can say we have always been the first with typewriters. That's why we are so careful about them—careful about things that matter, like precision, touch.

The equipment we've invested in at our factory—the Optical Profile Grinder and the Type Aligning Projector—are for just this reason: that the typewriter you invest in is perfect. The care we take over accuracy—1/10,000th of an inch in machined parts,

tools and dies, and the perfect alignment of types and typebars, you can call us fussy—even finicky. But then that's why Remington Typewriters are such a good buy.

Our attention to detail means you get precision balanced typebar action that flashes to and from the paper, keys that don't stick even with several typebars in flight, finger-fitted keys designed to cushion finger tips, smooth carriage and lighter, more rhythmic, highly responsive typing.

Remington Typewriters are now better than ever
That's why we are so proud of...

Rationing Round the Corner?

By Our Special Correspondent

ADDRESSING THE State Chief Ministers' Conference this Monday, the Prime Minister, Mr. Lal Bahadur, expressed the view that rationing of foodgrains and controls on such items of daily consumption as sugar, vanaspati and vegetable oils, were inevitable for containing the price spiral. With a view to easing the food situation in the country, he called for summary trial of traders who sold foodgrains at prices higher than those fixed by the Government. Deterrent action, he added, should be taken against the offenders. This should include imposition of heavy fines and cancellation of licences.

The Prime Minister deprecated the tendency among the States to think in terms of their own separate interests. This, he feared, might lead to a great deal of chaos in the country.

Dwelling at some length on the proposal of summary trial of traders who sold foodgrains at prices higher than those fixed by the Government, Mr. Lal Bahadur suggested that every district must have one or more judicial magistrates enjoying special powers to try these cases. The cases should be disposed of in one day or at the most two days; there should be no prolonged trials as otherwise no scheme of controls and rationing could succeed.

The two proposals, however, did not find ready and warm acceptance by the State Chief Ministers. The Chief Ministers of Maharashtra, U.P. and Madras were believed to have expressed doubts regarding the need for statutory rationing. The proposal of deterrent punishment to the offending traders, of course, received support, but the support, it is understood, was only lukewarm. The decision on the two steps was postponed till after the two-day deliberations of the National Development Council which were to end on Wednesday.

Inaugurating the National Development Council's meeting on Tuesday, the Prime Minister called for establishment of basic consumer industries in the public sector to meet the needs of the common man. Only then, he said, people would be assured that the shortages they have been experiencing in the recent months would not become chronic.

★★

In a paper entitled "A Strategy for the Fourth Plan", the National Council of Applied Economic Research has called for clamping of rationing of the scarce consumer goods, including foodgrains, on more or less permanent basis in all towns and cities with a population of 50,000 persons and above and launching of an ambitious and continuous rural public works programme. Another important recommendation made by the Council is that the export policy should be more clearly defined and, towards this end, the Industrial Policy Resolution should be amended with a view to giving due importance to industries with export potential. The export target, the Council feels should be commensurate with the magnitude of maintenance imports (estimated at Rs. 5,500 crores for the five years 1966-67 to 1970-71) which, it thinks, should be fully covered by exports.

Stressing the need for rationing in urban areas, the Council has expressed the opinion that in view of the rapidly rising population (at the rate of 2.5 per cent per annum) and the intensive desire to accelerate the growth of the economy, even a 5 per cent rate of growth in agriculture will not be able to ensure plentiful supplies of consumer goods to all who

need them. Shortages are bound to be felt and the only way to ensure minimum supplies to consumers at reasonable prices is rationing. The establishment of the rationing system on a more firm basis, the Council goes on to say, would in time make it more efficient and hence less costly.

In rural areas, the Council opines, a different approach will need to be adopted. Here, there is a large surplus of manpower a good part of which is also poor and ill-fed. This manpower is a potential capital asset inasmuch as it can be utilised for increasing capital formation in rural areas. This has not been done hitherto — at least not adequately. The Council believes that utilisation of the surplus manpower in the rural areas is the most urgent task — a task which will also be rewarding. The urgency rises out of the need to provide employment to the millions who cannot even afford the minimum consumption of food. It is rewarding because if organised properly, it can within a span of five years provide the workers sufficient income to make it possible for them to have a minimum level of consumption. The surplus manpower in rural areas, the Council recommends, should be utilised through a nation-wide rural public works programme which will engage the people whose level of consumption is below the minimum in works which are capital formative in nature. The workers will be paid in foodgrains (about 75 per cent of their wages) as well as in cash. A good part of the foodgrains required for payment would come from the better-off families in the villages who will gain substantially from the capital assets created through the rural works.

Utilising PL 480 Funds

Explaining the role of the rural public works programme in the fourth Plan, the Director-General of the Council, Dr. P. S. Lokanathan, told newsmen last week that PL 480 funds could be profitably utilised in making this programme a success. Much more funds could be available from the United States, if needed, he added.

While the rural works would be conducted essentially at the village and district levels, the Council recommends that the programme itself should be conceived as a national programme and the organisation to handle it must be built on national lines. An ambitious rural public works programme, the Council feels, should help in remedying the serious under-employment situation in the country-side.

The Council does not agree with the governmental thinking in respect of reduction of inequalities. The emphasis on reduction of inequalities between the rich and the moderately rich, the Council thinks, has missed the real issue, which is that there are millions in this country who lack incomes even for a minimum level of food consumption. This is the real cause of poverty and also of disparity.

The Council has pleaded for definite measures to be taken to ensure a 5 per cent rate of growth in agriculture over the fourth Plan period, making full allowance for the weather factor. It has also recommended that services and social overheads should be strengthened further and industrialisation of the country fostered at a rapid rate in the interest of bringing about a self-generating economy in the near future. The Plan, the Council further recommends, itself should con-

POYSHA MAKES QUALITY CANS FOR MAJOR INDUSTRIES

FOR FOODS. Poysha is one of the very few producers of open-top sanitary cans needed by the food industry.

FOR OILS. Leading brands of lubricating oils, greases, cooking oils and vanaspati come in lithographed Poysha cans.

FOR PAINTS. Last year, paints worth crores of rupees were packed in decorated Poysha cans.

FOR PHARMACEUTICALS... and chemicals, dyes and defence requirements, too. Poysha supplies a large part of their needs.

WILL SERVE OTHERS WITH THREE NEW FACTORIES

One of India's two largest manufacturers of tin containers, Poysha will soon be a nation-wide organisation that will offer on-the-spot services with 3 new factories. At Dighe (Bombay), Poysha will make 4 million cans a month, to serve industries in Western and Central India. At Cochin, Poysha's second new factory will make 3 million cans a month for the fishing, pineapple and other industries in the South. At Ghaziabad (Delhi), Poysha's

third factory will also produce 3 million cans a month for the rich fruit and vegetable districts of Northern and Eastern India.

This production is on a single-shift basis. If at any time circumstances demand more output, this can readily be achieved by working multiple shifts. To finance this increase of Poysha's capacity to a crore of cans every month, the Company is raising its Paid-Up Capital from Rs 25 lakhs to Rs 110 lakhs.

young ladies at the jewellery counters was a clear indicator of the surplus money in the hands of the people.

Moscow is a clean city and the metropol (underground railway) has lent its support in keeping it neat and tidy; it is said to be the best in the world and one cannot help admiring the clean, well-built and well-kept underground stations. Most of them are named after famous Russian writers, artists and political leaders. The solidity of these underground stations along with their neat presentation makes one admire the Russian craftsmanship. Of all the dozen or odd countries which I have visited and where I have seen the underground railways, including some of the West European countries, I found the underground in Moscow the best in every respect. The fare is cheap, costing only 5 kopecks (25 paise) from any station to any destination in Moscow. There are no ticket collectors or checkers. One has only to insert the five kopecks coin to enter any station after which he is free to move in any direction and cover any distance. The shortage of manpower, like that of many other European countries, has forced automation here as well.

The Kremlin

A visitor to Moscow puts the Kremlin on the top of his list amongst the places to be visited. Stalin had kept the Kremlin closed to the common people; Mr. Khrushchev threw its doors open for every one. Particular mention needs to be made of the armoury in the Kremlin where the remnants of the palaces of the Tzars are collected. Old robes, buggies, swords, cutlery and various other things owned by the Tzars, their lieutenants and queens are collected there and the State guides explain to the visitors — many of them are Russians from other parts of the country — the significance of the exhibits. Each and every exhibit fetches detailed explanation, highlighting the fact that the Tzars lived in luxury at the expense of the poor. Lenin's Mausoleum draws heavy crowds every day. Long queues of people march past the dead body of the departed leader in solemn silence. The temperature of the Mausoleum has been kept low and so is the case with the glass box in which the body has been preserved. A 24-hour vigil is kept by the soldiers. The Red Square and the Mausoleum together provide a spectacle with which newspaper readers all over the world have become familiar through pictures.

Mention also needs to be made of an exhibit which has recently been put up in Moscow showing the panorama of the Borodino Battle. When Moscow was attacked by Napoleon, the Russians fought heroically. The panorama makes use of modern technique of creating visions through canvas and light; this spherical panorama gives a realistic picture of the famous battle. Alongside the stands from where the visitors have a look at the panorama, logs of wood and other tattered things are placed while somewhere in between the picture and the real objects, the two combine imparting a superb impression on the onlooker. In the same class is the exhibit on of economic achievements of the people; this is a permanent feature of Moscow to which the visitors are attracted each day of the week. In this exhibition are shown the attainments of the Soviet Union in various branches. The factory workers come to the exhibition to see some of the machines being used by their comrades in similar factories in other parts of the USSR, and they compare notes in order to learn the new methods of production. A separate hall in this exhibition deals with electronics and computers. Last month, the Atomic Energy Commission of India specially deputed a young Indian to study the computers which were exhibited there in order to find out if any one of them would be in a position to solve some of the problems currently being

faced by the researchers. In case the computer was found useful for the work of the Commission, the Government would like to buy one of them.

The Ballet

The ballet has been perfected as a superb art in the USSR. The Bolshoi and the Palace of Congress lend their own charm to this unique art which is ethereal in assimilation and understanding. I had an opportunity to witness the Swan-lake at the Palace of Congress and the Snow Girl by Chaikovsky in another theatre. Not to be missed is the Russian circus which has an excellence of its own. Here, in the midst of high-level technical skill in the presentation of the various feats, is combined humour by some of their renowned clowns. The day I went to see the circus was the 35th anniversary of a well-known short-statured Russian clown named Karandash. It is true that in order to be able to enjoy humour one must know the language, but some of his pieces were in international language in the sense that no commentary was required. The manner in which he juggled with the plastic body of a woman, built up of various parts, showed that he could provoke laughter without even uttering a word. His bewildered attempts at re-making the statue of a woman from the various parts (which were of plastic) threw his audience into peals of laughter; it was real fun.

I had never imagined that de-stalinization in Moscow had been taken to such an extreme that not a single photograph or statue of Stalin was to be seen anywhere. In one of the art galleries which I visited, I saw high up in a corner the painting of someone who looked like Stalin. The moment I uttered the word 'Stalin', the interpreter corrected me at once saying that it was not Stalin's painting but of a certain General who had fought heroically during World War II.

tain a method by which, if there is shortfall in the rate of growth in the agricultural sector, proper co-ordination measures can be taken to ensure that the injury to the rest of the economy is minimised.

The Council has also laid a good deal of emphasis on containing the price spiral. To ensure that prices do not get out of hand, the Council recommends that anticipatory action should be taken in fiscal, monetary and other areas. All expenditure should be properly controlled.

The Council's estimate of the total investment required during the fourth Plan period for achieving a rate of growth of 6.3 per cent per annum (overall) and 5 per cent in agriculture, is Rs. 20,765 crores at 1960-61 prices -- Rs. 14,335 crores in the public sector and the rest in the private sector. This broadly corresponds to the outlay proposed by the Planning Commission in its preliminary memorandum i.e. Rs. 21,500 crores. The Council agrees with the role proposed to be assigned by the Planning Commission to the private sector. The physical targets proposed by the Council for the fourth Plan are more or less the same as those of the Planning Commission. But, in certain fields, such as steel and cement, the Council favours slightly lower targets -- 15 million tonnes of steel ingots and 20 million tonnes of cement as against the Planning Commission's target of 16.5 million tonnes and 24 million tonnes, respectively.

★★

A recent assessment made by the Union Ministry of Steel reveals that none of the pig iron manufacturing plants licensed in the public or the private sector since the launching of the third Plan is likely to be commissioned into production by 1965-66. The first of these new plants, that of Orissa Government's Baroil 100,000 tonnes unit, may go on stream in the latter half of 1966. Another public sector plant, that of Punjab Government, may go into production by the beginning of 1967. All the private sector units are likely to yield results only after 1968.

Disappointed at the performance of the new licensees for

pig iron manufacture, the Union Ministry of Steel has asked them to send monthly progress reports indicating the steps taken by them for the implementation of their schemes. These reports, it is hoped, would enable the Ministry to help the licensees in resolving their difficulties. Periodical meetings have also been proposed with the licensees with a view to maintain a close official contact with them.

The third Plan envisages production of 1.5 million tonnes of salable pig iron by 1965-66. Out of this, nearly one million tonnes output was planned from the integrated steel works of Hindustan Steel Ltd., and the remaining 0.5 million tonnes from the different plants in the private sector. The demand for pig iron is expected to grow to about 2 million tonnes by 1965-66. The new capacity licensed during the past 3½ years has been of the order of 2 million tonnes.

Indo-Soviet Agreement

With a view to mitigating the shortage of pig iron, the Government of India has entered into an agreement with the Soviet Union for importing 150,000 tonnes per annum. Steps have also been taken for augmenting pig iron production through installation of the fifth blast furnace at Durgapur and the sixth blast furnace at Bhilai in anticipation of the fourth Plan expansion programmes of these steelworks. In view of the none-too-encouraging performance of the private sector, the Government has further decided to set up at least three more blast furnaces in the public sector outside the integrated steel plants out of the twelve for which feasibility reports were commissioned a few months ago.

★★

The U.S. Aid authorities have been approached for a loan to cover foreign exchange component of four coal mining projects, namely Singrauli I, Umrer, Singrauli III and West Bokaro, and that of the Ramgarh colliery-cum-washery scheme.

Four other countries are assisting India at present in the development of coal mines. Poland has extended a credit for the development of nine deep mines by the National Coal

FOOD MUDDLE

Development Corporation in various parts of the country. Work on two of these at Sudamdih and Monidih has already begun. The Sudamdih mine is expected to go into production by the end of the current Plan. The Monidih mine is expected to be commissioned early in the fourth Plan period. A blendable coal washery with a capacity of 2.8 million tonnes of raw coal per annum is also being set up at Gidi (Karanpura) with Polish collaboration.

The USSR is assisting in the development of the Banki, Surrakchar and Manikpur coal mines. Coal has already been touched and production started at the Banki mine. It will be in operation fully by the end of December, 1965.

A project agreement has been signed between India and France for the exploration of thick coal seams in the Karanpura coalfields of Bihar. Under this agreement, the NCDC will carry out working of the thick highly inclined Sirka seam at the Gidi colliery by adopting the French long wall mining method.

The fourth country assisting India in the development of its coal industry at present is the United Kingdom which is rendering technical assistance to the NCDC by way of planning and development of the Jarandih coal mines in the east Bokaro coalfields of Bihar.

★★
The completion of two coal washery projects of the National Coal Development Corporation is understood to have been postponed to the fourth Plan period. These are the 1.5 million tonnes Ramgarh washery and the 2.16 million tonnes Sudamdih washery. While the former was originally expected to be fully commissioned into production during the current Plan, the latter was to be commissioned during this

period to a capacity of 0.5 million tonnes. Negotiations are still going on with AID for financial assistance for setting up the Ramgarh washery. The delay in the setting up of the Sudamdih washery has been caused mainly by the fact that it forms an integral part of the Sudamdih colliery project, the development of which is now not expected to be completed by 1965-66.

The other four coal washery projects of the NCDC, however, are expected to be completed by the end of the third Plan. These are expansion of the Kargali washery from 2.22 million tonnes to 2.72 million tonnes and the establishment of 3 million tonnes, 0.75 million tonnes and 2.84 million tonnes washeries at Kathara, Sawang and Gidi. The equipment for the expansion of the Kargali washery and the setting up of the Sawang washery is to be supplied by three West German firms. The Kathara washery is to be established with Russian collaboration. Poland will be assisting in the establishment of the Gidi washery.

★★
A 21-member delegation of American business men and industrialists has arrived in New Delhi to explore investment possibilities. Sponsored by the Action Committee of International Development (ACID), which represents over 2,000 American houses, the delegation will remain here up to November 6. During their stay, the members of the delegation will call on the Minister for Commerce, Mr. Manubhai Shah. They will also meet the secretaries of the Economic Ministries of the Union Government and representatives of trade, industry and bankers' associations. The delegation is being led by Mr. N. D. Abbey, Jr. President of Abbey Etna Machines Co., which is already collaborating with M/s. Bharat Steel Tubes Ltd., for setting up a 36,000-ton capacity tube mill near Delhi.

Public Sector in Orissa

From Our Correspondent

CALCUTTA:

NOT MANY State Governments have undertaken as rapid an expansion of their industrial and commercial activity as the present Congress regime in Orissa. On March 31 last year, there were as many as 51 companies either wholly owned or managed by the State Government, in addition to the three statutory corporations such as the Orissa State Financial Corporation, the Orissa State Warehousing Corporation and the Orissa State Electricity Board. The 51 companies included three fairly large-sized State Government undertakings, namely, the Industrial Development Corporation of Orissa, the Orissa Mining Corporation and the Orissa Construction Corporation. Most of the remaining have been started under the pilot project scheme meant to accelerate the growth of small-scale industries, as part of the campaign to speed up industrialisation in the State. It was perhaps inevitable that in such a mood to industrialise in a hurry, there should have been a few early casualties due to bad planning, faulty assessment of prospects, wrong reading of the market potential or some other causes. Of the 51 companies existing on March 31, five have since gone into liquidation; four because they could not withstand market competition in fruit products which was their line of manufacture and another, meant to make hardboards out of saw dust, could not just get off the ground. In the latter case the promoters had not been able to calculate the costs and benefits correctly.

Wasteful Expenditure

Even in the case of major companies like the Industrial Development Corporation, a fairly large part of the initial expenditure was wasteful. When the company was started it obtained a licence to start a cement factory with a daily production capacity of 1,200 tonnes. But in their enthusiasm to start the project as quickly as they wished, the sponsors chose a wrong site initially, which was later abandoned but not until several lakhs of rupees had been spent on "development work". The Corporation is now running a few other undertakings also, including the low-shaft furnace iron plant which it has purchased from Mrs. B. Patnaik, wife of the former Chief Minister. It is, however, working at a profit. The Orissa Mining Corporation, first started as a joint venture of the Union and State Governments and now wholly owned by the latter, is not working satisfactorily. Its cost of extracting iron ore still continues to be higher than what the selling price is. The position will remain uneconomic until the mining operations are fully mechanised. The Orissa Construction Corporation is however faring better. Started with the object of undertaking the construction of big projects including bridges on a competitive tender basis, it made a profit in the very first year of its operation.

In addition to these, there are 10 more undertakings which are departmentally run. They cover a variety of enterprises including shoe-making, tannery and leather goods manufacture, transport services, and trading by the Government in foodgrains, cloth and iron ore. Some of these enterprises are running at a loss and some at a profit. The State Government has also recently started two more corporations for fisheries and forest products. These are commercial ventures, but it is now too early to judge their efficiency. It is almost certain that many more ventures will be started during the next five-year Plan.

During the latest session of the State legislature, which concluded recently, concern was expressed about the manner in which some of the State undertakings are run and the consensus of the House desired that there must be a special committee of the Assembly to scrutinise the working of these concerns. At present the Public Accounts Committee of the Legislature examines the working results and annual reports of these concerns, but it has been felt there are now too many of them to be tackled by the P.A.C. easily. Moreover, a certain amount of professional and technical knowledge is required to judge the working of commercial and industrial ventures properly which it may not always be possible for the PAC to provide. Accordingly, the State Legislature has appointed a special committee which will act as a watch-dog of the House as far as the activities of the Government's undertakings are concerned. It is not expected that the new committee will have an adequate number of experts serving on it from the very start, but it can be expected that with years of working, the committee will acquire the necessary understanding and knowledge of scrutinising the results of the State concerns competently, and may even be able to suggest improvements in their operations whenever considered necessary.

★★
Another important socio-economic measure which the State Legislature could not enact during its latest session and which it is likely to take up during the next, is Orissa's land reform programme. Land reform legislation in the State has not had a smooth course. This was among the first States where a land revenue and tenure committee was set up under Mr. N. K. Chaudhury, a former Chief Minister, but the successive Governments were not able to act on the recommendations of that committee due to a variety of reasons. Only the Congress-Ganatantra Parishad coalition Government could enact legislation under which a ceiling of 25 standard acres was the maximum that a person or a joint Hindu family could hold. But as the coalition collapsed soon after, the Government

Gaharoo has the secret of keeping young...

Gaharoo Kaloo used to be the champion wrestler in his village. Today, no one would guess that he is fifty...and a grandfather. Dumb-bells. Ten press-ups every morning. Regular sessions at the gym. This is how Gaharoo keeps fit, young and on top of the job. His personal philosophy: 'Keep to the straight path. Never quarrel. Put your whole self into your work...'

THE RIGHT ATTITUDE

It is just this attitude which has won Gaharoo the respect of his work-mates and which makes him good at his job in the Benzine Installation, Sewree, Bombay. He attends to the blending of Chemicals and the filling of containers. Accuracy matters. If too much were to go in...the Company would lose. If too little...the customer would complain. A careful check on the dips and meters is a must. Gaharoo is careful.

TODAY, AS EVER, PEOPLE LIKE GAHAROO ARE WORKING FOR YOU

To understand Gaharoo one must know that he comes of farming stock—yet, even as a little boy he felt the city's pull. And to the city he migrated when still only a youth. The adjustment was made long ago. Gaharoo spends his holidays on a farmstead at Pratapgarh...which he has added to with his own savings. His working life with Burmah-Shell is equally active and rewarding. After 22 years with the Company, Gaharoo says, quite sincerely, 'This is a job I like.'

Gaharoo and people like him—at all levels of responsibility—are Burmah-Shell. Today, as ever, they are hard at work...working to ensure that vital petroleum products, essential to India's growth and progress, are brought to you at the right place and time, in the right quantities.

BURMAH-SHELL are People in the service of the People

had no time to implement its programme. The next Government led by Mr. B. Patnaik considered the measure regressive and half-hearted, and wanted to amend it according to its own norms of social justice. But for some reason or other it could not bring forward any legislation of its own until the last session of the Legislature when the Orissa Land Reforms (Amendment) Bill, 1964, was introduced. Under this amending Bill, the maximum for individual holdings has been reduced to 20 standard acres from 25 standard acres permitted under the original Act, and the rules relating to the disposal of surplus land have been considerably simplified. Of course, like the original Act, the proposed measure exempts from the scope of the ceiling certain classes of land like orchards, plantations, efficiently managed farms situated in compact blocks where heavy investments or permanent structural improvements have been made and whose break-up is likely to lead to a fall in agricultural and industrial production. Compensation which is proposed to be paid to owners for the loss of surplus land is fixed at 15 times the fair and equitable rent. The surplus land acquired will be distributed among landless agricultural labourers and poor peasants. Surprisingly, the amending Bill places no emphasis on co-operative farming societies as the Original Act did.

Fierce Controversy

This amending legislation has produced a fierce controversy — one school of thought holding it to be regressive and considering the revised ceiling figure as still too high, whereas the opposite school thinks that the Government is going too far with land reforms which would only lead to chaos. But the real danger at the moment is not whether the revised ceiling is too high or low, but the uncertainty which has pervaded the rural scene ever since the Government started talking about "revolutionising" the land tenure system. This

uncertainty has done much harm to agricultural production. Neither the landholder nor the tenant has shown much initiative in raising the productivity of land. This is what Mr. Asoka Mehta noticed when he was last in Orissa discussing the future programme of development with the State Government and advised the latter to end the uncertainty by either going ahead with its measure or postponing it until more propitious times.

★★

An aspect of State enterprise in Assam worth noticing is the huge waste in Government fisheries. The Estimates Committee of the Assam State Legislature has unearthed shocking cases of waste of public money by State fisheries running into lakhs of rupees. The Government runs about 30 fisheries and fish farms, all of which were found to be working at a loss. As against an expenditure of Rs. 64.72 lakhs on administration and non-recurring items in 1961-62, the receipt amounted to only Rs. 3.32 lakhs. Going into the activities of the State Fisheries Department as thoroughly as it could, which included visits to a number of fish farms, the Committee found that scheme after scheme had been launched without any prior examination of their possible utility and production potential. The Department did not prepare any project report as should have been done in the case of such undertakings. Consequently, expenditure was being incurred most haphazardly, with reclamation cost varying between Rs. 1,000 in some cases and Rs. 15,000 in others. The Committee has felt that the poor result of the fisheries may be due to bad management, unsound and inefficient techniques of seed production and faulty accounting, or a combination of all of them. In the meanwhile, of course, the Fisheries Department has expanded itself considerably in accordance with Parkinson's Law. For example, the annual recurring expenditure was only a mere Rs. 47,000

Get local help for your foreign exchange problems

Your State Bank Agent is just a telephone call away!

The State Bank of India and its Subsidiaries have 1700 branches at home and several branches abroad to deal with your problems regarding import and export trade.

Services rendered include • Exchange Control Formalities • Foreign Bills • Letters of Credit • Packing Credit Facilities • Guarantees and Indemnities • Forward Exchange • Remittances • Foreign Travel Regulations and Facilities. World wide network of Correspondents.

Our special information service deals with all your questions on:

- trading opportunities in other countries and names of likely buyers or suppliers
 - reports about the standing and financial status of business people in any part of the world, and their ability to fulfil contractual obligations
 - the currency and customs formalities of the country you do business with

in 1957-58; it steadily went up to Rs. 5.21 lakhs in 1961-62.

★★

Such States as may rely on co-operatives for the procurement of paddy or foodgrains will do well to heed the lesson which Assam has learnt. In this State, monopoly procurement of paddy was given over to apex co-operative societies and rice millers were banned from purchasing paddy direct from the cultivators. The mills had, therefore, to depend on the co-operatives to get their supplies. (There are 425 mills in Assam which require about 1 million tons of rice for working round the year on a one-shift basis). But the co-operatives failed miserably in their procurement drive and their total collect on was barely one quarter of what their target was. The people of Assam had, therefore, to go through the paradox of an acute rice scarcity in the market in a year when the paddy crop was supposed to be good. Needless to say it caused much

distress as not many had the capacity to purchase their requirements from the black market. Finding that the co-operatives had made a thorough mess of the job, the Government revised its earlier decision of prohibiting mills to procure paddy direct from the cultivators and allowed them to buy the cereal side by side with the co-operatives. Since the mills resumed their purchasing operations, they have been able to procure a substantial quantity of paddy, comfortable for their operations and comfortable for the consumers who are now able to get rice at the price they can afford. The State Government had admitted that its earlier procurement policy was wrong and also the fact that the supply in the market has considerably improved since the mills were allowed to resume buying direct from the cultivator. The co-operatives apparently did not pay an attractive price, while they were busy making the operation attractive only for them.

Madras Government's Discomfiture

From Our Correspondent

MADRAS:

THE MADRAS Government is having an uncomfortable time and it has been obliged for the first time in the past decade to explain in great detail the difficulties experienced by it in tackling the food situation and in pushing through the Salem Steel Project. The food situation, in particular, has assumed ugly proportions and the complacency showed by the State Government for a time gave rise to considerable criticism from the Opposition parties and even from members within the Congress Party. It was assumed, perhaps with some justification, that there were enough stocks in the State and that it would not be necessary to issue large quantities through fair price shops and co-operative societies. But the calculations in regard to availability were rudely upset by the suspension of despatches from Andhra Pradesh and the unwillingness of traders to carry on business in rice on account of the difficulties experienced in maintaining stocks and the impossibility of carrying on other transactions while rice was being distributed. In the midst of the confusion and clamour for rice in the principal cities in the State, Madras, Coimbatore, Madurai, Pollachi and other places, there were reports from Tanjore and Tiruchi districts that a bumper crop had been harvested and that the growers were finding it difficult to market their surpluses on account of the delay in moving stocks by the co-operative societies and the unwillingness of traders to enter into any commitments. Indeed, the movement of rice by road and rail was found unsafe because of the bad mood of the population and the fear of looting while in transit.

Accumulation of Stocks

The reports about the accumulation of stocks in the two principal rice growing districts, when there were long unsatisfied queues before the co-operative societies in cities and towns, were rather incongruous and it was felt necessary by the former Chief Minister and the present Congress President, Mr. K. Kamaraj, to advise the Government to take urgent measures and relieve the sufferings of the consumers of rice. Several measures have been adopted on an emergency basis in the past few days and large stocks of boiled rice from Thanjavur and Tiruchirappalli have been moved by road and rail to the big cities in the State. The movement of rice to areas outside the State has been temporarily banned as there is anxiety to take stock of the situation before allowing exports and before ensuring adequate supplies from Andhra Pradesh. It is complained that earlier exports of rice to Kerala, without corresponding imports from Andhra Pradesh, queered the pitch. The larger yield of Kuruvai, which is normally

exported to Kerala, has come in handy and in the past few days large supplies had been made available to the co-operative societies. The liberal issue of rice through these shops has allayed panic to some extent but there are still fears that the critical situation may not be easily got over until buffer stocks had been built and some method of informal minimum rationing had been introduced.

Meanwhile, efforts are being made to rush supplies from Andhra Pradesh, though the State's Chief Minister has been adopting an extremely cautious policy as there is a feeling that the recent floods have caused heavy damage to the standing crop and it would not be advisable to permit exports on the previous basis. While some stocks will be released by Andhra Pradesh and about 30,000 tons might be received in the next few weeks, it is feared that, in the absence of larger releases of wheat and rice from Central stocks, the period between now and the next crop cannot be satisfactorily got over. Actually, from the Central stocks at Avadi about 10,000 tons of rice have been released while wheat supplies have been augmented. It is not clear, however, whether the cut in wheat quota recently imposed would be restored. It is needless to say that, in the present context, easier availability of wheat would have a reassuring effect. It is also encouraging to note that the Orissa Government had agreed to provide 10,000 tons of rice. However, even with all these arrangements, there is no guarantee that rice and wheat would continue to be sold at the same rate without interruption. It has, therefore, been decided to eliminate buyers in queues who were trying to exploit the situation, with the issue of family cards. Arrangements in this regard are being finalised and the cards will be introduced in Madras in the first instance and extended to other cities and towns later in the light of the developing situation. Every effort would be made to use available stocks effectively. It will not be surprising if a decision was taken to raise prices of rice issued through the fair price shops as the opinion has been expressed that the pressure on these shops is due to the cheapness of rice issued by them.

Whatever might be the arrangements that would be completed in the coming weeks to issue rice and wheat, the recent developments have rudely shaken the State Governments in the Southern Zone. It had been proudly claimed earlier that the rice crop in the country and particularly in this area constituted a record for all time and that the problem related mainly to the availability of wheat. Thanks to the heavy imports and huge sales, the wheat situation has been brought under control to a certain extent though the Central Govern-

ment is afraid that it may not be possible to maintain sales at the previous levels in the absence of corresponding imports. In regard to rice, the estimates might have been affected to a certain extent by the loss sustained by Andhra Pradesh during the recent floods. However, out of the increase of over four million tons in the last season, the loss of four lakh tons cannot have upset calculations to such an extent as has happened now. The caution displayed by Andhra Pradesh is understandable but if the difficulty now being faced by the Madras Government is due to its policy of permitting liberal exports to Kerala without Andhra Pradesh fulfilling its commitments, the Centre has a special obligation to make good the loss sustained by the State Government on account of the shortfall in arrivals from Andhra Pradesh. The Centre has no doubt been prompt in releasing stocks from its own sources but the problem has to be tackled on a more energetic and sustained basis as a repetition of the happenings of the past fortnight will damage heavily the prestige of the State Government and give a greater handle to Opposition parties for maligning the Ministers.

★★

The Madras Industries Minister had naturally to adopt a defensive attitude when he faced the legislature during the food debate. The members of the Communist and DMK parties have tried to make political capital out of the present situation and criticised the Government for not being assertive enough in regard to the Salem project. Unfortunately, a serious controversy has arisen over the location of the fifth steel plant in the South and the remarks of the Union Minister for Steel and Heavy Industry have been taken to mean that he is not favourably disposed towards the Salem project, if not hostile. The case of the Madras Government is strong as all the preliminary work in respect of the Salem project has been completed and it would be possible to finish the construction work in a period of 4½ years from the date of signing the agreement. The technical consultants have proved clearly that steel can be made profitably from Salem ore and Neyveli lignite and that the capital cost would be the lowest among all the steel plants in the public sector. The Anglo-American consortium, which will be financing the construction of the fifth steel plant, has, however, been asked to study the relative merits of the three projects, Hospet, Bailadilla and Salem. It has been suggested that the Hospet and Bailadilla schemes are more easily feasible as ample high-grade iron ore reserves are available and a capacity of 1.5 million tonnes can be initially created without difficulty. In the case of the Salem project, it has been suggested that the initial capacity should be 5 lakh tonnes. There is no doubt that iron ore reserves in the Hospet and Bailadilla areas are ample and the quality of ore is superior. But there will be a problem, in both cases, of securing coal from outside sources. It would have to be closely examined, therefore, whether the cost of production can be kept down at a level which would compare favourably with those of other public sector steel plants. In the case of Salem, raw material supplies can be had from nearby sources though the quality of ore is definitely inferior and Neyveli lignite cannot be used for all processes. But it is felt that the lower transportation costs and some special qualities of these raw materials will enable special steels and alloy steels to be manufactured on a profitable basis. There is, therefore, room for the fifth major plant at either Hospet or Bailadilla while the Salem project should be included in the fourth Plan on its merits, if need be, as an alloy steel plant. There cannot be any upset in plan estimates on this score. In any case, it should be ensured that there is no bitterness between the three States on account of the present controversy and that every effort would be made to avoid an emotional approach to the problems at issue and to adopt policies which would encourage national and regional integration.

Trade Winds

DUSSELDORF INVESTMENT CENTRE

THE INDIAN Investment Centre's first European office was opened in Dusseldorf on October 29, 1964. The official inauguration was performed by His Excellency Kurt Schmucker, Minister for Economic Affairs of the Federal Republic of Germany. The new office, which is the Investment Centre's second office abroad (the first one being in New York), is headed by the Resident Director, Mr. N. G. Swami. It is located in "India Dugal House", Karlstr 76, Dusseldorf-4.

During the past one month or so, since Mr. Swamy started organising the new branch office of IIC, some 15 proposals were received from German industrialists for collaboration with Indian entrepreneurs. All these proposals were from small and medium-sized industries which are expected to play a greater role in Indo-German co-operation in future. The proposals included schemes for the manufacture of steel and malleable castings, welding machines and graphite crucibles. Of considerable significance is the fact that the influential Deutsche Bank with 150 branches in Germany is co-operating with the Indian Investment Centre in establishing contacts with German entrepreneurs. Such co-operation is sure to lead to fruitful results.

The German private capital investments in India at the end of 1963 were estimated at DM 80 million (about Rs. 100 million). The "Siemens" alone has investments of DM 50 million and the German associates in Utmal at Kansbahal near Rourkela, account for nearly DM 20 million. These investments, however, stand in no comparison to those made in India by the UK or the USA. It is, nevertheless, encouraging to note that the West German interest in India has continuously grown in recent years and till the end of June, 1964, as many as 319 joint ventures were sanctioned. Another 19 were approved during the quarter July to September 1964. Of the 319 collaborations sanctioned till the end of June 1964, 175 have already materialised. Of these 175, about 40 per cent are financial collaborations and 60 per cent technical collaborations. In 10 per cent of the cases the majority participation is of German investors.

The agreement signed on October 15, 1964, between the Government of India and the Federal Republic of Germany regarding protection of German capital investment in India is likely to give further impetus to German industry to invest in India. As to how far the 15th October Indo-German investment guarantee agreement will encourage the German industrialists to associate themselves with Indian development is yet difficult to say. There is an influential section of the German industry which doubts whether, with all these facilities, the medium and small industries can really afford to take the risk of moving out to India. The main handicap, in the opinion of this section, is that these types of firms have language difficulty and that they do not have sufficient technical personnel to send out to man their ventures abroad. This need not, however, be taken as the general view of the German industry because many industrialists are quite enthusiastic about the opportunities that India offers and feel that the German entrepreneurs should not miss the bus particularly when businessmen from the USA and other countries are trying to take due advantage of the situation. As a matter of fact there is a shortage of technical personnel and labour in West Germany which employs about a million foreigners. It is precisely for this reason that some of the German firms which have shown readiness to enter into collaborations with Indians are prepared to train Indian technicians in their factories in Germany so that the demand on their own technical personnel

will be limited. India will, therefore, have to get more and more of its technicians trained in such German units if the problem of shortage of technical personnel which West Germany faces is not to prove a handicap in future Indo-German collaborations.

The German industrialists also stress the need of finding proper Indian partners for the joint ventures contemplated by them. It is complained that approaches are often made by Indian businessmen for collaborations without adequate knowledge of the market for the items to be produced. The job of finding proper Indian partners will have to be handled by the Dusseldorf branch of the Indian Investment Centre. There are also other problems, such as relating to taxation, rules and procedures and controls prevalent in India. But many of these may be sorted out when the proposed West German delegation of businessmen and industrialists visits India, probably by January, 1965.

GERMAN CREDIT FOR ICICI

According to an announcement made by the Industrial Credit and Investment Corporation of India, a further line of credit of DM 5 million from the Kreditanstalt fur Wiederaufbau (KfW) of the Federal Republic of Germany has been made available to ICICI. This is a part of the amount which the Federal Republic agreed to advance to the Government of India for the fourth year (1964-65) of the third Plan. With this loan the ICICI would have obtained through KfW a total amount of DM 40 million. Of the loans so far obtained by it from KfW, the ICICI has already sanctioned sub-loans exceeding DM 25 million. The ICICI has lines of credit in foreign currencies from the World Bank (aggregating US \$90 million), from the Agency for International Development (US \$5 million) and from KfW (DM 40 million). The lines of credit from KfW have, in fact, been an important supplementary source of finance which the ICICI has used for providing sub-loans to small projects and to companies in the cotton textile industry. The sub-loans have so far been provided to more than 35 companies.

DUTY ON RAYON YARN

The special duty on viscose rayon filament yarns has been reduced with effect from October 16, 1964, varying from 50 paise to Real per kilogram depending on the denier of the yarn. This follows representations from the indigenous rayon industry saying that it was faced with serious accumulation of stocks and that some reduction in excise duty on these products was essential to ease the situation. The duty on cellulosic staple fibres is also being reduced, but yarns spun out of such staple fibres, with or without the addition of cotton, will be required to pay duty at the same rates as cotton yarns (other than in straight hands) except that such yarns up to 14 "New French Counts" will be exempt from this yarn duty. Yarn spun out of non-cellulosic staple fibres such as "terylene", nylon etc., which were hitherto exempt from yarn duty, will also have to bear some duty. All these changes will take effect from October 16, 1964.

DUTY-FREE IMPORT OF RELIEF SUPPLIES

An agreement signed between India and the United Kingdom in New Delhi on October 20, 1964, provides for the duty-free entry into India of relief supplies and drugs donated by specified relief agencies in Britain to voluntary relief and rehabilitation organisations approved by the Government of India. Before the signing of this agreement all British donors of relief supplies had to meet the cost of paying import duties initially and then claim a refund. Arrangements have now been made for the relief supplies to be cleared free of duty

on arrival in India. The cost of freight and insurance of these supplies will be met by the donors up to the point of entry into India. Thereafter the costs of internal transportation from the point of entry to the destination will be defrayed by the Government of India. Such supplies will be confined to foodgrains and other foodstuffs including milk powder, processed foodstuffs and multipurpose foods, drugs and medicines, multi-vitamin tablets, hospital equipment and supplies, agricultural implements and any other donations agreed to by the signatory Governments. All foodstuffs and drugs exported from Britain under these arrangements will be certified by the British authorities as meeting the prescribed food and drugs standards. These foodstuffs will also have to conform to the standards prescribed under the Indian Prevention of Food Adulteration Act and Rules.

F.A.O. RECOMMENDATIONS

After a ten-day examination of the world commodity situation and allied matters at its meeting in Rome last month, the 24-man Committee of the Food and Agriculture Organisation of the UNO has reported that the recent increase in agricultural production, trade and prices had benefited the developing countries only to a limited extent. According to the findings of the Committee, most of the price increases in 1963 had occurred in respect of such commodities as wheat, wool, butter and meat. The Committee points out that the prices of some commodities which were important to the developing countries — such as rice, rubber, tea, cotton and jute — were actually lower in 1963 than in 1962, or showed little change. Sugar and coffee were, however, among the exceptions. The Committee has further observed that the immediate outlook holds no promise of early recovery in prices. As regards recommendations concerning specific commodities, the Committee has asked the Food and Agriculture Organisation to conduct studies on the comparative nutritive values of rice and other foodgrains and consider means to increase trade in rice among developing countries. It has also asked for a comprehensive study for analysing the economic effects of dairy development in economically backward countries and for the bringing out of an annual publication giving data on the consumption of natural and man-made fibres in different countries.

U.S. LOCOS FOR INDIA

India has placed a \$12,400,000 order for 54 diesel-electric locomotives with "ALCO Products Incorporated" of the USA. The US Agency for International Development is financing the purchase of the new order. The delivery, scheduled to begin shortly, will be completed by the first quarter of 1965. The heavy duty, mainline locomotives, known as model DL-560 will be used for hauling freight on the broad-gauge railway system of India. The 2600-horsepower DL-560 is the most powerful diesel-electric locomotive exported from the United States. Completion of delivery will bring to 357 the number of diesel-electric locomotives that ALCO has shipped to India. The US firm is also engaged in a 10-year collaboration agreement with the Indian Government under which it provides technical assistance for manufacturing facilities at Varanasi to build ALCO locomotives and diesel engines.

P & T GLOBAL TENDER

Global tender has been called by the Posts & Telegraphs Department for buying equipment for Delhi - Alwar - Jaipur micro-wave link. The new connection is expected to be built during the next 18 months. It will provide the first modern alternative tele-communication route between Delhi and Jaipur which are already connected by coaxial cable going via Agra. Coaxial and microwave links represent the latest and most modern advance in tele-communications. Following the laying of coaxial cables, a subscriber-to-subscriber trunk dialling between Delhi - Agra and Delhi - Jaipur have been introduced.

This system enables subscribers in any of these cities to call a telephone subscriber in any of the two other cities without going through the trunk exchange. The micro-wave link, on the other hand, uses wireless waves of extremely short-wave length giving several hundred telephone channels on one radio beam. The Delhi - Alwar - Jaipur micro-wave connection will comprise 960 channels. To direct the radio beams and strengthen the signals along the route, there will be six relay stations between Delhi and Jaipur. Tall towers will be built at these relay stations for mounting special aerials for receiving and sending out the radio beams. These towers are being specially designed to withstand Indian weather conditions, including gales raging at a velocity of 100 miles per hour. The new link is estimated to cost about Rs. 30 lakhs. The foreign exchange component of the equipment to be imported from abroad will be met out of the International Development Association's credit.

CANADIAN LOAN FOR STEEL PLANT

The Indian High Commissioner in Canada and the President of the Canadian Export Credits Insurance Corporation, signed on October 6, 1964 at Ottawa an agreement under which Canada will provide India with a credit of about two million dollars. The loan will be made available to the Hindustan Steel Limited, for purchase, from the Canadian firm of Amco Furnace Contractors Limited, of reheating and heat treating furnaces for the mills at Durgapur. This is the seventh agreement signed by the Canadian Export Credit Insurance Corporation with India.

GOAT HAIR EXPORTS TO U.S.A.

The Government of India and the 'Foreign Assets Control' of the US Treasury Department have agreed on the procedure for the issue of certificates of origin for export of goat-hair from India to the USA. Goat hair will not be allowed entry into the USA unless the consignments are certified by the Agricultural Marketing Adviser, Government of India, that the goat hair was processed in India from goat skins of Indian origin. Under this procedure the exporters of goat hair to the USA have to register themselves with the Directorate of Marketing and Inspection, Union Ministry of Food and Agriculture, and maintain registers showing details prescribed in the procedure such as purchases of goat hair and skins, production of goat hair, stocks and sales. An official representative of the Directorate will visit the premises of the registered exporters and inspect records maintained, at least once in every three months. When the exporter applies for a certificate of origin to the Directorate for the export of goat hair to the USA a representative of the Directorate will inspect the goat hair to be exported, and if satisfied, will seal the parcels containing the goat hair after packing is done in his presence. The Directorate will then issue a certificate of origin to the exporter covering the sealed parcels specified in the application for a certificate of origin. Shipments of the certified parcels of goat hair to the USA will have to be made by direct carrier from India to the USA or through bills of lading.

AMERICAN LOANS

The United States Government has extended credits totalling nearly Rs. 2 crores (\$4.2 million) to seven Indian firms, all of which have American equity participation.

These credits will help increase the production of fluorescent and mercury-vapour lights, steel forgings, gears, electric motors, power tools, a r-blast cleaning equipment, and lifts and escalators. The loans are being extended to the firms under the Cooley Amendment to the United States Public Law 480.

By manufacturing in India products several of which are

currently imported, considerable foreign exchange will be saved. In some instances, part of the output will be exported, earning additional foreign exchange.

The firms receiving the loans are Sylvania and Laxman Ltd. (Rs. 50 lakhs), the Shama Forge Co. Ltd. (Rs. 47.5 lakhs), Napco Bevel Gear of India Ltd. (Rs. 40 lakhs), American Universal Electric (India) Ltd. (Rs. 21 lakhs), Rockwell India Ltd. (Rs. 16.9 lakhs), Indabrador Ltd. (Rs. 14.3 lakhs) and the Otis Elevator Co. India Ltd. (Rs. 10 lakhs).

EXPORT OF PROCESSED FOODS

The export of various processed foods during the first four months of the current year (April to July 1964) was worth Rs. 99.04 lakhs compared to Rs. 92.00 lakhs during the corresponding period of last year. The increase was of the order of 7.61 per cent despite a steep fall in the export of wheat bran from Rs. 20.35 lakhs to Rs. 6.57 lakhs. Significant increases have been recorded in the exports of pickles and chutney, canned and bottled fruits, biscuits and confectionery and cocoa-cocoa concentrates.

METALS INVESTIGATION

The Indian Bureau of Mines has stepped up field investigation work concerning important metals. Since January last, it has taken up 17 new investigations in copper, limestone, iron ore, gold, salt and tungsten. Eight more investigations are likely to be undertaken shortly.

Of the 17 investigations taken up since January last, six investigations in copper, limestone and iron ore are likely to be completed by the end of this year. These are: Madhan Kudhan and Kolhan sections of the Khetri copper project; Niwar and Bela limestone projects and Bailadila and Chikmagalur iron ore investigations. Work on the other 11 investigations is likely to go beyond the current year. These are: Akwali and Bhagani sections of the Khetri copper project; Rakha Mines and Roam Sideswar blocks and Agnigundela copper investigations in the Rakha copper project; Drang and Guma sections of the Mandi salt investigations; Ramagiri gold investigations; Degana tungsten project and Bailadila and Bellary-Hospet iron ore investigations.

With the transfer of the entire coal prospecting work to the National Coal Development Corporation in April, 1964, more drills have been made available to the Indian Bureau of Mines. The total number of workable drills with the Bureau has increased from 29 to 63. It will go up further by 30 when some more new drills and the drills being reconditioned are received.

The Bureau expects that a preliminary assessment report on the Bellary-Hospet iron ore investigations will be available by the end of this year. Efforts are being made to complete this investigation by the middle of the next year. The limestone investigations are likely to be completed well within the scheduled time. Necessary steps are being taken to ensure this.

DOUBLE TAXATION AVOIDANCE AGREEMENT

An Indian Tax Delegation has returned after negotiations with the Governments of the United Arab Republic and France for agreements for the avoidance of double taxation of incomes with these countries. The delegation was led by Mr. V. T. Dehejia, Secretary, Union Ministry of Finance, and included Mr. J. P. Singh, Chairman, Central Board of Direct Taxes.

In Cairo, the Indian and the UAR delegations drew up a comprehensive draft agreement covering all the possible sources and types of incomes. It is based on the principles followed by India in similar agreements with other countries,

subject to necessary modifications to suit the conditions prevailing in the UAR. The agreement will come into force after the draft is approved by the two Governments and Instruments of Ratification are exchanged.

In Paris, the Indian delegation completed the pending negotiations for an agreement with a tax delegation of the French Government. The discussions resulted in a settlement of the outstanding points relating to an earlier draft agreement for the avoidance of double taxation of incomes between the two countries on a comprehensive basis. This draft also embodies the principles which have been followed by India with other countries. A formal agreement is now expected to be concluded shortly.

HEAVY DUTY BRICKS

The National Buildings Organisation of the Union Ministry of Works and Housing is going to establish an integrated plant for the production of facing bricks, heavy duty bricks and vitreous clay tiles. The proposed plant will have a capacity of producing 2.5 million facing bricks, 2 million heavy duty bricks and 0.5 million sq. ft. vitreous clay tiles per year from clays of the Indo-Gangetic plain. The capital investment required will be Rs. 8,50,000, the foreign exchange component of which will be about Rs. 50,000 only. The heavy duty bricks, called engineering bricks, are known for their high strength and can be used in multistoreyed construction for load bearing purpose. Facing bricks for external cladding are likely to be in good demand in big cities because they do away with plastering. Paving and flooring bricks can replace the concrete and other special floors which are resistant to heat and chemical attack.

The vitreous clay tiles provide a permanent floor finish and are cheaper than conventional flooring material. The use of these products will result in saving of cement and a reduction in the cost of construction. A pavement constructed with paving bricks will save about 0.16 tons of cement per 100 sq. ft. The vitreous clay tiles will be cheaper and are estimated to cost Rs. 24 as against the cost of cement and "terrazzo" tiles which ranges from Rs. 55 to Rs. 155 per 100 sq. ft.

THE MYSORE KIRLOSKAR LTD.,

Yantrapur P.O. Harihar (India)

NOTICE

NOTICE is hereby given that the 23rd Annual General Meeting of the Company will be held on Saturday the 28th November, 1964, at 3-30 P.M. (I.S.T.) at the Registered Office of the Company at Harihar to transact the business, the details of which have been made known to the shareholders separately by notice sent them individually.

A MEMBER entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member of the Company.

The Share Transfer Books of the Company will remain closed from the 20th November, 1964 to 28th November, 1964 (both days inclusive).

By Order of the Board,
for THE MYSORE KIRLOSKAR LTD.,
V. K. BODAS,
Secretary.

P.O. Yantrapur
Harihar

Date: 23rd September, 1964.

LET A LATHE MAKE HIS LIFE

Ramlat: Abdul, I have brought my son Narayan to show him your workshop.

Abdul: With pleasure, Ramlat. Narayan, now that you have finished your studies what you wish to do for the future?

Narayan: Uncle, we came here to seek your advice in this matter.

Abdul: I shall gladly give it. Let us go on our round of the workshop.

Ramlat: Abdul, I am seeing your workshop after some years and I am glad to observe that you have very much increased your operations.

Abdul: You are right. I had only one Harihar Lathe when I started. I have built up by intelligent and hard work a reputation for good workmanship and my business is growing every year. We insist here on always doing a thorough job.

Ramlat: I am very happy about your progress. But tell me, Abdul, why you have all Mysore Kirloskar Lathes only installed here?

Abdul: Ramlat, the first lathe gave me such satisfactory work that I bought another of the same model. I then made a rule that we should have only Mysore Kirloskar Lathes in this workshop. Made by a pioneer manufacturer, these Lathes are dependable, sturdy, always up-to-date in design and construction. They are economical and need practically no servicing.

Ramlat: Now turning back to the question of Narayan's future what do you suggest?

Abdul: Well, seeing my workshop is an advice in itself. I suggest that you get him started as I did with a Kirloskar Lathe and lead him to a life of independence. If he wants I shall arrange for his training in my workshop where he will learn to operate these various lathes made by Kirloskar.

Company Affairs

TATA CHEMICALS

THE DIRECTORS of Tata Chemicals Limited have recommended the payment of dividend at the rate of 14 per cent for the year ended June 30, 1964 as against 10 per cent paid last year. The increase in distribution includes a bonus element of 1.50 per cent. The sales of the company have touched the new high of Rs. 756.41 lakhs and gross profit also was higher at Rs. 174.09 lakhs as against Rs. 134.06 lakhs last year. The provision for depreciation has been raised from Rs. 44.18 lakhs to Rs. 69.50 lakhs — a part of the increase being due to the provision for third shift working. After a provision of Rs. 35.25 lakhs for taxation there is a net profit of Rs. 69.34 lakhs. A sum of Rs. 10.88 lakhs is provided for development rebate reserve and Rs. 11.85 lakhs for general reserve.

The increase in profit was due to several favourable factors which include a higher production and sale of light and heavy soda ash — a record harvest of salt altogether eliminating the need to purchase salt during the year which has been a regular feature during the recent years. It also meant lower cost of production and higher realisation from the sales of the soda ash. Mr. J. R. D. Tata, Chairman, in a statement to the shareholders has stated that the company had attained the stage of self-sustained growth and that barring unforeseen circumstances, the investment would yield increasing returns. He added that production of soda ash exceeded the rated capacity of 400 tonnes per day. The company has decided to increase the rated capacity of the plant from 400 to 600 tonnes per day which can be achieved quickly and financed from the company's internal resources.

DECCAN SUGAR

The directors of the Deccan Sugar and Abkari Company Limited has recommended a final dividend of 11.5 per cent for the year ended May 30, 1964, making a total of 18 per cent for the year. Considering the facts that this distribution is on the increased capital, this maintenance of dividend is a reflection of improved results. A sum of Rs. 18.55 lakhs is provided for taxation, Rs. 1.35 lakhs for development rebate reserve and Rs. 5.30 lakhs for rehabilitation reserve. The proposed dividend absorbs Rs. 7.93 lakhs.

RUBY MILLS

The Ruby Mills Limited has shown substantial improvement in its working for the year ended March 31, 1964 and consequently the directors have proposed the payment of dividend at the rate of 10 per cent as against 8 per cent last year. The gross profit has gone up from Rs. 13.75 lakhs to Rs. 16.30 lakhs. The provision for depreciation has been raised from Rs. 6.33 lakhs to Rs. 9.43 lakhs and taxation from Rs. 1.15 lakhs to Rs. 3 lakhs. The net profit is slightly lower at Rs. 3.19 lakhs as against Rs. 5.53 lakhs last year. A sum of Rs. 1.51 lakhs is provided for development rebate reserve as against Rs. 3.70 lakhs last year. The total sales of cloth, yarn and waste amounted to Rs. 1.42 crores against Rs. 1.27 crores last year.

VALLABH GLASS

The working of Shree Vallabh Glass Works Limited for 1964-65 is expected to improve considerably because its sales for the first half of the current year have amounted to Rs. 50 lakhs. In other words it expects to reach a sales target of Rs. 1 crore in 1964-65 as against the sale proceed of Rs. 45 lakhs in 1963-64. The company is at present producing about 1,500 tons of sheet glass per month against the licensed capacity of 1,200 tons. The position with regard to figured glass is, however, not satisfactory because of over-production on the part of several manufacturers in the country. The com-

pany has been able to sell only 50 per cent of its production of figured glass. At present it produces 950 tons of such glass which is its licensed capacity.

The mirror plant with a capacity of 6,000 sq. feet of mirror glass per day is expected to go into production by the middle of 1965. For this plant the company has secured the technical collaboration of an American firm. Good demand is expected for mirror from consumers like the railways and steel furniture manufacturers. It has also finalised the technical collaboration arrangement with a leading American firm for its polished plate glass project, which will involve a capital outlay of about Rs. 2 crores.

JAYA SHREE TEXTILES

The Jaya Shree Textile Industries Limited has extended the time limit to November 15 for submitting applications for right equity shares, subject to payment of interest at 9 per cent per annum from September 1 to the date of receipt of application by the company along with full payment thereof.

BANK OF RAJASTHAN

With the opening of a branch at Newai, the Bank of Rajasthan claims to have 49 branches, which is considerably good progress in its working during the last 21 years. Mr. Har mao Upadhyaya, Minister for Education in Rajasthan State Government, while inaugurating the branch expressed satisfaction over the fact that the bank of Rajasthan was spreading its activity in the rural areas and was serving the interests of the community. The Bank of Rajasthan has 14 of its branches located in towns with less than 25,000 population. The Bank has taken into consideration the fact that it should spread its activity at places where no adequate banking facilities exist already. In this way it has been helping in the process of savings. The secretary of the board of directors indicated that the Bank had persuaded the Reserve Bank of India to permit the Bank to open its branches in Calcutta, Ahmedabad and Indore so that it can operate more efficiently.

SOUTH INDIA SHIPPING CORPN.

The P. & O. Steam Navigation Company and the Anglo-Norness Shipping Company, who are associated in the business of bulk carrying, have accepted an invitation to take up a 35 per cent and a five per cent share respectively of the initial issued capital of Rs. two crores (£1.5 million) of a new Indian shipping company, the South India Shipping Corporation Limited. The project has been approved by the Shipping Development Fund Committee of the Government of India.

The South India Shipping Corporation Limited has placed an order with the Bremen Vulkan Shipyard, Bremen, for five bulk carriers, each of 38,000 tons deadweight, designed for the carriage of ore, grain and other bulk cargoes. Mr. A. D. Shroff is the Chairman of the South India Shipping Corporation. The P. and O. Steam Navigation Company will be represented on the South India Shipping Corporation Board by Mr K. M. Campbell, London, and Mr. J. W. Anson, Bombay. Lord Inchcape, who has large industrial interests in India, has also agreed to join the Board of Directors.

SHREE KRISHNA ISSUE

Shree Krishna Rajendra Mills Limited, Mysore proposes to issue right shares in the proportion of one for one. The company has recently changed hands and modernisation has been initiated to achieve efficiency and economy in production. The finance realised from the issue of right shares will be utilised for the modernisation programme. The authorised capital of the company is Rs. 1 crore divided into 20,000 tax free redeemable cumulative preference shares (95 per cent) of Rs. 100 each and 160,000 equity shares of Rs. 50

each. The issued capital is Rs. 39.84 lakhs divided into 79,683 equity shares of Rs. 50 each out of which 72,394 equity shares of Rs. 50 are fully paid-up.

DALMIA CEMENT

Dalmia Cement (Bharat) Limited proposes to take over Hind Ceramics Ltd. by acquiring all its preference and equity capital. It will purchase 1,250 equity shares of Rs. 100 each at Rs. 125 per share and 5,000 (6 per cent tax free) cumulative preference shares of Rs. 100 each at par.

Hind Ceramics Ltd. is currently engaged in the manufacture of sanitary wares and stone-ware pipes. It has incurred losses during the years 1960, 1962 and 1963 and is finding it increasingly difficult to run its plant due to inadequacy of funds and lack of proper supervision and technical expertise. Its assets as on December 31, 1962 are valued at Rs. 23.80 lakhs against the written down value of Rs. 15.05 lakhs. The directors of Dalmia Cement feel that with proper management and technical improvements it will be able to earn reasonable profit.

HINDUSTAN LEVER

Hindustan Lever has decided to pay, in respect of 1964, an interim dividend of 60 paise per share, subject to deduction of tax. The dividend is to be payable on November 16, 1964 to shareholders registered in the books of the company at the close of business on November 4, 1964. The transfer books and the register of members of the company will remain closed from November 6 to 18, 1964 (both days inclusive).

CAPITAL ISSUES

Eight companies have been authorised to raise capital exceeding Rs. 8.82 crores. The consent of the Controller of Capital Issues is valid for 12 months in all the cases.

Khare & Tarkunde Private Limited, Nagpur, is to issue a capital of Rs. 98,600 divided into 986 equity shares of Rs. 100 each, to be allotted as bonus shares to the existing shareholders of the company, on capitalisation of the company's reserves to a like extent.

Dunlop Rubber Co. (India) Limited is to issue capital of Rs. 3 crores, being 15,00,000 equity shares of Rs. 10 each at a premium of Rs. 10 per share. The capital will be issued to the existing shareholders in the ratio of one to three. The money will be utilised for the expansion projects of the company at Sahagunj and Ambatur estimated to cost Rs. 340 lakhs.

Grindwell Abrasives Limited, Army and Navy building, Mahatma Gandhi Road, Bombay, will be issuing Rs. 6 lakhs bonus capital in shares of Rs. 100 each to be allotted to the existing shareholders.

Ghaziabad Engineering Company (Pvt.) Limited, Ghaziabad, engaged in the manufacture of harrows and trailers and household electrical implements, will be issuing bonus shares of the value of Rs. 1.75 lakhs on capitalisation of reserves.

Ahmedabad Advance Mills Ltd., Bombay, is to issue capital of Rs. 95 lakhs consisting of (i) Rs. 70 lakhs in 7,000-5½ per cent mortgage debentures of Rs. 1,000 each for cash at par; (ii) Rs. 10 lakhs in ordinary shares of Rs. 100 each to be issued as bonus shares in the ratio of one share for every 5 shares held on capitalisation of the share premium account; and (iii) Rs. 15 lakhs in ordinary shares of Rs. 100 each for cash at par to the existing shareholders in the ratio of one share for every 4 shares held. The capital from the debentures and rights cash issue will be utilised for modernisa-

tion and renovation of the mills engaged in the production of cloth.

Hindustan Ferodo Limited, Bombay, is to issue capital of Rs. 2,68,01,330 in equity shares of Rs. 10 each. Of this capital, Rs. 145.00 lakhs will be issued to Asbestos, Magnesia and Friction Materials Ltd., for taking over their existing assets and Rs. 53,33,330 to their parent company of Turner & Newall Ltd., U.K. for cash at par. The rest of the capital of Rs. 69.68 lakhs will be offered to the Indian public by prospectus at a premium of Rs. 17 per share. The money will be utilised for expansion and manufacture of new articles.

Modi Spg. & Wvg. Mills Company, Limited, Modinagar, is to issue further capital of Rs. 86,50,320 in equity shares of Rs. 10 each as rights shares for cash at par. The capital will be utilised for financing the installation of 25,000 spindles for the manufacture of sewing thread, hosiery, etc.

Indian Copper Corporation Limited, Calcutta, will be issuing capital of Rs. 125 lakhs in 12,500-7 per cent registered debentures of Rs. 1,000 each for cash at par. The debentures will be issued to the Indian public by prospectus. The money will be utilised for financing the expansion of mine ore production and the setting up of a sulphuric acid plant.

LICENCES ISSUED

The following licences have been issued under the Industries (Development and Regulation) Act, 1951 — during the fortnight ended 19th September, 1964. The list contains the names and addresses of the licensees, the articles of manufacture and annual installed capacity.

INORGANIC HEAVY CHEMICALS

The Anil Starch Products Ltd., Anil Road, P. B. No. 1062, Ahmedabad-2 (Ahmedabad, Gujarat) — Sulphuric Acid 12,600 tonnes per annum.

EXPLOSIVES INCLUDING GUN POWDER

Shri M. Krishnaswami, 20-C, St. John's Road, Secunderabad (Dn.) (Hyderabad, Andhra Pradesh) — Safety fuse 12,00,000 coils per annum.

COTTON TEXTILES

Sundaram Spinning Mills, Komarapalayam, P.O. Via Erode (Madras) — 100 automatic looms for the manufacture of cotton cloth. The Tamil Nadu Cottage Industries Ltd., 16, Anbu Nilayam, Royapuram Extension, Tirupur (Madras) — 12,000 spindles. Tirupur Textiles Pvt. Ltd., P.B.No. 108, Avanasni Road, Tirupur (Madras) — 13,000 spindles. Nutan Mills Ltd., Anil Road, Ahmedabad-2 (Gujarat) — 2,800 spindles.

OTHER PRODUCTS OF IRON & STEEL

Khemchand Rajkumar, 33, Netaji Subhas Road, Calcutta-1 (Kolkata, Thana, Maharashtra) — Electrolytic Tinplates 60,000 tonnes.

JUTE MACHINERY

Texwell Private Ltd., P-21/22, Radha Bazar Street, Calcutta-1 (Calcutta, West Bengal) — Felt Friction Bobs for Jute Industry — 84 lakh pieces.

ORGANIC HEAVY CHEMICALS

Indian Vegetable Products Ltd., Forbes Building, Home Street, Bombay-1 (Bombay, Maharashtra) — 1. Esters — 250 tonnes; 2. Fatty acid chlorides — 100 tonnes 3. Lauroyl Peroxide — 50 tonnes 4. Benzoyl Peroxide — 50 tonnes.

SYNTHETIC RESINS AND PLASTICS

Polyolefins Industries Ltd., Mafatlal House, Backbay Re-

clamation, Bombay (Thana, Maharashtra) — High density polyethylene 20,000 tonnes. Processed polyethylene products 5,600 tonnes. Ziegler catalysts 320 tonnes.

DRUGS AND PHARMACEUTICALS

Standard Pharmaceutical Limited, 67, Dr. Suresh Sarkar Road, Calcutta-14 (Calcutta, West Bengal) — (a) Tetracycline Capsules (250 mg.) — 24,00,000. (b) Tetracycline — chloramphenicol capsules (125 mg. each) — 12,00,000. (c) Chloramphenicol di-hydrostreptomycin capsules (216.25 mg.) 125.00 mg. — 12,00,000. Standard Pharmaceuticals Ltd., 67, Dr. Suresh Sarkar Road, Calcutta-14 (Calcutta, West Bengal) — (a) Tetracycline Pediatric drops — 18,000 kg. (b) Chloramphenicol — dihydrostrepto syrup — 6,000 kg. (c) Chloramphenicol pediatric syrup — 6,000 kg. Glaxo Laboratories (India) Private Ltd., Dr. Annie Besant Road, Worli, Bombay-18 (Bombay, Maharashtra) — Capramin tablets — 120 lakh tablets. Macraben injection (Injection of Vitamin B₁₂ — vitamin B₁₂ - 5Ml — 12 lakh vials. Wyeth Laboratories Ltd., Steelcrete House, Dinshaw Wachha Road, Bombay-1 (Bombay, Maharashtra)—1. Norethisterone B.P. tablets 4 mg, 2 mg, and 2.5 mg. — 5,00,000 tablets. 2. Noreth sterone Acetate tablets 4 mg, 2 mg, and 2.5 mg. — 5,00,000 tablets. 3. Methylprednisolone tablets 4 mg, 2 mg. — 35,00,000 tablets. 4. Methylprednisolone injections 40 mg. — 5,00,000 vials. 5. Fluoxymesterone B.P. tablets 2 mg, and 5 mg. — 10,00,000 tablets. 6. Nandrolone Phenyl propionate B.P. 2 mg. tablets — 12,50,000 tablets. 7. Nandrolone Phenyl propionate injections 50 mg. — 5,00,000 vials. 8. Norethandrolone B.P. tablets 10 mg. — 1,00,000 tablets. 9. Norethandrolone B.P. injections 25 mg. — 50,000 vials. 10. Norethandrolone B.P. drops 0.25 mg. — 5 litres. 11. Hydroxyprogesterone capronate tablets 2 mg. — 10,00,000 tablets. 12. Hydroxyprogesterone capronate injections 250 mg. — 12,000 vials.

COTTON TEXTILES

Smt. Parvathi Arjunan, M.L.A., Palayakottai Post, Dharpuram Taluk, (via) Erode (Kolar Gold Field Area, Mysore) — 24,000 spindles for manufacture of cotton yarn.

FLOUR

Andhra Roller Flour Mills, Mustafa Building, Jawaharlal Nehru Road, Berbun, Hyderabad-8 (Hyderabad, Andhra Pradesh) — Wheat products, Atta, Maida, Suji and Bran, 2,625 million tonnes per month. Shri Ratnakar Umanath Hattikudur, Empresa Industrial Krishna Ltd., Sanvordem — Curcho-rem (proposed name: Empresa Industrial Krishna Ltd.) (Sanvordemurchorem, Goa) — Wheat products, (Atta, Maida, Suji and Bran), 1,260 million tonnes per annum.

LETTERS OF INTENT

The following letters of intent have been issued during the fortnight ended 19th September, 1964, to parties who have applied for licences under the Industries (Development and Regulation) Act, 1951.

M/s. Machinery Manufacturers Corporation Limited, P. 61-B, Circular Garden Reach, Road, Calcutta-43 (Calcutta, West Bengal) — Crosrol-varga web Purifier, Crosrol-varga High Production Units, Crosrol-varga Tandem Carding System, Semi High Production Unit, Cotton Waste Web Purifier, Woolen Web Purifier — 2,000 units. M/s. Bhai Sunder Dass Sardar Singh Pvt. Ltd., 4/23-B, Asaf Ali Road, New Delhi-1 (Punjab) — Hot asphalt plants crushers and concrete pumps. M/s. Sen & Pandit Industries Ltd., Mercantile Buildings, Lall Bazar, Calcutta-1 (West Bengal) — Bicycle Tube valves 1.2 million nos. M/s. J. K. Synthetics Ltd., Kamla Tower, Kan-

pur (Kota, Rajasthan) — Nylon yarn — 11 lakh kgs. M/s. Ashok Ramanlal, Kasurchand Mills Estate, Dadar, Bombay-28 (Thana, Maharashtra) — Nylon yarn — 7.2 lakh kgs. M/s. Elpro International Ltd., 20, Graham Road, Ballard Estate, Bombay-1 (Maharashtra) — (1) High Pressure sterilizers — 189. (2) Boiling type sterilizers — 390. (3) Water stills — 90. (4) Operation tables — 170. (5) Operation theatre lights — 410. (6) Suction pumps — 250. M/s. Siemens Engg. & Mfg. Co. of India Ltd., 81/33, Veer Nariman Road, Church Gate, Bombay-1 (Maharashtra) — X-Ray Equipment. M/s. J. K. Synthetics Ltd. Kamla Tower Kanpur (Rajasthan) — Nylon staple fibre 18 lakh kgs. M/s. Universal Radiators, Mettupalayam Road, Coimbatore-11 (Madras) — Inter coolers and after coolers — 18,000 Nos. M/s. Bombay Company Private Limited, 9, Wallace Street, Fort, Bombay-1 (Maharashtra) — Foundry equipment, Rs. 1.5 crores worth a year.

M/s. Shakti Insulated Wires Private Limited, Bansilal Motilal Mansion, 22, Apollo Street, Bombay-1 (Maharashtra) — Enamelled wires 1,200 tons. Shri Madan Gopal Todi, 177B, Chitranjan Avenue, Calcutta-7 (West Bengal) — 1. L.T. Circuit Breakers — 1,000 nos. 2. L.T. Control Boards — 100 nos. 3. L.T. Switch Boards — 300 nos. M/s. The Ahmedabad Manufacturing and Calico Printing Co. Ltd., (Chemicals and Plastics Division), Anik, Chambur, Bombay-71 (Maharashtra) — Trichloroethylene and related solvents — from 1980 to 3000 tons. M/s. Indo-American Electricals Limited, 21, Old Court House Street, Calcutta-1 (West Bengal) — Enamelled copper strips, 780 tons. M/s. The Hindustan Machine Tools Ltd., P.O. Jalahalli, Bangalore-13 (Sanatnagar, Andhra Pradesh) — 1. Special purpose machines. 2. Gear-shaping machines. 3. Gear hobbing machines. 4. Metal forming machines. 5. Boring machines — 1,008 machines. M/s. Mather Greaves Ltd., Forbes Street, Post Box No. 91, Bombay-1 (Maharashtra) — Centrifugal pumps up to 30" (including spare parts therefor) 600 nos. M/s. Biological Evans Private Ltd., Cooks Building, 324, Dr. D. Naoroji Road, Bombay-1 (Andhra Pradesh) — Surgical sutures (2.16 million tubes). M/s. Podar Mills Limited, 'Podar Chambers' Parsi Bazar Street, Fort, Bombay-1 (Rajasthan) — Vee Belts and Fan Belts — 5,00,000 nos.

LICENCES REVOKED OR SURRENDERED

During the fortnight ended 19th September, 1964.

(The particulars refer to specific licences)

M/s. B. K. Khanna & Co., Private Limited, New Delhi. Name of the Undertaking: M/s. Shama Bearings Ltd. — Thin-walled bearings. M/s. Jhelum Spinning and Weaving Mills Ltd., Azadpur, Delhi — Cotton yarn.

M/s. Purshottamlal Jhunjhunwala, Bombay — Potassium Chloride and Magnesium Sulphate. M/s. Indian Drugs and Pharmaceuticals Ltd. New Delhi — Drugs from medical plants.

CHANGE IN NAMES (Owners or Undertakings)

During the fortnight ended 19th September, 1964.

(The particulars refer to specific licences)

From M/s. The Standard Vacuum Oil Company, Bombay to M/s. Esso Standard Eastern Inc., Bombay. From M/s. Murgappa Chigateri and Sons, Davengere to M/s. Chigateri Bros. Davengere.

From Shri N. J. Patel, Baroda to M/s. N. J. Matal Screens Manufacturers Private Limited, Baroda. From Shri P.V.P. Naidu, Madras to M/s. Micro Tools Limited, Madras. From M/s. Indo-Burma Trading Corporation, Madras to M/s. East Coast Oil Corporation, Madras.

BOOKS BRIEFLY

Demand Theory Analysed

Demand Theory and Economic Calculation in a Mixed Economy: By Dr. H. K. Manmohan Singh; George Allen and Unwin; Pp. 135; Price 21s.

Reviewed by SATISH C. MEHTA

THE BOOK under review deals with a subject seldom treated in detail by economists in India. It is a treatise on the "logical theory of demand" with an attempt at demonstrating the role of the theory as an aid to a policy of economic development in underdeveloped countries. The validity of the assumptions of the theory is examined in the context of an economic model of a planned mixed economy moving away from capitalism and towards socialism in the process of economic development. The book is divided into two parts of unequal lengths comprising seven chapters. Part I gives a systematic non-mathematical exposition of the three sources of the micro theory of demand, viz., (i) the Marshallian marginal utility hypothesis, (ii) the Hicks-Allen indifference-preference hypothesis, and (iii) the Samuelsonian revealed preference hypothesis. Appended to an analysis of these hypotheses is a discussion on the "Development and Use of Indifference Curves" and "Neumann-Morgenstern Method of Measuring Utility."

After conducting a very competent and comprehensive survey of the roots of micro theory of demand in Part I of the book the author proceeds to examine, in Part II, its usefulness in a planned mixed economy (like that of India) which has adopted State-directed planning as a policy for economic development. Finally, the subject of the extent to which the assumptions of the Law of Demand hold good for such an economy, is examined in the last chapter.

The author first examines the role of demand in a free enterprise economy in order to demonstrate that it plays a definite and positive functional role in a planned mixed economy. In a free enterprise economy, consumer's demand helps the disposition of productive resources amongst alternative uses and the given output gets distributed amongst individuals according to demand prices. The faults in the working of this system are that (i) it takes cognizance of only those goods which are in existence and does not take into account those goods which may be produced in future, (ii) production is based on expected demand and (iii) it only applies to the production and distribution of "private goods" and excludes the analysis of production and distribution of "public goods."

Underdeveloped countries are likely to follow the Soviet method of planning because of its remarkable achievements. But the Soviet method assigns no role to price mechanism and depends on "direct co-ordination of physical magnitudes." The author believes that "in a system that does not make use of demand prices there must be a large element of arbitrariness". Such a system is bound to be susceptible to gross divergences from the "ideal distribution of resources". He further adds that "in the absence of the market mechanism further adds that "in the absence of the market mechanism the clash between the planner's and consumer's preference schedules seems to be ineluctable". Prof. Oscar Lange, while commenting on the 'New Economic Model' of Poland, argues that "The fixing of prices should be the basic means of linking these socialist enterprises to one another, as well as of linking these enterprises to the consumers and private producers (peasants and artisans). In other words these links should be based on and artisans). In other words these links should be based on the functioning of the law of value". The under-developed countries (like India) are following the Polish and not the Soviet method of central planning.

The applicability of the demand theory to underdeveloped countries is discussed in the last chapter by analysing the "implicit" and "explicit" assumptions of the theory. The implicit assumptions are the abstraction of the theory from price controls and drawing of inferences from individual preferences alone. Price controls are a reality both in underdeveloped and developed countries and they have come to stay due to various reasons. In under-developed countries they become a necessity for securing planned increase in investment, for checking price inflation fostered by increased demand for essential goods and for checking violent price fluctuations due to inelastic demand and supply conditions of essential goods. Though price controls are responsible for causing malfunctioning of the economy, they cannot be avoided and must be taken as "a datum internal to the system". The deductions of the theory based solely on individual preferences do not recognize preferences of the State, based on its own values, and expressed in terms of a large variety and quantity of public goods.

The author concludes that some of the limitations of the micro theory of demand can be lifted and it can be extended so as to cover the field of the problem of "primary planning", i.e., allocation of productive resources amongst alternative uses and the distribution of turnover amongst different individuals, in a mixed planned economy. This reviewer wholeheartedly recommends the book — a product of first-rate scholarship and years of sustained labour — to advanced students of Economic Theory and fellow-economists interested in the subject.

THE CORPORATE SECTOR

The Investor's India Year-Book: Compiled by Place, Sidons & Gough Private Limited and Published by Orient Longmans; Pp. 470; Price Rs. 25.

The Madras Stock Exchange Official Year-Book, 1962-63: Compiled and published by Madras Stock Exchange Limited, Madras; Pp. 1112; Price Rs. 12.50

THE FIFTIETH edition of the Investor's India Year-Book presents a detailed picture of the corporate sector for the last ten years. The balance sheets of almost all the joint stock companies have been analysed to give the comparative figures of sales, profits, depreciation, reserve funds, dividends and the share prices up to the year 1963. It also contains a list of the prices of important shares quoted at all the stock markets as at the beginning and at the end of 1963, as also towards the middle of 1964. It also contains a list of important new issues offered to the public from September, 1963 to July, 1964. It has been brought up to date to make it a reliable reference book for those who are interested in the economics of the corporate sector.

The Madras Stock Exchange Official Year-Book, in the eleventh edition, maintains all its usual features and information and has been brought up-to-date wherever necessary. Particulars regarding all the companies officially listed on the Madras Exchange and those of a large number of important companies listed on other recognised stock exchanges have been included. Details have been given of the companies which raised capital in the market during the last three years. It also contains information relating to Central and other State loans, schedule of income-tax, rates of estate duty and other taxes.

RECORDS AND STATISTICS

Industrial Growth Key To Prosperity

INCREASES in industrial output were registered during 1963. The index of industrial production, which stood at 163.3, recorded an increase of 9.2 per cent over 1962. This rate of growth was higher than what was registered in the previous year (8.0 per cent).

All the groups constituting the index, except food manufacturing industries and tobacco industries, showed an upward trend. Even in the case of tobacco industries the decline, being less than one per cent, was negligible. The small decline of 4 per cent in food manufacturing industries was mainly accounted for by a fall of 5 per cent in the output of sugar. The remaining items in this group like wheat flour, vanaspati, coffee and salt recorded increases in output.

In the textile group, the highest increase of 20 per cent occurred in the woollen textiles group. The production of woollen/worsted fabrics rose from 18 million metres to 20 million metres and of woollen/worsted yarn rose from 18 million kgs. to 23 million kgs. This was mainly because this industry, being one of the defence-oriented industries, received special encouragement. Cotton textiles and jute textiles recorded much lower increases of 6 per cent. The increase in silk and synthetic fibres, being 10 per cent, was however much more appreciable.

A substantial increase of 38 per cent was noticed in aluminium manufacturing. The production of aluminium rose from 35 thousand tonnes to 53 thousand tonnes. The increase was mainly due to the coming into full production of a new unit which had commenced operations in the previous year. There was a sizable increase of 14 per cent in iron and steel basic industries also. These two together raised the index for the basic metals group by a further 14 per cent.

Chemicals to the Fore

Among the other groups which registered appreciable increases were chemicals and chemical products (22.6 per cent) and machinery, other than electrical machines (25.1 per cent). The increase in chemicals was on account of substantial increases in the output of almost all the constituent items such as sulphuric acid, caustic soda, soda ash, superphosphates and ammonium sulphate. In some of these industries, like sulphuric acid, caustic soda, superphosphates and ammonium sulphate new units and expansion projects of existing units came into production, which added to the installed capacity.

The increase in the index for machinery (other than electrical) was mainly due to increased output in diesel engines, ring spinning frames, machine tools, power driven pumps and ball bearings.

Substantial increases of 19 per cent to 20 per cent was also noticed in footwear, wood and cork, paper and paper products and leather and fur products.

Industrial expansion was considerably facilitated by an increase in the output of coal (9 per cent) and electricity (15 per cent).

The upward trend in production noticed in 1963 continued in the first half of the current year, although the rate of growth was lower. The index of industrial production for January - June 1964 (seasonally adjusted), at 170.6, was higher than the index for the corresponding period of last year by 6.8 per cent.

A larger number of constituent groups recorded a decline. These included mining and quarrying, woollen textiles, footwear, leather and fur products, basic metals including iron

and steel basic industries, copper smelting and brass manufacture. The decline in basic metals at 1.4 per cent was, however, small. The production of woollen/worsted fabrics at 6 million metres declined appreciably. There was a decline, although somewhat smaller, in woollen/worsted yarn also. A tapering off in the defence demand and shortage of foreign exchange for production of these goods for civilian consumption were mainly responsible for this decline. As in past years, there was a further conspicuous increase (18 per cent) in the output of electricity.

All the remaining groups registered increases. The most conspicuous increase, at 29.6 per cent, occurred in transport equipment. All the items in this group namely, automobiles, motor cycles, scooters, three wheelers, railway wagons and bicycles recorded sizable increases. In the case of automobiles, the increase was due mainly to higher production of jeeps and trucks. Increases in the output of railway wagons, was, in part, due to some additions to installed capacity which had taken place in 1963.

Increase in Textiles

Although there was a decline in woollen textiles, the overall index for textiles registered an increase of 6 per cent. This was due to a substantial increase (28 per cent) in silk and synthetic fibres. A small increase (5 per cent) in cotton textiles was also a contributory factor, since it carries a substantial weightage in the index.

The other groups which recorded increases of over 10 per cent were food manufacturing industries (14 per cent), paper and paper products (11.6 per cent), petroleum products (13.6 per cent), metal products (12.9 per cent), machinery except electrical etc. (11.1 per cent) and electrical machinery etc. (10.6 per cent). The increase in food manufacturing industries was due to higher production of sugar, which had shown a declining trend in 1963, and also of salt. Increased output of several items such as screws, razor blades, oil pressure lamps, crown cork and thermos flasks pulled up the index for the metal products group.

Higher output of items such as ring spinning frames, carding engines, machine tools, ball bearings and twist drills contributed to an increase in the machinery group index. Besides some new items, such as sugar mill machinery, also showed some improvement. Increases in output were also registered in power transformers, storage batteries, house service meters, domestic refrigerators, air conditioners, conduit pipes and some types of cables and wires. In some of these items such as machine tools, storage batteries, transformers, house service meters and ball bearings, additions to installed capacity had been made in 1963, which was partly responsible for the increased output in the first half of 1964.

The output of petroleum products recorded a substantial increase by about 5 lakh tonnes. This was mainly due to additions to refining capacity in the preceding period.

The increase in the output of paper and paper board was partly due to the fact that several new units which had started production in 1963, came into full operation during the first first half of the current year.

Table I gives the indices of production; and Table II, production statistics for important industries.

The rate of industrial growth during the last one and a half years has not been unsatisfactory; but it is clear that it is significantly lower than what was envisaged in the Plan.

On present indications, in several important industries such as steel, alloy steels, aluminium, copper, zinc, pig iron, cast iron pipes, steel castings and forgings, nitrogenous and phosphate fertilizers, sulphuric acid, synthetic rubber, newsprint, cement, rayon and cotton yarn the planned targets are not likely to be reached in time. In a few of these industries, however, the shortfalls are not substantial and in many of them the entire capacity required to achieve the targets has already been licensed. In some cases the requisite foreign exchange has also been made available.

Shortage of foreign exchange has been one of the major factors inhibiting industrial growth. It has also come in the way of a fuller utilisation of existing capacity. The need to provide larger foreign exchange for meeting the requirements of raw materials and components is fully recognised. The choice, however, between using the limited foreign exchange for increasing current production or for strengthening the industrial structure is a very difficult one. The long-term solution to the problem of foreign exchange must necessarily lie in increasing exports sufficiently so that it would pay for the required raw materials, components and specialised equipment. The need for imports will tend to grow, rather than diminish, in the near future. It would be necessary to import increasing quantities of raw materials and components in years to come, although imports of complete machinery may diminish with the increase in domestic machinery output.

A growing recognition by foreign countries of the foreign exchange problems of this country has been evident. An instance in point is the credit of \$90 million sanctioned recently by the International Development Association, which is an affiliate of the World Bank. This credit should help in attaining higher levels of utilisation of capacity in major fields such as commercial vehicles, construction equipment, machine tools, cutting tools, electric motors, transformers and switch-gear. It is expected that the IDA credit together with other foreign exchange resources will be able to meet in full the require-

ments of foreign exchange of these sectors for raw materials, components, etc.

Every endeavour is made to meet to the fullest possible extent the requirements of industry from available foreign exchange resources including credits from friendly countries. Nevertheless in sectors other than those covered by the IDA credit the foreign exchange shortage continues to be a serious limitation on the growth of production. Partly because of traditional business connections and partly because of a certain amount of inertia, manufacturers tend to restrict themselves to certain traditional sources of supply. In recent years, valuable assistance has been available from several countries in Western Europe and large and growing trade connections with East European countries have also been built up. The task of meeting the foreign exchange problem would become relatively easier if in keeping with the new sources and types of credits, industry could explore more fully these new avenues for meeting its foreign exchange requirements.

There were frequent complaints that procedural difficulties came in the way of a fuller utilisation of external assistance. The whole position was examined by a Committee under the Chairmanship of Dr. V. K. R. V. Rao which made certain suggestions for streamlining procedures. Government have accepted most of its recommendations and follow-up action is being taken to implement them.

Similarly another Committee examined in detail the drill laid down for obtaining the various clearances from Government for establishing industrial projects. Almost all the recommendations of this Committee have been accepted by Government and are being implemented.

A Committee, with Dr. P. S. Lokanathan as Chairman, has been recently appointed to examine the allotment and distribution of scarce raw materials to the various sectors of industry.

INDEX OF INDUSTRIAL PRODUCTION: 1960-64

(Base : 1956 = 100)

Groups and Sub-groups	Weights	1960	1961	1962	1963	Percentage increase(+) or decrease (—) in '63 over '62	Jan.-June		Percentage increase(+) or decrease (—) Jan-June '64 over Jan-June '63

								(Crude)	

TABLE II.
PRODUCTION TRENDS: 1960-64

Industry/Unit	Production				Jan.-June	
	1960	1961	1962	1963	1963	1964
I. MINING AND QUARRYING						
Coal (Th. Tonnes) ..						
Iron Ore (Th. Tonnes) ..	52604	56100	61548	66924	33966	32566
	10683	12270	13188	14784	7391	7287
II. FOOD MANUFACTURING INDUSTRIES						
Wheat flour (Th. Tonnes) ..						
Sugar (Th. Tonnes) ..	995	1001	1202	1322	625	893
(Figures from 1957 to 1963 are for the crop year (Nov. - Oct.))	2485	2983	2281	2160	1459	1721
Vanaspatti (Th. Tonnes) ..						
Tea processing (Mill. Kgs.) ..	338	339	369	384	197	213@
Coffee curing (Th. Tonnes) ..	315	348	343	343	93	97
Salt (Th. Tonnes) ..	51.7	66.7	47.5	58.4	45.0	53.0
	3436	3466	3860	4578	3503	3926
III. TOBACCO INDUSTRIES						
Cigarettes (Mill. Nos.) ..						
	36971	39466	41124	40736	20312	22106
IV. MANUFACTURE OF TEXTILES						
Cotton yarn (Mill. Kgs.) ..						
Cotton, cloth —	788	862	860	893	429	462
(i) Mill Sector (Mill. Metres) ..						
(ii) Decentralised Sector (Mill. Metres) ..	4616	4694	4480	4423	2184	2262
Art Silk fabrics (Mill. Metres) ..	2016	2376	2412	2880	1380	1458
	544	570	600	648	309	400@
Rayon: i) Viscose yarn (Th. Tonnes) ..						
	19.2	21.5	26.2	31.3	14.9	18.1

PRODUCTION TRENDS: 1960-64 (Contd)

Industry/Unit	Production				Jan.-June	
	1960	1961	1962	1963	1963	1964
ii) Staple fibre (Th. Tonnes) ..	21.8	26.0	32.4	32.2	15.8	18.4
iii) Acetate yarn (Th. Tonnes) ..	11.9	2.0	1.4	2.0	0.92	0.95
JUTE MANUFACTURES (Th. Tonnes) ..	1086	969	1181	1236	613	625
WOOLLEN MANUFACTURES:						
(i) Woollen/worsted fabrics (Th. Metres) ..	13956	13200	18288	20400	9594	6000
(ii) Woollen/worsted yarn (Th. Kgs.) ..	12696	14760	18012	22728	11385	10861
V. FOOTWEAR & OTHER WEARING APPAREL						
Leather footwear —						
(i) Western type (Th. Pairs) ..	5419	6224	6514	8288	3974	3672
(ii) Indigenous type (Th. Pairs) ..	3777	4407	5286	5185	2888	2729
VI. MANUFACTURE OF WOOD & CORK						
Plywood (i) Tea-chest (Th. Sq. Mtrs.) ..	9120	9039	9790	9924	4907	4611
(ii) Commercial (Th. Sq. Mtrs.) ..	6024	6309	7460	9648	4747	5089
VII. PAPER & PAPER BOARD (Th. Tonnes) ..	345	364	388	463	217	243
VIII. LEATHER AND FUR PRODUCTS						
Tanned hides (Th. hides) ..	3486	3491	3828	4432	2249	2119
Leather cloth (Kilo Metres) ..	5846	7010	6063	6235	3006	4246
IX. RUBBER PRODUCTS						
Footwear (Rubber) (Mill. Pairs) ..	44.6	45.1	49.8	46.6	24.2	22.5
Tyres: (i) Automobile (Th. Nos.) ..	1361	1562	1710	1926	939	1017
(ii) Bicycles (Th. Nos.) ..	10830	11346	11940	14186	6709	7842
Tubes: (i) Automobiles (Th. Nos.) ..	1281	1484	1643	2029	1001	1166
(ii) Bicycle (Th. Nos.) ..	12675	12848	11562	13343	6519	7128
X. CHEMICAL PRODUCTS						
Sulphuric acid (Th. Tonnes) ..	354	422	469	568	265	326
Caustic Soda (Th. Tonnes) ..	98	120	124	152	70	87
Soda Ash (Th. Tonnes) ..	145	177	223	267	133	138
Chlorine Liquid (Th. Tonnes) ..	31.7	33.9	37.9	44.2	19.3	24.6
Bleaching Powder (Th. Tonnes) ..	5.9	7.1	6.3	7.3	3.5	3.3
Bichromates (Th. Tonnes) ..	5.0	5.2	7.0	6.9	3.2	3.4
Superphosphates (Th. Tonnes) ..	318	372	448	580	266	316
Ammonium Sulphate (Th. Tonnes) ..	384	395	418	443	222	208
Alum (Ammonia) (Th. Tonnes) ..	4.5	4.5	4.1	3.7	2.1	1.3
Copper Sulphate (Th. Tonnes) ..	3.8	4.3	3.9	3.7	1.5	2.5
Glycerine (Refined) (Th. Tonnes) ..	5.8	6.1	7.3	7.2	3.8	3.8
Glue (Th. Tonnes) ..	1.9	1.9	2.2	1.99	0.99	1.1
Soap (Th. Tonnes) ..	143	149	152	159	80	86
Matches (Mill. Boxes) ..	5808	3858**	3950**	4138	2068	2101
Paints (Th. Tonnes) ..	52	59	65	69	31	38
Power Alcohol (Mill. litres) ..	49	54	51	25	24	0.4
Industrial Alcohol (Mill. litres) ..	41	51	62	87	43	77
(Rectified spirits)						
Welding gases						
(i) Oxygen Gas (Mill. Cu. Mtrs.) ..	21.3	16.2*	18.2*	20.6*	10.0*	12.2*
(ii) Acetylene Gas (Mill. Cu. Mtrs.) ..	2.5	2.9	3.3	3.9	1.9	2.1
Liver Extracts						
(i) Injection (Mill. C.C.) ..	40.9	45.4	43.8	43.0	24.1	18.8
(ii) Oral (Tonnes) ..	161	155	166	166	81	78
XI. MANUFACTURE OF PETROLEUM PRODUCTS						
Petroleum Products (Th. Tonnes) ..	5758	6101	6574	7650	3673	4200

PRODUCTION TRENDS: 1960-64 (Contd)

Industry/Unit	Production				Jan.-June	
	1960	1961	1962	1963	1963	1964
XII. MANUFACTURE OF NON-METALLIC MINERAL PRODUCTS						
Refractories (Th. Tonnes)	551	627	671	659	343	324
Insulators (i) H.T. (Tonnes)	2334	2958	4102	3846	1948	2424
(ii) L.T. (Tonnes)	3916	4258	5470	4313	2215	2619
Cement (Th. Tonnes)	7850	8250	8587	9355	4730	4790
Asbestos Cement Sheets (Th. Tonnes)	211	213	234	308	142	169
Grinding Wheels (Tonnes)	1952	2050	2269	2791	1328	1495
Coated abrasives (Th. Reams)	132	149	197	184	89	83
XIII. BASIC METAL INDUSTRIES						
Pig Iron (Th. Tonnes)	4150	4960	5764	6602	3381	3165
Finished Steel (Th. Tonnes)	2208	2851	3799	4277	2096	2145
Copper (Tonnes)	8933	8725	9781	9593	4573	4593
Aluminium (Tonnes)	18243	18381	35211	53386	26514	27625
Lead (Tonnes)	3747	3664	2849	3536	1664	1638
XIV. MANUFACTURE OF METAL PRODUCTS						
Screws (i) Wood (Mill. Nos.)	1434	1500	1477	1373	673	688
(ii) Machine (Mill. Nos.)	237	381	425	391	191	229
Razor Blades (Mill. Nos.)	565	770	625	827	349	418
Hurricane Lanterns (Th. Nos.)	5196	5540	5674	5071	2547	2664
Oil Pressure Lamps (Th. Nos.)	133	145	135	116	57	70
Crown Corks (Mill. Nos.)	769	873	698	769	496	516
Thermos Flasks (Th. Nos.)	1510	1550	1510	1939	877	930
XV. MANUFACTURE OF MACHINERY EXCEPT ELECTRICAL						
Diesel Engines						
(i) Stationary type (Th. Nos.)	42	44	43	56	27	32
(ii) Vehicular type (Th. Nos.)	10.6	9.8	7.6	8.8	4.0	4.2
Looms (Calco, Semi-Automatic & Automatic (Nos.))	5556	7572	5856	5196	2924	2380
Complete Ring Spg. Frames (Nos.)	1128	1414	1572	1980	967	1070
Carding Engines (Nos.)	1073	1320	1500	1596	848	923
Machinery Tools (Including Portable Tools and accessories) (Rs. lakhs)	669	852	1182	1799	782	983
Power driven pumps (Th. Nos.)	104	127	129	150	73	78
Ball bearings (Th. Nos.)	2699	3216	3906	4954	2285	3356
Sewing machines (Th. Nos.)	297	317	343	337	181	68
Typewriters (Th. Nos.)	23.5	31.1	36.3	42.4	19.6	22.3
Twist drills (Th. Nos.)	1536	2742	3785	4680	2017	3000
Sugar mill machinery (Rs. lakhs)	419	467	643	574	237	303
Tea processing machinery (Rs. lakhs)	121	177	165	165	77	53
XVI. MANUFACTURE OF ELECTRICAL MACHINERY						
Power transformers (Th. KVA)	1281	1796	2307	2639	1330	1548
Electric motors (Th. H.P.)	750	897	983	1182	1592	589
Dry batteries (Mill. Nos.)	208	214	239	276	137	128
Storage batteries (Th. Nos.)	507	511	566	689	340	379
Electric lamps (i) GLS & others (Mill. Nos.)	40	45	55	67	33	35
(ii) Fluorescent lamps (Th. Nos.)	1527	2090	3180	3638	1828	1854
Electric fans (Th. Nos.)	1012	1073	1129	1144	640	455
Radio Receivers (Th. Nos.)	268	326	343	419	198	211
House Service meters (Th. Nos.)	480	633	878	1194	552	665
Domestic refrigerators (Nos.)	11384	9725	13020	21192	11633	14761
Room air conditioners (Nos.)	10740	12471	13447	10476	5112	5941
Conduit pipes (Th. Metres)	4210	2620	3250	3055	1421	1936
CABLES AND WIRES						
(i) Bare copper conductors (Tonnes)	9900	7632	4944	4392	1781	3306
(ii) A.C.S.R. (Th. Tonnes)	23.3	24.8	24.9	32.4	16.4	21.3
(iii) Winding wires (Tonnes)	4217	5652	6799	7932	3713	4640

*Exclusive of quantity meant for steel processing.

**Relate only to 6 class 'A' factories, the previous figures are in respect of 66 factories including Small Scale factories.

PRODUCTION TRENDS: 1960-64 (Contd)

Industry/Unit	Production				Jan.-June	
	1960	1961	1962	1963	1963	1964
(iv) VIR & PVC (Mill. Metres)	245	263	274	314	158	152
XVII. TRANSPORT EQUIPMENT						
Automobiles (Nos.)	52116	54312	57816	52200	24951	32508
Motor Cycles (Nos.)	3998	8636	8790	9036	3893	5419
Scooters (Nos.)	12880	15451	14318	15432	6979	8841
Three wheelers (Nos.)	496	1267	1426	1704	661	1108
Railway wagons (Nos.)	9876	11052	13932	18960	9359	12459
Bicycles (complete) (Th. Nos.)	1050	1049	1116	1187	571	697
XVIII. ELECTRICITY GENERATED (Mill. KWH)	16433	19111	21473	24791	11862	14041

President in His Own Right

THE SIZE of the vote, both popular and electoral, for President Johnson suggests that the American people, by a clear majority, were as concerned about keeping the Republican candidate out as they were about keeping the Democratic candidate in. The world-wide uneasiness stirred up by the Goldwater candidature was not that it would succeed, but that it could at all have been possible. The fact that one of the two main political parties in the most powerful, prosperous and progressive country in the world should have chosen to gamble on extremism in the conduct of national affairs and policies simply seemed too bad to be true to the many nations of the world which had learned to hope from that country a continuing, constructive leadership for human freedom, world peace and economic growth. By disowning this Republican aberration so decisively the American electorate has certainly mended the damage done to the image of the United States in the eyes of the world.

It is true, of course, that although President Johnson secured a record total of about 42 million in popular vote, his rival did manage to have a little over 26 million recorded in his own favour. This, however, cannot be taken to mean that the great American nation is divided over Goldwaterism in the proportion indicated by the two totals. The two-party system is a basic institution of American democracy and a single false step on the part of the Republican Party surely cannot suffice to destroy it as a major and effective political force in the nation. Party loyalties have always been firm and strong in the American people and it is indeed highly probable that the greater part of the 26 million, whose votes technically belong to Mr. Goldwater, were really voting for the Republican Party as a historic tradition rather than for the Republican candidate of the moment. It should not be forgotten after all that the Republican Presidential candidate in 1960 had polled in a popular vote only fractionally smaller than that of his successful rival. Since the Republican Party had not exactly taken to its bosom, for all his 219 electoral votes, Mr. Richard Nixon in his defeat, it is extremely unlikely that it will be providing any fatted calf for Mr. Goldwater with his 52 electoral votes. Had Mr. Goldwater won, which was always unlikely, he might have succeeded in destroying the Republican Party; by getting defeated so decisively he has now destroyed himself politically and, what is more important, he has also isolated and exposed to the nation's conscience, in all their frightened feebleness, the grey forces of racial intolerance or communal selfishness lurking in the murky corners of the body politic.

President Johnson, returning to the White House in his own right, has thus been gifted a great opportunity. While it has been the privilege of the American people to elect him as their Chief Executive, a far wider world community, cutting even across the barriers of ideological geography, had been wanting them to do so because of its faith that with *him* rather than the other one as the President of the United States, the peace of the world would be more secure and the economic progress of the world more sure. In the tragic days following the late President Kennedy's assassination, his successor had won the admiration and respect of all by the dignity of his personal conduct and the sureness of his political instincts in dealing with a very grave emergency in national affairs. In the months since, his reputation as a positive President, alive to and active in good causes, has been steadily growing. The United States and the world, therefore, expect much of President Johnson.

British Levy Will Hit India's Exports

ALTHOUGH THE chief spokesmen of the new Labour Government in Britain, including the Prime Minister, Mr. Harold Wilson, have been at pains to make out that Britain's new economic measures "would be less likely to freeze patterns of trade and less damaging to the interests of Commonwealth," they have failed to carry conviction, to judge from the reactions to these measures, in particular to the 15 per cent surcharge on imports, from the Commonwealth countries as well as others. Even the assurances of the Chancellor of the Exchequer — Mr. James Callaghan — and the Minister for Economic Affairs — Mr. George Brown — that "every attempt had been made to give other Governments as much notice as possible of what was intended in an 'urgent situation'" have fallen flat, as witness the reactions of the members of EFTA. As a matter of fact, Mr. Maurice Brasseur, the Belgian Trade Minister, has openly accused the British Government of having failed to consult others before taking the decision. All this may be true and, also, it is on the cards that Britain will have to do a lot of explaining to the GATT meeting currently being held in Geneva and the meeting of the EFTA Ministerial Council to be held shortly to discuss these measures, not to speak of the IMF. It is further evident that Britain has probably lesser justification than Canada which imposed a similar surcharge in June 1962, only to withdraw it in April of the following year, due to pressure of adverse international opinion. Even so, it is difficult for any one not to appreciate Britain's "profoundly unsatisfactory" economic situation at present or not to accept as *bona fide* the declaration of the British Chancellor of the Exchequer that "Britain has no intention of becoming protectionist and no desire to be protectionist."

On the eve of the announcement of the new measures, it was disclosed at a Press Conference in London that, on the present pattern of trade, 13 per cent of Commonwealth exports to Britain would be liable to the new surcharge, as compared to 57 per cent of Common Market exports, 48 per cent of US exports and 36 per cent of EFTA exports. At the same Press Conference, it was also made clear — and this is very important — that the impact of the new surcharge would not necessarily be in the same proportion. In the case of Belgium, for instance, although the percentage of Britain's imports from Common Market countries may be 57, the proportion of imports from Belgium that would be affected comes to as much as 95 per cent, it is stated. Similarly, although the percentage of Commonwealth exports to Britain estimated to be hit is only 13 per cent of the total, India will be affected to a relatively greater extent, inasmuch as Britain is still the single largest consumer of Indian goods, accounting for about 20 per cent of India's exports, the current annual rate of exports to the UK being around Rs. 160 crores.

In a situation such as that in which Britain finds herself today, and especially with a new Government in power intent on making the change of Government felt, it is unrealistic to ask Britain to do away with the surcharge, however irksome it may be. However, there are three items of India's exports on which we could reasonably prevail upon Britain not to impose the surcharge. These are our cotton textiles, jute goods and handmade products, such as coir goods, carpets and handloom fabrics. In regard to each of these, there is an irrefutable case for exemption from the new British surcharge.

To take the case of cotton textiles first. It is common knowledge that exports of cotton textiles from India are already subject to a ceiling, thanks to the agreement relating to limitations on textile exports to the UK from India, Pakistan and Hong Kong. And to impose a further burden by way of a 15 per cent surcharge is not only unfair but also contrary to the policy underlying the imposition of surcharges. Mr. Callaghan stated, at the Press Conference referred to earlier, that, as between quantitative restrictions and import surcharges, "we have chosen the latter, because we think the first freezes the pattern of trade and limits the customer's choice, which is something we do not wish to do." Surely, after saying this the British Chancellor of the Exchequer cannot justify the double penalty of both quantitative restrictions and import surcharges on our cotton textile exports. According to him, since the latter is the lesser of the two evils, we ought to scrap the first and retain only the second or, if for any reason, this is not found to be feasible, he should be content to leave exports of Indian cotton textiles out of the purview of the import surcharge. How important our cotton textile exports particularly to Britain are should be obvious from the fact that Britain accounts for more than 40 per cent of these exports which are one of our major foreign exchange earners too!

In the case of jute goods, the imposition of the surcharge amounts to taking away by the left hand what was given by the right hand. It was not very long back that the power of the Jute Controller in the UK to "mark up" prices for certain categories of jute goods imported into Britain was abolished. Whatever benefit the Indian jute industry had derived from this concession has been negated now, thanks to the new surcharge.

As for our exports of handmade goods, Britain ought to know, as well as, perhaps better than anybody else, that, by reason of their high employment potential these are very important for this country. It is only fair to insist on Britain that she should bear in mind this important consideration and exempt India's exports of handmade goods from the surcharge.

In our concern for our exports, most of us have taken note of only the new British surcharge on imports

which is at best temporary — or so it is promised. What should concern us even more is the new Labour Government's plans to stimulate exports which Mr. Harold Wilson rightly ranks even higher than the new import restrictions. As a result, India, along with other developing countries, is bound to find in Britain a very keen competitor in the world markets. If Britain's proposed

Men Without Work

THE RECENT seminar on "Employment, Information and Manpower Utilisation" held in New Delhi under the joint auspices of the Employers' Federation of India and the All India Organisation of Industrial Employers focussed attention on the deterioration in the employment situation. It is a pity, indeed, that the number of the unemployed at the end of each five-year Plan has been more than the number of the unemployed at the beginning. The Planning Commission has estimated that at the end of the third Plan, the number of people without jobs will be around 12 million. In the fourth five-year Plan, the entrants into the labour market are estimated to be around 23 million while a similar estimate for the fifth Plan puts the figure at 30 million. It means that if unemployment is to be completely eradicated in this country by the end of the fifth Plan, we will have to find no less than 65 million jobs in the next two Plans. Some of the participants in the seminar put forward the view that it was possible for the country to raise the tempo of development so as to absorb the backlog of the unemployed and create opportunities for all the new entrants as well in the next decade. This seems to be a tall order if the experience of the last three Plans is any guide.

The seminar, however, succeeded in certain other ways. It highlighted the fact that there were inadequate facilities in the country for making short-term and long-term manpower studies so as to be able to chalk out plans for training of personnel in technical, managerial and other spheres. Various participants in the seminar emphasised the integration of manpower planning with planning in other sectors in the economy. But in order to make this approach a success, considerable improvement is needed in the collection and interpretation of labour and employment statistics. While the Director-General of Employment and Training has been collecting facts regarding employment in the public and private sectors the data were not made available to the researchers at a quick pace so that it could form the basis of scientific and meaningful research for manpower planning.

In the absence of any guidance in regard to manpower planning, the industrialists in the private sector were handicapped in attempting their expansion plans. This aspect of the problem was brought forth by Mr. Naval H. Tata, President of Employers' Federation of India, who said that employers in the private sector were unable to give a fair play to their imagination in

drive for exports is not to cut too much into Commonwealth exports, including ours, India should ask for and obtain an important place in the new Commonwealth Export Council that is to be created in the UK. It is to be hoped that this Council will address itself not only to problems of exports from Britain to the Commonwealth countries but also vice versa.

an endeavour to evolve radical plans for creating faster employment potential at their risk and responsibility by accelerating the tempo of industrial expansion. It was not feasible, he said, to forecast the degree of possible expansion of employment in one's own establishment under the present conditions. In the zeal for creating fresh employment, certain elementary considerations were thrown to the winds, according to Mr. Naval H. Tata. He said that employment opportunities in certain sectors were created regardless of the fact whether there were square pegs in round holes or whether there was undue migration of labour to urban centres with resultant neglect of agricultural areas or whether there was disproportionate concentration of manpower in certain areas of the country resulting in the shortage of suitable type of labour in other areas.

The consensus of opinion in the seminar's committee on "requirements of trained personnel" was that in the present Indian context, quantity would continue to remain more important than quality for some years to come. As regards the problem of flight of personnel from technical teaching institutions to other fields, or the flight of personnel from the public to the private sector, the committee was of the opinion that there should be no restriction on the movement of technicians from one employment to another because free competition alone would produce higher quality standards. The university representatives present at the meeting of the committee also said that they respected the principle of freedom of choice of vocation and that they were prepared to take up the challenge. The committee was also of the view that the scientific personnel had not been adequately utilised so far. It, therefore, recommended that determined efforts should be made to give such persons opportunities to take over as many of the non-production jobs in the factories as possible from the engineers in order that the latter may be released for more important work which could be done only by qualified engineers or diploma and certificate holders.

It needs to be conceded that the problem of manpower research has received insufficient attention hitherto. If the seminar should succeed in inducing the official agencies to accelerate the tempo of their work, it would be a significant step forward in the direction of evolving a manpower plan for the next decade. The new Institute of Applied Manpower Research must play a dynamic role in the evolution of this plan; it must rise to the occasion to justify its existence.

LET US TAKE A WALK

Now let's take a deep breath, and go forth into the open air. Now for the open road, the world out of doors, source of all health and pleasure. Surely there's no more healthy and enjoyable pastime than walking. And to keep on walking, two feet deep in comfort, in a pair of Bata shoes.

CAESAR'S WIFE

IN THE political history of this country since independence, the Das Commission Report enquiring into certain allegations against Mr. Partap Singh Kairon, ex-Chief Minister, Punjab, has assumed the status of an important landmark. It brought to light certain weaknesses in the current political machinery, particularly in the conduct of the Ministers and their relations. It revealed that the positions of authority enjoyed by Ministers offered opportunities to the near and dear ones which were anti-national. Again, the Santhanam Committee Report, which was submitted to the Government sometime ago, made some concrete suggestions so that the public life could be purified. As a first step for accepting the suggestions of the Santhanam Committee, the Government of India has now approved a Code of Conduct for Ministers, according to which the "do's and don'ts" for all Ministers have been set down in black and white. According to the new Code, a person before taking office as a Minister will be required to disclose to the Prime Minister or the Chief Minister details of his assets and liabilities and business interest not only of himself but of his family members as well. The disclosure will include all immobile property and approximate value of shares and debentures, cash holdings and jewellery. It is also stipulated that he should sever all connections with the management of any business in which he was interested before his appointment as Minister and he must divest himself of all his interest in business concerns which supplied goods and services to the Government. After he is appointed a Minister, he will abide by the following:

(i) A Minister shall

- (1) furnish annually by the 31st March to the Prime Minister, or the Chief Minister as the case may be, a declaration regarding his assets and liabilities;
- (2) refrain from buying from or selling to the Government any immovable property except where such property is compulsorily acquired by the Government in the usual course;
- (3) refrain from starting or joining any business;
- (4) ensure that the members of his family do not start or participate in business concerns engaged in supplying goods or services to that Government or to undertakings under that Government (excepting in the usual course of trade or business and at standard or market rates) or dependent primarily on grant of licences, permits, quotas, leases, etc. from that Government; and
- (5) report the matter to the Prime Minister or the Chief Minister as the case may be, if any member of his family sets up or joins in the conduct and management of any other business;

(ii) No Minister should

- (1) Personally or through a member of his family accept contributions for any purpose, whether political, charitable or otherwise; if any purse or cheque intended for a registered society or a charitable body, or an institution recognised by a public authority or a political party is presented to him, he should pass it on as soon as possible to the organisation for which it is intended;
- (2) associate himself with the raising of funds except

for the benefit of (a) a registered society, or a charitable body, or an institution recognised by a public authority and (b) a political party. He should, however, ensure that such contributions are sent to a specified office-bearer, etc. of the society or body or institution or party concerned and not to him. Nothing shall prevent a Minister from being associated with the operation or disbursement of funds raised as above.

(ii) A Minister should

- (1) not accept valuable gifts except from close relatives, and he or members of his family should not accept any gifts at all from any person with whom he may have official dealings;
- (2) not, nor permit a member of his family to contract debts of a nature likely to embarrass or influence him in the discharge of his official duties.

(iv) A Minister should

- (1) while on official tour, as far as practicable, stay in accommodation belonging to himself or maintained by Government, Government undertakings, public bodies or institutions (such as circuit houses, dak bungalows, etc.) or in recognised hotels; and
- (2) discourage ostentation or lavishness in parties given to him.

While it is true that human ingenuity has no bounds and those who are determined to violate all codes will always find some loopholes, the present step is without doubt praiseworthy because it is in the right direction. It is hoped that it will act as a deterrent and create some moral pressure on the Ministers to abstain from any activities which may later be cited against them. The present code is a fitting reply to the common grouse that corruption at the top must be eradicated before trying to tackle it at the lower levels.

17th AMENDMENT: CURTAIN DROPS

THE CONSTITUTION (Seventeenth Amendment) Act, 1964, which empowered the Government to be able to acquire land under personal cultivation on payment of compensation at its market value and had extended the meaning of the word "estate" to include grants of land, lands held under ryotwari settlement and certain other categories of land, has withstood the challenge in the Supreme Court. The Court has held that the Constitution empowers the Parliament to make amendments to the Articles governing fundamental rights and the procedure adopted for enacting the impugned Act was correct. This should set at rest all controversy about this important amendment to the Constitution.

The amending Act had been challenged as unconstitutional on two grounds. It was submitted that it curtailed certain fundamental rights the effect of which was to amend Article 226 by restricting the scope of jurisdiction which had been given to High Courts under this Article. It was further contended that under the proviso to Article 368, which laid down the procedure for constitutional amendments, Article 226 could be amended only if the amendment was ratified by the legislatures of the majority of States. This procedure admittedly had not been followed. The second contention was that Article 13 prescribed that any law made by Parliament was void if it contravened the fundamental rights. This provision controlled constitutional amendments and since the impugned Act

sought to curtail the fundamental rights themselves, it was ultra vires of the Constitution.

Delivering the majority judgment, the Chief Justice observed that the genesis of the amendment was to give effect to the economic policy of the party in power; it was aimed at removing any possible obstacles in the fulfilment of the socio-economic policy of the Government. The effect of the amendment on the area over which the power of High Courts operated was incidental and insignificant. In deciding whether the amending Act fell within the first or second part of Article 368, it was necessary to apply the doctrine of pith and substance to the legislation. The amendment aimed at the fundamental rights and only incidentally affected Article 226. It did not fall within the proviso to Article 368 and, therefore, did not require ratification by the legislatures of the States. Regarding the second contention, the Court observed that Article 368 empowered the Parliament to make amendments to the fundamental rights guaranteed in Part III of the Constitution.

The Supreme Court's verdict, however, has brought to light an anomaly in the Constitution. It is that whereas Article 32 and the other fundamental rights can be amended by the requisite Parliamentary majority alone, Article 226 can only be amended under the additional safeguard of assent of the majority of the States. The Parliament might consider whether this anomaly should be removed by including the whole of Part III of the Constitution in the proviso to Article 368.

GOODWILL GESTURE

THE AGREEMENT signed on Friday last between India and Ceylon has been hailed in this country because it has eliminated the only problem that had been creating a feeling of irksomeness in the otherwise most cordial relations between the two countries. The spirit of friendliness, mutual understand-

ing and compromise that was exhibited by the leaders of the two nations at every stage of the nine-day long negotiations which began with the arrival in the capital of Mrs. Sirimavo Bandaranaike on October 22 needs to be commended, though it has been argued that while the Prime Minister of Ceylon has driven a tough bargain, Mr. Lal Bahadur has been more than generous.

That the problem of the stateless persons is more human than political has been recognised by both the sides. The agreement allows 5,25,000 of such persons to be repatriated to India over a period of 15 years and to bring with them, at the time of their final departure from Ceylon, all their assets, including provident fund and gratuity. Moreover, the persons awaiting repatriation to India will be provided, during their stay in Ceylon, the same facilities as are enjoyed by citizens of other States (except facilities for remittances) and normal facilities for their continued residence, including free visas. These provisions of the agreement are encouraging, especially in the wake of the exodus from Burma of the Indian nationals, who are allowed to bring with them not even the barest minimum. The rest of the 3,00,000 persons out of the total 9,75,000 stateless persons will be granted citizenship by the Government of Ceylon. The operation of the agreement will be stretched over a period of 15 years, and the process of repatriation to India and the granting of Ceylon citizenship will be simultaneous.

The present agreement, unlike the Nehru-Kotla-wala agreement ten years ago, has every appearance of finality, though the future of the remaining 1,50,000 stateless persons still hangs in the balance. It has been stated that this will need a separate agreement. It is hoped that the going will be smooth for Mr. Lal Bahadur when he visits Ceylon in the beginning of 1965.

I.O.B. is big enough to serve you...

...and small enough to know you

THE INDIAN OVERSEAS BANK LIMITED

Central Office: Madras 2 • Over 100 Branches in all important places in India
M. Ct. Muthiah, Chairman, K. M. Nanjappa, General Manager

I.O.B. is an international bank with offices throughout India and South-east Asia and correspondents the world over. It offers a wide range of services to suit the needs of varied customers. Indeed, I.O.B. is big enough to serve you.

We asked our customers, thousands of them at random, what they thought of our service. They replied: "We are pleased." They also made several helpful suggestions which we are implementing. Indeed, I.O.B. is small enough to know you.

Range of I.O.B. services: Savings and Current Accounts—Recurring and Fixed Deposits—Personal and Business Loans—Bills Payment Service—Gift Cheques—Travellers Cheques—Safe Deposit Lockers—Trade and Export Information and Advice—and whatever other specialised help you may need.

INT-108-2700

Fokker F-VII—1924

DC-8 Jet—1964

It's 40 years now since the first KLM plane touched India

In November 1924, 40 years ago, KLM Royal Dutch Airlines landed in India for the first time, pioneering a new air route between Europe and the Orient.

This flight was operated by KLM with a single engined Fokker F-VII, the last word in commercial aircraft in those days. It carried a crew of 3, no passengers, and flew from Amsterdam all the way to Jakarta (then called Batavia) to prove that commercial flights of great distance were possible. The plane took 44 days to reach Calcutta from Amsterdam.

Dutch airmen in Calcutta Leaving to-day for Akyab

The Dutch airmen, Pilot Van der Hoop, Pilot H. Poleman and Mechanic Van der Broeke, arrived at Calcutta yesterday afternoon, en route to Batavia.

Leaving Allahabad at 7 a.m. they landed at Dum Dum Aerodrome shortly before 2 o'clock after an uneventful flight. The Fokker monoplane passed over the heart of Calcutta, and its occupants appeared to have some difficulty in sighting the aerodrome. By means of a fire, however, their attention was attracted and they made a perfect landing.

—Statesman, Nov 14, 1924

Today KLM DC-8 jets cover the same distance from Europe to India in a matter of a few pleasant hours. Profit from KLM's long experience. Book your passage on any of KLM's twice weekly flights from India to Europe—on Saturdays from Calcutta, on Tuesdays from Delhi. Or take advantage of KLM's five-weekly DC-8 jet flights ex-Karachi.

KLM also operates two flights a week from India to the Far East, which speed you direct to Bangkok, Manila and Tokyo and offer convenient connections at Bangkok to Hongkong, Singapore or Jakarta, in conjunction with the services of its interline partners.

KLM — an international carrier in 1924

Founded in 1919, KLM's operational history began in 1920 when it inaugurated a trial service from Amsterdam to London. In 1924 it had scheduled flights to London, Hamburg, Bremen, Brussels and Paris. Today KLM serves 44 cities in Europe alone and its network covers all the six continents in the world, serving 104 destinations in 68 countries.

A new record — Europe/India

A new record was set by KLM in 1933 when KLM carried Christmas mail from Holland to Jakarta in a Fokker F-18 "Pelikaan". An extract from The Statesman of December 22, 1933 is highly interesting to read:

Dutch plane's dash to Batavia — a new record

A new flying record between Europe and India was established yesterday when a KLM (Dutch) aeroplane carrying extra Christmas mails from Amsterdam to Batavia arrived at Dum Dum Aerodrome shortly after 10.10 a.m. accomplishing the journey between Amsterdam and Calcutta in 72 hours, including halts en route.

KLM 'firsts'

DC-8 jets were introduced in India for the first time by KLM—in 1960. They are now operating on all KLM's flights through India—in eastbound as well as westbound directions.

KLM pioneered in passenger comfort. Sponge rubber seats were a KLM idea. They went into use on KLM planes in 1927.

KLM was also the first airline to equip its fleet with blind-flying instruments and the first one to use radial air-cooled engines.

The world's first air booking office was opened in Amsterdam in 1921—by KLM.

Reliability — an important KLM factor

KLM has been busy providing reliable service for 45 years, longer than any other airline. That is why many experienced travellers recommend flying KLM. Ask your travel agent or the nearest KLM office for more information on KLM and its world-wide network of air-routes.

Polish Economy: Structural Changes in Consumption

ALEKSANDER PASZYNSKI

INFORMATION on the problems and economic situation of the socialist countries more often than not concerns the overall trends of development and deals with the dynamics of industrial production or the development of select branches of industry rather than with matters related to national income or consumption. Recently matters of consumption were strongly emphasized when the new five-year Plan for 1966-1970 was being elaborated. The economic programme for these years provides for a 25-27 per cent increment in consumption, and, as a consequence, an approximately 33 per cent rise in the supply of consumer goods. These provisions are significantly ambitious in view of the demographical situation in Poland which faces an exceptionally high "population bulge" in the next few years. Providing jobs for this "bulge" (otherwise called "a high demographical plateau", or, simply, the bumper crop of early post-war babies coming of age) has been given the highest priority in the Polish economy in the next five years; but, all consequent capital outlays notwithstanding, this has not overshadowed the question of consumption.

Durable Consumer Goods

We must begin with consumer durables for changes in this sphere are the most vital and they indicate certain general trends. The table below gives the number of consumer durables in use per 1,000 of population at the beginning of the current five-year period, an estimate at the close of this period, and a tentative figure at the close of the next five-year Plan:

Items	1960	1965	1970
Radio sets ..	134	196	198
TV sets ..	16	74	137
Washing machines ..	49	74	170
Refrigerators ..	5	25	75
Sewing machines ..	54	73	90
Bicycles ..	129	190	214
Mopeds ..	4	11	15
Motorcycles and motor-scooters ..	26	46	51
Automobiles (private- ly-owned) ..	3	6	10

The relatively strong supply of consumer durables in Poland in the years to come is to be accounted for by the rising internal demand, as also to a great extent by the large production capacity of the industry which will turn out these items. For it must be understood that most of the consumer durables are produced by the Polish industry which has been built only in the last 10 to 15 years; the role of imports is at present negligible. Imports are represented only in a few groups of items, chiefly automobiles, but even there they account for not more than one-fifth of the marketable products. At present it is no longer the limits of production capacity but rather the stabilized rate of sales that is conditioning the market for consumer durables. One result of this in the coming five-year Plan will be the relatively low demand for radio sets as also transport vehicles but not for automobiles.

The Polish radio industry today is working at much below its full capacity because its production is limited by

shrinking demand despite the relatively low prices of radio sets. This trend has been witnessed in Poland as against the highly-developed countries which indicate a much higher absorption of radio sets: there are more than 300 radio sets for each 1,000 of population in the Soviet Union, Britain, France and the German Federal Republic, and nearly 900 in the United States. It seems that the basic needs in this respect have been satisfied in Poland and any further expansion in sales may be made possible only through a considerable improvement in the quality and character of radio sets.

Similar conclusions apply to other classes of durable consumer goods such as bicycles and washing machines. A different situation is observed in the case of transport vehicles. Here, too, certain types of automobiles and motorcycles are proving hard to sell. The reason however is different. A private car in Poland has for many years now been looked upon as a luxury, and consequently, prices of automobiles are exceptionally high. By now, the demand for cars at their present prices has for all purposes been satisfied, while demand for the less expensive types of cars continues to grow. An adjustment of automobile prices, as also the revision of their classification as "luxury item", seems to be in the offing.

Clothing

The annual, per capita consumption of cotton, woollen and silken fabrics, taken together, is more than 26 metres, and that of shoes, three pairs. The forthcoming five-year Plan does not provide for any substantial changes in this respect because the output of the clothing industry is to a certain extent limited by the imports of raw materials, i.e., cotton, wool, etc. A weaker dynamics of growth, however, does not mean stagnation in the supply of clothing articles. The Plan provides for a 7.5 per cent increase in the consumption of textiles i.e., to 28.5 metres per capita annually and a nearly 20 per cent increase in the consumption of shoes, i.e., to 4 pairs per capita annually.

The outstanding problem with regard to clothing is not the quantity but the quality of production. Considerable emphasis is placed on improving the quality of ready-made clothes. No less, and perhaps even greater, attention is paid in Poland at present to the development of synthetic fibre industry to cater to the clothing industry. The drive towards more synthetic fibres for clothing is the result of a short supply of imported raw materials, as also of the generally higher quality and "better wear" of clothes made from synthetic fibre. Even now, out of the 19 million ladies' stockings sold in Poland every year 16 million are made of steelon, and about 40 per cent of all ladies' underwear is of man-made fibres. The coming five years will witness a radical breakthrough in the raw material structure of the clothing industry.

So far as food consumption in Poland is concerned, the situation is slightly different. Difficulty lies, among other things, in the internal structure of consumption, which is at variance with the prevailing modern views on and principles of rational nutrition. The consumption of protein foods in Poland hovers around the level of 113-114 kilograms per capita per annum, that is 13 kilograms below the world standard "B" (sufficiently nutritious food at moderate cost), whereas the consumption of carbohydrates comes to 170 kilo-

grams per capita per annum, that is, nearly 20 kilograms above the same standard "B". The task is thus to curtail the relatively high consumption of cereals and supplement the diet with a greater share of other foods. The plan relating to the production of food articles provides for that. Capital outlays for agriculture are being considerably increased, which is expected to bring the consumption of protein foods in the concluding years of the next five-year Plan — 1968-70 — to 125 kilograms per capita per annum. A rapid rise is envisaged in the supply of such products as milk (40 per cent), cheese (100 per cent), fish (50 per cent), whereas the supply of meat is to rise more slowly (by 30-33 per cent) because even today the consumption of meat and meat products in Poland is well in excess of the standard "B" and despite the slower rate of increase, by 1970 it is envisaged to surpass 50 kilograms per capita per annum. On the other hand, the consumption of milk and dairy products, despite a stronger dynamics of growth, will continue to lag somewhat behind the standards required by dietetics.

The above-outlined structure of consumption is a result not so much of certain shortages in supply but primarily of certain well-established eating habits and traditional preferences in consumption. In such a situation, the provisions of the Plan, concerning the consumption of food products, constitute

a specific compromise, as it were, of the desire to improve the prevailing structure of consumption with the well-established preferences of the population. Take the example of sugar: its consumption is expected to rise from 33 kilograms to more than 36 kilograms per capita by 1970, even though it should not exceed 27 kilograms according to the highest possible standard "D". Full control over this sphere of economy, which is the consumption of food, is, unfortunately, a very complex affair, and traditions and preferences of a cuisine repel all interference on the part of the planner.

Other, and more objective reasons have caused the somewhat incorrect structure of the consumption of fats, and changes in this respect will not be far-reaching. Currently, the per capita consumption of butter in Poland is 4.5 kilograms (10 lbs) annually which is very low. Owing to the limitation in the production of butter in the country, resort has been taken to the manufacture of vegetable fats. Even in the current five-year period the production of vegetable fats has been doubled, and in the years 1966-1970 it is expected to increase by another 50 per cent. Thanks to this increase, the aggregate consumption of fats (animal and vegetable) is expected to rise from 18 kilograms per capita this year to some 21 kilograms in 1970. This will be very close to the standard "B" though, admittedly, still unsatisfactory.

FIRST DETONATOR FACTORY IN INDIA

The first factory in India to make detonators—Indian Detonators Ltd.—will be going into production shortly.

Pioneers in setting up this vital unit to foster mining, quarrying, high-way construction and hydel projects, INDIAN DETONATORS LTD., aim at meeting the ever-increasing demands for detonators, while saving valuable foreign exchange.

Detonators for Dam Construction

Detonators for Mining

Detonators for Tunnelling

Production range includes: Ordinary, Electric and Delay detonators and Safety fuses.

In quest of gold

More and more Indian manufacturers are today earning valuable foreign exchange by selling their products abroad. Exports of cashew nuts, fish, vanaspati, toiletries and other consumer goods in Metal Box packages alone earned over Rs 8 crores last year. That's a lot of foreign exchange, and for the nation it's as good as gold.

To sell in highly competitive overseas markets the product must be of the finest quality. *And so must the package.* It must be of the *right size* and must have the *right finish.* And an *attractive surface design* that will score over competition in sales appeal.

All this requires research, experience, resources. Metal Box have them. They also have access to the fund of marketing and technical know-how of their world-wide associates. This is why Metal Box can

provide a comprehensive packaging service as no one else can. This is why, too, so many packers come to Metal Box for advice, send their goods abroad in packages designed and manufactured by Metal Box.

And Metal Box customers are not located in India alone. Last year Metal Box exported nearly Rs 30 lakhs worth of containers, closures and machinery direct to packers abroad.

You see, word gets around.

WINDOW ON THE WORLD

Protection Preferred to "Stop-Go"

PAUL EINZIG

LONDON:

IN SUBSTANCE the new Government measures aimed at reducing the balance of payments deficit amount to a virtual doubling of import duties and an incomparably smaller degree of subsidy to stimulate exports. The latter measure, being equivalent to a mere 1½ per cent of the value of the exports concerned, can only have a marginal effect. The Government's plan is based, therefore, almost exclusively on the success of the 15 per cent surcharge on import duties to stop a large proportion of unwanted imports. Nevertheless, there appears to be some confusion in the Government's mind as to what it really wants, judging by the fact that Ministerial spokesmen are exhorting business firms not to pass the whole 15 per cent on to the consumer in the form of higher prices.

Yet it may well be asked just how the Government expects to discourage consumers from buying imported goods otherwise than through causing their prices to increase. If in response to the official exhortations importers paid, say, 5 per cent of the surcharge out of their profit margins and only passed on 10 per cent to the purchasers of their goods, the effect of the measure would be considerably more restricted than it would be if the whole 15 per cent were passed on to them. It is true, the Government would have the benefit of the additional revenue and the satisfaction of causing a reduction of profits. But those were not the declared objects of the measure. In the interest of its success the Government should exhort importers to pass on to the consumer the whole of the surcharge.

In any case, this protectionist measure can only produce a temporary effect. The doubling of import duties is bound to cause a rise in the cost of living and the cost of production, and this would easily wipe out the stimulus of the very modest fiscal subsidies given to exporters.

Retaliatory Measures

While the governments of the countries whose exports to Britain are affected may be willing to abstain from retaliatory measures if the surcharges apply for a short period only, many of them are certain to retaliate if its application should become unduly prolonged. No exception can be taken to import restrictions as a temporary measure in face of the unprecedented import surplus with which the new Government is faced on assuming office. In fact, in a sense history is repeating itself. When the Conservative Government assumed office in 1951 it was faced by the same problem which it solved by restricting imports, not with the aid of tariff surcharge but with the aid of reducing imports quotas. Mr. Maudling has admitted it that, had the Conservative Government been re-elected it would probably have resorted to identical measures as those adopted by the Labour Government.

The new Government was well advised in rejecting panic measures such as a devaluation of sterling or a relapse into exchange control. Its wisdom in rejecting also the policy of "stop-go" is open however to question. It seems highly doubtful whether its emphatic renunciation and denunciation of credit squeeze and other measures aimed at curtailing demand, is the right method of inducing both sides of industry to co-operate voluntarily, even in the absence of a threat to resort to "stop-go", in the Government's effort to achieve expansion without inflation. Yet in the long run the fate of the British balance of payments will depend on the possibility of adopting an incomes policy to that end.

The exhortations addressed to employers and to unions

would be ever so much more effective if they were reinforced with the threat that unless they were prepared to play the game the Government would be forced to deflate even if it meant unemployment and bad business conditions. Instead the Government's attitude in condemning "stop-go" reassures employers and employees alike that even if they should choose to ignore the Government's exhortations they have no need to fear the consequences. That in the long run such consequences would become unavoidable seems obvious, but both sides prefer to ignore it.

Yet another piece of inconsistency in the new Government's attitude is the exhortation addressed to industry to produce at home the goods which are at present imported, without indicating any realisation that, given the facts of overfull employment the superimposition of such additional production to an economy, which is already overloaded, would necessarily entail inflation. It is indeed difficult to imagine that amidst increased scarcity of labour the trade unions would be more inclined to practise restraint or that the employers would respond to exhortations not to raise their prices if the accentuated inflationary spiral enables them to do so with impunity.

Major Crisis

However, what matters for the moment is to avoid a major crisis that would be certain to arise in the near future unless the trade deficit is brought speedily under control. Such a crisis would not be confined to Britain. It is therefore to the interests of countries which suffer disadvantages through the imposition of the import surcharge that they should submit temporarily to these disadvantages in order to assist Britain in solving her immediate balance of payments problem. Should that problem lead to a major crisis, every one of the countries would share in the disadvantages which might well be even graver than those caused by the import surcharge.

Having said all this, I hasten to add that the Government's concerned would be well advised to set a time limit to the period during which they are prepared to abstain from retaliation. They should make it quite plain that they would not be prepared to accept a perpetuation of the surcharge. In making this clear they would not only safeguard the interests of their own industries affected by the surcharge but would also render a service to the British people, because they would strengthen the Government's hand in its efforts to seek the permanent solution of the balance of payments problem through an incomes policy. Since the Government renounced its main bargaining weapon, the threat to revert to "stop-go", it should at least be placed in a position to tell the trade unions that unless a beginning is made in the adoption of an incomes policy within the next few months other governments would lose their patience and would resort to retaliatory measures, which again would hit British industry and would cancel out any improvement in the balance of payments through the import surcharge.

In order that the Government's hand should be strengthened effectively the governments of the countries whose exports to Britain are affected should declare in public the time limit beyond which their patience would become exhausted. Should they leave it vague, the threat of retaliations would not be taken sufficiently seriously to affect the attitude of those on whom the definite solution of the balance of payments problem ultimately depends. The Government itself

Leaders in Instrumentation

Now Pioneers in Automatic Process Controls

WE LIVE ON THE PAST: Four years ago, we ventured into the manufacture of a wide range of industrial measuring instruments in collaboration with Electroflo Meters Co. Ltd. of U.K. a member of the Elliott Automation Group. **WE LIVE IN THE PRESENT:** Our present range of measuring instruments has been fully accepted by users as conforming to the rigid specifications required of precision instruments. Some users have done us honour of specifying the brand name 'Mahindra-Electroflo' against their requirement. **WE LIVE FOR THE FUTURE:** And now we look ahead, with plans under way for the manufacture of a further range of sophisticated pneumatic, electronic, hydraulic process control equipment in collaboration with the same British Group. These instruments will find wide application in industries like... steel, paper, power generation, chemicals, fertilisers etc. where precise measurement and accurate control of Flow, Level, Pressure and Temperature is required.

LISTENING POSTS

NDC and the Fourth Plan

By our Special Correspondent

NEW DELHI:

ALTHOUGH THE National Development Council at its last week's meeting accepted the size of the fourth Plan as proposed in the Planning Commission's memorandum — a total outlay between Rs. 21,500 and Rs. 22,500 crores (between Rs. 14,500 and Rs. 15,500 crores in the public sector and Rs. 7,000 crores in the private sector) with the qualification that the development programmes in each sector would identify projects with a total outlay of Rs. 1,000 crores to be initiated during the second half of the Plan if the economy improves and resources can be mobilised — and the need to step up the rate of growth in agriculture by 5 per cent per annum, it suggested scaling down of the overall rate of growth to six per cent a year from 6.5 per cent suggested in the memorandum. The Council also felt that whereas there had been effected a substantial increase in the allocation for the development of agriculture and social services, the provisions made in the memorandum for power, irrigation, transport and industries were not adequate. It expressed the view that the sectoral allocations and priorities of development needed to be re-examined in the light of the immediate needs of stepping up productivity.

Self-Sustaining Growth

Broadly agreeing with the long-term objectives indicated in the memorandum — (1) to lay a sound foundation for self-sustaining economic growth; (2) to provide avenues and opportunities of employment to all those who seek it, (3) to narrow economic and social disabilities; and (4) to ensure a minimum standard of living — the Council opined that the fourth Plan should aim at (i) achieving a rate of growth of not less than 5 per cent per annum in agriculture, and an overall rate of growth of not less than 6 per cent; (ii) ensuring the availability of inputs for agriculture, such as fertilisers, manures, pesticides and improved seeds, and the materials needed by agriculture, such as cement for wells and other construction purposes, iron and steel for implements and equipment and cheap power for lift irrigation and agro-industries; (iii) enlarging the supply of essential consumer goods, such as cotton textiles, sugar, kerosene, cement, drugs and medicines; (iv) providing for continued growth in metals and mining, chemicals, machinery building, electric power and transport; (v) raising productivity through the development of human resources; (vi) controlling the growth of population through an extensive family planning programme; and (vii) generating adequate opportunities for employment of the new entrants to the labour force, including those seasonally under-employed.

The Council agreed that agricultural development should be accorded the highest priority in the fourth Plan. The financial allocation for agriculture indicated in the memorandum, it was agreed, should be treated as tentative. The physical targets to be achieved in this sector should be built up from below, through detailed work in the States, on the basis of the block and district plans and their implication in terms of financial resources and material inputs worked out in detail, and provision made in full before providing for other sectors. The Council stressed the need for adoption of a project approach for planning and implementation of agricultural pro-

grammes area by area, in a selective and integrated manner, and laid emphasis on quick maturing schemes, development of local manurial resources side by side with the use of fertilisers, pesticides etc., use of improved agricultural implements, extension of rural electrification for water lifting, early completion of soil surveys throughout the country, planning and implementation of minor irrigation programmes on the basis of systematic surveys of water resources, undertaking of pest protection measures as a service over large areas simultaneously at the appropriate time, provision of improved seeds on a large scale, development of animal husbandry, poultry, pig-gery and fisheries, provision of timely and adequate irrigation facilities, and, above all, improvement in the quality of service and effective co-ordination of all agencies, institutions and departments concerned with inter-related and inter-dependent aspects of agricultural production.

For a closer look at the fourth Plan development programmes in the various sectors of the economy, the Council decided to set up five sub-committees for agriculture and irrigation; industries, power and transport; social services; financial resources; and hill area. The sub-committees will consist of:

Committee on Resources: Mrs. Sucheta Kripalani, Chief Minister, Uttar Pradesh; (2) Mr. M. Bhaktavatsalam, Chief Minister, Madras; (3) Mr. P. C. Sen, Chief Minister, West Bengal; (4) Mr. Mohan Lal Sukhadia, Chief Minister, Rajasthan; (5) Mr. Fakhruddin Ali Ahmed, Finance Minister, Assam; and (6) Mr. S. K. Wankhede, Finance Minister, Maharashtra.

Committee on Industries, Power and Transport: (1) Mr. D. P. Mishra, Chief Minister, Madhya Pradesh; (2) Mr. Balwantray Mehta, Chief Minister, Gujarat; (3) Mr. Ram Kishan, Chief Minister, Punjab; (4) Mr. G. M. Sadiq, Prime Minister, Jammu & Kashmir; (5) Mr. R. Venkataraman, Industries Minister, Madras; (6) Mr. S. G. Barve, Industries & Electricity Minister, Maharashtra; (7) Mr. Veerendra Patel, Public Works Minister, Mysore; (8) Mr. K. P. Tripathy, Planning Minister, Assam; (9) Mr. Saila Kumar Mukherjee, Finance Minister, West Bengal; (10) Mr. Girdhari Lal, Irrigation & Power Minister, Uttar Pradesh; and (11) Mr. M. P. Sinha, Irrigation and Power Minister, Bihar.

Committee on Social Services: (1) Mr. M. Bhaktavatsalam, Chief Minister, Madras; (2) Mr. G. M. Sadiq, Prime Minister, Jammu & Kashmir; (3) Mr. Mathuradas Mathur, Planning Minister, Rajasthan; (4) Mr. Rabindra Lal Sinha, Education Minister, West Bengal; (5) Mr. Hitendrabhai K. Deasi, Home Minister, Gujarat; (6) Mrs. Yashodhara Dasappa, Social Welfare Minister, Mysore; and (7) Mr. Satyendra Narain Singh, Education Minister, Bihar.

Committee on Agriculture and Irrigation: (1) Mr. V. P. Naik, Chief Minister, Maharashtra; (2) Mr. G. Narayana Gouda, Agriculture Minister, Mysore; (3) Mr. Darbara Singh, Home and Development Minister, Punjab; (4) Mr. S. N. Sinha, Agriculture Minister, Bihar; and (5) Mr. Arjun Singh, Agricultural Minister, Madhya Pradesh.

Committee on Hill Area: (1) Mr. P. Shibu Ao, Chief Minister, Nagaland; (2) Mr. Y. S. Parmar, Chief Minister Himachal Pradesh.

NGB/46A

BINNY fabrics do not wear a mask. You buy what you see and feel.

NO STARCH By tradition Binny fabrics are not starched or given any other form of temporary finish. Every cloth is left literally to speak for itself.

NO OVER-BLEACH Binny fabrics are not over-bleached. Bleaching weakens the fabric and reduces its life. The avoidance of extreme whiteness by over-bleaching is one reason why Binny fabrics have a world-wide reputation for durability.

FAST DYES The use of only the world's fastest dyes and a large experienced staff of highly qualified research chemists—this is the unfailing formula that guarantees the colour fastness of every Binny fabric.

BINNY—a great name in textiles

THE BUCKINGHAM & CARNATIC CO., LTD. THE BANGALORE WOOLLEN, COTTON & SILK MILLS CO. LTD. Subsidiaries of BINNY & CO. LIMITED., MADRAS.

should feel that it is under pressure from abroad to implement its undertaking to tackle the problems of incomes policy, restrictive practices, unofficial strikes etc. in the interest of increasing production.

Above all, there is plenty of scope for pressure from abroad on the Government in a sphere in which the solution of the balance of payments problem lies in its own hands. By cutting down public expenditure, or at any rate preventing its further increase, until the need for maintaining the surcharge

on imports has come to an end, the Government could produce progress towards the desired results with a stroke of the pen. The governments of the Commonwealth and foreign governments are fully entitled to insist that their nationals should not be required to make sacrifices for the sake of assisting Britain unless the British Government and people themselves show willingness to make sacrifices by agreeing to defer the application of schemes which would involve an increase of spending and would thereby aggravate the balance of payments position.

Employment Opportunities Expand in U. S.

GUY SIMS FITCH

WASHINGTON:

"THEY ARE hiring them off the streets again." This was the somewhat cryptic comment made a few months ago by a fellow economic analyst, a former university professor turned business consultant, who had just concluded a tour of industrial centres in various parts of the United States. He was referring, of course, to his personal and professional observation that companies in key industries were beginning to run into shortages of labour, and were recruiting anyone deemed capable of filling a vacancy or of being trained for it. Bringing this comment to mind, and lending it the additional substance of further expert analysis, is a report just issued by the National Industrial Conference Board (NICB), a leading private research organization. For some years, the NICB has been compiling a help-wanted advertising index, which measures the volume of job advertisements in 52 major newspapers across the country. This index reached a new peak with its latest reading in September, 1964, up 21 per cent from June, 1963.

This means that companies are advertising for workers at a record rate, as far as the NICB index is concerned, and suggests that there are many more job opportunities opening up around the country than a superficial perusal of the over-all employment data might suggest. The NICB help-wanted index has been extremely sensitive to changes in general business conditions. As an indicator of underlying trends, it has tended to lead unemployment rates, thus foreshadowing actual developments in the job field.

Manpower Shortage

As an example, the index sank to its lowest point ever in February 1961, just about the time the late and unlamented recession was hitting bottom; three months later, the unemployment rate rose to its high point. On the other hand, the current climb in the index, which began in June, 1963, has been followed by a general decline in the unemployment rate — a decline which became particularly noticeable towards the end of 1963. Confirming this largely statistical analysis are independent reports of rising demand for labour, and of actual or incipient manpower shortages, in several key industries. The steel industry, for instance, is finding it difficult to fill a growing need for skilled and semi-skilled workers. Similar shortages are plaguing the machine tool industry, and the construction industry is running into its first manpower shortages since the early 1950's. A recent study shows that one of every five professional, technical and managerial jobs in the New York City Government service is vacant. Not all the shortages are among professional or skilled workers. Even relatively unskilled workers are in short supply in certain fields, such as hospital orderlies, car washers and restaurant employees.

These developments reflect the vigour of the sustained economic expansion which has been underway in the United

States for more than three and a half years. In that time, employment has climbed from the 1961 average of 67 million to the 71 million of September, 1964, while unemployment has dropped from 4.8 million to 3.3 million. And on the basis of current trends, one can assume that the economy will continue to expand and the employment situation will continue to improve. With 3.3 million still unemployed, however, one can hardly claim that the jobless problem has been solved, any more than one can claim that the manpower situation, despite its tightness in some industries, has become a deterrent to continued expansion of the economy. But the current job trends are having an interesting side-effect. They seem to be reactivating a long-smouldering debate on the nature of American unemployment.

There are those who believe unemployment is largely structural — that is, it is the result not so much of a lack of job opportunities as it is of technological and other changes which require a certain amount of manpower retraining and a general upgrading of the work force. On the other hand, there are those who believe that the problem is essentially one of over-all economic growth, that the primary cause of unemployment is an insufficient total demand for goods and services.

These views are not necessarily irreconcilable, except perhaps when stated and pursued in extreme forms. Each seems to be approaching unemployment from a valid if different vantage point. As US Labour Secretary W. Willard Wirtz has noted, both the demand and the structural aspects of the problem require attention. In time, this entire argument could become more academic than real — if it is not already becoming so — as unemployment continues to decline under the twin pressures of expanding economic activity and national programme of manpower development and training.

BIRD'S CENTENARY YEAR

**MINERALS IN
MULTI-MILLION
TONNES
FOR STEEL**

India's rising steel production demands an increasing supply of raw materials. To help meet this demand, the total minerals output of the Bird-Heilgers Group has increased in the last five years from just under 4 million tonnes to over 7 million tonnes per year. The Group is among the biggest mining organisations in the world—and still growing—producing coal, iron ore, limestone, manganese and dolomite.

Deploying the skills acquired over a hundred years, the Bird-Heilgers Group is making important contributions to the economy . . . through planned diversification and expansion.

chal Pradesh; (3) Mr. Koirang Singh, Chief Minister, Manipur; (4) Mr. S. L. Singh, Chief Minister, Tripura; and (5) Mr. G. L. Dogra, Finance Minister, Jammu & Kashmir.

The Council emphasised that all possible steps should be taken to accelerate progress in the early years of the fourth Plan in order to make the mobilisation of additional resources possible. It also stressed on the need for improving the administrative and technical organisations responsible for Plan implementation and felt that there was urgent need for a systematic analysis of the reasons for failures in past Plans and the qualitative changes needed in administration to meet the demands of a bigger fourth Plan.

The questions relating to the pattern of assistance for States and of certain types of projects being earmarked for full Central assistance were generally discussed. It was agreed that these would be discussed in a special meeting of the National Development Council, to be convened at an early date.

★★

The Working Group on Evaluation in the States, set up by the Planning Commission, under the chairmanship of Prof. V. K. R. V. Rao, Member, Planning Commission, has suggested a provision of about Rs. 150 lakhs in the fourth Plan for evaluation schemes of the States and Union Territories.

The Working Group has recommended that evaluation should be included among the Plan programmes and that the resources needed for conducting evaluation work should be adequately provided for in the Plan outlay.

The Working Group has recommended that all State Governments should have an evaluation organisation as an integral part of their planning machinery. This organisation should function either as a wing or division of the Planning Department or as a directorate attached to it. The State evaluation organisation as conceived by the Group, should have a headquarters unit, a field organisation composed of a task force and 3 to 6 field units according to the size of the State.

Another recommendation made by the Group is that there should be a General Advisory Council on Evaluation, on which the State Governments, the Planning Commission, the Central Ministries and the Programme Evaluation Organisation should be represented. The Council could review the progress of studies, discuss problems, methods and techniques of evaluation and advise the Central and State evaluation agencies on the programmes of study and co-ordination of the activities of the different agencies.

With such an evaluation set-up, it is expected that it would be possible to bring out an annual evaluation review of the entire Plan.

The Group has emphasised that since evaluation is a potent instrument, it should be used positively, satisfactorily and effectively, and in all the State Governments there should be a common measure of understanding of the objective, orientation, scope and method of evaluation.

★★

The demand for agricultural tractors in India is expected to grow from about 10,000 Nos. in 1965-66 to nearly 30,000 Nos. in 1970-71. With a view to ensuring that adequate effective tractors manufacturing capacity is created in the country to meet an annual demand of at least 25,000 Nos., the Union Government is understood to be planning to license an additional capacity to produce approximately 24,500 tractors a year. Currently, the effective capacity is stated to be around 8,500 Nos. per annum — 7,500 tractors of 20-30 DBHP and

1,000 tractors of 35 DBHP and above. Out of the additional capacity to be licensed, capacity to the tune of manufacturing 12,000 tractors is to be in the 12-18 DBHP range, 9,500 tractors in 20-30 DBHP range and 3,000 tractors in the range 30-50 DBHP. The indigenous production of tractors during the current calendar year is expected to be around 4,657 Nos. — 4,057 tractors of 20-30 DBHP and 600 tractors of 50 DBHP.

The exact demand for power tillers, however, has not yet been assessed. It was estimated some time ago that this demand might be of the order of 40,000/50,000 Nos. at the end of the third Plan and approximately twice this figure at the end of the fourth Plan. To meet the 1965-66 expected demand at least substantially, two schemes had been sanctioned by the Union Government — (i) the programme of the East Asiatic Company for producing 24,000 power tillers per annum and (ii) the scheme of Krishi Engines for manufacturing 3,000 power tillers a year. Three more schemes for a total annual capacity to produce 14,000 power tillers annually had also been approved in principle. But out of all these, only the scheme of Krishi Engines is expected to materialise early next year. The East Asiatic Company has surrendered its licence.

Although a more realistic assessment of the likely demand for power tillers is proposed to be made after some 1,000 tillers

Eastern Economist 20 Years Ago

NOVEMBER 10, 1944

The new Yellow Book embodying the second report on reconstruction planning by the Reconstruction Committee of Council leaves no doubt that while considerable progress has been made in the direction of sorting out of ideas and of gathering together of the nuclear organisations for planning work, not all the governing principles have been clearly set out to provide guidance to the planning departments at the Centre as well as to the Provinces, on the lines on which they should proceed. The correct principles for the determination of economic priorities, in particular, reach to the root of all, for on their formulation depends not only the soundness of the economic programme which we may envisage but also because the very structure of state control would flow from the adequacies for the organization of those priorities. It is very easy to list the multiple directions along which positive economic action is necessary, e.g., in industries, agriculture, transport and communication, electricity, housing and so on. But the essence of planning consists not in indicating how much in this direction or that direction could or remains to be achieved, but in formulating principles for determining the valid simultaneous rates of development in each direction which would be necessary for dynamic economic equilibrium i.e., balanced economic growth. The perfunctory manner in which the Yellow Book evades the primary task betokens a serious flaw at a high level of governmental planning work and thinking. For without such clear governing principles, we run the danger that we may have grand, but unco-ordinated plans about roads, electricity or agriculture which only lead to massive structural economic maladjustments and thus counter the policy of economic expansionism on which we are embarked. Must vital questions such as whether we should have more of roads or more of electricity or more of agriculture be settled by means of political haggling behind the scene or naive sentimentalizings without reference to principles capable of clear technical formulation?

necessary, therefore that the authorities should review the position in the light of this comprehensive and well-reasoned representation. They cannot but do so, if they are convinced that there is need, in the circumstances prevailing today, to revive stock exchange activities and investor confidence.

In their joint representation, the recognised stock exchange have critically examined the proposal contained in clause 13 of the Companies (Second Amendment) Bill, 1964, i.e., the proposed new sub-section 1A of Section 103, and have clearly established that the proposed restrictions on the currency of blank transfers are not only far from justified in the basic assumptions underlying them, but also that, in any case, the proposal lacks validity and that it is unnecessary in the context of the statutory provisions contained in the Companies Act 1956, the Securities Contracts (Regulation) Act 1956, and the Income-Tax Act, 1961, which, in their opinion, go very much beyond what any restrictions on the currency of blank transfers can be expected to, or conceivably achieve.

The Stock Exchange memorandum goes to the roots of the problem, as it were, by referring to the genesis of the proposed amendment. The proposed amendment, as is well-known is based on the findings of the Vivian Bose Commission which, in turn, it must be noted, related to a state of affairs that obtained before 1956 and only pertained to private limited companies not listed on the stock exchange. It is not clear why the authorities did not pause to look at the important qualifications to its recommendations made by the Commission itself. Had this been done, perhaps, there would have been no occasion or provocation for the proposed amendment. The Vivian Bose Commission has categorically recognised that the blank transfers system is widespread and that it serves a variety of legitimate reasons and necessary business purposes. If, in spite of this, however, it recommended certain restrictions, it must have been influenced, in the main, by its reaction to the working of the companies into whose affairs it had occasion to delve deep, and, if only because of this, the

authorities have to be doubly cautious in their approach today. The restrictions proposed presumably stemmed from the Commission's belief that the system of blank transfers leads to concealment of the beneficial owners' identity behind their nominees, tax evasion by investment of secret profits in holdings of blank transfers, window-dressing of balance sheets through substitution of inter-company loans and advances by investments, and creation of fictitious investment losses for reducing taxable profits. As stated earlier, the state of the post-1956 laws has reduced, if not removed altogether, the scope for these abuses.

Moreover, the blank transfers system is certainly not responsible for all the evils mistakenly attributed to it. There seems to be also some misunderstanding about the relationship between blank transfers and nominee holdings. The two are certainly not identical, as assumed in many quarters; they are two distinct things and the one could exist independently of the other. For instance, there are no blank transfers in the UK, whereas the practice of nominee holdings prevails there on a large scale. This should disabuse anyone of the fond notion that restrictions on the currency of blank transfers would bring about disclosure of beneficial interest or solve the problem of nominee holdings.

Nor are blank transfers responsible for tax evasion. There are relatively more convenient forms than shares on blank transfers for holding secret profits as, for example, currency notes, precious stones, jewellery and Government Securities. If, therefore, restrictions are imposed on the currency of blank transfers, what is likely to happen is only a diversion of investment from shares to these alternative channels. In other words, the desideratum of checking tax evasion is not achieved by the proposed restrictions. Blank transfers are a purely neutral medium and one should not facetiously conclude that, wherever there is tax evasion this could be checked by imposing restrictions on blank transfers. There is tax evasion, for example, in the USA, but, instead of restricting the currency of

The public sector may also take up manufacture of power tillers with Czech collaboration.

★★

A disconcerting trend has been witnessed on the coal front during the first five months of the current financial year. Both production and despatches of coal during these months have shown a decline from the levels attained in the corresponding period last year — production has gone down from 27.16 million tonnes to 25.33 million tonnes and despatches from 24.03 million tonnes to 22.63 million tonnes.

The primary reason for this trend is stated to be that a number of State Governments have failed to lift the quotas allotted to them. If the demand does not pick up during the rest of the financial year, it is feared that production of coal during 1964-65 may fall short of even the modest estimate of 66 million tonnes (including colliery consumption).

The Government is stated to be keeping a close watch over the progress of production and consumption of coal.

★★

The assurances given by the new leaders of the Soviet Union to India's Minister for Information and Broadcasting, Mrs. Indira Gandhi, should go some way in allaying the misgivings caused here by the last month's Kremlin shake-up. Mrs. Gandhi touched Moscow on her way back from Paris where she had gone to attend the UNESCO Conference.

Addressing newsmen this Monday, Mrs. Gandhi disclosed that the new Soviet leaders had specifically told her that they stood by the commitments made by the Soviet Union to India both on economic and military aid. There was also no change in their attitude towards the Kashmir issue and the Sino-Indian border trouble. The Soviet Union would like to give even more economic aid to India.

Mrs. Gandhi said that the present leaders of the Soviet Union were as much responsible for framing their country's policy towards India or any other country as Mr. Khrushchev. Therefore, a major shift in the policies pursued by Mr. Khrushchev could not be expected. The new Soviet leadership, Mrs. Gandhi added, would, however, like to lessen tension in whichever direction it existed. This might involve some minor policy adjustments and smoothening of edges. There was a general belief in the Soviet Union, Mrs. Gandhi opined, that it was not easy to come to terms with China. Even if the rapprochement between Moscow and Peking came in a big way, it did not mean that Russia's relations with the East European countries and India would undergo a change for the worse. There was also no question of the Soviet Union going back to the Stalin era.

Mrs. Gandhi revealed that during her talks with President Tito, she got the impression that the Yugoslav President also

shared the view that there was not going to be any major change in the Soviet Union's policies.

About the reaction of the Soviet leaders to China's exploding the atom bomb, Mrs. Gandhi said that the Soviet leaders thought China was insistent on exploding the nuclear bomb for prestige reasons only. The Soviet leaders stood by the Test Ban Treaty and fully endorsed India's stand on the issue. They did not favour expansion of the nuclear club as this would increase the danger of war.

Talking about the affairs of the Ministry of Information and Broadcasting, Mrs. Gandhi expressed the view that she would not mind AIR undertaking commercial publicity on a limited scale. No such decision, she hasened to add, had however, been taken as yet. About introduction of television in India, Mrs. Gandhi said that she favoured television more as a medium of education than entertainment. Her idea was to set up television centres in the four principal cities, after which there might come up groups to sponsor it in smaller cities. Lack of finances, Mrs. Gandhi added, stood in the way and she was waiting for the fourth Plan allocation for her Ministry so that the development of the TV could be chalked out according to the funds available. The committee proposed to be set up to go into the working of AIR, Mrs. Gandhi said, would address itself to the problem of improving the quality of Indian broadcasts. Commercial use of the medium might also be considered by this committee.

Mrs. Gandhi disclosed that the Union Government was making inquiries through its missions abroad about the availability of two 250 KW short-wave transmitters for external publicity. After consultations with the different Ministries, it was thought that we should go in for two 250 KW. short-wave transmitters rather than one 1,000 KW. medium-wave transmitter.

★★

Through a notification issued on November 2, 1964, the Government of India has prohibited the manufacture or sale of sugar of grain sizes 'A' and 'B' as described in the publication of the Indian Standards Institution "No. IS:438-1963-Grading for Vacuum Pan Sugar (Plantation White)" as amended in May, 1964. The order provides for exemption of sale of sugar of these two grain sizes manufactured before November 2.

The step has been taken in view of the fact that production of sugar of grain sizes 'A' and 'B' is wasteful, both from the point of view of manufacture and consumption.

★★

Consequent on the sad demise of Mr. H. C. Dasappa, Union Minister for Industry and Supply, on October 29, the charge of the Department of Industry has been temporarily vested in Mr. T. N. Singh, Minister for Heavy Engineering in the Ministry of Industry and Supply. Mr. K. Raghu Ramaiah, Minister of Supply in this Ministry, has been temporarily put in charge of the Department of Supply and Technical Development.

Restrictions on Blank Transfers Unjustified

R. V. MURTHY

BOMBAY:

IN THE course of my comments on the reactions of the business community in Bombay to the Companies (Second Amendment) Bill, 1964, I had made the following observation: "Undoubtedly a good deal of abuse has grown around the prevailing system of blank transfers. But one wonders whether the proposed restrictions will have the effect of mitigating, if not eliminating, these abuses, while, at the same time, leaving unaffected the mobility and liquidity of the concerned shares. Great care

should be taken to ensure that the restrictions do not adversely affect the economic system", I am, therefore, bound to draw pointed attention to the joint representation submitted by the recognised stock exchanges (for Bombay, Calcutta, Madras, Ahmedabad, Delhi, Hyderabad, M.P., and Bangalore), in which it has been made out that the proposed restrictions will not only damage the liquidity and negotiability of stocks and shares, but dislocate the stock market, affect credit facilities and produce many more serious repercussions. It seems

not as satisfactorily as the Engineering Goods Export Promotion Council would like it to be.

The problem of quality and costs is also faced by the country's export trade as a whole, including that in traditional items like tea, jute and cotton textiles. The inflationary conditions in the country have been hindering the effort in two ways; first, they make the domestic market more attractive for the manufacturer who can earn much more with so much less effort and secondly, they tend to price the Indian goods out of foreign markets. A survey of India's export trade by the World Trade Department of the Indian Chamber of Commerce spells out these problems neatly. As the survey shows, 1963-64 was by far the best in India's export trade, when the value rose sharply from Rs. 790 crores from Rs. 714 crores in the preceding year. A rise of Rs. 76 crores that is. This is obviously a record increase in a single year, but this was made possible by the buoyancy in world trade and the keen demand for certain commodities like sugar, jute goods and oil cakes. Almost all major items of export showed an increase, with the notable exceptions of manganese ore, raw cotton and waste and raw hides and skins.

Large Deficit

Exports to the dollar area increased from Rs. 143 crores to Rs. 157 crores, to the European Common Market from Rs. 48 crores to Rs. 57 crores, to East European countries from Rs. 92 crores to Rs. 109 crores, to the sterling area from Rs. 268 crores to Rs. 283 crores and to other soft currency areas from Rs. 170 crores to Rs. 188 crores. Area wise, some 100 countries including Argentina, Belgium, Ceylon, Czechoslovakia, Malaya, West Germany, Japan, the USA and Russia bought more, while some 76 countries including Indonesia, Iran, Nigeria, East Pakistan, Poland and Yugoslavia reduced their off-take. The disconcerting fact, however, was that the trade deficit with some of the important countries still continued to be large. For instance, with the United States, it was Rs. 262 crores, with West Germany (a country which has had a large favourable balance with India in recent years) it was Rs. 70 crores, and with Iran it was Rs. 43 crores. With some countries, notably the UAR, Sweden and Switzerland, the deficit even increased.

Another disconcerting feature was the deterioration in the terms of trade, as most of the increase in exports was on account of a bigger quantity having been exported rather than better value fetched for the goods. The Chamber's study has tabulated the relevant figures which are reproduced alongside.

India obviously has only taken advantage of the buoyant demand conditions in the world markets, but will she be able to maintain her exports at the increased level when the conditions change and competition increases? The answer again is that Indian manufacturers must keep costs down and steadily improve the quality of their products. But world trade is

also subject to many restrictions and barriers on which some firm international action or agreed programme is necessary. In this connection, the survey takes an optimistic view of the outcome of the recent UN conference in Geneva on trade and development. The conference, it admits, did not achieve anything spectacular, but it at least helped to focus attention on the need for more realistic trade policies on the part of the advanced countries. It also views hopefully the main decision of the Conference that the developed nations should contribute 1 per cent of their gross national product for the economic development of developing countries, that a trade and development board should be set up to implement the decisions of the Conference, which would meet at intervals not exceeding three years. The developed countries have been urged to avoid giving special encouragement to the production of new competitive synthetics when such investment could be employed elsewhere more effectively. Another important recommendation is that whenever international measures to stabilise prices of primary products in relation to those of manufactured goods are inadequate, arrangements should be made on an equitable and universal basis, and without prejudice to the general level of financial aid to the developing countries, to correct and compensate the deterioration in terms of trade and short-term decline in the exports earnings of countries exporting primary commodities with a view to facilitating the implementation of economic development plans and programmes.

These recommendations are not explicit and it is perhaps a little premature to hope that the existing obstacles to world trade like high tariffs, quotas, customs valuation procedure, anti-dumping regulations, internal taxes and so on will disappear in the near future. The progress of the Kennedy round of talks does not at least encourage much hope. Meanwhile, India must do the most she can to increase participation in world trade, which unfortunately is still far from substantial. World exports have gone up by 152 per cent between 1948 and 1963, while India's exports have increased only by 20 per cent in this period. What is more significant is that her relative share has declined from 2.5 per cent to 1.2 per cent.

(Base: 1958 equals 100)

Year	Exports		Imports		Net terms of trade

Rehabilitating the Repatriates

From Our Correspondent

MADRAS:

THE AGREEMENT between the Governments of India and Ceylon regarding the repatriation of stateless citizens of Indian origin is accepted on all hands as marking the satisfactory settlement of a ticklish problem which has for long evaded solution. It has naturally been claimed that both the Prime Ministers made a sincere effort to reach a settlement though the advantages that accrue from this arrangement are differently interpreted. While it has been stated that the Indian Government has struck a hard bargain the Ceylon Prime Minister has pointed out that substantial concessions have been secured and that with regular repatriation of 3,000 people every

month larger employment opportunities would be available for the Sinhalese. The manner in which the agreement is implemented will bear out ultimately which country will be the gainer though it cannot be disputed that Ceylon has once and for all shut out opportunities for gainful employment for non-Ceylonese and the Indian content of the total population of the island would decrease significantly over a period.

The Madras Chief Minister has welcomed this agreement from the human angle as it would provide relief and remove uncertainty for a large number of Indians who have been wanting to come over to this country. He has stated that about 2,50,000 people have expressed a desire to come over to this country

blank transfers, the American law makers have accorded blank transfers statutory recognition and protection to holders on blank transfers. Evidently they realise that restrictions on blank transfers are no answer to tax evasion.

There would also appear to be, as the joint memorandum makes out, some misapprehensions and misconceptions about blank transfers in this country. That the system has a historical justification and also that it has been in vogue ever since the inception of joint-stock enterprises seem to have been overlooked. The system is by no means peculiar to India; in one form or another, it is to be found in all parts of the world—on the Continent and in the U.S.A. It might be argued that there are no blank transfers at all in the U.K., but it should be borne in mind that this is because of the peculiar conditions that obtain on the London Stock Exchange. Unlike any other stock exchange in the world, the London Stock Exchange segregates brokers from jobbers. Further, there are specialised registrar agencies within a few square miles from the city which complete registration of shares and return them within a day or two, unlike weeks and months which it takes here for the same process to be completed.

Besides, the blank transfers system is an integral part of the stock exchange mechanism. It gives the market the essential and indispensable qualities of liquidity, continuity and stability. It is a moot point whether the exigencies of the situation today really warrant the imposition of the proposed restrictions and the risking of the repercussions thereof. "Any restrictions on blank transfers", according to the stock exchange memorandum, "will impede the free negotiability of shares; seriously impair market liquidity; disrupt the structural balance of the market by penalising long-term operations; adversely affect price continuity by producing sharp price fluctuations; lead to multiple rates for the same shares at the same time according to the duration of the transfer deeds; and create other technical problems such as the uncertainty about what is to happen to the shares when registration is not effected within the prescribed period, because the holder is either ill, or dead or abroad, or when the transfer deed is lost or stolen, or when delay occurs either in transit, or due to other causes, too numerous to mention, outside the control of the holder."

Integral Part

In addition to being an integral part of the stock exchange mechanism, the blank transfers system is also intimately linked to the banking world and the capital and money markets; it affects day-to-day lending and borrowing, and, in short, enters into trade, commerce and industry and the daily business of the country in a significant way. As such, any restrictions on the currency of blank transfers would impair the negotiability and marketability of shares, render the financing of corporate activity more difficult and curtail banking and other credit facilities, all of which would mean a serious dislocation of business practices and habits of the commercial community.

Finally, it is also worth referring to the significant point made out by the stock exchanges, namely that the Vivian Bose Commission itself was apparently not so keen on the abolition of blank transfers as on reforming it; otherwise, there could be no meaning to the Commission's own recommendations as to the limited application of the restrictions proposed by it, the reduction on the rate of transfer stamp duty and so on. What, in effect, these qualified recommendations would seem to amount to is that it is inadvisable to impose undue restrictions on blank transfers. Hence the undoubted relevance of, as also the ample force in, the joint submission of the stock exchanges that the proposed clause 13 of the Companies (Second Amendment) Bill, 1964 should be dropped altogether.

★ ★

Many in India celebrate their completing sixty years,

perhaps because it is an achievement in itself to live for sixty years in a country where the average span of life is still around 40 years. Thus Hindus believe it marks the end of an epoch in a man's life, whereafter at least he is supposed to concentrate on things that matter in the life hereafter. Not many do so in this workaday world though. Everyone, however, will concede that it is worthwhile taking stock of what one has done not unto himself but to his country and the community at large. Many may not like to do this even when they have achievements to their credit, lest it should savour of blowing one's own trumpet, and it is in respect of such people that Society owes it to itself to organise felicitation functions. The Maharashtra Chamber of Commerce did well, therefore, in organising a function last Saturday (24-10-1964) to felicitate Mr. Lalchand Hirachand, a distinguished scion of the Walchand House, on his having completed sixty years. It was equally imaginative of Defence Minister Chavan to agree to preside over the function, if only because the country's defence has benefited considerably from the Walchand group of industries. In fact, the real foundation for our defence industry may be said to have been laid by the late Walchand Hirachand.

Eloquent Tributes

Appropriately enough, eloquent tributes were paid to Mr. Lalchand not only by Dr. J. M. Rane, Vice-President of the Maharashtra Chamber, but also spokesmen of other commercial bodies, including the Indian Merchants' Chamber, the Bombay Chamber of Commerce and the All-India Manufacturers' Organisation. There was one feature common to all these tributes, namely the indomitable courage and the disarming frankness of Mr. Lalchand. Mr. Lalchand has given ample evidence of these traits whether as a legislator (Member of the Bombay Legislative Assembly in 1939) or as a member of Parliament (a Rajya Sabha Member from 1952 to 1958) or as a spokesman of industrialists and business men. Even at the function that established his sextagenarian status, he did not hesitate to declare that the process of economic development could be speeded up only by encouraging the forces of competition. He is among the few business men of the old guard who are never afraid to maintain that the profit motive is inherent in any trade or industry and that business men need not be ashamed of making legitimate profits (mark the word "legitimate"). He even went to the extent of saying that everyone, including Ministers, should work hard and acquire some capital if the country's economic future is to be assured. "To him must go the credit", as Mr. A. D. Shroff has observed in a tribute, "of mobilising small men in business and industry in Maharashtra to a sense of their potentialities...."

Despite his classic moustache — not unexpectedly this received notable mention at the function — and the somewhat severe look of a military chief that it imparts to him, Mr. Lalchand is as likable as he is easily accessible. Having rubbed shoulders with farmers and actually lived their life, he has pragmatic views on agriculture which he has been giving expression to fearlessly. As an industrialist too, he has had a rich and varied experience, his interests ranging from aircraft and automobiles to engineering and sugar. "When the history of India's economic development comes to be written", to quote Mr. Shroff again, Mr. Lalchand's contributions will find an important place.

Although associated with a number of commercial bodies, it is on the Maharashtra Chamber of Commerce, which, incidentally, was founded by his late and distinguished brother, Walchand Hirachand, that he will be leaving a lasting impress. Dr. Rane aptly summed this up when he said: "It is a fitting tribute to the illustrious

founder (Walchand Hirachand) that his brother (Lalchand Hirachand) should have done so much to consolidate his work and extend the usefulness of the Chamber to such an outstanding degree." Said a British poet, referring

Summary Trials : Negation of Justice

From Our Correspondent

CALCUTTA :

THE INDIAN Chamber of Commerce representing a very important section of the business community in eastern India has come out firmly on the side of the Government in its drive to suppress ruthlessly profiteering, black marketing and other anti-social activities of food traders. In a statement just issued, the Chamber roundly condemns these nefarious practices and fully agrees with the Government that people found doing these should be severely punished. Another business leader, Mr. P. D. Himmatsingka, M.P., has said very much the same thing at a specially convened meeting of the local foodgrains trade which he was invited to address at the office of the Indian Produce Association. Mr. Himmatsingka has appealed to the traders to modify their trading methods in order to serve the consumers' interests, as the latter have now been facing a very critical situation on account of the soaring prices of all essentials of life. He also reminds them that co-operation with the authorities will be in their own interest; unless the traders co-operate with the authorities and evolve a scheme of self-regulation, foodgrain dealers as a business class will themselves find it difficult to exist, because experience shows that in conditions of run-away inflation law and order becomes the first casualty. No business community can hope to thrive in conditions of lawlessness.

Fundamental Principles

The Chamber, however, is not exactly happy that offenders in the foodgrains trade should be punished through summary trials. This is what the proposed ordinance (which may have been promulgated by the time this letter appears in print) would empower the district authorities to do. The system of summary trials is not in keeping with the fundamental principles of justice. Blackmarketers of course should be punished, but only after a fair trial. The decisions in the proposed summary trial are not subject to appeal. This would make the law very stringent indeed. The Chamber has expressed the well founded fear for this might mean much harassment of honest people. Recording of one-sided evidence would undermine the normal judicial process, which is one of the corner-stones of freedom in a democratic society. It appears unlikely, particularly when the Prime Minister and Home Minister of the Union appear to be determined to issue this ordinance now, that the proposed measure will be given up or substantially modified, but there is a very strong case for providing some safeguards to protect the honest trader who may often be dragged into a case by scheming or malicious people.

There is, however, genuine appreciation of Mr. C. Subramaniam, Central Food Minister's effort to reorder the Government's food policy on more systematic lines. The prices which have been announced for foodgrains like paddy, rice, wheat, and a few others are obviously based on the calculation that they will help the proposed Foodgrains Trading Corporation to procure a fair part of the marketable food surplus. These prices have been fixed at a level higher than the average for the past three seasons, and should, therefore, attract the weaker and the poorer sections of the cultivators to part with their produce immediately after the harvest. It is generally believed that at least one third of the total production is disposed of in the post-harvest period. Even so, there will be the pro-

blem of storage, for the FTC will not be disposing of the foodgrains it will be procuring in the early part of the next agricultural year. It is however not clear whether it will serve the other major objective of providing an incentive to the producers to raise output. Increases in farm productivity do not only depend on human effort. The disastrous Andhra flood and that in other parts of the country serve as sharp reminders that agriculture in this country still continues to be a gamble on the monsoons. But it will most certainly help strengthen the precarious economic condition of the small farmer, which in itself is a desirable objective.

Free Movement

A major question from the point of view of deficit States like West Bengal is whether the new price policy will make for a freer movement of foodgrains between one State and another. It is pointed out that Mr. Subramaniam's set of prices cover only the standard grades of paddy, and the States are left free to fix prices for other grades. Of course the prices which the States will fix will be related to that fixed for the standard grade fixed by the Union Government, but that still leaves a lot of scope for controversy and dispute. West Bengal has to obtain a fairly large quantity of rice from Orissa in order to make up its deficit. And there may be disagreement between Orissa and West Bengal over the prices fixed by the former for particular grades. Again what Orissa may consider a fairly good grade may be considered otherwise in West Bengal. Disputes of a similar nature have held up despatches from Orissa during the current calendar year, and the same may be repeated next year unless the Centre takes a hand. The Centre can either undertake to meet the entire deficit of West Bengal which proposes to go in for statutory rationing for the city of Calcutta from next January and control the distribution in other parts of the State as thoroughly as it can, or New Delhi may intervene whenever disputes over prices threaten to hold up supplies from Orissa. It remains to be seen which of the courses will be adopted by the Centre, which, it is reported, has already assured West Bengal that all necessary help will be given to make the State's proposed food distribution scheme a success.

★ ★

The three-day seminar which was organised by the Indian Institute of Foreign Trade in collaboration with the Engineering Export Promotion Council in Calcutta last week, provided a useful forum for a scientific discussion of the country's export problems. Mr. A. Ramaswamy Mudaliar inaugurated it. He pointed out that export promotion would be a permanent aspect of India's industrial progress, but there was no short cut to export promotion. Cost and quality are the two primary factors in the drive, but these are difficult goals to achieve, especially when international trade tends to be increasingly competitive. But Indian manufacturers will have to keep on striving to produce goods of quality and at a comparatively cheap cost. Without this, they will not be able to make any headway. There is also the problem of projecting India's image abroad as a country capable of manufacturing goods of a high standard. Skilful propaganda will help to some extent, but basically, the problem consists in being able to produce goods at a competitive price and of a quality which would appeal to the choosy foreign buyer. India's exports of engineering goods have been moving up steadily, but perhaps

COME PRIMA!... Bombay-Rome Non-Stop by *ALITALIA*

THIS IS IT!

Flight AZ 775... a big, swift DC-8 Rolls-Royce Jet... leaves Bombay every Wednesday at 19.40 hours local time. Won't touch down at Teheran. Flies direct to Rome, arrives at 23.59 hours local time. The first Bombay-Rome non-stop flight. Now lets you fly Bombay-New York with only one stop—at Rome!

4 WINGED ARROW SERVICES

ALITALIA flies via Bombay eastward and westward with 4 flights each way every week. Eastward, ALITALIA flies twice a week to Sydney and twice a week to Tokyo. Westward, ALITALIA flies twice a week to Rome via Karachi, once a week via Teheran, and once a week direct to Rome.

♪ **FOR THE FIRST TIME !...** today, and every Wednesday.

almost immediately. Under the agreement, however, there will be no flood of repatriates as it is generally accepted that for every 30,000 repatriated annually about 20,000 would be absorbed as Ceylonese citizens. But a lot of planning would have to be done by the Madras and Kerala Governments as most of those repatriated would have belonged once to these States and there would naturally be a desire to re-settle in the areas from where the repatriated had originally migrated. The absorption of 3,000 Indians from Ceylon every month may not appear to be a huge problem at first sight, especially as hordes of people are coming into the country from Pakistan and the Central Government has handled very large numbers in particular periods. The Madras Government, however, is anxious that the repatriated Indians should not be hanging on the local population without being resettled within a short period and the expenditure in this connection should be borne on a national basis though there may be many Tamilians and Keralites among those arriving from Ceylon. These people originally migrated to Ceylon on the expectation that their rights would be properly protected and the Ceylon Government would not place them under any special handicap. The Ceylon Government is naturally worried about the large number of political and other considerations. But the Madras Government will face a serious problem if arrangements had to be provided for half a million people over a period of 15 years.

Small Industries

It has been suggested that efforts should be made to start small-scale and cottage industries and particularly in plantations in order to make good use of the repatriates. Many of them would have experience in work on plantations and as it is felt that there should be a large extension of acreage under tea, coffee and rubber, it would be worthwhile to examine whether the experience of these workers could be effectively utilised. In the existing plantations the problem of absorption may present some difficulties as those already in employment look to the recruitment of their progenies as far as possible in the place where they have been accustomed to work. But if the programme of extension of acreage under rubber in Kanyakumari and elsewhere can be properly chalked out and the plantation of new areas of high yielding rubber expedited, the programme can be successfully applied. In the early stages, serious difficulties may not be experienced as the numbers may be small. But over a period the cumulative effect would be very pronounced and unless the problems were tackled on a national basis satisfactory solutions could not be reached. There will also be an increase in numbers after some time as a settlement has to be reached regarding the residual stateless numbering 1,50,000.

★★

The rice situation in Madras State has improved to a considerable extent in the past few days. There are steady arrivals of boiled rice from Thanjavur and Tiruchirappalli though dehusking of paddy has been delayed to some extent by unfavourable weather conditions in both districts. Arrivals from Andhra Pradesh also are being speeded up though there is no disposition to relax the ban on exports from Madras until the Government have built up adequate stocks and it became clear that there would be continued despatches from Andhra Pradesh. It is now expected that there will not be any significant improvement in the supply position before the middle of February, 1965 and available supplies will have to be carefully used if the happenings of the past fortnight are to be prevented from recurring. Meantime, it is considered advisable to issue family cards and informal rationing is to be introduced in Madras City from the middle of November. The State officials are busy building up adequate stocks. In the early stages a flat allotment of rice and wheat may be given against the cards. But after sufficient stocks

have been accumulated the rations will be on the basis of the size of the family, it being suggested that every adult should get 8 ounces of rice and 4 ounces of wheat daily. The contention of the Food Department in Madras is that the State had been needlessly put into difficulty on account of its liberal approach to the needs of Kerala. It had been hoped that, against the exports of three to four lakh tons of rice from the southern districts of Madras State, the northern districts would get three lakh tons of rice from Andhra Pradesh. As imports from the latter region were unduly delayed and it is expected that the position will not get adjusted until after the new crop arrives, the suggestion from Mr. Brahmananda Reddi that supplies to Kerala should be made directly by Andhra Pradesh has not been readily accepted. It is contended that Madras should not be expected to export after the arrivals of the stipulated stocks to Kerala. The Madras area is considered self-sufficient there being even a moderate surplus. Crop failures have not been heavy in recent years because of the stabilisation of agriculture in many areas with the construction of medium-sized projects.

★★

After the meeting of the National Development Council held in New Delhi to consider the size of the fourth Plan and the manner in which the required resources should be raised, it has been debated how the States should go about their task and whether the size of the Plan could be preserved without the States levying heavy taxes. So far as Madras is concerned, the Industries Minister Mr. R. Venkataraman, has been claiming that a Plan of Rs. 650 crores could be implemented without resorting to fresh taxation on a heavy scale as a commendable effort has already been made and it is confidently expected that the required revenues could be gathered from the base already laid and with a stricter collection of taxes. The Andhra Government too have been planning in an ambitious manner and it has been stated that there would be an outlay of Rs. 700 crores in 1966-71 against the investment of Rs. 312 crores in the current Plan period. There may be a shortfall in the target by the end of this Plan and it is difficult to anticipate how the machinery would be called to the implementation of a much bigger plan and how the required resources would be gathered. But the State has need to execute projects in a big way as the progress in earlier Plan periods has been rather slow. But in respect of power particularly the installed capacity is expected to be only a little over 400 mW by 1966 while it would be as much as 1500 mW in Madras by the same date. It has, therefore, been emphasised that the expenditure on power projects should be on a large scale so that the installed capacity can be raised to 1,000 mW. The allotment for this purpose is placed at Rs. 200 crores. Agriculture will also be given due priority though there is greater anxiety to improve transport facilities more efficiently in the coming years. The increase in agricultural production, notwithstanding heavy expenditure on irrigation projects, has not been impressive so far because the large expenditure incurred on projects like Nagarjunasagar are expected to yield results only in the early year of the fourth Plan. Work on this huge project will perhaps be expedited after it has been decided by the Central Government as to what would be its proportion

of assistance. It can be expected, however, that there will be a more pronounced increase in agriculture in the fourth Plan as the various projects would start yielding results in the next few years. The greater emphasis on power generation and industrial development should also strengthen the regional economy. It can in fact be said that the fourth Plan will mark the beginning of an era of vigorous economic development in the history of Andhra Pradesh. If the resources of this State can be intelligently harnessed and Central assistance was liberally extended in respect of the bigger schemes, the results would be beneficial not only for the particular region but also for the whole country.

Trade Winds

EXPORTS ANALYSIS

ABOUT ONE hundred countries imported more goods from India during 1963-64 than in the preceding year while 76 countries reduced their off-take of Indian goods. This is revealed by a survey conducted by the World Trade Department of the Indian Chamber of Commerce, Calcutta. The main countries whose off-take of Indian goods increased in the last fiscal year were: Argentina, Belgium, Ceylon, Czechoslovakia, Malaysia, West Germany, Japan, the USA and the USSR. The countries which reduced their purchases of Indian goods included Indonesia, Iran, Nigeria, Pakistan, Poland and Yugoslavia. Exports to the dollar area increased from Rs. 143 crores in 1962-63 to Rs. 157 crores in 1963-64, to the European Common Market from Rs. 48 crores to Rs. 57 crores, to East European countries from Rs. 92 crores to Rs. 109 crores, to the sterling area from Rs. 268 crores to Rs. 283 crores, and to other soft currency areas from Rs. 170 crores to Rs. 188 crores. In spite of this, during 1963-64, India showed a deficit in the balance of trade with 28 countries. The deficit continued to be large especially with the USA (Rs. 262 crores), West Germany (Rs. 70 crores) and Iran (Rs. 43 crores).

In a detailed analysis of India's exports with individual countries, the survey report draws attention to the increasing competition that Indian tea is facing in the UK. For instance, Kenya stepped up her tea exports to the UK from 20.14 million lbs. in 1962 to 21.19 million lbs. in 1963, Netherlands from 2.34 million lbs. to 4.75 million lbs., Indonesia from 7.97 million lbs. to 10.89 million lbs., China from 3.53 million lbs. to 5.93 million lbs., Formosa from 0.43 million lbs. to 1.11 million lbs. and Japan from 0.69 million lbs. to 0.77 million lbs. Though India and Ceylon continue to remain the major suppliers, the competition from the new sources should not be under-estimated, the report points out.

Dealing with India's exports to the European Common Market, the survey points out that there were no significant exports to France, in 1963-64, of non-traditional items. In our trade with Belgium the decline in the export of bones from Rs. 68 lakhs in 1963-64 was the main feature. There has also been a change in the pattern of jute goods imports into Belgium which has been trying to reduce the import of jute bags and increase the import of jute cloth and yarn. In our trade with Italy, a notable development was that Brazil replaced India as the leading supplier of iron ore. As regards West Germany, the survey report says that about 50 per cent of our exports to that country consisted of half-a-dozen items, namely, tea and coffee, iron ore, manganese ore, leather and jute goods. India's exports to Eastern Europe have shown a remarkable increase from about Rs. 4 crores in 1953 to over Rs. 100 crores in 1963 and have consisted predominantly of non-traditional items. Though our exports to the USA increased from Rs. 114 crores in 1962-63 to Rs. 128 crores in 1963-64 our share in the total imports of the USA continues to be negligible, being less than 2 per cent. Similarly, our trade with Latin America is also very little. Out of the total annual imports of Rs. 4,000 crores into South America, India's share was only Rs. 17 crores.

The survey has indicated vast scope for increasing India's exports to countries of South Africa, West Asia and South-East Asia. Although our export performance in recent years has been improving steadily, there is a great need

to intensify our efforts, the report points out. Though world exports went up from \$54 billion in 1948 to \$136 billion in 1963, showing a rise of 152 per cent, India's exports improved only by 20 per cent. Consequently, India's share in world exports fell from 2.5 per cent to 1.2 per cent during this period. Our share in the exports of under-developed countries also declined from 8.3 per cent in 1948 to 5.2 per cent in 1963. India's per capita exports in 1963-64 were just £1.65h as compared to £123 of Canada, £150 of Netherlands and £79 of the UK. Only 78 per cent of our imports in 1963-64 were financed by exports.

EXPORT COUNCIL FOR WOOL AND WOOLLENS

The Export Promotion Council for wool and woollens, which was inaugurated in New Delhi on October 30, 1964 by the Union Minister for Commerce, Mr. Manubhai Shah, decided, in its first meeting, to impose a levy of 10 per cent on the f.o.b. value of actual user licences for the import of raw materials with a view to subsidising partly the losses suffered by the exporters of wool and woollen fabrics. By the imposition of this 10 per cent levy a fund of Rs. 50 lakhs would be created in one year as the Indian manufacturers are importing woollen raw materials to the tune of Rs. 5 crores per annum. The idea behind the creation of such a fund, Mr. Shah said, was voluntary and that the Government did not come into the picture at all. The benefit accruing from the fund would be shared entirely by the exporters. As regards the import of modern machinery for the woollen industry, the Minister said that an agreement had almost been concluded with the Soviet Union for the import of woollen machinery worth a crore of rupees. It would, however, be upto the Council to consider as to how much of the machinery was to be imported from the Soviet Union or Italy and which of the parties should be given the import licences. Mr. Shah suggested to the Council to stipulate that before a licence for the import of woollen machinery was granted to a party the Government should be satisfied, under certification from the Export Promotion Council, that the party had paid the 10 per cent levy and that none of those who fail to comply with this provision should be granted the import licence. He also informed the Council that 5 million pounds of Australian wool, worth Rs. 3 crores, would be imported for use as a stockpile to meet periodical shortages.

Earlier, on behalf of the Council its chairman, Mr. R. K. Birla, submitted to the Minister an incentives scheme for the promotion of exports of woollen fabrics. He said that this scheme would be discussed further by the Export Promotion Council whose members would be available for discussions with the officers of the Ministry of Commerce, so that the final shape could be given to the scheme. Referring to the quantum of India's exports of woollen cloth, Mr. Birla said that in terms of international trade, the present Indian exports were so insignificant that even a ten-fold increase would hardly produce a ripple in the world market. The present cloth exports from India amounted to only about 0.4 million linear metres against the world export figure of 300 million linear metres. Our exports of raw wool were only 18.7 million lbs. as against the world figure of 3,117 million lbs. In this respect Mr. Birla emphasised the importance of incentives which, he said, were available on exports in one form or the other and fairly liberally, even in the most advanced countries such as the USA, the UK, West Germany, Japan, Italy and Holland. Of particular significance was the absence of any handicap in

EXCELLENT COVERAGE! HARVEY CANVASES

provide the finest, surest protection for men and material

When the safety and protection of men and vital materials are at stake, one can't afford to take risks. Nothing but the finest coverage material will do! That's why top-ranking manufacturers like Kilburns insist on Harvey Canvases—the strongest and most reliable fabrics for making superior quality tarpaulins, tent canvases, etc. Harveys' Madura Mills are today India's largest producers of industrial fabrics. Through the years they have built up a world-wide reputation for consistently high quality. They have the men, machines and knowhow to produce a wide range of industrial fabrics such as Tyre Cords, Belting Ducks, Jacket Ducks, Light and Heavy Canvases. What's more, Harveys can weave industrial fabrics to your specifications—however rigid. Recent expansion at Madura Mills, with the installation of up-to-date high-speed looms and precision machinery, has further increased Harveys' weaving capacity. They can now meet all your requirements in industrial fabrics—to your complete satisfaction.

these countries in respect of raw materials or modern machinery, besides the fact that these countries had the advantage of many years of rich experience and consequent technological advancement. Against this the incentives available to the Indian exporters were hardly encouraging.

Mr. Birla also advocated for the removal of quantitative limitation on the export of Indian wool which, as a traditional item of export, had been earning Rs. 8 crores per annum. It was fairly reasonable to suggest, he added, that if the Government was not prepared to link imports of raw materials with the total value of exports including raw wool, it should fix a limit on the value of Indian wool exports on the basis of the past four or five years' average, with the provision that any increase over this limit would be made available to the industry for the import of raw wool. Mr. Birla went to the extent of suggesting that the Government should give some assistance even on the exports of raw wool from India.

INDO-SOVIET TRADE TALKS

The Soviet trade delegation led by Mr. B. A. Borisov, Deputy Foreign Trade Minister, met in New Delhi on October 28, 1964 the senior officials of the Union Ministry of Commerce to review the trade between the two countries and draw up plans for the next year. India's Minister for Commerce, Mr. Manubhai Shah also attended the meeting. During the last 10 years the trade and economic relations between the two countries have developed in a substantial manner. More than 38 projects are being built in India with Soviet collaboration in the field of iron and steel, heavy electricals, machine tools, fertilizers, power stations, lignite, drugs and pharmaceuticals, surgical and medical instruments, high pressure boilers and other heavy industries.

The current year's Indo-Soviet trade plan is for Rs. 85 crores each way. This is 70 per cent higher than last year when the trade had touched a figure of Rs. 50 crores each way. The next year's trade plan envisages a further rise of about 40 per cent over the current year's trade plan raising the Indian exports to the Soviet Union to Rs. 110 to Rs. 120 crores. The Soviet delegation has agreed to purchase larger quantities of light engineering goods, chemicals, paints, pigments and pharmaceuticals. The Soviet purchases of Indian textiles next year would be worth about Rs. 20 million, engineering goods about Rs. 25 million, chemicals about Rs. 20 million, tobacco about 35,000 tons and shoes about one million pairs. Likewise, India will buy from the USSR fertilizers, pig iron, special steels, caustic soda, non-ferrous metals, mineral oil products and heavy machinery and plant, in increasing quantities.

WORLD FOOD IMPORTS

The world food shortage by 1970 would compel the "deficit-food" countries to import \$4.6 billion worth of food per annum. This forecast was made last week in a press conference by the US Secretary of Agriculture, Mr. Orville Freeman, on the basis of an analysis of the world's food needs made by the US Department of Agriculture. The current 'diet-deficit' areas that have been listed by the "analysis report" are: Asia, excluding Japan and Israel; Africa, excluding its southern tip; almost all of central America and the Caribbean and the northern part of South America. The expected deficit in needs for adequate diet in developing nations would include the nutritional equipment of 54 million tons of grain, 6.5 million tons of non-fat dry milk, 3.2 million tons of soya beans (grits) and 3.1 million tons of vegetable oils.

The analysis report entitled "The World Food Budget, 1970"

is the second study of its kind by the US Department of Agriculture, the first one having been made in 1961. Mr. Freeman said that the world food budget would be of vital importance as a guide to President Johnson's proposal "to use the food and agricultural skills of the entire West in a joint effort to eliminate hunger and starvation". Food, he said, was one of the most powerful instruments of foreign policy, both as a humanitarian expression of goodwill and as a means of strengthening the United States own economy by building future markets for the US agriculture through encouraging economic growth in developing nations.

The report further points out that two-thirds of the world's population live in countries where the average diets are inadequate. Some improvement is, however, expected in the diets of the nutritionally inadequate areas under the Food for Peace Programme, the report adds. This Mr. Freeman pointed out, would have enormous implications for the development of export markets for the United States as the emerging nations, with the US help, raise their standards and become able to pay for imports with dollars or other hard currencies. According to the findings of the analysis report, 43 per cent of the imports of \$4.6 billion worth of food by the "deficit-food" countries will come from the United States.

INDO-CYLON JOINT TEA EXPORT EFFORTS

The trade relations between India and Ceylon were discussed at a meeting in New Delhi on October 27, 1964 between Ceylon's Minister for Internal and External Trade and Supply, Mr. Ilangaratne, and India's Minister for Commerce, Mr. Manubhai Shah. The two Ministers appreciated the need for strengthening joint efforts by the two countries to promote the sale of tea in the principal tea consuming countries where such efforts are already being made in co-operation with the local tea trade as also in other regions of the world where joint promotion has not so far been undertaken. It was recognised however, that unilateral promotion of tea, by origin, need not be ruled out so long as such promotion does not hamper the joint efforts. With a view to taking necessary measures for the development of the tea industry and trade of the two countries, the Ministers agreed, a joint tea commission should be set up. The commission may consist of three senior officials of each Government including the Secretaries of the concerned Ministries. The importance of the United Kingdom, which is the largest consumer of tea in the world, was particularly recognised by the two Ministers from the point of view of joint promotional campaign. It was further agreed that efforts should continue to be made by the Governments of Ceylon and India to secure substantial reduction in the internal duties of tea in West Germany.

BANK OF AMERICA

Bank of America, which was started for "the little fellow" and grew to be the world's largest non-government banking institution, celebrated its 60th anniversary on October 16, 1964, with the staff of the Bombay branch celebrating the same in India. Forty-one years after its founding in 1904, the bank became the largest commercial bank in the United States. Today, with 868 branches in the USA and offices in 27 countries, it has the total resources of \$14.8 billion. This bank is known for such banking innovations as instalment credit loans, automated accounting, equipment leasing, payroll processing, and a widely accepted and successful credit card.

Company Affairs

POYSHA INDUSTRIAL ISSUE

POYSHA INDUSTRIAL Company Limited enters the capital market on November 13 with a public offer of 600,000 equity shares of Rs. 10 each. The subscription list will close on November 23, or earlier at the discretion of the directors, but not before November 16. The company has an authorised capital of Rs. 1.50 crores made up of 1,500,000 equity shares. The subscribed capital is Rs. 25 lakhs. The present issue is for 850,000 equity shares of Rs. 10 each out of which 250,000 equity shares have been offered to the existing shareholders by way of rights. 600,000 shares now offered for public subscription have been underwritten by the Industrial Credit and Investment Corporation of India Ltd., Life Insurance Corporation of India, U.P. State Industrial Corporation Limited, Harkisondass Lukhmidass, Jamnadas Morarjee and Company, the Bank of Baroda Limited, P.R. Subramanyam and Sons, New India Assurance Company Ltd., Ramanbhai Lalbhai Sheth and South India Insurance Company Limited.

The company is engaged in the manufacture of a wide variety of containers used for cosmetics, paints and cans for fruits and vegetables in a variety of sizes and shapes to meet the needs of the different products to be packed. The company's wholly owned subsidiary, Colrige Limited, is engaged in the manufacture of rigid containers and collapsible metal tubes for cosmetic, pharmaceutical and other industries. Another subsidiary, Kaira Can Company Limited, will be manufacturing containers at its factory to be established near Anand mainly for the requirements of Kaira District Co-operative Milk Producers' Union Limited. The existing factory of the Company is at Messent Road, Bombay and there is another unit in Delhi.

The company proposes to establish two additional factories, one at Cochin to cater to the requirements of South India and the other at Ghaziabad to take care of North and East Indian requirements. Moreover, the main factory at Messent Road, Bombay, is proposed to be shifted to the Kalva Industrial area near Thana of the Maharashtra Industrial Development Corporation and fully modernised. The modernisation and expansion programme is likely to increase the Company's capacity from 4 million to 10 million cans per month on a single shift basis. The factory of Colrige Limited, which is now in rented premises at Sewri, is also proposed to be shifted to the new site near Thana of this company. The factory of the other subsidiary, Kaira Can Company Ltd., is also proposed to be established. Funds raised by the present issue are to be utilised for this expansion and modernisation programme of the company.

NEW ASIATIC INDUSTRIES

The name of the New Asiatic Insurance Co. Limited is proposed to be changed to the New Asiatic Industries Limited, subject to the approval of the Central Government, at an extraordinary general meeting of the Company to be held on November 18. This has been rendered necessary because the earnings from the general insurance business did not provide sufficient returns and the company ceased to accept any fresh insurance business with effect from January 1, 1961. Consequently its registration under the Insurance Act was cancelled with effect from December 1, 1961. The directors propose that better returns could be earned if industrial or commercial activity is undertaken and at the above mentioned general meeting the memorandum of association of the company is proposed to be altered.

The company now proposes to extend the business which can be advantageously and conveniently combined with the investment business already being carried out so that the area of operation will be enlarged. Under the orders of the

Court the deposits of the company with the Reserve Bank of India are to be refunded and the directors expect to utilise it for the new business.

The new business to be undertaken by the company includes the manufacture of chemicals, petro-chemicals, drugs including fertilisers, the business of engineers, metallurgists and technologists. It will also undertake contracts for work involving the supply or use of machinery and will act as importers and exporters. The amended memorandum of association will also allow the company to function in the field of cotton spinners or as proprietors of flats, etc.

THE BANK OF TOKYO

The Bank of Tokyo Limited, which also has its offices in India at Bombay, Calcutta and New Delhi, recorded a profit of 1,205 million Yen during the six months, October 1, 1963 to March 31, 1964. Its deposits towards the end of the period under review stood around 477,213 million Yen. It distributed a dividend at the rate of 2.25 Yen per share, which comes to 9 per cent per annum, and which absorbs 450 million Yen. An amount of 90 million Yen was transferred towards legal earned reserve, 550 million Yen towards voluntary earned reserve and 10 million Yen towards remuneration for the members of the board. An amount of 359.6 million Yen was carried forward to the next term.

PHILIPS INDIA RIGHTS ISSUE

Philips India Limited has decided to approach the Controller of Capital Issues for consent to issue 400,000 right shares of Rs. 10 each at a premium of Rs. 6 per share. Out of these the major shareholders, N.V. Philips Gloeilampenfabrieken, Holland, will subscribe only 100,000 shares although they are entitled to 300,000 shares on a rights basis. The remaining 300,000 shares will be offered to the existing shareholders in India in the proportion of three new shares for every five held. In April 1963 the company obtained sanction for issuing capital to the value of Rs. 16.66 lakhs which was to be distributed equally between N.V. Philips Gloeilampenfabrieken and the shareholders in India. The issue of this capital, however, was kept in abeyance pending a more detailed examination of the company's long-term requirements of finance. The new capital issue of 400,000 shares for which sanction is now being sought in place of the earlier sanction, is intended to meet both the long-term and short-term requirements for financing the company's expanding activities. At present the shares are held between N.V. Philips Gloeilampenfabrieken in the proportion of 77:23, but with the issue of the right shares the proportion of shares held by the shareholders in India will increase to nearly 31 per cent.

During the last seven years since 1957, when it first issued shares to the Indian public, its sales have increased from Rs. 4.73 crores to Rs. 10.63 crores in 1963. During this period the factory at Loni (near Poona) went into production and is now an important centre producing radio sets and radio components. In 1960 it acquired the light factory in Bombay where it is manufacturing a large number of incandescent lamps, fluorescent lamps and various other products. It has recently started the production of tungsten and molybdenum wire and tungsten coils, the vital component for electric lamps which was imported.

GOODYEAR INDIA

Goodyear India Limited will offer 640,000 ordinary shares of Rs. 10 each as rights shares, at a premium of Rs. 7 each to its existing shareholders in the ratio of eight new shares for every five held. It is also proposed to issue bonus shares by

The label 'SANFORIZED' is helping to carry Indian cottons round the world

For centuries Indian textiles held sway in world markets. Millmade cottons are still a leading item of export. In 1963, over 500 million yards went abroad and earned the country Rs. 41.2 crores in foreign exchange.

New markets need to be tapped, however, to build bigger, even more profitable exports. The label 'SANFORIZED' is proving of great assistance in introducing our fabrics to fresh markets, for it has world-wide recognition. The name is known and trusted in 49 countries and inspires confidence in millions of consumers.

Today, leading Indian mills are using the trademark 'SANFORIZED' aggressively as a valuable aid in the sale of cottons in highly competitive world markets. In 1963 the exports of cloth labelled 'SANFORIZED' increased more than 31 per cent over 1962...and more than 85 per cent over 1961.

Issued by Cluett, Peabody & Co., Inc. (Incorporated in the U.S.A. with limited liability) proprietors of the registered trademark 'SANFORIZED'. The trademark proprietors use the trademark 'SANFORIZED', or permit its use by authorised registered users, only in respect of tested fabric which meets the trademark proprietors' strict requirements as to residual shrinkage.

For information 'Sanforized' Service, 95 Marine Drive, Bombay 2

S. & L. AND STEEL PLANTS

S. & L.'s experience over many years at the great steel plants at Jamshedpur, Burnpur, Durgapur and Bhadravati place them in a unique position to serve the growing Steel Industry.

Recognised as the leading manufacturers in India of fabricated pipework, S. & L. offer a complete service from design to commissioning, with all materials and workmanship of the traditional high standards associated with S. & L.

STEWARTS AND LLOYDS OF INDIA PRIVATE LTD.

Regd. Office : 41, CHOWRINGHEE ROAD, CALCUTTA-16. PHONE : 44-2311
Branch Office : Himalaya House, 5th Floor, Palton Road, Bombay
Tech. Representative : c/o. Crompton Engineering Co. (Madras) Limited 49/51, Second Line Beach, Madras-1

capitalizing the share premium account, subject to Government approval. The funds thus raised will be utilized to meet the company's expansion programme. The company has proposed to raise the production capacity of its existing factory at Bal-labgarh, near Delhi, from 210,000 to 310,000 tyres per annum (or from 750 to 1,000 tyres a day) before the end of 1965. The Government has also renewed until December 1968, the company's industrial licence to manufacture 510,000 tyres.

HIND DEVELOPMENT ISSUE

Hindusthan Development Corporation Ltd., proposes to issue 15,000 cumulative redeemable preference shares of Rs. 100 each. These shares, which will carry a dividend of 9 per cent (free of company's tax at source) and are redeemable at any time after December 31, 1974, will be offered to the existing ordinary shareholders as on October 28 in proportion and as nearly as circumstances permit to the capital paid-up on those shares as on that date. The offer is subject to the condition that the full amount on the shares is paid on application. The present paid-up capital of the company is Rs. 97.92 lakhs all in equity shares.

SCINDIA STEAM

During the year ended 30th June, 1964, the total turnover of the Scindia Steam Navigation Co. Ltd., including other receipts, comes to Rs. 17.64 crores as against Rs. 18.22 crores in the previous year. This was due to reduced movement of cargo. After providing the sum of Rs. 1.98 crores as depreciation (previous year Rs. 1.92 crores), balance remaining comes to Rs. 1.34 crores as against Rs. 1.38 crores last year. The statutory development rebate reserve required to be provided in respect of new ships purchased during the year comes to Rs. 97.5 lakhs as against Rs. 9 lakhs in the previous year. The sum of Rs. 22.5 lakhs as against Rs. 68 lakhs last year, has been provided for tax liability and the balance available thereafter comes to Rs. 14.45 lakhs as against Rs. 61.23 lakhs. The Directors have considered it advisable to transfer the sum of Rs. 50 lakhs from the General Reserve for payment of Dividend at Rs. 1.25 per share. After adjustment of Rs. 7.74 lakhs, the previous year's balance, the sum of Rs. 1.79 lakhs is carried forward to next year. The dividend of 18 per cent proposed to be distributed has been provisionally determined to be exempt from taxation under the provisions of the Income-tax Act.

LARSEN TOUBRO

The sales of Larsen & Toubro Limited for the half-year ended 30th September, 1964, amounted to Rs. 354 lakhs compared to Rs. 275 lakhs for the half-year ended 30th September, 1963, representing an increase of 29 per cent. The value of the output from the Company's workshops at Powai, Bombay, is reported to be up by 21 per cent compared to the value of output for the same period last year.

CAPITAL ISSUES DURING THE QUARTER

Eightyfour companies with authorised capital of Rs. 10.4 crores were registered in the Northern Region from July 1, 1964 to September 30, 1964. The Region comprises Delhi, Uttar Pradesh, Rajasthan, Punjab and Himachal Pradesh. The new issues included six public companies, 77 private companies and one association not for profit. Of companies with authorised capital of over Rs. 50 lakhs, 3 were registered in Delhi, 2 in U.P. and one in Punjab.

Three public companies and 42 private companies with authorised capital of Rs. 1.8 crores and Rs. 1.54 crores respectively were registered in Delhi. Two public companies and 14 private companies with authorised capital of Rs. 3 crores and Rs. 52 lakhs were registered in Uttar Pradesh.

Punjab and Himachal Pradesh had one public company and 16 private limited companies with authorised capital of Rs. 1 crore and Rs. 1.18 crores respectively and one association not for profit. Five private limited companies with an authorised capital of Rs. 1.36 crores were registered in Rajasthan.

During the period under review 21 companies with a paid-up capital of Rs. 15.27 lakhs went into liquidation and names of 25 companies with a paid-up capital of Rs. 7.11 lakhs were struck off the Register of Companies under Section 560 of the Companies Act, 1956.

The total number of companies at work on September 30, 1964 was 4,768. They included 815 public companies, 3,761 private limited companies and 192 associations not for profit. The authorised capital of these companies was Rs. 326.82 crores and Rs. 522.75 crores, while the paid-up capital amounted to Rs. 77.12 crores and Rs. 151.91 crores respectively.

CAPITAL ISSUES

Six companies have been authorised to raise fresh capital aggregating Rs. 9.52 crores. Of these, one is issuing bonus shares, three are issuing equities, the fifth is floating debentures and the sixth equities plus preference shares. One company involves foreign collaboration. The consent of the Controller of Capital Issues is valid for 12 months in all the cases excepting one in which case it is valid only up to May 1, 1965.

Geep Flashlight Industries Limited, Allahabad (U.P.) will be issuing further capital of Rs. 3 lakhs divided into 3,000 equity shares of Rs. 100 each as bonus shares on capitalisation of the company's reserves to a like extent.

Electric Construction and Equipment Company Limited, Calcutta, is to issue capital of Rs. 84,56,600, divided into equity shares of the value of Rs. 59,06,600 and preference shares of the value of Rs. 25,50,000. The capital is required for completion of several projects of the company at Hyderabad, Budge Budge, Bandel and Sonapat estimated to cost Rs. 137 lakhs.

Associated Cement Companies Limited, Bombay, is to issue capital of Rs. 700 lakhs in seven per cent per annum, 'D' debentures of Rs. 1,000 each, for cash at par. The debentures will be offered to the public with first option to the existing shareholders of the company. The money will be used for financing the company's expansion, renovation and new factories.

Lucas-TVS Limited, Madras, is to issue a further capital of Rs. 50 lakhs, divided into 50,000 equity shares of Rs. 100 each, for cash at par, to be subscribed privately by the company's foreign collaborators — Messrs. Joseph Lucas (Industries) Ltd., U.K. — and Messrs. T. V. Sundaram Iyenger & Sons Pvt. Ltd., Madras. The money will be utilised to meet the increased capital requirements of the company's projects.

Benger Laboratories (India) Limited, Bombay, is to issue Rs. 50 lakhs in equity shares of Rs. 100 each at par, to be offered to the existing shareholders of Tata Fison Limited on the amalgamation of the latter with the former as approved under the orders of the Bombay High Court. The shares will be issued in the proportion of 10 shares for one share of Rs. 100 each (fully paid up) of Tata - Fison Ltd.

Goodyear India Limited, Calcutta, is to issue further capital of Rs. 64,00,000 divided into 6,40,000 equity shares of Rs. 10 each for cash at a premium of Rs. 7 per share. The entire issue will be made to the existing Indian shareholders in the ratio of 8 shares for every 5 shares held. The capital will be utilized for financing the expansion scheme involved in the manufacture of rubber tyres, tubes etc. The consent is valid up to May 1, 1965.

BOOKS BRIEFLY

Use and Abuse of Caste

When Caste Barriers Fall: By Dagfinn Sivertsen; Universitets Forlaget; Allen and Unwin.

Reviewed by JOSSLEYN HENNESSY

SOCIOLOGICAL studies of India have been piling up in the past fifteen years, which is splendid, but the accounts that they give of the pace of social evolution differ all the way from those who, like Mr. T. K. Basu in his "Bengal Peasant", think that change is minimal, to Mr. Sivertsen, who reports visible and fairly rapid upheavals, which is confusing. The answer is, of course, that although India has been a political unit for a little over a century — it is customary to refer to two hundred years of British rule, but, in fact, Britain was only one of many powers in India in the eighteenth century and British rule was not effectively consolidated throughout the sub-continent until after the Mutiny — ethnologically and culturally India is as much, and not more, one homogenous unit than is Europe. It follows that sociologists working in, say, the Punjab, Gujarat, Rajasthan, Bengal or Madras, will have raw material as different as sociologists reporting on, say, Finland, Denmark, the industrial north of France, the agricultural south of Italy, or Yugoslavia.

Just as there is a reasonable element of truth in the popular belief that the Scots are so capable and intelligent that they run Whitehall, there is an equal element of truth in the popular belief in India that the Madrasis run the Government of India. And Mr. Sivertsen's account of the impact of democratic ideology on the inhabitants of a remote Madras village bears witness to their adaptability and organisational enterprise. Caste has a bad press among Western intellectuals, whose (understandable) bias in favour of democracy makes them identify caste with oppression. What such critics do not always realise is that any social system constitutes an attempt to solve current social and economic problems and that the caste system did, in fact, solve India's problems for several centuries, and is making its contribution to the solution of contemporary problems. Compare, for example, the present state of affairs in Madras with that in southern Italy, where although new opportunities for economic development are being offered, corporate action is impeded because of the absence of social groups outside the family. In Madras, on the other hand, Mr. Sivertsen shows that despite its social

barriers, caste provides group organisations which can be, and are being, used to advance new political and economic aims. It is, however, relevant to note that whatever the underprivileged groups achieved in their revolt against caste's social barriers, the economic realities remain the same, i.e., the pressure of population on the land, the absence of local industries alternative to subsistence agriculture, and the difficulty of securing improvements in the methods of agriculture. It seems unfortunate that, according to Mr. Sivertsen, the Congress party allows, by default, the Communists undue prominence in organising social change.

Mr. Sivertsen is to be congratulated on a painstaking and authoritative piece of field research, which should be of the highest value to sociologists, administrators, planners, and politicians concerned with India's future. The non-specialist reader may, however, find parts of it pretty heavy going, because Mr. Sivertsen concentrates on factual and statistical investigation to the exclusion of character sketches. One would have liked to have met some of his informants and heard their personal reactions to the social stresses and economic strains, which he describes with scholarly detachment. The absence of a glossary is time-consuming, and failure to include J. H. Hutton's classic "Caste in India" constitutes a gap in an otherwise useful bibliography.

VARIED FARE

Wool & Woollen: Edited by T. V. R. Chandran; Published by Eastern Press Services (India), 227, Frere Road, Bombay-1; Annual Subscription Rs. 24.

This is a new monthly devoted exclusively to trades and industries allied to wool. As Mr. Manubhai Shah, Union Minister of Commerce, has said in a message to the inaugural issue, a journal on the woollen industry disseminating information needed both by the grower and the exporter has certainly a useful role to play. This issue contains a number of articles embracing different aspects of the wool trade and industry, including research for the development of wool fibres, research institute for the woollen industry, colour in wool fabrics, and fabric production costs in different countries, among others. One of the articles makes the point that abolition of controls on worsted yarn will make fabrics cheaper.

Readers' Roundtable

UNACCOUNTED MONEY

Sir, — Black money, about which so much is being said these days, is the illegitimate child of every controlled and heavily tax-ridden economy. When laws multiply, become complicated and taxes strain human nature, the cost of honesty goes up. Like any other commodity, many ordinarily decent people are unable to afford honesty at such a prohibitive price. Therefore, in their economic dealings, black money or unrecorded gains become the order of the day.

As the Finance Minister pointed out, black money, like an iceberg, is mostly hidden beneath the surface. It may be added that one-third of this iceberg belongs to dishonest businessmen and industrialists, another one-third to corrupt officers and the last part to corrupt professional politicians. Black money arises from the collusion of the three, and is thus shared between them in a truly socialistic spirit of egalitarianism.

Unethical though it is, in one sense black money has ren-

dered great national service by saving the economy from ruin, as Prof. B. R. Shenoy once pointed out. A large part of the money which, if paid in taxes, would have been promptly wasted by the Government, has been employed in productive purposes mostly in hundreds of small enterprises in the country.

The garrulous politicians have talked enough to put the holders of black money on their guard. Some of the methods currently employed by the Finance Ministry, instead of bringing out black money, are only earning for the Finance Ministry the bad name of Fascist Ministry. It is time to recognise that neither black money nor black wealth can be brought out into the open except by a ruthless dictatorship. Unless one wishes to pay that price, the wisest course is to prevent further creation of black money by bringing down taxes to a reasonable level and by reshaping economic policies according to the laws of the market.

ANNOUNCEMENT REGARDING THE PROPOSED ISSUE OF CAPITAL

This is NOT a Prospectus, Persons interested in full details may obtain copies of the Prospectus from the Registered Office of the Company or from the Underwriters, Bankers, Brokers and Issue House named hereinafter.

POYSHA INDUSTRIAL COMPANY LIMITED

(Incorporated under the Companies Act, 1956)

Registered Office: Messent Road, P.O. Tank Road, Bombay 33, DD.

EXISTING AND PROPOSED ACTIVITIES OF THE COMPANY

The Company is engaged in the manufacture of a wide variety of containers ranging from simple slip-cover-cans such as are used for cosmetics and other d.y products to friction-top cans for paints, open top sanitary cans for fruits and vegetables, and other precision-made containers. Metal cans, mostly, decorated and lithographed are manufactured by the Company in a variety of sizes and shapes to meet the needs of the different products to be packed. The Company also makes other light-gauge tinplate and sheet-metal products.

The Company's wholly owned subsidiary, Colr'ge Limited, is engaged in the manufacture of rigid containers and collapsible metal tubes for cosmetic, pharmaceutical and other industries.

Another subsidiary, Kaira Can Company Limited, will be manufacturing containers at its factory to be established near Anand mainly for the requirements of Kaira District Co-operative Milk Producers Union Limited.

The proposed activities of the Company as well as of subsidiaries will be the same as described above.

LOCATION OF THE FACTORIES

The Company's existing factory is at present situate at Messent Road, P.O. Tank Road, Bombay-33 DD. The Company has a branch factory viz., a reforming unit at Najafgarh Road, Motinagar, New Delhi-15.

The Company proposes to establish two additional factories, one at Cochin in the South to cater to the requirements of South India and the other at Ghaziabad in North India to take care of North and East Indian requirements.

The main factory situate at Messent Road, P.O. Tank Road, Bombay-33 DD., is proposed to be shifted to the Kalva Industrial Area near Thana of the Maharashtra Industrial Development Corporation and fully modernised.

The modernisation and expansion programme will increase the Company's capacity from 40 lakhs to 1 crore of cans per month, on a single shift basis.

The factory of Colrige Limited, a wholly owned subsidiary which is now in rented premises at Sewri, is also proposed to be shifted to the new site near Thana of this Company.

The factory of another subsidiary of this Company, Kaira Can Company Limited, is proposed to be established near Anand in Gujarat State.

COMPANY MEETING

THE CALCUTTA ELECTRIC SUPPLY CORPORATION

MR. I. A. MACPHERSON'S REVIEW

The Sixty-seventh Annual General Meeting of the Calcutta Electric Supply Corporation Limited was held on 23rd October in London, Mr. I. A. Macpherson, M.B.E., the Chairman presiding.

The following is from his circulated review for the year ended 31st March, 1964:

The event which, for us, as for everyone in or connected with India, overshadows all others has been the death on the 27th May of Pandit Nehru. It would be a presumption for me to try to add to the world-wide tribute already paid him, but I may perhaps be permitted to remark that it would be difficult, if not impossible, for a company such as this to operate under any other system than that of the parliamentary democracy of which, in India, Pandit Nehru was the architect and custodian.

GROWTH OF UNDERTAKING

The regulative measures which the Government had to adopt to ensure the optimum utilisation of available power resources were aimed primarily at reducing the peak demand on the Company's system. The commissioning last October of the 50 MW extension to our New Cossipore Generating Station and more recently of our Southern Receiving Station have already allowed several of the restrictions to be relaxed. Towards the end of this year, when the output of further generating plant will be put at the disposal of the State Board, our off-take at Southern Receiving Station will be stepped up to 80 MW and the position will be further relieved when, during

the first half of next year, we commission our Belur Receiving Station designed to take in 100 MW of power from the State Board's Bandel Generating Station. Provided they are backed by adequate State Board resources, the commissioning of these two Receiving Stations should enable Government to relax the restrictions remaining. Restrictions notwithstanding our output again broke all previous records and over the five year period 1959-60 to 1963-64 as a whole the average rate of growth in terms of units was about 8½ per cent compound.

REVENUE ACCOUNT

Revenue from the sale of electricity and for Meter Rents at £14.8 million was over £1.7 million (13 per cent) up on last year. This is a much higher rate of increase than is suggested by the increase in units sold. The main reason is that the monetary figure of sales includes Coal Surcharge revenue which arises by reason of increases in the delivered cost of coal — increases which of course are also reflected in additional Revenue Expenditure. Revenue Expenditure increased by almost £1.2 million; of this £885,000 was due to enhanced Generation, Transmission and Distribution costs. During the year our stations, in generating 2,077 million units, burnt 1.49 million tons of coal at a cost of £4.48 million, comparative figures for the previous year having been 1,841 million units, 1.38 million tons and £3.81 million. The Net Revenue Account shows that despite an increase of about £560,000 in the balance brought down from the Revenue Account the charge for Indian Taxes declined by nearly £150,000. This is, for the most part, due to the fact that our estimated Indian Income Tax liability on the profits of the year has been greatly reduced by Income Tax Development Rebate claimed on new plant commissioned during the year. It is this saving of tax that gives rise to the appropriation in the Net Revenue Account of £201,021 to the Development Reserve. This is a mandatory appropriation under the Electricity (Supply) Act and has the effect of equating the Company's Clear Profit with the Reasonable Return allowed by that Act. We have thought it prudent to build up a Taxation Contingency Reserve with an initial appropriation of £250,000 which is accordingly debited in the Net Revenue Account. As last year, we have again made a special appropriation to Plant Expansion and Contingencies out of Net Revenue, although this year it has been increased to £550,000. I would emphasize that this latter appropriation, together with those to the Development Rebate and to the Taxation Contingency Reserve, remained invested in the undertaking where, in conjunction with the Revenue Account allocation to Depreciation of over £1 million, they played a major part in financing the expansion of the undertaking during the year.

INCREASE IN RATES

Although the Company's Clear Profit was for the first time for several years equal to the Reasonable Return this

was in large measure due to the substantial saving in Indian Tax arising out of Development Rebate. Had it not been for this the Clear Profit would have been substantially less than the Reasonable Return. As it was foreseen that we would not again benefit from Development Rebate on the same scale and that our Clear Profits would in consequence be less than our Reasonable Return, we have had no option but to put into effect the further increases in our charges for electricity which were introduced towards the end of the year 1963-64. These increases were designed to enable the Company, in a normal year, to earn its Reasonable Return which, as was explained last year, is now based on a Standard Rate of 6½ per cent instead of the former 6 per cent. In the absence of unforeseen circumstances, we hope to be able to achieve this result in the current year.

FINANCE

In ordinary circumstances the financing on a more permanent basis of the recent £3½ million extension at the New Cossipore Station would have been achieved by an issue of shares or debentures or both, but we were advised that this would not be practicable in view of the fact that, under its Licence, the Company can be taken over by the Government of West Bengal or by the State Electricity Board on the 1st January, 1970 provided either of those Authorities gives one year's notice of its intention. We had, therefore, to explain to the Government of West Bengal that if Government could not tell us now either that we would not be taken over in 1970 (in which case we would have hoped to be able to raise medium term finance), or alternatively, that they would be taking us over in 1970 (in which case a short-term loan repayable out of the compensation monies would have been possible) we saw no prospect of being able to raise the money unless Government themselves would guarantee repayment. Government's decision was that they would guarantee repayment and we were thus able to go ahead and arrange a loan from the State Bank of India. This loan is for a sum of Rs. 4.7 crores (£3½ million) repayable on 30th December 1969. The Company's Forward Estimates indicate that during the period 1963-64 to 1969-70 Capital Expenditure will amount to some £18½ million (Rs. 25 crores) inclusive of the unpaid balance of expenditure on 1st April, 1963 on the New Cossipore extension. Provided the Company can continue to earn its Reasonable Return we estimate that we can look to internal sources (mainly Depreciation and retained earnings) to provide about £15 million of this sum. The recent loan from the State Bank will bridge this gap which means that, as far as can at present be foreseen it should provide the balance of the funds we shall need for the development of the undertaking in order to fulfil our statutory obligations until 1970.

The Report and Accounts were adopted.

NOTE: This statement is not a report of the proceedings of the Annual General Meeting referred to above.

RECORDS AND STATISTICS

Fourth Five Year Plan

A MEMORANDUM on the fourth five-year Plan prepared by the Planning Commission last month for a discussion at the meeting of the National Development Council, has provoked considerable interest. The broad co-ordinates of the Plan have been set out in this memorandum and even though the National Development Council has constituted some special sub-committees to look into the major sectors of the economy, yet it embodies in broad terms the official thinking on the objectives, strategy, size, pattern of investment, and financial resources for the Plan. Some of the important portions of this document are reproduced here:

The basic objectives which have been enunciated for the fifteen-year period commencing with the third Plan, are to lay sound foundations for self-sustaining economic growth, to provide avenues and opportunities of employment to all those who seek it and, while narrowing economic and social disparities, to ensure a minimum level of living to every family in the country. The third Plan was visualized as the first phase of a period of intensive effort to achieve these aims and its shape and strategy were designed accordingly. Since its inception the economy has moved in changing directions, its momentum favourable, some unavoidable, to the pace of the long-term objectives. The basic needs of the nation, however, remain as compulsive as they were at the outset, and, if anything, more pressing on account of the slow progress of the economy in recent years. The fourth Plan must ensure that, in spite of unanticipated difficulties in the immediate past, the move towards a better life for the common people maintains its momentum.

The central problem for the fourth Plan continues to be one of generating a rapid increase in the national product, without impairing social stability. More explicitly, basic goods and services required for consumption by the mass of the people have to be produced; and at the same time, investments in human and material resources should generate a much larger supply of those goods and services essential for future growth and for which we are now critically dependent on external assistance. It is these sophisticated goods and varied skills that help to diversify the productive as well as the occupational structure of the economy. It is only in this manner that hunger, poverty and unemployment can be removed. The goals and the strategy for the fourth Plan derive from the need to evoke maximum national effort for the vital tasks.

Mobilization of Effort

The mobilization of developmental effort in the fourth Plan is to be undertaken in a context which differs in several respects from what was anticipated in 1961. The broad view taken at that time was that national income should rise from about Rs. 14,500 crores in 1960-61 to about Rs. 19,000 crores in 1965-66, Rs. 25,000 crores in 1970-71 and Rs. 33,000-34,000 crores at the end of the fifth Plan. Allowing for population growth, it was anticipated that per capita income would increase from around Rs. 330 at the end of 1960-61 to about Rs. 385, Rs. 450 and Rs. 530 in 1966, 1971 and 1976 respectively. In actual fact, national income growth in the first three years of the third Plan has been less than 10 per cent — owing

largely to serious set-backs in agricultural production and delays in realization of output from some of the investments as against the increase of about 30 per cent assumed for the five-year period up to 1965-66. With better performance, especially in the agricultural sector, in the remaining years of the Plan period, it seems possible that the national income in 1965-66 may be around Rs. 17,400 crores (at 1960-61 prices) rather than Rs. 19,000 crores. Further, a recent examination suggests an adjustment in population projections from 492 million in 1966, 555 million in 1971 and 625 million in 1976 to the higher figures of 495 million in 1966, 560 million in 1971 and 630 million in 1976.

Concurrently with the slow rate of increase in the national product and the lag in agricultural output, elements like growth of population, additional employment, increased consumption expenditure by some sections of the population, larger defence spending, rising expenditure on social services, larger investment outlays, in both the public and private sectors, have all resulted in a rapid increase in the demand for goods and services. The continued stringency in regard to foreign exchange has made it impossible for these growing demands to be met out of additional imports. The result has been a marked rise in prices in the last two years, especially of agricultural commodities needed by the community. Although prices rose by about 30 per cent in the second Plan period, much of the increase was in respect of industrial raw materials and manufactured articles. However, between March 1961 and September 1964, the rise in the price index of food articles was 44.4 per cent, while that in manufactured articles was 5.9 per cent, in industrial raw materials 7.0 per cent and in the general price index 24.5 per cent. It is this large shift in the prices of cereals, pulses and other such essential consumer articles which has led to serious concern over the price situation.

Some Features of the Economy

The fact of this price rise must necessarily receive due consideration in defining the task to be undertaken in the fourth Plan. It is, however, also necessary to take into account certain other features of the economy as it has developed over the past few years. Despite the shortfalls in the national product and the Emergency, net investment during the five-year period 1961-66, taking the public and private sectors together, is likely to reach an aggregate of Rs. 11,700 crores at current prices. Net investment in both those sectors in the last year of the third Plan, viz. 1965-66, will probably be Rs. 2,800 crores to Rs. 2,900 crores, or about 16 per cent of net national income.* Correspondingly, net domestic savings as a proportion of net national income will be about 13 per cent. It is significant that these larger efforts at investment and savings have been undertaken in spite of the sudden increase in Defence spending that became necessary in 1962-63.

Though aggregate investment targets will have been achieved in financial terms, several of the physical targets of production or capacity set for the third Plan will not be reached by 1965-66. However, over a large part of the economy, investments that have been or are being undertaken will start yielding the expected benefits in the initial years of the fourth Plan. In transport, power and coal-mining, the capacity built up by the end of the third Plan, and the investments bearing fruit immediately thereafter, will be such as to prevent bottlenecks similar to those in the early years of the

* At 1963-64 prices, net national income in 1965-66 is expected to be between Rs. 18,800 crores and Rs. 19,000 crores. The ratios mentioned here are in relation to these estimates.

after the various sectoral programmes and their phasing have been worked out in greater detail. This would necessarily take some time. Tentatively, it is estimated that approximately half the amount would be on account of projects in the power-industry-transport group and the other half in the remaining sectors.

At this stage, pending further work, sectoral allocations and targets are based on a total outlay of Rs. 22,500 crores; later, it is hoped to indicate them in terms of a given outlay, as may be finally decided.

The size and pattern of outlays proposed for the fourth Plan in the public and private sectors (in terms of a total outlay of about Rs. 22,500 crores) are given in the table below:

The total outlay indicated above may be compared with the third Plan provision of Rs. 11,600 crores (Rs. 7,500 crores public sector and Rs. 4,100 crores private sector). As stated earlier, this represents the upper level of the range of Rs. 21,500 — Rs. 22,500 crores and includes a sum of Rs. 1,000 crores to be taken up if the State of the economy is satisfac-

tory during the first half of the Plan, a tempo of production is built up and larger resources can consequently be mobilised. Investment in the private sector has been estimated at Rs. 6,980 crores. This figure is still tentative and its volume and composition are being examined further.

It has been suggested that all possible steps to accelerate the rate of progress in the early years of the Plan should be taken so as to make it possible for the additional resources to be mobilised. This will call for appropriate advance action being immediately initiated in order to reduce the gestation period of projects. A careful selection of quick yielding schemes in agriculture, small scale and organised industries etc. will be necessary. After having selected the schemes all administrative arrangements should be completed and the trained staff placed in position in order to ensure implementation. These measures should enable a faster rate of growth to be achieved in the early years of the fourth Plan and so facilitate the raising of additional resources.

(a) Part of the inventories is covered in sectoral outlays and part will also be financed through the banking system.

It will be seen that a significant increase is envisaged in the fourth Plan in the proportionate allocations for agriculture and the social services. This is in keeping with the objectives of increasing agricultural production and providing for the basic social needs of the masses. The percentage distribution also reflects the shift in emphasis from schemes with long gestation periods such as major irrigation to quick yielding programmes such as minor irrigation included under agriculture. The industrial sector, together with the ancillary infrastructure on power and transport, shows a percentage decrease, largely under transport, but in absolute terms is double the original third Plan provision. This takes account of the fact that in the third Plan allocations for transport were substantially raised and the rail transport system will have some reserve capacity of the beginning of the fourth Plan. The programmes under this group have been drawn up in terms of the current needs of the economy and the perspective of the

fifth Plan. Their feasibility in terms of implementation has also been taken into account. The small allocation of Rs. 25 crores for rural works is in the nature of a token provision at this stage. A firm figure will be known only after State Plans have been formulated and a view taken of the size of the residual problem of unemployment in rural areas which may call for a supplementary rural works programme.

The broad implications of the programme are an annual increase in agriculture of not less than 5 per cent linear and compound annual rates of growth of 11 per cent in organised industry, 8 per cent each in small industry, communications, railways and organised banking and insurance and 6.5 per cent each in other commerce and transport and services. This should give an over-all rate of growth of around 6½ per cent.

The distribution of outlays between the Centre, the States and Union Territories under different heads of development can be indicated with precision only after the plans of States and Union Territories have been examined and accepted in consultation with them. Meanwhile, on the existing basis of classification, a tentative distribution of outlays has been indicated in the table below under important categories of development:

(Rs. crores)

Heads	Fourth Plan			
	Total	Centre	States	Union Territories
1. Agriculture	2,400	325	2,065	70
2. Irrigation	1,000	35	960	25
3. Power	1,950	300	1,625	5
4. Small Industry	450	170	265	15
5. Organised Industry	3,200	3,060	135	5
6. Transport and Communications	3,000	2,490	440	70
7. Social Services	3,495	1,059	2,193	243
8. Miscellaneous	125	86	37	2
Total:	15,620	7,525	7,660	435

The distribution is based on the assumption that as a general principle, all development schemes executed by State Governments and Union Territories will form part of their respective plans and that only certain limited categories of schemes would be shown in the plans of Central Ministries as being sponsored by the Centre.

In the last meeting of the National Development Council, Chief Ministers of several States had urged that it would be advantageous, both on technical and financial grounds, if the Centre could take the responsibility of financing big Irrigation and Power projects during the construction phase.

It has been observed that progress on certain projects is impeded due to lack of adequate provision in the States' annual plan budgets. Further, on account of price escalation some State Governments have to provide outlays on Irrigation and Power projects much larger than originally provided in their five-year Plan. This has resulted in reduced allocation

third Plan. The rate of growth of industrial production has been about 9 per cent in 1963-64 and is expected to reach about 11 per cent by the end of the Plan period. There have been significant expansions in the fields of education, public health facilities etc., which provide a base for further advance in the fourth Plan period. Where performance has been woefully short of expectations is in the agricultural sector; and it is this fact that has largely been responsible for limiting the increase in consumption standards of the common people and for the abnormal increase in prices that so dominates the current scene.

The imbalance reflected in recent price increases is, in other words, a resultant of two elements: the natural factors affecting agricultural production and the delays in securing maximum output from past investments. Neither of these need continue to have the same impact on available supplies as in the past three years. Every effort must be made to complete the projects that are far advanced; and utmost attention should be given to schemes and programmes that yield quick returns to investments. In setting the targets for the fourth Plan, the scope that exists for corrective measures in implementation has to be taken fully into account.

Even as the fourth Plan evolves from the third, it sets the stage for the country's development in the fifth and subsequent Plan periods. Because of current difficulties, it is possible that the likely effects on the country's progress in the next decade of a failure to achieve in the fourth Plan period a high rate of growth and essential structural changes may not be fully appreciated. As it is, the shortfalls of the third Plan make it necessary for the economy to strive for much higher rates of growth than were originally envisaged for the next two Plan periods, if the objectives in regard to adequate employment and higher standards of consumption are to be reached by about 1975-76. The crucial problem for the fourth Plan is thus of accelerating the tempo of development without accelerating inflationary trends in the economy. This obviously entails higher savings and investments, and clear priority not only for Plan as against non-Plan expenditure but also for essential as against non-essential private expenditure.

Agricultural Sector

Since so large a part of basic consumption goods originates in the agricultural sector — including animal husbandry and ancillary activities — any programme of raising the standards of consumption of the masses must provide for a sustained and concerted effort to raise the rate of growth in this sector. Similarly, to provide adequate facilities for education, medical care, water supply and other social services to the people, a much higher level of effort than was possible in the earlier Plans has to be undertaken. These are inescapable needs, both from the point of view of social stability and increased economic productivity. The idea has gained wide acceptance that a national minimum for basic consumption should be set and substantially realised by the end of the fifth Plan. Any slackening of effort, because of set-backs in the third Plan can only lead to further delay in the fulfilment of this objective.

The development of agriculture and social services is closely linked with the development of power, transport and industries, large and small. The supply of fertilisers, pesticides, construction materials, implements and processing equipment required for the success of the agricultural programme as well as of other mass consumption goods on a scale required to combat inflationary trends would depend upon an appropriate expansion of the industrial sector. A large spurt in small-scale industries and an all-round diversification of the base of the economy are called for in order to create employment opportunities for the expanding labour force during the fourth

Plan. It is obvious that these results cannot be achieved without a balanced increase in power and transport sectors. There can, therefore, be no suggestion of disturbing the inter-relationship, because by doing so, the growth of economy will be retarded and more real resources will not be released for agriculture and social services. Further, since a large part of public revenues is expected to come from the incomes generated in the sectors, slowing down of their development will make the task of mobilisation of financial resources for the fourth Plan even more difficult.

Of equal importance is the fact that a progressive reduction in the dependence on foreign assistance is vitally linked with expansion and diversification of industrial production. The bulk of our imports, apart from food imports, consists of petroleum products and crude oil, metals, chemicals, machinery and equipment. These commodities will be required in increasing quantities as the economy grows in size and complexity; and, unless deliberate attempts are made to enlarge their domestic production, there can be no escape from large-scale dependence on foreign loans and grants. As the scope for increasing imports through a big increase in traditional exports such as tea, jute and manganese is limited, new lines of export, mostly of ores and manufactured articles would need to be developed, in order to augment export earnings.

Strategy of the Plan

Within the larger context outlined above the objectives and strategy for the fourth Plan have to be such as to meet the requirements with regard to avoidance of inflation, improvement in the consumption standards of the people, more equitable distribution of incomes and wealth, faster development of human resources and quicker progress towards self-reliance. For these purposes, it will be necessary to undertake a variety of organisational and structural changes conducive to efficiency in productive activity, restraint on inessential consumption, and larger resources mobilization in both the public and private sectors for planned investments.

The preliminary outline of the fourth Plan presented in this Memorandum keeps in view the following:

- (i) for enlarging the income of the rural population, as well as for augmenting the supplies of food articles and agricultural raw materials, all possible efforts should be made to ensure a growth rate of not less than 5 per cent per annum and, if possible, more in agricultural production;
- (ii) For enabling this objective to be realised, production of such goods as fertilizers, insecticides, agricultural implements, including pumps, diesel engines, tractors etc., should be given the highest priority in the programme for industrial development;
- (iii) for enlarging the supplies of essential consumer goods on which additional incomes will be spent, production of articles like textiles, sugar, drugs, kerosene, paper etc., should be accelerated;
- (iv) with a view to improving the supply of residential housing, the production of cement and other construction materials should be augmented;
- (v) for ensuring continued growth in the metals, chemicals, machine-building, mining, electric power and transport industries, schemes in hand should be completed early as well as new schemes undertaken;
- (vi) for the development of human resources, not only should the maximum possible facilities be provided in the social services sector, but that these should be suitably reoriented in the direction of increasing productivity;
- (vii) the organization of effort in all these directions

should be such as to promote rapid progress towards greater employment and social justice.

A programme with these inescapable tasks poses difficult problems of finance and administration. While all possible efforts have to be made at avoiding further increases in prices of basic consumption goods, this cannot be achieved by a smaller development effort. A variety of fiscal, monetary and administrative measures will have to be taken to ensure that any excessive demand in the economy is prevented from raising the prices of basic consumer goods. It is necessary to exercise great restraint on inessential outlays in both the public and private sectors. Particular attention has also to be paid to achieving cost-reduction and implementation of quick-maturing projects, especially those which add to the supplies of essential consumption goods and services.

The country has in addition to keep itself in readiness to contain the pressure on prices of basic commodities through direct measures of controlled distribution. Steps are being taken to bring within State control the distribution at regulated prices of foodgrains, common varieties of textiles and other primary consumer articles. These will have to be further strengthened through co-ordinated action between Governments, consumers and producers. In so far as non-essential consumer goods, capital and intermediate goods are concerned, the emphasis has to be on adjustment of prices to promote the availability of scarce real resources for priority uses and to facilitate the mobilization of financial resources.

In the final analysis, neither relative price stability nor adequate development will be possible if means are not found to provide, from the current national income, as much of the domestic savings as may be required for planned investment. Consequently, all the instruments that can be used for enlarging both public and private savings, and channelling them into the priority investments — both material and human — will have to be utilised. This will require the better-off sections of the community to accept smaller increases in income and consumption. The magnitude of the effort required and the urgency of fulfilling it without generating inflationary pressures are such that all income-earners will in one way or another have to contribute to the pool of resources.

Price Rise

Recent price rises have caused hardships to large sections of the people, but they have also brought large incomes to sections of producers, traders etc. Unless such incomes are converted into savings and investment in consonance with the Plan, they will distort the economy and aggravate its imbalances. Structural changes in the economy are an essential condition of rapid development and will be more urgent than ever in the coming years. The attainment of other objectives demands the reduction of disparities in income and consumption. The administrative machinery of Government at all levels has to be geared for the basic economic and social tasks which have to be accomplished at this critical phase of national development.

As in the past, a large part of the responsibility for promoting development in the agricultural, industrial and services sectors will fall on the public sector. Apart from this the State will have to move towards attaining a commanding position in the distribution of essential consumption goods. These tasks will impose a heavy burden on the administrative machinery at all levels. These responsibilities have to be accepted, and suitable organizations built up for their efficient discharge if the goal of raising the standards of living of the people within the framework of democratic socialism is to be attained within a reasonable period.

* The Perspective Planning Division's and Working Groups' figures of investment are at 1960-61 prices. Planning Commission's estimates are at 1963-64 prices.

In September, 1962 the Planning Commission had set up 43 Working Groups (including 75 sub-groups) with the Secretaries of the Ministries concerned as Chairmen and had requested these Groups to submit their proposals for the fourth Plan in the light of progress in the third Plan and perspective development in the ten-year period ending 1976. Along with studies undertaken by the Working Groups the Perspective Planning Division of the Planning Commission formulated its proposals for the period 1961-76 with a view to providing a general frame for work on the fourth Plan. These proposals postulated a 7.5 per cent rate of growth for ten-year period 1966-76, which was considered a minimum for increasing employment opportunities, raising consumption standards and reducing dependence on foreign aid. The outlay proposed in the public sector (including current outlay and net investment) was Rs. 16,415 crores which, together with the Division's estimate of private sector investment of Rs. 7,915 crores, indicated a total outlay of Rs. 24,330 crores.

Size and Pattern of Investment

The aggregate outlay in the public sector as contained in the interim recommendations of the Working Groups came to Rs. 24,162 crores. This, with the addition of the Reserve Bank estimate of about Rs. 7,000 crores of investment in the private sector, indicated a total outlay of over Rs. 30,000 crores for the fourth Plan. As this represented the sum total of outlays recommended in different sectors, it was necessary to take an integrated view of the proposals of Working Groups in order to avoid duplication and to secure internal balance and consistency. As a result of this examination, the total outlay including investment in the private sector, was estimated between Rs. 24,000 and Rs. 25,000 crores. Considering all aspects particularly the availability of resources it is felt that the fourth Plan should be framed on the basis of a minimum outlay ranging between Rs. 21,500 to Rs. 22,500 crores*.

Along with the proposals for sectoral programmes and outlays, the Planning Commission has also reviewed the preliminary assessment of resources prepared by the appropriate Working Group. On the assumptions explained above, as against the estimated requirements of Rs. 15,500 crores for the public sector programme, the current assessment of capacity for raising domestic savings and mobilizing the financial resources in the public sector taken together with the uncertainties regarding the balance of payments, suggests that it may not be possible at this stage to assume firm commitments for more than Rs. 14,500 crores. This will leave approximately Rs. 1,000 crores of outlay in the public sector to be taken up if the progress of the economy in respect of the growth of output, resources, mobilisation and balance of payments, during the next 3-4 years is satisfactory. Thus, at present the total outlay in the fourth Plan has to be envisaged as ranging between Rs. 21,500 and Rs. 22,500 crores and outlay in the public sector as ranging between Rs. 14,500 and Rs. 15,500 crores. It has also been agreed that the programme of development in each sector should be carefully scrutinized and phased and that efforts should be made to identify as precisely as possible projects involving a total outlay of Rs. 1,000 crores to be initiated during the latter half of the Plan. While preparatory action, involving small expenditures in respect of these projects may be taken in the earlier years of the fourth Plan, the actual implementation of the schemes would be contingent on improved prospects for resource mobilization in the second half of the Plan.

The precise composition of the programmes and projects involving a total outlay of Rs. 1,000 crores will be determined

TRADE MARKS NOTICE

Notice is hereby given that Messrs. Atul Products Limited, Atul P. O. Via Bulsar, are the owners and Proprietors of the following Trade Marks;

The said marks have been registered under Nos. 212207, 212208 and 212209 in class one, two and five in respect of Dyes, Chemicals and Pharmaceuticals respectively. Any infringement, colourable imitation or fraudulent use of the marks will be dealt with according to law.

* Includes an anticipated outlay of about Rs. 12 crores for Paradip Port.

** Part of the inventories under public sector are covered in sector outlays and part will also be financed through the banking system.

† This is a token provision to be reviewed further when the plans of States have been considered.

Brief remarks are offered on the provision under certain Plan heads:

POWER

The provision at the Centre includes outlay on account of DVC, Neivelli expansion, Badarpur power station and Atomic power stations.

SMALL INDUSTRY

The provision at the Centre includes outlay on Khadi and Village Industries.

TRANSPORT AND COMMUNICATIONS

The provision under State Plans includes outlay on Roads, Road Transport, Minor Ports, Inland Water Transport and some schemes for Tourism.

HEALTH

The provision at the Centre includes an outlay of about Rs. 95 crores for the Centrally sponsored programme of Family Planning. As in the third five-year Plan, the provision for Communicable Diseases is at present shown in the Plans of States.

Pressurised Pipeline

THE PARLEYS with over a dozen bidders for collaboration in setting up the Madras oil refinery, which had dragged on unduly long, have now resulted in the National Iranian Oil Company and its US partner, the American International Oil Company, being selected by the Government of India for "further negotiations". Whether this decision of the Union Government, arrived at after prolonged deliberations, first by the Union Cabinet at a full-dress meeting on Wednesday morning and later that night by a Cabinet Sub-committee, consisting of the Union Ministers for Home, External Affairs, Finance and Petroleum and Chemicals, means the dropping of the curtain on the issue, it is difficult to say. Much depends on the scope and outcome of the contemplated "further negotiations" with NIOC and AIOC. There are conflicting advices about the new round of talks. The Minister for Petroleum and Chemicals, Prof. Humayun Kabir, has preferred to remain silent on the scope of these negotiations. Press reports are to the effect that these are to be conducted only for working out the details of the collaboration agreement. Another source suggests that differences on two basic issues—the quality of crude and the financial arrangements proposed — still remain to be ironed out.

Whatever may be the scope of "further negotiations" with NIOC and AIOC, the manner in which their offer has been accepted is suggestive of the fact that the political consideration of forging closer ties with Iran has weighed more with the Government than economic criteria in clinching this issue. That this feeling is not without foundation should be evident from the course of negotiations with the main contenders for collaboration in the project in the last four months and the pressure tactics employed by Prof. Kabir for first hustling and then side-tracking the Negotiations Committee consisting of the Economic Secretaries. On the basis of the data made available to it and the short time placed at its disposal to scrutinise the various bids, this Committee found itself unable to reach unanimity in recommending to the Union Cabinet acceptance of the NIOC-AIOC offer.

From the precious little that has seeped into the Press through various channels, the NIOC-AIOC proposals envisage setting up of the Madras refinery with an initial capacity of 2.5 million tonnes throughput per annum and facilities to produce ammonia for fertiliser manufacture, at an estimated cost of approximately Rs. 12 crores. The collaborators will participate in the equity capital of the venture to the tune of 26 per cent, the remaining 74 per cent capital being subscribed by the Union and the State Governments. The entire foreign exchange component of the project will be made available by the two foreign partners in the shape of their subscriptions to the equity capital of the enterprise and a \$20 million commercial loan to be raised in the US under guarantee arrangements with USAID. The collaborators will supply at least 20 million tonnes of crude to the refinery over a period of 8 to 10 years at \$1.35 per barrel, FOB Persian Gulf, on a 12-month credit. The designing, construction and technical management of the refinery will be in the hands of AIOC till the time the loan capital is fully repaid.

Though ostensibly quite attractive, these proposals suffer from certain drawbacks. They do not compare so favourably with the offers of at least two other principal contenders. BOC-Shell International and ESSO Standard Eastern. The crude supplies are supposed to be made available by

NIOC-AIOC from Darius oilfields where production started only early this year. This crude, an untried one, is stated to have high sulphur content around 4 per cent and about 32 API gravity. A slight conditioning of it is proposed to be undertaken before it is shipped to India, but even then its sulphur content will be as high as 2.4 per cent and its API gravity around 34. Sulphur being a corroding element in the distillation process, the Darius crude will require mixing with "sweet" crude available at much higher prices from Marabon or elsewhere. It will also necessitate the setting up of a hydro-cracker at an estimated cost of from Rs. 3 to 4 crores. A naphtha-cracker may as well have to be put up to adjust the product-mix to suit the demand pattern in the Madras area. The cost of setting up the Madras refinery may, thus, go up to well over Rs. 15 crores. Both BOC-Shell International and ESSO had offered to set up the refinery at a cost of nearly Rs. 10 crores only. The BOC-Shell International offer further contained a built-in advantage of setting up a fertilizer plant in Madras out of the refinery earnings — a ceiling had been proposed on dividends the profits beyond which could be utilized for the establishment of the fertilizer plant. ESSO had additionally offered to set up an industrial complex around the refinery. These two collaborators had also undertaken to export surplus products from the Madras refinery on their own. But a subsidy may have to be given on exports of surplus products from the NIOC-AIOC-built refinery.

The higher cost of constructing the Madras refinery with NIOC-AIOC assistance could have been justified if the extra cost had been counter-balanced by concessions in crude price. The landed cost of the Darius crude in Madras may be around \$1.55 a barrel as neither NIOC nor AIOC has tankers to ship this crude and a freight of 20 cents a barrel may have to be paid on the basis of the current AFRA rates. The BOC-Shell International and ESSO prices for a much better crude, though admittedly higher, would, however, have made the Madras refinery a much more profitable venture. The facilities offered and the concessions given in refinery cost, ceiling on dividends, sharing of profits on crude if the crude price went down below the price offered, etc., by BOC-Shell International would have made its FOB Persian Gulf crude price at least six per cent more competitive than the NIOC-AIOC price. The ESSO price had been made attractive with the offer to set up an iron ore reduction plant at Goa, export earnings from which would have met at least half the cost of crude required by the Madras refinery. Further, both BOC-Shell Interna-

tional and ESSO could have arranged some concession on freight.

The second major snag in the NIOC-AIOC offer to which the Union Finance Ministry is understood to have drawn attention is the financial arrangement proposed. Since the NIOC-AIOC proposals envisage a major portion of the foreign exchange component of the project being met through commercial loans, it will add to the already heavy burden of external debt repayment during the next ten years. It is an open secret that the Union Finance Ministry does not favour commercial credits at least for any of the fourth Plan public sector projects as the export earnings during the fourth Plan period may hardly be enough to finance the maintenance import bill. The Finance Ministry's preference, therefore, naturally is for the foreign collaborators participating in the equity capital of these ventures and financing the extra foreign exchange requirements, through long-term loans.

Apart from the political consideration, the Union Government's decision appears to have been influenced by the Oil and Natural Gas Commission's bid, with ENI and Philips Petroleum as partners, for off-shore oil concessions in Iran. It is presumed that the consideration shown by the Government of India to the NIOC-AIOC offer for the Madras refinery may be reciprocated by the Iranian Government. But whether this *quid pro quo* will follow or not, it is anybody's guess. This expectation of the Union Government and its anxiety to strengthen Indo-Iranian relations are understandable. But cannot these ends be served equally well, if not better, by negotiating with NIOC-AIOC for the Haldia refinery? The Darius crude with its high naphtha content would probably have suited more the demand pattern of the Calcutta area which has no pronounced bias in favour of middle distillates. Prudence demanded that since offers for collaboration in setting up the Madras refinery had been invited from a dozen or so foreign oil companies, the Union Government should have decided the issue strictly on economic considerations. The way the whole matter has been handled by the Ministry of Petroleum and Chemicals and the manner commercial practices have been thrown to the winds, can have very adverse repercussions on the Government's attempt to secure foreign collaboration for future projects not only in the oil industry but in other capital-intensive industries as well. When a political decision is aimed at, it is always prudent to go in for bilateral negotiations without bringing other parties into the picture.

Political Financing by Companies

ONE OF the most controversial sections of the Companies Act relates to contributions to political parties by companies. During the discussions in Parliament over the Companies Amendment Bill consisting of 215 clauses

in 1960, almost a third of the time of both the Houses was devoted to the consideration of the clause relating to the question whether joint stock companies should be allowed to make contributions to political parties.

Recently the Santhanam Committee on Prevention of Corruption has opined that "in Indian conditions, Companies should not be allowed to participate in politics through their donations. It is true that this matter was debated at length during the discussions on the Companies (Amendment) Act of 1960 and it was decided to permit such donations subject to restrictions of amount and condition of publication. We do not feel that this is sufficient and feel that nothing but a total ban on all donations by incorporated bodies to political parties and purposes will clear the atmosphere".

As the law stands at present, companies may contribute in any year an amount not exceeding Rs. 25,000 or five per cent of the net profits of the company, *whichever is greater*. Section 293-A of the Companies Act, inserted by the Amendment Act of 1960, which permits this, reads as follows:

"Notwithstanding anything contained in Section 293, neither a company in general meeting nor its Board of Directors shall, after the commencement of the Companies (Amendment) Act, 1960, contribute —

- (a) to any political party or
- (b) for any political purpose to any individual or body,

any amount or amounts which or the aggregate of which will, in any financial year, exceed twenty-five thousand rupees or five per cent of its average net profits as determined in accordance with the provisions of sections 349 and 350 during the three financial years immediately preceding, *whichever is greater*".

This section applies to all companies, public and private; and in the case of each company it extends to all political contributions made, whether directly relating to the company's business or not relating to such business.

Section 293A of the Companies Act quoted above restricts the amount of political contributions which companies may make and is definitely an improvement over the position existing previously. Prior to the coming into force of the Companies Act, 1956, there was no restriction at all on the powers of companies to contribute to charitable and other purposes, the only limit being the limit, if any, placed by the Memorandum of Association of each company as regards the objects for which its monies could be used. Section 293 (1) (e) of the Companies Act, 1956, which came into force from the 1st of April, 1956, for the first time restricted contributions to charitable and other funds including political contributions. According to Section 293(1) (e), the Board of Directors of a public company or a private company which is a subsidiary of a public company may contribute to charitable and other funds not directly relating to the Company's business any amounts not exceeding in the aggregate Rs. 25,000 or

five per cent of the average net profits of the three preceding financial years of the company, whichever is greater; and with the consent of the company in general meeting further amounts without limits may also be contributed.

Notwithstanding the fact that Section 293A of the Companies Act of 1960 is more restrictive than the position obtainable till then, it must be pointed out that the total amount that can be drawn from the corporate sector by the political parties is a colossal amount. Since there are about 25,000 companies at work in the country and the payment of sums up to Rs. 25,000 is not even subject to the availability of profits, the amount which political parties can tap from this source comes to Rs 62.5 crores. Since there are a few companies whose five per cent of the net profit exceeds Rs. 25,000, the estimate of the maximum amount that can be tapped by political parties may even be safely put at Rs. 65 crores. This, however, would only be a theoretical possibility. In practice, corporate donations to political parties are neither a regular nor a common habit in this country. In fact the number of companies which have been making such contributions is quite small compared to the total dimensions of the corporate sector.

The real issues are: (i) Can company managements whose operations are largely subject to Government control, resist the temptation of trying to win favours of the Government by subscribing to the party in power? (ii) Will political parties like to miss the chances of making easy money by championing the causes of companies as distinct from the people at large? On these matters, opinions are bound to differ sharply. But it will be generally agreed that democratic institutions can develop only if the voter exercises his choice independently and one of the important ways in which he could be induced to think would be by asking him to contribute his mite, however low it may be, towards the cost of the election. If political parties are freed from this necessity of getting funds from the voter, an important means through which democracy grows would be lost.

There is also another point. The only consideration, apart from philanthropic motives, which should induce anybody to contribute to political parties, is that either one feels strongly for the beliefs of the party or that it would be possible for one to benefit by the success of the party. Can companies whose main operation is to increase the production of goods and services afford to fritter away their energies by taking any active interest in the political affairs? Further, are companies justified, at least in the Indian context, in getting a party to power which is either pledged to reduce company taxation or committed to a bigger private sector or some other immediate good to the corporate sector?

Before examining the position on this subject in
