Food Without Fads

THE SENSIBLE manner in which that tricky matter, Food, or rather Food Controls, was handled at the Chief Ministers' conference last week is a happy augury for the Lal Bahadur Government. But the omens for the conference itself were far from auspicious. Only recently, Mr. T. T. Krishnamachari, delivering one of his Delphic utterances, had declared state trading in foodgrains to be inevitable. As was to be expected, the Leftist Press and politicians were quick to take the cue and to work up a propaganda for dragooning, if not demolishing, normal trade channels. The view was sedulously propagated that if food prices were high, it was simply because there were too many sinners and not enough saints in the foodgrains trade. The cry went out for the blood of speculators, hoarders and profiteers who, it was alleged, were mainly responsible for the absence of ample food at reasonable prices. Thus an attempt was made to work up an atmosphere of crisis for the conference, the object being to hustle that assembly into extensive state intervention in the distribution of foodgrains.

Luckily for the nation, those pressure tactics failed, or were foiled. The luck was in the recent replacement of Mr. Swaran Singh by Mr. C. Subramaniam in the portfolio of Food and Agriculture. It is more than likely that had Mr. Swaran Singh continued he would have yielded to the clamour for more controls. But his successor has rightly chosen to deny himself as well as others the luxury of playing politics with the people's food. Mr. Subramaniam has had the courage, in the first place, to recognise the fact that it is just not possible to push down food prices in the present circumstances. This is because if food prices have risen, or are rising, it is less due to the misdemeanour of merchants than to such a basic factor as the failure of agricultural planning and production in the context of inflationary government spending, including much of the expenditure on the Plan. With lean months lying ahead, until it is time for the kharif crop to reach the markets, the utmost that can be realistically aimed at is the avoidance of any further increase in prices for the time being. This may be a modest purpose, but it is the only honest purpose that the Government could place before itself or the people. The Chief Ministers' conference under the leadership of the Union Minister for Food and Agriculture had done precisely this. Its limited objective was to halt the rising trend in prices through a series of short-time remedies pending the formulation of long-term programmes.

The virtue of the scheme of short-term remedies adopted at the conference is that it has countered the cry for more controls by stoutly recommending that what is really needed is fewer controls, better administered. The problem here is essentially that of restoring confidence among the public. In the past many months the prices of essential articles have been rising steadily thereby causing discontent and disquiet. In the circumstances, the Government has to demonstrate here and now its capacity to make foodgrains move more freely into deficit pockets. Hence the abolition all over the country of all inter-State restrictions on the movement of coarse grains and the restoration of freedom in movement of rice in the Southern States. Mr. Subramaniam had earlier wanted to go farther. But his proposal for the lifting of restrictions on the movement of rice from Madhya Pradesh to neighbouring Gujarat and Maharashtra had to be withdrawn at the instance of the Madhya Pradesh Government which successfully insisted on the continuance for the present of the existing system of exports by licence-holders under a quota system.

July 3, 1964

But the accommodation shown to the Madhya Pradesh Government is perhaps a temporary one, to be reconsidered later in the year when new crop movements are about to begin. In the same manner the abolition of inter-State restrictions on the movement of wheat has been deferred too. Although Gujarat particularly was keen on the zonal system being ended, the Central Food Minister has bought its patience with a promise of liberal releases of wheat from Punjab, pending consideration of abolition of wheat zones when the next rabi crops will be getting ready for the market. Restrictions on inter-State movements of gram are also to remain for the present. It may be that such small liberalizations as there have been in food movements will not dramatically improve the situation either in respect of supplies or with regard to prices. But it is just possible that there could be some improvement, arising largely from the gain to public morale, and in any case, these relaxations will not cause a deterioration in the situation, a risk which was clearly present in the contrary nostrum of more controls.

To the extent, however, a marginal insufficiency of strategic food stocks has considerably prejudiced the Government's attempt to control food prices, it is clear that no short-term programme for relief could ignore the desirability of arranging for more and immediate imports. It is in this sense that Mr. Subramaniam's announcement that some rice is being procured from the United States and Pakistan is welcome. It is not a pleasant thing, however, for this country to look for succour thus in all directions. Nevertheless, confronted with a difficult situation even at the very beginning of his tenure, the present Food Minister had obviously not been left with much choice in the matter. But having arranged for additional imports of foodgrains, it has become all the more necessary for the Government of India to ensure that food policy is competently administered in the States so that the public gets the full benefit of the larger imports. Hence the emphasis which the Union Minister for Food and Agriculture has rightly laid on the responsibility of Chief Ministers to secure the proper enforcement of existing regulations and controls. While avoiding the histrionics of the Union Home Minister, who has set himself a two-year timetable for eradicating corruption in the public services, Mr. Subramaniam has soberly stressed the direct responsibility which the Food and Agriculture Minister at the Centre and the Chief Ministers in the States should assume for the proper implementation of food policy, including administration of food controls.

The need for realism is great since in matters of food policy especially what appear as highly plausible propositions could begin to lose their substance rapidly when scrutinized in detail. This has happened, for instance, with the Bhubaneswar slogan that the Government should take over rice mills as a step in state trading. The Minister for Food and Agriculture has pointed

out the snags in this proposition. As he told us, the bulk of the rice mill industry is scattered over small and uneconomic units with obsolete equipment and that it will not be in the public interest for the State to acquire or otherwise operate such units. But his own modified scheme for the Government itself setting up a number of large modern rice milling units is not free from objections. We are all for modernization of equipment and the replacement of uneconomic units by units of economic size in any industry, including rice milling. But it is difficult to see why public funds, which are not by any means abundant, should be invested, of all things, in the rice milling industry. Even a large rice mill with modern equipment does not cost so much money that it cannot be set up by private financing. If the rice mill industry has not taken sufficient interest so far in modernizing its equipment or in organizing itself into economic units, it is essentially because of the vagaries of the Government's food control policy. Given the present ideological uncertainties and political manoeuvring, rice milling is not a reasonable investment risk. But once the Government has settled on a pragmatic and stable policy for the regulation of the trade in foodgrains, the rice mill industry ought to be able to find its own finance for setting up large and modern units.

Disappointment has been expressed in some quarters over the failure of the Chief Ministers' conference to endorse proposals for the establishment of a government foodgrains trading corporation. We do not share this sentiment. To decide on a corporation of the kind proposed even before the broad outlines for the Government's long-term food policy are settled would surely be putting the cart before the horse. The proposal for the trading corporation, therefore, would be considered along with the long-term food policy. This apart, despite the oft-quoted pronouncement of the Foodgrains Inquiry Committee in 1957, we are not convinced that, given the largely subsistence and essentially marginal nature of food farming in this country, a government trading corporation can function to advantage. The examples of Australia and Canada have been cited, but the analogy is false since the problems of food trading in countries where agriculture is commercially organized for export are quite different from those of Indian food production. It would be a different matter if it were the Government's agricultural policy to aim at organizing our food production on the basis of farms of sufficient size for profitable production of foodgrains for the market. But so long as our agricultural policy continues to think in terms of subsistence farming or petty peasant farming, the utility of elaborate state trading would be negligible. In any case, to the extent that one of the main purposes of the State trading corporation would be to operate an all-India price policy for foodgrains, it is surely necessary that, in the first instance, there should be some broad agreement on the nature of that price policy. That there is no such agreement at present is only too obvious and the decision at the Chief Ministers' conference that, to

July 3, 1964

begin with, expert inquiries should be conducted into the economics of food production costs and prices is a necessary caution.

It is possible that the foregoing discussion might create the impression that we have argued either that nothing need be done or nothing much could be done to hold food prices. We hasten to dispel any such impression. We are as firmly persuaded as anybody else that it is dangerous to allow food prices, or indeed prices generally, to rise as steadily and as fast as they have lately been doing and we have no hesitation in affirming that it is an immediate and important claim on public policy that the increases in food prices or prices in general should be restrained. But as we had argued in the last issue of *Eastern Economist* in the article on the "Truth About Prices", the current spiralling of prices is only a symptom of a deep phase of inflation induced primarily by excessive, wasteful and unproductive public expenditure. This government expenditure is the fuel which feeds the pressures on the people's cost of living. Unless this fuel is withdrawn, the pressures cannot be brought under control. That is why we had pleaded that any attempt to deal with rising prices in the absence of an effort to curb government spending would be an exercise in self-deception. We are, therefore, glad indeed that the Finance Minister, addressing the Chief Ministers' conference, had conceded the inflationary role of government spending and undertaken to reduce Central Government expenditure by Rs. 70 crores. The Finance Minister's critics may, no doubt, query how this economy has suddenly become possible. There may, of course, be substance in the argument that if Rs. 70 crores could be saved now, it should not have

been included at all in the budget only a few months ago. The unfortunate fact, of course, is that over the years the Government has got accustomed to equating extravagance in its spending with enthusiasm for development. It is a mercy that at least at this stage there is an awakening desire for greater responsibility in spending. It must, however, be appreciated at this point that the Rs. 70 crores of which the Finance Minister spoke, have not yet been saved. What he has expressed is an intention and whether the intention is actually carried out time alone will show. The test will be whether deficit financing has been entirely avoided in the current budget year and budgetary surpluses shown. In fairness to the Finance Minister, it must be said here that he can make good his pledge only if there is ardent co-operation within the Central Government as well as the State Governments who have been exhorted by Mr. Krishnamachari to play their part.

It has been said often enough that the only real and permanent solution of the food problem is increased production. While this is true, we must face the fact that in the matter of essential commodities prices are necessarily susceptible to the state of aggregate demand in the economy. Increased production may remove scarcities, but it may not necessarily restrain prices, except to the extent that it might take away the famine element in prices. So long as the aggregate demand in the economy continues to be boosted by inflationary spending, with a large element of wasteful or unproductive expenditure in it, the price level will continue to be the arbiter of who consumes what or how much. This, in a country of mass poverty, could be a cruel tyranny.

The Indian Middle Classes

WHAT IS the truth in the oft-repeated statement that the increasing pressure of prices has eroded the level of living of the middle classes in this country much more than that of any other section of society? That the pattern of living of the middle classes is different from that of the working classes or the agriculturists or the upper classes is acknowledged, but no analytical attempt has hitherto been made to know the conditions of living of the middle class population. A measurement of the impact of rising prices is possible only if the cost of living indices relating to this class of people are regularly computed. There has, in fact, been a great demand from the corporate sector in particular for the cost of living indices applicable to the white-collar classes in the urban areas, but, except for a solitary non-official index relating to the middle classes in Calcutta, no such attempt has been made at official or non-official level. In order to fill this gap in our knowledge about the middle classes, the Central Statistical Organisation, in association with the National Sample Survey and the Indian Statistical Institute, Calcutta, conducted in 1958-59 a survey of the middle class families in 45 towns and

cities. The detailed findings of the enquiry were reproduced last week in the 'Records and Statistics' section of this journal.

The survey had two broad objectives in view. The basic aim was to evolve a machinery for computing an all-India middle class cost of living index and the corresponding indices for the major cities and towns; the Central Statistical Organisation also tagged an additional objective of determining the way of living of the middle classes. It collected information relating not only to income, expenditure and the components of the consumer expenditure, but also regarding employment, service conditions of the employees, etc. By and large the survey is a praiseworthy attempt at getting at the true facts of life among the middle classes, though the inherent defects of the survey method do produce some anomalies.

The definition of the middle class adopted in the survey under report is a restricted one. It neither covers the middle classes in the rural areas nor does it

3L
Xm 2, 447EE
M 9.43

cover all the middle classes in the urban areas. The enquiry relates to the employees only, the self-employed having been kept out completely. Because of the over-riding aim of collecting the basic data for calculating cost of living indices applicable to the white-collar workers in the urban areas, the survey had limited its scope. The findings of the enquiry, therefore, do not apply to the totality of the middle classes in this country, but only to a part of it. It might be argued that the scope of the enquiry could have been widened so as to give a comprehensive picture of all the middle classes in this country, but the manner in which the survey was conducted and the time that it has taken in finalising the report shows that as against the time lag of six years for this limited survey, the comprehensive enquiry would have taken the C.S.O. at least a dozen years.

In financial terms, the average monthly expenditure of the middle classes in 1958-59 was significantly above the all-India average for all classes. The figures for the middle classes collected in the enquiry showed, however, wide variations between the 45 centres where the enquiry was conducted. At the top of the list was Bombay with a per capita expenditure of Rs. 88 — about four times the all-India average for all classes. At the other end of the scale was Jammu with per capita monthly expenditure at Rs. 36 — only 50 per cent more than that of the all-India average for all classes. There are a number of centres in between these two extremes. These figures are only a rough guide of the level of living because in 1958-59 (as at present) the purchasing power of the rupee in these cities was not uniform. This point can be explained with particular reference to house rents which vary violently between towns. Whereas a decent room with bath and kitchen in Jammu may be available at Rs. 20 per month, the same may not be available in Bombay at double that cost. This also applies to certain other consumer goods such as foodgrains, vegetables, fruits etc. Again, in bigger cities like Bombay, Calcutta, Madras, Delhi, etc. there is a big element of cost on transport which is almost non-existent in smaller towns.

The survey has provided evidence to prove the Engle's Law which states that with rising income, the percentage of miscellaneous expenditure also rises. In the case of the working classes, for example, the miscellaneous expenditure constitutes hardly 5 to 10 per cent of the total consumer expenditure. In the case of the working class cost of living for Bombay, the percentage of consumer expenditure on miscellaneous items was not more than 16. The present survey has indicated that it was more than 20 per cent among the middle class people in the urban areas. In the Western region it was as high as 29.92 per cent followed by 25.50 per cent in the Eastern region, 28 per cent in the Northern region and 24.90 per cent in the Southern region. These high percentages — equivalent to almost one fourth of the total expenditure — have great relevance in the present economic context when the inflationary spiral is threatening to assume alarming proportions.

The usual attempt — in the absence of the required data — to measure the effect of prices on the middle classes through the working class cost of living indices fails to measure the true impact because whereas the working class cost of living indices are highly sensitive to changes in food prices (expenditure on food in the case of the working classes varies from 50 to 70 per cent) the expenditure of the middle classes is influenced in a larger measure by the variations in the prices of the miscellaneous items. Food does play an important part, but its share ranges between 40 and 45 per cent against 50 and 70 per cent in the case of the working classes.

It is a fallacy to think that the middle classes are uniformly enjoying better standards of living than the working classes or the agriculturists. The survey has demonstrated that there is a sizable percentage of middle class families with low income — income lower than that of certain sections amongst the working classes. In a city such as Agra, there were 12.3 per cent of the sampled families which had a monthly income of less than Rs. 75. There were similarly many other towns such as Meerut, Sambalpur, Patna etc., where the percentage of sampled families in the lowest income group varied from 8 per cent to 12 per cent. A majority of the families was in the income group Rs. 200-250 per month, though even in this group the level of living was not superior to certain sections amongst the working classes. Because they belong to the group of white-collar workers, they had to maintain appearances. That in itself caused an additional burden, reducing the consumption of good "quality" foods.

For the sociologist the survey has provided useful facts regarding the working hours of the middle classes and leisure time that they have at their disposal, but what is of great urgency is the early computation of the middle class cost of living indices for these 45 towns and cities. How long will the Organization need for starting these operations? Now that the basic facts about the consumer expenditure are known, machinery needs to be devised for collecting week-end prices of all the commodities which go to constitute the consumer basket of the middle classes. Once the machinery for collecting prices is established, the calculation of indices is only a matter of organising arithmetical work in the Labour Bureaus of the State Governments.

A piece of information thrown up by the survey is that the middle classes at the higher levels of income (i.e., the upper middle classes) tend to spend more than their earnings. The enquiry has, however, qualified this finding by saying that "in family budget studies, based on the interview method, expenditures are usually exaggerated, while incomes are somewhat under-stated". Again, in this survey, no estimates were made about savings. There is a common belief that the savings potential of the urban middle classes is larger than that of the agricultural or the urban working classes, an assumption which still remains to be scientifically considered.

Highlights of the Week

CHIEF MINISTERS' CONFERENCE

A NUMBER of steps have been decided at the last week's State Chief Ministers' Conference for checking further rise in foodgrain prices. Contrary to earlier expectations, the Conference, however, did not take any decision on the long-term measures to bring down food prices, although it did devote considerable time to this aspect of the problem also.

The State Governments have been asked to immediately set up adequate machinery for the proper enforcement of control measures and to prevent profiteering, black marketing, hoarding and other anti-social practices in the foodgrains trade. It has also been agreed to sponsor a scientific study to fix economic prices for rice and wheat in different States.

The Conference endorsed the decision of the Union Ministry of Food and Agriculture to abolish procurement of rice in Andhra Pradesh and Madras and to restore free movement of this commodity in the four Southern States — Andhra Pradesh, Madras, Mysore and Kerala. A similar step in regard to movement of rice from Madhya Pradesh to Maharashtra and Gujarat, however, did not find favour. The existing arrangements under which exports of rice from Madhya Pradesh to Maharashtra and Gujarat are undertaken on Government-to-Government account on a quota system is to continue. The wheat zones, as constituted at present, are also to be maintained. So also the maximum control prices and the modified system of foodgrains distribution in West Bengal.

There, however, would be no restriction of any kind, formal or informal, on the movement of coarse grains or pulses, except gram, from one State to another or within a State. All such restrictions that might have been imposed by any State Government would be withdrawn immediately. The movement of gram will continue to be regulated.

For reducing money supply, the Union Finance Minister, Mr. T. T. Krishnamachari, announced at the Conference his decision to cut Union Government's expenditure by Rs. 70 crores. The State Governments were advised to follow suit.

Two other important announcements made at the Conference were: (i) the plan of the Union Ministry for Food and Agriculture to set up modern mechanised rice mills in the public sector, including the co-operative sector; and (ii) establishment of two funds — called the Relief Guarantee Fund and Credit Stabilization Fund — for the benefit of the agriculturists.

Explaining the decision on rice mills, the Food and Agriculture Minister, Mr. C. Subramaniam, stated that it was considered better to set up new modern rice mills in the public sector, instead of taking over the existing ones, most of which were primitive and uneconomic. The modern units would produce better quality rice and in a more economic manner. A 3-tonne modern rice mill, capable of processing 20,000 tonnes of paddy a year, he said, could yield an output of 13,200 tonnes of rice, as against only 11,600 tonnes from the same quality of paddy by the existing units. Each new unit, he estimated, would help in saving approximately Rs. 11.2 lakhs in foreign exchange, whereas the foreign exchange component of the cost of setting up such a unit would be about Rs. 1.62 lakhs. Initially, efforts are proposed to be concentrated for installing modern rice mills in the package programme areas. It is felt that setting up of these rice mills would give the Government control over supply and distribution of rice.

The States of Madras, Kerala, Mysore and West Bengal asked for more supplies of rice from the Centre. Arrangements are being made to import more rice from the United States, Pakistan and Thailand.

Among the long-term measures to bring down foodgrain prices, Mr. Subramaniam suggested setting up of a high-level

technical agency for determining fair and economic prices for the producer and reasonable prices for the consumer, and establishment of a State-owned Foodgrains Trading Corporation. Although, both these proposals received general welcome from the Conference, the decision on them was deferred, presumably in deference to the desire of the Congress Working Committee to consider all long-term measures before they were finalised. The Chief Ministers expressed the view that State representatives should be associated with the high-level technical agency for determining foodgrain prices. In regard to the proposal for setting up the Government Foodgrains Trading Corporation, some Chief Ministers opined that such corporations should be established by the State Governments and there should be a Central Corporation to act as the apex body.

ACCENT ON SMALL PROJECTS

IN AN informal meeting with the members of the Planning Commission on June 23, the Prime Minister, Mr. Lal Bahadur, spelt out some broad considerations to be taken into account while drafting the fourth five-year Plan. Most of the points made by him were old and well-known; they have already received some attention at the hands of the planners. Mr. Lal Bahadur made a fervent plea for the eradication of unemployment and poverty from the country, stressed urgency of hastening the pace of agricultural development and early provision of "food, clothing and housing" for all. What was new in his rendering of the case was that in view of the paucity of resources, it was essential that the country should concentrate on small projects such as the building of wells and tanks instead of gigantic dams, which in addition to consuming vast financial outlays, had long gestation periods. Benefits from the dams flowed long after actual investment had taken place. The Prime Minister exhorted the planners to lay more stress on small projects because the results could be had without loss of much time. Again, the problem of agricultural production was an urgent and immediate one; it could not be postponed indefinitely. If enough chemical fertilisers were not produced within the country and the deficiency could not be covered through imports because of the shortage of foreign exchange, efforts needed to be made to fill this gap by compost and green manures.

There was no indication in Mr. Lal Bahadur's speech regarding the priorities in the Plan. If eradication of unemployment was to be put at the top of the list, it meant initiation of labour-intensive programmes and projects. While he wanted small and village industries to prosper, he also hastened to state that he was not against the basic industries. Unless there is a clear directive regarding the approach to the fourth five-year Plan, and the priorities are fixed, the Plan may suffer from the same defects which plagued the earlier ones. Mr. Lal Bahadur urged the Planning Commission to be "eyes and ears of the Government and not one of its departments." In these words, he defined the role of the Planning Commission as an enlightened body which kept the Chairman informed about economic trends and the possible solutions for the various problems. He was, thus, keen that the Planning Commission should play its rightful role in framing the long-term economic policies of the country and should not degenerate into a lifeless department of the Government. The suggestion of the Deputy Chairman, Mr. Asoka Mehta, that Mr. Lal Bahadur should give more time and energy to the Planning Commission, was a sincere plea, but his remark that "creative elements concerning formulation and implementation of plans would only come from the Prime Minister", perhaps, was said out of regard and respect for Mr. Lal Bahadur. In fact, it is the Planning Commission which should have cultivated (it is an unfortunate fact that it has not done so) in Yojana Bhavan the instruments of creative planning which are vital for the

formulation and implementation of the future plans on which depends the prosperity of the country.

LAND REFORMS

REDISTRIBUTION OF land ownership, sought in this country during the last one and a half decades, did not have a healthy impact on the agricultural economy in the sense that instead of assisting in increasing agricultural output, it has acted as a hindrance. The States have, however, continued to further land reforms with the ostensible objective of giving to the tiller his rightful due. Last week, the Land Reforms Implementation Committee, which had been set up by the National Development Council, decided to organise high-level committees in all States which would be asked to review the progress of implementation of land reforms twice a year. The Committee met under the Chairmanship of Mr. G. L. Nanda, the Home Minister, and was attended by some of the State Chief Ministers. It was suggested at this meeting that each State Government should appoint a special officer and other necessary staff in order to see that the land reforms programmes worked according to a time schedule.

A decision of great importance taken at this meeting was to provide to the tenant-cultivator financial assistance so as to enable him to carry through the production programme. In most of the States, a large number of tenants are cultivating lands on lease but tenancy is oral and not documented; the tenants are not in a position to assert their rights as they are not in a position to prove their tenancy. It will be the task of these committees to take steps whereby a record of tenancies is prepared and a revision in the record takes place at the earliest possible moment so as to benefit the tenants. In such cases, unfortunately, the tenants failed to obtain all the privileges granted by the Government; the absentee landlords enjoyed all the benefits.

Since agricultural production has come to occupy a pivotal place in the economy, it is essential that all cultivators should conform to certain "norms". It was suggested at the meeting that those who do not pay attention to their land with the result that output therefrom is highly deficient due to lack of interest, the State should take over such land; it was, however, decided that this scheme should be tried only in a few selected areas. It should be implemented on a wider scale only after sufficient experience in this regard has been gained. It was also decided that a technical committee should examine the entire question and submit its recommendations by August 1, 1964. Another suggestion put forward was that share-cropping should also be abolished and rents in kind should be converted into cash-rents. Then only the tenant-cultivator will be able to obtain an adequate return on his own contribution and that of the State.

UNUTILIZED CAPACITY

"THERE IS a good deal of slack in the Indian economy in terms of unutilised capacity and potentials which, if taken up, would immediately result in a considerable surge in production", says a columnist in a daily contemporary. One does not have to go very far for an illustration of such unutilised capacity. Take, for example, the small tool industry in the country. How important it is to every industry, be it in the public or the private sector, is common knowledge. Even the authorities are not unaware of it. Nor are they unappreciative of the unenviable plight of the manufacturer of small tools. They would fain help him, if they could, but are unable to do it. Why? All because of the procedure being followed for importing high speed steel, and essential raw material that is not made in India.

Under the prevailing practice, tool manufacturers are given a licence, of course, after long waiting, to import from a rupee payment country — Czechoslovakia in this case. This

licence has to be channelled through the State Trading Corporation, which is another time-consuming process. For, the STC has first to earn the foreign exchange and then to import its indentors' requirements, or effect a barter deal for the purpose. But, as things stand, this pre-supposes the availability in Czechoslovakia of all the quantity required to be imported, and that, unfortunately, is not the case. In the result, the import tends to get spread over an indefinite period necessitating more delay again.

It is not surprising, therefore, that, of late, complaints about inadequate supplies of high speed steel from manufacturers of small tools have grown in volume, and there does not seem to be an early prospect of the position improving, unless the authorities wholly reorientate the existing procedure. They must allow manufacturers of tools to import from other countries, besides Czechoslovakia, which are in a position to effect adequate and immediate deliveries. This no doubt entails the use of foreign exchange that is not freely or readily available, but it seems not only imperative but also desirable to find this foreign exchange for a number of reasons. In the first place, our small tool manufacturing units have already attained internationally acceptable standards. America, it may not be known to many, has begun to evince an interest in these tools (samples of small tools manufactured by Indian Tool Manufacturing Co. of Bombay, for example, were sent to the USA and were very well received, we are told). Secondly, the internal demand for small tools has increased enormously and bids fair to spurt further. Thirdly, with so assured a potential demand, it would be almost criminal to allow any installed capacity to remain unutilised, the more so when some of it is additional capacity specifically licensed to meet the rapidly rising demand for these tools. Today, for want of raw materials only 60 per cent of the installed capacity is being utilised. And, very soon, there will be further additions to the present installed capacity, but no manufacturer can be blamed for keeping his installed capacity not utilised fully, if he is not enabled to or does not have adequate raw materials. At least in respect of key industries like the small tool industry, therefore, the authorities must make it a point to ensure adequate, if not plentiful, supplies of raw materials, in particular imported raw materials.

Eastern Economist 20 Years Ago

JUNE 30, 1944

IT IS now some months since the Government of India started publicising their intention of according a high priority to agriculture in their post-war reconstruction plans. But it is no secret that their new-found enthusiasm for agricultural progress has completely failed to elicit any marked popular approbation. On the contrary, their motives are suspect and the fear has been expressed that their real object is to pose agricultural expansion as a counterblast to industrialization and thus confuse the issues. It should not be forgotten, however, that, whatever, may be the Government's strategy, agricultural development is of supreme importance in itself and may even be said to hold the key to all-round economic progress. Agriculture is, therefore, bound to occupy a crucial position in any scheme of national planning and it is desirable that, their unsatisfactory background notwithstanding, agricultural plans prepared by the Government Departments, committees and experts, all of whom have the advantage of vast official facilities and resources, should be considered dispassionately and on their merits and their value assessed and assimilated to a genuine plan of economic development.

VIKRAM JAYANTI

54,350 TON SUPER OIL TANKER

JOINS JAYANTI FLEET

VIKRAM JAYANTI, Jayanti Shipping Company's 54,350 Ton Super Oil Tanker, now joins Jayanti's fast growing fleet.

The vessel, built by Mitsubishi Shipbuilding & Engineering Co. Ltd., was delivered to Dr. J. Dharma Teja, Chairman, Jayanti Shipping Co. Ltd., in Japan.

VIKRAM JAYANTI, with its overall length of 754 feet and its breadth of more than 107 feet, will be the largest vessel on Indian Registry. It has a capacity of carrying more than 52,000 tons of oil when fully loaded and requires a 36 feet draft.

VIKRAM JAYANTI will start earning valuable foreign exchange for India the moment it leaves the Shipyard as the vessel has already been Time Chartered for a period of 12 years by ESSO Standard Eastern Tankers Ltd.

With the addition of VIKRAM JAYANTI to Jayanti's fast growing fleet, the Company's tonnage touches the high mark of 4,50,000 DWT. The Company now owns, besides the new Super Tanker, twelve 10,000/11,000 DWT cargo vessels, seven Bulk Carriers, totalling 2,31,000 DWT, and the Oil Tanker Adi Jayanti.

Tanganyika's Five-Year Plan

MADAN M. SAULDIE

TANGANYIKA EMBARKED on its Five-Year Development Plan on July 1. The Plan is the first of the three phases of a 15-year Plan covering the country's economic and social development up to 1980. Zanzibar now being a part of the Republic of Tanganyika-Zanzibar, a separate development plan will be drawn up shortly for that island.

The Plan envisages a total outlay of £246 million of which the Central Government will share £102 million, Local Authorities £10 million, the East African Common Services Organisation £18 million and the private sector £116 million. Of the Central Government's share, £27 million will be spent on ministerial programmes and the remaining £30 million will be allocated to parastatal organisations like the Tanganyika Development Corporation, the National Housing Corporation, the Co-operative and Development Bank and the Tanganyika Electric Supply Corporation.

The Central Government would raise £22 million from domestic savings and £80 million from overseas investment on favourable terms under bilateral and multi-lateral foreign aid agreements. The private sector is envisaged to attract a net capital inflow to the tune of £31 million and favourable social and financial climate will be created and special inducements offered to facilitate foreign investment.

Three main long-term objectives have been outlined in the Plan: To raise annual per capita income from the present low of £19.6 (estimated in 1961) to £45.1 by 1980, to reach a stage of self-sufficiency in trained manpower requirements and to raise life expectancy from the present 30-40 years to 50 years. These are not unachievable targets for a country with Tanganyika's vast resources.

Balanced Growth

To accomplish a balanced agricultural and industrial growth, the Plan places the private and public sectors on equal footing. Agriculture has been the chief occupation of the majority of the more than 9 million Tanganyikans and accounts for nearly 45 per cent of the total domestic product. Sisal, coffee and cotton are the main exportable products which in 1961 constituted 60 per cent of the total export trade. Apart from the need for boosting agricultural production, the Plan lays emphasis on exploring new markets for agricultural products as well as foster the traditional ones. Local markets will also be stimulated through community development programmes. Further, the Plan calls for discouraging subsistence agriculture and urges upon the farmer to concentrate on one or two cash crops so that the targeted 7.5 per cent annual growth rate in monetary agriculture be achieved. This radical "transformation" naturally needs diversification of agriculture, consolidation of fragmented holdings and organisation of village settlements, of which the planners seem to be well aware. Considerable importance has been attached to agricultural research and £500,000 in capital and £1,700,000 in recurrent expenditure have been earmarked for setting up new research centres as well as maintaining the existing ones.

The first task in the industrial field would be the substitution of local manufactures for imported goods, thus opening new vistas of employment. The Plan hopes to achieve an average annual industrial growth of 14.8 per cent and it is expected that the recently-concluded agreement with Uganda

and Kenya would enable this country balance her trade with East African countries by the Plan-end and participate effectively in the East African Common Market both as a buyer as well as a seller as against being at present a buyer only. The equitable distribution of the benefits of Common Market—which have so far been allegedly reaped mainly by Kenya—will create the necessary atmosphere for a future political integration of the three countries into an East African Federation.

The Plan provides for the development of the three sectors of Tanganyika's industry—mining, processing and manufacture—to achieve a desired structural evolution for industrial expansion. £1,800,000 have been allocated to Tanganyika Development Corporation for the development of mineral deposits, geological surveys and improvement of building-material output for a planned expansion of construction activity. A co-ordinated development of co-operative trading—through Governmental agencies—and private trading as provided in the Plan would improve the commercial perspective of the country and achieve an average growth rate of 8 per cent per annum. Till self-sufficiency is achieved in trained manpower requirements the needs of the increased economic and social activity in the country will be met by technical assistance imported from abroad.

It is therefore reasonable to expect that the first phase of the 15-year Plan will achieve considerable measure of economic and social progress and would gain for the country useful experience for the following ten years of planning. Drawn up by the Ministry of Development Planning under the direct supervision and guidance of President Julius Nyerere, the Plan is at once modest and realistic. Moreover, as President Nyerere remarked while presenting the Plan to the Tanganyika National Assembly: "Many of the facts which this Plan has to take into account are outside our control—the Plan is therefore a flexible one and periodically we shall examine progress in the light of the new economic circumstances, making adjustments as required." Dr. Nyerere proudly added: "Britain, for all her wealth, has only said that she will double her income in 25 years. We are aiming at 15—and I believe that we can achieve this objective." There is a 'catch' in this comparison. While Britain is planning to double her national income in 25 years from a sufficiently high base, the same process of doubling in the case of Tanganyika will be from a relatively modest base.

WINDOW ON THE WORLD

French Plan Changes

From Our Special Correspondent

PARIS:

IN QUARTERS where national economic planning is anathema, an article in the London "Economist" in May has had a certain success. It claimed that under the pressure of liberals like M. Jacques Rueff, the French Plan had been all but abandoned. French economic policy, it was implied, had taken a right turn and the Finance Minister, M. Giscard d'Estaing, was credited with the exclamation, "Le plan, c'est l'inflation". Several New York weeklies have since put this much more definitely: French planning is recognised in Paris to have failed and is to be suppressed. The lesson should be learned, it was added, in places like Rome and Madrid, where French-style plans are being drawn up just as the original model is scrapped as useless if not dangerous.

Discussions about planning are often stultified by the circumstance that people mean different things by the same term. Some of the most passionate anti-planners in the USA and West Germany have never cared to see how planning has worked in France but are content to condemn authoritarian centralisation of the economy — a point on which most people (including Russians) agree, but which is irrelevant. In the present case, too, reports that planning is to be scrapped in France must arise from a similar confusion. If one takes the most important part of planning to be the work of the plan study-groups and specialised commissions, which assemble representatives of all economic agents including the State, then it is not true that planning in France is scheduled for any major change, let alone destined to be abandoned. Indeed, new organisations of that sort are proposed, and they will be entrusted with such tasks as working out and implementing a national revenues policy which will form part of the national plan.

Guaranteeing Stability

Moreover, the Finance Minister said lately that when the present stabilisation operation was over, it would be necessary to "install institutional mechanisms that will guarantee stability". He meant that instead of waiting till prices and wages got out of control, and then resorting to the customary methods of corrective action, one could charge a permanent tripartite commission of the plan with the job of switching on the red lights as soon as disequilibrium started to appear. What this body would be and what powers of instant intervention it would have are subjects that have not yet been discussed publicly, but it is clear that the idea is to extend existing planning mechanisms and to direct their attention to new tasks.

If, on the contrary, one sees the essence of planning not in this attempt at co-ordination but in target-busting — i.e. fixing for various goods production objectives that are so high that they could not be attained in the normal way but require special incentives and disincentives — then it is indeed true that future French plans will contain less and less of it. One needs to note that this trend has been evident for some years, certainly since the writing of an interim plan in 1958-59 to replace the targets of the current plan which had become unattainable. So it is nothing new. In fact, planning as target-busting was limited to the years of post-war reconstruction when, in addition to the role of co-ordination which was and remains basic, the plan was a stimulant and encouragement to greater and greater production. No such stimulation is

needed today, for the problem is just the contrary; the French economy has been running hot, with producers' objectives set too high for the available manpower resources, leading to price-inflation. A stabilisation plan has been in force for ten months and will remain in operation many months more, with the aim of dampening down the pace of economic expansion until price stability (or what passes for it in the modern world: annual price-rises of 1-2 per cent) has been attained and guaranteed. Obviously, this would not be the moment to fix ambitious production targets for various sectors, and the next plan, now being written, will contain few of them.

Problems of Equilibrium

The idea, then, is to apply the tested methods of forecasting and co-ordination less to the problems of maximum production than to the problems of equilibrium. The reason for this change lies in the new circumstances produced by European economic integration in the Common Market and, even more generally, by the freeing of world trade and capital movements. Those developments mean that events abroad now can impinge on the French economy with more force than many of the factors taken into account in a national plan. Planning, of whatever sort, has always pre-supposed taking the national unit as more or less self-contained, in the sense that the planners thought they could foresee and perhaps control the majority of factors at work, leaving foreign trade and capital movements as a fairly substantial but still marginal influence. Fully justified just after the war, liable to occasional upsets in the following decade that as assumption is patently out of season now inside the Common Market. It will remain so, unless a European economic plan is adopted, as most members urge and as the ECM Commission has suggested. In the face of West German opposition to a European plan, the other members have no alternative but to make their own planning more supple.

This is no doubt a transitional phase. It is hard to believe that the six national economic authorities are going to be liquidated by integration, without there appearing some central economic authority with competence extending over the whole Common Market. Uncertainty during this transition shows up in many affairs besides planning. Cartels and monopolies, for instance, escape purely national control as their area of operation becomes that of the six territories, but there does not yet exist an effective regional authority to control them. Monetary policy is less and less under the control of national finance ministers as funds move freely around the region, but there is no central monetary authority to do their job. And so on. Some business men welcome this temporary relapse to 19th-century "freedoms", but in fact it is simply an accident due to the circumstance that political integration is coming behind economic unification. The situation would be intolerable if this lag persisted, and the Europeans will have to face up to the problems of installing some variety of central government soon, whether it be federal, confederal, supranational, inter-governmental or whatever, as long as it has competence over the whole region comparable to that exercised by national governments at home.

As soon as such a central authority appears, it will encounter the questions that France, Holland, Belgium and Italy now seek to solve by their democratic plans. In other words the issue of a European plan will cease to be theoretical and become very live. Till then, it is true, the national plans are

exactly in the position of monetary policy, anti-cartel policy, etc: they are leaking all round the edges, because the Common Market has opened up the national economies and removed many forces from national control (indeed from any control at all, temporarily). This is no more reason to conclude that planning has failed and will be scrapped than to conclude those things of monetary policy and anti-cartel policy. While they await the institution of some form of planning at the six-nation level, national planners will have plenty to do. They will be less concerned with financing investments at any price than they were after the war (and still are in India), and more interested in forecasting the major economic currents in the Atlantic world, inside the Common Market and finally at home.

Critics of planning in France would find better material in the failure of this country to provide adequate housing and adequate educational equipment for its rising population. For these are the most striking weaknesses in France's post-war achievement, and yet they are precisely the fields where provision is simplest. Leaving aside the shock of the return of eight lakhs or so of North African settlers which no one could foresee, demographic movements are known in advance with some precision. The number of young people attaining university age can be foretold with perfect accuracy years ahead. Furthermore, both fields are under almost complete

Government control: Government provides most education and finances one lodging in ten. Yet the upshot is that after decades of economic planning, housing is drastically short, and schools, colleges and universities are grossly overcrowded and under-equipped.

These cases are mentioned to recall that planning does not solve anything whatsoever unless there is the will to make certain options and attain objectives. In France, housing and education were given second place, as much by the planners as the politicians and the general public, to other economic activities whose development, as it turned out, was harder to foresee and control. We have the paradox of French planning neglecting what is most easily planned while tackling cases where international competition and the evolution of consumer-tastes upset every prediction. There is the related paradox that private enterprise co-operated more intelligently with centrally devised plans than did the Government's own departments. It is along these lines that one could develop cogent criticism of the very imperfect French experiments in democratic national planning, rather than by seeking to show that the progress of economic integration in the Common Market means the "failure" of planning. That integration poses new problems that the method of provision and co-ordination will tackle with as much hope of success as the problems of post-war reconstruction.

Euro-Dollars Have Come to Stay

PAUL EINZIG

LONDON:

THE EURO-DOLLAR market is, or ought to be, a matter of considerable interest to India, in spite of the fact that, being a member of the Sterling Area, her residents are not entitled to borrow in terms of foreign currencies in London. For indirectly India stands to benefit by the additional credit facilities. When switched into sterling the Euro-currencies become available to any borrower of the Sterling Area in the same way in which they are available to U.K. borrowers such as local authorities or hire-purchase finance houses. Moreover, in so far as many customers of U.K. banks resident outside the Sterling Area meet their requirements with the aid of Euro-currency deposits instead of conventional sterling bank credits, more facilities remain available for borrowers within the U.K. and the Sterling Area.

The figures on Euro-currencies that appear in the June issue of the Bank of England's 'Quarterly Bulletin' show that in March 1964 the total of Euro-currency deposits lent by UK banks to the Sterling Area was merely £3 million. Presumably this amount represents transactions for which special licence was granted. Euro-currency deposits lent by Sterling Area countries to U.K. banks amounted to £45 million. Presumably most of it belongs to Arab owners, since the oil-producing members of the Sterling Area are in the best position to accumulate dollar deposits.

Had there been any doubts until now about the permanent character of the institutional change represented by the development and expansion of the new facilities, the Bank of England's 'Quarterly Bulletin' and the Annual Report of the Bank for International Settlements have between them effectively disposed of such doubts. We now have it on the authority of both institutions that Euro-dollars have come to stay.

In the May 29 issue of 'Eastern Economist' I predicted

that the Bank for International Settlements in its Annual Report would endorse the view that Euro-dollars now form a permanent part of our international financial system. The text of that Report amply confirms my prediction. It is reassuring about the effects of the new device on the dollar and about its inflationary effects, also about the risk involved in lending Euro-dollars, and it is distinctly favourable to that device. An interesting fact published in the Report is that over 30 per cent of the Euro-currencies is borrowed by residents outside Western Europe and North America.

Prominent Borrower

Japan figures prominently among borrowers of Euro-dollars. The Bank of England's 'Quarterly Bulletin' in its analysis of the figures on the employment of Euro-currency deposits, points out that the published figures of under £100 million representing in March 1964, Japanese borrowing of Euro dollars in London — out of a total borrowing of £1,262 million — is by no means the whole story. Much of the Euro-dollar deposits borrowed by London branches of Japanese banks is lent to the New York branches of the same banks which, in turn, re-lend them in Japan. Such transactions appear under the amount of nearly £400 million lent in London to the United States.

An interesting feature of the statistics published by the Bank of England is that it indicates no noteworthy contraction in the turnover in Euro-currencies as a result of the losses and immobilisations caused by a few failures by borrowers in New York and Germany last autumn. Even though some London banks have, as a reaction to those incidents, discontinued or curtailed their Euro-dollar operations, others must have taken their place, judging by the fact that the decline of Euro-currency deposits borrowed by U.K. banks, compared with their maximum figure in September 1963 was merely £20 million, while the decline of £45 million in the amount lent by UK banks, though more substantial, was rather less than 5 per cent of the total. Although the expan-

sionary trend was interrupted — not for the first time since the origin of the market — there was no real setback.

The 'Quarterly Bulletin' also disposed of the view held in some quarters that switching of foreign currency deposits into sterling had a significant influence on the British credit situation. Its extent had its ups and downs, under the effect of the varying profitability of short-term lendings to local authorities and hire-purchase finance houses (allowing for the cost of covering the forward exchange), and the movements of such funds in and out of sterling area did affect the official dollar reserve. I have always understood that the authorities do not as a rule go out of their way to prevent unwanted movements of such funds by means of intervention in the foreign exchange market. The official policy is merely to neutralise any

unwanted effects of their influx or efflux on the money market, and they achieve that end as a matter of routine control of that market.

In conclusion the Bank of England expressed the view that the Euro-dollar market has shown its capacity to adapt itself to changing conditions. It has emerged as a truly international short-term money market providing attractive opportunities for short-term investment and short-term borrowing. It has stimulated banking competition and has helped to reduce interest rates in the main borrowing countries. It has thus proved that it has a useful part to play. Among other countries, India must have derived indirectly some benefit, even if prevailing conditions have prevented her from deriving direct benefit.

Start of a Productive Process

GUY SIMS FITCH

WASHINGTON:

BEFORE TAKING OFF for Geneva last March as a member of the US delegation to the United Nations Conference on Trade and Development (UNCTAD), a US Government official remarked that the objective was not to score debating points, but to get on with the job at hand. That job, of course, is to find meaningful ways of expanding the trade of less developed countries as an integral part of an accelerated development process. Now that the conference has ended, three months and many arduous sessions later, it is clear that this indeed has been the underlying approach of the United States. With patience and diligence, and with that forthrightness which underlines the respect the US Government has for the legitimate aspirations of developing peoples, the US delegation has sought in co-operation with others — from both developing and developed lands — to find sound and constructive answer to the related trade and development problems posed by UNCTAD. This is evident in the positive proposals the US delegation brought to each of the conference's principal committees.

Positive Proposals

In committee one, dealing with primary commodities, the United States indicated its readiness to enter into commodity arrangements, to help stabilize markets where such arrangements offer practical prospects of success. In committee two, dealing with trade in manufactured and semi-manufactured goods the United States supported improved market access through trade liberalizations, and put forward a broad programme aimed at generating effective export promotion in developing countries. It also supported the formation of regional groupings to stimulate trade among developing countries and provide those countries with a more efficient industrial base. In committee three, on financing for trade expansion, the United States played a leading role in agreements that were reached on a number of important points. These included the principles of economic assistance, the responsibilities of both developed and developing countries in achieving higher growth rates, the means for increasing and improving the flow of financial resources to developing countries and for coping with external debt problems of those countries. In committee four, on institutional arrangements, the United States proposed practical continuing machinery to deal within the United Nations framework with the problems of trade as they relate to development.

Along with committee three's financial recommendations, UNCTAD's most tangible results may well be the construc-

tion of this kind of institutional machinery, to which unresolved substantive issues can be referred. The conference in effect established itself as an organ of the United Nations General Assembly, and created a 55-nation trade and development board to take up on a continuing basis the discussions begun at Geneva. With this new machinery well-bolted into the UN system, the discussions can proceed in a fruitful and reasonable manner. Both the more and the less developed nations can meet one another in pursuit of UNCTAD goals in a continuing process of negotiation, adaptation and growing understanding.

Since a basic purpose of UNCTAD is to produce a consensus on attainable trade policy, its recommendations obviously must have substantial support from countries which bear much of the burden of putting them into realistic practice. It follows that the new machinery should incorporate the kind of special voting arrangement which takes into account adequately this fact of international life. Such an arrangement is in the common interest of all concerned — the developing countries which are in the numerical majority as well as the developed countries which account for more than 80 per cent of the world's trade.

No one could reasonably expect that one conference would automatically supply realistic answers to the many complicated and difficult questions of world trade and development, or that all the 120 participating nations could derive full satisfaction from its proceedings and recommendations. The important thing is that a start has been made in a practical search for those answers. Herein may well lie the basic significance of UNCTAD — as the beginning of a process of productive study and discussion in which all interested nations can co-operate and from which all can benefit. In this process, the United States, with its long-established record of financial and technical assistance and of concern for the advancement of developing countries, is prepared to play its part.

Shortfalls in Agriculture

By Our Special Correspondent

NEW DELHI:

THE AGRICULTURAL production index (base: 1949-50 = 100), according to the latest assessment of the Planning Commission, is likely to be around 160 in 1965-66, as against the original third Plan estimate of 176. The output of foodgrains at the end of the current Plan may not exceed 92 million tonnes, as against the Plan target of 100 million tonnes. The latest estimates put the likely production of the other principal crops in 1965-66 at : sugarcane 11 million tonnes; oilseeds 7.55 million tonnes; cotton 6.54 million bales; jute 6.20 million bales; mesta 1.79 million bales; tobacco 400,000 tonnes; coconuts 4,713 million numbers; arecanuts 102,000 tonnes; and lac 50,000 tonnes.

The major shortfall in the material input targets in regard to agriculture are expected to be under major irrigation, consumption of chemical fertilisers, plant protection and extension of area under improved seeds. As against the target of extending major irrigation to 12.8 million acres by 1965-66, anticipations are that only 8.6 million acres will be able to benefit from this developmental activity. The consumption of chemical fertilisers at 0.65 million tonnes nitrogen, 0.25 million tonnes P₂O₅ and 0.15 million tonnes K₂O, will fall short of the targets by 0.35 million tonnes, 0.15 million tonnes and 50,000 tonnes, respectively. Plant protection measures, it is now expected, would be able to cover only about 40 million acres, instead of the target of extending them to 50 million acres. The area under improved seeds at the end of the third Plan will be approximately 164 million acres, as against the target of 204 million acres. The targets set for the extension of minor irrigation and soil conservation however, are expected to be exceeded. It is hoped to extend irrigation facilities through minor works to about 13.8 million acres, as against the target of 12.8 million acres and soil conservation programmes to 11.8 million acres as against the target of 11 million acres.

Various Estimates

Four different estimates have been prepared by (i) the Working Group in the Department of Agriculture, (ii) the Perspective Planning Division of the Planning Commission, (iii) the National Council of Applied Economic Research and (iv) the Institute of Agricultural Research and Statistics, of the likely demand for the selected major agricultural products in 1970-71. These are given in the table alongside.

On the basis of these estimates and looking at the problem from the feasibility point of view, a note prepared recently by the Planning Commission suggests that the fourth Plan should aim at the following levels of production in 1970-71: foodgrains 120 million tonnes; sugarcane 13.5 million tonnes; oilseeds 10 million tonnes; cotton 8.5 million bales; jute 8 million bales; mesta 2 million bales; tobacco 480,000 tonnes; coconuts 5,113 million nuts; arecanut 110,350 tonnes and lac 60,000 tonnes.

This assumes that the minimum rate of growth in the agricultural sector during the fourth Plan period has to be 5 per cent per annum. To enthuse the farmers about agricultural development and to make agricultural planning realistic, it has been suggested that the agricultural plans should be built up from the village, block and the district levels. In the long run, the system of preparation of local plans viz., village, block and district plans, will have to be extended to all areas in respect of all schemes falling within the purview of the respective territorial units of Panchayati Raj. It may, however, not be possible to do so for the fourth Plan period without the detailed surveys of techno-economic possibilities in each area and specifying availability of financial, human,

material, technical and institutional resources. So, efforts should be made to go at least up to the block level for the preparation of the fourth Plan. The State Governments may be advised to fix, with due regard to all the relevant factors, the maximum feasible rates of agricultural growth in their areas at not below 5 per cent per annum. If the estimates and targets built up from the block level upwards indicate a lower rate of growth, the State Government should be asked to consider special measures for assuring a minimum 5 per cent annual growth rate in their territories. In the favourably situated States and areas, a higher rate of growth, say 6 or 7 per cent should be aimed at and necessary resources should be provided even if it means curtailment in some other sectors.

Selective Approach

Greater emphasis, it has been further suggested, should be placed on selective approach and concentration of efforts on the most favourable areas with a view to achieving there the saturation point within a specified short period of time. The selection of the areas for concentration of efforts, it has been recommended, should be on the basis of economic considerations and not under political pressures or on other similar criteria. All attempts need to be directed towards increasing agricultural production, especially of foodgrains, in the quickest possible time. The exploitation of the existing potential or the potential which can be easily created should be the over-riding aim of the fourth Plan.

On the basis of 120 million tonnes foodgrains output, it has been suggested that the targets of material inputs should be fixed as follows: irrigation — major 14 million acres, minor 16 million acres; soil conservation and land reclamation 20 million acres; extension of area though double cropping 30 million acres; consumption of nitrogenous fertilisers 2 million tonnes, phosphatic fertilisers one million tonnes, potash fertilisers 0.35 million tonnes, urban compost 5.4 million tonnes, and green manures 64 million tonnes; area under improved seeds 274 million acres; and plant protection 160 million acres. It has been recommended that not only a general assurance should be given that agricultural efforts would not be allowed

- Assumptions:
- Targets of national income postulated in the third five-year Plan implying an average annual increase of about 2½ per cent in per capita personal consumption, and
 - The minimum rate of growth required to ensure, by the end of the fifth Plan, a consumption expenditure of at least Rs. 20 per capita per month to the population.

July 3, 1964

to be impeded during the fourth Plan period in any manner for want of financial and other resources, but concerted action will also be taken to implement this assurance. If there is likelihood of occurring a shortfall in making available to the agriculturists various pre-requisites for agricultural production, such as chemical fertilisers and pesticides, from indigenous sources, it has been suggested that import should be stepped up correspondingly.

For providing electricity to the agriculturists at reasonable rates, it has been recommended that adequate provision should be made for this in the power development programme. For ensuring that the agricultural development programmes do not suffer for want of credit facilities, a simplified procedure has been suggested under which loans in the form of material inputs would be provided in kind against the security of crops.

★ ★
The selling price of unpacked cement, free on rail destinations, has been refixed at Rs. 99.75 per tonne with effect from July 1, 1964. The price hitherto was Rs. 97.75. The excise duty and the additional surcharge thereon and the packing charges have to be paid separately.

In the Government Resolution of October 31, 1961, on the Report of the Tariff Commission on the revision of fair prices payable to cement producers, it was stated that the prices then fixed would be in force till March 31, 1966, subject to adjustment whenever called for, for variations consequent on governmental action, including escalation for fuel and power.

On a representation from the cement industry, the Government examined the incidence of such variations on the cost of production of cement and granted an increase of Rs. 2.75 per tonne in the ex-works price paid to producers with effect from June 1, 1963. There have since been further increases in the cost of production arising from increases in costs of coal, power and railway freight on coal. After a fresh examination of costs, the Government has decided that with effect from July 1, 1964, the ex-works price to be paid to cement producers should be increased by Rs. 1.25 per tonne.

Besides ex-works cost, the distribution cost of cement has also risen on account of increases in railway freight since June 1, 1963. With a view to minimising the increase payable by the consumer, the Government has reduced remuneration payable to the STC as the sole selling agents. The F.O.R. selling prices has been raised by Rs. 2 per tonne. This will mean an increase of about 10 paise per bag of cement.

With a view to stepping up cement output, the Union Government is also understood to be considering a proposal to import about four or five complete cement plants in the near future, presumably from the rupee payment countries. These plants may be set up both in the public and the private sectors. At present, the new capacity in the cement industry can only be created from the indigenous supply of cement machinery. The relaxation in the present policy is proposed to be effected because supplies of cement machinery from the indigenous manufacturers are inevitably delayed.

The Union Government may as well revise upwards the limit on the standard size of cement plants which currently is 200,000 tonnes per annum capacity. About 400,000 tonnes a year capacity cement plants may be allowed to be set up at places where there are considerable limestone deposits.

★ ★
The fourth Plan for oil, it is understood, contains a provision for setting up 5 lube oil plants, besides the one already planned to be set up at the State-owned Barauni refinery. Negotiations for one of these are being carried on with Esso Standard Eastern. The Esso plant is to be set up, in partnership with the Government of India, at Trombay. It will cost

nearly Rs. 5 crores and will have a capacity to produce 145,000 tonnes of lubricants per annum.

At present, only the Assam Oil Company's Digboi refinery produces some small quantities of lubricants. The establishment of the Barauni and Trombay lube plants will raise lubricants output in India to about 350,000 tonnes. The four other proposed plants are expected to make the country nearly self-sufficient in lube oils by 1970-71, when the requirements are expected to go up to 0.9/1.0 million tonnes.

★ ★
An agreement has been reached between the Government of India and the Bechtel International Corporation of San Francisco (United States) for setting an engineering company in India — Indian Engineers Limited — which would provide designing, engineering, construction and management services for a broad range of industrial projects, both in the public and the private sectors. The Government of India, it is understood, will have 51 per cent share in this venture. The remaining 49 per cent share will go to Bechtel International.

For the time being, the services of Indian Engineers Limited are proposed to be utilised for setting up petroleum refineries, development of oil-fields, laying of oil and gas pipe-lines, and creation of facilities for the manufacture of chemical intermediates including petro-chemicals.

Indian Engineers Limited will employ engineers from India as well as the United States. Bechtel International has undertaken to train selected Indian personnel of this company at its offices in the United States and elsewhere.

The US Corporation is engaged on a world-wide basis in performing engineering services for various industrial projects. It will be able to contribute to Indian Engineers Limited a wide range of technical resources and personnel.

★ ★
The US Export-Import Bank has extended a new non-project loan of \$25 million (Rs. 11.0 crores) to the Government of India. This credit can be utilised for financing imports of US capital equipment and services required by both the public and private sectors.

The US Exim Bank had earlier made available to India three non-project credits — \$150 million in February, 1958, \$50 million in December, 1960, and \$25 million in August, 1962. These were used for importing from the US such capital goods as mining and construction equipment, transportation and earth-moving machinery, communication equipment and machinery for textile, aluminium, chemical and automobile industries.

The Bank also extended project assistance to a number of Indian enterprises engaged in the manufacture of diesel locomotives, fertilisers, aluminium, rayon, chemicals, plastics and forgings. Air-India, too, has been a beneficiary of the Bank's loans and it purchased its all-jet fleet through finance made available by this source. Including these credits, the total amount of assistance made available by the Bank to India now aggregates \$368 million (Rs. 175 crores).

Unlike the USAID credits, which are long-term and bear no interest, except a service charge of $\frac{1}{2}$ of one per cent, the US Exim Bank's loans are medium-term bearing an interest of 5 $\frac{1}{2}$ per cent per annum. The latest \$25 million credit extended by the Bank is repayable over a period of 12 years. The first instalment falls due in 1967.

★ ★
An agreement has been reached during the recent visit of the Union Minister of Transport, Mr. Raj Bahadur, to Japan with the Mitsubishi Group of Industries on the broad heads of the collaboration agreement for the establishment of the second shipyard in India at Cochin. Some minor details still remain to be worked out. A delegation from the Japanese concern is expected here shortly to complete this job.

The project is estimated to cost approximately Rs. 100 crores.

July 3, 1964

crores, out of which a sum of Rs. 2.67 crores will have to be spent in foreign exchange. The ship-yard will have a capacity to build two ships of 15,000 tons each and another two of 13,000 tons each by 1970-71. The first ship is expected to sail out in 1967-68.

★ ★
The Union Ministry of Finance has decided to repay immediately on demand the deposits made by persons whose contributions under the Compulsory Deposit Scheme do not exceed Rs. 150. According to the provisions of the Scheme, these deposits were to be repaid only at the end of 5 years.

Persons of 70 years in age or above and foreigners who are leaving India with no intention to return have also been allowed premature repayment of their deposits under the CDS irrespective of the amount involved. This facility is as well being extended in cases where the depositor is dead and his/her nominees or heirs want to withdraw the amount deposited.

In all, about 42,00,000 depositors are expected to benefit from these concessions. The amount involved is nearly Rs. 4.5 crores. The concessions have been given in order to provide relief to the lower income groups and to the aged and deserving persons in view of the changed, general economic conditions in the country.

The deposit offices have been authorised to sanction repayment.

Confusion Over Cloth Prices

From Our Correspondent

BOMBAY :

LIKE THE proverbial "Chataka" bird expecting every cloud to bring forth rain, cotton mill interests have been expecting a decision by the Government of India on an alternative to the Voluntary Price Regulation Scheme (VPRS), the old man of the sea that has been sitting pretty on the shoulder of the industry since 1960. They now seem to feel that they will at least be rewarded for their long waiting and that some solution to the cloth price problem will be found at the forthcoming meeting of the Cotton Textile Consultative Board on July 7. However, having faced disappointment after disappointment, at least a section among them must still be nursing misgivings about a definite outcome even on that day. This is understandable, inasmuch as they have waited long enough. They have certainly been very patient. This patience of the millowners is remarkable but the inordinately long time that the Government of India has taken to decide the question is as intriguing as it is indefensible.

Temporary Expedient

Now, the industry has been operating under a VPRS since 1960. According to this scheme, the price of every variety produced by a mill during a given period is to be fixed by a Price Fixation Committee and cannot be changed without reference to the Committee. But the scheme was not only expected to be voluntary but also temporary. No scheme, however, well-conceived — the VPRS was certainly not one such — can be expected to work, if even at the commencement itself it is branded as temporary. We do not know of any temporary expedient anywhere being worked in the way in which the VPRS has been operated, as though it were a permanent solution. It is not surprising, therefore, that it has gone out of alignment completely. This should be obvious even as it is amazing that after being repeatedly appraised of the deterioration in the position, the authorities should have chosen to sleep over the issue.

The VPRS, as stated above, was introduced nearly four years ago as a purely temporary expedient to tide over what was then thought to be a transitory problem of rising prices, but rising prices have not only tended to last long but also

ment of deposits made by the aforementioned categories of persons without any further reference to the Union Government.

★ ★
An agreement was signed here last week between the Governments of India and Nepal providing for a direct wireless circuit between Delhi and Kathmandu and a direct radio-telephone link between Calcutta and Kathmandu. The two services are expected to start soon.

The tele-communication contact between Nepal and India at present is through the telegraph office with the Indian Embassy in Kathmandu. The two new services will enable Nepal to have direct access to New Delhi and Calcutta without routing the messages through the Indian Embassy. The Kathmandu-Calcutta radio-telephone service will be connected to the Overseas Communication Service. This will help Nepal to have direct tele-communication links with the world through India.

The equipment for both the Calcutta-Kathmandu radio-telephone service and the Delhi-Kathmandu wireless circuit has been supplied by the United States under a tripartite agreement signed between the Government of India and His Majesty's Government of Nepal and the US Administration in 1958. Some equipment for the Delhi-Kathmandu wireless circuit has also been provided by India.

become more pronounced. Notwithstanding the fact that there has been a notable rise in prices of almost every commodity, the powers-that-be have not persuaded themselves that there should also be a rise in the basic price of cloth initially fixed under the VPRS. Repeated pleas to raise the basic price have gone unheeded. The industry had banked for relief on the findings of the Tariff Commission which began an inquiry into cloth prices in December, 1960 and reported in December, 1962. There was a forced lull then presumably because of the Chinese invasion and the emergency that followed in its wake. Early this year again the industry felt compelled to reopen the question and there were several meetings between the Government and the Planning Commission, on the one hand, and the Indian Cotton Mills' Federation, on the other, in March-April. At these meetings, again the spokesmen of the mill industry impressed upon the Government how, for a variety of reasons, the VPRS had become totally discredited and that it required to be replaced by a scheme which would do justice to the industry and the consumer alike. Three alternatives — statutory control, full decontrol and partial control — were actually discussed and the industry even offered to accept partial control, under which a specified percentage of the output of mill cloth would consist of prescribed qualities to be sold at a fixed price. It is believed the Government promised to make known its decision by the end of May, but, unfortunately for the industry, Prime Minister Nehru passed away and everything was again at a standstill for a time. On June 2, however, Parliament was informed that the industry's representation against the VPRS was "under consideration."

It was with great difficulty, it now seems, that the Federation could make its members work the VPRS until the end of May. Thereafter, it seems to have thrown up its hands and the scheme has virtually ceased to operate, as many mills find it to be hopelessly unworkable. They have long been regarding its operation as a big farce. And yet it is alleged that all mills have already started stamping fantastically higher prices. What has really happened is that only a few of them, having lost all hopes of an early official decision, have adjusted the prices of a few of their varieties, and the total cloth involved in this process of price readjustment is said to

be no more than about 3 to 5 per cent of the total available cloth. In any case, it is nowhere near the region one is led to believe from all the ballyhoo about soaring cloth prices that one hears these days from the public. But without it, it is a moot point whether the authorities would have taken serious view of the question of cloth prices. It is an ill wind that blows no good.

★★

The problem of food supply to the State has apparently eased due to the measures taken by the Centre. The measures are reinforced by steps to remove delays in the clearance of foodgrains from the docks. Mr. C. Subramaniam, Union Minister for Food, who was here personally to investigate the position, stated in a Press Conference that the Government of India has decided to abolish contract labour engaged in the unloading of imported foodgrains in Bombay docks. In future, the handling of foodgrains in Bombay docks would be done departmentally by the Union Food Ministry through its regional food directorate. This decision has been taken in the interest of better organisation of unloading work in Bombay docks and would be implemented soon. He also said that Government had decided to extend the incentive scheme to "matadi" workers. The Bombay Port Trust authorities would submit a scheme in this regard to the Government of India. So far, this scheme was applicable to dock workers other than the "matadi" workers. He expressed the hope that these decisions would help to speed up the clearance of foodgrains. He pointed out that with the proposed unloading on barges on the other side of the ships for attaining the clearance capacity of 10,000 tons per day, the congestion in Bombay harbour would be removed within three to four weeks. Making a reference to the food position in Maharashtra, the Union Minister said that the Madhya Pradesh Government had assured that it would honour its commitments in regard to the supply of foodgrains on State-to-State account. Under the present arrangement, 20,000 tons of foodgrains would have been moved from Madhya Pradesh to Maharashtra by July 1. Any deficit in supply would be made good by the Centre. The Centre had also agreed to meet the indigenous wheat requirements of Maharashtra to the extent of 2,00,000 tons for the current season.

★★

According to the latest Census of Manufacturing Establishments, for 1961, now available, Maharashtra ranks as the second biggest in the country in the proportion of workers in the registered factories and has 19.1 workers per 1,000 workers against West Bengal's slightly higher proportion of 19.9 workers per 1,000 workers. In manufacturing, Bombay Division comprising Greater Bombay leads with the total of 505.10 workers per 1,000 workers. In this division are also included the backward Konkan districts. Nagpur follows Bombay with a total of 248.00 workers. Poona division ranks third with its relatively low proportion of 80 workers while Aurangabad's figure, that is 47.10, is the lowest in the State. In Bombay division, Greater Bombay has the predominant figure of 388.15

Will Unit Trust Boost Stock Markets?

From Our Correspondent

CALCUTTA:

DURING HIS brief visit to Calcutta last week, Mr. R. S. Bhatt, chairman of the Unit Trust of India, defined the scope and functions of this new organisation at a meeting with the members of the Calcutta Stock Exchange. Declaring that the Trust is a mutual fund which is meant to pool the savings of small investors and provide them a channel of safe investment, Mr. Bhatt said that the units were meant for long-term investment and not for quick gains. Therefore, transfer would not be generally permitted excepting in genuine cases such as from father to son. The units, however, would be resold to

workers. Greater Bombay alone provides employment to 4,68,101 workers or 38.82 per cent of the total workers; and they are employed in 26,023 or 8.12 per cent of the establishments in the State. Among the other districts of Maharashtra, Bhandara, Nagpur, Sholapur, Poona, Kolhapur and Nasik have various industries, and hence they are significant from the standpoint of industrial growth. The remaining districts have a very small proportion of industries, and whatever industries exist are more or less of servicing type.

Heavy Concentration

According to the census report, there are 3,20,460 factories and work-shops of all types in Maharashtra. Of them, 2,02,508 or 63.19 per cent, are in rural areas while the remaining 1,17,952 or 36.81 per cent are in urban areas. Since large factories of major industries are located in urban areas, of a total of 12,12,210 workers engaged in manufacturing establishments, only 3,76,508 or 31.06 per cent are in rural areas and the remaining 835,702 or 68.94 per cent are in urban areas. Even in urban areas, there is a concentration of factories in the 12 cities which together employ 51.97 per cent of the workers engaged in manufacturing in the State. So far as the major groups of industries in Maharashtra are concerned, the cotton textiles industry with its 38,043 establishments employs 3,31,803 workers. It has also the highest proportion of workers engaged in manufacturing, that is, 273.72 per 1,000 workers. In this industry, urban areas account for 65.13 per cent of establishments and 90.14 per cent of the workers. The tobacco products industry has 39,518 establishments absorbing 1,37,324 workers. Of its establishments 83.27 per cent are located in the rural areas and they absorb 67.26 per cent of workers in the industry.

The industry of basic metals and their products except machinery equipment has 24,055 establishments employing 1,12,950 workers. In this industry, a large proportion, that is, 76.89 per cent of workers is absorbed in 55.81 per cent of the establishments located in urban areas. The census shows that the proportion of industries using no power of any kind in rural areas is 928 per 1,000 establishments while the corresponding proportion is 829 per 1,000 establishments in urban areas. For liquid fuel, the proportion is 829 per 1,000 establishments in rural areas and 26 per 1,000 establishments in urban areas. So far as electricity is concerned, the proportion of establishments using it is low i.e. 7 per 1,000 establishments in rural areas while it is much higher i.e. 145 per 1,000 in urban areas. Establishments using electricity are increasing rapidly as rural electrification is speeded up. The figures of electricity consumed by industries shows that the consumption was 816 million KWH in 1951. It increased to 1,820 million KWH in 1959-60 and further to 1,853 million KWH in 1960-61 and to 2,148 million KWH in 1961-62 — a trend of increased consumption which is bound to be further increased as comparatively cheap electricity from the Koyna hydel and other projects becomes available. Of the electricity consumed in 1957-58, 60 per cent had been consumed in Greater Bombay.

the Trust itself and the refund of the values would be made as soon as possible after complying with certain formalities, including verification of signatures. Another policy declaration which Mr. Bhatt made was that the brokerage would not be raised from 4 per cent to one per cent as this would mean an additional load for the unit-holders. An office of the Trust will be shortly set up in Calcutta and members of the Trust will try to meet in this city at least once in every two months. The sale of the units of the Trust commenced, from July 1. Naturally, its effect on stock market activity is being widely discussed in investment circles. It is felt that its immediate

impact will not be considerable, although it is bound to influence stock market activity greatly in the long run as the operations of the Trust gather volume and strength. In the UK, for example, the total volume of funds invested by the Unit Trusts there at the end of 1963 exceeded Rs. 500 crores. The unit holding accounts in that country today number more than a million. In the United States, the growth of mutual funds has been even more spectacular. At the end of 1963, the total assets of these funds were more than Rs. 12,000 crores. This represents a trebling of the funds in a period of six years. The total number of accounts in that country has already approached 6 million.

Will the units prove popular in India? It is not easy to make a definite prediction, but the substantial tax concessions which this Trust will enjoy could well enhance its appeal for the investors. For example, the initial contributors of capital for Rs. 5 crores will be exempt from super tax on their income from the Trust; dividends up to Rs. 1,000 will be income tax-free and there will be no tax deductions at source by the Trust. The six per cent return may not be considered attractive under the present conditions in the capital market, but the units have the advantages of safety, liquidity, and capital appreciation. The fact that the authorities have fixed the maximum value of a unit at Rs. 100 and may even sell units of a value of Rs. 10 each is likely to attract the new investing classes in the urban areas, although the rural saver may not feel drawn towards it if only because he may not yet know the value of this new medium.

Investment Policy

The attractiveness of the units will also depend on the Trust's investment policy. In one of his recent statements, Mr. Bhatt has given some idea of the type of investment policy the Trust will follow. It will normally buy securities which have an overall yield of more than six per cent but taking into account growth prospects, it may purchase some securities even with a lower yield of, say, five per cent. The Trust will aim at building up a sound and balanced portfolio, maintaining a judicious balance between fixed income bearing securities and variable dividend securities. The latter category will include new issues with growth prospects. At a later stage, the Trust proposes to initiate savings or thrift plans designed to enable a saver of even moderate means to invest in units. Experience of similar bodies abroad shows that savings plans have great appeal to small investors, especially those belonging to the salaried class. There are several types of such plans such as regular savings plans, accumulation plans, providing for automatic reinvestment of income, and plans which are combined with life or endowment assurance.

In making its investments, the Trust will have to go in first-class securities which yield a return of 7 to 7.5 per cent, so that it will be possible for it to ensure a return of 6 per cent for the unit holders. It will choose from the offers of stock brokers, but will not take initiative in placing orders with them. Mr. Bhatt has justified this policy by pointing out that there are at present about 1,500 stockbrokers in the country, and the Trust cannot place orders with all of them. Doing business with only a select few will naturally arouse complaints of discrimination and partiality. Will the stock exchanges be dealing in its units? The Trust does not contemplate such a course at present; the sale and purchase price of the units will be announced by the Trust, but if it is found to be in the interest of unit holders, the matter will be reviewed in due course. How will the unit holders benefit from capital appreciation of their investments? Mr. Bhatt has said that the Trust has no idea of issuing bonus units because such a practice is not followed by similar bodies anywhere. The Trust will also not be distributing capital gains every year,

because the value of units is likely to fluctuate in that case. Rather, the capital gains will be a kind of reserve to cushion the effect of a depreciation in the value of units, when it happens.

This policy is apparently soundly conceived, but much will depend on how it is carried out in practice. One thing, however, needs to be pointed out. The growth of the Trust is interlinked with the prosperity of the private sector, and, therefore, it will have a vested interest in the good health of stock markets and the private sector as a whole. It will be in the interest of the Trust to provide support to stock markets in times of stress. At the moment, the new issues market is depressed, and share offers generally have failed to attract investors. Not that they are intrinsically unsound or lack growth prospects, but because of the adverse conditions in the capital market at present. It will be interesting to see how the operations of the Unit Trust are going to affect them.

★★

West Bengal's food situation is still as confused as it was before the State Chief Ministers met in New Delhi, but a good deal more confidence is perceptible among officials in dealing with the food crisis. This is because of the success which is being claimed for the State Government's scheme to cater to the food requirements of the entire population of Greater Calcutta area, estimated at some 6 million, since the past two weeks through fair price shops. But what is puzzling is that only 25 per cent of the ration cards registered with the authorities have been used to draw supplies from fair price shops. This is attributed to the existence of a huge number of ghost or bogus ration cards, but surely, the majority of ration cards could not be ghosts. If they were, it would speak very poorly of the official machinery issuing them. It is likely that families inflate the number of their members in order to ensure larger supplies of commodities like sugar than they would otherwise get. But ghost ration cards alone cannot explain why only the minority of families have been drawing their supplies from fair price shops. What looks a more probable reason is that most of the families may have stocked themselves with supplies to last them for a few weeks in anticipation of the difficult situation which was developing. What is also probable is that most retailers are making clandestine sales. However, encouraged by this experiment the Government is now thinking of extending the scheme to as many urban areas as possible. Various estimates of food requirements have been made, but what is not clear yet is whether the Government will have enough stocks to feed the urban population in the State until at least next October. It was reported at one time that the Central Government is disinclined to commit itself to further rice supplies than what it has promised already; it is reported now that the Centre will be giving additional help. Even if the latter report is correct, West Bengal will still need a lot more of Orissa's rice than it has got so far.

The Chief Minister of Orissa is reported to have stated that West Bengal could immediately get a sizable quantity of rice from the mills in that State, provided the latter is

GROW MORE

SAVE MORE

WORK MORE

willing to pay a little more. Rice prices in West Bengal are high, and Orissa is a surplus State where they should normally be lower. But prices in the latter State are said to be even higher than those prevailing in West Bengal. This paradoxical situation has arisen because of the prospects of larger rice exports from Orissa to West Bengal, although exports so far this year have been considerably less than they were at this time last year. Moreover, despite the estimated harvest of 5 million tons of rice in Orissa this year, the State Government puts the exportable surplus at only 250,000 tons because of increased local requirements. West Bengal, however, thinks that Orissa's surplus should be 500,000 tons hence the complaint that West Bengal has not been getting sufficient co-operation from Orissa in getting at least 300,000 tons it wants. Yet West Bengal is unwilling to offer a higher price because it may involve subsidies or a revision of officially fixed prices for the local wholesale and retail trade.

In Orissa itself, prices of rice have been steadily moving up, and according to one reliable estimate, they have risen by as much as 30 per cent during the past three months. Also, supplies of commodities like mustard oil, potato and onion, for all of which Orissa has to depend on outside sources, have become so scarce that the prices fixed for them by the Government under the Defence of India Rules have been only of academic value to consumers. Even vegetables like brinjals which are entirely home-grown are selling at prohibitive prices. The Government there, like State Governments everywhere, is showing itself to be entirely helpless.

In Bihar, the price story is not very different. Moreover, this is a deficit State in food, and stocks there at the moment are said to be low for this time of the year. The State Govern-

ment has been wholly depending on the Centre to come to its rescue, but now complains that the latter's allotment of quota has not only been very inadequate but supplies from that source are not arriving in proper time. According to one report, Bihar had asked for 320,000 tonnes of wheat and 80,000 tonnes of rice during four months from March to June, but the total allotment from the Centre so far is only 155,000 tonnes of wheat and 8,000 tonnes of rice. Consequently, the Government has been hard pressed to meet the supplies demanded by traders. Prices have been steadily going up and between January and June, there have been sharp increases in the prices of rice, wheat, dal, gram and mustard oil.

Assam too is passing through a food crisis. Rice prices, in particular, have soared to an extent which the supply position does not justify. In informed circles, the State Government's procurement policy has been mainly blamed for this. At first, the policy was to entrust only co-operatives with the task of procuring rice, but since they did not fare well, the policy has been revised and mills are now permitted to procure rice side by side with the co-operatives. This apparently has made matters worse. The co-operatives whose procurement drive was a failure — the Government's procurement target is now short of 35,000 tonnes — have withdrawn obviously annoyed by the fact that they have lost their monopoly. The mills are yet to organise their operations. Meanwhile, stocks have vanished from the markets. Even fair price shops complain of shortage of stocks. The State claims to have had a bumper harvest this year, but it has now asked for bigger supplies from the Centre which the latter is reportedly unwilling, or perhaps unable, to provide. The price situation, needless to say, is causing serious anxiety to the State Government.

Southern States Welcome New Food Policy

From Our Correspondent

MADRAS:

THE ANNOUNCEMENT by Mr. C. Subramaniam at the conference of Chief Ministers held in New Delhi last week and the decisions taken subsequently have had a dramatic effect on the rice trade in this part of the country. It had not been expected that the Union Food Minister would be agreeable to a lifting of controls over prices and movement within the zones especially as there was a feeling that buffer stocks were not large and there was uncertainty about further shipments under PL-480 agreement. The State Governments having surplus stocks of foodgrains were also reported to be eager to realise the maximum prices on export sales. There were besides opposing schools of thought regarding State trading. Indeed, it was anticipated that there would be a tightening of controls, instead of relaxation, in order to satisfy the extremists. The decision to dispense with immediate effect procurement and levy in Andhra Pradesh and Madras, therefore, came as a surprise. The compulsory levy was no doubt responsible for pushing up prices in the open market especially as there were restrictions relating to the movement of foodgrains between States. Andhra Pradesh particularly was worried about the distorting effect that prices for export varieties had on prices for qualities of rice consumed by the population within the State. Early this year, there was a ban on exports for a short period which led to a sky-rocketing in prices in Madras and elsewhere.

The restrictions, however, did not have the desired effect as there was a heavy deficit in Mysore and Kerala, the latter State particularly, and traders thrived on smuggling of large quantities of rice at fantastic rates. Meanwhile, the pressure on fair price shops became so great that it was not possible

to meet the demand of consumers standing in long queues, even on a restricted basis.

Under the new policy, free movement of rice has been permitted between the four States in the Southern Zone and the procurement and levy programme in Madras and Andhra Pradesh has been suspended. The significance of this move will be clearly understood only when it is known that the estimates regarding yield of the crop in different regions correspond with actual receipts. It is expected that the Southern Zone will account for a rice crop of 10.52 million tons against 9.84 million tons in the previous year, there being a significant increase in the yield of the crop in Andhra Pradesh. These two account for a crop of 8 million tons. Curiously enough, Andhra has a reputation of having large export surplus though Madras also is growing a large crop. This is due to the fact that Andhra Pradesh, which has a population of 35.9 million, slightly more than the population of 33.6 million of Madras, has a large number of people who eat coarse grains. The per capita consumption in this region is, therefore, less than in Madras. The surplus between the two States can be reckoned at about 1 million tons but Mysore and Kerala produce between themselves only 2.2 million tons for a population of 40.5 million, in the two States combined. Even allowing for a lower per capita consumption in these areas, there will have to be imports of 7,00,000 — 8,00,000 tons of rice from other sources. The difficulty in exporting rice from Madras and Andhra Pradesh when the levy system was in force, was therefore reflected in very high prices in the deficit areas, particularly in Kerala.

The Andhra Pradesh Government, however, has estimated that it would not be possible to export more than 6,00,000 tons to the deficit States as internal consumption has been

The moving fingerprints

increasing and there is also divergence between the estimates prepared by the State Government and those of the Centre. The validity of the official forecasts will be borne out by the developments in the next weeks.

It is accepted, however, that large stocks have been held back by the growers while there has been hoarding by the trade. This is perhaps responsible for the slump in prices in Nellore varieties by over 15 per cent immediately after the announcement from New Delhi. In Madras State, smaller declines in prices were recorded though in Madras City traders were not inclined to mark down prices immediately as they were carrying large stocks purchased at high prices. The new policy has been generally hailed and consumers are awaiting a further decline in prices. But there is some disappointment that sales through fair price shops will not be made as before and that co-operative societies and fair price shops may henceforth sell only imported rice in restricted quantities at even cheaper rates. If, however, there can be an assurance about regular availability in the open market at prices very much lower than the peak levels touched recently, the new measures would have been worthwhile. The rice millers also are happy that their activities will not be seriously restricted, at least for the time being, and there is no fear of their mills being taken over by the Government in pursuance of the policy of State assuming a dominant position in the foodgrains trade. There is anxiety, however, to know what will be the future policy that will be adopted in regard to procurement at specified price. If through greater encouragement to the cultivators and regular sales of imported foodgrains, a stable price level can be assured with an increase in output, the food problem can be less intractable than it is now.

★ ★
Mr. R. Venkataraman, Minister for Industries of Madras State, has taken advantage of his visit to New Delhi to impress on the Centre about the need for advancing the schedule of some of the projects so that the State grid could be considerably firm up and the recurrence of the power cuts, which have been an annual feature for some years, can be avoided in the future. It has now been accepted that the State Electricity Board should take up the construction of the thermal plant having a capacity of 300 mW near Madras. This thermal station may be based on imported coal or may also use waste gas from the proposed refinery, or both. It is also accepted that, from the technical point of view, it is necessary to have a high-power station in Madras if the intention is to receive power from the thermal station at Kothagudem in Andhra Pradesh that is proposed to be enlarged in pursuance of the plan for developing the southern grid. Mr. Venkataraman has also stated, after his return from New Delhi, that clearance has been given for erecting another thermal station having a capacity of 100 mW at Tuticorin. The Centre has agreed to the early implementation of the atomic power station at Kalpakkam, near Mahabalipuram in Chingleput District. Continuous power will be available from this source. It had been urged that the initial capacity also should be raised to 500 mW. During the next Plan period, thermal power will have to be generated in large volume especially as available water-power that the Neyveli thermal station would have to be expanded in a much bigger way. There will no doubt be regular additions to the capacity of the station in the next few years to 600 mW from 250 mW at present. It should be made sure, however, that following the stepping up of the capacity to 400 mW, there should not be any gap in completing the next stage. The first stage of expansion to 400 mW is expected to be completed by March 1966. As there is sufficient time for planning ahead, it should be the objective to install one set of 100 mW in the two years 1966-67 and 1967-68. The time between now and 1967-68 should be utilised for drawing up the plans for constructing a super station in a different place in the same area.

In that event, this station will be able to ensure regular additions to capacity of 100 mW beginning from 1968-69 so that, during the period of the fourth Plan, Neyveli alone would be able to account for additional capacity of 500 mW taking the total of capacity to 1,100 mW for the two stations together. It is, of course, assumed that the super station will ultimately have a capacity of 1,000 mW.

The importance of thermal power has been greatly appreciated during the present crisis. Even with the power-cut in force daily consumption was of the order of 8 million units of which thermal power constituted 6.6 million units. Neyveli is pumping into the Madras grid 5 million units daily. The position was so precarious that at one stage, it was found difficult to make good the shortfall in power generation when one of the units in Neyveli was out of commission for a few hours due to minor trouble. This difficulty was responsible for the authorities deciding on the imposition of a cent per cent cut in respect of high tension supplies in the hydel areas in the case of non-continuous process industries. Fortunately, the Electricity Board was in a position to step up hydel power generation when a few days later one of the units in Neyveli could not be operated temporarily due to difficulties in receiving supplies of lignite through the conveyor system. These difficulties are bound to be experienced when the various facilities are being utilised at high pressure. These developments only emphasise the need for building up adequate reserve capacity and also for examining the possibility of conservation of water resources in such a way that the cut is not necessitated in the middle or early in June every year. It is now becoming clear that the South-West Monsoon breaks out in the Peninsula after a delay of a few weeks. This may probably turn out to be the future pattern. The State Electricity Board will, however, be in a position to operate the hydel stations on a basis which will enable the conservation of available water resources in Kundah and Pykara because the Mettur Tunnel Scheme, which utilises the irrigation discharge, would have been put into operation by September this year. At Periyar also the extension scheme is expected to be completed before the end of this year. But this flexibility will not exist for more than three years as power consumption will be increasing all the time.

★ ★
In the present context there is naturally some irritation in Madras State over the latest report that the construction of Madras Oil Refinery might be delayed on account of the anxiety of the Central Government to negotiate an agreement with the participating foreign interests on a basis which will permit the use of crude oil purchased by the Central Government itself from sources other than those which the foreign interests might draw upon. This new thinking is certainly to be welcomed as any arrangement that might be made by the Government for purchasing crude oil on a rupee or a deferred payment basis or in pursuance of any other arrangement, would result in a reduced strain on the balance of payments position. But it is not correct to delay the construction of the oil refinery as, even without any arrangement for importing crude supplies on the basis indicated above, there will be considerable saving on refining operations alone. Even with the coming on stream of three refineries in the public sector by the middle of next year, it would be necessary to construct additional refining capacity as by the time the new units at Madras and Haldia are completed the consumption of oil would have risen appreciably. As many other schemes also are dependent on the early execution of the Madras refinery project and no specific advantage will be derived by taking a delayed decision, the Madras Refinery project should be put through immediately. Otherwise, there will be considerable agitation in the minds of the population in Madras State.

I WAS NOT quite happy when Mr. Lal Bahadur, decided to follow precedent and assume the Chairmanship of the Planning Commission. I was inclined to think that the change in the Prime Ministership gave to the Government of India a good opportunity to establish and build up the essentially advisory character of that body. But it is possible that I was mistaken for it is not unlikely that Mr. Lal Bahadur's association with the Planning Commission could inject into the mind and functioning of that body a dose of much needed practical good sense.

Here I must say that Mr. Asoka Mehta's entry into Government planning has not exactly been a success so far either for himself or for the Planning Commission. The trouble with Mr. Asoka Mehta is that he has spent so much of his life trying to make do with words where ideas are required, or with ideas where action is required, that he seems now to have permanently settled down (if "settled down" is the phrase) into some kind of a floating grey eminence, wafted aimlessly on the wind of his own extremely vocal wisdom.

It is becoming increasingly clear that the Deputy Chairman of the Planning Commission has not only not acquired so far any grip over the functioning of that body but also that he is unlikely ever to be able to give effective direction to planning. It must be said in fairness to Mr. Asoka Mehta that the Planning Commission was never a very coherently functioning organism, and it is, of course, tempting to argue that any successor to Mr. G. L. Nanda in the Deputy Chairmanship of the Planning Commission ought to be an improvement in some respects at least, and certainly where clear-headedness matters. But the disagreeable truth remains that the present Deputy Chairman has not been able to provide any very purposive leadership. In the circumstances, it may not be an altogether unsound arrangement for Mr. Lal Bahadur to keep the leadership of the Planning Commission in his own hands.

★ ★
It is, no doubt, true that the Prime Minister, as Chairman of the Planning Commission, cannot devote much time or attention to the organizational problems and the task of administrative streamlining which the Deputy Chairman has so far tended to ignore or evade either because he does not know what is required of him or because he still finds himself temperamentally unsuited to the exertions involved. But the Prime Minister could still make a valuable contribution to the more useful functioning of the Planning Commission by asserting a pragmatic view of development. This precisely is what he seems to have done last week when he took over the Chairmanship at a gathering of the members of the Planning Commission, including its Deputy Chairman. Mr. Lal Bahadur, it appears, has declared certain opinions which seem to have so violently upset prevailing notions that it is actually being said in Yojana Bhawan that some fresh thinking has at last become necessary and cannot altogether be avoided. The last Prime Minister, for instance, has had the courage to suggest that what might matter is not big planning as such but the achievement within a reasonable period of certain practical results in development which could visibly contribute to the economic progress and welfare of the people. Mr. Lal Bahadur is reported to have indicated that he is apt to be less impressed with the financial targets or even with opulent blue prints or prestigious projects than with a series of relatively small

but carefully selected and clearly directed efforts at increasing production and stepping up economic activity at the "medium" and "small" levels.

Incidentally, it is interesting to note that the Prime Minister significantly emphasized more than once the advisory character of the Planning Commission. Mr. Lal Bahadur is reported to have said that the essential function of the Planning Commission was to advise him — that is, the Chairman of the Planning Commission, who is also the Prime Minister — and through him the Cabinet and the Government. Many who heard him recall with wonder that Jawaharlal Nehru, in all his power and glory, never once used the first person singular in that manner, nor ever prescribed that the job of the Planning Commission was to advise him. Now that the quiet and mild-mannered Mr. Lal Bahadur has had the courage to re-define the character of the Planning Commission as an essentially advisory body which must tender its advice to the Government through him, it remains to be seen whether he will have the courage to follow this up by forcing through a process of ruthless reform and reorganization of Yojana Bhawan and thereby carve out of its sprawling bureaucracy a small, compact and purposively activated brains trust for the Government.

★ ★
"The Statesman", ever quick to turn to or turn out a bright phrase, has been having some excellent fun with the Home Minister's Hall of Justice or Diwan-e-Am. If Mr. Nanda chooses to spend an hour or so every morning listening to sundry complaints of corruption or high handedness on the part of government officials, it might possibly be because he believes that he cannot engage himself more usefully. It is, therefore, not for me to question his wisdom. But I must confess that I am nevertheless intrigued by such goings-on. I am tempted to ask, for instance, what has become of the President's durbars for the common man. I am told that this admirable institution continues to make its gracious contribution to the keeping alive of democracy in this country, and that the Wednesday audiences go on. When this is so, where is the necessity for the Home Minister getting into the act? I do not claim to be very imaginative, but at this rate I could easily visualize:

- Mr. Asoke Sen, keen on discharging adequately his newly acquired responsibilities for social security, deciding to let widows and orphans go to him at 4, Hastings Road with their tales of deprivation or distress;
- Mr. S. K. Patil who, whether he liked it or not, has become Railway Minister, trying to make the best of a bad bargain by keeping his house open for India's travelling millions who must surely be tempted to share with him their experiences of ticket troubles, late running trains, crowded compartments, or poor catering;
- Mr. Kamaraj having a "shamiana" put up on the lawn of his residence for the convenience of the Chief Ministers and other Congressmen who have helped him with the "consensus" and who may now be wanting to find out from him whether there is anything in for them; and so on.

V.B.

UNIT TRUST OF INDIA

(ESTABLISHED UNDER THE UNIT TRUST OF INDIA ACT, 1963)

Sale of Units Begins on 1st July 1964

Units of the face value of Rs. 10/- each, available in multiples of ten, will be sold initially at Rs. 10/- from 1st to 31st July 1964.

Investment in units gives you major advantages :

- *Assured Income
- *Safety of Capital
- *Liquidity of Investment
- *Important Tax Concessions

UNITS WILL BE AVAILABLE AT ALL BRANCHES OF THE FOLLOWING BANKS :

State Bank of India, State Bank of Hyderabad, State Bank of Mysore, State Bank of Bikaner & Jaipur, State Bank of Indore, State Bank of Travancore, State Bank of Saurashtra, State Bank of Patiala, Bank of India, Central Bank of India, Punjab National Bank, Indian Overseas Bank, Indian Bank, United Commercial Bank, Canara Bank, Bank of Baroda, National & Grindlay's Bank, Syndicate Bank, Devkaran Nanjee Banking Co., United Bank of India, Andhra Bank, Allahabad Bank, Chartered Bank of India, Bank of Behar, New Bank of India, First National City Bank, Mercantile Bank, Hongkong and Shanghai Bank, Krishnam Baldeo Bank, Tanjore Permanent Bank, Bank of Rajasthan, Lakshmi Commercial Bank, Hindustan Mercantile Bank, Bank of Maharashtra, Union Bank of India, Netherlands Trading Society, Oriental Bank of Commerce and British Bank of the Middle East.

Also from sharebrokers registered with Stock Exchanges at : Ahmedabad, Bangalore, Bombay, Calcutta, Delhi, Hyderabad, Indore and Madras.

UNIT TRUST OF INDIA
P. B. 2000, Bombay-1.

Trade Winds

FAIR TRADING CODE

THE MINISTRY of International Trade (now the Ministry of Commerce) as well as the Board of Trade have for some time past, been considering the need to evolve principles which should govern all dealings in foreign and internal trade of the country. A code of conduct for exporters which was drafted by the Ministry is now engaging the attention of Export Promotion Councils. Another 3-point Model Code of Fair Trading Practices for internal trade was drafted by the Ministry and sent in April, 1964, to the Federation of Indian Chambers of Commerce and Industry for its comments. After ascertaining the opinion of its member organisations on the 8-point Code, the FICCI has informed (in a letter dated June 24) the Ministry of Commerce that the draft Model Code is generally acceptable to it. The Federation has, however, urged that its adoption should be entirely voluntary. It has also been pointed out that practical difficulties may be encountered by certain trades in implementing the Code in full or in part. For example, it may not be possible for every retail trader in all urban areas to maintain a list of prices of all articles available with him for sale as provided in item IV of the Code. Manufacturers too, in certain lines, may face similar difficulties. While emphasising the need for a flexible rather than rigid approach to the implementation of the Code, and offering its own co-operation, the Federation has suggested that Government should seek the co-operation of the various chambers of commerce and industry and enlist their good offices in the matter of propagating the Code.

The draft of the Model Code of Fair Trading Practices as drawn up by the Ministry says that all manufacturers (i.e. producers and processors) and traders (i.e. wholesalers, retailers and merchants) who have registered themselves with the various Chambers of Commerce, Manufacturers' Associations, Trade Associations, and Commodity Boards, shall adhere to and abide by the Code of Conduct hereinafter prescribing that: (i) it shall be the duty of every manufacturer to develop and promote the industry on a well-organised basis, so as to make it a source of strength to the country's economy, (ii) it shall be the endeavour of every manufacturer or trader to ensure purity of quality of the articles manufactured, processed or sold, (iii) every manufacturer and trader shall maintain accuracy in quality in terms of weights and measures, (iv) every retail trader in all urban areas covering a population of over one lakh, shall maintain, at all times, a list, indicating in the local language the prices of the various articles available with him for sale, and he shall while selling these articles strictly adhere to the price so indicated, (v) besides the price list, every manufacturer and trader shall resort to price stamping, price marking or price tagging, whichever is best suited, in respect of all articles manufactured or sold by him, (vi) manufacturers shall, either jointly or individually, advertise or relashion their existing advertising campaigns, to declare the ex-factory price of the articles manufactured, wherever possible, (vii) no manufacturer or trader shall hoard goods with a view to profiteering by creating artificial scarcity, nor shall he resort to unfair means to eliminate free and healthy competition in the market, and (viii) it shall be the endeavour of every manufacturer and trader to scrupulously maintain business integrity of the highest order in his dealings with customers so as to inspire confidence in their minds.

CASTOR-SEED PRICES

Following the Central Government's decision to ban forward trading in groundnut, groundnut oil, mustard seed, etc., the Forward Markets Commission has been keeping a close watch on

the diversion of speculative activity to the related commodities. As a result of the discussion held by the Commission with the President of the Bombay Oil-seeds and Oil Exchange Ltd., the Board of the Exchange recently took certain steps to ease the pressure in the castor (June 1964) delivery. As the prices of the castor-seed futures September 1964 delivery are showing signs of unnatural rise, the Commission has decided to impose a limit of Rs. 2 per 250 kgs. on the weekly rise in the prices of the castor-seed June and September deliveries, and the limit would come into force whenever their prices rule at or above Rs. 180 per 250 kgs. Similar restrictions have also been imposed at the Ahmedabad Seeds Merchants' Association Limited.

INDIA AT MID-PASSAGE

In an article entitled "India's Trade with Britain" incorporated in a pamphlet "India At Mid-passage" published recently by the Overseas Development Institute, London, Mr. K. B. Lall, India's Ambassador to the Common Market countries, while analysing the trends of Indo-British trade points out that imports into Britain continue to rise, but unhappily, not from India and that India's exports are also rising, but not to Britain. The picture presented by British exports to India is also not particularly pleasing. Imports into India are being maintained at a high level, but Britain does not enjoy a fair share of India's market commensurate with traditional links between the two countries. While British exports to the rest of the world are rising, its sales to India stagnate at a low level. Britain follows a liberal policy in regard to imports from India, and India wishes to increase its imports from Britain. And yet, the quantum of their mutual trade is declining. The reasons for these paradoxes need to be identified. Apparently, some structural changes are called for if the trend is to be reversed. In the case of tea and tobacco, a saturation point in terms of consumer demand seems to have been reached. Despite quota-free and duty-free treatment accorded to India's industrial products, there are no visible signs of significant diversification of its exports. Nor has India been able to claim a fair share of Britain's rising imports of industrial, particularly consumer goods, from third countries.

In the pamphlet referred to above, Mr. William Clark, Director of the Overseas Development Institute, says that the rich countries should accept the responsibility for India's fourth Plan (1966-71) in the same way as the United States had accepted responsibility for Europe's recovery under the Marshall Plan. He opines that Russia and Eastern Europe may well be included in this new initiative which will involve a commitment to support the complete five-year Plan. Details of the amount of aid required will be worked out by Indian planners in association with representatives from the rich countries. Mr. Clark believes that at present just too little is being given with just too little effect and that there is a danger of it all being wasted.

The pamphlet contains papers presented to discussion groups at the Overseas Development Institute, on such subjects as "Population Policy" by Mr. Robert Neil and "Rural Industries" by Mr. E. F. Schumacher. In his paper, Mr. Robert Neil estimates that up to £45 sterling can justifiably be spent from the purely economic point of view on each prevented birth — this being the investment that will be required to produce an average annual income of £18 sterling. In the paper on rural industries, Mr. E. F. Schumacher points out that it costs about £3,000 sterling to create one job in industry in India (for steel the figure being £12,000 sterling). What is therefore needed is intermediate technology that will

create jobs in rural industries at £50 sterling per job. This, he says, calls for new technical devices and the development of new sources of energy — the wind and the sun for example.

PAINT EXPORTS

Orders for the sales of paint worth Rs. 2.5 lakhs have been secured by the six-member Indian paint delegation which returned recently after a tour of West Asian and East African countries. According to the leader of the delegation, Mr. P. C. Chanda, negotiations are currently in progress for further sales to the tune of about Rs. 5 lakhs. The countries visited by the delegation import paints and related products worth Rs. 8 crores annually of which India's share is only Rs. 3 lakhs. There is, therefore, considerable scope for stepping up exports of Indian paints to these countries. The delegation which was sponsored by the Chemicals and Allied Products Export Promotion Council, visited Bahrain, Kuwait, Baghdad, Teheran, Beirut, Damascus, Khartoum, Addis Ababa, Nairobi, Mombasa, Dar-es-Salaam, Kampala, Zanzibar and Aden.

DISTRIBUTION & SALE OF FOODGRAINS

Zonal regulation of movement of foodgrains is at present in force in the country in respect of rice and paddy and wheat and wheat products. The object of the zonal system is to promote regional self-sufficiency by conserving supplies for local consumption, isolate areas of shortages which could be taken care of by the Government, and reduce the cross-movement of foodgrains. There are four multi-State rice zones: (i) Eastern Zone comprising West Bengal and Orissa; (ii) the Western Zone comprising Madhya Pradesh, Maharashtra and Gujarat; (iii) the Southern Zone comprising Andhra Pradesh, Madras, Mysore and Kerala, and (iv) the Northern Zone comprising Punjab, Delhi and Himachal Pradesh. The remaining States are zones by themselves. In respect of wheat, there are eight zones and a residual area. The zones are: (1) Punjab and the Union Territories of Delhi and Himachal Pradesh; (2) Uttar Pradesh; (3) Rajasthan, (4) Madhya Pradesh, (5) Bihar; (6) Maharashtra and Goa; (7) Gujarat, Daman and Diu; and (8) Madras, Andhra Pradesh, Mysore, Kerala and Pondicherry. The residual area comprises Orissa, West Bengal, Assam, Nagaland, Tripura and Manipur. Rice and wheat can move freely within a zone. Inter-zonal movement is permitted with the consent of the Government of India and is restricted to Government or State-sponsored accounts.

FAIR PRICE SHOPS

Fair price shops selling foodgrains at reasonable prices are now functioning in almost all the important cities and towns including district towns. The issue price and the quantum of distribution through fair price shops are determined by the respective State Governments. Supplies to the fair price shops are made from Central stocks which are made up of imported wheat and imported as well as indigenous rice. In the course of the last three years the number of fair price shops in the country has increased from 48,000 to 77,000. The Central stocks for distribution through fair price shops has increased from 1.8 million tons in 1961 to about 2.8 million tons in 1963. During the first five months of 1964, about 2 million tons of foodgrains were supplied from Central stocks for distribution through the fair price shops.

ANOTHER OIL TANKER

'Vikram Jayanti', the 54,350 tons super oil tanker built by Mitsubishi Shipbuilding & Engineering Co. of Japan was delivered to Dr. Jayanti Dharma Teja, Chairman, Jayanti Ship-

ping Co., on June 22, 1964, at Mitsubishi's Shipyard at Nagasaki in Japan. 'Vikram', with its overall length of 754 feet and its breadth of 108 feet, will be the largest vessel on Indian Registry. It has the capacity to carry approximately 52,000 tons of oil when fully loaded and it requires a 36 feet draft. The vessel, which has been built at a cost of Rs. 325 crores, will be manned by an all Indian crew of 77. It will start earning valuable foreign exchange for India the moment it leaves the shipyard as it has already been time-chartered for a period of 12 years to ESSO Standard Eastern Tankers Ltd. 'Vikram' is India's third oil tanker, the first being 'Adi Jayanti', which came under Indian flag some two years ago. With the addition of 'Vikram Jayanti' the Company's tonnage touches the mark of 4,50,000 DWT. Besides the new super tanker, the Company owns twelve 10,000-11,000 DWT cargo vessels, seven bulk carriers (totalling 2,31,000 DWT) and an oil tanker 'Adi Jayanti'. The Company's eighth bulk carrier, 'Samudragupta Jayanti', is also due for delivery this year and its three combined oil/ore carriers each of 21,000 DWT, are expected to be ready for delivery next year.

DRY FISH TO CEYLON

According to Mr. M. P. Alexander, Chairman of Marine Products Export Promotion Council (MPEPC), talks between a three-member delegation of MPEPC and representatives of the Ceylon Co-operative Wholesale Establishment (CWE) — the monopoly organisation dealing with the entire import-export trade in Ceylon — on measures to step up exports of Indian dry fish to Ceylon have ended "satisfactorily". CWE has agreed to speed up payments and simplify cumbersome procedures which stood in the way of boosting exports of dry fish from India to Ceylon. CWE has also agreed to raise prices of five varieties of dry fish by percentages ranging between 15 and 40. The price increase will come into effect on June 21 and will remain in force till September 30, 1964 after which there will be a further revision for the next season commencing in October. The increase in prices will benefit the country to the extent of Rs. 15 to Rs. 20 lakhs over the normal annual exports valued at over Rs. 15 crores. These benefits will be shared by Kerala, Madras and Maharashtra, from where India's dry fish is exported to Ceylon.

India had been exporting various kinds of dry fish to Ceylon for the last many years. These exports, in terms of quantity, were of the order of 20,000 to 25,000 tons, valued at Rs. 3 to Rs. 4 crores every year. But in 1962, the Ceylon Government abolished the system of private import of dry fish into the island and entrusted the entire monopoly of the import trade to CWE and, as a consequence, the export market of Indian dry fish to Ceylon 'almost collapsed'. However, under the Indo-Ceylon trade agreement, concluded towards the end of last year, Ceylon agreed to take 20,000 tons of dry fish every year from India. But in terms of that agreement, Indian exporters had been experiencing some practical difficulties in achieving the target. It was for the removal of these difficulties that the MPEPC delegation visited Ceylon and arrived at a satisfactory agreement with CWE.

KHANDSARI LEVY REDUCED

For the convenience of the manufacturers of Khandsari sugar a procedure of Compounded Levy was introduced by Government in 1960 and suitable rates of compounded levy were fixed. In consideration of the various representations received from the industry the Government of India has reduced the existing rates of compounded levy by one-third, for the period from July 1 to October 31, 1964, through notifications published in the Gazette of India, dated June 27, 1964.

Company Affairs

JAIPUR METALS

MR. R. H. KAMANI, Chairman, Jaipur Metals and Electricals Ltd., pointed out at the annual general meeting held recently that the company had recorded considerable progress so that turnover and profits touched new peaks. The turnover increased from Rs. 2.33 crores to Rs. 2.69 crores and profits, after providing for depreciation, increased from Rs. 23.79 lakhs to Rs. 30.24 lakhs. This 16 per cent increase was the result of well sustained production as well as sales of meters and other metal products. The timely commencement of the production of ACSR and of aluminium conductors, especially at a time when the allocation for copper conductor industry was discontinued, contributed considerably towards this progress. The Chairman was of the opinion that demand of these conductors was quite assured during the period of increasing generation of electricity in the country. In the sphere of meters, however, he seemed to be cautious because the production capacity, at the moment, was higher than the actual demand, with the result that there existed stiff competition in prices. Mr. Kamani informed the shareholders that the company was taking necessary measures to face this situation.

The company has been making efforts to be self-sufficient in the manufacture and procurement of meter components. He expressed satisfaction over the fact that with the exception of jewel bearings, magnet and small percentage of sub-parts of the cyclometer unit, which were presently imported, all other items were either made in the factory or procured indigenously. In fact all the necessary machinery for the manufacture of magnet was already installed and on the arrival of technical experts from its collaborators in Japan, the company will commence its production. It will also be able to manufacture the remaining small percentage of sub-parts for the cyclometer unit during the current year. The company was, therefore, in a positively advantageous position to face the competition which existed in the market. Mr. Kamani indicated that the company was making substantial efforts to carry through expansion and development schemes in other spheres as well. For instance in the near future it will be able to manufacture enamelled copper wires and cotton, silk and paper covered wires and strips. The company was also making efforts to improve the quality of its products as well as reduce the cost of production which was vital for any progressive institution.

Mr. Kamani referred to various taxes and indicated that frequent changes in the fiscal policy of the Government resulted in uncertainty in terms of future planning and development of industries. He, therefore, emphasised the need for stable policy for at least a certain minimum period. While he welcomed a rebate of 10 per cent on income tax and super tax and a rebate of 20 per cent on surtax in case of certain key industries to which this company also belonged, but, by and large he was critical of the introduction of tax on equity dividends which whittled down the reliefs otherwise obtained.

TRAVANCORE RAYONS

Mr. M. Ct. Muthiah, Chairman, the Travancore Rayons Ltd., outlined the factors that caused a comparative decline in the production of rayon yarn from 2.16 million kgs. in 1962 to 1.38 million kgs. in 1963. The production of cellulose film, however, registered a welcome increase from 1.48 million kgs. to 2.57 million kgs. so that total sales during the year were higher at Rs. 3.43 crores against Rs. 3.13 crores last year. Lower output of rayon yarn was the result of the non-co-operation of labour as well as the continuously increasing costs of almost all the raw materials. Crippling excise duty, income-tax and other multifarious levies, higher interest and insurance charges also added to the increasing costs. The provision for depreciation had also to be higher due to addi-

tions to fixed assets, but the real damage was done by the non-co-operation of labour for several months. The relations with labour, especially with the spinners, were strained which resulted in a low quality output causing accumulation of stocks. After protracted negotiations the relations were brought to normal but in the meanwhile considerable damage had been done. It was indeed extremely unfair on the part of the labour leaders to indulge in such wasteful pursuits. The Chairman indicated, however, that at present the relations with labour had shown marked improvement and the quality as well as quantity of rayon production had been quite satisfactory. The company can, therefore, hope to show much better results during the current year.

The Chairman pointed out that the company was moving ahead with its programme of expansion and renovation. The new spinning machine ordered sometime back had arrived and will go into production in about two months. This machine utilises the latest developments in the rayon industry and incorporates the technology evolved by the most advanced producers like E.I. duPont de Nemours Inc USA. Its application to import further machines is pending with the Government as the company finds it prudent and advisable to import only the latest types of machinery. Its cotton linter pulp plant, the first of its kind in India, went into commercial production during the year under review. The quality of pulp was considered satisfactory. The full rated production of 10 tonnes per day would be achieved shortly after the installation of some balancing equipment received recently. The company has been in touch with the latest developments in synthetic fibres and all the latest appliances were put into use.

The Chairman made a brief reference to the investment climate and added that the Government seemed to be conscious enough to keep the market sufficiently buoyant. But in practice, he added, the budget for 1964 had not provided any such impetus and in fact several measures like the dividend tax, tax on bonus shares and many other imposts had created considerable nervousness among the investors and entrepreneurs.

DEMAND FOR REFRACTORIES

Mr. J. Dalmia, Chairman, Orissa Cement Ltd., indicated at the annual general meeting held recently that demand for both silica and basic refractories had not increased in line with the creation of excess capacity in the industry. He said that despatches of silica and basic refractories were lower on account of lack of orders. A year before he had emphasised the need for a careful appraisal of the future demand for refractories before planning an increase in the capacity. But now the position had further deteriorated and the industry was facing a crisis. The present production capacity along with that to be implemented by 1965-66 exceeds the demand which was unlikely to move beyond 1963-64 level until 1967-68. He informed the shareholders that at recent discussions at Refractories Panel meetings it was revealed that the installed capacity of refractory industry at the end of 1963 was 828,980 tonnes which at the end of 1965 will rise to 1,291,320 tonnes. planned on the basis of annual production target of 10 million tonnes of steel ingots by the end of the third five-year Plan. Recent forecasts revealed that this target could be achieved only by 1967-68 and ingot production of steel by the end of the third Plan was estimated at 7.16 million tonnes which clearly explained the imbalance that prevailed in the output and demand of refractories. Mr. Dalmia, therefore, warned that during 1964-65 and 1965-66 demand for refractories — fire bricks, silica bricks and basic bricks — would be nearly 54 per cent to 56 per cent of the capacity available with the industry.

These estimates were based on the consumption pattern in 1963. The chairman carried the point further and stated

THE ORIENTAL FIRE AND GENERAL INSURANCE COMPANY LIMITED

Speech delivered by the Chairman, Shri B. K. Kaul, I.C.S., at the Sixteenth Annual General Meeting of the Shareholders on Tuesday, the 30th June, 1964

(1) The Report, Accounts and Balance Sheet for the year ended 31st December, 1963 are already in your hands and, with your approval, I propose to take them as read. Before we proceed to consider these for adoption, I would like to review some of the points which had a bearing on your Company's working during the year.

(2) Mr. Jawaharlal Nehru suddenly passed away on Wednesday, 27th May, 1964. Mr. Nehru's death is a stunning blow to the entire nation. An anguished Nation has been mourning the sudden passing of her most beloved son, an illustrious fighter for freedom, an outstanding statesman, a world leader. He occupied a place in the hearts and hopes of hundreds of millions of our countrymen. He was the architect and symbol of modern India. By his death our country in particular and the world in general has suffered a grievous loss. The best tribute we can pay to our departed leader is to work hard and do our duty well so that our country may prosper.

(3) As I mentioned last year, your Company was appointed by the Government as its sole agent in connection with the administration of the Emergency Risks Insurance Schemes (Goods & Factories). During the year 1963 the Company received over 4,24,279 applications under these Schemes at 163 centres all over India. I am glad to say that the Company was able to cope up with the enormous work connected with the applications in a satisfactory manner. The work was done by the Company entirely on a non-profit basis.

(4) In the foreign field, the Governments of Ceylon and Burma restricted the writing of general insurance to State Institutions from 1st January and 1st February, 1964, respec-

tively. In both these territories we had been doing modest but profitable business for a number of years. As the unexpired business is not being taken over, we are required to run off the existing risks and, therefore, have to keep a skeleton staff for some time to come.

In Kuwait a new agency was established in 1963 and its results have been satisfactory.

Whilst our operations in Pakistan gave us cause for concern in earlier years, we have been able to take effective measures to put the business on an even keel by setting up a regional office at Dacca exercising better control on underwriting and claim and by exploring fresh avenues of profitable business.

In Africa, a Union of the Republic of Tanganyika with Zanzibar was recently announced. We have been operating in East Africa including these two territories for a number of years and I have no doubt that the Union shall provide increased opportunities for expansion of our business.

I had stated last year that we were progressing in the matter of expansion of our foreign business with caution. Whilst this policy has continued we have explored the possibilities of expansion in the Middle East and other Arab countries. It may perhaps be possible to make a beginning in some of these areas during this year, as our negotiations in some cases are quite far advanced.

(5) Turning now to the results of the year's working, the net profits for the year of the Company after making provisions for taxation is Rs. 17.11 lakhs as against Rs. 19.40 lakhs for

Freedom is in peril, defend it with all your might

DEFENCE IS YOUR JOB TOO

To equip a jawan at the frontline adequately, fifty to hundred people will have to work on the home front. More and more materials and supplies should flow to meet the growing needs of Defence.

Your job is vital. Work resolutely to eliminate slackness and waste and raise national efficiency.

YOUR DISCIPLINE IS INDIA'S STRENGTH

the year 1962. The slight fall in the net profits has been due to an increase in claims and in the salary and allowances paid to the staff under the revised agreement.

The Gross Premium income of the Company in 1963 was Rs. 1,014.93 lakhs as compared to Rs. 878.62 lakhs in 1962. After fulfilling the statutory obligations and making other cessions the net premium of all departments increased from Rs. 492.29 lakhs for the year 1962 to Rs. 583.88 lakhs for 1963 showing an increase of Rs. 91.59 lakhs i.e. 18.60 per cent over the previous year's figure. This increase is made up of Rs. 74.25 lakhs from business transacted in India and Rs. 17.34 lakhs from business transacted out of India. Considering the market conditions this rise may be considered quite satisfactory.

The overall claims ratio of net claims to net premiums has shown an upward trend i.e. 59.71 per cent for 1963 as against 56.09 per cent for 1962.

In the Fire Department the claims ratio for the year 1963 was 46.31 per cent as compared to 34.83 per cent for the year 1962. The increase in the claims ratio was mainly due to adverse experience on our Foreign acceptances. On the Miscellaneous side the claim ratio has increased from 57.79 per cent for the year 1962 to 61.22 per cent for 1963, largely on account of continued adverse claims experience in Motor Department in India and out of India. On the Marine side the claims ratio for the year 1963 has registered a fall to 90.34 per cent as compared to 93.26 per cent for 1962.

The overall ratio of commission and expenses of management to net premiums is around 32.4 per cent which is considered satisfactory.

As a result of the year's working the Departmental Reserves have shown an impressive increase of Rs. 44.33 lakhs at Rs. 328.69 lakhs for the year 1963 as compared to Rs. 284.16 lakhs for the year 1962 showing an increase of 15.67 per cent over the previous year's figure.

Our Investments as at 31st December, 1963, aggregated to Rs. 457 lakhs and the total depreciation thereon was around Rs. 4.50 lakhs and is more than adequately covered by the Investments Reserve. Considering the magnitude of the total investments and the general fall in the prices of shares and securities, it will be seen that the depreciation of 0.98 per cent is nominal.

(6) Your Directors have recommended dividend at the rate of 8 per cent (subject to deduction of tax at prescribed rates) on the paid up value of shares as compared to 6 per cent for the year 1962.

The General Reserve has been further augmented by an appropriation of Rs. 3.75 lakhs.

The year's working has resulted in a substantial increase in the funds of the Company from Rs. 454.14 lakhs in 1962 to Rs. 504.60 lakhs in 1963 registering an increase of 11.11 per cent over the previous year's figures.

7) In conclusion, I take this opportunity to express my thanks to our clients and well-wishers both in India and abroad who have continued to extend us their support. I also thank the officers, staff and development officials of the Company for their loyalty and good work.

N.B.: This does not purport to be a record of the proceedings of the Annual General Meeting.

IT
DAGGER BRAND CUTTERS FOR LASTING PRECISION PERFORMANCE

BACKED BY 25 YEARS OF TRADITION and rigid control at every stage of production **DAGGER BRAND CUTTERS** (available in metric and inch sizes) assure precision performance. They are made of superior quality steel, specially heat-treated to ensure long life, and manufactured in India's biggest and most modern factory for Small Tools. **THE INDIAN TOOL MFRS. Ltd.** 101 Sion Road, Bombay 22

ORISSA CEMENT LIMITED

Summary of the Speech of the Chairman, Shri J. Dalmia, delivered at the Fourteenth Annual General Meeting of the Company held at Raigangpur (Orissa State) on 29th June, 1964.

Gentlemen:

I welcome you to the 14th Annual General Meeting of your Company.

Although more than a month has passed since the fateful 27th day of May, we are still burdened with the sense of our heavy loss and great sorrow at the sad and sudden passing away of our great leader, Pandit Jawaharlal Nehru, who, as the first Prime Minister of India, has guided and shaped the destinies of our country since independence. His passing away has been mourned by the world at large for he was not only the architect of modern India but an acclaimed and accepted leader in the international sphere. His devotion to the ideals of peace and brotherhood of man stands out like a beacon to guide the path of mankind through the years ahead. Let us in tribute to his memory, resolve to move forward together to achieve his dream of a peaceful, prosperous and united India.

2. We are indeed fortunate that the leadership of our country is now in the hands of Shri Lal Bahadur Shastri, who took up the onerous burden of the Prime Ministership of the country on the 9th June. Shastriji, as he is commonly and affectionately known throughout the country, can best be described as the great commoner. Of humble birth, he has risen to the leadership of the Nation. A conciliator and negotiator par excellence, he was relied upon by Pandit Jawaharlal Nehru in many a difficult situation. During his tenure as Home Minister, Shastriji amply demonstrated his acumen and firmness. His services to the Nation and to the common man are too wellknown to need repetition. In his devotion to the ideals of the Father of the Nation, Mahatma Gandhi, handed down to him by Panditji, and his pragmatic approach to national and international problems, we must find hope again to move forward to the goal of a prosperous India and a peaceful world. In offering our respectful felicitations to Shastriji, let us also pledge ourselves to strive, each within his own sphere, to help in the immense task of nation building.

3. Your company has suffered a grievous loss in the untimely death on the 27th of April, 1964 of Shri N. C. Roy, who was a member of your Board and also served the company as its Technical Advisor. In the course of his long association with our Organisation extending over 30 years, Shri Roy had rendered dedicated service and was held in high esteem for his deep knowledge of the industries with which he was associated. He made valuable contributions to the work of various Technical committees and the Panels on the cement and refractories industries set up by the Government of India. I was closely associated with Shri N. C. Roy throughout his service with our organisation and his sad demise is a great personal loss to me. I am sure you will join me in placing on record our deep appreciation of his manifold services to the company and expressing our heartfelt sympathies and condolences to the bereaved family.

4. The major reason for the set back to the working results has been the shrinkage in demand for both silica and basic refractories. Last year I had warned against the creation of excess capacity in the refractory industry. My fears have come true and the despatches of Silica and Basic refractories have suffered during the year under review on account of lack of orders. Factors beyond the control of the

producers such as increases in the coal price, surcharge on railway freight etc., have resulted in increases in production costs of cement. The industry has reported the incidence of these various levies to the Government of India and has represented that the retention prices payable to the producers be increased but it is regretted that till date no decision has been taken by the Government. Compensatory increase in the retention prices in respect of actual increase in production cost due to Governmental action had been recommended by the Tariff Commission and agreed to by the Government. It is only fair that these assurances should be implemented and the increase in retention prices expedited.

5. Both in my address in June 1962 and last year I had emphasised the need for a careful appraisal of the future demand for refractories for planning increase in the capacity of the industry. Last year, I also drew attention to the demand for refractories falling short of the growing capacity and consequent increase in idle capacity with the industry. The position has deteriorated further and the industry is faced with a crisis, which is likely to continue for sometime, due to its production capacity, existing and to be implemented by 1965-66, far exceeding the demand which until 1967-68, is unlikely to increase substantially over the 1963-64 requirements.

6. As derived from discussions at recent Refractories Panel meetings, the installed capacity of refractory industry (excluding mortars and dead-burnt magnesite) at the end of 1963 was 8,28,980 tonnes which, at the end of the years 1964 and 1965, will rise to 11,04,330 and 12,81,320 tonnes, respectively. Though additional capacity of 3,26,700 tonnes has been licensed, I am not taking that into consideration for presenting the present plight of the industry, as foreign exchange has not yet been provided for it. The expansion of refractories industry, just mentioned by me, was planned and is being implemented on the basis of annual production target of 10 million tonnes of the steel ingots by the end of Third Five-Year Plan. According to the revised forecast, this target can be achieved only by 1967-68, and ingot steel production for the earlier years is estimated at 5.92, 6.32 and 7.18 million tonnes for 1963-64, 1964-65 and 1965-66, respectively.

7. Based on steel production of 6 million tonnes during 1964-65 and 7 million tonnes during 1965-66, estimated demand of refractories — Firebricks, Silica Bricks and Basic Bricks — during these two years will be about 56 per cent and 54 per cent, respectively, of the capacity available with the industry. This confirms my forecast last year that by 1964-65 about 50 per cent of the industry's capacity would be idle. These figures are based on consumption pattern in 1963. With the introduction of an all basic open hearth furnace, the consumption of Silica refractories has steadily declined and before long the steel industry may consume very little silica bricks, except for the construction of new Coke Oven Batteries. The capacity released will of course be available for the production of other products. But with the switch over to all basic materials, as well as greater operational experience by the steel industry, the consumption of refractories has shown and will show a marked downward trend. As against the estimated Five-Year Plan of 90 Kg. per ingot tonne for open hearth process using Silica roof, the present official estimation is

only 57 Kg. per ingot tonne, comprising of 35 Kg. for firebricks, 14 Kg. for basic and 8 Kg. for silica. The corresponding consumption figures for highly advanced steel producing countries are now approximately 7.5 Kg., 7.3 Kg. and 2.8 Kg. per ingot tonne, respectively. The steel industry will no doubt make efforts to reduce the consumption further due to the emphasis by the Government on cost reduction. This trend cannot, therefore, be ignored by the Refractory Industry in the planning for its future growth. When these factors are taken into consideration, it is conceivable that the refractory industry may find itself with well over half of its capacity idle by the end of Third Five-Year Plan.

8. According to the data furnished to the Panel on Refractories the production pattern in regard to the target of 18 million tonnes of steel by 1970-71 will be — Open Hearth 7.35, L.D. 9.70 and Electric Steel 1 million tonnes, respectively. Thus, ingot steel production by open hearth process by 1970-71 will be only little more than the anticipated production by this process at the end of 1965-66, and bulk of the additional steel production, when the 18 million tonnes target for 1970-71 is achieved, would be by L.D. process in which Dolomite replaces conventional refractories to a large extent. As such, growth of the demand for refractories in relation to the growth of the steel industry will be at a much lower rate than hitherto. In regard to rate of consumption of refractories for the conventional open hearth process and electric steel process there is divergence of opinion even within the steel industry and the studies by the Indian Refractory Makers' Association support the view of those who hold that the consumption will be very much less than that put forward by the protagonists of high consumption. This divergence has been reflected in the discussions of the Refractories Panel where a clear picture has not emerged partly due to want of adequate data from some of the steel plants. We hope they will furnish the required data for which they have been requested.

9. At a recent meeting of the Refractories Panel, revised firebricks consumption at a level of 18 million tonnes of steel production has been placed at 8,61,600 tonnes which, according to the industry, is very much on the higher side. The requirement for repairs for blast furnaces has been placed at too high a figure, while the future offtake of firebricks by non-steel consumers is likely to be around 4th of the total consumption instead of 1/3rd. A more correct estimate would, thus, be 7,26,000 tonnes. By the adoption of continuous casting process by the steel industry and the repairing of the entire blast furnace linings by gunning and not by shaped and fired bricks, the consumption of firebricks will fall further substantially. By 1966 the industry will have a capacity to produce over 10 lakhs tonnes of firebricks, which will be sufficient to cover the demand for such refractories even when the steel production target of 18 million tonnes is achieved. I would refer here to what has been described as steel plant quality brick to support the contention that the entire capacity of the industry is not suitable for the manufacture of refractories for the steel plants. Not all refractories indented by the Steel plants are of this quality as atleast one third of the total plants are of this quality as atleast one third of the total being made by almost every firebrick maker in the country. The remaining demand for high quality bricks can easily be catered to by the major refractory works. The conclusion is inescapable; there is no deficit of firebrick production, nor will there be in 1970-71, when the steel production capacity of 18 million tonnes is targeted for. On the contrary, there may still be even an excess capacity of nearly 2 lakh tonnes.

10. In the case of basic refractories the issue is even more controversial. At the meeting of the Refractories Panel in March last, a total figure of 1,36,103 tonnes of basic bricks was

arrived at for a level of steel production of 18 million tonnes according to open hearth, L.D. and Electric Steel processes. This figure has been questioned not only by the Indian Refractory Makers' Association but by some of the steel producers as being unnecessarily high. As indicated by various steel plants, their consumption of basic bricks by open hearth process per million tonnes of ingot steel is — Rourkela, 6,000, TISCO 7,270, IISCO 9,009, Durgapur 12,000 and Bhilai 20,000 tonnes. An average consumption rate of 13 Kg. per tonne was derived from these figures, which, however, does not give a true picture as four out of the five plants show substantially less consumption and their average comes to about 8.5 Kg. per tonne. The corresponding consumption figures by major steel producing countries in the world ranges from 4 Kg. to 9 Kg. per tonne. Bhilai Steel plant has been requested to furnish details for such a high consumption of refractories in their modern plant for proper assessment of their future requirements. It is felt that if this question is examined properly the consumption rate of basic bricks at Bhilai would not be more than at Durgapur, that is, 12,000 tonnes per million tonnes of ingot steel, which would reduce the total requirement of basic refractories for the open hearth process plant by 20,000 tonnes on Bhilai's projected capacity of 2.5 million tonnes of ingot steel. For the manufacture of electric steel the Panel assumed tentatively a consumption rate of 10 Kg. of basic bricks per tonne of steel. The consumption pattern of existing smaller electric furnace steel units is very much less than this. The authoritative figure of basic brick consumption in electric furnaces given by DEBENHAM of US Steel is only 5 Kg. per tonne. As the new and large electric steel furnaces which are to be put up for the production of one million tonnes of electric steel will doubtless incorporate the latest technological improvements, it would be safe to assess the consumption of basic refractories for such production at 5 Kg. per tonne of steel. Furthermore, in the total figure of basic bricks consumption, arrived at tentatively by the Refractories Panel, there is a provision of 10 per cent of the total consumption of basic bricks by the steel industry for other consumers. In 1963 only about 3.5 per cent of the total despatches of basic bricks went to consumers other than the steel plants. With the doubling of the production of basic bricks over the 1963 level the percentage of supplies to other consumers as against those to the steel plants will fall further and it would be more than adequate if a provision of 3 per cent for other consumers is made instead of 10 per cent. After allowing for these three factors, the total requirement for basic bricks by 1970-71 is placed around 101,700 tonnes, about 30 per cent less than that arrived at by the Refractories Panel. By 1966 the industry will have a capacity of 135,000 tonnes for basic bricks which would be more than adequate to cater to this demand particularly when allowance is made for further reduction in the rate of consumption of basic refractories due to further improvements in the quality of indigenous refractories and due to the increasing experience in steel technology which the Indian steel industry will doubtless have. Introduction of the "gunning" process for repairing of open hearth furnaces instead of by relining with shaped bricks will also reduce basic brick consumption.

11. I have referred earlier to the virtual elimination of silica refractories by the steel industry in future. The silica bricks capacity, a great part of which is already idle, would be available for switching over to basic brick manufacture, should that be necessary. There is therefore already a substantial built-in reserve available to the industry for further production of basic refractories without having to seek any extension in its capacity.

12. I therefore submit that, for the reasons stated earlier, the third Plan target for the refractory industry should be considered as having been converted into the 4th Plan target

to cater for an 18 million tonnes steel industry. Any further expansion of this industry therefore cannot be justified at present and if created must lead to chaotic conditions forcing some of the existing units to the wall with the unhappy consequences of unemployment, industrial unrest and waste of rupee and foreign exchange resources already employed. I believe that government would be glad to utilise the country's limited financial material, and trained man-power resources in other sensitive sectors of the economy instead of permitting further expansion in an industry where such expansion is not only unnecessary but would be injurious to the industry itself. It is pertinent to add here that whereas a new steel plant takes 5 to 6 years to go into operation, much can be accomplished by the refractory industry within a short space of time at a fractional cost. If, therefore, it is found that for any reason the demand for refractories is likely to exceed the forecasts made, additional capacity, as required, can be created well in time to meet the additional demand. This is, therefore, another reason why any proposals for further major expansions of the industry should be deferred for some years until it can be definitely established by pragmatic approach to the problem that there are reasons justifying creation of further capacity.

13. It is a paradox that while the industry today is burdened with idle capacity, imports of Refractories of the type manufactured in the country have been continuing, generally in the guise of package deals, even though Government had informed the Indian Refractory Makers' Association in June 1963 that imports of such Refractories would be allowed only after very careful screening. I would like to refer here to the recommendations of the Rao Committee on the "Utilisation of External Assistance" and Government's decisions thereon. Two of these recommendations which have been accepted are likely to increase the imports of Refractories as items of major plants and particularly by the public sector projects. I would earnestly appeal to Government to ensure that in the implementation of these recommendations the policy restricting the imports of Refractories should be strictly enforced until and as it has been established, in consultation with the industry that suitable material is not available indigenously.

14. With idle capacity as discussed by me, the Refractory industry must explore possibilities for export. Your company alive to this need and, at the invitation of the Government of India, is participating in the New York World Fair as one of the two exhibitors from India of Silica and Fireclay Refractories and the sole exhibitor of Basic Refractories. During 63 the Indian Refractory Makers' Association had suggested the Government of India to include refractories in all their

trade agreements with other countries and in their trade journals as one of the main commodities which can be exported in accordance with international standards. Africa, Middle East and South-East Asia should be natural outlets, but, unfortunately, ocean freight rates discriminate unfavourably against Indian exports. The Association is collecting data regarding the ocean freight rates in comparison to those from European and Japanese ports and will shortly submit to Government their recommendations to enable the Indian refractory industry to meet competition more effectively.

15. I had referred last year to your Company having developed the manufacture of certain special types of refractories such as Silica Coke Oven Bricks, Forsterite Bricks, etc. Efforts continue to be made to achieve further diversification of production as a possible method of meeting to some extent the difficulties arising from over production in the industry. While such diversification will doubtless assist the industry, its salvation must lie in controlling its further growth as the bulk of the requirements and hence of the production is for the conventional types of Refractories which are already produced.

16. Refractory industry continues to face the problem of multiple specifications regarding quality, shape and size adopted by the steel plants. The Indian Standard Specifications formulated with the help of steel industries' representatives still remain unaccepted in many cases. We hope Government will take further action to ensure universal adoption of the Indian Standard Specifications for refractories by the steel plants. This would help to restrict unnecessary imports and facilitate the manufacture and supply of refractories to the steel plants at short notice.

17. Delays continue to be experienced in the disposal of Mining Lease and Prospecting Licence applications, although there are indications of some improvement in this direction. I would like to repeat here the suggestions which I had made last year that rules and regulations should be devised whereby the legitimate claims of manufacturers and actual users of certain raw materials which are extremely scarce are recognised and upheld to prevent good properties, while being evaluated, passing into the hands of speculators thereby making it extremely difficult to programme the manufacture of heavy duty products such as Refractories on a regular basis.

18. Before I conclude, I would like to express our appreciation of the services rendered by the officers, staff and workers of the Company during the Year. **JAI HIND.**

N.B. — This does not purport to be a report of the proceedings of the General Meeting.

THE METAL BOX COMPANY OF INDIA LIMITED

Review by the Chairman, Mr. M. K. Vellodi

The Thirty-first Annual General Meeting of the Metal Box Company of India Ltd. will be held on Wednesday, the 22nd July, 1964 at 59 C, Chowringhee, Calcutta.

The following is a copy of the Review by the Chairman, Mr. M. K. Vellodi, which has already been circulated to members.

SALES

I am glad to be able to report another year of fruitful endeavour particularly as, in my review last year, I struck a somewhat pessimistic note based on the assumption that the greatly increased taxation, both direct and indirect, including such impositions as the compulsory deposit in the last year's budget was bound to curb the purchasing power of the consumer. Happily this assumption proved incorrect, and our Product Sales in the year ended 31st March, 1964, increased by 17 per cent to Rs. 13.85 crores.

Sales in all significant product groups increased, and during the second half of the year the new Paper Group commenced production. The encouraging volume of our order book for paper products at the year end is an indication that this addition to our packaging service will be widely welcomed.

Throughout the year and especially during the second half, the irregularity in the supply of raw material and, with certain products such as tubes, capacity considerations affected the service we were able to give our customers. In spite

NGB/46A

July 3, 1964

of these difficulties, ingenuity and good planning by the Company's managers again resulted in increased productivity, and generous long-term credit arrangements with our associates in England are now enabling us to undertake long overdue modernization programmes. The sales of non-tinplate products will be promoted vigorously during the coming year and with Calcutta No. 2's difficulties in tooling up for Defence work largely overcome, the sale of industrial components should be particularly strong. However, the availability of raw materials, especially tin-plate and polyethylene, also capacity to produce certain products will continue to determine the extent to which we can meet this year's strong demand.

Of late, Government has become increasingly aware of the important function of scientific packaging in the preservation of goods packed and the protection of the consumer. This is reflected in current plans for new manufacturing capacity for such essential packaging materials as tinplate, aluminium and polyethylene. A time lag is, however, inevitable before new capacity can be brought on stream. In this interim period the packaging needs of the Third Plan must be serviced without interruption. Failure to do so will have an immediate and severe inflationary effect. In the case of tinplate, for example, Rs. 1 lakh spent on imports generates the distribution of over Rs. 22 lakhs of essential consumer goods. In this connection, it is worthwhile considering the growth of all packaging, over the years of the Third Plan. We reckon that in 1960-61 the production of consumer packages valued at Rs. 107 crores, and employing 100,000 men enabled the distribution of Rs. 2,870 crores of consumer products. This amounts to 12 per cent of the aggregate value of the country's supplies in that year. By 1965-66 it is estimated that the planned growth in production of essential consumer commodities will require packaging materials valued at Rs. 213 crores and made by 150,000 men for the distribution of goods worth Rs. 6,620 crores.

If these statistics have been seldom considered in past Plans, it is perhaps because packaging as a service industry must of necessity operate behind the scenes. Our contact with the public is indirect. It is therefore all too easy for the proper consideration of our contribution and our problems to go by default. The consequence of apathy can be serious. It is, for example, essential that the country maintains an international standard of packaging and presentation if its consumer products are to succeed in world markets. Every well-packaged item of consumer goods may be a potential export; already some Rs. 28 crores of packaged consumer goods are exported annually from India to almost 60 countries all over the globe. The packaging service essential to the effort to diversify India's exports is a specialised one, requiring technology of a very high order. Fortunately, both Government and industry recognise this need. We, therefore, welcome Government's move to establish an institute of packaging in the country to assist Indian exporters with packaging and marketing know-how.

Packaging manufacture the world over is located substantially in the organised section of industry requiring as it does precision mass-production methods; investment in complex machinery; long-term research and development; and close scientific collaboration both with packers and the suppliers of raw material. Export requirements demand that India must have access to the mainstream of world packaging technology. Your Company serves this role and, by maintaining laboratories and development facilities in Calcutta and Bombay, makes sure that new techniques and product improvements are developed in consonance with India's own particular requirements and material availability.

In view of the current interest in the scale of industrial operations, it is relevant to mention that as in the case of your Company, far from being prejudicial to the development of the small-scale sector, large-scale enterprise can be of vital

assistance to its development. Metal Box, for example, establishes research facilities and develops new packages and packaging systems, builds up markets for them, establishes raw material supplies available to all, trains technicians and supplies for unrestricted sale previously imported packing machinery. Whether we like it or not we have in a most effective way brought up competition in our wake. In addition, we provide a direct stimulus to small industry from which our purchases each year exceed Rs. 60 lakhs. More important, the majority of our 1,500 customers belong to the small-scale sector. All of our customers, large and small, have access to our research and technical resources and a fund of technological and marketing know-how particularly valuable to the small packer. To take one example, our precision packages and advisory services have helped enterprising prawn canners on the West Coast — all of them relatively small-scale in comparison with their competitors overseas — to export over Rs. 73 lakhs worth of canned fish last year to markets as competitive as the USA. Our Cochin Factory was established particularly to provide these canners with on-the-spot can service. We also evolved a 'flattened' system of can despatch to reduce the freight cost factor for canners all over the country. For small canners in North and South India, we have set up reforming installations at Delhi and Madras which assembled, at cost price only, flattened Open Top cans made on high-speed lines in Calcutta and Bombay. We have supplied similar equipment to the Uttar Pradesh Government to serve the needs of small-scale canners in the rural areas of the U.P.

DEFENCE

Sales of ordnance supplies were below forecast during the year, owing to unexpected problems in equipping ourselves and in meeting the standards required by the ordnance inspection authorities. Your Company has so far invested more than Rs. 6 lakhs in plant, equipment, tools and dies for Defence work. As our difficulties appear largely to have been resolved, we anticipate a substantial increase in sales during the year ahead.

EXPORTS

After the previous year's setback, export sales went ahead again, increasing by 33 per cent to a new level of Rs. 28 lakhs. Extensive overseas touring by senior sales staff to reinforce the work of our agents secured notable gains in Burma, Ceylon and East Africa in particular. Our exports of domestic hardware and publicity materials increased by approximately 55 per cent and, to our great satisfaction, machinery sales again rose by more than 100 per cent.

Experience last year has made it abundantly clear that in the face of intense international competition it is far from easy to achieve and maintain the extremely high quality standards required in markets abroad. Your Company's efforts will be further intensified during 1964-65 although we anticipate problems arising out of political developments in Burma and in Ceylon.

I have already referred to our main contribution to the country's foreign exchange earning: the provision of packages made to international standards. In the past year our customers have earned more than Rs. 8 crores in foreign exchange through the export of goods packed in our containers.

To stimulate the growing awareness of scientific packaging, both for home and export markets, we organised over the year a series of seminars on consumer packaging for senior executives from amongst our customers, advertising agencies and Government. The seminars aimed at providing a comprehensive background on the subject of packaging to those concerned with the distribution and marketing of consumer products. This effort has been very well received.

RAW MATERIALS

Throughout the past year, and especially during the last four months, the procurement of raw materials presented dif-

July 3, 1964

scilities. Owing to delays in licensing procedures and the failure of the Russian authorities to fulfil commitments and a disappointing performance by Rourkela, tinplate stocks were very low during the last quarter.

The unfortunate communal disturbances at both Rourkela and Jamshedpur further reduced your Company's tinplate stocks and although the authorities were reasonably appreciative of our difficulties, arrivals against import licences cannot be expected in time to prevent further difficulty in meeting our customers' requirements. Increasingly we are being directed to import tinplate from sources which involves AID or Government-to-Government trading. While the need for this is accepted, the result for your Company is a loss of control over specifications and an unsatisfactory timing of deliveries through repeated procedural delays; also a general increase in tinplate prices.

The strongest possible representations have been made to persuade Government that India requires a minimum importation of 75,000 tons of tinplate during 1964-65. The demand for tinplate is now rising sharply and to the extent that it is not met a broad range of essential consumer products will not reach the markets. Every effort is being made, and must continue to be made, to develop substitute packs, but the climatic conditions, the rough handling and extended shelf-life to be expected in our country set a severe limit to the use of substitutes. For a long time to come therefore tinplate alone, for a majority of packs, will be able to meet these exacting requirements.

The foreign exchange bill for 75,000 tons of tinplate would be a little more than Rs. 8.60 crores; while the problems of financing importation at this level are not underrated, it is a relatively small price to pay in terms of the health of the consumer economy when set against the fact that this tonnage means the marketing of consumer goods including food-stuffs and many household necessities worth more than Rs. 190 crores at retail prices. Failure to import at this level must mean shortages which can only have a high inflationary impact on retail prices.

Aluminium supply scarcely balanced demand through the past year but availability in 1964-65 is likely to improve and advantage will be taken of this to push sales of non-tinplate products.

Polyethylene supply virtually dried up during the second half of 1963: the national sugar shortage led to an inadequate supply of industrial alcohol to the two polyethylene producers and the situation is not expected to improve much during 1964. Bearing in mind that to an extent polyethylene, either alone or when laminated with other materials, can for certain packs be a substitute for tinplate, it is regrettable that this shortage has been allowed to develop when adequate capacity for indigenous polyethylene production is either available or about to be commissioned.

With the starting of your Company's new Paper Group, we became for the first time buyers of board and paper on a substantial scale. It is clear that the quality of indigenous board leaves a great deal to be desired. However, our buyers, technical staff and research people are co-operating with suppliers in endeavouring to improve the quality available to us.

RESEARCH, DESIGN AND DEVELOPMENT

Paper Group. Modern high speed equipment has been installed at Worli in Bombay for the manufacture of international standards of paper packages: treated and laminated paper and boards, cartons made therefrom, wrap-around labels, labels for cans and punched labels for bottles. The low quality scientific and mechanical problems, but they have not stood in the way of a successful start. We already have a nucleus of highly skilled personnel and the training of staff has continued throughout the year.

Bombay No. 2. The new factory at Deonar was completed on schedule and the entire Open Top operation was transferred from Worli to these new premises. The transfer of tin printing has been slightly delayed due to the late arrival of imported balancing equipment. Deonar has been built to allow room for Paper Group at Worli and to enable the re-laying of our can-making equipment. When the transfer is completed the congestion at Worli will be considerably eased, resulting in the more efficient utilisation of plant and machinery.

Flexible Packing. During the year under review the Government sanctioned the expansion of our manufacture of Flexible Packages. Currently new equipment is being specified which will permit the expansion of our product range. A new laminate has been developed as a tamperproof diaphragm for tinplate containers combining the protective properties of foil, polyethylene and paper. The material has already been introduced for some packs and its functional properties are being examined for a wide range of other products.

Calcutta No. 2. Throughout the year Industrial Components section has been heavily engaged with Ordnance supplies; technical resources have been fully stretched and the Technical Development Division played a major role in the design and manufacture of press tools required for this work. Several heavy presses have been installed and the Factory now has a balanced press shop for a wide range of components for the electrical and automotive industries and components for munitions.

Machinery Building. Our plans for developing the Machinery Building Section of your Company have been affected by the defence requirements. Nevertheless the supply of closing machinery to customers had continued undisturbed. A valuable export order for production equipment was received from our overseas associates and here again the resources of the Technical Development Division were used to complete the project on time. Further export orders for similar equipment are currently under manufacture.

Research Division. A Customer Research Canning Laboratory is being established at Research Division to augment our advisory services to the industry. In this laboratory we will be able to reproduce canning conditions and experiment directly with the canning of new products. Throughout the year the Research laboratories in conjunction with suppliers have continued to develop wholly indigenous materials. Their field of operation has extended to cover the new Paper Group.

VISITS FROM ASSOCIATES

During the year we had the pleasure of welcoming Mr. C. E. Sutton and Mr. A. L. Stuchbery, Directors of The Metal Box Company Limited. Mr. Sutton, who is in charge of the Home Company's Administrative Services, was able to apply to your Company's problems his very considerable experience, particularly that in the field of raw material procurement. Mr. Stuchbery, heading Research and Technical Engineering, apart from being one of the world's leading can-makers, is Chairman both of the Council of the Institution of Production Engineers in the U.K. and the Production Engineering Research Association. He was therefore in an unrivalled position to the development of our Machinery Building and Industrial Component operations. Needless to say we welcome such visits which are both pleasant and useful.

EMPLOYEE RELATIONS

During the year under review, labour relations in the country deteriorated and the cordial atmosphere generated by the Emergency and the Industrial Truce Resolution unhappily began to disappear. This was most evident in the engineering industry of which we are a part: it particularly affected our employee relations in Bombay and North India.

If, as we are asked to believe, we are living in a state of

July 3, 1964

emergency, and if the country's paramount needs are increased productivity to strengthen its defence and its export trade and at the same time raising the living standards of the people, then it is essential that there should be on the part of labour an adequate realisation of its responsibilities in this matter and on the part of the Government a determination to ensure that unreasonable demands and indifference to the common weal either by employers or by labour are not given any encouragement.

In Bombay, where over the last 10 years we had successfully negotiated with representative committees elected by our employees, a concerted attempt was made by an outside trade union to create unrest and disturbance. As a consequence our relationship with our employees there during the last few months of the year was under considerable strain. Charters of demands were presented to the Company by three separate unions, all pressing for formal recognition by the Company. Acting in accordance with the Code of Discipline, we have not recognised any union so far. We have, however, concluded an agreement on dearness allowance and gratuity with a union which represents a majority of the monthly-rated staff as certified by the Maharashtra State Labour Commissioner. The demands made by the other unions were taken to conciliation which was infructuous. However, a bipartite agreement was reached with one of the unions representing the daily-rated employees.

Signs of tension were noticed in Faridabad throughout the year, which culminated in a four-day strike in March. This strike was entirely unjustified, since the issue on which it was called was already under investigation by the Conciliation Officer of the Punjab Government. The issue has now been referred to the Labour Tribunal.

After protracted negotiations, a comprehensive agreement covering terms and conditions of service was concluded with the daily-rated employees at Calcutta No. 1, Calcutta No. 2 and Technical Development Division. I am happy to report that with the signing of this agreement (operative till December 31, 1967) the restlessness which I mentioned amongst our daily-rated employees in the Calcutta establishments last year and in 1962 has largely disappeared.

Your Company continued to emphasise training at all levels within the organisation. Five officers and one Research Associate underwent training by Metal Box in the U.K. One senior manager was sent to the Administrative Staff College at Henley-on-Thames, and another attended the Advanced Management Programme organised by the All India Management Association at Bombay. We sponsored a candidate to the nine-month Junior Management Development Course of the Indian Institute of Management, Calcutta. A further thirty-seven managers have undergone the Company's residential Management Course in Calcutta at which we continue to welcome the participation by managers from our Malaysian and Pakistani associates.

Courses for supervisors were organised in the units in management, safety and work study. Forty-one apprentices were recruited under the Apprentices Act, in addition to seventy-three currently receiving training under the Company's apprenticeship schemes.

It is a pleasure for me to record the valuable co-operation of the Company's employees in our widespread activities and I thank them and the Management for yet another year's splendid performance.

BOARD CHANGES

It was only last year that I paid tribute to the services of Mr. K. C. Mahindra who served as Chairman of our Company for five eventful years. Unhappily he was not destined to enjoy for long the rest from all his labours in the interest of the industry in general and our own Company in particular. His death on 31st October, 1963, was deeply mourned by all of us in Metal Box and to his family, who survive him, we sent our

sympathy in their bereavement.

It was with real regret that your Board agreed to release Mr. John Cochrane-Barnett from the Board. His services to the Company during the last seventeen years and more — the last three as Deputy Managing Director — have been most valuable. His drive and determination, backed by his intimate knowledge of production and marketing in India have contributed in a substantial way to the continued growth of your Company's sales. His tactful and painstaking advocacy of our own and the packaging industry's need for raw materials have been as much respected and appreciated by officials in the Government as have his loyalty and breadth of vision by his colleagues on the Board. We shall miss him and I should like on your behalf and also mine to convey our thanks and good wishes to him.

We have lost another valuable colleague by the resignation of Sardar H. S. Malik from the Board. After a very distinguished career in the Indian Civil Service, Sardar Malik joined our Board as a Director in 1957. During the last seven years he has, by his wide experience of men and affairs, and by his ability in presenting our problems to the Government, been of the greatest assistance to the Company. On your behalf and also on mine I should like to convey our thanks and good wishes to him.

CONCLUSION

As a comparative new-comer to your Company I have been doing a certain amount of research into its fortunes. The graphs reproduced at the beginning of this report bear eloquent testimony to the Company's growth and prosperity which have been attained by hard work and by the application of progressive methods of production and management.

The smooth and effective manner in which the Company was able successfully to float in March 1964 a Rights Issue of over two crores of rupees is proof of both the soundness of your Company and the confidence that it enjoys in the country.

The speech of the Chairman at the Annual General Meeting of a company has become an occasion in this country and elsewhere for a review of the important events of the year or for the exposition of one facet or another of industrial philosophy. Sometimes these speeches include criticism — mild or otherwise — of the policy of the Government, and in particular of its Finance Minister. The temptation to join this chorus is great for the simple reason that I find myself in agreement with most of what has been said, and will continue to be said by others in the same position as myself. But I have often wondered what one would do if one were to find oneself in the unenviable position of the Finance Minister of the Government of India. Given the conditions that exist in our country today, namely the need to finance successive five-year Plans of increasing dimensions and defence budgets of staggering proportions, has a Finance Minister much of an alternative? His business is to raise the necessary finance. He cannot do so without hurting someone. All taxes, by whatever name they are called, are an abomination of the Lord: no one likes to pay taxes; but taxation of some kind or another in a civilised and democratic country is the most approved and legitimate means of raising money. All this does not mean that I do not share the views of far more experienced Chairmen of Companies than myself on the Budget and all that it implies; but it is just as well to remind ourselves that all of us — Parliament, Government and Industry — are labourers in the same vineyard; as we sow, so shall we reap.

I cannot conclude this report without referring to the untimely death of our beloved Prime Minister on 27th May, 1964. All our units closed on the afternoon of that day and all the following day in token of our grief. Our management and staff met together to mourn their and the country's loss. We "shall not look upon his like again".

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

July 3, 1964

EASTERN ECONOMIST

July 3, 1964

THE TRAVANCORE RAYONS LIMITED

Speech Delivered by Shri M. CT. MUTHIAH at the 18th Annual General Meeting of the Company at Rayonpuram on June 25, 1964.

Gentlemen,

I appreciate the honour done to me in electing me to the Chair for this meeting.

I am glad to welcome you all this evening to this the Eighteenth Annual General Meeting of the Company. The Chairman of the Board, Mr. A.R. Ramanathan, is now away on a tour and is hence unable to be present at this meeting.

Almost a month ago, the entire nation was jolted to hear of the sudden and untimely demise of our beloved Prime Minister, Pandit Jawaharlal Nehru. He was "one of the greatest figures of our generation", a world citizen, "an outstanding statesman whose services to the cause of human freedom can never be forgotten". "As a maker of modern India his services were unparalleled". "It will be difficult to reconcile ourselves to the image of India without Pandit Nehru's active and all-pervasive leadership". "In his death an epoch in our country's history has come to a close". Two qualities in him stand out prominently: he was an indefatigable worker, and sincerely devoted to the people he served. What greater tribute could we in industry pay to his memory than strive to emulate these two qualities: hard work and sincerity in what we do?

In the unanimous election of Shri Lal Bahadur Shastri as Leader of the Congress Parliamentary Party in succession to Pandit Nehru, we have "begun a new political era with dignity and determination". "Few other nations in the independent new world have matched India's political maturity". "Few could have managed such transition so well". The new Prime Minister has qualities which make him eminently fitted to guide the country in the critical years ahead. In the tasks that lie ahead of him, "he undoubtedly carries the widest support and goodwill of the people of the country".

The printed Annual Report and Accounts for the year 1963 have been in your hands for the past few weeks and may I, with your permission, take them as read?

I. WORKING RESULTS

The working for the year 1963 has shown a net profit of Rs. 25.86 lakhs, after providing Rs. 32.20 lakhs for depreciation, Rs. 8.50 lakhs for Development Rebate, and paying Rs. 39.95 lakhs towards excise duty (gross amount: Rs. 84.81 lakhs). You will notice that the profit has declined compared to that of 1962.

II. REASONS FOR DOWNWARD PROFIT TREND

The reduction in rayon production, and the need to provide a higher depreciation on account of additions to fixed assets have, to a large extent, contributed to the decline in profits. Considering depreciation alone the increase is about Rs. 5.45 lakhs and you will see that when this fact is taken into account, the net profit for 1963 will be almost on par with that of 1962. In fact, the results for 1963 would have been far better had the labour extended better co-operation. Protracted labour troubles (to which I shall refer in detail later in my speech), and consequent loss of rayon yarn production, have affected the profits considerably.

Also, a special factor which continued to operate against your Company (and other rayon spinners) was the concessional sales of rayon yarn, at heavy loss, to help export promotion of rayon fabrics. Considering our critical foreign exchange

position, and the long-term need to build up our export potential, I do agree that some sacrifice on our part is inevitable. But, then, care has to be taken to see that the indigenous industries are not throttled in the process. As for the other factors responsible for the lower profit, I can do no better than repeat what Mr. A.R. Ramanathan said last year. Despite increased sales, many reputed companies have, as you would have seen, had to report declining net profits and, consequently, declared lesser dividends than in the past. Generally, this trend has pronounced itself in unmistakable terms. The reasons are obvious: continuously and steeply increasing costs of almost all raw and auxiliary materials; crippling excise duty, income tax and other multifarious fiscal levies (which are growing in geometrical proportions); higher interest, insurance, and freight charges; and the higher incidence of labour costs (without corresponding increase in productivity).

In regard to securing relief from the Export Promotion Scheme, you will be glad to learn that Mr. A.R. Ramanathan, under the auspices of the Association of Man-Made Fibre Industries, led a high-level deputation to the Government, impressed upon them the pressing need to relieve the rayon spinners of the obligation to put up with the sale of yarn at considerable loss, and pleaded for suitable remedies. I am glad to inform you that, effective from May 15, 1964, Government have removed the order regarding sale of yarn at concessional rates to the weavers under the Export Promotion Scheme. The effect of this decision will be seen next year since we have fairly large stocks of pulp purchased, effectively at a higher price, under Export Promotion Scheme.

III. APPROPRIATION

Considering the various factors explained by me, I am sure you will agree that the working results of your Company should be considered satisfactory.

The profits of Rs. 25.86 lakhs, along with the balance of Rs. 0.18 lakhs carried forward from the previous year makes a total of Rs. 26.04 lakhs. Out of this sum, the provisions to be made are:

Development Rebate	Rs. 8.50 lakhs
Taxation	Rs. 4.60 lakhs
Preference Dividend (6.5%)	Rs. 3.25 lakhs

The balance of Rs. 9.69 lakhs only is available for payment of equity dividend. A further cut in the dividend has, thus, become unavoidable. However, with a view to declare a dividend of 12½ per cent on the equity shares, your directors recommend transfer of a sum of Rs. 3.00 lakhs from the Dividend Equalisation Reserve. When this is done, and a sum of Rs. 12.50 lakhs is appropriated for the equity dividend, there will be a balance of Rs. 0.19 lakhs to be carried forward to the next year. I may, however, point out, here, a feature of some consolation, namely, according to the latest Finance Act, the deduction of tax at source stands reduced from 30 per cent to 20 per cent. As a result, the dividend retention in the hands of the shareholders, when the gross dividend is 12½ per cent, will be 10 per cent, as against last year's retention of 10.5 per cent on a gross dividend of 15 per cent.

IV. PRODUCTION

The demand for both rayon yarn and cellulose film was satisfactory. But, due to the non-co-operation of labour, the

COMMUNICATIONS

Good communications — road, rail, shipping — are vital to a developing economy like India's.

As India's industries expand, traffic in goods increases. This creates the need for more motor transport, a larger merchant fleet, a denser network of roads and railways.

Rail, road and marine transport facilities were increased tenfold between 1948 and 1960.

A substantial share of the equipment that brought about this rapid development was supplied by German industries.

GERMAN INDUSTRIES —
PARTNER OF INDIA'S INDUSTRIAL PROGRESS

THE AUTOMOBILE INDUSTRY . . .

To rush men and material to threatened frontiers, motor vehicles are the quicker, more flexible, more economical means of transport.

In times of emergency, defence production may call for the mobilisation of suitable factories such as provided by the automobile and ancillary industries. They offer the scope for quick conversion of production to defence needs. They can turn out special types of vehicles to transport the army of men and their equipment more speedily, even to regions unapproachable by other means.

This is not the only way that the automobile industry serves the country's defence.

Each vehicle sold provides the Government with a large share of money in the form of taxes, duties and levies. An Ambassador car, for instance, contributes some 5140 rupees or one third of the "on the road" price of the car in Calcutta to the Government in this form. This revenue and those received from the ancillary industries that are largely dependent for their existence on the automobile industry provide to Government the wherewithal to meet a substantial portion of the cost of defence requirements.

supports national defence

CAR PRICE STRUCTURE :

INDUSTRY IS A
KEY INDUSTRY

ISSUED BY HINDUSTAN MOTORS LTD., CALCUTTA.

production of rayon yarn declined precipitously from 216 million kgms. in 1962 to 1.33 million kgms. in 1963. However, it is gratifying that the production of cellulose film registered a welcome increase from 1.48 million kgms. to 2.57 million kgms. The total sales are higher at Rs. 3.43 crores against Rs. 3.13 crores in 1962. I am also happy to say, that, at present, the labour is acquitting itself satisfactorily, and the quality and quantity of rayon production have shown a marked improvement. If this trend continues — as I hope it will — and we are also able to maintain the cellulose film production and sales at the 1963 level, we can look forward to encouraging working results for the current year. The supply position of raw materials is generally satisfactory; in the case of caustic soda however considerable difficulty is being felt in obtaining adequate supplies from indigenous sources. We are therefore, importing some quantities, taking advantage of the facilities offered by the Government in this connection. You will be pleased to know that the Government have announced that your industry is one of those few which are entitled to priority treatment in regard to import of raw materials and spare parts for maintenance. This will, no doubt, go a long way to help us maintain uninterrupted production and thereby avoid under-utilisation of capacity.

V. FINANCIAL POSITION

The borrowings from Banks at the end of the period under review stood at Rs. 1,44,60,594.09. By far, a major portion of the borrowings is made up of payments towards capital additions. In addition, a sum of Rs. 18,59,784.86, was obtained from the Industrial Finance Corporation of India as dollar sub-loan for financing the purchase of the six new spinning machines.

The financial position of the Company is sound, considering that it has been able to augment its total holdings under fixed assets by utilising the profit and depreciations earnings for further acquisitions. While there is no increase in the paid-up share capital, the present value of gross block is about Rs. 6.82 crores.

VI. EXCISE DUTY

The year under review saw a further steep increase in the levy of excise duty on rayon yarn. The impact of excise duty is felt in a growing measure year by year. This can be seen on a comparison of the gross amount of excise duty paid. Whereas for the years 1961 and 1962 the total amounts of duty paid (on rayon and cellulose film) was Rs. 58.58 lakhs and Rs. 68.04 lakhs, respectively, for 1963 the figure was much higher at Rs. 84.81 lakhs.

The increase in levy on rayon yarn during the year was as high as 33 1/3 per cent, the total incidence amounting to nearly 30 per cent of the selling price. The Finance Act, 1964, has brought in a further rise of 50 per cent over the prevailing rate, thereby imposing a crippling burden on the industry. The excise duty now payable is Rs. 6.00/kgm. for 100 deniers, and Rs. 4.00/kgm. for 120 and 150 deniers, which works out to 39 per cent and 33 per cent, respectively, of the selling prices. Every product has a limit upto which it could be subjected to Central levies. In my opinion, the limit has definitely been reached in our industry; any further increase would only retard the progress of this industry and not go to increase the exchequer receipts to the extent expected. I would earnestly request the Government to take notice of this aspect and take corrective action.

The question of excise duty on nitrocellulose lacquer used in the manufacture of moistureproof cellulose film is being contested. I think it is obviously unfair and unwise to extend the excise net to cover raw materials, intermediate products, and the finished products, all at the same time. This system of multiple levies progressively inflates the cost of production prohibitively. I do hope the Government will give the matter their considered attention and take suitable action.

VII. REPLACEMENT OF MACHINERY

Last year, I referred to having ordered for six new spinning machines through the dollar resources of the Industrial Finance Corporation of India. These machines have since arrived and will be in production before the next two months. They include the latest developments in the rayon industry and incorporate the technology licensed by E.I. duPont de Nemours Inc., USA through Chemtex Inc., USA, and will produce superior quality yarn. Sanction was obtained from the Government to import these machines as part of the replacement programme which we have drawn up; and the import of these six machines constitutes the first phase of this programme. Having been in continuous production for almost fifteen years we have to think of gradual replacement. Our application for import of further machines is pending with the Government. We were asked to look to other sources where foreign exchange will not constitute a problem. We have gone into the matter and made investigations. Considering the technological improvements incorporated, quality and durability of the machines, the resultant quality of the yarn that is produced — which is an important factor to be considered when rayon fabrics are exported to markets where keen competition exists — and for the money that is to be invested, we find it will be prudent and advisable to seriously consider dollar sources. We have accordingly informed the Government and do hope they will appreciate our view and give us the necessary sanction.

VIII. PULP PLANT

Our cotton linter pulp plant — the first of its kind in India — went into commercial production during the year under review. You will be happy to know that in this, too, we have kept up our pioneering spirit. The quality of the pulp is satisfactory and superior to imported wood pulp. Full rated production of 10 tons per day will be achieved shortly, after the installation of some balancing equipment received recently. This plant will save foreign exchange of about Rs. 36.00 lakhs annually.

IX. NEW DEVELOPMENTS

Newer synthetic fibres are being heard of now in the country — polyamides (such as Nylon), polyesters (such as Terylene), and polyacrylonitriles (such as Acrilan), to mention a few. We will be hearing more about them with the establishment of the Petrochemical industry in the country. Your Board has for some time been seized of the recent trends in synthetic fibres, and is applying its attention in this direction. Incidentally, I might mention that the emergence of new synthetic fibres does not mean the decline in importance of viscose rayon yarn. The new fibres are still to match the price of viscose yarn and its ability to absorb moisture which is a very important consideration in a climate such as we have in our country.

X. THE INVESTMENT CLIMATE

At this point, I would like to make a brief reference to the investment climate as it would determine the availability of finance required for expanding a running industry or setting up a new one. I am glad to note that the Government are conscious that an active and vital capital market is a sine qua non for rapid economic and industrial development; and, in fact have taken certain measures in this direction. But, to my mind, generally the Budget for 1964 has not given the necessary impetus for the growth of a buoyant investment climate. The dividend tax; tax on bonus shares; the steep and almost penal rate of estate duty; gift tax; wealth tax; capital gains tax — these measures have created great nervousness among the investors and entrepreneurs, and, thereby sapped their spirit of initiative and enthusiasm. A study of the issues which entered the market after the budget — why, in fact even before the Budget — will indicate this feeling. "Hardly any promoter, irrespective of his reputation, the prospects of the project concerned or the strength of foreign collaboration, has thought it wise to enter the market without

hundred per cent underwriting cover. Apart from this, in almost all cases where subscription lists have already been closed, the underwriters have been obliged to take up an overwhelming part of the issue — anything from 70 to 90 per cent. In fact, the situation has become so uncertain that the head of a prominent financial institution is reported to have quipped that at this rate the underwriters would soon become undertakers. While the pursuit of democratic socialism has, per force, to narrow down vast disparities in incomes and wealth, it must be obvious that drastic levies will not help erase the poverty of the teeming millions. What is really needed is a suitable system of incentives and constructive aids which will give an impetus to productive activity and stimulate the creative energies of the people. Money for the exchequer could be gathered, but I plead, without choking the generation of savings and their investment in industry.

LABOUR RELATIONS

At the last General Meeting, the Chairman had dwelt in detail on the unsettled labour situation which culminated in the dismissal of nearly all the spinners in the rayon division. The unsettled conditions continued into the year under review. Consequent to the dismissal of the spinners, new workers were recruited and trained over several months, resulting in substantial reduction in production, increase in inferior quality yarn and abnormal waste. After prolonged discussions with the Unions and on the intervention of the State Government, the Management overlooked the gross misconduct of the workers and took them back in August, 1963. In spite of the assurances given, their attitude was not helpful, and inferior quality yarn was being produced. Consequently, stocks accumulated, and the workmen had to be laid off in October, 1963. After protracted negotiations with the new Union leaders the lay off was lifted towards the end of January, 1964. Production has, at the time of reporting, stabilised, and, in a way exceeded previous performance. Sales have picked up and should the present conditions continue to prevail, the year 1964 should see promising results.

There are bound to be differences between the outlook of the employer and employees. If, however, the problems are

approached with understanding, reason, and a broad outlook, there should be no reason why mutually satisfactory solutions cannot be found. On the other hand, if an unrelenting stand is taken, throwing understanding and reason to the winds, no one will stand to gain as the year under review has shown us. And, without increase in productivity there will be precious little to give — a fact which is plain and simple to understand, but forgotten and overlooked often. The Company is always willing to be fair and reasonable in its dealings, and is ever ready to objectively look into grievances, if any, and amicably settle them — with the co-operation of the labour. We have started the new year on the right note, and I earnestly look forward to the continuance of the cordial relationship with the Union leaders and the workmen.

Among the latest addition to the features of amenities for the welfare of the employees, I may mention here that your Company has built a most modern and well-equipped industrial canteen, with a wide range of facilities, at a cost of about Rs. 6 lakhs. And for the furtherance of intercommunication with the employees and to foster and develop closer personal touch, your Company is also starting a house magazine called "Trayons".

DIRECTORATE

I am glad to inform you that during the year under review there has been a valuable addition to our Board. Shri C. Ramasubban, ex-Chairman of the Tariff Commission, has been nominated to our Board as a representative of the Industrial Finance Corporation of India. I am sure his inclusion will be an asset to the Board.

GENERAL

The Directors and shareholders would no doubt like to join me in expressing our appreciation to the executives and staff for their services during the year, and look forward to pleasant relations with the labour.

With these words, I now propose that the Directors Report, Balance Sheet and Profit and Loss Account for 1963 be approved and adopted.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

JAIPUR METALS & ELECTRICALS LIMITED

Following is the Summary of the Speech of Shri R. H. Kamani, Chairman, Jaipur Metals & Electricals Ltd., Delivered at the 20th Annual General Meeting of the Shareholders on the 25th June, 1964, at the Registered Office of the Company at Jaipur

Extending a cordial welcome to the Shareholders of the Company, Shri R. H. Kamani referred to the great national tragedy created by the passing away of our beloved Prime Minister. In a moving reference he solemnly stated that all-out efforts would be made by the Company to realise the dream of Jawaharlalji for a prosperous India through industrialisation. He prayed for the peace of the departed soul.

Shri Kamani then presented the Directors' Report, Audited Profit and Loss Account and Balance Sheet and proposed them to be adopted.

ACCOUNTS:

The working of the Company, Shri Kamani stated, had shown quite satisfactory progress with the total turnover and the profits touching new heights viz. from Rs. 2,32,76,000 to Rs. 2,69,39,000 and from Rs. 23,79,000 before providing for depreciation and the Managing Agents' remuneration to Rs. 30,24,000 respectively, being 16 per cent higher.

He then recounted the allocation and stated that the amount provided for taxation was less at Rs. 5,65,000 including the dividend tax on last year's equity dividend as against Rs. 6,85,000 in the previous year; while the Managing Agents' remuneration was Rs. 1,72,000 as against Rs. 1,48,000 in the previous year. Depreciation rose from Rs. 7,33,000 to Rs. 10,89,000 as also the Development Rebate from Rs. 3,50,000 to Rs. 4,82,000. He also referred to the abolition of Super Profit Tax and the introduction of Sur Tax and the Dividend Tax calculated at 7.5 per cent on the amount of dividend on Equity Capital distributed by the Company. He stated that while the net effect of the abolition of Super Profit Tax and introduction of Sur Tax was beneficial to the Corporate Sector, the introduction of tax on Equity Dividends has whittled down the reliefs so obtained.

He welcomed a rebate of 10 per cent of Income Tax and Super Tax and a rebate of 20 per cent in Sur Tax in case of certain key industries to which category the Company also belonged, as also the withdrawal of Super Tax on inter Corporate investments. He expressed his opinion that frequent changes in the fiscal policy of the Government was a disturbing factor, which would result in uncertainty of future planning and development of industries. He, therefore, emphasised the need for a stable policy on the part of the Government for at least a certain minimum period.

Shri Kamani then dwelt upon the salient features of newly introduced Companies (Profits) Sur Tax Act, 1964 and emphasised that in order to avail of the full benefits under the Act and to meet the expenses of the development and the expansion schemes, it was very necessary that the Company should have a strong Capital base. He added that it was for this purpose that the Board of Directors recommended Dividends at 6 per cent each for Preference and Ordinary Shares and have recommended to transfer a sum of Rs. 3,61,000 to the General Reserve. By doing this, the Capital resources

of the Company would increase on one hand while on the other, liability on account of Sur-Tax would decrease.

FACTORY WORKING:

The Chairman informed the Company that the production tempo has been maintained and the production and sales — both in the Meter and Metal Divisions — were the highest ever reached. He also expressed satisfaction at the timely commencement of the production of ACSR and All Aluminium Conductors more especially when the allocation of copper for Conductor Industry was discontinued by the Government. He stated that with the ever increasing production of electricity in the country, the prospects for the manufacture of ACSR and All Aluminium Conductors were bright.

In the sphere of Meter production, he cautioned a note of warning that since recently many meter manufacturing units had come into existence in the country, as a result of which there was a very stiff competition in price. The Company was fully conscious of this position and was, therefore, taking all the necessary measures to face the situation.

EXPANSION AND DEVELOPMENT:

Shri Kamani informed the Company that efforts were afoot to make the Company self-sufficient in the manufacture and procurement of meter components. He was happy to state that except for Jewel Bearings, Magnet and a small percentage of sub-parts of the Cyclometer unit which were presently imported, all other parts and components were either made in the factory or indigenously obtained. He stated that all the machineries required for the manufacture of Magnet were installed. The Company was now awaiting the arrival of technical experts from our collaborators in Japan and no time will be lost to commence the production of Magnet. The Company will also be able to manufacture the remaining small percentage of sub parts for the cyclometer unit during the course of the current year.

Shri Kamani sounded a note of optimism that the Company, in the near future, will also be able to manufacture Enamelled Copper Wires and the cotton, silk and paper covered wires and strips.

RESEARCH:

Shri Kamani stated that with a view to improve the quality of products as also to reduce the cost of production, all-out efforts were made by the Company and added that this was very vital for the economical development of the industry.

The Chairman attributed the good working results to the efforts and co-operation of the workers and members of the staff as also to the encouragement and backing of the shareholders received from time to time. He thanked them all.

NOTE: This does not purport to be the proceedings of the Annual General Meeting.

RECORDS AND STATISTICS

Labour Statistics

THE EMPLOYERS' Federation of India has brought out a "Handbook of labour statistics" which, within the compass of 60 pages, sets out salient facts about Indian labour. It provides statistics regarding economically active population, national income and investment, capital investment, cost structure, profitability, wages, earnings, prices, social security, housing, industrial disputes, trade unions, accidents and absenteeism. A few of the useful tables are presented here. All the figures have been culled from official publications.

Table I below gives statistics regarding the average annual earnings of factory workers during 1947-1962. It shows that the average daily employment of factory workers improved from 1.7 million in 1947 to 2.3 million in 1962. The average annual earnings improved from Rs. 737 to Rs. 1,459 per annum, indicating almost 100 per cent rise during the period under review. Table II reduces the money earnings figures into real earnings with the all-India consumer price index as the deflator. It shows that in real terms, the average earnings of factory workers improved by more than 30 per cent between 1947-1962.

Table III discloses the rise in the average daily employment, in all industries in this country. It shows that between 1955-1962, the total employment in all the industries rose from 3.1 million to 4.1 million indicating a rise of one million workers in seven years.

Table IV provides statistics in regard to the breakup of the average daily earnings of active workers in major industries for 1958-59, the latest year for which these figures are available. It gives, in addition to basic wages plus D.A., details regarding the fringe benefits which are enjoyed by the factory workers in this country. Total daily earnings in different industries show a vast dispersion. In coffee industry, for example, the average earning per day was as low as Rs. 1.32 while the highest was in the petroleum refineries at Rs. 6.49.

TABLE I.
AVERAGE ANNUAL EARNINGS OF FACTORY WORKERS
1947-62

Year	Average Daily Employment (in lakhs)	Average Annual Earnings (in Rs.)	Index of Money Earnings (1947=100)
1947	17.18	737	100.0
1948	17.65	833	120.0
1949	18.54	988	134.4
1950	18.07	959	132.0
1951	17.79	1,036	140.9
1952	17.40	1,112	150.9
1953	17.61	1,111	151.8
1954	17.96	1,173	159.4
1955	23.49	1,208	162.6
1956	20.88	1,234	170.2
1957	17.81	1,285	167.4
1958	18.81	1,310	171.5
1959	18.87	1,385	187.9
1960	22.23	1,414	191.8
1961	22.23	1,414	191.8
1962*	23.24	1,459	197.9

Note: Figures of average daily employment and money earnings relate to employees drawing Rs. 200 or less per month as collected under the Payment of Wages Act, 1938.

means that the maximum wage rates were nearly four times the minimum wage rates.

One of the reasons why in 1963 industrial output took an upturn was that the number of man-days lost due to industrial disputes recorded a sharp decline. In the history of the last 13 years, the man-days lost due to industrial disputes were the lowest in 1963 at 29,01,000 as against the highest at 77,97,000 in 1958 (Table V).

TABLE II.
INDEX NUMBERS OF REAL EARNINGS OF FACTORY WORKERS: 1948-62
(ALL-INDIA)

Year	Index Numbers of Money Earnings (Base shifted to 1947=100)	All-India Consumer Price Index No. (Base shifted to 1947=100)	Index of Real Earnings (Base 1947=100)
1948	120.0	111.7	107.4
1949	134.4	115.0	116.9
1950	132.0	115.8	114.0

Going Places

DISCUSSING the prospects of the emergence of an inner Cabinet in the Government of Mr. Lal Bahadur and speculating on its possible shape and substance, "V.B." in *Eastern Economist* of June 12 (page 1373) wrote:

"...My own assessment is that the Finance Minister and the Minister for Information and Broadcasting will, in their different ways, be the most influential members of the new Government. I foresee that their advice would be sought and accepted over a wide range of government activity. I also have the feeling that the Prime Minister and these two colleagues of his will probably have more things in common and be able to work more closely than may be the case with any other permutation or combination of the members of the Council of Ministers."

Thanks to the unfortunate accident of the Prime Minister's illness on the eve of the Commonwealth Conference in London, the political forecast in the above passage has come true earlier than it might otherwise have done. Mr. Lal Bahadur's choice of Mr. T. T. Krishnamachari to deputize for him at the conference of the Commonwealth Prime Ministers was not merely logical but was the only decision he could possibly have taken. This is not merely because economic issues have been given an important place on the agenda of the conference. The point is that Mr. Krishnamachari has, for some time now, ceased to be simply the Government's economic expert. Unmistakably, though imperceptibly, he had been building up for himself a reputation for a wider wisdom even when Jawaharlal Nehru was alive. During his tenure in the Government after the last General Elections, first as Minister without Portfolio for a short time and subsequently as Minister for Economic and Defence Co-ordination, he found opportunities, big and numerous, coming his way for the exercise of his versatile competence. Even earlier, during his previous term as Finance Minister, Mr. Krishnamachari had taken kindly to the arts and graces of diplomacy on the occasions he went abroad to expound this country's economic philosophies, defend its economic policies and secure foreign understanding for the former and foreign assistance for the latter. His talents in these directions acquired new dimensions more recently when, as Minister for Economic and Defence Co-ordination, he had to go to Washington and London to negotiate for military aid to this country for countering Chinese aggression.

In the days of the Nehru government, Mr. Krishnamachari was one of the three Central Ministers who were fairly familiar to the world outside, the other two being Mr. Krishna Menon and Mr. Morarji Desai. Today, with Mr. Lal Bahadur still to be seen outside India and, as it is, only a name in international political billing, Mr. Krishnamachari and Mrs. Indira Gandhi are the two in our Central Government who are most widely known in the world as distinct political personalities. In fact, if Mr. Lal Bahadur were ever to come to the conclusion that he should part with the Foreign Affairs portfolio, the only consideration that could come in the way of his giving it to Mr. T. T. Krishnamachari would be that the Prime Minister might not care to look for another Finance Minister and Mr. Krishnamachari might prefer to stay where he is. In the circumstances, having been prevented by his sudden illness from making the London trip himself, the Prime Minister, by nominating Mr. Krishnamachari for the assignment, has ensured that India will be represented at the London meeting of Commonwealth statesmen by a member of the Government who can more than make up for his lack of prolonged formal and professional acquaintance with the routine of foreign affairs by his capacity to comprehend large issues and to be articulate about them and even more

Note: (a) Frequency rate is the ratio of number of industrial disputes to one lakh of mandays scheduled to work.
(b) Severity rate is the ration of total mandays lost due to industrial disputes to one lakh of mandays scheduled to work.
(c) The Index numbers of industrial unrest are obtained by multiplying by 100 the ratio of mandays lost to mandays scheduled to work for the given years as compared to similar ratio for the Base year, i.e. 1951.

by his alert instinct for the traps and thrills of the political game.

Mrs. Indira Gandhi's association with Mr. Krishnamachari in the assignment for the Commonwealth Conference need not at this stage be given any special significance. There is a tendency in the Press and elsewhere to interpret this association as indicating that the Prime Minister has begun grooming Mrs. Indira Gandhi for the External Affairs portfolio. There is perhaps no more to this speculation than that there has always been a disposition in some quarters to assume that the proper role for the daughter of Jawaharlal Nehru was to succeed him as Prime Minister and failing that, to become at least Foreign Minister. Mrs. Indira Gandhi herself has evidently not been giving encouragement to such ambitions entertained for her by others and, indeed, when the offer came to her of a Ministership in the present Government, she deliberately expressed a preference for a "light" charge. In the circumstances, it is unlikely that the Prime Minister intends her (or she herself desires) to make an attempt to share equally or otherwise with her senior colleague, Mr. Krishnamachari, the responsibilities of the Indian representation at the Commonwealth Conference. It is significant that one of the first acts of Mrs. Indira Gandhi, after being sworn in as Minister for Information and Broadcasting, has been to make it clear that she is truly interested in her portfolio and is planning to be at her job. In a conference with the officials of her Ministry she has given heart-warming evidence of a sincere desire to take a long view of the demands and requirements of her charge and make her Ministry func-

tion not in its settled groove, but in new directions and in a dynamic manner. Particularly gratifying is Mrs. Indira Gandhi's recognition of the sad fact that the Government has so far neglected, or at least not employed fully, its resources of mass communication for getting its ideas across to the people and enlisting their informed enthusiasm for the nation's political, economic and social objectives. It is greatly to be hoped that Mrs. Indira Gandhi's assumption of the Information and Broadcasting portfolio will initiate creative and constructive husbandry in an area where there has so far been only some stray and sporadic scratching of the surface.

Both the entertainment and the educative aspects of broadcasting, particularly, have to be vastly improved. In the former case it is necessary that there should be fewer inhibitions and desirable that there should be daring and innovation; in the latter case, there is need for a very comprehensive co-ordination between the attempts of the Central and State Governments to implement various social projects or economic programmes and the opportunities offered by the radio to put ideas across to the people, arouse their interest, stimulate their minds, carry conviction to them and thus prepare them emotionally and intellectually for co-operating in schemes of national importance for national good. That broadcasting in this country is at present both spiritless and pointless to an extent which is avoidably and unconscionably large is, unhappily, a fact. That it may cease to be either under the leadership which the new Minister for Information and Broadcasting may give to it must be our hope.

A String to His Bow

IN THE CONTEXT of certain criticisms made at the time the Industrial Development Bank of India (IDBI) Bill was on the legislative anvil early this year, it was perhaps necessary for both the Union Finance Minister, who inaugurated the IDBI last Wednesday, and the Governor of the Reserve Bank, who requested Mr. T. T. Krishnamachari to inaugurate the IDBI, to meet these criticisms. At the same time, both the speakers dwelt at some length on the scope of work of the IDBI. The Union Finance Minister also felt obliged to make a reference to the investment climate in the country, not so much with a view to saying anything reassuring to the market as to justifying this year's Central budget (although, as he went out of his way to mention, he was under no obligation to do this, except to Parliament). Apparently, from the few favourable trends noticed in the capital market lately -- these owe their origin, though, to special causes in each particular case as, for instance, relaxation of margins -- Mr. Krishnamachari has hastened to conclude that his budget has had the intended effect, that all is well, and that no special action is now called for to resuscitate the capital market. This is taking credit a little too prematurely, it seems, for, according to the Union Finance Minister

himself, "it is only with the passage of time when facts speak louder than words that the true impact of a budget on the economy begins to be felt". Also, this seems somewhat inexplicable, if not inconsistent, when he has chosen to disregard the sustained stalemate in the share markets ever since the budget, that is, for over a four-month period.

At the time the IDBI Bill was before Parliament, doubts were expressed about the necessity for yet one more financing body such as this when there were already in existence a number of primary financing agencies and a refinancing agency as well. The natural presumption by the public was either that the functioning of these bodies left much to be desired or that there was something which was necessary to be done and which fell beyond the scope of any one or all of them put together. In either case, it was felt, the situation could well have been remedied otherwise than by superimposing one more agency as has been done. There was also the criticism that, in making the IDBI a full subsidiary of the Reserve Bank, the authorities were saddling the latter, already overworked in all conscience, with an additional heavy responsibility, thereby giving rise to genuine doubts whether the Reserve

Bank could really give the IDBI the time and care that its sponsors -- the late Prime Minister, the Union Finance Minister and the Planning Commission -- desired it should receive.

On the need for the establishment of the IDBI, while Mr. Krishnamachari pointed out broadly that even the combined effort of all the existing institutions could no longer meet the needs of the situation, Mr. Bhattacharyya spelt out four reasons: (i) with the mounting tempo of industrialisation, he said, a stage had arrived when some rationalisation and integration of the activities of these institutions were called for; (ii) these activities have to be co-ordinated with the structure of short-term facilities which all industries require; (iii) adequate arrangements have to be made for the much larger and wider tasks ahead, and (iv) a far greater diversification -- a diversification such as the authorities might want -- of the industrial sector is called for -- to put it more graphically (or is it more grandiloquently?) in the words of the Union Finance Minister, "to enter new fields and set up new standards of constructive and imaginative endeavour". In the opinion of both the speakers, accordingly, the *raison d'être* of the IDBI is the fact that the existing financial institutions are not adequately equipped to carry the additional burden of financing industrial growth, especially where a long-term view is necessary and where certain risks have to be taken. Rather than effect "very considerable changes in their existing rules and criteria to special needs", the authorities decided to have a new agency altogether.

The provisions in the relevant Act setting up the IDBI seek to place ample rupee resources (it is not known, however, from where the IDBI will find and provide the foreign exchange resources) at its disposal

and on the most attractive terms conceivable, while, in order to ensure expert management, presumably, the erstwhile Central Board of the Reserve Bank has been enlarged to include, among others, eminent business men such as Mr. Arvind Mafatlal and legal luminaries such as Mr. N. A. Palkhiwala. A significant feature is that, by making it a wholly-owned subsidiary of the Reserve Bank, the IDBI has been placed at a very safe distance from the not-always-healthy attention of Parliament. Starting with so many advantages and under such favourable auspices, the IDBI should fulfil the expectations of its sponsors, namely to accelerate the economic development of the country.

To the extent that the authorities go on adding such specialised agencies, they must expect and, indeed welcome the availing of their services by the public and not blame it for doing so. It is not fair, for instance, to characterise the resort by *entrepreneurs* and underwriters to one or more of the specialised agencies created by the Government itself as lack of either enterprise or efforts on their part to make a success of a new issue. In the prevailing circumstances, for the creation of which the Government has itself to thank, the private sector has only two alternatives, namely, either to turn to these institutions (whether in the first or the last resort) or to rely on foreign sources such as suppliers' credit from manufacturers abroad, loan from P.L. 480 funds and so on. If underwriters have been obliged to become investors, it is not out of their free will but only as a painful necessity. As Mr. G. L. Mehta once observed, underwriters these days have been reduced to the status of undertakers. And yet, ironically enough, the Union Finance Minister wants us to believe that there is nothing wrong with the investment climate in the country today.

Uncle Tom Uncabin'd

BY REAFFIRMING the Dignity of Man, the Civil Rights Bill, to which the US President put his signature on July 2, has immensely enhanced also the dignity of the American nation. If much of the rest of the world is sharply divided between the rich and the poor, the richest country in the world has had to reckon with its own disturbing dichotomy of the Black and the White. One hundred and eighty years ago, the Americans wrote themselves as a nation in their Declaration of Independence. But for another 80 years those words could make no meaning at all for the Negro in the United States. Then came the Emancipation and the Black man in America was told that he was no longer a slave or chattel of his White master. That was an immense gain indeed, but over the hundred years since, the Negro, free and equal in the Spirit of the US Constitution, has continued to be somewhat less free and considerably less equal in the Letter of many State Laws and the "mores" of his White fellow citizens, especially in the Southern States.

In the last 20 years, however, a great change has

come over the American Negro and revolutionized his essentially passive acceptance earlier of his second-class citizenship. During the last War, the American Negro had fought side by side with the American White for the liberty of the American people and for the liberty of other peoples in several parts of the world. In post-war America, the Negro has necessarily shared, although perhaps in a lesser measure than the Whites, in the benefits of the American boom as well as in national advances in education, culture and civilization generally. As a result, he has become conscious of his citizenship and his prerogative to exercise all those fundamental rights which in the American Constitution are guaranteed to all American citizens, irrespective of the colour of their skin. Hence the wholly dignified, but firmly persistent, movement among American Negroes to claim and exercise their constitutional and legal rights, and offer passive resistance to segregation in the South or discrimination in both the South and the North. Responding to this awakening among the Negroes and recognizing that unless law came to uphold

justice, violence might be appealed to, the late President Kennedy proposed bold new legislation on civil rights which would mobilize Federal resources of enforcement for the ending of segregation or discrimination wherever practised and in whichever form. It has taken nearly 12 months and the personal dedication as well as the vast tactical competence of the present President of the United States to impel Congressional procedures towards a successful passage of the Bill.

The essence of the advantages which the Civil Rights Act secures to the American Negro has been best summed up by President Johnson himself in the following words: "Those who are equal before God shall now also be equal in the polling booth, in the class rooms, in factories and in hotels, restaurants, movie theatres and other places that provide service to the people". How true these words would become is largely dependent on the quality of the Federal enforcement which President Johnson is able to secure to the Civil Rights Act. Apart from the fact that in keeping with his own obvious faith in and zest for the principles of the Act the US President will certainly spare no effort in ensuring the effective implementation of the Act, it has already become evident that Negro pressure will be steadily brought to bear on the Federal Government to make equality of the Negroes a reality here and now. One of the test areas for civil rights enforcement is expected to be Mississippi which has been described as the most resistant of all Southern States. The White community in that State appears to be dominated by a militant segregationist minority which has readied itself for a last-ditch fight both against civil rights organizations and Federal enforcement efforts. But it is not only in Mississippi or in other Southern States that violence is apprehended. In the North too, there are signs of unrest and tension; but here the initiative for aggression is seen in impatient groups of young Negroes who seem unimpressed by appeals to patience issued by responsible national leaders of their community. These alarms and excursions, however, do not and cannot take away from the Civil Rights Act any part of its majesty as an act of faith and courage on the part of the various great institutions of American polity which have been pledged to the purpose of securing to all American citizens the protection and blessings of the Constitution of the United States of America.

To us in this country especially, this act of faith and courage in the name and on behalf of a nation with which ours shares certain fundamental beliefs and ideals relating to the Estate of Man, must carry an urgent message which is also an imperative challenge. In India, as in the United States, there is this evil problem of "under privilege", not sanctioned by any currently accepted national norm and indeed expressly outlawed in the Constitution and laws passed under it. While it is true that the "untouchables" in this country had secured their civil rights a few years earlier than the Negroes in the United States had obtained theirs, it is possible that in terms of enforcement, the American charter might become more of a reality sooner than the

analogous laws of this country promise to be. In the report of the Commissioner for Scheduled Castes and Scheduled Tribes for the year 1961-62, for instance, we read that "untouchability is still practised in many parts of the country, in some form or the other, the most common ones being: (i) denying access to public restaurants and hotels and use of utensils kept in such places for general public; (ii) not allowing the use of wells, tanks, water taps and other sources of water; (iii) denial of service by barbers, dhobis, etc., and (iv) denial of hired accommodation to scheduled caste officials when posted in rural areas". How considerably ineffective the law against untouchability has been at the point of actual enforcement is seen from the fact that, despite the wide prevalence of the practices mentioned in the Report, the number of cases registered with the police under the Untouchability (Offences) Act, 1955 had totalled only 2,893 in the six years ending 1960. The Report of the Commissioner for Scheduled Castes and Scheduled Tribes for the year 1961-62 says further that the number of complaints regarding the practice of untouchability, harassment, etc., received in the Commissioner's office from scheduled caste persons during that year amounted to only 340. Statistics such as these clearly suggest that the ignorance, apathy, or fatalism of the communities victimised by untouchability are so deep-rooted and extensive that unless the Government and informed public opinion together become more positive in combating untouchability and the social and economic practices, such as segregation and discrimination, associated with it, the secret and silent suffering of injustice by the underprivileged in our midst may continue indefinitely and delay our emergence as a truly integrated nation.

It may be that there is today in this country no sign between the "untouchables" and the rest of the people of that simmering violence glowing like a red signal of danger in the heart of the American racial problem. But this surely is because the privileged in our country find their status and their security less effectively threatened than the Whites of Mississippi. The Indian untouchable has far less education or political awareness and is vastly poorer and certainly far worse exploited economically and socially than the most deprived of the Negro communities in the deepest South of the United States. Consequently, his powers of protest are extremely limited despite the fact that the "touchability" which the community actually allows him is but a precarious fraction of what the Constitution concedes to him. In a moving passage in his broadcast to the nation, the Prime Minister, Mr. Lal Bahadur, speaking of the problem of mass poverty, said: "I cannot forget particularly the claims of the most backward sections, like the scheduled castes and scheduled tribes, who had suffered neglect and had to endure all the more significant and demanding as, in another part of the world another great nation, dedicated to human values and civilization, takes a giant step forward in extending the area of human dignity.

Highlights of the Week

P.M. CANCELS LONDON TRIP

MR. LAL BAHADUR has decided to abide by the advice of the doctors and has cancelled his visit to the Commonwealth Prime Ministers' Conference. Mr. T. T. Krishnamachari and Mrs. Indira Gandhi have agreed to deputise for him. In the normal course, Mr. G. L. Nanda should have represented the Prime Minister at London, but because he felt that he had more urgent tasks to complete in India and that he could not prepare himself adequately in the time at his disposal, he regretfully declined to proceed to London. In Mr. T. T. Krishnamachari and Mrs. Indira Gandhi we have spokesmen who understand the national and international policies sufficiently well. Mrs. Indira Gandhi was closely associated with the late Prime Minister for the last few years; she has a good understanding of his mind in regard to most of the international problems and India's policy towards them. She will certainly be a source of strength to Mr. T. T. Krishnamachari in his parleys with other Prime Ministers, especially because the country has decided to pursue the same policies as outlined by the late Prime Minister, Jawaharlal Nehru.

It is true that a large number of India's friends abroad will be disappointed because they were anxious to meet the new Prime Minister in person so as to make an assessment about the man who has walked into the shoes of Jawaharlal Nehru. While tales of his humility have already travelled abroad, people were generally anxious to make a first-hand assessment of the new Prime Minister.

Because Mr. Lal Bahadur has cancelled his trip to London, it does not mean that he has not recouped from the recent illness which according to the doctors was due to exhaustion and over-work. The Prime Minister has considerably recovered from his sickness and has already started looking after state affairs. It was the strain of a long journey and the attendant engagements which the doctors had asked him to avoid. There is considerable relief in the country that Mr. Lal Bahadur has wisely decided to cancel his trip; fervent pleas have now been made to request Mr. Lal Bahadur not to strain himself beyond his physical capacity. Demands have also been made that all unnecessary interviews and engagements should be eliminated and he should be asked to limit himself to the most essential matters which cannot be decided without his intervention. The late Prime Minister had, even in his old age, led an active life which can be the envy of youngmen: any one trying to imitate him may not be able to stand the strain.

POST-KAIRON PUNJAB

THE SELECTION of a successor to Mr. Partap Singh Kairon remained an intriguing affair for nearly a fortnight after the remained an intriguing affair for nearly a fortnight after the broad findings of the Das Commission had been publicised, requiring two visits of Sardar Swaran Singh, the Union Minister for Industries, to Chandigarh in order to obtain the "consensus" of the members of the legislature. Various names were considered including those of Mr. Darbara Singh, principal opponent of Mr. Partap Singh Kairon in the Congress Party, Mr. Bhimsen Sachar, Dr. Gopi Chand Bhargava, Giani Zail Singh, Mr. Brish Bhan and also of Sardar Swaran Singh. Mr. Lal Bahadur was reluctant to lose Sardar Swaran Singh and the latter was also not very keen on going to Punjab as a Chief Minister. The other leaders belonged to one faction or the other and would have split the Congress Party into two parts in case of a contest. Following the successful technique adopted in the election of the Prime Minister at the Centre, there was oneness of opinion amongst the Senior Congress leaders at New Delhi including Mr. Lal Bahadur and Mr. Kamaraj, in the application of the same approach to Punjab. Strangely, a new name emerged in the last phase of the negoti-

ations, that of Mr. Ram Kishen, who was hardly known beyond the frontiers of the State. His election as the Head of the Punjab Ministry is the result of the Congress Party's anxiety to preserve unity and reduce the fissiparous tendencies. In this tussle, the persons who came out with flying colours were Sardar Swaran Singh, who successfully brought the situation under control and concluded the rivalry on a happy note, and the Congress President, Mr. K. Kamaraj, who has won the admiration of the Indian people for his workman-like method of executing the most tangled tasks.

Sardar Swaran Singh has now made public the technique adopted by him in selecting the Chief Minister acceptable to both the groups. When it became clear to him that Mr. Darbara Singh and Sardar Zail Singh were the candidates of the rival groups, he asked each of them to let him have a list of four names. Mr. Ram Kishen's was the only name common to both the lists and that is why Sardar Swaran Singh had little difficulty in suggesting the most acceptable candidate to the High Command.

There has been some criticism regarding the method adopted in this selection wherein a semblance of outward unity has been sought. The election of Mr. Lal Bahadur at the Centre through this very method was hailed because it was felt that in the post-Nehru era, there was great need to keep the country united and to keep all disruptive tendencies under check. The application of the same method at the State level is riddled with hazards. Sooner or later, the underlying division in the Congress Party must come to the surface. Since Mr. Ram Kishen is a compromise candidate who has been accepted by the rival groups as a matter of convenience, it is feared that he may not be able to pull his full weight and carry the party with him. On the other hand, a leader elected on the basis of a secret ballot can always function fearlessly because he really enjoys the confidence of the majority of the members of the legislature. That also is the essence of the principles of democracy. Any make-shift arrangement of this type will at best work for a short period and is not likely to prove a lasting one.

Much, however, depends on the character of the new leader. The preliminary observations made by him indicate that he knows that he is the product of the labours of the High Command and will look up to it for guidance in all major issues. His intrinsic capacity in guiding the affairs of the State will be tested in the next few months and one need not jump to any conclusion about a "dark horse". Certain choices have been made in the past — Mr. Bhimsen Sachar's is a classical case in the history of Punjab in similar circumstances — and they have been successful because the men chosen had qualities of leadership. In Mr. Ram Kishen, Punjab has a man who is reputed to be honest and hard working. His promise to give to Punjab a clean administration is, indeed, a big one in view of the havoc which has been wrought by Mr. Kairon and his supporters during the last 8½ years.

EXPERTS' REPORT ON GOA

THE REPORT on Goa's agricultural and economic development submitted to the Government of India recently by a team of planning experts follows more or less the pattern of techno-economic surveys made fashionable in this country by the National Council of Applied Economic Research. The Goan Administration is to be congratulated for striking at the opportune moment when the draft of the fourth Plan is on the anvil of the Planning Commission. Since Goa, along with Daman and Diu, is to be formally initiated into the Indian economic planning system with the inauguration of the fourth Plan, the report emphasizes that "it would be advantageous to start on the basis of integrated planning keeping in pers-

July 10, 1964

pective the development needs of the territory over the next decade".

The economic development of Goa, says the report, depends on making the territory self-sufficient in foodgrains. Goa is in no way better placed than the rest of India with regard to foodgrains, and to meet its requirements it has to import 36,000 tonnes annually. Its travails of agricultural deficit are traced to the apathy of the Portuguese colonial administration, which, in its latter years, diverted all its attention to the exploitation of Goa's mineral resources. This resulted in a steady shift of labour from agriculture to the mining industry, depriving the land of its permanent agricultural peasantry. Low yields, high wages and food deficits were the obvious by-products to flow out of this policy. Suggesting measures to pull Goa out of this quagmire, the experts have made various recommendations. Among the major recommendations are: early decisions on the report of the Goa Land Reform Commission "so that Goa's land tenure system should be placed on a firm footing and the growth of agricultural production will not be impeded", rationalization of the distribution of land "so that the size of the holdings will be economical", immediate establishment of an agricultural production research station, extension of the Land Acquisition Act to Goa, and the deputation at an early date of an experienced officer of the Union Food and Agriculture Ministry to examine Goa's requirements and strengthen its agricultural department "so that its activities cover agronomy, plant protection, testing of soil and soil fertility, horticulture and extension".

The process of large-scale industrialisation in Goa has already gained sufficient momentum. There is a proposal for the establishment of a pig iron — and possibly a steel — plant in Goa. An increase in the capacity of Mormugao port is shortly to be undertaken. It is in the field of medium and small-scale industries in the private sector that Government assistance is urgently needed. In this regard the report suggests the enactment of a State Aid to Industries Act and reorganization of Goa's administrative machinery to facilitate the process of industrialization. For the latter, the report recommends that a competent IAS officer should serve as secretary of Goa's industries department, because such a step is necessary "in view of the intensive industrial development proposed to be taken up in the territory".

INDEPENDENT NYASALAND

TO THE galaxy of independent countries in Africa was added on July 6 the British protectorate of Nyasaland which will now be known as Malawi, a name which this land has taken from the Malawi people who are mentioned in the 17th century records. Malawi, under its new constitution, will be a monarchy with the Queen of England as head of the State. It is one of the most historical States in Africa because with it has been associated the name of a pioneer, Dr. David Livingstone who discovered the lake Nyasa in 1859. A number of Christian missions were established in the wake of Livingstone's discovery and it was in 1891 that Nyasaland became a British protectorate. The wind of change which has swept over the whole of Africa did not fail to arouse political consciousness in Nyasaland. In the 1961 general election, the Malawi Congress Party was victorious on its policy of secession from the Federation of Rhodesia and Nyasaland and in December, 1962, the British Government took the decision to permit Nyasaland to secede from the Federation. The decision was led by Dr. H. K. Banda and it won 21 out of 28 seats. The decision to set up independent Malawi State was taken in September, 1963 by the British and Nyasaland Governments. The new constitution of independent Malawi provides for a National Assembly of 53 seats. While roll only 3 members are chosen by voters registered on a general on a special roll. This has been done to provide representation to the European minority.

As against the total population of 30 million, the number of voters (age 21 years and above) registered was 1.87 million. In the May, 1964 election all the 53 candidates—50 candidates nominated by the Malawi Congress Party and 3 by the Nyasaland Constitutional Party — were returned unopposed.

In the sprawling lands of South and Central Africa, Nyasaland is a relatively small State. While its length is 560 miles, its breadth ranges from 50 to 100 miles. The total area is about 46,000 sq. miles including the area under water. There is no place in the State which is more than 50 miles from the border. Of the 3 million population, only a very small minority of 23,000 people is of non-African origin. The economic resources of the new State are not very wide. Its chief exports are tea, tobacco and cotton valued at not more than £10,000,000. The export crops were introduced into Nyasaland by the British missions in the early years of their association. Total aid from Britain since the end of the World War II is estimated at £20 million, out of which nearly two-thirds have been in the form of gifts.

The State also has facilities regarding education and health services: a polytechnic is being built with American aid. With the assistance of British Colonial Development and Welfare Fund, a new institute of public administration is also being set up. A four-year development Plan for the period 1962-65 envisages an expenditure of £19 million, out of which about £2.3 million have been allotted for education. The inhabitants of Malawi are of Bantu region.

The recent political events in Nyasaland brought out the hostility of the people to a union with Rhodesia because it was feared that continued association would result in the political domination by the Europeans of Southern Rhodesia. The opposition to the Federation and a call for African self-government in the State came simultaneously. It was in 1961 that Dr. Banda was released and power was handed over to African Ministers. That was the beginning of a new era in Nyasaland. It is hoped that after the attainment of political aspirations of the people, the co-operation between Malawi and the United Kingdom will grow, specially for hastening economic development.

Eastern Economist 20 Years Ago JULY 7, 1944

IT HAS been reported that the International Monetary Conference at Brettonwoods has turned down the proposal of the Indian Delegation that the Fund should provide for the liquidation of India's blocked sterling balances. It will be remembered that the White Plan did provide for the multilateral clearing of the abnormal war balances as they were called within a period of time. The new Stabilization Fund by omitting this part of the scheme knocked all of India's interest in it. Yet in the belief that our case should not go by default we had urged India's participation in the Conference. Now that our attempts have failed, we are thrown upon the only course open to us of entering into a bilateral — but as we fear really unilateral — arrangements with Britain. How far we shall be able to get satisfaction time will soon reveal. But the immediate question is: Should India care to be part of the International Monetary Scheme? There are clearly no advantages in being a member of the Stabilization Fund, for on current account India will not be a debtor. As for loans, whether we need them or not will depend upon partly to Britain, partly upon how far the machinery of the proposed World Capital Bank will prove useful to us and finally upon the rate of economic development we plan for.

July 10, 1964

Handling Handicrafts

THAT INDIAN handicraft products were being bought rather than sold in foreign markets was the keynote of the deliberations at the three-day seminar on 'handicrafts exports', held recently in New Delhi under the auspices of the Indian Institute of Foreign Trade. Little attempt has been made so far at market research into foreign consumer tastes or preferences for handicraft products. Whatever traditional items are being produced are attempted to be sold abroad in a hit-or-miss manner and spirit. Realising, therefore, the need for exploring new vistas and producing new items, the participants at the seminar made a fervent plea for the proper handling of production as well as exports of handicrafts. Export demand may not be as vital to the maintenance and growth of handicrafts as the domestic demand. Nevertheless, exports, on an average, form 10 per cent of the total production and thus play an important role in maintaining the stability of the industry. The average annual value of exports of handicrafts during the first five-year Plan was Rs. 7.04 crores. In the second Plan period this average increased to Rs. 10.3 crores. During the first three years of the third Plan the value of exports increased to Rs. 19.35 crores in 1961-62, Rs. 21.53 crores in 1962-63 and Rs. 26.41 crores in 1963-64 (April-January). This increase is attributed to expansion in the exports especially of precious, semi-precious and synthetic stones. During the last seven-year period (since 1957-58) for which more detailed classification is available, the study of the export performance of individual items of handicrafts indicates considerable fluctuations. Excepting a few commodities such as wood articles and papier-mache, almost all commodities have experienced fluctuations. The commodities which have shown sharp fluctuations are: jewellery set with precious stones and synthetic stones, lacquered wood ware, lace and fabrics. These fluctuations have not been caused essentially on account of fluctuations in international demand. They were due mainly to the inadaptability of domestic production to the changing pattern of demand. Moreover, fluctuations in foreign demand may have been caused partly by the buyers' doubts about the continuous supply of quality products at competitive prices.

Diversifying the Market

The maintenance of present markets and exploring new markets constitute important aspects of any export promotion drive. Handicrafts, like many other commodities on our export list, depend largely on a few markets such as the USA, the UK, Canada, West Germany, Australia and the USSR which accounted for 24.4, 21.7, 7.9, 4.2, 4.0 and 1.1 per cent respectively in 1962-63. The rest of the 36.7 per cent was accounted for by all the other countries. (These figures do not include the value of such commodities as precious, semi-precious and synthetic stones, ivory products, sarees, etc. on which country-wise data were not available). Such dependence inevitably results in a greater degree of instability in the value and quantum of exports on the one hand and lesser bargaining strength of the seller on the other. Hence, it is essential to diversify the overseas market for our handicraft products. This involves the exploration of new markets. Though it is extremely difficult to define a new market, according to the All India Handicrafts Board all countries whose intake of our handicrafts is less than Rupees one lakh constitute new markets. On this assumption, Latin America, Africa, Eastern Europe excluding the USSR, the Scandinavian countries and Switzerland can be considered as new markets. Besides, the Latin American and the African countries are experiencing economic growth and many of the African countries have a sizable Indian population which constitutes a promising potential market. With respect to such highly developed countries

as Norway, Sweden, Denmark and Switzerland, the Handicrafts Board assumes that there is a larger demand for Indian handicrafts than has been exploited so far. In the case of East European countries where personal incomes are rising rapidly and liberal trade policies are being gradually adopted, there is good scope for Indian handicrafts.

Addressing the seminar on the opening day, Mr. L. K. Jha, Secretary, Ministry of Finance, suggested that the affluent society of the West should be approached by the handicraft exporters with the realisation that the competitive selling of hand craft goods (which could command fancy prices) at cheap rates was dangerous. In this respect the selectivity approach was emphasised i.e., selected exporters selling selected commodities in selected countries and thus avoiding unhealthy competition on the one hand and creating a worthy image of India's crafts abroad. In order to build this image of quality it was suggested, almost unanimously, that the export of sub-standard goods (even if expressly ordered by some countries) should be banned.

Export Promotion Fund

The seminar was attended by over 50 participants representing exporters and manufacturers and their associations as well as officers from concerned government and semi-government departments such as the Ministries of Commerce, Industry, Finance and Foreign Affairs, the Reserve Bank of India, the State Bank, the Export Credit and Guarantee Corporation, the All-India Handicrafts Board, the State Trading Corporation, the Handicrafts and Handloom Export Corporation, etc. After the plenary session the seminar was divided into three discussion groups one each on problems of "production", "export marketing" and "export assistance and export finance". The suggestions made by these groups and approved by the concluding plenary session include the establishment of a "Handicrafts Export Promotion Fund". According to this recommendation, the exporters will contribute to the Fund 0.3 per cent of the f.o.b. value of their exports. On this basis it is calculated that against the estimated export of about Rs. 30 crores worth of handicraft products during 1963-64, the contributions to the Fund will amount to about Rs. 9 lakhs. A matching contribution of Rs. 9 lakhs will be made by the Marketing Development Fund of the Government of India. It has been suggested that the Fund should come into existence on October 1, 1964 and be operated on the advice of a Committee consisting of representatives from important regional and all-India handicrafts exporters associations, All-India Handicrafts Board and the Handicrafts and Handloom Export Corporation. Besides market surveys, the Fund Committee will advise on programmes of publicity, sending of trade delegations abroad and on the opening of sales offices in foreign countries.

Another important recommendation of the seminar aims at the establishment of "model production centres" with a view to ensuring increased production of quality goods. These centres will be of the nature of 'industrial estates' where craftsmen will be brought together and given common facilities such as designing, technical know-how, bulk purchase of raw-materials, etc. Details regarding the establishment of such centres will be worked out by the All-India Handicrafts Board in consultation with the Handicrafts and Handloom Export Corporation as well as the various manufacturers' and traders' associations. It has been suggested that initially 10 centres may be established for such crafts as carpets; brass artware and other metal crafts; embroidery, zari, shawls, etc.; handprints; wood-carving and ivory; dolls and toys; costume jewellery; straw, bamboo, cane,

palmyra leaf and grass mats, etc.; furniture; and bags, wellies and chappals, etc.

Here are some of the other important recommendations that were adopted at the seminar:

Market surveys, indicating the competitive position of Indian products in foreign markets, new designs and technical improvements required and the new items which the Indian craftsmen can make for exports, should be conducted during the course of 1964-67, covering the following items and countries: (i) "Floor Coverings (including carpets, druggets and namdas)" in the USA, Kenya, Ghana, Zanzibar, Nigeria, the UK, Australia, Malaysia and the Philippines; (ii) "Art Metalware" in Australia, New Zealand, Scandinavian countries, Lebanon, the USA and South America; (iii) "Woodwork" in the USA, Canada, Panama, Venezuela, West European countries and East African countries; (iv) "Shawls and Scarves" in Middle East, East and North Africa, Switzerland, West Germany, Sweden, the USA, Mexico and some other South American countries; (v) "Toys & Dolls" in the USA and the EEC countries; (vi) "Handprinted Textiles" in the USA; (vii) "Leather Footwear" in West Germany, Spain, Italy and Austria; (viii) "Zari" in Middle-East countries; (ix) "Ivory goods" in the USA and (x) "Jewellery and Precious Stones" in Australia, New Zealand and the Fiji Islands.

Another recommendation related to the adoption of the following export targets in respect of different handicraft items:

	(In crores of Rs.)	
	End of the third Plan (1965-66)	End of the fourth Plan (1970-71)
Jewellery (including cut and uncut stones)	15.00	20.00
Carpets	6.50	8.00
Art Metalware	3.00	4.00
Zari	0.75	1.25
Ivory	0.50	0.75
Handprinted Textiles	1.00	1.50
Others	4.25	5.75
TOTAL	31.00	41.00

For solving the manpower problems of the handicrafts industry the Government, in collaboration with the industry and trade, should chalk out a programme of intensive training wherein master-craftsmen should be induced to take not more than five apprentices each and that these apprentices be given in-service training for a period of five to seven years. A national college for craftsmen should also be established for imparting theoretical as well as in-service training to selected craftsmen on all aspects of the crafts such as designing, production, packaging and marketing.

Without impinging upon the ingenuity and individuality of the craftsmen, special efforts should be made to provide them with improved tools and techniques.

In cases where bulk purchase of raw materials is possible the units of particular crafts should form associations of their own and provide warehousing facilities for stock-piling and preservation of raw materials.

All exports of handicrafts should be brought under the scheme of compulsory inspection. Exports of sub-standard goods should be prohibited even in cases where foreign importers are prepared to buy such goods.

For ensuring a regular supply of designs to Indian craftsmen the All-India Handicrafts Board should pool blue-prints

on the various crafts and models and make them available to the craftsmen, along with technical and financial assistance so as to ensure effective implementation of these blue-prints. Concrete steps should be taken to adapt the designs of Indian handicraft products to suit the changing tastes and "utility requirements" of the overseas consumers. For this purpose a "reference library of samples" should be set up. In order to equip the library, study teams should be sent abroad periodically to study foreign markets, select samples and identify the commodities which India can produce.

With a view to improving the standards of packaging of handicrafts the Government of India should establish an All-India Institute of Packing and Packaging which should conduct intensive research on the changing patterns of packing and packaging abroad and introduce the necessary changes in methods to meet the requirements of India's exports. A special cell should be established in this Institute to meet the specific requirements of handicraft products.

Penetrating New Markets

Besides paying attention to the traditional markets such as the UK, the USA and Western Europe, special measures should be taken to penetrate the new markets in the countries of Africa, Middle East, New Zealand and Latin America.

Four or five information centres should be set up in major overseas markets for the supply of information on market conditions, change in consumers' demands, new designs, and samples of new items which may be of interest to our manufacturers/exporters.

The publicity of India's handicrafts abroad should be undertaken through the media of television, press advertising and the distribution of brochures.

The show-rooms of international air-ports and hotels should be furnished with beautiful craft objects to create impression on the minds of the tourists about Indian handicrafts.

Regarding the problem of 'export finance' for the handicrafts industry it has been suggested that as there is a considerable lack of information in regard to the existing financial facilities and institutional arrangements in the country, efforts should be made to publicise the existing facilities that are available.

As 'handicrafts' cover a wide range of goods the problems of finance in respect of different items are widely different. For example, the problem of financing the production and export of carpets is quite different from that of financing the production and export of, say, ivory goods. It is, therefore, necessary to make an assessment of the specific difficulties in financing the pre-shipment as well as post-shipment needs separately in respect of different items of export, particularly those items which are presenting difficulties. Thereafter, either under the aegis of the All-India Handicrafts Board, the Indian Institute of Foreign Trade or the Handicrafts & Handloom Export Corporation or jointly by them, a meeting should be convened where representatives of the exporters, the financing institutions and the ECGC should be present and go into the financial problems of each specific commodity or region and evolve practical solutions.

The Indian Institute of Foreign Trade proposes to forward the recommendations of the seminar to the various organisations, institutions and Government departments concerned with their implementation. Copies of the recommendations will also be sent to the various industry and trade associations.

The seminar marks the beginning of a series of intensive studies proposed to be launched by the Indian Institute of Foreign Trade for analysing problems connected with exports on a commodity-wise and country-wise basis. The next seminar in this series will be on "Trading With Malaysia".

NOW - A NEW VEE-BELT
WITH 40% INCREASED
HORSE POWER RATING

DUNLOP

introduces

MAXRATE

Maxrate is one more major development by Dunlop in the field of industrial rubber products in India. This premium rated belt will bring economy of drive space, weight and cost. How? Read on.

The basic factor in assessing the utility of any vee-belt is its horse-power carrying capacity. More hp means more profitability. Maxrate is developed to do exactly this. Besides, it is backed by the technical know-how and expertise of Dunlop and manufactured from the finest materials for top performance.

Here's why Maxrate 40% higher hp capacity means more economy than normal vee-belts.

1. Higher hp capacity results in compact drives.
2. Compact drives mean savings in space, weight and cost.
3. No increase in price; thus increased value for your money.

Maxrate is manufactured by Dunlop in a wide range to suit every requirement. See your nearest Dunlop dealer for details or write to:

Lean Years for Railways

ASHOK V. DESAI

OXFORD:

THERE WAS jubilation at the British Railways and congratulation from outsiders when their annual accounts were published recently: it was announced that they had made a trade loss of only £82 million. The loss itself was no surprise, for the British Railways have not made a profit since 1955; the heartening feature was that the deficit had been cut by £22 million over the year.

The railways were nationalised by the Labour government in 1947 in pursuit of their policy of controlling the basic industries, or, to use the more melodramatic name, the commanding heights of the economy. Although they were nationalised at about the same time as Indian railways, their financial fortunes could not have been more different. While the Indian railways bring a handsome profit to the government, the British railways pay interest on money they borrow to cover their losses. This is obviously a refinement on the nineteenth century arrangement whereby only the initial costs of construction of the Indian railways were borrowed in the British capital market.

Factors Behind Losses

The causes of the British railways' losses are simple. On the one hand, they have been losing merchandise traffic which brought high revenue per ton-mile. On the other hand, their wage costs have been rising rapidly.

British railways, like their Indian counterpart, follow the system of charges often called "charging what the traffic would bear." Actually, the charges have very little to do with what the traffic would bear; the railways have, in fact, little idea what it would bear. What they do is to classify goods according to their value per ton and to ensure a very rough correspondence between value and charges. This was all right as long as the railways were a monopoly. More recently, however — since the thirties, in fact — road transport has competed away an increasing proportion of the high-value goods traffic. As the proportion of these goods carried by railways fell, so did the average revenue per ton-mile, given their rate structure.

On the cost side, the British Railways have had to grant rapid wage increases since the war. This has been partly due to the general upward trend of wage, but it also owes partly to the fact that railways, being a depressed industry, paid particularly low wages before the war. So railway workers have been able to appeal to considerations of equity and fairness in their wage demands.

The wage increases have reflected themselves in wage costs because until recently, the increases in productivity have been slow. The railways have been a technically stagnant industry for many years; and while there have been notable technical advances in the running of railways since the last war, the British railways have been too poor and dispirited to adopt them on a large scale.

Their reaction to cost increases was to raise charges. Their power to do so was, however, gravely circumscribed. Since they are a nationalised industry, increases in their charges have to be approved by tribunals on which consumers' interests are strongly represented, as well as by the Minister of Transport. The former have, not unnaturally, been hostile; and successive Ministers of Transport have blocked or delayed

increases in charges, generally on grounds of preventing inflation. The fact that railway users are more important electorally than the railway executive has also played a part.

Another favourite anti-inflationary move of governments has been to curb investment in nationalised industries. This has also delayed and reduced cost-reducing investment in railways. The railways had for years been a backward industry, and found it difficult to attract personnel to organise new investment; and the government's stop-go investment policies did not make it any easier to keep the personnel they had got.

Achievement of Dr Beeching

The origin of railways' losses was at least partly political, and evidently, the solution had also to be partly political. This is where we must start looking for the essential achievement of Dr. Beeching, the present Chairman of British Railways.

Dr. Beeching started with a certain advantage, for when the Minister of Transport induced him two years ago to give up a directorship in the ICI and take over the British Railways, he gave him a brief to try and wipe out the railway losses. Given this task, Dr. Beeching was quick to realise that it could not be achieved by increases in charges, which ran up against powerful political interests. What he needed was the power to make selective increases in charges. Such increases were blocked by old legislation which made it obligatory for railways to publish their charges and to carry all traffic that came at those charges. Now, charges based on commodities are 'ipso facto' insensitive to the different costs of haulage. For example, odd lots entail much higher handling charges than bulk cargo, which cannot be reflected in such a charge list. Hence the railways must be entitled to refuse goods which cost more to carry than the published charges on them. This was one of the powers Dr. Beeching asked for and obtained.

Runs the Gauntlet

Another move of his, which is much more conspicuous and controversial, was to initiate a traffic survey and, on its basis, to start closing down lines on which traffic was not heavy enough to cover costs. This has also to run the gauntlet of a tribunal and the Minister of Transport; and the press makes incredible noise over it, since every rail closure is fresh news. But the railway lines that are closed are all in sparsely populated outlying areas; so the political pressure against them is less important, and the Minister of Transport acquiesces more easily in them. In fact, the Conservatives have been holding Dr. Beeching forward as a symbol of their brand of modernisation. The Labour Party is not so enthusiastic about him, and being but human it makes political capital out of unpopular railway closures, but even it says, not that the railways should continue to finance these lines, but that the government should subsidise them to run lines that make losses — that the decision as to which lines should be closed down ought to be taken on social, and not financial grounds.

The procedure of railway closure is very time-consuming. For example, British Railways gave notice in January that they would close the Universities line between Oxford and Cambridge in April. The line is of great antiquity, having been opened in 1845. Oxford University had condemned the first proposal to bring the railway to Oxford as being subversive to discipline, detrimental to health and an incentive

July 10, 1964

to monetary speculation; its reaction to the Universities line is not known. But now it has lodged an objection to the closure, and a number of hearings will follow. The outcome is little in doubt. The goods traffic is negligible; and some five two-coach diesel trains run every day in either direction which are rarely even half full: often one can count one's fellow-passengers on the fingers of one hand. But it will be surprising if the matter is settled before the end of the year.

The Future Shape

Long though it might take, Dr. Beeching will probably have his way. A Labour government might keep some lines open or run buses along them, but there must be a limit to such activity, since subsidies are politically unpopular. So it is very likely that Britain is heading for a much smaller railway service with little significant change in its rate structure. And the present objective, that the railways should pay their way, should be achieved in five or six years.

However, manipulating the size of the primary undertaking is but one way of achieving this objective. There are at least two other ways of going about it — the French way of increasing the output of railway services per man-hour and equipment-hour, and the Dutch way of adjusting charges. The SNCF in France has electrified its main trunk routes and increased the traffic handling capacity of the marshalling yards and installations along them. It has thus been able to speed up traffic and achieve great economies in manpower and equipment. On the other hand, the Dutch railways pay great attention to the charges and services of their competitors as much as they would pay without having recourse to alternative means of transport. Thus, they come much nearer to charging what the traffic would bear, and thereby make handsome profits. In these directions, it seems, the British Railways will not achieve as much as they could.

The problems discussed do not have much relevance for Indian railways, and will not for some time to come. Average costs per ton-mile are still considerably lower for them for road transport; so they will not, for a long time, find it difficult to make ends meet. But it may not be so long before trucks begin to make a dent on their profits. My estimate is that

Tour of a Rosier Horizon

JOSSLEYN HENNESSY

LONDON:

SINCE THE state of the economy is all-important for the electoral hopes and fears of Tories and Socialists alike, political commentators pounce upon each new set of economic indicators as it is published. Unfortunately, as economic commentators have been warning their political colleagues, indicators taken in isolation are subject to seasonal and other exceptional factors, so that the trend is much more important than the individual announcement.

Political commentators were quick to note the sharp fall in UK exports in January, which contrasted with their strength in December, February, and March. Inside the totals, exports to Europe expanded, those to the USA and Canada contracted, and those to the sterling area expanded. Analysis by commodities shows that the really important items — machinery, road vehicles and chemicals — were doing well. Total exports were lower, again, in April, but the Bank of England says that this "does not warrant any supposition that the underlying strength of exports has significantly weakened. Export orders outstanding, notably for engineering products, have been well sustained".

The Bank of England considers that economic prospects overseas promise a large rise in UK exports again this year—

Indian railways earn 15 to 20 per cent of their freight revenue on goods which could easily be competed away by trucks given their present charges; with the recent increases in charges the proportion might have increased. And whatever role we might plan for road transport, it will grow up to compete with railways, for it is much more profitable to compete away existing traffic than to rely on sparse and uncertain feeder traffic. This is confirmed by the rapid growth of road transport around our large cities.

However, the problem this poses for the railways is simple as yet. All they need to do is to reduce charges where they exceed 12 P. per ton-mile-charges — on cotton, jute, petrol and manufactures — and to raise them on coal and grains. Even if the transport of coal and grains is to be subsidised, this should be done by the state governments as a deliberate policy, and not covertly by the railways.

Odd Lots, Short Hauls

These rate changes will stave off financial embarrassment for railways; they will not, however, result in an economic distribution of traffic between rail and road. For this purpose it is necessary for railways to fashion charges in such a way to attract the traffic best suited to them. More specifically, charges need to discriminate against odd lots travelling short distances. This can be done easily by introducing a charge on the number of lots, as well as one on their tonnage, and by reducing the haulage charge per ton-mile. The same rules apply to passengers: short journeys on local trains should cost more per mile than long ones on express trains.

Apart from changes in the rate structure, the greatest opportunities of the Indian railways lie in the field of long-range planning. For India already has long stretches of homogeneous trunk routes, and the formation of industrial growth points furnishes further opportunities for opening long lines. There is thus much scope for economical and fast long distance train services that could be exploited in the next decade or two. Railways furnish a rare type of planning problem — difficult and challenging and yet not vexatious like the problems of payments and prices.

and, other things being equal, what is good for the UK should be good for India. The American miracle, which Paul Bareau described here recently, has entered its fourth year, and shows no sign of ending. Demand continues to grow, while many US industries have spare capacity, and prices are stable. Substantial tax cuts should have a powerful expansionary effect.

In Europe, the rate of expansion has been quickening. The main impetus comes from Germany and Holland, with France and Italy lagging. This conflict of trends makes it difficult to assess how demand in the EEC may develop, but UK economic observers think it possible that activity will rise as fast as in 1963, though there may be some shift from consumption to investment.

The export earnings of the primary producing countries, in general, soared in 1963, both because they sold more and aid. Their aggregate reserves therefore rose from a depressed level. The Bank of England's latest bulletin suggests that the sustained expansion in prospect in 1964 for the chief industrial countries means that demand for primary products will remain strong, and above average. After a long period of stagnation, imports of manufactures into the primary producing countries turned up during 1963 and, although the representatives of

July 10, 1964

the 75 developing nations at Geneva professed some disappointment at the results of the recent UN trade talks, their upshot was, at the very least, not negative, and if the primary producers did not get all that they wanted, they did not leave empty handed. The UK, in particular, pledged increased contributions to the UN Special Fund, to the UN Secretariat for industrial development, and capital aid to the African and other regional development banks. The developed countries, as a whole, at the instigation of Mr. Heath, the UK's Secretary for Industry, have undertaken to do their best to provide at least 1 per cent of their national income in aid and other capital flows.

The powers of attraction of the USA's buoyant economy are held here to explain the marked increase in the UK's net new portfolio investment in non-sterling countries in 1963. With the prospect of higher returns there, UK portfolio investment in the USA rose from £13 million in 1962 to £46 million in 1963. At the same time UK private investors did not neglect the overseas sterling countries. From £6 million in 1962, their stake in these areas rose by £24 million in 1963.

Italian Crisis Threatens Common Market

From Our Special Correspondent

PARIS:

THE RELATIVE optimism of our comments here a fortnight ago on "Italy's prosperity crisis" now needs to be moderated in view of the political crisis in Rome. Not that the cabinet crisis would be particularly ominous if the reasons for it were those given publicly: the refusal of the secular parties to apportion a small increase in State aid to Catholic schools. But the confessional-school controversy in Italy, as in France, usually covers something else; it is a convenient and honourable ally for a showdown or a rupture, that can be invoked at any moment, without it being necessary to make public the real causes of disagreement. This is the function it has fulfilled again in this case. The Socialist Party (the party of Mr. Nenni) had decided, or at least its extremist wing had decided for it, to quit the Left-Centre coalition government before it became absolutely necessary to impose disinflationary policies to save the lira. Having so decided, it was just a matter of finding a pretext, and after some searching a tiny budget entry was found that allocated more State funds to confessional schools. A Socialist Minister was responsible for the budget, which had already been approved in the cabinet by all the Socialist Ministers, but that was no obstacle to dressing up this detail as a matter of high principle.

One dwells on this affair because the bad faith shown by the Socialists is very relevant to Italy's economic future. The Premier, Aldo Moro, saw this because, though not strictly obliged to resign after being outvoted on so small a matter, he lost no time in abandoning office. For the fact is that the Socialists were intimating clearly that they will not help clean up the confusion they have helped to make in Italy's economy, and, in particular, they will not stay in any government that risks making itself unpopular with an austerity campaign. Italian socialism has no Stafford Cripps in its ranks, and after two years in coalition governments it is still unwilling to shoulder any of the unpleasant responsibilities of power. Its attitude is that it will stay in office only as long as it can implement its expensive reforms; once there is need to safeguard the economy (weakened in part just by those reforms), the Socialists prefer to get out and leave the dirty work to others.

This profoundly irresponsible, not to say demagogic, approach to governance shows how far the Socialists are from being incorporated into the parliamentary system, which was

The Bank for International Settlements recently estimated that the European money market totalled £2,500 million, of which £1,786 million were in dollars. The Bank of England has followed this up by estimating that over £1,300 million of foreign currencies (dollars, D marks, Swiss francs etc.) are on deposit in London, of which over £1,100 million are in dollars, thus confirming that London dominates the European money market and is probably doing more than half of its business. The Bank comments that this market has stimulated banking competition, has reduced interest rates in the main borrowing countries, and has added to the total funds available to finance international trade. It is estimated that only 20 per cent of dollar deposits in London come directly from the USA, and that the bulk comes from Europe. It appears that Europe does most of the borrowing — about £400 million in dollars and £200 million in other currencies. Curiously enough London lends about the same amount of dollars — to the USA; apparently some of these dollars come from Japanese banks in London, which lend to Japan through their offices in New York.

the objective of the Left-Centre experiment. If they were content to quit the ministry and leave the inevitable disinflation to others, the case would be bad enough; but there is the obvious danger that they will pass over to the opposition and instigate the labour unions to harass any ministry that tries to correct Italy's situation. For the Socialists still refuse to admit the necessity of the sort of corrective action recommended by Italy's Common Market partners and accepted by the Christian Democrat and Social Democrat members of the coalition.

'London-Rome Axis'

Certain reports that have filtered through from Common Market sources that conducted the negotiations with the Roman cabinet just before it was overthrown are extremely instructive as regards Socialist views. It appears that the Socialists were ready to agree to every cut in consumption suggested by the Common Market advisers, provided that all the resources thus saved were immediately invested, so as to maintain employment. Naturally the net effect of "disinflation" undertaken in that way would be zero, and the value of the lira would continue to deteriorate. When Italy's partners began to lose patience and insisted on speedy action by the Moro Government, which had been dithering for over six months, the Socialists retorted that Italy was not to be bullied by the conservative governments of Bonn and Paris. If their attitude endangered the Common Market, they added, then too bad: Britain would soon have a Socialist government too, and a Socialist London-Rome axis could well be independent of a conservative Erhard-de Gaulle camp.

The absurdity of these fulminations is worth noting, in that this is where Italy's "opening to the Left" has ended. The only terms on which the Socialists would co-operate with the Centre parties (and even then without breaking their connection with the Communists) were: implementation of a preconceived, ideological programme regardless of expense, and at the cost, if necessary, of Italy's currency, credit, and Common Market obligations. The irony is that this programme is not even politically profitable to the Socialists, let alone to the Centre parties that consented to co-operate with them on such terms. For it is the majority opinion among political observers that if fresh elections are needed to resolve the ministerial crisis, the most likely winners are the two extremes, the neo-fascists and the Communists. In other words, the mood

of confusion and disillusion produced by the collapse of the Italian economic miracle will not serve those responsible for the crisis, but will be grist in the mill of the anti-democratic forces.

For all that the political climate has worsened, one can still repeat what was said here last fortnight, that there is nothing fundamentally dangerous in Italy's economic situation—given a minimum of central authority in Rome. The basis of the long boom was sound, and there is nothing artificial or fictitious about the immense economic progress of the last decade and a half. But the boom started to go too fast from about 1961 and the country slipped into a prosperity skid, connected in particular with a leap in consumer outlays on food and drink when lakhs of poor people found their first regular jobs. This situation could have been dealt with fairly easily by restrictive measures taken in time, but unfortunately it coincided with the "opening to the Left" experiment in 1962. Some mild restrictive measures were taken this February, belatedly, and since then the situation has shown signs of improvement.

Brussels Diagnosis

The diagnosis of the Brussels experts last month confirmed that basically the Italian economy is suffering from nothing that a spell of moderation could not cure. They forecast that this year the gross national product will grow by 5 per cent, given that crops are normally good, that exports will increase 11 per cent (against only 9 per cent last year), while imports rise 15 per cent (whereas they jumped 23 per cent in 1963). Unemployment will decline by 15 per cent, against 10 per cent last year, so that consumer demand will grow at least as quickly. Thus, the outlook is not disastrous and is better than at the start of the year. But it is nevertheless serious, for the above figures entail another large payments deficit which, combined with the loss of confidence caused by the Left-Centre experiment, could eventually force a devaluation of the Lira.

To avoid that, President Segni's unenviable task is to find in the present assembly a team with enough political courage to impose the moderately severe disinflation that is required. The programme is ready and written: an increase in sales taxes, higher income taxes, dearer petrol and cigarettes, etc., and of course a cutback in State outlays and postponement

of costly reforms. This programme has been approved by the country's monetary authorities and by the Centre parties, as well as by Italy's partners. It remains to find a ministry with the courage to sign it. If none can be found, the situation will indeed become alarming.

At that point, Italy's crisis becomes a Common Market crisis, the first of the sort it has had to face. The European nations have many times experienced the difficulties that now face Italy, and up till 1958 they always had a weapon of last resort: the isolation of their economy from the rest of the world by means of a severe limitation of imports, artificial export promotion (if necessary by means of multiple exchange rates), control over all capital movements, maintenance of a false "official" exchange rate that no longer represented the value of the currency, and then if absolutely inevitable a unilateral decision to devalue. Now, all the Common Market Six have surrendered the power to follow that course of action, at least vis-a-vis their partners in the community. To limit imports from the rest of the community and so on would simply mean withdrawing from the Common Market, and for a member to back out would entail a grave mutilation of the association.

In other words, the continued progress of the Common Market and Italy's continued membership of it require a deflation in that country, so that it can continue to honour its obligations. The Socialists (not to mention the Communists) refuse that deflation, which is not contemplated with pleasure by any of the parties, but of which the others recognise the necessity. So the choice is clear: the Common Market or inflation, but not both. One can now understand the irritation in the other Common Market capitals when Washington made a loan to Italy in March. In Bonn, Paris and Brussels it seemed that Washington was paying Rome to postpone the painful decision demanded by the other five, and indeed that is what happened. The Italians thanked good old Uncle Sam (Socialists as fervently as any) and put off the corrective measures that were already overdue, while the country, and the Common Market with it, drifted nearer disaster. If Washington wants to repeat the gesture now, it has a simple way of wrecking the Common Market: encourage the Italians to prefer continued inflation to the rigorous requirements of membership of the community.

another order for CELCON[®] came the other day

[®] Celcon is the new engineering material which has excited interest of buyers from the automobile industry, the electrical industry, the building materials industry, the hardware industry, the packaging industry, the office equipment industry and the weapons-making industry. Celcon was developed after many years of research by the Celanese Corporation of America, one of the world's major producers of formaldehyde and trioxane.

Celcon is fast displacing iron, steel, brass, zinc, aluminium, magnesium, thermosets, laminates and wood in the manufacture of many articles. As contrasted with many die-cast metals, Celcon components require little or no finishing when they

emerge from the mould and may almost immediately be put to use. Considerable amounts of money are thus saved when Celcon is used. Celcon maintains its high mechanical strength, stiffness, toughness and resistance to impact force over a long period and through broad ranges of temperature and environment.

Celcon is available in natural translucent white and 18 standard colours; it is easy to fabricate; has excellent frictional characteristics; it can be readily sawed, drilled, turned, milled, filed and threaded. It can be fabricated by injection moulding, extrusion, blow moulding and other high volume thermoplastic processing techniques. Processing ease and economy are its greatest advantages.

Keep Production rolling with Caltex "STOP LOSS" programme

When a machine bearing fails, it's not the cost of replacement that's expensive, it's the lost production. A Caltex "Stop Loss" Programme can virtually eliminate the most common cause of bearing failure — improper lubrication.

HOW "STOP LOSS" WORKS: Caltex Lubrication Engineers help you set up a fool-proof system of lubrication control. From woodyard to shipping platform, they see to it that every piece of equipment gets the right amount of the right lubricant at the right time. The results: maintenance costs down as much as 15%, number of major lubricants required reduced to as few as six, purchasing simplified.

Production is worth a lot of money — keep it rolling with Caltex "Stop Loss" Programme.

State Foodgrains Trading Body Soon

By Our Special Correspondent

NEW DELHI:

THE UNION Food and Agriculture Minister, Mr. C. Subramaniam, will be shortly submitting concrete proposals to the Union Cabinet for setting up a State-owned Foodgrains Trading Corporation and an agency to fix grain prices. This was indicated by him at a Press Conference here last week.

The details of the two proposals are being worked out in the light of the discussions at the State Chief Ministers' Conference held here from June 24 to 26. The Chief Ministers had generally welcomed the two steps, although they did not take formal decisions on them.

As regards the Foodgrains Trading Corporation, it is being considered whether there should be set up only one corporation for the whole country and to deal in all the principal foodgrains or there should be regional, State-wise or separate corporations for dealing in the main food crops. In regard to the agency proposed to be set up to fix foodgrain prices, the current official thinking is not to associate any representative of the farmers and consumers with this agency. It has to be a technical body consisting of only technical experts. The agency will be required to recommend minimum prices for foodgrains payable to the producers and reasonable maximum prices which should be charged from the consumers.

Lasting Solution

Mr. Subramaniam stressed that the only lasting solution to the food problem of the country was to increase production. This required making available to the farmer, well in time, adequate quantities of essential prerequisites for agricultural production as well as credit and offering him suitable incentives. The cardinal principle which was proposed to be followed while fixing foodgrain prices was payment of remunerative prices to agriculturists. The proposed Price Fixation Agency, it is understood, will submit a preliminary report to the Union Food and Agriculture Ministry before the next rice crop.

Mr. Subramaniam also gave details of his programme for setting up modern mechanised rice mills in the public sector, including the co-operative sector. He proposed to put up by the end of the fourth Plan period, 1,000 3-tonnes-per-hour capacity modern rice mills and another 1,000 2-tonnes-per-hour capacity units which would mill nearly 20 million tonnes of rice per annum. Six such rice mills are proposed to be set up in the immediate future. Three of these will be located in Thanjavur (Madras), West Godavari (Andhra Pradesh) and Shahabad (Bihar). Locations for the other three will be decided shortly. An official delegation is leaving for West Germany and Italy on July 16 to negotiate the purchase of machinery for these mills. This delegation would later on visit Japan, another country where this equipment is available.

Mr. Subramaniam stated that no licences would be issued in future for setting up new rice mills in the private sector. No provision was also being made for modernising the existing private sector rice mills, although most of these were characterised by the Food and Agriculture Minister as "primitive and uneconomic".

Mr. Subramaniam emphasised that his proposal to set up modern mechanised rice mills in the public sector and not to

take over the existing private sector units did not in any way violate the spirit of the Bhubaneswar Resolution of the Congress. It was no use sticking to the old and primitive rice mills, turnover of which was much lower than of the modern mills, he said. Mr. Subramaniam, however, did not rule out control over the existing rice mills; if any controls were necessary to regulate their working, they will be imposed.

Mr. Subramaniam also indicated that he would soon take up with the Union Ministry of Commerce the question of banning exports of pulses during the present period of shortages. Even though these exports were only small, they did tend to push up prices and a ban on them was necessary for creating a psychological impact, opined Mr. Subramaniam.

Talking about land reforms, the Food and Agriculture Minister stated that ural and informal tenancies which had come into being in the past few years, were creating complications and upsetting the implementation of land reform programmes. They hampered agricultural production also. It was time to look into this matter.

Mr. Subramaniam revealed that the short-term measures to contain the expanding spiral of food prices, decided by the Union Government and ratified by the State Chief Ministers, had yielded perceptible results. Foodgrain prices had come down at various places in the country. This downtrend, he hoped, would continue and prices would stabilise at reasonable levels in the near future.

★★
Hospet, instead of Goa, is understood to have been favoured as the location for the first steel plant in South-West India, by the Technical Experts Committee appointed by the Union Department of Steel to scrutinise the feasibility report on this project. The Committee is said to be of the view that production cost would be comparatively cheaper in Hospet than in Goa. Siting of this steel plant at Goa can have one advantage; it can obtain its coal supplies from abroad. But in the opinion of the Technical Experts Committee, the plant if located at Hospet would also not suffer from any disadvantage in this respect. Bengal and Bihar coal, the Committee feels, can be made available in Hospet at about the same price as the imported coal in Goa. Hospet has the added advantage of being close to limestone resources and non-alkaline water. Iron ore in the neighbourhood of Hospet is also stated to be richer in ferrous content than the one available in Goa.

The Union Government is expected to take a decision on whether to locate this plant in Hospet or in Goa in another couple of months. As soon as this decision is taken, negotiations are proposed to be started for securing foreign collaboration for the project. Besides the U.S. and European manufacturers of steel-producing machinery, Japan and Poland are understood to have shown interest in assisting the establishment of this steel plant as well as another proposed to be set up in Visakhapatnam or Bhailadila.

Which of these two steel plants — to be set up in Goa-Hospet and Visakhapatnam-Bhailadila areas — will be included in the fourth Plan as the fifth public sector steel-manufacturing unit is anybody's guess at present. A few months ago, Mr. C. Subramaniam, as the Minister for Steel, had indicated that the Goa-Hospet plant had an edge over the

July 10, 1964

Visakhapatnam-Bhailadila unit. But the position appears to have changed materially now. With the feasibility reports of both the plants having been looked into by the Steel Department's Experts Committee, the plants are now more or less on a equal footing. One of these plants is to be set up during the fourth Plan period upto the steel-manufacturing stage and the other upto pig iron-making stage.

An official delegation, led by the Secretary to the Department of Steel, Mr. N. N. Wanchoo, is expected to leave for Moscow on July 17 for talks with the Russian authorities on the Bokaro plant. The delegation will include Mr. K. M. George, Managing Director of Bokaro Steel Ltd. It will spend about two weeks in the Soviet Union. The major point of discussion would be the changes that might be required to be made in the project report made for the Bokaro plant by Dasturco. This report has been with the Soviet authorities for quite some time. The need to amend it probably arises because the Russian standard specifications may be slightly different from those of the United States. Dasturco had prepared the report according to the US specifications as collaboration for this project was being sought at that time from the United States.

Expansion Progressing

The expansion programmes of the Bhilai, Durgapur and Roureeka steel plants are stated to be progressing well. While the expansion of Bhilai to 2.5 million tons ingots capacity is likely to be achieved in 1965, the Durgapur and Roureeka steelworks would be expanded to 1.6 million tonnes and 1.8 million tonnes ingots capacity, respectively, by the middle of 1966.

Pig iron supplies from the Soviet Union under the agreement reached recently are expected to start shortly. The Soviet Union is to make available under this agreement 100,000 tonnes of pig iron during the current year.

The Durgapur Alloy Steel Plant is expected to be partially commissioned into production by the end of the current calendar year. It is hoped that one of the four re-heating furnaces to be installed at this plant would go into operation by that time.

Designed for a capacity of 100,000 tonnes of alloy and special steels, the plant will turn out finished products at the rate of 60,000 tonnes a year — 14,500 tonnes high-speed tool and die steels, 27,500 tonnes alloy construction steel and 18,000 tonnes stainless steel. The cost of setting up the plant is estimated at Rs. 65 crores.

A major portion of the main plant and equipment is being supplied by a consortium of Japanese steel manufacturers under an agreement signed in September, 1963. Three re-heating furnaces are being made available by Messrs AMCO of Canada and the fourth one by Messrs. Wellmann Incandescent. Messrs. Atlas Steel Limited, a Canadian firm, are the production consultants for the project. The engineering consultancy services are being provided by Messrs. Dastur and Company.

The Union Minister for Commerce, Mr. Manubhai Shah, revealed at a Press Conference here last week-end, that as a result of his negotiations with the US Secretary for Agriculture during his recent visit to America, the United States was likely to make available to India 100,000 tonnes of soyabean oil and some tallow under PL 480. The first shipment out of the 360,000 bales of cotton to be made available by the US under the PL 480 agreement signed in April this year, Mr. Shah said, was expected by the end of the current month.

On textile exports to the U.S., Mr. Shah said that India's dissatisfaction at the smallness of the US import quota had

been expressed by him to the US Government. But from the categorisation of quotas, it appeared that there were several varieties either not under restraint or under partial restraint only and these could be sold to the US market in increasing quantities. If the Union Government and the textile manufacturers studied this problem and made efforts, India could increase textile exports to the US by about \$5-6 million. Indian textiles, Mr. Shah further stated, satisfied the quality standards of the US market, but some US importers had complained that sometimes they received short lengths. Mr. Shah urged the textile exporters to take note of this complaint.

As a result of Mr. Shah's discussions with the US importers of Indian mica, spices and cashewnuts, various measures are proposed to be taken in the near future to step up these exports. A Rs. 34 lakhs research project will be launched in the US soon to find diverse uses for mica. The Indian mica exporters would contribute Rs. 5 lakhs to this project and the American importers another Rs. 5 lakhs. The remaining Rs. 24 lakhs would be made available by USAID. In regard to exports of red chillies, black pepper, turmeric, aniseeds and cardamom, a market promotion drive project is to be launched. The cost of this project, nearly Rs. 16 lakhs, will be shared equally by the Indian exporters and the American importers. Another similar publicity drive is to be undertaken for promoting cashewnut exports.

Mr. Shah stated that from his discussions with the US importers he had gathered the impression that exports of marine products, such as sardines and shrimps, to the US

could be increased from the present about 9 million lbs. to as much as 20 million lbs. if the Indian exporters improved their packing and maintained good quality consistently. There were also good chances of India exporting to the United States engineering goods, machine tools, surgical instruments and automobile ancillaries. The Engineering Export Promotion Council would be setting up an office in New York in the near future.

Referring to mineral ores, Mr. Shah said that there were fair chances of increasing manganese ore exports to over one million tonnes in the next few years; exports currently ranged between 800,000 and 900,000 tonnes, largely because of the recession in the US steel market. There were good prospects for stepping up exports of bauxite and chrome as well, he added.

Mr. Shah found the official attitude in the US towards India's request for increased sugar quota quite sympathetic. He hoped this quota would be soon raised substantially from the present meagre level of 20,000 tonnes.

The Union Government has announced the second instal-

Control Over Cloth Prices

From Our Correspondent

BOMBAY:

CLOTH PRICES have drawn attention in recent weeks because of the decision by a small number of mills to raise prices consequent upon all-round increase in the cost of raw materials and wages. On June 29, the Mill Owners' Association requested its members not to increase cloth prices because a decision in this regard was likely to be taken at the Cotton Textile Consultative Board meeting scheduled to be held on July 7*. In the history of the Mill Owners' Association, this was perhaps the first time that an open appeal "not to stamp, with immediate effect, prices higher than those permitted under the scheme", was issued by the Association. The mills are of the opinion that it would not be feasible to keep the cloth and yarn prices pegged at the 1959 level. A number of representations had been made by the cotton mills industry earlier but the Government turned a deaf ear to all these appeals. Market circles believe, however, that the Government has already taken a decision in this regard and a revision in the cloth and yarn prices will be announced shortly.

The stagnation in cloth production has also caused great anxiety. The Union Government is reported to be considering a proposal to increase the working hours by staggering the weekly holiday and raising the weekly working hours to 54. This proposal will come up for discussion with the labour leaders at the next session of the Indian Labour Conference scheduled to be held at Bangalore on July 29 and 30. The underlined idea of this scheme is to increase working hours from eight to nine per day. It is understood that over-time wages will be paid for the additional hours that time labour will put in. Instead of a uniform holiday on Sunday for all labour, it will be restricted to one of the seven days of the week. In this manner, the mills would be able to operate their machinery on all the days of the week. This technique alone is likely to increase production by 16 to 17 per cent.

The third Plan target of cloth production by the mill sector was fixed at 5,800 million yards. The actual production of the mill sector in 1963 was 4,837 million yards, indicating a gap of about 1,000 million yards. With the increase in the working hours and with the sanction of additional spindles

*As we go to the Press, newspaper reports indicate that the Board has recommended to the Government that statutory controls should be imposed on production and prices of popular varieties of mill cloth which would account for 40 per cent of the total production of the mills. This is expected to ensure the consumer popular varieties of cloth at controlled prices. There will be no control on the remaining 60 per cent of cloth production.

ment of its market borrowing programme for the current financial year. It is issuing from July 13, 1964, a further tranche of 4 per cent 1970 Loan and 4½ per cent 1989 Loan for subscription in cash or by cheque for a total sum of Rs. 150 crores. The 1970 Loan will be issued at Rs. 99 per cent. It will be repaid at par on April 15, 1970. The 1989 Loan is to be issued at par i.e. at Rs. 100 per cent. It will be repayable at par on April 15, 1989. The subscription lists will close on July 15 or earlier without notice as soon as the total subscriptions aggregate Rs. 150 crores. The Government of India reserves the right to retain subscriptions upto 10 per cent in excess of the notified amount.

The State Governments this year are to enter the market for their borrowings separately. They may do so in August.

★★

Mrs. Indira Gandhi was sworn in as the Union Minister for Information and Broadcasting on July 2. On her assuming this office, Mr. Satya Narayan Sinha, Minister for Communications and Parliamentary Affairs, relinquished his temporary charge of the Information and Broadcasting Ministry.

and looms, it is possible to raise production to the stipulated level in the next two years.

★★

Ever since the emergency, the turnover in the stock exchanges has been extremely limited. The margins have, to a certain extent, been responsible for this restrained activity. This week, the Government decided to partially relax the margin system. The exemption limit regarding daily margins has been increased from Rs. 3 lakhs to Rs. 5 lakhs on each cleared security. The rate of margin on the top slab has been reduced from 40 per cent to 20 per cent. The rate of 20 per cent has been made applicable only on the slab above Rs. 20 lakhs. Earlier, the 40 per cent margin rate was on the slab above Rs. 10 lakhs. The exemption limit regarding additional carry-over margin has been increased from Rs. 15 lakhs to Rs. 25 lakhs. The number of slabs has been lowered from six to five. The top slab has been raised from over Rs. 40 lakhs to over Rs. 50 lakhs. The margin rate thereon has been reduced from 30 per cent to 20 per cent. The markets have welcomed these changes, though they have not given any boost to prices presumably because the relaxations had been anticipated.

★★

The fourth agreement between the Indian Oil Company — a public sector undertaking — and "Soyuznefteexport" was signed at Bombay on July 4, according to which this country will import 1.5 million tonnes of petroleum products — kerosene, high speed diesel oil and furnace oil — from the Soviet Union during the next three years. Addressing a Press Conference immediately after signing the agreement, Mr. Gopalakrishnan, Chairman of the Indian Oil Company, said that the total demand for petroleum products by 1966 would be around 16 million tonnes. All the public sector refineries are likely to meet half of this total demand. In due course, the Indian Oil Company will handle the entire production of the public sector and will become one of the oil giants in the country.

★★

Mr. Purushottam Kanji, Chairman of the Maharashtra State Financial Corporation, in a press conference, said that

July 10, 1964

the corporation will sanction loans amounting to Rs. 45 crores by the end of the fourth Plan period, if the prevailing demand for industrial finance is sustained. He added that the corporation's disbursements at the end of 1970-71 would amount to Rs. 25 crores. Since its inception in 1953 to the end of March 1964, the Corporation has sanctioned loans amounting to Rs. 13.57 crores; disbursements have amounted to Rs. 8.37 crores. The Corporation sanctioned loans amounting to Rs. 3.22 crores in 1963-64 against Rs. 2.06 crores in 1962-63, and disbursed Rs. 2.09 crores against Rs. 1.65 crores. Outstanding loans amounted to Rs. 5.52 crores at the end of March 1964 against Rs. 4.11 crores at the end of March 1963. Mr. Kanji

Failure on the Food Front

From Our Correspondent

CALCUTTA:

AGRICULTURE IN West Bengal has been much in the news, largely because of the persisting food crisis. The recent visit of the Central Study Team on Agriculture led by Mr. Shriman Narayan, Member of the Planning Commission, served to highlight the importance of the subject further. The increasing uncertainty of obtaining supplies from outside the State in times of stress like the present had led to the realisation that West Bengal must do everything in its power to raise internal food production by cultivating the existing acreage intensively, since extension of the area under food crops is marginally possible. The State Government has been taking measures to make the basis of cultivation more intensive, but these have yielded no outstanding result because the measures themselves, as Mr. Shriman Narayan was constrained to point out, have been at best half-hearted. For example, in the field of minor irrigation on which greater reliance has to be placed on the short-term than on major projects, progress has been most unsatisfactory. The State has been able to sink some 616 tube wells so far, but of these only 155 have been working properly. Lack of sufficient electricity and cement shortage have been given as the reasons for slow progress. While Mr. Narayan has assured a supply of 2,000 tons of cement for the purpose, there is nothing he can do about the first. It is for the State Electricity Board to increase power supplies for the tube wells. In other words, the West Bengal Government itself must do something about supplying electricity to tube wells.

As for other important measures like providing the farmer with sufficient fertilisers and credit and conserving soil against threats of erosion, there is much the State Government could do, but these unfortunately have been receiving inadequate attention. Mr. Narayan has pointed out that West Bengal's target for fertiliser consumption is half a million tons of ammonium sulphate by the end of the third Plan, as against which the State was able to absorb only 75,000 tons in 1963-64. The consumption rate cannot be substantially stepped up without creating a suitable agency capable of coping adequately with the distribution work. Fertiliser distribution in the State is at present entrusted to a few private firms who apparently are unable to do the work well. Service co-operatives or even credit societies could have been entrusted with it, but for some inexplicable reason the State Government has not been utilising their services. Local institutions like gram panchayats also can help.

It is obvious that unless the State Government pay sufficient attention to these important matters, agriculture here will not get the shot in the arm it needs. The tentative provision for farming, community development and co-operation under the fourth Plan is Rs. 3,200 crores, very nearly one-fourth of the size of the next Plan's outlay. West Bengal will naturally have to work a bigger programme of agricultural development during the next five year period in line with

said that, given the rapid growth in activities in recent years, the corporation could look forward to sizable loan operations in the next Plan period. It would seek to meet such a demand mainly by borrowing from the Refinance Corporation for Industry and Development Bank which commenced operations from July 1. The Corporation preferred borrowing to raising capital. While interest on the former was treated as expenses for tax purposes, dividend on paid-up capital was liable to tax. He added that the corporation's borrowing capacity was ten times its paid-up capital of a crore of rupees. The corporation has so far borrowed about Rs. 5.25 crores, and can thus borrow a further amount up to Rs. 4.75 crores.

the overall plan strategy of improving agriculture and rural industries in order to maximise employment and reduce rural under-employment.

Talking of the current food crisis, the other facet of the State's agricultural insufficiency, the Government now feels that it is successfully riding the storm. The fair price shops have been able to supply food ration and sugar to all those who have come and the 25 per cent or so who have failed to turn up so far are either those who are temporarily short of cash or those who possess ghost ration cards, and are afraid to come to the shops because of strict police scrutiny of the cards. Therefore, the weekly offtake during the latest week was 4,000 tons, against 3,030 tons in the previous week and an estimated 6,000 tons weekly on the basis of a population of 6 million in greater Calcutta area. The Chief Minister has confidently declared that the State Government has now enough stocks to last until next October. With a little more careful husbanding of resources and popular co-operation the stocks could last even until December by which time supplies from the new harvest would come. While the State Government may reasonably claim credit for its skilful handling of prolonged negotiation with the milling interests, the suppliers of mustard seed and wholesalers, the Government is still far from ensuring adequate supplies of mustard oil in Calcutta, and perhaps in the whole State. The situation is extremely confusing. The Government has fixed retail and wholesale prices for mustard oil and seed, while the seed dealers have voluntarily fixed prices for the produce under a gentleman's agreement. Yet mills are not working to full capacity, the

THE MYSORE KIRLOSKAR LTD., YANTRAPUR, P.O. HARIHAR (India)

NOTICE

NOTICE is hereby given that an Extraordinary General Meeting of the Company will be held on Saturday the 25th July, 1964, at 3-00 P.M. (I.S.T.) at the Registered Office of the Company at Harihar to transact the business, the details of which have been made known to the shareholders separately by notice sent to them individually.

A MEMBER entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member of the Company.

The Share Transfer Books and Membership Register shall remain closed from the 17th July, 1964, to 25th July, 1964 (both days inclusive).

For THE MYSORE KIRLOSKAR LTD.,
V. K. BODAS
ASST. SECRETARY.

Date: 27th June, '64.

July 10, 1964

complaint being that the varieties of seeds supplied to them are inferior to those which they have a right to expect because of the rates being charged to them. This the seed suppliers have denied.

★★

Little progress appears to have been made in the matter of setting up a super power grid since the eastern States agreed to establishing one last January largely at the persuasion of the Union Minister for Power, Dr. K. L. Rao. It now seems that some of the States did so with reservations. West Bengal in particular fears that its autonomy in the matter of planning for power generation and distribution may be compromised because of the existence of a regional authority. That the State should continue to feel so in spite of Dr. Rao's assurance that nothing will be done to dilute the autonomy of the State, is surprising. This State stands to benefit a good deal more than others from a regional distribution network which would save so much in capital cost both in regard to the installation of new units and construction of transmission lines. West Bengal is already taking some electricity from Rihand and Hirakud through an interconnected transmission system, and it cannot be denied that these supplies are helping the State a good deal in its present power deficit phase. Such benefits could increase through an exchange of power in larger quantities through the proposed super power grid. However, a regional electricity board has already been set up with the chairmen of the State Electricity Boards of Orissa, Bihar and West Bengal and the representatives of the Damodar Valley Corporation. This Board is now engaged in drawing up a plan for co-ordinating electricity production and

distribution in these States, and much will depend on how the plan is conceived and mapped out and how these States react to it when finally presented to them.

★★

In the context of the programme to modernise jute mill machinery and equipment, it is heartening to see that the domestic output of this machinery has been rising steadily. A Jute Mill Machinery Manufacturers Association has been formed with Mr. S. C. Kela as its first president, which should help in the further development of this industry through an energetic representation of its problems to the Government. Jute mill machinery-making in India began only towards the end of the first Plan, yet, judging from the account given by Mr. Kela, the progress of the manufacture so far has been substantial. The number of manufacturing units has gone up from just one in 1955 to 10 in 1961, and in terms of value, actual production has moved up from an insignificant figure to Rs. 3.75 crores in 1963-64, which is well above the third Plan final year target of Rs. 2.50 crores. Side by side, the range of output has widened, and the items now manufactured include such important products as spinning frames, drawing frames, carding engines, broad looms and cop-winders. Moreover, several items of spares and components are also being produced by the industry. Mr. Kela claims that the domestic manufacturers are now in a position to meet 70 per cent of the jute industry's requirements. But the latter's requirements will go on increasing from year to year with the next Plan period, and the machinery manufacturing industry must take steps to expand capacity to cater to the fast widening market now literally on its door steps.

Water for the Thirsty Land

From Our Correspondent

JAIPUR:

JULY 1, 1964 will be a red letter day in the history of Rajasthan's economic development when water was released in the Rajasthan feeder canal — 133 mile-long project which would benefit the desert districts of Bikaner and Ganganagar. This project is a part of the gigantic and ambitious 421-mile long canal system which would bring "the river of promise" to this thirsty-sandy area. This water will be available during the Kharif season for the next 6-7 years, at the end of which the Pong dam on river Beas is likely to be completed ensuring perennial water supply for Rajasthan canal. Some perennial water supply will, however, be available from the next year when gradual interception of water, which is now going to Pakistan, would commence as a result of Indus Water Treaty. This will provide additional dependable water supply to the area. Immediately irrigation would start in an area of over 400,000 acres ushering an era of prosperity in an area where crop irrigation was hitherto unknown. This would insure the kharif crop — the mainstay of the economy of this part of the country — against drought, the villain of the piece.

According to the present estimates, the canal will cost Rs. 184 crores and will irrigate about 36,00,000 acres of cultivable land. The first phase of Rajasthan canal which includes the Rajasthan feeder and 122-mile long canal is expected to be completed by the end of 1968-69. Of the completed feeder canal, 110 miles are in the Punjab. The area commanded by the canal is at present largely uninhabited. A plan for the development and colonisation of the area has been prepared. This is a long-term plan envisaging an expenditure of Rs. 213 crores in all. About 20,00,000 people will be settled in this area by 1981. New villages, towns and cities are planned to be developed and a prosperous region will emerge, which would wipe out the foodgrains deficit of the country sizably.

★★

The Rajasthan Government has decided to set up industrial areas at 16 places in the State. To facilitate work in this con-

nection, the Industrial Areas Rules have been enforced in the State since January, 1960. At present industrial areas at Jaipur, Jodhpur, Kota, Udaipur, Bharatpur and Alwar are being developed. The State Government has so far spent Rs. 7.41 lakhs for developing some of these areas in respect of roads, drainage, water and power supply. The State Government has already made allotments to 85 industrial units in this area. Out of these, 40 units have by now started production, providing employment to 2,200 persons. It is estimated that by the end of the current financial year, employment potential for another 2,000 persons will be created. A sum of Rs. 6 lakhs has been provided in the current year for the further development of these areas. Another project for stepping up the tempo of industrialisation in the State includes 11 industrial estates comprising 353 sheds. These estates would soon be starting production on full-scale providing employment to nearly 4,000 persons.

In this connection, the agricultural workshop, which was shifted from Bharatpur to Jaipur in 1960, deserves special mention. This unit has grown into one of the leading workshops in the country turning out agricultural implements. The workshop specialises in a variety of manufacturing processes, such as hand boring, wood work, shed erection work, spare parts of complicated imported implements, manufacture of tractor trailers, water tanks and cowdung gas plants, repair of trucks, pumping sets, generators, electric motors etc. The work is conducted through various sections including a design and testing section and an administrative wing. Since the beginning of the current year, the workshop has started manufacturing power-operated agricultural machines and implements. The design section is at present engaged in an ambitious project of designing an automatic seeds drill, a bullock drawn digger and groundnut digger.

★★

A review of the financial position of the State Government recently undertaken by the Finance Department reveals

July 10, 1964

that signs of strain are developing. Visible changes have taken place in the relative contribution of the various sources of revenue which include share in the Central taxes, State taxes, non-tax revenue and grants-in-aid from the Union Government since the formation of the State.

Rajasthan's share in Central taxes increased from Rs. 8 lakhs in 1950-51 to Rs. 1,240.18 lakhs in 1963-64 while the collection from the State taxes has also gone up from Rs. 1,108.44 lakhs to Rs. 3,146.60 lakhs over the corresponding period. Spectacular increase has also taken place in the grants-in-aid from the Union Government from Rs. 9,000 to Rs. 1,282.54 lakhs over the last 14 years. However, developments in non-tax revenue have not been very encouraging despite the fact that substantial investments were made by the State during the last 14 years. The revenue from this source increased from Rs. 344 lakhs in 1950-51 to Rs. 1,662.18 lakhs in 1963-64. The reason advanced by the State Government for the slow pace of increment from this source relates to the plan priorities favouring investments in irrigation and power projects which have a long gestation period. The land revenue has nearly

doubled from Rs. 4.21 crores to Rs. 8.85 crores mainly due to the resumption of jagir lands and also because of additional land coming under the plough.

These resources, however, are likely to fall short of the State's plan requirements during the fourth plan which is likely to be much "bolder" than the preceding one. The only way out available to the State Government seems to be a still heavier reliance on borrowings from the Union Government and the public. Quite a substantial part of the increased expenditure has accounted for by the huge expenditure on administrative services over the past 14 years. The expenditure on police, for instance, rose from Rs. 2.18 crores in 1953-51 to Rs. 6.12 crores in 1964-65 (Budget). The State Government maintains that it has to keep 10 RAC battalions on the Indo-Pak border entailing substantial expenditure. But the biggest increase has taken place in the expenditure on different social services provided by the State. Here revenue expenditure has gone up from Rs. 3.73 crores in 1950-51 to Rs. 24.52 crores in 1964-65 -- an increase of over 700 per cent. In the formulation of the fourth five-year plan, all these considerations will, obviously, have to be taken into account.

New Issues Face Foggy Weather

From Our Correspondent

MADRAS:

MR. R. VENKATARAMAN, Minister for Industries in Madras State, has observed that a high level taxation and rising prices have retarded economic progress in the past two years and during the fourth Plan there should not be any attempt to increase expenditure to a level which would be more than what the economy could absorb. In fact, he has been rather concerned about the slow-down in the tempo of industrial development latterly and the depressed state of the capital market. Many new issues are pending flotation as conditions in the capital market are not considered propitious. The absence of any enthusiastic support for even first class flotations like Coramandel Fertilizers Limited and Hindustan Polymers Limited provides clear evidence that the public cannot be persuaded to take interest in new issues if its earlier experience was not satisfactory. Since in a mixed economy the private sector would continue to play an important role there should be the necessary climate for raising the required resources. Mr. Venkataraman has even suggested that there should be no fresh taxation during the period of the fourth Plan as only then entrepreneurs can plan on an assured basis and implement their projects. When he addressed the members of the Hindustan Chamber of Commerce at the annual meeting held a few days back, the Industries Minister gave out as his personal view that the outlay on the fourth Plan projects should not be more than five times the investment in the last year of the third Plan plus Rs. 1,000 or Rs. 2,000 crores as only then it would be possible to dispense with additional taxation. In case of buoyancy in revenue, the fourth Plan targets can be revised upward if after a reappraisal in the middle of the Plan period, it was thought advisable to incur expenditure in a bigger way. The second and third Plans got stalled midway on account of the shortage of foreign exchange and rupee resources and it ultimately turned out that not more than 85 per cent of the Plans could be completed.

There will be a large spill-over into the next Plan and excepting in the case of new projects it will not be difficult to find the required resources as aid from friendly countries will be available and no great difficulty is expected to be experienced in respect of rupee finance. With the provision of proper incentives it will be found ultimately that the outlay can even exceed Rs. 17,000 crores in 1966-71 as the private sector can be expected to overfulfil its targets if official policies proved to be helpful. It will, however, be generally agreed that Madras State has acquitted itself creditably as the total outlay in 1961-66 is expected to be much more than the original

estimate. While the State Government concentrated on the provision of basic facilities, several industries grew considerably in stature with liberal assistance from the State-owned Madras Industrial Investment Corporation. Only in the past year industrialists have not been quite enthusiastic about the promotion of new enterprises because of the difficulty experienced in raising funds from the open market. The Madras Industrial Investment Corporation too has not been able to extend support as liberally as before because its funds are locked up in equity shares of new undertakings which are expected to pay dividends only in the next two years. The cumulative effect of heavy direct and indirect taxation has been so regressive that the objective should henceforth be to raise additional resources through fresh efforts to step up industrial and agricultural production and not through additional doses of taxation.

Mr. R. Venkataraman's observations, however, have not been fully echoed by Mr. T. T. Krishnamachari as he would still seem to be of the view that his last budget has not had any disincentive effect and that the burden of corporate taxation had actually been reduced. He seems to be strongly of the opinion that with more strenuous efforts for mobilising small savings, the Unit Trust and other institutions would enable the private sector to finance further industrial development in a big way. There will nevertheless be a large gap between outlay and corporate savings in the fourth Plan period which will have to be filled with the help of the savings of individual investors. It cannot be expected that the statutory financial corporations could lend support to big flotations on the same scale as they have been doing in the past few months. The relaxation of margin regulations and the greater interest shown by jobbers in the stock markets have no doubt been responsible for bringing about an improvement in general sentiment in recent weeks. But entrepreneurs are still of the view that there will be no disposition on the part of investors to place their savings in new issues until their earlier investments proved remunerative.

A memorandum is being prepared for submission to the Finance Minister after the Presidents of the Stock Exchanges have met in New Delhi in the next few days. While they are appreciative that the revised margin regulations have helped to market can become active once again only if confidence was restored and there was an assurance that fresh investment would be quite profitable.

the decisions taken at the Chief Ministers' Conference, in the foodgrains trade have been rather dramatic. Even before it was indicated by the Andhra Pradesh and Madras State Governments that procurement of rice had been stopped and restrictions on movement had been removed, there was a fall in prices at several centres. In Nellore, Andhra Pradesh, and in Kuttalam, Madras State, big dealers were in a hurry to conclude sales as it was feared that there would be a further decline in prices when stock began to move freely. Within a fortnight, prices for various grades of rice have declined by over 10 per cent and it is felt that, after the high-priced stocks in the main consuming centres have been disposed of, there would be a fresh decline and that there might not be any difficulty in regard to availability.

Reports from different States in the South Zone indicate that fairly large stocks are held by the trade and that it may not be necessary for the State Governments to effect large sales through the fair price shops. The poorer sections of the community have no doubt been affected by the suspension of sales through fair price shops. But until such time a new scheme of procurement is evolved, sales through these shops cannot be resumed. It can be expected, however, that during lean months, imported rice would be released on a cheap basis. Only, it is not known whether any quantity will be made available for those who are in receipt of reasonable incomes.

What is more encouraging from the point of view of the rice-eaters is the indication that the 1963-64 crop has been reasonably good and that till the next crop arrives, it may not be necessary to draw on Central stocks. In Madras, the yield of the crop may be actually higher than expected while in Andhra Pradesh can be expected to supply nearly a million tons out of the last crop. It is even reported that the accumulation of stocks in Kerala and elsewhere is such that dealers are not entering into fresh commitments for the time being. Indeed, they have been asking for a suspension of fresh despatches. If availability had not been comfortable there would have been a recovery in prices as it has happened in Bombay in regard to wheat. Luckily, the prospects for the next crop have considerably improved in Madras State with the onset of the South-West Monsoon. In Andhra Pradesh also there are expectations that the yield will increase further as nitrogenous fertilizers are available without difficulty.

It was not clear even early last week that the power cut could be lifted in a short period as rains in the catchment areas of the various hydel reservoirs were inadequate. But

there was a sudden increase in rainfall in the four days ending July 4 and the Madras State Electricity Board was compelled to take a decision regarding the lifting of the cut with immediate effect. Otherwise, there was the awkward prospect of the waters of the rivers in the Papanasam and Kundah areas going to waste. The Papanasam Power House and Kundah Power House No. 2 had to be brought into commission immediately if the heavy inflow were to be utilised. There was also no possibility of using the water resources for purposes of generation at later stages. Between Kundah and Papanasam there is an installed capacity of over 200 MW.

As the irrigation discharges in Periyar and Mettur also have to be utilised and all the units in Neyveli were functioning, a situation arose in which there was a problem of absorbing the power generated against the acute scarcity experienced only a little earlier. Consumers having high tension connections were, therefore, asked to resume work even before the cut was officially announced. The restrictions on power supply for 19 days have thus been ended. The question has now been asked whether, with a skilful use of the irrigation discharges from the Mettur Dam, after the tunnel scheme is completed, and a conservation of available resources at Kundah and Pykara, a cut can be averted next year. Even allowing for an increase in consumption by 30 per cent, it should be possible to prevent a repetition of this year's happenings in 1965 especially as it is expected that the sixth generating unit at Neyveli would have been commissioned in the next few months.

★★★

The stock markets have been rather active in the past few days. In Madras, there has been greater enquiry for plantation and miscellaneous counters as it is somehow felt that the immediate outlook is more hopeful. The power cut has enabled the accumulated stocks of yarn to be cleared while the end of the drought in the Nilgiris should enable a pick-up in tea output. The slight increase in cement prices has not had any encouraging effect but there are reports that companies like Mettur Chemicals, Aluminium Industries and Ashok Leyland are doing very well and that those companies would be able to report a sizable increase in their earnings for the current accounting period. The purchases made by the Unit Trust have been helpful to some extent and it is expected that fairly large sales of units would ultimately result in heavier purchases of industrial securities from the open market. There is a shortage in particular of fixed interest securities and the undertone is inclined to be more hopeful.

July 10, 1964

The moving finger writes

THERE IS naturally relief over the Prime Minister's recovery from illness, but only a candid report by his medical attendants will dispel disquiet in the public mind about the state of his health. The fact that no technical description of the nature of the Prime Minister's illness has been published is bound to have an unhealthy effect on speculation over the nature of his illness. This is all the more likely because a convention seems to be in the process of being established that when Prime Ministers fall ill, the details should be closely guarded as a State secret.

I submit that this is a wrong way for the authorities to go along. I cannot deprecate too strongly the superstitious fear that the country would crumble if the knowledge is allowed to reach it that its rulers too are vulnerable to the ills which the human flesh is heir to. In the case of Jawaharlal Nehru, the policy of conspiratorial silence about the state of his health was carried to an extreme limit, with the result that even now no authentic official version is available either of the nature of the affliction which befell him at Bhubaneswar or of his last illness. I do hope that it will not become a settled practice to dismiss as vulgar curiosity the public's legitimate desire to have accurate and adequate information when men in high places fall ill.

I agree that it would have been fine had the Prime Minister been able to attend the Commonwealth meet, but it is not exactly a tragedy that he has failed to make it. Actually, there may be a distinct gain in his meeting with other world statesmen at formal conferences being deferred until such time as he had been able to look around and make up his mind on what is what in foreign affairs. It has been suggested that Mr. Lal Bahadur's exposure on international platforms at the earliest possible opportunity would have been useful in reassuring the world at large that the Indian polity is settling down smoothly after the shock of the passing away of Jawaharlal Nehru. This is true enough, but as against this advantage there is the fact that the present Prime Minister is still so very far from having got over the sensation of being Jawaharlal Nehru's successor that for some time to come, his disposition, especially while addressing audiences abroad, may well be to stress unduly — and certainly unrealistically — the desire or determination of the Government of this country to act always as Nehru would have done or would have wanted it to do. My point is that Mr. Lal Bahadur's appearances abroad will be more significant and valuable when he has had sufficient time to formulate, in a positive manner, his and his Government's broad thinking on issues, national as well as international.

Meanwhile, the nation is certainly indebted to the Home Minister for not insisting on the right his seniority gives him to depute for the Prime Minister at the Commonwealth Prime Ministers' Conference. It has been said that Mr. Nanda's preoccupations have come in the way of his making the London trip. It is no doubt true that he has set himself a two-year deadline for rooting out corruption and that some precious months out of the total of 24 have already passed. But it is unlikely that this is the main reason for Mr. Nanda not wanting to go. May I be pardoned for suggesting that the Home Minister has had the moral courage to concede his limit-

ations? Mr. Nanda's honest realism is all the more commendable when viewed in the light of the fact that omniscience is a quality to which few men in the top flight of political leadership could, in the interest of their career, afford not to lay claim to.

Government by correspondence seems to be becoming quite fashionable these days. The Home Minister, it appears, has written to the Deputy Chairman of the Planning Commission asking that steps be taken to arrest rising prices lest the law and order situation is jeopardized. Some time ago when the Prime Minister was caught in the throes of Cabinet-making, the Deputy Chairman of the Planning Commission wrote to him, giving the advice that a separate Ministry should be set up for Science and Technology. I suppose other Ministers and high dignitaries too will be writing to one another sooner or later about how this country should be governed. Perhaps Mr. Sanjivayya might write to Mr. B. R. Bhagat that unless Dr. Sushila Nayar did something about the increasing population, he (i.e., Mr. Sanjivayya) will not be responsible for the aggravation of unemployment in the country. There is also a distinct possibility that the Commerce Minister might write to the Minister of Finance saying that he would not go abroad for export promotion unless the Information Minister agrees to persuade foreign news agencies to submit for Mr. Manubhai Shah's censorship their reports of Mr. Manubhai Shah's speeches. But whatever letters may be written and whoever may write them, it is most unlikely that Mr. T. T. Krishnamachari's record in this regard will be beaten. He was writing to the Prime Minister when he was Minister for Economic and Defence Co-ordination and he was writing earlier too when he was no Minister at all, but, Cincinnatus-like, was watching New Delhi impatiently from distant Tambaram. Truly the champion letter-writer of them all!

A witticism frequently heard in the Capital these days is that it has been easier for the Congress party to find a new Prime Minister for India than to find a new Chief Minister for Punjab. The difficulty, of course, was that far too many people were determined to have a finger in the Punjab pie. I read in the papers that Pandit Chandrashekhra Shastri had to obtain his wife's permission before he could be initiated into "sanyasa ashram" and installed as Shankaracharya of Dwarka-peeth at Jagannathpuri. I do not know whether Mr. Ram Kishan had similar domestic obligations, but he certainly had to obtain clearance from more than one person before he could become the Chief Minister of Punjab. From Mr. Kamaraj, Mr. Lal Bahadur, Mr. Nanda and Mr. Swaran Singh down the line to Mr. Kairon, Mr. Darbara Singh, Mr. Zail Singh, Mr. Bhimsen Sachar and Dr. Gopi Chand Bhargava, everybody has had his say before the "comrade" could be allowed to have a fling at being "boss". What kind of a boss "Comrade" Ram Kishan will make I do not pretend to know, but it is becoming fairly obvious that our politics and government are now rapidly passing into the hands of men who themselves need to be built up before they can be expected to build India.

A question of safety

Q How do you ensure there is no child or obstruction behind your vehicle before reversing?

A Before you enter it, walk round from the rear, NOT from the front.

It is dangerous to reverse from a side road or garage into a main road. If your garage opens on to a main road, reverse into it, so that you enter the road driving forward.

If your view to the rear is restricted, get help when reversing.

Road Safety is a matter of life...and death

OILSEED PRICES

THE PRESENT price spiral is by no means limited to food-grains — rice, wheat and other cereals — but also extends to cash crops. Of course, the first explanation for the rise that readily suggests itself is the short-fall in production. In the case of oilseeds, for instance, the production has not only not registered a rise but has been woefully lagging behind the second Plan target of 76 lakh tons, not to speak of the current Plan target of 98 lakh tons. At a time when the demand has been rising so sharply, the 'status quo' or a steady decline in the production of oilseeds is bound to accentuate the runaway price trend. The authorities apparently thought that they could arrest this upward movement by clamping down a ban on forward trading in oilseeds and oilcakes, but they misjudged the situation and now find, to their utter dismay, that prices in the commodity futures markets have not fallen. As a matter of fact, harring coconut oil, the prices of all others have risen to higher and higher levels over the past few days. The spot price of Karad bold variety of groundnut, for example, rose steadily from Rs. 266.25 to an all-time record of Rs. 285.00 per 250 Kg. by the end of May, 1964. Correspondingly, the price of cotton seed rose from Rs. 111.50 to Rs. 116.00 per 250 Kg. and linseed from Rs. 44.00 to Rs. 44.62 per 50 Kg. This trend continued through June, 1964.

It would, however, not be justified to attribute the price rise solely to shortfall production. This is disproved by the fact that even the last season's record crop, which was officially estimated at nearly 53 lakh tons (nut-in-shell), could not halt the upward trend in groundnut prices. A more plausible explanation would, therefore, appear to lie in the overall shortage in supplies of edible oils, consequent upon the short-fall in production of mustardseed and sesamum. Indeed, this overall shortage of supplies of edible oils is not a phenomenon peculiar to India. Oil and oilseed prices the world over have been ruling quite firm because of the overall shortage of supplies. The world production of groundnut during 1964 was of the order of 15.6 million tons, the same as in 1962, the production in which year was considered to be a record one. As a matter of fact, when compared to the average world production of groundnuts for the years 1955-59, the present level of groundnut production has been higher by as much as nine per cent. But this has not prevented the rise in groundnut prices.

In this context, the deliberations of the recent conference of seed crushers in Weissbaden, West Germany, perhaps provide a pointer. The Weissbaden deliberations disclosed that, in 1963, for the first time in ten years, world production of oils and fats failed to equal the preceding year's production, so that the average level of prices in that year ruled seven per cent higher than in 1962. The shortfall in marine oils, thanks to indiscriminate whaling by the fishing industry, and the decline of over 80,000 tons in pig production, it is said, materially aided the upward trend in the international market for oilseeds and oilcakes. Even the better olive crop and the slightly higher stocks of soya beans (at the commencement of the year 1964-65) do not seem to have gone very far in offsetting the effect of the decline in output of marine oils and pig production.

One has to view, against this background, the official allegation that the channels of distribution are responsible for the rise in prices. Mr. C. V. Mariwala, Chairman of the Bombay Oilseed Crushers' Association did well to stress this point and to declare, at the Association's Annual General Meeting last week, that there was no justification for this charge. According to him, the villain of the piece was the

total world demand which had outstripped the total available supplies.

RICE IMPORTS

At India's urgent request US Government has agreed to supply immediately 300,000 tons of rice which will be delivered within the next two months. India will also receive immediately 100,000 tons of rice from Pakistan with prospects of getting an equal quantity a few months later. It is hoped that with the assured rice imports of 400,000 tons, the requirements of the deficit States will be met adequately. The imports are, however, being staggered in order to avoid congestion at the ports as also due to the limitations of storage facilities in the country.

INDO-U.S. TRADE

After attending the World Trade Conference at Geneva, India's Minister of Commerce, Mr. Manubhai Shah, proceeded to the United States for talks on the promotion of India's trade with that country which accounts for one-fourth of the entire Indian trade. India's trade with the USA is steadily increasing. Last year alone, the increase was \$40 million mainly due to a rise in exports, particularly of jute and cotton fabrics. The trade in traditional items recorded a decline. Among the projects which Mr. Shah is expected to finalise during this tour is the "Caravan Project" for exhibition of Indian goods at various American towns, particularly the small ones. The project, which is proposed to be set up by an Indo-American private enterprise, involves two or three trailer vehicles with Indian jute, coir and other goods to be sent around the country, to stimulate interest in Indian goods.

In the course of his two-day visit to Washington, Mr. Manubhai Shah met high US Government officials and discussed with them about the import of cotton, soyabean oil, tallow and some other items under PL 480. During the current year India is expected to get under PL 480 a total of 3.6 lakh bales of long-staple cotton and one lakh tons of soyabean oil and tallow. In order to push up her exports of engineering goods, India will shortly set up in New York an office of the Engineering Export Promotion Council. In addition to this, promotional campaigns and schemes financed jointly by Indian exporters and American importers will be launched in several fields. One such will be a \$500,000 project in cashew trade while another will be a \$200,000 project to push up sales of Indian spices and condiments. The US Government's aid agency will help (through technical assistance programme) to finance the market promotion and research in mica, shellac and other goods exported to the USA.

In New York, Mr. Shah also met the Indian commercial representatives in Latin America and Caribbean States and discussed measures to promote Indian exports in those areas. India may undertake a market survey, through competent research firms in Latin America, on the scope for Indian goods in those countries. Possibilities of improving shipping facilities between India and Latin America and the establishment of depots stocked with Indian goods at free ports on the west coast for export to Latin America would also be considered.

TEXTILE MACHINERY IMPORTS

A trade delegation led by Mr. B. P. Patel, Chairman, State Trading Corporation, has left New Delhi for the UK to finalise arrangements for the purchase of textile machinery worth about Rs. 10 crores. The purchases will be financed out of a ten-year credit made available by the Midland Bank Ltd., London, and other financing institutions in the UK to the S.T.C. under the guarantee of the Export Credit Guarantee Department of the British Government and the Government of India. The purchase agreement for the machinery has

TRACTORS FOR PUNJAB

EXPORT PROSPECTS

India have gone up from Rs. 62 lakhs in 1962 to Rs. 103 lakhs in 1963. It is used for packing sugar and other products. The Indian exporters wishing to export jute manufactures to Czechoslovakia may contact Messrs. Cemrotex Foreign Trade Corporation, Trida, Dukelskych Hrdinu. As reported by the representative in Poland, Indian tobacco which was introduced in the Polish market for the first time in 1962 has shown a promising export potentiality. The exports have increased from Rs. 61 lakhs in 1962 to Rs. 102 lakhs in 1963. Due to a bumper crop in Poland during the current year their purchases of tobacco from India would be smaller. However, there is a good scope for oriental type of tobacco which Poland is not producing herself, the chief supplier being Libya.

CO-OPERATIVE MARKETING COMMITTEES

CO-OPERATIVE MARKETING COMMITTEES

The Government of India has decided to set up a high-powered committee to suggest measures for the speedy development of co-operative marketing and processing in the country. Besides officials of the Union Ministry of Community Development and Co-operation, representatives of the Reserve Bank of India, the State Bank, the Planning Commission and the Finance Ministry are expected to be included in the committee. The Ministry of Community Development and Co-operation holds the view that co-operatives should be utilized as the sole agency of the Government in any scheme of State trading and that procurement should be undertaken only through co-operative marketing societies on payment of commission. Further, the State Government should consider the question of granting exemption to marketing co-operatives from sales tax on members' produce. A similar exemption from the levy imposed on trading in paddy and rice should also be considered. To help marketing societies make outright purchases from their members, particularly the small growers, the Government should contribute to a special price fluctuation fund at the State marketing society level. In regard to processing, the Ministry holds the view that the co-operative societies should increase their out-turn to Rs. 100 crores from the present level of Rs. 25 crores. The Ministry is also strongly of the view that positive preference or exclusive reservation of additional capacity should be accorded to co-operatives in the matter of granting licences for agricultural processing units.

TO LONDON VIA MOSCOW

On June 30, 1964 Air-India and the Aeroflot of the Soviet Union signed an agreement under which Air-India will operate a bi-weekly service from Delhi to London with a stopover at Moscow. Air-India's additional route through Moscow will be the shortest and fastest between New Delhi and London. It will take less than twelve hours to cover this distance as against 16 hours taken by the other route via Western Europe. The new route to London via Moscow will be opened in October, 1964 with two Boeing services per week. The fare by either route will be the same. The service on the new route will operate during day time.

TOURIST TRAFFIC

The largest number of tourists who visited India during 1963 was from the USA, and Canada as compared to any other single region in the world, maintaining the trend of previous years. The percentage of visitors from these countries was 29.2 against 26.1 in 1962. The USA and Canada together sent 17.3 per cent more tourists in 1963 than in 1962 which had registered a 5.4 per cent increase over 1961. The tourist traffic from South America, however, declined in 1963 by 5.1 per cent. Tourists from Japan, Hong Kong and Korea registered an increase in 1963, though the figure for the entire East Asian region showed a fall of 8.2 per cent. Maintaining the upward trend, Japan recorded an impressive rise of 16.7 per cent in 1963 against 2.4 per cent increase in 1962.

Company Affairs

MR. M. K. VELLODI, Chairman, the Metal Box Company of India Limited reviewed the increasing role of scientific packaging in the Indian economy while addressing the annual general meeting of the company held recently. Increased popularity of packaging can be reckoned, he said, from the fact that in 1960-61 the production of consumer packages was valued at Rs. 107 crores and it enabled the distribution of Rs. 2,870 crores worth of consumer goods and by 1965-66 the production of essential consumer commodities will require packaging material valued at Rs. 213 crores for the distribution of goods worth Rs. 6,620 crores. This increase of more than 100 per cent is a clear indicator of the extent to which the scientific packaging was becoming a part of our economy. The quality of packaging in India has been considered fairly high and in this the Metal Box could claim to have made substantial contribution. It has helped the country to compete with the international standards of packaging and presentation. A well packed item of consumer goods could be a potential export and already nearly Rs. 28 crores worth of packaged consumer goods were exported every year to nearly 60 countries all over the world. This indeed had tended to diversify India's exports. In fact export requirements demanded that Indian exporters had access to the latest packaging technology in the world, and in this field the Metal Box adequately met the challenge. It has established research facilities and has developed the packaging system most suited to the Indian conditions. It has also taken into consideration specific demands of its customers. As Mr. Vellodi indicated, the precise packages and advisory services helped certain prawn canners on the West Coast, who were comparatively small producers, to face overseas competitors. These producers were able to export canned fish worth more than Rs. 73 lakhs to markets as competitive as the USA. The Cochin factory of the company was established particularly to provide these canners with on-the-spot services.

The company met the special demands from two sources — defence and exports. For ordnance supply the company was expected to produce equipment of the standards set by the ordnance inspection authorities. Consequently the company invested more than Rs. 6 lakhs to equip itself with the latest plant and machinery for defence work. Secondly the company extended its overseas sales and its agents secured notable gains in Burma, Ceylon and East Africa. It, however, realised that in the face of intense international competition it needed special efforts to achieve and maintain the high quality standards required in the markets abroad. Apart from sending senior sales staff to certain overseas area, it organised a series of seminars on consumer packaging for senior executives from amongst its customers, advertising agencies and Government so as to stimulate awareness about quality packaging.

It is rather unfair that the company which has played such significant role in our economy did not get sufficient quantity of raw materials. The Chairman indicated that owing to delays in licensing procedures and the failure of Bourke's plant to produce tin plate, the company had to depend upon the import of tin plate from sources which involved AID or trading at State levels. The result, however, was that the company did not have sufficient control over the specifications of the supplies and the deliveries were not properly timed. The company made representation to the Government regarding its minimum requirements of tin plate which if denied would block the packaging of a wide range of essential consumer

TRAVANCORE CEMENT

The cement industry in India has suffered to a great extent due to rising costs which could not be offset by prices because the retention price payable to the cement producers has been fixed from time to time. Usually the time-lag between the increased costs and revised prices has been sufficient so that during the intervening period the industry was the net loser. Mr. C. S. Loganathan, Chairman, the Travancore Cement Limited, touched this problem in detail in his speech delivered at the annual general meeting held recently. He indicated that this company even suffered more than other producers. The retention price fixed on the basis of the Tariff Commission's report, November 1961, was to be in force till March 1966. The Government, however, did agree in principle to make suitable changes in the retention prices whenever there were material increases in the cost of production. Consequently from June 1963 an increase of Rs. 2.75 per ton was allowed to nearly all the cement producers. The Chairman pointed out that this benefit was not allowed to this company. It has made representations to the Government to extend this price increase to this factory as so and the matter was pending consideration. It may be added that there has been further increase in the cost of production during the last one year and it is indeed unfair on the part of the Government not to allow this company the advantage of increased prices extended to other producers. In fact the Cement Manufacturers' Association has already requested the Government of India for a further enhancement of retention price. Under these circumstances, it is hoped that the Government would favourably consider the request of the industry and do justice to this company by allowing an equivalent increase in prices.

The Chairman indicated that during the year the company was able to increase its production and sales but failed to reap the harvests of higher production due to increased costs. The sales of white cement increased by 31 per cent over 1962 and 76 per cent over 1961 and still the profit was lower at Rs. 7.17 lakhs against Rs. 9.68 lakhs last year. The Chairman indicated that the company had to declare a dividend at the rate of 6 per cent as against 7 per cent declared last year.

RUBY GENERAL

Ruby General Insurance Co. Ltd., has been making steady progress since its inception, particularly during the last few years. Mr. M. L. Shah, Chairman of the company told the shareholders at the annual general meeting held recently that the premium income increased during 1963 to Rs. 1.90 crores as against Rs. 1.85 crores last year. During the same period capital and funds increased from Rs. 1.68 crores to Rs. 1.81 crores. This improvement was reflected in its profits, which stood around Rs. 13.86 lakhs as against Rs. 13.36 lakhs last year. The company achieved these results at a time when the Life Insurance Corporation has decided to compete with the private sector in general insurance business. The Chairman was of the opinion that it was a good move on the part of the L.I.C. provided it did not disturb the existing business pattern of the private insurers. The L.I.C., for instance, had decided to follow the tariff rates agreed to be followed by all other insurers. He hoped that the L.I.C. and the general insurance companies in

July 10, 1964

the private sector would work in full co-operation to the benefit of the insurance industry and the insuring public. The voluntary code of conduct had proved very useful in improving the tone of the industry and it would be just proper on the part of the insurers to pursue the code to inculcate an atmosphere of co-operation.

The Chairman indicated that the improvement in the company's performance was not uniform. The net premium income for the year improved in the case of fire department, where it was around Rs. 83.36 lakhs as against Rs. 78.21 lakhs last year. The net claims increased only marginally so that its percentage to net premium declined to 40.47 per cent as against 41.91 per cent last year. This improvement, the Chairman pointed out, was achieved in spite of the reduction in the premium rates from July 1, 1962. The net premium income for the motor and miscellaneous departments, however, declined to Rs. 38.53 lakhs as against Rs. 93.07 lakhs last year. This reduction was essentially due to a fall in the overseas business which had not been profitable. The company had consciously planned a gradual reduction of this class of business in the overseas territory.

There was a high incidence of motor claims which, the Chairman indicated, could be reduced only if the Government took stringent measures for the proper observation of traffic regulations by the motorists, particularly by the public goods carriers. The gains of such policy would be manifold. Careless driving caused material damage to the vehicles, but more serious was the loss of valuable lives due to accidents on the highways, which in many cases could be avoided. The marine department provided larger net premium at Rs. 17.97 lakhs against Rs. 13.84 lakhs but this department recorded a loss of Rs. 3.99 lakhs as against a profit of Rs. 1.13 lakhs last year. This was mainly due to the fact that the reserves had to be increased substantially. Moreover keen competition among the insurers both in India and abroad resulted in ratecuts to uneconomic level, causing constant anxiety to the insurers and consequent fall in income.

ORIENTAL FIRE

The year 1963 witnessed significant improvement in the working of the Oriental Fire and General Insurance Company Limited, so that its gross premium income in that year was around Rs. 10.15 crores as compared to Rs. 8.79 crores last year. The net premium was also higher by nearly 19 per cent over last year and this progress was reflected in dividend, which has been recommended to be paid at the rate of 8 per cent as against 6 per cent last year. Mr. S. K. Kaul, I.C.S., the Chairman indicated at the annual general meeting held recently that this company was appointed by the Government as its sole agent to administer the Emergency Risks Insurance Scheme (goods and factories) for which it received over 424,000 applications at 163 centres all over India.

The Chairman observed that the net profit for the year declined marginally due to an increase in claims. The overall claims ratio of net claims to net premiums was higher at 59.71 per cent for 1963 as against 56.09 per cent for 1962. This ratio increased both in fire and miscellaneous departments. In the fire department it went up to 46.31 per cent from 34.83 per cent last year and in the miscellaneous department it increased (mostly due to motor department) from 57.79 per cent to 61.22 per cent. Nevertheless there was some decline on the marine side from 93.26 per cent for 1962 to 90.34 per cent this year.

The Chairman while talking about the increase in net premium revealed that nearly 20 per cent of it was achieved through business transacted out of India. To strengthen the

foreign business a new agency was established in Kuwait during the year under review and in East Africa the company has been operating for a number of years. He believed that a union of the republic of Tanganyika with Zanzibar would also provide increased opportunities for business. It was also making efforts to explore the possibilities of expansion in the Middle East and other Arab countries. Thus the company was making significant attempts to improve the foreign business and due caution was being taken in this expansion. More recently it restricted its operations in Ceylon and Burma where early this year general insurance business was taken over by the State Institutions. The Chairman indicated, however, that the unexpired business will stay with the company for which it will have to maintain a skeleton staff for some time to come.

UNITED INDIA INSURANCE

Mr. M. Ct. Muthiah, Chairman, the United India Fire and General Insurance Co. Ltd., highlighted the fact that the general insurance industry was facing considerable difficulty in balancing its costs and incomes. While premium rates have undergone reduction more than once, there has been a continuous increase of expenses due to rising costs. The combined effect of these two factors has been that the insurers found it difficult to keep expenses within the limits which ultimately tend to cut their margins of profits. The insurers have to abide by the insurance rules and have to follow the code of conduct and while remaining within these limits have to find sufficient resources for development purposes. This aspect of the general insurance industry should attract the attention of the authorities.

The Chairman referred to the entry of the Life Insurance Corporation in the field of general insurance. It was feared that the L.I.C. would not bind itself to the rate tariff agreed to be followed by other insurers. He, however, expressed satisfaction over the L.I.C.'s assurance that although it would not be a party to the rate tariff, it would not compete with other companies on unhealthy lines or do anything to undermine the standards necessary for building up this industry on sound basis.

He considered that the year 1963 was a year of progress for this company. The premium incomes increased in all the sections and on score of claims also it was not a bad year. For instance, it was possible, during the year, to put Rs. 60,397, Rs. 2,60,746 and Rs. 16,760 to business reserves in fire, accident and marine sections respectively, and there was a net profit of Rs. 4.28 lakhs. A sum of Rs. 50,000 was provided for general reserve and a similar amount for other reserves. The dividend was recommended to be maintained at the rate of 80 Paise per share, subject to tax. The Chairman added that the company stopped writing business in Ceylon from June 1, 1963 and closed its office at Colombo on account of nationalisation of general insurance business in that country. This did mean some loss, but did not mean much to the company, which has progressed in many other ways.

INDIA'S FIRST PETROCHEMICAL COMPLEX

At long last, some definite news about the Petrochemical complex in Bombay area is available. Addressing a press conference on Monday (29th June, 1964) Mr. Arvind N. Mafatlal, Chairman of the National Organic Chemical Industries, Ltd., (NOCIL), announced details of the first large petrochemicals complex to be established in India, in the Bombay region. The project is being undertaken by the Mafatlal group, which has been exploring the possibility of such a venture for over four years now, in collaboration with Shell International Chemical Co. Ltd., UK and its affiliates. It is estimated to cost about Rs. 30 crores, out of which the present

July 10, 1964

proposal is to raise Rs. 10 crores by way of equity capital. This is to be subscribed in equal proportion by the Mafatlal group, Shell Petroleum Company (SPC) and the public. The project entails a foreign exchange expenditure of Rs. 14.5 crores the whole of which will be found by SPC — Rs. 3.4 crores by way of equity capital and the balance as a long-term loan. It is noteworthy that this loan will be from sources outside the Aid-India Club. The local banks will provide such rupee requirements as may be needed.

Besides the NOCIL, there will also be another company — Polyolefine Industries, Ltd., (PIL) — with a paid-up capital of Rs. 3.8 crores to be equally subscribed by NOCIL, Farbwerke Hoeche of West Germany and the Indian public. The entire project in this case is estimated to cost Rs. 3.8 crores and here again, all the necessary foreign exchange requirements will be found by the German collaborators — Rs. 1.2 crores by way of equity investment and the rest in the form of a loan. This loan too will be outside the Aid-India Club assistance. To this company and Hoechst Dyes and Chemicals, Ltd., (HDC) as well as to Indian Dyestuff Industries, Ltd., (IDI), NOCIL will serve as a central utilities plant and supply their requirements. A 500-acre site has been acquired near Bombay and NOCIL will occupy 300 acres, the rest being accounted for by the other affiliates.

The construction work of the complex is expected to begin sometime in October and, subject to the availability of all the required facilities and the co-operation of the concerned authorities, is scheduled to be commissioned by mid-1966. The engineering and construction of NOCIL will be carried out by Stone and Webster Engineering Corporation (USA), while Bataafse Internationale Chemic Maatschappij N.B., associates of Shell International Chemical Co. Ltd., will supervise the establishment of the plant. The engineering and construction contracts for P.I.L. has been entrusted to Friedrich Uhde G.M.B.H. (W.B.). The whole project will thus be a truly international undertaking which will employ during the construction stage about 5,000 workers and over 100 expatriates. All these technical and engineering contracts are now before the Government for approval.

When commissioned, NOCIL is expected to process 2.25 lakh tons of Napha per annum from the Burmah-Shell Refineries. This will not in any way come in the way of an adequate supply of napha to the Trombay Fertilizer Project, as apprehended in certain quarters.

The manufacturing programme provides for:

- 60,000 tonnes ethylene converted to:
3,000 tonnes ethylene dichloride (excluding captive quantities).
30,000 tonnes vinyl chloride monomer.
20,000 tonnes PVC.
5,000 tonnes finished PVC products.
12,000 tonnes ethylene oxide.
10,000 tonnes ethylene glycol.
600 tonnes diethylene glycol.
1,000 tonnes polyethylene glycol.
- Balance ethylene supplied to PIL and HDC for polyethylene, and vinyl acetate manufacture respectively.
- 35,000 tonnes propylene converted to:
1,500 tonnes Isopropanol (excluding captive quantities).
3,700 tonnes methyl isobutyl ketone.
11,000 tonnes acetone (excluding captive quantities).
2,800 tonnes diacetone alcohol.

- 8,000 tonnes butanol.
- 8,000 tonnes 2-ethyl hexanol.
- 7,200 tonnes butadiene.
- 700 tonnes dicyclopentadiene.
- 14,000 tonnes benzene.
- 2,700 tonnes methane.

PIL's manufacturing programme includes,

	Installed capacity tonnes/year
1. High density polythylene	20,000
2. Processed polythylene	5,600
3. Ziegler catalysts	320

In order to complete the picture mention must also be made here of the expansion programme of HDC which is as follows:

Product	Installed capacity tonnes/year
1. Vinyl acetate monomer	8,000
2. Polyvinyl acetate	12,000

IDI also has an expansion programme to manufacture 30,000 tonnes of chloride and related inorganic chemicals in their chlorine/caustic soda electrodes plant.

Besides representatives of the well-known foreign collaborators the board of directors will include the four Mafatlals, Mr. H. V. R. Iengar and Mr. N. A. Palkhiwala. On the PIL Board, besides Mr. Arvind Mafatlal and representatives of foreign collaborators, there will be Mr. R. G. Saraiya and Mr. N. R. Mody. There will also be two managing directors for each of the concerns, one administrative, Dr. C. J. Dadachandji and Mr. N. V. Vohra and another technical Mr. A. N. Holmes and Dr. A. Schmiktensing for NOCIL and PIL, respectively.

The sponsors may be expected to enter the capital market only when market conditions improve which means that it may be some time in October, if not later.

It is noteworthy that NOCIL will have neither managing agents nor sole selling agents.

It may take over two years for the project to commence manufacture. But, in the meantime, as many of the products are new and are still not being used on a large-scale in this country, NOCIL has been negotiating for a product loan of some of the items so as to popularise their use. Whatever product may be borrowed thus, will, of course, be returned after production starts in the new complex. It is possible that, when the whole complex is fully commissioned, this country will be in a position to export a few of these products, the collaboration agreements not barring such exports. Even otherwise, there will be a considerable saving of foreign exchange and substantial benefit to the Indian economy as a result of this long-awaited project.

TELCO RIGHTS

The directors of Tata Engineering and Locomotive Co. Ltd., have recommended the issue of 200,000 further ordinary shares of Rs. 100 each at premium not exceeding Rs. 50 per share, as the Controller of Capital Issues may prescribe and as may be agreed to by the directors. These new shares will be issued to the existing shareholders in the proportion of one new share for every five held. The company has shown satisfactory progress during the year ended March 31, 1964. Net profit at Rs. 136.15 lakhs was considerably higher as compared to last year's figure of Rs. 115.53 lakhs. Consequently the

directors have proposed to maintain the dividend of 14.5 per cent. The turnover increased from Rs. 43.64 crores to Rs. 51.51 crores. A sum of Rs. 260.53 lakhs was provided for depreciation, Rs. 200 lakhs for taxation and Rs. 68.10 lakhs for development rebate reserve. The equity dividend will absorb Rs. 155.32 lakhs.

CAPITAL ISSUES

Six companies have been authorised to raise fresh capital aggregating Rs. 5.15 crores. Of these, one is Central Government undertaking and two are companies floated by the State Governments. Four companies are issuing equities and two equities plus preference shares. Two of the companies are offering part of their capital for public subscription by prospectus.

The consent of the Controller of Capital Issues is valid for twelve months in the case of four companies. In respect of two companies, it is valid up to December 28, 1964 and May 21, 1965 only.

South India Shipping Corporation Limited, Madras, is to issue capital of Rs. 2 crores divided into 2,00,000 equity shares of Rs. 100 each to be issued for cash at par. Out of this, shares of the value of Rs. 1.5 crores will be offered for public subscription by prospectus. The capital will be utilised for meeting part of the cost of 5 bulk carriers, to be ordered by the company.

Instrumentation Limited, Jaipur, a Government of India undertaking, will be issuing capital of Rs. 35 lakhs divided into 3,500 equity shares of Rs. 1,000 each to be issued privately for cash at par. The money will be utilised for manufacture of electronic and electro-magnetic instruments etc.

Assam Gas Company, a Government of Assam undertaking, is to issue further capital of Rs. 50 lakhs divided into 50,000 equity shares of Rs. 100 each to be issued privately for cash at par. The money will be utilised in financing the Naharkatia Namrup Gas Pipe Line and for meeting other expenditure.

The Orissa State Commercial Transport Corporation Limited, a Government of Orissa undertaking, is to issue capital of Rs. 50 lakhs divided into 5,000 equity shares of Rs. 1000 each to be issued privately for cash at par. The money will be utilised for developing an efficient system of road and water transport for facilitating construction and the development of traffic to Paradeep Port.

Indo-French Forges Limited, Calcutta, was given consent in 1963 for the issue of capital of Rs. 1 crore consisting of Rs. 75 lakhs in equity and Rs. 25 lakhs in preference for the setting up a forge and heavy structural plant at Panchet, District Purulia.

To enable the company to meet increased capital requirements, the amount of the consent has been enhanced to Rs. 150 lakhs for cash at par consisting of Rs. 100 lakhs in equity shares of Rs. 10 each and Rs. 50 lakhs in 9.5 per cent cumulative redeemable preference shares of Rs. 100 each. Out of these, such number of shares of each kind will be issued to the public by prospectus as would qualify each kind of scrip to be listed on the recognised Stock Exchanges. The consent is valid up to December 28, 1964 only.

Andhra Cotton Mills Limited, (Andhra Pradesh) is to issue share capital of Rs. 30 lakhs divided into 20,000 equity shares of Rs. 100 each and 10,000 cumulative redeemable preference shares of Rs. 100 each carrying a dividend of 9.3 per cent free of company's tax but subject to tax at source.

GOVERNMENT OF INDIA

4 PER CENT. LOAN 1970 — ISSUE PRICE Rs. 99.00 PER Rs. 100 (NOMINAL) — REPAYABLE ON 15TH APRIL 1970

4½ PER CENT. LOAN 1989 — ISSUE PRICE Rs. 100 PER Rs. 100 (NOMINAL) — REPAYABLE ON 15TH APRIL 1989

Subscriptions to further tranches of the above loans will be received in the form of cash/cheque from 13th of July 1964 to 15th of July 1964 but the subscription list may be closed earlier without notice as soon as the total subscriptions amount to Rs. 150 crores.

2. Interest on the new loans, which will be subject to tax under the Income-tax Act, 1961, will accrue from 13th July, 1964. Interest will be paid on 15th October, 1964 for the period 13th July to 14th October, 1964 inclusive and thereafter payments will be made half-yearly on 15th April and 15th October.

3. Applications for the new loans will be received at:—

- (a) **Offices of the Reserve Bank of India at Bangalore, Bombay (Fort and Byculla), Calcutta, Madras, Nagpur, and New Delhi;**
- (b) **Branches of the subsidiary banks of the State Bank of India conducting Government Treasury work; and**
- (c) **Branches of the State Bank of India at other places in India.**

For full particulars apply to any of these offices or branches.

outstanding performance

For more tread miles at moderate cost...for high reinforcing properties...for overcoming tough obstacles...for excellent mould flow...for smooth and easy extrusion...versatile PHILBLACK. Developed to cover diverse rubber processing needs and famous all over the world for outstanding performance, four types of PHILBLACK are now available to you from India's first Carbon Black Plant at Durgapur.

Let any or all the types of PHILBLACK work for you.

- PHILBLACK G**, General Purpose Furnace Black
- PHILBLACK A**, Fast Extrusion Furnace Black
- PHILBLACK O**, High Abrasion Furnace Black
- PHILBLACK I**, Intermediate Super Abrasion Furnace Black

NAS-PC-1121

.02 & .025 mm

Associate these numbers with that very precious commodity called EARNED FOREIGN EXCHANGE (over Rs. 132 crores of it). Why? Because "point-o-two" and "point-o-two-five" millimetre represent the gauge thicknesses of aluminium foil from which Tea Chest Linings are made. And, with a few gay colours added, "point-o-two" and "point-o-two-five" millimetre also become good material to make lovely bangles for my fair lady — bangles for which there is such an extensive market in the Middle East and even America. Altogether, Alfoil of these gauge thicknesses help to earn a lot of Foreign Exchange each year.

This is in supersession of an earlier consent for the issue of capital of Rs. 25 lakhs. The consent is valid till May 21, 1965 only.

LICENCES ISSUED

The following licences were issued under the Industries (Development and Regulation) Act, 1951, during the fortnight ended June 6, 1964.

During the week ended May 30, 1964

IRON AND STEEL CASTINGS & FORGINGS

M/s. Raymon Engineering Works Limited, 2, Brabourne Road, Calcutta-1 (West Bengal) — Steel Forgings — Capacity to be fixed later; M/s. Sudsons (Private) Ltd, 3, Esplanade East, Calcutta-1 (Calcutta, West Bengal) — Steel Forgings and drop stampings — 2,424 tons per annum.

COAL

M/s. K.K. Chandra and Bros, Central Baihardi Colliery, P.O. Katrasgarh, Dist. Dhanbad (Bihar) Name of the undertaking : Central Baihardi Colliery (Dhanbad, Bihar) — Coal — 15,000 tonnes per annum; Mr. M. C. Guha Mustafee, Khas Katrasgarh Colliery, P.O. Katrasgarh, Dist. Dhanbad (Bihar) Name of the undertaking : Khas Katrasgarh Colliery (Dhanbad, Bihar) — Coal — 1,800 tonnes per annum; M/s. National Coal Development Corporation Ltd, "Dabhanga House", Ranchi (P.O. Bermo, Dist. Hazaribagh, Bihar) — Washed — 2.2 million tonnes per annum.

INTERNAL COMBUSTION ENGINES

M/s. Lynx Machinery Ltd., P.O. Box No. 163, 10, Clive Row Calcutta-1 (Maharashtra) — (1) Industrial Diesel Engines 9 HP to 90 HP — 2,040 Nos. per annum; (2) Marine Diesel Engines 9 HP to 90 HP — 900 Nos. per annum.

AIR AND GAS COMPRESSORS AND VACUUM PIPES

M/s. K.G. Khosla Co Private Ltd., 1, Deshbandhu Gupta Road, New Delhi-1 (Gurgaon, Punjab) — Automatic Disc and Plate Valves — 15,000 pieces per annum.

GRINDING WHEELS AND ABRASIVES

Ms. John Oakey & Mohan Ltd., 1/754 Chabiganj, Kashmir Gate, Delhi-6 (Mohan Nagar, Ghaziabad, U.P.) — Coated abrasives — 1,20,000 Reams per annum.

COTTON TEXTILES

M/s. Shree Ayyanar Spinning and Weaving Mills Ltd., 51, K.E. S. Godown Street, Virudhunagar (S.I.) (Virudhunagar, Madras) — Cotton Yarn — 13,000 spindles; M/s. Tarun Commercial Mills Ltd., Outside Kalupur Gate, Railwayapura, Ahmedabad-2 (Gujarat) — Cotton Yarn — 2,200 spindles; M/s. medabad-2 (Gujarat) — Cotton Yarn — 2,200 spindles; M/s. Gajraj Panna Lal Ltd., 68 Nalini Set Road, Calcutta-7 (Calcutta, West Bengal) — Cotton Yarn — 3,000 spindles; M/s. Hada Textile Industries Ltd. C/o 42, Garden Reach Road, Calcutta-24 (Calcutta, West Bengal) — Cotton Yarn — 12,500 spindles.

PAPER

M/s. Delhi Pulp Industries, 16/25, Katra Baryan, Fatehpuri, Delhi (Faridabad, Punjab) — Paper and Board — 1,500 tonnes per annum; Pulp — 1,500 tonnes per annum.

PORTLAND CEMENT

M/s. Saurashtra Cement and Chemical Industries Ltd., Ranavav (Gujarat) (Ranavav, Gujarat) — Pozzolan Cement — 120,000 tonnes per annum.

During the week ended June 6, 1964

COAL

M/s. Pandit Rambhaju Upadhyaya & Co., Pure Damoda Colliery, P.O. Nudkharkee, Dist. Dhanbad (Bihar) — Coal —

43,200 tonnes per annum.

ELECTRICAL MOTORS

M/s. Associated Electrical Industries (India) Pvt. Ltd., 56, Janpath, P.O. Box No. 345, New Delhi (West Bengal) — Squirrel Cage Induction — 3,000 Nos. per annum; Motors of the flame proof type up to 10 HP — 1,800 HP per annum.

SHIPS AND OTHER VESSELS DRAWN BY POWER

M/s. Scindia Workshop Limited, Scindia House, Ballard Estate, Bombay-1 (Mazagaon, Bombay, Maharashtra) — Ship's Hatch Covers — 20 sets per annum.

AUTOMOBILES

M/s. Hyderabad Allwyn Metal Works Ltd., Sanatnagar, Hyderabad-18 (Andhra Pradesh) — (1) Hydraulic hoists and tipping goers — 3,000 Nos. per annum; (2) Heavy duty trailers and semi-trailers. — 600 Nos. per annum.

COTTON TEXTILES

M/s. Elphinstone Spinning & Weaving Mills Co. Ltd., Kamani Chambers, 32, Nicol Road, Ballard Estate, Bombay-1 (Maharashtra) — Terry towelling cloth — 25 automatic looms.

VANASPATI

M/s. Shree Mansingka Oil Mills Pvt. Ltd., 258, Kalbadevi Road, Bombay-2 (Madhya Pradesh) — Vanaspati — 10 tons per day.

CHANGE IN NAME (Owners or Undertakings)

(Information pertains to particular licences)

During the week ended May 30, 1964

From The Coimbatore District Co-operative Mills Ltd., Coimbatore — to M/s. The Coimbatore District Co-operative Spinning Mills Ltd., Coimbatore; From M/s. Kerala State Industrial Development Corporation Limited, Trivandrum — to M/s. Kerala Spinners Limited, Alleppey.

During the week ended June 6, 1964

From M/s. Khemchand Rajkumar, Calcutta to M/s. Bombay Steel Rolling Mills Ltd., Calcutta; From Shri Ramabhupal Reddy, Kurnool to M/s. Torsion Products Private Limited, Kurnool; From Voltas Ltd., Bombay to M/s. Scottish India Machine Tools Ltd, Bombay; From M/s. Ravi Vegetable Oil Industries, Davangere to M/s. Jamnadas Madhavji & Co., Davangere (Lessees).

LICENCES REVOKED OR SURRENDERED

(Information pertains to particular licences)

During the week ended May 30, 1964

M/s. Pramod and Mapara Private Limited Bombay-1 — Chemical Machinery; Mr. Muljibhai Chaganlal Mehta, Prop. M/s. Kantilal and Co., Bombay-2 — Cotton Yarn; M/s. R. Chimanlal and Co., C/o The Aryan Brush Co., Ahmedabad — Cotton Yarn; Mr. Udayan Chinubhai C/o Udayan & Co., Ahmedabad — Cotton Yarn; Mr. Ishwardas Narottamdas, C/o Sheth Narottamdas Karsandas, Caltex Agent, Junagadh — Cotton Yarn.

During the week ended June 6, 1964

M/s. The Indian Tube Company (1953) Ltd., Calcutta — Cold formed sections; Mr. M. L. Goenka, Bankura (West Bengal) — Grinding balls; M/s. Carter, Pooler & Co., Private Ltd., Calcutta — Fork lift trucks; M/s. Addison & Co. Ltd., Madras — Jeep trailers; M/s. Kothari Oxygen Co., New Delhi-1 — Oxygen and dissolved acetylene; Licensee: Mr. A. C. Burman, Calcutta, Undertaking: M/s. Ashok Cotton Mills Ltd. — Cotton yarn; Licensee: Mr. Kashi Prasad Kataruka, Patna, Undertaking: M/s. Ashoka Spinning Mills Ltd. — Cotton yarn; Licensee: M/s. Inder Chand Rajgarhia & Sons Pvt. Ltd., Calcutta, Undertaking: M/s. Jyoti Cotton Mills Ltd. — Cotton yarn; Mr. Onkarmal Somany, Calcutta — Cotton yarn M/s. Karnatak Vegetable Mills & Refineries Ltd., Hagari-bommanahalli, Distt. Bellary (S. Rly.) — Vanaspati.

COMPANY MEETINGS

THE TRAVANCORE CEMENTS LTD., KOTTAYAM

Speech delivered by the Chairman, Sri C. S. Loganathan, at the Seventeenth Annual General Meeting held at the Registered Office of the Company, Nattakom, Kottayam, on 29th June, 1964.

Gentlemen,

I welcome you all for the seventeenth Annual General Meeting of our Company.

We are meeting at a time when the entire nation has not yet recovered fully from the gloom cast on account of the passing away of Sri Jawaharlal Nehru, our illustrious past Prime Minister. The phenomenal industrial progress of our country since we gained independence was mainly due to his foresight and drive and it is the sacred duty of every one of us to keep up the tempo and help building up a prosperous India for which he lived, laboured and died. As a mark of respect to our late Prime Minister, let us all rise up and observe a minute's silence.

The audited accounts and the annual report for the year have been circulated to all members and, with your permission, I shall now take them as read.

During 1963 the Company has been able to keep up the production and sales levels. During the year we produced 53,160 tonnes of grey cement and 6,300 tonnes of White cement and have sold 52,678 tonnes of grey cement and 6,082 tonnes of White Cement. Our sales of White Cement have been gradually improving year by year and sales during 1963 have been 31 per cent more than what was in 1962, and 76 per cent more than that of 1961.

You would have noticed from the Directors' Report that the profit for the year 1963 has been only Rs. 7,17,163 as against Rs. 9,67,529 for the previous year. The reasons for the decline in profit have been due to increased cost of production as explained in the Directors' Report. Your Directors have, therefore, been able to declare a dividend of only 6 per cent for the year 1963 as against 7 per cent for the year 1962.

Retention Price: The retention price payable to the cement producers was fixed based on the Tariff Commission's report in November 1961 and is to be in force till March 1966. However, the Government of India had in principle agreed to make suitable changes in the retention prices, whenever there are material increases in the cost of production. From June 1963, an increase of Rs. 2.75 per tonne was allowed to all cement producers excepting ourselves to meet the increased cost of production. As explained in your Directors' Report,

representations have been made to the Government of India to extend this price increase to our factory also and the matter is still pending with the Government. Since June 1963, there have been further increases in the cost of production due to increase in coal price, Railway freight etc., and the factories individually and through the Cement Manufacturers' Association have requested the Government of India for a further suitable enhancement of retention price. It is hoped that Government will favourably consider this request of the industry and in our case, mete out justice which was denied to us at the time of allowing a general increase to the industry from June 1963.

Taxation: As per the Finance Act of 1964, in the case of industries engaged in the production of basic and essential commodities a rebate in the tax is allowed. Cement is one among such industries and we are getting a relief of 5 per cent in the taxation, but there is an extra levy of dividend tax at the rate of 7.5 per cent of the amount of dividend.

The total amount of tax to be deducted from dividends has been reduced from 30 per cent to 20 per cent and this is a good relief to the shareholders.

Gentlemen, you are aware that the Government of Kerala has two nominees in the Board of Directors. Sri C. S. Padmanabha Iyer who was Government nominee in the Board has been appointed by the Government of India as Chief Engineer of Cochin Port Trust and consequently Sri Padmanabha Iyer has resigned from the Board. In this vacancy, the State Government has nominated Sri T. P. Kuttiammu, Chief Engineer, Irrigation and Projects. I take this opportunity to express our thanks to Sri C. S. Padmanabha Iyer for his valuable guidance and service to the Company and also welcome Sri T. P. Kuttiammu to the Board.

Before I conclude, I would like to express my thanks to my colleagues on the Board of Directors for their valuable services to the Company and to the Works Manager and all employees for their continued co-operation and efficient service.

I now request that the Directors' Report and the audited accounts for the year 1963 may be taken up for consideration and adoption.

NOTE: This does not purport to be a record of the proceedings of the above Annual General Meeting.

RUBY GENERAL INSURANCE COMPANY LIMITED

RUBY GENERAL RECORDS STEADY PROGRESS, SUSTAINED RISE IN INCOME AND PROFITS

Speech delivered by Shri M. L. Shah at the Twenty-eighth Annual General Meeting on Monday, the 29th June, 1964.

Gentlemen,

It gives me great pleasure to welcome you to the Twenty-eighth Annual General Meeting of the Company.

We are meeting under the shadow of a national tragedy, Shri Jawaharlal Nehru, our beloved Prime Minister and Leader, who guided the destinies of the nation since independence, is no more with us. Not only India but the whole world mourns his loss. Such great personality is seldom born and it is impossible to replace him. However, it is gratifying to note

that Shri Lal Bahadur Shastri has been appointed our new Prime Minister with promise of all round support and I am confident our country will continue its onward march of progress under his able guidance.

The Statements of Accounts of the Company for the year 1963 have been with you for some time and you must have noted with satisfaction that the Company has again shown good results.

Your Company has been making steady progress since

PARTICULAR SERVICING FOR PARTICULAR PEOPLE

It means more life, more mileage. If your Jeep is serviced by Jeep Dealers. It is oiled, cleaned, tuned and adjusted by people who know each nut and bolt of the Jeep. They have been trained to give you factory specialised servicing. There are over a 100 dealers spread throughout the country with a complete range of equipment. Trust your Jeep to a JEEP DEALER for reliable, efficient servicing.

BUY NATIONAL DEFENCE CERTIFICATES

July 10, 1964

inception, and particularly during the last few years has shown very good results. As compared to the premium income of Rs. 1,85,12,084 for 1962, the premium income for 1963 has been Rs. 1,89,85,871, and the Capital and Funds during the same period have increased from Rs. 1,67,75,481 to Rs. 1,81,05,008.

FIRE DEPARTMENT

The Premium income for the year has increased from Rs. 78,21,379 in the year 1962 to Rs. 83,36,101 and Profit from Rs. 16,43,000 to Rs. 18,40,247.

MOTOR AND MISCELLANEOUS DEPARTMENT

The Premium income for the year has been reduced from Rs. 93,07,083 in the year 1962 to Rs. 82,52,631 due to reduction in foreign Motor business which has not been profitable. The Profit increased from Rs. 4,17,262 in the year 1962 to Rs. 4,48,283.

MARINE DEPARTMENT

The Premium income for the year has increased from Rs. 13,83,622 in the year 1962 to Rs. 17,97,139. The working of the Department shows a loss of Rs. 3,99,290 as against a profit of Rs. 1,30,940 in the year 1962, mainly due to the increase in the Premium Reserve from Rs. 13,83,622 to Rs. 17,97,139.

The Net Profit after taxation has increased from Rs. 13,35,783 in the previous year to Rs. 13,85,873.

THE UNITED INDIA FIRE & GENERAL INSURANCE CO., LTD.

Speech of the Chairman, Mr. M. Ct. Muthiah

The following are extracts from the speech delivered by Mr. M. Ct. Muthiah, at the 26th Annual General Meeting of the Shareholders of The United India Fire & General Insurance Company Limited, held on 1st July, 1964, at the Registered Office of the Company, at No. 151, Mount Road, Madras-2.

Gentlemen,

I extend to you all a hearty welcome on this occasion. We have met for the purpose of considering the Directors' Annual Report, the Balance Sheet and the Accounts for the year 1963. As these have all been printed and circulated to all the Shareholders, I shall with your permission take them as read.

Just over a month has passed since our Country sustained a heavy loss in the death of Shri Jawaharlal Nehru. It is a difficult task to say how much we all owe to him for the services he rendered to India and the World at large. You know the whole story as well as I do. It is impossible to forget the sacrifices he made in the cause of Indian Independence and the services he later rendered as our sole leader all these years. We can only hope that the ideals for which he lived and the example he has set will serve as a source of inspiration to those who are now or may hereafter be called upon to carry on his work for the advancement of our people in various directions.

Coming to the results of the Company's working during the year 1963, you will have noticed that the premium income has risen to a greater or smaller extent in all the sections and that the claims experience is not bad either. I shall not go into the details which are all found printed in the several Statements of Accounts. After meeting all expenses and other demands and adding Rs. 60,397, Rs. 2,80,746 and Rs. 16,763 to the business reserves in the three sections — Fire, Accident and Marine respectively—a sum of Rs. 4,28,334 has been carried as profit to the Profit and Loss Account. From this amount, your Directors thought fit that we should transfer Rs. 50,000 to General Reserve and Rs. 50,000 to other reserves. These reserves necessarily help us to build up the financial strength of the Company on right lines and form a good cushion in case of need in later years. The Directors have recommended payment of a dividend of 80 P. per share subject to deduction of tax as in the previous year. I trust you will consider this satisfactory.

The Directors have recommended a Dividend of Rs. 1.25 Paise per share as before. The Directors have also decided to take steps to capitalise Rs. 6,43,000 out of the Premium on Shares and issue one fully paid Bonus Share of Rs. 8 as against 5 existing Shares.

The most important event in the Indian Insurance Industry during the year under review has been the decision of the Government to permit the Life Insurance Corporation of India to write General Insurance business. The L.I.C. has commenced business from 1st April, 1964 and decided to follow the Tariff Rates for the present. The L.I.C. should not disturb the existing business of the private insurers but should open new avenues and look for fresh business.

The Voluntary Code of Conduct has proved very useful in improving the tone of the industry and I hope the encouraging results achieved so far will be continued.

Before I conclude I would like to place on record my sincere appreciation and thanks to our patrons for their continued support and to the Executives, Staff, Field-workers and other representatives in India and abroad for their co-operation and devotion to duty which has enabled the Company to achieve good results.

Thanking you, gentlemen.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

There is at present one problem in our business which calls for special notice. While premium rates have undergone reduction more than once, expenses have gone up steadily due to increased costs all round. The combined effect of these two factors is that there is an increasing difficulty in keeping expenses within the limits prescribed in the Insurance Rules and at the same time finding sufficient resources for development purposes. I have no doubt, however, that this aspect of the matter will receive attention from the authorities concerned.

Fears were expressed when it was reported some time back that the Life Insurance Corporation would enter the field of general insurance, as non-tariff insurer. The Corporation has since commenced to transact business and it is gratifying to receive an assurance that the Corporation although operating as a non-tariff insurer will not compete with other Companies on unhealthy lines or do anything to lower the standards required for building up general insurance business in the Country as a great and good national asset.

Our Company stopped writing business in Ceylon from 1st June, 1963 and had to close its Office in Colombo on account of nationalisation of general insurance business in that Country. This meant some loss to us but altogether I think that we need not regret the necessity to withdraw from that Country.

Having regard to the results disclosed in the several Statements of Account, I trust that you agree with me that 1963 was a year of progress for us. I should like to take this opportunity to express my appreciation of the good work carried out by all those who were attending to the Company's business both in the Head Office and in the branches.

I shall now move that the Directors' Report, audited Balance Sheet and Accounts be received and adopted.

NOTE: This does not purport to be a record of the proceedings of the annual general meeting.

THE AUTOMOBILE INDUSTRY...

is a key industry

In a country like India, where industrial development is in full swing, the Automobile Industry is a KEY Industry. Its growth contributes to the national prosperity and well-being in many ways:

it saves foreign exchange through progressive manufacture of motor vehicles, which will gradually eliminate imports;

it generates work and income for numerous other industries and trades;

it contributes to the development of agriculture through speedy road transportation of produce to markets;

it generates high revenues to Government for numerous development projects;

it helps to raise the standard of living and do away with poverty;

it helps the integration of the country through greater mobility;

it contributes to the improvement of vocational education and technical 'know how', through apprenticeship schemes, mechanics' and engineers' training courses, technical institutions, etc.;

it contributes to the country's defence through supply of the required vehicles to the armed forces.

The Indian automobile industry, therefore, deserves the fullest measure of support both from the Government and the public.

RECORDS AND STATISTICS

Corporate Leaders in Indian Economy

This paper was prepared by Dr. Raj K. Nigam, Director of Investigation, Monopolies Inquiry Commission and Mr. N. C. Chaudhuri, Research Officer in the Research and Statistics Division of the Department of Company Law Administration.

SEVERAL BASES are used for measuring the size of companies. One of them which readily presents itself for adoption because of easy availability of data is paid-up capital. More important criteria adopted for the purpose are however those based on net tangible assets, net fixed assets turnover, net worth, net profits and employment. In this study all the criteria mentioned above except employment have been taken into account and a list of first hundred biggest companies popularly known as Corporate Leaders or toppers according to each of these bases has been drawn up for the year 1962-63. These companies include both public and private sector companies; banking and insurance companies are excluded.

It may be mentioned that the overall size of the entire corporate sector is readily available only in terms of paid-up capital from official records. The total number of companies at work in the country as on 30th June, 1963 stood at 25,592. The total paid-up capital of these companies was estimated at Rs. 2247 crores. The aggregate paid-up capital of the first hundred biggest companies from the point of view of paid-up capital worked out to Rs. 1078 crores and accounted for 48 per cent of the total paid up of all companies at work in the country. In 1962-63 the hundred toppers ranked according to net tangible assets, net fixed assets and net worth accounted for 47.48 per cent of the total paid-up capital of all companies. The aggregate paid-up capital of the 100 corporate leaders on the basis of turnover amounted to Rs. 863 crores which constituted about 39 per cent of the total paid-up capital of all companies at work in the country. The 100 toppers according to the criterion of net profits, accounted for an aggregate paid-up capital of Rs. 574 crores or about 25 per cent.

The figures of net tangible assets, net fixed assets, paid-up capital, net worth, turnover and net profits of 100 toppers according to these respective bases for the year 1962-63 are given below:

	(Rs. in crores)
Net tangible assets	2779.8
Net fixed assets	1607.3
Paid-up capital	1077.8
Net worth	1384.3
Sales/Income	1715.5
Net profits (i.e. profits after tax depreciation and other charges)	76.8

The various financial data relating to 100 toppers according to the criterion of net tangible assets are given below:

	(Rs. in crores)		
	1954-55	1956-57	1962-63
Total Net Tangible assets	738.9	1012.2	2779.8
Total Net fixed assets	—	—	1568.1
Total Paid-up capital	294.7	334.2	1066.7
Total Net worth	422.6	516.4	1363.6
Total Sales/Income	505.4	725.5	1508.7
Total Net profits	32.7	43.3	66.9
	(97 companies)	(98 companies)	(87 Cos.)

It will be seen that the paid-up capital of the 100 toppers was 78 per cent of their net worth. The share of the net fixed assets in the net tangible assets was 56 per cent. The ratios of net profits to turnover and net profits to paid-up capital in respect of 87 of the toppers which earned profits worked out to 5 per cent and 12.7 per cent respectively.

As already mentioned, the overall size of the entire corporate sector was available only in terms of paid-up capital from the official records. The proportionate share of the aggregate paid-up capital of the 100 toppers in the total paid-up capital of all companies at work in the country was 47 per cent in 1962-63 as compared to 30 per cent of the entire corporate sector represented by the 100 corporate leaders ranked according to net tangible assets in terms of paid-up capital in 1954-55 and 31 per cent in 1956-57.

The Hundred Toppers

The above 100 toppers comprised 19 Government companies with a total paid-up capital of Rs. 670.8 crores and 81 non-Government companies involving an aggregate paid-up capital of Rs. 395.9 crores. The share of the 19 Government companies in the total paid-up capital of the 100 toppers came to 62.9 per cent. These 19 Government companies represented about 30 per cent of the entire corporate sector in terms of paid-up capital. The giant sized Government companies Hindustan Steel had a big share of Rs. 367 crores or 55 per cent in the 19 Government companies and 34 per cent in the 100 toppers in terms of paid-up capital. The three iron and steel companies in the private sector included in the 100 toppers accounted for an aggregate paid-up capital of Rs. 60.2 crores. Thus the four iron and steel companies together constituted 40 per cent of the aggregate paid-up capital of the 100 toppers and about 20 per cent of the total paid-up capital of all companies at work in the country. The fifteen textile companies all in the private sector included in the 100 toppers together accounted for Rs. 51.1 crores out of Rs. 1066.7 crores or 5 per cent. The number of manufacturing companies included in the 100 toppers was 75 comprising 13 Government companies and 62 non-Government companies accounting for aggregate paid-up capitals of Rs. 291.4 crores and Rs. 521.6 crores respectively. These manufacturing companies represented more than 76 per cent of the 100 toppers and more than 36 per cent of the entire corporate sector in terms of paid-up capital.

The aggregate value of the net tangible assets of the 100 toppers amounted to Rs. 2779.8 crores shared by the private sector companies, and public sector companies about equally (Rs. 1465.3 crores in the non-Government companies and Rs. 1314.5 crores in the case of Government companies). The net tangible assets of the iron and steel companies amounted to Rs. 1066.9 crores of which major share was claimed by Hindustan Steel (Rs. 798.6 crores) i.e. the iron and steel companies alone accounted for more than 38 per cent of the total assets of the 100 toppers. The seventy-five manufacturing companies included in the 100 toppers accounted for aggregate net tangible assets of Rs. 2074.7 crores out of total net tangible assets

POSITION OF 10 BIGGEST COMPANIES RANKED ACCORDING TO THEIR NET TANGIBLE ASSETS, NET FIXED ASSETS, PAID-UP CAPITAL, ETC.

	Net Tangible assets	Net fixed assets	Paid-up Capital	Net worth	Sales/Income	Net profits
1. Hindustan Steel	798.6 (1)	579.5 (1)	367.0 (1)	343.1 (1)	130.5 (1)	—
2. Tata Iron & Steel	155.2 (2)	103.3 (2)	39.0 (4)	82.0 (3)	103.4 (2)	3.4 (2)
3. Indian Iron & Steel	99.8 (3)	61.5 (5)	15.1 (13)	42.6 (5)	67.4 (4)	5.6 (1)
4. Neyveli Lignite Corpn.	97.0 (4)	83.7 (3)	80.0 (2)	82.1 (2)	1.3*	—
5. Fertiliser Corpn. of India	84.8 (5)	64.8 (4)	42.1 (3)	48.2 (4)	22.6 (15)	1.1 (20)
6. Oil India	76.5 (6)	18.9 (12)	28.0 (7)	28.9 (8)	3.9*	1.3 (11)

of Rs. 2779.8 crores for the 100 toppers or little less than 75 per cent (34 per cent from the private sector manufacturing companies and 41 per cent from the public sector manufacturing companies of which the share of Hindustan Steel is about 35 per cent).

The industrial distribution of the 100 toppers ranked according to the net tangible assets is given on page 93 with net tangible assets and paid-up capital of companies in each industrial group.

The net tangible assets, net fixed assets, paid-up capital, net worth, sale/income and net profits for the first 100 biggest companies ranked according to net fixed assets are given below:

	(Rs. in crores)
Total tangible assets	2639.8
Total fixed assets	1607.3
Total paid-up Capital	1053.3
Total Net worth	1348.7
Total Sale/income (99 companies)	1347.8
Total Net profit (86 companies)	63.3

The aggregate paid-up capital of the 100 toppers accounted for 47 per cent of the total paid-up capital of all companies at work in the country and 78 per cent of networth for the 100 toppers. The share of the net fixed assets in the total assets for the toppers was 61 per cent. The ratios of net profits to sales/income and net profits to paid-up capital in respect of 86 of the 100 toppers which made profits were 6 per cent and 12 per cent respectively. The 100 toppers comprised 16 Government companies and 84 non-Government companies. The aggregate amount of net fixed assets was Rs. 920.9 crores for the 16 Government companies and Rs. 686.4 crores for the non-Government companies. Hindustan Steel tilted the balance heavily in favour of the Government companies included in the hundred toppers.

The following are the financial data for the 100 corporate leaders ranked according to sales/income.

	(Rs. in crores)
Total Net tangible assets	2347.6
Total Net fixed assets	1317.8
Total Paid-up capital	863.0
Total Net worth	1176.3
Total Sales/income	1715.5
Total Net profits (96 companies)	67.0

The 100 toppers ranked on the basis of turnover represented 39 per cent of the entire corporate sector in terms of the paid-up capital. The aggregate paid-up capital of these toppers formed 73 per cent of their net worth. Net fixed assets accounted for 56 per cent of total net tangible assets. Out of the 100 corporate leaders four incurred losses. The rate of net profits for the remaining 96 companies on their sale/income was four per cent. The net profits of these 96 companies as percentage of their paid-up capital came to 15.

The aggregate figures of net tangible assets, net fixed assets, paid-up capital, net worth, sales/income and net profits of the 100 corporate leaders ranked according to net profits are indicated as under.

	(Rs. in crores)
Total net tangible assets	1656.3
Total net fixed assets	762.1
Total paid-up capital	574.2
Total net worth	859.5
Total sale/income	1413.0
Total net profits	76.8

The 100 toppers accounted for 25 per cent of the whole company sector in terms of paid-up capital. The share of the aggregate paid-up capital of these toppers in their net worth was 67 per cent. The rates of net profits on sales and paid-up capital stood at 5½ per cent and 13 per cent respectively.

The financial statistics of the 100 toppers according to the criterion of net worth are summarised below:

	(Rs. in crores)
Total net tangible assets	2,742.9
Total net fixed assets (99 Cos.)	1,576.5
Total paid-up capital	1,069.5
Total net worth	1,384.3
Total sale/income (99 Cos.)	1,547.6
Total net profits (87 Cos.)	62.8

The aggregate paid-up capital of these 100 toppers accounted for 48 per cent of the total paid-up capital of all companies at work in the country and 77 per cent of the net worth for the 100 toppers. The share of total net fixed assets in the total net tangible assets for the 100 toppers worked out to 57 per cent. The rates of net profits on sales and paid-up capital for 87 profit earning companies of the 100 toppers stood at 5 per cent and 12 per cent respectively.

The total figures of net tangible assets, net fixed assets etc. of the 100 corporate leaders ranked on the basis of paid-up capital are as follows:

	(Rs. in crores)
Total net tangible assets	2,710.7
.. net fixed assets	1,562.5
.. paid-up capital	1,077.8
.. net worth	1,362.8
.. sale/income (99 Cos.)	1,447.8
.. net profits (83 Cos.)	64.8

The 100 Corporate Leaders represented 48 per cent of the entire Corporate Sector in the country in terms of paid-up capital.

The first 10 companies of the 100 toppers ranked on the basis of net tangible assets, net fixed assets, paid-up capital, net worth, sales/income and net profits (i.e. profits after tax, depreciation and other charges) are shown below:

July 10, 1964

It will be observed that the giant sized Government Company Hindustan Steel tops the list in all cases except in the case of toppers ranked according to net profit. In fact, this company does not figure in the list of toppers ranked according to net profits. The company is running at a loss now but there is little doubt that it will earn huge profits in the near future when it would be in full operation. The two Government Companies which figure in the first ten of toppers on the basis of net profits are Hindustan Machine Tools and State Trading Corporation of India occupying the seventh and the tenth place in the list. The Indian Iron and Steel Company, a private sector company heads this list. This company earned Rs. 5.6 crores during 1962-63 which is five times that earned by the last company in the list viz. State Trading Corporation of India. The total net profits of the 10 firsts amounted to Rs. 22.8 crores or 30 per cent of the total net profits of the 100 toppers (Rs. 76.8 crores). The paid-up capital of the 10 firsts accounted for 23 per cent of the aggregate paid-up capital of the 100 toppers and 6 per cent of the total paid-up capital of all companies at work in the country.

The Government company which ranked first in the list of first 10 of the toppers according to net tangible assets accounted for net tangible assets of Rs. 798.6 crores out of the aggregate value of net tangible assets at Rs. 1,536.5 crores for the 10 firsts, i.e., more than 50 per cent. Besides Hindustan Steel, the first ten of the toppers included five other Government companies, namely Neyveli Lignite Corporation, Ferti-

THE FIRST 10 OF THE 100 TOPPERS RANKED ACCORDING TO THEIR NET FIXED ASSETS

10. Hindustan Aircraft	3.24	20.0
Total		690.9

lizer Corporation of India, National Coal Development Corporation, Indian Refineries and Heavy Electricals (India). The second place was occupied by the private sector company, Tata Iron and Steel Company, whose aggregate net tangible assets amounted to Rs. 155.2 crores which is less than one-fifth of that for Hindustan Steel. The aggregate tangible assets of the first 10 of the 100 toppers amounted to Rs. 1,536.5 crores which accounted for 55 per cent of the total net tangible assets of the 100 toppers. These 10 companies accounted for 64 per cent of the 100 toppers and 30 per cent of the corporate sector in terms of paid-up capital.

The paid-up capital of Hindustan Steel which tops the list of the first 10 biggest companies ranked according to paid-up capital was Rs. 367 crores or more than 50 per cent of the aggregate paid-up capital of these 10 toppers. As many as

THE FIRST 10 OF THE 100 TOPPERS RANKED ACCORDING TO THEIR NET-WORTH

(Rupees in crores)			
Rank Name of Company	Industrial Classification	Net-worth	Paid-up Capital
1. Hindustan Steel	3.0	343.1	367.0
2. Neyveli Lignite Corp.	1.0	82.1	80.0
3. Tata Iron and Steel Co.	3.0	82.0	39.0
4. Fertilizers Corp. of India	3.65	48.2	42.1
5. Indian Iron and Steel Co.	3.0	42.6	15.1
6. National Coal Development Corporation	1.0	37.7	35.4

TOTAL		749.8	677.1

eight Government companies including Hindustan Steel were included in these ten toppers and accounted for more than 90 per cent of the 10 firsts in terms of paid-up capital. The remaining were the two private sector companies, Tata Iron and Steel Company and Oil India, which occupied the fourth and seventh places respectively.

The 10 biggest companies accounted for 64 per cent of the 100 toppers and 31 per cent of the entire corporate sector in terms of paid-up capital.

Though Hindustan Steel ranked first among the first 10 biggest companies from the point of view of turnover, its sale/income was not very impressive. Its sale at Rs. 130.5 crores constituted only about 20 per cent of the total sales of the 10 firsts. The aggregate sales of the 10 biggest companies accounted for 39 per cent of the total sales of the 100 toppers. Again the 10 biggest companies represented 54 per cent of the 100 toppers and 21 per cent of the whole company sector in terms of paid-up capital and included only two Government companies including Hindustan Steel.

More than half of the aggregate net fixed assets of the first 10 biggest companies ranked according to net fixed assets (Rs. 1,058.5 crores) was accounted for by Hindustan Steel (Rs. 579.5 crores). The first 10 biggest companies included 7 Government companies including Hindustan Steel and accounted for 66 per cent of the total net fixed assets of the 100 toppers. The remaining three companies were non-Government companies accounting for aggregate fixed assets of Rs. 191.6 crores. This is to say the seven Government companies' aggregate fixed assets amounted to Rs. 866.9 crores which constituted 82 per cent of

July 10, 1964

the total fixed assets of the first 10 corporate leaders and 54 per cent of the total net fixed assets of the 100 toppers.

The total net worth of the first ten biggest companies ranked according to net worth amounted to Rs. 749.8 crores which accounted for more than 50 per cent of the total net worth of the 100 toppers. Of the ten biggest companies, six were Government companies whose aggregate net worth amounted to Rs. 566.7 crores or 76 per cent of the aggregate net worth of the first 10 toppers and 40 per cent of the total net worth of the 100 leaders. The net worth for Hindustan Steel which topped the list amounted to Rs. 343.1 crores which accounted for 46 per cent of the aggregate net worth for the first 10 biggest companies and 29 per cent of the total net worth for the 100 toppers.

The table at the bottom presents the shift in the position of the first 10 biggest companies during the period 1956-57 — 1962-63.

It will be seen from the table that six of the 10 top ranking

10. Associated Cement Co.	50.2 (10)	19.1 (11)	43.9 (5)	19.1 (4)	40.6 (3)	15.8 (3)

Note: * The Government company Sindri Fertilizer and Chemicals Ltd. was merged with Hindustan Chemicals and Fertilizers Limited and the name of the latter changed to Fertilizer Corporation of India Limited with effect from 1st January, 1961.
† The company was registered on 18th February, 1958.
** Did not find a place in the first 100 biggest companies.
— The company was registered on 22nd August, 1958.

companies according to net tangible assets are Government companies occupying the first, fourth, fifth, seventh, eighth and ninth position in 1962-63. Tata Iron and Steel Company and Indian Iron and Steel Company occupied the first and second places with net tangible assets of Rs. 98.3 crores and Rs. 54.0 crores respectively in 1956-57 and the second and third places with higher net assets of Rs. 170.4 crores and Rs. 92.8 crores

THE FIRST 10 OF THE 100 TOPPERS RANKED ACCORDING TO THEIR NET PROFITS

(Rs. in crores)			
Rank Name of Company	Industrial Classification	Net Profit	Paid-up Capital
1. Indian Iron & Steel Co.	3.0	5.6	15.1
2. Tata Iron & Steel Co.	3.0	3.4	39.0
3. Associated Cement Cos.	4.1	2.1	19.1
4. Hindustan Lever	3.82	2.0	8.2
5. Esso Standard Refining Co. of India	4.00	1.9	3.0
6. Imperial Tobacco Co. of India	2.50	1.8	15.2
7. Hindustan Machine Tools	3.44	1.6	8.1
8. Tata Engineering and Locomotive Co.	3.49	1.4	10.0
9. Burmah Shell Refineries	4.00	1.6	14.5
10. State Trading Corporation of India	6.01	1.4	2.0
TOTAL:		22.8	134.3

respectively. The Government company Hindustan Steel ranked first in 1962-63 as also in 1959-60, while the two non-Government companies, Tata Iron and Steel Company and Indian Iron and Steel Company, maintained their second and third positions occupied by them in 1959-60 with their net tangible assets improved to Rs. 155.2 crores and Rs. 99.8 crores respectively.

The shift in the position of the first 10 biggest companies ranked according to net tangible assets with reference to their ranking based on net fixed assets paid-up capital, net worth, sale/income and net profits is indicated in the table on the next page.

FOR ELECTRICAL USES

- High electrical conductivity
- High tensile strength/weight ratio
- Non-magnetic and nonsparking properties

FOR TRANSPORTATION

- Extreme lightness and mobility, meaning lower fuel consumption and higher speed
- High durability and low maintenance cost

FOR UTENSILS & HOUSEHOLD APPLIANCES

- High purity aluminium is extremely hygienic and corrosion resistant
- High thermal conductivity means quicker and more uniform heating in cooking vessels
- Lightness and durability

IN BUILDING & CONSTRUCTION

- Very high strength/weight factor
- Long economic life, low maintenance costs and high scrap value
- Highly reflective aluminium panels make buildings cool in summer and warm in winter

IN CANNING AND PACKAGING

Extremely attractive brightness and finish means high consumer appeal

- Excellent protection against moisture, heat, light and gases
- Light and handy to use

IN MACHINERY AND EQUIPMENT

- Ease of fabrication and shaping ensures tailor made satisfaction of specific jobs
- Combining a panoramic range of uses and properties, aluminium is the versatile wonder-metal for modern industry

Why Aluminium

The Rs. 200 million Birla-Kaiser aluminium project at Rihand has, since December 1962, attained the present target capacity of 20,000 tonnes of high quality COMMERCIAL & E. C. GRADE ALUMINIUM INGOTS AND WIRE BARS per annum. Fabrication facilities to manufacture sheets, plates, circles, extrusions and wire rods, and expansion of the primary production capacity to 50,000 tonnes per annum are being undertaken, to keep the fast growing national industries on their march to progress and prosperity.

How to measure Growth

All things grow in age—but only *some* grow in size and stature. A young sapling shoots up—sprouts new leaves and branches. But how does one measure the growth of a bank? Take the Bank of Baroda, for instance.

One way would be to compare figures. The Bank of Baroda began in 1908 with a single office in Baroda. Now it has as many as 210 branches in India and abroad. And deposits exceed Rs. 140 crores.

A strong and progressive institution with 55 years of experience, the Bank of Baroda has had a successful programme of branch expansion. It has also aimed at an ever-widening pattern of service. Indeed the Bank's chief goal has been to widen the range and scope of its banking services for the convenience of its customers.

THE BANK OF BARODA LTD.

(Estd. 1908) Head Office: Baroda

now has over 210 branches all over India and abroad with deposits totalling over Rs. 140 crores

The Challenge of Prices

THE HOME Minister, undoubtedly, deserves credit for recognizing more clearly perhaps than most of his colleagues in the Government the gravity and the urgency of the price situation. Mr. Nanda is surely not exaggerating when he suggests that if prices continue to rise and scarcities of essential goods become increasingly common, popular discontent arising from popular distress might well become a threat to law and order. What then is to be done? It is undoubtedly necessary in the first instance to take effective measures for the enforcement of the more important price and distribution controls which are already existing. It is true, of course, that a great deal of the recent deterioration in supplies and prices of essential commodities is due to the fact that government regulations which are supposed to counter those tendencies exist only on paper and have seldom been actually applied. The immediate need, consequently, is to see that the controls and regulations with which the Government has armed itself are deployed effectively against illegal speculation, hoarding or profiteering in essential commodities.

There has been a suggestion that the Defence of India Rules should be (or are likely to be) used in the enforcement of price and distribution regulations. It is not difficult to appreciate the intensity of the feeling behind such a demand, but while no quarter need be given to those who are deliberately contriving to withhold supplies of essential goods from the public or rig up prices of such goods, it is important to bear in mind that the efficacy of extraordinary deterrents is apt to be in proportion to the judgment and discrimination shown in appealing to them. The Home Minister has reportedly been conferring with the Minister for Food and Agriculture on steps for energizing the apparatus of enforcement, especially in the area of foodgrain prices, and we are confident that it will not be found to be beyond their joint wisdom to work out a strategy of enforcement which combines discrimination with determination. There is no doubt that, so far as public opinion is concerned, it must unreservedly support and co-operate with the efforts of the Government to enforce price and distribution regulations through penalties or other punishment wherever necessary.

Enforcement of controls, however, could only be a part of a policy for prices. It must be realized here that the controls themselves are strictly and sadly limited in scope. For a number of essential consumer goods, even theoretically sound schemes of control have in practice been repeatedly found to pose political and administrative problems of embarrassing complexity. It follows that controls or the enforcement of controls may at best be a measure of immediate relief of limited relevance to the public. Once the Government has made up its mind to secure effective enforcement of the truly essential controls, it becomes desirable that it should not stop there but proceed to deal with the more basic conditions underlying the price situation. As we have been reiterating in these columns, rising food prices are a symptom of developing inflation. The main task before the Government, therefore, is to contain this inflation. This has to be done by curtailing wasteful and unproductive public expenditure drastically as well as by deferring marginal investments on relatively long-term projects. The Finance Minister's recent offer to economise in Central Government expenditure to the extent of Rs. 70 crores is only a symbolic gesture considering the dimensions of the economy called for. It is imperative that the Government should make up its mind to adopt more heroic measures for bringing down substantially the aggregate level of Central and State Government expenditure, both consumption and investment, by say, about Rs. 400 crores over the next 12 months. It is only in this manner that some impression could be made on the

current disequilibrium in the economy. Simultaneously, it is most important that all steps should be taken to increase production all round. The output of consumer goods of all kinds should be stepped up wherever possible and, at any rate, no idle capacity should be allowed to continue in any important consumer goods industry, or indeed in any industry at all. This would mean a series of discussions or conferences with the industries concerned on immediate measures for stepping up output.

On the agricultural front, again, there is need for clear and purposive thinking. There is an obvious necessity for boosting the morale of owners and cultivators of medium and relatively large holdings. The truth must be faced that such farms alone could provide the marketable surplus on which the level of food supplies or food prices in urban areas depend. While facilities should no doubt be given to small and petty holdings to improve their farming, it is obvious that such holdings must necessarily operate on a subsistence basis. It follows that the problem of food supply and

prices can be dealt with only in terms of providing security and scope for profitable functioning to medium and relatively large holdings. Abstract and ideological experiments in land reform have already done much harm in inhibiting private capital or management in medium-scale agriculture. These negative and frustrating attitudes should now be abandoned. Once government policy recognizes the dynamic role which only medium and relatively large farms can play in agricultural production it would become possible to evolve an intelligent and integrated programme for assisting not only this market sector in agriculture, but also the subsistence sector. The policy we have so far pursued has demoralized market agriculture without strengthening in any way subsistence agriculture. It is possible that a good monsoon may bring some marginal relief to the food situation in the new agricultural year, but the time thus gained would be wasted if the Government were to fail to utilize it for thinking out a calm and coherent policy for promoting market farming while protecting subsistence farming.

Three Bags Full

FOR QUITE some time now a controversy has been going on, both in the press and elsewhere, about the possibility of substituting imported wool by Indian wool for the manufacture of woollen and worsted fabrics. The Ministry of Food and Agriculture (Directorate of Agricultural Marketing) has, on the basis of livestock census carried out in 1961, estimated the production of wool in different regions as under:

Himalayan Region	10.5 million lbs.
Dry Northern Region	40.6 " "
Southern Region	20.7 " "
Eastern Region	0.2 " "
TOTAL:	72.0 " "

It is estimated that if different varieties of indigenous wool are sorted out and graded, broadly, the availability of various categories will be as follows:

Region	(Qty. in million lbs.)			
	Below 40's	40's-46's	48's-50's	56's-58's
Himalayan	1.14	4.00	1.91	0.45
Dry Northern	13.70	15.40	7.02	2.90
Southern	20.70*	—	—	—
TOTAL:	35.54	19.40	9.11	3.35

* Mostly coloured and coarse wool.

According to the classifications cited above, almost 50 per cent of the total production viz., 35.54 million lbs. of coloured and coarse wool of quality below 40's is unsuitable for fabric or carpet manufacture. Some of this quantity is being exported while the balance is utilised for the manufacture of coarse blankets, druggets, etc. We then have 19.40 million lbs. of 40's-46's quality wool which is mainly of carding type and can be used for the manufacture of yarn for carpets. A part of this quantity is also being exported.

The wools that can be used for coarse types of woollen fabrics for apparel manufacture and hosiery goods fall in the range of 48's-50's (9.11 million lbs.) and 56's-58's (3.35 million lbs.). Some quantity out of this production of 12.46 million lbs. is utilised by the cottage sector, particularly in the Himalayan region. Some of the quantity produced in the Northern region is also utilised for the manufacture of carpets for finer varieties. The total estimated quantity that becomes available for mill consumption in respect of these qualities is of the order of eight million pounds. (This may increase to about 12 million lbs. by the end of the fourth five-year Plan). This quantity of eight million lbs. is also not yet properly classified and graded. Some of this may be suitable only for carding purposes while some can be utilised for purposes of combing for utilisation in the worsted industry. The combing yield from the Indian wool, however, is not more than 60 per cent. Even if all the eight million lbs. of 48's to 58's qualities are combed, we are not likely to get more than 4.8 million lbs. of wool tops or about four million lbs. of yarn (as against 28 million lbs. of worsted yarn requirements by the end of the third Plan). Even if this production increases and about 12 million lbs. of comb-worthy wool is available, we are likely to get only seven million lbs. of wool tops equivalent to 6.2 million lbs. of yarn during the fourth Plan as against the estimated requirements of 40 million lbs. of yarn. Therefore, for the major requirements of apparel manufacture we will have to rely on imported wools although, to the extent indicated above, the Indian wools can substitute the requirements of coarser types of imported wools in the grades of 48's to 56's.

The industry's annual requirements of imported raw materials have been estimated by the Indian Woollen Mills Federation at Rs. 20.5 crores, on two-shift

basis, by the end of the third Plan and Rs. 28.75 crores by the end of the fourth Plan. These figures do not take into account the additional productive capacity that will be created through modernisation of the industry during this period. In 1963-64 the industry was allocated no more than Rs. 5 crores for the import of raw materials. Together with export promotion entitlements, quota for defence production and 'allocation for nylon fibre' the total imports permitted were hardly worth Rs. 8 crores. This constituted only about 40 per cent of the industry's requirements.

The shortage of raw materials is by no means the industry's only problem. It is also in urgent need of modernisation of its outdated machinery which, in certain cases, is several decades old. The rationalisation aspect took a definite shape only after the working group set up by the National Industrial Development Corporation went into this problem and submitted its report in February, 1961. The report recommended that 20 per cent of the spindles in the woollen sector, 26 per cent in the shoddy sector and 54 per cent in the worsted sector, along with 34 per cent of looms, should be modernised by the end of the third Plan. This programme, on the basis of calculations made at the time of submission of the report, was to cost the industry Rs. 10.25 crores. The cost of machinery abroad has since gone up by 30 per cent and consequently the amount required would also go up to Rs. 13.50 crores. Out of this, foreign exchange worth Rs. 4 crores has already been allocated and actually utilised by the industry for the import of machinery, leaving a backlog of Rs. 9.50 crores. A working group of the Planning Commission and the Development Council of the woollen industry have also gone into the modernisation requirements for the fourth Plan and have recommended that the modernisation of woollen sector should be carried out up to 56 per cent, shoddy sector up to 40 per cent and powerloom sector up to 50 per cent of the installed capacity, whereas the modernisation in the worsted sector should be maintained at 54 per cent. The foreign exchange cost

of this programme has been worked out at Rs 4 crores. Adding this to the backlog of the third Plan, a total of Rs. 13.50 crores in foreign exchange is needed to carry through the rationalisation programme.

While this is the picture of foreign exchange requirements of the industry for the import of machinery and raw material, its potential for earning foreign exchange through the export of finished products is not inconsiderable, although it is at present being exploited only to a limited extent. As it is, the bulk of the foreign exchange earnings is being secured from the export of raw wool, shipments of which amount to 30 million lbs. valued at Rs. 8 crores. Only about a fourth of that amount is currently earned through the export of woollen fabrics. The value of such exports amounted to Rs. 1.99 crores in the year 1963-64 and it is interesting to find that Afghanistan alone absorbed woollen goods from this country of the value of Rs. 1.21 crores. Among the other customers were the USSR, Aden and countries in South and West Asia. Mill-made woollen and worsted piecegoods account for about 50 per cent in value of total exports of woollen fabrics and if the industry is given facilities for modernizing its machinery and is also assured of adequate imports of apparel wool, it may quite possibly be able to build up a respectable export trade in woollen fabrics. Meanwhile, the Indian Woollen Mills Federation has suggested to the Planning Commission that an attempt should be made to export carpet yarn and machine-made carpets for which there is a large market abroad. The Federation has proposed that, in the first instance, six mechanized carpet-making units should be set up to explore possibilities in this direction. It has been estimated that the export of carpets manufactured by these units could earn Rs. 22 crores per annum. The point is that the woollen industry, like quite a few other industries, is one which could reward handsomely a bold and imaginative policy of modernization and expansion. There is therefore no wisdom in negative or even merely passive attitudes.

Land Reforms

LAND REFORMS in India in the post-Independence years have attempted to create an atmosphere wherein the production efficiency of the farmer would improve. They were aimed at primarily removing the shackles of intermediaries, a class of zamindars who were land revenue collectors under the Permanent Settlement and their progeny. The laws also aimed at improving the working relations between the owners of land and their tenants. They sought to create an interest for the tenant in the land so that he may evince greater initiative and enterprise.

In several ways the reform Acts sought to protect the poorer sections. The Acts relating to the regulation

of tenures are of continuing interest. Several attempts have been made to assess the effects of these Acts on agriculture. The Planning Commission sponsored a series of field studies in different parts of the country some time after the reform Acts came into force. The National Sample Survey also in its 8th and 16th rounds (1954-55 and 1959-60) collected interesting data. The latest Census Report also includes valuable economic data on land holdings. While none would dispute the success of the laws relating to intermediary abolition and debt relief nor doubt their efficacy, opinion will be divided regarding the achievement of the desired objectives through the tenancy laws. Searching enquiries do not confirm the success that is claimed. On the other

hand some of the trends that are noticed are disturbing.

It has been claimed that, thanks to legislation, the tenants now take greater interest in land. As a token of this the increase in their investment in agricultural operations is cited. But is it all? Actually, the value of tenant-investment bears the same ratio to owner-investment as it was in the pre-reform period. Therefore, there has been no improvement which may be attributed to land reforms. As a consequence of tenancy reform there has been a widespread resumption of lands from tenants. And the owners who resumed tilling the land could not devote the same attention to these lands as they did to the others. Thus, while the area of owner-cultivated holdings had increased, there was no corresponding increase in yield. This has put the tenant in a favourable light which was not due to any extra effort on his part. The inference that tenant productivity had increased is erroneous, under such circumstances. However, the net result has been to reduce agricultural productivity which is not a gratifying consequence.

The average size of the holding has declined since 1946. While some of the studies sponsored by the Planning Commission in the early 50's did not find a material change in the pattern of the size of the holdings, the National Sample Survey (16th round) and the 1961 census have noticed a clear change for the worse since 1953-54. The decline is explained by (1) the increase in the pressure of population on land, (2) decrease in joint ownership and joint operational holdings (breaking of joint families), and (3) implementation of the ceiling limits on holdings. These disintegrating forces which were fanned by unimaginative land laws, have tended to bring down agricultural efficiency. In order to appreciate the situation, one may recall the fact that half of the land holders own about an acre of land and that often in small bits. It is not worthwhile to cultivate small bits unless more land was available on lease. Small holders, if they wanted to remain on land, had to procure more land on lease. A small farmer is, therefore, in part a tenant also. Conversely, it is equally true that a tenant is an owner too. Thus, the question is not a simple or straight one between a land owner and a tenant; while there is no doubt that a large percentage of area is leased out by big landlords yet such pure owners, like pure tenants, form a small percentage. A tenant may often find the law inconvenient; as a land owner he may find it embarrassing.

Small holdings are a handicap where human and animal labour and implements are not fully used. Thus, more land is required for proper employment of resources. When livestock and implements are lacking, credit facilities are required very badly which are attracted the least. Therefore, any law prescribing a ceiling on land holding is likely to hasten the process of sub-division and fragmentation that will eventually accentuate this trouble and aggravate the problem.

Tenure laws have not been able to fulfil their objective of promoting a favourable atmosphere for growth. They have brought in more discontent and mutual suspicion than the good they may have done to an illiterate farmer who often is unaware of the law. They have tended to lay emphasis on the legal aspect of securing the position of the tenant but have not considered whether he was equipped to fulfil his role as a good farmer. He has not come up to the measure in respect of size of holding, investment and productivity. The Government are obviously aware of these problems. In order to check further breaking up of individual holdings they have tried to persuade farmers to consolidate holdings. But there is no law to prevent recurrence of sub-division by inheritance. Where the law could usefully intervene with the least infliction, it fails completely. On the other hand, it sets out to modify contracts by a fiat. Consolidation generally is not a success in India for the simple reason that even after several decades, it has not spread out to the four corners of the country. The Government have now sought to enlarge the scope of the "Co-operative Movement" by bringing in agricultural operations. Today there are three types of such organised farming: (1) collective farming, where the landless are settled on government lands and the operations are government subsidised; (2) joint farming, where the land owners undertake to organise their farming operations jointly (the real co-operative effort) and (3) tenancy farming. The first is in its nascent stage attended with the basic uncertainty of a continuity in policy. Strangely enough, it was reported recently that the co-operative credit banks did not find these farms a good security. Again, the experiments in joint farming generally have not been a success. Where members need to cultivate new mental horizons and produce a strong leadership that will sustain, they have failed. Tenancy co-operatives, good as they are and healthy for economic farming, do not find a ready response from land owners; while a land owner may evict a tenant, he cannot do the same to a co-operative society. Co-operative farming is very good as an idea but is difficult in practice under democratic conditions. A rational approach to agriculture will be to consider it as two distinct sections, namely, the subsistence section where small farmers are concerned and the marketing section consisting of large holdings that can produce for the market. If the government policy and measures are based on this basic approach they will go a long way to improve the tempo of agricultural activity and growth. Secondly, the identification of the tenant and the owner in the same person needs to be recognised for an integrated approach. Thirdly, the policy should aim at increasing production and equipping the farmer for this purpose instead of merely securing a legal position. If the Government policy and measures are based on this basic approach, they will go a long way in improving the tempo of agricultural activity and growth.

Highlights of the Week

COMMONWEALTH CONFERENCE

THE COMMONWEALTH Prime Ministers' Conference in London was dominated by the Southern Rhodesian problem which had agitated considerably both the African and Asian Prime Ministers. The other issues which came up for discussion were apartheid in South Africa, the problem of British Guiana, a review of the world situation (including East-West relations, the Sino-Soviet conflict, Cyprus, Indo-China border dispute etc.), world trade and economic relations. It also provided an opportunity for a meeting between the Union Finance Minister, Mr. T. T. Krishnamachari, and the Pakistan President, Mr. Ayub Khan, when it was decided that the Home Ministers of India and Pakistan would meet later this month or early in August so as to pave the way for a meeting between the two leaders, Mr. Lal Bahadur and President Ayub Khan. The talks between the two leaders were held in a cordial atmosphere so as to evolve a way out of the present tangled situation. Mr. T. T. Krishnamachari delivered to President Ayub Khan a letter from Mr. Lal Bahadur inviting him to visit India.

Mr. T. T. Krishnamachari attempted to stress on the Commonwealth Prime Ministers that the threat from China was not limited to south-east Asia alone but was a menace to the whole world. If the great powers of the world including the United Kingdom did not take steps to save the neutralist Government in Laos, the whole of south-east Asia might come under the heels of China. The neglect of Laos — the only non-aligned Government sponsored by the international community — would become a serious threat. Also, the Plain of Jars needed to be restored to the neutralist Government of Laos; if that did not happen, Laos like Vietnam would be cut into two.

Next to Southern Rhodesia and South Africa, the attention of the Premiers was rivetted on British Guiana which had hit the headlines because of racial riots. A memorandum distributed at the Conference by Mr. Eric Williams, Prime Minister of Trinidad and Tobago, suggested that British Guiana should be put under a UN Commission. According to Mr. Eric Williams, that was the only way of restoring normal life in British Guiana. This put Britain in a difficult situation as by accepting this suggestion a demand could be made at a future date that Southern Rhodesia should also be handed over to a UN Commission.

An interesting point which loomed large during the discussions was whether Peking alone was the fomentor of trouble all over the world or Moscow also shared the responsibility in perpetuating tensions. The assessment presented by the British Prime Minister indicated that Moscow had considerably mellowed after the Cuban affair. This was, however, questioned by Pakistan President, Mr. Ayub Khan, who said that Moscow and Peking were equally responsible for tension all over the world. Tengku Abdul Rehman was of the view that much of the Malaysia dispute with Indonesia was caused by Peking.

Mention needs to be made here of some significant observations made by President Ayub Khan of Pakistan at a Press Luncheon regarding Pakistan's relations with India, the threat to India from China and the problem of defence of the Indo-Pakistan sub-continent. President Ayub Khan is reported to have stated that he had high hopes that Mr. Lal Bahadur "will do something positive to resolve Indo-Pakistan differences and to ensure that the two countries become friends". He went on to describe his impression that in his last days the late Prime Minister, Jawaharlal Nehru, had realised that the Indo-Pakistan sub-continent had to be defended jointly and had also exhibited anxiety to settle India's dispute with Pakistan on Kashmir. He also said that China's

military threat to India was of a limited character. He described as "utter military nonsense" the theory that India could be conquered by China from Tibet as a military base. On the other hand, he was afraid — and here he harped on his pet theme — that the massive military build-up in India was likely to be used against weaker nations, including Pakistan.

The Commonwealth Prime Ministers remained sharply divided on Southern Rhodesia. The British Prime Minister, Sir Alec Douglas Home, was not in a position to endorse the African demand regarding positive action to ensure "one-man one-vote" rule in Southern Rhodesia. He could not take any decision in this regard without discussing the issue with the Southern Rhodesian Prime Minister, Mr. Ian Smith.

The Commonwealth has emerged as a big talking shop. A free exchange of views takes place at these meetings though no one seems to be under any obligation to adopt any one of the suggestions made by the members. It does, however, serve a purpose in that it brings together on one platform leaders of Commonwealth countries following different domestic and foreign policies. The present Conference has one achievement to its credit in that it smoothened the path for further talks over Kashmir between India and Pakistan. The contribution may not be large but the fact remains that it is there and cannot be denied.

RAM KISHEN'S HEXAGON

THE NEW cabinet in Punjab has held out the promise to bring about a new look in the State. Mr. Ram Kishen, the new Chief Minister, who was elected unanimously has selected a team of ministers all of whom belong to the anti-Kairon faction. The key-man of the Cabinet is Mr. Darbara Singh who was also the leader of the anti-Kairon group. Most of the new ministers had at one time or another clashed with the former Chief Minister, Mr. Pratap Singh Kairon. Mr. Probodh Chandra had been fighting against Mr. Kairon's ways for a long time and only recently had to resign from the Speakership of the Vidhan Sabha because his impartiality had been questioned by the legislators, mostly of the Kairon group. The other members of the Cabinet are: Mr. Kapoor Singh who has been the Chairman of the Punjab Legislative Council since 1952; Mr. Sunder Singh, who was the Labour and Excise and Taxation Minister from 1952 to 1962 and Deputy Excise and Taxation Minister in Mr. Kairon's Cabinet in 1962; Mr. Harinder Singh, a member of the All India Congress Committee and the Punjab Pradesh Congress Committee, and Mr. Rizak Ram, the General Secretary of the Congress Legislature Party for a brief period in 1962. Mr. Sunder Singh represented the Harijan community and was sworn in as a Deputy Minister.

Mr. Ram Kishen has promised to clean up the administration. In order to impress his colleagues in the Cabinet and the public, he has taken a lead in declaring his assets. It is interesting to know that Mr. Ram Kishen's total assets are valued at less than Rs. 20,000. The Chief Minister has also warned his relations and members of the family not to interfere with the administration. It seems that he is determined to present a clean image to the public. In addition to a "clean rule", he has also held the assurance that prices would be stabilised and efforts would be made to reduce the prices of consumer goods. In the first policy statement, he put agricultural development in the highest-priority category.

The expansion of the Punjab Cabinet has been under discussion and in this connection the Chief Minister Mr. Ram Kishen had consulted recently the Prime Minister. Mr. Lal Bahadur, according to Press reports, he also had discussions with Mr. Nanda regarding the follow-up action to be taken on the Das Commission Report. The Punjab Chief

Minister has promised that action would be taken against those officers who had been censured in the Report. The Centre is reported to be dissatisfied with the progress made by the officer who had been sent from New Delhi to look into these cases. It is likely that another senior officer will be deputed to Punjab in order to expedite this work. The expansion of the Punjab Cabinet has been delayed because of the Chief Minister's anxiety to take a decision only after the former Prajatantra legislators were allowed to rejoin the Congress Party. The Congress Party in the State Legislature will be strengthened by 24 members (out of which 18 are former Prajatantrites) if the decision to let them join the ranks of the Congress is ratified. The Prajatantrites are mostly former Congressmen who had revolted against Mr. Kairon's rule and had formed a new group in order to oppose him. With the admission of these 24 legislators, the Congress Party's strength in the Vidhan Sabha will increase to 109 out of the total number of 154.

While the Chief Minister is busy creating a new atmosphere in the State, the first challenge that he is likely to face is the impending clash between the two Akali groups led by Master Tara Singh and Sant Fateh Singh on the Paonta Sahib Gurdwara issue. They are likely to start an agitation to take over the management of the shrine. Since this Gurdwara is located in Sirmur District of Himachal Pradesh and Himachal Pradesh Government is not in a position to face this challenge, discussions are currently going on between the Governments of the Punjab and Himachal Pradesh so as to face any threat to peace and security which this agitation may entail. Whatever the demerits of the Kairon rule in Punjab, it must be said to the credit of the former Chief Minister that he had put down all agitations, which tended to disrupt life in Punjab, with a determined and heavy hand. Mr. Ram Kishen will have to prove that he has the capacity to handle similar situations with the same degree of firmness.

NO FROM NAGAS

THE HOPES of a settlement with the underground Naga leaders have received a set-back due to the rejection of cease-fire terms by the Naga leaders. Earlier it had been reported that a workable solution had been thrashed out by the Peace Mission whereby the Government of India's security forces were expected to suspend operations some time in the third week of the current month. The suspension was to last one month during which negotiations were to take place with underground Naga leaders for creating permanent peace in the region. It was understood that the suspension was to extend to all areas inhabited by Nagas including Manipur and NEFA. These talks received a set-back because the Naga leaders did not accept "the terms of the memorandum" which the Centre had sent to the Peace Mission in connection with the holding of the Peace Conference.

The differences, according to the External Affairs Ministry, stemmed from the fact that the Union Government had refused to give up the patrolling of the international borders during the period of the cease-fire and had also declined to recognise the so-called Naga Federal Government. The Naga underground leaders had also been informed that the talks for future peace in Nagaland would be held between the Government of India in association with the Government of Nagaland on the one hand and the Naga underground leaders on the other. The underground Naga leaders were free to name themselves in any manner they liked but the Government of India would recognise them only as "underground Naga leaders". It is reported that at no stage the Naga leaders had raised the question of Mr. Phizo's presence at these talks.

Because of this deadlock, the original target date set for the cease-fire on July 21 may not be adhered to now. The Chief Minister of Assam, Mr. Chaliha, has, however, rightly stated that the situation in Nagaland needs to be dealt with care and consideration especially because the Naga leaders have requested the Peace Mission to continue its efforts. The future

course of action will be devised by the Peace Mission sometime later this month. The reservations put in by the Government of India regarding military patrolling on the international borders are genuine because no sovereign Government will surrender its right to patrol the land along the borders. The Peace Mission has the delicate responsibility to bring round the Naga leaders to the view that they would not impose impossible conditions for carrying on discussions with the Government of India. Unless the rebel leaders show some genuine anxiety to come to terms with the Government of India, the shadow of strife is likely to continue to hover over Nagaland, much to the detriment of the people.

RICE MILLS

ONE OF the decisions taken at the recent Chief Ministers' conference at New Delhi was that the rice mills in the private sector would not be nationalised and an effort would be made to set up large-sized, economic rice mills in the public sector. At first it was thought that all these rice mills would have to be imported. Now it is proposed that they should be manufactured in the country. The manufacture of the rice mills will be a major project since the total need for rice mills will be significantly large at 2,000 during the fourth Plan period. The basic objective of manufacturing the rice mills in the country is to ensure both certainty and speed in the setting up of the mills. Some of the large millers are currently manufacturing a few of the components of the rice mills. The Government would encourage them to expand their production so as to include all components. In order to achieve this objective, it will be essential to seek foreign collaboration. It has been estimated that the cost of a three-ton paddy processing mill is around Rs. 1,62,000; if 1,000 of such units are manufactured within the country instead of importing, the size of the rice mill machinery industry will develop into one of the major industries of the country. In addition to these three-ton paddy-processing mills, the country will need at least 1,000 units with one-ton capacity each. Another decision has also been taken that the manufacture of the rice mills would not be limited to the public sector alone. The private sector will also be induced to increase its capacity to manufacture rice mills.

Eastern Economist 20 Years Ago

JULY 14, 1944

THE PITIFUL experience during the war has showed us, as never before, how very ignorant we are about the elementary facts and figures of our agriculture. The Government has been literally fumbling and bumbling in an almost complete statistical darkness — especially so in regard to the Indian States and permanently settled areas. While Professors Bowley and Robertson pointed out that the data at present are quite insufficient to determine whether or not food is increasing in proportion to population, the Gregory Committee negatively concluded that since available statistics of food production or food imports do not show any trend, but since a population increase as large as 50 million in a decade "is itself inconsistent with any assumption of a progressive deterioration in the standards of consumption which would not have permitted such a population increase to take place," consequently there must be statistical defects. Such is the enormity of our statistical ignorance. The perfunctory treatment of agriculture in the Bombay Plan and even in the Government Plan is hardly to be surprised at. Let us confess that we know little about our largest occupation: we do not know how much land we have for extension of cultivation or what are the production and cost conditions in agriculture, or whether famine mortality in Bengal has been nearer half a million or nearer five million.

British Companies in India

ANALYST

THE PURPOSE of this article is to analyse the financial position of British companies in India in manufacturing and distribution (financial companies are not covered in this study) in relation to the performance of British companies in the U.K. and Indian companies in India. The basic statistical data for this study has been derived from the company finance studies made by the Reserve Bank of India and the U.K. Board of Trade. The importance of this study arises from the fact that the United Kingdom accounts for the highest volume of foreign investment in the country and any further flow of foreign equity capital into India will, to a great extent, depend on the performance of existing companies.

Profitability

Profitability of companies can be measured by various ratios such as the rate of profit before tax on the total capital employed, which gives an idea on the efficient use of capital or the rate of profit after tax on net worth, which is important from the point of view of the investor. A third way of measuring profitability is to find out the rate of profit before tax on the sales of a company and this shows the profit margin on sales. Since profit has its origin in sales this standard is also important, but the higher profit margin on sales may be either due to the lower cost of production or by exploiting any monopoly or near-monopoly positions. In this article profitability is considered by all the three criteria. Table I shows the rate of profit before tax on sales income in the case of British companies and Indian companies in India. Since data regarding sales is not available for British companies in the U.K., it is not possible to know the profit margin on sales there.

It will be seen from Table I that British companies in India made a higher rate of profit on their sales as compared to Indian companies in India during all the five years, 1957 to

TABLE I
GROSS PROFITS* ON SALES

(Per cent)			
Year	British Companies	Indian Companies	Differences
1957	9.8	7.3	2.5
1958	9.5	8.0	1.5
1959	10.3	8.3	2.0
1960	10.1	9.2	0.9
1961	10.0	9.2	0.8

* Including managing agency remuneration, interest charges and provision for tax but excluding depreciation.

TABLE II
PROFIT BEFORE TAX ON TOTAL CAPITAL EMPLOYED

(Per cent)			
Year	British Companies in U.K.	British Companies in India	Indian Companies in India
1957	10.6	11.3	5.1
1958	10.1	10.8	5.5
1959	10.7	12.2	7.1
1960	10.8	11.6	7.3
1961	9.3	11.5	7.2

1961. The higher rate of profit varies from 0.8 per cent to 2.5 per cent.

The rate of profit before tax on the total capital employed by British companies in the U.K., and India in relation to Indian companies in India may be seen in Table II.

It will be seen from Table II that British companies in India are making a higher rate of profit on the total capital employed than not only the British companies in the U.K. but also the Indian companies in India.

Since the shareholders are mostly interested in maximising their return, the rate of profit after tax on the net worth of the company is the most important consideration for them. Table III shows the rate of profit after tax on net worth.

TABLE III
PROFIT AFTER TAX ON NET WORTH

(Per cent)			
Year	British Companies in U.K.	British Companies in India	Indian Companies in India
1957	8.2	9.9	5.9
1958	8.2	9.2	6.8
1959	9.2	12.3	10.7
1960	9.2	11.7	10.5
1961	7.8	10.9	9.5

It may be seen from Table III that the British investor is earning a higher rate of profit after tax on the investments in India, compared to the investments in Britain. Besides, the British companies in India are making a higher rate of profit than the Indian companies.

Dividend

The higher profitability of British companies in India enables them to declare a higher rate of dividend. Tables IV and V show the rate of dividend declared by these companies in India and the U.K. on their paid-up capital and net worth.

TABLE IV
DIVIDEND ON PAID-UP CAPITAL

(Per cent)			
Year	British Companies in U.K.	British Companies in India	Indian Companies in India
1958	6.0	8.3	6.4
1959	8.7	12.2	10.5
1960	8.5	13.8	10.3
1961	8.3	15.0	10.0

Table IV and V show that British companies in India are paying a much higher rate of dividend on both paid-up capital and net worth, compared to both British companies in the U.K. and Indian companies in India. The rate of dividend on the

net worth paid by British companies in India is more than double what the parent companies have paid in the U.K. in 1961.

TABLE V
DIVIDEND ON NET WORTH

Year	(Per cent)		
	British Companies in U.K.	British Companies in India	Indian Companies in India
1958	2.9	5.3	5.2
1959	4.2	7.5	6.4
1960	4.2	8.2	6.3
1961	4.0	8.9	6.0

Assets and Liabilities

The higher rate of profit made by British companies in India and the consequent higher rates of dividends declared by them may be due to many reasons. An analysis of the pattern of assets and liabilities of British companies in India is likely to throw some light on the financing practices of British companies and their effect on profits. Tables VI and VII show the pattern of assets and liabilities of British and Indian companies.

TABLE VII
PATTERN OF ASSETS

	(Per cent)					
	British Companies in U.K.		British Companies in India		Indian Companies in India	
	1960	1961	1960	1961	1960	1961
Net fixed assets	40	41	28	30	41	41
Inventory	27	26	30	31	30	31
Loans, Advances, Debt Balances	20	19	20	20	15	16
Investments	7	6	7	5	6	5
Cash	4	3	10	9	4	3
Other Assets	3	4	3	5	4	4
TOTAL:	100	100	100	100	100	100

It may be seen from Table VI that British companies in India are not capital intensive industries to the same extent as either the British companies in U.K. or Indian companies, for the net fixed assets of these companies are only 30 per cent of their total net assets, compared to 41 per cent for British companies in U.K. and Indian companies.

As regards liabilities, net worth in the case of British companies in India is lower than British companies in U.K. for in U.K. it amounts to 62 per cent of the total liabilities compared to 54 per cent in India. The lower importance of net worth in India may partly be due to the lower importance of net fixed assets. Another possible reason is that since the profit after tax on net worth is higher in India, the manage-

TABLE VII
PATTERN OF LIABILITIES

	(Per cent)					
	British Companies in U.K.		British Companies in India		Indian Companies in India	
	1960	1961	1960	1961	1960	1961
Paid-up Capital	31	30	33	32	26	25
Reserves and surpluses	32	32	23	22	17	17
Taxation provision	8	8	8	7	6	7
Bank borrowings	4	5	8	8	16	16
Long-term borrowings	8	8	4	5	8	8
Miscellaneous borrowings & creditors	18	17	26	25	27	27
TOTAL:	100	100	100	100	100	100

ment of British companies in India thought it better to raise borrowings to meet their increased financial needs rather than increase its net worth. In fact, the British companies in India had a high amount of miscellaneous borrowings and creditors, which carry little or no rate of interest, compared to the parent companies. The miscellaneous borrowings of British companies in India constituted 25 per cent of their liabilities, compared to only 17 per cent in U.K. Since the Indian companies also had about 27 per cent of their liabilities from miscellaneous borrowings, it may be inferred that British companies also were able to raise a higher amount of miscellaneous borrowings. Since these miscellaneous borrowings carried only a small rate of interest, it was possible for the British companies to pay the profit accrued by employing these borrowings also to shareholders. This was one of the reasons for their higher profitability.

The important points of this discussion may now be summarised:

- British companies in India make a higher profit margin on sales compared to Indian companies.
- The rate of profit before tax on the total capital employed is higher for British companies in India, compared to both the parent companies in the U.K. and Indian companies in India.
- The rate of profit after tax on shareholder funds (net worth) is higher for British companies in India, compared to both the U.K. companies in the U.K. and Indian companies in India.
- British companies in India are paying a higher rate of dividend both on paid-up capital and on net worth, compared to British companies in the U.K. and Indian companies in India.
- British companies in India have financed their assets by borrowings to a greater extent than their parent companies in the U.K. Since these borrowings carry a low rate of interest, the higher rate of profit earned by British companies in India was partly due to this reason.

Tokyo by night

Facts you should know about KLM's reliable DC-8 jet flights to Bangkok, Manila, Tokyo, Singapore and Sydney and about the attractive possibility to fly across the Pacific

KLM has had longer than any other airline to perfect its reliability—44 years. It was the first European airline to fly to the Far East. Today, for the convenience of passengers and air freight shippers, KLM maintains 17 offices east of Karachi. KLM's flights from India now serve Tokyo direct. Read on...

1. A KLM DC-8 jet leaves Calcutta every Monday afternoon and Delhi every Friday afternoon for Tokyo. Both these flights go via Bangkok and Manila.

2. Leaving from Bombay, you can easily fly up to Calcutta or Delhi or Bangkok on Mondays or Fridays to link with KLM's flights to Tokyo.

3. Japan, so gay and full of life, will be fun to visit during the Tokyo Olympic Games. Combine your business with pleasure and make your travel plans now.

4. You will find a Japanese stewardess on every KLM flight from Bangkok to Tokyo and over the Pole to Amsterdam. They add a delightful touch of the Orient, and guarantee that KLM's Japanese-speaking travellers feel right at home.

Polar Route

5. For Tokyo passengers interested in visiting Europe too, KLM offers a nice opportunity of going via the Polar route and returning via the South Asian route or vice versa.

6. KLM operates twice-weekly services each way between Tokyo and Amsterdam via Anchorage, Alaska.

Mondays and Thursdays. From Amsterdam to Tokyo on Wednesdays and Sundays.

To Singapore and Sydney

7. KLM's weekly flights to Singapore and Sydney can be linked at Bangkok on Tuesdays and Wednesdays respectively, by passengers from Calcutta, Delhi and Bombay.

8. The longest route flown by KLM is the DC-8 jet service between Amsterdam and Sydney—11,754 miles. KLM flies this stretch in less than 26 hours.

9. KLM has its own resthouse in Bangkok. It has spacious rooms with private bath and recreational facilities. KLM flies in fresh food and delicacies regularly from Holland. The service in this resthouse matches the standards of a good European hotel.

PAL to San Francisco

10. KLM, joining hands with Philippine Airlines (PAL), offers you an attractive possibility of flying to San Francisco via Honolulu, across the Pacific.

Serving all six continents

Every four minutes a KLM plane takes off or lands somewhere in the world. KLM flies to 104 cities in 68 countries, serving every continent and covering 44 cities in Europe alone. KLM's total route network is 144,000 unduplicated miles. KLM's twice-weekly flights from India now serve Athens direct on their way to Europe, and connect at Amsterdam with KLM services to many important cities in Europe and the U.S.A.

11. Twice-weekly services are operated by PAL from Manila to San Francisco via Honolulu, on Wednesdays and Saturdays. Both of these can be connected at Manila by KLM/Interline partners' flights from Calcutta, Delhi and Bombay. You can also visit Hongkong on your way to San Francisco at no extra fare.

12. Take this opportunity of visiting New York—so easy to reach from San Francisco!

See the World's Fair; go with KLM and Cinerama "To the Moon and Beyond"; sample the thrills and sensations of outer space at the Transportation and Travel Pavilion. Ask KLM for further details.

13. Every KLM intercontinental flight carries a travel information case full of tourist information.

There is a set of KLM Tourist Information leaflets, covering more than 100 countries. These leaflets are available at all KLM offices and can be had free of cost on request.

14. KLM prepares special diet food for passengers who request it as they book their seats. KLM pursers are always briefed on these special diets before passengers come aboard.

15. Travelling First Class on a KLM DC-8 jet, you enjoy royal comfort. Among other thoughtful features, you can have a soft foam rubber hassock to rest your feet as you relax in a reclining chair. Hassocks are standard First Class equipment on KLM jets.

16. When KLM DC-8 jets land in hot climates and passengers remain on board, KLM rolls special equipment up to the plane to keep the air-conditioning going on the ground.

17. Domestic animals, accompanied by you, have to be carried in a strong closed basket or kennel to be provided by you and to be approved by KLM. For particulars please get in touch with KLM.

18. Your Travel Agent will be able to tell you more about the advantages of flying KLM. Get in touch with him or contact the nearest KLM Office. Calcutta—7, Chowringhee Road; Delhi—9A, Connaught Place; Bombay—Taj Mahal Hotel.

Free Travel Information

For further information on KLM and its services to any of the cities on its Far Eastern and Australian network, please write to KLM, Calcutta.

WINDOW ON THE WORLD

Europe's Migrant Millions—I

From Our Special Correspondent

PARIS:

THE RAPID economic expansion of the Continental countries seems to be heading for a phase of less spectacular progress, as governments everywhere move to combat the inflationary contagion. The root cause of this relative slowdown (expansion no doubt will continue, but at a slower pace) is the shortage of manpower, which acts either directly or indirectly (through competitive wage increases leading to inflation). Paradoxically, the 185 million people who inhabit the Common Market and Switzerland are not enough to provide all the goods and services they desire. The proof is that today they are bringing men, at considerable cost, to work in their factories and mines from further and further afield: the case of the Arabs and Negroes in France is well known, but less so the Turks, Jordanians, Japanese and South Koreans in West Germany. Those exotic sources of manpower are being drawn on as the traditional sources — Italy, Spain, Portugal and Greece — are less and less able, for various reasons that we shall mention, to offer the numbers and the qualities of workers that north Europe needs. One Communist country, Yugoslavia, already sends migrant workers to west Europe and the question of getting more men from the Soviet bloc has been raised. Even the USA's unemployed are being coaxed to Europe by offers of work, and a first wave of this unexpected counter-migration has reached Scandinavia.

Manpower Hunger

Even with a slower pace of expansion, these economic migrations will continue. Since they involve many millions, they constitute a phenomenon that deserves much more attention than it has received; there seems to be a certain reluctance among the wealthy Europeans to admit how much of their prosperity is built on the labour of lakhs of dark-skinned foreigners who live apart in shanty-towns. This is not a transient affair, and the prosperous countries of north-west Europe will be hungry for manpower for many years yet. We may make that prediction for various reasons. Firstly, the proportion of the active population in the total population will continue to fall in those countries for decades to come, both for demographic causes and because of longer schooling. Secondly, labour is successfully pressing for shorter working weeks and longer annual holidays, and will go on demanding earlier retirement ages.

Thirdly, the local reservoirs of manpower constituted by the peasantry and the unemployed female have been drawn on almost to the point of exhaustion in the past two decades. The percentage of the population employed in agriculture is approaching the minimum, while one woman in two who could work does so already in West Germany, France and Britain (one in three in Benelux). Fourthly, the type of economic development now going forward in north-west Europe is increasingly labour-intensive because it entails a vast expansion of the tertiary sector (services) where productivity is increasing only slowly, if at all. Fifthly, the millions of Mediterranean people who have come to work in north Europe in recent years have taken over the heavy, dirty jobs, and the local people thus released from that work will never return to it; there is a social promotion that is irreversible. Mining, house-building, hotel service, domestic service and municipal jobs (sweeping, sewage, etc.) are now-a-days almost wholly staffed by immigrants in the richer European countries, and many arduous or dangerous factory tasks are entrusted to them.

For all these reasons, the three countries West Germany, France and Switzerland alone will continue to need about

three million migrants even if industrial expansion slows down notably. Another reason for attracting migrant labour verges on the pathological, but has its importance in some places: north Europeans are as reluctant as ever to change their place of residence in order to secure work, so that any pocket of manpower shortage is apt to be met by increased immigration even when unemployed nationals are available elsewhere in the country. For example, a company in Alsace (eastern France) lately tried to coax 30 oxy-welders who were unemployed in Brittany to go to Strasbourg; they refused, so the firm got its labour from Turkey, 4,000 kilometres away. The collieries in Germany and northern France are bringing miners from Turkey and East Asia, when there are unemployed coalminers in central France who decline to leave their home-towns. These cases are not just oddities. They illustrate the important fact that rich Europe is depending on foreigners to supply that mobility of labour that is essential in a developing economy.

That particular use of immigrant labour is patently uneconomic. But one is tempted to ask how economic is the whole process of importing millions of foreign workers to deal with a labour shortage that will ultimately have to be met with capital investments. As has been noted, the appeal to masses of migrants has not prevented Europe running into a generalised inflationary crisis arising from rapid increases in wage-costs. (Incidentally, that is why the trade unions have not objected to immigration, as they used to do before the war: they have seen that it is consistent with constant wage increases). So capitalists would have done better to invest, from the start, in new machines and processes in higher productivity and in automation. Apparently, they preferred to take the easier course, which is cheaper and less intelligent, of boosting their staff. But that course is only easier if the workers are foreign, that is, if there is the idea that they can

"What is the point, sir, in mentioning 'by post' when you are very much here all the time?"

be got rid of fairly ruthlessly if business conditions turn down.

Migrant labour, then has simply encouraged Europe to postpone the inevitable rationalisation of its industry by means of concentration, automation, better use of local manpower, suppression of useless jobs in the administration and in the tertiary sector generally and even, perhaps, the suppression of labour-intensive sectors of the economy. It is probably irrational for north-west Europe to keep alive, with protective quotas and imported labour, sectors like textiles which would be much better located, with the aid of capital from north-west Europe, in regions whence the migrant workers are being drawn. Lack of enterprise often explains why a firm brings Spanish workers to the Ruhr instead of sending its capital and techniques to Spain. While, when one finds automobile factories in West Germany that are financed entirely by American capital and staffed very largely by migrant workers from the Mediterranean region, one wonders whether tariffs are not responsible for a grave perversion of the division of labour. However, against that, one must note that there have been cases lately of firms venturing abroad exactly because they have trained labour from the region where they are about to invest; e.g. German firms open plant in Spain staffed by the Spaniards who have worked for them in Germany.

Deplorable Aspect

The calculation that foreign workers could be much more easily retrenched in times of bad business than local workers (or new plant) in responsible for the refusal of some countries, e.g. Switzerland, to allow the migrants to bring their families after them. The excuse mostly given is a local housing shortage, yet the one country that allows the migrants to bring their families after them is France, whose housing situation is the worst. The separation of workers from their families is the most deplorable aspect of the large labour migrations in Europe today, and it has been denounced by religious and health authorities; but the employing nations insist on it because they

Exchange Rate Uncertainties

PAUL EINZIG

IT SEEMS probable that the period of comparative stability in the foreign exchange markets that followed the establishment of close co-operation between Central Banks is drawing near its conclusion. The outlook of the principal exchanges is now less settled than it has been at any time during the last two years. We must envisage the possibility of another period of exchange scares and the principal exchanges are likely to fluctuate within a wider range than they have been lately. At any rate, while it is hoped that spot rates will be maintained within their agreed support points, sharp movement of forward rates are likely to indicate the true basic trends in the markets.

Paradoxically enough, one of the main perturbing factors is the apparent consolidation of the international political situation in Europe. Although the D. mark has been persistently firm for a very long time owing to the strength of the West German economy, confidence in it was until recently not absolute, owing to the political uncertainty caused by the Berlin situation. While there were many investors, speculators and arbitrageurs who were keen on sending their money to Germany, others preferred to refrain from doing so, for fear that another Berlin crisis might flare up suddenly. But for this consideration the influx of foreign funds which, together with Germany's perennial export surplus, has kept the D mark firm, would have been even more pronounced.

Now that the Kreml'n has come to be more preoccupied with Peking than with Berlin, the European political outlook

shrink from the cost of the public services (housing, schools, hospitals, etc.) that the families would require, and they are afraid they could not so easily put the foreigners out in times of economic crisis.

Leaving aside the moral aspect of this attitude, we will note the economic significance of obtaining labour on these terms. Obviously, it is cheaper labour, even when the worker himself is given the same fringe benefits as the native worker, because the employing country is not supporting the social costs of his family. In fact, the worker, employed in these conditions, is not interested in fringe benefits even for himself. His one idea is to get the most direct pay, the biggest cash pay packet, so that he can save more and send more home. In turn, the repatriation of most of these workers' pay has its economic significance: a part of the income of the working class (and it may be a large part: one worker in three in Switzerland is a foreigner) has no impact on local prices, because workers consume the barest minimum. The disinflationary effect of this abstinence (and of the negative impact on the payments balance of workers' remittances home) must be considerable, and makes it all the more remarkable that countries like Switzerland have lost control of internal prices.

The point is worth emphasising because there are lakhs of workers in every northern European country today who are just workers and hardly consumers at all. The foreigners take all the overtime work they can, so they have no time left for leisure and even if they had they do not speak the local language or appreciate local customs. They live in primitive conditions, and this is so, often, even when their employers or the State have provided decent accommodation and facilities: they prefer to save money by paying less rent. Not that all their squalor is deliberately chosen; there is some scandalous neglect on the part of their hosts, too, but no doubt their conditions are vastly superior to those of their uncles who migrated to the USA at the start of this century. Other economic consequences of the substantial labour migrations will be looked at in a subsequent article.

has come to be viewed with an increasing optimism. More and more people who matter from the point of view of the behaviour of the exchanges have come to the conclusion that the last thing Soviet Russia would want is a war with the West, because, even if she were victorious, it would weaken her considerably in the face of the growing Chinese menace. While the Russian attitude towards Britain remains aggressive outside Europe — in the Yemen, in Malaysia, in Cyprus and elsewhere — West Germany is now considered to be reasonably safe from any threat of aggression. This must necessarily mean that the D. mark has come to be regarded even more attractive than before, and the influx of foreign funds is likely to continue increasingly.

This major influence is likely to produce a disturbing effect on foreign exchanges, especially on sterling and on the dollar. In any case, sterling will have to face the pre-election scare during the coming months. Even though the technical position is strong and there is a great deal of optimistic talk trying to play down the impending pressure, it is difficult to visualise the weeks that will precede polling day without heavy selling of sterling both through speculation and through transfers of capital from London. The material and psychological effects on the minor clashes outside Europe are also liable to become detrimental to sterling, and there is also an ever-present possibility that any of these clashes might develop into a shooting war on a large scale. The British authorities have, it is true, ample resources and drawing rights at their disposal to cope with the attacks on sterling, but their

in keeping with its role as Reserve Banker for the Free World. In the past several years, however, the US Government has begun to break out of this box with a diversified series of policies, containing several new and important features.

There has, for instance, been the active use of fiscal policy, notably the recently enacted income tax cut, to stimulate the domestic economy. There has been the innovation of the "twist" in monetary policy — keeping short-term rates up to guard against capital outflow and long-term rates down to avoid checking the domestic expansion. In addition, there is what President Johnson calls the approach of "friendly persuasion" with labour and management, aimed at keeping wage increases in line with productivity gains, thereby holding prices steady and forestalling inflationary pressures. Fourth, there are the new forms of international stabilization — such as currency exchanges and Central Bank borrowings — under-

taken in concert with other free countries to help keep the dollar and other currencies strong.

These and policies like them have been fashioned not to cope with theories, but with facts. They have not been hasty improvisation, but deliberately dodged moves to get the U.S. economy "moving again," in the memorable words of the late President Kennedy, while retaining that dedication to international responsibility which has been the hallmark of US policy throughout the post-war years. This may well be the most telling point of all. While every nation obviously will act in accord with its own situation, it is important that policies generally be reconciled with the overriding need for international co-operation and co-ordination. There is nothing to be gained through actions which help one nation at the cost of seriously hurting others. In an interdependent world, such actions may well be of no help at all in the final analysis.

The moving finger writes

I SEE THAT Mr. L. K. Jha's appointment as the Prime Minister's Secretary has had a good press. This is not surprising. Mr. Jha has an enormous reputation for quiet efficiency and is, besides, a man of parts. He, of course, has been fortunate in his Ministers, or rather Minister, for it is Mr. T. T. Krishnamachari, more than any other Minister, who has had to do the most with Mr. Jha, first licking him into shape in the Commerce and Industry Ministry and then giving him his head in the Ministry of Finance. Mr. Jha is known to be quick on the uptake, but patient in argument; open to conviction, but sure of judgment. It is, therefore, possible to say that the Prime Minister has been wise in his choice. Only, Mr. Jha, like Mr. Lal Bahadur, has a history of heart ailment, and it is no secret that in the Finance Ministry, Mr. Krishnamachari had been extremely careful not to over-work Mr. Jha. The question is whether, in his new assignment, Mr. Jha will be able to avoid undue physical strain. As Secretary to the Prime Minister he will have to undertake a very considerable organizational job, and now that it has been decided that he should shoulder this burden, all that remains is to express an earnest wish that neither he nor his principal will ever yield to the temptation of underestimating the hazards of over-strain.

Mr. L. K. Jha, incidentally, is not the only senior civil servant who is being called to labours possibly inconsistent with the state of physical fitness of the person concerned. There is, for instance, a proposal that Mr. A. N. Jha, presently Secretary, Defence Production, in the Ministry of Defence should move to the Ministry of Information and Broadcasting as its Secretary. Mr. A. N. Jha, too, has been in indifferent health for some time now. I am rather unhappy about this because, as has been generally recognized, there is much vigorous work to be done in the Ministry of Information and Broadcasting. It is doubtful that Mr. Jha, in his present state of health, will not find his chores at the I and B Ministry too much for his physical resources or reserves. In any case, it is only sensible that, when key appointments are to be made in Ministries scheduled for policy or organizational overhaul, those who are responsible for making those appointments pay some attention to the factor of physical fitness.

★ ★
The ways of a man with a maid admit, no doubt, of infinite variety, and the wooing manners which the Finance Minister might choose to adopt for courting foreign capital could justifiably be flexible so long as they are not flighty. But I for one fail to see the point of Mr. T. T. Krishnamachari's denigration of Indian business men when talking in London about New Delhi's attitudes towards private enterprise. The Finance Minister reportedly said that, while the Government of India was ready to extend attractive treatment to foreign capital, it was not disposed to be equally benevolent towards domestic business since Indian industrial enterprise, according to him, was "vitiated by dynasticism". Apart from the fact that our politicians should be the last persons to decry dynasticism — seeing that they themselves have been pretty prompt in introducing it into our Central Government — it is rather surprising that such a well-informed person as Mr. T. T. Krishnamachari should be harbouring the impression that Indian private enterprise is dynastic. The question of "dynasty" arises only when an institution has been in existence for a sufficiently long time. Dynasties are not built in a day, but only over generations. Now, the most obvious single attribute of private industry in this country is its newness. Much the greater part of India's industrial leadership consists

at present of first-generation business men. This is true, with perhaps one or two exceptions, even of so-called big business in this country. Mr. Krishnamachari does not wear a hat, but he ought to have worn one when accusing the Indian business community of "dynasticism".

I should perhaps add that if Mr. Krishnamachari had been unfair to Indian business, he was even more unfair to himself. Does he have so little faith, then, in his own egalitarian fiscal measures that he thinks poorly of their potential for countering any "dynasticism" which may tend to develop in Indian business in the coming years? Finally, I would like to make the point that a policy of favoured treatment of foreign capital or enterprise is both short-sighted and self-defeating. It may have a stimulating effect temporarily on foreign investments, but the gain is likely to be neither large nor enduring so long as government policies towards domestic enterprise are also not equally liberal. The best way of attracting foreign capital is not by showing it special preference, but by maintaining in this country an economic climate which, in its totality, is wholesome and is conducive to all capital and enterprise, whether domestic or foreign.

★ ★
I would like to share with my readers an instance of the practical good sense which Mr. C. Subramaniam, Minister for Food and Agriculture, is capable of bringing to bear on his work. Recently the Delhi Administration went to him with a proposal that the Capital should get its sugar supplies from factories in eastern U.P., as the prices fixed for those factories were slightly lower than the prices for sugar produced in other areas. The bright idea was that this would help the Delhi Administration to stand well with the Delhi public by effecting a slight reduction in the price at which sugar is sold in this city. The suggestion, however, was turned down by the Minister who is reported to have pointed out that there was no justification for depriving some other part of the country of the cheaper eastern U.P. sugar for the benefit of people in Delhi who, after all, enjoyed on the whole higher incomes and a higher standard of living than those elsewhere.

The Minister, no doubt, was aware that the Delhi Administration was trying to play politics, but then who does not these days? Take, for instance, Mr. Subramaniam himself. The best that could be said for this business of rice mills in the public sector is that it is a slick way of getting around the absurd Bhubaneswar directive about nationalization of rice milling. It is, however, rather ridiculous that a Minister who was only recently so enthusiastic about steel mills in the public sector should now be exerting himself so obviously to work up an equal (but wholly artificial) enthusiasm for rice mills in the public sector. Having failed to grow two ears of corn where one grew before, the Government of India would now have us believe that it is going to extract two grains of rice from where only one grain was to be got before. While I do not deny that improved techniques will reduce wastage in milling, this surely is not why the Government has so suddenly developed a taste for rice mills in the public sector. In any case, if the aim is the avoidance of loss in processing, hand-pounding is definitely superior to the most modern processes of milling. At the present time, out of the total rice output of 30 million tons, nearly 18 million tons are hand-pounded; and since the taxpayer's money is being used to subsidize hand-pounding, I should like to know what logic there is in the taxpayer's money also being employed simultaneously to boost rice milling capacity which must necessarily cut into hand-pounding.

V.R.

strength will be put to a severe test, especially if the balance of payments should remain unsatisfactory. While there is no risk of a devaluation, the outlook is not very satisfactory.

Nor is the outlook for the dollar altogether reassuring. It is true, the balance of payments position has improved, and the resistance of American authorities to over-lending abroad is producing its effect. But the Presidential election has introduced an unexpected element of uncertainty as a result of the likelihood of Senator Goldwater being nominated as Republican candidate for the Presidency. In the ordinary way the possibility of a Republican victory would be, if anything, a bull point for the dollar. But the possibility of Senator Goldwater being in charge in the White House is causing widespread uneasiness in the domestic front. Should he be definitely nominated it would affect the dollar very unfavourably during the coming months.

Last, but by no means least, there is the Italian situation. Even if the acute political crisis which flared up at the end of June is solved, the underlying political and financial situation is likely to remain essentially unstable. A devaluation of the lira is widely anticipated in the foreign exchange markets. Nor is the lira alone that is affected by the Italian deadlock. Should it prove to be indefensible its devaluation or depreciation would inevitably revive speculative attacks on other currencies which are deemed to be vulnerable.

This is where the Bretton Woods system of orderly adjustment of currencies which are out of equilibrium is likely to prove unworkable. When in the 'twenties Mussolini declared his determination to defend the lira with the last drop of

his blood that remark gave rise to many sarcastic comments, especially after he felt impelled to abandon the rigid defences of the lira some ten years later. But the basic truth remains that, unless a currency is defended with that stubborn determination for which Mussolini's remark was the slogan, it cannot be defended at all. The moment the market comes to the conclusion that adjustment of exchange parties is a possibility, and that it has become once more fashionable to yield to pressures rather than resist them with the last drop of our blood, pressures will develop in plenty. The devaluation of any of the major currencies would greatly strengthen the attacks on other currencies by weakening our faith in the determination of the authorities to defend it "with the last drop of their blood."

At the same time, the failure of concerted action by the financial Great Powers to save the lira might strengthen the feeling that co-operation between Central Banks should not be used for bolstering up obviously untenable positions. A reaction against large-scale international support to currencies under attack is liable to set in. For this reason alone, it would be a very grave event in the post-war history of foreign exchanges if the lira proved to be indefensible.

On the other hand, financial commentators who maintain that a lira devaluation would necessarily let loose a cataract of speculation against sterling in particular appear to have overlooked the very close economic and psychological links between the lira and the other currencies of the Common Market. It is those currencies that are likely to be involved in the first instance, and sterling might even derive some strength from their weakness.

The Management of the U.K. Economy—I

JOSSLEYN HENNESSY

LONDON:

CRITICISMS TO post-war U.K. chancellors' "Stop and Go" policies (which have undoubtedly been one cause of the U.K.'s comparatively slow rate of growth) have arisen to such a crescendo in the past year or so that it is as well to remind oneself what Stop and Go is all about. Basically it is about full employment. It was because the inter-war governments did not "go" but remained "stopped", or neutral, towards the level of economic activity that the unemployed were counted in millions. In criticising post-war Stop and Go, one should not, however, forget how new the concept of maintaining the level of employment is, and how theoretical and untested Keynes' propositions were. In their application, the U.K. Government has played a pioneering role, beginning with its 1944 official statement, which pointed out that the measures proposed had never before been systematically applied by any government.

Chief among the U.K. Government's failures have been five: (1) the old trade cycle has persisted, though much attenuated. Output and employment have virtually not declined but there has been a cycle in the rate of growth of output; (2) there have been frequent adjustments of policy, which have led industry and the public to feel (rightly or wrongly) that they were being subjected to unnecessarily frequent reversals of policy; (3) prices have risen continuously; (4) the balance of payments has tended to be weak; (5) growth has not been as rapid as in Germany, Italy, and Japan.

But these failures have been relative only. By pre-war standards, economic fluctuations have been minor, growth has been faster than ever before in U.K. history, and the standard of living has risen every year. This is not, for one moment, to suggest that there is not room for improvement. The

trouble hitherto has, however, been that all proposals for diminishing the jerks of Stop and Go, for avoiding inflation, and for boosting exports to attain a better balance of payments, have become tangled with politics. While for all Socialists, the basic secret of success lies in planning, some Socialists see no harm in "a little" inflation, others would use import controls to cure adverse swings in the balance of payments; some advocate cheap money, others nationalisation. The Conservatives also advocate planning, but their main emphasis remains on fiscal and monetary controls; and they argue about "cost" and "demand" inflation; and their insistence on some margin of unutilised capacity in the economy is seized upon as proof that they really want to keep wages depressed.

Just as the approach of the general election is raising these controversies to apoplectic pitch, it is refreshing to find a book, which provides an historical narrative of what the Labour and Conservative chancellors actually did between 1945 and 1960, collects all the relevant economic facts, and analyses the methods used in official economic forecasting, the effects of direct controls, of fiscal and monetary policies, and of variations in public investment, rates of interest, and does all this with an academic detachment and single-minded interest in searching out the truth (as far as it can be ascertained), regardless of its repercussions on the fortunes of a political party. The book is "The Management of the British Economy — 1945-60" (Camb. Univ. Press, 60 sh.) by J. C. R. Dow, who spent the first eight post-war years struggling at first hand with these problems in the Treasury's economic section, the next ten years studying them at the National Institute of Economic and Social Research, and who has just gone as Assistant Secretary General to the O.E.C.D. in Paris. His book should be a boon to all Ministry of Finance officials, central bankers, and all responsible for, or puzzled by, the problem of managing an economy, because here for the first time are all the

facts assembled in one volume, which unflinchingly outlines the conflicting theories advanced by different schools of political and economic thought before offering its own conclusions.

Mr. Dow's conclusions are, on the whole, encouraging. He argues that the U.K. authorities are steadily absorbing the lessons of experience and getting better at keeping the economy in balance. He reminds one that for nearly ten years after the war ministers were not sure that they had found the secret of full employment. By the mid-fifties, the dramatic sterling disasters had forced attention on to the perils of inflation and more systematic efforts were made to regulate demand, but a great deal had to be learned about the timing, strength, and direction of government measures, and this meant that not only skill had to be acquired but statistical and other sources developed. The government failed to moderate the build up for the 1955 boom, went heavily into reverse with Mr. Thorneycroft's 7 per cent bank rate in 1957, followed by too blithe expansions in 1958-59, and the heavy hand again in 1960-61.

Quick Result Policy

Mr. Dow's detailed examination of these policy changes leads him to conclude that there was a too easy assumption that policy (particularly fiscal) could provide quick results, and that it was over-influenced by the superficial appearance of current events, particularly by the level of the gold reserves, and that this prompted heavier action than was necessary.

A good deal of the fluctuation in the balance of payments is random and, to this extent, movements, favourable or unfavourable, are unlike to go far, or for long, without being halted. Many of the factors depend on the trend in world trade. World commodity prices determine chiefly the U.K.'s terms of trade; these prices are very variable in the short term, but any large movement in prices tends to adjust supplies in such a way as at least partially to restore the position. Moreover, the immediate effect on U.K. import prices is likely to be ac-

companied in a year or so by compensating changes in other items of the external account: booming world trade may cause the U.K. to pay more for imports, but she can also sell more exports, and profits on overseas investments are high. Finally, much of the fluctuation has been caused by erratic swings in stocks of imported commodities; but stocks are not run up or down indefinitely, and any large movement is likely to produce its own reaction.

The speed with which these compensating factors work themselves out varies from item to item, and it is this which is the fundamental cause of short-period fluctuations in the balance of payments. A year is too short a period in which to expect all factors to balance out smoothly. The statistics for 1948-60 show that the extent of the swing in the U.K.'s balance of payments can be expected to be at least £200 million on either side of its average value. This should put into perspective the current (seasonally adjusted) deficit of £62 million reported for the first quarter of 1964, compared with a surplus of £6 million in the last quarter of 1963. There is, of course, no suggestion that the U.K., or any other country, can ignore a persistently adverse balance of payments. What is important is not the short term, but the trend. Taking a two to three year period, there are only two factors affecting the U.K. balance of payments, both under the U.K.'s control. The first is how competitive U.K. export prices are, which depends on the level of prices in the U.K., compared with those of her competitors. The second is the rate of expansion of demand in the U.K. (which — price levels being given — determines the rate of growth of imports) as compared with the rate of expansion in other countries (which — price levels again being given — determines the rate of growth of U.K. exports).

The argument applies, *mutatis mutandis*, not merely to the U.K.'s affairs but to those of any international trading country. Where it leads will be outlined in a concluding article next week.

U.S. Dollar Gains Strength

GUY SIMS FITCH

WASHINGTON:

THERE IS an ancient story of a group of men who went to sea in a small boat. One of them, to the consternation of his companions, began to drill a hole in the bottom of the boat. When the others protested this action which was endangering them all, he answered indignantly that it was no concern of theirs, as he was drilling the hole only under his own seat.

In the modern world of shrinking distances and growing interdependence, this little tale has its obvious application to nations as well as individuals. Whether we like it or not, we all are in the same boat, sailing the same international seas. To an increasing degree in the post-war era, the free nations have been formulating and pursuing their policies in this spirit of mutual concern. As never before in history, perhaps, they have been learning to work together in a co-ordinated attack on the economic imbalances which have affected one or more of them at one time or another. All this comes to mind with the recent judgment by the respected Bank for International Settlements in Basle that the world's "economic trouble spot has shifted from the US to Western Europe".

Today, it is Western Europe which is confronting problems of inflation and incipient international balance of payments difficulties. These pressures have induced Western European nations to take anti-inflationary steps, in varying degrees, and have tended to put a damper on their buoyant economic expansion.

This is a noticeable reversal of the situation of a few years ago, when the relatively slow economic growth of the

United States and its persistently high balance of payments difficulties combined to move gold and dollars to European centres. Now, with European costs rising and the United States in the midst of a sustained, vigorous and essentially non-inflationary expansion, U.S. exports have become more competitive, the US payments position has improved markedly, and the US dollar has gained further strength. Also, its current economic expansion has made the United States a desirable investment haven. In fact, the US growth rate, once the laggard among industrial countries, has now moved ahead of the European rate by and large although the present situation obviously affects different European nations differently. A complicating post-war element is the fact that nations no longer are bound to follow the traditional pre-war path of deliberate deflation to counter untoward domestic or international developments. The old answers are no longer acceptable.

Appropriate internal discipline in facing problems of economic imbalance is still an important element in public policy, of course, but now it is tempered by the acknowledged need to keep in clear view other important goals of high employment and growth. These, in fact, have become cardinal objectives of national policy, as was recognized formally in the United States with the adoption of the Employment Act of 1946, with its stress on maintaining high levels of production, employment and purchasing power. The United States may have had to pay a somewhat heavier price than other industrial countries in the way of slow growth and high unemployment in order to maintain the discipline and economic balance

Decision on Oil Refineries Delayed

By Our Special Correspondent

NEW DELHI:

THE UNION Government's decision on the foreign collaboration arrangements for the proposed Madras and Haldia refineries, informed sources reveal, may be expected only some time next month. The Union Ministry of Petroleum and Chemicals, it is learnt, is yet to make up its mind on the various proposals received by it for these two projects.

The picture at present has become complex as a result of the understanding reached between the Government of India and the Bechtel International Corporation of the United States for setting up Indian Engineers Ltd., a company for providing designing, engineering, construction and management services for industrial projects (to begin with, for projects in the petroleum industry) and the provisional agreement arrived at, during Mr. P. R. Nayak's recent visit to Italy, on the Oil and Natural Gas Commission's collaboration as a partner in ENI and Phillips Petroleum's bid for off-shore oil concessions in Iran. Although the agreement with Bechtel International has been concluded more with an eye on the long-term development of the Indian oil industry, the Union Government's insistence on utilisation of the services of Indian Engineering Ltd., as contractors for building the Madras and Haldia refineries is not ruled out. The Union Government may as well like to associate this Indo-US partnership concern with part of the designing work of the two refineries. This, it is thought, would save at least part of the foreign exchange expenditure which may have to be incurred on payment of designing and construction fees to the foreign collaborators.

Important Condition

Another important stipulation that will have to be conceded by the collaborators in the Madras and Haldia refineries it is understood, will be utilisation of the crude which may be available if ONGC is successful in implementing its oil exploration plans in partnership with ENI and Phillips Petroleum in Iran or on its own at a later date in Kuwait. The crude found through ONGC's efforts in the Middle East is proposed to be treated on the same footing as Indian crude. The ONGC collaboration with ENI and Phillips Petroleum in the bid for off shore concessions in Iran, no doubt, gives the collaboration bids of ENI and Phillips Petroleum an edge over the proposals of the other contestants for the Madras and Haldia refineries. But it is not known whether the two companies will be able to arrange crude supplies in the interim period on rates competitive, quality-wise, with approximately 1.56 cents per barrel, f.o.b. Persian Gulf Ports, quoted by BOC-Shell International. Then, there is the consideration that the crude is to be such as would yield products suited to the demand patterns of the regions to be served by the two refineries and will not leave surpluses to be disposed of through exports. In entering into crude supply commitments with the collaborators, the Ministry of Petroleum and Chemicals, it is further learnt, will also like to have adequate flexibility which would enable it to take advantage of fall in crude prices at a future date.

The possibilities of setting up Madras and Haldia refineries as purely public sector enterprises are ruled out, for apart from arranging crude supplies till the period ONGC's Middle East crude can be available, if at all, in adequate quantities, there is the question of providing foreign exchange for import of equipment for the two refineries. Commercial credits are not considered feasible in the present circumstances because these not only involve payment of high rates of interest, but also repayment of principal at a time when our foreign exchange resources would be experiencing severe

strain on account of the external debt liability already incurred. Equity participation by collaborators has the advantage in that only dividend disbursements have to be arranged in foreign exchange in their case.

In view of such considerations, the Union Ministry of Petroleum and Chemicals is finding it hard to pick out the most suitable collaboration offers for the two refineries. Last week, it had discussions with a delegation of the National Iranian Oil Company on the NIOC's bid for collaboration in setting up the Madras and Haldia refineries and ONGC's plans to go in for off-shore drilling in Iran. The final round of talks with the other bidders for the two refineries are proposed to be held in the next few days.

The National Iranian Oil Company's delegation has also shown keen interest in supplying ammonia to India in exchange for Indian iron ore and bauxite. It has suggested to the Government of India that a panel of two engineers — one Indian and one Iranian — may be appointed to study the various aspects of this proposal.

★ ★
Hopes of finding oil in the Raxual area, it is understood, have been abandoned by the Oil and Natural Gas Commission. The core analysis of the structural well drilled here has failed to indicate any marine sediments up to a depth of about 4,000 metres to which this well had been drilled. Chances of striking oil in this eastern part of the Gangetic Valley at deeper levels may be there, but exploitation at such horizons is not considered economic.

Oil exploration in the Gangetic Valley is now proposed to be undertaken at its western end near Dehra Dun. Structural drilling in this area is expected to start soon. Two or three structural wells will be later on drilled between Dehra Dun and Raxual.

The first well drilled at Pattukotai, near Karaikal, in the Cauvery Basin, too, is understood to have failed to indicate any hydro-carbon horizons. Another site about 5 x miles south of Pattukotai is now stated to be being prepared for drilling.

Meanwhile, a decision is said to have been taken that the Oil and Natural Gas Commission should enter into a contract with ENI for drilling in the Nawagam area so that sufficient crude is available from the Ankleshwar, Kalol and Nawagam oilfields for running the Koyali refinery.

Negotiations with ENI for off-shore drilling in the Cambay area on contract basis are also understood to be progressing well. An agreement in this regard is expected to be reached between ONGC and ENI in the near future.

★ ★
As a part of advance action on stepping up pig iron output during the fourth Plan period, the Union Ministry of Steel, it is understood, will be asking, in another two weeks' time, three Indian technical consultancy firms, including Dasturco, to prepare feasibility reports for establishing blast furnaces at a dozen selected places. Only two or three furnaces, however, may be set up in the public sector on the basis of these feasibility reports during the fourth Plan period. The other schemes may be taken up later on. The selected sites are in Maharashtra, Andhra Pradesh and the coal and steel belt of East India. The technical consultants will be required to complete their assignments in eight or nine months.

To cover the gap between demand for and supply of pig iron from indigenous sources during the early fourth Plan period, the Ministry of Steel has recently issued four licences — one to Birlas and the other three to iron ore exporting

firms of Goa — to set up blast furnaces to a total capacity of one million tonnes. It is also expediting action for setting up one blast furnace each at Bhilai and Durgapur Steelworks as part of the fourth Plan expansion programmes of these two units. An agreement in regard to the extra furnace at Bhilai was signed here with the Soviet Union last week. The agreement with the British consortium for the additional furnace to be set up at Durgapur is expected to be concluded in the near future. Both these blast furnaces would go into production in the second half of 1967. No such proposal, however, is under consideration in regard to the Rourkela Steel Plant.

The Russian experts at the Ranchi Heavy Engineering Complex have been asked to prepare a technical report on the blast furnace equipment that can be manufactured at Ranchi.

★★
After discussions with the Union Ministries of Food and Agriculture, Community Development and Irrigation and Power, the Planning Commission last week decided to recommend to the forthcoming meeting of the National Development Council a growth rate of 5.6 per cent per annum for agriculture during the fourth Plan. It also endorsed the view that this rate of growth should be stepped up to 6.3 per cent a year during the fifth Plan period.

Although the target of 5.6 per cent annual growth in agriculture in the fourth Plan would be nearly 60 per cent higher than the likely achievement under the third Plan, it is not considered impossible of accomplishment provided effective steps are taken by the State Governments for implementing the agricultural development programmes that may be drawn up for the fourth Plan.

The Commission generally favoured the targets suggested for various agricultural crops by the Working Group on Agriculture, but preferred higher targets for cotton and oilseeds. The targets recommended by the Working Group for the principal crops are: Foodgrains 120 million tonnes; sugarcane 13.5 million tonnes; oilseeds 10 million tonnes; cotton 8.5 million bales; jute 8 million bales; mesta 2 million bales; tobacco 480,000 tonnes; coconut 5,113 million nuts; arecanuts; 110,350 tonnes and lac 60,000 tonnes.

The Commission was also inclined to the view that some of the targets visualised in the Working Group's paper for various agricultural development programmes could be revised upwards. It specified two such targets; the target for minor irrigation, it thought, could be pitched at 20 million acres as against 16 million acres recommended by the Working Group, and that for green manuring to over 64 million acres, the level proposed by the Working Group.

The Commission agreed that agriculture during the fourth Plan should continue to receive priority next only to defence build-up and all the resources required for stepping up agriculture output should be found and actually made available.

★★
The Government of India has constituted a two-member Tribunal, consisting of Mr. B. N. Gokhale, a retired High Court Judge, (Chairman) and Mr. G. Mathias, a senior officer of the Indian Audit and Accounts Service, to enquire into the cases

against managerial personnel of companies which may be referred to it by the Central Government, and also to exercise and discharge, with effect from July 1, 1964, all or any of the powers and functions conferred on the Courts by or under Section 155, Section 203 (in so far as they relate to granting of leave under that Section), Section 240 and Sections 397 to 407 of the Companies Act, 1956. The Tribunal has been set up under Section 10A of the Companies Act.

The powers and functions conferred on the Tribunal relate to the following matters:

1. Rectification of the register of members and the register of debenture-holders of a company;
2. Granting of leave to persons to manage companies in cases where they have been restrained from doing so by orders of the Courts;
3. Compelling certain persons to produce documents and requiring them to appear before an inspector appointed by the Central Government to investigate into the affairs of a company, and ordering examination on oath of a person whom the inspector has no power to examine on oath; and
4. Granting of relief in cases of oppression of any member or members of a company or mismanagement of the affairs of a company or where the affairs of a company are being conducted in a manner prejudicial to public interest.

The District Courts and the High Courts, as the case may be, shall not henceforth exercise these powers and functions. By virtue of sub-section (5) of Section 10A of the Companies Act, however, these Courts shall continue to have jurisdiction over any proceedings arising out of these matters pending before them immediately before July 1, 1964.

All applications and references required to be made to the District Courts or the High Courts, as the case may be, in regard to the matters in respect of which these powers and functions of the Courts have been transferred to the Tribunal are required to be addressed to the Tribunal's office at 25, Curzon Road, New Delhi.

Mr. L. K. Jha has been appointed Secretary to the Prime Minister. He is expected to be succeeded as Secretary for Economic Affairs, Ministry of Finance, by Mr. S. Bhoothalingam. The decision on Mr. Bhoothalingam's successor as Secretary for Co-ordination in the Finance Ministry will have to await the return of the Union Finance Minister, Mr. T. T. Krishnamachari, who is away in London for the Commonwealth Prime Ministers' Conference.

Wanted: Three Steel Mills in the South

From Our Correspondent

MADRAS:
THE REPORTS that the second World Bank team has given an estimate of steel requirements at a level which is very much less than the calculations of the Planning Commission and that in order to achieve this target, it would be enough if the capacity of the existing steel plants was expanded and an entirely new steel unit other than Bokaro was erected, has

caused some disappointment in the Southern States. It is not clear how the final target for the fourth Plan will be fixed though it has been tentatively indicated that it would be necessary to produce 11.5 million tonnes of finished steel. This would mean that there would be need for an installed capacity of 18 million tonnes of steel ingots. In order to bring about this capacity, it would be necessary to expand further

the size of the three public sector units by at least 3 million tonnes while Tata Iron and Steel Company and Indian Iron and Steel Company will between themselves account for 2 million tonnes. Taking into account the capacity of Bokaro plant as 14 million tonnes, there would be a gap of 2½ million tonnes which will have to be filled by new units which, it has been agreed by even the World Bank, should be erected in the South. In the opinion of the expert team, the Goa-Hospet area is considered to be most advantageous though it is not known how the required quantities of coal would be obtained and whether the unit could be located at Goa itself.

Mysore's Claim

There is considerable difference of opinion on the subject and the Mysore State Government is, naturally, anxious that an integrated plant having a capacity of one million tonnes should be located in the Bellary-Hospet area itself as iron ore of rich quality is obtainable in ample quantities and it would be possible to import coal from Singareni or from West Bengal by the sea-cum-rail route. The estimates of reserves of iron ore extend up to 3,500 million tons, the over-burden alone being taken at 350 million tons. Within a depth of 100 ft. iron ore of uniformly rich quality between 65 and 70 per cent — the best grade in the world — over 1,000 million tons is stated to be available while at greater depths much larger quantities could be secured. Even if the plant is located at Goa, it is contended that the required ore supplies would have to be transported from the Bellary-Hospet area which would mean very much additional strain on transport, as a broad-gauge line will have to be constructed in any case between Hospet and Goa and a large export trade built up. It is, therefore, argued that the return wagons from Madras and Goa could be used for fetching coal. Limestone and manganese can also be had from nearby sources and, therefore, it is emphasised that the Mysore State should be given an opportunity to have a steel plant of its own.

Andhra Pradesh is equally anxious to have a steel unit for itself as the Bailadilla area is being developed. The unlimited quantities of iron ore are proposed to be used for stepping up exports beginning from next year. It is stated that the newly constructed rail route should be utilised for transporting ore to the steel plant that would be erected at Visakhapatnam. Coal can, of course, be brought from West Bengal by sea to Visakhapatnam or from Singareni as the case may be. Both Hospet and Visakhapatnam are thus having identical claims for the erection of a medium-sized steel plant.

The Madras Government has not spoken out loudly so far. But its case would appear to be much stronger than that of others as the controversy, if any, relates only to the question of using lignite for purposes of steel-making. There is one school of thought which holds the view that available quantities of lignite can be utilised more effectively for power generation and for promoting other industries and that a steel plant would be using scarce raw materials. The Madras Government, however, would seem to be of the view that Salem iron ore is ideally suited for the manufacture of pig iron with low phosphorus content which will be helpful in producing alloy steel of various kinds. Also lignite reserves are ample and the experience gained in the past two years clearly shows that fresh reserves can be profitably exploited and without much difficulty. It is still to be decided whether the Salem project should produce common steel or alloy steel. Probably the ultimate decision may be in favour of an alloy steel plant. There will only be difficulty in finding the required resources. But the base of the industry has to be broadened as by the end of the 4th Plan, the existing five major units would have been fully developed and it would be easy to expand further in the fifth Plan only if more new units, which are capable of further expansion had been erected. From this point of view, three units in the South have to be constructed at an early date. Otherwise, a continuing increase in output of steel

in the next decade may not be achieved. The capacity of the three units need not be very big in the early stages, though it would be advisable to plan in such a way that future expansion is rendered easy. The State Governments have, therefore, been busy preparing the project reports in order to present their cases forcefully to the Planning Commission.

★★
The automobile industry in Madras City will be developing in a big way in the coming years. Already, considerable progress has been achieved in the establishment of allied and ancillary industries. As the Central Government is very keen on increasing the capacity for producing trucks, the existing manufacturers are being encouraged to undertake ambitious expansion plans. While Telco, Premier Automobiles and Hindustan Motors will be undertaking big expansion schemes and there will be a more than doubling of the output before 1966, in Madras, the producers who have collaboration agreement with British firms will also be expanding in a big way with the assistance provided by the latter. It was announced only a few days ago that Ashok-Leyland would be undertaking the manufacture of entirely new types of trucks which would be able to carry much larger loads, in fact 2½ times the load that the present trucks can handle. There will be two-axled and three-axled vehicles powered by engines of 185 h.p., the biggest so far to be produced in this country. The expansion programme is expected to cost £4 millions of which Leyland will be providing £2.5 million. The Indian shareholders will be asked to find £1.5 million. It will be necessary to construct larger factory buildings and expand also the facilities for castings and forgings at the Ennore Foundries, a sister company. Ashok-Leyland is already producing industrial engines up to 100 h.p. for sale to outside parties. Under the new scheme, it is proposed that more powerful industrial engines should be produced so that engineering units, manufacturing specialised equipment, can use these industrial engines. This expansion scheme comes immediately after the £3 million scheme which has just been completed.

Standard Motor's Expansion

The Chairman of Standard Motor Products of India Limited also indicated a few days ago at the annual meeting of shareholders that the company would be erecting its Press Shop before the end of this year and that body panels would be pressed in its own factory, leading to considerable economies of working. There is also a scheme for manufacturing one-ton trucks at the rate of 1,200 units annually. These trucks are expected to roll out of the assembly early next year, there being an initial indigenous content of 70 per cent. Standard Motor Products belongs to the Leyland Group and it is expected that this company also will undertake fresh expansion plans in a big way. There are proposals for doubling the output of the existing model of passenger car while it may be necessary to produce the one-ton trucks to a much higher level before long. The Government has not so far taken any clear decision as to how car manufacturers could be helped.

There is, however, the early prospect of Simpson and Company undertaking a big project for manufacturing truck chassis. Under the new scheme of integrated production of trucks by Telco, Hindustan Motors and Premier Automobiles, it will be necessary for Simpsons to embark on the production of trucks of their own. At the present moment, the diesel engines produced by them are being sold to Hindustan Motors and Premier Automobiles. It was announced some time back that these two companies should produce their own engines and that Simpsons should be asked to utilise the diesel engines that would be manufactured by them. Hindustan Motors will be producing a more powerful diesel engine to be fitted in the trucks while Premier Automobiles are already producing diesel engines. Simpsons will, therefore, have to utilise their output of diesel engines apart from any sales that might have to be made to outside parties for replacement purposes. For the truck project, negotiations are being carried on with a

number of foreign collaborators and it is expected that a final decision will be announced shortly. If this project materialises, as it must, Madras City will become even more important as a producer of cars, trucks, components and parts.

★ ★
There is also disappointment over the delay that has been happening in arriving at a decision regarding the collaborating firm for constructing the oil refinery at Madras. While it is agreed that a refinery will be erected in Madras and a large petro-chemical complex would come into being, it is difficult to understand what exactly is standing in the way of an immediate decision. It had been hoped that a final decision would be taken before the end of June and that the refinery would be erected by the end of 1965 or early 1966. When Mr. Humayun Kabir visited Madras recently, he stated that the refinery was definitely being established though it may not come on stream before 1967. The keen competition from foreign firms for collaborating in this project with the Central Government is no doubt welcome and it is also gratifying to know that there will be a great reduction in capital cost even as compared to the Cochin refinery. But what is intriguing is the emphasis on the difficulty that would be experienced in financing crude oil imports after the refineries at Madras and

Haldia have been erected. After the mistakes committed in the past, there is need to be careful when finalising arrangements with foreign firms. But it would not serve any purpose if a decision was unduly delayed simply to secure small gains. It is now clear that the capital cost will be considerably less and the foreign firms would be even prepared to process crude oil supplied by the Central Government and obtained from the Middle East. There would, of course, be objection to using Russian crude oil. It cannot be expected that the efforts to secure crude oil from Iran or the Middle East on a rupee payment basis, or as a result of collaboration agreements, would prove successful in a short period. What is necessary is to have a provision in the agreements that crude oil of acceptable qualities imported from the Middle East would be processed by the new refineries, if it were supplied by the Government. It is necessary to remember that the creation of fresh refining capacity would lead to the displacement of imports of finished petroleum products or at least prevent a further increase and that the saving on this account would be as much as Rs. 30-40 per ton. As we are now importing finished products on a large scale, any delay will be costly. It is, therefore, strongly felt that a decision should be taken within the next few weeks.

Vigilance Committees for Price Control

From Our Correspondent

BOMBAY:

MEETING HERE last week under the chairmanship of the Union Minister for Commerce, Mr. Manubhai Shah, the Cotton Textiles Consultative Board recommended that statutory controls should be instituted by the Government on the production and prices of the popular varieties of cloth produced by composite mills. Such controlled production, it suggested, might amount up to 40 per cent of the present total cloth output, excluding deliveries for export and defence. The remaining 60 per cent cloth manufactured in the mill sector, the Board felt, might not be subjected to production or price controls; the mills might be allowed to sell this cloth at prices to be determined by them.

The Board further recommended that statutory ex-mill prices, statutory retail prices, excise duty per metre and the words "controlled variety" should be stamped in red on each piece of cloth, the production and prices of which are to be controlled. In the case of non-controlled varieties also, the Board suggested, it should be made obligatory on the part of the mills to stamp in blue actual ex-mill prices, the corresponding retail prices, excise duty per metre and the words "non-controlled varieties" on each piece of cloth. This, the Board felt, would make it possible for the consumers to know the maximum prices for the non-controlled varieties and also ensure that the dealers or retailers would not mix the controlled varieties with the non-controlled ones.

For keeping a close watch over the working of the control system and for checking malpractices, it was suggested by the Board that vigilance committees of consumers, public workers and the other interests concerned should be formed in all towns and cities. According to another recommendation of the Board, the controlled varieties of cloth should be made available by suitable arrangements to all consumers' co-operatives and fair price shops in all parts of the country.

The Board recognised that it might not be possible for the Government to bring into force statutory controls immediately and some preparatory arrangements would have to be made. It fixed the time-limit for making the necessary preparations at three months. During the interim period, the

Board suggested, the present voluntary price control scheme should be continued and in view of the increase in production costs which have taken place since January 1, 1962, the existing prices of the old varieties i.e. the varieties which were in existence before January 1, 1962, and which are continued to be produced at present, should be refixed by the Textile Commissioner in consultation with the industry. No increase in prices, it felt, however, needed to be allowed in respect of the new varieties of cloth which came to be produced after July 1, 1962. No new varieties, the Board further recommended, should be allowed to be added by the mills during the next three months before statutory controls are brought into force. Enquiries here show that the prices of the old varieties of cloth might be increased by 8 to 10 per cent.

To ease the cloth supply position, the Board felt that mills should be asked to produce as much cloth as possible. The present stock position of cotton and imports already arranged, it pointed out, ensured satisfactory supply of the basic raw material to the cotton textile industry. The Board, however, suggested that Government should assist the mills to secure the balancing machinery and equipment required by them to step up production. If this machinery was not made available locally, imports should be allowed on a priority basis. The Board also recommended that efforts should be continued to step up third-shift working on looms in the composite mills. It noted with satisfaction the last four years' progress in this regard; during this period, third-shift working on the composite mills' looms has increased from 21 per cent to 30 per cent.

★ ★

Mr. G. L. Mehta, Chairman of the Indian Investment Centre, disclosed at the annual general meeting of the Centre that a team of West German industrialists would visit India some time in October-November next to study the investment conditions and opportunities in the country. The proposed visit was being sponsored by "Bundesverband in Deutschen Industrie", a leading federation of German industrialists. It was also proposed to invite a team of Japanese experts some time in August next, who would explore the possibilities of developing petro-chemical units in India and the prospects of Japanese participation both technically and financially. This visit will be sponsored by the Japan Consulting Institute,

which was established ten years ago with a view to helping Japanese industrialists to export technical know-how to developing countries. It was the intention of the Centre to bring to India at a later stage similar teams from France and other countries. Referring to the trend of enquiries received by the Centre, Mr. Mehta said that there had been a distinct fall in the number of enquiries. During the year ended March 31, 1964, the total number of enquiries of all kinds received from India and foreign entrepreneurs was 750 against 1,050 during 1962-63 and 1,272 during 1961-62. Of these 750 enquiries, about 310 were from Indian and foreign entrepreneurs for establishing joint ventures in India. During 1963-64, eight proposals resulted in technical collaboration agreements, while 22 proposals matured into joint-venture agreements involving a total capital cost of Rs. 3.05 crores. This brought the total number of joint ventures assisted by the Centre during the past three years to 66 with capital cost at Rs. 55.6 crores and foreign equity participation at Rs. 6.5 crores.

★ ★
Mr. S. K. Wankhede, Maharashtra's Finance Minister, at a Press Conference at Nagpur said that he was confident that about 50 per cent of the present foodgrain shortage in the State would be made up by the food production drive during the fourth Plan. Replying to questions, he said that the total outlay of the State's third Plan had already been increased from Rs. 390 crores to Rs. 418 crores. A further increase was likely. As many as 37 schemes were being implemented in Vidharbha division. Besides, there were 20 divisional level schemes of irrigation, of which eight were spill-over schemes from the second Plan. The total Plan provision for all these schemes, was Rs. 1,617.15 lakhs. The Rs. 2.17 crore Nalganga project, which would irrigate 24,500 acres, had already been commissioned and the first stage of the Ekburji tank project had also been completed. The Itiadh and Bagh projects in Bhandara

district, would jointly irrigate 1,04,000 acres and would cost Rs. 12 crores. Nagpur division had made satisfactory progress in regard to the generation and distribution of power. As many as 1,310 villages in the eight districts of Vidarbha had been electrified so far. In the remaining two years of the current Plan, 300 more villages would be electrified. During the last three years, 5,400 electric pumps had been installed in the division taking the total number of pumps to nearly 12,000. Mr. Wankhede further said that, by and large, the Department of Technical Education had fulfilled its targets. In every district, an industrial training institute and a technical high school centre had been established. Of the additional Rs. 28 crores provided in the third Plan, Rs. 10 crores would be spent in Vidarbha on agricultural production, irrigation, rural electrification and helping the educationally backward classes.

★ ★

Broadcasting a talk on the progress of the ports in Gujarat, Mr. Vijayakumar Trivedi, Gujarat's Minister for Public Works and Ports, stated that about 60,00,000 tons of cargo was expected to be exported from the ports of Gujarat by the end of the fourth Plan, excluding the major Kandla port. He said that Rs. 65 lakhs had been allotted by the Union Government for the development of the ports of Gujarat. The Union Government had decided to undertake the survey work of Magdalla port; the survey of the Bhavnagar creek was also in progress, while the surveys of Bedi and Okha had been completed. A scheme costing Rs. 7 crores was drawn up to make Porbandar an all-weather port and it was hoped that work would commence as soon as the sanction by the Centre was received.

Central Office: Madras 2 • Over 100 Branches in all important places in India
M. Ct. Muthiah, Chairman, K. M. Nanjappa, General Manager

I.O.B. is an international bank with offices throughout India and South-east Asia and correspondents the world over. It offers a wide range of services to suit the needs of varied customers. Indeed, I.O.B. is big enough to serve you.

We asked our customers, thousands of them at random, what they thought of our service. They replied: "We are pleased." They also made several helpful suggestions which we are implementing. Indeed, I.O.B. is small enough to know you.

Range of I.O.B. services: Savings and Current Accounts—Recurring and Fixed Deposits—Personal and Business Loans—Bills Payment Service—Gift Cheques—Travelers Cheques—Safe Deposit Lockers—Trade and Export Information and Advice—and whatever other specialised help you may need.

This question remained unanswered in mid-April this year when the "Demand Week" was observed by the Communist-sponsored unions of bank and insurance employees. It was clear that opinion on this vital question was divided at that time among the employees. A clear lead in this regard was, however, given recently by the General Body of the employees working in the Reserve Bank of India at its headquarters at Bombay. A resolution passed by an overwhelming majority at a special meeting on July 3, 1964 stated "this Association

is opposed to the nationalisation of banks, since experience shows that nationalisation of banks would not be conducive to the interests and welfare of the employees. As such, this meeting decided to dissociate itself and the Association from the campaign for nationalisation of banks and to take all such steps necessary in furtherance of this decision." It is expected that other organisations of bank employees in the country will follow the line taken by the Reserve Bank employees and will pass resolutions against the nationalisation of banks.

Accelerated Exports of Engineering Goods

From Our Correspondent

CALCUTTA:

THANKS TO the enterprise of the manufacturers, Indian engineering goods have now become a new and promising line of export. Not only have the foreign exchange earnings from this source increased steadily over the past few years, but the range of goods exported keeps widening. For example, exports during 1963 fetched Rs. 13.45 crores as against Rs. 9.37 crores in 1962, itself a big improvement over the 1961 performance. The 1963 earnings represent as big a rise as 43 per cent over those of 1962, and trends of exports during the first five months of the current year show an increase of over 36 per cent during the same period of last year. Foreign demand for such Indian products as bicycles, railway track materials, cast iron soil pipes, transmission line towers, wood screws, brass builders hardware, diesel engines, dry batteries, non-ferrous alloys and semis and electric wires and cables have been noticeably increasing. During the past six months, the manufacturers have done substantial business in these items with customers overseas. It is of great significance that a good part of this business has been done with highly developed countries including the United States. India was already selling foundry products like castings to that country, but now, for the first time, a sizable quantity of pipes, tubes and fittings has been sold. Also for the first time, New Zealand has bought railway track materials worth about Rs. 12 lakhs. India sold roughly 150 million razor blades to the USSR last year, and orders for a similar quantity for the current year have already been accepted. In fact, if India could find the raw materials to make them, she could secure orders for another 2 million blades. East Germany is in the Indian market for storage batteries and orders so far booked amount to Rs. 25 lakhs.

Firm Contacts

As for the developing countries in Asia and Africa, natural markets for Indian engineering goods, the industry has not only established wide contacts, but has taken steps to make the contacts firm and permanent in some of them. In Ceylon, a bicycle factory is being set up in collaboration with an Indian manufacturer and a factory for making Hume pipes is being established in Libya on a similar basis. Much of the credit for such success as has already been achieved should go to the Engineering Export Promotion Council. Mr. S. L. Kirloskar, Chairman, however feels that the progress of the steps which are being taken to organise exports more vigorously are not as satisfactory as the Council would like it to be. In his view, India should be able to export more of her engineering products, especially those of simple manufacture and semi-processed goods, to the highly developed countries, for the obvious reason that India enjoys appreciable cost advantages in these items. On its part, the Engineering Export Promotion Council is setting up offices in London, Düsseldorf and Chicago, where its officers will do active promotion work on the spot. East European countries offer scope for increasing India's engineering goods exports and the Council recently sent a trade delegation to those countries to explore trade opportunities. The delegation has not submitted its

final report yet, but its preliminary findings point to the opportunities which can be exploited profitably. Mr. Kirloskar has advised the industry to understand the trading methods of East European countries which are naturally different from those of free-market economies, and should adjust their ways accordingly if trade is to expand.

While the Council is anxious to maximise exports, the Government of India obviously is not. In the first place, the latter is doing precious little to tackle the basic causes of inflation which has now reached a very serious stage. Secondly, it follows no stable export policy. In fact, it is this lack of stability in the Government's export policy which is hindering the country's export promotion efforts. In the case of engineering industry in particular, the Government has recently taken four steps, which have greatly discouraged exporters; it has increased the price of steel even for export products; it has increased the floor prices of steel; it has reduced the import entitlement for exporters of a number of non-ferrous items, and a grouping system has been introduced for the purpose of utilising import entitlement. In the absence of a stable policy and because of frequent changes, exporters are unable to enter into long-term contacts with their overseas customers, and without being able to enter into long-term commitments it is difficult to do business, let alone increase it. The Government has, however, subsequently assured the exporters that they would be enabled to honour their existing commitments at old rates but the announcement has come rather late; in the meanwhile, many exporters had to suspend their work. Mr. Kirloskar suggests that in order to enable the engineering exporters to plan their business on a long-term basis, it is necessary that there should be no change in the policy until at least the end of the fourth five-year Plan. Mr. Manubhai Shah who has brought a greater sense of purpose and direction to India's export drive will have to do something to help the engineering industry. Steady and expanding export business is an essential condition for the growth of this industry, which now stands at the centre of this country's industrialisation effort.

★★

The current congestions in Calcutta and Bombay Ports could well hamper the country's overall export promotion effort as it is officially claimed 'they are doing. In Calcutta port particularly, serious congestion for the past few weeks has thrown the loading and unloading operations completely out of gear, and at one stage, as many as 20 ships were waiting at Sandheads for lack of berthing facilities. The Central Government is naturally concerned about this, and the Deputy Minister for Transport, Mr. M. Mohiuddin, who has just returned to New Delhi after making an on-the-spot study of the congestion problem is of the view that low output by stevedore labour is mainly responsible for the present conditions at the port. Mr. Mohiuddin seems to be right, considering that the port authorities have been investing substantial sums of money in modernising and expanding the facilities. The Port Trust has already borrowed Rs. 4.28 crores from the World Bank, and during the current financial year, it proposes

to borrow Rs. 3.25 crores from the Government and Rs. 6.43 crores from the World Bank — all for capital expenditure. A market loan of Rs. 1 crore will also be raised. Among the development schemes which are being implemented, there is one to mechanise the unloading of food ships, which is scheduled to be completed by the end of this year. In Madras port, similar facilities already established have helped improve the efficiency of food unloading operations remarkably. Facilities for dry-docking and repairs are being extended to cope with the increasing number of ships now calling at the port, which during the current financial year is expected to handle a little more than 11 million tons of cargo as against 10.5 million tons handled during 1963-64. Moreover, 45 electric cranes have already been installed.

Defective Wage Rates

Mr. Mohiuddin however did not have the time to talk to the representatives of labour. His senior colleague, Mr. Raj Bahadur, who was to come to Calcutta last week, has postponed his visit by a few days, but the labour unions at the docks had prepared a memorandum for the Union Transport Minister, which they will submit when Mr. Raj Bahadur actually comes here. They appear to attribute the difficulties mainly to the system of wage rates prevailing in Calcutta for dock labour, prescribing two rates of payment for those working on board the ships and those on the shore. In Madras and Bombay, there is only one piece-rate system operating uniformly for the two categories of labour and that has paid good dividends. In Calcutta, the need for a similar system is obvious. In fact, a committee appointed to go into this question as early as 1956 had recommended a uniform piece-rate system for different types of workers. Bombay and Madras ports implemented the recommendation, while Calcutta has shelved it. However, under the pressure of circumstances, Calcutta port authorities have just commissioned a few of their senior officials to prepare a piece-rate payment scheme. A good deal will depend on this.

Like labour, the other interests affected, that is, the shipping lines too, have a memorandum for the Union Transport Minister. They are reported to be ready with a full account of their loss since the current congestion started. A day's delay means a loss of Rs. 10,000 for a shipping company, it is

said. They also make some suggestions as to how the cargo handling facilities might be improved with existing facilities. This could be done by changing the emphasis on priorities. If 35 berths could be available for big draft vessels, capable of handling 1,000 tons a day each, the total for a month would be over 1 million tons. In Bombay and Madras, the rate of handling per big berth is already much higher than what the shipping companies recommend for Calcutta. But here again, much will depend on labour efficiency. If workers continue to go slow as some sections are doing now, in Calcutta, mere ready availability of berths would not spectacularly improve matters.

★★

The electric transmission line, inaugurated last week by Mr. P. C. Sen, West Bengal's Chief Minister, to bring power from a new 75 MW unit in Durgapur to Calcutta via Bandel, will ease the power problem of the city and the industrial belt considerably, but it is not obviously certain that West Bengal's power shortage will be over by the end of the current year, as Dr. K. L. Rao, the Union Minister for Power, once hoped. The State Government has of course put up its outlay on power projects by Rs. 80 crores, but much will depend on the Finance Ministry's sanction of foreign expenditure for a 150 MW power plant which West Bengal also proposes to build in Durgapur during the third Plan. Overall power requirements of West Bengal, as calculated by the Sachdev Committee, by the end of the third Plan are 1,184 MW. On a subsequent reassessment, this has been raised to 1,219 MW a year. As against this estimated demand, supply from existing source plus the new projects (including the 150 MW plant, the fate of which is even now uncertain) would be 51 MW short the end of 1965-66. Since the 150 MW plant has little chance of materialising by the end of the third Plan, the gap should be actually wider. New Delhi, however, still maintains that West Bengal has no reason to worry since the super thermal power station at Chandrapura being put up by the DVC will have been commissioned by the end of the current Plan, and would wipe out the entire power deficit in the State; in fact, these sources claim that there may be a little surplus in the first year of the next Plan. No comment from the State Government sources is immediately available, but they maintain that 150 MW plant in Durgapur is still necessary.

Blueprints of expansion of a nation's industrial activity require adequate financial resources for implementation.

Allahabad Bank plays its part in providing funds for projects. The investor's money thus plays a vital role in the country's rapid development, the Bank guaranteeing its security and interest to the investor.

Trade Winds

INTERNATIONAL CAPITAL MOVEMENTS

THE FLOW of international capital to the world's developing countries increased in the three-year period 1960-62, but at a slackening pace and without a uniform pattern for the various geographic regions. This is revealed in the recent United Nations study report "International Flow of Long-term Capital and Official Donations, 1960-62", which examines the amounts and types of funds provided by the developed countries, the official and private capital and grants received by developing countries, and the international economic assistance provided by countries with centrally planned economies. During 1960-62 the annual flow of funds from the developed countries to the rest of the world averaged about \$6,300 million i.e. about 14 per cent above the annual average of \$5,500 million for 1955-59 period. By far the largest proportion of the flow went to international institutions, which in turn contributed to the developing countries. This flow has tended to concentrate on a relatively small number of countries. Fifteen out of the 52 developing countries and areas received about two-thirds of the long-term capital and official donations in 1961-62. The share of official loans and grants increased while the proportion of private capital decreased during this period. While in 1960 the private capital amounted to 22 per cent of the total flow its ratio fell to 16 per cent in 1962. In transactions among the developed countries, on the other hand, private capital was dominant. The United States accounted for three-fifths of the total net flow. It was followed by France with 18 per cent of the total and the United Kingdom with 10 per cent. Contributions from developed countries to international institutions rose by about 21 per cent between 1960 and 1961, and by about 42 per cent the following year. The aid provided by these institutions, in turn, has often been on terms 'relatively favourable' to the developing countries.

Regionwise, the developing countries of the Far East received the largest share, followed by Africa, Latin America and West Asia. More than one-third of the total net flow of capital and official donations went to five recipients: India, Argentina, Puerto Rico, Brazil and Indonesia. Private capital went largely to Latin America, whereas more than 70 per cent of the total official funds received by developing countries in 1960-62 went to the Far East and Africa. There was a definite shift, during this period, towards loans rather than grants, accompanied by an easing of loan terms. Rising prices of manufactured goods imported by the developing countries, however, reduced the real aid provided by international funds. The 10 per cent rise in capital and official donations in 1961, and the 4 per cent rise in 1962, amounted, in actual effect, to 9 per cent and 3 per cent increase respectively in capacity to finance imports. In some countries, and in some years, interest and dividends paid out by developing countries offset the funds they received.

As regards the aid provided by the centrally planned economies, the Soviet Union continued to provide, during 1960-62, the major part of the credits granted by the centrally planned economies. Its share in the over-all total declined, however, largely because of the substantial credits granted to the developing countries by Czechoslovakia, Hungary and Poland. Regionwise, Africa received the largest share of the credits in 1961. The Far East's share was largest in 1960 and 1962. The total commitments of these countries to the developing countries rose from \$393 million in 1960 to \$1,163 million in 1961.

BOARD OF TRADE RECONSTITUTED

The Board of Trade, which was set up in May, 1962, has been reconstituted for another term of two years. It will now have 22 members as against 15 in the last Board, the number of non-official members having been doubled. In

view of the growing importance of foreign relations on the country's trade prospects, the Secretary-General of the Ministry of External Affairs has now been made a full-fledged member of the Board. Other official members are the secretaries of the Ministries of Commerce, Finance, and Food and Agriculture and of the Planning Commission. The presidents of the Federation of Indian Chambers of Commerce and Industry and the Associated Chamber of Commerce are ex-officio members. The members of the reconstituted Board are: Mr. Manubhai Shah, Minister of Commerce (Chairman), Mr. S. V. Ramaswamy, Deputy Minister of Commerce (Vice-Chairman), Mr. D. S. Joshi, Mr. K. P. Goenka, Mr. Ogilvie, Mr. Bharat Ram, Mr. Sachin Chaudhury, Mr. E. P. W. da Costa, Mr. Khandubhai Desai, Dr. B. N. Ganguli, Mr. H. V. R. Iengar, Mr. S. L. Kirloskar, Dr. P. S. Lokanathan, Mr. Prabhuv V. Mehta, Mr. A. Ramaswamy Mudaliar, Mr. Padampat Singhania, Mr. P. L. Tandon, the Secretary-General, Ministry of External Affairs, Secretary, Ministry of Finance (Department of Economic Affairs), Secretary, Planning Commission, Secretary, Ministry of Food and Agriculture (Department of Agriculture), and a Joint Secretary, Ministry of Commerce (Member-Secretary).

COTTON PRODUCTION

According to the Directorate of Economics & Statistics, Ministry of Food & Agriculture, the "All-India Final Estimate of Cotton, 1963-64" puts the area and production of cotton at 19,569,000 acres and 5,493,000 bales (of 392 lbs. each) respectively. This production is the highest on record. As compared with the 'Partially Revised Estimates' of 19,385,000 acres and 5,374,000 bales for 1962-63, the Estimates for 1963-64 show an increase of 184,000 acres or 0.9 per cent in area and 119,000 bales or 2.2 per cent in production. The increase in area is shared mainly by Punjab, Madhya Pradesh and Rajasthan and is attributed to favourable climatic conditions at the sowing time. In Punjab it is also attributed to attractive prices of cotton. The increase has, however, been offset to some extent by the decline in area reported mainly by Maharashtra and Gujarat. The decline in area in these States was due to inadequate and untimely rains during June and July, 1963. The increase in production is accounted for mainly by Punjab, Maharashtra and Madhya Pradesh and is attributed to more favourable weather conditions during the growing period. In Punjab and Madhya Pradesh, it was also due partly to the increase in area. This increase has, however, been offset to some extent by the decrease in production reported mainly by Gujarat where it was due to a severe cold wave in January, 1964. Production estimates in respect of Andhra Pradesh, Gujarat, Maharashtra, Madhya Pradesh, Rajasthan and Uttar Pradesh are based on the results of random sample crop-cutting surveys. These States together accounted for 72.4 per cent and 73.5 per cent of the total area and 63.5 per cent and 66.5 per cent of total production of the crop during 1963-64 and 1962-63 respectively.

JUTE DEVELOPMENT COMMITTEE

In place of the 'Central Supervisory Body for Jute' the Government of India has set up a 25-member central committee for jute development. This committee will scrutinize the development programmes formulated by State Governments in respect of jute and allied fibres, review progress of jute development in the context of targets laid down and recommend measures for accelerating the tempo of development. It will also suggest special schemes for improving the quality of jute and allied fibres. Appraisal of prices for jute and allied fibres in the producing States, recommendation of measures to stabilize prices and facilitating movement of the produce to the marketing centres are among the other functions of the Committee. The Special

Secretary in the Ministry of Food & Agricultural Research will be the Chairman of the Committee. Among its members will be the Agriculture Secretaries of the producing States of West Bengal, Bihar, Assam, Orissa, Uttar Pradesh and Andhra Pradesh and of the Tripura Administration, two representatives of jute growers and a representative of the Indian Jute Mills Association. The Planning Commission, the State Trading Corporation and the National Agricultural Co-operative Marketing Federation will also be represented on the Committee. The Chief Jute Development Officer, Indian Central Jute Committee, Calcutta, will be the Member-Secretary.

INDO-SOVIET TRADE

The flow of trade between India and the Soviet Union nearly doubled in the first four months of 1964 as compared to the first four months of 1963. Exports from India were worth Rs. 23 crores in the first four months of 1964 as compared to Rs. 11.1 crores in the corresponding period of the previous year. Imports from the Soviet Union in the first four months of 1964 also totalled about Rs. 23 crores. According to the new Five-Year Trade Agreement between India and the U.S.S.R., which came into force in January, 1964, exports from India to the Soviet Union in 1964 are estimated at Rs. 85 crores as against Rs. 50 crores in 1963.

PRECISION INSTRUMENTS

A contract for the supply of equipment and materials and for rendering technical assistance for the establishment of a precision instruments plant at Kota in Rajasthan was signed, on July 7, 1964, between the Instrumentation Limited (A Government of India Undertaking) and V/O Prommash-export, the Soviet supply organization. The contract provides for the supply of 616 tons of machinery, equipment and instruments costing Rs. 133.7 lakhs for the establishment of the plant. It also provides for technical assistance by Soviet specialists in setting up the plant as well as for the training of about 120 Indian engineers and technicians in the U.S.S.R. The Soviet assistance for the project will be financed from the Indo-Soviet Credit of September, 1959. When this public sector plant goes into full production, electromagnetic and electronic instruments and accessories

comprising 138,000 instruments and 400,000 transmitting elements will be produced annually. A second plant for the manufacture of mechanical, hydraulic and pneumatic instruments is also proposed to be established in Kerala with Soviet financial and technical assistance.

EMERGENCY INSURANCE SCHEME

The Emergency Risks (Goods) Insurance Scheme and the Emergency Risks (Factories) Insurance Scheme have been modified so as to provide for an automatic extension by a further period of three months, with effect from July 1, 1964, of all the policies already issued under the two schemes. No premia are to be charged on these policies for the three months — July, August and September, 1964 — and no fresh applications need to be made for their renewal. In respect of property which becomes insurable for the first time on or after July 1, 1964, applications are to be made to the Oriental Fire and General Insurance Company in the prescribed manner, but without treasury chalang, for the issue of policies as provided under the schemes.

REFUND TO I.M.F.

The Government of India has arranged to refund to the International Monetary Fund a sum of \$25 million (Rs. 119 crores) as the second instalment of repayment of the credit of \$250 million (Rs. 119.04 crores) drawn from the Fund on August 1, 1961. The first instalment, also of \$25 million, was repaid to the Fund on February 20, 1964. The balance credit of \$200 million has to be repaid to the Fund in suitable instalments before the end of July, 1966. The IMF made available this \$250 million credit to India in six currencies — \$110 million (Rs. 52.38 crores) in US dollars, \$60 million (Rs. 28.57 crores) in Pound-Sterling, \$45 million (Rs. 21.43 crores) in Deutsche Marks, \$15 million (Rs. 7.14 crores) in French Francs, \$15 million (Rs. 7.15 crores) in Italian Liras and \$5 million (Rs. 2.38 crores) in Japanese Yen.

SURVEY OF INDIAN PORTS

The Naval Hydrographic Office, Dehra Dun, has completed a survey of almost all the major and minor ports of India and prepared navigational charts on the basis of data

collected by its field survey ships, covering an area of about 1,48,000 square miles along the coastline of about 4,000 miles. The Naval Hydrographic Office is the only authority in India which can prepare navigational charts. It also represents the Government of India in the International Hydrographic Bureau which has a membership of over 50 countries.

MECHANISED BRICKS

An agreement has been signed between the Governments of India and Rumania for setting up a mechanised brick-making plant in Delhi. The plant will produce about 112,000 solid, hollow and perforated bricks per day. It will also

manufacture special types of decorative bricks and roofing tiles. The total cost of the project is expected to be Rs. 24.5 lakhs. The estimated cost of the machinery is Rs. 8 lakhs. Machinery worth Rs. 5.5 lakhs will be imported from Rumania. About 55 acres of land have already been acquired by the National Buildings Construction Corporation at Sultanpur, a village near Delhi, where the plant is to be installed. The cost of bricks produced by the factory is expected to be about Rs. 25 per thousand. The perforated and hollow bricks to be produced by the plant will be lighter but as strong as the traditional bricks and will help in bringing about economy in the cost of construction.

RESERVE BANK OF INDIA

APPLICATIONS ARE invited for the posts of Junior Officers Grade II (on probation) in the Bank in the scale of Rs. 375-20-535-25-560-EB-25-660-30-720.

Note: Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scale.

In addition to pay, the selected candidates will be eligible to draw local pay at 10 per cent of the pay rounded off to the next higher complete rupee when stationed at Bombay, Calcutta, Madras, New Delhi, Kanpur, Ahmedabad, Bangalore and Hyderabad and dearness allowance at prescribed rates. The present rate is 20 per cent of pay with a maximum of Rs. 100 per mensem. In addition they will be eligible for house rent allowance at 15 per cent of pay with a minimum of Rs. 60 per mensem.

QUALIFICATIONS:

Applicants should have a good academic record and possess a first or high second class Bachelor's or Master's degree in Science, Arts or Commerce of a recognised Indian or Foreign University. Practical banking experience in a commercial bank will be considered as an additional qualification. Preference will be given to those who have passed the Institute of Bankers' Examination.

THE SELECTION BOARD WILL INSIST ON A VERY HIGH STANDARD OF SUITABILITY IN MAKING SELECTIONS FOR THE ABOVE POSTS AND ONLY THOSE CANDIDATES WHO POSSESS HIGH ACADEMIC QUALIFICATIONS AND/OR ADEQUATE EXPERIENCE OF THE TYPE SPECIFIED ARE ADVISED TO APPLY.

AGE LIMIT AS ON 1ST AUGUST, 1964:

Between 21 and 25 years. The maximum age limit is relaxable but not beyond 30 years in the case of:-

(i) candidates possessing special qualifications and experience of value to the Bank;

(ii) ex-employees of banking institutions whose services had to be terminated for reasons of economy or as a result of the banks going into liquidation;

(iii) personnel retrenched from Government offices after at least one year's service applying through Employment Exchanges; and

(iv) candidates belonging to the Scheduled Castes or Scheduled Tribes.

2. Applicants for the above post must remit with their application a fee of Rs. 7.50 by cheque or bank draft on a Scheduled Bank payable at Bombay or by Postal Order. The application fee is in no case refundable. In the case of candidates belonging to Scheduled Castes/Tribes, the fee will be reduced to one-fourth.

3. Applications in the candidate's own handwriting in the prescribed forms obtainable from the Reserve Bank's offices at Bombay, Calcutta, Kanpur, New Delhi, Nagpur, Madras, Bangalore, Hyderabad, Trivandrum, Lucknow, Patna and Jaipur accompanied by copies (originals should not be sent) of certificates regarding age and educational qualifications, statements of marks secured in the Graduate and Post-Graduate degree examinations and copies of two testimonials should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1 so as to reach him on or before the 1st August, 1964.

4. Candidates already in service will be required to produce a proper discharge certificate from their employers in the event of their being selected at the time of their appointment in the Bank's service.

5. Candidates belonging to Scheduled Castes/Scheduled Tribes should mention this fact prominently in their applications and also enclose a copy of a certificate to that effect from a competent authority.

6. Candidates must be prepared to serve in any office of the Bank in India or group of departments to which they are posted, and to undertake tours when required.

7. Selected candidates will have to appear for interview/s before the Selection Board at any of the Bank's Offices. 8. Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

9. If any candidate desires to have his application acknowledged, he should send it by "Registered Post — Acknowledgement Due". Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

10. Canvassing in any form will be regarded as disqualification.

EXPANSION OF AUTOMOBILE UNITS

THREE UNITS engaged in the production of automobiles — Hindustan Motors, TELCO and Ashok Leyland — have made financial arrangements for their respective expansion programmes. The US Government authorised three credits totalling \$37.8 million (Rs. 18 crores) to Hindustan Motors and TELCO to expand and modernize their production facilities and to increase their heavy engineering capacity. These credits are to be used for the purchase of machinery to increase annual production in India by 10,500 trucks, 15,000 heavy duty automobile engines and 24 power shovels. The loans, extended by the US Agency for International Development are: two credits of \$23 million and \$3 million to Hindustan Motors Ltd. and a credit of \$11.8 million to Tata Engineering and Locomotive Co. Ltd.

The loan of \$23 million to Hindustan Motors will enable it to expand its production of Bedford trucks from 10,500 to 15,000 every year, and to produce its own engine for this truck, as well as to modernize its over-all plant facilities. An earlier U.S.A.I.D. loan of \$15.8 million is financing an expansion programme, expected to be completed by the end of this year, to increase the production of truck chassis from 6,000 to 10,500 per annum. Hindustan Motors is manufacturing Bedford trucks with the collaboration of Vauxhall Motors Ltd. of the United Kingdom, which is owned by General Motors Inc., of the United States. The trucks manufactured by Hindustan Motors are currently powered by an engine produced by another firm. The new loan will enable Hindustan Motors to manufacture Bedford engine which is of greater horse power, at its factory located at Uttarpara, eight miles north-west of Calcutta. The engine will have an indigenous content of 85 per cent at the time of commencement of production. It is expected that the entire expansion programme of the company will be completed by the end of 1966.

The loan of \$3 million to Hindustan Motors will be utilized by its heavy engineering division to expand its output of Hind-Marion power shovels from 12 to 36 per annum and to increase the indigenous content of this versatile machine from 28 to 70 per cent. The ultimate goal of the company is to produce 48 shovels per year of 95 per cent indigenous content.

A power shovel is a portable digging machine which is of great use in the mining industry and in many construction projects. The Hind-Marion 2½ cubic yard diesel powered shovel has several attachments which render it convertible to back-hoe, dragline, clamshell and lift crane operations. The shovel, the basic machine, digs in earth or rock located above the base of the machine. It is useful in the mining of coal, iron ore and limestone and in moving earth during the construction of dams. The back-hoe enables the shovel to dig pipeline trenches in rugged terrain. The dragline is suited for operations, such as the construction of large-sized irrigation canals, which involve scooping up a large quantity of loose material and casting it aside. The clamshell is used primarily for operations in narrow working spaces. The lift crane is used for erecting steel in building construction, for driving piles, and for magnet lift and other lifting operations. The Marion Power Shovel Company, Marion, Ohio, USA, a division of the Universal Marion Corporation, is assisting Hindustan Motors in this venture. Under the loan agreements the machinery will be purchased in the United States.

The loan to TELCO will enable it to expand its production of Mercedes Benz truck chassis from 18,000 to 24,000 per annum. The firm expects to complete by December 1964 its current expansion programme, financed by an earlier U.S.A.I.D. loan of \$13.7 million, to increase its production capacity from 12,000 to 18,000 vehicles. The equipment to be financed under the latest loan including some foundry and forge machinery to

fill out the expansion programme begun under the first U.S.A.I.D. loan, but mostly it consists of production machine tools and attachments, such as dies and fixtures. By the completion of the entire expansion programme in 1968 TELCO expects to have increased the indigenous content of its truck to more than 90 per cent.

The Indian firms will repay to the Government of India the rupee equivalent of the U.S.A.I.D. dollar credits over a period of ten years, with an initial grace period of two years. They will pay the Indian Government interest at the rate of 5½ per cent. In order to reduce the burden on India's balance of payments, the Government of India will be able to make repayments on the credits over a period of 40 years, including an initial grace period of 10 years. During the grace period the Government of India will pay interest at the rate of ½ per cent annually and during the remaining 30 years at the rate of two per cent.

Ashok Leyland Ltd., has finalised its £4 million expansion plan aimed at increasing the installed capacity of the company, along with the manufacture of new and more powerful vehicles, in association with Leyland Motor Corporation Ltd., of England. Under the new manufacture programme Leyland Motor Corporation will invest £2.5 million in Ashok Leyland in the form of special plant and machinery. Ashok Leyland on its part, will invest over £1.5 million to meet the requisite financial outlay for its £4 million expansion. The Indian capital will finance new factory buildings and increase the Indian-made and multi-purpose machinery in the factory. The work on the project is likely to start immediately. Under this new manufacturing programme, two-axled and three-axled vehicles will be manufactured with gross ratings of up to 107,520 lb. (compared with the present Comet tractor-trailer maximum of 40,320 lb.) with 185 H.P. Leyland plus 0.680 diesel engines. Nearly £750,000 worth of vehicle components have already been ordered for the construction of the first of the new vehicles. It is also undertaken to produce a military version.

TISCO DIVIDEND

The Tata Iron and Steel Co. Ltd., for the year ended March 31, 1964 has declared an equity dividend of Rs. 12 per share as against Rs. 11 per share distributed last year. This increase is quite in line with the company's turnover which has crossed the Rs. 100-crore mark this year. The total turnover has risen from Rs. 99.53 crores to Rs. 110.44 crores. The gross profit, according to the preliminary statement of financial results, has gone up from Rs. 22.21 crores to Rs. 24.44 crores. From the gross profit the directors have provided Rs. 797.04 lakhs for depreciation and Rs. 475 lakhs for taxation. The directors have transferred Rs. 100 lakhs to development rebate reserve, Rs. 270 lakhs to deferred taxation reserve, Rs. 275 lakhs to general reserve and Rs. 525 lakhs to dividend reserve. The balance carried forward is Rs. 244 lakhs.

PRIVATE SECTOR OIL COMPANIES

The three principal private sector oil refineries operating in India — those of Burmah Shell, Esso and Caltex — reported record output in 1963. Burmah Shell increased the throughput of its refinery to approximately 3.76 million tonnes, Esso to nearly 2.4 million tonnes and Caltex to about 1.04 million tonnes (7.77 million barrels), from 3.68 million tonnes, 2.2 million tonnes and 0.94 million tonnes (7.08 million barrels), respectively, in 1962.

But despite increased throughputs — in Burmah-Shell's case to slightly over the sanctioned capacity of 3.75 million tonnes and in the case of Esso and Caltex to near-sanctioned capacities of 2.5 million tonnes and 1.05 million tonnes — the directors have proposed to maintain the interim dividend

gross profits (after providing for depreciation) showed decline during 1963 compared to the previous year. The net profit after taxation was also lower except in the case of Caltex. Burmah-Shell earned a gross profit of Rs. 6.35 crores in 1963 — Rs. 42.9 lakhs lower than in 1962. After providing for income-tax, surtax and tax on dividends, the net profit of this company came to Rs. 2.49 crores. Esso's profit before tax in 1963 totalled Rs. 3.72 crores, as against Rs. 3.76 crores in the previous year. The net profit after making provision for taxes at 1963-64 rates amounted to Rs. 1.11 crores; it may be slashed by approximately Rs. 3.19 lakhs when the final accounts of taxation liability are prepared in the light of the 1964 taxation changes. In 1962, Esso's net profit amounted to Rs. 1.89 crores. Caltex earned a gross profit of Rs. 52.02 lakhs in 1963, as against Rs. 54.87 lakhs in 1962. Its net profit at Rs. 17.12 lakhs, however, was higher than a bare Rs. 68,519 in 1962. Esso and Caltex have provided out of their net profits, a sum of Rs. 2.05 lakhs and Rs. 64,885, respectively, for development rebate reserve. The fall in profits is attributed to increased costs of processing material and in the case of Burmah-Shell also to higher local taxes and in the case of Caltex to discontinuance from April 1, 1963, of duty protection on diesel and fuel oils.

The 1963 profits of the three companies should dispel the popular belief that the private oil companies in India are making fabulous profits. It is only in the case of Burmah-Shell that the percentage of net profit to net worth (paid-up capital plus reserves and surpluses and balance profits brought forward) works out to 10.6. In Esso's case this percentage works out to approximately 7.91 and in the case of Caltex to 1.62 only. The percentage in even Burmah-Shell's case cannot be said to be unduly high in comparison with most of equally-efficient-run units in the other key sectors of the Indian economy. The net worth of the three companies at the end of 1962 worked out to: Burmah-Shell Rs. 23.5 crores; Esso Rs. 15.23 crores; and Caltex Rs. 11.01 crores. At the end of 1963, the net worth of the Burmah-Shell and Esso improved to Rs. 23.63 crores and Rs. 16.10 crores, respectively. The net worth of Caltex, however, was slightly lower at Rs. 10.71 crores.

A feature of the working of the three oil companies has been that, following sound financial practices, they have not been frittering away their profits in paying dividends. All the three companies have built up sizable reserves which should stand them in good stead when expansion is allowed (though the expansion of the private sector in oil has been stalled notwithstanding the delays incurred in the commissioning of the public sector refineries and rapid y increasing demand for petroleum products, the Perspective Planning Division in its exercise on the fourth and fifth Plans takes into account a possible expansion of Burmah-Shell and Esso refineries by one to two million tonnes and that of Caltex by 0.45 million tonnes). Esso has been investing its profits from refining in marketing in India. Since its inception, it has paid dividend only in two years — Rs. 27 lakhs in 1960 and Rs. 10.24 lakhs in 1962. No dividend has been proposed as yet for 1963. The total dividend of Esso at the end of 1963 amounted to Rs. 13.09 crores, serves of Esso at the end of 1963 amounted to Rs. 13.09 crores, as against a paid-up capital of Rs. 3 crores and borrowings of Rs. 8.02 crores. Burmah-Shell's reserves on December 31, 1963, totalled Rs. 9.09 crores, against the paid-up capital of Rs. 14.54 crores and borrowings of Rs. 8.45 crores. For 1963, Burmah-Shell has paid a taxable dividend of 27.5 per cent, as against 25 per cent in 1962. Caltex had built up by 1963-64 reserves to the extent of Rs. 6.21 crores, against the paid-up capital of Rs. 4.5 crores and borrowings of Rs. 6 crores. It declared a tax-free dividend at the rate 9.42 per cent in 1963, against 10.58 per cent in the previous year.

Income from refining per tonne/barrel crude showed decline in 1963 in the case of Esso and Caltex when it went down to Rs. 32.42 per tonne and Rs. 3.38 per barrel, respectively, from Rs. 35.86 per tonne and Rs. 3.71 per barrel in 1962. Burmah-

Shell's income from refining showed a slight improvement; it increased from Rs. 37.13 per tonne in 1962 to Rs. 37.36 per tonne in 1963. But not much can be read in this inter-company comparison in the absence of details about the product-pattern of the three refineries and also about stocks of petroleum products held at the end of the year. One inference, however, is relevant and that is that the refining margin of all these three companies is much lower than \$1.35 per barrel (approximately Rs. 45 per tonne) allowed by the Government of India in the case of the Cochin refinery.

The fixed assets of Burmah-Shell at depreciated value amounted to Rs. 13.91 crores at the end of 1963. The depreciated value of Esso's assets on December 31, 1963, was Rs. 9.04 crores and that of Caltex Rs. 9.09 crores. The three companies had by that date provided for depreciation to the tune of Rs. 14.72 crores, Rs. 8.08 crores and Rs. 5.70 crores, respectively. The private sector refineries have contributed well to the growth of ancillary industries in India. They are increasingly buying their stores locally.

Caltex commenced production of liquid petroleum gas in 1963. Esso and Burmah-Shell have plans to manufacture lubricants in India. Esso also intends to produce Solvent 2,445 which is extensively used in the textile industry. It has as well planned to alter its jute batching oil refining facilities in order to help the jute industry to maintain export market.

BOMBAY NYLON PLANT

The Arthur Import and Export Co. of Bombay has concluded a collaboration agreement with M/s. Invest Export, Berlin, of the German Democratic Republic, for the installation of a three-ton nylon manufacturing plant in the State of Maharashtra. The German firm will supply the plant equipment worth nearly Rs. two crores. The shipment of machinery will commence by the end of the 1965 or early 1966 and will be completed in about six months. The project is expected to go into commercial production by the end of 1966. The total capital outlay on the project is expected to be around Rs. 4 crores. The German Democratic Republic has agreed to supply plant and equipment on a deferred payment basis and the remaining capital will be provided by the promoters and their friends, various industrial credit institutions in the country and by equity capital subscribed by the public. A new company named Bombay Nylon Spinners Ltd., will be floated to undertake the project.

NEPA EXPANSION

The National Newsprint and Paper Mills, Neapanagar, has embarked on an expansion programme at a cost of Rs. 8 crores, which will be financed by the Madhya Pradesh State Government. After this expansion the company will have a capacity to produce 75,000 tons of newsprint every year against the present annual capacity of 30,000 tons. Under the expansion programme a 10 mw steam power station with an extraction unit will be installed. Apart from the expansion of the paper mill, five 800-HP pulp grinders, pulp digestors and a caustic soda and chlorine plant will be set up. For meeting the power demand of 8 mw for the expansion, it is proposed to use high pressure steam for pulp digestion and low pressure steam for drying of paper. Mechanical equipment is being obtained from a Finnish firm and electrical equipment from a West German firm. The erection work will be handled by a German firm on rupee payment. In order to improve the quality of paper a new method of drying wood pulp is being tried. The management hopes that by utilising caustic soda produced in their own plant and adoption of new methods for drying hard wood, the quality of paper would be improved both in colour and tensile strength.

DENA BANK

Devkaran Nanjee Banking Co. Ltd., has shown satisfactory progress during the half year ended June 30, 1964. The net profit, subject to audit, has amounted to Rs. 16.58 lakhs com-

of equity shares at the rate of Rs. 2 per share of Rs. 25 each, which comes to 8 per cent, which will absorb Rs. 4 lakhs. The amount carried forward to the next half year is Rs. 14.63 lakhs against Rs. 1.79 lakhs brought in.

BANK OF BARODA

The directors of the Bank of Baroda have declared an interim dividend of Rs. 4 per equity share of Rs. 25 each for the half year ended June 30, 1964. The profit, subject to audit, has amounted to Rs. 35.55 lakhs in the first half-year compared to Rs. 26.10 lakhs in the corresponding period of 1963. The interim dividend will absorb Rs. 18 lakhs, the same as in 1963. A sum of Rs. 22.52 lakhs has been carried forward against Rs. 2.97 lakhs brought in from the previous account.

ANIL HARD BOARDS

Anil Hard Boards Ltd., has been granted a licence for the manufacture of granulated rock wool with a capacity of 12,000 tonnes per annum to be used as raw material, instead of bagasse, for the manufacture of fibres board, acoustic tiles and ceiling boards. It has entered into an agreement with M/s. Conversion Development Corporation, US, a sister concern of M/s. Wood Conversion Company of USA for the patents of rights and the manufacture of fire-proof fibre boards, acoustic tiles and ceiling boards. It has also entered into an agreement with another US firm for the manufacture of granulated rock wool. Both the agreements have been approved by the Government of India. This will be the only factory of its kind in this part of the world and will have export market in South-East Asia and many other countries. It has already received firm orders from certain Middle East countries.

BURN AND COMPANY

The working results of Burn & Co Ltd. for the year ended April 30, 1964 show a profit of Rs. 32.56 lakhs, after making provision for taxation, development rebate reserve etc., as against Rs. 31.55 lakhs last year. The directors have proposed the payment of a dividend at a rate of 15 per cent, subject to deduction of tax. The annual report reveals that the company is seeking to raise the output of its new factory set up in collaboration with M/s. A. Reyrolle and Co. Ltd., of UK. This new company called Reyrolle and Burn Ltd. was formed with equal share holdings of the two collaborators and its factory was constructed within 18 months. The initial operations were trained in the Howrah Iron Works during the construction period which made it possible to start production almost immediately. The Howrah Works continue to show reasonably good results and the order books remain at a satisfactory level. The directors have noted with satisfaction the improvement in the supply of matched steel and hope that this trend will continue. Various mines and refractory works belonging to the company continue in production but sufficient remunerative work was extremely difficult to secure. The directors have reported a small increase in the value of magnesite exported.

LICENCES ISSUED

During the week ended June 13, 1964.

COAL

M/s. Bharat Mining Corporation Ltd., 9, Old Court House Street, Calcutta (Babisoile Colliery, Dist. Burdwan, West Bengal) — Coal: 1964 — 5,24,000 tonnes, 1965 — 6,07,548 tonnes; Shri S. K. Palit, Rajpura Coal Co., P.O. & T.O. Mugma, Dist. Dhanbad (Bihar), (Dist. Dhanbad, Bihar) — Coal — 9,700 tonnes; M/s. Khas Joyramdih Colliery Co., P.O. Nawagarh, Dist. Dhanbad (Dist. Dhanbad, Bihar) — Coal — 8,800 tonnes; M/s. K.B. Seal and Sons, Kalithan Jinagorah Colliery, P.O. Jharua, Dist. Dhanbad (Kalithan Jinagorah Colliery, Dhanbad, Bihar) Coal — 18,000 tons.

CONVEYING EQUIPMENT

M/s. Westerwork Engineers Private Ltd., Bhandup Village Road, Bombay-78 (Maharashtra) — Electric Overhead Travel-

ling Cranes (capacities up to 30 tonnes) — 60 numbers.

INORGANIC HEAVY CHEMICALS

M/s. Kanoria Chemicals & Industries Ltd., 9, Brabourne Road, Calcutta-1 (Distt. Mirzapur, Uttar Pradesh) — Phosphoric acid (wet process) — 3,500 tonnes; M/s. P.K. Veli & Co. (Pvt.) Ltd., 11, Mahatma Gandhi Road, Post Box No. 514, Bombay-1 (Bombay, Maharashtra) — Phosphoric acid (dry process) — 1,000 tonnes.

ORGANIC HEAVY CHEMICALS

M/s. The Mysore Sugar Company Ltd., Post Box No. 564, Sri Jayachamaraja Wadiyar Road, Bangalore-2 (Mandya, Mysore) — Twelve tons of Acetic Anhydride per day.

INSECTICIDES ETC.

M/s. Cyanamid India Ltd., 16, Queen's Road, P.O. Box No. 1994, Bombay-1 (Gujarat) — (1) Malathion 50 per cent Emulsifiable VON — 40 tonnes, (2) Malathion 25 per cent WP — 18 tonnes, (3) Malathion 5 per cent Dust — 84 tonnes.

COTTON TEXTILES

M/s. Palani Sri Murugan Textiles Ltd., 789, Trichy Road, Singanallur Post, Coimbatore (Coimbatore, Madras) — 13,000 spindles for the manufacture of cotton yarn; M/s. Sree Sivakami Mills Ltd., "Meenakshi Nilayam", Tirupparankundram Road, Madurai-3 (Madras) — 2,944 spindles for the manufacture of cotton yarn — M/s. Shree Vivakanand Mills Ltd., Ahmedabad-10 (Gujarat) — 4,600 spindles for the manufacture of cotton yarn; M/s. Soundara Raja Mills Ltd., P.B. No. 15, Dindigul (Pondicherry) — 13,000 spindles for the manufacture of cotton yarn; M/s. Sri Kannipiran Mills Ltd., Sowripalayam, Peelamedu Post, Coimbatore-4 (Madras) — 2,628 spindles for the manufacture of cotton yarn; M/s. Sree Chandrodaya Mills Ltd., Chitradurga Road, Davangere (Mysore) — 6,000 spindles for the manufacture of cotton yarn.

PAPER

M/s. Rajendra Paper Mills, 2, Brabourne Road, Calcutta (Faridabad, Punjab) — (i) Light Weight Speciality, paper — 3,240 tonnes, (ii) Pulp — 3,240 tonnes; M/s. Paper and Pulp Conversions Ltd., 376, Shukrawar Peth, Poona-2 (Khopoli, Dist. Kolaba, Maharashtra) — Paper — 4,030 tonnes, Pulp — 4,000 tonnes.

GLYCERINE

M/s. Bengal Immunity Co. Ltd., 153, Dharamtala Street, Calcutta-13 (West Bengal) — Tooth-paste — 3,000 Kg. per annum.

FIRE BRICKS

The General Manager, The Kerala Ceramics Ltd., Kundara (Kerala) — Firecement — 120 tonnes per annum.

CHANGE IN NAMES (Owners and Undertakings)

During the week ended 13th June, 1964.

(Information pertains to particular licences only)

From M/s. Windsor Engineering (P) Ltd., Thana to M/s. R.H. Windsor (India) Ltd., Thana; From (Name of the undertaking): M/s. Central Weaving and Manufacturing Co, Bombay to (Name of the new owner): Shri Manmohan Anand, Bombay; From (Name of the Licensee): M/s. The Mysore Sugar Co. Ltd., Bangalore to (Name of the new undertaking): M/s. The Mysore Acetate and Chemicals Co. Ltd., Bangalore; From M/s. American Products Company Ltd., Bombay to M/s. U.S. Vitamin and Pharmaceutical Corporation (India) Limited, Bombay.

LICENCES REVOKED OR SURRENDERED

During the week ended 13th June, 1964.

(Information pertains to particular licences only)

M/s. Forbes, Forbes Campbell & Co. Ltd., Bombay — Drawn Wire; (Licensee): Mr. E. Jagen Philpote, Alleppey. (M/s. Mankott Co'r Industries, Alleppey) — Tapioca Starch; M/s. Textile Store Dealers Ltd., Calcutta — Cotton yarn; M/s. Khemraj Nemichand, Raipur — Rice Bran Oil.

RECORDS AND STATISTICS

Depreciation of Money

A PROVOCATIVE study of the comparative rates of depreciation of money in 42 countries during the decade 1953-63 has been published in the July issue of the Monthly Economic Letter of the First National City Bank of New York. The study reveals that among the currencies of the industrially advanced countries, the U.S. dollar recorded the least rate of annual depreciation at 1.3 per cent (compound) during the decade under study. The shrinkage in purchasing power of most of the European currencies ranged between 2.5 to 4 per cent, while the Indian rupee registered a moderate rate of erosion at 2.5 per cent per annum. Unbridled inflation in Latin American countries resulted in a serious loss of purchasing power of national currencies. Some of the interesting findings of the study are reproduced below:

With an average annual rate of shrinkage of 1.3 per cent for the decade ending 1963, the United States suffered the lowest rate of depreciation among the major industrial nations; its performance, for the first time since 1956, was better than that of Germany and Switzerland. In most European countries, the rates of depreciation over the decade have been of the order of 2.5-4 per cent. The fact that dollar has lost value at a far slower rate than most other currencies helps to explain why it continues to be so widely used and

respected as an international standard of value.

In Western Europe, where gains in industrial output have been accompanied by narrowing profit margins and an outbreak of wage-price spiralling, the rise in the cost-of-living indices of the major countries has accelerated over the past three years. Acknowledging the need for price stabilization, the Council of Ministers of the European Economic Community approved in April a programme to combat inflationary pressures in the EEC through joint application of monetary, fiscal and "incomes policies," with particular emphasis on checking the over-rapid growth of public expenditures. The Council's recommendations are expected to reinforce individual country programmes, results of which are already discernible.

Reasonable monetary stability is an essential pre-requisite for restoring the faith of people in long-term promises to pay. If, for example, a 2.5 per cent annual rate of shrinkage in the value of a currency were projected over the life of a 20-year bond denominated in that currency, the real value of the bond would be reduced by 40 per cent at maturity. Europe is engaged in developing its capital markets to provide long-term funds to finance European growth, but, until a better record of price stability is regained, it will be difficult to build investor confidence in bonds denominated in European currencies.

Inflation joined with political unrest to trouble several of the major countries in Latin America last year. Brazil suffered the most serious loss in purchasing power—43 per cent in one year — while the value of Chile's currency sank by 31 per cent and that of Argentina by 20 per cent.

COST OF LIVING IN SELECTED COUNTRIES

Malthus, Mehta and Dr Rao

IN A LEADING Article in our issue of January 31 (Pp. 168-172) we urged an immediate and massive effort for the control of population through a drastic reduction in the fertility rate. We cited evidence to show that people as a whole were inclined towards family planning and that where education, instruction and facilities were being provided, they were not only being availed of but were also being reflected in the moderation of the fertility rate. Proceeding, we pointed out that this country, its people and its Government were therefore entitled to take a positive view of the practicability of an organized nation-wide family planning programme and its vast potentialities. The success of the programme, we emphasized, would depend on the provision of enough finance for family planning campaigns and the whole-hearted and sufficiently extensive propagation of decisive techniques for the avoidance of pregnancies or births.

While conceding the desirability of a multi-pronged attack on the population problem through the employment of every method or instrument available in the armoury of contraception, we suggested that, for the achievement of considerable results within a reasonable period of time, there would have to be a concentration of effort on quick-yielding programmes. Spelling out the possible contents of such an effort, we advocated a bolder and more positive approach than is presently prevailing for the popularization of surgical sterilization. Expressing the view that current official, semi-official or voluntary family planning propaganda is still unnecessarily feeble or apologetic where surgical sterilization is concerned, we wrote: "We strongly recommend that decisive advice in favour of sterilization should be given in all cases where there are already two children in the family and it appears unlikely that the parents concerned would or could regularly accept the discipline of mechanical or chemical contraceptives".

Secondly, we deprecated the squeamishness surrounding the discussion in this country of the legalisation of abortion under controlled conditions for the specific purpose of limitation of families. We pointed out that clandestine termination of pregnancies by surgical intervention does take place to a certain extent and in circumstances which not only impose an avoidably heavy financial burden on the family but are attendant with grave risk to the life or health of the woman. We, therefore, suggested that while resort to abortion should not be encouraged as a regular substitute for other methods of family planning, it was desirable that abortions should be legalized where the mother already had two children living and the mother or the father was prepared to undergo surgical sterilization.

We are now glad to find that a special study group set up during the deliberations of the All-India Honorary Family Planning Education Leaders' conference held earlier this month has made recommendations along the lines we had urged. This group has come to the conclusion that it is necessary that the sterilization programme should receive top priority in the family planning campaign and that the Central Government should provide full financial and other assistance to the State Governments for achieving the target of 2.5 million per year set for surgical operations on either the wife or the husband. The group also discussed at length the question of liberalizing the present laws of abortion and this resulted in a majority favouring such liberalization. According to this thinking, in view of the urgent necessity for bringing down the birth rate,

abortion might be permitted after three children, provided it was followed immediately by sterilization of either the wife or the husband. The point was stressed that such legalized abortion would have to be conducted under proper medical supervision in certified hospitals. Incidentally, the view was also expressed that legalization of abortion with the recommended safeguards would discourage a large percentage of illegal abortions currently being carried out by untrained hands.

Eastern Economist is naturally gratified that its advocacy of sterilization and legalized abortion under controlled conditions for the purpose of population control has now received this valuable endorsement. It is, however, only too ready to record its appreciation of the fact that the purposive recommendations made by the study group owe a great deal to the lead, both imaginative and realistic, given by the Deputy Chairman of the Planning Commission, the Union Health Minister and others who addressed the conference on family planning.

Lt. Col. B. L. Raina, for instance, made the very helpful and positive assertion that, in the prevailing conditions, sterilization was the method most calculated to assist in securing a large and early reduction in the birth rate and that, while we might supplement sterilization by other family planning programmes, it was clearly necessary that we should concentrate on it as the main campaign for population control. Dr. Sushila Nayar, again, while commending the good work done by the Orientation camps organized for disseminating family planning education, declared that each Orientation camp should serve as a sterilization camp as well. Underscoring the prime place occupied by the sterilization programme in the strategy of population control, the Health Minister declared that the success of Orientation camps and other family planning activities should be measured by the yardstick of the number of vasectomies effected, but it was to Mr. Asoka Mehta that the lion's share of the credit should go for setting the conference on the steady course of stern realism.

Pleading that the family planning effort had to be "objective-oriented and time-bound", Mr. Mehta conceded that there were various methods of family planning and only the experts could tell us which were the best. It was, however, obvious that we should not wait for the perfect method to discover itself. It was necessary that the family planning strategy should attempt at deploying effectively the various tactics available and here the campaigners' experience of popular responses to different methods would certainly be significant. Mr. Mehta, proceeding, disclosed that his discussions with State Governments had shown that many of them were anxious to organize sterilization on an extensive scale. His own view was that, if we were to seek results with a sense of urgency or on a war footing, it was time that a decision was taken in favour

of a crash programme of vasectomy and advise State Governments to go ahead with schemes and plans for mass scale vasectomy operations. Mr. Asoka Mehta felt that it might not be possible to strike straight away the target of 2.5 million operations per year, but he regarded an annual rate of half a million to a million operations as a possibility almost immediately.

Not that the conference was without its clown. For reasons known only to himself, Dr. V. K. R. V. Rao, a Member of the Planning Commission and consequently a colleague of Mr. Asoka Mehta, elected to engage himself in a pointless, public wrangle with the Deputy Chairman. In an amazingly irresponsible demonstration of frivolity, Dr. Rao injected the jargon of the class war into the discussion and exclaimed that there should not be two sets of rules, one for the masses and one for the classes. It would be a waste of time to probe into the extent of ignorance and prejudices disclosed thus, and it is in any case obvious that Dr. Rao was not taking either his audience or even himself seriously. The fact, however, remains that speeches of the kind he made are misleading and could be mischievous. At a time when there is great need for mobilizing national awareness and effort for popular control in the short period, Dr. Rao is doing no service to his country or his people, nor is he discharging his obligations as a Member of the Planning Commission by his negative and sterile attitudes or his deliberate cultivation of contrariness. Views could differ almost on everything under the sun and sterilization as a method of population control cannot claim immunity from critics, sceptics or protestants. But discussion and argument, in matters of this kind, have an obligation to be responsible. For Dr. Rao to hint vaguely, but nevertheless darkly, at the "sociological" and "psychological" impact of sterilization is, in our view, a thoughtless exercise in the display of dangerous half-knowledge. Even normally, there are bound to be popular fears and prejudices where sterilization is concerned. Their root-cause is ignorance and this ignorance can only be gradually dispelled by the steady propagation of knowledge and instruction. Thanks to the widening experience of sterilization among the people themselves, it is coming to be gradually recognized that sterilization, especially of the male, is nothing worse than simple minor surgery and that no adverse effects, either psychological or physical, have generally been noticed and may, therefore, be reasonably discounted. So far as medical opinion is concerned, it does not seem to share Dr. Rao's nervousness, and in the circumstances, we must repeat that it is clearly irresponsible on his part to have sought to give currency to notions which could come in the way of something practical being done about a problem so urgently demanding a solution.

We certainly agree with Dr. Rao that the raising of the age of marriage of girls from 16 to 19, the spread of education among women and the strengthening of their

property rights would help in restraining the tendency towards large families, but it is obvious that the influence of such developments can only be indirect and gradual. This is not to say that their usefulness is to be denied on this ground, but while they and other influences could provide supplementary support to programmes of population control, it is impossible to take seriously Dr. Rao's suggestion that they could be substitutes for more direct approaches. Finally, we must state emphatically that we do not share the pessimism of this Member of the Planning Commission on the practicability of "targetry" in the matter of family planning. We are certainly puzzled by Dr. Rao's assertion that family planning is not the same thing as agricultural or industrial planning where targets could be fixed and results achieved. If, say, in agriculture the manufacture of a certain quantity of fertilizers and its distribution among and use by cultivators could reasonably be expected to lead to increased agricultural production, we see no reason why similar credence should be withheld from programmes for propagation of the use of contraceptives or techniques of contraception. Talking of targets, it stands to reason that if a certain number of vasectomies are aimed at and effected in a particular area or during a period, there should be a corresponding impact on the fertility rate. Dr. Rao is sceptical about popular acceptance of family planning techniques, particularly sterilization. Fortunately, prejudiced publicists or propagandists notwithstanding, family planning programmes have in fact been able to make a substantial impression already on public opinion as well as individual or family consciousness for the simple reason that they answer a felt need. Here we quote with pleasure from an official report on the progress of the family planning programme in this country during 1962-63:

"The proposed main goal from now on is to accele-

rate the rate of adoption of family planning so as to reduce the birth rate in India (by 50 per cent) as soon as possible. It is known from the experience of other countries that fairly rapid changes in birth rate are biologically and socially possible. Sound preparatory steps for such a mass movement in India have been taken extending over the last 40 years, and accelerating more recently. The proposed goal has already been achieved by the segment of people in the highest socio-economic level throughout India. The goal has been nearly achieved by the heterogeneous population of Bombay City, where the birth rate, corrected to be comparable with all-India population, has gone down to about 27 per 1,000 population. The same trend is visible in other urban areas. In some rural areas, such as districts of Maharashtra State, the trend towards acceptance of family planning is already on the scale of a mass movement. Studies of popular attitudes and practices among groups of people through rural India have all indicated that there is a basic awareness of the problem of excessive births, that there is interest in learning how to do something about it, and that there is virtually no specific opposition to family planning. All evidence supports the proposition that the main problem is one of organizing a sufficiently extensive programme, which can accelerate the normal process whereby the strong latent interest of individuals is converted into new social norms and group action."

It follows that we have no reason to regard the population problem, however difficult or menacing it may seem, as impossible of solution. What is needed are adequate purposiveness, organisation and finance. There are welcome signs that these resources are being increasingly committed. What remains is for those who would confuse counsel to keep out or be kept out. The problem of population is too important to be left to the professors.

Off and On

OURS IS a nation which misses no opportunity of taking days off from work under one pretext or the other. At every turn in the climate, the folk-lore has prescribed certain festivals and festivities. Then there are the innumerable gods and goddesses of a vast Pantheon to whom due homage must be done. Equally numerous are the prophets, sages and saints of many religions, who again, claim to be properly honoured. On top of this is the growing galaxy of historic personalities, whose birth and death anniversaries cannot be permitted to go unnoticed. And, as if all this were not enough, days of national pleasure, pride or prestige have to be duly observed — and the number of such special dates has appreciably grown. In the result, it is not surprising that a large number of man-days is being lost every year because of the national lack of restraint in the matter of holidays.

Table I shows that among the States, there is a marked divergence in the number of public holidays. The figures relate to the year 1964. In Jammu and Kashmir, the number is the largest at 30 even after ignoring the regional and sectional holidays. At the other end of the scale is Andhra Pradesh whose total number of public holidays is only 14 excluding the sectional holidays. Members of different religious communities are permitted to enjoy leave on specific days which are considered sacred by them. If to these large number of holidays are also added the total number of Sundays — 52 in a year — the aggregate in most of the States comes to nearly 20 per cent of the working days; it increases further, if regional and sectional holidays are also taken into consideration.

The same problem of wastage through these holi-

days may be looked at in another way. Table II below shows the number of holidays allowed in one State or the other in all the 12 months of the year. It demonstrates that in addition to 52 Sundays, there are 66 other days — again excluding regional and sectional holidays — when one State or the other is enjoying a holiday. There is certainly need for curbing our enthusiasm for festivals and festivities without, of course, infringing upon the liberty of people to celebrate religious functions and festivities. It is suggested that the number of public holidays should be restricted to around 16 and no State should be allowed to exceed that limit. The

TABLE I.
PUBLIC HOLIDAYS (STATES* AND CENTRE)
IN 1964

	No. of Holidays
1. Andhra Pradesh	14
2. Bihar	20
3. Gujarat	18
4. Jammu & Kashmir	30(13)
5. Madhya Pradesh	15
6. Madras	16
7. Maharashtra	16
8. Orissa	16
9. Punjab	15
10. Rajasthan	20
11. Uttar Pradesh	21
12. West Bengal	22
13. Central Government	16+2(12**)

Note: (a) figures in brackets indicate the number of regional holidays as distinguished from State holidays.

(b) In addition to 16 holidays each Central Government employee is allowed to choose 2 holidays out of the 12 restricted holidays.

*Excluding the States of Mysore, Kerala, and Assam.

**Figures indicate the number of restricted holidays.

States which will have to slash the number of public holidays are Bihar, Gujarat, Jammu and Kashmir, Rajasthan, U.P., and West Bengal. It might be asked as to which are the particular holidays in these States which should be abolished. A study of the public holidays of all the States (excluding Kerala, Mysore and Assam for which details were not available) has brought home the conclusion that there are a number of public holidays which some of the States could reasonably do without.

Let us take the case of the New Year's Day. There are a number of States, such as Gujarat, Madhya Pradesh, Madras, Orissa, Punjab, Rajasthan, and U.P., where the New Year's Day is not observed as a public

holiday. There are some States such as Andhra Pradesh, Bihar, Jammu and Kashmir, Maharashtra and West Bengal which do observe the New Year's Day as a public holiday, though the Union Government has it as a restricted holiday. Again, there are a number of States, such as Bihar, Gujarat, Madras, Punjab, U.P., West Bengal and the Central Government which declare a holiday on Good Friday, while the others do not. This type of difference between the States applies to a number of other public holidays, such as Lord Buddha's Birth Day, Ramzan, Muharram and Idulmilad which are not observed as public holidays uniformly by all the States. There is, thus, ample room for reducing the number of public holidays in all those States which are currently permitting a considerable number of man-days to be lost to the public services, the national economy and the work and the well-being of the community generally.

TABLE II.
PUBLIC HOLIDAYS IN 1964
(States* and Centre)

Month	Total number of holidays	
	All-inclusive	Excluding Regional holidays

TRADE MARKS

CAUTION

Notice is hereby given that the word 'Terylene' *per se* and the 'Terylene' symbols in English and in Hindi illustrated below this paragraph are registered trade marks in India, the property of Imperial Chemical Industries Ltd., London. They can be used only on or in relation to polyester fibre manufactured by Imperial Chemical Industries Ltd., London, or their associated company, Canadian Industries Ltd., Canada, and in the manner authorised on the goods made from or containing this polyester fibre.

'TERYLENE'
Polyester  Fibre

'टेरिलीन'
पोलिएस्टर  फाइबर

Instances have come to our notice where the 'Terylene' Trade Mark is being applied by certain manufacturers to garments or fabrics not containing the polyester fibre manufactured by Imperial Chemical Industries Ltd., or Canadian Industries Ltd., and also to fabrics containing polyester fibre waste in appreciable quantities, and that such garments and fabrics are sold or offered for sale as garments or fabrics containing genuine 'Terylene'.

Such manufacturers and the dealers concerned are hereby warned against such improper use of these trade marks and the public is also hereby cautioned against buying such garments and fabrics.

Neither of these trade marks can be applied to any articles or used in advertisements for their sale except with the authority from and under conditions prescribed by Imperial Chemical Industries Ltd., London, or by Imperial Chemical Industries (India) Private Limited.

Any unauthorised use of these marks on the goods or in advertisements will be regarded as infringements thereof and liable to legal action. Any imitation, infringement or fraudulent use of the said Trade Marks will also be dealt with according to law.

Highlights of the Week

SPOTLIGHT ON FOOD PRICES

A NUMBER of steps have been announced by the Union Food and Agriculture Minister, Mr. C. Subramaniam, for checking the uptrend in foodgrain prices, both in the short-term and in the longer run. At a Press Conference in New Delhi this week, Mr. Subramaniam stated that for bringing out hoarded stocks, maximum sale prices of foodgrains would be fixed shortly. In the first instance, maximum prices are proposed to be fixed for rice in the Southern Zone. These will become operative with effect from August 1, 1964. The ceiling prices in the other areas, both for rice and wheat, are envisaged to be announced by the middle of August.

As another short-term measure, the Union Food Ministry has decided to take resort to the Defence of India Rules for making the foodgrain stockists declare their stocks. Notifications to this effect have already been issued by the Maharashtra and Andhra Pradesh Governments. The other State Governments are being advised to follow suit. The State Governments are also being asked to follow the procedure of West Bengal for distribution of Government's stocks in the urban areas on the basis of household cards. The enforcement machinery is proposed to be strengthened in all the States so that the Government's policy for bringing out hoarded stocks can be implemented effectively. Fifty per cent of the extra expenditure to be incurred by the State Governments in this regard will be borne by the Centre.

An Ad hoc committee has been set up under the Chairmanship of Mr. L. K. Jha, Secretary to the Prime Minister, for working out producer, wholesaler and retailer prices of foodgrains for the coming season. The Committee has been asked to submit its report in regard to rice before the next harvest in September. For fixing reasonable producer and consumer prices over the longer run, a Technical Team will be constituted shortly. It will study in detail the cost of production of foodgrains and suggest the producer and consumer prices for the 1965 harvest season.

A decision has also been taken to set up a Foodgrains Trading Corporation. There will be only one Corporation in the whole of India to deal in both rice and wheat. It may have, however, branches in various parts of the country as the necessity arises. The FTC will be a wholly Government-owned commercial organisation registered under the Companies Act. It will buy foodgrains from producers at fixed prices. The wholesalers may also be required to hand over their stocks to this Corporation at declared wholesale prices. For direct purchases from producers, the Corporation will utilize the services of co-operatives and may also nominate private traders as its agents. In the course of time, the FTC will be handed over import trade of foodgrains. It is proposed to give the FTC monopoly of movement of foodgrains by rail. The private traders will, however, be allowed to move grains over shorter distances by road. The Corporation is expected to start operating with effect from January 1, 1965.

Mr. Subramaniam cited figures to show that three to four million tonnes of additional wheat and rice as compared to the last year's were available for distribution. The availability of foodgrains being better this year than in the preceding year, he was of the opinion that the complaints of scarcity of foodgrains were not justified. His interpretation was that because of rising prices, the market arrivals had dwindled resulting in holding back of stocks by both the producers and dealers in the hope of realising higher prices later.

Mr. Subramaniam gave a State by State analysis of the food position. Punjab along with Delhi, Jammu and Kashmir and Himachal Pradesh were in a class apart as the producers were not realising high prices. The States of Maharashtra and Kerala were passing through a critical situation. U.P.

was described by the Minister as a "sick-child" and said that a large number of wagons had been allotted to carry wheat to that State. The food situation in Assam and Orissa was satisfactory and there was not much pressure from Bihar, though the Government had despatched increased food supplies to that State.

At the same Conference, Mr. C. Subramaniam also announced the appointment of a third committee for reviewing the production, distribution and prices of sugar in the coming season. This committee will look into the licensing policy also. He conceded the fact that the controls instituted in October last year on the movement of gur and khandsari had not worked satisfactorily. An immediate withdrawal of the restrictions on the movement of gur was announced by him. He would have liked to withdraw restrictions on khandsari also but for the legal complications involved.

ANGRY BANKMEN

THE GOVERNMENT of India's decision to extend the Desai Award in respect of the scheduled banks has not been favoured by the bank employees who have in recent weeks adopted "go-slow" tactics, resulting almost in paralysis of the banking work in some of the big towns and cities. The Award has been in operation for two years only. The Government decided to extend it till July 31, 1965 because it was thought that the appointment of a new tribunal would involve considerable time, expense and effort. It is the view of the Government that the Desai Award had been given after great thought and labour and it was in the interest of both the parties to extend it for another year, the maximum period prescribed in the Industrial Disputes Act being three years.

Taking note of the deteriorating relations between the employers and the employees, the Government of India has asked the Chief Labour Commissioner to hold discussions with the bank employees and the employers in the early part of the next month. The Commissioner will make an effort to bring about an amicable settlement on such of the issues which deserve favourable consideration on merits. It is believed that the intervention of the Commissioner will bring about a better climate and that the bank workers would resume their work, shedding the "go-slow" methods adopted by them recently.

The associations of bank employees have put forward the plea that the Desai Award suffers from a number of anomalies and that due to a steep rise in prices, the circumstances under which the Award was given have also changed. The bank employees' associations had been asked earlier by the Government of India to list all the alleged anomalies so that they could be discussed with the employers for arriving at an agreed solution. The Government had also given an assurance that the extension of the Award need not in any way be used as a ground for not discussing the grievances of the bank employees. The employees' associations, however, did not provide the Government with any details regarding the inadequacies or anomalies and it was only in June, 1964 that one of the employees' organisations forwarded their memorandum. The Government, however, has asked the Indian Banks' Association and the Bombay Exchange Banks' Association to consider the points raised by the representatives of employees. Broadly, the employees' association sought some modifications in the provisions of the Award, especially those relating to the calculation of basic pay for provident fund and gratuity. It also suggested the abolition of area IV and demanded 20 per cent increase in pay for all categories of bank workers.

The Desai Award had in 1962 merged a major portion of the dearness allowance with the basic pay and a new system of linking dearness allowance with the All-India Working Class

Consumer Price Index was evolved. In other words, the bank employees are fully compensated for any increase in cost of living as indicated by the All-India Consumer Price Index. There does not seem to be much weight in the claims of the bank employees; in any case, the promise of Chief Labour Commissioner to look into the legitimate demand of the employees should help to create normal conditions in the banks.

In any consideration of the demands of the bank employees, an important fact which should be noted is that from September this year the banks will be required to keep a higher percentage of their deposits for purposes of liquidity and they will be required to open a large number of new branches in order to mobilise deposits. Both these factors will reduce the margin of profit available to the banks and should, therefore, be considered as relevant factors in any decision which tends to increase the wage bill of the banks.

AFRICAN UNITY

THE SECOND summit conference of the African States which concluded in Cairo on July 21 was dominated by the forceful move by President Nkrumah of Ghana to hasten the formation of a Federal Government of Africa to which the response from most of the members was not very favourable and which even invited a scathing attack from President Nyerere of Tanganyika and Zanzibar. President Nasser — wiser after his attempts at Arab unity — suggested that the proposed Federal Government should be set up stage by stage. The gulf between the member States on the unity issue was too wide to be bridged at one go and hence the Conference is reported to have decided to refer this question to a Special Committee which has been asked to consider all aspects of the question. Mr. Diallo Telli, Guinea's Chief Permanent Delegate to the UN and Chairman of the UN Special Committee on Apartheid, has been chosen as the Secretary-General of the Committee. The headquarters of this new organisation will be located at Addis Ababa.

There seemed to be unanimity of opinion amongst all the 34 African leaders regarding the economic boycott of South Africa, increased support to guerillas in Portuguese territories and sincere efforts at bringing together all the nationalist forces in Southern Rhodesia to intensify the struggle for independence. According to President Nasser, 90 per cent of the African trade was with non-African countries and, hence, the economic sanctions against South Africa and Portugal would not be hard to operate. The summit also made a specific appeal for a boycott of passengers to and from South Africa passing through the territories of the member countries. The oil producing countries were asked to stop the supply of oil and other petroleum products to South Africa. An exception was provided by Mr. Hastings Banda, Prime Minister of Malawi, who frankly admitted that his country was not in a position to implement the economic boycott of South Africa because it would hurt the economy of his country severely. The impression was created that only those countries which had nothing to lose by this decision were in the forefront of its advocacy. Since most of the African economies are in the primitive stage, any move which brought forth economic hurdles needed to be avoided. It is perhaps advisable that the African States should join hands on the political plane to exert pressure on the colonial powers; that may evoke more interest all over the world and in Africa.

If and when a united Africa emerges from the current efforts of the African leaders, it will be a force to reckon with. The manner in which President Nkrumah of Ghana tried to push through the formation of the Federal Government with whatever support he could muster aroused the suspicion of a number of other African leaders. His assertion that there was no need for a stage by stage unity was countered by President Nyerere who said: "To rule out a step by step process in the march to unity is to rule out unity itself."

At the same time it must be conceded that the getting together of so many African leaders in itself is an achievement of no mean order. They will be well advised not to set their sights too high but to evolve policies which may be possible for all members to follow. A fair evaluation of the second summit would be that the unity plan has still to work out in real terms. Unity in negative terms against South Africa, Southern Rhodesia and Angola does exist but the bonds on the positive side are not very strong. May be, by September 1965 when the third summit will be held, some progress in this direction will have been made.

DEMOCRACY FROM GRASS ROOTS

AT THE two-day meeting at New Delhi of the State Ministers of Community Development and Panchayati Raj, great stress was laid on measures for stepping up agricultural production. It was recommended that agriculture should receive the highest priority in the fourth Plan and funds earmarked for this purpose should not be diverted to any other project. The Community Development and Panchayati Raj institutions were asked to make all-out efforts towards increase in agricultural production by maximum use of rural man-power. For this purpose, the co-operatives and the panchayati raj institutions must come closer so as to meet mutual requirements.

The meeting was also addressed by Mr. Jayaprakash Narayan — the renowned Sarvodaya leader — who described the present progress of panchayati raj as slow and hesitant. Panchayati raj institutions, Mr. Narayan said, were conceived primarily as agencies and instruments of self-government and State Governments must take all possible measures to introduce the elements of self-government at the village, block and district levels. Non-official organisations, he said, should be formed both at the State and the all-India level. It was recommended that, at the State level, a panchayati parishad should be set up on which the three tiers of panchayati raj should be represented. At the all-India level also, there should be a panchayati parishad but an effort should be made to eliminate all rivalries between these associations at different levels.

The State Ministers' Conference also considered the report of the Study Team on gram sabhas and suggested that panchayat samitis must take active interest in convening meetings on more important subjects in their jurisdiction. Some of the Ministers put forward the view that it would be desirable to have studies of the actual working of the selected gram sabhas so as to benefit from their experience. The Ministers also discussed the Santhanam Study Team on panchayati raj finances. The view that prevailed at the Conference was that expenditure on staffing village panchayats should be shared equally by the Centre and the State Governments. In case this arrangement was not acceptable, the Conference suggested the adoption of the recommendation of the Santhanam Study Team for providing one rupee per head per annum for village panchayats which again should be shared equally by the Centre and State Governments. The Conference also felt that panchayati raj finance corporations should be set up in one or two States which had shown their willingness to do so. In the light of the experience gained in these States, the programme of setting up similar corporations in other States should be examined.

Various schemes for assisting the weaker sections of the community were discussed at the Conference. The opinion prevailed that assistance could be provided through the rural works and industries programmes and through labour co-operatives and co-operative farming societies. The panchayati raj institutions and the block extension agencies were expected to assist the co-operative farming societies in drawing up agricultural production programmes. The impression prevailed at the Conference that all was not well with the community development and panchayati raj institutions and that considerable work needed to be done in various directions in order to tone them up.

World Bank's Role in Economic Development

GEORGE D. WOODS

President, World Bank, International Finance Corporation and International Development Association

ANY COUNTRY or group of countries prepared to adopt economic development as a central objective of its policy will find the World Bank, together with its affiliates, a willing and, I hope, a powerful ally.

Our own developmental role has been constantly expanding and our operations have, over the years, proceeded at an ever faster tempo. Loans and investments made by the Bank group of institutions in support of projects to increase production in the less developed countries now aggregate more than \$5,500 million. In the 1963 calendar year, the level of our financing reached the equivalent of a thousand million dollars and for the current fiscal year ending June 30, it may be above that figure, to stand at the highest level in our history.

Of this record and of the momentum it reflects we can justly be proud. We are proud, but we are not satisfied. The decade of the 1960's confronts the Bank with problems different from those it faced in the 1950's; the approaches and solutions which have served the Bank well in the past as it sought to meet the needs of its members are no longer fully adequate or appropriate.

Among other things, we had only 56 members 10 years ago; now we have 102, and 20 of these became members in the last year. Many of our most recent members are new not only to the Bank but to the international community. Inexperienced in development administration, they need different kinds of assistance, both financial and technical, from those countries which have been longer on their own.

Challenge and Response

If the Bank is to go on being a dynamic agent of economic progress, it must adapt itself to the changing development environment and respond to the changing needs of its membership. The Bank, no less than its members, must continue to grow. And so we have embarked on a programme of critical self-analysis to consider wherein and to what extent our policies and internal organization need to be modified and the direction or emphasis of our activities changed.

The first consequence of this re-examination has been a decision to expand the scope of our financing. Up to now, the Bank has been concerned chiefly with large-scale projects to develop better transportation and new sources of energy. We do not propose to abandon these fields, and indeed, they no doubt will continue to absorb the major portion of our funds. Building infrastructure, however, is not an end in itself. We have concluded that we should now greatly increase our assistance to agricultural and industrial production which infrastructure is intended to support and promote.

We have in mind, for example, assisting comprehensive agricultural schemes to increase productivity on individual land holdings, and hope especially to help strengthen organizations which extend credit or technical help to farmers. And because the investment requirements of agricultural projects call primarily for local currency expenditures, I am recommending to the Executive Directors that the Bank evidence greater willingness to help finance such expenditures.

Moreover, I am pleased to say, we have enlisted the cooperation of the Food and Agriculture Organization of the United Nations (FAO) in our plan to intensify our support of

agricultural development on this broader scale. We are also seeking ways to vary and broaden the nature of our assistance to industry. One approach will be to provide long-term financing for programmes to import individual pieces of equipment, components and spare parts in cases where existing industrial capacity is not fully used because there is a lack of foreign exchange with which to buy such equipment from abroad. Other approaches, designed particularly to enable us to be of greater help to private industrial enterprises, are being explored. Above all, we intend to press forward with our support of private industrial development companies. Seventeen such institutions, in Asia, Africa and Latin America, have already been set up or strengthened by the Bank group under the leadership of the International Finance Corporation (IFC).

New Impetus

This growing network of organizations, equipped to tap both international and domestic capital and to provide managerial and technical assistance for growing industries, is giving a new impetus to the economic development of many of our member countries.

The success of our efforts in the fields of agriculture and industry depends in large part, however, on how effectively the initiative, intelligence and skills of the people of the borrowing countries are mobilized for productive purposes. Efforts to enable human beings to realize their fullest potential must be made of many different kinds, but somewhere near the root of the process must be education.

The International Development Association (IDA) entered this field some time ago and the Bank expects shortly to make its first loan for education purposes. In our efforts to do more to help create the facilities for the spread of education, we shall have the co-operation of the United Nations Educational, Scientific and Cultural Organization (UNESCO), with which we plan jointly to explore and support new projects. We hope that one important consequence of our decision to enter the field of education financing will be to encourage others to intensify their efforts in this sector.

So much for an indication of the ways in which the Bank is determined to expand the horizons of its lending.

A second result of our re-examination of our policies has been the adoption of some greater flexibility in the terms of the Bank's financing. The Bank has already, in one significant case, given a borrowing country the usually long grace period of eight years before requiring the first amortization payments on our loan, in order to take account of the borrower's difficult short-term financial situation.

We have also begun to lend at somewhat longer term than was our practice in the past, where this is justified by the prospective life of the project and is desirable in light of the country's economic position. And we are examining the whole problem of local expenditure financing which I have already mentioned in connection with the agricultural projects.

A third decision which has emerged from the review of our activities is that our technical assistance and training activities must be greatly enlarged.

The Bank decided long ago that the effective discharge

of its development responsibilities required it to supplement its lending operations with many types of technical assistance. We have been particularly concerned, up to now, with development planning. For example, we have helped 25 countries to draw up programmes of economic development; we maintain an Economic Development Institute as a senior staff college whose purpose is to improve both the formulation and execution of development programmes; and we have established a Development Advisory Service whose members are now functioning as programme advisers to 11 governments in the less developed world. Without in any way reducing these efforts, we propose now to put greatly increased emphasis on assisting our members to identify and prepare projects.

We have come to this decision because the flow of sound, economically viable projects coming forward from many developing countries today is not enough to enable these countries to realize the growth rate which is within their capacity to attain. It is not that good investment opportunities are lacking; what is lacking is initiative and proper organization to enable those opportunities to be realized.

"Insiders" in Stock Exchanges

"OBSERVER"

ONE OF the undesirable practices, the existence of which is well-known in the stock exchange circles, is the betrayal of their fiduciary duties by directors and officers of companies who use their positions of trust and the confidential information, which comes to them in such positions, to aid them in their stock exchange operations. Closely allied to this type of abuse is the unscrupulous use of information by the Auditors of companies.

The Securities Contracts (Regulation) Act, 1956, which came into force from February, 1957 and which repealed the Bombay Securities Contracts Control Act, 1925, contains provisions directed against undesirable transactions in securities by regulating the business of dealing therein, by prohibiting options and by providing for certain other matters connected therewith. The prohibition of dealing in options in the securities of the companies in which they are directors, which was recommended by the Jenkins Committee in the U.K., applies in India by virtue of Section 20 of the Securities Act, 1956, not only to directors but to everybody, as this section prohibits all options in securities. The Bhabha Committee on Company Law Reform was also aware of this problem and Section 307 of the Companies Act provides for the maintenance of a Register of Directors' shareholdings which will be available for the inspection of shareholders. Section 307 stipulates:

- "(1) Every company shall keep a register showing, as respects each director of the company, the number, description and amount of any shares in, or debentures of, the company or any other body corporate, being the company's subsidiary or holding company, or a subsidiary of the company's holding company, which are held by him or in trust for him, or of which he has any right to become the holder whether on payment or not.
- (2) Where any shares or debentures have to be recorded in the said register or to be omitted therefrom, in relation to any director, by reason of a transaction entered into after the commencement of this Act and while he is a director, the register shall also show the date of, and the price or other consideration for, the transaction.
- (3) The said register shall also be produced at the commencement of every annual general meeting of the company and shall remain open and accessible

In recent months we have given increased attention to the project problem. We have added specialized courses in project evaluation to the curriculum of our Economic Development Institute. We have undertaken more and more pre-investment studies of possible projects and sector programmes, both as Executing Agency for the United Nations Special Fund and on our own.

For the future, we are giving serious consideration to increasing the number of our field representatives responsible for providing assistance in project planning on the spot. And the partnership arrangements with FAO and UNESCO which I have mentioned are designed, among other things, to expand the number and improve the quality of agricultural and educational projects available for financing.

But we are fully aware that these efforts, in relation to the need, are modest and we are anxious to explore suggestions for helping still further to accelerate the flow of good investment projects. For such a flow is a 'sine qua non' for economic progress.

during the continuance of the meeting to any person having the right to attend the meeting."

The Companies Act thus secures that the information relating to the shareholdings of directors is available to the Government and to the shareholders. Although this provides for some publicity, it is thoroughly inadequate. A large amount of shares can still be held through "benamis" and the legislation does nothing to prevent top executives of companies from misusing inside information.

Comprehensive Legislation

The absence of any effective legislation to curb the misuse of inside information by directors and top executives of companies, while speculating on the stock exchanges, has resulted in several abuses. Apart from enabling this section of speculators to make undue profits, this practice is standing in the way of creating confidence among investors in the stock markets of the country. Speculation with "inside" knowledge is also harmful to the company concerned. This arises out of the fact that prices of the quoted shares rise or fall not because of genuine economic reasons, but due to "insiders" operations. Such extraneous fluctuations in the share prices affect the credit worthiness of the companies giving rise to the serious problem of managing the finance of companies. The unnatural rise or fall in the quoted shares of companies would also give an appearance of financial strength or weakness to certain companies which would stand in the way of a rational allocation of the financial resources of the community.

Comprehensive legislation should prevent "insiders" from trading in the stock exchanges in the shares of companies of which they have inside knowledge, either directly or indirectly. Under "insiders" should be included not only the directors and top executives but also the auditors and underwriters of the company. In this context it would be useful to see how the evils of "insider" trading are sought to be removed in the U.K. and the U.S.A. and whether the steps taken in those parts of the world could serve us in dealing with the problem here.

The Cohen Committee in the U.K. was of the opinion that "whenever directors buy or sell shares of the company of which they are directors they must normally have more information than the other party to the transaction, and it would be unreasonable to suggest that they were thereby debarred from such transaction, but the position is different when they

act not on their general knowledge but on a particular piece of information known to them and not at that time known to the general body of shareholders." On the basis of the recommendations of the Cohen Committee, the English Companies Act of 1948 stipulates in Section 195 that every company should keep a register containing particulars of the share and debenture holdings of each director in that company or its subsidiary or a subsidiary of its holding company. Purchases and sales are to be recorded therein giving dates and prices. The Jenkins Committee has agreed with the Cohen Committee that the best safeguard against improper transactions by directors and against unfounded suspicions of such transactions is to ensure that disclosure is made of all their transactions in the shares or debentures of their companies. The Indian Companies Act has adopted the recommendations of both the Cohen and Jenkins Committee Reports, as discussed earlier (Section 307).

In the United States, Section 16 (a) of the Securities and Exchange Act of 1934 provides that every officer or director of a company with an equity security registered on an exchange, as well as every person who is directly or indirectly the beneficial owner of more than 10 per centum of any class of an equity security so registered shall file with the Securities and Exchange Commission and the stock exchange an initial report of his holdings of all the issuer's equity securities and a further report within ten days after the close of each calendar month in which there has been any change in his holdings. The reports are made available to the public both at the Commission and at the exchange. The Commission also compiles and publishes the information contained in all these reports in a monthly pamphlet which is available at every ex-

change and every regional office of the Commission and is widely distributed. The only sanctions for enforcing compliance with Section 16(a) — unless the person required to file happened to be an exchange member or a registered broker dealer, against whom the Commission might take disciplinary action administratively — are criminal prosecution and mandatory injunction.

Apart from disclosure, by virtue of Section 16(b), any profit realised by director or top executive, from any purchase and sale, or any sale and purchase, of any equity security within any period of less than six months shall be recoverable by the company.

Although in the United States, both disclosure of share transactions and surrender of profits are necessary, an insider who holds for six months or more before selling does not become liable under Section 16(b), no matter how much proof is adduced of unfair resort to non-public information. Again under this Act, there is no guarantee against evasion by mutual "back scratching" of insiders in different corporations, or by trading through friends or relatives.

Since the evil effects of insider trading is increasing in this country, legislation comparable to Sections 16(a) and 16(b) of the Securities and Exchange Act of the United States, providing further that even the six month limit will not apply for surrendering the profits to the company, would appear to be desirable. Since the profits are surrendered to the company, and not to the persons harmed, it may even be better if legislation comparable to the Dominion Companies Act of Canada which prohibits directors from speculating in shares of their companies is enacted.

THE BANK WITH SERVICE PLUS*

Even birds have the saving instinct. They know that a little at a time adds up into a store that helps in future. More than birds men need saving although it is not always an easy matter.

Saving with the United Bank is a pleasant habit.

You may open a Savings A/C with only Rs. 5

* Your Saving earns interest @ 3% per annum.

* You may draw by cheques.

* You may draw 200 times in a year and as much of your money as you may need.

* Touch of personal attention and warmth of friendliness.

WINDOW ON THE WORLD

Europe's Migrant Millions—III

From Our Special Correspondent

PARIS:

HAVING SEEN the economic implications of the immigration of million of workers, for the rich employing nations, in two previous articles, one must look at what this means for the so-called "over-populated" nations that are providing north-west Europe with these second-class citizens. The nations concerned are Italy, Spain, Greece, Portugal, Turkey, Yugoslavia, Algeria, Morocco, Tunisia and, accessorially, Negro Africa and some Asian countries. One cannot pretend to strike an exact balance-sheet of advantages and disadvantages in a field where even the barest statistics are lacking: there are no precise figures for the number of unemployed in any of those countries, much less for the number of under employed; there exist only "official" figures on the number of migrant workers leaving for Europe, and these can be far short of the truth; and there is no exact figure for the remittances sent back by those workers, because of currency smuggling. We are in the dark, and liable to remain there because none of the governments concerned are particularly proud of the emigration while the dictatorial regimes of Spain, Portugal and Yugoslavia are evasive and misleading on the subject.

Soulless Muscle Power

One country has no complexes about it, the big provider of migrant labour, Italy. This is because the same phenomenon is going on inside that country, as lakhs of workers move from the poor south to industrial Lombardy and Piedmont, and there is little difference, economically or in point of law, if workers go further north still to the other countries of the Common Market. There, their reception and employment are subject to agreements between the Six, and the Italian migrant and his host-employer can feel that their relations pre-figure the united Europe that is being built. Enjoying exactly the same conditions and benefits as local workers, and being well received by the local population, the Italians can feel that, though foreigners, they are not sub-citizens — at least in places where they have a chance of mastering the language and of living a life not too different from what they are used to. That means, essentially, in France, Belgium and south Germany; further north, and singularly in Holland, they suffer such a degree of isolation, ostracism and depression that they become soulless providers of muscle-power keen to make a pile and clear out fast. And that is always their condition in Switzerland, where it is made plain to them that nothing is wanted but their work — a typical case of unhealthy economic expansion founded on robots instead of human beings.

Besides, Italy's function as a reservoir of men is coming to a close. The current economic crisis in the peninsula might slow down this process (though the latest forecasts are that Italian unemployment will drop 15 per cent this year, against 10 per cent last year, despite current difficulties), but that is a passing incident; the days are gone when Italy supplied labourers to four continents. Compared with permanent emigration abroad, the temporary migration of workers to north Europe has been much more advantageous for Italy. The remittances were bigger: officially \$335 million last year but in reality much more, maybe twice as much. And the men came home, often with industrial qualifications not to be had in their own country, but now useful to that country because of its own industrial progress. One sees full-page advertisements in French and German newspapers by Italian enterprises offer-

ings work to trained men abroad, and the Lancia motor works lately got 1,000 men from the German auto industry whom it could never have hired at home. In sum, the affair is profitable for Italy because it mostly concerns a genuine economic association to which she belongs and where her own industrial expansion matches, and is complementary to, that of her partners.

The case is rather different for the other providers of muscle-power. Migration is officially described, in these cases, as profitable for both sides in that it gives professional training to ignorant workers and advances European unity. However, one must be sceptical of a 'unity' that is not expressed in a precise charter of mutual obligations like the Rome Treaty, while one must be quite incredulous about the value of professional training given to peasants in a country that has no domestic industry where that training could be applied. The Greek workers who work for two and three years in the Ruhr to accumulate a nest-egg of 5,000 or 10,000 DM do not take home any talents that can be employed there, except in quite exceptional cases. If there were a movement of German investment in Greece, and if it were related to the training of Greek workers in Germany, one could advance the professional training argument; but that will only happen when Greece is a full member of the Common Market, whereupon her situation will be comparable with Italy's now. Meantime, Greece gains little more than Morocco does when her workers go to French steel mills for three years, namely nothing in the way of know-how that can be used at home.

Overloading the Economy

As for the nest-egg of the returning migrant, it is seldom a useful contribution to his country's capital-stock. The men concerned come, after all, from the most backward parts of the Mediterranean world and on their return they find little to do with their savings but buy land or a small shop, or repair a house, or pay off a debt. For the most part, they contribute, then, to overloading the already hypertrophied primary and tertiary sectors of the economy, without assisting the birth of secondary industry. There are exceptions, when workers trained in the building and mechanical trades have found employment, and even a use of their savings, on returning to North Italy and Spain, provided industrial progress had got going in their absence. The Turkish Government has seen the need to avoid the waste that is more common when migrants come home, for it has organised a system of loans and subsidies for returning workers who consent to put their savings in a savings account and set up in a suitable trade. One could conceive variations of this system that could be applied in North Africa to ensure that some lasting benefit emerged from the migration of millions of men to industrial Europe.

Before returning with these savings, the migrant has been sending money home each week or month to his family, and there are whole provinces of southern Spain and Turkey that are supported by this inflow. For the countries concerned, it is a source of foreign exchange comparable to, or even larger than, the massive earnings from the tourist trade. For the year 1963, the official transfers of emigrant workers' wages were \$335 million for Italy, \$200 million for Spain, \$40 million for Greece and perhaps \$10 million for Yugoslavia. But all these figures are vast understatements, while no figure at all can be given for Turkey, whose currency is so over-valued

that no worker would be foolish enough to send money home otherwise than by the black-market. But even taking the official figures, the transfers sent by workers to Algeria, Morocco and Tunisia equal a good part of those countries' respective national incomes. The gain here is indisputable and, in countries where some industrialisation has begun, such as Spain now, these exchange earnings are being put to good use from which the nation will benefit permanently.

Emigration naturally relieves unemployment — but in the worst possible way—by denuding a region of its best men and by raising its wages (especially agricultural costs) without promoting productivity. Exact figures are lacking but there seem to be a million unemployed in Greece, a million in Portugal (out of a total population of less than nine million!), three and a half millions in Turkey, under a million in Italy and unknown numbers in North Africa, Yugoslavia and Poland. It is better that these millions, living on the fringe of fabulous European prosperity, should have work of some sort, but it is as well to be clear on the fact that the departure of most of a region's active men (there are parts of Spain, Portugal and Anatolia where this has happened) marks the beginning of a decline into a condition of backwardness that will be much more costly to repair than the "over-population" now complained of. It would be easier, right now, to stimulate development in crowded parts of Greece than

to do so in areas that have sunk into age-old slumber because of loss of their menfolk, such as Auvergne.

Finally, there is the question of the spiritual impact of advanced Europe on the countries who send there millions of workers. Apparently, that impact has no short-term political implications since Messrs. Franco and Salazar are content to let their subjects go abroad, and have had no more cause to regret it than to regret opening up their countries to the tourist trade. The truth is that the migrant worker in Europe lives a quite isolated life, lacking the time, language and inclination to take any interest in matters other than earning cash as fast as possible, and meeting no encouragement from his hosts to do otherwise. Most of the migrants are peasants, who have not seen urban life in their own countries and cannot read or speak correctly their own language; efforts to initiate them into a foreign tongue and culture, therefore, usually fail. Where there is a prior political emigration, such as the Spanish Republicans, attempts to indoctrinate the temporary newcomers are made, but seem to be no more successful. These migrant workers, too, are seeing the least appealing side of industrialism for they get the worst jobs and poorest living conditions; they would scarcely go back as advocates of that way of life. Apart from the immense envy evoked by the sight of Europe's prosperity, the spiritual impact of emigration seems slight.

The Spirit of Bretton Woods

PAUL BAREAU

LONDON:

A TWENTIETH ANNIVERSARY is now being celebrated, but hardly with the flourish of trumpets which it deserves. It was in July 1944 that the Allied Powers, still locked in the battles of the World War II, sent their delegates to the conference of Bretton Woods in the United States and agreed on plans for setting up an International Monetary Fund and an International Bank for Reconstruction and Development. This was a remarkable gesture of faith and optimism. It had been preceded even more significantly by the preparatory work done in 1942 and 1943, years when the Allied fortunes had sunk to their nadir. It was at that period that John Maynard Keynes and some of the best brains that were working with him at the British Treasury, elaborated the first "blueprint" of a new international monetary system. This was the International Clearing Union complete with a new international unit of account, based on gold, to be known as the "bancor".

These labours were indeed symbols of faith and hope, with some tinges of charity in the outlines of the World Bank project. The greatest contrast between the immediate aftermath of the first and the second World Wars can be explained by the thought that had been given during the second war to the economic problems that would have to be faced at the end of hostilities. In 1918 after the end of the first war the formula and the limits of human intelligence and foresight were encompassed in the phrase "back to normalcy".

The world was soon to know what that meant. In terms of monetary policy it was the sharp deflation of the early 1920s and in Britain a premature return to the gold standard at the wrong parity. Soon thereafter came the great crash which began in Wall Street in 1929 and the depression that was to sweep the world and lead to the breakdown of the gold standard and the international monetary system for which it stood. This was no great testimony to Western economic civilisation and intelligence.

We were saved from all this by the revolution in economic thinking that was largely inspired by Keynes. It is easy to find fault with his mathematical formulae and to accuse him of apparent inconsistencies. But there can be no quibbling with his basic condemnation of the sacrifice of the economy

to the concepts of financial "normalcy" and orthodoxy. There can be no quarrel with his basic teaching that man was not made for money but that money should serve humanity — to which should be added that if money is to be a good servant it must have reasonable stability.

The work that was done during the war years in preparing the blueprints for the brave new world that was to emerge after victory had been won was suffused with this Keynesian philosophy. It is this which provided the happy contrast with the bitter experience of the immediate post world war one period. After 1946 we had continued economic expansion, the gradual move towards currency convertibility, the reasonable stability of exchange rates; and as the other side of the medal, a persistent though relatively modest depreciation in the value of money.

Having paid this compliment to what might be called the spirit of Bretton Woods, we must after this span of twenty years ask whether all the hopes that had been placed on it have been realised. The answer is very clearly "No". On the monetary front we are still groping for ways of increasing the international reserves without which the expansion of world trade, the freer movements of capital, must be hampered. The International Monetary Fund has not become the central bank of central banks and filled the role which Keynes had cast for it in his own Clearing Union scheme. Its functions have been much more limited. It has provided short-term credits to member countries in temporary balance of payments difficulties. It has given copious good advice. It has provided a meeting place where the monetary authorities of the world have been able to discuss their common problems. But the system it has instituted is still operated with the help of a series of compromises and improvisations. The search for a more satisfactory and permanent solution is evident in the labours that have been proceeding amid the "group of ten" in Paris and the working party of OECD to improve the international monetary system.

The Fund, however, was merely one leg of the tripod that was to support post-war reconstruction. The second leg was the Bank for Reconstruction and Development. The third was an International Trade Organisation which was to provide

for world trade, the code of conduct and the meeting place for the discussion of tariffs, quotas and related matters, which the Fund provided for world payments. The work which has been done on the trade front through the General Agreement on Tariffs and Trade, the legatee of the stillborn International Trade Organisation, has been based on the philosophy of multilateral freedom of trade, as symbolised by the most-favoured-nation clause.

This philosophy has great virtues, but it also has shortcomings. The doctrinal free trade approach will probably lead to a permanent segregation between primary producing countries and those that are industrialised. Given the vast advances in industrial technology and the capital resources needed in the new electronic and computerised industrial revolution upon which the world is entering, free trade would lead inevitably to a constant widening of the gap between the richer and the poorer nations.

This danger has been recognised. It dominated the recent United Nations Trade and Development Conference in Geneva. This marked a definite retreat from what might be called the

"spirit of Bretton Woods". That spirit as interpreted in the United States included a phobia against preferences. Yet one of the major proposals made at the Geneva conference was an extension of preferences in favour of all developing countries. This may well be the line along which the new trade organisation that will parallel GATT will be working.

The gap between the poor and the rich is the primary responsibility of the World Bank and its affiliates. Not enough has been done to fulfil the high hopes that were engendered on this score at the Bretton Woods conference. Reconstruction has been achieved; development has a long way to go. Even here however good work is being done. The World Bank's latest affiliate, the International Development Association, whose resources are being substantially increased, serves the cause for which the Bank was set up.

The spirit of Bretton Woods is still alive and the institutions which it created show reassuring signs of flexibility and capacity for empirical adjustment. We can still look back to that conference held in the hills of New Hampshire, with gratitude and a feeling of admiration for the foresight of its participants.

Trade or Aid?

PAUL EINZIG

RELATIVELY LITTLE attention has been paid in Britain to the lesson that has emerged forcefully from the recent Geneva conference on aid to developing countries. The demand put forward by these countries that their exports should enjoy preferential treatment caused resentment in all quarters. Even those liberal circles which have always been in favour of giving developing countries the maximum of assistance are against this formula on the ground that its application would prejudice the chances of the Kennedy round for tariff reductions, and it might even threaten the very existence of GATT.

This attitude is in keeping with the general attitude of advanced countries — in particular the United States and Britain — to prefer giving financial aid to less favourably placed countries rather than permit their goods more freely. To put it succinctly, they prefer aid to trade. Throughout the early post-war period the United States resisted efforts to lower the American tariff wall preventing Europe and other continents from balancing their accounts with her by exporting more to the United States. Rather than accepting larger quantities of imported goods, the Washington Administration distributed lavishly foreign aid in various forms, enabling the rest of the world to buy more American goods without having to pay for them in the form of exporting to the United States more of their own goods. Powerful vested interests have arisen, American firms whose prosperity has come to depend on maintaining American foreign aid in spite of the fact that the United States is no longer in a position to dispense such aid so lavishly, owing to the decline of her gold reserve, the increase of her foreign indebtedness, and her persistently adverse balance of payments.

Britain, too, preferred aid to trade, though in a different sense. For many years before her colonies achieved independence, she prevented them from spending their accumulated sterling balances by enforcing the rule that colonial note issues must have a 100 per cent cover in the form of sterling balances. This in spite of the obvious fact that in tropical countries a very high percentage of paper money is eaten up by the white ants or disappears for ever in various ways, so that it will never be presented for conversion into sterling. In spite of this, for a long time, for each pound worth of colonial notes one pound sterling had to be held in reserve by the Currency Boards. To make up for this handicap, the British Parliament passed a series of Colonial Development and Wel-

fare Acts as a result of which the British taxpayer had to provide large amounts for free gifts to colonies. It was not until the last few years of colonial rule that the system was relaxed somewhat by authorising the Currency Boards to invest part of their reserves in the colonies.

Developing countries are undoubtedly in need of aid. But what is incomparably more important is that granting them gifts or loans — in many instances the difference between the two is only a matter of form, for the lender stands very little chance ever to be repaid — is to enable them to help themselves. This could be done by assisting them in their industrialisation and in the better utilisation of their agricultural resources. But in itself such form of aid is not sufficient unless the developing countries are enabled at the same time to find foreign markets for their increased output, whether of raw materials or manufactures.

In spite of cheap labour that is usually available in such countries, they are apt to be handicapped in many ways in international competition. It is therefore reasonable to give them a chance in the form of tariff preferences for their exports. In doing so they might be able to achieve an export surplus which would enable them to pay for the imports of the capital equipment they need for their further development. This would obviate the necessity for advanced countries to assist them with the aid of outright gifts or of loans of dubious security.

From the point of view of the developing countries, it would greatly assist them morally if they could feel that they are on their way towards being able to work out their own salvation. Dependence on aid is apt to be demoralising. It is comparable with the operation of the welfare state which has generated in advanced countries a mentality taking it for granted that there is no need for recipients of benefits ever to exert themselves to make it unnecessary to depend on benefits.

From the point of view of the advanced countries, expansion of trade with the developing countries on a basis of give-and-take is a much more satisfactory basis for their economic and political relations with them. Human nature being what it is, receiving gifts, so far from generating a feeling of gratitude, is apt to generate an atmosphere of resentment on the part of the recipients of one-sided favours. Receiving loans and long-term capital in the form of direct investment is an

INDIANOIL IN STRATEGY OF DEFENCE

Only INDIANOIL can build and maintain the supply line for Defence — to bring petrol and oil where they are needed most, when they are needed. ☐ INDIANOIL has been working in close collaboration with Defence, building such supply centres at strategic points.

GROWING STEADILY EVERY YEAR—

THE BANK OF BARODA

Established as a local bank with about 20 employees, the Bank of Baroda is now one of the leading banks in the country, with 205 branches. These are spread all over India and abroad and collectively employ over 5,000 people. Deposits total more than Rs. 140 crores. This dramatic and dynamic growth has been the result of meticulous planning and courteous service. Moreover, the Bank of Baroda has on its Board of Directors, men who are eminent in the industrial and financial world—thereby enhancing the bank's stability and prestige.

even worse basis for satisfactory relations. The operation of foreign enterprise is usually a source of constant reciprocal irritation between the countries concerned. And the existence of a large foreign debt or of a large invested foreign capital provides temptation for Left-wing parties to achieve popularity by agitating in favour of expropriation.

It is much more satisfactory for all concerned if aid were to assume the form of preferential tariffs. The cost in the form of loss in customs revenue would not exceed the cost of fin-

ancial aid. If industries in advanced countries were to suffer some disadvantage in the form of losing markets, surely such a sacrifice is well worth making for the sake of accelerating the growth of developing countries. The Geneva formula should be studied with care. The only ground on which it may be found objectionable is the claim of developing countries to force it on developed countries in some international assembly in which they would easily outnumber the latter. The right way to proceed is for developed countries to realise the need for making the concessions.

Pursuit of Liberal Trade Goals

GUY SIMS FITCH

WASHINGTON:

THE US Office of Emergency Planning (OEP) has just come up with a new and significant decision. It has rejected a request for special protection for the American manganese and chromium industries, ruling, in effect, that imports are not unduly damaging to these industries, and that they do not impair or threaten the national security. This finding has an importance that goes beyond the merits of the case in question. It represents but the latest of a number of actions taken by the US Government in recent months that effectively bolster the basic position of the United States as an advocate of freer world trade. Another example of this US position has been the government's dismissal of several recent charges of dumping levelled at foreign exporters by some American companies. As a matter of fact, the administration of President Lyndon B. Johnson has done more than merely react on industry moves. It appears to have gone out of its way to emphasize the US interest in eliminating "outworn" protectionism wherever and whenever feasible.

A prime target of administration review has been "escape clause" actions instituted by the United States over the past decade. Despite the publicity accorded them, there are only eight such actions still on the books. In essence, they represent modifications of earlier US tariff reductions as a means of safeguarding American industries found to have been damaged by rising imports. In a series of letters during the last few months, President Johnson has taken an all but unprecedented initiative. He has asked the US Tariff Commission to investigate whether such escape clause actions are still warranted—whether the industries concerned now have any real need for this kind of protection.

These presidential "requests" have a special character. They are not to be confused with the regular annual reports in which the Commission as a matter of course outlines the latest economic developments in industries receiving escape clause relief.

The President's initiative already has triggered several probes into existing escape clause actions, the special tariff relief being given the sheet glass and the stainless steel flatware industries, and the import quotas affecting lead and zinc.

One result of all this is that the Commission is busier than it has ever been with matters of this kind. The four invest-ga-

tions now in process equal in number and exceed in economic importance, all previous reviews by the Commission of escape clause actions. Such full-scale probes have been permissible since 1952, but they rarely have been undertaken till now. It remains to be seen whether any other reviews of escape clause actions—those involving carpets and safety pins, for instance—will be initiated. But those already begun indicate clearly that the United States does not intend to keep on protecting any American industry if that protection is not fully warranted.

The administration's position in favour of freer trade is further buttressed by the nature of the Trade Expansion Act of 1962. Escape clause relief criteria under this Act are far more stringent than they were under the old trade agreements legislation. So stringent are the criteria, in fact, that they have had the evident effect of discouraging domestic requests for special protection, whether in the form of quotas or higher tariffs, and any new escape clause actions appear highly unlikely at this time.

It also should be kept in mind that the President has the right of final decision on Tariff Commission recommendations—a matter of some consequence in view of Mr. Johnson's avowed interest in liberalized trade. Presidents generally have tended to follow Commission recommendations, although they have not always done so. Mr. Johnson could order denial or removal of escape clause relief, whatever the Commission's findings.

Aside from the obvious US policy considerations, this series of escape clause investigations also opens up some interesting possibilities with regard to the Kennedy Round, which the US government heartily supports and which is aimed at a major multilateral reduction of trade barriers under the 62-nation General Agreement on Tariffs and Trade (GATT). By law, the United States cannot negotiate on items for which escape clause relief is in effect.

If existing escape clause actions were to be terminated, however, the items affected might be made eligible for negotiation, and hence for new trade concessions, pending another Tariff Commission determination that the domestic industries could withstand such concessions. The result conceivably could be a potential broadening of the Kennedy Round's liberalizing impact on world trade.

Road Development in Fourth Plan

By Our Special Correspondent

NEW DELHI :

MEETING AT Srinagar last week, the Transport Development Council endorsed the recommendation of the Working Group set up by the Ministry of Transport at the instance of the Planning Commission, that the allocation for road development programmes in the fourth Plan should be about Rs. 1,150 crores.

The Council also approved the idea of setting up road planning boards at the Centre and in the States for suggesting priorities and phasing of road development programmes and for reviewing the progress periodically. It stressed the need for having an integrated road plan, both for the Centre and the State Governments, to meet the requirements of the various sectors of the national economy. The Conference recommended that a phased programme for road development should be drawn up after carefully assigning priorities. There should be economic justification for every scheme to be undertaken. Large projects should be backed by cost benefit studies.

In view of the increasing number of heavy vehicles, the Council further recommended that the regional road plans should be framed keeping in view the requirements of a region as a whole, special attention being given to the less developed areas such as Nagaland, Manipur and Assam, which were also border areas.

Priorities Recommended

The Council also recommended priorities for various categories of roads and emphasised that the National Highway system should be adequately expanded to meet the requirements of a developing economy. In regard to roads of inter-State importance, the Council suggested that the Centre should help financially in the construction of bridges near the boundaries of the States, while the State Governments should build the required connecting road links to these bridges.

The need for setting up testing and control laboratories in various regions was also emphasised by the Council. Facilities for training technical personnel, adoption of mechanised methods of construction on an increasing scale for ensuring roads of higher specifications for heavy traffic were also recommended by the Council. According to another recommendation of the Council, proper assessment of the road-making machinery requirements on a national basis and steps to promote indigenous manufacture should be taken expeditiously.

To tackle the problem of strengthening the weak and old bridges and culverts, which is a big task requiring considerable finances, the Council suggested drawing up of a crash programme to meet the minimum needs.

Emphasising the urgency of development and proper maintenance of rural roads, the Council agreed that a fair percentage of the State plan funds for roads should be earmarked for rural roads. Financial assistance should also be given by the Union Government for this purpose.

To cover un-regulated burrow pits along National and State highways, the Council urged the association of Landscape Architects in the design and lay-out of roads, so that the highways could be made as attractive as they usually were in foreign countries.

The Council pleaded for simplification of the existing procedures to expedite the execution of road works. It noted that a working group had been appointed for the purpose and was expected to submit its findings within a few months.

In regard to road transport, the Council suggested the amendment of the Road Transport Act, 1950, to enable the constitution of corporations under it. The present company which has been incorporated to provide goods transport service in certain areas of Assam and West Bengal, the Council recommended, should be converted into a corporation under the Road Transport Act and the field of its operations should be extended to inter-State routes in other parts of the country, if necessary.

The Council wanted that the limit of 300 miles recommended by the inter-State Transport Commission for unrestricted movement of oil tankers should be relaxed if it could not be totally removed.

For fostering tourism, the Council recommended that the State Governments should finalise and notify by October 31, 1964, the rules under the Motor Vehicles Act, 1939, for country-wide operation by tourist vehicles without counter-signature of their permits by various regional and State transport authorities. These rules, which would allow the grant of all-India permits for 50 tourist taxes and 10 tourist buses by each State, would be based on orders already circulated for this purpose by the Union Transport Ministry.

★★

The port development programmes and the Sethusamudram Canal Project may be allocated not more than Rs. 200 crores under the fourth Plan. Earlier it was estimated that these schemes would require an outlay of approximately Rs. 243 crores.

This downward revision is understood to have been recommended by the experts of the Planning Commission who feel that allocations of Rs. 150 crores, Rs. 30 crores and Rs. 20 crores would be sufficient for the development of major ports, minor ports and the Sethusamudram Project, respectively, as against Rs. 178.5 crores suggested by the Working Group on Port Planning for major ports and Rs. 45 crores and Rs. 21 crores recommended by the Transport Ministry for minor ports and the Sethusamudram Project.

The Planning Commission experts have recommended that in addition to increasing the capacities of the ports to meet the anticipated traffic, more attention should now be paid to increasing the efficiency of port operations and management. Man-power training plans for ports, they say, have not received adequate consideration in the past. Without adequate man-power planning and drawing up of proper programmes for fresh recruitment, the present technical and administrative weaknesses of the port authorities, they add, will become more marked.

For drawing up realistic programmes for the development of various ports, the experts have suggested that each port authority should be suitably equipped. Except for Calcutta and Bombay, the other port authorities at present do not have sufficient technical personnel for preparing feasibility studies, much less detailed project reports. It has been recommended that while the Calcutta and Bombay ports should take early

steps to develop and strengthen their technical organisations on their own with a view to assisting other ports, the Ministry of Transport should organise a well-equipped technical organisation capable of undertaking investigations, preparation of project reports and supervision of construction of difficult works. It has been further recommended that to the extent possible, for a number of ports at any rate, it would be desirable to establish a "pool" for higher technical and administrative personnel. This would help in achieving high level of competence, attracting able men to work in ports and in creating a greater sense of security in port personnel.

The experts have further recommended that action should be instituted at an early date for filling up the lacuna of lack of engineering and harbour research facilities and stepping up of indigenous production of modern equipment required at the ports.

The total traffic handling capacity of the major Indian ports is expected to go up to 62 million tonnes by 1965-66. It may have to be expanded to 120 million tonnes by 1970-71.

★★

According to the estimates of the private sector oil companies, the demand for lubricants in India is expected to go up to 545,000 tonnes in 1968 and further to 930,000 tonnes in 1971. The public sector Indian Oil Company, however, anticipates this demand to increase to 500,000 tonnes in 1968 and to about 800,000 tonnes in 1971. The Union Ministry of Petroleum and Chemicals, it is learnt, proposes to fix the fourth Plan target for lube oils production midway between these two estimates, i.e., around 860,000 tonnes. The Ministry feels that the demand for lubricants may go up to about 525,000 tonnes in 1966.

The indigenous production of lube oils by the end of the current Plan period is expected to increase to nearly 70,000 tonnes — about 25,000 tonnes from the Digboi refinery and approximately 45,000 tonnes from the Barauni refinery.

As reported in this column earlier, five new lube oil plants are proposed to be set up during the fourth Plan period to fill the gap between supplies from indigenous sources and the anticipated demand. Negotiations for one of these plants, to be set up at Trombay in equal partnership between the Union Government and Esso, are stated to have now reached the final stage. This unit will have a capacity of producing annually 145,000 tonnes of lubricants.

Joint Venture

Of the other four plants proposed to be set up during the fourth Plan period, one with a capacity of 200,000 tonnes per annum may be set up, again at Trombay, as a joint venture of the Government of India and Burmah-Shell. The remaining three plants are proposed to be put up at Cochin/Madras, Koyali and Haldia. The Cochin/Madras plant is likely to have a capacity of 100,000 tonnes. The Koyali and the Haldia plants may have a capacity of 140,000/150,000 tonnes each. There is also understood to be under consideration a proposal to expand the production at the Barauni unit.

The two Trombay plants are envisaged to go on stream in 1966-67. The Cochin/Madras and the Koyali units may start production in 1967-68. The Haldia plant will be the last one to be commissioned into production, the target date for it being 1969-70.

With the setting up of these five plants, the country's requirements of lube oils are expected to be largely met from indigenous sources. Some special types of lubricants may, however, continue to be imported.

The five plants are expected to cost Rs. 35 crores. Nearly

65 per cent of this expenditure may have to be incurred in foreign exchange.

★★

Disappointed at the performance of the private sector during the current Plan in such vital industries as alloy and special steels, fertilizers, newsprint and cement, the Planning Commission, it is understood, is thinking in terms of allocating some reserve funds to the public sector in the fourth Plan so that the public sector may step in if the private sector again fails to fulfil the tasks proposed to be assigned to it. The Planning Commission is said to be of the view that a mechanism should be evolved to keep a watch over the private sector's progress in key industries so that remedial action can be taken well in time. Every effort, of course, is proposed to be made to study and solve the genuine difficulties faced by the private sector in implementing the programmes of development in the key industries.

★★

The Agricultural Production Board, it is understood, has recommended the use of commercial banks for channelling credit to cultivators in areas where co-operative credit supplies are inadequate. A scheme for this purpose is expected to be finalised shortly in the light of the experience gained from an experiment conducted in this regard in Mysore recently.

Meeting here last week, the Board is further understood to have decided to accept the suggestion of the State Chief Ministers' Conference that in respect of minor irrigation, all plans that are feasible should be implemented by the State Governments. Approval of all such projects, the Board, however, recommended, should be subject to the conditions that they are quick yielding schemes and are completed within a specified period depending upon the size of the project.

In regard to the working of irrigation tubewells, the Board is stated to have felt that the question of granting subsidy for tubewell irrigation on a basis similar to the subsidy at present extended to canal irrigation or open-well irrigation should be examined.

In regard to the decision of the Board at an earlier meeting that the facilities for soil testing should be augmented, the Board was informed that an expert team had examined the present soil-testing facilities and indicated the location for the new soil-testing laboratories. The State Governments had been informed of the recommendations of the team and requested to include the setting up of these laboratories in their respective State plans.

The Board is said to have endorsed the view of the State Chief Ministers' Conference that the concessional rate at present given for aerial spraying of pesticides on cotton and oil-seeds crops should be extended to foodgrains. The concession involves a 50 per cent subsidy on the cost of pesticides and charging of a nominal fee of Re. 1 per acre for the use of aeroplanes.

In order to give a fillip to the improvement of indigenous livestock by cross-breeding with imported breeds which would help in increasing milk yield, etc., the Board decided that the purchase of stock, namely, young calves, for this purpose should be subsidised.

On the complaints about the inadequacy of cement supplies for agricultural programmes from some States, the Board suggested that efforts should be made to divert the annual increase in cement production exclusively to agricultural purposes.

★★

The two lists of industries in respect of which applications for licences under the Industries (Development and Re-

gulation) Act will continue to be considered on merits or ordinarily rejected without reference to the Licensing Committee have been revised by the Union Government. Eight new industries have been added to the banned list. These include certain auto ancillaries, industrial fans and blowers, winding wires, bleaching powder, sodium aluminate, bicycle tyres and tubes and rubber accelerators. This list now comprises 89 engineering industries and 106 non-engineering industries.

Eighteen industries have been transferred from the banned list to the open list. These include industries producing calculating machines, refrigeration plants for industrial use, pulp and paper making plants of above 25-ton capacity, power and industrial alcohol, asbestos sheets and pipes, glazed tiles, plasticizers, PVC resins and compositions and chemical fertilizers. This list now consists of 149 industries — 79 engineering industries and 70 non-engineering industries. It is, however, only an illustrative list and does not exhaust all the fields of industry in which new capacity is to be licensed.

Both the new lists will remain in force up to December 31, 1964. The details are published in the Records and Statistics Section of this issue.

★★

Some details are now available of the National Iranian Oil Company's collaboration offer to the Government of India for the proposed Madras refinery. The NIOC, it is learnt, is prepared to supply crude to this refinery from the Darius fields in exchange for a minority share in the equity capital of the refinery, at \$1.43 per barrel f.o.b. Persian Gulf ports on a long-term contract basis. Initially, this contract may be for five years, with an escalation clause for adjustment in freight rates and crude prices in the light of the changes in the world market. Provision is proposed to be made in this contract for taking the Oil and Natural Gas Commission's crude, if and when available, either from indigenous sources or from the Middle East where ONGC proposes to prospect for oil.

As regards the management of the refinery, the NIOC is believed to have asked for provisions similar to those agreed to by the Union Government with Philips Petroleum in the case of Cochin refinery. This implies that the Managing Director of the Madras refinery will be a nominee of the NIOC or its US collaborator, the American International Oil Company, for the first five years. The Chairman of the Board of Directors of the refinery will be Government's nominee.

The whole of the foreign exchange required for building the refinery will be made available by the NIOC and its American collaborator, partly in the form of their share in the equity capital and the rest in the shape of commercial credit. The repatriation of the loan with interest, dividends and of the capital investment in the event of nationalisation has to be guaranteed by the Government of India. The services of the Indian Engineers Ltd., a partnership concern of the Government of India and the Bechtel International of the USA, are to be utilised as contractors for constructing the refinery.

In lieu of the product offtake rights, the NIOC has asked for a guaranteed refinery margin.

Since the Darius crude has high sulphur content, the cost of the refinery may be in the neighbourhood of Rs. 15 crores. A sum of Rs. 1.5/2.5 crores will be required for setting up a hydro-cracker or desulphitation plant to rid the crude of sulphur impurities.

The NIOC is also believed to have offered to make available to the Indian Oil Company petroleum products at favourable terms till the Madras refinery goes on stream.

Although these proposals are obviously not as attractive as those of some other contenders for the Madras refinery, owing to higher capital cost, the burden involved in servicing

and repayment of the commercial credit to be made available to finance the foreign exchange component of the project over and above the minority share of the NIOC and the American International Oil Company, offer of untried crude (crude was discovered in the Darius fields only early this year and production till recently has been only of the order of about 38,000 tons) and inflexible management, the Government of India is understood to be inclined towards collaboration with NIOC as a quid pro quo for Iran favourably entertaining ONGC's bid for off-shore oil concessions in her territory.

★★

Several States and the Central employer Ministries are understood to have expressed serious doubts about the feasibility of implementing the recommendations of Bonus Commission. They are believed to have pointed out that apart from adding to the burdens of the public sector enterprises which are mostly in the developmental stage, the Bonus Commission's recommendations, if accepted, will accentuate the uptrend in prices at a time when the expanding prices spiral is creating a great headache for the Government.

The whole matter, it is learnt, will be soon considered by the Economic Secretaries Committee whose recommendations will then be placed before the Union Cabinet. The issue is also likely to be discussed at the Indian Labour Conference at its Bangalore meeting.

The Labour Ministry is said to be worried because all the trade union organisations in the country have been demanding as early acceptance and implementation of the Bonus Commission's report. One organisation has even threatened to launch agitation if the Government delays its decision.

★★

The Planning Commission is understood to have approved the Steel Working Group's proposal for fixing the fourth Plan mild steel production target at 17.3 million tonnes ingots. This will mean almost doubling steel production between 1965-66 and 1970-71. It is estimated that India will be producing about 8.9 million tonnes ingot steel at the end of the current Plan.

The expansion of the existing plants — that of TISCO from 2 million tonnes to 3 million tonnes, of IISCO from 1 million tonnes to 2 million tonnes, of Bhilai from 2.5 million tonnes to 3.5 million tonnes, of Durgapur from 1.6 million tonnes

Eastern Economist 20 Years Ago JULY 28, 1944

THE ESSENTIAL factor is that, given goodwill on all sides, the "abnormal war balances" could be assimilated into the multilateral world economy, without prejudice to the essential short-term and long-term interest of any country concerned. Even though the machinery of Stabilization Fund has refused to be saddled with this function, it could be facilitated equally by the International Bank or by an ad hoc machinery. Indeed, Britain's international debt position is so far from being bankrupt that the problem could very simply be solved, to the benefit of both Britain and her creditors, if she agrees to go back towards her net creditor position by repaying a part or whole of her obligations with a fraction of her foreign security holdings. Proposal for funding of sterling obligations does not reduce the current burden on Britain. As for repudiation, it would indeed be a very short-sighted policy for Britain, for not only will she thereby be deprived of the definite and direct benefits which rapid economic development in countries like India would bestow on world trade in general and British trade in particular, but she would also have lost the goodwill and commercial reputation she has built up for centuries, a goodwill, which, presumably, has always given her a measurable cash value.

to 3 million tonnes and of Rourkela from 1.8 million tonnes to 2.5 million tonnes — will raise the production to 14 million tonnes. The Bokaro plant is expected to yield another 1.5 million tonnes. The rest of the output will come from the Salum Steel Plant and the other integrated steel unit envisaged to be established in the Goa/Hospet or Visakhapatnam/Bhailadila area.

Although the Commission has endorsed the feasibility of producing 17.3 million tonnes ingot steel by 1970-71, it has yet to satisfy itself about the details of the programme. It has asked for precise information about the action being taken on the phasing of the expansion plans of the existing plants as well as such information in regard to the setting up of the

proposed steel plants.

★★

Another addition to the Union Ministry has been made with the appointment of Mr. T. N. Singh as Minister of State for Industry and Supply. Hitherto, Mr. T. N. Singh had been the Member for Industry in the Planning Commission. As Minister of State, he will look after the heavy engineering section in the Ministry of Industry and Supply.

★★

According to an official announcement made last week, the next session of the Lok Sabha will commence on September 7. The Rajya Sabha also will meet for its next session on the same day. Both the Houses will remain in session till October 3.

Strangulation by Stages

From Our Correspondent

BOMBAY:

THE REPORT that the Government of India has issued instructions to local bodies in centrally administered areas, statutory bodies and all government corporations or companies in the public sector to have their banking business only with the State Bank of India and its subsidiaries may not have come as a bolt from the blue to the banking sector. But it has given them a jolt all right. The move to make the S.B.I. monopolise all banking business in the public sector, however, is nothing new. It started some time ago, as, for instance, when the Government entrusted the handling of all the PL 480 counterpart funds to the S.B.I. For quite some time, it is well known, the State Governments too have been issuing similar instructions (as the Union Government is reported to have done now) to all local authorities under their jurisdiction and all State-sponsored institutions to do their banking business exclusively with the S.B.I. or with co-operative banks. Some State Governments like the Maharashtra State Government have, in fact, been long insisting on all co-operative societies to have their bank accounts only with co-operative banks. Such of the co-operative societies as had their accounts with some scheduled bank or the other have been compelled by the Registrar of Joint-stock Companies, by virtue of powers said to have been invested in him under Co-operative Societies Rules, to transfer them to co-operative banks. The S.B.I. itself, it is believed, has been issuing directives to its branches and subsidiaries to persuade all public sector organisations to open accounts with them even when these organisations have had long established banking connections with one or more scheduled banks.

Evidently the authorities feel that the time has come to shift from persuasion to pressure. Whether this is part of a bigger strategy or the thin end of a wedge to bring about bank nationalisation is anybody's guess. But, confining ourselves only to the reported move to extend the scope of activities of the S.B.I., we feel we must utter a note of caution here about the probable effects of the proposed move. One immediate result would be to deprive the other commercial banks of the business they are having now from Government or semi-Government undertakings. This business consists of both deposits which these bodies have been keeping with commercial banks and advances which the latter have been extending to the former (admittedly on more liberal terms than the S.B.I.), apart from other sundry banking services. Is this deliberate move warranted? Without any specific Government directive, the State Bank of India has even now been enjoying a handsome share of the country's total banking business. On July 10, for instance, the total deposits of, and the bank credit extended by, the S.B.I. amounted to Rs. 643.54 crores and Rs. 356.99 crores, respec-

tively, as against the total deposits and the total bank credit of all scheduled banks of Rs. 2,405.57 crores and Rs. 1,767.36 crores, respectively. In other words, the share of the S.B.I. out of the total volume of business handled by all scheduled banks worked out to about 25 per cent as regards deposits and to some 20 per cent as regards bank credit. It does not seem necessary accordingly to take any special steps to bolster up the business of the S.B.I. unless it be for some pre-conceived or ideological reasons.

Banking circles feel naturally concerned over the reported move not so much because they stand to lose a sizable share of their existing business to the S.B.I. — although they do mind it — as because of the extra aggressive bargaining power that the shift will invest the S.B.I. with. Then, again — and this is a very important consideration — by compulsorily reducing the resources available to other commercial banks, the authorities will themselves impair the capacity of these banks to support the Government's borrowing programme, although they seem to have guarded themselves against this risk by the stepping up of the liquidity ratio of commercial banks. The move may also lead to unhealthy competition among other commercial banks for the reduced volume of business, and this, coupled with the lower profit brought about by the shrinkage in the total volume of business will mean lower profits to these banks and, consequently, lower returns to investors in bank shares. As it is, bank shares are not particularly fancied by investors and the Index Number of Prices of Bank Shares has shown a rise of less than four per cent per annum over the past year. Henceforward even this modest rise may not be there; on the other hand, there may be a marked fall in prices of bank shares.

One very strong argument against the proposed move is the uncertainty that it has given rise to about the intention of the powers-that-be. It is high time that they made these clear to the people, who might otherwise well wonder whether this "strangulation by stages" is not a compromise formula that they are offering to protagonists of bank nationalisation.

★★

The Unit Trust of India has decided to extend the initial sale period of units up to August 14 instead of July 31, which was the closing date announced earlier. In a Press note, the Trust has stated that the response to the sale of units had been good in the sense that more than 40,000 applications had been received until July 22. There was a regular flow of applications from all over the country and the majority of the applications were in amounts ranging from Rs. 100 to Rs. 1,000. It means that great interest had been evinced in the units by small and medium income groups.

It was also announced by the Trust that the processing of applications had already started and that units would be issued within a month or two. The unit holders were advised to keep with them the acknowledgements until they

had received the certificates. They were also requested not to send the acknowledgements to the office of the Trust. The scheme has been amended so as to provide for holding of units by joint applicants on "either or survivor" basis. Currently, the scheme provided for the holding of units by two or more individuals on a joint and survivor basis only. Another amendment in the scheme has enabled societies registered under the Societies' Registration Act, 1860 to purchase and own units in their own names.

★★

Under the Maharashtra Foodgrains (Declaration of Stocks) Order, 1964, stocks of foodgrains, as on July 31, will have to be declared for the first time by August 5 to officers specified by the authorities. A non-producer possessing less than 10 quintals of all foodgrains is required to make a declaration, while one having in possession 10 quintals or more will be required to do so. A producer having in his possession 25 or more quintals of all foodgrains is required to make a declaration. According to this Order, the definition of foodgrains includes paddy (rice in husk), rice (husked), wheat, jowar, bajra — whole, broken or flour thereof. For computing the quantity of paddy, one and a half quintals of paddy will be deemed equivalent to one quintal of rice. The Order has authorised the inspecting officers to seize stocks of foodgrains alongwith the containers if they have reason to believe that the Order has been contravened, or is being, or is about to be contravened.

Problems of Tea Industry

From Our Correspondent

CALCUTTA:

THE APPOINTMENT of a committee by the Union Government to enquire into the problems of the tea industry and examine its needs from the point of view of the assistance, financial and otherwise, which needs to be given to enable the gardens to expand their output and exports in line with plan targets, has been naturally welcomed, but a good deal will depend on how soon the committee completes its investigation and how promptly the Government acts on the recommendations which the former will make. There is a general feeling however that the Government means business this time, because Mr. Manubhai Shah, who heads the Ministry of Commerce and who is most anxious to promote India's tea exports, has already promised that the Government will give the tea industry all necessary help in its effort to raise production and maximise exports. An earnest of the Government's seriousness is also seen in the fact that the composition of the committee has been made as representative as possible, with all interests concerned — the Tea Board, the Indian Tea Association, planters' associations, leading tea companies and the State Governments of Assam, West Bengal, Madras and Kerala — represented on it.

In this context, it would not be out of place to review the current problems of the industry as they have been represented by organised associations from time to time. In the first place, the industry finds the tax burden too heavy, which has reduced its competitive capacity in export markets. Secondly, and because of heavy taxation, the industry is unable to build sufficient internal resources for financing its replanting and expansion programmes. Thirdly, for very obvious reasons the industry is unable to borrow long-term from banks and facilities which now exist such as the fund of Rs. 10 crores with the Tea Board are not only inadequate, but the terms of lending make it uneconomic for most gardens to go in for Tea Board loans. The Agricultural Refinance Corporation and State Financial Corporations have not been providing much,

It applies equally to producers and non-producers of foodgrains including institutions, such as banks, corporations, etc., who hold foodgrain stocks either on their own account or on account of their clients.

★★

The Executive Director of the Indian Council of Trade Fairs and Exhibitions, Mr. Prem Nath, stated recently that during the current year, the Council would participate in three fairs at Bangkok, Ghana and Leipzig and organise two trade centres in Nigeria and Hamburg. Next year, it would participate in a larger number of fairs and take over more Government trade centres abroad. It would pay special attention to commodity fairs, which were of greater importance from the angle of exports. Enumerating the difficulties that organisers of visual publicity encountered, he stated that there was a shortage of technical personnel, lack of enough finance and inability to secure and distribute good publicity material. The main objectives of the Council were sufficiently comprehensive to include a wide variety of activities in the field of visual publicity, including the formulation of policies and programmes. Earlier, Mr. S. P. Godrej, Vice-President of the Council, stated that India was not sufficiently publicity-conscious, though he was certain that it could secure a fair share of the markets of African and neighbouring Asian countries, particularly because the cost of Indian labour was relatively low. He suggested that greater attention should be paid to market research and design.

although these sources should be expected to extend liberal help for such projects as irrigation, which now have a great bearing on the problem of increasing production. The decline in output during 1962 and 1963, it may be recalled, was largely due to droughts. Fourthly, the welfare burdens on the industry have also become heavy. The obligation of the gardens to provide housing for their labour according to definite specifications laid down by official committees now involves a heavy financial outlay, and on top of that, the Wage Board has now awarded a second interim wage increase for tea workers, which must considerably strain the estates' financial resources.

These are serious problems. The longer solutions are delayed, the greater will be the harm to the vitality and future of this industry. Tea is an agricultural enterprise, and, therefore, subject to all the usual uncertainties and hazards, and the fact that its well-being is entirely dependent on exports considerably adds to the problems. Mr. A. S. Bam, Chairman of the Tea Board, ever since he took this office, has shown a greater and more realistic appreciation of the tea industry's difficulties, and the Board under him has become a more dynamic institution, but even Mr. Bam will agree that only the promotional efforts in overseas markets, extensive though they have been, will not achieve the result desired. Tea to be exported must be produced first, and largely in quality grades, and the world now requires more quality grades and not common teas which form a big proportion of India's output. Quality grades can be produced only through an extensive programme of replanting, for which the industry must require incentives. At present, all expenditure on replanting is treated as a capital item for income tax purposes; consequently, the producers have no incentive to set apart funds from their current incomes for this very necessary development. Mr. T. T. Krishnamachari, who has included tea in the list of industries which qualify for special assistance under his 1964-65 Budget, has so far not committed himself to anything on this question, but it is reported that his Ministry is agreeable to giving some fiscal relief on this account.

Perhaps the recommendations of the committee will help the Finance Minister to make up his mind finally.

Another major grievance of the industry is that while the export duty on tea has been abolished altogether (which no doubt helped in increasing exports during 1963) the excise duty on all teas has been raised, and despite some refund on a regional basis for export purposes, the net effect has been to raise the level of the excise duty. Since the duty is collected from the gardens instead of at the auction stage (the Chanda Committee preferred this latter course), a good deal of their funds is locked up in the process for a long time. In the present phase of its unhappy financial position, the industry finds it a heavy burden, and one of the factors responsible for the industry's failure to raise production in line with the third Plan targets is said to be this obligation to pay excise duty at source, which adds to its borrowings. The committee will no doubt be urged to press the Government for changing the practice.

Although it is not one of its terms of reference, the official committee must consider the world supply demand position as it is now, and as it is likely to develop in future in the context of the rising world production of tea and the increasingly competitive nature of the export trade. India was able to export more tea during 1963, yet almost all companies report lower profits. This is because the average price realised at the auctions during the past marketing season was lower (for both leaf and dust) than that in the previous season. The current marketing season has made an even more unpromis-

Industrial Plan for Andhra Pradesh

From Our Correspondent

MADRAS:

THERE IS great anxiety to develop the industrial potential of Andhra Pradesh as it is felt that not much progress has been made in the past decade and more. The occasion of the meeting of the Central Committee of the All-India Manufacturers Organisation in Hyderabad recently was utilised to examine how the desired rate of industrial growth could be achieved. Though latterly some industrial units have been promoted and the existing undertakings have expansion plans on hand, the per capita consumption of power is very low being 15 units against the average of 50 units for all-India and the consumption in Madras of 60 units and in Mysore of 35 units. However, from the point of view of natural resources, Andhra Pradesh is more richly endowed than the other three Southern States as, besides vast resources of iron ore and coal, there are huge quantities of limestone and barytes. Agricultural raw materials also are available in plenty. It is only recently that the sugar, paper and cement industries have grown in stature. Some of the Central undertakings in and around Hyderabad will help to broaden the base of the industrial structure of the State but a lot more remains to be done and it is felt that, apart from active financial help, as in Madras, by the Andhra Pradesh Industrial Development Corporation there will have to be incentives in the shape of tax rebates for the promotion of industries in backward areas.

The All-India Manufacturers Organisation has pointed out that even in the UK, such facilities are provided for the development of industries in backward areas. However, having regard to the peculiar conditions in our country some such procedures might be difficult of adoption. The Central Government might not be agreeable to pursue any scheme for granting rebates in direct taxes as they affect the corporate sector. It has been recognised, however, that select areas in the backward regions must be developed for industrial purposes and the basic facilities like water, land and electricity

ing start, in spite of the fact that the carry-over from the previous year's lower production was very small. The average prices at the auctions have been dropping steadily. Production has, of course, been running well ahead of last year's figure by this time, and in all probability, tea production on the whole will be appreciably higher than last year's, but higher output alone will not ensure prosperity for the industry. The auction prices are a reliable index of the world supply-demand position. Therefore, the Government, while asking the industry to produce 1,000 million lbs. (the third Plan target of 900 million lbs has no chance of being realised) by the end of the fourth Plan, must devise a scheme of aid which will help the tea companies to take good years with bad without difficulty, and perform their allotted part efficiently under the five-year plans.

It is because such a scheme does not exist at present, stock market investors, hard-headed realists as they are, have neglected tea shares for a long time despite official declarations to help the industry in as many ways as possible. With the sole exception of one — Patrakola — all tea shares have fallen in value. The fact that almost all leading companies have cut their dividends is the major reason for this, but the uncertain future outlook has also depressed sentiment. The stock market as a whole has been passing through a dull phase in spite of the increase in the Indian Iron dividend from 16 per cent to 17 per cent plus a special cash bonus of 10 paise a share. But the depression in tea shares dates back to a much longer period.

should be readily available. The Andhra Pradesh Government is aware of the need for providing these facilities and giving the maximum encouragement to entrepreneurs so that the various handicaps of slow growth can be easily overcome.

The State Government has prepared a blue-print which would require an outlay of Rs. 431 crores for the development of large-scale industries in the fourth Plan period. It is estimated that the promotion of steel and engineering industries and the expansion of the Vizakhapatnam oil refineries alone will account for a fairly good proportion in the total outlay in the next few years. It is not expected that there will be any difficulty in getting the required quantities of coal for the steel plant either from indigenous sources or from foreign countries. There will also be no shortage of power as it is expected that there will be an increase in the installed capacity to 500 mW by the end of this Plan. A large thermal plant is being set up at Kothagudem. It was indicated recently by Dr. K. L. Rao that plans for erecting a thermal plant at Ramagundam, having a capacity of 200 mW., submitted by Dr. Dharma Teja, are being examined and will be finalised shortly.

There is no doubt that during the fourth Plan many industrial units will come to the production stage and the character of the regional economy will become more industrial than agricultural. Apart from the fertilizer factory at Vizakhapatnam, it is quite likely that the oil refinery in the same area will be expanded. It has also been decided that the fertilizer factory at Kothagudem will be in the private sector as interest has been shown by entrepreneurs and arrangements are being made to secure the necessary foreign exchange and technical collaboration. It is hoped that this new large unit will be completed in the next three years.

★★

The situation as it relates to availability of natural and synthetic rubber has once again come in for examination and it has been pointed out that needless expenditure has been

incurred on imports while there had been a sizable increase in the output of natural rubber within the country and the newly started synthetic rubber plant was expected to utilise its capacity fully. Dr. Varma, the retiring President of the Indian Rubber Board, has estimated that the gap between consumption and demand for rubber will be only 35,000 tonnes and that it will not be necessary to permit large imports. In fact, there has not been any significant rise in prices for even natural rubber, following decontrol, as there were large stocks of both natural and synthetic rubber imported at prices very much lower than indigenous prices. The consumers of rubber were naturally more keen on utilising the cheaper imported products. The tyre producers particularly were handicapped because of the slump in the market and the difficulties experienced in disposing of an increasing volume of output. The new producers particularly are having a difficult time and it is feared that the working results for the current year may not be satisfactory in many cases. The new plans for raising output of trucks will certainly be helpful. But it is apprehended that, for at least a year, there may not be a pick-up in demand which will take care of the additional capacity that has been recently created for producing tyres. Some of the tyre producers are even thinking in terms of curtailing production as there has been no brisk demand and the competition from the bigger established producers has been rather keen.

Even in respect of tread rubber compound, there has been a price war. This is good from the point of view of consumers. But the absorption of the additional excise duty on tread rubber components by the bigger producers has caused hardship for some of the new tyre companies which had hoped to offset the losses on tyre sales by the profit earned on tread rubber sales. This is the reason why there has been a slump in prices of shares of tyre companies, particularly those of the new units.

The slowing down of production of tyres and tubes will naturally be reflected in reduced growth in the consumption of rubber. There will in any case have to be marginal imports during the current year. If only some policy can be devised by which the capacity of the synthetic rubber plant

can be fully utilised, there can be a substantial saving in foreign exchange expenditure. How this can be achieved is difficult to say. It is estimated that there will be a gap of 1.05 lakh tonnes by 1970 between demand and consumption and in spite of an increase in the output of indigenous rubber to 62,000 tonnes. A number of rubber estates are carrying out a vigorous programme of replantation and it is confidently felt that, after two or three years, there will be a jump in output of natural rubber. The Chairman of Cochin Malabar Estates has recently indicated that the company's programme of replantation will start yielding good results after some time though there may be a static level of output for a short period.

★★

The food situation in Madras and Kerala is rather confusing. After a decline in prices for all varieties of rice following the lifting of restrictions over procurement and movement, there has been an increase in prices latterly and it is not known whether the trade has been busy cornering available supplies or there has been smuggling of large quantities of rice to West Bengal and Maharashtra where the situation is stated to be rather alarming. The Madras Government is making serious efforts to keep down prices by opening a large number of fair price shops. It is, however, felt that the food situation can be brought under control effectively, only when the needs of Maharashtra and West Bengal have been fully satisfied. The prevalence of the high prices in these regions, particularly in Maharashtra, has had an upsetting effect on other regions. It is not clear why the Central Government has not been effecting large sales of wheat, especially when prices have risen abruptly and the consumer would be content with supplies of cheap wheat if rice cannot be had freely. Even though the Union Minister for Food and Agriculture has promised a review of the food policy and re-examination of the zonal schemes, the immediate difficulties can be got over only with liberal imports of wheat and rice and vigorous sales from Central stocks. At the same time, there should be a determined effort to bring out hoarded stocks with merchants and cultivators. If prices for essential articles are not kept in check a difficult situation is expected to develop again which may have serious political repercussions.

The moving fingerprints

I CANNOT enthuse over Mr. T. N. Singh's appointment as Minister of State in charge of Heavy Engineering in the Ministry of Industry. This job requires a man who could plan, organize, direct and supervise at the highest level — and I do not think that Mr. T. N. Singh could do any of these well. Whether his appointment has involved a process of being kicked upstairs could be debated. I would simply suggest that it has effected a painless removal of Mr. T. N. Singh from the Planning Commission. For this small mercy the nation in general — and Mr. Asoka Mehta, in particular — have good reason to be grateful to the Prime Minister. When the inside story of Yojana Bhavan comes to be written — and I hope it will be some day — I am sure that Mr. Singh would be shown to have been among the more stubborn dogs-in-the-manger, responsible for negating or frustrating much industrial effort in the private sector, through their ideological rigidities or prejudices.

I must say here that the stars in their courses seem to be favouring the Planning Commission. Mr. Singh's exit was preceded by the departure of Professor M. S. Thacker who had relinquished his Membership of the Planning Commission some weeks earlier on being appointed Vice-Chancellor of Bangalore University. Now, I have nothing against the learned Professor except that his occasional presence in this country between his frequent visits abroad have been for such short spells that he could possibly not have devoted sufficient time to his chores at Yojana Bhavan. Thus two posts of Members fell vacant recently in the Planning Commission. Besides these, there is also the much earlier vacancy caused by the retirement of Mr. C. M. Trivedi. The Prime Minister and the Deputy Chairman of the Planning Commission, consequently, have ample elbow-room for manoeuvre. I do hope that in filling these vacancies, they will sternly eschew the earlier practice of providing convenient berths for superannuated civilians, orphaned politicians or careerists and professional climbers of all kinds. There is still some dead wood, and the presence of at least one gentleman on the Planning Commission has long ceased to have any point — assuming that his original appointment had some. If the Prime Minister believes that he is under an obligation to provide alternative employment for this particular Member, he might create another post of Minister of State in the Central Cabinet since one more or less of that tribe cannot make much difference.

So far as the country is concerned, it would certainly gain by the injection into the Planning Commission of new blood of the right type. Yojana Bhavan cries out for men who have knowledge and background, passion and vision and who, above all, are not political pensioners or professional careerists. It is certainly desirable that there should be much more of specialized skills and technical expertise at the Members' level. It is also proper that a few younger men, to whom perspective planning is not merely an exercise but is also an expectation, should be found places on the Commission. I have seen it suggested that the Planning Commission is at least being adequately served in the matter of an economist. I wonder whether Dr. V. K. R. V. Rao endorses this opinion. He was, no doubt, an economist once, but I believe that he now describes himself as a sociologist. I myself would say that politics has become the first love of his maturing years. In any case, if Dr. Rao is to be considered an economist, all that I would say is that there should be another economist on the Planning Commission.

★★

The recent conference held in the Capital on family plan-

ning did come to some rather important conclusions which could be significant in raising the efficiency of the family planning movement, but could be successfully implemented only if public opinion and public support are mobilized in their favour. The conference, for instance, came to the very practical conclusion that the only effective short-term strategy would be mass sterilization for the purpose of preventing large families. There was also support at the conference for the legalization of abortion under controlled conditions. It is a pity that these recommendations have not received the editorial notice that is their due from the nation's Press. Among the five 'national' newspapers, 'The Hindu' and 'The Statesman' have chosen to be silent. 'The Times of India' and 'The Indian Express' elected to wait until their next Sunday issues came around. 'The Hindustan Times', however, was prompt with an editorial on the subject. But there were more sly winks and sniggers than seriousness in its treatment of the subject. It described vasectomy rather pointlessly as an "essentially negative solution" and expressed the fear that mass vasectomy might lead to investing sterility with "a mystique that, ironically enough, used once to go with creation". I am glad to find that 'The Hindustan Times' at least allows, even if grudgingly, that vasectomy might be justified as a "desperate economic necessity". The question is how desperate do we want to get?

'The Times of India' winds up a rather confused editorial with the tame recommendation, "whatever the steps taken or contemplated, there should be more and freer discussion of the problem, more fact-gathering and more specific action, perhaps by a specially recruited corps of field workers" — a piece of advice which goes ill with its earlier deprecation of "impressive phrases and earnest resolutions".

A wrong impression which seems to have taken hold of many who object to surgical sterilization is that this method is being advocated in exclusion of other techniques. As Mr. Asoka Mehta has made it clear however, the family planning programme has to exploit all available possibilities. All that the emphasis on surgical sterilization implies is that here, given the social and economic conditions of the bulk of our people, is a technique which could do more to reduce the fertility rate sooner than any other alternative method. I wish the Press would stop treating family planning as a subject for "light" editorials or Sunday leaders and pledge its vast resources of publicity and persuasion for promoting public participation in the family planning campaign. Incidentally, I wonder why the All India Radio has not been exerting itself at all in furthering the cause of family planning. Here surely is an area where there could be greater and more purposive co-operation between the Ministry of Health and the Ministry of Information and Broadcasting. I do hope that Dr. Sushila Nayar will soon have a talk about this with Mrs. Indira Gandhi.

★★

One of the most touching passages I have ever come across in political journalism appears in Rajaji's column in 'Swarajya' of July 25: "A Tamil rag in Madras writes suggesting that I have some deep plot of ambition based on my Indo-Pak attitude. How can I convince such folk that at 86 I can conceivably have no ambition for myself? I have hopes for my country and our people, but there is nothing I want for myself except peace of mind. I have had more honours than I ever hoped for. Even my political antipathies have not much of anger in them now. I pity those who err, for I see no good in being angry with them."

V.B.

Trade Winds

GROUNDNUT MUDDLE

THE POPULAR resentment arising from the exorbitant prices of edible oils in the State of Gujarat, which leads in the production of such oils, can easily be understood especially when the supplies of foodgrains needed by the State have not been forthcoming due to the enforcement of the zonal system. The Government of Gujarat, therefore, after consultations with the visiting Union Minister of Food and Agriculture, Mr. C. Subramaniam, issued orders on July 22, 1964, under the Defence of India Rules 1962, banning, with immediate effect, the movement of groundnut and groundnut oil outside the State, except on permit. Announcing the imposition of the ban at a press conference, Mr. Subramaniam assured that an objective assessment of stocks in the State would be made and if found surplus, regulated exports to that extent would be permitted. After prolonged discussions with the State Government on food and edible oil prices Mr. Subramaniam declared that the Union Government would shortly review the entire system of zonal restrictions on the movement of foodgrains and announce its decision well before the new season.

As has been reported earlier in these columns (vide page 77 of "Eastern Economist" dated July 17, 1964) the runaway price trend in respect of edible oils and oilseeds has been due to the increase in total demand which has outstripped the total available supplies, both in the country and the world. The efforts of the Gujarat Government at bringing down the prices of groundnut oil will, therefore, have only a localised effect and may lead to inter-State smuggling. The prices of groundnut oil in Gujarat crashed within 24 hours of the imposition of the ban — declining from Rs. 42 to Rs. 35 per tin. On the other hand, within the same 24 hours, the prices in Bombay shot up by Rs. 100 per tonne (from Rs. 2540 per tonne to Rs. 2640 per tonne) and a virtual famine is feared in the near future. The prices in Calcutta are reported to have shot up to Rs. 2,700 per tonne and in Delhi to Rs. 2,800 per tonne. Observers, therefore, feel that it will not be surprising if the prices move up to Rs. 3,000 or more per tonne. Though the Saurashtra region of Gujarat is believed to be still having a surplus stock of about 40,000 tonnes of oil, it is considered doubtful whether the Gujarat Government will issue export permits soon since the present export ban is intended to be a retaliatory measure. It is felt that if the scheme of zonal restrictions is to be extended like this, from one essential commodity to another, it will be the surest way to national disintegration.

The production of major oilseeds in the country in 1963-64 is estimated at about 63 lakh tonnes as against 66.7 lakh tonnes in 1962-63 and 68.5 lakh tonnes in 1961-62. The requirements of all types of edible oils for the next three months may be around 6,00,000 tonnes whereas the present stocks in the country may not be able to meet even half of it. Under the circumstances, it would be advisable to expedite the proposed imports of 1,00,000 tonnes of soyabean oil from the U.S.A. under the PL 480 programme. In addition, it may be worthwhile to import coconut oil with a view to maintaining our export commitments in respect of 'Vanaspatti' and groundnut oil. The indiscriminate ban on groundnut oil and vanaspatti exports is unfair to the processing industry which has, during the past years, persevered in building up markets for 'brand' products. As foreign markets cannot be dictated to suit our convenience, the patient build-up of business, yielding Rs. 50 to Rs. 60 lakhs per annum in foreign exchange, should not be destroyed light-heartedly.

Our planners do not seem to have realised the fact that the rise in prices of oil and oilseeds have been almost wholly determined by stagnant production. It is reported that the

preliminary fourth Plan oilseeds target is less than the third Plan target of 98 lakh tonnes whereas the actual production up till now has been woefully lagging behind the second Plan target of 76 lakh tonnes. In this context, while addressing the TOMCO shareholders' meeting, Mr. J. R. D. Tata put forward the suggestion of giving oilseeds' production the kind of encouragement and facilities that have been extended to plantation crops like tea and coffee. Since a crash programme for a 50 per cent increase in total production in the next few years would call for considerable investment and organisation, Mr. Tata suggested that the corporate sector should enter the field of oilseeds production.

ESSO'S DEVELOPMENT DECADE

July 29, 1964 marked the end of a ten-year period of progress of the ESSO's refinery at Trombay in Bombay. This was India's first modern oil refinery which, with its commissioning in 1954, brought about more than 500 per cent increase in the country's refining capacity, from 5,400 barrels to 30,400 barrels a day, and turning out more than 300 million imperial gallons a year of six different products. In building the Trombay refinery the ESSO Company made an initial outlay of Rs. 171 crores — an amount which still represents the largest single investment of private American capital in this country.

During the ten-year period since its inception, the Esso refinery has more than doubled its initial capacity; new units have been added to the plant and new products have been included in its range of manufacture. Perhaps one of the most tangible projections of this growth is in the foreign exchange contributions made by the refinery in recent years. It was estimated at the time the plant went on stream in 1954 that it would help save an equivalent of Rs. 1.2 crores in foreign exchange annually just by refining imported crude oil locally. But last year alone this figure amounted to Rs. 11.3 crores and the total savings since the start-up of the plant are calculated at Rs. 46 crores. All this has been made possible not only by refining crude oil locally but also by the export of surplus gasoline and asphalt and by the addition of new units designed to manufacture products hitherto imported. Thus, in July 1959, the asphalt plant was commissioned to meet the country's increasing demand for this product. Earlier, asphalt was imported in drums, the cost of which alone accounted for 32 per cent of the price. The surplus asphalt now goes abroad and, in less than five years, an amount of Rs. 4.6 crores has been saved and earned in foreign exchange. In 1962, the solvents unit was commissioned. Designed and constructed in India, the unit began with the manufacture of two new industrial solvents — Hexane and Esso Solvent 1425. But to meet a new need the unit started production of Esso Solvent 2445 early in 1964, boosting foreign exchange savings from Rs. 15 lakhs a year to an estimated Rs. 60 lakhs in 1965. Products such as Hexane and Solvents 1425 and 2445 are vital to industries like vegetable oils, textiles and rubber. By making Hexane available in India the refinery has helped to treble the export of high-purity oilcake. The solvent extraction industry uses Hexane to remove traces of vegetable oil from oilcake so that it can be utilised as cattle feed safely. The demand for Indian oilcake, particularly in the United States, is enormous and this year the export of 9,00,000 tons of cake is expected to earn the country well over Rs. 35 crores in foreign exchange.

Of the 70 odd American nationals who were connected with the plant at the time of start-up, there are now only four left; Indians have replaced them. The Indian engineers from the ESSO refinery have also been to countries like Malaysia,

Indonesia and the Philippines where they helped set up new refineries and improve the functions of the existing ones.

INTERNATIONAL BANKING CENTRE

The First National City Bank has opened an International Banking Centre in New York to serve exclusively visitors from other countries. The only facility of its kind in the United States, it is located on the corner of Park Avenue and 54th Street in the bank's uptown headquarters. The Centre will buy and sell foreign monies, cash foreign drafts, arrange remittances abroad, and complete payments coming from overseas for beneficiaries who call at its office. Other services include sale, refund and encashment of travellers checks, and sale and encashment of travellers letters of credit. It will also receive mail for clients coming to the city, assist foreign visitors with general information about New York City and sell tickets for and furnish information about the World's Fair.

TEA COMMITTEE

The Government of India has appointed a Committee, with Mr. V. V. Chari, Additional Secretary, Ministry of Finance, as Chairman, for examining the needs of the tea industry. The Committee has to submit its report to Government within three months. The terms of reference of the Committee are: (i) to examine the financial position of the tea industry with particular reference to the requirements of increase in production and exports, (ii) to review the financial assistance available to the industry from the Tea Board and banking institutions and to suggest simplification of procedures relating thereto, (iii) to make recommendations regarding the provision of finances required by the industry, (iv) to examine the structure of taxes on tea and to suggest appropriate measures for giving tax relief where necessary, and (v) to make any other recommendation that the Committee may deem appropriate for the development of the tea industry. Besides its Chairman, the Committee will consist of the following members: Mr. P. C. Barooah, M.P.; Mr. Rameshwar Tanti, M.P.; Mrs. Akkamma Devi, M.P.; Mr. B. N. Adarkar, Additional Secretary, Ministry of Finance (Department of Economic Affairs); Mr. N. S. Pandey, Joint Secretary, Ministry of Finance; Mr. A. S. Bam, Chairman, Tea Board, Calcutta; Mr. H. K. FitzGerald, Chairman, Indian Tea Association, Calcutta; the President of the United Planters' Association of Southern India, Coonoor; Mr. B. C. Ghose, Indian Tea Planters' Association, Jalpaiguri; Mr. P. Crombie, Senior Adviser, Indian Tea Association, Calcutta; Mr. Vinod Parekh, Managing Director, Messrs. J. Thomas & Co., Calcutta; a representative each of the Governments of Assam, West Bengal, Madras and Kerala; Mr. B. K. Kacker, Secretary & Treasurer, State Bank of India, Calcutta; Mr. V. Sivaraman, Managing Director, Agricultural Refinance Corporation, Bombay; Mr. R. B. Shah, General Manager, the United Commercial Bank Ltd., Calcutta (Alternate Member — Mr. K. M. Krishnamurty, Manager, the Bank of Baroda Ltd., Calcutta); Mr. P. Chentsal Rao, Secretary, Federation of Indian Chambers of Commerce and Industry, New Delhi; and Mr. K. M. Kidwai, Director of Tea Development, Tea Board, Calcutta (Member-Secretary). The Committee will have powers to co-opt other members.

BRITISH INVESTMENT IN INDIA

According to a spokesman of the Federation of British Industries, which consists of about 8,300 individual firms and nearly 300 national trade organisations with a total membership of about 45,000 firms, India ranks very high in the list of countries where British businessmen and industrialists would like to invest their capital. Judging by investments so far, Canada comes first, Australia second and India third in the

list of countries where British capital has been invested. Most of the important British industrial units are already operating in India and have been expanding their activities by reinvesting their profits. An encouraging feature now is that even small British firms are extending their activities to India and are co-operating with medium and small entrepreneurs.

U.S. LOANS FOR BEARINGS

Agreement for an American Government loan of \$4.3 million (Rs. 2 crores) which will substantially increase India's capacity to produce ball and roller bearings, was signed on July 21, 1964 between the American East India Company and the U.S.A.I.D. The US credit, in favour of National Engineering Industries Ltd., (NEI) of Jaipur, will meet the foreign exchange costs of setting up a new plant to manufacture tapered roller bearings and of expanding the capacity of existing plants which make ball bearings and straight roller bearings. This will result in a net saving to India of \$2 million (Rs. 1 crore) a year in foreign exchange. The American East India Company is a wholly owned subsidiary of NEI. The Federal Mogul Bower Bearing Inc. will provide technical assistance for the establishment of the new plant and will train several Indian technicians in the United States. The loan will assist in increasing the cumulative annual production of ball, straight and tapered bearings from 40,00,000 to 75,00,000. The project is expected to be completed by the end of this year. The loan bears an interest rate of 5.75 per cent and is repayable in 10 years including a two-year grace period. To reduce the impact on India's balance of payments, the agreement provides for NEI to make repayment in rupees to the Indian Government on the above schedule. The Government of India in turn will repay the principal to the US Government in dollar instalments spread over 40 years, including a 10-year grace period. The Indian Government will pay interest at the rate of three-quarters of one per cent during the grace period of ten years and two per cent thereafter.

TRIBUNAL FOR AIR-INDIA EMPLOYEES

The Government of India has appointed a National Tribunal to which the various charters of demands pending with Air-India have been referred for adjudication. The tribunal will be presided over by Mr. G. D. Khosla, retired Chief Justice of the Punjab High Court. On March 24, 1964, the Union Minister of Transport had made a statement in the Lok Sabha that a Commission would be appointed to evolve a rational wage structure for the employees of the two air corporations of India. The situation, however, changed as a result of the notices of strike served by a section of the employees of Air-India. The Government of Maharashtra initiated conciliation proceedings, but failed to arrive at a settlement. The Government of India, therefore, decided to refer the dispute for adjudication to a national tribunal. As the matters covered by the demands raised by the other sections of employees of Air-India are either common with or are related to the demands of the unions which have served the strike notices, Government has referred all the demands to the National Tribunal.

CORRECTION

In the last issue of "Eastern Economist" (dated July 24, 1964) under the heading "VEGETABLE OIL EXPORTS" (vide page 163) it was mentioned that with a view to checking the uptrend in the prices of vegetable oils and products, the Union Government had decided to "step up" exports of coconut oil, cottonseed oil, groundnut oil, kardiseed oil, mustardseed oil, rapeseed oil, salad oil and sesamumseed oil. There was a printing error. As a matter of fact the Government has stopped, and not stepped up, the exports of these oils.

Company Affairs

TELCO'S EXPANSION

MR. J. R. D. TATA, Chairman of the Tata Engineering and Locomotive Co. Ltd., highlighted the significance of expansion activities by the company. He stressed, in a statement appended to the annual report, that the successive expansion schemes of TELCO helped the company to reap full benefits of the scale of production and this highly productive engineering unit achieved increasing levels of efficiency. The users of Tata Mercedes-Benz vehicles would have been paying substantially higher price than they were actually paying if the company had not carried out its schemes of expansion. The output of TELCO has been increasing rapidly and its first stage of expansion to 18,000 vehicles is now virtually completed. Work has already started on the second stage intending to bring its production up to 24,000 vehicles every year. Mr. Tata indicated that Agency for International Development had approved a loan of \$11.80 million to finance the foreign exchange element of the second stage of this expansion programme. Orders for imported machine tools and equipment would be placed shortly so that further expansion materialised without any delay.

In spite of this rapidly increasing capacity, the company has not been able to meet the demand for Tata Mercedes-Benz vehicles, partly because it steadily incorporated a number of major improvements without any increase in price. In fact, the Chairman pointed out, between October 1959, when the company completed the initial phase of truck manufacturing programme, and this day, the price of its popular model increased from 30,455 to Rs. 37,619, which means Rs. 7,164. Against this increase the sales, excise and other taxes charged on this vehicle by the Union and the State Governments increased by Rs. 6,780, while the cost of imported materials and components increased by Rs. 739 which made a total increase of Rs. 7,519. In a way, excluding these two items, the company had actually reduced the price.

Referring to the financial performance of the company, the Chairman indicated that the operating profits for 1963-64 were Rs. 114.75 lakhs higher than in the previous year, but most of the excess was absorbed by increased allocation to depreciation, development rebate reserve and taxation. The total amount available for distribution was around Rs. 136.15 lakhs which was nearly Rs. 8 lakhs less than the amount required to maintain the current dividend of 14½ per cent on its enlarged capital. The directors, therefore, transferred Rs. 8 lakhs from the general reserve so that a total of Rs. 14 lakhs has been drawn from reserves during the last two years towards the payment of dividends. This appears to be fully justified in the context of the expanding output and higher profits recorded by the company which necessitated a larger distribution at the same rate on larger capital. Mr. Tata was hopeful that the company would be able to maintain the same rate of dividend even after the additional issue of 200,000 ordinary shares in the ratio of one new share for every five shares he'd which was being recommended at a premium not exceeding Rs. 50 per share. This, however, had to be finally approved by the Controller of Capital Issues and the directors of the company. This new issue was necessary to maintain the debt-equity ratio at a proper level. The increase in share capital will not only improve the debt-equity ratio to which the AID, like the World Bank, attached considerable importance, it will also provide additional funds for the expansion scheme.

The relative significance of railways and road transport

were discussed by the Chairman who stated that railways had dominated the official attitude and road transport was comparatively being neglected. For instance a recent announcement of the railway's share of nearly 70 per cent of the total proposed investment in surface transport in the fourth five-year Plan is a sufficient proof that road transport was not being given the attention it deserved. On the other hand, the restrictive regulations imposed by the various State Governments made long distance road transport extremely difficult. He proposed that multiple taxation on vehicles and taxation on cargo should be rationalized so that a system of inter-State trucking permits was evolved by a Central authority. He suggested that the permits should carry a fee sufficient to absorb all the State and local vehicle taxes levied at present. These permits should be given for a year, to be automatically renewed unless the holders got it revoked for some violation. Keeping in view the nature of Indian landscape as well as the area which has to be served with road transport, and the points which cannot be touched normally by the railways, the fourth Plan should be reshaped to take into account an adequate expansion of the road transport.

OIL INDIA

Mr. Khandubhai K. Desai, M.P., Chairman, Oil India Ltd., revealed at the annual general meeting held recently that the company had recorded a net surplus of Rs. 336 lakhs after providing for depreciation, taxation and development rebate. Consequently a dividend has been proposed to be paid at the rate of Rs. 120 per share, which came to 9 per cent, after payment of all taxes. The profit recorded by the company is a reflection of its physical performance, which has various highlights. The company achieved its drilling targets with an average of 74,154 feet per drilling rig, which compared favourably with similar drilling efforts elsewhere in the world. It completed two wells to produce oil from two zones independently, popularly known as dual completion wells, and three deviational wells directed to tap oil reserves under the river bed. These were the first dual production and deviated wells drilled in the country and Oil India could naturally claim the credit. With this drilling, the Chairman pointed out, Oil India was in a position to meet its commitments towards the public sector refineries at Gauhati and Barauni.

One of the outstanding achievements of Oil India has been the completion of its pipe line system in North-East India connecting the oil fields with Government refineries at Gauhati and Barauni. This pipeline was constructed for the company by the Burmah Oil Company (Pipe Lines) Ltd. It is indeed a fact of considerable significance that this project was finally completed at a cost of about Rs. 45 crores which was a little below the original estimate of Rs. 46 to Rs. 47 crores. During the year 1963 the company also completed the crude conditioning plants at Nahorkatiya and at Moran which were specially designed to make crude from this region pumpable. These plants were actually constructed by the Assam Oil Company and are now in the charge of Oil India after thorough tests which conformed to the expectations.

The Chairman indicated that the company was in a position to supply sufficient gas to certain industrial projects approved by the Union Government and the State Government of Assam. It has already made commitments, apart from nearly 10 million cu. ft. of natural gas for oilfield uses, for the supply of nearly 45 million cu. ft. of natural gas per day to various industrial projects. It will supply 18 million cu. ft.

From elephants—to egg timers
everything is carried by BOAC's Jet-Cargo Service

BOAC aids your exports—speeds imports—
with 36 flights a week in and out of India.

Secure that contract, make ahead-of-time deliveries with BOAC's Rolls-Royce jet-cargo service. You save on packing and warehousing costs, and your insurance rates are less. And with BOAC's fast, direct deliveries and efficient ground handling your freight arrives on time, trouble free.

INDIAN TUBE TO EXPAND ITS SEAMLESS TUBE MILL

The Indian Tube Company, pioneers in the manufacture of seamless tubes in India, have been granted an Import Licence for additional plant and machinery which will enable them to raise their annual capacity for these tubes from 24,000 to 40,000 tonnes.

Existing technical and service facilities at the Company's Works in Jamshedpur will enable speedy execution of the expansion programme, which is expected to be completed in 1965. INDIAN TUBE will then meet the bulk of India's requirements of seamless tubes for the oil and chemical industries, power generation and transmission and other essential demands which are still being partly met by imports. This will mean an annual saving of Rs. 6 crores in foreign exchange.

per day to the Assam State Electricity Board, 10 million cu. ft. per day to the Assam Gas Company, 8 million cu. ft. per day to Assam Oil Company, 8 million cu. ft. per day to the fertiliser plant at Namrup and small quantities to brick kilns and tea gardens. Gradually, therefore, the company is increasingly participating in this important sector of the economy and has proved to be a significant factor in making the country self-sufficient in oil.

HINDUSTAN MOTORS

Preliminary results of Hindustan Motors Ltd., show that it has maintained the ordinary dividend of 11½ per cent for the year ended March 31, 1964. The profit has gone up from Rs. 1.18 crores to Rs. 1.19 crores, after providing for depreciation and taxation. A sum of Rs. 25 lakhs has been provided for reserves.

PREMIER AUTOMOBILES

It is reported that Premier Automobiles Ltd., has revealed a turnover of Rs. 24.09 crores during the year ended June 30, 1964, as against Rs. 20.12 crores last year. The larger turnover has mainly come from the rise in sales of trucks from 5,712 to 6,711. There has, however, been a drop in sales of cars from 4,350 to 4,083. In 1961-62 the sale of cars was around 7,193. It appears that the low level of 309 cars per month touched at the end of 1963 has not been picked up.

CENTRAL BANK OF INDIA LTD.

Central Bank of India Ltd., has earned a higher profit, subject to audit, of Rs. 98.54 lakhs for the half year ended June 30, 1964 against Rs. 89.80 lakhs for the corresponding period of 1963. The directors have proposed to maintain the interim dividend at the rate of Rs. 2.40 per cent which comes to 19.2 per cent per annum. The new right shares offered on February 1, 1964 will rank for the pro rata dividend with effect from May 1. The total interim dividend distribution will amount to Rs. 30.35 lakhs, against Rs. 30.28 lakhs for the corresponding period of the last year. The directors have also provided a sum of Rs. 1,401 for payment of final dividend for 1962 and interim and final dividend for 1963 to the former shareholders of Jodhpur Commercial Bank Ltd., to whom the shares of Central Bank have been allotted. A sum of Rs. 69.09 lakhs, subject to tax, has been carried forward.

STATE BANK OF INDIA

The Central Board of Directors of the State Bank of India decided to pay an interim dividend of Rs. 10 per share, subject to deduction of tax, for the year ending December 31, 1964 to the shareholders registered in the books of the bank as on June 30, 1964.

INDIAN BANK

The directors of Indian Bank Ltd., have declared a higher interim dividend of 7.5 per cent, including a bonus of 2.5 per cent, for the first half year of 1964. This compares favourably with the 7 per cent dividend paid inclusive of a bonus element of 2 per cent for 1963. The higher distribution follows an improvement in the bank's earnings. Its net profit has gone up from Rs. 9 lakhs for the first half of 1963 to Rs. 10.39 lakhs for the period under review. The interim dividend will absorb Rs. 6.63 lakhs. The directors have transferred Rs. 2.06 lakhs to the reserve fund.

BANK OF AMERICA

Net operating earnings of Bank of America for the first half of 1964 increased to \$48.42 million. Loans now stand at a record figure of \$6,852.42 million, an increase of \$995.01

million since a year ago. Deposits of the bank stood around \$13,374.82 million as against \$12,354.79 million last June. Mr. Peterson, President of the bank, indicated that this business advance together with the continuing growth in deposits permitted a significant increase in earning assets through the wide variety of lending services. Dividends totalling \$28.48 million were paid to more than 200,000 shareholders at the annual rate of \$2.00 per share.

CAPITAL ISSUES

Ten companies have been authorised to raise fresh capital aggregating Rs. 5.63 crores. Of these, two will be issuing bonus shares, four are issuing equity capital, one is floating debentures and three are issuing equity plus preference shares. Four companies involve foreign collaboration. Two companies are offering part of their shares to the public by prospectus.

The consent of the Controller of Capital Issues is valid for 12 months in all cases.

Jeypore Sugar Company Limited, Madras, is to issue bonus shares of the value of Rs. 3,37,210 divided into 33,721 equity shares of Rs. 10 each on capitalisation of its share premium account. The bonus shares will be issued in the proportion of one share for every 12 equity shares held.

Hyderabad Laminated Products Limited, Secunderabad, is to issue capital of Rs. 1,42,857.14 on capitalisation of reserves to a like extent, by way of bonus issue, for converting the existing 20,000 equity shares from partly paid up into fully paid up shares of Rs. 50 each.

Tata - Merlin & Gerin Limited, a public company proposed to be incorporated in the State of Maharashtra for the manufacture of switchgear and controlgear, in collaboration with Merlin & Gerin of France, will be issuing capital of Rs. 70 lakhs in equity shares of Rs. 100 each, for cash at par. Out of these, shares of the value not exceeding Rs. 8.75 lakhs will be offered to the French Collaborators against import of plant and equipment.

Electrolytic Tinplates Limited, Bombay, is to issue Rs. 50 lakhs capital divided into Rs. 36 lakhs equity in shares of Rs. 10 each, and Rs. 14 lakhs preference in shares of Rs. 100 each. All the shares will be issued for cash at par. The money will be utilized in the manufacture of tinplates by electrolytic process.

Kamani Industrial Corporation Limited, Jaipur, is to issue Rs. 1 crore debenture stock in units of Rs. 1,000, each carrying 7½ per cent interest and to be offered to the public for cash at par. The capital will be utilised in the establishment of Pig Iron Project at Udaipur (Rajasthan).

Material Handling India, Limited, a public company proposed to be incorporated in the State of West Bengal, is to issue capital of Rs. 50 lakhs in equity shares of Rs. 10 each, for cash at par. The money will be utilized for the manufacture of electrical cranes, heavy structural's and conveyors.

Hind Equipment Corporation Private Limited, Bombay, (a company proposed to be converted into public one) engaged in the manufacture of friction and hydraulic shock absorbers for automobiles, is to issue further capital of Rs. 40 lakhs in 4,00,000 equity shares of Rs. 10 each, for cash at par. The capital will be utilized for financing expansion of the existing activities of the company.

Steelcrete Private Limited, Calcutta, will be issuing further capital of Rs. 75 lakhs, on conversion into a public company. Of this, Rs. 50 lakhs will be issued in equity shares of Rs. 10 each, and Rs. 25 lakhs in preference shares of Rs. 100 each, all for cash at par. Shares of the value of Rs. 30 lakhs in equity and Rs. 10 lakhs preference will be issued to Foundation Overseas Ltd., Canada, against supply of construction

machinery etc. The company will offer the balance shares to the public by prospectus.

Anup Engineering Limited, Ahmedabad, is to issue capital of Rs. 29 lakhs divided into equity shares of Rs. 100 each. Of this, shares of the value of Rs. 7.5 lakhs — consisting of Rs. 2.5 lakhs to the foreign collaborators, Machine Fabriek Reineveld N.V. Delft, Holland, against supply of know-how and Rs. 5 lakhs to the shareholders of Hind Laboratories Private Ltd. in terms of a amalgamation scheme, — will be issued for consideration other than cash and the balance for cash at par. Out of the cash issue, shares worth Rs. 0.5 lakhs will also be offered to the Dutch firm for cash. The capital will be utilized for financing the manufacture of machines like centrifuges, separators, etc.

Indian Overseas Shipping Company, Bombay, is to issue capital of Rs. 150 lakhs, divided into 11,00,000 equity shares of Rs. 10 each and 40,000, 9½ per cent Redeemable Cumulative Preference shares of Rs. 100 each to be issued for cash at par. Out of this, equity shares of the value of Rs. 50 lakhs and the entire preference shares will be offered to public by prospectus and equity shares of the value of Rs. 25 lakhs will be offered to the company's foreign collaborators, American Shipping & Finance Syndicate. The capital will be used for starting a liner service.

LICENCES ISSUED

The following licences were issued under the Industries (Development and Regulation) Act, 1951, during the fortnight ending 4th July, 1964. The list provides the addresses, articles of manufacture and annual installed capacity of the licensees.

During the week ended June 27, 1964.

ELECTRICAL LAMPS

M/s. Glass & Miniature Bulb Industries, 84/22 Fazal Ganj, P. B. No. 324, Kanpur-9 (U.P.) (Kanpur, U.P.) — Fluorescent tubes — 9,60,000 Nos.

AUTOMOBILES

M/s. Teksons Private Limited, Modi Chambers, Bombay-4 (Bombay, Maharashtra) — Radiators — 12,000 Nos.

COTTON TEXTILES

M/s. The Janakiram Mills Ltd., Srivilliputtur Road, (Rajapalayam, Madras) — 12,736 spindles for the manufacture of cotton yarn; M/s. The Bhalakia Mills Co. Ltd., Khokhra Mehmedabad Road, Ahmedabad-8 (Gujarat) — 2,640 spindles for the manufacture of cotton yarn.

SYNTHETIC FIBRES

M/s. Modi Spg. & Wvg. Mills Co. Ltd., Modinagar, (U.P.) (Modinagar, Uttar Pradesh) — Silk & Artsilk Woven and Knitted fabrics — 250 looms and 4 warp knitting machines

FLOUR

M/s. Madras Flour Mills, 196, Govindappa, Naick Street, Madras-1 (Madras) — Atta, Suji, Maida & Bran — 2400 M. Tonnes per month; M/s. India Roller Flour Mills, 17/320 Appanakara Street, Post Box No. 312, Coimbatore (Coimbatore, Madras) — Atta, Maida, Suji, Rough Brand and Bran Flakes — 2,250 M. Tonnes per month.

VANASPATHI

M/s. Shree Radha Krishna Vegetable Oil Products Co., Anantapur District, Andhra Pradesh (Kallur, Anantapur Distt. Andhra Pradesh) — Vanaspathi — 7 Tons per day.

During the week ended July 4, 1964.

PRODUCTS OF IRON AND STEEL

Hind Galvanizing & Engineering Co. Private Ltd., 96, Garden Reach Road, Calcutta-23 (West Bengal) — (1) Transmission Towers — 6,000 tons, (2) Other Structural — 2,000 tons, (3) Hamilton Poles — 8,000 tons (After substantial expansion).

COAL

Shri Debi Prasad Marwari, P.O. Mahagama, Distt. S.P. (Bihar) (P.O. Mahagama, Distt. S.P., Bihar) — Coal 2,800 tonnes.

RAILWAY ROLLING STOCK

Modern Industries, Post Office Malik Nagar, Sahibabad (N. Rly.), (Ghaziabad, Distt. Meerut) (Sahibabad, Uttar Pradesh) — Railway Wagons — 1000 Nos; Central India Machinery Manufacturing Company Limited, (Wagon & Structural Shop Division), Bharatpur (Rajasthan) (Bharatpur, Rajasthan) — Railway Wagons — 875 Nos.

AUTOMOBILES

Universal Radiators, P. B. No. 521, Coimbatore (Coimbatore, Madras) — Radiators (including oil coolers) — 12,000 Nos.; Rane (Madras) Ltd., "Ganapathi Buildings", 47, Velachery Road, Madras-32 (Madras) — Tie rod ends for automobiles — 10,00,000 Nos.

EARTH-MOVING MACHINERY

Jessop & Company Ltd., P.B. No. 108, 63, Netaji Subhas Road, Calcutta-1 (Calcutta, West Bengal) — Diesel Road Rollers 8/10 tons capacity — 400 Nos.

WOOLLENS

Kabir Woollen Mills, Industrial Area 'A', Ludhiana (Ludhiana, Punjab) — Woollen yarn — 6000 Spindles; Karamchand Thadaram, Prop. The Nagpal Woollen Mills, Atlas Mills Compound, Reay Road, Bombay-10 (Maharashtra) — Woollen Yarn — 2000 Spindles; A.K. Silk Woollen Mills (P) Ltd., Industrial Area 'A', Ludhiana (Ludhiana, Punjab) — woollen Yarn — 4,800 Spindles.

ALCOHOL

The Travancore Sugars & Chemicals Ltd., Higginbotham's Compound, Puthanchanthai Main Road, Trivandrum (Tiruvalla, Kerala) — Alcohol — 378,000 gallons.

FLOUR

United India Roller Flour Mills Private Ltd., No. 1, Anna Pillai Street, Madras-1 (Madras) — Atta, Maida, Suji & Bran — 1,600 m. tonnes per month.

CHANGE IN NAMES (Owners or Undertakings)

During the fortnight ended July 4, 1964.

(Information pertains to particular licences only)

From M/s. Assam Aluminium Cable Industries, Gauhati to M/s. Meenaxi Wire Industries (Assam) Ltd., Gauhati; From M/s. Hindustan Transmission Products Private Ltd., New Delhi to M/s. Hindustan Transmission Products, Prop. Madhusudan Limited, New Delhi; From /s. Gelatine Capsule Manufacturing Company Private Ltd., Uttarsanda, Kaira District to M/s. Gelikeps Private Limited, Uttarsanda, Kaira District; From M/s. Bharate Private Ltd., Bombay to M/s. Jaibharat Industries, Bombay; From M/s. Vitreous Ceramics Ltd., New Delhi to M/s. Vitrex Ceramics Ltd., New Delhi.

From M/s. Modi Sugar Mills Ltd., Modinagar to M/s. Modi Industries Ltd, Modinagar; From M/s. Kerala Government cycle Rim Factory, Trivandrum to M/s. Trivandrum Rubber Works Ltd., Trivandrum.

LICENCES REVOKED OR SURRENDERED

During the fortnight ended July 4, 1964.

(Information pertains to particular licences only)

M/s. Himalayan Exporters, Delhi — Heavy Structural and cranes, etc.; M/s. United Trading Company, Jodhpur — Sodium Sulphide; Shri Nem Kumar Jain, Etawah (Undertaking) M/s. Etawah, Paper Mills Ltd., Etawah — Paper and Pulp.

M/s Sir Shadilal Sugar and General Mills Ltd., Mansurpur Distt. Muzaffarnagar (Uttar Pradesh) — Sugar; M/s. Premier Rubber & Cable Industries, Bombay — Rubber Polyethylenes.

BOOKS BRIEFLY

Increased Output Without Investment

Better Plant Utilisation in India: By Morris J. Solomon; Asia Publishing House and Statistical Publishing Society; Pp. 59; Price Rs. 10.

Reviewed by BANARSI DAS

"THERE IS reason to believe that many Indian plants can increase their output up to 500 per cent with little or no increase of investment in fixed plant", says Morris J. Solomon. This is a startling revelation; but it is, nevertheless, substantially true. It is an admitted fact that not only there is a huge unutilized capacity in Indian plants, but — and this is more important — scant attention has been paid to maximum plant utilization. The capital and foreign exchange position as it is, Indian industrial development can receive a considerable boost, and the country can produce a larger total output, if the "given fixed plant can be made to yield greater output."

In this monograph of the Indian Statistical Institute, where the author spent a year and a half under a programme of the US Technical Co operation Mission in India, Solomon discusses the question of improving plant utilisation from the point of view of the individual enterprise as well as the economy as a whole. The increased output, through better plant utilization, obviously will lead to no insignificant rise in profits for the individual enterprise on the one hand, and a relatively large increase in production and employment in the economy, on the other. In fact, it will not be unusual, in the author's opinion, for Indian firms to obtain a 50 per cent return on investment. How these spectacular results in production and profits can be achieved is cogently spelt out in the book. The measures indicated are necessarily unconventional insofar as they endeavour to achieve unconventional results in the realm of plant utilisation and profitability. Nevertheless, they deserve a careful study. The crux of these measures is that machine-time lost, whether due to six-day week, or single-shift operation, or absenteeism, should be saved, even if it means an increase in the number of operatives per machine. With the help of "break even" analysis, based on operation research techniques, the author shows that in view of very high ratio of capital to labour prices in India, as compared to advanced countries, the increase in the strength of labour would lead to tremendous increase in output.

Proposals for more intensive staffing are viewed with suspicion by managements in India and it is surely something contrary to the picture Indian technologists have picked up abroad. The human relations problem of more intensive staffing, as suggested by Solomon, is serious enough to make any management pause. Yet the gains to the enterprise can

be so great that it is worth the effort. In conclusion it may be pointed out that industries, where the availability of raw materials as well plant capacity is the limiting factor, are not likely to go very far in their effort for better utilisation. And their number is not small, particularly of those depending on imported raw materials.

MANAGEMENT A SCIENTIFIC SKILL

Office Management: Published by the National Productivity Council, 38, Golf Links, New Delhi, India; Pp. 120; Price Rs. 3.50.

Reviewed by R. C. KUMAR

EVER SINCE modern management has revealed that administrative ability is not a combination of hunches and rule-of-thumb methods but a scientific skill, a gradual shift is noticeable in employers' attitude towards management problems. The emphasis now is on the 'why' of things so that each procedure or method is analytically revised and its validity ascertained from time to time. The National Productivity Council has attempted in this publication — a report of its Productivity Team's study tour of the USA, the UK and Japan — to assist employers in gainfully utilizing the knowledge this new science offers and cutting down office costs, simplifying office procedures and looking personnel problems in the face.

The Report elaborately describes office practices and procedures prevailing in the countries the Team visited and office managers in this country can gain a good deal from the inferences drawn from the case-studies discussed. Among the various recommendations made for bringing about scientific management in our offices are the utilization of modern techniques like work-simplification and work-study, arranging in-company training courses for office workers, and creating congenial office atmosphere with particular attention to environmental factors like heat, light, ventilation and noise which affect work efficiency considerably. Personnel problems such as recruitment, job-satisfaction and merit-rating have been given ample coverage and various relevant criteria have been laid out to help managers wield effective control over men and material.

The study pinpoints delay in paper work as a major factor responsible for inflated cost of office maintenance and suggests that considerable economy can be secured in office costs through work-simplification programmes. This technique is of particular value to business organisations in this country since paucity of foreign exchange and the relatively limited scale of business operations do not permit automation to a large extent.

Readers' Roundtable

OUR EDUCATION SYSTEM

Sir, — The Union Government is to be congratulated for appointing a Commission to inquire into the educational system. The Education Ministry, in refreshing contrast to complacent statements issued by other Ministries, has frankly admitted the inadequacy of the present education system.

A look at the business and industrial spheres shows the utter inadequacy of the present educational system. At the decision-making managerial level, firms have to set up expensive training programmes. One firm, which wanted to recruit 20 Management Trainees, received about 10,000 applications, but after proper scrutiny and interviews, found barely 8 suitable candidates. At the implementation level, i.e., supervisors, clerks, etc., the low productivity and inefficiency are to be attributed to the present educational system which has not equipped them properly for meeting the needs of the

changing economy. Since the present economic policy has bound the consumer hand and foot, the mischief of inefficiency and low productivity are not yet realised by the country.

The Commission should devote its attention to this aspect of education. It should also see that the key figure in the system, namely, the teacher, is properly equipped for teaching and well remunerated.

Economists like A. K. Cairncross and Colin Clark have stressed the importance of the human factor and the vital role of education in improving the economic conditions of the people. It is time that our educational system is put on a proper basis to be run by educationists instead of allowing it to be the playfield of professional politicians. The appointment of the Commission is, therefore, the first step in the right direction.

BOMBAY.

M. R. PAI.

OIL INDIA LIMITED

(A 50:50 Cooperative Enterprise of the Government of India and The Burmah Oil Company for Prospecting, Drilling, Production and Transport of Crude Oil from Assam to Refineries in Gauhati, Assam and Barauni, Bihar)

Statement of the Chairman, Shri Khandubhai K. Desai, M.P., to the Shareholders on the Occasion of the Fifth Annual General Meeting of Oil India Limited, held at Duliajan, Assam, on Tuesday, June 23, 1964.

Gentlemen,

I have pleasure in presenting to you the report of the Directors and the Annual Accounts of the Company for the year 1963. Under the new order issued under Rule 52 of the Defence of India Rules it will not be possible for us to circulate these reports as usual. This rule also imposes restrictions in regard to publication of news concerning the activities in individual fields and details in respect of the other aspects of our work. Within these limitations I shall endeavour to present a general view of our activities during the last year and a continuation of these efforts in the next year.

TRIBUTE TO LATE SHRI JAWAHARLAL NEHRU

We are meeting under the shadow of a great tragedy which struck the nation in the death of Jawaharlal Nehru, whose unique role as leader in the forefront of India's struggle for independence and as Prime Minister of independent India for over 17 years has contributed a new and glorious chapter in the history of this ancient land. He was the architect of modern India and took a keen interest in all activities directed to promote the welfare of the country and the people. Only in June 1963 we were honoured by his visit to our oilfields in Assam and his appreciation of our work had been a source of encouragement and inspiration to us. The best way to honour his memory is to work hard in our limited spheres and thus contribute our mite to India's prosperity.

General: Oil is fast assuming a place of first importance in the industrial economies of the world and recent trends in uses of various commercial fuels indicate that the popularity of petroleum products and their proportionate use in industry has been going up steadily. Although India has a very low per capita

consumption of Oil products, the economy of the future will require a rapid and steady increase of these energy sources. In the long run coal and hydraulic power sources may prove inadequate and nuclear energy will take a considerable time to replace traditional sources of energy. The combined requirements of energy and petro-chemicals in India leave no alternative therefore to the rapid development of the oil industry.

In the recent past the demand for petroleum products has been increasing at the rate of nearly 10 per cent per annum and during the fourth Plan period it is now expected to increase by 2 to 3 million tonnes annually. By the end of the fourth Plan period, demand for all products is likely to go up to about 28 or 30 million tonnes. However, there is some difference of opinion about the total demand and how it will shape in future during the fourth Plan period and it is not necessary for me to go into these details except to stress that the refineries based on imported crude should produce more of kerosine and fuel oil, for which there is a spurt in demand. The purpose of this review is to set a background for the functions of Oil India and the role it has to play in meeting this demand for petroleum products.

The country hopes to have a production of about 6 million tonnes of indigenous crude oil by the end of the current Plan and, of this, more than half will be contributed by the oilfields in Assam. When this quantity of oil is produced and refined at the public sector refineries of Gauhati and Barauni it will save imports of petroleum products of the value of nearly Rs. 40 crores per annum.

Oil Field Development: Despite the difficulties faced in acquiring land for drilling sites, Oil India Limited have achieved their drilling targets. An average of 74,154 feet per drilling rig was achieved which compares favourably with similar drilling efforts elsewhere in the world. Of the total wells drilled during this

year, 2 wells were completed with a view to producing oil from two zones independently, popularly known as dual completion wells, and 3 devotional wells directed to tap oil reserves under the river bed. These were the first deviated and dual production wells to be drilled in India and Oil India can legitimately lay claim for these two "firsts" in their drilling programme. Another noteworthy feature of the drilling activities in Oil India's areas is that increases in the cost of material and labour and heavy expenses involved in exploration drilling have been offset by speed in drilling.

With the wells drilled and completed, Oil India is in a position to meet the requirements of the public sector refineries at Gauhati and Barauni, to the extent of its commitments. The refinery at Gauhati has been taking regular supplies of crude oil particularly since the latter half of this year, while the first unit of the refinery at Barauni is expected to go on stream in the near future. In fact some quantities of crude oil are

July 31, 1964.

being supplied to this refinery for "trial runs."

Exploration Activities: For the first working season, a seismic party from the Oil and Natural Gas Commission was employed to do seismic surveys in the New Exploration Licence Areas. In the second working season a seismic party from the Seismograph Services Limited was engaged in the fields. Both parties made excellent progress. Over 900 line miles of seismic reflection survey were completed during the two working seasons commencing February 1963 as against a target of about 700 line miles for this period.

The permits required to enable the personnel to enter the Exploration Licence Area in NEFA were not received until 5th February, 1964. However a ground survey was commenced on 6th February but later heavy monsoons interrupted the work and the party had to be evacuated with the assistance of helicopters.

Exploration drilling in the New Exploration Licence Areas was taken up side by side with seismic survey. This programme of surveys and test drilling, costing a total of about Rs. 2 crores will be continued throughout 1964 and early 1965.

Pipelines: Oil India's pipeline system in North-East India connecting the oilfields with Government refineries at Gauhati, Assam and Barauni, Bihar, has been completed. This is the second longest crude oil pipeline in the East and one of the most modern and automatic of its kind in the whole world. This pipeline was constructed for Oil India by The Burmah Oil Company (Pipe Lines) Limited and I would like to pay here a tribute to all the project staff — labour, clerical and executive — and the various contractors and their men who worked hard to complete this extremely difficult job. After the completion of the pipeline The Burmah Oil Company (Pipe Lines) Limited, have been required to operate and guarantee the pipeline for a period of 12 months from January 1, 1964. Meanwhile the operational control without affecting the guarantee is being taken over by Oil India with the necessary integration of staff to which I propose to revert later. A little known fact of this project is that the final completion cost of about Rs. 45 crores was a little below the original estimate of Rs. 46 to Rs. 47 crores.

Crude Conditioning Plant: The crude conditioning plants at Nahorkatiya and at Moran, the first of their kind in the world and which were especially designed to make Nahorkatiya and Moran crude pumpable, were completed and operated during the year. These plants were actually constructed for Oil India by the Assam Oil Company, a subsidiary of The Burmah Oil Company — Government's partner in Oil India. Oil India has taken charge of these plants after thorough tests and these are now operational. The tests showed that the completed plants conform to pilot plant expectations and our thanks are due to Assam Oil Company and their staff for this job.

Industrial Installations and Domestic Buildings: Almost all the programmed construction work for 1963 on the various industrial installations and domestic buildings was completed during the year. One more oil collecting station was installed at Nahorkatiya, making a total of six such stations there, and another similar station was completed at Moran. 95 domestic buildings of various types, together with the necessary roads, drainage and other services, were completed during the year and what was an impenetrable jungle a decade ago has turned into a thriving and prosperous town due to the oil find at Nahorkatiya.

Crude Supplies: The requirements of crude of the refineries at Gauhati and Digboi were met in full. The production will go up once the first unit of the Baurani Refinery goes on stream to be followed by the second unit.

EASTERN ECONOMIST

215

Gas: Apart from nearly 10 million cubic feet of natural gas which will be required for oilfield uses, there is still a large balance which can be utilised for other projects. As at present, commitments have been made for the supply of nearly 45 million cubic feet of natural gas per day to various industrial projects; 18 million cubic feet per day to the Assam State Electricity Board; about 10 million cubic feet per day to the Assam Gas Company; 8 million cubic feet per day to Assam Oil Company; 8 million cubic feet per day to the Fertilizer Plant at Namrup; and small quantities to brick kilns and tea gardens. Here I would like to assure the Government of India and the State Government of Assam that we, on our part, are prepared to supply the balance of the gas available with us to the industrial projects approved by them, and we can do so at a price which will be sufficient to enable Oil India to compress and store gas to the extent necessary to provide for uninterrupted supplies over the period required by the consumer.

Finances: The delay in the commissioning of the Barauni Refinery resulted in the offtake by the Indian Refineries Limited being much lower than originally anticipated. The consequent reduction in the anticipated cash inflow necessitated the use of larger overdraft facilities for working capital and general purposes and arrangements were made with the State Bank of India to make these available.

The rupee cost of pipeline construction was financed by Rs. 30 crores received in full on 6½ per cent debenture stock 1968-77. The foreign exchange expenditure on this project was financed partly by a loan of £3 million from the UK Government to the Government of India under a UK-India (Oil Pipeline) Credit Agreement 1959 and a sterling loan of £10,250,000 from the Bank of Scotland, UK.

Dividend: The profit and loss account shows a net surplus of Rs. 336 lakhs after providing for depreciation, taxation and development rebate. This leaves funds available for the declaration of a dividend of Rs. 120 per share of paid-up equity capital which is a minimum dividend of 9 per cent after payment of all taxes including taxes payable on dividend. An interim dividend of Rs. 40 per share of paid up equity capital was declared in December 1963, and a final dividend of Rs. 80 per share is now being recommended.

Staff: We are making advance arrangements now to take over the Pipeline and for this purpose additional staff have been taken on the payroll for maintenance and operation of the Pipeline. This process has almost been completed. The last years have been formative ones for Oil India and organisational problems

have been tackled side by side with development work in the Mining Leases, and exploration activities in the New Exploration Licence Areas. This has been rendered possible by the spirit of co-operation shown by all concerned at all levels — workers, clerical and executive — and here I would like to pay a tribute to their sense of duty and constancy. In particular I would like to mention that there was no industrial unrest, which is evidence of the consciousness on the part of the workers of their participation and keen interest in the national endeavour to produce more oil.

Lastly, I would like to thank my colleagues on the Board for their active assistance. In particular I would like to mention Mr. J. C. Finlay, M.C., Managing Director, and Shri P. Govindan Nair, I.C.S., Financial Director, who have worked most closely together to make this year a successful year for Oil India. I also take this opportunity of expressing my thanks to various Ministries of the Government of India especially the Ministry of Petroleum and Chemicals and State Governments of Assam, West Bengal and Bihar for their assistance in our work.

TATA ENGINEERING & LOCOMOTIVE CO. LTD.

Statement of the Chairman, Shri J. R. D. Tata

The following is the statement of Shri J. R. D. Tata, Chairman of the Tata Engineering & Locomotive Co. Ltd. for the year 1963-64

Before I review the Company's operations during the past year, I must give expression to our profound sorrow at the passing away of our late Prime Minister. Although his failing health during the last year had given rise to some anxiety, his sudden death at the end of May stunned the people of India and, indeed the whole world, for Jawaharlal Nehru's status as a statesman and as a man transcended political and geographical frontiers. His fame, his writings, his struggles and sacrifices in the cause of freedom and peace were known in every country of the world and it is probably true to say that more people mourned his passing than that of any other man in modern history, with the exception perhaps of Mahatma Gandhi. It was possible to disagree with some of his and his Government's policies and decisions on political, international or economic issues, but it was impossible not to be deeply affected and influenced by his intellectual brilliance, his single-minded devotion to the causes he espoused, his courage, his innate goodness, the depth and tenderness of his solicitude for the afflicted, the oppressed and the poor and the love which he inspired amongst the people. Jawaharlal played a dynamic role in shaping world history during these two decades, but it is as the Maker of Modern India that he will be remembered and his memory forever enshrined in the hearts and minds of the people of India.

2. I am glad to report that the Company made good progress in its operations, profits and expansion during the past year which, however, was also marked by certain unhealthy developments culminating in the tragic events of March, 1964, to which I shall revert later in this review.

3. Output rose appreciably; the first stage of expansion to 18,000 vehicles is now virtually complete and work has started on the second stage intended to bring production up to 24,000 vehicles per annum. I am glad to report that the Agency for International Development has just approved of a further loan of \$11.80 million (Rs. 5.62 crores) to finance the foreign exchange element of the second stage of the expansion programme. Orders for imported machine tools and equipment will be released shortly.

4. Operating profits for the year were Rs. 114.75 lakhs higher than in the previous year, but most of the excess was absorbed by increased allocations to depreciation, Development Rebate Reserve and taxation, so that the net increase in disposable profit was only Rs. 20.62 lakhs. The total amount available for distribution was thus Rs. 136.15 lakhs, which is some Rs. 8 lakhs short of the amount required to maintain the current dividend of 14½ per cent on our enlarged capital. Your Directors have, therefore, transferred Rs. 8 lakhs from the General Reserve and recommended the same dividend as last year. A total of Rs. 14 lakhs will thus have been drawn from reserves over the last two years towards the payment of dividends. This will have been fully justified as, barring some totally unforeseen set-back the increased profit resulting from our expanding output should enable us without difficulty to continue paying the same dividend on ordinary shares in future. In fact, there are, in my view, good prospects of the Company being able to maintain the same rate of dividend even after the additional issue of 200,000 ordinary shares in the ratio of one new share for every five shares held, which is being recommended to you at such premium, not exceeding Rs. 50 per share, as the Controller of Capital Issues may prescribe and as may be agreed to by the Directors.

5. In view of the issue for the same amount made as recently as 1963, your Directors would have normally preferred to postpone the present recommendation for a year or so, but the extraordinarily large and rapid expansion of the Company and the growing imbalance in the Company's capital structure make a further issue imperative and urgent.

6. In relation to total funds employed of about Rs. 44 crores (including Rs. 25 crores of debt), which are expected to rise to about Rs. 60 crores by 1966, our present share capital of Rs. 12 crores is clearly disproportionately small, while our debt-equity ratio will be unacceptably large if the share capital is not increased and the amount is borrowed instead. An issue of shares is therefore required not only to provide urgently needed funds but also to improve the debt-equity ratio to which the AID, like the World Bank, attaches considerable importance.

7. Your Directors realise that these are difficult times for shareholders to find additional funds to invest. In view, however, of the special and urgent requirement of the Company, the recent indications of a revival in the state of the market and the fact that the new shares may be expected to earn a dividend of 14½ per cent from the date of issue, equivalent to 9.7 per cent on capital plus premium, I am sure shareholders will approve the recommendation which is also subject to the approval of the Controller of Capital Issues.

8. Although about half of the capital of the Company is institutionally held and only one and a half crores Rupees or so will therefore be obtained from individual subscribers, the Directors have recommended, in order to lighten the burden on shareholders, payment of the amount for the new issue in two instalments, one in November this year and the other in May, six months later.

9. The demand for Tata Mercedes-Benz vehicles continues unabated and in spite of the steady increase in our output, we have so far failed to catch up with it. Ever since we commenced production of these vehicles, they have been the first choice of the transport operator because of the quality, performance and ruggedness built into them. There are today more Tata Mercedes-Benz vehicles on the road than any other make.

10. There are misguided people who assume that bigness in Private Sector enterprises, particularly those which supply a significant proportion of the total market for any product, results in the exploitation of the consumer and is therefore against the public interest. The manner in which your Company has used its pre-eminent position in the field of commercial vehicles should provide a telling answer to such a belief.

11. Between October 1953, when the Company completed the initial phase of its truck manufacturing programme, and today, the price to a customer in Bombay of the TMB 312/42 model — the most popular model in our range — increased from Rs. 30,455 to Rs. 37,619, i.e., by Rs. 7,164. During the same period, the sales, excise and other taxes charged on this vehicle by the Central and State Governments increased by Rs. 6,780, while the cost of imported materials and components rose by Rs. 739, a total of Rs. 7,519. Therefore, over the last five years which witnessed a disturbing and continuous rise in the price of practically every product, commodity or service in the country, the price of the TMB vehicle excluding the above two items has actually fallen in spite of the continuous

incorporation of a number of major improvements to the vehicle, the cost of which was absorbed by the Company and in spite also of the fact that the price of locally made ancillary items invariably exceeded the price of the imported ones which they replaced.

12. The point to be noted in this context is that the Company could not have fulfilled its desire to keep its prices low in the interests of the consumer and the country if it did not have the benefits of large-scale production.

13. If Government had not sanctioned the successive expansion schemes of Telco, as they wisely did, there is no doubt that the user of Tata Mercedes-Benz vehicles would be paying a substantially higher price than he is paying today, while the country would have been deprived of the full benefits of a powerful, versatile and highly productive engineering unit, geared to meet both civilian and military requirements, and also of most of the substantial contributions which have accrued to the public exchequer as a result of the Company's operations. It is noteworthy that during the year under review, public revenues were enriched, as a result of Telco's operations, by as much as Rs. 15 crores, in import and excise duties, sales taxes and taxes on profits.

14. But this is by no means the full measure of our Company's contribution to the Indian economy. The company has created direct employment for over 16,000 men, whom it has, over the years, trained to a high degree of skill. The importance of this contribution should not be underestimated, for the economic growth of a country depends just as much on the specialised skills of its workers, technicians and managers as on machines, raw materials and finance.

15. Finally, the large-scale development of Tata Mercedes-Benz vehicles has helped to establish a number of ancillary industries in the country, the lack or insufficiency of which in the past has been one of the main obstacles to the rapid development of the automobile industry. All in all, we can be justly proud of our performance during the last decade which, in terms of growth and service to the country is probably unsurpassed by any other company in the country.

16. I have referred earlier to the large revenues accruing to the National Exchequer as a result of our operations. As the cost of Government's various imposts is largely included in the price of our vehicles, it is the user who ultimately bears this heavy initial burden; but that is only the beginning so far as he is concerned. On an average, every commercial vehicle in regular use for highway transport pays every four years in taxes alone a sum in excess of its original cost. Of all economic activities in the country, none to my knowledge bears such a crushing burden of tax as the road transport industry. It is, I believe, a fact that the incidence of taxes and duties alone in every ton-mile of road transport equals the total amount charged by the Railways for a ton-mile by rail. In addition to crippling taxation, the road transport industry suffers in a number of ways from Government policies and is burdened with such a maze of outmoded restrictions as to prevent it from playing in full the role it would in the country's economic development. That in spite of these conditions, road transport in India has grown to such an extent that it is now estimated to carry half the country's passenger traffic and over a fifth of its freight, reflects the road transport industry's technological advantages as well as the initiative perseverance and resiliency of its operators.

17. India has one of the world's largest railway systems born long before motor vehicles came into existence. As a result, the transport policies of successive administrations have invariably been based on "railway thinking" with little consideration given to alternative forms of transport. This thinking has dominated official attitude to transport problems

to a degree which is probably unique in the world. India must surely be one of the few countries where such numerous and oppressive barriers continue to be placed in the way of the development of road transport while railway mileage continues to be expanded at tremendous cost. How else can one explain the restrictive regulations that are imposed by the numerous State Governments which make inter-State trucking a nightmare for operators and long-distance trucking virtually impossible? These restrictions include difficulties and long delays in obtaining permits for inter-State operations, limitations on the number of permits issued for some routes and the temporary nature of permits that make long-term investment in motor transport hazardous. Multiple taxation of vehicles and sometimes taxation of the cargo add to the difficulties. The result is that inter-State traffic is reserved to the Railway to a degree which fails to take into adequate account that for some goods the speed and other advantages of highway transport are very important. What is needed is a system where inter-State trucking permits for operating through any State should be issued by a central authority.

Kirloskar

worth
every

rupee

Worth every rupee invested in it is the Kirloskar Lathe LK-200. In design, construction, performance, LK-200 Lathe is incomparable in its range. Mark the exclusive features of this Lathe: Height of Centres 200mm. Admits between Centres 1500mm.

The permits should carry a fee sufficient to absorb all the State and local vehicle taxes at present levied. The permits should be given for one year and automatically renewed unless the holder has his permit revoked for some violation. These should not be limited in number for the trucking business; attracts thousands of small operators who should be permitted to develop the traffic.

18. It is unfortunately apparent, from a recent announcement of the Railway's share of about 70 per cent of the total proposed investment in surface transport in the fourth five-year Plan, that Government's thinking on the subject is as Railway-dominated as ever and that the prospects of some relief to the road transport industry and of an improvement in the operating conditions are dim indeed. I feel that the time has come when a comprehensive and impartial study of the economics of transportation in India needs to be undertaken by an independent body. An explicit analysis of benefits and costs will, I am sure, reveal that greater investments in highways and some relief to the road transport industry are not only fully justified but urgently needed.

19. I have kept to the last a reference to the unhealthy developments mentioned in my opening paragraph which marred an otherwise satisfying year of progress. I am referring to the labour situation as it developed at Tatanagar during the past twelve months and to the shocking events which brought such misery and shame to Jamshedpur during the months of March last.

20. The labour situation at the Telco Works has been increasingly unsatisfactory during the last year and particularly since the beginning of 1964. Internal rivalries between two groups within the recognised Telco Workers' Union have been mainly responsible for the deteriorating situation and the blame must squarely attach to the dissident group which, notwithstanding the fact that its claim for control of the Union was, and still is, the subject of proceedings before the Patna High Court, carried on an intensive agitation which far exceeded the bounds of legitimate trade union activities. In its attempt to force its demand for recognition, this group resorted to widespread intimidation not only of workers but also of supervisory personnel. Indiscipline, defiance of constituted authority and unpunished intimidation, threats of violence and actual violence create an atmosphere where crime and lawlessness find it easy and profitable to rear their ugly heads.

21. We have constantly sought the assistance of the Central and State Governments, in addition to doing everything possible ourselves, to restore normalcy and are grateful to them for their assistance. I earnestly hope that stern action will be taken against those who, under the guise of trade unionism, deliberately create problems of law and order and prevent the full utilisation of industrial capacity urgently needed by the country. The recent communal disturbances have shown how easy it is for a handful of mischievous and anti-social persons to lead masses of people to planned acts of violence.

22. With its thousands of tough and hardy men drawn from all parts of the country, a large industrial centre like Jamshedpur-Tatanagar obviously contains explosive possibilities of trouble and therefore requires the maximum of alertness coupled with firm and timely action on the part of the management of factories and those charged with the maintenance of law and order. The scope for Management to maintain discipline and prevent acts of violence and intimidation is largely limited to the shop floor whereas in this case, agitation and violence grew and flourished largely outside the Works.

23. Perhaps one of the reasons for the inadequacy of law and order enforcement in the area, is the fact that although the city of Jamshedpur-Tatanagar is the second largest in the State of Bihar and one of the largest and most vital industrial centres in the whole country, it is still constitutionally treated

for administrative purposes as a sub-division of a district, the headquarters of which are not even Jamshedpur but Chaibassa which is a minor town in the area. We have urged that consideration should be given to up-grading Jamshedpur to an administrative status within Bihar commensurate with its importance and the magnitude of the task and problems of administering it.

24. While looking forward to another year of progress, I wish to acknowledge the diligent efforts of our employees, suppliers and dealers which have made possible the good results before you in spite of the many difficulties and obstacles which faced them. In particular, our officers at Tatanagar, Indian and German, deserve our gratitude for the hard work they put in and the fortitude with which they faced difficult and harassing situations.

To move with the times and remain in the forefront has been J. K. Organisation's proven achievements.—

OVER 150 YEARS IN THE SERVICE OF THE NATION.

Prakash is a small industrialist who needs money badly for purchasing raw materials. But he cannot afford high interest and has little security to offer. Who will help him?

THE STATE BANK HELPS

For the biggest bank—no client is too small.

Through their 1600 offices all over the country, the State Bank and its subsidiaries give the following financial facilities to small-scale industries.

Advance against security of raw materials and finished goods.

Factory type advances where security cannot be kept under the Bank's lock and key. Borrowers have free access to raw materials.

Clean credit facilities where no securities are obtainable.

Medium-term loans for modernisation and expansion.

Instalment credit for purchase of machinery.

Interest is as low as 6%. In special cases the outer limit is 7% inclusive of incidental charges.

THE STATE BANK OF INDIA

Big scale help for small scale industry.

DAGGER BRAND CUTTERS FOR LASTING PRECISION PERFORMANCE

BACKED BY 25 YEARS OF
TRADITION and rigid control
at every stage of production
DAGGER BRAND CUTTERS
(available in metric and inch
sizes) assure precision
performance.
They are made of superior
quality steel, specially
heat-treated to ensure long
life, and manufactured
in India's biggest and most
modern factory for Small Tools.

RECORDS AND STATISTICS

Industrial Licensing : New Policy

The list of industries in respect of which applications for licences under the Industries (Development and Regulation) Act, 1951, may ordinarily be *rejected* without reference to the Licensing Committee till 31st December, 1964 is as follows:

ENGINEERING INDUSTRIES :

1. Agricultural implements (excluding Tractor drawn).
2. Air Compressors (Expansion of the existing units for compressors up to 700 cfm. will be permitted).
3. Aluminium Strips/Sheets/Circles/Foils/Extruded Rods and Sections.
4. Antimony (except for expansion schemes).
5. Automobile Ancillaries:
 - (i) Axles.
 - (ii) Brake Assembly.
 - (iii) Brake Drums.
 - (iv) Brake Linings.
 - (v) Carburettors.
 - (vi) Clutch plates and Clutch assemblies.
 - (vii) Distributors.
 - (viii) Dynamos.
 - (ix) Electric Horns.
 - (x) Filters.
 - (xi) Fuel Injection Equipment.
 - (xii) Gaskets.
 - (xiii) Gasolene Tanks.
 - (xiv) Gears and Shafts.
 - (xv) Head/Tail and Side lamp fittings.
 - (xvi) Ignition Coil.
 - (xvii) Inlet and Exhaust Valves.
 - (xviii) Jacks (hydraulic, mechanical and manually operated) up to 100 tons capacity.
 - (xix) King Pins.
 - (xx) Oil Seals.
 - (xxi) Panel Instruments.
 - (xxii) Piston Assembly including piston rings and piston pins.
 - (xxiii) Push Rods.
 - (xxiv) Radiators.
 - (xxv) Regulators.
 - (xxvi) Rocker Arms.
 - (xxvii) Shackle pins.
 - (xxviii) Shock absorbers.
 - (xxix) Silencers, Muffler Pipes etc.
 - (xxx) Spark Plugs.
 - (xxxi) Starter Motors.
 - (xxxii) Tappets.
 - (xxxiii) Thin Walled bearings.
 - (xxxiv) Tie Rod ends.
 - (xxxv) Tipping gears.
 - (xxxvi) Tyre Inflators.
 - (xxxvii) Valves for tyres and tubes.
 - (xxxviii) Wheels for Motor vehicles & Agricultural Tractors.
6. Ball and Roller Bearings.**
7. Barbed Wire.
8. Bare copper conductors.
9. Bare Copper Strips.
10. Bicycles and Bicycle Parts.†
11. Bifurcated rivets.
12. Bolts, nuts and rivets.
13. Brass/copper extruded pipes and tubes/extruded rods and sections and sheets/circles/strips.
14. Car Lifts.
15. Cast Iron Pipes including spun pipes.
16. Chaff Cutter Blades.
17. Cinema Arc Carbons
18. Circles, Sheets, Rods & Utensils of Stainless Steel.
19. Collapsible Tubes & Rigid Containers.
20. Commercial Vehicles (except expansion schemes).
21. Conductors (ACSR/AA).
22. Condu't Pipes.
23. Conveyor Belting.
24. Copper Virgin.
25. Copper wire for non-electrical purposes.
26. Cotton and Hair Belting.
27. Crawler Tractors.
28. Domestic Utensils.
29. Domestic Refrigerators.
30. Drawing of Wire Mild as well as Special Steel.
31. Drop Forged Tools.
32. Drums and Barrels and Tin Containers excepting those for manufacturers' own requirements.
33. Electric Fans.
34. Expanded Metal.
35. Ferro-Manganese.
36. Ferro-Silicon.
37. Flash Light & Torch Containers.
38. Fork Lift Trucks and the like.
39. Heavy Earth Moving Equipment (only shovels).
40. Household Appliances such as Electric Irons, Heaters and the like.
41. Hurricane Lanterns.
42. H.T. Switch Gears 33 K.V. and above.
43. Industrial Fans & Blowers.
44. Internal Combustion Engines including Petrol/Kerosene and Marine Engines (except expansion schemes).
45. Jeep type vehicles and station wagons.
46. Kerbside Petrol Pumps.
47. Lead-Virgin.
48. Meters — Single & Polyphase.
49. Miniature Lamps (except Automobile Headlight Lamps).
50. Motor Vehicles & Scooters, Autocycles, Mopeds and Three Wheelers.
51. Non-Ferrous Alloys.
52. Non-Ferrous Castings (including Pressure Die Castings).
53. Paper and Pulp Making Plants up to 25 tons per day capacity including Wire-Cloth for Paper Machinery.
54. Passenger cars.
55. Photoflash Lamps.
56. Plates & Sheets (M.S.) — Except for main producers.
57. Railway Wagons (except when the expansion is desirable for making the unit an economic one).

*Only expansion or diversification in the range of the same products of the existing units will be considered.

**Except when the expansion is desirable for making the unit an economic one.

†Except when expansion of bicycle tube valves is desirable for making the unit an economic one.

50. Picking Bands.
 51. Plastic Industrial Machinery.
 52. Power Factor correction capacitor.
 53. Power Rectifiers.
 54. Pumps.
 55. Rayon Plants.
 56. Refrigeration Plants for Industrial use.
 57. Rice, Dals, Wheat Flour Mill Machinery.
 58. Small Tools (Threading Tools, Milling Cutters and Reamers).
 59. Soap and Cosmetics Machinery.
 60. Speed Reduction Units.
 61. Steel Castings.
 62. Steam Engines and Turbines.
 63. Steel Files.
 64. Steel Forgings.
 65. Steel Pipes and Tubes (Seamless and expansions in welded to make existing units economic).
 66. Steel Structural.
 67. Steel Wire Mesh (other than welded wire mesh).
 68. Storage Batteries.
 69. Strips Cold Rolled (M.S., Alloy Steel and Box Strap-pings).
 70. Switchgear and Controlgear (below 33 K.V.):
 - i) H.T. Switchgear (below 33 K.V.).
 - ii) Iron Clad Switches and Switchfuse units.
 - iii) L.T. Switchgear.
 - iv) Motor Controlgear.
 71. Textile Machinery.

103. Woollen and Shoddy Yarn (except expansion schemes).
104. Woollen/Worsted Cloth.
105. Worsted Yarn.
106. Zinc Oxide.

An illustrative list of industries in respect of which applications for licences under Industries (Development and Regulation) Act, 1951 will be considered on Merits till 31st December, 1964 is as follows:

ENGINEERING INDUSTRIES:

1. Agricultural Machinery.
2. Air Rifles.
3. Aluminium ingots.
4. Biscuits and Bread Making Machinery.
5. Boats and Crafts.
6. Boilers.
7. Calculating Machines.
8. Cast Iron Castings.
9. Cement Machinery.

* Applications for substantial expansion from existing units as well as applications for setting up new units in areas where raw material resources have remained untapped, would be considered on merits.

10. Centrifuges.
11. Ceramic Machinery.
12. Chemical and Pharmaceutical Machinery.
13. Chip Board and Fibre Board Plants.
14. Cigarette Making and Tobacco Machinery.
15. Coal Mining and Washing Machinery.
16. Coated Abrasives.
17. Construction Machinery.
18. Conveyors.
19. Dairy Machinery.
20. Drilling Equipment.
21. Dry Cells.
22. Electric Furnaces.
23. Electric Lamps.
24. Electric Motors (above 10 H.P.).
25. Electrical Measuring Instruments.
26. Electronic Components.
27. Electronic Measuring and Testing Equipment.
28. Electronic Components.
28. Fractional Horse Power Motors.
29. Grinding Media Balls and Cylpebs.
30. Grinding Wheels.
31. Hacksaw Blades.
32. H.T. Bolts and Nuts.
33. Hand Tools (hammers, screw drivers, etc.).
34. Heavy Earth Moving Equipment (except shovels):
 - i) Motorised Dumpers.
 - ii) Motorised Scrapers.
 - iii) Motorised Graders.
35. Industrial Gas Plants.
36. Industrial Sewing Machines and Sewing Machine Parts.
37. Jute Machinery:
 - i) Carding Engines.
 - ii) Drawing Frames.
 - iii) H.S. Centrifugal Spinning Frames.
 - iv) H.S. High Draft First Drawing Frames.
 - v) H.S. High Draft Second Drawing Frames.
 - vi) Jute Machinery and parts (including 10 Jute Sliver Spinning Frames).
 - vii) Self Doffing Sliver Spinning Frames.
 - viii) Spinning Frames.
38. Lifts.
39. Light House Equipment.
40. Machine Screws (Socket head, allen and other specialised types).
41. Machine Tools.
42. Malleable Cast Iron Castings.
43. Malleable Pipes Fittings.
44. Medical/Surgical Instruments, equipment and appliances.
45. Metallurgical Machinery.
46. Oil Firing Equipment.
47. Oil Mill Machinery.
48. Oil Separators.
49. Paper and Pulp making plant (above 25 tons capacity).

Poisoning Food with Politics

WHAT IS dangerous in the present food situation is not profiteering but politics. For this both Government and Opposition political parties are equally to blame. The Government, instead of taking the public into confidence and seeking and securing its enlightened co-operation in tiding over current food difficulties, is itself indulging in scare-mongering by exaggerating the extent of hoarding or speculating. It is a pity that everybody, from the President downwards, has lately been trying to persuade the nation that the villain of the piece is the "hoarder". But who is this "hoarder"? Various descriptions have been given from time to time in quarters supposedly authoritative. These descriptions have widened from mouth to mouth. To start with, it was the middleman who was accused of hoarding. Then came the turn of the producer; and now we are being told that the consumer is also guilty. In other words, we are all "hoarders" now. If this is true, the Government surely must be facing an impossible situation, which ought to have reduced it to a state of pathetic helplessness. Fortunately, this is not true. Grain movements from producers to traders and traders to consumers, or from surplus areas to deficit areas, are, no doubt, far from satisfactory at the present time, but it would be an over-simplification of a rather complicated situation to blame it all on the hoarder.

There is no doubt that a "certain amount of withholding" on the part of the producer or the trader exists. It is also clear that at least the well-to-do sections of the community are probably buying and stocking a little more than what may be strictly required for current or immediate consumption. But this is not an extraordinary tendency in a period of rising prices attended by uncertainties regarding the continued availability of adequate supplies. From this it does not necessarily follow that "hoarding" as such is wholly or even largely responsible for distortions in distribution. There is certainly enough warrant for examining the question whether government restrictions on trade, which have grown haphazard into an untidy and cumbersome pile, are not also to be held responsible. On the wisdom of zonal barriers, at any rate, there is a considerable debate even between the Centre and the States or among the States themselves. Only last week the Minister for Food and Agriculture confessed that movement control had failed to serve its purpose in the case of gur and said that the Government had, therefore, decided to abolish that control. Is it not at least possible that in the case of foodgrains too a wrong pattern of restrictions on trade or movement may have contributed to the difficulties experienced by consumers?

In the last few days there has been feverish activity on the part of local authorities in the Capital and elsewhere for unearthing what are described as "hoarded" stocks. It is possible that the initial effects of such operations may be to reassure public opinion that the Government is not sitting idle. But we doubt that there will be much else of benefit either to the Government or to the public. On the contrary, it is not unlikely that the raiding of grain godowns or the sealing of their contents in large trading or consuming centres might well lead to a further disorganization of the trade, block arrivals of grain to mandis or consuming centres, and thus actually aggravate the difficulties experienced by consumers. This is not to suggest that food regulations should not be properly enforced. Strict administration of food laws is certainly called for. But the first condition of sound administration is that the authorities should make sure that the regulations sought to be enforced are really

necessary, practicable and neither too numerous nor too complicated for the people to observe or officials to enforce. We are far from convinced that this essential condition of sound enforcement is at present being fulfilled. It follows that any hysterical resort to police action against producers or merchants is likely to hurt the public interest rather than serve it. One result of such a policy would undoubtedly be to make the food situation appear worse than it may be and thereby accentuate public nervousness and tension.

That there is already considerable apprehensiveness and uneasiness in the public mind is, of course, obvious. The Minister for Community Development and Co-operation recently found himself in difficulties because some of his colleagues in the Government thought that he was adding fuel to the fire when he suggested that unless steps were taken immediately to make adequate grain available to the people at reasonable prices, there was a risk of food riots in the country. The difficulty with Mr. Dey, of course, is that he has no ideas of how the Queen's English should be written or spoken. But it is, nevertheless, a fact that what he said so clumsily was not far different, in sense, from what the Home Minister, Mr. Nanda, had started saying, quite rightly, much earlier. There is certainly no denying the fact that if the food situation is not handled properly, there is a risk of a threat to law and order. That already this threat is at least incipient in some areas cannot be denied either and it must also be added that the emotions aroused in the public mind by official "raiding" activities are not likely to be helpful in the maintenance of an atmosphere of calm or confidence. That is why we suggested at the start of this article that what is making the food situation dangerous is politics. Here, the Opposition parties, unfortunately, are showing a high degree of irresponsibility. The Swatantra Party is as much to blame as the Communist Party, and the only principle that is being followed by the Opposition groups appears to be that any stick is a good stick for beating the Government with. Although no political party or politician would probably deny in so many words the essentiality of public co-operation with the Government to the nation's tiding over of food difficulties, in actual practice, virtually every one of them is doing its or his damndest to ensure that this public co-operation is not forthcoming. This is, indeed, a sad reflection on the present state of public morals or personal patriotism in our country.

We repeat, therefore, that what is most dangerous in the food situation is politics. Here, we would like to emphasize the fact that, although there is a great deal of talk about food shortage, from no part of the country has it been reported that food is not physically available. It is true that there are queues, but the queues are to be found before fair price shops where subsidized grain is sold at prices below those prevailing in the open market. Foodgrains, in other words, are

physically available, but only at prices which have risen considerably. The difficulty, therefore, is essentially one of prices, not of supplies as such. It may, no doubt, be argued that if supplies are more plentiful than they actually are, their bearish effect would be reflected in prices, but this would be different from saying that supplies are not sufficient in the sense of there being a substantial physical gap between stocks on the one hand, and consumer needs on the other. From the point of view of practical policy also, it is necessary to make this distinction between the problem of a physical deficit and the problem of a high level of prices. The latter could be the product of factors not confined to the food economy as such. On the present occasion, there is every reason to believe that the high level of prices is owing less to the physical food situation than to the aggregate economic situation where inflationary factors seem to be actively at work.

In the circumstances, such marginal additions to food supplies as may be forthcoming through increased imports or improved distribution may not be significantly effective in reducing the level of prices. We are convinced that, so far as the problem of prices is concerned, the public will have to depend on such re-orientation or rationalisation of the Government's economic policies, particularly in the area of Government spending, as the Government must be persuaded to carry out. The Finance Minister recently said that efforts would be made to effect an economy of Rs. 70 crores in the Central Budget. This decision is useful only as a token. Much more than Rs. 70 crores will have to be taken out of scheduled government spending if some impact is to be made on inflationary pressures. We would say that a target of Rs. 300 crores for the Central and State Governments taken together would be the minimum obligation the Finance Minister should seek to enforce in the area of government spending in the current financial year.

For the rest, it is more or less apparent that domestic production of wheat has been considerably less this year than last and domestic production of rice about the same. With population steadily rising, it is clear that the need for imports has grown. It is probably the case that the Government, at the moment, has less imported stocks at its disposal than it could feel safe with. But it is not necessary to exaggerate this weakness since energetic steps are being taken to step up the rate of imports. Here, Ambassador Chester Bowles' statement last week should do more to reassure public opinion than all the "de-hoarding" operations of the Government. Over the next seven months the United States would be doubling the rate of food shipments and thereby delivering to this country a total of about four million tons of wheat by February next. The United States Government will also provide much needed assistance to the Government of India in solving the problem of prompt unloading of grain in Indian ports. A team of

American shipping and handling experts will soon be arriving in this country for this purpose. There are also possibilities of more rice being secured from abroad. A deal has already been struck with Pakistan for about 60,000 tons of rice and it is expected that the United States may be in a position to make available some quantity of this cereal for this country in the coming months. Again, the Ministry of Commerce is deputing officials to rice-surplus countries in South-East Asia for negotiating purchases.

We are satisfied, on the whole, that these imports would substantially relieve the present situation. There is no need, therefore, to be unduly alarmed about immediate food prospects. But we would, however, suggest that much could be gained, particularly in psychological terms, by the Government announcing that commercial importers would be free to procure as much rice or wheat as they can from anywhere in the world, outside the purchases made under PL 480 or other inter-governmental agreements. The Government should also decide to release on demand from the trade the necessary foreign exchange for these commercial imports. We do not believe that this will impose any intolerable strain on our balance of payments. Imports of foodgrains on private trade account will necessarily be limited, although they will still function as an invaluable supplement to official imports. The virtue of commercial imports is that their quantities or prices are not announced and advertised as in the case of inter-government deals. They have thus the virtue of flexibility and can, therefore, act as a deterrent to speculation in the domestic market. Apart from the fact that commercial imports will have a substantial psychological effect on the trade, the very fact that these imports will automatically rise if domestic prices or domestic shortages become too pronounced will dictate caution to speculation within the country. Again, it is also in the long-term interest of our commercial policy to provide some scope for grain imports on private trade account. This could help strengthen and promote our business ties with grain-exporting countries, particularly in South-East Asia. We do hope that the Government will consider the possible advantages of action along these lines.

The Minister for Food and Agriculture announced certain decisions last week. We must confess that we are not impressed. While it is true that fixation of official prices of foodgrains has become unavoidable in view of the fact that unless prices are statutorily fixed they could not be legally enforced, we fail to see the need for appointing committees for discovering what those prices should be. Given the vast and varied agriculture of our country, a search for general formulae suitable for extensive application is fore-doomed to failure. An empirical approach would clearly be the best in the circumstances and we wish the Central Government had the political courage to fix regional prices

in consultation with State Governments and representative organizations of growers, merchants and consumers. The important point about price fixation is that it must provide reasonable assurance to the producer that increased output will not be allowed to be penalized by unremunerative lowering of prices through market forces. Here, we are doubtful that nice theoretical calculations or paper work by committees of officials or experts about farm costs and the like are going to be of much help. The Government will have to be guided by practical experience and changing circumstances in working out adjustments from season to season and we repeat our firm conviction that it is only the lack of political courage to take decisions affecting powerful or influential interests which could serve as an explanation for the expedient of committees.

And finally, there is the King Charles's head of state trading in foodgrains. It is evident that Mr. Subramaniam's heart is not in the ritual, but it is easy to see that he must nevertheless make his dutiful obeisance to the gods of Bhubaneswar and his party. It has now been stated that the Government of India has at last taken a formal decision to set up a foodgrains trading corporation which is expected to start operations on January 1. New Year resolutions are notoriously unreliable and we may be pardoned if we do not show much enthusiasm for this particular one. There is surely justification for this scepticism if only because the Government itself seems to be at sixes and sevens over the precise nature of this project. While the Minister for Food and Agriculture desires that the Corporation should function in competition with private traders except to the extent that it will have a monopoly of transport of foodgrains by rail over long distances, his colleague, the Finance Minister, is quite emphatic that the scheme could succeed only if there is a law compelling all producers to sell their surplus grain to the Government. Mr. Krishnamachari, in other words, demands that the Corporation should have a monopoly of procurement and wholesale trading. It is strange and disturbing that even on the fundamentals of important decisions which have been taken, evidently, after discussions in the Cabinet, the Government is not in a position to speak with one voice.

Ministerial differences apart, we have no doubt in our mind that any extensive abrogation of normal trade channels on a permanent or semi-permanent basis is not only not warranted by anything that has happened on the food front but is also likely to discourage production, disorganize distribution and generally work to the disadvantage, rather than the advantage, of the consumer. We are apprehensive that distribution costs will go up as a result of state trading and we are afraid that Government machinery of food marketing will fail to serve the consumer in terms of meeting its consumption pattern or ensuring quality of merchandize. It is

no doubt true that commercial distribution has its own defects and deficiencies, but it has been proved, again and again, that government-controlled distribution is liable to fare even worse. It is ironical that the Finance Minister who, towards the end of last year, expressed healthy confidence in the abolition of controls and announced the withdrawal of price controls on a number of commodities should now be championing the cause of an undesirably comprehensive regimentation of prices and distribution over a very large sector of the economy. This attitude becomes all the more difficult to understand when evidence is accumulating daily of the failure in practice of the policy of restrictions and controls, as, for instance, in the case of gur to which reference was made earlier.

Whatever may be the passing pressures on the Government, prices are not going to be kept in check nor production improved through controls or government trading. On the contrary, there is every reason to believe that restrictions on trade movements or the displacement of commercial agencies by government or semi-government bodies add to the difficulties and harassment of the consumer, rather than assist him in securing supplies at reasonable prices. The Government, indeed, would be well-advised to review the zonal and other restrictions on trade and movement and our

Cracks in Cement

THE SHORTAGE of cement which has been acting as a drag on factory and private housing construction as well as official third Plan development projects of relatively low priority, appears to threaten now the pace of work or progress even in the most essential and urgent sectors of the economy. Reports suggest that construction programmes of many State and Central projects have come to be affected by the non-availability of cement, so much so that State Governments are pressing the Centre to arrange imports of about 500,000 tonnes of cement immediately to tide over the present crisis.

The current difficult situation in regard to cement supplies may have partly resulted from the attempts that have come to be made to raise the tempo of developmental activity after the mid-term third Plan appraisal last year. But, it, obviously, is due mainly to the fact that cement production has been lagging far behind the planned programme. As against the third Plan targets of raising the cement industry's installed capacity and production from 9.2 million tonnes and 7.8 million tonnes in 1960-61 to 15 million tonnes and 14 million tonnes in 1965-66, the current capacity and production — in the fourth year of the Plan — amount to barely 10 million tonnes and 9 million tonnes.

The performance of the cement industry during the quarter ending June 30, 1964, has also not been very encouraging. The 19 cement manufacturing companies which are members of the Cement Manufacturers' Asso-

own advice would be that, as soon as the special or increased imports now being arranged begin arriving in a steady flow, steps should be taken to restore free movement of wheat and rice in the region of Punjab, Delhi, U.P. and Rajasthan as well as in other similar broad regions, viz., Madhya Pradesh, Gujarat and Maharashtra or Orissa, West Bengal and Bihar. The pattern already established for the southern States should, in other words, be extended to other contiguous and coherent regional units and the ground thus prepared for the restoration of free trade movements across the entire country as early as possible. We certainly do not believe that a case has been made for state trading in foodgrains as a long-term policy except in purely political or emotional terms. It is not at all necessary to go in for state trading in order to check hoarding or profiteering if and when it occurs. The Government, in the ordinary course, has sufficient powers to proceed against anti-social practices. As we have said often enough, such reasonable action as the Government may take from time to time to check or penalize anti-social practices would naturally attract, as it should, the support and co-operation of the people. The public, however, is extremely unlikely to be equally enthusiastic about doctrinaire decisions setting up the Government as the sole shopkeeper.

ciation, have reported deterioration in the overall utilization of their installed capacity from 96.1 per cent in April-June, 1963, to 92.3 per cent during these three months this year. (A statement of their output is published under "Records and Statistics" in the present issue). This may be due partly to the newly added capacity—approximately 0.165 million tonnes—being not fully commissioned into production. But the unit-wise production figures suggest that the deterioration in the case of many a company has been due to other reasons including shortage of raw materials. A particularly disconcerting fact is that while production of "cement equivalent of clinker" has gone up during April-June, 1964, by about 80,000 tonnes over the figure for the corresponding period in 1963, the output of "ground cement" has recorded a fall of 8,896 tonnes.

In the immediate future, there may not be any escape from importing cement. But it is high time that government machinery had been geared to meet the challenge of the terminal year of the current Plan when anxiety to reach targets in the cement-consuming sectors of the economy is bound to result in a further spurt in demand for this building material.

The main hindrance to the augmentation of capacity in the cement industry has been the linking of the expansion plans with the availability of machinery and equipment from indigenous sources and the low profitability of cement manufacture under the control-

led prices not only restricts the building up of internal resources for financing expansions, but also scares away new investments. There are stated to be nearly 30 expansion or new cement manufacturing schemes awaiting tie-ups with indigenous machinery manufacturers for supplies. The relaxation allowed by the Union Government last year under which the persons who held licences for cement schemes were permitted to import some balancing equipment from abroad to a ceiling of Rs. 45 lakhs per plant of 600 tons a day capacity, has, indeed, yielded some results, but there is need for a more pragmatic approach in this regard. The proposed import of about half a dozen complete cement plants from East European countries also requires to be expedited.

There is also imperative need to strengthen the financial position of cement manufacturers so as to enable them to plough back greater internal resources into their expansion programmes. With the capital market in the doldrums at present, new investments are not forthcoming from the public in an adequate measure even for particularly attractive ventures. The difficulties that such low-yielding industries as cement must necessarily encounter can easily be appreciated.

The Union Government has all along been resisting pleas for an adequate upward revision of prices. The two marginal increases allowed to the cement industry, first in 1961 and again a short time ago, have hardly been commensurate with the increased costs of production and transportation. When a black market is rampant in cement and demand far exceeds supply, no useful purpose is served by keeping a rigid control on prices at the factory level.

The contention of the Government has been that the freeing of cement will push up the construction costs

of new projects, making them over-capitalised. But this danger can be avoided by following in the case of cement the pattern of distribution introduced for steel in March last. While the cement industry may be continued to be subjected to price control for that portion of its production which is required for priority uses in the national interest, the remaining production meant for low priority uses may be decontrolled. No doubt, it will push up cement prices in the open market. But this will help in restraining consumption and restoring a balance between demand and supply. The financial position of the cement manufacturers too should improve and make the expansion of the industry much easier.

With the rapid expansion envisaged for the cement industry during the next Plan — the Perspective Planning Division has suggested raising capacity and production to 26 million tonnes and 23 million tonnes respectively in 1970-71 — energetic efforts will be needed to build up cement machinery-manufacturing capacity as well as in the area of exploration of new cement-grade limestone deposits. The demand for cement machinery by 1970-71 is expected to go up to as much as Rs. 15 crores per annum and that for cement-grade limestone to as high as 37 million tonnes a year, from the third Plan-end indigenous availability of Rs. 4.5 crores worth of cement machinery and 17.13 million tonnes consumption of cement-grade limestone. While with sympathetic consideration of the foreign exchange requirements of cement machinery-manufacturers, the country may well become self-sufficient in this regard, prospecting of new deposits of limestone could, indeed, prove an arduous job. The proposed Cement Corporation will do well in concentrating its energies on this task for some time rather than dissipating them in attempting to build up a high-cost public sector in the cement industry or getting embroiled with the distribution trade.

Highlights of the Week

A FRIEND INDEED

THE U.S. Ambassador, Mr. Chester Bowles, announced at a Press Conference in New Delhi on July 30 that his Government would make available to India four million tons of wheat and a substantial quantity of rice during the next seven months. American shipping and port handling experts are also being sent for advising the Government of India on ways of speedier unloading, bagging and distribution of these foodgrains.

The four million tons of wheat supply promised by the US, it is learnt, is out of the balance quantity which could not be imported by India under the PL 480 Agreement (1960) up to the expiry of this pact on June 30, 1964. The rice supplies promised are fresh ones and will be made available out of the new US rice crop. The quantity involved is understood to be 300,000 tons. The US has also supplied some rice to India during the past two months out of her 1963 crop. The prospects of the US supplying substantial quantities of foodgrains to India in the next few years under PL 480 were rated high by Mr. Chester Bowles. "We have no intention of letting you down", he declared.

The United States also proposes to help India in a massive way in revolutionising Indian agriculture. American experts with long experience in the pricing of food products will be coming to New Delhi soon to help the Union Government in devising "incentive prices" for farmers. A consortium of fertilizer manufacturing companies of the US has offered to set up five new fertilizer factories in India, each with a capacity of 200,000 tons of nitrogen nutrients per annum. The US consortium will be content with a minority share in the capital of these ventures. The investment arrangements, currently being discussed, are expected to be finalised on the patterns of the Cochin Oil Refinery or the Vishakhapatnam Fertilizer Plant. The production from these five units, anticipated to start in about three years, will raise foodgrains output in India by approximately 10 million tons.

An American expert will also be arriving in New Delhi shortly to assist the Government of India in developing and greatly expanding the programme of aerial spraying to minimise the damage caused by insects and plant diseases. India loses nearly 10 per cent of her foodgrain production because of the damage done by insects and plant diseases. The US has further promised to assist India in meeting her food requirements in various other ways.

The following is the text of the statement made by Mr. Chester Bowles at the Press Conference:

Topic of Discussion

Food shortages and consequent high prices have become a topic of much discussion in India. Some of my Indian friends, including members of the press, have asked me to comment on the problem itself and particularly on the role of the United States in relation to it.

The situation is two-fold: First, the need for additional grain supplies to ease the current shortages, and second, the longer-term measures that may be taken to increase India's food output and to prevent similar shortages in the future.

Let me first comment on the subject of current supply. In response to the urgent request of the Government of India, the United States is now doubling the rate of wheat shipments.

In seven months we shall deliver four million tons of wheat. This means that the equivalent to two fully laden 10,000-ton wheat ships from America will arrive every day in Indian ports. Between July and February of next year we will land here in India supplies of wheat which are nearly half as large as all the wheat grown in India in the last year. These shipments represent the output of 5.5 million acres of American wheat fields, which is an area more than half as large as the State of Kerala.

We have also responded to the Indian need for rice.

Although the new American crop will not be harvested until August, we have committed a substantial amount to India. With this commitment and rice from other sources, on top of India's own production, I believe ample supplies will be assured.

In the last seven years we have shipped 23 million tons of foodgrains to India. At the present rate the shipments are amounting to 15 per cent of our total wheat production and 15 per cent of our total rice production. Moreover, we have no intention of letting you down in the future.

Right now the bottleneck is not the availability of wheat or the ships to carry it from the United States, but the problem in unloading grain in Indian ports. However, recently the Indian Government has been making good progress and in response to its request, we are sending American shipping and handling experts to work with Indian authorities to devise ways for speedier unloading, bagging and distribution of the incoming grain supply and a long term plan to eliminate similar bottlenecks in the future.

Emergency Measures

These emergency measures will help ease India's current problem. However, the basic need is for greater production right here in India. Here again, the United States is offering and will offer all-out assistance.

In response to a request from Mr. Subramaniam, Minister of Food and Agriculture, we have arranged for American experts with long experience in the pricing of food products to come to India. They will consult with their Indian colleagues on how incentive prices can be set to encourage Indian cultivators to increase sharply their production and with assurances of fair prices to the consumer.

This is the approach which has enabled us to grow such extraordinary quantities of food in America and to sell it to the consumer at reasonable prices which have recently been decreasing.

One of the most important and dramatic means of raising India's food production is sharply to increase its supply of fertilizer and to make this additional fertilizer available to the cultivators at a lower price.

The opportunity is underscored by the fact that a single ton of fertilizer nutrients will produce 10 additional tons of food.

In the last 13 years the United States Government has shipped 446,000 tons of fertilizer to India. With the tremendous emphasis now being placed by the Government of India on fertilizer, an additional 433,000 tons is on order and deliveries have begun. In addition we are now financing the building of a new fertilizer plant at Trombay which begins production this year and by early 1965 will be producing at the rate of 430,000 tons annually. That plant is in the Public Sector. We have extended large loans for the construction of another huge fertilizer plant at Visakhapatnam. This plant is being built jointly by Indian and American companies.

Discussions with representatives of American companies soon will begin for a massive expansion of the production of fertilizer nutrients with the co-operation of US companies which have been particularly successful in this field. Five factories, each with a capacity of 200,000 tons of nitrogen nutrients per year or a total of one million tons per year are under consideration.

This extra production in itself would more than double Indian output from existing plants and plants now under construction. If agreement on these new factories is promptly reached, and construction started without delay, the existing gap in India's fertilizer requirements can be met within three years.

In response to the Government of India's request, an American expert is scheduled to arrive soon to co-operate with

(Contd. on p. 239)

Is Big Business Monopolistic?

'OBSERVER'

THE APPOINTMENT by the Government of a Monopolies Commission to inquire into the extent and effect of concentration of economic power in private hands and the prevalence of monopolistic and restrictive practices in important sectors of economic activity other than agriculture presumes the existence of monopoly and restrictive trade practices in big business. It is the object of this article to examine whether the big business of this country is benefiting from monopolistic and restrictive trade practices in the form of either a higher rate of growth or a higher rate of profit.

As a preliminary to the study of the rate of growth and profitability of big companies in India, it would be in order to explain what monopoly and restrictive practices mean. Monopoly is a situation in which a single seller has complete control of the supply of a commodity in a given market. In real economic life such a situation never exists. In practice a single seller controlling the entire supply of a commodity is rarely found because the concepts of both commodity and market are so broad that there is always some degree of competition with even an apparently monopolised product. In a poor country such as ours, with very little purchasing power in the hands of the consumer, an important competitive element that is present is that it is always possible for the consumer to go without the product rather than pay a higher price, in view of the highly competitive demands on his little purchasing power. In view of the absence of single seller monopolies, the Monopolies and Restrictive Practices Act of 1948 of U.K. deems that a monopoly situation exists, broadly speaking, where at least one-third of the market (or of a substantial part of it) is in the hands of a single firm (or connected group of firms). The Monopolies Commission of U.K. may then be required to report on whether the monopoly situation or the "things done" as a result of or to preserve that situation operate against the public interest. The "things done" would include mainly excess profiteering either by charging a high price or by selling substandard articles and the situation can be preserved only by ensuring a high rate of growth.

Public Interest

Under restrictive trade practices could be included agreements both national and international, by which manufacturers seek to control prices and output, to divide markets and to fix conditions of sale. In the U.K. a restrictive agreement is presumed to be contrary to the public interest and the burden of proving the contrary is upon the person who seeks to uphold the agreement. The upholder of an agreement must satisfy that the agreement in question fulfils one of seven specified conditions:

- It is reasonably necessary for the safety of the public
- Its removal would be likely to deny specific and substantial benefits or advantages to the public as purchasers, consumers or users
- It is reasonably necessary to counteract restrictive measures taken by an outside monopoly
- It is reasonably necessary to enable the parties to match the bargaining power of a dominant buyer or seller
- Its removal would have a serious and persistent adverse effect on the level of unemployment in an area
- The removal would cause a substantial reduction in the exports of the country or of the industry
- It is reasonably necessary as an adjunct of another agreement already approved by the Court

Since monopolistic and restrictive trade practices would result in a higher rate of growth and profitability in the case

of big companies, we may turn towards its examination. Table I shows the rate of growth in assets in 1961 in the case of 1333 public limited companies.

TABLE I
CAPITAL FORMATION RATES, SIZEWISE 1961
(Per cent per annum)

Size Group (Paid-up Capital)	No. of Companies	Gross fixed assets formation	Net fixed assets formation	Inventory accumu- lation	Gross Capital for- mation	Net capital forma- tion
Rs. 5 to 10 lakhs	339	10.8	10.8	8.0	9.9	9.5
Rs. 10 to 25 lakhs	450	10.2	10.0	9.4	9.9	9.6
Rs. 25 to 50 lakhs	260	10.9	10.8	11.4	11.1	11.1
Rs. 50 to 100 lakhs	166	10.0	10.1	13.5	11.2	11.8
Above Rs. 1 crore	118	9.5	6.3	9.8	9.6	7.5
TOTAL:	1333	9.9	7.9	10.7	10.1	9.1

Source: Reserve Bank of India Bulletin, June 1963.

It will be seen that the biggest companies in India which have a paid-up capital of more than Rs. one crore each have recorded a below average rate of growth by all the five important standards of growth such as gross fixed assets formation, net fixed assets formation, inventory accumulation, gross capital formation and net capital formation in 1961. Another important fact that emerges from Table I is that the smallest companies, that is, those having a paid up capital of between Rs. 5 and 10 lakhs have recorded much higher growth rates than the biggest companies by four important standards like gross fixed assets formation, net fixed assets formation, gross capital formation and net capital formation. The rate of increase in inventory accumulation is slightly lower in the case of the small companies and this was mainly due to the very high rate of growth in inventories which they had in 1960. That the lower rate of growth in 1961 in the case of the biggest companies was not accidental could be seen from the fact that in 1960 also the biggest companies (i.e. those having a paid-up capital of above Rs. 1 crore) recorded below average rates of growth. Table II shows this.

It will be further seen from Table II that the smallest com-

(Per cent per annum)

Size Group (Paid-up Capital)	No. of Companies	Gross fixed assets formation	Net fixed assets formation	Inventory accumu- lation	Gross Capital for- mation	Net capital forma- tion
Rs. 5 to 10 lakhs	237	8.5	7.4	24.4	13.3	14.7
Rs. 10 to 20 lakhs	316	7.0	4.8	19.1	11.0	11.8
Rs. 25 to 50 lakhs	205	10.0	9.0	26.9	15.6	17.9
Rs. 50 to 100 lakhs	143	7.5	7.3	11.9	9.1	9.7
Above Rs. 1 crore	100	7.9	3.4	14.8	9.5	7.0
TOTAL:	1001	8.0	4.7	17.1	10.6	9.6

Source: Reserve Bank of India Bulletin, June 1962.

panies in 1960 had a much higher rate of growth than the biggest companies. In fact the net fixed assets formation and net capital formation, which reflect the growth in industrial capacity was slightly more than double in the case of small companies compared to the biggest.

It has been alleged that in view of the connections with banks and capital market, the big companies are able to get more than proportionate share of the bank loans and other external sources of funds (such as equity capital, debentures etc.) and are thus in a position to retard the rate of growth of small companies. Table III shows the external sources as a percentage of total sources of funds and increase in bank borrowings as percentage of external sources in the case of five groups of companies (classified according to size) in 1960 and 1961.

TABLE III
IMPORTANT RATIO OF SOURCES OF FUNDS—1960 & 1961

Size - group (Paid-up capital)	1960		1961	
	External sources as % of total funds	Increase in bank borrowings as % of external sources	External sources as % of total funds	Increase in bank borrowings as % of external sources
Rs. 5 to 10 lakhs	52.1	43.1	52.6	36.2
Rs. 10 to 25 lakhs	53.9	62.6	53.0	28.0
Rs. 25 to 50 lakhs	59.6	55.0	54.9	41.1
Rs. 50 to 100 lakhs	42.9	66.5	48.2	40.4
Above Rs. 1 crore	33.3	30.3	34.8	32.5
TOTAL:	43.5	48.3	43.8	35.5

Source: R.B. Bulletin, June 1962 and 1963.

It will be seen from Table III that the smaller companies are having greater access to capital market and bank loans than the biggest companies.

Profitability

Although there are various measures of profitability, the most important standard for knowing whether monopoly or near monopoly profits are being secured by big companies is to see the rate of gross profits (including interest charges, managing agents' remuneration and tax provision, but excluding depreciation) on the total capital employed. Table IV shows the rate of gross profit for three years on the total capital employed.

It will be seen from Table IV that in 1959 and 1960 the biggest

TABLE IV
GROSS PROFITS ON TOTAL CAPITAL EMPLOYED
(Per cent)

Size - group (Paid-up capital)	1959	1960	1961
Rs. 5 to 10 lakhs	10.7	10.5	9.7
Rs. 10 to 25 lakhs	8.9	10.1	9.8
Rs. 25 to 50 lakhs	11.1	10.1	9.8
Rs. 50 to 100 lakhs	10.1	10.3	9.7
Above Rs. 1 crore	9.5	9.9	10.2
TOTAL	9.8	10.1	10.0

Source: R.B. Bulletin — June 1962 and 1963.

companies made a lower rate of profit than the average rate and the smallest companies had a higher rate of profit than the biggest companies. In 1961 the biggest companies made a slightly higher rate, but that was only 0.2 per cent higher than the average rate.

As regards the rate of dividend paid by big companies, it may be seen from Table V that during the three years 1959 to 1961, the big companies have paid a dividend of 6.6 and 6.7 per cent only on the net worth of companies. A rate of dividend of 6.7 per cent cannot be considered excessive when the Unit Trust of India is generally expected to pay a dividend of not less than six per cent.

TABLE V.

DIVIDEND AS PERCENTAGE OF NET WORTH
(Per cent)

Size - group (Paid-up capital)	1959	1960	1961
Rs. 5 to 10 lakhs	5.8	6.5	5.8
Rs. 10 to 25 lakhs	5.9	6.5	5.9
Rs. 25 to 50 lakhs	6.2	6.1	5.6
Rs. 50 to 100 lakhs	7.1	6.7	6.2
Rs. 1 crore and above	9.6	6.7	6.7
TOTAL	6.5	6.6	6.3

Source: R.B. Bulletin — June 1962 and 1963.

Since monopolistic and restrictive practices are followed to get a higher rate of profit and growth, the absence of both these in the big company sector, should put the burden of proof on the Monopolies Commission. In this context a word of caution would be appropriate. Indian business men have to compete effectively with other business men abroad whose scales of operation and efficiency are much above ours. Further even at home, the Indian industrialist has to compete with a consumer whose purchasing power is so low that it is always advantageous for him to do without the thing in question rather than pay a higher price or accept a poor quality. Our capacity to live without even some of the so-called basic necessities of life is well known. In such a society, no measures akin to either US anti-trust laws or the UK Monopolies and Restrictive Practices Act should be enacted without a very careful consideration of all the issues. It may be worth pointing out that not even European countries have copied the American method of dealing with monopoly or dominant enterprise. In Europe, government regulation of economic performance tries to prevent or ameliorate abuses arising from the possession of dominant market power. On the other hand, in the United States, competition is made to function as an automatic regulator of economic performance. This difference is mainly due to the fact that the market for the products of European manufacturers is much smaller than that of the American market and because of the necessity to compete abroad. Since both these reasons are true to a greater extent in India, 'prima facie' it would appear that far from having any anti-trust legislation akin to USA, we should have only government regulation of the economic performance of our industrialists, but to a lesser extent than in Europe. The question that then arises is: have we not already exceeded Europe in the field of government regulation of business?

WINDOW ON THE WORLD

Goldwater and U. S. Gold

PAUL EINZIG

SENATOR GOLDWATER'S nomination as Republican candidate for the Presidency of the United States seems to have produced no impression of any kind in the foreign exchange markets up to the time of writing. This is probably because most people take it for granted that he will not be elected. But the possibility that in November he will become President-elect, and that in January 1965 he will take charge of the United States Administration, should not be ignored. It is advisable to envisage it and to try to figure it out how it would affect the dollar.

Taken at its face value, the economic programme endorsed by the majority of the Republican delegates at the San Francisco Convention would undoubtedly help the dollar powerfully — if it were put into practice. Ever since under Roosevelt's Administration during the thirties the United States had tried to spend its way out of the depression, all Presidents have been pursuing a policy of deficit-financing on a scale entirely unprecedented in times of peace. But Goldwater will go to the election with a programme of bringing deficit financing to an end. The balancing of the budget is one of the basic points of the Republican platform. Moreover, under Goldwater the elimination of the balance of payments deficit would be given high priority.

On the face of it, anticipation of Goldwater's victory should therefore tend to make for a firm dollar. But the great question is, would it be safe to assume that a Goldwater Administration would be able to balance the budget and the balance of payments? Unfortunately, the foreign policy with which Goldwater's name has come to be associated, and which was clearly defined at San Francisco, rules out any hope of a strengthening of the dollar under a Goldwater Administration.

Reversing the Policy

It is Goldwater's declared intention to reverse the policy of peaceful co-existence and to adopt a highly aggressive foreign policy towards the Communist bloc. The logical, natural and inevitable consequence of such a policy would be spectacular increase in defence expenditure within and outside the United States. Hopes of budgetary economies and of cuts in overseas military expenditure have been rising under the influence of improved East-West relations, but they would have to be abandoned under Goldwater. On the contrary, there would be a revival of the cold war, a rearmament race, and a reinforcement of United States forces overseas. Even if the new Government were able to cut non-military expenditure, any conceivable economies would be heavily outweighed by an increase of military expenditure. The budgetary deficit, far from being reduced, would be increased considerably, and so would be the deficit on the balance of payments.

The possibility of a limited war in the Far East could not be ruled out. Even a limited war would be an extremely costly affair and would aggravate both budgetary deficit and balance of payments deficit. The experience of the Korean War is still remembered, and the difference is that in the meantime the decline of the US gold reserve and the increase of US external liabilities has weakened the technical position of the dollar.

Since it is Goldwater's declared intention to practise brinkmanship, there would be bound to be major war scares from time to time. On each occasion the dollar would be subject to extra pressure through withdrawals of foreign

funds. Admittedly, it would be difficult to find a "safe" currency into which hot money could be switched. But there is always gold. There would be a gold rush in the London market and the Central Banks' Gold Pool would have to part with very substantial amounts of gold in order to prevent a spectacular increase in the free market price.

In such circumstances, and also because Goldwater is certain to antagonise and even insult foreign statesmen such as de Gaulle, several foreign Governments and Central Banks holding large dollar reserves would convert their holdings into gold and repatriate them. The resulting decline in the gold reserve of the United States would aggravate the wave of distrust in the dollar and would accentuate the withdrawals of privately held dollar balances. The Central Banks of countries whose residents would be selling out their dollars would have to support the dollar under the International Monetary Fund arrangement and would thereby accumulate dollar balances which they would then withdraw in gold. Alternatively, the United States would exhaust the drawing rights with the International Monetary Fund and would have to support the dollar by parting with gold.

It is no exaggeration to suggest, therefore, that within a few months after Goldwater's election American gold would

Eastern Economist 20 Years Ago

AUGUST 4, 1944

The creation of a new Department of Planning and Development, the choice of Sir Ardeshir Dalal as its Head, and the central place it is expected to occupy in the Government of India afford evidence of a frank recognition of the importance of planning in New India and mark a victory for all those who believe firmly that the future of this country depends upon sound planning. The essential functions of the Planning Department are two: (a) It should plan, frame policies and be responsible for all decisions in respect of all economic problems in which policies are involved; and (b) it should ensure that the plans framed and agreed upon are also executed with celerity and in conformity with the principles underlying the plans. These two functions require different types of machinery, but it is essential that the Planning Department should have an administrative section which, while not itself executing the plan, will hold itself responsible for the co-ordination of the various administrative departmental organizations of the Government. Planning personnel is the lynch pin of the planning section. If Sir Ardeshir means business, he should be able to get together a team of workers whose outlook and equipment are very different from those of the average ICS and departmental officers. The defects of the old and routine type of civilian administrators, accustomed to handle files in a leisurely manner, going from precedent to precedent, unwilling or afraid to take bold decisions or break fresh ground, have now become the common place of bureaucratic administration.

flow out like water. 'Nomen est omen'. The Senator would certainly live up to his name.

The alternative to heavy losses of gold would be the adoption of exchange control or the adoption of a floating dollar. It seems probable that, confronted with that choice, Goldwater would choose the floating dollar. This at any rate may be inferred from the fact that his chief economic adviser, Professor Milton Friedmann, has been for many years an enthusiastic supporter of the idea of abandoning fixed parities and adopting floating exchange rates.

The Wage-Price Spiral

JOSSLEYN HENNESSY

LONDON:

HOW LONG this despatch will take to reach you, or whether, indeed you will receive it at all depends not on the efficiency of the British post office but on the kindness and good will of Mr. Ron Smith — general secretary of the Union of Post Office Workers who, at the time of writing, have been alternately out on strike or refusing to work overtime, with the result that more than 35,000,000 letters now await handling in London alone. As if this were not enough, we are threatened with a strike of telephone operators as well.

Why? Because Mr. Ron Smith says that postal workers earn 13 per cent below the national industrial wage average. This, he thinks, is too obviously unfair to need arguing.

Let us, however, consider the argument implied. If, as soon as the wages or salary of any employee fall below the national average, they must be brought up to it, this means that every employee in every industry — coal miners, bank clerks, bus drivers, hotel managers, works managers, company chairmen and night-watchmen — must all be paid the same wages. In fact, you will not have a national "average" wage, because the concept of an average implies that some employees are above, some below it. Without this, there is no "average": there is only a uniform national wage rate.

Logic of the Conclusion

Mr. Ron Smith might reject the logic of this conclusion, because he wants postmen's wages to be determined by comparing them with other jobs of similar skill and responsibility and bringing them up to that level, if found to be below it. But this is exactly what was done. Trouble has arisen because the comparison did not reveal a big enough differential, in favour of the postmen, so Mr. Ron Smith wants another investigation to be conducted, taking other jobs for comparison, which will produce a bigger rise for the postmen. The implication of this is that as long as comparability gives the postmen advantages, Mr. Ron Smith favours different rates of pay according to skills and responsibilities, but that if it does not produce this, he wants to substitute a flat national wage rate.

The government has offered an immediate, back dated, interim pay rise of 4 per cent, and a speedy reconsideration of the comparability scales by arbitrators, which could produce something over and above the 4 per cent. Mr. Bevins, the Post Master General, says such a review could be completed and agreed in a month. Mr. Smith rejects all this, asserting that the review would take seven months, and the postmen are not prepared to wait that long. They demand a 10½ per cent rise immediately.

Two questions suggest themselves: (1) Can the Post Office afford to pay out more in wages without raising its charges to the public? (2) If not, can it devise means of raising the productivity of postal workers and granting a pay rise

Judging by the steadiness of the dollar during July, the foreign exchange markets do not appear to have realised as yet the economic consequences of a Goldwater victory. Or, as I said above, they are over-confident that the good sense of the American public would reassert itself and Goldwater would be defeated. Every banker I have talked to expressed himself in that sense. I can only hope that they will prove to be right, so that the remark that Goldwater's election is out of the question will not prove to be one of the most fateful of historical "famous last words."

on condition that the men accept the new techniques necessary?

If the answer to both these questions is "No", a pay rise would be inflationary. It would add to the wage-price spiral and neither the community nor the postal workers would gain anything because more money would be chasing an unincreased total of goods and services. They would, in fact, lose, because inflation distorts the economic indicators which enable entrepreneurs to allocate available resources in accordance with demand.

You would think that serious papers such as the 'Times' and the 'Guardian', and the B.B.C.'s current affairs interviewers and commentators, would put these elementary questions before the public. Well, they don't.

The trouble with the U.K.'s post-war Welfare Society is that any one who suggests that there is, or should be, a connection between personal effort and reward is regarded as being as eccentric as someone who takes the Bible's Garden of Eden story literally.

The fact is that over broad areas of the economy, once a worker is accepted as a union member, and once he is engaged in a job, it is status, not the quality of his performance that entitles him to employment. The performance must be good enough not to flout customary standards, but to excel that minimum attracts sanctions from the organised upholder of status — the unions. The difficulty that an employer has in dismissing a unionised worker solely on the grounds of inefficiency emphasises status and customary standards of work in established techniques. This is a regression to the static, pre-Industrial Revolution economies, in which the mediaeval trade guilds flourished. The need to achieve the higher productivity of the constantly changing technologies that characterise a society which has substituted competition for ascribed status is lost to sight. All manual workers, more and more white collar workers, and professional people such as doctors, nurses, or teachers, connect pay rises with an across-the-board increase that they expect as routine from the next round of union-employer, or union-government, negotiations, in which the deciding factor is not increased productivity but the "rise in the cost of living" that such practices render inevitable. In a society in which competition was enforced, employers would reach a point at which, without increased productivity, wage rises would cease, because costs had become too high to be passed on without encountering resistance from consumers, which would lead to falling profits.

Such, however, is the climate of opinion here that if (as at the moment of writing) an employer (in this case the government) dares to refuse the full wage rise demanded, the newspapers and the B.B.C. commentators imply, or assert, as a matter of course that the employer must be wrong.

This despatch may have a certain value as a quaintly unique collector's piece, in that the economic considerations outlined in it will be brought to the notice only of those newspaper readers in the U.K. who subscribe to "Eastern Economist".

High Tide in U. S. Trade

GUY SIMS FITCH

WASHINGTON:

THIS YEAR'S upsurge in US trade with the rest of the world is no isolated phenomenon. It is part of a general advance which is likely to see the trade of free nations, expressed in terms of exports, soar well above last year's peak to another all-time high to close to \$150,000 million. The general expectation seems to be that world trade, excluding the \$20,000 million or so exported by Communist lands, will exceed last year's \$134,000 million by from \$12,000 million to \$15,000 million, the largest annual increase yet recorded. This spectacular advance is being fed by the expansion of economic activity, with a consequent rising demand for goods, around the world. What has been happening thus far may only be a foretaste of the even more vibrant gains that promise to accompany successful conclusion of the Kennedy Round of multilateral negotiations to reduce tariffs and other barriers to international trade under the aegis of the General Agreement on Tariffs and Trade (GATT). Ground rules for this round, which would benefit countries everywhere in all stages of development, have been agreed to in principle, although working out the technicalities surrounding their implementation is proving an arduous and time-consuming task.

As the world's largest trading nation, the United States has participated substantially in the current trade upsurge. The respected National Foreign Trade Council (NFTC), leading private organization in its field, new projects US commercial merchandise exports for all of 1964 at \$24,700 million and US imports at \$18,200 million. These figures, which accord closely with adjusted annual rates revealed in official monthly data, are somewhat higher than those forecast by the Council at the beginning of the year. They would represent sizable gains over 1963's actual totals of \$22,700 million for exports and \$16,900 million for imports. The upward trend in trade is based on continued vigorous economic activity at home and abroad. The especially buoyant US expansion could well mean that US imports will be rising somewhat faster than exports as the year progresses. The Council's estimates also envisage

no drastic shift in export or import price levels. On the basis of the NFTC estimates, the US trade surplus—the excess of exports over imports — would come to about \$6,500 million this year. This would be the largest such surplus since the earliest post-war years, and would go far towards reducing the persistent deficit in the US balance of international payments. The payments deficit is the amount by which all US expenditures, loans and investments abroad — public and private — exceed US receipts from abroad. It is the result largely of the continued and sizable transfer of US resources to other countries in keeping with responsible international policies — a transfer which for a number of years has outweighed the traditional US export surplus.

With this surplus now growing substantially, the Council has estimated the 1964 US payments deficit at about \$1,500 million. This would be the nation's seventh deficit in a row, but it would be markedly smaller than the previous six. Last year, the deficit was \$2,600 million. Recent data tend to bear out this forecast of a sharply reduced deficit, although not all government economists are as optimistic as the private traders about the magnitude of the improvement to be registered this year. One of the questionable points is the size of the outflow of private capital from the United States, which will be a major element in the payments deficit despite the widening trade surplus. The NFTC expects this outflow to be about \$4,800 million this year, compared with \$4,200 million in 1963. Much of this private outflow represents long-term investment in productive facilities abroad, thereby contributing to economic growth in other countries. But some of it is in the form of short-term funds which often move in response to advantageous interest rates.

No less a personage than President Johnson, however, has publicly discounted at a recent meeting with business men at the White House any seriously untoward effects of these interest rate increases. Without going into detail, the President flatly predicted that this year's payments deficit will be lower than last year's and that next year's will be lower still.

HIGHLIGHTS OF THE WEEK (Contd. from p. 232)

the Indian authorities in developing and greatly expanding a programme of large-scale aerial spraying against insects and plant diseases.

Another new US programme, the details of which we expect to announce soon, involves a major expansion of the output of grain legumes (beans and peas) which is a major source of protein for Indian villagers. Four United States scientists will come to work with Indian scientists in the development of this programme.

In co-operation with the Government of India and the Rockefeller Foundation we are also making distinct progress in hybrid maize. If present plans are carried forward maize production can be doubled in five to ten years. We are also steadily progressing in the development of hybrid varieties of sorghum (jowar) which will increase the yield of this important crop substantially. About 15 per cent of all India's acreage is devoted to this crop.

On another front, nine American technicians will work with Government of India experts in soil and water conservation. They will be concerned with the upstream problems of building catchments, reforestation and drainage slopes — to conserve water for the dry season — and with the downstream problems of canals and distribution systems to make the best use of available water.

We have also asked eight additional American technicians to work in co-operation with the Government of India and the Ford Foundation in the fifteen districts where intensive use of

modern food growing techniques is now under way.

At the request of Mr. Subrameniam a team of American irrigation experts is now at work in Madras State exploring methods by which the food production miracles of our Imperial Valley in the State of California can be applied here in India.

In another agricultural area we are working with Indian authorities to bring a thousand pedigreed bulls to India to improve the milk production of Indian cattle.

In addition, the United States is co-operating with India in the setting up and operation of seven agricultural universities, which will help meet a basic need for training, research and extension work. We believe that these institutions may contribute to the kind of agricultural revolution which resulted from the United States land grant colleges which were begun a hundred years ago in the United States.

One final word: this is not the first time in India's long history when she has faced serious food shortages. However, this time there is solid basis for confidence.

For the short term, massive shipments of grain are now on their way from the United States. For the longer term the Indian Government, backed by all the scientific skill that the United States can bring to bear, is launching a bold, carefully planned, scientifically sound programme designed rapidly to increase India's food production.

With a reasonably fair break from the monsoon rains and with a determined implementation of the programme I have described, India can successfully meet her food problem in the coming years, and I can assure you that the United States Government is determined to help.

Dramatic Turn in Madras Refinery Negotiations

By Our Special Correspondent

NEW DELHI:

SOME MODIFICATIONS effected in their offer by the Burmah Oil Company and Shell International last week have dramatically changed the course of negotiations with the prospective collaborators for the Madras refinery. On the eve of his departure on a 4-week tour of Europe, the Union Minister for Petroleum and Chemicals, Mr. Humayun Kabir, disclosed to newsmen that the revised proposals of BOC-Shell International were "extremely attractive" and this had brought the combine very much back into the picture.

Although the modified proposals are being kept a closely guarded secret, it is understood that the Burmah Oil Company and Shell International have made an offer to the Government that if the Madras refinery is set up with their collaboration, they will associate the Government as partner in all crude purchases abroad for the venture. This implies that both the Government and BOC-Shell International can negotiate, severally or jointly, for crude supplies for the Madras refinery on the most competitive commercial prices.

The real tussle for bagging the Madras refinery now appears to be between BOC-Shell International and the National Iranian Oil Company. The Government of India has asked the NIOC to reduce its quotation for crude. No reply, however, has yet been received from the Iranian company.

Three other collaboration offers — from Esso Standard, Philips Petroleum and the French oil interests — are also stated to be still under consideration. But substantial modifications will be required in them if they are to compete successfully with the BOC-Shell International and NIOC's offer.

The decision on the issue is now expected only next month on Mr. Kabir's return from his European tour. It is intended to start construction of the Madras refinery by the end of the current calendar year.

The decision on the proposed Haldia refinery may be taken sometime early next year. Construction of this refinery is proposed to be taken up by October-November, 1965.

During his current visit to the Continent, Mr. Kabir will visit the United Kingdom, France, Italy, Czechoslovakia and Rumania. He will explore the possibilities of securing from these countries financial and technical assistance for the development of petroleum, petro-chemical and fertilizer industries in India.

★★

The seismic survey for oil and gas reserves under the sea-bed along the Coromandel Coast is expected to begin around the middle of this month when the Soviet scientific ship "Akademik Arkhangelsky" arrives in Madras. About 60 Russian seamen and scientists will be manning this ship under the leadership of Dr. Yakov Malovitsky. Nearly 10 Indian specialists are also expected to join in this seismic survey.

Investigations will initially begin in an area 200 km. long and 30 km. wide up to a depth of 100 metres near the mouth of the Cauvery river. They are expected to continue till October. After that, when the weather in this area becomes unfavourable, the Soviet ship will go over to the Rann of Kutch for conducting seismic survey there. It will return to the Coromandel Coast again some time in March.

The seismic surveys both along the Coromandel Coast and in the Kutch area are expected to be completed by October or November next year.

★★

The current thinking in official circles is understood to be in favour of a big role for the Cement Corporation of India

(CCI) in stepping up cement production during the fourth Plan period. The Corporation is expected to be brought into existence towards the end of September.

Of the additional 10 million tonnes capacity for cement manufacture to be created during the fourth Plan, nearly half may be set up by the Cement Corporation of India.

Besides entering the field of cement production, the CCI will undertake prospecting for cement-grade limestone in various parts of the country. It will also render assistance to the private sector in designing new cement plants.

★★

The recent controversy between the Planning Commission and the Union Ministry of Commerce over the fourth Plan target for exports is understood to have been amicably settled. At a meeting of the Planning Commission last week, which was attended by the Commerce Minister, Mr. Manubhai Shah, a compromise is believed to have been effected to fix the fourth Plan exports target at Rs. 5,000 crores. This will mean raising of exports from approximately Rs. 850 crores in 1965-66 to about Rs. 1,150 in 1970-71. The Planning Commission had earlier suggested a target of Rs. 1,200/1,250 crores exports in 1970-71. Mr. Manubhai Shah had characterised it as an unrealistic aim and was credited with the view that exports in the last year of the fourth Plan could not be expected at more than Rs. 1,100 crores.

The Union Ministry of Commerce has been asked to spell out in detail the conditions which need to be created for stepping up exports to Rs. 5,000 crores during the five years 1966-67 to 1970-71. Indications are that greater restraint may be put on domestic consumption of the products which can command a good export market. Prices of such commodities may be pegged at high levels through increases in excise duties. Excise duty rebates are allowed on exports.

Attempts are also likely to be made to meet the foreign exchange requirements of the exporter industries to the maximum extent possible. The public sector is likely to be assigned a larger role in the manufacture of such consumer goods as raw sugar. Establishment of some export-oriented industrial units is also envisaged.

★★

The representatives of the leading associations of wholesalers, semi-wholesalers and retailers of mill-made cotton cloth, who had been invited for discussion on cloth distribution with the senior officials of the Union Ministry of Commerce, are stated to have expressed the view that there was no need for clamping controls on the manufacture and prices of cloth. In case the Government instituted these controls, as suggested by the Cotton Textiles Consultative Board, the trade should be associated with the sale of both the controlled and the non-controlled varieties. Regarding stamping of ex-mill and retail prices, the trade representatives are said to have opined that no stamping of prices was necessary on the non-controlled varieties; it would be enough if the name of the mill, the nature of the texture, the type of the cloth and the brand names, if any, were printed on such cloth. While they did not object to stamping of ex-mill and retail prices on the controlled varieties of cloth, the trade representatives pleaded for increase in the distribution margin. The present margin of 18 per cent over the ex-mill prices without excise duty, they told the Ministry officials, was inadequate.

The official spokesmen are stated to have assured the cloth trade representatives that for the distribution of controlled varieties, the normal trade channels of wholesalers and retailers

August 7, 1964

Do you know?

The average annual wage of a cotton mill employee is nearly Rs. 2,000.

HARVEY FABRICS ARE THE FIRST CHOICE OF LEADING CYCLE TYRE MANUFACTURERS

Tough, durable Harvey cotton tyre fabrics provide the sinews for the finest cycle-rickshaw and cycle tyres. That's why they are the first choice of leading tyre producers such as Dunlop, National Rubber Manufacturers, Oriental Rubber Industries and Cosmos India Rubber Works. Harveys' Cotton Cycle Tyre Cord Warp Sheet, Cotton Cycle Rickshaw Warp Sheet and Cotton Cycle Bead Wrapping Sheet are extensively used by the industry.

Harveys' Madura Mills are today India's largest producers of industrial fabrics. Through the years they have built up a world-wide reputation for consistently high quality. They have the men, machines and knowhow to produce a wide range of industrial fabrics like Tyre cords, Belting Ducks, Light and Heavy Canvases and Filter Cloths.

What's more, Harveys can weave industrial fabrics to *your* specifications—however rigid. Recent expansion at Madura Mills, with the installation of up-to-date high speed looms and precision machinery, have further increased Harveys' weaving capacity. They can now meet all your requirements in industrial fabrics... to your complete satisfaction.

HARVEYS OF MADURAI

4¾ PER CENT MAHARASHTRA STATE DEVELOPMENT LOAN, 1976.

ISSUE PRICE AT PAR

OPEN ON MONDAY, THE 24TH AUGUST 1964.

The Loan will be closed as soon as the total amount of Rs. 15 crores has been subscribed and in any case not later than the close of business on 29th August 1964.

The applications for the loan will be received at—

- (a) the offices of the Reserve Bank of India, Bangalore, Bombay (Fort & Byculla), Calcutta, Madras, Nagpur and New Delhi,
- (b) the branch of the State Bank of India at Patna,
- (c) the branch of the State Bank of Hyderabad at Hyderabad,
- (d) the branches of the State Bank of Hyderabad conducting Government treasury work within the State of Maharashtra,
- (e) the branches of the State Bank of India within the State of Maharashtra except at Bombay and Nagpur and at places covered by item (d),
- (f) the Government treasuries and Sub-treasuries in the State of Maharashtra at places not covered by items (d) and (e).

Full particulars can be obtained at any of the offices mentioned above.

would be maintained as the quantities of the controlled cloth would be very large — nearly 2,000 million yards a year. Regarding stamping of ex-mill and retail prices of the non-controlled varieties, the officials emphasised that these varieties also should be sold to the consumers at reasonable prices. If the trade could make satisfactory arrangements, there would not be any need for stamping prices on the non-controlled varieties of cloth.

The Government's policy to bring the popular varieties of cloth such as dhoties, sarees, long cloth and shirting, under control, to the extent necessary, was explained by the officials of the Ministry. It was pointed out to the trade representatives that even after the introduction of the production and price controls, the textile industry should be in a position to produce adequate quantities of these popular varieties. The officials ruled out an increase in the distribution margin on the controlled varieties of cloth. They said that this was not feasible in the present-day situation when the prices were rising.

The Textile Commissioner is said to be working out the production and price control measures for the popular varieties of cloth in consultation with the industry. Steps are also being taken to appoint an advisory committee at the apex level, consisting of all interests, namely, industry, trade, labour, consumers and others, to advise the Government on efficient and smooth working of these controls.

★ ★
The British Government last week made available to India a credit of £10 million (Rs. 13.3 crores) out of the £30 million (Rs. 40 crores) assistance promised by it under the aegis of the Aid-India Consortium for the current financial year.

The credit is not tied to any development project and can be used for financing current import requirements. In view of the fall in our foreign exchange reserves in the last few weeks due to exports not picking up commensurably, this general purpose credit has been specially welcomed by the Government of India.

Including this £10 million credit, the total aid made available by Britain for India's third Plan amounts to £135 million. Of this, over £72 million have already been disbursed.

The British Government has also intimated to the Government of India its readiness to extend a loan of approximately £50 million for meeting the foreign exchange cost of expanding the capacity of the Durgapur Steelworks during the fourth Plan, from 1.6 million tonnes ingots to 3 million tonnes ingots. A formal agreement in this regard is proposed to be

signed as soon as the terms and conditions of the loan are finalised.

Construction work under the fourth Plan expansion programme of the Durgapur Steelworks is expected to start early in 1966.

★ ★
The Union Government has accepted the recommendations of the ad hoc committee constituted in August, 1963, for the selection of the rationalised sections to which rolling of steel could be restricted, and decided to limit the number of structural steel sections rolled by the main producers to 153. It is thought that this will result in economic rolling of the steel sections consistent with the broad requirements of consumers.

Special sections such as crossing sleepers, bearing plate bars, telegraph channels, sheet piling sections, etc., will, however, continue to be rolled to meet specific demands.

At present, the main producers roll about 300 sections, while the number of such sections included in the relevant Indian Standards is about 516.

As it will take some time for the existing rolls to wear out and for designs utilising these structural sections to be changed, the change-over to the rationalised sections is proposed to be effected from January 1, 1965.

The main producers have been asked to take all possible steps to ensure that all the rationalised steel sections are made available to consumers in sufficient quantities and in time. The Union and State Government departments have also been instructed to modify and base all their designs on these rationalised sections only. All consumers of steel will place indents from January 1, 1965, on the basis of these sections and import of steel sections not included in the rationalised scheme will be allowed only on the ground that the structures were designed to utilise these other sections.

The future pattern of production of structural sections by the main producers will be restricted to the rationalised steel sections only.

★ ★
With a view to reducing costs and stepping up production expeditiously, the Union Government is understood to be laying great emphasis on technological improvements in planning the advance action on the expansion of the steel industry during the fourth Plan period.

The first step in this direction was taken last week when a technical committee was set up under the chairmanship of Dr. B. R. Nijhawan, Director, National Metallurgical Research Laboratory, to suggest improvements in blast furnaces.

It has been estimated that technological improvements in

blast furnaces can increase the production of pig iron by one million tonnes. This would go a long way in meeting the demand for pig iron in the fourth Plan.

According to the tentative estimates prepared by the Planning Commission, the demand for pig iron would grow to

around 4 million tonnes by 1970-71. Of this, the existing steel-works and the units already licensed in the private sector would be able to provide 1.75 million tonnes. In case one million tonnes of pig iron are available as a result of technological improvements, arrangements would have to be made only for 1.25 million tonnes additional capacity.

Divided Counsel on Cloth Control

From Our Correspondent

BOMBAY:

"HOWEVER, HAVING faced disappointment after disappointment, at least a section among them (cotton mill interests) must still be nursing misgivings about a definite outcome even on that day" (July 7, when the Cotton Textile Consultative Body met in Bombay). This remark in my despatch to "Eastern Economist" issue of July 3 (page 19) seems to have turned out to be prophetic, though the Cotton Textile Consultative Board (CTCB) did arrive at definite decisions. Thanks to the reported strong opposition from the Congress Parliamentary Party's Sub-Committee on Prices, the Union Government is believed to have rejected this Advisory Body's recommendations which has happened seldom in the past. Although an advisory body, the Cotton Textile Consultative Board has a special status and its recommendations have invariably been accepted. This is only as it should be because the Chairman of the Board happens to be the Union Minister for Commerce, while the Vice-Chairman is the Textile Commissioner. It is these two official spokesmen of the Government who actually determine the official policy in respect of the cotton mill industry in the country. But this need not occasion any great surprise, considering that, not unoften, the Government of India has felt no qualms in overruling the recommendations of even expert statutory bodies such as the Tariff Commission.

The Question of Prices

Presently, it is not this academic question of whether or not the Government should overrule the recommendations of an advisory body, however high its status may be that should occasion concern. What should cause anxiety, and what has, in fact, been doing so, is the question of prices, especially of essential commodities such as cloth. It is not surprising, therefore, that almost everyone heaved a sigh of relief when the realistic recommendations of the CTCB, at its Bombay meeting on July 7, were made known. These recommendations, it is noteworthy, aimed not only at an overall increase in mill cloth production — the only effective answer to the problem of scarcity-cum-high prices—but also at a statutory control of up to 40 per cent of the total mill production, involving about 1,800 million yards or some 90 per cent of the apparel wear of the common man, according to Mr. Manubhai Shah, so as to ensure adequate supplies of varieties of cloth consumed by the common man at reasonable rates. The decisions of the CTCB were spelt out so clearly and in such detail that they left no scope for any possible confusion in the minds of the consumer either about the varieties of cloth to be controlled or as to their prices. Until a few days ago, in fact even after the ten-day long discussions that took place between the Commerce Ministry officials and the association of wholesalers, semi-wholesalers and retailers of mill made cotton cloth, the general impression left on the minds of the people was that the Union Government had accepted the decisions of the CTCB and had actually started implementing them.

This impression gained ground by the reported rejection by the Government of the general view of the cloth traders that there was no need for any control and of their demand for an increase in dealers' distribution margin (of 18 per cent) on the popular varieties to be controlled. As late as last week — on July 28 — it was even said that the Union Government would soon appoint an advisory committee to finalise steps to ensure the

smooth working of production and price control measures on popular varieties of cloth for mass consumption. All this is not to be, it seems. Indeed, there are disquieting reports that all the arrangements that had been set in motion to bring into force statutory controls over the production of popular varieties of cloth within three months, as had been envisaged by the CTCB, have been stayed. The whole question, it would now appear, has to be referred to the Union Home and Finance Ministers for a final decision, presumably after a further meeting of these Ministers and the representatives of the industry. In short, there would appear to be no prospect of the era of uncertain cloth prices ending soon.

The whole problem of cloth prices is becoming, if it has not already become, a sickening affair. If the members of the Congress Parliamentary Party's Sub-Committee on Prices felt that there was a strong case for lowering prices to provide some relief to the consumers, they should have put forward concrete suggestions to bring this about without affecting cloth production adversely. Instead, they were content merely to express this view, as though just a wish on the part of these mighty few would bring down cloth prices. Cloth prices can be brought down only if and when the quantum of cloth production, in particular of the popular varieties, is raised appreciably and the level of prices of at least the popular varieties is fixed. Merely on suspicion that the mill interests might charge unreasonable prices for popular varieties and unconscionable prices for non-control varieties — which is to assume that the mills do not know their own interest — the sub-committee on prices has chosen to throw a spanner into what might have become a smooth-working mechanism, without realising the damage they have unwittingly done to the prestige of the Union Minister for Commerce and the Textile Commission, as also the latter's ability to decide and enforce reasonable prices, not to speak of the demoralisation that the continued uncertainty of prices has brought in its wake.

★★
In connection with the question of accepting deposits by joint-stock companies other than banking companies, it may be recalled, the Reserve Bank of India had issued a notification in May last asking non-banking companies and financial institutions to submit returns of deposits received by them on or after March 31, 1962, by the end of last month (July 31). The last date for the submission of these returns, however, has since been extended to the end of this month (August 31). Meanwhile it is interesting to refer to certain clarifications provided by the Reserve Bank on some points raised by the Federation of Electricity Undertakings of India.

Electric Supply Undertakings stand in a special category by themselves, inasmuch as their working is regulated by the Indian Electricity Act (1910 and 1948). Under the provisions of this Act, security deposits are usually taken from requisitionists for power by way of revenue guarantee. Also, in some cases, consumers are required to place in deposit certain sums representing consumption of energy for a given period (the maximum period is three months). Besides these deposits, electricity undertakings also receive short and medium term deposits from the public to finance their power development schemes. They have, in fact, been driven to resort to this practice because of the fact that interest charges payable to banks are above the ruling standard rate (Bank Rate + 2 per cent i.e., $4\frac{1}{2}\% + 2\% = 6\frac{1}{2}\%$) permitted to electricity under-

takings under the Act and also because of the limitation placed by law on the return to investors in electricity companies.

The Reserve Bank's clarification is to the effect that, whereas the first two (those governed by the Indian Electricity Act) need not be included in the returns to be submitted, the third, that is, term deposits from the public raised for development, has to be.

★★

In order to take advantage of the slack season, 13 State Governments have announced the issue of their 4½ per cent 1967 loans totalling Rs. 100 crores. The busy season in the second week of May this year was at its peak when the ratio of total bank credit to aggregate deposits was as high as 80.28. According to the latest weekly bulletin of the Reserve Bank of India, the corresponding ratio for the week ended July 17, 1964 was 72.00 per cent and during the past five weeks had continuously declined indicating availability of surplus bank funds. All the loans, except that of the Kerala Government, will open for subscription on August 24 and close on August 29. The loan of the Kerala Government will open on August 25 and close on August 31. It is stipulated that the State Governments will have the right to retain subscriptions up to 10 per cent in excess of the loans sought. Maharashtra has floated the largest loan at Rs. 15 crores followed by Madras at Rs. 14 crores. The State-wise details of the loans are given

below with the issue price indicated in brackets:

Andhra Pradesh Rs. 11 crores (Rs. 99.50), Assam Rs. 3 crores (Rs. 99.50), Bihar Rs. 4 crores (Rs. 99.50), Gujarat Rs. 7 crores (Rs. 100), Kerala Rs. 4 crores (Rs. 99.50), Madhya Pradesh Rs. 5 crores (Rs. 99.50), Madras Rs. 14 crores (Rs. 99.75), Maharashtra Rs. 15 crores (Rs. 100), Mysore Rs. 7 crores (Rs. 99.50), Orissa Rs. 8 crores (Rs. 99.50), Rajasthan Rs. 5 crores (Rs. 99.50), Uttar Pradesh Rs. 10 crores (Rs. 99.75), and West Bengal Rs. 7 crores (Rs. 99.75)

The loans are uniformly for a period of 12 years and will be paid at par in 1976. Interest in all the cases will be liable to income-tax and will be paid half-yearly on February 24 and August 25, except for the Kerala loan for which the dates will be February 25 and August 25. Subscriptions may be made in the form of cash or cheque. Some of the old securities can also be offered for conversion into the new loans e.g. the 4 per cent Bombay State Development loan, 1964 and the 4 per cent Saurashtra State (Local Bodies Development) loan, 1964 will also be accepted at par for conversion into the new loan of the Maharashtra Government. Similar other loans, which will be acceptable for conversion, are the 3 per cent Madhya Pradesh loan, 1964, the Madras Government 4 per cent loan, 1964, the 4 per cent U.P. loan, 1964 and the 4 per cent West Bengal loan, 1964.

Jute Mills Meet Heavy Weather

From Our Correspondent

CALCUTTA:

AFTER A brief period of prosperity, India's jute industry is facing heavy weather again. This conclusion would appear startling if judged against the country's record production and export figures for 1963 — and jute mills are still working to full capacity. Current prospects, however, are necessarily judged not by past performance but by such factors as market conditions for an industry's products, state of competition and trend of costs — and from these latter points of view, the profit outlook for the jute mills is by no means bright. Therefore, the stock market investor who has been indifferent to jute shares for some time is making a shrewder assessment of the industry's prospects than those who dismiss the market trends as a mere reflection of the speculator's aberrations.

Let us take production costs, first. It has been well known that the costs of the industry have risen steadily over the past year principally due to the Wage Board award adding considerably to labour cost, and higher charges for power, fuel, lighterage, stores and essential parts and components. All these have put up the industry's conversion costs. On top of this, raw jute prices (fibre alone accounts for 60 per cent of the total costs) have been going up unchecked, largely on account of the price support scheme, but lately due to speculation about the size of the current crop, reinforced by reports that this year's crop in Pakistan is likely to be appreciably smaller than that of 1962-63. The Jute Commissioner has taken the timely step of contradicting rumours that no large drop in the Indian crop need be feared and, in fact, the output is likely to be about the same as it was during the past jute year. Yet conditions in the raw jute market continue to be buoyant, so buoyant in fact that both the industry and the East India Jute and Hessian Exchange, which guides futures trading in fibre, are now seriously worried. The member mills of the Indian Jute Mills Association have arrived at a gentleman's agreement not to pay prices above certain rates and the East India Jute and Hessian Exchange has asked its vigilance committee to keep a strict watch on speculative excesses in the fibre market.

While this is the outlook for costs, the prices being fetched in the export markets have been falling steadily. Accord-

ing to an analysis of the cost and price trends in a recent issue of the 'Jute Bulletin' issued by the Indian Central Jute Committee, the average monthly prices of fibre (basis Assam Bottoms ready delivery) have gone up unchecked, and the same for gunnies (for both hessian and sacking) have declined steadily. Hessian rates for 40in. 10oz. construction stood at Rs. 47.28 in January, Rs. 46.35 in February and Rs. 45.73 for March this year (all per 100 yards), compared with Rs. 50.97, Rs. 50.63 and Rs. 47.85 in the same months of 1963. The latest price is Rs. 45.10. Against rising costs, this steady decline in prices can only mean a lower profit margin, and no wonder the investor is assessing the prospects for the current year's working as carefully as he can. It needs to be pointed out here that the prices for jute goods during the past year, although ruling at much higher levels than obtaining currently, have not led to bigger dividends as the profit margins have been squeezed due to the trend of rising costs which set in from the latter half of 1963. In fact, most of the mills who have declared their profits and dividends for the past working year show lower profit levels, and, therefore, smaller dividends. Only a select few have been able to maintain the dividend rate, but it is because of diversification of their activities.

Birla Jute provides a prominent example. The working results of this company for the year ended 31st March, 1964, show higher gross earnings — net earnings are lower because of bigger provisions for depreciation and development rebate — which is entirely due to the expanding activities of its cement manufacturing line, but the other two mills (including Bally) in the Birla group which have announced their results this past week, show smaller profits and declare lower dividends as they depend only on jute manufactures. Howrah Jute has of course announced a higher dividend of 12½ per cent, against 10 per cent last year, but its profit margin has considerably shrunk although its sales for the past working year were substantially higher. The sales of this company have improved to Rs. 3.97 crores from Rs. 3.51 crores in the previous year, but the trading profit is sharply down from Rs. 48.79 lakhs to Rs. 38.62 lakhs. This is more or less the general trend of jute mill profits for the past working year, and most

knowledgeable people say that the outlook for the current year is still worse.

Apart from rising costs and lower profit margins, the jute mills have yet another adverse factor to contend with — competition from Pakistan, which has grown serious by now. The industry in that country enjoys definite advantages — in the form of a better quality fibre, lower labour costs and more modern machinery and equipment — over the mills in India, which are helping the former to get ahead in the competitive race. Moreover, generous subsidies are given by the Pakistani Government in the shape of the bonus voucher scheme, which makes all the difference between incentives and the absence of them, and the Indian mills have no incentive whatsoever except to keep themselves in business. Little wonder then that the production by the Pakistani mills has been rising so markedly, side by side with the expansion of the manufacturing capacity itself. The hessian output of Pakistani mills has increased from 67,259 tons in 1960-61 to 82,109 tons in 1963-64 and that of sacking even more spectacularly from 170,012 tons to 222,380 tons. It is now said that Pakistan has captured many markets from India for sacking and in hessian she has been making good progress in the export field. In fact, India's sacking output over this period has declined from 532,700 tons to 492,160 tons.

Competition from Pakistan

It is a shame that the Indian jute mill industry, much older in life and much better established with infinitely greater experience of the export business, should be losing to a newcomer, but, for this the industry is not entirely to blame. Pakistan's natural advantages and the vagaries of India's export policy have combined to increase the Indian industry's handicaps. In fact, conditions could have been even worse but for the fact that the world's consumption of this packaging material has increased over the years in spite of the inroads which synthetic substitutes have made into the field. This is a hopeful factor, and India must still rely on jute goods as one of her major foreign exchange earners. Since Mr. Manubhai Shah took charge of foreign trade, he has been viewing the industry's problems more realistically than was the case before, and measures have been initiated to put the industry on a sound footing. Mr. Shah's enthusiasm has somewhat infected other Ministers concerned, and a few measures have been set on foot which could considerably improve the economic basis of the industry if they are carried out as planned. One of them is the appointment of a committee to look after raw jute development work. This committee consists of the Agricultural Secretaries of the States concerned, representatives of the Planning Commission and growers and manufacturers. It will function in close co-operation with the Indian Central Jute Committee and the Agricultural Production Commissioner whose particular responsibility it is to supervise the task of the jute development programme.

The main aim of the jute development programme, already under implementation, is to introduce improved strains of jute to the entire acreage as early as possible. The time limit is now fixed in terms of nine years during which period it is proposed to bring the entire jute acreage under improved strains. A package programme for intensive cultivation has been launched in some districts of West Bengal and Bihar, along with other necessary measures such as more efficient distribution of fertilizers, and better retting facilities, which will make intensive cultivation possible. The Indian industry will need more and more superior varieties of fibre as there is every prospect of competition to increase from Pakistan particularly, and from the European industries considerably. Superior grade fibre is essential for making finer varieties of hessian and carpet-backing cloth; this latter item is in great favour with overseas customers at present. But there is also the need to modernise jute mill machinery. A programme to

equip the mills with more up-to-date plant is already being implemented, but the progress has not been as fast as it should be. Now that the indigenous machinery manufacturers have been steadily expanding their output, the mills should be helped to modernise their machinery more quickly so that they may at least hold their own — in the export markets.

★ ★

Eight recognised stock exchanges in the country have just submitted a memorandum to the Union Finance Minister urging him to revise the fiscal system suitably, so that the country's capital market which has been badly hit by the latest Central Budget, may revive. The details of the memorandum were given to the Press by Mr. C. L. Jhunjhunwala, President of the Calcutta Stock Exchange, at a conference last week. Mr. Jhunjhunwala disputed Mr. Krishnamachari's observation that the stock market did not present a correct picture of the economic trends in the country, but its affairs were manipulated by a set of moneyed men, and pointed out that far from being a hunting ground of the rich, the stock market accurately reflected the dismal economic, corporate, fiscal and political trends in India at present. It particularly reflects the outlook for industrial growth, which in turn depends on the success of new issues, among other things. Mr. Jhunjhunwala also pointed out that not only has the value of new issues floated come down sharply over the past few years — from Rs. 73.8 crores in 1962 to Rs. 54.6 crores in 1963 — but even the limited number of issues which are being made are attracting no more than 5 to 10 per cent of the total amounts offered, the rest being taken up by the underwriters. Companies with some amount of Government support are not faring better. This shows what the investor, the saver that is, feels about the future prospects of industry and particularly of his own investment in the shares of industrial concerns. The increase in the corporation tax and the imposition of the super profits tax (now levied under the different style of surtax) had considerably affected the profitability of industries, and the tax on dividends and on notional capital gains from bonus shares in the 1963-64 Union Budget have reduced the attractions of investment in industrial securities further. Mr. Jhunjhunwala, therefore, suggested a few measures which the Union Finance Minister should take, in order to improve the country's investment climate. The suggestions are mainly as follows: (1) The new 7½ per cent impost on dividend and the levy on the tax on bonus shares should be reviewed as these have discouraged risk capital to flow into industry, (2) In view of the continuous reduction in the real income of the investors from dividends because of the serious inflationary pressure in the country and the consequent depreciation of

value of the rupee, the companies should be encouraged to pay larger dividends to shareholders so that the latter's real value of the income is at least maintained. (3) Investors should be encouraged by the elimination of the existing invidious treatment of income from dividends as "unearned income". (4) The margin system, which has considerably hampered the revival of the capital market, should be rationalised. (5) The Reserve Bank should not unduly discourage bank advances against stocks and shares.

The Chairman of the Tea Board, Mr. A. S. Bam, is always up to some new idea or the other to popularise India's tea abroad. His latest was to sponsor the visit of Mr.

Rice Prices Raise Doubts

From Our Correspondent

MADRAS:

THE MAXIMUM and minimum prices for coarse varieties of rice announced by the Union Government became effective from August 1, in the four States of Andhra Pradesh, Kerala, Madras and Mysore. It had been anticipated that the Centre would take a decision to this effect though there was a feeling in particular quarters why the Southern States alone should come in for special restrictions while the situation in other States, particularly Maharashtra, Uttar Pradesh, Bihar and West Bengal, had not been effectively tackled. In fact, it was complained by traders as well as consumers that the high level of prices in Uttar Pradesh and Maharashtra had an unsettling effect on the plans of the surplus States and the marginally surplus regions. The statement by Mr. C. Subramaniam about large sales of wheat having been effected has no doubt been welcomed in the present context. But it is wondered why such heavy sales have not made any impression on wheat prices and whether the statistical data published by the Government regarding the yields of the various crops are incorrect.

There is no doubt that there was a shortfall in the last wheat crop by over a million tons and the output of coarse grains was also seriously affected. But with a record rice crop it was emphasised that total availability had not been affected and with heavy releases from central stocks, the availability, if anything, was significantly higher. It is, therefore, intriguing why the food problem is intractable?

Cultivator Hoarders

The readiness of the US Government to supply four million tons of foodgrains in the next 8 months to help this country get over a critical period should help our Government to pursue a vigorous policy. Fresh sales during the lean months should serve to keep down prices besides helping to reveal the true situation. The feeling has latterly gained ground that more than the trade, the cultivators are guilty of hoarding and the high level of prices is not due so much to scarcity as the withholding of stocks by the cultivators from the markets. If these reports are correct, there should be a significant fall in prices when the next crop arrives. In any case, the Central and State Governments will have to be effecting large sales of wheat and rice in the next three months if speculative activity is to be effectively checked.

★ ★

In the Southern Zone, it is generally agreed that enough stocks of rice are available and that, with the arrival of the new crop, there should be a distinct decline in prices. But the fixation of maximum prices for coarse varieties of rice without corresponding maximum prices for paddy in the producing areas would, it is claimed, create difficulties for the trade and lead to fresh complications. Even now it is complained that the maximum prices are 10-15 per cent below the ruling

Tenzing Norgay and his wife to Canada and the United States on the same campaign. The couple distributed tea and promotional literature at the Indian pavilion of the New York World Fair, where they had a tremendous reception from the organised authorities; even July 14 was observed as the Tenzing Day at the Fair. On their return from the tour, Mr. Bam held a Press Conference in Calcutta last week (where the Norgays were present) to tell newspapermen how the Norgays had made a highly successful job of their trip, and from the account given, it appears that active advertising by a popular hero personally could often accomplish much more than thousands of dollars spent on advertising in the Press and on television.

★ ★

At the Bangalore Conference of representatives of labour and the Central Government, the price situation naturally came in for considerable discussion. Industrial unrest has been in evidence in recent months in different parts of the country and a large volume of production has been lost on account of labour strikes. The increase in the cost of living has had an upsetting effect on the minds of labour. Mr. D. Sanjivayya, Union Minister of Labour and Employment, has stated that legislation would be brought forward by Government to compel industrial establishments to open fair price shops or consumer co-operative organisations as, in spite of repeated requests, the establishments employing over 300 workers have not been agreeable to start fair price shops due to the difficulties involved in purchasing essential commodities and distributing them at fair prices. The compulsion to open fair price shops may not be resented as there would be preparedness to take the suggestion if the shops were run on a 'no loss, no profit' basis. But the proposal to pay salaries partly in kind may lead to new difficulties. Any agreement to supply specified quantities of essential commodities at stipulated prices would lead to an uncertain element of subsidy which might have an upsetting effect on the calculations of many industrial establishments. Besides, even if they were ready to sell essential commodities at stipulated prices there would be a problem of securing adequate supplies unless the Government came into the picture. Ultimately, the question

DELHI-6

will relate to the stepping up of production and efficient distribution of available supplies. Whether this can be achieved through the opening of fair price shops by industrial establishments alone or the payment of salaries in kind is difficult to say. Also, the new propositions may satisfy only the demands of industrial labour to some extent. The remaining sections of population would not have similar treatment. It may even happen that the arrangements to supply essential commodities at fair prices to workers in industrial and administrative establishments, would result in higher prices for other classes of consumers. The Government have to move in this matter slowly and surely as new complications might have an explosive effect.

★★

Mr. T. T. Krishnamachari was in Madras State for a short period to take rest. His presence was naturally utilised to discuss problems relating to agriculture and other matters so that production could be stepped up significantly in a short period. Arrangements are being made to adopt a crash programme to raise agricultural production in areas where irrigation facilities are easily available. It is expected that, with the larger availability of fertilisers, there would be a further rise in agricultural production in Madras State. But what is more heartening for the citizens of Mr. T. T. Krishnamachari's parliamentary constituency is the announcement that work on the construction of a deep harbour at Tuticorin and the Sethusamudram canal would be taken up side by side and the total cost would be Rs. 30 crores. In order to relieve congestion at Bombay, Cochin and Madras ports the development of Tuticorin port should be taken up expeditiously. This will also facilitate quicker turn-round of ships after the completion of the Sethusamudram project and enable considerable saving in foreign exchange. The Union Finance Minister has thought it advisable to make an encouraging statement to the effect that there will not be any postponement of the Sethusamudram project. It is needless to say that with the proposal for constructing a new thermal unit at Tuticorin and the provision of additional railway transport facilities, the southern districts of Madras State would become more industrially developed.

★★

The Kerala Government is anxious to draw up its draft plan for 1966-71 so that the per capita income can be raised at least to the all-India average in the next few years. The various political parties are now busy preparing for the coming elections. The decision of the Prime Minister not to delay the elections will probably have a salutary effect on economic progress in the fourth Plan period as the elections would be over early next year and the new Government should be able to devote greater attention to the implementation of Plan schemes. It is hoped that the Congress would be returned to power. The emphasis will naturally have to be on the rapid industrialisation and the harnessing of water-power resources. The Programme Committee will be finalising the draft of the Plan before the end of the next month and the Advisory Board will be able to have fresh discussions on the basis of the draft. It is felt that there will be need for having an outlay of at least Rs. 400 crores in 1966-71 against Rs. 170 crores in 1961-66. If a number of new industries were promoted and large expenditure was incurred on power projects, Kerala can hope to overcome, to a great extent, the adverse effect of slow growth in the last three Plan periods.

It is expected that the availability of large blocks of power, after the end of 1965, will aid industrial growth. The Sabarigiri Project would be able to meet the increasing demand for electricity. It is also proposed that the Idiki scheme, which will be implemented with the help of the Canadian Government, when completed would even enable Kerala to supply surplus power to the neighbouring States. Construction work on this project is expected to start in right earnest in 1965

once the preliminary work had been completed. It is also expected that the shipyard at Cochin will become an accomplished fact as attempts are being made to start work in collaboration with Japanese interests. Kerala's potentialities have not been effectively tapped so far. If there can be larger production of rubber, cashewnuts, tea and timber products, the foreign exchange earnings could be stepped up appreciably. At the same time, if industrial units could be promoted in large numbers, it would be possible to provide employment for many and relieve pressure on land. In view of the peculiar difficulties of Kerala, it will be necessary to have a minimum outlay of Rs. 350 crores in the next Plan period.

Look what you get with HONEYWELL instrumentation

Far more than just instruments, you get a complete control system, custom designed for your specific needs, by men who know your processes. You get expert, interested assistance every step of the way, with your initial planning and long after your instruments are installed. Blue Star assume full responsibility for the engineering, installation and start-up of your system. You get training for your instrument technicians in the most up-to-date

maintenance methods at the tuition-free Blue Star-Honeywell Instrumentation Education Centre at Bombay. You get prompt, competent service from your nearest Blue Star office and immediate replacement of emergency repair parts. These are but some of the plus-values that comprise instrumentation by Honeywell...and they apply regardless of whether you buy a single instrument, a replacement part or a complete control system.

Sold and serviced in India exclusively by

INDIA FOILS LIMITED
(Incorporated in Great Britain)
Calcutta Bombay Madras New Delhi

The moving finger writes

INDIA, HAPPILY, has always been fortunate in its American Ambassadors — and I do not mean the persons whom we send to Washington. It would be worse than a platitude to call Ambassador Chester Bowles a good friend of India. It would be a half-truth. There is in this man a degree of personal involvement with the fate and fortunes of the Indian people which embarrasses you sometimes, but moves you always. Thursday last week was an occasion when I was only moved — and moved very deeply indeed.

On that day Ambassador Bowles held a Press Conference to announce the action the US Government had taken to provide short-term relief and long-term assistance to this country and its Government in the matter of food. The Ambassador informed us that the United States, in an urgent effort at putting the Government of India in possession of badly needed wheat supplies, is doubling the rate of wheat shipments so that about four million tons would be delivered to this country between now and February of next year. Washington would be sending not only this wheat but also a team of shipping and handling experts to work with the people here in devising ways for speedier unloading, bagging and distribution of the incoming grain supplies. Ambassador Bowles modestly suggested that "these emergency measures would help ease India's current problem". What he did not add was that the United States was virtually underwriting India's food economy in the critical months ahead.

Ambassador Bowles also omitted to say something else. This was the vital role he must undoubtedly have played in arranging that the United States came to this country's assistance promptly and adequately. It is interesting that no Minister from the Government of India had to go to Washington or even no mission had to be sent there to plead for urgent assistance. I am aware that Mr. S. K. Patil is in Washington and that among the many explanations he has been giving for going there is the one that he would be talking about PL 480. Mr. Patil, of course, is a resourceful man and he is unlikely ever to be at his wit's end. All the same, it is clear enough that the Americans have been waiting for no emissary from us. The credit, here, must surely go to Ambassador Bowles. It is evident that, having noted that India needed increased imports urgently and made up his mind that the United States should quickly provide them, Ambassador Bowles had apparently lost no time in persuading Washington to view the situation in the same way.

I said that I was deeply moved last Thursday. I must add that I felt a little ashamed too. The United States had sent us a lot of food over the past years. It will be sending more in the future. The only justification for this country receiving assistance in food on this scale is that it is buying time for the programmes which would, in due course, increase its own production of foodgrains sufficiently. We know, however, that we have not kept and are not keeping our part of the bargain. It may be that at some future date the Government of India will succeed in working out a positive policy for agricultural production and it is possible also that Mr. C. Subramaniam may be the man who would have invented that policy. For the time being, however, the Government seems to be going through movements largely meaningless. In the process, it is necessarily becoming desperately dependent on friends. Thus the Americans have not only to send us wheat but they have also to send us men to help us in unloading

and handling them at our ports. Again, more American experts are coming to advise us on how incentive price can be set to encourage our cultivators. Yet another batch is scheduled to co-operate with our authorities in developing and expanding a programme of large-scale aerial spray against insects and pests. Visiting American experts, again, are to advise on the cultivation of hybrid maize and legumes and the hybridisation of jowar. Finally, — that is to say, "finally for the time being" — there will be one more team of American technicians, this for working with our experts in soil and water conservation. After all this, the Ambassador's further announcement that the US Government would be sending a thousand pedigree bulls to this country, could have prompted only one question — whether an appropriate number of American cows should not be accompanying the bulls. I hope my meaning is clear. It is certainly good of the Americans to give us all this help so earnestly and so wholeheartedly. But is there, on our part, some sharing of this purposiveness or sense of urgency? I hope there is, but I wish I could be sure.

Take the case of fertilizers. Stressing the argument that "one of the most important and dramatic means of raising India's food production is sharply to increase its supply of fertilizer and to make this additional fertilizer available to cultivators at a lower price", Ambassador Bowles said that discussions with representative American companies were to begin soon for a massive expansion of fertilizer capacity in this country. These discussions would relate to the Government of India plans for five factories with a total capacity of one million tons of nitrogen per year. The Ambassador pointed out that if agreement on the new factories was promptly reached and construction started without delay, the existing gap in India's fertilizer requirements could be covered within three years. But those are big 'ifs' considering what our general attitudes are in these matters.

Look, for instance, at Sindri. At a time when every ounce of fertilizers which the country could produce is badly needed, the Sindri factory has ground to a standstill as a result of a wage dispute between its management and its employees. At this point I am not concerned with the issues in dispute or with the merits of the conflicting points of view. What I would like to emphasize is that it does not seem to have occurred to any Minister in the Central Government to assume responsibility for keeping this essential factory working. It may or may not be true that the Sindri management had been left with no alternative to a lock-out and it is certainly a very serious matter that the behaviour of workers could have been such as to give rise to apprehensions of sabotage of the plant. What passes my comprehension is that neither the Minister for Petroleum and Chemicals, into whose portfolio comes Sindri, nor the Labour Minister has so far thought it necessary to intervene. It is even more surprising that Mr. G. L. Nanda, who is so ready to arrogate to himself a paternalistic status in all matters concerning Labour, has so far not even noticed the naughtiness of his proteges in Sindri. Incidentally, it is not the Communists who have allegedly attempted or threatened sabotage in Sindri but the followers of the ruling party's most loyal affiliate, the Indian National Trade Union Congress. Perhaps that is why New Delhi is looking the other way.

12. Uttar Pradesh	10	99.75
13. West Bengal	7	99.75

All loans, except Kerala Government's loan, will open for subscription on Monday, 24th August, 1964 and close on Saturday, 29th August, 1964 or earlier without notice as soon as subscriptions approximate to the amount of each issue. The Kerala Government's loan will open for subscription on Tuesday, 25th August, 1964 and close on Monday, 31st August, 1964 or earlier without notice as soon as subscriptions approximate to the notified amount. All the State Governments reserve their right to retain subscriptions up to ten per cent in excess of the notified amounts.

The loans will be redeemable at par after 12 years i.e. 24th*/25th@ August 1976 and interest will be paid half-yearly on 24th*/25th@ February and 24th*/25th@ August each year.

Subscriptions may be in the form of CASH/CHEQUE in respect of all the loans.

Securities of 4% Bombay State Development Loan, 1964 and 4% Saurashtra State (Local Bodies Development) Loan, 1964 will be accepted AT PAR for conversion into the new loan of the Government of Maharashtra. Securities of 3% Madhya Pradesh Loan 1964, Madras Government 4% Loan 1964, 4% Uttar Pradesh Loan 1964 and 4% West Bengal Loan 1964 will also be accepted AT PAR for conversion into the new loans of the respective State Governments.

Interest on the securities of 4% Bombay State Development Loan, 1964, Madras Government 4% Loan 1964, 4% Uttar Pradesh Loan, 1964 and 4% West Bengal Loan, 1964 tendered for conversion will be paid at the rate of 4% per annum upto 31st July, 1964 inclusive and at 4¾ per annum for the period 1st to 23rd August, 1964 inclusive. Interest on the securities of 4% Saurashtra State (Local Bodies Development) Loan, 1964 and 3% Madhya Pradesh Loan, 1964 tendered for conversion will be paid at the rate of 4% and 3% upto and inclusive of 23rd August, 1964 and 31st August, 1964 respectively.

Applications for all the loans will be received at the offices of the Reserve Bank of India at Bangalore, Bombay (Fort and Byculla), Calcutta, Madras, Nagpur and New Delhi, the branch of the State Bank of India at Patna and the branch of the State Bank of Hyderabad at Hyderabad.

Applications will also be received at other places within the respective States as follows:

- Branches of the Subsidiary Banks of the State Bank of India conducting Government treasury work.
- Branches of the State Bank of India at places where there is no branch of its Subsidiary Banks conducting Government treasury work.
- Treasuries and Sub-treasuries (except in the States of Assam and West Bengal) at places not served by the aforesaid branches.

Copies of the Notifications and Application Forms may be obtained at any Receiving Office.

Applicants tendering applications at the offices of the Reserve Bank of India at Bangalore, Bombay (Fort and Byculla), Calcutta, Madras, Nagpur and New Delhi will, in the event of over-subscription to the loan applied for, be given subscription. To avail themselves of this facility, the applicants should complete the "Special Option Form" copies of which can be obtained at any of the foregoing offices of the Reserve Bank of India and tender the form along with their applications.

Trade Winds

TROMBAY EXPORTS

AS A result of the Atomic Energy Commission's display at the New York World's Fair of radioisotopes produced at its Trombay complex, large orders are pouring in from the United States. The US demand for the boron group of isotopes is in excess of what the Trombay plant now produces. Arrangements are, therefore, being made to produce this particular product on a commercial scale. The isotope laboratory at Trombay, set up early in 1958, has been producing since 1960, radioisotopes, labelled compounds and some 250 types of radioactive products which have been exported to Ceylon, France, Pakistan, South Korea and Thailand. An order was recently received from the International Atomic Energy Agency. Isotope production is but a small part of what goes on at the Trombay centre which was started a decade ago. The Indian scientists and engineers at Trombay have set up a plant for producing reactor grade uranium metal and a fuel element fabrication plant. The first lot of 10 fuel elements was ready in February, 1960. Out of this, two fuel rods were sent to Canada for use in the NRX reactor there. The Canadians were not only satisfied with their performance but said that Trombay's fuel rods were among the best. A plutonium plant has also been built and commissioned by the Indian scientists working at Trombay. The plant cost only Rs. 3.6 crores, less than half the estimated cost of a plant of about the same capacity being built in Belgium by a consortium of 22 chemical firms from 12 West European countries. The purpose of the Trombay plutonium plant is to treat waste fuel elements from atomic reactors and extract plutonium, an extremely valuable fissionable material for India's nuclear reactors. Facilities have also been developed for producing electronic equipment that will be needed for the expansion of India's atomic energy programme. The fabrication of electronic instruments in India has saved over Rs. 2 crores in foreign exchange so far.

As regards solving the problem of population in India, the Chairman of the Atomic Energy Commission, Dr. H. J. Bhabha, rules out radiation as a means for controlling population growth on account of the health hazards involved. But nuclear science has a useful role to play in the field of agriculture, food preservation and storage. Some work has already been done on irradiating seed to yield new strains of rice with such favourable characteristics as high yield, fine grain and early flowering. It has been found that irradiation of such fruits as mango, apple, guava and banana with suitable doses of gamma radiation, appreciably extends the shelf life at room temperature. Likewise, small doses of gamma radiation have been found to be of use in the extension of shelf life of fresh fish and in processing dried fish products. Significant advances have also been made in the study of control of insect pests in stored grain by radiation, which can be integrated with the existing storage facilities available in India. The method appears to be technically and economically feasible and is competitive when compared with conventional methods.

FOODGRAIN IMPORTS

According to the Union Minister of Food and Agriculture, Mr. C. Subramaniam, imports of foodgrains, particularly of wheat, will have to be intensified during this year and the next. He is of the opinion that foodgrain imports will have to be continued at least until the end of the fourth Plan period. Addressing a meeting of the Regional Directors of Food in New Delhi, on July 30, 1964, Mr. Subramaniam said that even if next season's crop was good, imports next year might have to be of the same order as this year because of the need to build up buffer stocks. It was "absolutely necessary" that

the Regional Directors of Food, who handled imports and arranged for their despatch to various places, functioned efficiently and smoothly.

It is interesting to note that the Soviet Union will import, during the current year, twice the quantity of foodgrains imported by India in any single year. Russia's population is roughly one half of India's. During the past nine months, the Soviet Union and Eastern Europe have accounted for a 60 per cent increase in Canada's wheat exports. Czechoslovakia and Poland have bought from Canada about half a million tons of wheat each. Czech purchases have been made under a long-term agreement with North American exporters. Bulgaria and Hungary are to import 700,000 tons of wheat from North America under similar agreements.

SCRAMBLE FOR CHINESE MARKET

Britain seems determined to go all out in the current scramble among France, West Germany, Italy and other West European powers for capturing the vast Chinese market and is reportedly working out a multi-pronged plan for the purpose. A major exhibition of British industries in Peking is being organised for November this year. More than 100 top British firms are expected to participate. The exhibition which is described as Britain's "biggest show" abroad in recent years has full backing of the British Board of Trade. It is expected to be opened by Mr. Edward Heath, President of the Board. Observers feel that Britain's conciliatory attitude towards China at the recent Commonwealth Prime Ministers' Conference has to be viewed against the background of her determined bid to recapture the market which she considers to be the traditional outlet for her products.

A wide range of products will be on show at the November exhibition. These will include electrical and mechanical engineering goods, earthmoving and mining machinery, commercial vehicles and electronic equipment. Britain has already held two smaller exhibitions in Peking. One was an exhibition of scientific instruments (high precision measuring and manufacturing equipment) in April this year and the other was of mining and construction equipment in June this year. It is significant to note that China bought all the exhibits at "rock-bottom" prices. It paid £300,000 for all scientific instruments and a similar amount for mining and construction equipment. No fresh orders were, however, placed. Britain has also participated in some exhibitions organised by the Chinese. Besides, since 1962 she has been selling all types of goods, including strategic material, to China. These include special steels and nuclear radiation measuring equipment.

BALANCE OF TRADE DEFICIT

According to a tentative estimate prepared by the Department of Economic Affairs, Ministry of Finance, there will be a deficit of only about Rs. 260 crores in India's foreign trade in 1964 as compared to the actual deficit of Rs. 395 crores in 1963. The imports during 1964 are likely to be of the order of Rs. 1,095 crores and exports slightly over Rs. 835 crores as against Rs. 1,168.9 crores and Rs. 773.3 crores respectively in 1963. These projections are based on the assumption that the pattern of foreign trade observed during the first five months of 1964 will continue till the end of the year. Imports during the first five months of 1964 amounted to Rs. 456.17 crores as compared to Rs. 497.13 crores in the corresponding period of 1963. Exports increased from Rs. 311.30 crores in the first five months of 1963 to Rs. 331.05 crores in the first five months of 1964. The deficit in India's balance of trade during the first five months of 1964 has consequently been smaller at Rs. 125.12 crores as against Rs. 185.83 crores in the first five months of 1963. It is indicated that the rise

*"I check
every type of

on this
machine"*

"It's the 3-Dimensional TYPE ALIGNING PROJECTOR
—simultaneously projecting three images of a type on three adjacent screens. These images reflect three faces of the type (top, side and front) which must conform with pre-drawn markings on the screens. This enables me to check the projected type image for accuracy in type-soldering and bar-alignment. Faults, if any, are immediately corrected and types perfectly positioned to ensure smooth flow and light touch."

7/7/64

Modern precision equipment like the 3-D Type Aligning Projector and Braja Mohan Dan who works on it, are just one team of the multitude of men and machines at the Remington Rand typewriter plant. They are all engaged in a constant endeavour to improve the quality of each tool, die and part that goes into the making of your Remington typewriter.

Over the years people in India have come to expect the standards set by REMINGTON—the highly responsive touch, light positive shift, smooth carriage action, and superior styling and finish—which make them so essential to distinctive correspondence.

REMINGTON TYPEWRITERS ARE NOW BETTER
THAN EVER—ORDER YOURS TODAY

Remington Rand of India Limited.

in governmental imports vis-a-vis the decline in private imports in 1963 will be taken a stage further during the current year. Government imports during 1963 amounted to Rs. 568.2 crores — an increase of Rs. 118.5 crores over the figure for 1962. In sharp contrast to this, the private imports registered a decline of Rs. 33 crores to Rs. 600.7 crores during 1963.

WOOL GRADING SCHOOL

A wool grading instructors' training school will be started in Jaipur on August 10, 1964. It will be set up as part of the integrated sheep and wool development programme of the United Nations Special Fund. In the first instance the school will take 40 students for a six-month training. Most of the students are from among the officers working on wool extension centres in the State. Three Australian experts have been assigned to teach at the school for a period of three years. The school will prepare the necessary staff to manage the various wool shearing, grading and marketing centres to be set up in the State. The entire State is proposed to be divided into 14 "sheep districts", each district comprising a population of about five to six lakhs sheep. The State will also have nine grading centres and three marketing centres. The total annual wool yield in Rajasthan is estimated at 27 million lbs. of which about 7.4 million lbs. are said to be comb-worthy and capable of producing fine apparel.

AIR PARCELS TO MALAYSIA

New rates have been prescribed by the Directorate General, Posts and Telegraphs, for air parcels to Malaysia. These rates which came into force with effect from August 1, 1964, provide for a charge of Rs. 4.60 for the first 250 grams of weight in case of air parcels to Malaya, North Borneo (now called Sabah) and Sarawak (except Limbang, Lawas, Trusan and Sundar). Each additional 250 grams of weight of air parcels addressed to these places will be charged at Rs. 1.90. Air parcels to Limbang, Lawas, Trusan and Sundar in Sarawak will be charged at Rs. 5.55 for the first 250 grams and Rs. 2.85 for each additional 250 grams. This means that the rates which were earlier applicable only to Lawas will now be applicable to three more places in Sarawak, namely, Limbang, Trusan and Sundar.

STANDARDS FOR FOREIGN COLLABORATION

The ISI Advisory Committee on Implementation of Indian Standards has recommended that Indian manufacturers entering into foreign collaboration should adopt, wherever possible, Indian Standards and raw materials. It has been observed that, at present, in some cases where industries are set up with foreign technical collaboration, foreign standards for raw materials, spare parts, design practice and even the terms of measurement, are being used, when corresponding Indian Standards and raw materials are available.

CZECH FOUNDRY FORGE PLANT

A protocol, defining the scope of the foundry forge plant being set up in the public sector with Czechoslovak collaboration, was signed in New Delhi on July 29, 1964, between the governmental representatives of Czechoslovakia and India. This is in pursuance of the second agreement on economic collaboration between the two Governments signed on May 11, 1964. Czechoslovakia will supply the requisite machinery and equipment for the project and assist in putting up the plant. This is the second foundry forge plant being set up in India with Czechoslovak assistance. The project will comprise a main plant to be situated in Wardha, including a steel foundry and forge shop, and a branch plant for grey iron foundry, to be located at another place. The steel foundry will have a total annual capacity of 12,000 tons in castings and 13,500 tons in ingots for forgings. The plant will manufacture moulds required by producers of cast iron pipes and steel casting needed in trucks, tractors and other industries. It is also proposed

to set up a grey iron foundry with necessary auxiliary shops and facilities at the branch plant.

BRUSSELS FAIR

India will be participating in the 35th Food and Domestic Equipment Trade Fair to be held in Brussels (Belgium) from October 10 to 25, 1964. The fair is organised by the Co-operative Society of Manufacturers and Dealers of Materials and Products of Foodstuffs, Brussels, and is almost an annual feature in which many countries of Europe and other continents take part. It offers an excellent opportunity for stimulating our exports of foodstuffs and domestic equipment, particularly in Belgium and the adjoining countries. It will also help in establishing good trade contacts and in negotiating on-the-spot business.

SUGAR PRODUCTION GOES UP

According to the Indian Sugar Mills' Association the total production of sugar in the month of June, 1964, was about 9,000 metric tons as against 1,000 metric tons produced last season during the corresponding period. This brings the total half-yearly production till June 30, 1964 to 25,03,000 metric tons as against 20,93,000 metric tons during the corresponding period last season. The off-take of sugar from factories during the month of June, 1964, including 42,000 metric tons despatched for exports, was 2,12,000 metric tons as against 2,44,000 metric tons (including 73,000 metric tons despatched for export) during the corresponding period last season. The total despatch during first 8 months in 1963-64 season was 17,58,000 metric tons (including 2,35,000 metric tons despatched for exports) as against 21,03,000 metric tons (including 4,24,000 metric tons despatched for exports) by the same period last season.

SMALL SCALE INDUSTRIES

The Planning Commission is stated to be in favour of encouraging small-scale industries during the fourth Plan period at a much faster pace than has been possible hitherto. It is felt that although the third Plan laid a good deal of emphasis on the development of small industries, in practice the process has not made sufficient headway. There still remains considerable bias in favour of the large-scale sector.

With a view to correcting this bias, the Planning Commission thinks that production of nearly 54 industries — plastic goods, dyes, leather footwear, pressure cookers, bolts, nuts and screws, tape recorders wire products, metal buttons, locks, lanterns, cycle pumps, cigarette lighters, microscopes for students and medical use, mechanical toys, paints and varnishes, pesticides, detergents, soaps, etc. — should be exclusively reserved for the small-scale sector.

The Commission has proposed an investment of Rs. 500 crores on the development of small-scale industries during the fourth Plan. The annual rate of growth in this sector is envisaged to be stepped up from the present 4 per cent to 8/10 per cent.

FOREIGN PARTICIPATION IN STEEL INDUSTRY

In a statement issued on July 27, the Union Minister for Steel and Mines, Mr. N. Sanjiva Reddy, has denied that there is any proposal under the consideration of the Government to permit participation by foreign capital in the expansion of the Indian steel industry. The Government, he says, has no intention of deviating from the principles embodied in the Industrial Policy Resolution of 1956. The question of a shift in the Government's policy relating to the development of the public sector, hefore, does not arise.

The need for issuing this statement arose because in an interview to the Industrial Correspondent of the 'Statesman' Mr. Reddy was alleged to have expressed the view that he saw no harm in equity participation by foreign capital in the public sector steel plants in India. This had raised a controversy in the Press. Mr. Reddy hopes that after the clarification made by him now, this controversy will cease.

Company Affairs

EXPANSION OF ALUMINIUM CAPACITY

SOME TIME back the Government of India decided to raise the production capacity of aluminium for the third Plan to 120,000 tons instead of 85,000 tons. Important units in the industry consequently decided to raise their production capacity. Both Hindustan Aluminium Corporation Ltd., and Indian Aluminium Co. Ltd., decided to raise their capacity, for which these companies required foreign exchange. Last week a loan of \$11 million was approved by the Export-Import Bank for the Hindustan Aluminium Corporation. This loan will assure the first phase of expansion from 20,000 tons capacity to 48,000 tons, which is likely to cost nearly Rs. 13 crores. The balance is to be met partly by taking rupee loan from PL 480 funds and partly from company's own resources. HINDALCO approached the Government for permission to expand its capacity upto 60,000 tons for which it received the approval. This expansion will be achieved in two stages so that the first phase, which will take its installed capacity to 48,000 tons, is likely to be achieved by 1965. It has been indicated that the management of the company had no intention of making a fresh capital issue for this expansion programme. The company is already doing very well in the sense that the installed capacity of the present plant is 20,000 tons which yielded an actual output of 22,000 tons during 1963. During the current year it is expected to yield even better results because for the first five months its production has been of the order of 10,000 tons which means an output valued at about Rs. 3.60 crores. The sales for 1964 are expected to be around Rs. 8.5 crores and profit for the year at about Rs. 3.50 to 4.00 crores. A fact of remarkable significance is that the company has reached this stage within less than four years of starting the erection of the factory in 1960 so that HINDALCO has established a record of its technical efficiency.

The Indian Aluminium Company Ltd., had planned to raise smelter production from 11,000 to 16,000 tons of aluminium per year. To achieve this expansion the company has been extended a loan of \$900,000 by the Canadian Government in addition to the \$1 million credit provided last December. The loan is to be utilised to acquire additional capital equipment from Canadian suppliers, the Aluminium Company of Canada Ltd., Montreal, for the expansion of INDALCO's bauxite mine and alumina facilities at Loharga in Bihar, and of its smelter at Alupuram in Kerala. It has been agreed that the entire additional output of the Indian Aluminium Company will be of electrical conductor rod, which will be placed at the disposal of the Indian Government to help meeting high priority requirements of the rapidly developing electrical industry in India.

The Indian Aluminium Company is affiliated with the Aluminium Company of Canada and operates a fully integrated industry from bauxite mining, alumina and smelting facilities, to the production of aluminium sheets, foil and extrusions and other fabricated products. Recently it has approached the Government of India for a licence to build the first stage of a large integrated aluminium unit starting with a 30,000-tonne per annum smelter together with related alumina and bauxite facilities. The proposed smelter will draw power from the Sharavathi project in Mysore State. A separate application has been submitted to establish a rolling mill in Maharashtra State. When these industrial undertakings are through, a large integrated aluminium company will have been established with its principal unit in Mysore State. The

directors have convened an extraordinary general meeting to consider the possibility of transferring the registered office of the company from Calcutta to a suitable place in Mysore.

GWALIOR RAYON

The directors of Gwalior Rayon Silk Manufacturing Company Ltd., have recommended a higher dividend of Rs. 2.75 per share, subject to tax, for the year to March 31, 1964. A dividend of Rs. 2.50 per share was paid last year. The turnover has risen from Rs. 13.20 crores to Rs. 16.21 crores. The gross profit has also gone up from Rs. 426.96 lakhs to Rs. 433.84 lakhs. A sum of Rs. 163.35 lakhs has been provided for depreciation as against Rs. 83.89 lakhs last year. Provision for development rebate reserve has been lower at Rs. 7.98 lakhs as against Rs. 112.36 lakhs last year. The net profit for the year came to Rs. 248.53 lakhs as against Rs. 192.54 lakhs last year. The directors have proposed to transfer Rs. 15 lakhs to preference shares redemption reserve and Rs. 233.57 lakhs to general reserve. The proposed dividend including the dividend on preference shares will absorb in all Rs. 81.67 lakhs which is to be paid out of the general reserve. The company will be appropriating from the general reserve Rs. 6.71 crores being the tax liability for the past years upto March 31, 1964, since the Supreme Court decided the case for tax exemption against the company. As a result of this the general reserve has been reduced to Rs. 2.40 crores.

The company has been successful in producing rayon grade pulp and its production during 1963-64, the first year of production, is 7,500 tons and has been consumed entirely by its staple fibre factory. It has also produced 24,400 tons of paper pulp during the year. The production of rayon and paper grade pulp has saved foreign exchange to the extent of Rs. 3 crores. The company is expected to produce even a high quantity during the current year. The output of staple fibre has been higher at 29.67 million kgs. as against 28.78 million kgs. last year. It would have been even higher but for an accident in one of the ancillary units. The Government's decision in allowing Indian Cotton Mills Federation to import 8.35 million kgs. of staple fibre adversely affected the staple fibre market and this continued throughout the year under review. The selling price of staple fibre was also reduced and this affected the margin of staple fibre production. The working of the weaving division has been very satisfactory and suitings have earned a wide reputation. Even though an industrial licence was granted three years back to the company to manufacture rayon and other chemical plant machines, no appreciable progress has been made because of delay in the licence to import necessary plant and machinery.

The company has purchased a cotton textile mill at Bhiwani — Bhiwani Textile Mills — with an installed capacity of 18,000 spindles and 286 looms. It has been licensed to increase its capacity further by 9,200 spindles. The working of the unit is quite satisfactory. The company has also applied for a licence to set up a polynosic staple fibre plant with a capacity of 50 tons per day and for P.V.C. fibre plant with a capacity of 10 tons per day. The capital outlay on the first plant which is proposed to get priority is of the order of Rs. 4 crores and foreign collaboration for this project is being finalised. The working of the company during the current year has also been reasonably good.

PREMIER CABLE

The Premier Cable Company Ltd., will enter the capital market in the middle of August with a public issue of Rs. 52

lakhs comprising 300,000 equity shares of Rs. 10 each and 22,000 cumulative redeemable preference shares (93 per cent) of Rs. 100 each. The entire public issue has been underwritten. The company has an authorised capital of Rs. one crore and an issued capital of Rs. 70 lakhs of which the directors and their friends have taken up equity shares of Rs. 18 lakhs. The company will manufacture P.V.C. insulated power cables at its factory in Kerala. It has entered into technical collaboration with an East German manufacturer of aluminium conductor cables. The construction of buildings is under progress and machinery is expected to arrive by the beginning of 1965. It has been sanctioned a loan of Rs. 50 lakhs by the Industrial Finance Corporation of India.

NIMAR TEXTILES

The Nimar Textiles Ltd., a new company incorporated in Maharashtra to establish a textile mill at Khandwa, is likely to enter the capital market at the end of the next month to raise Rs. 42 lakhs by the issue of equity and preference shares. The authorised capital of the company is Rs. 3 crores made up of equity shares worth Rs. 2.50 crores and preference shares of Rs. 50 lakhs. The issued and paid up capital will be worth Rs. 50 lakhs of which Rs. 56 lakhs will be in equity shares and Rs. 14 lakhs in (9.5 per cent) cumulative redeemable preference shares of Rs. 100 each. The promoters, directors and their friends will take up equity shares worth Rs. 28 lakhs and the remaining equity shares worth Rs. 28 lakhs and preference shares worth Rs. 14 lakhs will be offered for public subscription. The entire public issue has been underwritten. The total cost of the project is estimated to be around Rs. 197.49 lakhs, out of which Rs. 70 lakhs will be raised by way of capital, Rs. 70 lakhs as a loan from the Industrial Finance Corporation of India, Rs. 12.65 lakhs as unsecured deposit from the managing agents and Rs. 34.84 lakhs by borrowing from banks. The balance of Rs. 10 lakhs will be raised by a further issue before going into full production of the entire complement of 25,000 spindles licensed to the company. Construction has already started and production is expected to begin by July 1965. Machinery worth Rs. 25 lakhs is to be imported from the United States and other countries.

CENTURY'S ISSUE

The response to the 8.57 per cent preference shares of the Century Spinning and Weaving Company Ltd., has been encouraging. The company offered 25,000 shares of Rs. 100 each at par to the existing shareholders in the ratio of one for five. Against this offer the company has received applications for 32,000 shares. The allotment of additional shares will be finalised in a few days.

BALLY JUTE ISSUE

The directors of the Bally Jute Company Ltd., have proposed to offer at par ordinary capital of Rs. 20 lakhs as right shares to the existing shareholders on the basis of one new share for every existing share held. This step has been proposed to be taken as a corrective measure to raise its paid-up capital in relation to assets of the company. Meanwhile, the working of the company has resulted in a lower net profit of Rs. 26.28 lakhs for the year ending March 31, 1964 against Rs. 38.19 lakhs last year. From this amount a sum of Rs. 10.48 lakhs has been set apart for depreciation, Rs. 4 lakhs for tax-

ation and Rs. 6.95 lakhs for development rebate reserve. Dividend on ordinary shares has been reduced from 25 per cent to 20 per cent, less tax.

BIRLA JUTE

Birla Jute Manufacturing Co. Ltd. improved its working during the year ended March 31, 1964 so that the net profit for the year, before providing for depreciation and taxation, was higher at Rs. 212.25 lakhs against Rs. 207.29 lakhs last year. Depreciation has been raised to Rs. 101.24 lakhs from Rs. 67.43 lakhs and development rebate reserve to Rs. 35.56 lakhs from Rs. 14.11 lakhs. The taxation provision is lower at Rs. 36 lakhs against Rs. 60 lakhs and development and rehabilitation reserve at Rs. 2.24 lakhs against Rs. 3.10 lakhs. After paying the dividend on ordinary and preference shares and reducing general reserve to Rs. 4 lakhs from Rs. 30 lakhs, there is a balance of nearly Rs. 40,000, which is forwarded to next year. The directors have decided to maintain dividend on ordinary shares at 15 per cent, less tax.

POYSHA ISSUE

The Poysha Industrial Company Ltd., proposes to enter the capital market shortly to offer for public subscription shares worth Rs. 60 lakhs. It plans to raise its capital from Rs. 25 lakhs to Rs. 110 lakhs. Of the additional capital to be issued, the existing shareholders will be offered shares in the ratio of one for one. The company is considering to obtain long-term loans of Rs. 74 lakhs from various financial institutions for its expansion programme. In addition to the modern factory to be set up near Thana, the company proposed to erect a factory each in Cochin and Ghaziabad. Additional printing machinery for the Bombay factory has been received and is awaiting installation. It has also secured permission for a second automatic body maker line for the Bombay factory which will enable quick changeover from one can diameter to another without much loss of time. Results of the company for 1963 show sales around Rs. 129.17 lakhs — nearly 18 per cent more than last year. Gross profit for the year was around Rs. 17.46 lakhs as against Rs. 9.14 lakhs last year. Equity dividend has also been raised from 9 per cent to 10 per cent.

ION EXCHANGE

Ion Exchange (India) Ltd., a subsidiary of the well-known Permutit Company Ltd., of London, will shortly produce in India a comprehensive range of modern polystyrene ion exchange resins of both cationic and anionic types. In addition, the company will design and engineer all types of Permutit plant to serve the growing demand of the Indian industry. Permutit plant and ion exchange resins are also used extensively in the chemical and metallurgical fields for purposes other than water treatment. Permutit plant is employed in the extraction of uranium from its ore. A large fully automatic Permutit plant of this type was expected to satisfy the existing requirements of the Indian Atomic Energy Authority. The establishment of this new manufacturing unit will strengthen considerably the country's industrial potential, more so it will help in saving the valuable foreign exchange. In fact the possibilities of export will also be explored, particularly in view of the parent company's worldwide reputation. Land has already been acquired and construction is ex-

CALCUTTA • BOMBAY • KANPUR • DELHI • MADRAS

B.E.I.
product

pected to be completed by February 1965. The issued capital of the company is Rs. 25 lakhs of which Rs. 15 lakhs has been subscribed by the Permutit Company Ltd., and the balance of Rs. 10 lakhs from Indian sources.

MODERN FAMILY PLANNING ISSUE

Modern Family Planning Products Ltd., a new company incorporated for the manufacture of family planning products and contraceptives on a large scale by highly automatic methods for the first time in the country, is expected to enter the capital market shortly to raise Rs. 15 lakhs by a public issue. The authorised capital of the company is Rs. 50 lakhs divided into 50,000 equity shares of Rs. 100 each. The issued and subscribed capital will also be Rs. 50 lakhs of which promoters, directors and their friends will take up shares worth Rs. 20 lakhs, foreign collaborators worth Rs. 15 lakhs and the balance of Rs. 15 lakhs will be offered for public subscription.

The company will manufacture Cooper Creme, Sampooon foam tablets, rubber diaphragms and jellies. It will also manufacture contraceptives like Dumas caps and check pessaries. It has entered into collaboration agreement with American and Japanese producers. The Government of India has granted a licence to the company to establish a factory near Bombay with a capacity of 360 tonnes of Jelley and Creme. It has also received a licence to produce 54 million pieces of foam tablets, besides 103.7 million condoms and sheaths, 1.2 million diaphragms, 1.68 million Dumas caps and check pessaries and 0.3 million gynecic models. The company hopes to achieve full production capacity by the end of 1965. Though initially the products will be made at the Wadala factory it has plans to shift its factory to Thana in the near future. Its research department had developed various contraceptives keeping in view the indigenous conditions.

BATALA ENGINEERING ISSUE

The Batala Engineering Company Ltd., a subsidiary of Mukand Iron and Steel Works Ltd., will enter the capital market shortly to raise Rs. 7.36 lakhs to finance its expansion schemes at an estimated investment of Rs. 120 lakhs. The company proposed to set up a factory at Ballabgarh near Delhi

to manufacture production lathes and open-side hydraulic planing machines. It has been licensed to produce 360 lathes and 60 planers every year. The company has entered into collaboration with an Italian firm to manufacture these items. The Government has approved the company's application to import equipment worth Rs. 39.36 lakhs, subject to the availability of foreign exchange loan of Rs. 22.05 lakhs. The proposed public issue of Rs. 7.36 lakhs in 73,636 equity shares of Rs. 10 each at par, is the unsubscribed capital of the three for five rights issue of Rs. 8.25 lakhs made in last January.

In addition to the proposed plan at Ballabgarh the company intends to diversify its activities on its Batala factory for which it has received an import licence for Rs. 15 lakhs to import plant and equipment. The total capital investment for expansion programme which will cost nearly Rs. 120 lakhs will be financed by borrowings, internal resources and by increasing share capital. The company has been granted a loan of Rs. 15 lakhs from the National Industrial Development Corporation Ltd.

NEW SWADESHI MILLS

The New Swadeshi Mills of Ahmedabad Ltd. fared quite well during the year ended 31st March, 1964. The gross profit has gone up to Rs. 42.41 lakhs from the previous year's figure of Rs. 27.38 lakhs. Sales during the year went up to Rs. 482.25 lakhs as against Rs. 387.91 lakhs. Provision for depreciation was Rs. 21.81 lakhs as against Rs. 14.23 lakhs last year. Provision for taxation was Rs. 10 lakhs as against Rs. 3.57 lakhs. A sum of Rs. 5 lakhs has been carried to general reserve. Dividend on equity shares has been maintained at the rate of 10 per cent which means Rs. 10 per share.

During the year under review, the Company has purchased one more textile mill in Ahmedabad at a price of Rs. 55 lakhs as per the scheme sanctioned by the High Court of Gujarat. This mill, which remained closed for about eight months, has now been restarted employing about 3000 workers. In addition to the acquisition of the block assets of this mill as stated above, the Company has spent Rs. 11.96 lakhs on renovation and modernisation of its mill known as "New Swadeshi Mills". The Company now owns two textile mills in Ahmedabad.

Here are the remarkable features of the

CONVEYOR BELTING WITH A COTTON/NYLON CARCASS

Read about

DUNLOP STARLON

Starlon's cotton/nylon carcass is a major break-through in conveyor belting development in India. These details tell you how Starlon will bring increased pay-offs!

Intensive tests have proved that conveyor belts with a cotton/nylon carcass are far more successful for heavy duty material handling service. Starlon is the result of these tests. It is backed by the world-wide technical know-how and experience of Dunlop and is specially constructed for extra heavy conveyor jobs.

THE DUNLOP RUBBER CO. (INDIA) LTD.

Industrial Rubber Products Division, 57B, Free School Street, Calcutta-16.

Here's why Starlon means a much more profitable investment!

- | | |
|--|--|
| 1. Improved flexibility—better troughing, smaller pulleys. | 5. Higher impact strength. |
| 2. Less horse-power required. | 6. Greater tear resistance. |
| 3. Increased flex life. | 7. Better fastener holding properties. |
| 4. Reduced number of plies—lighter and thinner. | 8. Higher belt web strength. |
| | 9. Lower capital cost; lower cost per ton carried. |

Starlon Belting, 17240 metres long and 1524 mm wide, will shortly be supplied to the Neyveli Lignite Corporation for their mine expansion scheme. This is the largest single order for conveyor belting and yet another Dunlop achievement.

For complete details on Starlon, contact the nearest Dunlop office or write to:

BOOKS BRIEFLY

Here Was a Man

Hugh Gaitskell: 1906-1963: Edited by W. T. Rodgers; Thames and Hudson, London; Pp. 167; Price 25s

THIS IS a series of pen-portraits of the late Hugh Gaitskell by contributors who have attempted either to record the recollections of him during that stage of his life which each knew best or to convey their impressions of him in that role of his career which each perhaps found most interesting. Thus John Betjeman rightly writes of the times when he and Gaitskell were boys together at The Dragon School (Oxford), while Sir Maurice Bowra, Margaret Cole, Prof. Michael Postan and Marjorie Brett take the story further into the successive stages of New College (Oxford), Gaitskell's "discovery" of the Labour Movement, the evolution of his political ideas and his entry into Parliament respectively. Then comes a distinct division in the scheme of the book, with Gaitskell's political or trade union colleagues speaking of various phases of his career as civil servant, minister or leader of the Labour Party of which, by the time he died, he had become the unquestioned mentor and spokesman.

Editor W. T. Rodgers, in his introduction, claims that the book is intended to go some way towards answering these two questions: How was it that Hugh Gaitskell, from a conventional middle class environment, succeeded in becoming a political figure greatly respected not only in Britain but

throughout the world? What gave his early death the proportions of a major tragedy and left such a hollow gap in the lives of those who were close to him? It must be said that the contributions included in this publication go very far indeed, both individually and collectively, in answering those questions and perhaps farther still in their answer to the second one. A collection of this kind is bound to have many threads running through it, but on the present occasion we have an instance where it is not difficult to select the one that is most vital. There is striking agreement among the contributors to this volume of the essential quality of the individual who was Hugh Gaitskell, an agreement expressing itself in respect for his sharp intelligence, admiration for his intellectual courage and, above all, affection for the man because of his charm and worth as friend and companion. As if by common consent, every chapter in this volume concentrates almost furiously on demolishing that notorious Bevanite image of an ice-cold middle class intellectual who would function in the Party of Keir Hardie and Lloyd George only as a "desiccated accounting machine". Hugh Gaitskell emerges from these pages as a man of enlightenment, with a wholesome appetite for the good things of life, to whom the appeal of socialism lay precisely in its promise that those good things would in the widest commonality be shared.

V.B.

Readers' Roundtable

BALANCE OF ADVANTAGE

Sir, — I have read with interest the comments of V.B. on Mr. Masani's protest against export of rice, edible oil and bananas. While V.B.'s comments are fair, they are apparently based on such reports of Mr. Masani's views on the subject as have appeared in the Press. But please permit me to say there are some aspects to the objection to exports of these edible commodities which may not be known to many. In the first place, neither the Swatantra Party nor any of its spokesmen would have objected to exports of a given quantity of high-priced rice generally not in demand in this country to earn enough foreign exchange to import double that quantity of qualities of rice consumed here. That, however, was not the explanation furnished to the Swatantra Party by the STC. The STC, when approached, informed the undersigned that the rice exported was, after all, a negligible quantity meant for the use of the staff of Indian embassies and Indians residing abroad. Surely, even V.B. will agree that exports should not be allowed of any rice to meet this unbecoming demand of Indians abroad, especially in the prevailing circumstances.

As regards edible oil, I agree that no hasty action should be taken for the sound reasons stated by V.B. At the same time, I am sure, V.B. will not support those who have based their export targets of edible oil on their targets of production which have failed to materialise. The third Plan target for oilseeds production of 98 lakh tons is nowhere near sight even in the second half of the third year of the third Plan. Why, for that matter, the planners have not yet been able even to achieve the second Plan target of 78 lakh tons! Those responsible for this stagnation in oilseeds production have no right to indulge in the luxury of fixing impracticable export targets, even if they may be excused for failing to take note of the additional 10 million mouths every year of our mounting population.

In the case of banana exports by the Maharashtra State Co-operative Society to Italy, the Swatantra Party criticism relates also to the uneconomic nature of the deal — entailing a loss of as much as Rs. 11 lakhs in respect of just two consignments due to the rotting of the fruits on the way and the cost of destruction and disposal of the damaged plantains. No one can argue that this experience will be repeated in respect of future consignments also, particularly after all the steps now proposed to be taken to prevent such damage in transit. Nor would any one wish it when the Society has fixed an export target of 14,500 tons of bananas to yield nearly a crore of rupees in foreign exchange.

At the same time, is it not pertinent to restrict exports of a fruit which constitutes probably all the mid-day meal to lakhs of people as in Bombay? At least the export of those varieties that cannot stand long voyages could be stopped. And to make the proposition more profitable — also to provide more employment — is it not better to process bananas into banana powder and export it in that form? Is V.B. aware that a small venture that has started doing this business with foreign collaboration has orders which will keep it busy, at its present rate of production, for the next five years? As a well known economist, V.B. should appreciate that the balance of advantage lies in favour of exporting banana powder and not bananas.

MADHU MEHTA.

Bombay.

II

Sir, — In "Eastern Economist's" issue of July 24, V.B. of 'The Moving Finger Writes' congratulates the Jalgaon Co-operative Society "on its enterprise" — namely banana export. But is it possible that V.B. hasn't heard, or has completely overlooked, the fact that this project cost the Co-op. over Rs. 7 lakhs in losses? Surely this sort of performance calls for anything but congratulations! It is all very well to launch into new experiments — after all "nothing venture,

nothing win" — but let's also maintain a certain amount of discretion in patting each blunder on the back. It seems the Centre magnanimously has stepped in to fill the breach and will make good the loss to the Jalagaon Co-op. Society. In all fairness let's ask this question: Exactly how many private enterprises has the Centre helped in their losses in new ventures? Surely the Co-op. should have first studied the marketing methods of a highly perishable product — a very specialized field — before starting to export. This is just one more example of the slipshod way in which we run things. Apart from depriving the already starved home market of yet another cheap food, the arrival of a perished cargo/cargoes of bananas could hardly have added anything to the stature of Indian goods abroad.

ZENOBIA BOYCE.

Bombay.

[V.B. writes: "From the first paragraph of Mr. Madhu Mehta's letter it is clear that the Swatantra Party's objection to the export of a small quantity of high-priced rice was prompted by inadequate information regarding the economics of the trade. Mr. Mehta blames the STC for not shedding full light on the circumstances of rice exports, but then why should he have imagined that the STC would be a competent expounder of government policies? He could have sought enlightenment elsewhere. In any case, I cannot share Mr. Mehta's contempt for Indians abroad wanting to have some good quality rice to eat. After all, a certain amount of quality rice is being produced in this country and has to be consumed. There is no harm in our sharing a part of it with others, who are willing to pay for it. The only issue, as I pointed out in my column of July 24, is whether these exports constitute a net advantage or a net disadvantage. The evidence is clear that they confer a benefit. By exporting a ton of superior rice at about £90 per ton, we are securing enough foreign exchange for about three tons of imported foodgrains. The point cannot be overemphasized that while a certain quantity of foodgrains has to be imported from abroad, the foreign exchange for the purpose is strictly limited and can bear being added to in all possible ways.

As for bananas, Mr. Mehta as well as Miss Boyce ought to make up his or her mind what precisely he or she is objecting to. If the contention simply is that no banana should be exported at all because there is a market for them in India, I am afraid this line of reasoning would justify a good part of our export trade being wound up. It is true that bananas are a relatively inexpensive article of food, although I doubt that they are a substitute in any significant sense for foodgrains. But even assuming that they are a marginally important element in our domestic food supplies, is it not possible that the emphasis should be on producing more bananas so that export opportunities may also be availed of? It is surely possible that the emergence of a profitable export outlet could provide an incentive to the banana grower to step up his output. There have been recurring cases in the economic histories of nations of export opportunities resulting in increased production, improved quality, better marketing practices and lower prices from all of which the domestic consumer stands to profit perhaps even more than the foreign customer.

As for the misadventure of the Jalagaon Co-operative Society, I repeat my suggestion that it is possible to be too hard on a pioneering effort. I am aware that a loss has been incurred through the consignment of bananas to Italy going bad in transit. But such occurrences are not uncommon in world trade, especially when business is attempted in new directions. Can it be seriously claimed that no exporter in the private sector has ever burnt his fingers? I am second to none in my preference for normal trade channels, but I also believe that co-operative societies can and ought to be encouraged to function in a normal businesslike manner. I am glad to note that Mr. Mehta at least harbours no unkind thought towards the Jalagaon Co-operative Society's Rs. one-crore programme of banana export. I appreciate also his point about export of banana products. But I would suggest that the banana as a fruit is, in its own right, an article of merchandise, and since there is always a market for the banana in its true state, taste and flavour, India need not deny itself export opportunities in this direction. Our aim, in other words, should be to export bananas as well as banana products or banana chips"—Ed.]

Food Without Politics

WE ARE glad that the police raids organized by the Delhi Administration on grain godowns in the city have resulted in exploding the myth of large-scale hoarding activities being responsible for the high prices or local shortages of cereals in the country at the present time. Here, in the Capital, it seems to have been established to the satisfaction of the authorities that no substantial or serious infringement of food regulations has been taking place. This development, we hope, will serve to reassure public opinion which has been unnecessarily and unduly inflamed by exaggerated political propaganda and, let it be added, thoughtless and sweeping statements on the part of Ministers or others holding high and responsible positions in government or public life. There is little doubt that the difficulties or the food situation have been aggravated by observations or assertions which have undermined public morale and provoked a crisis of confidence. The immediate need is to ensure that this crisis ceases and this can be done only if the Governments at the Centre and in the States call off indiscriminate campaigns of raids on and seizure of trade stocks. The Delhi episode has firmly established the truth that such raids bring no relief to the people. On the contrary, they tend to inflame popular sentiment, build up tension and incite tendencies to public disorder. This apart, they also make the food situation worse instead of better. Thus, it is seen in the Capital that the first result of the raids on godowns is that arrivals of grain into this important consuming area have been discouraged and disrupted. The consequence is that some further increase has taken place in the prices of foodgrains. The consumer, in other words, has been hurt rather than helped by the so-called drive against hoarding. If more normal conditions are to prevail and food stocks are to move freely into the market and be available for purchase or consumption by the public, it is obvious that the Government should give up any excessive reliance on police methods. Incidentally, we do not believe that the Home Minister's reported offer to State Governments to let loose the Special Police Establishment on the grain trade will serve the public interest at all since flamboyant gestures of this kind are bound to deepen the crisis of confidence.

How then is the food situation to be constructively dealt with? This is a legitimate question and our answer would be that the Government should concentrate on easing the food situation during the period from now to the gathering of the harvests of the next crop year by the intelligent and efficient handling of the unloading, allocation and distribution of the imported grain supplies which are to be expected. The Government of the United States has agreed to ship quickly and regularly wheat to the extent of four million tons in the period ending February next year. It has also agreed to provide some rice while the Government of India is also arranging to buy more from a number of neighbouring countries. These imported supplies, given proper management, should enable the Government and the country to tide over current food difficulties. The outlook for food, particularly in psychological terms, will further improve if, as we recommended last week (on page 229), the Government makes the imaginative gesture of permitting imports of foodgrains on private trade account. There is thus no need to panic, but a very great need indeed, to handle imports of foodgrains with competence and good planning. There is also reason to believe that the relaxation of regional barriers to the trade in foodgrains could facilitate larger and smoother flow of supplies to consuming areas and thereby help moderate scarcities or scarcity prices encountered in deficit or high-consumption pockets. We believe that the Central and the State Governments concerned should

MORE ALUMINIUM for the industry

HINDALCO

The Rs. 200 million Birla-Kaiser Aluminium Project has, since December, 1962, attained the present target capacity of 20,000 tonnes of virgin aluminium per annum. HINDALCO products now include commercial grade ingots, electric conductor grade ingots, high purity ingots, wire-bars, billets and re-draw rods of a very high quality. Fabrication facilities to manufacture sheets, plates, circles, and extrusions are being undertaken, to keep the fast growing national industries on their march to progress and prosperity.

agree, as early as possible, on the modification of zonal restrictions. The Southern States have been brought together for the movement or distribution of foodgrains. In the same manner, the restrictions on grain exports from Madhya Pradesh to Maharashtra or Gujarat should be abolished forthwith. Secondly, Uttar Pradesh should be brought into the northern zone of Punjab, Kashmir, Himachal Pradesh, Rajasthan and Delhi, while free movement of grain should be provided for among States of Orissa, West Bengal, Bihar and Assam forming the eastern zone. With fairly large quantities of imported grain scheduled to be available for supplementing supplies in urban centres or deficit pockets, this modification of zonal barriers could be expected to have a healthy influence on local or regional trade and movements in foodgrains. The Minister for Food and Agriculture concedes the case for the abolition of the

Steel : Performance and Prospects

FROM THE preliminary results of working for the year 1963-64 released by the Tata Iron and Steel Co. Ltd. (TISCO) and the Indian Iron and Steel Co. Ltd., (IISCO), it is evident that the recent expansion programmes of the two companies have started yielding results. The gross profits of both the companies have shown marked improvement. Both of them have stepped up their lividends.

The substantial improvement in the results of the working of these two companies will be clear from the following table showing details of production under different heads:

Tata Iron & Steel Company Ltd.	Pig Iron	Steel Ingots	Salable Steel
1960	1,594,000	1,555,000	1,237,000
1961	1,588,000	1,623,000	1,237,000
1962	1,647,800	1,643,400	1,317,700
1963	1,766,000	1,799,300	1,412,700
1964	1,811,200	1,891,700	1,506,400
Indian Iron and Steel Co. Ltd.			
1960	1,070,470	840,305	672,707
1961	1,160,576	914,159	722,034
1962	1,187,397	934,498	736,970
1963	1,291,825	1,002,038	795,119
1964	1,237,000	1,027,000	810,000

A rise in output of salable steel of nearly 2.2 per cent in the case of TISCO and a rise of nearly 1.7 per cent in the case of IISCO over a five-year period (1959-60 to 1963-64) may not appear spectacular, but in the circumstances in which the companies have had to operate, these results must be regarded as about the best

prevailing pattern of zonal inter-State restrictions, but pleads that the reform should await the harvests of the next crop year. We, however, believe that the relaxations we have suggested here could be effected safely even now in view of the safety margin provided by scheduled imports. The Minister for Food and Agriculture, despite flaws in government thinking or faults in government action, here or there, has on the whole been addressing himself to a challenging job with vigour and freshness of mind. There is no reason why he should not succeed in bringing the food situation under control provided his efforts are directed towards reviving public morale and confidence by discouraging witch-hunts for so-called hoarders and through the bold liberalization of regional restrictions on trade and skilful management of imports.

that could have been achieved. These five years especially were years in which the industry had to function under a series of handicaps. The main obstacle to steel production was the high ash content of coal. In one of his speeches, Mr. J. R. D. Tata, TISCO Chairman, explained how serious it was for the industry to use coal with high ash content. For every one per cent increase in ash content of coal, production of iron at blast furnace declined by five per cent or more. At the same time, a higher ash content of coal also led to an increase in consumption of about five per cent of coke and limestone. The combined effect of both is to raise costs of production unduly. The industry also had to put up with irregular and insufficient railway transport, lack of facilities for beneficiation and blending and, until this year in the case of Tatas, the need for a tonnage oxygen plant. On top of it all was the rigid and complicated system of fixing retention prices which has since been replaced by a plan of partial decontrol of prices, the precise impact of which has yet to be seen. In the meanwhile, both TISCO and IISCO have suffered from the Government's unrealistic, if not unsympathetic, price policy. In 1960-61 alone, according to an estimate given by Mr. Tata, TISCO failed to earn a surplus of Rs. 14 crores, which they had expected and which they had planned to use to finance part of their two-million-ton expansion programme.

Much has been said about the alleged uneconomic expansion programmes of the two units in the private sector. Indeed, even the Government at one time insinuated that the TISCO expansion programme actually cost about Rs. 120 crores, as against an original estimate of Rs. 66 crores. There was, however, no proper basis for such calculations and Mr. Tata roundly repudiated them in one of his speeches. He recalled how, in 1956, the World Bank had estimated the cost of this expansion at Rs. 95 crores and pointed out further that the actual cost, including the

cost of certain additions and modifications effected subsequently, but not contemplated earlier, was Rs. 110 crores. Making allowances for increases in import duty and escalations of suppliers of plant and machinery which amounted to Rs. six crores, the excess over the estimate came to only Rs. nine crores or less than 10 per cent.

There seems to have been a slight setback in the working of the two steel companies during the last quarter April-June, 1964, as the following comparative output figures indicate:

	Pig Iron	Steel Ingots	Salable Steel
	1964	(1963)	1964
	1964	(1963)	1964
TISCO			
April-June	4,20,000	4,89,000	4,50,800
IISCO			
April-June	3,18,345	3,37,780	2,43,558
			2,62,637
			1,76,267
			1,96,845

It may be presumed that the setback is due to the cropping up again of some of the difficulties already alluded to.

It is against this record of performance of the two units in the private sector and the working of the three main units in the public sector that one has to view the outlook for the proposed fourth Plan steel target of 17.3 million tons of ingot steel. It is a moot point whether, by the end of this century, India would be able to produce 100 to 120 million tons a year, as the then Union Minister for Steel, Mr. C. Subramaniam, remarked in Bhilai on April 13, 1964. But, for the time being, there would appear to be doubts about the attainment of even 17.3 million tons by March, 1971, because of the long time that it takes to expand the existing plants and to build new ones, not to speak of the many and difficult problems involved in correspondingly increasing supplies of raw materials, coal, transport and power. Discussing this point, Mr. Tata expressed some time ago the view that the maximum capacity which could reasonably be aimed at in the fourth Plan would be not more than 15 million tons.

The steel targets proposed to be reached at the end of 1970-71 are as follows:

TISCO	3 million tons
IISCO	2 "
Bhilai	3.5 "
Durgapur	3 "
Rourkela	2.5 "
Bokaro	2 "
Gap to be filled by new units	1.3 "
TOTAL:	17.3 "

The absence of any reference to the 500,000 tons Salem steel plant at a cost of Rs. 80 crores, which was to have been taken up during the current Plan period itself, is significant.

The Steel Steering Group of the Planning Commission has suggested an annual production target of 17 million tons of ingot steel, four million tons of pig iron and one million tons of alloy and special steel ingots.

According to the Steel Steering Group, the total indigenous steel production in 1963-64 was no more than 4.4 million tons, as against a total demand in the country of 5.6 million tons. In other words, even with the import of one million tons in 1963-64, the entire demand for steel in the country could not be met in full. Similarly, the indigenous production of pig iron in 1963-64 was only 1.2 million tons, as against a total demand of over two million tons.

Although the present level of actual production in both the public and the private sectors does not seem to warrant thinking in terms of an ambitious target of over 17 million tons per annum, as envisaged by the Planning Commission, the pace of expansion in the public sector lately seems to lend some hope that the target might not be so difficult after all of fulfilment. Since the agreement for expansion was signed with the USSR in July, 1964, Bhilai, for instance, has shown some commendable progress. Its present annual rated capacity of one million tons of steel ingots is expected to rise to 1.8 million tons with the completion of the first phase. The second phase, about which discussions have been in progress between the General Manager of Bhilai and the Russians in Moscow, and which is expected to take up the production to 2.5 million tons, is

Eastern Economist 20 Years Ago

AUGUST 11, 1944

The Government of India have informed all Provincial Governments that the machinery of food control will continue to operate for three or four years after the war. The fact that in recent years our population has been fast outrunning our food supply, has been brought home to us only by catastrophic happenings, and in the recent House of Commons debate emphasis was again and again laid on what might be called the elements of an acute Malthusian situation in India. The mere end of the war will not mean the end of our food problem; for, although the availability of shipping and possibility of importing food-stuffs from abroad in the last resort will not allow the deterioration of the domestic supply and distribution position beyond a certain point, the tough problem of adequately feeding a rapidly increasing population in a stagnant agricultural economy will remain. Taking the average of the quinquennium before the last war as the base, the gap between the index of food supply (including net imports) and the index of population was progressively narrowing down until in 1937-38 the index of food supply was actually 7 points below the index of population. The chronic underfeeding of at least 40 per cent of the population even by any standard of bare subsistence, makes our "factor of safety" nil, and inflationary maldistribution of purchasing power, transport difficulties or hoarding by consumer, producer or dealer only provide the final push over the precipice. Until the population-food ratio is rendered more satisfactory by a planned drive to put our food economy on a sound basis, rationing would be deemed a desirable social policy -- not for only three or four years after the war, but for at least a decade.

expected to be ready by 1965. Meanwhile, in 1963-64, Bhilai has established some records. Against its annual rated capacity of 1.1 million tons, the actual production of hot metal was 1.3 million tons; against an annual rated capacity of one million tons of ingot steel, actual production was 1.14 million tons, and against an annual rated capacity of one million tons, again, ingots rolled actually turned out to be 1.12 million tons. The Bhilai plant also exceeded its rated capacity in steel ingots (116 per cent) as well as in salable steel (113 per cent) during 1963-64. At this rate, the claim of those in charge of Bhilai that they expect to reach an overall production of four million tons annually by the end of the fourth Plan period does not seem too tall.

Durgapur also has been making steady progress. Production of pig iron and steel ingots, which amounted to 4,04,078 tons and 2,58,400 tons, respectively, in the first half of 1962 rose to 6,84,619 tons and 5,18,474 tons, respectively, during the first half of 1964. The latter figures represent, it is claimed, 106 per cent and 102 per cent, respectively, of rated capacities.

The performance of Rourkela plant, on the other hand, has not been as satisfactory. Much better results were expected than have actually materialised. But there were a number of setbacks, and, even now, the plant is still said to be not altogether out of the woods. Last year, the plant had to be closed for 15 days because of communal disturbances. There has been some kind or other of labour unrest for the past two years. One blast furnace was ineffective for three months. The result is that the plant could reach only 79 per cent of its rated capacity in hot metal, 80 per cent in steel ingots and 79 per cent in salable steel. Even so, these figures, it is said, represent an improvement over the previous year by 7 per cent, 14 per cent and 35 per cent respectively.

The expansion programme of Rourkela, which will raise its capacity from one million tons to 1.8 million tons of steel ingots by the middle of 1968 and further to four million tons by 1970, is presently being finalised by the Chairman of the Hindustan Steel with the West German Government and the German Bank for Reconstruction. As per this plan, Rourkela's fourth blast furnace will be commissioned in June, 1966 and the remaining units during 1966. Various other items of expansion at Rourkela are estimated to cost Rs. 137 crores, of which the foreign exchange component is Rs. 62 crores. After the expansion, Rourkela's output of finished products will rise from 720,000 tons to 1,240,000 tons. It is noteworthy that all the additional iron ore requirements for Rourkela's expansion are available from its present sources—the Barsua mine.

According to a recent press release of Hindustan Steel, the public sector complex as a whole attained in 1963-64 a level of production equivalent to 99.4 per cent of rated capacity in hot metal, 97 per cent of rated capacity in steel ingots, and 94 per cent of rated capacity

city in salable steel. Their combined despatch of pig iron rose from 800,000 tons in 1962-63 to 869,000 tons in 1963-64 made up as follows:

Bhilai	..	405,000 tons
Durgapur	..	400,000 "
Rourkela	..	64,000 "

Hindustan Steel also claims the following achievements:

It has accounted for 2.9 million tons of steel ingots, which is only three per cent short of rated capacity. Its salable steel output of 2.15 million tons represented a 95 per cent utilisation of available capacity. It has reached its ingot capacity and its total sales have risen from Rs. 130 crores in 1962-63 to Rs. 180 crores in 1963-64. It has met all interest payments and depreciation and paid Rs. 5.7 crores by way of interest to Government. It has incurred a loss of Rs. 6 crores.

According to Hindustan Steel, it has been able to bring down its cost of production steadily, despite the rise in costs of raw materials and wages. Its cost (in April, 1964) is said to be Rs. 500 per ton, as compared with the project estimate of Rs. 409. In 1963-64, it is stated, costs were lower by 15 per cent in Rourkela, 13 per cent in Durgapur and 7 per cent in Bhilai. The marked reduction in the case of Rourkela — from Rs. 308 for ingots in 1961-62 to Rs. 252 under the open hearth system and to Rs. 226 under the L.D. process — compares with a reduction from Rs. 333 to Rs. 217 in respect of Durgapur and the present rate for Bhilai ingot of Rs. 214.

The demand for alloy and special steels has been growing. This is only to be expected with the rise in industrial production and increase in the degree of sophistication of our products. In fact, it bears a broad relation to the consumption of common steel, ranging from five per cent to nine per cent in the western countries. It cannot be less than five per cent in India, according to experts. Their estimate accordingly is that the demand may reach 0.5 million tons by the end of the fourth Plan period. In order to meet this demand, Durgapur will install an alloy steel plant with an ultimate production capacity of one million tons. The first furnace of the alloy steel plant (which is estimated to cost Rs. 65 crores) is to be commissioned on October 2. This is probably the largest single project designed in India (by Messrs. Dastur & Co.) and undoubtedly constitutes an important milestone in the industrial progress of the country. The present installed capacity, according to one estimate, is 339,200 tons, as against a demand of 360,700 tons. Actual production however, was, only 29,000 tons, mainly of spring and other low alloy special steels. As against a licensed capacity of 127,000 tons of alloy constructional steels and low alloy high tensile steels, the demand during the fourth Plan period is estimated to go up to 200,000 tons. Taking other varieties, such as alloy high strength steel (100,000 tons), spring steel (1.329 lakh tons), stainless and heat-resisting steel

(80,000 tons), free cutting steel (1.16 lakh tons), high speed tool steel and die steel (86,000 tons), the total demand works out to more than 700,000 tons.

Besides Durgapur and Mysore (Bhadravathi Steel Works) which are to specialise in special alloy steel manufacture, several private sector units have been licensed. Of the three alloy steel units so far licensed, the MAN Industrial Corporation, Jaipur, is to produce 24,000 tons of spring steel; Messrs V. H. Shah of Ahmedabad 20,000 tons of stainless steel and Chase-Bright Steel of Bombay 14,000 tons of free cutting steel. In addition to these, seven more firms have entered into joint ventures for producing 134,000 tons of alloy steels. Bhadravathi, which has a total expansion programme of Rs. 17 crores, will spend Rs. 12 crores on its special steels project. The proposal is to raise its present pig iron capacity of 80,000 tons to 200,000 tons, half of which is to be used for foundry grade pig iron, leaving the other half to be converted into 77,000 tons of alloy and special steels in two stages. In the first stage, which is expected to be completed by the end of the year (1964), about 45 to 50 thousand tons of low alloy and high carbon steel are to be produced. During the second stage, i.e. by 1966, it is proposed to manufacture high speed steel, high alloy chrome steel and other categories of special steel for aeronautical and defence needs.

Now that the Bokaro project also has been finalised — the Soviet firm offer of help and assistance was announced on May 14, 1964 — it is possible to expect from Bokaro a production of 1.5 million tons by 1968 during the first stage if a firm schedule is agreed to

with the Soviet collaborators. So far, it may be noted, the Soviet Union is committed firmly to aid only the first stage, although the Plan target is to attain four million tons by 1970-71. Some important questions, such as the sizes of the strip mill and the blast furnace, on which there would appear to exist differences between the Government of India and the USSR, were discussed in Moscow recently by an Indian team led by Mr. Wanchoo.

The private sector also has been assigned an expansion programme during the fourth Plan. Following recent discussions between the officials of the Ministry concerned and also the World Bank, the Planning Commission's Steering Group for the Iron and Steel Industry has recommended that TISCO should expand its present production from two million tons to three million tons and IISCO should expand its present output of 1.7 million tons to two million tons. This is perhaps the maximum expansion that the two units, situated as they are at present, can undertake. Their contribution to the total steel production of the country, even after they have completed this expansion, would be less than 30 per cent. Meanwhile there are several difficulties in the way of the proposed further expansion programme being fulfilled. Some of them, such as the need for additional development of ancillary facilities and importing of balancing equipment, the high ash content of our coal supplies, and the still unsatisfactory transport and other infrastructure facilities, have however been recognized by the Government. What remains is action to widen the bottlenecks.

Highlights of the Week

WAR AND PEACE

THE WORLD was once again on the brink of a war in the first week of August when torpedo boats belonging to North Vietnam attacked the US vessels in international waters in the Gulf of Tonkin. The attack, it is stated, was unprovoked. In order to retrieve its prestige, the US, in the words of Mr. Adlai Stevenson, US Ambassador to the Security Council, "found it necessary to take defensive measures." The facts relating to the skirmishes are that on August 2, 1964, the United States destroyer, the Maddox, while patrolling in the Gulf of Tonkin at a distance of nearly 30 miles from the mainland of North Vietnam, was approached by three high-speed North Vietnamese torpedo boats which were all poised for an attack. Despite three warning shots delivered by the Maddox, the torpedo boats continued approaching it and then launched the attack with machine guns. Another aircraft carrier, Ticonderoga, which was also plying nearby in the international waters came to the rescue of the Maddox and sent out four aircraft for providing cover. This incident was followed by a note sent by the United States to the North Vietnamese regime drawing attention to the aggression committed against the United States ships. This warning note stated that "grave consequences would inevitably result from any further unprovoked offensive military action against United States forces."

On the night of August 4, the destroyers, the Maddox and the C. Turner Joy, were again attacked by motor torpedo boats of the North Vietnamese Navy. According to American sources, the vessels were 65 miles from the shores of Vietnam. It was a deliberate and planned attack against the US ships, which had every right to ply in the international waters. In order to stop these unprovoked attacks, the US forces gave a fitting reply by striking at the North Vietnamese torpedo boats and their support facilities. Extreme care was taken by the US forces to limit the operations so that the hostilities did not spread and, at the same time, the necessary lesson was brought home to the North Vietnamese regime. A fitting reply of this nature, perhaps, was necessary in order to safeguard the whole of South-East Asia. This operation has, without doubt, made it clear that the United States will continue to honour its obligations "to help its friends and protect their independence."

The US case was presented to the UN Security Council in very clear terms by Mr. Adlai Stevenson and the following lines from his speech indicate the determination of the American nation to make full use of its rights in international seas. Mr. Stevenson said, "Let me repeat that freedom of the seas is guaranteed under long-accepted international law applying to all nations alike. Let me repeat that these vessels took no belligerent actions of any kind until they were subject to armed attack. And let me say once more that the action they took in self-defence is the right of all nations and is fully within the provisions of the Charter of the United Nations." Mr. Stevenson also made a very sincere plea that peace would be restored in South-East Asia if all foreign troops withdrew from the area. The peoples of Laos, Vietnam and Cambodia wished to be left alone and the US will be happy to withdraw all its forces if the foreign troops in these lands decided to withdraw forthwith.

It is believed in some quarters that the vast mobilisation of warships, planes and warriors by the United States was a misconceived operation. This seems to be an inadequate appraisal of the situation in South-East Asia. The United States

has an obligation to protect its friends in this zone and if it had not acted in the manner it has in the present case, the weaker nations would have lost confidence in the capacity of the United States to protect them. To state the present firm operations as Goldwaterism is a distortion of facts.

THE CREATIVE URGE

A SYMPOSIUM on "Science and the Nation", held at the National Physical Laboratory last week, focussed attention on the importance of technology in economic growth. Many a speaker touched upon the urgency of disseminating technical information to the people who can make the most profitable use of it. The number of technical colleges continues to grow in this country and is reported to have exceeded the 100 mark. The number of research laboratories is also increasing at a fast rate and a considerable volume of research work is reported to have been conducted in these institutions. But there is very little attempt to make practical use of all the discoveries made in these institutions. The scientists seem to have remained in their ivory tower making no attempt to explain in popular language the findings made in the laboratories and the manner in which they could be instrumental in solving some of the basic problems facing this country.

Most of the participants were specialists in their own spheres and harped upon their favourable themes. Dr. K. L. Rao, Minister of State for Irrigation and Power, stated that the need for electricity for rural areas was of basic importance. He laid stress on the use of power in agriculture and also suggested that atomic energy should be harnessed to fulfil the country's need for 40 million KW of power. Dr. C. H. Bhabha, Chairman of the Atomic Energy Commission, also laid stress on the need for extending the capacity for power generation because, according to his estimate, shortage of power in industry would result in 10 per cent loss of national income, while the excess of energy would mean only the loss of one seventh part of income. Citing figures, he stated that an average investment of Rs. 1,000 was required for every KW of energy, whereas industries working on energy required an investment seven times that level. He also gave the opinion that nuclear power was cheaper than the power derived from coal in certain areas in this country.

Mr. Asoka Mehta, Deputy Chairman of the Planning Commission, said that the war against poverty could only be won by the young scientists of India. He further said that in bringing about a dynamic society in this country, it would be essential to foster a scientific outlook. Science, he said, was the most important factor of production.

The Lebanese delegate drew attention to the surfeit of experts who had been visiting his country in order to explore what had been repeatedly explored before. He said that his country "had been subjected to a new kind of colonialism where it was over-run by experts and super-experts to explain to new experts what old experts failed to understand". It means that everywhere considerable volume of energy, time and funds were being wasted for lack of co-ordination. Even the type of symposium that was held in Delhi was of not much use because, except for long-winding speeches, the delegates failed to arrive at any tangible conclusions on any basic issue. It was, therefore, suggested by many delegates that smaller symposia should be organized in place of these big conferences so as to discuss specific problems and to obtain some concrete results therefrom. A suggestion in the same direction was made by the delegate from the Philippines who asked for the

publication of an Afro-Asian Science Quarterly containing information relating to the developments in science in different countries. The need for such a journal was great because, in the words of the Indonesian delegate, "there had been in recent years an information explosion" and every research worker was today finding it extremely difficult to keep track of the research work being conducted on a specific subject in other countries.

Dr. H. J. Bhabha made an interesting point about the use of the term "developing countries" for the "under-developed countries". He said that the really developing countries were those which were technically advanced and had recorded rapid progress in recent years. There was no stigma attached to the term "under-developed" because this alone signified in unmistakable terms the present state of these countries.

A point which was talked about the least at the symposium but which was in the mind of most of the Indian scientists assembled there related to the state of scientific research in our universities and in our research laboratories. It has been noted that most of the Indian scientists of repute did their research work in foreign universities or their merit was recognized abroad. Not many scientists in this country have been acclaimed as outstanding on the basis of their work done in the Indian institutions for reasons which are too well-known. The Indian mathematician, Dr. Jayant Vishnu Narlikar, who earned world-wide renown recently for his new theory on gravity was able to do so only in association with the British professor, Dr. Fred Hoyle. The younger scientists complain that the atmosphere conducive to creative research is not available in the universities and that the enthusiasm of the young scientists does not get proper encouragement. It is in this direction that more attention needs to be paid.

THE PRESS

THE LATEST annual report of the Registrar of Newspapers for India reveals that the circulation of newspapers and periodicals in 1963 rose by 5.4 per cent as against 8.8 per cent in 1962. The decline in the rate of rise of newspapers' circulation was caused by the continuing need to ration newsprint and other requirements of newspapers. Foreign exchange position remained difficult throughout 1963 and hence, the overall curb on the expansion of the newspapers. Throughout the year, some of the newspapers were not able to satisfy the demands of their readers.

The total number of newspapers and periodicals in the country was 7,790 at the end of 1963 as against 7,397 in 1962. Statistics were, however, available for a lesser number of papers which recorded an increase in circulation from 19.3 millions relating to 4,467 papers in 1962 to 20.3 millions in 1963 for 4,570 papers. Comparable figures were available for 3,596 papers only whose circulation rose from 17.7 millions in 1962 to 18.3 millions in 1963. The Union territories of Goa, Daman, Diu and Pondicherry were also covered in the 1963 survey. In all, 24 papers, including 9 dailies from Goa, Daman and Diu were added while 20 papers from Pondicherry were included.

A high percentage of the newspapers published was either weekly or publications brought out less frequently. The dailies constituted only 6.5 per cent of the total. Out of 4,570 papers for which circulation figures were available, there were only 345 dailies which commanded a circulation of 5.6 millions or 27.5 per cent of the total. Regarding ownership, it is disclosed that out of 4,737 papers for which relevant details were available, 50.2 per cent were under individual ownership while a little less than a quarter were owned by societies or associations. Under common ownership were 203 newspapers with a circulation of 5.0 millions or a little less than one-fourth of the total circulation.

The report has made a special study of the so-called

monopolistic position of different papers in various regions and languages. It has disclosed that six daily papers owned by "big business" enjoyed a monopolistic position in their respective languages or regions. A monopoly has been defined as a position wherein "a paper enjoyed a circulation of more than 50 per cent in a particular language or region". The study has indicated that 8 daily papers not connected with "big business" also enjoyed a monopolistic position. There were 143 dailies under common ownership in 1963 as against 130 in 1962; they controlled 68 per cent of the total circulation of all dailies in the country in 1963 as against 66 per cent in 1962. Their total circulation improved from 3.5 million in 1962 to 3.8 million in 1963. Nine of the owners published 43 dailies commanding a total circulation of 2.3 millions or 41 per cent of the total circulation of all dailies in the country. Amongst the political parties, the Congress Party owned the largest number of papers at 29, followed by the Communist Party which had 25 papers. In terms of circulation, the Communist Party led the rest with a circulation of 82,920.

In the language-wise distribution of the daily papers, Hindi papers were on top with the total number at 142 followed by Urdu (64), English (54), Marathi (41), Malayalam (39), Kannada (34), Gujarati (35), Tamil (29), Punjabi (15), Telugu (13), Bengali (9), Oriya (5), Assamese (1) and Sanskrit (1). The largest circulation was of the English dailies at 1.5 millions or 26 per cent of the total. The Hindi dailies commanded the second position with total circulation at 0.8 million. Nine dailies in the country had circulation of more than 1,00,000. The highest circulation at 1,46,819 was claimed by a Bengali daily, "Ananda Bazar Patrika" of Calcutta.

The newspapers in the smaller towns are gradually coming into their own. The number of dailies published from towns with population of less than 1,00,000 nearly doubled from 63 in 1962 to 114 in 1963. Amongst the States, Maharashtra was the leader with the largest number of daily papers followed by U.P. and Madhya Pradesh.

A COURTESY CALL

NEW DELHI played host last week to a distinguished guest from the Netherlands — Dr. J. M. A. H. Luns, Dutch Foreign Minister, who was on a four-day visit to this country. Dr. Luns had "very interesting and cordial meetings" with the Prime Minister and the Minister for External Affairs. He discussed with Mr. Swaran Singh, among other things, the international situation, the ECM's role in India's economic development, and the Dutch aid to India through Aid India Club. His discussions with Mr. Lal Bahadur explored the possibilities of cultural and educational collaboration between the two countries.

To the extent that he had no "burning" problems to discuss, Dr. Luns was right, but that he was being modest is evident from the outcome of his deliberations with Indian leaders and his public speeches and press statements. The Netherlands has been an active member of the Aid India Consortium, and it has extended to this country, through the Consortium, aid valued at \$33 million over the last three years. His assurance that the Netherlands would continue to assist this country is certainly of vital interest to us. Reiterating that the ECM was designed to expand international trade, much less to retard or restrict it, Dr. Luns stated that India's exports to Common Market countries had, in fact, increased by 41 per cent over the last six years. The ECM, he said, not only strove for a more harmonious distribution of income within the member countries, but was also pledged to helping developing countries in raising their standards of living. Dr. Luns also emphasised the common approach of the two countries to the question of a 50 per cent reduction in tariffs, and said that the Netherlands and India saw eye to eye at the recent United Nations Conference on Trade and Development.

JETTING AHEAD WITH EXPERIENCE

IAC is eleven years old. Graduating from faithful Dakotas through Viscounts and Friendships to fast Caravelles, the airline has earned more than a million hours of flying experience. Linking 70 stations on a 32,000 kilometre

network, it offers speedy travel throughout India.

Eleven years of steady growth pointing to a brighter future ahead. IAC owes it to the people of India—for it is not only an airline but a public service as well.

Export Policy and the Fourth Plan

MANUBHAI SHAH

(Union Minister of Commerce)

WHEN THE third Plan was formulated it was recognised that unless the exports over the period added up to Rs. 3,700 to 3,800 crores so as to cover maintenance imports during the Plan there was no possibility of completing a plan of Rs. 10,400 crores with the amount of foreign aid likely to materialise. The third Plan Report had stated clearly: "Without a substantial move forward on exports further progress of the economy will be seriously jeopardised. The estimate of Rs. 3,700 crores is the minimum to be aimed at; the needs of the situations are, in fact, larger." It was also felt that such a target would not be achieved unless an overriding priority was given to exports in domestic policy decisions.

The performance of exports over the first 3 years of the third Plan has been encouraging judged by any standards. Total exports amounted to Rs. 2,188 crores for the period 1961-64. During the remaining two years of the Plan, even if exports do not go beyond the level reached in 1963-64, the country will have attained the target she set for herself. The improvement has come as much from new items like iron ore, oil cakes and sugar as from jute, about the prospects of which everyone had been so pessimistic at the beginning of the Plan.

This should not lead to any complacency on our part regarding the future. We should not feel that the battle of exports will be easy any more and that we can achieve any target we lay down for ourselves. Such a note of caution is necessary because the fourth Plan is being discussed now. It will necessarily have to be a large plan if the pace of growth has to be maintained and it will by implication require a large export effort. It will be unfortunate if a larger export effort following from a large plan is made the subject of fancy and wishes rather than of facts and hard work towards modest practical targets. Also the effect of any modestly high target on the domestic policies will have to be identified and detailed. Such a caution may look strange at this time but it would be realistic and therefore in the larger interests of the country, if we are to avoid sudden downward land slides in the performance of key sectors of the Plan, which mainly rest on availability of foreign exchange.

Traditional Commodities

An analysis of our exports over the years since planning was started in the country yields certain interesting conclusions about the growth of India's exports. The principal items of exports today continue to be the same as those fourteen years ago, viz., jute, tea, cotton textiles, tobacco, leather and leather manufactures, vegetable oils, spices, fruits, vegetables, etc. The only new items the exports of which we have been able to build up to a significant extent are iron ore, sugar and oil cakes. On the other hand, items like manganese ore and lac, which used to be important earlier, have lost their place in the export list. This would go to emphasise the fact that our export performance still depends heavily upon traditional items and that our efforts to diversify our exports have not been all that successful. Any new export drive in the immediate future will have to depend therefore greatly on the prospects of these commodities which we have always exported.

A close look at the figures will reveal another interesting fact. In the case of many items, the performance today,

after three years of intense promotional effort, is at about the same level as it was over a decade ago. The important exception to this rule will be jute, iron ore, sugar, and oil cakes. Such a tendency indicates two things: (a) our hard work has enabled us to gain to some extent the ground we have lost in the past years, particularly during the second Plan; (b) future progress will be very much harder because we will have to create new trading opportunities and consequently our efforts at export promotion will have to be redoubled.

Agricultural Output

Under these circumstances, what steps do we take to raise our exports to the high level that will be required during the fourth Plan if investment is to be maintained at high levels? The most important action that is required is an all-out effort to increase agricultural productivity so that larger surpluses are available for export at competitive prices. The low productivity in most primary products has meant that there are no surpluses available for export in the face of domestic demand, or that prices are uncompetitive. Both these obstacles have to be eliminated immediately if a large export drive is to be successful.

This will mean more investment in agriculture, mining etc. which no doubt will be provided for on an overall basis. This will also mean the ushering in of a technological revolution in agricultural production methods and the productivity of our lands and crops. A mere economic approach to agriculture will not suffice. It will have to be technological-cum-economic. Furthermore, what is required is a specially favourable treatment of those sectors in which the export potential is great. Although theoretically investment anywhere will have a beneficial effect on exports by neutralising demand or augmenting supplies somewhere in the economy, in actual practice a concentration of effort will yield better results, particularly because of the economies of scale in export promotion effort and removal of export incentives. Items like sugar, oil seeds and oil cakes, fruits and fish are instances in point. We have not undertaken such development programmes for any item except iron ore; we will have to do so in more fields. Our efforts have to be selective as otherwise they will be spread so thin as not to yield any measurable results.

Secondly, a steadiness in supplies will have to be maintained if we are to hold and enlarge our share in the world market. This needs to be stressed because a fluctuation in the output of agricultural commodities is inevitable and this often leads to a fluctuation in supplies because export demand is looked upon as a residuary charge rather than a first charge on available supplies. It is important to realise that such fluctuations destroy the valuable work done in building up contacts and may lead to a loss of markets altogether if a reputation for uncertainty is established. Therefore, unless a grave crisis threatens the economy frequent changes in policy regarding export availabilities should not be made. Exports have to be steady even if some diminution in domestic supplies and consumption results therefrom.

It is also necessary in this connection to emphasise the necessity for restraint on consumption. The basic fact about a developing economy is the constant pressure of consumption on available goods. Incomes are rising, unemployed are

being drawn into work and so on and therefore expenditures on consumer goods are increasing all the time. Defence expenditure and other non-productive expenditures are bound to rise, at least modestly, even if great thrift and vigilance are kept. Thus an induced inflationary pressure in a nation-building, heavy-industries-based, welfare-conceived economic planning is inescapable. These pressures tend to affect particularly items like sugar, tea, tobacco, cloth, footwear and vegetable oils, especially due to the influence of those in higher income brackets upon the consumption of those in lower brackets. Similarly increased production of goods in the economy raises the demand for items like jute. In all these cases efforts have to be made to restrain internal consumption for the sake of exports though (a) it seems unethical to deny the poorest classes the fruits of development and (b) it has serious consequences in a political democracy. The alternative is slower progress because the larger import requirements of a higher rate of investment cannot be met.

Policy on Export Push

These measures will not take the export target beyond a certain point in view of the well known limitations of production of primary and intermediate products. Therefore the kind of growth in exports needed for the fourth Plan can come about substantially through a rapid diversification of exports. That is, exports of manufactures will have to be built up quickly. Our inability to do so has been due to the policy of import substitution that our industrialisation has been geared to so far. It was, of course, logical to follow such a course so long as exports of manufactures were uncertain and foreign exchange was actually scarce. The development of industrial capacity for export was too risky a proposition to be considered seriously. However, now that the basic foundations of industrial growth have been securely laid, we will have to think seriously of developing capa-

city for export in certain selected sectors. It will have to be selective because a general expansion would not lead to exports and is clearly beyond our means. Such sectors can be: castings, rolled products, prime steel, structurals, railway and communication equipment, constructional goods, pipes, transport equipment etc. Having created this capacity we must set aside a certain part of the output for export without heeding the continuous cries of internal shortages which arise from time to time. Unless this policy of deliberate export push in certain sectors is followed, we will not get the increases we want. Frequent vascillations and short-term pressures will dissipate effort because it must be realised that selling each product requires specialised skill and we have only a limited amount of such skill.

There is nothing new in all this. A casual glance at the third Plan Report will show that these steps have been spelt out there. What is stressed here is that everyone should realise that a large export effort cannot be made without sacrifices from the people in a developing economy; that when shortages of particular products come in the way of exports what is really affected ultimately is long run growth, that export promotion and import substitution are two aspects of the same question and that promoting one at the expense of the other does not lead to particularly fast rates of growth. A failure to export has the same serious repercussions on growth as the failure to secure adequate foreign assistance. Therefore the two should be viewed with the same sense of realism while formulating necessarily large development programme. The 'political will' to export is the 'open sesame' to greater exports. Export earnings can be raised to what may look as enormous figures as compared to the present level but which in fact are our minimum needs if we have to fight poverty. But this needs a will and understanding. Have we got these in any adequate measure? This is the real question of our time.

4 3/4 %

ANDHRA PRADESH STATE DEVELOPMENT LOAN, 1976

Issue Price Rs. 99.50 Per cent

Open on the 24th August, 1964

THE LOAN will be closed without notice as soon as the subscriptions amount to Rs. 11 crores approximately, and in any case not later than the close of the business on the 29th August, 1964.

Applications will be received at (a) the offices of the Reserve Bank of India, Bangalore, Bombay (Fort and Byculla), Calcutta, Madras, Nagpur and New Delhi, (b) the branch of the State Bank of India at Patna, (c) the branches of the State Bank of Hyderabad and the State Bank of Mysore conducting Government treasury work in the State of Andhra Pradesh, (d) the branches of the State Bank of India, in the State of Andhra Pradesh at places not covered by item (c), (e) the Government treasuries and sub-treasuries in the State of Andhra Pradesh at places not covered by items (c) and (d).

FULL PARTICULARS CAN BE OBTAINED

at any of the Offices or Branches mentioned above or at any Treasury or Sub-Treasury in the State of Andhra Pradesh.

WINDOW ON THE WORLD

What Are "National Equities" ?

JOSSLEYN HENNESSY

LONDON :

THAT THE government should issue securities in the form of "national equities", whose dividends would vary with the rise or fall of the Gross National Product is the novel suggestion made in a recent issue of the "Westminster Bank Review" by Mr. Alan Day, outstanding among the leading economists of the younger generation.

Mr. Day's scheme, which has received wide publicity in the UK, should interest the Government of India, because its aim is to help to meet the enormous and continuously rising government expenditure on national development projects.

Mr. Day argues that the convention that the only way in which a self-respecting government should raise money is by issuing fixed interest securities "runs counter to every example set by commercial enterprise". The issue of "national equities" would contractually commit the government to pay an annual dividend, which would vary in proportion to changes in the GNP. For example, a national equity issued at £100 in 1964 might promise a dividend of £2-10-0, with annual dividends equal to £2-10-0 multiplied by the last available index of GNP divided by the base year index. If GNP in 1968 were 20 per cent above the base year (say, 1963), the dividend payable at the end to 1968 would be £3. Mr. Day does not specify whether the dividend would be reckoned in constant values or in current monetary values. The latter would obviously make the equities easier to sell to investors.

Reluctant Buyers

Continuing experience of inflation has made investors in most Western countries reluctant to buy fixed interest securities, and a substantial part of the market for them has often to be artificially created by legislation compelling institutions, such as insurance companies, to maintain a proportion of their investments in gilt edged. On the other hand, most governments are now committed to full employment and to economic growth policies, so that the risks that ordinary shareholders will experience a set-back during a period of deflation have been substantially reduced.

This does not, of course, mean, as so many of Britain's Labour politicians keep saying, that the ordinary shareholder can no longer lose and can be sure of a continuous rise in "unearned" capital values. Investment in bad managements or in industries, which find themselves overtaken by innovations or changes in consumers' tastes, will lose money however full employment is and however fast the economy as a whole is growing. Nevertheless, it remains true that a reasonably broadly based portfolio of equities is likely to enjoy the benefits to dividends arising from the secular growth of profits due both to inflation and to economic growth. By insisting on borrowing on fixed interest rates in these days of inflation-bitten investors, governments all over the world are probably paying bigger charges on their debt than they would if they were to diversify their borrowing more widely through the issue of equities.

One of the biggest tasks facing the UK is urban reconstruction. It is unlikely that this can be carried out fast enough, and on the vast scale necessary, unless government and municipalities have more power to acquire land than they now have. Private enterprise has its part to play here, but cannot be expected to provide all the necessary public services (e.g. roads). At the same time, the public authorities are inhibited by the sheer size of the sums of capital needed to

buy large blocks of land, many on already valuable sites, and to stand the long waiting period before full returns from re-development are earned.

Mr. Day suggests that the public authorities should swap land for some other kind of asset with the present owners of the land. If compensation is fair, everyone is as well off after as before. As matters stand today, such a swap encounters tremendous opposition because owners of property regard compensation in fixed interest bonds, which inflation then proceeds to rob of all their value, as compulsory confiscation. Mr. Day argues that the difficulties of raising these large sums, and persuading property owners to sell, would be avoided if national equities were offered for land. Property owners would receive in compensation an asset of the same kind as they were selling. And the government would buy the land on cheaper terms than it could today. The immediate cost to the government of borrowing by issuing national equities can be judged from the present state of the UK equity and land markets. Probably the cost in the first year would be about half the cost of issuing long-term, fixed-interest securities. Subsequently as GNP rose, the cost differential would narrow and in the more distant future would reverse itself. This must always be remembered: in economic affairs one cannot get anything for nothing, and the government would be getting the advantage of cheaper borrowing now at the cost of satisfying a demand for securities whose earnings would rise over the years.

If my impression is correct that land reform and urban redevelopment in India has been delayed by the difficulties of

NEW DELHI, Aug 3.—The Delhi Administration's drive to check foodgrain stocks in the city was "anti-factory as an exercise."

Announcing it at a Press conference today, the Chief Commissioner, Mr. Dharmu Vira said that the drive

"It was very good exercise sir; it doesn't show in your muscles, though."

just compensation, Mr. Day's ideas would seem worth studying in New Delhi and the State capitals.

There is, of course, always a fly in any ointment, and the fly here is that the government would be competing against private enterprise for investors' savings, and if it were so minded could strangle private enterprise by the back door without legislation. One can only hope that cabinet ministers

will not continue for ever to be such fools as they too frequently make themselves out to be today. To achieve greatness — spiritual and material — a nation needs a self-reliant, self-confident population. The way to achieve that is not to create multitudes of "yes-men", fearfully and obsequiously at the behest of the "Party" and its civil servants, but to encourage private enterprise, because it diffuses initiative and self-help among the masses.

Is a Gold Scare Imminent?

PAUL EINZIG

LONDON:

AFTER MONTHS of remarkable stability in the London gold market, there are now some indications that it might witness another gold scare in the near future. Until the closing week of July the dollar price of gold remained low, even though its sterling price advanced in accordance with the weakening of sterling in relation to the dollar. The volume of activity was moderate and there was no evidence of any substantial or persistent hoarding demand from the continent or from the East. The extent to which the gold pool had to intervene in support of the market was very moderate, and the Bank of England's policy to limit such intervention to satisfying only part of the demand did not cause a rise in the dollar price of gold. As usual when things are going well for a few months, the optimistic impression was gaining ground that gold scares were now a matter of the past, and that the gold pool arrangement of the Central Banks had succeeded in ensuring lasting stability.

Even though the rise experienced during the concluding days of July was moderate, it was sufficient to dispose of this unwarranted complacency. The view is now gaining ground that the gold market is likely to experience another spell of hectic activity before this year is over. This opinion is based on the following reasons:

(1) Open hostilities in Viet-nam, Malaysia and Arabia are widely anticipated. Should these materialise, they are likely to step up hoarding and speculative demand for gold from the Middle East, the Far East and elsewhere.

(2) The possibility of Senator Goldwater's election is giving rise to anticipation of war scares both in Europe and in the Far East, leading to a certain amount of flight into gold.

Flexible Dollar

(3) Senator Goldwater's economic advisors are known to favour the flexible dollar, which would mean a depreciation in terms of hard currencies. The prospects of his election are likely to induce holders of dollars to play for safety by switching into gold.

(4) The coincidence of a sterling uncertainty on account of the possibility of a Socialist victory with a dollar uncertainty is likely to drive many people into the gold market.

(5) Since the last major gold scare, the financing of gold hoarding has become much easier as a result of the plentiful supplies of Euro-dollars that have become available for that purpose because of growing distrust in unsecured Euro-dollar transactions.

By far the most important factor is the possibility of Senator Goldwater's victory. Writing in "The Commercial and Financial Chronicle" of New York on the day after his nomination as Republican candidate for the Presidency, I wrote that, should he be elected, his name would indicate the fate of the United States — gold would flow out like water. This view was not shared by the foreign exchange market which was impressed by his programme of balanced budget and of high priority for balance of payments equilibrium. But it is easier to declare such objectives than to carry them into practice on the basis of the foreign policies that would be pursued by

Senator Goldwater. It is his declared intention to revive the cold war and to adopt an uncompromisingly aggressive attitude towards both Soviet Russia and Communist China. To do so would necessarily involve a heavy increase in military expenditure, which would wipe out any economies in other directions.

Apart from the effect of war scares on the dollar, the high degree of co-operation that exists now between the American and Western European monetary authorities would inevitably suffer as a result of the Senator's arrogance in dealing with Allied statesmen. For instance, his personality is bound to clash with that of General de Gaulle, and the latter would retort to any real or imaginary affront from Washington by availing himself of his right to withdraw the Bank of France's very considerable dollar reserve. The resulting heavy loss of gold would inspire distrust in the dollar, apart altogether from the effects of war scares and of increases in military expenditure.

Speculative Pressure

It is true, amidst the uncertainty of the political outlook resulting from his attitude, no European currency would be considered safe enough for inspiring an influx of funds from New York. But there is always the gold market. So long as the price of gold remains artificially low as a result of intervention by the gold pool, there would be utmost temptation for the conversion of refugee moneys into gold. This process could only be discouraged by allowing the price of gold to rise to a level at which speculators and hoarders would stand to lose if their pessimism should prove to be unfounded. The present "heads you win, tails you won't lose" policy can only be continued successfully so long as speculative and hoarding pressure remains moderate.

It would be little short of miracle if that pressure did not increase very considerably between now and the Presidential election in November. As it is difficult to forecast the result of that election, possibly hoarders and speculators will not be prepared to pay unduly heavy premiums. But once Goldwater is elected, the anticipation of the effects of his policies is bound to produce a spectacular effect on the gold market. The resources, actual and potential, of the gold pool are by no means unlimited, and anticipation of a termination of official support would add to the pressure.

P. M. Writes to States on Food Problem

By Our Special Correspondent

NEW DELHI:

IN A letter to the State Chief Ministers, the Prime Minister, Mr. Lal Bahadur, has suggested a number of steps to meet the challenge of the expanding price spiral. The most important recommendation made by him is that with a view to bringing out the hoarded food stocks, the State Governments may not take any penal action in the next two weeks if any trader or stockist brings into the open any stocks of foodgrains not previously declared by him. At the expiry of this two-week period, however, stern action should be taken against hoarders as had been done already in some places.

The Prime Minister has also hinted at introduction of rationing in the big cities like Bombay, Calcutta, Madras and Delhi, whose problems, he says, have to be dealt with in a special way. For easing the food situation in the rural areas, the Prime Minister has advised that more and more fair price shops should be opened and Panchayats should be asked to take upon themselves the responsibility of keeping an eye on every man in the village to see that there is no starvation. Panchayats should also be in a position to know with whom stocks are available. They should use persuasive methods to bring these stocks out.

Another short-term measure suggested by the Prime Minister is that the larger hotels and restaurants which serve a wide variety of dishes, should cut down their consumption of rice and wheat. Those who are non-vegetarians should also curtail their consumption of cereals. In the States of Punjab, Delhi, U.P., Rajasthan and Madhya Pradesh, people should cut out rice from their meals for a month.

Laying emphasis on firm implementation of the price policy of the Government, the Prime Minister has urged that the officials of the State Governments should frequently go around and find out for themselves if the daily items of consumption are being sold at the prices fixed by the Government.

Surplus States' Co-operation

The Prime Minister has advised the surplus food producing States that they should keep the all-India situation in view, co-operate with the deficit States in this difficult period and resist the temptation of enforcing measures for easing the position in their own States. He has assured that the Union Government will spare no efforts to see that the surplus States do not suffer on account of any co-operation or help they might extend to those which are in greater need.

The Prime Minister observes in his letter that in the present-day difficult situation, there is no alternative to importing cereals from abroad as quickly as possible. But the only effective and real solution to the food problem of the country is stepping up of production. Detailing the measures which are being taken to increase foodgrains output and for improving the distribution system (such as setting up a commission to suggest remunerative producer and reasonable consumer prices of foodgrains, establishment of the Foodgrains Trading Corporation, etc.), he has called upon the State Chief Ministers to devote their full attention to agricultural development.

Regarding import of foodgrains, the Prime Minister has stated that substantial quantities of rice and wheat would be imported during the current and the next few months. Nearly 50,000 tons of wheat will be shipped from the United States during the current month out of the four million tons promised by it to be supplied between now and February, 1965. Arrangements have been made for importing rice from the

United States to the tune of 300,000 tons (200,000 tons will be available between August and December), 71,000 tons from Pakistan and 10,000 tons from Thailand. Further efforts are being made to import another 50,000 tons of rice from Thailand and 60,000 tons from Cambodia on barter basis. The impact of these imports is expected to be felt by the end of this month.

The Prime Minister has also emphasised the need for maintaining the prices of such articles of daily consumption as sugar, cloth, vegetable oils, matches, kerosene, tea, soap and vanaspati. He has expressed the view that prices of these commodities should be fixed and properly enforced.

The Prime Minister is understood to have addressed a communication to his colleagues in the Central Government in which he has stressed the need for cutting down expenditure in the interest of curbing inflationary tendencies. He is believed to have suggested that the Union Ministries should avoid making fresh commitments for a year or so in the case of heavy industry projects on which real work has not yet started. He has suggested that the Union Finance Minister and the Deputy Chairman of the Planning Commission should attempt a reassessment of the projects and programmes for which funds are currently being allocated or are to be allocated next year. The emphasis, the Prime Minister says, should be on rapid completion of the schemes already in hand. He is also said to have advised cutting down of all wasteful expenditure even in the sphere of defence. The legitimate defence build up, of course, is not to be slackened. The Prime Minister has further recommended that consolidation of the past gains should take precedence over new schemes and the fourth Plan should be drawn up realistically on the basis of the current Plan.

With a view to securing the co-operation of the Opposition parties for bringing down foodgrain prices, the Prime Minister had discussions last week with the leaders of the Opposition groups in the Parliament. He appealed to them that they should advise their parties to refrain from agitational approach to the food problem at the present juncture.

The Soviet Union has offered more assistance for increasing food production in India. It is understood to be willing to provide machinery, technical know-how and fertilizers for this purpose. Full compliment of equipment has also been offered for setting up another Government farm on the lines of the Suratgarh farm in Rajasthan.

★★

A team of steel experts from Russia, headed by Mr. A. Goubert, Chairman of the Giprorez, the Soviet enterprise handling exports of metallurgical plants and equipment, is expected here next week for further investigations and detailed discussions on the proposed Bokaro Plant. This was disclosed by Mr. N. N. Wanchoo, Secretary to the Union Steel Ministry, who returned from the Soviet Union last week after holding talks with the Soviet authorities on Russian assistance for putting up the first 1.5 million tonnes steel-making capacity at Bokaro. The Giprorez experts have proposed some significant changes in the Dasturco report on this project in the light of the latest Soviet techniques of steel production.

The Wanchoo Delegation, which included Mr. K. M. George, Managing Director of Bokaro Steel Ltd., and Mr. M. N. Dastur, of Dastur and Co., Union Government's Indian technical consultants for this fourth public sector steel plant, is stated to have impressed upon the Soviet authorities the anxiety of the Government of India to complete the first 1.5 million tonnes stage

of this steelworks on a priority basis so that it can be commissioned into production by the end of 1968. The Soviet authorities are understood to have agreed that no efforts would be spared to accomplish this goal.

Mr. Wanchoo is also believed to have urged the Soviet authorities that they should explore the possibilities of providing at the Bokaro Steelworks the continuous casting of steel production. This process, which is the latest Russian technique for steel-making, eliminates the traditional blooming and slabbing mills and thus saves nearly Rs. 20 crores in the cost of setting up a steel plant. The technique also considerably reduces the wastage of steel in the process of rolling into products.

The Soviet authorities have expressed keenness to assume full responsibility for the designing of the plant and supervising of its construction so that the project is completed without any difficulties according to the schedule of the Union Government. They have also stressed the use of 100 per cent sinter for steel manufacture at Bokaro. The fullest utilisation of the available Indian capacity to fabricate steel-making equipment has been agreed to by the Soviet Union.

To initiate preparatory work at Bokaro, orders for the purchase of over Rs. 1 crore worth of earth-moving and construction equipment from the Soviet Union are proposed to be placed shortly. This equipment is expected to be delivered in the last quarter of 1964 or in early 1965.

The Wanchoo Delegation also had discussions with the Soviet authorities on the fourth Plan expansion programme of the Bhilai Steelworks which would raise the capacity of this steel plant from 2.5 to 3.5 million tonnes ingots per annum.

The Indian delegation also visited Czechoslovakia and explored the possibilities of further Czech collaboration in the Indian heavy engineering industry, particularly in the manufacture of electric equipment for steel production.

★ ★
A reassessment of the financial resources for the fourth Plan, carried out by the Planning Commission recently, is understood to have revealed that if the additional taxation effort during the five years 1966-67 to 1970-71 is of the same order as assumed in the current Plan, an investment of Rs. 11,000 crores in the fourth Plan public sector programmes should not

be out of reach. It is thought that balances from current revenues can provide during the fourth Plan period about Rs. 1,900 crores. The surpluses from public sector undertakings may yield at least Rs. 900 crores. The railways will contribute nearly Rs. 450 crores and the provident funds Rs. 500 crores. Approximately Rs. 1,600 crores can be raised through market loans and another Rs. 1,200 crores through small savings and annuity deposits. Miscellaneous capital receipts may amount to Rs. 350 crores. Deficit financing may be around Rs. 500 crores. External aid will be required to the tune of Rs. 2,550/2,600 crores. This, however, excludes about Rs. 700 crores that may be available under PL 480 and the assistance that may be needed for financing the capital repayments of the foreign credits already contracted.

★ ★

Addressing the concluding session of the Company Law Board's Seminar on "Promotion of Research in Corporate Management and Finance", the Union Minister for Finance, Mr. T. T. Krishnamachari, expressed the view that a statutory limit was called for on the scale of operations of private limited companies with a view to ensuring healthy functioning of the corporate sector. Either the private limited companies should be obliged to keep within a ceiling of Rs. 20-25 lakhs turnover per annum or a suitable formula should be devised on the basis of their capital-at-charge, he added. Operations larger than this limit, the Finance Minister opined, should be carried on only by the public limited companies.

Mr. Krishnamachari felt that it would be desirable to frame legislation for making it obligatory for joint stock companies to furnish full details relating to their functioning along with the statement of their annual accounts. The responsibility of accuracy of such information should be that of the companies. This proposal of the Finance Minister was, however, at variance with the view taken by the Seminar earlier which had favoured resort to persuasion for obtaining adequate information from companies rather than framing of legislation for this purpose.

The Finance Minister wanted a stricter control on inventories. He also sharply commented on the lack of profit consciousness on the part of the public sector undertakings. He did not subscribe to the view that the Government enterprises should function on no-profit-no-loss basis.

Extravagant and Erring States

From Our Correspondent

CALCUTTA:

ALONG WITH nine other States, West Bengal, Bihar, Assam and Orissa will be shortly in the market to borrow Rs. 7 crores, Rs. 4 crores, Rs. 3 crores and Rs. 8 crores, respectively. All loans will mature after 12 years for redemption at par. But the issue price is Rs. 99.75 per cent in the case of West Bengal and Rs. 99.50 per cent in the case of the other three. The rate of interest is 4½ per cent in all cases, which is considered attractive by current market standards. In fact, the market had been expecting that the interest rates on State loans would be higher than offered previously because of dearer bank credit. During the past two financial years, the States did not borrow independently, but were given shares from the proceeds of the combined borrowing programme which the Centre undertook on their behalf. That programme had many advantages, but had to be given up primarily for two reasons. First, it was not possible to fix a basis which could satisfy all States as to the share each one of them was getting, and secondly, it tended to encourage the States to make more importunate demands for assistance from New Delhi.

In fact, in the name of development some of the States have been spending so recklessly that something will have

to be done fairly soon to put their financial houses in order. The total debts of Orissa have risen from Rs. 203 crores in 1962 to Rs. 228 crores in 1963 and is expected to rise further to Rs. 266.36 crores by the end of the current year. The revenue deficit of Rs. 3.92 crores in the 1964-65 Budget has been left uncovered, yet it proposes to spend over Rs. 40 crores on development, which it hopes to find from Central assistance and market borrowing. This State has so far spent 76 per cent of the total outlay budgeted for the third Plan as a whole, but leaving aside the question (which many people are now asking) whether the money has been spent wisely and well, Orissa's apparently good performance has been made possible by generous Central aid. Now that the latter is likely to look a little more closely into Orissa's application for help, it is very problematical whether the State will be able to spend as much on "development" as it has budgeted for the current financial year.

The finances of Assam are also in a bad way. It will have spent as much as 88 per cent of the total third Plan outlay if the current year's Budget provision of Rs. 34.20 crores is fully expended, but its ways and means position would appear to be even worse than Orissa's. However, there is general

BIRD'S CENTENARY YEAR

ENGINEERING TO AID INDUSTRY

The expansion of industry depends largely on the timely supply of engineering products and services. The Bird-Heilgers Group, with water treatment, coal washeries, castings and structurals, refractories, pneumatic equipment, springs and research, is playing a significant role in providing basic requirements for a wide variety of industries.

Deploying the skills acquired over a hundred years, the Bird-Heilgers Group is making important contributions to the economy . . . through planned diversification and expansion.

sympathy with Assam as a harassed border State, whose commitments have increased enormously since the Chinese invasion of India's borders. This State too has made a relatively good tax effort to find additional resources for the Plan. Although still a long way short of the Rs. 16 crores which it has undertaken to find during the current five-year period, it has been trying to increase internal resources in each of the years of the third Plan. Incidentally, Assam is raising the smallest of the loans this year, although her overall Budget deficit is bigger than Orissa's. This may be due to the fact that Central assistance for Assam is likely to continue on a generous scale.

Bihar is relatively better off, but in her case, the enthusiasm for "development" is not quite so pronounced as it is with Orissa or Assam. In fact, it errs on the side of caution. Bihar has shown no mania for spectacular projects like Orissa, and would seem to favour small-scale industries as the primary means of developing its economy. But then it must be said that the major projects like a steel plant or an oil refinery or the heavy engineering complex which are being located in this State are all Centrally sponsored and financed. Of all the States in eastern India, Bihar's tax effort to raise additional resources for the Plan is the poorest so far. It has not even raised half of the Rs. 50 crores which was the amount Bihar is required to raise for the third five-year Plan. The small surplus which is shown in the State's 1964-65 Budget is actually the result of some cuts in its Plan schemes. Therefore, if Bihar is raising a loan of Rs. 4 crores, it is because of the prospect for smaller Central assistance this year.

Unenviable Position

The financial position of West Bengal is not exactly enviable, but of all the four States, it has been making the maximum effort to finance the State's development schemes out of internal resources. In fact, as the Finance Minister disclosed in his Budget speech last February, West Bengal has already found Rs 145 crores for her Plan schemes as against Rs. 90 crores which it was required to raise. The late Dr. B. C. Roy had all along insisted that the State must have a plan for Rs. 341 crores for West Bengal's balanced development, but the Planning Commission, considering the resources which the Centre could spare for this State, had pruned the original plan down to Rs. 250 crores. There was, however, an understanding that if West Bengal could raise more than Rs. 90 crores from out of its own resources, the plan outlay could be revised upwards. Now that the State has done so, it is pressing New Delhi to restore the plan to its original size but if this is to be done, the Centre must provide at least another Rs. 30 crores or so over and above Rs. 155 crores it has already agreed to give. But in view of the economy drive which the Union Finance Minister proposes to launch, it is unlikely that more funds from the Centre will be available; in fact, Press reports suggest that New Delhi has already asked West Bengal to reduce its spending on the Plan.

This, however, places the State in a dilemma. It must

comply with the Union Finance Minister's wishes in order to contribute to the general economy campaign, yet certain advance commitments and the State's own peculiar economic problems, now aggravated by the ever continuing influx of refugees from across the border, make it imperative that the State proceed with all its development schemes. The problem of power deficit and the need to develop the Durgapur-Asansol area, for example. From the way the power requirements in the State have been increasing it is clear that unless adequate provisions are now made for augmenting generation capacity, there will be a critical power shortage in the middle of the next Plan.

To develop the Durgapur-Asansol belt, adequate infrastructure facilities will have to be provided, and this must require considerable expenditure. The State obviously needs the Rs. 7 crores which it is going to borrow from the market. As for the prospect of the loan being fully subscribed, the market circles feel that apart from the usual institutions, the banks too would find it worth their while in view of the relatively attractive rate of interest. In fact, the effective rate works out to 4.78 per cent in West Bengal's case, and in the case of the three others, it is even more, 4.81 per cent. Incidentally, these loans will open on August 24 and close on August 29, and the States reserve the right to retain up to 10 per cent in excess of the notified amounts.

★ ★

At the annual meeting of the Tea Association of India, held at India Exchange last week, both Mr. A. S. Bam, Chairman of the Tea Board and Mr. S. R. Daga, President of the Association, agreed that India must produce and export more tea, but while Mr. Bam understandably emphasised the need to raise production, Mr. Daga dealt with the measures which are needed to boost output from the gardens. That was the only difference in their respective approaches to the problem. Mr. Bam pointed out that since the expansion in tea production was lagging behind the Plan target, the Planning Commission has already reduced the third Plan target from 900 million lbs. to 830 million lbs; the export target too has been cut to 530 million lbs. from 610 million lbs. Mr. Daga thought that the original targets were ambitious and the revised ones realistic; even so, the industry will require some positive incentives to reach the revised targets. Apart from repeating the well known demand that expenditure on replanting and new planting be treated as a charge on current revenue, instead of as a capital item, for tax purposes, Mr. Daga put forward a new one, urging higher rebates for tea as one of the industries qualifying for special assistance under the 1964-65 Union Budget. The rebates granted are 10 per cent on income tax and super tax and 20 per cent on surtax. But these in effect have been reached to 4 per cent and 8 per cent, respectively, as 60 per cent of tea profits are taxed by the States concerned as agricultural income. In Mr. Daga's opinion, these rates of relief should be raised to 25 per cent on income tax and super tax and 50 per cent on surtax.

Thirst for Funds

From Our Correspondent

MADRAS:

THE DETAILS regarding the borrowing programme of the State Governments were made known recently. While 13 State Governments have asked for an aggregate amount of Rs. 100 crores, the share of the four Southern States amounts to Rs. 36 crores; Madras will be raising the largest sum of Rs. 14 crores because it has a loan which was outstanding to the extent of Rs. 5.25 crores and which fell due for redemption on August 1. Andhra Pradesh, however, will be raising the largest net amount of Rs. 11 crores as it has no maturing loan. The other two States also do not have to repay any loan, Kerala thus raising only Rs. 4 crores and Mysore Rs. 7 crores.

As interest rates have tended to increase in the past two years and the Central Government also offered more advantageous terms to the lenders recently, the State Governments have been obliged to raise the interest rate on their loans to 4½ per cent and offer a redemption date in twelve years. The States are coming on the market to raise their requirements separately after 1962 as in 1963 the Central Government thought it advisable to have integrated borrowing as the conditions in the money market were not considered quite favourable and it has also thought advisable not to allow an undue increase in the interest rate. In 1962, 14 State Governments asked for Rs. 93.5 crores and there was considerable over-subscrip-

tion, total applications amounting to over Rs. 108 crores. The rate of interest offered was $4\frac{1}{2}$ per cent. The four Southern States required Rs. 32 crores.

It has, therefore, been necessary to borrow on a costlier basis. Even the Central Government had to offer a rate of $4\frac{1}{2}$ per cent to its lenders though it was for a long-dated issue. All the four Southern States are busy implementing Plan schemes and it would be helpful if larger sums could be borrowed from the open market. The Reserve Bank, however, has considered it desirable to limit borrowing to Rs. 100 crores as the State Electricity Boards and the statutory financial corporation also have to complete their borrowing programmes after the State loans are out of the way. The prospects for the latter being successfully launched should be considered encouraging as the banking system did not support liberally the loans issued by the Centre in July and there are ample funds on hand especially as there has since been a considerable improvement in conditions in the money market. It is even felt that institutional investors would provide bulk of the amount and that it may not be necessary to make a bid for collecting large sums from the rural areas.

Central Finance

While there will still be need for additional resources, in the case of Andhra Pradesh and Mysore particularly, there is great relief in these two States over the prospect of the big multi-purpose projects being financed entirely by the Central Government. It had been repeatedly represented to the Centre by the Andhra Pradesh Government that it was not possible for the latter to meet the expenditure on the desired scale for expediting construction work on the Nagarjunasagar Project without cutting the allocation for other projects. Even so, efforts are being made to provide large sums out of available resources, though, with a bigger allocation, work on the project could have been considerably accelerated and the benefits out of the huge expenditure derived much earlier. The actual decision is expected to be taken after the meeting of the National Development Council before the end of this month. There are some ticklish problems involved as it has still to be decided whether Central financing and moratorium on interest payments would meet central execution of the projects selected for this purpose. The view of the Andhra Pradesh Government would seem to be that the construction work should be carried out only under State auspices. Since there is already an arrangement for supervising construction, it may probably be eventually agreed that, subject to financial control by the Centre, the construction work would be carried out by the State. The Mysore Government is naturally interested in this decision as it has a number of multi-purpose projects which have to be implemented during the fourth Plan period.

★★

Following the fixation of maximum prices for coarse variety of rice by the Central Government, the State Governments of Andhra Pradesh and Madras have fixed maximum and retail selling prices for coarse and even finer varieties of rice. The prices announced are about 10 per cent below the levels that were prevailing in the market a few days back. It is generally agreed that the new maximum prices for the different categories of rice are such that they would be remunerative to the producer and workable for the trade though the consumer has been somewhat disappointed. The trade, however, has a lurking fear that imports of rice from Andhra Pradesh may not be easily coming in as the neighbouring State Government has somehow got alarmed over the movement of large stocks from its territory. It is not known whether all the stocks moved from the producing centres have found their way to Madras as it was emphasised by traders in this centre that stocks of Andhra rice were not large and that the requirements of Madras City were not large and that the requirements of Madras City could not be met without difficulty if there were no regular imports. The needs of Madras City are estimated at 4,000 tons monthly. While it

is too early to say how exactly the new arrangement will work out and the needs of the population in the next few months will be found, the problem can be satisfactorily got over only if there were no restrictions on movement within the zone and the State Governments of Madras and Andhra Pradesh worked in close co-operation. With the favourable rains in the past few days it is felt that the prospects for the new crop have considerably improved.

★★

A well attended function took place on August 5 in Neyveli when the completion of the first stage of the thermal project was celebrated. Mr. N. Sanjiva Reddy, Union Minister for Steel and Mines, presided over the function while Mr. P. S. Neporozhny, Soviet Minister and Chairman of the Production Committee for Power and Electrification, who came from the USSR specially to participate in the function, unveiled the obelisk commemorating the completion of work on the first five generators. There are four more panels for the remaining units that will be erected under the first and second stage of expansion. It is now expected that the first phase of expansion will be completed before the end of 1965. The Soviet Minister was kind enough to offer the assurance that technical and financial assistance from his country would continue to be available for raising capacity to 600 mW. Indeed, he even indicated that assistance would be forthcoming for the subsequent stages of the project which would be conceived ambitiously. Mr. Sanjiva Reddy naturally emphasised the need for the installation of additional generating capacity so that power could be supplied on a regional basis and in an assured manner. Mr. K. N. Subbaraman, Chairman of the Neyveli Lignite Corporation, justifiably claimed that lignite had been put to good use and that the Neyveli scheme would prove to be a project for prosperity. The full benefits of the large expenditure that has been incurred so far would be felt by the middle of next year when the briquetting plant and the fertiliser unit would be in operation. Even in the short period, the generators have been in commission, a total quantity of about 2,000 million units has been produced while approximately 1,500 million units have been pumped into the Madras grid. During the period of the recent power crisis, the daily availability from this source for the Madras State Electricity Board was as much as 5 million units.

Expansion Plans

With the construction work on the briquetting and the fertiliser projects nearing completion, thoughts are now centred on the schemes that would have to be formulated for the fourth Plan. Not much difficulty is expected in drawing up plans for installing additional generating capacity as considerable experience has already been gained and it is generally accepted that Neyveli would have to be the big source of supply. The question is now being discussed whether there should be an expansion of the capacity of the fertiliser plant as there are inbuilt reserves in some departments and it would be possible to step up output significantly even with a small outlay. The expansion plans can, however, be finalised on a definite basis only after it is known how the gasification of lignite is achieved and whether it is in conformity with earlier estimates. There is confidence that the processes for manufacturing urea, based on lignite, will be successful though it is difficult to say, without commercial operation, how much quantity of lignite would be required for producing up to the rated capacity of 1.52 lakh tons. This is the largest unit in the world for a lignite-based project. As the cost of raw material is expected to be higher than that of other raw materials like naphtha, expert opinion would seem to be inclined to the view that there should not be any increase in the capacity of this unit. As, however, over-head expenses can be reduced significantly with an increase in the capacity by about 30 per cent, with an expenditure of only Rs. 3 crores, immediately after the necessary experience has been gained, the expansion should be undertaken.

NEWS from SKF

Here is a preview of some of the SKF specialities which will be manufactured in India, when the new plant at Chinchwad goes into operation. Meantime, part manufacture and assembly has already commenced in Bombay—maintaining all the technical skill and know-how which has made the name SKF world famous.

The moving finger writes

THE PRIME Minister's meeting with the press last Saturday was not by any means the first indication that the country has had that he is back at his job with a vengeance. I have heard it suggested that Mr. Lal Bahadur probably considers it necessary to demonstrate the fullness of his recovered physical fitness not merely by recapturing the pace of work which he adopted for himself before his illness but by even improving on it. I hope this is not true and that the Prime Minister who is now not lacking in advisers, official or other, will hear and listen to some sound advice on the vital question of "burning the candle" safely and sensibly.

Here I may also add that Mr. Lal Bahadur should not be lavish with gestures of austerity. Although he has said that he does not want a lift to carry him to the ramparts of the Red Fort on Independence Day, a lift very rightly is nevertheless being installed. In other words, the expenditure of public money to which he objects is being incurred and there is clearly no point in his denying himself the use of the facility which is thus being provided.

Similarly, I am not impressed either with his decision to use a small car instead of a limousine. I am sure the limousine which he has surrendered will, nevertheless, be kept on government account and used by others. It is not inconceivable that the vehicle may be pressed into service for dropping a Secretary's wife at a matinee in a local cinema or fetch a Deputy Secretary's children from school or even be taken by a Section Officer's wife to the vegetable market. The Prime Minister is nearing sixty, has a history of heart ailments and is even otherwise not of robust constitution by any means. In the circumstances, it is merely sensible that he should take proper care of himself and I am confident that the country wants him to do this and will be legitimately aggrieved if he does not.

The Prime Minister's letter to Chief Ministers on food policy is on the whole a document of considerable wisdom. I like particularly the emphasis he has laid on the need for individual State Governments thinking in national terms where the people's food is concerned. There has been too much of a "Pull Devil, Pull Baker" mentality among State Governments and it is evident that the Minister for Food and Agriculture has been finding it too difficult to reconcile claims and counter-claims. It is to be hoped that the Prime Minister's appeal will have the desired effect on State capitals. This is particularly important because without this co-operation within the ruling party, it would be idle to expect any constructive response from Opposition parties or trade unions to Mr. Lal Bahadur's plea that the food situation should not be exploited for political or sectional ends.

There is a point, however, in the Prime Minister's statement on food policy which, I must say, fails to make sense. He anticipates — and in my view rightly — an easing of the nation's food difficulties after about two months. By then the large supplies of wheat promised by the United States would have started reaching this country in a regular and large flow, and secondly, the Kharif rice crop, which may be expected to be a good one, would have begun moving into the markets. Since these are the prospects, I fail to see why Mr. Lal Bahadur should have thought it necessary at all to advise State Governments to be prepared for organizing rationing in cities such as Calcutta, Bombay, Madras or Delhi. If the worst of the present food difficulties could be expected to be over towards the end of October, there is clearly no need for thinking in terms of the introduction of rationing in the cities or

elsewhere. Secondly, talks of rationing are apt to depress and demoralize the public rather than boost their morale. Rationing, again, is apt to weaken the inclination of producers or middlemen to sell or trade freely. The important thing now is to strengthen public confidence and reference to rationing is surely not the way to do it.

Mr. Raghunath Singh's appointment as Chairman of the National Shipping Board must inevitably recall to habitues of the Central Hall of Parliament an anecdote, no doubt apocryphal, which used to flavour the interminable cups of coffee drunk in that august chamber. Mr. Raghunath Singh — so the story went — who was speaking in Lok Sabha on the Demands of the Transport Ministry in a very critical vein, was so carried away by his indignation over that Ministry's sense of commission and omission that he raised his voice to demand why the people of Uttar Pradesh should have any confidence at all in a Ministry which was not even prepared to consider setting up one of the shipyards in that State. Now that Mr. Raghunath Singh has arrived at the National Shipping Board, he may certainly be expected to put Banaras on the navigation map of the world.

Recently ("Eastern Economist", dated July 31, page 205) I had some comments to offer on the appointment of Mr. T. N. Singh as Minister of State for Heavy Engineering. The why and wherefore of that appointment was something of a mystery to me. Since then a clue of sorts has come my way. Mr. Lal Bahadur and Mr. T. N. Singh, I learn, went to school together. I am indebted for this information to a Monday column in a local Daily. The columnist in question goes on to reveal that the two cronies used to ride "double" on a bicycle, with Mr. T. N. Singh in the saddle. It now remains to discover the person who used to swim across the Ganga with Mr. Lal Bahadur in those exciting early days carrying school books on the head. There ought to be a job awaiting him somewhere in the Government.

My congratulations to Mr. G. S. Bhargava, Special Correspondent of "The Indian Express", on his recent series of articles describing some very strange doings in certain high places in Orissa. His reporting is an excellent example of restrained, and therefore deadly, indictment. For obvious reasons, Mr. Bhargava has been cautious and considerate in marshalling his evidence and has consequently been all the more successful in establishing a very strong case for a judicial investigation of some of the political or business careers in Orissa's recent past.

"The Hindustan Times", I notice, also has Orissa on its mind. In its issue of August 6, Associate Editor Kr'shan Bhatia's "Political Notebook" pleads most persuasively with the Congress Parliamentary Board to steel itself for another Das Commission, so that the party's honour and prestige may be retrieved. I agree with him — and I hope he shares my amusement over the following sentence occurring in his piece: "On the other hand, if the Board somehow works itself into an unusual mood of ruthlessness and orders some heads in Orissa to role (sic), the people would still talk of the many who have cheated the gallows". I am all for gallows or guillotines for the wrong type of people in Orissa or elsewhere, but I would rather not mix up those two distinct types of engines of death.

SUGAR PROBE

AN INQUIRY into the production, price and distribution of sugar as much as of sugarcane, was overdue for quite some time now. The appointment, therefore, by the Union Minister of Food and Agriculture, Mr. C. Subramaniam, of a Commission of Inquiry to go into the various problems of the Indian sugar industry should be welcome to all concerned. The determination of the price as well as the system of distribution for the sugar season commencing on November 1, 1964 will be the immediate concern of the Commission and will be covered in its interim report to be submitted to Government by the end of August, 1964. As a matter of fact, the Union Ministry of Food and Agriculture fixes sugar prices according to a formula which takes into account the price of sugarcane and the manufacturing cost. The industry has lately been complaining that the existing prices are unremunerative and provide little incentive for greater production. The profitability in the industry is said to be among the lowest in the industrial sector. In fact, the present price schedule for sugar is based on the Tariff Commission's recommendations submitted as early as 1959. The six-member Commission of Inquiry, headed by Dr. S. R. Sen, Adviser (Programme Administration), Planning Commission, is expected to go over the ground afresh and make detailed examination of all aspects of the cost structure. The industry has been demanding a higher price for sugarcane to enable it to compete with the gur and khandsari industries which have lately become its serious rivals. It also wants the Government to adopt a policy of selective controls under which factories may be allowed to sell in the free market their excess production over and above the basic quotas. The effective regulation of gur and khandsari manufacture within the areas covered by the factories has also been demanded. The industry is in favour of fixation of sugar prices in different regions and sub-regions as well as the demarcation of cane zones for individual sugar factories in all the States with a view to ensuring adequate cane supplies to the factories.

As the industry is to meet not only the internal requirements but also to produce for export, the Commission will examine the policy regarding licensing of new sugar factories and the expansion of the existing ones. Licences for expansion as well as new units are granted by the Government to both the joint stock companies and the co-operative sugar factories. Preference is given to the co-operatives. In the co-operative sector, of the 57 factories licensed, 46 are working and account for about 22 per cent of the total production in the country. By the end of the third Plan, with 72 co-operatives licensed, this sector will account for nearly one-third of the total production. The share of the co-operatives in the additional capacity to be licensed during the fourth Plan is expected to be of the order of 7,00,000 tons and 30 new units may have to be established. It is envisaged that by the end of the fourth Plan there will be 100 co-operative factories accounting for about 42 per cent of the total installed capacity. The Commission will, however, go into the entire question of licensing and make appropriate recommendations with a view to ensuring quick increase in production.

Besides its Chairman, the members of the Commission include Mr. S. C. Choudhuri, Economic and Statistical Adviser to the Ministry of Food and Agriculture; Mr. N. Krishnan, Chief Cost Accounts Officer, Ministry of Finance; Mr. S. C. Gupta, Director, National Sugar Institute, Kanpur; Dr. Dharam Narain, Institute of Economic Growth, Delhi University; and Dr. P. K. Mukherjee, Deputy Economic and Statistical Adviser,

Ministry of Food and Agriculture, who will also be the Secretary of the Commission.

U.A.R. TRADE TEAM

A trade delegation from the United Arab Republic will visit India some time in September this year. The delegation will explore possibilities of increasing trade between the two countries. At present, the UAR is buying tea and jute from India. According to the UAR Ambassador, Dr. M. H. El-Zayyat, his country will be interested in importing from India coffee, timber, wood and spices besides considering import of cotton mill stores and jute mill stores.

FOREIGN GOODS CORNERS

An increasing number of imported articles, ranging from bananas to jewels, is being displayed in the show-windows of Japanese department stores and specialty shops. Some of the major department stores have established "Foreign Goods Corners" where all sorts of imported clothing, shoes, watches, fountain pens, foodstuffs and liquor are on sale. Japanese affiliates of foreign firms are also stepping up their publicity programmes. Increasing number of advertisements publicising foreign goods are appearing in Japanese newspapers and magazines and on television and radio. As a matter of fact, it was only in 1960 that Japan started liberalizing her imports in right earnest. About 42 per cent of the categories of her imports were liberalized that year. This rate of import liberalization has now gone up to 93 per cent. Parallel to this liberalization, the income level of the Japanese people has risen and their consumption of goods has increased. People are buying more expensive goods than before and their eating habits and tastes have become more international in nature. As a result, imports of consumer goods have been increasing tremendously in recent years. The Finance Ministry of Japan recently made a survey of 45 principal consumer goods imported into the country. The value of the 45 principal import items in 1960, including foodstuffs, machinery, precious stones, beverages and sundries, was estimated at \$59 million, whereas last year these imports totalled \$220 million. In 1960, the import of consumer goods accounted for only 1.31 per cent of Japan's total imports, and in 1962 these goods accounted for 3.27 per cent of the total imports.

The articles which Japan has imported in greater volume in recent years may be divided into four types. One classification is that of products which are not produced in Japan, the most representative example of which is banana. In 1962 Japan imported 83,000 tons of bananas, valued at \$12.5 million. In 1963, following the liberalization of imports of bananas, their imports increased to 2,60,000 tons, valued at \$37 million. The same thing may be said of instant coffee imports. In 1960, the quantity of instant coffee imported totalled only 29 tons, but since July 1961, when import restrictions on this product were relaxed, its import has increased rapidly from 1,515 tons in 1961 to 2,753 tons in 1962 and 2,848 tons in 1963. Increase in the import of canned pineapple, coffee and cocoa beans, none of which is produced in Japan, has also become evident. The second type of consumer goods which are being imported in greater quantity are those which are produced in Japan but cannot be marketed at prices lower than those of the imported ones. Shrimps, crabs and mutton are included in this category. The value of shrimp and crabs imported in 1960 totalled only \$1.2 million, whereas in 1963, \$24.5 million worth of those articles were imported. The third category includes those imported high quality goods whose demand is far in excess of their indigenous availability. This category covers such items as safety razor blades, fountain pens, soap and golf clubs. Japan imported only \$120,000 worth of safety

razor blades in 1960, but following their import liberalization in November, 1962, the value of their imports rose to \$1,980,000 in 1963. The fourth group includes watches, diamonds and other luxury items. Only 14 kilograms of diamonds were imported by Japan in 1960, but after the liberalization of import restriction on this item in August 1960, its annual imports increased to 1,150 kilograms in 1963. The import of high-quality watches and motor boats has also increased tremendously.

GERMAN CREDIT FOR I.C.I.C.I.

The Industrial Credit and Investment Corporation of India Ltd., has obtained a further line of credit of DM 10 million from the Kreditanstalt für Wiederaufbau (KfW) of the Federal Republic of Germany. The new credit is in addition to the two loans aggregating DM 25 million which ICICI has already obtained from this organisation. This credit forms part of the consortium aid from the Federal Republic of Germany to India for the year 1963-64. With the completion of negotiations for this loan the total amount obtained by ICICI from the Federal Republic of Germany is DM 35 million (about US \$9 million). In addition, the ICICI has obtained five lines of credit aggregating US \$90 million from the IBRD, and a line of credit of \$5 million from the USAID. Thus, the total foreign currency resources available with ICICI amount to US \$104 million. The ICICI is a major institution providing foreign currency loans to Indian industry and has so far committed about 80 to 90 per cent of its foreign currency resources.

FOREIGN EXCHANGE FOR BUSINESS TOURS

As an export promotion measure, the Ministry of Finance has liberalised the allocation of foreign exchange to Indian businessmen visiting foreign countries. Travelling salesmen visiting countries like the USA and Canada will now get Rs. 125 per day instead of Rs. 100 per day granted to them earlier. Similarly, salesmen visiting countries other than the United States, Canada, South-East Asia and other neighbouring countries, will now get Rs. 100 per day instead of Rs. 70 per day. The top-ranking businessmen will now get Rs. 200 per day instead of Rs. 150 per day as hitherto. But, this increase in daily allowance (for top-ranking businessmen) will be granted only in the case of visits to countries other than the United States, Canada and the neighbouring countries. If these businessmen visit the USA or Canada, they will get a reduced daily allowance. Instead of Rs. 225 per day hitherto they will now get only Rs. 214 per day. In the case of technical advisers, the daily allowance has been reduced for their visits to the USA, Canada or any other country, excepting South-East Asia. In the case of the USA and Canada, the daily allowance of technical advisers has been reduced from Rs. 225 to Rs. 167 (\$35) and in the case of their visits to other countries the allowance will now be only Rs. 133 per day instead of Rs. 150 per day previously. Technical advisers will include businessmen, directors or any other people who cannot be called "top-ranking businessmen". For countries of South-East Asia and the neighbouring countries such as Pakistan, Ceylon, Afghanistan, Aden, Iraq, Iran and Saudi Arabia, foreign exchange will be released at the rate of Rs. 100 per day as at present except that foreign exchange will be released at the rate of Rs. 150 per day for Kuwait and the Persian Gulf countries. The daily allowance will be reduced by 25 per cent for the period a salesman stays at a particular place for more than three weeks.

NEWSPRINT ADVISORY COMMITTEE

The Government of India has set up a 17-member committee to advise on questions of policy regarding the import and allocation of newsprint and printing machinery for newspapers and on other cognate matters. The Deputy Minister for Information and Broadcasting will be the Chairman of the Committee which will consist of six officials, three nominees of the Indian and Eastern Newspapers Society, two represent-

atives of the Indian Languages Newspapers' Association and 5 other non-officials nominated by the Government. The Chairman will have the power to co-opt additional members. The term of membership of non-official members will be two years, the retiring members being eligible for reappointment. The Committee will ordinarily meet twice a year. The members of the Committee are: Mr. Uma Shankar Dikshit, MP; Mr. A. D. Mani, MP; Mr. R. K. Khadukar, Mr.; Mr. G. N. Sahi, "The Hindustan Times", New Delhi; Mr. D. M. Harris, "The Statesman", Calcutta; Mr. C. G. K. Reddy, "The Hindu", Madras. Mr. Ratilal Sheth, "Jannabhoomi", Bombay; Mr. D. S. Kaldare, "The Vasant", Bombay; Mr. K. R. Pattabram, "The Deccan Chronicle" Secunderabad; Mr. M. Yunus, Dehli, "The Shama", New Delhi; a representative each of the Ministry of Commerce, Ministry of Industry and Supply, Department of Economic Affairs, (Ministry of Finance), State Trading Corporation, Registrar of Newspapers, and the Deputy Secretary, Ministry of Information and Broadcasting, in-charge of press matters, who will also be the Secretary of the Committee.

EXPORTS TO AFRICA

The first meeting of the reconstituted Board of Trade, scheduled to be held on August 7, has been postponed to August 19, 1964. At this meeting the board is expected to finalize its views on the fourth Plan export target. The meeting will also discuss measures to step up our exports, particularly to African countries. Exports to Africa have, in fact, grown without any conscious effort from our side. During the last year, the exports were worth Rs. 50 crores. Although exports of tea have improved, there is no ground to feel complacent especially in view of the growing competition from Ceylon and China. Besides, African countries are fast coming up as major suppliers of tea. On the basis of the present per capita consumption, Africa's cloth requirements by 1970 are estimated at 6,338 million yards as against the present indigenous production of 1,739 million yards. Possibilities are there of India's capturing a sizable share of this market.

INDUSTRIAL FINANCE CORPORATION

All the shares of the Industrial Finance Corporation of India (IFC) held by the Central Government and the Reserve Bank were transferred to the Industrial Development Bank of India with effect from August 1. The IFC has also issued 2,692 additional shares in favour of the Industrial Development Bank. The Bank, thus, holds 50 per cent of the Rs. 835 crores reconstituted capital of the Industrial Finance Corporation.

The Industrial Development Bank was established on July 1, 1964, as a wholly-owned subsidiary of the Reserve Bank of India. It has an authorised capital of Rs. 50 crores, which, if necessary, can be increased to Rs. 100 crores. Among other things, the Bank will co-ordinate the activities of all the bodies like the IFC and the State Finance Corporations which are providing financial assistance for industrial development in the country.

AID TO COAL INDUSTRY

The Union Ministry of Steel and Mines has decided to invite fresh applications from the coal industry for financial assistance out of the World Bank funds made available two years ago for the development of coal mines. This assistance would be provided for new projects, expansion of existing mines and replacement of equipment.

The fresh applications will be entertained upto August 31. Applications for new projects will be considered on merits, having regard to the needs for development of such projects and the most suitable agency for undertaking the development. These new projects will also require clearance of the World Bank. The request for such clearance will be made to the World Bank once the projects have been approved by the Government.

Company Affairs

TATA IRON PROPOSES EXPANSION

MR. J. R. D. TATA, Chairman of the Tata Iron & Steel Company Limited, expressed grave concern over the continuous increase in the cost of production of almost every single product in India. In a statement appended to the annual report of the company he indicated that steel provided a striking example of the marked deterioration in the country's cost-price structure. Whereas until 1955 Indian steel was amongst the cheapest in the world, it has become one of the costliest, although the basic elements which made up the total manufacturing cost had not materially changed in relation to those of other countries. The full incidence of excise duties and other taxes alone on the final price of steel has been exorbitant with the result that the final price was beyond the company's control. On the other hand, most of the times an increase in prices was sanctioned by the Government much after the increase in costs, so that every time the company incurred substantial loss of revenue.

The damage caused by rising costs, Mr. Tata stated, has rendered most of the exportable Indian products uncompetitive in world markets. Rising prices have also inflated expenditure under the development plans which in turn necessitated increases in the already crushing burden of taxation and deficit financing. The grave burden of additional defence expenditure further complicated the problem and deterioration in the price structure was largely due to our forcing the pace of economic development beyond the country's capacity in physical and financial resources. It was indeed a sad situation and there seemed to be no recognition of the need for a reappraisal of resources and priorities in our planning.

The Chairman indicated that the passing of the amendment to the Companies Act, empowering the Government unilaterally to convert into shares loans advanced by them to joint stock companies, had been viewed with deep concern. He informed the shareholders about the discussions which the Tatas and the Indian Iron had had with the Government in regard to the repayment of their special advances. He revealed the fact that from the end of the war until the middle fifties the retention prices allowed by the Government to the steel producers were fixed at levels far below the import prices. A gross return of 8 per cent on block, from which had to be provided profit sharing bonus, managing agent's commission and taxes, leaving only about 3½ per cent for dividend and reserves was quite unrealistic. In the long run this price scheme had disastrous consequences as it left virtually nothing in the hands of the industry for rehabilitation and modernisation. The chairman reminded the Government that the company had approached for a rise in prices by Rs. 100 per ton the returns from which were to be spent exclusively towards the modernisation and expansion of the plant. Even with this increase the average retention price at that time was to be about half the price of the imported steel. And even this proposal was turned down by the Government, who instead, increased the selling price without raising the retention price. The funds generated by this increased return from the consumer, which would normally have accrued to the producers, were taken to equalisation fund from which the special advances were made to two steel companies. In a way the Government lent the two steel companies from the money which rightfully belonged to these producers. These special advances of Rs. 10 crores made to each of the two main producers towards the cost of their modernisation and expansion programmes were to be repaid with special interest only when a special element was added specifically for that purpose to the normal retention price. Mr. Tata informed the shareholders that discussions were still in progress about the

repayment of these special loans and it was hoped that the Government would keep in mind the background of those advances.

Mr. J. R. D. Tata told the shareholders that the company might be called upon to undertake a further large scale expansion of capacity at Jamshedpur during the fourth five-year Plan. In fact necessary arrangements were expected to be made shortly to appoint a firm of consulting engineers for the preparation of a detailed project report about the expansion of capacity to three million tons from the present two million tons. Preliminary estimates indicated that the cost of this expansion would be of the order of Rs. 170 crores of which probably a little more than half would be in foreign exchange. The most difficult problem remained to be of finance, particularly in the light of the fact that this project would be super-imposed on a programme already in hand for expanding and modernising ore mines, building a battery of coke ovens, adding some equipment to SMS-3 and a few other things which would cost nearly Rs. 25 to Rs. 30 crores. He assured the shareholders that there was no need for any alarm at the prospect of such large commitments because every increase in capacity would strengthen the company.

INDIAN IRON: GROWTH WITH CARE

Sir Biren Mookerjee, Chairman of the Indian Iron and Steel Company Ltd., referred to the proposed expansion of the company in a statement dealing with its performance during the year ended March 31, 1964. He indicated that the expansion programme involved considerable investment which increased the loan liabilities of the company. Nevertheless it held promise of substantial expansion in production capacity. The steel making annual capacity of the Burnpur Works, upon completion of the first phase, will be higher by nearly 300,000 tonnes of crude steel. The second phase of expansion, for which preliminary steps have already been taken, will raise the annual capacity further by 700,000 tonnes. In two phases therefore, the company will have achieved an additional capacity of nearly one million tonnes. Sir Biren made a pointed reference to the fact that the company was trying to achieve an expansion of such magnitude without imposing too great an immediate financial burden on the company which would have impaired the dividend position to the detriment of the interest of the shareholders. The expansion has to be gradual and each stage has to be followed by a period of consolidation. This precisely seemed to be the strength of the private sector, where expansion was achieved without causing major financial dislocation. The Chairman added that the company would have desired to compensate the shareholders for comparatively restricted dividends by capitalising a portion of the reserves by the issue of bonus shares, but it has become impracticable under the present rules of taxation.

To achieve a steady improvement in the efficiency of the plant sufficient attention has been paid to research. It was all the more necessary in the face of a steady deterioration during the last decade in the quality of the primary raw materials, particularly coking coal and limestone. The Chairman indicated that through continuous research the company was able to process these raw materials to achieve good quality products. The company has been carrying out extensive research with its own iron ore in an effort to find the best way of utilising the under-size ore with considerable success. Investigations have been carried out for the control of humidity and the increased use of oxygen in the steel making process. Similarly considerable attention has been paid towards the utilisation of waste products. Moreover, import restrictions on engineering spares forced the company to develop manufacturing techniques for various items for which it was not even properly equipped. For instance, it carried out experiments at

its foundries with the help of British Rollmakers Corporation to manufacture rolls with considerable success. The result has been that the company was able to produce engineering spares for various consumers which otherwise would have been imported.

Sir Biren Mookerjee outlined the salient features of the Government's decision about the partial decontrol of steel which was accompanied by an increase in the excise duty, mainly to compensate the loss of surcharge with the abolition of the equalisation fund. The average rise in the excise duty calculated on the company's 1963-64 output of steel was nearly Rs. 18 per tonne while the average increase in the case of the decontrol category of steel, nearly 60 per cent of the total output, was of the order of Rs. 30 per tonne on the basis of the product mix and the portion of 'tested' and 'untested' steel in 1963-64. In the case of the uncontrolled categories the effective increase has been of the order of Rs. four per tonne only on account of reduction in the net price of billets and the assumption by Government of an incorrectly high percentage of 'tested' galvanised sheets in working out the prices, despite the fact that on protest the prices of untested billets were revised upward by Rs. 15 per tonne from May 30, 1964. The Chairman pointed out that the over-all average increase in respect of the total output of controlled and decontrolled categories of steel on the basis of production for 1963-64 was approximately Rs. 20 per tonne, effective in successive stages of rupees ten, rupees eight and rupees two per tonne from March 1, April 30 and June 1, 1964, respectively. It is too early to assess the adequacy of the revised planning arrangements under the Joint Plant Committee but the Chairman was of the opinion that the retention of control by Government over certain categories of steel, particularly in the case of sheets, had done little to curb the activities of the black market in the items in short supply.

PREMIER CABLE ISSUE

The Premier Cable Co. Ltd., will enter the capital market on August 18 to raise Rs. 50 lakhs by the public issue of 300,000 equity shares of Rs. 10 each and 20,000 redeemable cumulative preference shares (9.3 per cent) of Rs. 100 each. The subscription list will close on August 28 or earlier at the discretion of the directors but not before August 20. It has an authorised capital of Rs. one crore and issued capital of Rs. 70 lakhs. Out of the present issue the directors, promoters, their friends and relatives have subscribed for 180,000 equity shares. The entire public issue has been underwritten — Kerala State Industrial Development Corporation Ltd. (equity shares Rs. 10 lakhs, preference shares Rs. 15 lakhs), Life Insurance Corporation of India (equity shares Rs. 2.50 lakhs, preference shares Rs. 5 lakhs), Industrial Financial Corporation of India, (equity shares of Rs. three lakhs, preference shares Rs. two lakhs), the Industrial Credit and Investment Corporation of India (equity shares Rs. six lakhs), the United Commercial Bank Ltd., (equity shares Rs. five lakhs), New India Assurance Co. (equity shares Rs. 2.5 lakhs) and Raja Ram Bhasin & Co., (equity shares Rs. one lakh). The company has been promoted by M/s. P. C. Periwal, H. M. Periwal and S.L. Mohta. It entered into an agreement for technical collaboration with a reputed cable manufacturer in German Democratic Republic M/s. VEB Kabelwerk Oberspree Berlin. The company has also secured the services of Mr. Charles G. Gorton as technical adviser who has substantial experience in the manufacture of all types of electric cables both in U.K. and India. The plant is to be located in Kerala State at Karukutty near Ernakulam. It has been granted a licence for the manufacture of P.V.C. and V.I.R. cables with a capacity of 18 million core yards every year on two shift basis, and plastic insulated power cables with a capacity of 270 miles per annum. The Kerala State Electricity Board has assured the company the required power and the main raw materials required will also be available in South India. In view of the high priority given to

generation of electric power the demand for transmission and distribution which requires power cables, will also be substantial. The company has already purchased land and has placed orders for machinery and expects to commence production by the end of 1965. The capital outlay on the project is likely to be around Rs. 1.20 crores which will be raised through share capital to the extent of Rs. 70 lakhs and the remaining Rs. 50 lakhs will be raised through loans from the Industrial Financial Corporation of India.

IMPERIAL TOBACCO

The working of the Imperial Tobacco Company of India Limited has resulted in a substantial fall in net earnings for the year ended March 31, 1964. According to a preliminary report, the net profit, after deducting all charges, expenses and taxation, amounts to only Rs. 99.25 lakhs against Rs. 180.24 lakhs in the previous year. The provision for taxation is shown at only Rs. 187.46 lakhs against Rs. 262.37 lakhs. In this connection, the directors state that the company's business has been adversely affected by taxation measures in each of the last two budgets. The directors have proposed a final dividend of 2.5 per cent, making a total of 6.4 per cent, less tax, for the year against 8 per cent taxable, paid previously. They have also announced an interim dividend of 2.5 per cent for the current year.

NATIONAL RUBBER

National Rubber Manufacturers Limited has been successful in raising Rs. 50 lakhs through a rights issue of 500,000 ordinary shares of Rs. 10 each at par, in the ratio of one new share for every existing ordinary share. Not only the bulk of the existing rights were exercised, but also there were applications for additional shares, making the issue over-subscribed. The allotment of additional shares has been made on a graduated scale according to the basis determined in consultation with the Calcutta Stock Exchange.

REMINGTON RAND ISSUE

Remington Rand of India Limited has announced that it would be converted into a public limited company with Indian participation in its equity shares. Discussions are now being held with the Central Government and it is expected that a prospectus will be issued in six months. The factory has an installed capacity for manufacturing 30,000 typewriters a year and the present rate of production is 27,000 a year. According to a spokesman of the company, the factory has attained an indigenous content of 95.89 per cent, while its ultimate target is 99.50 per cent. The company produces nine Indian language keyboards. New testing and production equipment has been imported. This will enable the company to increase the production of typewriters with improved quality standards.

LUFTHANSA'S PROGRESS

It is revealed that during the year 1963 Lufthansa German Airlines recorded a profit of US \$20,000. The company laid stress on safety and introduced jet aircraft so that passenger fatalities per hundred million passenger-kilometres decreased from 0.78 in 1960 to 0.47 this year. In 1963 Lufthansa carried 2.1 million passengers as against 1.8 million in 1962 and cargo carried also increased considerably. It was indicated that Lufthansa proposes to purchase jet equipment for short routes in replacement of the present propeller equipment. It also proposes to expand its fleet of long range jets and add supersonic airlines at the appropriate moment.

MADRAS TUBE TO ENTER MARKET

Madras Tube Co. Ltd., a company incorporated in 1961 for establishing a welded steel tube pipe plant for the manufacture of both galvanised and black steel pipes and tubes in the size range of 1" to 4" diameters for gas, water, steam and other high quality tubes, proposes to enter the market soon to offer for public subscription 5.50 lakh equity shares of Rs. 10 each and 40,000 9.3 per cent, cumulative redeemable

another order for CELCON[®] came the other day

[®] Celcon is the new engineering material which has excited interest of buyers from the automobile industry, the electrical industry, the building materials industry, the hardware industry, the packaging industry, the office equipment industry and the weapons-making industry. Celcon was developed after many years of research by the Celanese Corporation of America, one of the world's major producers of formaldehyde and trioxane.

Celcon is fast displacing iron, steel, brass, zinc, aluminium, magnesium, thermosets, laminates and wood in the manufacture of many articles. As contrasted with many die-cast metals, Celcon components require little or no finishing when they

emerge from the mould and may almost immediately be put to use. Considerable amounts of money are thus saved when Celcon is used. Celcon maintains its high mechanical strength, stiffness, toughness and resistance to impact force over a long period and through broad ranges of temperature and environment.

Celcon is available in natural translucent white and 18 standard colours; it is easy to fabricate; has excellent frictional characteristics; it can be readily sawed, drilled, turned, milled, filed and threaded. It can be fabricated by injection moulding, extrusion, blow moulding and other high volume thermoplastic processing techniques. Processing ease and economy are its greatest advantages.

How to measure Growth

All things grow in age—but only *some* grow in size and stature. A young sapling shoots up—sprouts new leaves and branches. But how does one measure the growth of a bank? Take the Bank of Baroda, for instance.

One way would be to compare figures. The Bank of Baroda began in 1908 with a single office in Baroda. Now it has as many as 210 branches in India and abroad. And deposits exceed Rs. 140 crores.

A strong and progressive institution with 55 years of experience, the Bank of Baroda has had a successful programme of branch expansion. It has also aimed at an ever-widening pattern of service. Indeed the Bank's chief goal has been to widen the range and scope of its banking services for the convenience of its customers.

THE BANK OF BARODA LTD.

(Estd. 1908) Head Office: Baroda

now has over 210 branches all over India and abroad with deposits totalling over Rs. 140 crores
Write in for our free booklet entitled 'May We Help You?' which gives details of all our services.

preference shares of Rs. 100 each. The issue consists of 9,99,300 equity shares of Rs. 10 each and 40,000 preference shares of Rs. 100 each. The promoters, directors and their associates have agreed to take up 2,99,300 equity shares and foreign collaborators 1,50,000 equity shares.

The factory will be situated at Pattabhiran, about 17 miles from Madras. The company has entered into an exclusive technical and financial collaboration agreement with M/s. Societe Vallourec, No. 6, Rue Daru, Paris, France, for the manufacture of steel tubes and pipes.

CAPITAL ISSUES

Ninety companies with an authorised capital of Rs. 9.61 crores were registered in Northern Region from April 1 to June 30, 1964. The Region comprises Delhi, Uttar Pradesh, Rajasthan, Punjab and Himachal Pradesh. The new issues included 13 public companies, 76 private companies and one association not for profit. Of companies with an authorised capital of over Rs. 50 lakhs, four were registered in Delhi and one each in Uttar Pradesh and Rajasthan. Five public companies and 51 private companies with an authorised capital of Rs. 2.76 crores and Rs. 2.1 crores respectively were registered in Delhi. Two public companies and 13 private companies with an authorised capital of Rs. 3.25 crores and Rs. 15.50 lakhs respectively were registered in Uttar Pradesh. Punjab and Himachal Pradesh had 11 private limited companies with an authorised capital of Rs. 32 lakhs and one association not for profit. Six public companies and one private limited company with an authorised capital of Rs. 1.01 crores and Rs. 1 lakh respectively were registered in Rajasthan.

During the period under review, 27 companies with a paid-up capital of Rs. 13.71 lakhs went into liquidation and names of 22 companies with a paid-up capital of Rs. 7.94 lakhs were struck off the Register of Companies under Section 560 of the Companies Act, 1956. The total number of companies at work on June 30, 1964 was 4,725. They included 818 public companies, 3,716 private limited companies and 191 associations not for profit. The authorised capital of these companies was Rs. 321.15 crores and Rs. 493.87 crores while the paid-up capital amounted to Rs. 76.65 crores and Rs. 147.69 crores respectively.

LICENCES ISSUED

The following licences were issued under the Industries (Development and Regulation) Act, 1951, during the week ended 25th July, 1964. The list contains the names and addresses of the licensees, the annual installed capacity and the items of production.

IRON AND STEEL CASTINGS

Shree Hanuman Cotton Mills Ltd., 46, Strand Road, Calcutta-7 (West Bengal) — Cast Iron Castings — 24,500 tons.

MACHINE TOOLS

Kirloskar Brothers Ltd., P.O. Kirlokarwadi, Distt. Sangli, Maharashtra (Kirloskarwadi, Maharashtra) — (i) Shaping Machines — 300 Nos., (ii) Planing Machines — 28 Nos.; Shri U. P. Pandit, Green Cottage, Off. Race Course Road, Rajkot (Gujarat) (Rajkot, Gujarat) — (1) Radial Drilling Machines — 240 Nos., (2) Pillar Drilling Machines — 240 Nos.

EARTH-MOVING MACHINERY

Agrind Fabrications Ltd., 6, Ganesh Chandra Avenue, Calcutta-13 (Calcutta, West Bengal) — 8-10 ton Diesel Road Rollers, and 10-12 ton Diesel Road Rollers — 40 Nos.; The Britannia Engineering Company Limited, Titaghur, 24 Paraganas, West Bengal (Titaghur, West Bengal) — Diesel Road Rollers 8-10 ton capacity — 100 Nos.

COTTON TEXTILES

Smt. Nivedita Madhukar Sabnis, 1-Southlands, Colaba, Bombay-5 (Hingoli, Distt. Parabhani, Maharashtra State) —

25,000 spindles for manufacture of cotton yarn.

JUTE

Kinn'son Jute Mills Co. Ltd., Chartered Bank Buildings, Calcutta-1 (West Bengal) — Fine fabrics made of admixture of jute and union cotton yarns — 45 looms having a productive capacity of 54 tons per month.

SYNTHETIC TEXTILE PRODUCTS

Essorpe Mills Private Ltd., "Ram Prakash", Periaswamy Road, R. S. Puram, Coimbatore-2 (Madras State) — Staple Fibre Yarn — 13,000 spindles; Bharat Commerce and Industries Ltd., (Kiran Spinning Mills), Industry House, 159, Churchgate Reclamation, Bombay-1 (Maharashtra) — Staple Fibre Yarn — 9,000 spindles; Sri Gopal Krishna Mills (P) Ltd., Ganapathy Post, Coimbatore-6 (Madras State) — Staple Fibre Yarn — 12,680 spindles.

PAPER FOR PACKAGING

Paper Products Ltd., 13-14, Ajmeri Gate Extension, New Delhi-1 (Thana, Maharashtra) — Printing and conversion Cellulose and Plastic films, waxed papers and laminates thereof — 6,600 tonnes.

FLOUR

The Hyderabad Roller Flour Mills Co. Ltd., Maseraet Manzil, Abid Road, Hyderabad, Under the name and Style of M/s. Hyderabad Roller Flour Mills Co. Ltd. (Hyderabad, Andhra Pradesh) — Maida, Suji and Bran — 2000 M. Tonnes per month; Gurdaspur Roller Flour Mills, Railway Road, Gurdaspur (Gurdaspur, Punjab) — Atta, Maida, Rawa and Bran — 1750 M. Tonnes per month; Patel and Company, Outside Raipur Gate, Ahmedabad-17 (Ahmedabad, Gujarat) — Atta, Maida, Suji and Bran — 800 M. Tonnes per month.

MISCELLANEOUS WARE

Electric Lamp Manufacturers (India) Pvt. Ltd., 1, Tara Tolla Road, Garden Reach, Calcutta-24 (Calcutta, West Bengal) — Glass Shells (Machine Blown) 16.92 million pieces per annum.

CHANGE IN NAMES (Owners or Undertakings)

During the week ended 25th July, 1964.

(Information pertains to particular licences.)

From M/s. Sankey Electrical Stampings Limited, Bombay — M/s. Guest, Keen, Williams, Limited, Calcutta; From M/s. Arvind Engineering Company, Bombay to M/s. Arvind Mechanical and Electrical Engineers Private Limited, Bombay.

LICENCES REVOKED OR SURRENDERED

During the week ended 25th July, 1964.

(Information pertains to particular licences.)

M/s. Galvawire Industries Ltd., Bombay — Galvanised Steel-Wire, Hard Drawn bright Annealed Wire, Coppered Wire, and Stranded Wire; M/s. East Asiatic Company (India) Private Ltd., Bombay — Power Tillers.

LETTERS OF INTENT

During the week ended 25th July, 1964 to parties who have applied for licences under the Industries (Development and Regulation) Act, 1951.

M/s. Chamanlal & Bros., Nagindas Chambers, 167, Frere Road, Fort, Bombay (Hosdurga, Mysore) — Portland Cement — 200,000 tonnes per annum; M/s. COMPANY MEETINGS

INDIAN IRON & STEEL COMPANY LTD.

The following statement by Sir Biren Mookerjee, Chairman of the Indian Iron & Steel Co. Ltd., dealing with Company's working for the year ended 31st March 1964, has been issued to shareholders. The Annual General Meeting of the Company will be held on Tuesday, the 8th September, 1964, at 3 p.m. at the Registered Office of the Company, 12, Mission Row, Calcutta-1.

Before dealing with the affairs of the Company, I would refer to the national tragedy we have experienced in the death of our late Prime Minister, Pandit Jawaharlal Nehru, on the 27th May, 1964 and would give public expression on behalf of the Board of Directors and all members of the Company to our feeling of profound sorrow at the passing of one who played a leading part in the attainment of freedom by our Country and who since the achievement of independence, guided in so able a manner on the home and international fronts the destinies of India through the momentous events of the past seventeen years. His memory will remain with us always.

OPERATIONS:

From the figures given in your Directors' Report it will be seen that production of steel during the year under review has again approximated to the rated capacity of the Plant. This position barring untoward events it is hoped to maintain, but having reached the plant capacity as it stands under present working conditions no improvement in production of any magnitude can be looked for except to such extent as the introduction of new techniques may render possible. To this end intensive research continues to be carried out by your Company's technical staff into the beneficiation of raw materials, improvement of blast furnace operational conditions and added use of oxygen in the Melting Shop. I will refer to this matter of research in greater detail at a later stage in this Statement.

ACCOUNTS:

Those shareholders who are unfamiliar with the provisions of the Income-tax Act and the Companies Act may find difficulty in fully understanding the reasons which have necessitated the raising of the provision for depreciation from Rs. 3,40,18,269 for the previous year to Rs. 4,40,25,006 for the year under review and I should, therefore, perhaps supplement the brief technical explanation given in the Report by your Directors.

Section 205 of the Companies Act provides that no dividend shall be paid by a Company for any year except out of the profits for that year arrived at after providing for depreciation. Certain alternative bases are then laid down for computation of the provision for depreciation, that chosen by your Company being stated in Section 205(2)(b) as provision "in respect of each item of depreciable asset, for such an amount as is arrived at by dividing 95 per cent of the original cost thereof to the Company by the specified period in respect of such asset". The term "specified period" is then defined in the following words — "specified period in respect of any depreciable asset shall mean the number of years at the end of which at least 95 per cent of the original cost of that asset to the Company will have been provided for by way of depreciation if depreciation were to be calculated in accordance with the provisions of Section 350". Section 350 then provides that depreciation shall be taken at the rate specified for the assets by the Income-tax Act and the rules made thereunder for the time being in force as normal depreciation "including therein extra and multiple shifts allowance".

Referring back to Section 205(2)(b), it will now be appreciated that 95 per cent of the original cost of assets is a definite unvariable amount but that the factor by which this amount is to be divided in order to arrive at the amount of depreciation to be provided, namely the "specified period", is by reason of Section 350 dependent upon the Income-tax rates of depreciation applicable from time to time. If these rates are increased then the more quickly will 95 per cent of the original cost of the assets be covered, the shorter will be the "specified period" by which the 95 per cent of the original cost of the assets has to be divided and the greater in consequence the amount of depreciation that has to be provided against profits. This is the position for the year under review where it has been announced that the income-tax depreciation rates that will be applicable in respect of that year are to be increased by the re-introduction of triple shift allowance with consequent increase in the depreciation provision made in the Profit and Loss Account.

DIVIDEND:

In view of the magnitude of the amount, some comment will no doubt be expected from me regarding the sum of Rs. 5.43 crores set aside to General Reserve from the profits of the year in relation to the amount proposed to be distributed as dividend. It is perhaps appropriate that I should therefore list the very heavy loan liabilities outstanding at the 31st March, 1964 in respect of the completed Expansion Schemes together with the finance that has to be found for the further Schemes to which reference has been made in your Directors' Report. These are:

World Bank Loans:		
1953 Extensions	Rs.	7.18 crores.
1955 Extensions	"	5.31 "
Government of India Loan	"	4.81 "
Collieries Development Project	"	23.19 "
Balancing of Plant Project	"	16.21 "
TOTAL	Rs.	56.50 crores.

Following upon completion of the Balancing of Plant Project which, as you are aware, will increase the steel-making capacity of the Burnpur Works by some 300,000 tonnes of crude steel per annum, our plans are that implementation of the second phase of further expansion shall be put in hand and preliminary steps towards this end have already been taken with Government and the World Bank. This second phase of expansion would give added capacity of approximately a further 700,000 tonnes per annum, the two Projects together therefore covering the raising of our present capacity by some 1,000,000 tonnes of crude steel per annum. The phasing of this further 1,000,000-tonne expansion into two parts follows our policy that no individual expansion project should be of such magnitude as to impose too great an immediate financial burden on the Company or impair the dividend position to the detriment of the interests of the shareholders but rather that expansion should be gradual, each stage being followed by a period of consolidation before the undertaking of the next.

It's the OPTICAL PROFILE GRINDER, housed in a special airconditioned chamber. Tools, dies and precision parts are machined on it, and automatically checked against magnified drawing office specifications — clamped on to a screen. The Grinder projects an image of the same part magnified to the same proportion—upto 50 times. I can see where the part falls short of specifications, and I machine it till its absolutely perfect."

Modern precision equipment like the Optical Profile Grinder and Ujjal Kumar Chatterjee who operates it, are just one team of the multitude of men and machines at the Remington Rand typewriter plant. They are all engaged in a constant endeavour to improve the quality of each tool, die and part that goes into the making of your Remington typewriter.

Over the years people in India have come to expect the standards set by REMINGTON—the highly responsive touch, light positive shift, smooth carriage action, superior styling and finish—which make them so essential to distinctive correspondence.

REMINGTON TYPEWRITERS ARE NOW BETTER THAN EVER—ORDER YOURS TODAY

BINNY fabrics do not wear a mask. You buy what you see and feel.

NO STARCH By tradition Binny fabrics are not starched or given any other form of temporary finish. Every cloth is left literally to speak for itself.

NO OVER-BLEACH Binny fabrics are not over-bleached. Bleaching weakens the fabric and reduces its life. The avoidance of extreme whiteness by over-bleaching is one reason why Binny fabrics have a world-wide reputation for durability.

FAST DYES The use of only the world's fastest dyes and a large experienced staff of highly qualified research chemists—this is the unfailing formula that guarantees the colour fastness of every Binny fabric.

BINNY—a great name in textiles.

THE BUCKINGHAM & CARNATIC CO., LTD. THE BANGALORE WOOLLEN, COTTON & SILK MILLS CO. LTD. Subsidiaries of BINNY & CO. LIMITED, MADRAS.

No firm estimate of the cost of the second phase of the further expansion can be made until decision is taken as to what form the end products will take, this being dependent upon the future requirement of the country, but the cost will naturally be of very great magnitude and constitutes therefore a major factor in an appreciation of the financial requirements of the Company.

Additionally, finance has to be found for expenditure on capital account in connection with the modification and improvement of the existing plants, the provision of additional housing and amenities for staff and workers together with the large general capital expenditure that must constantly be incurred in every efficient and expanding organisation. Viewed in this light, the necessity for the ploughing back of profits not only for the year under review but also for the future will, I trust, be clearly apparent.

In compensation in some measure for the restriction of dividend so caused it would normally have been the desire of your Directors to capitalise from time to time by the issue of bonus shares a portion of the reserves of the Company which are already out of all proportion to the share capital. It is a matter of regret to them that such a course is however impracticable under present taxation principles involving, as it would, heavy liability for tax both on the Company and on the shareholders and is, in fact, impossible under the current policy of Government which it is understood is to permit bonus issues solely out of any share premium account.

As possibly of some assistance to the shareholders in the spread of their income, I would however say that I am considering recommending to my Board that for the current and future years an on-account distribution of profits should be made by way of declaration of an interim dividend during the course of the year, the balance of dividend only then being left for declaration in the normal course at the Annual General Meeting.

RESEARCH AND DEVELOPMENT:

The steady deterioration during the last ten years in the quality of the primary raw materials, particularly coking coal and limestone for pig iron production, has presented a serious challenge to the Company's technical staff but thanks to the operational research carried out by them capacity production from our Blast Furnaces has been achieved and is being maintained. As examples of some of the problems with which we are faced, the ash content of our coking coal currently averages about 19 per cent compared with 16 per cent ten years ago, but what is worse is the wide range between the maximum and minimum ash content at 24 per cent and 14 per cent respectively. Similarly, the effective lime content of the present-day limestone varies between 30 per cent and 45 per cent. The quality of our iron ore too has been adversely affected by increasing demand and mechanisation of the Iron Ore Mines. Nevertheless, these are the raw materials with which our country is endowed and we have to learn, and learn quickly, how to use them to better advantage to enable

us to produce iron and steel efficiently, both from a productive and economic point of view.

A large part of the solution lies in raw material preparation which, if we are to avoid merely blindly copying what others have done or are doing, calls for more and more expenditure on operational research. To take a specific case—raw material preparation includes crushing to an optimum maximum size and restricting the minimum size to give an aggregate best acceptable to the process. From this procedure in the case of iron ore, a large quantity of undersize material will accrue to become an expensive discard unless steps are taken to convert it into a useful material.

The most well known, long-standing and orthodox way of doing this is by sintering, a process which has resulted in improved blast furnace practice. We, ourselves, however have never accepted that this expensive process is necessarily the best solution to the problem in relation to Indian iron ore and have consequently refrained from any hasty decision that would commit us to the very heavy capital expenditure involved. That this has been the prudent course is borne out by modern research which has suggested that other forms of agglomeration could be capable of producing better results with Indian iron ore than the sintering process.

Over the past few years your Company has accordingly been carrying out extensive research with its own iron ore in an effort to find the best way of utilising the undersize ore which as a result of crushing and screening is accruing at our Ore Mines. I am happy to say that this research has shown much promise so much so that our own findings involving a combination of direct reduction, magnetic separation and agglomeration have been confirmed on reference by us for test by an independent overseas research organisation. The product obtained in our Pilot Plant is of high purity and is likely to have in the future a great influence on the operation and efficiency of Indian blast furnaces. Sufficient information has now been obtained to enable the engineers to design the appropriate plant.

We have also investigated the questions of humidity control and fuel injection in relation to the operation of the Blast Furnaces, the increased use of oxygen in the steelmaking processes and the possibility of future production of such a standard grade of iron as would enable us eventually to eliminate the rather costly and wasteful intermediate Bessemerising process that under present conditions is necessary for purification of the hot metal before charge to the Melting Shop Furnaces. Suitable inclusion towards this ultimate latter end has in consequence been made in the Collieries Development and Balancing of Plant Schemes.

The utilisation of waste products has also been engaging our attention. For instance, we have been producing for a number of years building bricks and mortar manufactured from waste blast furnace slag.

Import restrictions on engineering spares has forced us

Agents:

**THE ORIENTAL MERCANTILE
CO., LTD.**

CALCUTTA • BOMBAY • KANPUR • DELHI • MADRAS

into developing manufacturing techniques for which we more often than not are ill-equipped. The recurring expense of importing rolls for our Rolling Mills, for instance, is a serious drain on the country's foreign exchange resources. Here, although not having been granted a licence to manufacture rolls for the purpose of selling, we have as a result of experiments carried out at our Kulti Foundries and with the help of the British Rollmakers Corporation, been able successfully to manufacture rolls for our 18" Mill which have proved to be equal to, if not better than those imported. For this size of roll we can now support ourselves, saving approximately Rs. 13 lakhs per annum in foreign exchange. The factor limiting our ability to produce rolls in greater numbers and in larger sizes is the capacity of our existing Foundry and Machine Shop at Kulti which we hope to enlarge in course of time so that we may be able to cover also the roll requirements of the Merchant Mill and Sheet Bar and Billet Mill.

Miscellaneous engineering spares previously imported are now regularly being produced by our associated Companies within the Martin Burn Organisation for consumption at Burnpur resulting in a considerable and recurring foreign exchange saving. We have also been able within this Organisation to secure the manufacture to our specifications of items of capital plant for which we had previously to look to foreign suppliers. As examples, these cover such diverse items as Hot Metal Ladles, Ingot Casting Cars, Ladle Cranes, Bessemer Converter Shells, Hot Metal Transfer Cars and Bogies, Ground Charges, Slag Ladle Carriages, Special Type Discharge Wagons, Coke Quenching Cars, Acid Tanks and Acid Vats, the total value over the past nine years approximating to some Rs. 50 lakhs.

KULTI FOUNDRIES

Modernisation and expansion has been carried out of the Non-Ferrous Foundry and the Steel Foundry at your Kulti Works and an additional Annealing Furnace for the latter installed. New Machine Shops have been attached to these two foundries and the pressure on the main Machine Shops relieved to this extent.

The order position continues to be satisfactory but output for the current year remains dependent upon adequacy of the supplies of foundry grade pig iron.

During the year loss was suffered by the death of Mr. S. N. Gupta, the Works Deputy General Manager (Commercial) who had charge of Kulti. Mr. R. G. da Costa, a Mechanical Engineer of wide experience, has since been appointed and has assumed charge as Deputy General Manager (Kulti).

DECONTROL

In my Statement last year I indicated that Government were considering decontrol of the distribution and prices of steel and that it had been arranged that the producers should submit joint concrete proposals for the setting up and operating of a Joint Organisation following upon decontrol and for the prices that should become effective at the date of decontrol. Representatives of the producers met on several occasions at various levels to discuss and work out joint proposals but unanimity was not able to be achieved and ultimately the producers in the private sector were asked to put up their views independently of the public sector. Accordingly, your Company jointly with the Tata Company submitted a memorandum on the 7th November, 1963 suggesting the formation of an Iron & Steel Board. The memorandum contained details as to the functions of the proposed Iron & Steel Board together with recommendation regarding the prices to be effective on decontrol. These suggested prices were based on

a block of Rs. 1,500 per tonne of saleable steel as being more truly representative of present-day conditions than the figure of Rs. 1,176 per tonne adopted by Government in the last fixation of retention prices. The proposed prices on this basis were about Rs. 35 per tonne higher than the retention prices excluding the assessed increased incidence in respect of freight equalisation.

Matters rested at this stage until unilateral decision was taken by Government regarding the planning of production and control and the pricing and distribution of Iron & Steel, the principles of which were conveyed to the representatives of your Company and those of the Tata Company who were called to meet the Minister for Steel in Delhi on the 26th February 1964. The salient features of Government's decision were as follows:

(1) Statutory control over the price and distribution of all categories of steel except pig iron, ingot moulds and bottom plates, billets and tin bars, plates, sheets, wide strips, skelp, tin plates, hoops and their respective defectives would be abolished with effect from 1st March, 1964.

(2) Indents for categories of iron and steel which continued to be controlled would require to be supported by quota certificates as hitherto.

(3) A Joint Plant Committee would be constituted with an accredited representative from each of the Steel Plants and with the Iron & Steel Controller as its Chairman. A representative of the Railway Board would also be a member of the Joint Plant Committee. This Committee would be entrusted with the task of (a) the planning of production both of controlled and decontrolled categories; (b) the announcement and listing of prices of the decontrolled categories of steel and (c) the administration of the freight equalisation fund for both the controlled and decontrolled categories.

(4) Government would set up a high level steel priority committee which would determine priority ranking in relation to bulk allocations of steel.

(5) Re-rollers would be virtually made free from all control, as also would stockists and retailers in the case of all decontrolled items.

The decision of Government followed the general recommendation of the committee appointed by Government in September 1962 on decontrol of steel and popularly known as the Raj Committee.

Simultaneously with the decision of partial decontrol of steel, Government announced increases in the Excise Duty mainly to compensate the loss of surcharge with the abolition of the equalisation fund with effect from the 1st March, 1964. The average rise in the Excise Duty calculated on your Company's 1963-64 output of steel is about Rs. 18 per tonne. The selling prices for the decontrolled categories announced by the Joint Plant Committee, and the prices directly notified by Government for the controlled categories, include an element of Rs. 62 per tonne on account of freight equalisation to cover the distribution of steel to consumers at all rail head stations throughout India at a uniform price. The system of retention prices has been abolished and the new prices to producers have a differential of Rs. 45 per tonne between the 'tested' and the 'untested' categories, which under the new arrangements is now retained in full by the producers as against Rs. 10 per tonne only under the old system of retention prices.

Owing to force of circumstances the prices announced

IN RADIOS the sound is the thing

WESTERN INDIA PLYWOODS make the specialised plywoods to express it best

Different industries need different types of specialised plywoods. Makers of well-known radios, for instance, are highly selective of the plywoods they use for their cabinets. They have to be, and they choose 'WESTINDPLY' plywoods. Seasoned wood specially processed for

resonance and low temperature and a wide choice of attractive veneers to suit modern interior decor combine to make 'WESTINDPLY' ideal for radio cabinet designs. Western India Plywoods, the largest manufacturers of processed woods in

India, make numerous varieties of specialised 'WESTINDPLY' plywoods to meet the industrial, architectural and defence needs of our country. They also manufacture 'WESTON' Hardboards, 'WIPEX' Paper laminates, Flushdoors and Block Boards.

Western India Plywoods supply a large part of the plywoods and hardboards required by India's leading radio manufacturers.

Chairs, table tops, panels, shelves, cupboards, flooring—infinite is the scope of 'Westindply' 'Weston' and 'Wipex'.

'Westindply' plywoods are made available in a wide variety of veneers to add prestige and modernity to showrooms.

THE WESTERN INDIA PLYWOODS LIMITED
P. O. Ballapatam, Cannanore District, Kerala State.

by the Joint Plant Committee had of necessity to be based on the previous retention prices adjusted for excise duty and additional freight, the effective increase to the producers arising therefore almost wholly from the additional realisation in respect of tested materials. The prices of the decontrolled categories were later revised from the 13th April, 1964 in partial compensation of increases in production costs not reflected in the previous retention prices.

The average increase in the case of your Company on the decontrolled categories of steel forming nearly 60 per cent of the total output is of the order of Rs. 30 per tonne on the basis of the product mix and the proportion of 'tested' to 'untested' steel achieved in the year 1963-64. In the case of the controlled categories, the effective increase has been of the order of Rs. 4 per tonne only on account of reduction in the net price of billets and the assumption by Government of an incorrectly high percentage of 'tested' galvanised sheets in working out the prices despite the fact that on protest the price of untested billets was revised upward by Rs. 15 per tonne from 30th May, 1964. On the basis of our production for 1963-64 the over-all average increase in respect of our total output of controlled and decontrolled categories of steel is approximately Rs. 20 per tonne, effective in successive stages of Rs. 10, Rs. 8 and Rs. 2 per tonne from the 1st March, 1964, the 13th April, 1964 and the 1st June, 1964 respectively.

It is too early yet to assess the adequacy of the revised planning arrangements under the Joint Plant Committee and I would only say at this juncture that the retention of control by Government over certain categories of steel, particularly

in the case of sheets, has done little to curb the activities of the black market in the items in short supply.

On the financial side, we have grounds for dissatisfaction inasmuch that the cut imposed by Government on the retention prices recommended by the Tariff Commission for the two years ended the 31st March, 1962 and continuing up to the date of revision of prices under the above arrangements together with certain interim increases in production costs have remained uncompensated and that funds to this extent have been denied to the Company which would otherwise have been available against the heavy capital expenditure on staff housing, modernisation and expansion with which we are faced. We are also unaware of the reasons for non-acceptance of the prices put forward to Government under the joint proposals of the Tata Company and ourselves and by reason of the somewhat ad-hoc nature of determination of the prices now current are also unaware of any approved basis for future adjustment of these prices in relation to productive capacity, capital block and working costs.

ACKNOWLEDGEMENTS:

In conclusion, I would express on behalf of the Board of Directors our appreciation of the services rendered by the General Manager, Mr J. McCracken, his executive heads and the entire staff and workers of the Company whose efforts have contributed so largely to the results that have been achieved.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

DAGGER BRAND CUTTERS FOR LASTING PRECISION PERFORMANCE

BACKED BY 25 YEARS OF TRADITION and rigid control at every stage of production DAGGER BRAND CUTTERS (available in metric and inch sizes) assure precision performance.

They are made of superior quality steel, specially heat-treated to ensure long life, and manufactured in India's biggest and most modern factory for Small Tools.

Keys call the tune

for Dorothy Almeida...

She wouldn't put it quite like that herself. She'd say she enjoys playing the piano in the evenings. She'd tell you about the composers she likes, her favourite numbers, her preference for jazz. At work, it's the typewriter keys that call the tune. Here a different touch is needed: brisk, sure, efficient. Whatever the content or the mood—an official letter or a Gershwin blues number—Dorothy Almeida has it at her fingertips!

EFFICIENCY COUPLED WITH PRUDENCE...

...is the keynote to success in her career. Efficiency and prudence meet behind Dorothy Almeida's laughing eyes and gay, infectious smile. Secretary to the Personnel Manager of Burmah-Shell, Bombay, her work is concerned with people. She knows them. Not as functions. As people and individuals. She keeps records about their

work and themselves, with care. And there is routine work—correspondence, appointments for the Manager. Her filing is neat, systematic, ready for reference. The Personnel Manager finds his Secretary prompt with intelligent assistance.

TODAY, AS EVER, PEOPLE LIKE DOROTHY ALMEIDA ARE WORKING FOR YOU

For all her clockwork efficiency, there is nothing mechanical about Dorothy Almeida. Her tall, supple figure moves with grace at table tennis, while swimming, and on the dance floor. It's a full life.

Dorothy Almeida and people like her, at all levels of responsibility, are Burmah-Shell. Today, as ever, they are hard at work, working to ensure that vital petroleum products, essential to India's growth and progress, are brought to you at the right place and time, in the right quantities.

BURMAH-SHELL are People in the service of the People

EXISTING AND PROPOSED ACTIVITIES OF THE COMPANY

The Company plans to manufacture immediately 18 million core yards of P.V.C. cables and 270 miles of Plastic Insulated Power Cables per annum.

P.V.C. Insulated Power Cables are fast replacing the conventional paper insulated cables throughout the world and in India also.

At present there is a sizable shortage of power cables, demand of which is expected to increase still further because of the various projects under execution. In the Kerala State itself where the factory will be located several power projects like Panniar, Pampa, Idukki are under execution.

TECHNICAL COLLABORATION

The Company has entered into a technical collaboration agreement with M/s. VEB Kabelwerk Oberpree of German Democratic Republic (formerly controlled by AEG), who were established 65 years ago and are reputed to be one of the leading cable manufacturers in Europe.

The agreement shall be in force for 10 years. The collaborators shall train 10 Indian personnel in their factories and the Company shall also be entitled to use their Trade Mark and benefit of the improvements made in production techniques by the collaborators. They shall be paid a total sum of Rs. 10,50,000/- No royalty is payable.

LOCATION

The factory shall be located at Karukutty in the State of Kerala.

IMPORT OF MACHINERY

The Company has been granted two import licences for import of plant and machinery, worth Rs. 11 lakhs from West Germany and Rs. 31.18 lakhs from German Democratic Republic. Orders for these have already been placed.

CAPITAL LAYOUT:

The capital cost of the project is estimated to be about Rs. 1.20 crores, which shall be met out as below:-

Share Capital	Rs. 70 lakhs
Loan from Industrial Finance Corporation	Rs. 50 lakhs
	<u>Rs. 1.20 crores</u>

MINIMUM SUBSCRIPTION:

The minimum subscription on which the Directors will proceed to allotment is shares of the value of Rs. 52 lakhs, being the whole of the present issue.

PROSPECTUS AND APPLICATION FORMS

Application forms along with copies of the prospectus can be had from the Registered Office of the Company and from the Bankers, Underwriters and Brokers, whose names are mentioned above.

Application for shares must be for minimum 25 Equity Shares or multiples thereof and for a minimum of 5 Preference Shares or multiples thereof.

THE TATA IRON AND STEEL COMPANY, LIMITED

STATEMENT OF THE CHAIRMAN

The following statement by Mr. J. R. D. Tata, Chairman of the Tata Iron and Steel Company Limited, dealing with the Company's working for the year ended March 31, 1964, has been issued to the shareholders. The Annual General Meeting of the Company will be held on Thursday, September 3, 1964 at 4-30 p.m. at the Birla Matushri Sabhagar, 19, Marine Lines, Bombay-1.

To the Members,

As this review comes to you only a bare two months after the death of Jawaharlal Nehru, it is fitting that it should begin with a tribute to his memory and an expression of our grief at his passing. In every age, a few men are born destined to shape the course of history and it was fortunate for our country that at one of the most critical turning points of its history, one of his heroic stature was there to lead it.

2. After Gandhiji led us to freedom, Jawaharlal undertook the prodigious task of changing the outlook, beliefs and way of life of hundreds of millions of people steeped in ignorance, poverty and despair; giving them faith in themselves and showing them that with education, hard work, modern ideas and methods and the application of science and industry, they could build a new and better life for themselves and their children. Many years must still pass before Jawaharlal Nehru's dream of a modern industrialised India comes true, but he lived to see the success of the greatest and boldest experiment in parliamentary democracy the world has ever known. If through all the emergencies and crises, which it had to face and surmount over these seventeen years, India has clung so tenaciously to the democratic way of life and remains today a nation of free people, we owe it mainly to him.

3. The Steel Works and the city of Jamshedpur held a special place in the thoughts of Jawaharlal Nehru for, long before other steel plants were built in the country, they were to him the symbol and the promise of a new India. In 1958, on the occasion of our Golden Jubilee, while dedicating the Jubilee Park, which the Company presented to the citizens of Jamshedpur, he said "I have come here because this great Steel Works and the city of Jamshedpur have become symbolic of the growth of Indian industry... but the biggest reason of all is to pay homage to the memory of Jamsetji Tata." It is appropriate to recall these words today since this year marks the 125th anniversary of the birth of Jamsetji Tata and the 60th anniversary of his death. Referring to Jamsetji's courage and vision, he said "It is right that we should honour his memory and remember him as one of the big founders of modern India." The great heart that paid this gracious tribute is now stilled, but, as his biographer has said, "India will remember Jawaharlal as the man who saw the vision big and tried, with all his faith and will, to make it great."

4. As we mourn the passing of Jawaharlal, our thoughts, sympathy and good wishes turn to the dedicated man who has taken on the heavy burden of leading the country. The unanimous choice of Lal Bahadur Shastri as Prime Minister and the smooth transition to the new regime have given proof of the maturity and soundness of our parliamentary democracy. I am sure that shareholders will join me in assuring Prime Minister Shastri of the full support and co-operation of the Company in whatever way it may be called upon to help in the further development of India's steel industry.

THE YEAR'S RESULTS

5. The Company made satisfactory progress during the year under review and reached the production target of 1.5 million tons of finished steel while the output of steel ingots fell short of the 2 million ton target by only 5 per cent.

6. On the financial side, however, the results of the year's operations were somewhat disappointing. Although the profit before taxes was nearly Rs. 2 crores higher than in the previous year, much of the excess was due to fortuitous addition to revenues of Rs. 85 lakhs written back from excess provisions made in previous years. Discounting this item, the profit was only marginally higher than in the previous year in spite of the substantial increase in sales and the ratio of profit before taxes to sales was 14.2 per cent as against 15.4 per cent in the previous year. The slight deterioration in profit per ton was due, as stated in the Directors' Report, to a rise in costs uncompensated by a corresponding increase in retention prices. Increases in prices were sanctioned by Government only from March 1964, although the increases in costs beyond the Company's control which such escalation in prices is intended to cover had taken place much earlier. The delay caused the Company the loss of a substantial amount of revenue and therefore of profit during the year. Furthermore, as stated in the Directors' Report, the price increases from March 1964 in categories of steel over which price control has been retained after partial decontrol, were substantially less than expected on the basis of an announcement made by the Minister of Steel in that month.

7. Shareholders will have noticed the six-fold increase in taxes this year. Whereas in the previous year the bulk of the profit was absorbed, for tax purposes, by arrears of development rebate, there was no similar set-off this year as all such arrears have been fully made up. The provision for taxes would, in fact, have been Rs. 2.70 crores larger but for the higher depreciation allowed under the reducing balance method of calculation adopted by the tax authorities than under the straight line method followed by us. I am sure, you will approve of the Directors' decision to set aside this saving in tax to a deferred taxation reserve for the reasons explained in the Directors' Report.

8. As against the increase of Rs. 6.65 crores in the provisions for taxes, including deferred taxation, as compared to last year, the allocation to the development rebate reserve is as much as Rs. 7.70 crores less than in the previous year. Taking into account all the variations between the two years' allocations and provisions and last year's transfers of Rs. 3.84 crores from reserves, the final balance available for disposal was larger this year by Rs. 3.12 crores.

9. As you are aware, our general reserves were heavily depleted by transfers to profit during the last few years to compensate for the exceptionally large amounts set aside for special reasons towards additional depreciation and arrears of development rebate. In the interests of the shareholders, it is necessary that we should build up these general reserves again whenever possible after paying reasonable dividends. Your Directors have, therefore, set aside Rs. 2.75 crores to General Reserve No. 1 this year and at the same time were able to recommend an increase of Re. 1 in the dividend on Ordinary shares.

IMPACT OF INFLATION

10. A matter of much concern to us as to all engaged in industry has been the continuous increase in costs year after year, not only in steel but in almost every single product made

or grown in India. Although the accelerating rise in the cost of living index during the last year has been principally due to soaring food prices, themselves due to insufficient production combined with a greatly increased purchasing power, the cost of all industrial products, including those which, like steel, do not depend on agricultural raw materials, has continued to rise relentlessly with no sign of abatement in sight.

11. Steel provides a striking example of the marked deterioration in the country's cost/price structure. Whereas until 1955 Indian steel was amongst the cheapest in the world, it has become one of the costliest although the basic elements which make up the total manufacturing costs have not materially changed in relation to those of other countries. At the end of 1963, the average price of the common categories of steel in India was more than two and a quarter times the 1948 price, one of the largest single elements of increase being in respect of excise duty which increased no less than fifteen times from Rs. 5 to Rs. 75 per ton. Actually the full incidence of excise duties and other taxes on the final price of steel is much greater than that as practically every item which goes into the making of steel, including fuel, power, raw materials and stores, is itself subject at one or more stages of production to its own excise duties and other taxes. In addition to the growing burden of direct taxes of one sort or another, freight rates charged by the Indian Railways are today four to five times what they were fifteen years ago.

12. The damage caused by rising costs to the economy and to the country's long-term plans of development cannot be exaggerated. Not only does the resulting decline in the purchasing power of the rupee cause severe hardship to every family in the country, but increases in costs have a number of other dire consequences. For instance, they have already rendered uncompetitive in world markets almost every exportable Indian product other than tea and jute, thus severely restricting our earnings in foreign exchange; they have inflated expenditure under the country's development plans and this, in turn, has necessitated, apart from further additions to our already crushing burden of taxation, a further rise in deficit financing, aggravating inflationary pressures and leading to still higher costs and prices, a vicious circle indeed.

13. While appreciating the magnitude and complexity of the problems involved and the grievous burden of additional Defence expenditure since last year, I venture to suggest that the deterioration in our price structure is largely due to our forcing the pace of economic development beyond the country's capacity in physical and financial resources. The inflationary effect of spending too much too quickly has been aggravated in our case by the fact that so much of the total expenditure has been incurred on unproductive civil administration and on costly long-term projects which can add to the national income only after long gestation periods and which, even when completed, produce little for the consumer.

14. Unfortunately, there seems to be no recognition as yet of the need for a reappraisal of resources and priorities in our planning. From the tentative figures recently announced for the fourth Plan period it would seem that the remedies for our present ills are thought to lie in still larger plans involving still heavier doses of taxation, deficit financing and foreign borrowings.

SPECIAL ADVANCE

15. You will, no doubt, expect me to make some reference in this Statement to the recent amendment to the Companies Act empowering Government unilaterally to convert into shares loans advanced by them to joint stock companies, and to the discussions which we and the Indian Iron & Steel Company have been having with Government in regard to the repayment of our respective special advances.

16. We have viewed the passing of the above amendment

with deep concern, not only because of its potentially grave impact on the Company and its shareholders, but also because of the arbitrary and unfair nature of the measure and of its disregard of past undertakings in so far as the two Steel Companies are concerned. The scheme for the special advances of Rs. 10 crores made by Government to each of the two main producers towards the cost of their modernization and expansion programmes was formulated in consultation with a World Bank Mission in 1952 and, as memories on the subject seem to be short, I feel it necessary to review once again the genesis and history of these advances.

17. From the end of the war until the mid-fifties the retention prices allowed by Government to the steel producers were fixed at levels far below import prices, on the unrealistic basis of a gross return of 8 per cent on block, from which had to be provided profit sharing bonus, Managing Agents' commission and taxes, leaving only about 3½ per cent for dividends and reserves. This price scheme had disastrous consequences for it left virtually nothing in the hands of the industry for rehabilitation and modernisation, leave alone expansion, and made it impossible to attract any fresh capital. As a result, the country had to spend immense amounts in foreign exchange every year on imported steel, which could have been saved if Government had followed a more realistic price policy.

18. When Government finally accepted the need for modernising and expanding the country's steel industry, we urged that our prices should be raised by Rs. 100 per ton, which we undertook to apply exclusively, after taxes, to the modernisation and expansion of the plant. Even with this increase, our average retention price would at that time have been about half the price of imported steel. This modest and perfectly sound proposal was turned down by Government who, instead, decided to increase selling prices without raising retention prices. The funds generated by this increase to the consumer, which would normally and legitimately have accrued to the producers, was taken to an equalisation fund, from which the special advances were made to the two Companies. As I pointed out at that time, this amounted to lending us our own money. This was, in fact, recognised, at least by implication, in the terms of the special advances which made it clear that they were no loans in the ordinary sense, for the advances were to have no fixed maturity date and were to be repaid with interest only if and when a special element was added to the normal retention prices specifically for that purpose. In their 1962 inquiry into the steel industry, the Tariff Commission were specifically asked by Government to recommend a special element in the retention prices towards the future repayment of the advances and interest thereon from July 1958. The Commission recommended Rs. 8 per ton. Government for reasons of their own, which I have not been able to understand to this day, changed their mind and announced in Parliament and elsewhere that they were considering other means of recovering these advances, including their conversion into shares, it was presumably in pursuit of this objective that the extraordinary amendment to the Companies Act mentioned earlier was passed in December 1963. Whether the real purpose was actually to convert the advances into shares or merely to induce the Companies, under the threat of such conversion, to repay them in abrogation of the terms of the agreements between the Government and the Companies, has never been made clear to us. We naturally made strong representations to Government with whom, I am glad to say, discussions have been held and are still continuing towards what I hope will be an equitable and mutually satisfactory solution.

19. While not relevant to this particular issue, I may mention that we have protested with equal earnestness against another amendment of the Companies Act recently introduced by Government, which is in breach of the spirit if not the letter of the Constitution. Under this amendment, the voting

rights attached to shares of joint stock companies held in trust are to pass to a Public Trustee, who incidentally, has still to be appointed by Government. This measure, which has at one stroke disenfranchised every trustee shareholder in the country, except in the case of trusts of less than Rs. 5 lakhs, is an extraordinary piece of legislation which illustrates the present tendency to disregard the rights of individual citizens and a growing readiness to rely on compulsion in enforcing Government's will on the people. Although it is now part of the law of the land, it has not yet been put into actual operation as the appointment of the Public Trustee has still to be notified. I hope, even at this late stage, that some convention or "modus vivendi" will be established whereby, in practice, the voting rights of trustee shareholders will be left undisturbed except when they are abused or where the Public Trustee has grounds to apprehend the misuse of such rights by the trustees.

FURTHER EXPANSION

20. In my Statement last year, I mentioned the possibility that our Company might be called upon to undertake a further large-scale expansion of capacity at Jamshedpur during the fourth five year Plan. Government have, indeed, requested us to undertake such expansion and further progress has been made in the examination of the project. The scheme, as it has now emerged from such a study and from discussions with Government, contemplates the installation of the necessary facilities for making, in the first instance, an additional million tons of ingot steel to be rolled into sheets and strip in a continuous or semi-continuous strip mill.

21. We expect to appoint a firm of consulting engineers shortly to prepare a detailed project report which should be received in about eight months after their appointment. While only preliminary estimates have been made, the indications are that the cost of this further expansion would be of the order of Rs. 170 crores of which probably a little more than half would be in foreign exchange.

22. As I hinted last year, the most difficult problem will be that of finance, particularly as this project will be superimposed on a programme already in hand for expanding and modernising our ore mines, building a battery of coke ovens, adding some equipment to SMS 3 and doing a few other things, at a cost of about Rs. 25 crores and on the project for increasing the output of our Jharia Collieries by a million tons of washed coal at an estimated cost of about Rs. 30 crores.

23. There is no need for alarm at the prospect of such large commitments. The recently completed Two Million Ton Programme and the results before you in the form of increased dividends and reserves are an indication of the benefits and added strength which accrue to the Company and its shareholders from expansion resulting in lower costs, better utilisation of total assets and increased productivity. At this early stage, I can only repeat that your Directors will sanction a further expansion only if they are thoroughly satisfied that the project is technically and economically sound and that it can be undertaken on terms wholly fair to the shareholders.

COMMUNAL DISTURBANCES

24. The Directors' Report contains a brief factual reference to the tragic events which overtook Jamshedpur in March this year and which, in addition to the loss of valuable life, brought great misery and hardship to thousands of innocent men, women and children. This explosion of communal violence was all the more shocking for having occurred at Jamshedpur which, for over a half century, had established an exemplary record of peace and harmony, maintained unswerving even in the darkest days of 1947.

25. It is poor consolation to know that the troubles were least pronounced in the Steel Plant and in the areas inhabited

by the Steel Company's employees. This was to be expected as a large proportion of our present employees consists of second and third generation citizens of all communities who were born in Jamshedpur, went to school together and form a mature and stable cosmopolitan community. These elements conducive to happy relations between communities are lacking among the newer industries of Jamshedpur, most of whose employees have come from outside the city and, being younger, are more easily swayed by troublemakers.

26. The lesson to be learnt from this tragic episode is the need for continuous vigilance and sustained action in the promotion and maintenance of good relations amongst the various communities as well as for a strong civil administration endowed with the necessary authority and the will to take firm and instant action in emergencies. Although the local Government authorities, including the Police, no doubt did their best to bring the situation under control, they were at first overwhelmed by the suddenness and magnitude of the events which offered evidence of having been deliberately planned.

27. One of the possible causes for the situation having gone out of hand for a while is the fact that Jamshedpur, although the second largest city in the State of Bihar and perhaps the most vital industrial centre in the whole country, is still administratively treated as a sub division of a district, the headquarters of which are in a small neighbouring town. As a result, the law enforcement machinery is inadequate for dealing with serious emergencies. We have, therefore, urged that early consideration be given to the possibility of upgrading Jamshedpur to an administrative status commensurate with its importance to the State and to the country and with the magnitude of the problems and the task of administering it.

28. As stated in the Directors' Report, the Company, along with sister concerns at Jamshedpur, took quick and effective steps to provide relief and rehabilitation to the families of the affected communities. Although not relevant to this review, I think, shareholders may be interested to know that, recognising the similar misery and hardship suffered by thousands of refugee families from across the country's borders, the Steel Company, along with Telco and the Tata Trusts, are planning to undertake a programme of relief at one or more refugee camps in Bihar.

SIR JEHANGIR GHANDY

29. It is customary for me to end my annual statement to the shareholders with an expression of thanks to the officers, supervisory staff and workers at Jamshedpur and elsewhere for their contribution during the year to the further progress made by the Company. Now that I am no longer inhibited by his membership of the Managing Agents' Firm, I should like to pay a special tribute to my old friend and colleague, Sir Jehangir Gandhi, who retired as Director-in-Charge of the Steel Company at the end of the year under review. "Joe" Ghandy, as he has always been known to those who have worked with him, joined the Steel Company as a trainee in 1917, nearly 47 years ago, and left for the U.S.A. eighteen months later for advanced post-graduate studies. He returned to Jamshedpur in 1921, and has been there ever since. From the start, he showed such exceptional ability and drive that it took him only nine years to be put in charge of the whole plant as General Superintendent and another eight years to become the first, as well as the youngest Indian General Manager. Since 1946, he was in charge of the Company's affairs at Jamshedpur, first as Resident Director of the Managing Agents, and then as Director-in-Charge. To him goes a major share of the credit for the progress and growth of the Company over the last thirty years.

30. Sir Jehangir Ghandy achieved prominence and countrywide recognition in various fields of national endeavour

and was closely associated with many of the country's leading technical institutions; but it is as an outstanding Engineer Administrator and for his unparalleled services to this Company and to the Indian steel industry as a whole that he will be remembered, and for which we all owe him a deep debt of gratitude.

31. Although no longer concerned with the day-to-day conduct of the Company's affairs, Sir Jehangir happily continues his connection with the Company as a member of its Board, as a Director of Tata Sons and as Chairman of three important enterprises associated with the Steel Company at Jamshedpur, I am sure shareholders will wish to join me in thanking him for all he has done for the Company over these four decades and more, and in wishing him many years of good health and happiness.

32. The work and responsibilities of Sir Jehangir at Jam-

shedpur are now shared by two Resident Directors of the Managing Agents, Mr. S. K. Naravati, in charge of Operations, and Mr. R. S. Pande, in charge of Administration. Mr. Naravati retired as General Manager of the Company in September last year on his joining the Board of the Managing Agents' Firm after a brilliant career with the Steel Company covering a period of over 29 years, and was succeeded as General Manager by Mr. G. Kumar.

33. Mr. Pande had a distinguished record of service with Government prior to joining the Steel Company in 1958 as Director of Personnel. He was appointed Agent in April 1959 and retired from the Company's service on 1st April this year when he joined the Board of Tata Industries.

34. The Company's operations are safe in the hands of this strong and experienced team backed by a group of able and devoted officers.

RECORDS AND STATISTICS

Working Results of TISCO & IISCO 1960-63

THE WORKING results of Tata Iron & Steel Company and the Indian Iron and Steel Company for the years 1960 to 1963 are set out in the two tables below. The first obvious conclusion which emerges from a scrutiny of these figures is that both the companies made substantial progress during the period under review in sales, gross profits and net profits. It is

known that this encouraging trend was made possible because of the increases in capacity in both the plants. According to the statement of Mr. J. R. D. Tata issued to the shareholders, dealing with the Company's working for the year ended March 31, 1964, the proposal to extend the capacity of TISCO from two million to three million tons

† Proportionate dividend for the three months on the new ordinary shares from 1st January, 1960.

was under the active consideration of the Board of Directors. The study undertaken by TISCO and the discussions held by the company with the Government have indicated that the company would have to install "necessary facilities for making, in the first instance, an additional million tons of ingot steel to be rolled into sheets and strips in a continuous or semi-continuous strip mill." Currently, the capacity of the indigenous plants to meet the ever-increasing demand for sheets and strips is insufficient and the erection of a unit designed to produce this vitally needed type of steel will fill a major gap in the steel picture of the country. Mr. J. R. D. Tata also

stated that according to preliminary estimates, the cost of further expansion might be of the order of Rs. 170 crores out of which more than half would be in foreign exchange. The earlier expansion of TISCO from one million to two million tons had been more than justified by the increase in reserves and dividends; Mr. Tata held out the assurance that the company would sanction a further expansion in capacity only if it was satisfied that "the project is technically and economically sound and that it can be undertaken on terms wholly fair to the shareholders."

Lal Bahadur at Large

IT IS EVIDENT that the brief period of enforced rest following his recent illness had given the Prime Minister opportunities for some quiet introspection which he had availed himself of to the full. Mr. Lal Bahadur, as his activities in recent weeks show, has returned to his job with fairly clear ideas of how to do it. It is apparent also that he has cast himself in the role of the principal policy-maker and whole-time leader in government and administration.

The way Mr. Lal Bahadur presumably desires to function as Prime Minister will be generally welcomed in the nation. The people need coherent and clear-headed leadership and the responsibility for providing that leadership must naturally belong to the Prime Minister. The country must dispense with the luxury of unco-ordinated thinking or action among the Central Ministries or Ministers or as between the Central and State Governments. This it could be forced to do only by the Prime Minister effectively assuming the higher direction of government in all important areas. It takes both courage and clear vision for the Prime Minister to recognize that the nation should have a whole-time Prime Minister who would govern it in detail and not merely guide it in principle. Mr. Lal Bahadur, therefore, deserves well of his countrymen, especially as his indifferent health underlines all the more emphatically the heroism of his resolve.

Almost the first action the Prime Minister has taken to enable him to provide positive and adequate leadership to the government is the organization of a strong secretariat for himself. The size and the scope of the new establishment, which is apparently still in the process of being built up, are not yet known to the public. It is possible that what the Prime Minister is after is not a mere secretariat, but a brains trust of hand-picked official advisers. There is no reason at all why the Prime Minister should not permit himself this institutional facility. At the same time, a word of caution must be sounded. The essence of a Prime Minister's job is to work through other Ministers and Ministries. His own secretariat should, therefore, be severely limited in size and highly selective in scope. This would be desirable even on mere grounds of administrative economy to which Mr. Lal Bahadur is presently, and rightly, attaching considerable importance. But an even more weighty consideration would be that the Prime Minister, as we had suggested earlier, should seek to run the government rather than set up a parallel government or even a government within a government. It is important that the initiative and sense of responsibility of the various Ministers or Secretaries of Ministries should not in any way be weakened or discouraged. It has been said of the Planning Commission that it has been functioning as a fifth wheel in the coach. It would be a mistake to suppose that the addition of a sixth wheel in the form of an equally elaborate Prime Minister's secretariat would improve matters by restoring symmetry.

Another important point which needs to be made about the Prime Minister's secretariat is that even its possible utility as a sound brains trust of official advisers would be no compensation for the loosening of the bonds of discussion and consultation between the Prime Minister and his colleagues in the Council of Ministers. The Prime Minister is certainly entitled to full information, advice and even education from official sources on all matters relating to the functioning of the government. The right to take all the final decisions, again, is certainly his. But, it would be a mistake to lose sight of the fact that the parliamentary system of government, based on collective responsibility of the cabinet, clearly demands that, in the transaction of all important business of government, there should be the fullest and freest consultation between

the Prime Minister and other Ministers. We may even go further and say that in such a system of government, the colleagues of the Prime Minister are entitled to the knowledge of and the exchange of views on his intentions or decisions, particularly in matters relating to their respective portfolios and more generally in respect of all government business of significance. By temperament and training the present Prime Minister tends to act in consultation rather than in isolation and we may therefore expect that, within a reasonable period of time, the conduct of government business under his aegis will get organized in such a way that the Prime Minister's colleagues will have a sense of full participation in the formulation and administration of policies.

Circumstances have forced Mr. Lal Bahadur to take policy initiatives in the economic field sooner than he might otherwise have done. In this sense, the rising prices and the strong public reaction to them may even be regarded as a blessing. The rising prices, of course, are a symptom of a disease. The disease itself is the lack of sufficient growth in the economy — sufficient that is to provide for the increasing population, improve the standard of living of the people, or create enough resources for more rapid economic expansion. For at least three years now the economy has not been growing as fast as it needed to. On the contrary, there has even been some stagnation, particularly in agriculture but also in industry, especially in the consumer goods sector. Simultaneously, there has been a forced growth of government spending, much of it on defence and development but a good part of it also on administration and on activities which do not contribute to the growth of the economy. To put it briefly, the nation has been living beyond its means. It goes to the credit of the Prime Minister that he has been quick to see this and draw the moral. The Finance Minister had said on an earlier occasion that the Government had decided to effect a saving of about Rs. 70 crores in its expenditure in the current Budget year. The Prime Minister has now endorsed this undertaking and has directed Central Ministries to co-operate in achieving this measure of economy. He has also appealed to the State Governments to avoid or postpone expenditures wherever possible.

It must be pointed out, however, that while saving in public expenditure on the scale projected at present may provide some relief to the economy, it is unlikely to contribute significantly to a reversal of inflationary trends. The total of public expenditure, including Central and States spending, on capital as well as revenue account, both Plan and non-Plan, had increased from Rs. 3184.1 crores in 1961-62 to Rs. 4885.0 crores in 1963-64. This spending is budgeted to increase further to Rs. 5472.8 crores in the current financial year (see table alongside).

An increase of this order in the draft made by the Government on the country's resources could have

been supported by the nation only if there had been a correspondingly large expansion of the economy. Since there has been no such expansion, there has naturally been an acute disequilibrium in the economy between the incomes generated by government spending and the goods and services made available by the growth of the economy. To the extent that a good deal of government spending is not only unproductive but is also deliberately wasteful, this imbalance has been further aggravated. It is obvious that here is a situation which cannot be significantly altered by a cut of Rs. 70 crores or even Rs. 100 crores in a budget of government spending aggregating to some Rs. 6,500 crores.

The Prime Minister, therefore, did not really have an alternative to suggesting, as he had done, that a good deal more would have to be done in the remaining years of the third Plan to bring government spending back to levels which the economy could tolerate. The fact that he has not hesitated to say that even the size and details of the defence budget should be vigorously scrutinized amply demonstrates the importance he rightly attaches to the restraining of inflationary spending by the Government and it must therefore serve to persuade Central Ministries and State Governments of the need to consider seriously his connected suggestion that, even with regard to Plan targets, it might be desirable not to start work on schemes in the field of heavy industry which called for a great deal of capital investment but were relatively slow in reaching the stage of production. It is true, of course, that what the Prime Minister now advocates amounts to some whittling down of the size of the third Plan, but since the inflationary situation, resulting not only in high prices and, therefore, costs, but also in the shortages of essential construction or other materials has, in any case, made it impossible for the physical targets of the third Plan to be fulfilled, it should really be not difficult for the country to accept the Prime Minister's argument which has the virtue of realism. Mr. Lal Bahadur has taken pains to explain that it is not by any means his view that in the long-term context of development or

even in the framing of the fourth Plan, the building up of heavy industries should not be given its due importance. This clarification ought to help in meeting the point made by Mr. Asoka Mehta that growth could not be sacrificed to a pursuit of stability. It is, of course, wholly clear that this country cannot industrialize itself without going in for consistent, continuous and very considerable development of heavy and basic industries. The only issue, therefore, is how to generate the resources needed for heavy industrialization of this order. It is here that the question of assigning adequately high priorities for the resource-creating sectors, such as agriculture and consumer goods industries, becomes relevant. It is primarily from agricultural and consumer goods production that the surplus of resources for building heavy industries must come. In this sense stability and growth become mutually conditioning and therefore interdependent factors.

The nation will, therefore, be well advised to place its trust in the principles which the Prime Minister

Atoms for Abundance

NO TRIBUTE is too much to the people who had the vision to foresee the need for thermal power stations in India over two decades ago. To be exact, it was on March 12, 1944 that Dr. H. J. Bhabha wrote to the Sir Dorab Tata Trust to consider establishing an institute of fundamental research for training experts who could be placed in charge of such stations when set up. "When nuclear energy has been successfully applied for power production, in say a couple of decades from now," Dr. Bhabha stated in his letter then, almost prophetically, "India will not have to look abroad for its experts, but will find them ready at hand". That Dr. Bhabha was no idle visionary, as many people must have thought at that time, has been abundantly established, as witness the work of the Department of Atomic Energy over the past ten years. Exactly ten years ago, the Trombay Establishment of the Atomic Energy Commission was set up, although the Atomic Energy Act itself dates back to April 15, 1948. The years between 1948 and 1954, however, were what may be described as the preparatory period, when steps were taken to draw suitable syllabi for teaching higher mathematics, physics and chemistry in Indian universities, the Atomic Minerals Division and the Chemicals and Metallurgy Division were established, the Rare Earths plant was started at Alwaye, and the work on the Thorium Plant was started at Trombay. Needless to say, Dr. Bhabha was guiding all these with single-minded devotion all his own.

It is significant that, along with these steps to produce atomic energy, India also clearly spelt out her stand on the peaceful uses of atomic energy. Both at the New Delhi Conference in November, 1954 and at the first U.N. International Conference in Geneva in August, 1955, India succeeded in persuading a number of other nations to accept her stand on the peaceful uses

seems to be patiently evolving to meet the challenges not only of current stability but also of future development. That the mere size or scale of government expenditure is hardly relevant to solid development few will dispute. The urgent need for the avoidance of waste on unproductive spending should therefore be common ground for the thoughtful sections of the community. Once this is conceded it ought not to be difficult to appreciate the next stage of the argument which is that more attention should immediately be paid to development projects and programmes which could add to the substance of the economy in the short period. The Prime Minister is merely stating the truth when he says that the first claim on the Government must be the needs of the people for food, clothing, housing and employment. These needs could be served only by the growth of production all round, but particularly in the area of consumer goods, both agricultural and industrial. To production then the nation must turn for stability and growth alike.

of atomic energy. What is equally important is that India has translated this concept into action and all the achievements to the credit of the Department of Atomic Energy (D.A.E.) today bear witness to this.

Right from the time when the decision was taken to build Apsara in 1955 upto the completion of the Plutonium Plant, one refreshingly notable feature has been the constant endeavour of Dr. Bhabha to train Indians to do all the work, first, by working jointly with the experts of foreign collaborators, then by working according to foreign designs and advice, and, finally, by doing all on their own, including design and construction. Always keeping this goal in mind, Dr. Bhabha has been able to create a corps of atomic scientists who can hold their own against any of their counterparts even in countries which have taken great strides in the field such as the USA, Canada, the USSR and the UK. This has also been accepted by experts in the field, namely Leonard Beaton and John Maddox, authors of the *Spread of Nuclear Weapons*, when they say: "in technical terms India and Canada are undoubtedly the two countries which are most ready to become nuclear powers". They further add: "they are also the two countries which have been most unqualified in their rejection of nuclear weapons."

The contribution that India has made to the advancement of atomic science and development of the peaceful uses of atomic energy needs to be emphasised. The wide variety of radio isotopes — "the most versatile tools of atomic energy" — produced at Trombay, some of which have found, besides considerable application at home, also a ready export market in developing countries such as Ceylon, Pakistan, South Korea and Thailand, as well as in developed countries such as France and the USA, the fabrication of a few of the most sophisticated machines and fuel elements for reactors and

the commissioning of the Plutonium Plant are certainly among the most outstanding achievements. Although Dr. Bhabha and his band of atomic scientists may not be able to press into service atomic science (radiation) for purposes of population control due to the health hazards involved, they have established, by means of the experiments they have conducted already, that nuclear science can play an important role in the sphere of food preservation and storage. Nuclear science can also be of help in increasing food production, thanks to the excellent work done on irradiating seeds so as to increase the yield. Similarly, this country can afford to do with more work that our atomic scientists are capable of on measures that prolong the life of fresh fruits and fish and control insect-pests, because these will save crores of rupees worth of edible stuff from deterioration and destruction every year.

That the country has need for atomic power is no longer disputed. The belief that the rivers of India contain in them untold millions of potential kilowatts and that, for all additional needs, the country could do with a number of thermal stations dotted all over the country is being seriously reconsidered in the light of the rising needs for energy of our growing industries. It has been indisputably established that a shortage of electric power can prove to be a major bottleneck, the more so now when the country has to meet the extra power needs imposed by the emergency created by the Chinese aggression. However, there is a school of opinion that feels that we have still not fully exhausted the potentialities of thermal power and that we can well afford to postpone indulging in the luxury of atomic power. But even this school is not wholly opposed to our making a beginning in the exploitation of atomic power — if only to keep pace with the other advanced countries and be ready to take advantage of the latest developments in the field. The difference in the approach of this school and that of Dr. Bhabha would appear to be that, whereas the latter would like actively to participate in the latest advances by steady expansion in the country itself — as by the setting up of two more nuclear power plants, one in Rajasthan and one in Madras — the former would like to take advantage of the advances in the field made by the other countries. The latter may no doubt save substantial funds, but it will, at the same time, mean continued dependence on foreign expert guidance and services when India decides to expand her nuclear power potential.

It is necessary to draw attention to the existence of these different schools of opinion in the context of the conflicting claims about comparative power costs. However well-reasoned Dr. Bhabha's claim that the Tarapore Nuclear Power Plant can produce power at a cost of 3.22 paise per unit as against 3.76 paise per unit which a thermal power plant would have cost if it had been located at the same place may be, there are those who argue that the computation of comparative power costs is a very tricky affair and that, by manipulating the life of the plant or making allowances for a variety

of services or uses, it is possible to arrive at any convenient estimate to make a debating point. To these people even experience abroad does not seem to mean much, as they hold that it is too facile to assume that experience in India would be identical with that in other countries and they cite the instance of periodical revisions which have had to be made in respect of dams and hydro-electric installations.

Notwithstanding these controversies, many would perhaps like to let the D.A.E. proceed with its three nuclear power stations programme, if only because each one of them is expected to serve a distinct end, while, at the same time, enabling India to march in step with the latest advances in the field, such as the modified second stage reactor, on which both India and Sweden have been experimenting, and the very fast reactor under trial in some countries.

One may not sound a discordant note on an occasion such as this, but one must also not fail to allude to the concern expressed in certain circles that the country is running the grave risk of her great scientists getting bogged down in the administrative mire. To be sure, this is by no means an idle or irrelevant concern. The experience of our scientists after they have taken on administrative work has not been exactly happy. We are in no position to let the splendid work that has so far been done by our scientists in any field remain stagnant or stay put, but this is unfortunately the fate that many apprehend will overtake the Indian field of atomic science if Dr. Bhabha continues to saddle himself, or allows himself to be saddled, with more and more administrative work, as seems to be the case. It is all very well to say that some people have enormous energy to do almost everything, as was being said about our late Prime Minister, Jawaharlal Nehru. But the inevitable and relentless sapping of energy that even simple routine work entails is something that cannot be dismissed as inconsequential.

Eastern Economist 20 Years Ago AUGUST 18, 1944

The war, if it has played havoc with human lives directly and indirectly, has also shaken us out of our narrow grooves and compelled us to think afresh. Thanks to the Bengal famine and wide-spread scarcity, the whole question of food supply in relation to sufficiency and nutrition is engaging the public attention in a very forceful manner. No longer is food to be subjected to uncontrolled forces of supply and demand. Rationing rendered indispensable on account of scarcity is regarded now as a useful weapon even in post-war to ensure minimum standards of food and health for all. Through it the community can conserve and increase their strength and welfare by so planning production and consumption that good and nutritive foods may become both relatively more abundant and more widely consumed. By education and propaganda it is possible to revolutionize habits of consumption, so that at far less real costs than before, a community can, by planned production, distribution and consumption, live more healthily and grow stronger.

Highlights of the Week

SMALL-SCALE INDUSTRIES

AT A two-day session of the Small-Scale Industries Board in New Delhi, Mr. H. C. Dasappa, the Union Minister for Industry, outlined a four-point programme for "reorientation of future growth of small-scale industrial sector in the country". The four elements in the new programme are: (a) devising ways and means for utilising the production capacity already created in different lines; (b) examination of the capacities available for different industry groups to see if it was possible to divert them to the production of end-products of a higher national priority; (c) exploration of the possibilities of producing defence requirements and (d) participation in the export drive. This programme is no more than a re-statement of the problems which the industry has faced in recent years, especially after the declaration of the emergency. The most important problem which has plagued the industry is the non-availability of requisite scarce raw materials with the result that in many cases the unutilized capacity is equivalent to three-fourths of the total capacity. To that extent it means under-utilisation of available capacity in plant and machinery involving sizable national wastage. The paucity in foreign exchange has imposed certain limitations in such a way that with all its sincere efforts the Government cannot satisfy the demands of all the small-scale industries for the raw materials needed by them. A natural and practical way of meeting such a situation is to divert the production capacity of some of these units to those lines which can be of greater use to the economy. This is, however, a long-term process and will take some time. At present, the problem of scarce raw materials is urgent.

Mr. Dasappa announced, at the conclusion of the two-day session, the appointment of a seven-member Committee to go into the question of equitable distribution of available raw materials between the small and the large-scale sectors in industries. The Minister also promised that an effort would be made to raise the allocation next year for the import of the scarce raw materials for small-scale industries above the present level of Rs. 14 crores. The new Committee is headed by Dr. P. S. Lokanathan, Director-General of the National Council of Applied Economic Research. The other members of the Committee are Mr. A. R. Bhat, President of the Federation of Small-Scale Industries Associations, Mr. G. L. Bansal, Secretary-General of the Federation of Indian Chambers of Commerce and Industry, Mr. S. S. Kumar, Secretary-General of Technical Development, Dr. D. K. Malhotra from the Planning Commission, Dr. S. T. Merani, Development Commissioner for Small Industries and Mr. S. V. S. Sharma, who will be the Secretary of the Committee.

Mr. Dasappa also stated that it will be necessary for the Government to set up Screening Committees at the State or Central levels in order to scrutinise applications for setting up units dependent on scarce raw materials. Once such schemes were approved by the Screening Committee, the Government would assure supply of raw materials for a single shift working. In view of the vast unutilised capacity of the small-scale units, the establishment of these Screening Committees will virtually result in a curb on further increase in the number of the small-scale units. This is, however, in the larger national interest because it will not only make possible judicious use of the available capital but will also relieve pressure on imports of scarce raw materials. The number of small-scale units has, during the last decade, recorded a phenomenal increase. It is time that some consolidation took place. There are more than 57,000 small-scale units registered with the various State Directorates of Industries. The number of non-registered small-scale factories which have from time to

time availed of the facilities offered by the Central Small-Scale Industries Organisation is estimated at between 200,000 and 250,000. The total output of the small-scale sector is estimated at Rs. 1400 crores or nearly one-third of the total production in the industrial sector. It shows that the small-scale sector does occupy an important place in the industrial picture of the country and all efforts need to be made for its continued growth. The Government's stores purchase programme has assisted the small-scale industry in quite a big way. No less than 30,000 small-scale factories have been registered with the DGS & D whose purchases from these units have almost been doubling every year during the last four years.

While all these facts point to the encouraging growth of the small-scale factories throughout the country, disconcerting reports have been received from some of the States. The Punjab Government recently conducted an enquiry into the state of affairs of the small-scale units functioning in three of its districts, namely, Sangrur, Ferozepur and Rohtak. It was revealed that nearly half of the loans granted to small-scale industries were used for the purposes for which they were not intended. In Ferozepur district, it was found that nearly 65 per cent of the loans provided by the Government were diverted for other uses. There are reports of some of the scarce raw materials allocated to some of the Punjab factories having been exported to other States. The industrial estates also have not been in very good shape whether they were set up under the co-operative sector or under the State auspices. It is necessary that the Government should take corrective action in time before valuable resources provided for the growth of the small-scale industries are frittered away.

ENOSIS

THE RUMBLINGS of a war tremor were once again heard all over the world on August 8, but the epicentre this time had shifted — as it has often done for the past so many years — to Cyprus from North Vietnam, where, after the US military operations in the Gulf of Tonkin early this month, the atmosphere is relatively calm. It started with the attacks by the Turkish planes against Greek Cypriot positions round the besieged Turkish Cypriot fishing village of Kokkina in North-West Cyprus. Describing its action as a "limited police operation" carried out for purposes of legitimate defence, the Turkish Government claimed that it was fulfilling the obligation which it had assumed under the Zurich Treaty of Guarantee. Distress signals were sent out by Archbishop Makarios, President of Cyprus, to all friendly countries, including the Soviet Union. Greece, being one of the signatories of the Zurich Treaty, could not be blamed for its willingness to come to the succour of its compatriots in Cyprus if Turkey intensified its hostilities against the Greek Cypriots. This limited encounter had portents of plunging the world into a major war. Fortunately both Cyprus and Turkey have agreed to a cease-fire in response to the Security Council resolution, though a solution to the problem remains to be found.

The basic problem of Cyprus is one of mutual mistrust between its Greek and Turkish nationals. In this Mediterranean island of 3,572 square miles inhabited by nearly 600,000 people, the Greek Cypriots are in a predominant majority (79 per cent), the remainder being Turkish Cypriots (18 per cent), and other minorities. Cyprus is a republic and gained its independence from British rule in 1960, after the signing of the Zurich agreement of 1959, with the UK, Greece and Turkey as guarantors, which were entitled to take "action" if the island's 'status quo' was threatened. To protect the interests of the Turkish Cypriots, who were afraid of victimization by the Greeks, a number of built-in safeguards were provided in

the constitution which gave the Turkish Cypriots a veto power in foreign affairs, defence and taxation, in addition to a 30 per cent of all security and civil service posts in Government. Also, a Turkish Cypriot was appointed Vice-President.

The constitution proved unworkable almost from the start, the reason being lack of trust between the two communities. The Turkish Cypriots charged that they were being deprived of their legitimate share of jobs, while the Greek Cypriots claimed that the former were sabotaging the Government by holding up tax laws. It was the declaration in November last by President Makarios of his intention to amend the constitution, to curtail the veto power of the Turkish Cypriots, which resulted in the unparalleled bloody Christmas riots. The violent hatred for each other which has existed between the two communities for decades and was held in check in the past by the British had burst out. Since then, Cyprus has been divided into two armed camps. Reinforcements of men and military equipment have poured into the island in increasing numbers and quantities, stealthily as well as openly, from Greece and Turkey. The EOKA (the Greek terrorist organization) which, during the pre-independence days had directed its activities towards the British troops, has now sprung into action against Turkish Cypriots. Nor is the TMT (Turkish Defence Organisation), well supplied with smuggled arms, less active. A third organisation, the EKEL (Communist), has lately come to wield considerable influence with President Makarios. While EOKA demands 'enosis' (integration with Greece), the TMT stands for partition of the island, and EKEL claims its independent status, which view, as a matter of fact, goes well with President Makarios. Apparently, therefore, the Greek Cypriots are divided between those who want 'enosis' and those who prefer independence. General Grivas, a popular leader and a staunch believer in 'enosis', is now back and has taken over command of the Cyprus National Guard.

The negotiations for a permanent settlement had a temporary setback because of the sudden illness of the UN mediator in Cyprus, Mr. Sakari Tuomioja. Latest report from Geneva indicate that Dr. Galo Plaza Lasso of Ecuador, U Thant's personal representative in Cyprus, might take over the task of conducting the negotiations. At the same time, Mr. Dean Acheson, former United States Secretary of State, is working

feverishly behind the scenes for the 'enosis', so that Cyprus may become a part of NATO and all possibilities of its being converted into another Cuba may be eliminated once for all. The reported offer of the Soviet Union to come to the succour of President Makarios in case the Turkish pressure did not relent has added to the complication. A readymade solution in the present tense situation may be hard to find. Perhaps the best way out will be to satisfy the wishes of the vast majority of the Greek Cypriots with adequate safeguards for the Turkish Cypriots. Any division of the island is likely to become a permanent sore.

KENYA: A REPUBLIC

THE PRIME MINISTER of Kenya, Mr. Jomo Kenyatta, announced last week at Nairobi that Kenya will become a Republic on December 12, the first anniversary of its Independence. It will, however, remain a member of the Commonwealth. Mr. Kenyatta will be the first President of the Republic. He told the House of Representatives that the present Constitution of the country was expensive to operate and generally too rigid to be workable. The Constitution would be amended and the new version would be put before Parliament in the third week of October. If necessary, a referendum would be held throughout Kenya in the third week of November. According to him, the new Constitution would be extremely suitable for the country. It will guarantee the paramount power of Parliament and will bring in the new concept of collective ministerial responsibility.

Mr. Kenyatta will choose his own Cabinet which will be responsible to Parliament. The President will be usually the leader of the majority party and will pick his Cabinet from among the members of Parliament. It is anticipated that some drastic changes will be made in the powers of the regional assemblies. There is no doubt that the regional assemblies will be allowed to exist, but they will have no exclusive executive or legislative authority on matters planned and directed on a national scale. An outstanding change likely to be introduced in the new Constitution is that the land which is now vested in Government or private ownership would be re-vested in Government without compensation. This is, however, a rather alarming trend and it is feared that it will have unfavourable repercussions on the non-Africans in Kenya.

"Are you suggesting sir that we start hoarding?"

Are Small Companies Surviving?

ANALYST

IT HAS been alleged that the economic and financial policies of the Government are favouring the growth of big companies and that the small company finds it extremely difficult to survive. Further, it is said that the practices followed by the big business man also hamper the growth of the small industrialist. It is the object of this article to examine from the available basic statistical data the growth of the small companies during 1956 to 1961 and see in particular how far this allegation is true.

Data regarding the number of companies that are being registered in the country are being published by the Ministry of Finance. Table I shows the number of new companies registered from 1956-57 to 1963-64 under different size groups according to their authorised capital.

TABLE I
NEW COMPANY REGISTRATIONS 1956-57 TO 1963-64

Year	Below Rs. 1 lakh	Below Rs. 5 lakhs	Below Rs. 10 lakhs	Below Rs. 50 lakhs	Over Rs. 50 lakhs	Total Companies
1956-57	171	478	708	804	44	848
1957-58	231	605	834	924	37	961
1958-59	252	694	962	1055	40	1095
1959-60	346	895	1229	1387	65	1452
1960-61	370	936	1317	1541	142	1683
1961-62	402	966	1241	1483	131	1614
1962-63	348	823	1115	1350	147	1497
1963-64	241	655	894	1124	103	1227

It will be seen from Table I that the number of companies with an authorised capital of less than Rs. 1 lakh and Rs. 5 lakhs has shown a continuous increase from 1956-57 to 1961-62; in 1962-63 and 1963-64, there was a fall, but this fall was not only in the small companies but there was a general decline in the total number of newly registered companies.

Capital Formation

Statistical data regarding the rate of capital formation and the rate of profit earned by small and large public limited companies are published by the Reserve Bank of India. Table II shows the rate of gross fixed asset formation, net fixed asset formation and net capital formation in small and large companies from 1957 to 1961.

A small company is defined as one having a paid-up capital of less than Rs. 5 lakhs and all those with a paid-up

TABLE II
CAPITAL FORMATION (Percentage)

Year	Gross Fixed Asset Formation		Net Fixed Asset Formation		Net Capital Formation	
	Small Cos.	Medium & large Cos.	Small Cos.	Medium & large Cos.	Small Cos.	Medium & large Cos.
1957	9.0	16.4	7.7	20.5	1.5	11.8
1958	6.8	11.7	3.8	12.6	5.0	6.2
1959	6.0	7.5	4.3	5.7	4.6	4.5
1960	7.5	8.0	6.9	4.7	8.0	9.6
1961	9.5	9.9	7.5	7.9	8.3	9.1

capital of Rs. 5 lakhs or more are included in the medium and large companies.

It can be observed from Table II that the rate of growth of gross fixed assets in the case of small companies has been lower than that of medium and large companies during all the years 1957 to 1961. As regards the growth in net fixed assets, although the small companies had a lower rate of growth at least in one year, viz., 1960, the rate of growth was higher in the case of small companies. In the year 1957, the net capital formation in the small company sector was very low; in the other years, it was very near to the rate of medium and large companies.

Since the net capital formation is an important indicator of the rate of growth of companies, it would be useful to compare this ratio with reference to those industries in which both small and large companies exist side by side.

TABLE III
NET CAPITAL FORMATION IN CERTAIN INDUSTRIES (Percentage)

Year	Tea		Engineering		Chemicals		Trading	
	(a)	(b)	(a)	(b)	(a)	(b)	(a)	(b)
1957	1.2	1.1	17.8	13.3	7.8	17.3	8.1	7.8
1958	4.0	4.3	9.8	5.7	6.6	17.0	7.7	15.1
1959	1.1	3.0	6.5	9.5	-0.8	16.5	11.8	-1.4
1960	1.8	6.0	35.5	17.5	13.1	13.2	3.7	19.0
1961	3.5	2.9	16.6	15.7	15.1	25.4	1.5	6.8

(a) Small companies. (b) Medium and large companies.

It is clear from Table III that in the case of Tea Plantations in two out of five years the net capital formation was higher in the case of small companies; in Engineering, the small companies had a higher rate in four out of five years; in Chemicals the medium and large companies had a higher rate throughout and in trading the rate of capital formation was higher in the case of small companies in two out of five years of the study.

Since an important indicator of the ability to survive is the capacity to make profits, it would be useful to see the rate of profit earned by small and large companies during 1956 to 1961. Table IV shows the rate of profit earned by the small and large companies between 1956 and 1961.

It will be seen from Table IV that the small companies

TABLE IV
RATE OF PROFIT (Percentage)

Year	Gross Profit* on Total Capital Employed		Gross Profit* on Sales		Profit after Tax on Net Worth	
	(a)	(b)	(a)	(b)	(a)	(b)
1956	6.5	9.6	5.1	10.0	4.7	8.8
1957	5.2	7.5	4.4	8.0	1.9	6.5
1958	6.8	8.0	6.1	8.6	5.1	7.1
1959	7.5	9.8	6.3	10.0	6.8	10.5
1960	7.7	10.1	6.5	10.2	7.5	10.9
1961	7.4	10.0	6.1	10.0	6.5	10.0

(a) Small companies. (b) Medium and large companies.

* Including managing agents' remuneration, interest charges and provision for tax but excluding depreciation.

have earned lower rates of profit than medium and large ones during all the six years. But it is worth noting that the small companies have earned an average rate of profit exceeding 6 per cent on the total capital employed.

Tables V to VIII show the rate of profit earned by small and medium and large companies in tea plantations, engineering, chemicals and trading, by all the three important measures of profitability, viz., the rate of gross profits on total capital employed, and sales and the rate of profit after tax on net worth. In the case of tea, in all the years and by all the three

TABLE V
RATE OF PROFIT IN TEA PLANTATIONS
(Per cent)

Year	Gross profit on total capital employed		Gross profit on sales		Profit after tax on net worth	
	(a)	(b)	(a)	(b)	(a)	(b)
1956	7.9	14.5	19.2	23.6	5.9	11.2
1957	2.7	7.3	5.6	12.0	— 1.7	3.8
1958	6.7	9.3	11.7	15.2	3.7	6.0
1959	10.6	13.3	17.1	20.6	8.7	10.5
1960	9.0	12.0	15.4	20.4	7.4	8.8
1961	6.3	9.3	10.3	15.6	3.7	6.1

(a) Small companies. (b) Medium and large companies.

standards, the small tea companies made lower profits than the larger ones; but it is worth noting that in all the years when the profit was lower in the case of small companies, the same trend is noticed in the case of the large ones, showing that both the categories of companies were affected by factors beyond their control. In the case of engineering industry, although the small companies in general made a lower rate

TABLE VI
RATE OF PROFIT IN ENGINEERING INDUSTRY
(Per cent)

Year	Gross profit on total capital employed		Gross profit on sales		Profit after tax on net worth	
	(a)	(b)	(a)	(b)	(a)	(b)
1956	5.3	9.6	4.6	9.3	— 0.3	9.7
1957	12.7	8.9	7.6	8.4	12.4	9.5
1958	17.4	9.3	10.4	9.2	18.5	9.3
1959	9.9	10.3	7.0	10.4	14.6	11.7
1960	7.3	10.9	7.3	10.9	6.3	12.4
1961	7.7	10.5	8.1	10.9	7.8	11.3

(a) Small companies. (b) Medium and large companies.

of profit, there were certain years in which the small companies were more profitable than the large ones. In the case of the chemical industry, although the same trend is seen, the profitability of small chemical concerns was very near to that of the large ones. In trading, the large companies were much more profitable than the small ones.

Although the number of small companies that are being

registered in the country has shown an almost continuous rise during the last eight years, in terms of both the rate of capital formation and the rate of profit earned, the small companies do not compare very favourably with those of their larger

TABLE VII
RATE OF PROFIT IN CHEMICAL INDUSTRY
(Per cent)

Year	Gross profit on total capital employed		Gross profit on sales		Profit after tax on net worth	
	(a)	(b)	(a)	(b)	(a)	(b)
1956	4.2	7.0	3.5	8.0	— 0.9	6.3
1957	7.1	7.7	7.2	8.8	9.3	5.3
1958	5.2	7.6	5.2	9.7	4.5	6.6
1959	9.5	10.8	7.4	14.0	12.7	11.4
1960	9.2	13.8	8.0	16.7	10.5	14.6
1961	9.9	12.6	8.9	16.0	12.9	13.4

(a) Small companies. (b) Medium and large companies.

counterparts. But the main point worth noting is that in absolute terms the rate of capital formation and the rate of profit earned by the small companies is not low. The small companies had an annual average rate of net capital formation of 5.4 per cent and an average rate of gross profit on total capital employed of 6.9 per cent. If the small companies are not in a position to meet the competition from their larger counterparts, they might have incurred losses, resulting in negative capital formation. The main reasons why the rate of growth in the case of small companies is lower is because they make a lower rate of profit and this in turn is due to the fact that they do not enjoy the advantages of large-scale production to the same extent as their larger counterparts. But since these small companies are all the same growing, they will gradually enjoy the economies of scale to a greater extent. The available statistical data therefore do not support the contention that the small man is being driven out of business by the competitive advantage or other practices followed by the big industrialist.

WINDOW ON THE WORLD

Hard Days for BOAC

ASHOK V. DESAI

OXFORD:

LIKE ALL airlines, the BOAC is highly public-relations-minded and likes to present a bright, young image to the public. Even when it made a loss last year, it congratulated itself in its advertisements for earning valuable foreign exchange. Hence there was an unusual air of scandal about the recent revelations of a dispute between it and the Minister of Aviation about the purchase of the Vickers VC 10.

This is not the first time that the affairs of the BOAC have jumped into news. There was a stir when Sir Matthew Slattery and Sir Basil Smallpiece, the Chairman and Deputy Chairman of the BOAC, resigned last November. The public impression of relations between Ministers and heads of nationalised industries is generally one of cordiality and even complicity, so the rupture suggested that there had been serious differences which the Minister resolved by dismissing the chiefs of the Corporation. Since the Minister appointed Sir Giles Guthrie as Slattery's successor, it was expected that the disaccord between the Minister and the Corporation was at an end.

Expensive Tailpiece

If, however, the Minister of Aviation was looking for an amiable yes-man, he had made a mistake in appointing Guthrie. Guthrie took six months to look at the Corporation's finances, found that it needed far fewer planes in the next few years than had been ordered, and decided to cancel the order for 30 Vickers Super VC 10s and buy six Boeing 707s instead. This would, naturally, be a heavy blow to Vickers and to the British aircraft industry, since the VC 10 was being built as a rival of Boeing. As Sir Basil told the Select Committee on National Industries, the Super VC 10 had had its engines put at the tail to make it different from Boeing, and "that has led to the building into the VC 10 of considerable additional weight which is not present in the Boeing and which takes off from the economic performance of the VC 10". Apparently, the BOAC would incur additional costs of £7 million a year to run VC 10s instead of Boeings and need to achieve a six per cent higher load factor than its rivals — no mean task in the highly competitive business.

The Corporation's attempt to get out of buying VC 10s could not have affected their reputation much although Lord Watkinson, the former Minister of Aviation who forced them upon the BOAC, has recently extolled their virtues in a letter to "The Times". In fact, the VC 10 lost the battle against Boeing long ago, not only owing to its costliness but because of its late date of delivery — the Standard VC 10s have recently been put into operation by the BOAC, and the Supers are not due till 1967, which will leave them three or four years before they are superseded by the Supersonic planes of the 1970's. Airlines would much rather buy Boeings now and amortize them over six years than Super VC 10s over three years. So the VC 10 has been a dead duck for a long time. The BOAC had itself realised this by 1960, and wished to reduce its order, first placed in 1957. It was, however, forced by the Minister of Aviation to stick to VC 10s and refused permission to buy Boeings.

Events have repeated themselves. Amery, the present Minister, has forced the BOAC to buy 17 Super VC 10s and ordered three for the Royal Air Force. The decision was

somewhat more awkward this time because when he appointed Guthrie, Amery gave him a public directive to operate the corporation as a fully commercial undertaking. Since Guthrie had himself insisted on this directive, it is surprising that he accepted Amery's decision; he relies probably on the Minister's promise to do something about wiping off BOAC's past losses in the next Parliament.

Staying in the Air

While the Ministers have foisted an uneconomic aircraft upon the Corporation, it must not be forgotten that the BOAC itself ordered it, and that the VC 10 would never have been produced but for its order. It has proved a costly error for two reasons. First, the routes for which the VC 10s were ordered — the African and Asian ones — have become unremunerative as newly independent countries have started their own airlines, and favoured them in one way or another. Second, since the British lost their lead in subsonic jets with the failure of the Comet I in 1954, the market for British planes has been narrowing progressively. The advent of missiles has knocked the bottom out of the military aircraft, and Boeing has swept the board in the market for large airliners; the turbo-props replaced by Boeing can be had for a song, so that there is no demand for new ones. This means that the demand for British planes is mainly British and State-sponsored — as Vicky pointed out in a cartoon in the "New Statesman". John Bloom's Rolis Razor Corporation which went bankrupt recently would not have been allowed to do so had it produced planes. And the narrower the market, the fewer the models the industry can produce and the greater the risk in production. Slowly the industry is reaching the stage when it can try out only one aircraft of each sort, and in the supersonic age it will produce only half of an airliner, the other half of the Concord being produced by the French in partnership.

The American producers, on the other hand, have a much larger home market and do not have to gamble so heavily on particular models. They have also been more far-seeing — once the end of military aircraft was in sight they went into the production of missiles and are doing well in it. Further, they have been much quicker in delivery of planes. Since technology is changing very rapidly in aircraft production, delivery dates have much influence on the period over which the amortization of planes can be spread: late planes are worse than no planes. The lateness of British planes is partly due to bad luck; but it might also point to bad organisation of aircraft development. The way in which the State has financed development has also played a part. Government allocations to research are made annually from the Budget, and have been sensitive to current fiscal policy. This has been detrimental to research which requires steady and abundant finance.

Ministers and Tycoons

The point of Amery's decision to make the BOAC buy VC 10s is to keep the teams that are working on them occupied and keep them together for future use, and perhaps to salvage some of the resources invested in the last five years. The cost of the decision to the BOAC will, however, be heavy: it is unlikely to earn its way in the 1960's. And since loss-making

airlines do not feel very enterprising, its business might also suffer. The best it can hope is the supersonic Concord which it will have to buy in the seventies.

The ultimate reason for this state of affairs is miscalculation in the fifties — the aircraft industry failed to deliver good enough long-range planes that it promised then. But that miscalculation continues to dog the steps of the BOAC today is entirely due to ministerial decisions.

That the Ministers should try to protect the interests of the British aircraft industry is but natural; after all, the industry is of military value. What raises eyebrows is that they have used a public corporation to help the industry. There are curious similarities between this case and another one which came up before a court recently, where an Indian businessman started two companies, bought coffee with one and sold it to the other at enormous loss, put the first company into liquidation and tried to cash in on the second company's profits. The cases are, however, different: there is a spark of daring ingenuity in the tycoon's fiddle that the Ministers lacked.

Important Issues

The BOAC affair raises two issues of public importance. First, there must be some permanent mechanism to handle State help and subsidies to industry. There can, of course, be numerous grounds for industrial subsidies, and it does not matter financially which organ of the State pays them, since the entire Government is one enterprise. But indirect or hidden subsidies have the disadvantages that it cannot always be discerned on what criteria or for which purposes they are given, and the relative merits of different contenders are not judged together.

The second and more important issue is that of suitability of the public corporation as a form of State enterprise. The corporation is a celebrated British innovation and has been copied throughout the Commonwealth. Its great merit is supposed to be that it combines independence and continuity

of management with parliamentary responsibility. It has turned out, however, that the management under the present arrangements is only as continuous as the Ministers would allow. The appointments on the corporation boards are made every four or five years by Ministers, and the powers of decision of Ministers are such that they can make lives pretty uncomfortable for unco-operative boards. In Britain, Ministers cannot be too cavalier with some board chairmen because they are often highly prized by private industry and would not be sorry to leave. In other countries, however, mercenary chairmen may not be so uncommon.

Ministerial responsibility does not remedy the situation; for the checks to the power of Ministers in a government of the British type reside less in Parliament than in the majority party, and political parties are not the best judges of how industries should be run. The Parliamentary Select Committee on Nationalised Industries does an excellent task of fact-finding, and nearly all we know about the BOAC affair is due to its efforts. But it has no powers.

Remedial action can proceed in two directions. First, the Ministerial powers may be circumscribed. Ministerial action in certain fields might be inhibited or made subject to approval by tribunals. This is, however, a negative approach to the problem. What matters is not that Ministers should not run industries, but that criteria of economic policy should govern the conduct of corporations, and the basic need is for a permanent institution to supervise their affairs and check their performance. It must have the personnel, technical, accounting and economic, that could judge the running of corporations under its aegis. It may be subject to parliamentary control, but only in respect of its economic functions, on which it must have specific directives. Its precise status — whether it should be a parliamentary committee, an independent industrial commission, a part of the civil service organisation or something else — is a matter for thought and discussion; and in fact, there is much scope for organisational innovation and learning of lessons in the running of public enterprises.

Economic Growth in the West

JOSSLEYN HENNESSY

LONDON:

IT IS REMARKABLE that the successes of postwar free enterprise have evoked fewer studies than its prewar failures. This is possibly because so much economic literature is in English and the postwar achievements of the USA have been relatively less impressive, because it has failed to avail itself of the latest techniques of fiscal and monetary policy, while the UK has failed to maintain efficient competitiveness and to provide sufficient fiscal and other incentives for expansion. But, elsewhere in the West, capitalism has flourished as never before in its history. The sincerest tribute to the truth of this assertion is that Marxist economists have now abandoned the idea that capitalism must inevitably collapse. The average growth rate of the OECD countries (even including the USA and the UK) between 1950-60 was 4.2 per cent (German and Italian rates were 7.6 and 5.9 per cent respectively, well above the average).

Because the USA dominated the world economy between the wars and because it provided generously massive Marshall Aid, which directly set Europe, and indirectly the rest of the world, on its feet after the war, popular opinion continues to believe that the USA remains dominant. But total US world trade, and hence US economic influence, is much smaller than that of Europe. Since 1950, the USA has had three recessions,

none of which has had more than a minor impact on European payments, demand, or output.

In a thought-provoking and closely documented study, "Economic Growth in the West" (Allen & Unwin, 30 sh.), Mr. Angus Maddison, a senior OECD economist, recalls the catastrophic failure of Europe to control its economic destiny in the interwar years, in which Europe sought to counter depression by exchange control on capital movements, import restrictions, devaluations, inconvertible currencies, blocked accounts, export subsidies, and discriminatory tariff and trading blocks. He contrasts this with Europe's liberal post-war policies. The cure for the inter-war depression should have been to ensure a steady expanding level of demand, but no country did this because each feared that its import would rise too fast. Hence its autarkic measures, which, of course, hit other countries, which, in turn, retaliated. Countries could not break out of this circle of external deflationary pressures, because they lacked mutual trust and shrank from granting each other credit. Fortunately, postwar Europe had digested this ghastly experience and began to move steadily back towards liberalism and a new pragmatic international economic co-operation, typified by Marshall Aid, the OEEC, and the European Payments Union.

Europe's success in managing demand is a permanent

sophistication in managing a capitalist economy. Further refinements are, of course, essential, but the basic equipment of fiscal and monetary policy has been largely used in full throughout Europe. This is not true of the USA, although its need to manage demand was greater, because the US economy had less pent up war-time demand than Europe, and the US entrepreneurs faced greater risks, because they were nearer to the fringe of technological knowledge and to future consumer tastes. The USA has much to learn from Europe in economic management, particularly in the flexible use of fiscal policies.

Europe is likely to be able to maintain growth rates at much higher than historical averages, at least for several decades ahead, because its productivity is at present only half that of the USA. This is because most European countries are working below the fringe of the best available technology. They can therefore push their investment rate above that of the USA without encountering diminishing returns.

Some of the major problems of growth arise from the interdependence of economies. That all European countries have been following expansionary demand policies, and liberalising their trade, has enlarged opportunities for export, and this, again, has fostered demand and productivity. Capital flows have stimulated growth. Mutual trust has been built up in the economic relations between countries. Fluctuations in both exports and imports have, however, been a major source of demand instability; there have been some substantial destabilising movements of capital and some persistent difficulties in obtaining payments balance in major countries, particularly the UK, where these difficulties have led to policies which have damped growth and incentives to investment.

Recent discussions of payments problems have emphasised shortage of liquidity, but this has not been a major problem for most countries (except the UK). The outstanding cause of payments difficulties is that countries' costs rise at different rates, and so affect the competitiveness of their export prices, and the volume of their imports. Germany's export surpluses, for example, have not arisen from lack of demand (e.g. too low wages preventing sufficient goods from being bought) inside Germany, but from Germany's greater skill than her neighbours in managing to avoid artificial expansion (i.e. inflation) of domestic demand. Europe's real problem has been the inadequacy of policy weapons to achieve the right degree of

competitiveness in each country. The chief drawback in liquidity arrangements was that they ceased to be automatic after the European payments had ended. In a system of free trade and fixed exchange rates there are few policy weapons which can affect foreign balance substantially. Import controls and changes in exchange rates are too disturbing to use except in extremes. Floating rates would produce instabilities harmful to investment and profit expectations (on which expansion depends), would remove restraints on irresponsible competitive inflations, and could easily end in retaliatory trade restrictions. Floating rates would destroy confidence in the key currencies and end the gold exchange standard, and would mean reverting to gold as a means of settlement. The present liberal system of trade and payments cannot continue unless countries have confidence in stability of exchange rates. In such a system, the key to equilibrating international adjustments lies in each country's management of its domestic price level, because exports and imports, and so the foreign balance, are sensitive to relative price levels.

Management of the price level has proved difficult because it is apt to involve governments in the process of determining wages and salaries. To Mr. Maddison, as to many other economists, the solution lies in an Incomes policy. In my view, however, this is to fall back on a formula, like the interwar "collective action" which, it was proclaimed, would enable the League of Nations to preserve eternal peace. An Incomes policy, in fact, means setting up some statutory authority to calculate the total increase in wages possible within a given period without causing inflation, and then to allocate this total between millions of differently skilled employees demanding wage increases in myriads of different jobs. Mr. Maddison asserts that the Netherlands has enjoyed a successful Incomes policy. I lack the space to do more than to offer the counter assertion that it has not, or alternatively if it can be argued that it did have an Incomes policy, then its policy has, in any case, collapsed.

The alternative to an Incomes policy is to maintain the level of demand with a sufficient margin of slack in the economy to avoid inflation — say, in the case of the UK, with unemployment around 2 per cent. Contrary to popular belief that this would slow growth down, it would, by maintaining a competitive price level, stimulate investment and speed growth.

IMF to Strengthen World Financial System

GUY SIMS FITCH

WASHINGTON:

A SIGNIFICANT meeting of minds is evident in the two reports issued recently on international liquidity and monetary policy. One is by the International Monetary Fund (IMF), the other by the Paris Group of 10 nations which has been studying these related questions for the past year. Members of the Paris Group are the United States, United Kingdom, Canada, France, Federal Republic of Germany, Italy, Japan, Belgium, the Netherlands, and Sweden. Switzerland, not an IMF member, has participated as an observer.

The principal recommendation, common to both reports, is that there should be a moderate increase in IMF resources to enable that body to meet more effectively international balance of payments problems of its members. An increase in members' quotas in the range of 20 to 30 per cent seems to be envisaged. This would mean that the United States, which has subscribed some \$4,125 million of the Fund's present resources of \$15,600 million would be contributing another \$1,000 million or so.

In addition, there is a likelihood of some special additional increases for those countries whose quotas are very low in relation to their ability to pay. The Federal Republic of

Germany is an example. Some less-developed countries also might want to build up their quotas, thereby enlarging the amounts they can borrow from the Fund when and if needed. This matter of a quota increase will come up at the annual meeting in Tokyo next month of the IMF and the World Bank. If adopted, it might take a year or so before all the requisite action by the Fund and parliamentary approval by the membership is completed. This, at least, was the experience in 1959, the last time the Fund's resources were increased — in that case, by 50 per cent.

A related matter is the amount of gold to be contributed in any new quota increase. The usual procedure has been for national contributions to include 25 per cent in gold. While no severe hardship is expected from this requirement, alternatives to this gold contribution are being considered to mitigate the possible effects on some countries. Involved particularly are the United States and the United Kingdom, whose currencies — the dollar and the pound sterling — are major reserve assets and hence usable for gold in international transactions. A quota increase might mean an immediate drain on the US and the UK gold stocks to meet the new commitment. Such devices as a gold certificate, or perhaps an instalment arrangement for paying in gold, have been suggested to

get around these potential difficulties. This proposed quota increase may be the only substantive matter to come up for an official decision at Tokyo.

The Paris Group, in the meantime, will be looking into ways in which nations can adjust more effectively to balance of payments swings without recourse to potentially disruptive economic or financial policies; it will be conducting a "multilateral surveillance" and an exchange of information on actions taken to bolster payments position; and it will be examining the question of establishing a new form of major reserve asset to supplement the dollar and the pound. In the last-named case, much may depend on the readiness of other countries to take up the opportunities and responsibilities of sharing the international monetary reserve burden.

It is significant that the Paris Group has placed no set timetable on the various studies and appraisals it intends to undertake in the interests of improving the system and enhancing its capacity to meet world problems. As revealed clearly in the report the Group issued recently and also in the report issued by the International Monetary Fund at the same time on the same subject, the general consensus is that there is no present urgency demanding the setting of such deadlines. There is no tendency to back away from gold as basic to the world monetary system. However, a growing opportunity is seen for opening up new ground in the form of expanded credit facilities, both bilateral and multilateral, as a means of bolstering international financing. Also underscored in the reports is a reaffirmation of the role of the US dollar as the principal currency support for the international monetary structure. No imminent threat to world liquidity is seen even if the outflow of dollars to other countries should recede or stop as the US balance of payments position continues to improve and deficit begins to give way to surplus.

Australian Budget, 1964-65

H. A. ROLFE

SYDNEY:

THE PRESERVATION of stability was the aim of the 1964-65 Budget, brought down by the Federal Treasurer, Mr. Holt on August 11. The Treasurer said the Government believed that to achieve a realistic balance between claims on national resources arising from defence, development, and social welfare there was no alternative to an increase in the prevailing levels of taxation. The Budget provides for an estimated cash surplus of £A18.5 million over projected total expenditure of £A2,529.6 million, and follows a year of notable economic achievement for Australia.

In 1963-64, wages and salaries increased by 9 per cent, company income by 10 per cent, farm income by 26 per cent, and gross national product by 9 per cent. A major factor in the achievement of these results was the spectacular improvement in exports, which reached £A1,374 million, higher by £A309 million than the previous year. The rise was due to a good season at home, price increases and unexpected market gains in several major export commodities.

Despite a rise in imports in the later part of the year, receipts from abroad greatly exceeded outgoings, and overseas reserves increased by £A228 million to a total of £A854 million. Notwithstanding the rise in incomes and activity and expenditure in the year, and despite considerable increases in wage rates and earnings, consumer goods prices remained stable until the later part of the year when they began to rise fairly sharply. Prospects for 1964-65 include a substantial addition to the work-force from school-leavers and migration, which will be coupled with as already notable shortage of skilled and semi-skilled labour, and increased pressure on plant capacity and materials. Further demand in both capital and cur-

These reports thus represent a kind of precautionary activity. They are helping to prepare the ground for action that may be needed in the future to enhance the effectiveness of the international monetary system and forestall the development of serious monetary problems. There has been a good deal of co-operation between the Paris Group and the IMF, although each has explored those avenues of primary concern to it and to which its activities are best suited — the Paris Group nations both as IMF members and as leading financial countries with special responsibilities, the IMF as a body broadly representative of the interests of 102 member nations.

Helpful Co-operation

At no time, apparently, has either body considered arrangements arrived at outside the Fund, no matter how helpful in strengthening international financial stability, as substitutes for the Fund. Nor has the Paris Group considered itself a self-appointed "Caucus" making decisions for all other nations. In fact, much of what the Paris Group may decide later on is likely to be keyed to IMF moves. As an example, the standby general agreement to borrow, under which members of the Group have undertaken to lend the Fund up to \$6,000 million if needed, will be subject to periodic review and will come up for renewal in 1965. But the precise form and size of that renewal, if any, may well depend on the nature and effectiveness of the increase in IMF resources that will be coming up for discussion at the annual meeting in Tokyo next month of the Fund and the World Bank.

What we have, then, are two parallel studies in the best tradition of the international economic co-operation that has marked the post-war period. In this type of continuing and enlightened progress and collaboration lies the best hope for whatever constructive action may be required in the future.

rent expenditure forms is rising strongly in a situation of high liquidity, and may increase further and faster than available supplies.

The Treasurer saw the budgetary problem, then, as needing to ensure that demand should not rise excessively in the face of a proposed increase of some £A224 million in Commonwealth expenditures.

Major items of expenditure included a projected increase in defence spending of £A36.3 million to £A296.8 million; an addition of £A31.7 million for grants to the States (which levy no income taxes) bringing the total to £A479 million; an increase of 21 per cent in the vote for Commonwealth works and services, and a rise of £A32.8 million for redemption of maturing debt. A wide range of development projects and a small rise in Commonwealth social service pension payments also accounted for a sizable part of the expenditure increase. On the revenue side, loan raisings are expected to be virtually all confined to the domestic capital market, and are estimated to produce some £A275 million, somewhat less than last year. A 5 per cent rebate which has operated on individuals' income taxes for the past three income years was removed, and company tax was increased from 8½ to 8½d in £1. Sales tax on a wide range of motor vehicles was raised from 22½ per cent to 25 per cent, and customs and excise duties on tobacco products, air navigation charges, and post office telephone service charges were also raised.

The Budget was generally well received by the business community, and was well anticipated on the stock exchange. However, company tax changes may require some comparatively major adjustments to taxation provisions which have already been made.

PL 480 Funds for Underwriting Capital Issues?

By Our Special Correspondent

NEW DELHI:

A START may soon be made, possibly next month, for utilising PL 480 counterpart funds for underwriting new capital issues in India. A concrete scheme in this regard, it is understood, is now being drawn up by the US Agency for International Development for submission to the Government of India.

According to the indications available, the scheme envisages setting up of an Agency either to refinance the existing underwriters of new issues or to directly underwrite new floatations. It will maintain complete liaison with the existing underwriters.

The Agency will be registered under the Indian Companies Act. Initially a sum of Rs. 10 to 15 crores may be placed at its disposal out of the PL 480 rupee proceeds. Further funds will be provided as and when necessary.

As the Agency is to be set up with PL 480 funds, it will give priority in its refinancing or underwriting operations to the floatations of Indo-US ventures, both new schemes and expansion programmes. Surplus resources available to it will be utilized for underwriting other issues.

The Agency will work on no-profit-no-loss basis. A nominal fee will be charged by it for its services. The unsold blocks of the underwritten shares or the scrips vested in it by the other underwriters to whom it may have provided refinancing facilities will be held by the Agency only for such periods as are necessary. As soon as the Indian public is ready to absorb these shares, they will be put on the market. Any profit accruing in the sale of these shares will be put into the revolving fund for further use.

Representation on Boards

For safeguarding its interests, the Agency will ask for representation on the Boards of Directors of the companies the capital issues of which are underwritten or refinanced by it, till the time its holdings are taken up by the public.

The Agency is proposed to be administered by a Board on which India will be suitably represented. The World Bank may also be given representation on this Board.

Only those ventures which associate the Indian public with their capital and which are unable to secure assistance from the existing underwriters will be assisted by the proposed Agency. The idea is to supplement and not supplant the activities of the existing underwriters. Safeguards will be provided against sale of the holdings of the Agency to a few individuals or parties.

Cooley Fund assistance to the Indo-U.S. ventures will not be affected by the operations of the Agency as the aid from this fund is provided in the form of loans.

The Government of India, it is understood, has suggested to the Soviet Union that a sum of Rs. 10 crores out of the unutilized Soviet credits should be made available for advance measures on the fourth Plan projects. The Soviet Union has also been requested to extend further credits during the fourth Plan period for import of Soviet oil equipment, contract surveys for oil, etc., and to send some deep-drilling experts, production engineers and specialists in mud treatment for imparting training to Indian technicians.

An approach has also been made to the Soviet authorities

for the supply of specially equipped helicopters for oil exploration in difficult areas.

The Bhilai Steel Plant is slated to have developed several scientific innovations to tackle the problems of production, construction and maintenance. These innovations are expected to go a long way in increasing productivity, reducing cost of steel and in better utilization of indigenous raw materials and skill.

Some of the important innovations made are: (1) development of a coke blend incorporating 10 to 20 per cent inferior (unwashed) coal; (2) a sinter containing more fluxes which gives more iron at much lower coke rates; (3) utilisation of surplus gases from blast furnaces and coke ovens as open-hearth fuel; and (4) speedy repair of open-hearth bottoms within two hours lasting for 100 heats, as against the usual 5 to 6 hours lasting for only 20 to 30 heats.

The Bhilai Steel Works has also adopted various modern techniques of construction and maintenance to suit its requirements.

The Chairman of Koppers & Co., Mr. Red Foy, is expected to visit India in the middle of the next month for talks with the Union Ministry of Steel on the US and UK collaboration in setting up the fifth public sector steel plant during the fourth Plan period. Koppers, a leading steel construction and engineering firm, it may be recalled, had organised a consortium of American and British companies for the supply of machinery and equipment, on commercial credit, for the Bokaro steelworks. Since assistance has been made available for the Bokaro Plant by the Soviet Union, the interest of Koppers is believed to have shifted to the fifth public sector steel plant which may be up either in the Goa/Hospet or the Visakhapatnam/Bailadilla area.

Three African countries — Uganda, Liberia and Sierra Leone — have shown interest in seeking Indian collaboration for setting up sugar factories. Four African Governments — those of Liberia, Sierra Leone, Northern Rhodesia and Nyasaland — have indicated possibilities of establishment of cotton blanket manufacturing units in their countries.

The Indo-African collaboration in setting up industrial ventures in various African countries is understood to be making good progress. Birla Brothers have already established, in partnership with local interests, a textile mill in Ethiopia and are said to be interested in the expansion of this mill and in participating in an industrial complex that is being planned around it. They are also establishing a composite industrial unit for manufacturing light engineering goods (air-conditioners, water coolers, refrigerators, electric fans, bus and truck bodies, etc.) in Nigeria. Another project of Birla Brothers for the establishment of a textile mill in Northern Nigeria has also been approved by the Governments of India and Nigeria. Birla Brothers are further stated to be actively pursuing the possibilities of setting up a jute mill and an asbestos cement plant in Nigeria.

Some other proposals are also being considered by the Government of India and the Governments of Kenya, Uganda, Nigeria and Ethiopia for Indo-African collaboration in industry. The Kenya Government has recently granted a licence to M/s. Ranchodas Goculdas, of Bombay, for setting up a

textile mill in Kenya. Negotiations are currently being carried on for this project with the Government of India. Another Bombay firm, Morarji Brothers, is examining the possibility of setting up a fertilizer manufacturing unit in Kenya. Messrs. Jay Engineering Works, Calcutta, are also stated to have conducted a study for establishing a sewing machine and parts manufacturing unit in this East African country.

Messrs. Jankidas and Co., proprietors of Atlas Cycle Works, Sonapat, are exploring the possibility of setting up a bicycle plant in Uganda. India is also extending assistance to the Uganda Government for starting handloom industry in that country. Messrs. Indian Hume Pipes have been allowed to establish on collaboration arrangements with a party in Libya a factory to manufacture concrete pipes. Messrs. Malhotra & Sons, Calcutta, are arranging to set up a razor blades manufacturing unit in Ethiopia. Messrs. Mckenzie Ltd., Bombay, are considering the establishment of glass and paints factories in Ethiopia.

To take advantage of the opportunities provided by African countries for setting up Indo-African industrial ventures, the Government of India recently approved the proposal of the Federation of Indian Chambers of Commerce and Industry to send an Industrialists Goodwill Delegation to Africa. To provide greater scope to Indian industrialists to study the African markets, it is now felt that instead of one, two delegations should be sent: one to the English speaking areas in East Africa and the other to the West African countries (including Nigeria and Ghana) which are mostly French speaking.

At a meeting held here last week under the Chairmanship of Mr. D. S. Joshi, Secretary to the Union Ministry of Commerce, the advisory body on the Kandla Free Trade Zone decided to constitute a Selection Committee for the allotment of plots to applicants for setting up industries inside the Free Trade Zone.

The Selection Committee, headed by Mr. D. S. Joshi, will consist of representatives of the Ministry of Commerce, Ministry of Finance (Department of Economic Affairs), Ministry of Industry and Supply, Director-General of Technical Development, the Planning Commission, the Kandla Port Trust, the Gujarat Government and the Chief Controller of Exports and Imports. It will hold its first meeting towards the end of September.

Applications for the allotment of plots in the Free Trade Zone will be received up to the end of the current calendar year. The allottees will be expected to start construction within a few months of the allotment of plots. They will be required to commence production within a specified period to be decided according to the nature of the industry.

The rate of annual ground rent to be paid by the lessees will be 50 paise per square metre. Arrangements for the supply of electricity will be made by the Free Trade Zone Administration so that the individual industries may not face any difficulty in this regard. Ancillary industry such as printing press for publicity, manufacture of packaging material, etc., will be allowed to be set up in the Free Trade Zone to supply ancillaries to the main industries.

The basic idea behind setting up the Free Trade Zone is to provide for the maximum relaxation of customs documentation and paper control so that the activities in the Zone may be more advantageous than in the bonded warehouses. The extent of relaxation will, however, be governed by reasonable safeguards against malpractices. The safeguards will require that all the imports for the Free Trade Zone do reach the Zone; that exports from the Zone are really effected from the country; that all foreign exchange earnings are credited to the country's foreign exchange pool; and that nothing goes into the custom territory for home consumption without a valid licence and payment of custom duties. While no quota system will, normally, apply for import of commodities into

the Zone, maintenance of proper accounts and periodic submission of returns of stocks lying with the licensees in the Zone to the custom authorities will be required so that the Government can satisfy itself that the articles imported into the Zone from abroad are properly accounted for.

A total area of 1,386,000 square metres is being developed in the Free Trade Zone for the present. Out of this, an area of 268,650 square metres is being reserved for industries requiring very big plots. Out of the remaining area, it is proposed to carve out 67 plots of 1,650 square metres each, 36 plots of 2,475 square metres each and 82 plots of 4,070 square metres each. Provision is also being made for constructing 20 sheds, each of 36 metres x 18 metres, for small industrialists and exporters who may prefer to hire accommodation instead of building their own sheds.

Imports into the Free Trade Zone intended for re-export will not be debarred. Stock-piling of important items of imports for subsequent distribution in the country may also be permitted in special cases. Such items as diamonds, precious stones, gold and watches, which can be easily smuggled into the country, shall not be allowed to be imported into the Zone.

★★
The Union Ministry of Industry is understood to be considering the establishment, in the public sector during the next Plan period, of two or three Central pulp-making plants and a second newsprint manufacturing factory in addition to expansion of NEPA.

The demand for newsprint is expected to rise to nearly 300,000 tonnes by 1970-71. It is proposed to achieve self-sufficiency in this regard by the end of the fourth Plan period. It is, therefore, felt that the 1970-71 capacity target for newsprint manufacture should be fixed at 330,000 tonnes. By the end of the current Plan period, only 30,000 tonnes capacity will be available in this line as against the target of 150,000 tonnes.

As regards paper and paper board, the demand is expected to rise to 1.2 million tonnes by the end of the fourth Plan, against the likely production of 650,000 tonnes in the last year of the third Plan. To achieve production corresponding to the fourth Plan demand, a capacity target of 1,500,000 tonnes has been proposed.

During the third Plan, though a capacity in excess of the target was licensed in paper, board and newsprint industries, the progress in the implementation of the schemes has been slow, partly on account of financial difficulties and uncertainty in regard to the availability of cellulosic raw materials. To overcome the shortage of raw materials, it is proposed to blend at least 20 per cent long-fibre pulp with bagasse pulp. Since bamboo resources are also in short supply in the country, the new paper mills will have to be based substantially on bagasse as the source of pulp production.

To meet the demand of long-fibre pulp, two or three central pulp plants with daily capacity of 300-400 tonnes each would be established by the public sector in areas richly endowed with bamboo resources. An outlay of Rs. 40 crores has been proposed for this purpose.

★★
The Government of India has granted exemption from certain provisions of the Companies Act, 1956, to non-profit associations engaged in the promotion of art, commerce, science, religious charity and any other useful objectives, which are licensed under Section 25 of the Act. This follows several requests received from chambers of commerce and other trade associations seeking the desired concession.

The exemptions relate to Sections 193, 259 and 292 of the Companies Act. They are expected to facilitate the functioning of the non profit associations.

As a result of the exemptions granted under Section 193, minutes may now be recorded within 30 days of the conclusion

of every meeting in case of companies where the Articles of Association provide for confirmation of minutes by circulation. Under Section 292, matters referred to in clauses (c), (d) and (e) of sub-section (i) may be decided by the Board by circulation instead of at a meeting. There is complete exemption from Section 259.

At its first meeting held here last week, the Panel of Agricultural Economists, constituted recently to advise the Union Minister for Food and Agriculture for solving the food problem of the country, decided to conduct four studies. The first study will deal with the behaviour of foodgrain prices during the current season and the role played by bank credit in the foodgrains trade so that action may be taken to avoid the recurrence of spiralling of foodgrain prices. The second study will relate to the various aspects of trade in rice, wheat and other foodgrains with the object of preparing the ground for the proposed Foodgrains Trading Corporation. The third

study will be undertaken for finding out how an incentive price of foodgrains influences their production, wages of agricultural labour, marketable surpluses, etc. The panel felt that the main objective of ensuring remunerative prices for foodgrains and other agricultural products should be to provide an incentive for increasing output through the use of agricultural inputs like seeds, fertilizers, irrigation and application of pesticides. The aim of the fourth study will be to assess the efficiency of the present system of collection of statistics.

The Government of India has sanctioned the establishment of a survey unit at Ranikhet to study medicinal plants in the Uttar Khand and Dehra Dun districts and Kumaon Division. A medicinal plants garden and a museum of drugs will be attached to the unit for carrying out research. The unit will also undertake pharmacognostic and chemical investigations. A similar survey unit is already working at Hardwar.

Controls and Stagnation Go Together

From Our Correspondent

BOMBAY:

SUGAR CIRCLES in Maharashtra have reasons to wonder whether it was sporting or cavalier of Mr. C. Subramaniam, Union Minister for Food and Agriculture, to have just assured the Deccan Sugar Factories' Association (DSFA) that, "in any policy we evolve, there will be an element of positive incentives to efficiency and to higher productivity" and "leaving the problems of industry for the present", as he said, "in the hands of the Sen Commission." It is a pity that although complete identity of views seems to exist on the problems of the sugar industry, especially in the Deccan, between the Union Minister and the retiring President of the DSFA, Mr. M. L. Apte, there does not appear to be any such unanimity on the solutions to these problems. Thus, Mr. Subramaniam fully shares Mr. Apte's view that one of the basic difficulties facing the sugar industry is the diversion of sugarcane for gur manufacture, but he does not seem to believe that to ensure sufficient sugar production gur and khandasari prices must be checked at reasonable levels, as suggested by Mr. Apte. Maybe, because of the widespread dispersal of the manufacturing units of gur and the large number of varieties without any quality control, control on prices is a very difficult problem. But, merely because it is difficult, the problem cannot be left as it is. The phenomenon of a very large percentage of sugarcane going into the manufacture of gur, as the Union Minister himself has said, indicates some strong pull for gur in preference to sugar among large sections of the people in this country. It cannot be entirely due to what is euphemistically described as other than sweetening purposes. The strong consumer preference for gur is a matter of fact. Not all the gur could be going into illicit distillation. So, according to Mr. Subramaniam, there should be an investigation and, until then, perhaps, the diversion of sugarcane from sugar to gur must continue!

Another point on which both Mr. Subramaniam and Mr. Apte are agreed is the imperative need to increase sugar production. Whether it is a total capacity of nearly five million tons of sugar by the end of fourth Plan, as the former visualises, or a target of 3.3 million tons (the target originally announced by the Central Government for the year 1963-64) as Mr. Apte speaks of, the achievement of the goal depends upon a variety of factors, such as location, prices, and distribution. On none of these factors, again, is there any consensus between the industry and the Government. Whereas Mr. Subramaniam realises the need for encouragement of sugar industry in areas where the industry would make the best and most economic use of the available land — and on this question Mr. Apte has indisput-

ably established the claims of Maharashtra and the South,—he is not prepared to accept the economies of location stressed by Mr. Apte as the decisive factor. This is not at all surprising in view of the Union Minister's known predilection for equal delivered prices all over the country for every commodity. Of course, factors such as preference to relatively more productive regions, length of the crushing season, sucrose content, extent of the diversion of gur and need to license suitable capacity in areas near port towns to facilitate exports, have also been mentioned. Mr. Subramaniam has referred too to the need for regional self-sufficiency as being more desirable than area self-sufficiency. But it is intriguing why he has said nothing about the need to allocate distinct and separate zones to co-operative factories and joint-stock sugar factories, even after the detailed reference to the sorry state of affairs that the absence of such demarcation has led to in Maharashtra.

Social Responsibility

On the main question of control over the sugar industry, the views of the industry and the Government are poles apart. Mr. Apte has categorically stated that it is possible to achieve the target by adopting a policy of progressive decontrol of sugar and a partial control until total decontrol becomes possible. His thesis that "controls have invariably stagnated consumption and consequently production, while decontrol have regularly encouraged production and consumption" (amply supported by the experience of the industry from 1952-53 to date) is, however, challenged by Mr. Subramaniam who feels that "leaving the need of the country for sugar to be met by the normal operations of the free market has led to what can only be described as exploitation of the consumers." Hence his justification for Government to continue "to exercise a strategic control over the production and distribution of sugar." According to him, "Government will have to exercise control till such time as production matches demand and the industry and trade realise their social responsibilities".

Now, who is to decide the latter? If it is the Government of India, its views are already known. The pistol is thus heavily loaded against industry and trade. In other words, it seems, one can as well begin to reconcile oneself to co-existing with sugar control all the time. Mr. Subramaniam may not recognise any incompatibility between Government exercising such control and giving adequate incentives and competitive strength to sugar so as to increase its production and efficiency. But the wearer knows where the shoe pinches. Surely, to employ an automobile parlance, one cannot apply

the brake and press the accelerator simultaneously and yet hope to speed up.

Yet another case of breach of parliamentary privilege arose recently in the Maharashtra Legislative Assembly. The party that courted the wrath of the Assembly this time was the Bombay Municipal Corporation. By adopting unanimously an adjournment motion expressing its strong resentment against allegations of corruption made on the floor of the State Legislative Assembly, it was contended by the members of the Assembly, the Corporation had infringed the privileges of the House. The adjournment motion, by the way, was the outcome of a debate raised by Mr. F. M. Pinto (PSP) on June 31, in the Assembly, on the Bhabha Hospital building collapse on June 13, in which six people died and seven others were injured. Significantly all the political parties in the Assembly joined in the attack against the Corporation for its gross inefficiency and rampant corruption, and asked the Minister of Urban Development, Dr. Rafiq Zakaria, to convey the sense of the House to the Corporation through the Mayor. But the civic body would not take this lying down. In turn, the Corporation took strong exception to the sweeping allegations of corruption levelled against the civic administration. Here, again, leaders of all the political parties joined in passing the adjournment motion, while the leader of the ruling Congress Party, Mr. M. Madhavan, moving the motion, went a step further in castigating the State Government for its gross inefficiency in taking an unduly long time in conducting an inquiry into the Bhabha Hospital collapse. It is this reaction of the civic body that piqued the legislators and led to the motion of privilege moved by Mr. P. G. Kher, a Congress member of the Assembly. Mr. Kher contended that, by passing the adjournment motion, the Corporation had, in effect, passed a censure motion, as understood in parliamentary parlance. It had committed a gross violation of the privileges of the House and its members, he said, "in that they have and will have an effect of deterring the members of this House from discharging their duties in a free and fearless manner." Referring this motion to a Privileges Committee, Mr. K. R. Girme, the Deputy Speaker, said that it was well known that the Corporation was the product of legislation of this House and the Government, which was responsible to this legislature, had over-riding powers over the Municipal administration as a whole.

Mr. Dharamsey M. Khatau, President of the Cement Manufacturers' Association, reviewed the progress of the cement industry since Independence at the third Annual General Meeting of the Association. He illustrated with facts how the capacity of the cement industry in each of the plans had lagged behind the targets fixed by the Planning Commission. According to the latest estimates, the actual capacity and production at the end of the third Plan period are expected to be 11.5 million tonnes and 11 million tonnes respectively, being 77 per cent and 85 per cent of the target. While the expansion programme of the industry has had an unencouraging trend, the cement factories have on the whole done much better by making the best possible use of their capacity. Currently, they are turning out cement equivalent to 96 per cent of their rated capacity and in many cases, the output is more than the installed capacity.

A number of reasons have been given by Mr. Khatau for the likely non-attainment of the target in the third Plan. In the early part of the Plan, foreign exchange difficulties and transportation bottlenecks were the primary cause. Again, the Government adopted a doctrinaire approach in granting licences to new comers who had no experience of the cement industry. The net outcome of this policy was that there was no progress in the expansion of the industry. The manufacturing units were keen to expand their capacity but the unrealistic prices fixed by the Government left little margin for ploughing back. Some of the cement companies were even forced to maintain their rate of dividend by drawing upon their reserves. The low return in the cement industry

also failed to attract investors. All these factors combined to bring about a stalemate in the industry.

Cement prices were last fixed in November, 1961 when a provision for upward adjustment was made if the costs of production of the industry went up. It has now been estimated that between November, 1961 and April, 1964, the cost of production has increased by Rs. 5.9 per tonne while the price adjustment granted by the Government over this period amounted to Rs. 3.75 per tonne. This increase was not given with retrospective effect which caused further losses to the industry. A representation made by the industry to the Government has suggested four concrete measures for accelerating the development of the industry. They are: (1) the development rebate granted to cement industry in terms of the income-tax provisions should be raised from 20 per cent to 40 per cent; (2) a more rational basis for the grant of production incentive should be adopted; (3) a higher price for additional

production achieved by the expansion of the existing plants or the setting up of new plants should be granted; and (4) a realistic retention price should be fixed. The Government has not acceded to the request of the industry for increasing the development rebate. No production incentive has so far been provided. Only in the case of new plants or others which have expanded their capacity, a higher price at Rs. 77.75 per tonne has been allowed.

Referring to the proposed Cement Corporation under State auspices, Mr. Khatau said that the Cement Manufacturers' Association was not against the establishment of the cement plants in the public sector. He, however, suggested that the best course for the Government would have been to allow the present units to expand in all possible ways instead of granting licences to newcomers with no experience in the cement industry, specially when the profits in the industry were at the lowest level.

Expansion Plans for Private Steel

From Our Correspondent

CALCUTTA:

IN SETTING a target of 18 million ingot tons of steel for the fourth five-year Plan, the planners have obviously taken it for granted that the two major producers in the private sector — the Tata Iron and Steel Company and the Indian Iron and Steel Company — will expand their capacities, as they have been asked to do, by one million tons each. Sir Biren Mookerjee, Chairman of the Indian Iron and Steel Company, does not give the impression that his concern is finally committed to any such scheme, although the directors are examining the technical and economic feasibilities of an expansion plan which would take production capacity to two million tons of steel (ingots) within the next five or six years. Mr. J. R. D. Tata, too, speaking to shareholders at the TISCO's annual general meeting in Bombay, has said nothing final about undertaking further expansion to TISCO's steel-making capacity. In fact, this is what he said at the meeting: "I can only repeat that your Directors will sanction a further expansion only if they are thoroughly satisfied that the project is technically and economically sound and that it can be undertaken on terms wholly fair to shareholders".

It needs to be pointed out, however, that the Indian Iron and Steel Company has already taken steps to expand capacity by 300,000 tons, or what it calls the first stage of an expansion, which if completed, would raise production capacity by one million tons; in other words, Sir Biren's company will have to take a final decision on whether it will be worth while to go in for a further addition at 700,000 tons to its capacity. The cost for the first phase in terms of capital equipment and manpower was rather marginal, it did not impose any serious strain on the finances of the company, but the second phase would naturally require heavy capital investments, and, therefore, a thorough calculation of costs and returns is necessary. The TISCO directors have not yet begun calculating the cost for the second phase, as no firm estimate can be made until they first decide the form the end-products will take. This the directors have not yet been able to do as they have no clear indication of the future steel requirements of the country, or precisely, the categories for which the demand will rise. The need for this becomes the greater in the context of a free market for 60 per cent of the total production and talk of shifts in plan strategy. If the managements of both Indian Iron and Tata Steel have been considering expansion prospects as cautiously and carefully as they now do, it is because of considerations such as these.

There are other questions to consider also. Both Sir Biren and Mr. Tata have emphasised the shareholders' interests

in the context of the need to spend large sums of money. In TISCO's case, the cost of an expansion project involving the production of another one million ingot tons of steel to be rolled into sheets and strips in a continuous or semi-continuous strip mill, has been roughly estimated at Rs. 170 crores, about half of it in foreign exchange. Of course, the estimate is only preliminary, which will be further scrutinised by a firm of consulting engineers which the company will shortly appoint for a detailed project report, but there is no doubt that the investment will be heavy. The benefits of the Company's two-million-ton project are still meagre for the shareholders. In spite of the increase in the dividend for the last working year, during which the steel plant almost reached its increased rated capacity, the net payment to shareholders is in fact somewhat less than what it was before the Company embarked on expansion. This was because of sharply rising production costs which had its inevitable effect on the profit margin, and there is no assurance that the Company will do appreciably better during the current year.

Bonus Shares

The shareholders of the Indian Iron and Steel Company do not complain about the quantum of dividend paid, much too restricted though it has been, but they would like to be compensated by way of bonus shares. But this the company is unable to do for reasons which are well known. At the annual meeting of the IISCO shareholders, Sir Biren explained why the Company was not issuing bonus shares, although its reserves are already huge and out of all proportion to the share capital. The main reason is the Government's tax policy relating to bonus shares, which would impose heavy tax liabilities on both the company and shareholders, should the management decide to make bonus issues out of reserves. Besides, the amendment to the Company Law which empowers the Government to convert at will loans taken by joint-stock companies into shares in them, has now become a sore point with the private steel companies who are particularly in danger of attracting the new law because of the special advances granted to them. Also, the other amendment which transfers the voting rights in respect of shares of a joint-stock company held in trust to a Public Trustee (to be appointed by the Government) if the value exceeds Rs. 5 lakhs, has caused considerable uneasiness among these steel companies. It is, however, not suggested that they are "going slow" with the expansion schemes in order to extort concessions in respect of these new legal measures, but these have not exactly contributed to an improvement in the relations between the Government and the companies.

While the prospects for steel expansion in the fourth Plan

are thus subject to uncertainties, the buoyant expansion in aluminium is continuing. The present installed capacity in the industry is placed at 53,000 tons, as against the original plan target of 87,000 tons, later revised to 110,000 tons for 1965-66, but judged against the capacity existing only a few years ago, the rate of expansion has been very fast indeed. The process of expansion has been considerably helped by the country's vast natural resources, but also by foreign collaboration which has come from many quarters. It is well known that many world producers of aluminium are now taking a close interest in India's aluminium development. Encouraged by the rapid rate of expansion, the Government, it is reported, has decided to provide for further large expansion in its next Plan. According to the Perspective Planning Division of the Planning Commission, India is likely to require 250,000 tons of aluminium by 1970-71, and in its view, the electrical industries will be the single largest consumer of the metal if the present policy of substituting aluminium for copper in as many of the latter metal's uses as possible, is continued. The Government has apparently been influenced by the P.P.D.'s estimates in ordering advance action in respect of several major projects which would provide an additional output of 70,000 tons of aluminium by 1970-71. Also new plants may be located in regions where raw materials and power at relatively cheap rates are available.

The aluminium industry of India continues to be protected, but the present period of protection will expire next December.

The Tariff Commission has already issued a questionnaire to the quarters concerned whether protection for the industry should be continued beyond this period. The Indian Non-Ferrous Metals Manufacturers Association, which must have many among its members who are sincere consumers of the metal, has wholly supported the industry's case for continued protection. The Association says that protection should be continued until 1970. The performance of the industry and developments made by it, says the Association, fully justify the protection given to it so far. There are frequent complaints that the costs of making aluminium in India are high in spite of the country's vast natural resources, but this is mostly due to factors beyond the industry's control, the Association argues. In the first place, the cost of power is very high, and the energy requirements of the industry are necessarily heavy. Secondly, raw materials like caustic soda and calcined petroleum coke are expensive to get, and thirdly, on account of import duties, small-scale operation, greater investment in spare parts for the machinery equipment and relatively big expenditure on housing and labour welfare, the unit costs of the industry have been at a high level. The Association agrees with the Perspective Planning Division's estimates of aluminium requirement of the country by 1970-71, which is placed around 250,000 tons, as against the present demand of 10,000 to 15,000 tons. Therefore, if the industry is to expand more rapidly, it must continue to enjoy protection.

BENGAL CHEMICAL & PHARMACEUTICAL WORKS LTD., Calcutta

The following is the summary of the speech of Dr. B. N. Ghose, Chairman of the Bengal Chemical & Pharmaceutical Works Ltd., at the 64th Annual General Meeting of the Company.

Gentlemen:

The performances of your Company despite various difficulties it had to encounter during the year under review are encouraging although the net operating results are below our expectations. But for the acute shortage of industrial alcohol, rectified spirit and special denatured spirit during the latter half of 1963, which are essential raw materials in pharmaceutical industries, we could report better turnover this year with a corresponding increase in profits. To ensure smooth and uninterrupted working in the pharmaceutical industries it is considered a matter of paramount importance to see that effective steps are taken by authorities concerned to maintain adequate supplies of alcohol so vital for such industries.

The trading results of your Company for the year ended 31st March, 1964, are on the whole satisfactory notwithstanding the fact that we continued to be confronted with troubles relating to procurement of raw materials, problems of transport, interrupted supplies of power and rising costs in a number of directions. I am sure you will agree with me that with the reduction of all these factors as far as possible which have direct impact on the trading activities of any industrial and manufacturing concern, your Directors will be in a position to report more satisfactory results in years to come.

Your directors recommended maintenance of the same dividend @10 per cent on all classes of Ordinary Shares as in the last year and propose to carry forward a sum of Rs. 1,00,000 to General Reserve No. II after providing for all prior charges. I would like to add here that the completion of the various expansion schemes of the Company this year will necessitate the transfer of a substantial amount to Development Rebate Reserve next year which will have its reflection on the profits of the Company.

The overall business in the field of Heavy Chemicals in

your Company shows a sign of steady progress, the sales during the year under review having increased substantially over the last year's figure. I am glad to report that the new Alum Plant is almost completed and it is now under trial run. We do hope the new Alum Plant will go into production very soon. You will be glad to learn that the Government of India have granted your Company Industrial Licence to carry on business for the manufacture of Sodium Aluminate, Stannate, Naphthenates, etc. The export potentialities of some of the products of the Heavy Chemicals Section of your Company are now being studied and negotiations to export a large quantity of Alumino Ferric are going on.

The installation of an additional 50 ton/day Sulphuric Acid Plant at Panihati is steadily progressing and we hope this plant will start production by the end of this financial year.

I reported to you last year that we have taken up in hand certain development programmes. Your Company is one of the pioneers in India in the field of manufacture of Caffeine. I am glad to report that Industrial Licence for manufacture of 16 tonnes of Caffeine annually has been obtained from the Central Government and our plants have been expanded accordingly to reach the production target. But unfortunately, the supply of Tea Waste, the principal raw material for manufacture of Caffeine, is too inadequate to meet the increased demand.

We are trying to explore various markets in South-East Asia and Middle East and African countries. Our exports of Surgical Cotton Wool have suffered a setback due to severe competition from other countries.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

The moving finger writes

NEHRU AND the Red Fort went well together. Both were extremely pertinent to India's history over the ages. Both, again, were rather less relevant to much of what was actually happening around either. For his first important public appearance in his present office, Mr. Lal Bahadur would have done better with a background less commemorative of a personality so radically different from his — for the present Prime Minister surely is not one who can claim to be judged by history and history alone.

That he senses this more acutely than perhaps anybody else was clear enough from the tenor of the Prime Minister's Independence Day address. He reiterated his Government's commitment to the pursuit of policies which would secure current and concrete benefits to the people and I hope I am not mistaken in my inference that, although the Prime Minister dutifully made his obeisance to the gods of Congress socialism, he did suggest that it was not his Government's intention to subordinate welfare to wishful thinking. Mr. Lal Bahadur, a recent editorial in 'The Times of India' suggested, "has the attractive quality of being earth-bound". 'Attractive', perhaps, is not the appropriate word — for earthiness the right adjective, I submit, is "reassuring."

★★

A few days ago, the Prime Minister held a full meeting of the Council of Ministers, and reportedly appealed to his colleagues to exercise restraint in their public utterances. It is a pity that his advice or admonition should have been lost on his senior-most colleague. Speaking at a seminar held by the Bharat Sewak Samaj on August 16, the Home Minister reportedly accused traders of what he was pleased to describe as "vulture mentality". Hard words break no bones, and it puzzles my understanding why such a powerful person as the Home Minister should consider it necessary to resort to them in so extravagant a fashion. Let the Government by all means in-frame sound and sensible regulations and enforce them without fear or favour. But there is surely no need for Ministers to indulge in wild or undignified language which can only alienate public opinion. Mr. Nanda, in any case, ought to know that vultures only gather over dead or dying bodies. Does the Home Minister then have so little faith in the vitality of the Government of which he is such an eminent — and excitable — member?

★★

I am sure that Dr. K. N. Raj's article on "Prices and Economic Policy" in the Independence Day Supplement of 'The Statesman' will receive wide attention if only because it attempts to measure the inflationary gap in the economy. I myself have studied this attempt with not a little interest and a great deal of care, but I am afraid that I am not impressed with Dr. Raj's scholarly exercise. For one thing, after having taken great pains and done some detailed calculations to arrive at an estimate of the magnitude of "direct" or "primary" demand, he rather casually assumes a wholly arbitrary figure for "indirect" or "secondary" demand. In my view, a statistical exercise of this kind can have but little meaning when it abruptly dismisses with statistics at an inconvenient point.

Secondly, while assessing the dimensions of the "supply" factor, Dr. Raj indicates that his calculations are related to 1960-61 prices, but no similar reference is found to constant prices in his estimate to the demand factor. The presumption, therefore, must be that demand has been estimated at current prices. This discrepancy would seem to vitiate the comparison

attempted in the article between the "quantities" of demand and supply. If allowance were to be made for the price factor in the demand estimates, the inflationary gap which Dr. Raj places at Rs. 2,500 crores for the years 1961-62 to 1963-64 would be considerably less.

The measurement of the inflationary gap, however, is not the most important part of Dr. Raj's analysis. Rather more substantial is the latter part where he tries to discuss what correctives could or should be applied to inflationary pressures. In his view, to cut the investment programmes in the five-year Plans to meet the immediate price situation would be to accumulate trouble for the future since the country has really no alternative to stepping up the rate of growth of industry for providing adequate employment opportunities for the growing population and the rate of growth of agricultural production for feeding this population and providing the raw materials for industry. He, therefore, demands that, inflation or no inflation, the rate of investment should be accelerated rather than decelerated. He suggests that it should not be difficult for the country to step up investment at the rate of Rs. 200 to Rs. 300 crores per annum provided an annual rate of growth of six per cent in the national income is achieved, since this rate of growth will add each year Rs. 1,000 crores to the total supply of commodities and services in the economy.

I would submit that the factor which is really relevant, in terms of Dr. Raj's own analysis, is not the rate of investment but the rate of growth. While growth must admittedly come out of investment, it is frequently and tragically true that all investment does not lead to growth. The quality of investment is therefore supremely important and it could certainly be argued that a smaller investment better employed could promote a greater rate of growth than a larger amount less productively used. There is also the fact that a schedule of quick-yielding investments could be very valuable in countering inflation while serving fully the cause of growth. To argue merely for a high aggregate rate of investment on the basis that the rate of growth is bound to go up simply because investments go up may not therefore be quite helpful in the present circumstances.

Finally, I must confess that I find it difficult to follow those parts of Dr. Raj's article where he argues that Government expenditure cannot be a source of inflation because it is offset by the process of taxation. It is just not true that every rupee withdrawn by taxation must necessarily have the same qualitative economic consequence as the corresponding rupee returned through government expenditure. The argument in the context of inflation must really be about the quality of government expenditure in terms of its productivity. On the same reasoning I would reject also Dr. Raj's estimate of the inflationary potential of bank credit. Once again the issue is how bank credit is utilized — to what extent productively. In any case, is it Dr. Raj's contention that the size of government expenditure is irrelevant to the size of bank credit?

★★

I am glad that the Press is becoming population conscious. In the 'Statesman' of August 14, Mr. Inder Malhotra deplores the widening gap between population and food supply. So far so good. But then he goes on to suggest that the gap is further aggravated "on account of longer life spans". Surely, the element of longevity is subsumed in the growth of population. Still, as I was saying, I am glad that the Press is beginning to take an interest in the population problem.

Trade Winds

TRADE TRENDS

DURING THE quarter April-June 1964, there was a sizable reduction in India's trade deficit which amounted to only Rs. 72 crores as compared to Rs. 130 crores in April-June 1963. While imports decreased, exports registered an improvement as will be seen from the following table:

	(Value Rs. crores)	
	April-June, 1964	April-June, 1963
Imports	272.4	310.2
Exports	200.6	180.2
Balance of Trade	-71.9	-130.0

The main reason for higher exports during this period was heavy buying by East European countries, specially the USSR, which accounted for an increase of Rs. 10 crores. The increase in exports to the U.K. was Rs. 4 crores. The main items accounting for the increase of Rs. 20.4 crores in exports, in this quarter, were jute manufactures (+Rs. 5 crores), cotton textiles (+Rs. 4.6 crores), coffee (+Rs. 2.8 crores), ferro-manganese (+Rs. 2 crores), cashew kernel and tobacco (+Rs. 2 crores each). Due to attractive prices, sugar sales were accelerated to the USA and other destinations (1,50,000 tons of sugar in this quarter). As regards cotton textile fabrics, in the previous year, Pakistan and Hong Kong, our main quota-holding competitors in the UK, were selling fast in the early part of the year, flooding the markets there, and India was, therefore, not able to fully reach its annual quota of 195 million yards. This year the Textile Export Promotion Council changed its licensing system and asked exporters to fulfil quotas early and hence the bulk of the goods earmarked for the UK has been shipped.

On account of scarcity, a ban was imposed on the export of vegetable oils, with effect from July 11, 1964. The exports of these oils in the next two quarters (July to December, 1964) will, therefore, dry up causing a severe decline in earnings on that account. Due to the shortage of sugar, it is expected that only about 25,000 to 30,000 tons of sugar will be released in the next two quarters (July to December, 1964) thus causing a severe decline in earnings from this commodity. As against 5,28,000 tons of sugar exported in 1963-64, releases assured by the Ministry of Food and Agriculture for the current year (1964-65) are only 2,30,000 tons. Textile exports are also expected to show some decline due to the exports to the UK having been shipped earlier.

As regards imports, there was a reduction of Rs. 38 crores during the quarter under review. But this reduction is more apparent than real because imports of cereals alone, which are not fully recorded by the customs, showed a decline of Rs. 20 crores. Imports of miscellaneous manufactured items showed a decline of Rs. 10 crores followed by decline in petroleum and petroleum products (Rs. 8 crores) and in transport equipment (Rs. 7 crores). Part of the decline in these items was offset by increased imports of machinery, components and parts (+Rs. 7 crores), iron and steel (+Rs. 4 crores), non-ferrous metals (+Rs. 3 crores) and fruits and vegetables (+Rs. 2 crores). There was a significant decline in our imports from the USSR, from Rs. 21 crores to Rs. 15 crores. Among the other East European countries, imports from Czechoslovakia were somewhat higher while those from East Germany, Poland and Yugoslavia declined slightly. Among the EEC countries, imports from West Germany increased from nearly Rs. 23 crores to nearly Rs. 26 crores while imports from France were moderately higher. Imports from Belgium, Italy and Netherlands were at a somewhat lower

level. Imports from the UK declined by Rs. 2 crores, from Rs. 46 crores to Rs. 44 crores. Imports from Iran showed a significant decline from Rs. 16 crores to Rs. 7.5 crores, mainly due to the less imports of petroleum and petroleum products. Imports from Japan and the UAR were a little higher. A large part of the decline in imports from the USA from Rs. 102 crores to Rs. 79 crores is accounted for by items like food-grains which are not fully covered in the Custom's returns.

COTTON TEXTILE WAGE BOARD

The Government of India has set up a second wage board for the cotton textile industry to consider the question of a further revision of the wage structure in the industry. While making its recommendations, the wage board shall keep in view (i) the recommendations of the first wage board for the cotton textile industry and Government decisions thereon; (ii) the principles of fair wages as set forth in the report of the Committee on Fair Wages; (iii) the needs of the industry in a developing economy including the need for maintaining and promoting exports; (iv) the various elements of labour costs (excepting bonus) apart from wages; (v) the requirements of social justice; (vi) the need for adjusting wage differentials in such a manner as to provide incentive to workers for advancing their skill; and (vii) the desirability of extending the system of payment by results. In applying the system of payment by results, the board shall keep in view the need for fixing a minimum (fall-back wage) and also for safeguarding against over-work and undue speed. The board shall also consider the demand for the introduction of a gratuity scheme on an industry-wise basis. Mr. K. Bhimasankaram, retired Judge, High Court, Andhra Pradesh, will be the Chairman of the board. The other members on the board will be Mr. Tulsidas S. Jadhav, M.P. and Prof. M. B. Desai (independent members), Mr. D. C. Kothari and Mr. Surottam P. Hutheesing (members representing employers) and Mr. G. Ramanujam and Mr. A. N. Buch (members representing workers). The headquarters of the board will be located at Hyderabad. The correspondence intended for the board is to be addressed to the Chairman, Second Central Wage Board for the Cotton Textile Industry, c/o the Secretary to the Government of Andhra Pradesh, Home (Labour-II) Department, Hyderabad.

INTERNATIONAL STANDARDISATION

The International Organisation for Standardisation (ISO) will hold its sixth triennial General Assembly and group meetings in New Delhi from November 9 to 21, 1964. For the first time the ISO will be holding its General Assembly in the East. The objective of ISO is to promote the development of Standards in the world with a view to facilitating international exchange of goods and services, and to developing mutual co-operation in the sphere of intellectual, scientific, technological and economic activity. Delegates from 50 member countries, including India, are expected to participate in the General Assembly and group meetings. The group meetings will cover such subjects as steel, manganese ore, solid mineral fuels, light metals and their alloys, rubber, agricultural food products, sheet and wire gauges, bolts, nuts and accessories, standard marks and pictorial markings for handling of goods.

U.S. TRADE MISSION

A United States 'Investment and Industrial Development Commission' will visit India early next spring. The Commission will comprise five businessmen in such fields as are of special importance to India's development and two Commerce Department officials who will serve as director and trade de-

velopment officer respectively. The Commission will investigate ways and means by which the US and Indian private firms can prove most helpful in achieving Plan targets. The U.S. team will arrive in New Delhi on February 27, 1965. It will visit Bombay, Madras and Calcutta, returning to New Delhi in time to complete its programme by March 27, 1965. Business information centres will be established in each of the four cities so that the mission members may meet the Indian businessmen interested in the proposals offered by the U.S. firms or in presenting business offers of their own. Meetings will also be arranged with the State investment and industrial development organisations as well as with Indian trade groups and chambers of commerce. Plant visits will be arranged for discussions with company managements their plans for expansion, modernization and diversification. The five business men to be chosen for the mission are expected to be from such fields as chemicals, plastics and synthetic fibres; machine tools; fabricated metal products; materials handling machinery and equipment; and printing machinery.

RICE MILLING MACHINERY

The Union Minister for Food and Agriculture, Mr. C. Subramaniam, has assured rice mill manufacturers in the country that they will be given full opportunity to fabricate modern rice milling machinery. Recently, while addressing the representatives of the Rice Mill Machinery Manufacturers Association of Bombay, in New Delhi, he said that Government's policy was to give every encouragement to the indigenous industry. He said that Government had planned to import only six modern units from abroad. These units would be worked on a pilot basis to see whether the foreign manufacturers were justified in making their claims with regard to the efficiency of these units. The intention was not to import all the machinery that would be required for the rice processing industry. If the efficiency of the new machinery was proved, the first thing the Government would do would be to find out how much of that machinery could be fabricated within the country itself and to secure only the remaining part from abroad. These imports would also be progressively reduced. About silos, Mr. Subramaniam clarified that the intention was not to import them but to build them within the country itself. Their specifications might however, change in order to bring them in line with modern techniques.

In a memorandum submitted to the Minister, the Association has pointed out that if substantial demands are forthcoming, the Indian manufacturers, with an experience of 40 years, will be able to produce machinery of the type which the Government has in mind for modernising the rice processing industry.

The three-man delegation which went to Italy and Germany, at the instance of the Ministry of Food and Agriculture, to study modern practices in the rice processing industry, has returned to New Delhi. After an inspection of the rice milling equipment at the manufacturer's factories and also in the rice mills, the delegation has come to the conclusion that manufacturers in these countries have made major improvements in rice mills, including storage facilities. These improvements help obtain additional out-turn of rice which is being lost in India due to poor processing and storage facilities. In Italy and Germany, the team found, major scientific improvements in techniques of handling and processing of paddy had been introduced.

FRANCE LIBERALISES IMPORTS

France has liberalised the import of 27 tariff items. Many of these products have been identified by Committee III of the GATT Trade Expansion Programme as being of special export interest to less-developed countries. Among these are:

castor oil, walnuts, chewing gum, frozen fruit, certain fruit juices, carpets and rugs, specified knitted or crocheted fabrics, travelling rugs and blankets, specified ferro-manganese, specified base metals, scissors, certain parts for motor cycles, and gymnasium and athletic equipment.

G.D.R. TREBLES OUTPUT

The total volume of production in the German Democratic Republic trebled between 1950 and 1963 as it rose from 51,000 million marks to 152,000 million marks. The growth of material production in industry was significantly steep and increased more than three times from 32,000 million marks in 1950 to 109,000 million marks in 1963. These figures are contained in the 1964 Statistical Year Book of the German Democratic Republic. These achievements were accomplished essentially by the same number of working people, for the total number of gainfully employed persons in the economy did not rise above that of 1950 by more than 10 per cent in any of the following years. This means that output per man — another name for productivity — held the key to increased output.

N.S.I.C. AND SMALL INDUSTRIES

The National Small Industries Corporation has published a list of 99 industries having scope for development in the small scale sector. The list includes a number of light engineering industries such as hand tools, instruments and electrical appliances. The non-engineering industries in the list include rubber and plastic goods, glass, ceramics and cement products, leather and leather goods, chemicals, paper and paper products and food processing industries. The Corporation has also brought out a comprehensive directory of machines available on hire purchase to the prospective small industrialists. The details of facilities available to small industrialists from the Corporation and the various small industries service institutes and extension centres are outlined in the directory. An account is also given of the various measures taken by the Corporation for the development of ancillaries, industrial co-operatives and small industries in rural areas. An index of machinery suppliers is also given so that those interested in buying machines may refer to the suppliers concerned.

A review of the hire-purchase operations of the Corporation shows that till the end of December, 1963, the Corporation had received nearly fourteen thousand applications for over 61,600 machines valued at Rs. 65.5 crores. Of this, 10,543 applications for the supply of machines valued at about Rs. 40 crores had been accepted by the Corporation. The Corporation has so far supplied machines worth over Rs. 18 crores to some 4,500 small entrepreneurs. In terms of production and employment, it has been estimated that the machines supplied by the Corporation will add Rs. 120 crores annually to the national output, with an employment potential of 1,00,000 persons. Another field where the Corporation assists the small industrialists is in securing Government contracts for supply of stores and equipment. Till May, 1964, contracts worth Rs. 70.8 crores had been secured for small industries from the Directorate-General of Supplies and Disposals.

BRITISH INVESTMENTS IN INDIA

According to a recent estimate, direct investments in India by British companies aggregate £256,000,000. India ranks high in the list of sterling area countries benefiting from British investments, and is surpassed only by Australia (£522,000,000) and South Africa (£269,000,000). The total of British private business investments in the sterling area is put at £1,964 million. These figures exclude investments in oil, insurance, and banking.

"Our Typewriters get their superior finish here

"This is the HUMP BACK OVEN. Spray-painted parts are uniformly radiation-heated at controlled temperatures—moving along in a continuous flow. This revolutionary baking process gives Remington Typewriters their superior finish, which won't crack, peel, corrode, stain or catch dust."

The Hump Back Oven and Keshab Chandra Bose who works on it, are just one team of the multitude of men and machines at the Remington Rand typewriter plant. They are all engaged in a constant endeavour to improve the quality of each tool, die and part that goes into the making of your Remington typewriter.

RR/G/157

Over the years people in India have come to expect the standards set by REMINGTON — the highly responsive touch, light positive shift, smooth carriage action and superior styling and finish — which make them so essential to distinctive correspondence.

Company Affairs

INDIAN COPPER CORPORATION

IN SPITE of various problems faced by the Indian Copper Corporation Ltd., it maintained its level of performance and recorded a higher profit of £1.39 million for the year ended December 31, 1963 as against £1.35 million a year before. Mr. S. C. Gladstone, the Chairman of the company, while addressing the annual general meeting referred to various factors that limited its normal functioning. He indicated that the output of copper during the year under review was marginally lower as compared to the previous year's output, mainly due to a shortage of good quality coal. The Coal Controller reduced the quota of Section 'A' coal by 50 per cent and substituted it by inferior quality coal which adversely affected the efficiency of the smelter. Another limiting factor was the Government's restrictions on the sale of brass and copper sheets to the utensil industry, which is the principal traditional consumer. The production of brass sheets and circles was further affected adversely by the high price of zinc, particularly in the US market, which had to be the source because these imports are financed by USAID. The Chairman also made a pointed reference to the delay in obtaining an import licence to procure spare parts for the main compressor required for the mining exploration at Mosaboni. It took eight months to obtain the licence which dislocated the functioning considerably. The compressor, however, was put back into operation in January this year. Mining explorations at Surda and Patharghora mines continued satisfactorily so that the reserves of the company increased by over 2,000 tons, which was considered to be a good progress.

The Chairman indicated that shortage of essential materials such as cement, roofing sheets and steel was responsible for the delay in the construction of the new refinery for the electrolytic plant. Even the suppliers of indigenous plant and machinery could not keep up the delivery dates, mainly due to the dislocation created by the emergency conditions following the Chinese invasion. The company has, however, tried to speed up the process and expected to put this unit into operation towards the end of this year. The company has also been licensed to produce 260 tons of nickel sulphate which will be a by-product of the electrolytic plant. Foreign exchange for the plant has been arranged and final details of the technical know-how are being negotiated. Operations on the plant are likely to start in the first quarter of 1966. The company has also been granted an industrial licence to expand production of copper and to produce sulphuric acid as a by-product. Negotiations for the necessary foreign exchange loans are in progress.

The Chairman added that the present smelter being over 30 years old, it has been proposed to install a new smelter of larger capacity and of a type that would allow the recovery of waste gases in the form of sulphuric acid. Expansion is also proposed in the mining operations at Surda, where new equipment is required to allow for development in depth and also a concentration plant. A new crushing plant is required at Mosaboni mine to deal with the increased capacity. It is expected that after this new equipment has been installed production of copper will be higher at 12,130 tons during the first year of operation of the new smelter and around 12,950 tons during the following year. Sulphuric acid is likely to be produced at the rate of 100 tons a day. The cost of this plant is expected to be around £2.88 million which is planned to be financed by bank overdrafts, foreign loans and a debenture issue.

NIMAR TEXTILES ISSUE

Nimar Textiles Ltd., will enter the capital market on August 28 to raise a sum of Rs. 42 lakhs by the issue of 28,000 equity shares of Rs. 100 each and 14,000 cumulative redeemable preference shares (9.5 per cent) of Rs. 100 each. The subscription list will close on September 10 or earlier at the discretion of the directors, but not before September 1. The company has been incorporated to establish a cotton spinning mill at Khandwa, Madhya Pradesh with an installed capacity of 25,000 spindles for spinning cotton yarn. It has an authorised capital of Rs. three crores made up of 250,000 equity shares of Rs. 100 each and 50,000 redeemable preference shares of Rs. 100 each. Out of the issued capital of Rs. 70 lakhs, 28,000 equity share of Rs. 100 each have already been subscribed by the directors, their friends and associates. The entire present issue has been underwritten by Industrial Finance Corporation of India, Life Insurance Corporation of India, ICICI, Madhya Pradesh Finance Corporation, Oriental Fire and General Insurance Co., Devkarani Nanjee Banking Co. and Mr. L. K. Panday. The total cost of the project is estimated to be around Rs. 197.49 lakhs, out of which Rs. 70 lakhs will be raised by way of capital, Rs. 70 lakhs as a loan from the Industrial Finance Corporation of India, Rs. 12.65 lakhs as unsecured deposit from the managing agents and Rs. 34.84 lakhs by borrowing from banks. The balance of Rs. 10 lakhs will be raised by a further issue before going into full production of the entire complement of 25,000 spindles licensed to the company. Construction has already started and production is expected to begin by July 1965. Machinery worth Rs. 25 lakhs is to be imported from the United States and other countries.

GLASS CARBOYS ISSUE

Glass Carboys and Pressedwares Limited will enter the capital market on August 20 to raise a sum of Rs. 17.50 lakhs by the public issue of 125,000 equity shares of Rs. 10 each and 50,000 redeemable cumulative preference shares (9.5 per cent) of Rs. 10 each. The subscription list will close on August 31 or earlier but not before August 22. It has an authorised capital of Rs. 50 lakhs out of which capital worth Rs. 25 lakhs is issued. 75,000 equity shares of Rs. 10 each have been subscribed by the directors, their associates and friends. It has obtained an industrial licence to set up a unit to manufacture glass carboys and glass pressed ware with an installed capacity of 350 tonnes per month on three shift basis. The unit will be located in the Ambernath Industrial Estate, near Bombay. The entire public issue is underwritten. It will manufacture one and five gallon carboys, glass domes for mercury vapour lamps and glass tiles used in modern building construction. The factory is expected to start around August, 1965.

CENTRAL INDIA MACHINERY SHARES

Sutluj Cotton Mills Ltd., Amritsar, has offered for sale 27,000 cumulative redeemable preference shares (8.57 per cent) of Rs. 100 each fully paid in Central India Machinery Manufacturing Company Ltd., at Rs. 92 per share (excluding dividend for the year ended March 31, 1964). The offer will be open from August 24 to August 28 and this entire offer has been underwritten. Central India Machinery Manufacturing Company Ltd. has an authorised, issued, subscribed and paid up capital of Rs. 1.50 crores. It has three factories, one at Gwalior, one at Bharatpur and one at Bombay. The Gwalior factory manufactures textile machinery, all types of power

looms, high speed cone winding machines and several other types of machines including Sakamoto automatic looms in technical collaboration with Messrs. Enshu Limited of Japan. High speed winding machines and warping machines are manufactured by the company in collaboration with Messrs. Franz Mueller, Maschinenfabrik of West Germany. The factory at Bharatpur is manufacturing rolling stock such as wagons, mine cars and structurals. The Bombay factory manufactures all types of shuttles required for the textile industry. The company is setting up a steel foundry at Birlanagar (Gwalior) which is expected to go into production soon. During the year ended March 31, 1964 it recorded a profit of Rs. 64.39 lakhs and dividend on ordinary shares was paid at the rate of 10 per cent. A sum of Rs. 18.00 lakhs was transferred to general reserve and another sum of Rs. 2.94 lakhs was transferred to development rebate reserve. Provisions for depreciation and taxation were Rs. 21.66 lakhs and Rs. 6.5 lakhs respectively.

AUTOMATION EQUIPMENT

Automation Equipment and Engineering Company is being converted into a public limited company in Bangalore for entering the capital market some time in November with a public offer of Rs. 20 lakhs in equity shares of Rs. 10 each. It will have an authorised capital of Rs. 50 lakhs and an issued capital of Rs. 25 lakhs. The directors and their friends will take up shares of worth Rs. 5 lakhs. The company proposes to manufacture remote control automation electronic equipment, flow control equipment, material handling equipment and other automation equipment with an annual turnover of nearly Rs. 1.15 crores when the plant achieves full capacity. It will be situated near Bangalore where building work is expected to commence in the next two months. The capital outlay on the project is estimated at Rs. 34 lakhs to be met by the issue of capital to the extent of Rs. 25 lakhs and credits to the extent of Rs. 9 lakhs. Foreign collaboration agreement is expected to be concluded soon.

INDIAN DYESTUFF ISSUE

The directors of the Indian Dyestuff Industries Ltd., propose to issue 15,000 ordinary shares to the existing ordinary shareholders in the ratio of one right share for every 14 shares held. These shares were originally reserved for the company's collaborators ACNA of Italy who have informed the company that they will not take up the shares. The proposed rights shares will not be entitled to dividend for the year ended March 31, 1964, but will rank for dividend for the next accounting period onwards.

The directors have decided to maintain the dividend on the ordinary shares at 7 per cent, subject to tax, for the year ended March 31, 1964. The gross profit has amounted to Rs. 43.80 lakhs against Rs. 52.18 lakhs. Provision for depreciation was Rs. 32.76 lakhs, for development rebate Rs. 9.97 lakhs, and the proposed equity dividend Rs. 14.63 lakhs. There is no provision for taxation. The directors have transferred from general reserve Rs. 10.83 lakhs and from development rebate reserve Rs. 6.59 lakhs. Sales have increased from Rs. 2.39 crores to Rs. 2.58 crores.

I.D.C.O.'s CEMENT PLANT

Considerable progress has been reported about the cement plant being erected for the Industrial Development Corporation of Orissa Limited, at Bargarh, Sambalpur. The K.C.P. Limited, Madras, have entered into an agreement for the supply and erection of this 1,200 tonnes per day cement plant. Nearly two-thirds of the machinery and equipment are of indigenous origin and the balance is being imported from France. About

1,100 tonnes of imported machinery and equipment landed in Madras Harbour last week. The fabrication of the balance of the indigenous machinery is being taken up at the workshop of the K.C.P. Ltd., in Madras. The factory at Bargarh is expected to go into production by the end of 1965. This is the first instance for an Indian manufacturer to accept a turn-key job of engineering, supply of machinery, erection and commissioning of a cement plant of such capacity.

ORIENT PAPER

The Orient Paper Mills Limited has made a slightly lower net profit for the year ended March 31, 1964. The directors have proposed to maintain the dividend on the ordinary shares at Rs. 2 a share, less tax, subject to audit. The net profit, after providing Rs. 50.40 lakhs for depreciation, Rs. 75,000 for development rebate reserve, Rs. 47 lakhs for taxation, Rs. 25 lakhs for general reserve and taking into account Rs. 93,475 being the balance brought forward from the preceding year, is Rs. 51.77 lakhs against Rs. 51.84 lakhs in 1962-63.

USHA FORGINGS

Usha Forgings and Stampings Ltd., a new company set up for the manufacture of hand tools, will enter the capital market sometime in October to raise Rs. 12.73 lakhs. The authorised capital is Rs. one crore divided into 800,000 equity shares of Rs. 10 each and 20,000 cumulative redeemable preference shares (9.3 per cent) of Rs. 100 each. The issued capital will be Rs. 20 lakhs composed of 1,42,500 equity shares and 5,750 preference shares. Of this issue, the promoters, directors and their friends have already subscribed for 72,675 equity shares for cash at par. The balance of 69,825 equity shares and 5,750 preference shares will be offered for public subscription.

The company has entered into a technical collaboration agreement with Technoexport, Praha, Czechoslovakia, an important supplier of industrial plant. The collaborators will supply the required machinery and equipment, including production tools and spare parts, and provide technical assistance including erection and supervision of plant.

TWA's PROGRESS

Trans World Airlines recorded a peak level of earnings during the six months of the current year. The net profit for the first six months of 1964, according to President Charles C. Tillinghast, Jr. was \$11.1 million, operating revenue for the second quarter of this year was \$147.16 million, 22.3 per cent more than the corresponding period of the last year. Expenses for the same period came to around \$122.75 million, an increase of 7.8 per cent. It shows apparently a higher profitability. The President of the company indicated that nearly 54 per cent of the earnings this year resulted from the operations within the United States which showed a loss during the same period last year. TWA operated 30.4 per cent more revenue passenger miles, carrying 20.9 per cent more passengers during the quarter compared with the second quarter of last year. It also recorded a 26.9 per cent increase in air cargo during this period.

EVEREST REFRIGERANTS ISSUE

Everest Refrigerants Ltd., a company formed with the main object of manufacturing fluorochloromethane gas like freon and other chemicals, will enter the capital market on August 24 to offer for public subscription 190,000 equity shares of Rs. 10 each and 6,000 cumulative redeemable preference shares (9.3 per cent) of Rs. 100 each. The list will close on August 29 or earlier but not before August 27. The directors and their friends have already taken 190,000 equity shares and

6,000 preference shares. Foreign collaborators, Technical Enterprises Inc. New York, USA, have also agreed to take 100,000 equity shares. The factory will be located at Andheri, near Bombay. The project is to be financed from a share capital of Rs. 60 lakhs and a loan of Rs. 60 lakhs approved by the United States of America acting through the AID (Cooley Fund). Import licences for capital goods have been obtained and a letter of credit has been opened. Shipments of capital goods have commenced. The factory building is expected to be completed by February next. The Government of India has approved the collaboration scheme and made available a loan of Rs. 27.5 lakhs from DLF to meet the bulk of the foreign exchange requirement. The balance will be met by the collaborators in the form of subscription to the equity capital of Rs. 10 lakhs. The project is essentially for the manufacture of new items which are not being manufactured in India.

INDIA STEAMSHIP

The directors of the India Steamship Company Limited have not recommended any dividend on the ordinary shares for the fourth year in succession. The last dividend was rupee one a share, which was paid for the year ended March 31, 1960. The directors have, however, recommended Rs. 6.50 a share, less tax, on the preference shares. The annual general meeting will be held on September 24.

CAPITAL ISSUES

Seven companies, including 4 Central Government undertakings, have been authorised to raise fresh capital aggregating Rs. 17.74 crores. Of these, one company is issuing bonus shares, four are issuing equity shares and two equities plus preference shares. Two companies involve foreign collaboration. One of them is offering part of its shares to the public by prospectus. The consent of the Controller of Capital Issues is valid for 12 months in all cases excepting one where it is valid only up to April 7, 1965.

Heavy Electricals (India) Limited, Bhopal, a Government of India undertaking, will be issuing further capital of Rs. 9 crores divided into 90,000 equity shares of Rs. 1,000 each for cash at par. The capital will be utilised for civil engineering works, purchase of machinery and plant, training of engineers etc.

Indian Drugs & Pharmaceuticals Limited, a Government of India undertaking, is to issue capital of Rs. 5.20 crores divided into 52,000 equity shares of Rs. 1,000 each to be issued for cash at par. The capital will be utilised for financing the drugs and surgical instruments plants.

Bharat Earth Movers Limited, Bangalore, a Government of India undertaking, is to issue capital of Rs. one crore divided into 10,000 equity shares of Rs. 1,000 each to be subscribed privately for cash at par. The money will be utilised for the manufacture of heavy earth moving equipment and rail coaches.

National Buildings Construction Corporation Limited, Delhi, a Central Government Undertaking, is to issue capital of Rs. 26 lakhs divided into 2600 equity shares of Rs. 1,000 each for cash at par. The capital will be utilised for construction of buildings, roads and other civil works throughout India.

Sandur Manganese & Iron Ores Private Limited, Bangalore, is to issue capital of Rs. 68,47,500 consisting of equity capital of Rs. 52,47,500 and 9.3 per cent preference capital of Rs. 16 lakhs. Equity shares of the value of Rs. 17 lakhs (con-

sisting of Rs. 2 lakhs for consideration other than cash against technical know-how and Rs. 15 lakhs for cash) will be issued to Societe Anonyme D' Applications De Chimie Industrielle and Societe Commerciale De Mines Mineralise and Metaux of Belgium respectively. Out of the above, such number of shares of each kind as would qualify the scrips to be listed on the recognised stock exchanges will be issued to the public by prospectus. The money will be utilised for the manufacture of pig-iron.

Engine Valves Limited Madras, will be issuing further capital of Rs. 32,22,300 (including Rs. 4 lakhs raised under the Exemption Order) divided into 25,000 equity and 7,228 cumulative redeemable preference shares of Rs. 100 each carrying dividend at 9.1 per cent per annum, for cash at par. Out of the issue, equity shares of the value not exceeding Rs. 14 lakhs will be offered to Farnborough Engineering Company Limited, Birmingham, or their parent company against supply of plant and machinery to be imported. The money will be utilized for financing expansion of the manufacture of valves.

Associated Cement Companies Limited, Bombay, which was given consent on April 8, 1964, to the capitalisation of share premium not exceeding Rs. 1,19,21,800 and issue bonus shares has now been permitted to capitalise Rs. 1,27,16,600 from the share premium and issue bonus shares to the existing shareholders. The consent is valid up to April 7, 1965.

Situation Vacant

CAMBRIDGE UNIVERSITY, ENGLAND

SOUTH ASIAN ECONOMICS

The Economics Faculty of Cambridge University wish to appoint an Assistant Lecturer in South Asian Economics. The candidate appointed should be a person who has had direct experience of economic conditions and problems in some regions of South Asia and should possess a degree in economics and be otherwise suitably qualified. The appointment would be for 3 years, with possible extension to a total of 5 years. The appointment would be on the scale £1200 — £1570. Applications (one copy only) giving full details of the candidate's career and the names of three referees should be sent to Posner, Economics Faculty, Sidgwick Avenue, Cambridge, England, as soon as possible and in any case so as to arrive not later than 30th November. The starting date of the appointment would be not earlier than 1st June, 1965, and could be later than that date.

BOOKS BRIEFLY

Art of Planning ?

Economic Strategy and the Third Plan: Indian Statistical Institute; Asia Publishing House; Pp. 132; Price Rs. 11.50.

Reviewed by SATISH C. MEHTA

THE BOOK under review contains a collection of papers contributed mostly by foreign economists who visited the Indian Statistical Institute during 1959-61.

Prof. Galbraith in his paper, "Some Notes on the Rationale of Indian Economic Organisation", written with the objective of provoking discussion, points out 'the lack of progress in working out a rationale of economic institutions' in India — a problem which he regards as most urgent. Indian economic institutions fall into two categories, viz., (i) the private sector, and (ii) the public sector. Undertakings in the public sector are ridden with numerous defects. Concentration of decision-making at the Centre regarding finances, purchasing and personnel are a few of the many drawbacks in existence. These drawbacks give rise to a sense of irresponsibility, on the part of executive and technical personnel, towards the development and efficient running of these undertakings. Keeping in view the problem of finance as the formidable problem of planning in India and the reliance of the government, in the past, on such "uncertain and exiguous sources of domestic savings" as taxes and voluntary savings and aid from abroad, it is imperative for public projects to be run most efficiently so as to provide finance for development by accumulating profit-surpluses. The surpluses, if and when they emerge, must not find their way into schemes of labour-welfare.

Three-fold Division

A discussion of the problem of the organisation of public enterprises calls for a three-fold division of the public sector: (a) Initiation, (b) Operation, Expansion and Financing and (c) Spontaneous Development. Sector (a) is to concern itself exclusively with the establishment of new industrial projects, the decision regarding 'what' and 'where' of such projects being taken at the ministerial level. Sector (b) is to be completely divorced from ministerial control and is to be operated by efficient managers under the supervision of competent authorities constituted into a board. Given a considerable measure of freedom in decision-making, the efficiency is to be determined by profits earned. Prof. Galbraith suggests that 'expansion and operation in this sector should be tied by the financing function'. Establishment of a 'public development bank' will go a long way in facilitating expansion programmes. Sector (c) permeates the entire Indian society and the Community Development programme is a beginning in this direction.

Mr. T. Balogh in his paper, "Notes on Indian Economic Strategy", discusses the importance of the third Plan as a stepping stone towards self-sustained growth. The discussion covers such vital issues as the role of foreign aid, the problem of income distribution, the relationship between economic and social ends, relation between physical and financial planning, the problem of investment and growth, the problem of prices and efficiency, the problem of taxation and finally the relationship between social framework and output and productivity. He demonstrates the 'national' failure of domestic savings to increase — the actual rate of savings being grossly inadequate to sustain a socially tolerable rate of economic growth. Failure to achieve a five per cent rate of growth was the most disappointing aspect of the second Plan.

In India, Mr. Balogh thinks, there is haziness regarding the 'requirements' and 'implications' of planning. Resource-availability is considered in types of finances and the problem of planning is considered in monetary terms alone. This involves short-term budgeting and fixation of lower targets. The adoption of this method of planning is throughout to avoid inflation, secure balance and help stabilise the economy. Mr. Balogh has expressed his doubts as to the correctness of this attitude on the part of Indian planners.

In his paper "An Outline of Financial Policy for the Third Plan" Dr. M. Kalecki insists that a sound financial policy must be based firstly, 'on the correct proportion between the rate of growth of national income and that of the supply of necessities' and secondly, 'on such a policy of taxation which would restrain the consumption of unessentials to the extent that would provide sufficient resources for the financing of investment'. Dr. Kalecki, in his second paper, "Measures to Expedite the Increase in Agricultural Production in the Third Plan", points out the defects in the country's agrarian structure and holds it responsible for retarding economic development.

Transport Policy

In the last paper "Transportation Policy in India" Dr. Louis Lefebvre and Mr. M. Dutta Chaudhuri analyse the transport problems and policy in India and arrive at the following conclusions: (i) for better utilisation of transport capacity during the third Plan the 'nuisance legislation' designed to hinder long-distance transport by road must be repealed; (ii) railway rate-structure must be revised upwards so as to substantially reduce the transport of bulk commodities and thus help in judicious location and adoption of efficient techniques of production in industries by reflecting not the money cost but the real cost of transportation; (iii) railways must charge the Government the full cost of services rendered to it; (iv) average railway rates should be composed of operating expenses, realistic depreciation and capital charges and their level should be such as to equilibrate the demand for and the supply of railway transportation; (v) new investment in railways should only be undertaken if the incremental return equals the current social marginal return of 20 per cent and (vi) in undertaking programmes of investment in other means of transport than railways 'the present discounted value of each should be compared to its cost'.

The current railway rate-making principle of 'what the traffic can bear' is outdated and has outlived its usefulness in the context of the developing economy of India. Railways can re-establish their financial soundness and stability by specialising in the transport of bulk commodities. This involves raising the rates of bulk commodities to lower the total cost of their transportation and physical alterations in the railway plant to shorten the time in transit, minimise the handling requirements and thus lower the cost of bulk transportation.

The reader will come across repetitive arguments and suggested measures for resolving the problems of development. This, however, is unavoidable in a compilation like the one under review. Incidentally, this indicates unanimity of opinion generally on the part of participants on some of the vital problems of planning in India.

Readers' Roundtable

POPULATION CONTROL

Sir, — I have read your editorial comments entitled "Mehta, Malthus and Dr. Rao", published in your issue of July 31, 1964, with great care and am not quite sure that the substance of Dr. V. K. R. V. Rao's arguments has been correctly appreciated by you. His position was that sterilization is not likely to make the impact on birth rate which is claimed for it because the target of even 2.5 million vasectomy operations per year would be hard to achieve. It seems you disagree with Dr Rao on this basic issue. I for one would very much appreciate if you would substantiate your position.

The highest figure of vasectomies per year on record in India is 1.2 lakhs only; and it is unlikely that that performance would improve 20 times. Maharashtra has the best performance in India and even if all the States are able to reach this level of performance, which in itself will be no mean achievement, the number of operations would be 4 to 5 lakhs per year.

I would like, in this connexion, to draw your attention to the findings of S. N. Agarwala ("Economic Weekly", July 4, 1964) which support Dr. Rao's position. Agarwala maintains that even if sterilization operations are performed at the rate of 5 per thousand per year for a period of ten years (1961-1971), this would take out from reproductive group about 28 million females and in the meanwhile 21 million females would have been added to the reproductive group so that on balance only 7 million of the females go out of reproduction. The birth rate would, according to his calculations, decline by only 13 or 14 per cent in a decade as against the claim of 50 per cent made by the supporters of sterilization.

This arithmetic of the situation is quite conclusive. Agarwala further maintains that the cost of sterilization per

prevented pregnancy would be higher than that of condom, respective costs being Rs. 20 and Rs. 16. In fact, his most explosive suggestion is for using intra-uterine devices. This might involve only a very nominal cost — perhaps only a few paise per prevented pregnancy.

In view of the above, I would very much like that you please explain your technical position in this matter; and if you find that you have been unfair to Dr. Rao, to say so. To be candid, few of your readers have appreciated the language used by you for Dr. Rao who commands a great deal of respect throughout the country and abroad for his scholarship, for his services to the cause of economic thinking and research and for setting up two leading institutes of higher research and studies in the field of economics.

D. N. ELHANCE,
(Deptt. of Commerce,
Jodhpur University)

Jodhpur.

[Prof. Elhance's references to the arithmetic or the comparative economics of sterilization are no doubt pertinent to discussions of family planning, but they are not relevant to our criticism of Dr. V. K. R. V. Rao. If Prof. Elhance would study our comments once again he would find that we were taking exception to Dr. Rao's mode of treatment of a subject of grave significance. It was surely not necessary for Dr. Rao to have dragged in the question of the poor versus the rich while discussing sterilization, and we repeat that his vague mention of some kind of "sociological" or "psychological" menace on threat being present in programmes of sterilization was misleading and could be mischievous. As for the last paragraph of Prof. Elhance's letter, we had no intention of being offensive, but we have no doubt either that this country can do with some candid journalism. — Ed.]

ORISSA GOVERNMENT LOAN, 1976

Issue Price Rs. 99.50 Per Cent
Opens on the 24th August, 1964

Applications for the Loan will be received at

- (a) the Offices of the Reserve Bank of India, Bombay (Fort and Byculla), New Delhi, Madras, Nagpur and Bangalore. (b) the branch of the State Bank of India at Patna, (c) the branch of the State Bank of Hyderabad at Hyderabad, (d) the branches of the State Bank of India located in the State of Orissa, and (e) the Government non-banking Sub-Treasuries in the State.

Full particulars can be obtained at any of the Offices mentioned above.

COMPANY MEETINGS

THE SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LTD.

Registered Office

Power House, Tennur, Tiruchirappalli.

EXTRACT FROM THE SPEECH OF SRI K. A. P. VISVANATHAM, CHAIRMAN, DELIVERED ON THE OCCASION OF THE 24TH ANNUAL GENERAL MEETING OF THE COMPANY HELD ON THE 14TH AUGUST, 1964.

Please allow me to welcome you all to this Twenty-fourth Annual General Meeting of the Company.

We are gathered here today under the gloom cast by the demise of our beloved Shri Jawaharlal Nehru. As one of the architects of our freedom and then as our Prime Minister, from the time the country reached its independent status, he worked hard for improving the economic status of the ordinary individual and to conferring equality to all people. He succeeded in his objectives in no small measure. May we deserve his efforts and sacrifices and continue to work in his footsteps, to achieve his objectives and ideals.

We are fortunate in having in Shri Lal Bahadur Shastri a worthy successor to Nehruji. He has been acclaimed, the world over, as one who would follow Nehruji's footsteps, most sincerely and effectively. I am sure that in his efforts to bring economic happiness at home and world peace and amity all over, he will have the sincere co-operation and goodwill of every citizen of India.

Last year the Balance Sheet and accounts of the Company could not be published on account of the prohibition imposed on the publication of such documents under the Defence of India Rules in 1963. I am glad to state that this prohibition has however been relaxed and hence the accounts of this year have been published. I believe you will share with us the gratification that our Company's affairs progressed very satisfactorily. Though the restrictions imposed under the Emergency have been relaxed, I would like to repeat my assurance to the Government, on behalf of all of you, that this Company's resources and services will be always available to the Government in any emergency.

Now, reverting to the specific affairs of the Company, as I said earlier, the progress all round has been satisfactory. Expansion in both rural and urban areas has been up to the usual budgetted schedules. In spite of our having given up large blocks of the area to the Electricity Board for development, demand for extension in the retained area, for both agricultural and domestic services continues to be heavy.

The Company has decided to invest between 20 to 25 lakhs of rupees every year on such expansion projects, so that over the next 7 to 8 years we can cover the entire area entrusted to us, with electricity services, fully.

We had an almost calamitous power position this year from the beginning of June to the end of July. Due to late decisions taken by the Government on the imposition of restrictions, the mode of power regulation was very unsatisfactory

and caused untold harassment to the rural and urban consumers of domestic power. I would request the officials of the Electricity Board to recognise the fact that the hydro-electric generation in this State is subject to vagaries of monsoon and to therefore take more timely and rational steps in regulating power supply to avoid much unpleasant situations.

I am however glad to say that the abundant, though late, rains, are reported to have filled up the Kundah and Pykara reservoirs and that Mettur, Periar and Papanasam lakes are also receiving a full measure of water supply. This position, I am told, will ensure to us that in the coming summer months we will not be subjected to any anxiety on account of power restrictions.

The effect of this one month's power restrictions (i.e. June-July '64) will probably be reflected to some extent in the next year's account. This year, however, as you would have observed from the Balance Sheet, we have done very well with power sales at over 120 lakhs of rupees and with over 76,000 consumers. With the continually increasing demand for power, I believe this rate of growth will be kept up. Your Directors have recommended the payment of increased dividends on equities at 11 per cent for this year which, I hope will be accepted by you. I also hope the same progress will continue in future.

To achieve this level of expansion and growth, the staff of the Company have contributed their best. I am sure they will every time strive to give their best for the consumers whom they serve.

This leads me to the Managing Agents, Messrs. Seshasayee Brothers (Private) Limited whose Managing Agency will end by 1st April, 1965, and whose request for renewal of their Managing Agency has been commended to you by the Directors. Seshasayees need no further recommendation to you from me. Apart from the exemplary way in which they have managed affairs of this Company, their contribution to industrial expansion in South India is well known to you. I heartily commend their continuance as Managing Agents as per their request. I am sure you will all whole-heartedly support this proposition.

I now move that the Directors Report, Auditors' Report and the Balance Sheet as on 31-3-64 and the Profit and Loss Account for the year ended 31-3-64 be approved and adopted.

Note: This does not purport to be the record of the proceedings of the 24th Annual General Meeting of the Company.

INDIAN COPPER CORPORATION LIMITED

Address Delivered by Mr. S. C. Gladstone, Chairman, at the Annual General Meeting of the Company for the year Ended 31st December, 1963, Held on 12th August, 1964

Gentlemen,

The Report of your Directors and the Accounts for the year ended 31st December, 1963 have been in your hands for several weeks. Fortunately, the restrictions imposed in 1963 by the Government of India under the Defence of India Rules, which prohibited the publication of the Accounts, have now been relaxed.

This is the first time that I have had the privilege of addressing you, but before I begin my review I should like to pay tribute to the late Prime Minister, Pandit Nehru. After leading the freedom movement for many years, he became the first Prime Minister of independent India in August 1947 and for 17 years he never spared himself in the service of the country. He will undoubtedly go down in history as one of India's greatest men.

Your Chairman last year, Mr. J. W. Easson, who left India on retirement in March this year, has been connected with the Company for 29 years and has been your Chairman for the last two years. I am sure that you would all like to join me in wishing him a happy retirement, which has been so well earned.

I will now give you a general review of the affairs of your Company during 1963.

GENERAL REVIEW

During the first nine months of last year there was ample copper to meet world demands and the price remained steady at about £234 per ton. In the last quarter of that year demand began to overtake supply, but it was not until the New Year that prices began to rise. In spite of increased production and sales the price on the London Metal Exchange, which had been steady since June 1961, rose to around £300 per ton where it has since remained.

At the present time production capacity probably just about balances the world demand and but for industrial disputes the price could be expected to recede to between £240 and £250.

The shortage of copper, especially in the U.S.A., has had a most unfortunate effect on your Company in as much as the new Electrolytic Refinery is based on the import of Blister Copper. It was originally intended to import Blister Copper from Africa, but as a result of the foreign exchange shortage the Government of India have only been able to allow us a licence to import from the U.S.A. and at the present time Blister Copper is not available from this source.

WORKING REVIEW

The production of copper in 1963 was 9,582 metric tonnes, a small decrease of 199 tonnes compared to the previous year due to a number of factors such as the deterioration in the quality of coal and operating conditions.

In the middle of 1962, as a result of the acute shortage of good quality coal, the Coal Controller reduced our quota of Selected 'A' coal by 50 per cent and substituted coal of inferior quality for the balance of our requirements. Inevitably this has had a significant effect on the efficiency of your smelter.

Your Company's Rolling Mill produced 9,376 tonnes of Brass Sheets and Circles during 1963 and for this imported Zinc is required. Import licences for Zinc are now based on value and are financed by U.S. AID and thus the high price of this metal in world markets, and particularly in the U.S.A., has resulted in a substantial reduction in the tonnage that can be purchased. The Government of India have also imposed restrictions on the sale of Brass and Copper Sheets to the Utensil Industry, our traditional and principal consumers. The effect of these restrictions began to be felt in the second half of 1963 and the burden this year will be heavier.

Mining exploration at your Surda and Patharghora Mines continued, but a serious breakdown of the main Compressor restricted development work at the Main Mine at Mosaboni. In spite of the most energetic efforts, it took eight months to obtain an import licence and procure spare parts for this machine, during which time all available compressed air was used to maintain production and development was at a standstill. In spite of this, our reserves increased by over 2,000 tonnes, which is satisfactory, and I am pleased to say that the Compressor was put back into operation in January 1964.

Electric supplies were adequate throughout the year, but pig iron and coke for the Foundry and cement were in very short supply. Thanks to a better supply of wagons, despatches showed some improvement resulting in a decrease in stock of finished products.

The financial results of your Company for 1963 were satisfactory considering the rise in prices in the wake of the Emergency. Labour costs and the expenses of mining at greater depths continue to amount; nevertheless, the successful results reflect credit on all concerned.

During the year under review labour relations were generally good and a dispute over the payment of profit sharing bonus was settled in Conciliation proceedings. Towards the end of the year, however, the Unions submitted fresh demands for very substantial increases in wages, which cannot be justified. I regret to report that while negotiations were in progress the Works Union recently called a three-day protest strike to bring pressure to bear in support of their demands. Negotiations are still in progress.

KYANITE

Exports of Kyanite fell from 27,686 tonnes in 1962 to 18,797 tonnes due to competition from synthetics and poor market conditions. The recession in the steel industry abroad in 1962 led to a reduced demand for Kyanite in the following year. At the same time there was a big improvement in the supply of railway wagons to carry the ore from your Mines to the docks, which encouraged your customers to reduce their stocks. This has led to a temporary fall in exports, but I am happy to say that up to the end of July over 13,000 tonnes had been exported and by the end of this month the figure will approach 17,000 tonnes.

ELECTROLYTIC PLANT

When your Directors' Report was written in May this year, it was predicted that the new Refinery would be com-

Agents:

THE ORIENTAL MERCANTILE CO., LTD.

CALCUTTA • BOMBAY • KANPUR • DELHI • MADRAS

pleted in September this year, but I regret to report that there have been further serious delays since that date.

There have been many delays in the construction schedule chiefly due to a shortage of essential materials such as cement, roofing sheets and steel and the failure of most suppliers of indigenous plant to keep to promised delivery dates. Much of this can be traced to the Emergency created by the Chinese invasion in November 1962. There has also been pilferage in the Calcutta Docks. All this is completely outside our control and although everything is being done to speed the work on the final stages of the plant, it is anticipated that production will not commence before the New Year. This will, of course, depend on the supply of Blister Copper to which I have referred earlier.

Your Company has also been licensed to produce 260 tonnes of Nickel Sulphate, which will be a bye-product of the Electrolytic Plant. Foreign exchange has been arranged and the final details of technical know-how are now being negotiated. It is hoped to start production in the first quarter of 1966.

EXPANSION PLANS

Your Company has been granted an Industrial Licence to expand production of copper and to produce Sulphuric Acid as a bye-product and negotiations for foreign exchange loans are far advanced. The present Smelter is now over 30 years old and has for some time been operating at well above its designed capacity. No plant can be expected to remain at peak efficiency after so many years' service. It will, therefore, be necessary to instal a new Smelter of larger capacity and of a type that will allow the recovery of waste gases in the form of Sulphuric Acid.

At Surda new equipment is required to allow for development in depth and also a Concentration Plant. Additional grinding plant is required at our Works and a new Crushing

Plant at your Mosaboni Mine to deal with the increased capacity. It is expected that after this new equipment has been installed, production of copper will rise to 12,130 tonnes during the first year of operation of the new Smelter and to 12,950 tonnes during the second year. Sulphuric Acid will be produced at the rate of 100 tonnes a day.

The total cost of this plant will be £2,875,000, which, it is planned, will be financed by Bank overdrafts, foreign loans and a Debenture Issue.

ACCOUNTS

The profit for the year before providing for Taxation, Depreciation and Reserves amounts to £1,334,875, as compared with a profit in 1962 of £1,351,771. Income Tax and Super Tax on profits, however, amounted to no less than £821,855, partly because of the Bonus Issue in 1963 and the new tax on dividends. Your Directors have decided to place £170,000 to Depreciation and £98,000 to General Reserve. £26,597 is allotted to Development Rebate Reserve and £21,694 to provision for Kyanite Decretal Amount.

There is a balance available of £247,299 and your Directors are recommending that the same amount as last year, i.e. £246,834, equivalent to a Dividend of 12 per cent, subject to tax, on the new capital of the Company should be distributed, leaving a balance of £465 to be carried forward.

STAFF

It remains for me to thank the General Manager, Mr. N. A. B. Hill, and the Staff and Workers, both at the Mines and the Works. I am sure that you would all wish me to thank them for their exertions on your behalf which have led to yet another successful year.

4¾ PER CENT MAHARASHTRA STATE DEVELOPMENT LOAN, 1976.

ISSUE PRICE AT PAR

OPEN ON MONDAY, THE 24TH AUGUST 1964.

The Loan will be closed as soon as the total amount of Rs. 15 crores has been subscribed and in any case not later than the close of business on 29th August 1964.

The applications for the loan will be received at—

- (a) the offices of the Reserve Bank of India, Bangalore, Bombay (Fort & Byculla), Calcutta, Madras, Nagpur and New Delhi,
- (b) the branch of the State Bank of India at Patna,
- (c) the branch of the State Bank of Hyderabad at Hyderabad,
- (d) the branches of the State Bank of Hyderabad conducting Government treasury work within the State of Maharashtra,
- (e) the branches of the State Bank of India within the State of Maharashtra except at Bombay and Nagpur and at places covered by item (d),
- (f) the Government treasuries and Sub-treasuries in the State of Maharashtra at places not covered by items (d) and (e).

Full particulars can be obtained at any of the offices mentioned above.

THIS ANNOUNCEMENT IS NOT A PROSPECTUS.

PERSONS INTERESTED IN FULL DETAILS ARE REQUESTED TO OBTAIN COPIES OF THE PROSPECTUS WHICH ARE AVAILABLE FROM THE COMPANY'S REGISTERED OFFICE AND FROM THE OFFICES OF THE COMPANY'S BANKERS, BROKERS AND UNDERWRITERS

NIMAR TEXTILES LIMITED

(Incorporated as a Public Limited Company on 1st September, 1962, under the Companies Act, 1956)
Registered Office: Sylvester Building, 20, Old Custom House Road, Bombay-1.

PROPOSED ACTIVITIES:

The Company has undertaken the establishment of a cotton spinning mill at Khandwa, Madhya Pradesh with an installed capacity of 25,000 Spindles for spinning cotton yarn.

LOCATION:

The Company has purchased and taken possession of 42.89 acres of free-hold land at Khandwa, Madhya Pradesh.

RECORDS AND STATISTICS

International Liquidity

THE INTERNATIONAL Monetary Fund in its nineteenth annual report stated that there was a case for an increase in members' quotas, and called for an early and detailed examination to decide on the size and timing of a general increase, as well as on the need for special increases for individual countries. This, together with other suggestions designed to enlarge the Fund's potential for making further contributions to international liquidity, were the principal findings of the Fund's study on international liquidity.

The Fund found that in present world economic conditions, the existing general level of international liquidity was broadly satisfactory. It said, however, that the concern of its latest study had been with the prospective adequacy of international liquidity. In this respect, it believed that in a world in which income and trade were expanding rapidly, the need for the type of liquidity provided by the Fund, like the need for liquidity in general, could be expected to grow. The report said that there was some prospect that the growth in the need for international liquidity would outstrip the increase in the supply of liquidity. Reliance on the Fund to assist in filling this gap would have the advantage of increasing the type of liquidity that was associated with the adoption of measures which help to correct balance of payments disequilibria without prejudicing general prosperity.

The past fiscal year was again an active one for the Fund's financial operations. Sales of currency exceeded those in the preceding year, and the amount of stand-by arrangements reached a record level. Purchases from the Fund amounted to the equivalent of \$625.9 million, and the stand-by arrangements agreed during the year amounted to the equivalent of \$2,159.85 million. Of the 27 members which received financial assistance from the Fund during the year, either through direct purchase transactions or in the form of stand-by arrangements, 4 were industrial countries (Italy, Japan, the United Kingdom and the United States) and 23 were non-industrial countries. Italy and the United States accounted for more than 55 per cent of the total purchases, and Japan, the United States and the United Kingdom for more than 83 per cent of the total available under stand-by arrangements. Fifteen of the members receiving assistance were in the Western Hemisphere, 4 in Asia, 2 in Africa, and 2 in the Middle East.

Sharp Improvement

The Fund said that the pattern of international transactions that had evolved during 1963 had resulted in a substantial increase in international liquidity. Total official reserves of all countries, which had increased by \$1 billion during 1962, rose by about \$3.4 billion, or more than in any other post-war year. A major factor had been a sharp improvement in the balance of payments position of the primary producing countries as a whole. Since these countries generally kept a high proportion of their international reserves in foreign exchange, their \$1.6 billion over-all balance of payments surplus in 1963 had brought about a nearly equivalent increase in their sterling and dollar holdings. Another factor had been a greater increase in world monetary gold holdings than in any post-war year. Both production and Soviet gold sales had increased, and there had been less hoarding than in 1962, which itself reflected increased confidence in the international monetary system.

The relative calm in foreign exchange markets during the

past year, combined with a further substantial increase in reserves, had created a favourable background for the studies of international liquidity that had been conducted both at the Fund and in the group set up by the ten participants in the General Arrangements to Borrow. These conditions had permitted the problems to be thoroughly explored without the urgency which would otherwise have stemmed from a need for early action.

The Fund said that the subject of international liquidity had taken a prominent and continuous place in its work and recalled that a comprehensive staff study undertaken in 1958 had had great weight in the discussions which preceded the last general quota increase in 1959. The present study emphasized that the adequacy of international liquidity had to be judged not only in the context of world economic conditions, but also in conjunction with the process of adjusting payments disequilibria and in relation to the type of national economic and financial behaviour that it was desired to encourage or discourage.

Liberalising Trade

The Fund said that liquidity considerations should not inhibit industrialized countries from pursuing policies designed to liberalize trade, augment capital flows and developmental aid, and achieve full employment. Developing countries, faced as they were with large import needs relative to their export incomes and reserves, would also have a rising need for liquidity in order to be able to avert undue disturbance to their development programmes because of temporary or unexpected balance of payments difficulties.

The Fund noted that the promotion of high employment and economic growth, and the maintenance of stability, were economic objectives common for all countries. These objectives, however, had to be pursued in an international setting, which implied that countries had to keep their international payments in approximate balance over the average of a period of years. Unless adequate weight were given to balance of payments considerations in national economic policies, it would be difficult for countries to achieve their domestic goals while maintaining effective par values and avoiding undesirable payments restrictions, as provided for in the Articles of Agreement of the International Monetary Fund.

Since the end of the war, the international financial system — based on reserves in the form of gold and reserve currencies, supported by the International Monetary Fund as well as by certain other credit arrangements — had permitted a signal expansion of the world economy and of international trade. This had made it possible to restore the convertibility of the main currencies, and to cope with difficult situations which had affected certain currencies. At the same time, the system has allowed a relatively high level of employment to be maintained.

The Fund pointed out that the accumulation of dollar balances had made an important contribution to the over-all supply of international liquidity since the war. In the period ahead, however, foreign exchange reserves, arising mainly from US payments deficits, were unlikely to contribute to reserves on anything like the same scale. In these circumstances, the Fund said, it would seem both desirable and timely to enter upon a broad exploration of the possible ways to meet any inadequacies in the supply of international liquidity to which the present system might otherwise give rise and to

offset any undesirable fluctuations in it. The financial system had already been adapted to changing requirements, and in considering further changes that may be appropriate, the substantial benefits that the system had brought should be kept in mind. In looking ahead, it was also important that the characteristic advantages of the multilateral institutional approach should not be lost to view.

If it were considered that the international monetary system was moving into an era in which the supply of unconditional liquidity was tending to fall short of the need for it, there were various possible ways that the Fund might enhance its contribution to the supply of international liquidity of a more or less unconditional kind. One approach would be to make members' access to some portion of the credit tranches more assured than it was at present. Another possibility, which was closely connected with the Fund's gold policy, would be to substitute for a portion of the gold subscriptions to the Fund an alternative method of payment (e.g., by means of gold certificates). A third approach, which could take various forms, might be the purchase by the Fund of assets for the purpose of increasing the international liquidity of its members. Such investments, whatever their precise form, could be undertaken on the initiative of the Fund for response to particular balance of payments needs. The additional resources that would be needed by the Fund for these operations could be provided through increased subscriptions or through borrowing arrangements, such as negotiated lines of credit or "deposits."

Even Progress

Reviewing world economic trends, the Fund said that the past year had been marked by progress shared more evenly than for a long time among the different parts of the world. The rise in output in the industrial countries had been generally more rapid than during 1962, and the trend in production, which had been hesitant in several key countries in late 1962 and early 1963, had been clearly upward a year later. The Fund noted, however, that although all the manufacturing countries faced a broadly similar rate of expansion in their export markets from 1962 to 1963, there were wide variations in the growth of their exports. A particularly encouraging aspect was that the primary producing countries participated in the general economic improvement through an unusually large rise in their export earnings.

The Fund said that the general rise in output in the industrial countries had been accompanied by a large expansion

in world trade than had been experienced for some years, and the value of exports of the primary producing countries had risen in line with world trade, i.e. by about 9 per cent. The increased export earnings of the primary producing countries had been about equally attributable to the strong expansion in the volume of world trade that had accompanied the rise in output of the industrial countries and to the higher level of primary commodity prices. After declining or remaining low for several years, these prices rose markedly in 1963 and by early 1964 had almost returned to their level prior to the general downturn that began in 1957.

Largely as a result of the rise in their export earnings, together with some increase in foreign aid, the balance of payments of the less industrialized primary producing countries as a group improved by about \$1.5 billion, changing from a deficit into a surplus. Thus, the Fund said, was perhaps the most helpful development in international transactions in 1963. In addition, however, there was some evidence of a tendency toward a reduction in imbalances among the industrial countries, even though new situations of external disequilibrium arose in the course of the year. Thus, the balance of payments deficit of the United States, which had continued to run at a high rate in the first half of the year, fell sharply in the second half of 1963, and reached an approximate balance in the first quarter of 1964. Although the improvement was in part due to transitory factors, some basic influences were also at work. Three years of sustained growth of the US economy under conditions of price stability, in combination with rising costs and falling profit margins in many of the other industrial countries, had tended to make foreign investments relatively less attractive than domestic investments, while recent trade developments appeared to indicate an improvement in the international competitiveness of the United States.

In the United Kingdom, the balance of payments remained in surplus on current account throughout 1963. There was, however, some deterioration of the current balance in the course of the year, in part related to a rebuilding of inventories under the impact of rising activity and rising import prices. After the third quarter of 1963, an appreciable overall deficit developed which was financed mainly by an accumulation of sterling balances rather than by a decline in reserves.

In Japan, also, the very high rate of economic expansion

had put some strains on the balance of payments; however, in part because the Japanese authorities had taken action earlier than on similar occasions in the past because of the boom from getting out of hand, and in part because of the high degree of prosperity in Japan's main markets, the balance of payments deficit on current account that had developed was smaller than the inflow of capital.

In Continental Europe, the Fund noted that balance of payments developments had shown conflicting tendencies. The over-all surplus of the area as a whole had been largely unchanged from 1962 to 1963, remaining at about \$2 billion, but it had been lower in the second half of 1963 than in the same period of 1962, with signs of a further decline in early 1964. There was, moreover, a reduction of \$0.8 billion from 1962 to 1963 in the area's surplus on current account, which was thereby brought into approximate equilibrium. These developments had been the product of marked changes in the positions of individual countries. A large German surplus re-emerged progressively in the course of 1963, mainly reflecting rising demand pressures in the rest of the Common Market area. Such pressures were particularly strong in Italy where, after several years of substantial surplus, a large balance of payments deficit on current account had been accompanied by an outflow of capital. Late in 1963, strong demand pressures in France also caused a sizable reduction in the large and hitherto persistent French balance of payments surplus. Since mid-1963 both Italy and France had adopted measures aimed at restoring stability, and more recently attention had been given by the Common Market countries to the problem of inflation in the area as a whole. These efforts, the Fund said, should help to reduce imbalances within the area and, although they may also slow down progress toward solving the problem of the area's surplus position with the rest of the world, it was apparent by early 1964 that this latter problem had in any case come much nearer to its solution.

Disequilibrium Reduced

The Fund said that the major disequilibrium between the United States and the continent of Europe that had disturbed international payment relationships for several years had been sharply reduced, without contractionary action in the major deficit country that might have had harmful repercussions in many parts of the world. The international monetary system had been able to meet the challenges to which it had been exposed with a more effective and intimate co-operation in monetary matters than at any time in history. Nevertheless, even after three years of expansion, unemployment in the United States still remained at a relatively high level, and the sharp rise in prices and costs in those countries which were or had recently been in surplus had created new problems of internal and external balance.

The existing rigidities of price systems and cost structures had made it difficult for price reductions in deficit countries to play a major role in the adjustment of payment positions, and much of the adjustment in relative costs and prices had occurred through increases in the surplus countries. Once set in motion, an upward movement of prices and wages could continue after the international imbalance that they had helped to correct had been eliminated. However, the recent sharp increases in costs and prices had not been merely the effect of "imported inflation," but had also been a reflection of other factors, such as the pressures within some countries for a redistribution of income shares or pressures which had accompanied the success of the continental countries in meeting their targets of full employment and of achieving a high rate of growth.

Commenting on these developments, the Fund said incomes policies had been given growing consideration as a possible means of mitigating tendencies toward cost inflation

under full employment. Such policies, the Fund said, seemed likely to be used increasingly to supplement other instruments, although even if they were generally adopted there was no guarantee that they would be most effective in the countries chiefly prone to cost pressures. Nevertheless, an incomes policy could contribute to the adjustment process for balance of payments disequilibria. The role of capital movements in facilitating balance of payments adjustments had also attracted increasing attention, one emphasis being on the possibilities of improving the structure of capital markets in Europe, so as to help correct the existing payments disequilibrium between the United States and continental Europe. The report describes the present limitations of these markets and some of the difficulties which limit their wider use. However, a revival of these markets had been given impetus during the past year by the proposal for an interest equalization tax in the USA, and this had led to some experimentation with new forms of international borrowing in Europe. It must be expected, however, that the United States with a very large part of the world's savings would continue to be the most important supplier of capital to the rest of the world.

Private Capital

The potential role of private capital in assisting more effectively in the process of economic development also needed attention. The flow of private capital to the less developed countries had been discouraged in recent years by a number of factors that had accompanied the slow growth of exports of these countries, including weak payments and reserve positions, intensive use of payment restrictions and inflationary developments in many countries. The new rise and higher level of prices for primary products, if they proved to be more than temporary, should improve investment opportunities in the less developed countries and also encourage the inflow of foreign capital where the climate for foreign investment was favourable. The Fund stated, however, that a substantial flow of private capital to some of the less developed countries would require a willingness on the part of both investors and developing countries to adopt new attitudes. It believed that the larger part of the inflow of foreign finance into the less developed countries would continue to take the form of bilateral and multilateral aid, the net flow of which in 1963 had made up about four-fifths of the total inflow of foreign financial resources. Much of official loans and aid continued to be tied in the country providing them, but in order that these resources could be utilised as effectively as possible, this limitation should not be resorted to unless there were compelling justifications for doing so.

The Fund had continued to maintain a special interest in the problems of the developing countries. In addition to providing financial support to countries in balance of payments difficulties, during the year it had recruited staff to provide technical assistance in two fields which were of special importance to many of the developing countries. A new Fiscal Affairs Department would provide technical assistance on tax systems, tax administration, budgeting and revenue, and expenditures control, while the establishment of a Central Banking Advisory Service would assist those members that were planning to organise new central banks or to improve and strengthen existing institutions.

MORE ALUMINIUM for the industry

HINDALCO

The Rs. 200 million Birla-Kaiser Aluminium Project has, since December, 1962, attained the present target capacity of 20,000 tonnes of virgin aluminium per annum. HINDALCO products now include commercial grade ingots, electric conductor grade ingots, high purity ingots, wire-bars, billets and re-draw rods of a very high quality. Fabrication facilities to manufacture sheets, plates, circles, and extrusions are being undertaken, to keep the fast growing national industries on their march to progress and prosperity.

Good Sense from Gur

AMONG THE sweet uses of adversity, according to Shakespeare, is finding "tongues in trees, books in running brooks, sermons in stones, and good sense in everything." Hard-pressed as the Government of India is, we do hope that it will be able to draw good sense, for instance, from gur. This rather lowly article of household consumption has a remarkable history of always being able to cock a snook at the Government's attempts to control it. Until very recently it was playing a game of hide-and-seek with the authorities, the latter being left, of course, to do the seeking. One of the controls put on gur was restrictions on inter-State movement. The theory backing this regulation was that unless the commercial movement of gur from the producing to the consuming areas was regulated, there would be speculation or profiteering in the commodity in the producing areas resulting in high prices and, consequently, undue diversion of cane from the manufacture of sugar to the manufacture of gur. In practice, all that the restriction on inter-State movements succeeded in achieving was that it forced the gur trade to bribe its way across State borders.

This led to the foreseeable result that the consumer had not only to go to the blackmarket if he wanted gur, but he also had to pay very high prices, part of which went towards covering traders' expenses in bribing police and civil supply officials of more than one State. Naturally there was vigorous protest in the deficit consuming areas and the Central Ministry of Food and Agriculture had at last to withdraw the movement restrictions, which it did on July 27. Since then gur has reappeared in retail shops and is generally available at or about authorized prices. A difficult supply position thus changed for the better almost overnight. This was surely not because the production of gur had suddenly shot up. All that had happened was that the artificial barriers clogging commercial channels were withdrawn.

We have no doubt in our mind that there are many other articles besides gur which could benefit from the Government drawing the moral of the story. There is a curious notion prevalent these days that the best way of dealing with imbalance between supply and demand is to prevent the trade from doing its job. The shallowness of this notion has been shown up every time the Government has attempted to badger or bully normal commerce. In October last year, the Finance Minister, concerned over the slowing down of economic activity, came to the right conclusion that excessive and ineffective controls benefited nobody and certainly not the consumer. He, in fact, announced the abolition of price controls on a few commodities and indicated that what he had done then was only a first instalment. Unfortunately, there has been no further progress in that direction since then. On the contrary, thanks to some rise in the price of foodgrains and other essential commodities, a powerful sentiment in favour of controls seems to be sweeping over the authorities. A government which panics is a burden to itself and a nuisance to the community. Now that the peak of the hysteria over the food situation seems to have been crossed, we greatly hope that the Government will pull itself together and refuse to be stampeded into short-sighted measures which may do more harm than good. The pressing need of the hour is increased production. This applies to foodgrains of course, but it is nearly as necessary to take measures for achieving increased production in the industrial sector, particularly in the area of consumer goods industries. Perhaps here more than in agriculture an appeal to restraints and regulations could have the most unfortunate results in terms of depressed production or discouragement to expansion of capacities. A specific case is that of cloth. Cement too provides an instance. The public will certainly be better served by positive policies aimed at increased capacity or production than by melodramatic attempts at fixing retail profit margins or regimenting the trade. We would appeal to the Government generally and the Finance Minister in particular to give production its due importance. Prices then will cease to be a problem.

Goodwill, Like Charity

THERE IS no harm in taking at its face value the goodwill mission which will be leaving for Pakistan next week. It is true that its leader, Mr. Jaya Prakash Narayan, has expressed views on the status of Kashmir and, indeed, on other issues involving Indian territory which run counter not only to our government policies but also to our national will and perhaps our national interests. Nevertheless Mr. Jaya Prakash Narayan's idealism has always been apparent while his patriotism has never been in doubt. That he deeply deplores the present state of Indo-Pakistan relations and sincerely desires that the two countries should learn to live in amity as good neighbours is of course obvious. It is equally obvious that co-operation and friendship between India and Pakistan is not simply one man's wish. Mr. Jaya Prakash Narayan's basic sentiments in this respect are certainly widely shared in this country. India and Pakistan have been dangerously drifting apart to the disadvantage of both countries and the individual and family disaster of large numbers of people in either country. It is, therefore, the merest common sense that initiatives for ending this rift should be unreservedly welcomed by enlightened public opinion. The Jaya Prakash Narayan mission, consequently, is entitled to take with it to Pakistan the support of the people of this country.

The mission is sponsored by the Indo-Pakistan Conciliation Group which has for its Chairman Mr. Jaya Prakash Narayan. A press release issued by the Group states that the objects of the mission will be to discuss the present political estrangement between India and Pakistan and offer its services and co-operation for lessening the tension between the two countries at government level as well as at a people-to-people level. The mission will be visiting Pakistan in response to an invitation from President Ayub Khan and on the Indian side, while it is not exactly known to what degree the Government of India is associating itself with the mission, officially or non-officially, it is reasonable to assume that the Government is extending such facilities as are required by the mission for its visit.

The mission, in any case, is essentially a non-official one in the sense that it is a goodwill effort by private citizens who believe that the problem of Indo-Pakistan relations is too important to be left wholly to diplomats. Once it is conceded, as indeed it must be, that the specific political disputes between the two countries could only be negotiated and settled in a changed atmosphere of mutual trust and desire for friendship between the governments and the peoples of the two countries, the part which a mission of the proposed kind could play in preparing the ground becomes significant. A mission of Indian citizens which would seek to create goodwill for India in Pakistan, however,

should naturally have, to begin with, the goodwill of its own countrymen if it is to be of any good. We have suggested that this goodwill should be forthcoming from our people in an abundant measure. The mission's claim to this goodwill has become all the stronger in the light of Mr. Jaya Prakash Narayan's statement that he intends suggesting to President Ayub Khan that Pakistan should agree to keep the Kashmir problem "in abeyance" for at least two years. This should dispose of suspicions aroused in this country by his previous utterances on Kashmir that he and others of his way of thinking are only interested in manoeuvring the Government of India into a position where it would be forced to accept in substance, if not in form, Pakistan's claim to Kashmir. Mr. Jaya Prakash Narayan has now made it clear that he holds no rigid view that India could or should buy the friendship of Pakistan by an immediate surrender of its position in Kashmir. He has thus rejected the role of a broker (honest or otherwise) into which certain persons here and in Pakistan would evidently like to cast him. Thereby he has shown himself to be truly interested in what he says is his interest, viz., a real and enduring friendship between the people of India and Pakistan based on mutual benefit as well as mutual trust. It is, however, easy to see why Mr. Jaya Prakash Narayan's disclosure that he intends to appeal to President Ayub Khan to agree to keep the Kashmir dispute in abeyance should have upset, for instance, Sheikh Abdullah. In the event of Mr. Jaya Prakash Narayan succeeding in his plea, Sheikh Abdullah will automatically lose not only his mission but even his mere meaning. Although he is never tired of asserting that his contention is simply that the future of Kashmir should be decided by the people of Kashmir, it has always been apparent that he is exploiting for his own purposes the situation created by Pakistan's claim to the territory of Kashmir. Sheikh Abdullah has lost no time in advertising his view that President Ayub is most unlikely to listen to Mr. Jaya Prakash Narayan's suggestion. He may be right in his anticipation since his channels of knowledge and information in this matter should certainly be accepted as authentic and adequate. But the impression which the people of this country must have had that Sheikh Abdullah not only believes but is also happy that Mr. Jaya Prakash Narayan will not succeed in his plea to President Ayub is certainly not going to be helpful to him in his self-advertised role of a grand arbiter of Kashmir standing above and apart from the squabbles of the countries and governments of India and Pakistan.

While the reaction of Sheikh Abdullah is thus natural, that of one of Mr. Jaya Prakash Narayan's own associates on the goodwill mission is rather odd. An editorial in *The Hindustan Times* of August 19 has

warned Mr. Jaya Prakash Narayan that he is exposing himself to the risk of not being taken very seriously either in Rawalpindi or Delhi. About Rawalpindi's response, *The Hindustan Times*, like Sheikh Abdullah, is probably right. But we fail to see why New Delhi also should be assumed to be incapable of seeing any virtue in Mr. Jaya Prakash Narayan's suggestion. The Government of India has always taken the stand in the United Nations and elsewhere that the Kashmir dispute is being artificially kept alive by Pakistan and it would certainly be sensible on its part to welcome Mr. Jaya Prakash Narayan's proposal at least as a partial satisfaction. This apart, the special significance of editorial admonition addressed to Mr. Jaya Prakash Narayan by *The Hindustan Times* is that its editor happens to be a member of the goodwill mission which Mr. Jaya Prakash Narayan will be leading to Pakistan. It is, therefore, a fair inference that an important member of the goodwill mission does not agree with its leader in important particulars on how the mission should conduct itself or carry out its assignment. This disagreement is rather unfortunate since it is apt to do damage to the reassuring quality of Mr. Jaya Prakash Narayan's statement of intentions and thereby possibly revive doubts and fears in the minds of the people of this country regarding the attitudes which may be adopted or activities which may be pursued by the mission collectively or its members severally during their visit to and presence in Pakistan.

It is curious that the editorial in *The Hindustan Times* joins issue with Mr. Jaya Prakash Narayan on the same ground as Sheikh Abdullah. Both oppose Mr. Jaya Prakash Narayan's projected move with the argument that President Ayub Khan is not going to listen to him. This seems to us to be strange logic. Some importance should surely be given to the point whether Mr. Jaya Prakash Narayan's suggestion in itself has any merit. His critics seem to want to maintain that a settlement of the Kashmir dispute, presumably to the satisfaction of Pakistan, is a pre-condition of the development of good relations between India and Pakistan. If this indeed is their contention they ought to say clearly and openly what precisely this settlement in their view could be — for, only then this country and its people will be able to decide whether the price that is proposed is worth paying and whether, when it is paid, there will be any goodwill left in this country for Pakistan with which this country could reciprocate the goodwill which it would have purchased from Pakistan. This does not mean that we are cynical about the Kashmir dispute being solved at any time to the mutual satisfaction of India and Pakistan or on the basis of friendship between the two countries. On the contrary, we believe not only that this could be achieved but also that it should be achieved if there is to be any civilized living for the peoples on this sub-continent. But we just do not see why Mr. Jaya Prakash Narayan should be ridiculed at all for suggesting that the two countries

should first manage to come together in mutual friendliness to some extent before they could really hope to be able to discuss Kashmir in a constructive manner. It is partly true that, historically, the Indo-Pakistan confrontation in Kashmir has preceded the accumulated atmosphere of tensions, distrust and antagonisms between India and Pakistan. But it does not necessarily follow that once a settlement — any kind of settlement — is reached between India and Pakistan over Kashmir, a flood of perfect understanding and goodwill will sweep across the frontiers. It is even less true that so long as those tensions and hostile attitudes remain, a mutually acceptable settlement could, in fact, be reached over Kashmir. Mr. Jaya Prakash Narayan, in other words, may not be putting the cart before the horse. It is his critics who do not seem to know which is the horse and which is the cart.

There may however be some substance in the argument that Mr. Jaya Prakash Narayan errs in talking of possibilities of Indo-Pakistan agreement on a common foreign policy or joint defence in advance of a settlement of the dispute over Kashmir. We agree that he is certainly looking too far ahead too soon. At the same time, we would say that even here his thinking is not wholly wide of the mark. Even if the time is not yet for agreement on foreign policy or joint defence it is surely profitable and possible immediately for both to agree on a number of matters allied to foreign policy or defence. Thus, for instance, there could be a gentlemen's agreement between India and Pakistan to refrain from carrying on unseemly propaganda against each other in other countries or international conferences. More positively it ought to be possible for the governments of the two countries to act in consultation with each other or even in association on a number of international issues in which questions relating to their own differences may not be involved. Similarly, in the area of defence, granted that there is a mutual desire for friendship and lessening of tensions, it should be possible for India and Pakistan to agree not to continue the arms race which each has directed against the other. There is, in fact, no reason why the familiar formula of a no-war declaration should not now be revived, accepted and given effect to. It should be even less difficult for the two countries to agree on a mutual guarantee that there would be no indulgence in border incidents of any kind. As a matter of fact, it should be possible for India and Pakistan to go further and redeploy their armed forces or military concentrations in such a way that both will be enabled to share in the impression of an absence of aggressive intentions. These are surely some of the directions in which the goodwill mission might endeavour to explore possibilities of a climate of mutual trust and goodwill being built up between India and Pakistan so that the two countries may gradually but not too slowly come to co-operate with each other on the economic, political and above all, human plane. We

hope that the mission collectively and its members individually will address themselves to these realistic and extremely desirable tasks or to good works of a similar nature rather than be tempted to embark on the hazardous enterprise of discovering and inventing a formula

Diversification of Industry

THE PHENOMENAL increase in the pace of Indian industrial development during the last few years has brought about some significant structural changes. Although the pattern of industrial expansion has not been peculiarly faulty, it has not been very smooth either. Studies have been conducted from time to time to determine the nature of industrial growth so that a clearer picture has emerged of this important field of the economy. A recent addition has been a short study by Dr. Raj K. Nigam, Director of Investigation, Monopolies Inquiry Commission, on the pattern of diversification observed in the Indian industry during the last few years, with special reference to the comparative financial performance of selected companies. The process of diversification has been defined as an increase in the heterogeneity of output from the point of view of the number of markets served by that output. While the subject selected is interesting and meaningful in the context of the expanding dimensions of industrial activity, the method of the study is not sufficiently scientific and comprehensive to present a valid view, even though the conclusions do not appear to be wide of the mark.

The object of the study is essentially to analyse the financial performance of the companies that diversified their activities. Although Dr. Nigam has refrained from discussing in any detail the motivation or justification for such diversification by these companies, he has given briefly the broad reasons which usually led these companies to diversify their activities. While enumerating these various reasons he has missed, perhaps, the most important factor making for diversification in Indian industry. The reasons provided in the study are: (i) The likelihood of greater stability of operations of companies engaged in diverse activities during the periods of recession as against the companies that pursued only unified activity which might be affected acutely during the recession. (ii) It is comparatively easy for the established companies to raise additional capital on attractive terms for new lines. (iii) An established company can utilise surplus funds lying with it or invested in gilt-edged securities. (iv) The existing companies can also utilise their technical and managerial skill. (v) Certain trading companies can be tempted to take up the manufacture of items for which they already maintain marketing machinery. (vi) A company may like to take advantage of the tax laws and reduce its overall tax liability. These factors do explain the process of diversification in any economy, but they do not present a full picture of the process

for India buying Pakistan's friendship with Kashmir. Mr. Jaya Prakash Narayan has been convicted by *The Hindustan Times* of "an alarming ignorance of the facts of life in Pakistan". We submit that ignorance of the facts of life in India is to be deplored no less.

in the Indian industry. In fact Dr. Nigam has failed to mention at all the role played by industrial policy which blocks the expansion in the case of various established industries and allows expansion in the case of certain other industries. No established manufacturer can be expected even to maintain his present level of activity unless he introduces a minimum expansion either by way of improvements in techniques or by entering into new lines of production. Thus an important factor to be considered in the case of companies which diversify their activities is that they do so either for reasons of attractive avenues in new lines or because they feel completely blocked in their own lines for reasons of official policy.

Dr. Nigam has attempted to compare the financial performance of those companies which went in for diversification with those that did not go through this process. The object of the study naturally is to highlight the significance of diversification in terms of profitability. It is quite possible that the present comparison may only reflect the performance of expanding organisations as against those which are comparatively static ones, which obviously is not the aim. There are certain companies that have enough funds for their expansion and instead of investing in their own lines these companies take up new lines of manufacture and are deemed to have gone in for diversification. Therefore, to assess the real impact of diversification on financial performance, a proper comparison should have been between the companies that diversified the activities and those that had nearly equivalent financial surplus for their expansion and invested these funds to expand in their own lines. When we look at the details of the increase in total assets of these companies we find that nine out of 15 companies which diversified their activities recorded an increase in their assets to the extent of more than Rs. 50 crores each between 1955 and 1962. Out of the other 15 companies which did not diversify their activities, there were only five which recorded an increase in their assets beyond Rs. 50 crores each during these years. A selection ought to be made from among the companies which recorded nearly similar increases in their total assets.

Another apparent drawback of the study is the comparatively small sample on the basis of which the author has tried to establish a phenomenon of considerable significance. These 15 companies selected by the author do not cover a sufficient span of diversification in Indian industry, especially when their financial performance has to be studied. Dr. Nigam has tried to

prove an important proposition on the basis of the results of just four cotton companies, four jute companies, three sugar companies, two cement companies and one company each from tea and rayon industries. Moreover the sample is not representative of all the companies that went in for diversification. In fact Dr. Nigam has selected such companies which featured prominently "in the discussions in the economic and financial journals and evoked attention of the public at large". To establish the validity of the conclusions of the study it is necessary that a larger sample is taken which should cover, in the first instance, a broader field of industrial activity, and secondly, a certain minimum percentage of such companies. This will reasonably reduce the element of error in the results.

Another aspect which seems to have been ignored in the study is the time taken by the diversification plans to go through the period of gestation so that normal returns start coming from the additional schemes. This is necessary because unless full returns are taken into consideration, it is quite likely that the financial results may not show the real benefits of diversification. This is again very important because the period of gestation is not uniform for all the industries. Although it is not possible to establish very precisely this period for each industry, some reasonable estimate has to be worked out and provision has to be made for such periods before their results can be considered for such a study.

In spite of the drawbacks mentioned above, this study has revealed certain interesting conclusions. Dr. Nigam has compared the growth of total tangible assets, sales, gross profits and net profits in respect of each of the 15 companies that went in for diversification, during their respective pre-diversification years and for 1962. These financial results have been studied in relation to the growth recorded in these financial indicators and compared to their matching non-diversified companies over the corresponding periods. Similarly, a comparative study has also been made of the ratios of gross and net profits to sales and net worth in respect of the two sets of companies.

The study reveals that sales of 11 of the 15 diversified companies recorded a larger increase than those of the non-diversified companies. The figures of net profits show greater increase in 9 out of 15 diversified cases as compared to the increase registered by the corresponding non-diversified companies. One reason for the comparatively less brilliant results in respect of their net profits as compared to their sales is that the diversified companies which have not yet completely commissioned their plants to their full production capacity incur heavy overhead expenses which consequently reduce the quantum of gross and net profits. Another factor which may be mentioned in this connection is that depreciation in absolute terms is usually higher in respect of the newly acquired plant and machinery as against that of the non-diversified machinery where written-down value would have already declined substantially.

Broadly, however, this discloses that the diversified companies have an edge over the non-diversified companies in the matter of improving their sales and profitability. This conclusion is also borne out by a study of the ratio of net profits to sales and net worth. In the case of diversified companies, the ratio of net profits to sales showed improvement in four cases over the period whereas the ratio of net profits to net worth was found to be better in nine cases over the same period. A study of the non-diversified companies shows that the ratio of net profits to sales improved in three cases and that of net profits to net worth was seen to have improved in six cases.

To make the study more scientific a set of correlations could be worked out. For instance, if the companies which go in for diversification show better results, there should be a positive correlation between the increment in capital investment for diversification and additional returns. The coefficients of this correlation would naturally be different from the ones that would be obtained if correlation was tried between the increment in capital investment for expansion in the same line and the additional returns. Only a difference in coefficients of correlation in these two series will provide conclusive evidence in favour of diversification.

Eastern Economist 20 Years Ago

AUGUST 25, 1944

THE WAR has crippled the lending capacity of Britain for at least two decades, unless it be that she is going to effect a second industrial revolution immediately which will put her on very superior levels of efficiency over the rest of the world, and this is highly improbable. The suggestion that British industrialists look forward to foreign investment after the war, e.g., Sir Firoz Khan's message for a fifty-fifty participation in Indian industries, reflects the investing capacity of individual industrialists who have made their pile during war rather than the nation's capacity for overseas investment. Otherwise the refusal of those very same industrialists to admit Britain's capacity for releasing India's blocked sterling assets becomes difficult to understand. In any case, the private fortunes of individual industrialists available for overseas investment cannot and will not alter the broken British balance of payments to the point of rendering possible foreign investment or removing the control over capital movements.

Ruling out Britain, there is no country on the Continent which can undertake foreign investment. On the contrary, the war-ravaged countries of Europe will stand in urgent need of immense volumes of capital. This applies to Russia as well for, say, a decade.

Thus the pre-eminent creditor status of the U.S.A. is unchallenged. But what will the U.S.A. do? It is now admitted by American statesmen themselves that the irregular dollar supply to the rest of the world arising from the high tariffs and irregular lending of the U.S.A. as well as the violent fluctuations in her national income has thrown the world's economy and balance of payments out of gear and that greater import and lending by her are essential to world's as well as her own trade and employment.

Highlights of the Week

ECONOMY IN EXPENDITURE

IN RECENT weeks, the Prime Minister, Mr. Lal Bahadur, has written to his cabinet colleagues and the State Chief Ministers in regard to the urgent problem of rising prices and reducing the current level of Government expenditure. He has propounded the view that there is need for effecting economy in expenditure without hampering the tempo of production. This objective can be attained, in his view, by not embarking upon some of the less urgent projects. He has indicated that expenditure on construction should be pruned, whether it is included within the Plan or not.

In a communication to the Prime Minister Mr. Bhupesh Gupta, Communist Member of Rajya Sabha, characterised the decision to postpone certain projects as "utterly defeatist and wrong approach." Mr. Gupta made a specific reference to the heavy industries, saying that the Prime Minister had recommended postponement and pruning of vital Plan projects which, in his view, was not in the interest of the common man. Mr. Gupta saw no contradiction at all between the heavy, nation building projects and the promotion of the well-being of the masses in the matter of food, shelter, medical facilities etc. In his reply to Mr. Gupta, the Prime Minister reiterated that he had asked his cabinet colleagues to make sizable cuts in Government expenditure and had also given illustrations of the type of projects where economy could be achieved without having any unfavourable impact on the growth of the economy. He further stated that it was in this context that he had drawn attention to the possibility of postponing some of the projects in the field of heavy industries which had not yet been started. Relevant excerpts from Mr. Lal Bahadur's letter to Mr. Bhupesh Gupta are reproduced below:

"The first point which I should like to clarify is that it is not my view that there is a contradiction between the setting up of heavy industries and the promotion of well-being of the masses. But clearly, there has to be some kind of a balance between outlays on heavy industries and outlays on measures which bring immediate benefit to the common man. It is the task of the Planning Commission to study this problem in all its intricacies when formulating the fourth Plan and it is only after the Planning Commission has gone into this difficult question, with all the care that it needs, that the time would come for me and the Government to take a definite view on this.

"The point to which I had drawn the attention of my colleagues was a much simpler one. It is, in my view, necessary to make sizable cuts in Government expenditure, both at the Centre and at the States. To achieve such economies, we must examine the possibilities everywhere and I had advised all my colleagues to extend their fullest co-operation to the Finance Minister and the Deputy Chairman, Planning Commission in effecting such economies. I had given various illustrations of the type of things where economy could be achieved without any serious repercussions of an undesirable kind and it is in this context that I had drawn attention to the possibility of postponing some of the projects in the field of heavy industries which have not yet been started. From what little I know of what is happening today, it seems to me that the many shortages which exist, of cement, steel, foreign exchange availability for the import of machinery and the like, act as limiting factors in the development of heavy industries. I definitely consider that it would be wise not to dissipate our resources by starting too many fresh projects at this stage and instead to concentrate available resources on the speedy completion of the projects already under construc-

tion. Such a policy, I feel, will accelerate rather than retard the development of heavy industries in the country — a development which has to be assessed not in terms of the number of foundation-stones laid but in terms of output derived.

"The other point where I feel you have misunderstood what I had said was in regard to return on investments already made. My reference was to the return on investment made in the public sector which I feel is low either because the projects have not been completed in time or because they do not attain full production according to target. You have referred to the "exploiting elements" which to my mind have no real relevance to the question of returns on public sector investments which I had referred to."

ONCE BITTEN, TWICE SHY

PARADOXICALLY, WHILE Congressmen pledge all support to the eradication of corruption, they feel somewhat jittery at the mention of the word 'corruption' which seems to be getting more and more currency. They are perhaps justified. Having been bitten twice — once by the Das Commission report, and more recently by the Madhya Pradesh High Court strictures passed against Mr. K. L. Khadiwala who, as a sequel, had to relinquish the Chairmanship of the Madhya Pradesh Congress Committee — there is no wonder if they are four times shy. An indication of such a disposition was amply had last week both at the Congress Working Committee meeting and at a session of the Union Cabinet. The Congress Working Committee digressed from its agenda to discuss the "status" of the Samyukta Sadachar Samiti. The back-drop to this discussion was provided by the correspondence exchanged on the subject between Mr. Gu'zarilal Nanda, Chairman of the Samiti, and Mr. Atulya Ghosh, the West Bengal Congress Chief. Mr. Ghosh was prompted to write to Mr. Nanda when it was brought to his notice that a section of the Congressmen was opposing the Samiti's activities. While the Prime Minister did not take part in the discussions, the Congress President, Mr. Kamaraj, stated that the Party had nothing to do with the Samiti, although it had all sympathy for agencies engaged in anti-corruption activities. Mr. Nanda, however, explained that the Samiti represented the non-official, non-party forum for the crusade against corruption. The Congress Working Committee was more in a mood to 'disown' the Samiti than to 'own' it, it did neither. The future of the Samiti has now been left to the Congress Parliamentary Board, which will be meeting shortly to consider the recommendations of the Santhanam Committee on combating corruption.

Perhaps more than anything else, the Congressmen dread the Santhanam Committee recommendations. At the meeting of the Union Cabinet, which discussed the Santhanam Committee report, the recommendation to be assailed volently was the one which demanded an enquiry by a panel in case of a complaint by ten legislators against a person in high position. The recommendations of the report are likely to undergo drastic changes before final acceptance by the Government.

Some progress has been made both at the official and the non-official levels in regard to positive measures in specific cases. A panel of lawyers, appointed by the Congress Party some time back to go into the corruption charges against the Chief Minister of Orissa and his colleagues, has finalised its report. Meanwhile, a five-man Cabinet sub-committee has been set up to consider these charges. At the Government level, the Central Vigilance Commission is being fully geared to the task of combating corruption in administration. The Ministry of Works, Housing and Supply has constituted a study team for examining the organisation, structure, and methods of

work and procedures of the offices of the Central Public Works Department — all in an effort to eliminate malpractices. These are all healthy signs, but surely the Government will have to do much more. Besides Orissa, there are the States of Mysore and Madhya Pradesh whose Chief Ministers are facing allegations of corruption. The Government's hesitation to take resort to judicial probes in such cases is understandable but any attempt to condone the sins of the erring members is likely to recoil heavily on the ruling party.

PEACE IN NAGALAND

NAGALAND HAS been in the throes of a turmoil for more than eight years. The happy news of a cease-fire last week was, therefore, received with great satisfaction all over the country. It has rightly been claimed that the truce, which will come into effect from the mid night of September 5, is a result of genuine anxiety on the part of both the sides to come to terms and put an end to this fruitless fight. According to Press reports, a settlement has been reached on all major questions related with cease-fire though details on the patrolling of the international border and the major highways are yet to be worked out.

The broad terms and conditions for the stoppage of operations have been released to the Press by the Governor of Assam, Mr. Vishnu Sahay. After the cease fire on September 5, the representatives of the Government of India, in association with the representatives of the Government of Nagaland, will take part in talks with leaders of the underground Nagas. From the date of the cease-fire, the security forces will not undertake (a) jungle operations; (b) raiding of camps of the underground; (c) patrolling beyond a thousand yards of security posts; (d) searching of villages; (e) aerial action; (f)

arrests and imposition of labour by way of punishment. During the truce period, no fines, connected with allegations of complicity with underground leaders, will be imposed. On the part of the underground leaders, an assurance has been given that during this period, they will refrain from sniping, ambushing, kidnapping, raiding and firing on security posts, towns and administrative centres and moving with arms or in uniforms in towns, villages and administrative centres, wherever there are security posts. In case an encounter took place, both the sides will observe the rule "no firing unless first fired". Regarding the patrolling of the security forces, it has been agreed that the international border security forces will maintain patrolling to a depth of 3 miles as the crow flies from the frontier.

On the assumption that these talks will lead to promotion of permanent peace in Nagaland, the Central Government has already started formulating plans for improving the standard of living of the people in frontier areas, including Nagaland. It is known that Nagaland is deficit in foodgrains. The Centre is thinking in terms of rapid economic development of this area and will encourage such schemes as relate to soil conservation, reclamation of land, distribution of improved seeds, etc.

The Peace Mission has played a commendable part in bringing about the truce in this area. It is now preparing a widespread campaign among the people to start a new chapter in the life of the State in the spirit of "forget and forgive". The Peace Mission is preparing leaflets, in different Nagaland dialects, for circulation in the villages. There is no doubt that the Government of India will also approach the problem with an open mind and see to it that the genuine aspirations of the Nagas are fulfilled.

Role of Anti-Monopoly Laws in a Free Market

ADOLF A. BERLE, Jr.

(Professor of Corporation Law, Columbia University, New York)

THE AMERICAN economic republic has dealt with the ancient conception of the "free market" on a realistic basis. Here, probably, economic theory is evolving more rapidly than in any other single respect.

In the 19th century, a free market was somehow assumed to be a basis for human freedom. French physiocrats like Quesnay believed (as did Proudhon in later life) that a man could not be free unless he had some piece of property with which he could produce — else he was a mere plaything of a dictatorial state. Adam Smith, writing before the French Revolution (his great work, "The Wealth of Nations," came out the same year the United States declared its independence of Great Britain), followed that theory. This was natural. Continental Europe only began to emerge from absolutist monarchies when the Bourbon dynasty fell in 1789. The absolute sovereign who controlled the persons, property and economic activities of his subjects continued throughout much of Europe until the Revolution of 1848. Naturally, perhaps, 19th century economists proposed the theory of the "free market" as antithesis to feudal or state-monarchist economic systems prevailing when the 18th century drew to a close.

Modern Theory

This idea — that of the "classical economists" represented by the Austrian Ludwig von Mises and in America by his disciple, Friedrich von Hayek — is rapidly losing ground. Modern theory is not that a free market makes free men. Rather free men make a free market — and take it or leave it, limit, modify or reject it. In the United States at present a large sector of economic production and distribution is carried on under the free market system. But the free market has become (perhaps always was) subject to considerable State influence.

Classical economics taught that all useful economic activity would be motivated and brought into existence by the desire to make profits; also that in a free market the aggregate of economic activity thus sparked by hope of gain would best allocate the resources of the nation — would allocate part of production to "capital" and part to "consumption"; would set up prices for goods so that the supply would be best allocated to need and want.

Under this spur, production would seek those areas where buyers most wanted the product. Labour was considered a commodity. In a free, that is, a competitive market, the best available equation between the price of labour and the employment requirements would be struck. There is, nevertheless, difficulty with this classic theory — as the United States has discovered. The most notable is that the free market will not stay free unless some outside power — the State, in fact — compels it to remain so. Left to themselves, enterprises in the free market will not indefinitely compete with one another. They will combine, and set up monopolies or cartels. Or, the strongest, by his competition, will bankrupt the weaker and emerge as a monopoly.

Something very like this, indeed, did occur in the United States at the close of the 19th century — as also occurred in great parts of Europe, possibly continuing even to this day. This led the United States in 1890 to pass the Sherman Antitrust Act and, after a decade of waiting, to commence its vigorous enforcement. It has since been reinforced by other laws, notably the Clayton Antitrust Act, by creation of the Federal Trade Commission and the setting up of an active unit in the Department of Justice to enforce these acts. In combination, these amount to powerful intervention by the State — for the purpose of maintaining the free market — within certain limits. Withdraw these State activities, and the free market in the United States in all major lines would probably disappear in a few years.

Again the free market, as Americans see it, has a number of useful attributes. It can maintain a degree of competition. This means that the corporations, competing with each other, keep their prices within reason. Monopoly being prohibited, no one corporation can oppress a customer by refusing to supply him; he can go to another supplier. The free market does mean that many private enterprises are constantly seeking new outlets for their organizational ability and their capital. This means a high degree of innovation — new ideas, new processes, new services and an economic system seeking primarily to satisfy the wants of a large population, testing itself by what the population does want — rather than by what someone in a commissariat thinks the population ought to want.

Frivolous Activity

The difficulty lies in the waste, even the frivolity, of some free market activities. Much of this current criticism is true. It is not always easy to defend a system which rewards the creator of a new mouthwash as highly as it does the publisher of first-rate books or the producer of first-rate plays. The free market sometimes seems to satisfy — or even debase — cultural levels rather than to raise them.

The American economic republic, nevertheless, has always been cautious at this point. It rarely tries to tell its population what they must consume, considering that control of a man's consumption comes perilously close to being control of his life. The assumption is that Americans must choose their own ways of life, and consequently what they will consume.

This, some argue, makes for a "bad civilization". Possibly. Certainly it is plain that in the next few decades the greatest problems in the United States lie not in the field of production or even distribution but in the field of education and cultural advance: in education, in taste, in aesthetics.

The American reliance on the free market system for a substantial part of its production is certainly not ideal. Yet it is considered better than reliance on some Orwellian Big Brother (Communist dictator), with a hierarchy of police, imposing his will by economic pressure.

Whether you keep records with this... or this...

you can cut maintenance costs up to 15% or more with Caltex "Stop Loss" Programme

Here's one plan for reducing major overhead costs that puts no premium on your record-keeping methods.

Whether you use a clerk or a computer, you can count on a Caltex "Stop Loss" Programme for substantial savings in maintenance expense... savings that can reduce costs up to 15% or more.

The key to this plant management plan for cost control is our exclusive Lubrication Control System. This flexible blueprint for economy helps slash costs in the primary areas of production and maintenance. It eliminates the high price that companies pay for unnecessary shutdowns. It extends machine life, reduces maintenance time and labour costs, and increases unit output.

Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex office.

We at Remington Rand have been with typewriters a long time—you can say we have always been the first with typewriters. That's why we are so careful about them—careful about things that matter, like *precision, touch*.

The equipment we've invested in at our factory—the Optical Profile Grinder and the Type Aligning Projector—are for just this reason: that the typewriter you invest in is *perfect*. The care we take over accuracy—1/10,000th of an inch in machined parts,

tools and dies, and the perfect alignment of types and typebars, you can call us fussy—even finicky. But then that's why Remington Typewriters are such a good buy.

Our attention to detail means you get precision balanced typebar action that flashes to and from the paper, keys that don't stick even with several typebars in flight, finger-fitted keys designed to cushion finger tips, smooth carriage and lighter, more rhythmic, highly responsive typing.

Remington Typewriters are now better than ever
That's why we are so proud of....

Is Slowdown a Strike?

ARIJUN P. AGGARWAL

AFTER THE Chinese aggression on our borders in October 1962, a joint meeting of all central employers' and workers' organisations was held on November 3, 1962 when it was resolved unanimously that "under no circumstances shall there be any interruption in or slowing down of production of goods and services" and that no effort should be spared to achieve maximum production. It was also agreed that any planned idleness or waste, or any negligence, careless operation, damage to property, or interference with normal work, should be denounced by the unions. Earlier, at the 15th session of the Indian Labour Conference in 1957, certain principles were evolved to recognise the dignity of labour and to ensure better relations between employees and employers. One of the principles was that "there should be no recourse to 'go-slow' tactics". It was further agreed both by management and unions in the "Code of Discipline" "that neither party will have recourse to (a) coercion, (b) intimidation, (c) victimisation or (d) go-slow tactics. The unions further agreed "to discourage unfair labour practices such as (a) neglect of duty, (b) careless operation, (c) damage to property, (d) interference with or disturbance to normal work, and (e) insubordination."

In spite of repeated solemn agreements, however, slowdowns have occurred in the recent months even in industries of national importance. During the period of the Emergency any such break in the regular flow of production is bound to affect the security of the country and to disturb the routine of the national life.

The country has witnessed three major 'slowdowns' during the last six months. The first was reported in the government-controlled Rourkela Steel Plant. The slowdown continued for more than a month and the industry suffered a loss in production for more than 15 million rupees. (The indirect loss such as that to machinery etc. was not calculated). The other 'slowdown' was by 'grain workers' at the Bombay docks which continued for three weeks. The demurrage payable to the port authorities and shipowners worked out to about Rs. 70,000 for each day in clearance. Lastly, the nation was taken by surprise by mass indiscipline and 'slowdown', in the banking industry, started in the third week of July, throughout the country. It caused serious hardship not only to the business community but to the wage earners as well. Total national loss, which is expected to be in millions of rupees, has not so far been estimated.

Right to Strike

It may be assumed, without relying on any particular statute, that workers in India do have a right to strike, for better wages and other terms and conditions of employment. There are, however, certain restrictions on this right, both in statutory provisions and in case law. The term 'strike' is defined in the Industrial Disputes Act, 1947, Section 2(q) as follows:

"'Strike' means a cessation of work by a body of persons employed in any industry acting in combination, or a concerted refusal, or a refusal under a common understanding, of any number of persons who are or have been so employed to continue to work or to accept employment."

"Slowdown" is not included in this definition of "strike". But the unions have contended that the right to strike includes the right to engage in slowdowns. As early as 1953, however, the industrial tribunals refused to accept this view. Under the Bombay Industrial Relations Act, 1946, Section 3(a) "strike" is defined as 'a total or partial cessation of work' instead of 'a cessation of work' as in the Industrial Disputes Act. For some time, on the basis of the words 'partial cessation', slowdowns have been held to be strikes under that

*361 U.S. 477 (1960), 39 CCH Lab. Cas. 66,239.

Act. But in 1957 under the same section of the Act, the Labour Appellate Tribunal at Bombay held in *Bai Sontok Beni v. Fine Knitting Co.* (1957-1-LLJ. 409) that deliberate 'slowdown' cannot be considered to amount to a strike.

In May 1950, in *Moti Pura Sugar Factory*, the Bihar Government had appointed a Court of Enquiry to find out "what measures should be adopted by the Government of Bihar to deal with the go-slow (slowdown)?" The Court of Enquiry suggested, along with other things, that slowdowns should be treated as similar to illegal strikes.

"The solitary example of recognizing a slowdown as a 'strike' is in the report of the Committee appointed by the Bihar Central Standing Labour Advisory Board in 1950-51. That Committee recommended that slowdown by workers should be treated as on a par with a strike. It also recommended that 'slowdown' caused by the malpractices of the management would be justified. But it said that workers should not resort to a slowdown without at least seven days' notice. The Bihar Government accepted these recommendations by its resolution of December 1, 1951.

It may be noted, however, that in spite of the approval that the "slowdown" received from the Committee and the Government of Bihar, the standing orders of companies in Bihar State continued to list a slowdown as misconduct. They were upheld by the courts.

Serious Misconduct

Slowdown of production represents what would otherwise be a strike, but without suffering loss of wages. In *Bharat Sugar Mills v. Jai Singh*, 1961-II LLJ. 644-47, the Supreme Court of India condemned the slowdown tactics. It pointed out that a "slowdown" is a picturesque description of a deliberate delaying of production by workmen pretending to be engaged in the factory but not really doing so. It is one of the most pernicious practices that discontented or disgruntled workmen can resort to. A slowdown is likely to be much more harmful than total cessation of work which results from a strike. During a strike much of the machinery can be fully turned off, but during a slowdown it must keep going at a reduced speed which is often extremely damaging to some of its parts. Furthermore, a slowdown prevents an employer from hiring replacements. For all these reasons, a slowdown has always been viewed as serious misconduct. If permitted with impunity it would undermine discipline and would encourage inefficiency among the workers.

The industrial tribunals and courts in India have taken a very serious view of slowdown tactics. The slowdown has been treated as a misconduct of serious nature for which an employee may be dismissed.

In *Firestone Tyre & Rubber Co. v. Bhoja Shetty* (1953-54) V F.J.R. 159 L.A.T.) the Labour Appellate Tribunal condemned the deliberate efforts to reduce production which not only caused a serious drop in production but also induced a spirit of calculated indiscipline which undermined the stability of the industry.

In the United States, "slowdowns" are covered by the definition of strike given in the Labour Management Relations Act. Section 501(2) which reads: "The term 'strike' includes any strike or other concerted stoppage of work by employees and any concerted slowdown or other concerted interruption of operations by employees." The National Labour Relations Board has held that a slowdown is a partial strike and a harassing tactic, and, therefore, an unprotected concerted activity. The United States Supreme Court in *Insurance Agent's Int'l Union v. NLRB** has held that though the slowdowns and other harassing tactics did not amount to refusal to bargain in good faith under section 8(b) (3), such harassing

tactics were a wrong not protected against disciplinary action.

Thus the NLRB and the courts permit the employer to take disciplinary action against such employees who engage in slowdown and other harassing tactics.

In Australia 'go-slow' (slowdown) does not amount to a strike either within the natural meaning of that word or as a partial failure to work, because in 'go-slow' the workman does not refuse to work either wholly or in part, but merely refuses to work at a normal pace. The Federal Act contains a provision prohibiting, *inter alia*, an officer or a member of a Committee of an organization which is bound by an award, from advising, encouraging, or inciting any one to retard, obstruct or limit the progress of work by "go-slow" methods, or to adopt a practice or mode of performance, the result of which would be a limitation or restriction of output. (Conciliation and Arbitration Act, 1904-59 S138).

How to Prevent Slowdowns?

Slowdown in India is a serious offence and it should not be taken lightly either by the employer or by the government. The government policy as indicated above is against the slowdowns. The tripartite resolutions have condemned it and federations of unions have many times given assurance that they would not adopt slowdown tactics. The law is also against slowdown tactics and empowers the employers to discharge the employees who engage in or instigate such activities. Apart from this, the certified standing orders of most of the industries put "slowdown" in the category of misconduct for which an employer could dismiss the workman concerned.

There is a great difficulty, however, to find out when the workers really are on "slowdown". Sometimes the union gives a notice of its intention to start slowdown on a certain date if their demands are not met. But on other occasions, slowdowns are started without notice. The union secretly instructs its members to adopt the 'slowdown' tactics. The employer comes to know about a slowdown only after a long

span of time, when a considerable damage has been done to the machinery and production. The employers need to be extra-vigilant during negotiations and during the pendency of an industrial dispute. A well-managed system of daily production record of an individual worker would be of great assistance in this regard.

The courts have approved the employer's right to dismiss an employee for engaging in slowdown tactics. But they do require, of course, that the offence be properly established through a domestic enquiry and according to the procedure established. Natural justice demands that no man be punished unheard; and this is particularly true in cases of dismissal for misconduct in the realm of industrial relations.

The misconduct of "slowdown" differs from an ordinary misconduct as it is a continuing one. If an employer has to defer disciplinary action against a workman till sufficient evidence is accumulated, he would have suffered irreparable loss by that time. It is in the interest of industry that the courts relax the procedural requirement for dismissal due to misconduct in cases of 'slowdown' particularly when it is started by giving a regular notice to the employer, because notice itself is presumptive evidence against the employees. It is, therefore, suggested that (1) The management should be free to withdraw recognition from a labour union whose leaders instigate or countenance slowdown tactics; (2) Slowdown should be treated as a social crime; (3) A federation, to which the local union engaged in slowdown is affiliated, should be asked to cancel its affiliation because it has violated both the Code of Discipline and the Truce Resolution; (4) Provision should be made that the unions and its leaders would be made responsible for the damages caused by slowdown.

No restriction on the right to strike is suggested. But it is highly appropriate that proper and firm steps should be taken to control the under-hand labour practices, such as slowdowns which may jeopardise the national economy at any time.

I.O.B. is big enough to serve you...

...and small enough to know you

THE INDIAN OVERSEAS BANK LIMITED

Central Office: Madras 2 • Over 100 Branches in all important places in India
M. Ct. Muthiah, Chairman
K. M. Nanjappa, General Manager

I.O.B. is an international bank with offices throughout India and South-east Asia and correspondents the world over. It offers a wide range of services to suit the needs of varied customers. Indeed, I.O.B. is big enough to serve you.

We asked our customers, thousands of them at random, what they thought of our service. They replied: "We are pleased." They also made several helpful suggestions which we are implementing. Indeed, I.O.B. is small enough to know you.

Range of I.O.B. services: Savings and Current Accounts—Recurring and Fixed Deposits—Personal and Business Loans—Bills Payment Service—Gift Cheques—Travellers Cheques—Safe Deposit Lockers—Trade and Export Information and Advice—and whatever other specialised help you may need.

WINDOW ON THE WORLD

Lessons of the Ferranti "Scandal"

JOSSLEYN HENNESSY

LONDON:

PARLIAMENT'S final session before the general election closed with an Homeric clash between the Government and the Opposition over the Auditor-General's recent discovery that Ferranti's had made a profit of £5,770,000 on their contract to produce the Bloodhound missile. The firm is now to refund £4,250,000. The price of £12 millions, agreed between Ferranti's and the Ministry had allowed for a profit of 7 per cent on costs. But costs turned out to be only £7 millions, giving a profit of 82 per cent. This outcome created red faces on the government benches and enabled the Opposition to go to towns with cries of "profiteering", "scandal", and "capitalist exploitation". So much so that the basic issues at stake, important not only in the U.K. but in all countries in which governments place contracts with private firms, have been lost to sight.

The first question is how did the Ministry of Aviation's experts come to make so large an error in their estimates of Ferranti's costs? The explanation was that the cost experts concerned are too few and too over-worked. This should be easy to remedy. But their calculations continued over a period of time, and the second question was why, when Ferranti's realised the huge margin that was piling up for them, they did not utter a squawk? Their attitude seems, in effect, to have been that if the government was satisfied with the contract that they had voluntarily signed, why should Ferranti's raise objections? Mr. de Ferranti, the chairman, told the Public Accounts Committee that labour costs were saved because "we resolved the technical problems competently and quickly and ... we employed skilled labour and so arranged our affairs and trained them that they were able to do the job more quickly than our competitors". Mr. de Ferranti's attitude was that he was accepting a fixed price contract, which inevitably involves risks. If costs had risen against him, he could not have complained. Mr. de Ferranti told the Public Accounts Committee that he had been half expecting the Ministry of Aviation to re-open discussions because the Ministry had all the information about the way that the work was developing. The Ministry had, in fact, obtained Ferranti's true labour costs for Bloodhound, as opposed to the original estimates, when its experts went to calculate the allowance to be added for over-heads. The two sets of figures were not however, compared because they were pigeon-holed in different sections of the Ministry! Ferranti's had concealed nothing and legally their position was cast iron.

On the other hand, from the viewpoint of public relations and common sense, their behaviour was childish. They have made the Ministry of Aviation look complete fools, they have damaged the public image of private enterprise at a moment in the electoral history of the country in which private enterprise ought to be on its best behaviour, they have given the Labour party a wonderful stick with which to whack the government, and they have confirmed every Socialist in his

worst suspicions of "big business", which can now look forward to rougher treatment than ever if Labour wins.

As against all this, however, I maintain that the bigger fault lies with the government. The key to the Ferranti riddle is the Ministry of Aviation's allowance for profit of seven per cent. If there is a scandal, it is in this ridiculously low figure for the production of a vital part of Britain's rational defence, which involves the most complicated and up to date technologies. Moreover, any firm with experience of government contracts in any country will tell you of the headaches, risks, and thanklessness of the task. Specifications are liable to frequent modifications, and government expenditure to sudden postponements or economy cuts, for which the compensation, if any, is usually wholly inadequate to the dislocation caused, often to other commercial contracts under simultaneous production. The chairman of one of Britain's best known companies, which undertakes vast contracts for the government, once told me — long before the present "scandal" broke out — that if he could see any way of refusing a government contract, he would never take another one. Seven per cent is an average profit allowance for such contracts in the U.K.

Incentive to Silence

I suggest that a firm which found itself in Ferranti's position would have an incentive to warn the government's officials of their mistake about labour costs if the firm knew that it was going to be allowed at least 20 per cent profit, which is nearer a reasonable figure for an efficient enterprise engaged in a new commercial venture of the magnitude, complexity, and unknown risks involved in the Bloodhound missile. But with the low profit margins offered by the government, a firm feels that it cannot get a fair return for good work produced on time, and it has an incentive to keep quiet if, for once in a way, the government makes a mistake.

If, on the other hand, the government's officials make no mistake, such low profit margins offer no incentive to a firm to find ways of improving quality and speeding production. A government which pays low rates gets low quality. A high profit would not only reduce the chances of a repetition of the Ferranti experience with other firms, but it would provide a real incentive to produce efficient defence weapons and to streamline production methods — to the benefit of the taxpayer, the industry, and the economy as a whole.

Admittedly, Ferranti's behaved foolishly, but the lesson for the UK Government, and for all governments, is that they should treat private enterprise generously, so that a firm finds that good behaviour is neither difficult nor expensive, but easy and profitable. A government which tries to employ labour on the cheap is universally condemned, but when it tries to employ capital on the cheap nobody protests. Is it not time that it was universally recognised that neither cheap labour nor cheap capital give the best results?

International Liquidity and Price Level

PAUL EINZIG

THOSE WHO expected the Tokyo meeting of the International Monetary Fund to decide upon measures to bring about an immediate expansion of international liquid reserves were no doubt disappointed by the strictly non-committal character of the Report issued by the Ministers of the Group of Ten which, together with the I.M.F.'s own expert committees, was pre-

paring the ground for a decision on the subject. The Ministers arrived at the conclusion that supplies of gold and of reserve currencies are fully adequate for the present and are likely to be for the immediate future. The most they could offer is a moderate general increase in I.M.F. member quotas, to be decided upon in September 1965, and arrangements to study

the various proposals regarding the creation of additional reserve assets.

The Report is doing its best to allay the "liquidity-hysteria" that has been evident in recent years by pointing out that "the fact that some individual countries find themselves short of external liquidity is not prima facie evidence of a general shortage of international liquidity". On the other hand, it warns that further expansion in world trade is liable to entail a corresponding increase of requirements of liquid resources and that the increase in gold output is not likely to be sufficient to meet these requirements. Likewise, it warns that the United States is not likely to oblige the world indefinitely by supplying dollars as a result of her adverse balances of payments.

All this is common sense. Where the Report goes hopelessly wrong is in respect of its defective diagnosis of the main cause of a potential acute shortage of liquid resources. In addition to growth of world trade and of capital movements, amplitude and duration of imbalances of international payments and psychological attitudes towards reserve requirements, changes in reserves, and the use of available credit facilities, there is a factor which the Report contrived to overlook completely — the trend of world prices. Yet surely it must be obvious to every student of economics that reserve requirements must rise and fall with the ups and down of prices. It is not only the increase in the volume of foreign trade that tends to increase the amount of international resources needed for financing it, but also the increase in the prices at which it has to be financed. Even though there is no such strict arithmetical relationship between the volume of international capital movements and the rise in prices, in the long run the size of international payments, financial as well as commercial, tend to adapt itself to major changes in prices. The size of "hot money" movements, for instance, is today several times larger than it was before the war.

Although it is only too glaringly obvious that rising prices tend to increase the need for gold and reserve currencies, hardly any of the experts who have been agitating in favour of the adoption of some ingenious formula by which international reserves could be increased by a stroke of the pen have as much as mentioned this aspect of the problem. In this respect at any rate economists do not seem to differ. Seven economists may well hold eight different opinions about the right formula, but there seems to be a tacit agreement between them on their attitude in trying to ignore the price factor out of existence.

Deceptive Simplicity

The explanation of this attitude is that, once they acknowledge the existence of a price problem in connection with their liquidity schemes, those schemes would lose their deceptive simplicity in which lies their principal attraction. How easy it would be to persuade public opinion, and even sophisticated politicians, to suggest a reform which merely requires a stroke of the pen that would enable mankind to live happily forever after! But it would be quite a different proposition if the Triffins, the Berssteins, the Stamps, the Maudlings and the rest of the authors of liquidity schemes were to admit that, in the oversimplified form in which they try to sell their schemes, those schemes are doomed to defeat their object. Any increase in international liquidity would entail, in existing circumstances, an accentuation of the rise in the international price level, a rise which would inevitably cancel out the additional liquidity in a few years.

In order to ensure a lasting increase in international liquidity, any increase in the volume of liquid resources, whether through the adoption of one of the schemes or through

the increase of I.M.F. quotas or even through an all-round devaluation of currencies, would have to be linked with measures to mitigate the inflationary effect of such an increase. In other words, for the sake of ensuring lasting benefits through an expansion of liquid resources, it should be made conditional on the acceptance of an incomes policy. Unless this can be achieved any expansionary measure could only bring about passing results.

In our equalitarian world the lower income groups could be the principal beneficiaries from a general rise in the standard of living resulting from international expansion through an increase of liquid resources. It is, therefore, to the lasting interests of the lower income groups to practise self-restraint in order to assist in the achievement of expansion without inflation, or at any rate with a minimum degree of inflation. It should be the duty of experts in working out the solution of the problem of liquidity to use their authority to make public opinion realise the fact that there can be no lasting solution unless it is combined with the adoption of an incomes policy. But it is ever so much simpler to put forward a magic formula — of a kind which, in words of the London "Economist", could be drafted by any articulate economist on the back of an envelope in a matter of minutes — than to make it plain that the success of such a scheme could only be achieved through co-operation between all classes in an incomes policy.

Company Notice

THE GWALIOR RAYON SILK MFG. (WVG.) CO. LTD.

Registered Office: Birlagram, Nagda

NOTICE

NOTICE is hereby given that the Seventeenth Annual General Meeting of the Shareholders of the Company will be held on 18th September, 1964 at 3 P.M. at the Registered Office of the Company to transact the ordinary and special business mentioned in the Notice which is being posted to the Shareholders of the Company along with the Explanatory Statement required under Section 173 of the Companies Act, 1956, Balance Sheet, Profit and Loss Account and the Directors' Report for the year ended 31st March, 1964.

N.B.: A Member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a Member.

Notice is also given that the Register of Members and Transfer books of the Equity Shares of the Company will remain closed from 31st August, 1964 to 18th September, 1964, both days inclusive.

The Dividend on Equity Shares when sanctioned will be made payable at the United Commercial Bank Ltd., on or after the 18th September, 1964 to those shareholders whose names stand on the Register on 18th September, 1964, to whom dividend warrants will be posted.

By Order of the Board
B. N. PURANMALKA
Secretary

Birlagram, Nagda,
21st August, 1964.

NEW DELHI:

A JOINT delegation of National Iranian Oil Company and American International Oil Company that arrived here last week has been having talks with senior officials of the Ministry of Petroleum and Chemicals in an attempt to come to an agreement regarding the supply of crude oil for the proposed Madras refinery. The delegation met the senior officials of the Ministry including Mr. Nakul Sen, Secretary (in the absence of Mr. Damle, who is on leave), Mr. N. N. Kashyap, Joint Secretary, and Mr. P. R. Nayak, Chairman, Oil and Natural Gas Commission. They also met Mr. O. V. Alagesan, Minister of State in the Ministry of Petroleum and Chemicals, and certain officials of the Ministry of Finance. Although no conclusive decisions have been taken as yet in the absence of the Union Minister for Petroleum and Chemicals, Mr. Humayun Kabir, who is likely to return from his foreign tour on August 31, it is understood that the delegation has not been able to offer sufficient reduction in the prices of crude oil, which is now the main point in the negotiations.

It is believed that an offer has been made by the delegation of a type of crude oil with high sulphur content at the rate of \$1.43 per barrel, which is considered to be rather on the higher side, particularly when additional plant and equipment will be required to extract sulphur and other impurities from this type of crude oil. It is gathered that the Government spokesmen expected a lower price of around \$1.30 per barrel. The American International Oil Company, it is believed, is prepared to reduce its earlier demand for a twenty-year contract for the supply of crude oil and is now agreeable to a shorter period of five years or so. An official statement issued last week also mentioned the difference of opinion that emerged during these negotiations and it was indicated that these discussions were likely to be resumed after the representatives of the said companies have had further consultations with their respective principals.

Future Possibility

A delegation from Kuwait which is in Delhi has also been discussing with the Government the possibilities of the supply of crude oil. But this is a possibility for the future because at the moment the Kuwait Government and the Kuwait National Oil Company do not have any crude oil of their own. Kuwait is credited with the intention of throwing open some of its off-shore areas for drilling and expects sufficient surplus crude oil that will be made available in about three to five years.

Another offer that the Government of India is likely to consider for the Madras Refinery is from a French company which has offered a loan of \$40 million for the supply of crude. It is, however, indicated that the rate of interest of this loan is considered to be on the high side. Moreover, no precise offer has been made about the price at which crude will be supplied. It may be added that the Union Government is not prepared, at the moment, to enter into a long-term contract with this company.

The new proposals offered by the BOC-Shell International are still being considered. The discovery of a new field in Oman by Shell has added interest to these proposals. A final choice may be made in the month of September and the

present round of discussions with various interests may be completed towards the end of August when the matter will go to the Cabinet.

★★

The fourteenth meeting of the Board of Trade held here last week under the chairmanship of Mr. Manubhai Shah, Minister of Commerce, approved an export target of Rs. 5,100 crores for the fourth Plan. There was a general consensus of opinion that taking into consideration the export possibilities in the various agricultural and industrial sectors and the economic conditions prevailing, this target would be reasonable for the five years of the fourth Plan with the export earnings in 1970-71 at Rs. 1,110 crores. The achievement of the target would call for the adoption of an integrated and co-ordinated policy designed to ensure the availability of the required quantities of commodities for export, even if this might involve a certain measure of restraint on domestic consumption. Moreover, a high degree of co-ordination among the different ministries of the Government of India as also between the Central and the State Governments would be necessary so that an integrated policy could be evolved and carried out without interruption. It was also felt that in the achievement of the export targets the various public sector undertakings should play a definite role.

The Board expressed concern regarding the inflationary pressures that were developing in the economy which might come in the way of larger exports. It was suggested, therefore, that drastic measures should be taken to achieve some degree of price stabilisation with a view to reducing costs and making Indian exports competitive in the world markets.

The Board regretted that the export of certain items such as vegetable oils had to be banned suddenly on account of scarcity conditions prevailing in the domestic market. It was indicated, however, that continuity in supplies for export was absolutely essential for maintaining our markets abroad. Abrupt stoppage of exports seriously affected the confidence of foreign buyers resulting in loss of goodwill and the markets. The need to ensure the continuance of export promotion policies over a reasonably long period of time was stressed so that trade could plan its exports on a long-term basis. No major changes should, therefore, be made in the export promotion policies during the Plan period.

Reviewing the targets for individual commodities, the Board felt that there were good possibilities of building up the exports of iron ore up to 25 million tons by 1970-71. An integrated programme of mining, transportation and port development was being implemented. The Board urged that the target for iron ore facilities should be worked at 30 million tons to achieve an export of 25 million tons per year by 1970-71. Likewise, there were considerable possibilities for increasing the exports of marine products, if an oceanographic survey was undertaken and proper facilities provided for mechanised fishing and refrigeration. With the increasing production of steel in the country, substantial exports could be developed in this line by earmarking a part of it, say, half a million tons of prime steel, for export every year to the countries of Asia and Africa.

It was felt that a systematic plantation programme for cashewnuts was absolutely necessary for ensuring adequate

supplies of raw nuts in the future. The representative of the Ministry of Food and Agriculture assured intensive attention and advance action in order to achieve the suggested targets. It was realised that it would be necessary to initiate advance action from now on so that the quantities required for export may become available during the fourth Plan. In fact it was stated that necessary action had already been initiated to increase the production of raw cashewnuts to 150,000 tons from the present annual production of about 75,000 tons.

Another suggestion was made in that collaboration arrangements should be entered into between manufacturers in India and marketing and distributing agencies abroad to build up an export market. The importance of an integrated approach by the various ministries to the various problems involved in exports was also emphasised. It was stressed that the pattern of investment in the fourth Plan should be ensured to yield the maximum results, the agriculture-based industries should receive priority and that adequate attention should be paid to economic and social over-heads.

The need for increasing the productivity of jute was urged if the increased export earnings of Rs. 180 crores were to be achieved by the end of the fourth Plan. The real handicap in future years, it was stated, was going to be the non-availability of adequate jute fibre. It was suggested that better quality of jute fibre should also be produced. The price of jute goods at reasonably high levels was recommended to be maintained if necessary by a suitable import policy of a million bales of jute fibre. The need was also stressed for tax concessions and relief to the tea industry if the exports figure of Rs. 160 crores per year was to be reached by 1970-71.

The Board also decided that Regional Export Information Bureaus be opened in all the important regions of the country to disseminate necessary information and to create proper public opinion in favour of exports. It was proposed that the Ministry of Information and Broadcasting be requested to bring out half a dozen documentary films on export activities and the role that exports play in building up the national economy.

The Board of Trade will hold its next meeting in Bombay on Monday, October 5, 1964, when the work of the United Nations Conference on Trade and Development and the strategy for promoting exports to the countries of Africa will be considered.

★★

The Union Ministry of Steel and Mines has indicated that tentative targets of coal production in the private sector have been placed at 5.14 million tonnes of additional coal production in the remaining period of the third Plan and an output level of 76.49 million tonnes by the end of the fourth five-year Plan. The Union Government has asked the industry to go ahead with the formulation of its programme, particularly in regard to the fourth Plan production. The units which are expected to make a contribution to the additional production during the fourth Plan period have been called upon to furnish detailed annual plans supported by necessary blueprints. The Planning Group on coal has provisionally estimated the total demand of coal by 1970-71 at 136.46 million tonnes. This is likely to go up by another three million tonnes on account of coal requirements for power.

According to a rough assessment made by the Ministry, the total capital outlay by the private sector for the programme proposed will be Rs. 48.30 crores, of which about Rs. 14.74 crores will be for additional production of coking coal and Rs. 33.56 crores for maintenance of production. The industry has been urged to make an assessment of the financial implications of this programme and has been asked to offer its

comments on the assessment made by the Ministry. It has been impressed upon the industry that it should also make a realistic assessment of machinery and equipment, indigenous as well as imported, which will be needed during the fourth Plan, both for maintenance of production and for expansion and new development.

The private sector, in the year 1965-66, is expected to produce 15.31 million tonnes of coking coal. It has been assessed that the private sector should be able to raise an additional quantity of 10.67 million tonnes of coking coal during the fourth Plan period, of which 1.42 million tonnes will be from the third Plan schemes. The requirement of coking coal, including those of iron and steel and merchant cokeries, at the end of fourth Plan has been assessed at 46.05 million tonnes.

It is further estimated that against a total production of non-coking coal for 1963-64 of 47.62 million tonnes, the requirements during 1965-66 are likely to be 60 to 64 million tonnes, including one million tonnes of blendable coal for metallurgical industries. To meet this additional requirement of 13.02 million tonnes during the next two years, the private sector is required to produce 4.40 million tonnes extra over the level of 1963-64. The estimated demand for non-coking coal at the end of the fourth Plan is expected to be 80.74 million tonnes, so that the additional requirements of non-coking coal in 1970-71 work out to 28.40 million tonnes. Out of this, the private sector's share is 7.02 million tonnes.

The production of blendable coal in the private sector during 1963-64 was about 2.50 million tonnes. This production level is likely to be maintained during the remaining period of the current Plan. The requirement of blendable coal for metallurgical industries at the end of the fourth Plan has been assessed at 6.63 million tonnes, of which 3.24 million tonnes is likely to be produced in the public sector and the balance of 3.44 million tonnes in the private sector. The private sector's share of the additional production of blendable coal during the fourth Plan is estimated to be 0.74 million tonnes.

★★

A Jute Textiles Consultative Board with Mr. Manubhai Shah, Minister of Commerce, as Chairman, has been set up by the Union Government. The Deputy Minister of Commerce, Mr. S. V. Ramaswamy, will be the Vice-Chairman of the Board, which will have 10 other members. The Board has been nominated for a period of two years. In view of the important part played by the jute industry in the Indian economy, particularly in the field of exports, this Board has been set up to advise the Government on steps to be taken to develop the jute textile industry in all its aspects. The Board will be consulted on all important matters concerning the jute industry, particularly in regard to production, distribution and exports of jute goods, imports and exports of raw jute and matters relating to the development of jute industry, research in jute industry, procurement of raw materials, machinery and accessories required for the industry.

The members of the Board are: the Secretary, Ministry of Commerce; the Additional Secretary, Ministry of Commerce; the Chairman, Indian Jute Mills' Association; three representatives of the Indian Jute Mills' Association; a representative of Calcutta Jute Fabric Shippers' Association; a nominee of the Ministry of Food & Agriculture (Department of Agriculture); a representative of labour in the jute industry; and the Jute Commissioner (Member-Secretary). The Board will hold its first meeting on September 9, at Calcutta.

★★

A Committee to go into the question of weeding out spurious co-operative societies has been appointed and is to be headed by Mr. Ram Niwas Mirdha, Speaker of the Rajasthan Legislative Assembly. This Committee, which consists

of six members, will make recommendations for the elimination of vested interests from the co-operative movement and suggest measures to make it self-reliant. This was revealed by Mr. S. K. Dey, Union Minister for Community Development and Co-operation, while addressing a conference of presidents and secretaries of State Co-operative Unions. He revealed that out of nearly 120,000 registered primary co-operatives, as many as 63,000 did not possess even a sign board and existed only in Government registers. These co-operative societies will have to be liquidated. Till now they had defied all attempts at their amalgamation into viable units. In some cases, a co-operative consisted of one family only. Mr. Dey stated that the effective size of a co-operative society should be one that covered 3,000 persons or 600 families as suggested by the V. L. Mehta Committee.

★★

The Union Ministry of Food and Agriculture has finalised the constitution of an Agricultural Prices Commission, a full-fledged body which will study from time to time the input costs of agriculture and variations in selling prices. This Commission, which is likely to be headed by Prof. Dantwala of Bombay University, and will have four or five other members, will study actual conditions in various regions of the country and estimate various production costs as well as costs of transport, storage etc. In a way, it will determine an over-

State Trading in Foodgrains

From Our Correspondent

CALCUTTA:

IT WAS reassuring to hear from the Union Food Minister, Mr. Subramaniam, that the overall food supply position in the country has begun to ease; only two States, Maharashtra and Gujarat, are still passing through critical times. The Minister, who made a statement to this effect at a Press conference in Calcutta last week-end, was even more reassuring about Central food assistance to the deficit States of West Bengal and Bihar. The former State would continue to get 84,000 tons of wheat every month, and the latter, a monthly quota of 70,000 tons from the end of August. Mr. Subramaniam had observed that the arrivals in West Bengal markets had been increasing and with that prices had begun to fall, and he expected that with the approach of the Pujas, the farmers would be unloading more stocks to raise the necessary money for their festival purchases. The price-trends in the city of Calcutta, however, do not confirm Mr. Subramaniam's optimistic assessment of the situation, where apart from rice ruling at a high price in the free market, the other key commodities such as fish, mustard oil and pulses are very expensive to get when they are available.

State Trading

The State Government, which has failed to "discipline" the trade, is now considering some bold measures to control the price line. It is now well known that West Bengal will introduce State trading in foodgrains from January next year. Although the details of the scheme still remain to be worked out, it wants to do something even before that. As Mr. Subramaniam announced at the Press conference, West Bengal would shortly take charge of the distribution of the entire quantity of 84,000 tons of wheat being supplied from Central stocks. At present, 51,000 tons of the cereals are distributed through trade channels, the balance going to fair price shops. Private flour mills and 'chakis' would only process the wheat, but would have nothing to do with the sale. Mr. P. C. Sen was quick to point out that this limited experiment would pave the way for the statutory rationing which would be introduced early next year in Greater Calcutta and some other urban centres of the State.

all basis for computing remunerative prices that should be assured to the producers. It is likely to have the assistance of a separate machinery for the collection and processing of agricultural data. It proposes to take into account different varieties of each agricultural product while making recommendations to the Union Government regarding fair prices. It will be expected to advise about the price levels of substitutes and competing crops so that a proper balance may be maintained in respect of the returns to the agriculturists from alternative agricultural crops. This body will also be expected to determine the margins to be allowed to wholesalers and retailers after studying the pattern of their costs by way of investment, transport and storage charges.

After the assumption of Food and Agriculture portfolio by Mr. C. Subramaniam, considerable amount of fresh thinking has been done on food prices in an effort to assure a reasonable return to the agricultural producer. It is now increasingly realised that an assurance of reasonable returns to the agriculturist will enable him to invest in the improvement of his land and will allow him the utilisation of fertilizers, improved seeds, better implements, without which consistent higher output is not possible. It is quite likely that this one measure of assured prices to the agriculturists will result in considerably higher output.

Statutory rationing combined with modified rationing in some places would cover nearly 13 million people, and in order to ensure adequate supplies of foodgrains for this number throughout the year, the State Government would procure part of the marketable surplus directly from the producer. This is broadly the idea behind the new bold scheme which West Bengal proposes to introduce and which has earned high commendation from the Central Government, the Food Minister in particular. But since the State Government is yet to announce the details, a number of questions are being asked. In the first place, will the State resort to compulsory procurement, and if so what would be the basis of arriving at a particular producer's surplus? Alternatively, if it buys in the open market at pre-determined prices, the producers would be free to withhold stocks if they consider the prices uneconomic or less profitable. What would the Government do in that case? In spite of what Mr. Subramaniam may say, there is no real evidence that producers or stockists are unloading their stocks in response to the Prime Minister's warning. Secondly what role would the rice mills play in this scheme, for the Government will have to process the paddy assuming that it manages to get the quantity it wants. According to one report, they too would be required to process the Government's paddy and hand over the rice for distribution through ration shops. But the milling programme of these units may not exactly suit the authorities. In order to make it smooth from all sides, the Price Inquiry Committee appointed by the Government some time ago, has recommended that the Government should take over the rice mills when it acquires the entire marketable surplus of foodgrains through State trading. But then the question is, will the Government be able to run the mills by itself? Here, one suggestion is that they should be handed over to co-operatives. But considering the racket some of these co-operatives have been — they are often found to be run by the well-to-do for the well-to-do and the politically influential — the State Government is likely to treat this suggestion rather cautiously.

Meanwhile, the Calcutta Rice Mills' Association in a communication to the Press has questioned some of the basic assumptions

tions of the Government's price policy. In its opinion, there is no real food shortage in the country: not a shortage at any rate which could justify the present high prices. On the contrary, the current situation is very much the product of the Government's wrong policies of pricing and distribution control. Taking the zonal system, in the first place, West Bengal, a deficit State, is tagged on to Orissa which usually has a surplus. The system logically implies that there should be free movement of foodgrains between the two, but this is not the case now. The Orissa Government has imposed restrictions on paddy movement through a levy on exports. The levy has not been withdrawn despite the pressure from the Centre; on the contrary, it has been raised from 25 per cent of the value on paddy to 40 per cent, and from 15 per cent on rice to 25 per cent. Even so, the promised quantity of 300,000 tons has not been delivered and the supply up to date is less than one-third of this figure. While Orissa is thus being unhelpful, West Bengal has lost another major traditional source of supply — Chattisgarh in Madhya Pradesh.

But the major fault lies with West Bengal's pricing policy itself. In the view of the Association, this is definitely uneconomic. This has made it difficult for the rice mills in the Calcutta area to procure the paddy they need. The State Government has fixed the same price for the cereal for the entire State, making no allowance for the transport costs which the mills' suppliers would incur in getting paddy from distant areas, say, in north Bengal. The Government should not only revise the ceiling prices, but it must also allow due transport costs and a margin to traders if they are to bring paddy to mills from districts. As they are not allowed these at present, they have no incentive to bring the cereal. Consequently, some 60 rice mills or so in the Calcutta area are now closed, "creating unemployment for workers and waste of capital."

Lacking Realism

This is not the only aspect where the Government's policy lacks realism. Its much advertised food production drive is scarcely more realistic. Even making allowance for the fact that this State has over 3 million refugees and about 5.5 million non-food producing population who have migrated from neighbouring States in search of employment in factories and offices, that the land-man ratio is one of the lowest in the country, and that there has been a large diversion of acreage to jute production, there is no reason why it should not be able to raise an additional 3 to 4 lakh tons of foodgrains. As the Deputy Chairman of the Planning Commission, Mr. Asoka Mehta, pointed out in the course of his chat with the local Press about the new strategy being proposed for the fourth Plan (under which quick result-yielding projects would claim equal priority with heavy capital-intensive industries with long gestation period) the growth rate in agriculture in West Bengal has been the lowest in India. This is not only because of the natural limitations under which this State has to work, but because of faulty planning. For example, West Bengal's minor irrigation programme has been a near failure because sufficient power is not available to energise most of the tube wells which have been sunk at such cost all over north Bengal and in many other areas of the countryside. This in turn has affected the consumption of fertilisers. Again, for a package district like Burdwan there is no arrangement of any kind to provide credit to the farmers. These are only two examples of rank bad planning which Mr. Mehta gave. There would undoubtedly be many more if a proper evaluation of West Bengal's agricultural development programme is made.

Mr. Mehta is reported to have done much more plain speaking at Bhubaneswar about Orissa's farm programme, where he had been to discuss the State Government's fourth

Plan projects with Cabinet Ministers and members of the State Planning Board. Stressing the need for a very well worked out agricultural programme, Mr. Mehta is reported to have made the following frank remarks: "Orissa's agricultural production is so poor and the State's attempt to step up agricultural production is so little that it has no capacity to raise more and more resources internally. Therefore, it constantly runs into difficulties. The point is, Orissa is one of those States which, I think, enjoys getting into debt not because of any mismanagement, but because its whole economy is so constituted today. Now the strait-jacket has to be removed". Orissa is trying hard to run fast in the industrial race — in fact, the growth rate in industrial production in the first Plan was 4.5 per cent, in the second Plan it was 5.9 per cent and would be substantially more in the third. Yet this has made little difference to the poverty of the people. This is because farming is the main occupation of the people, and during the last ten years, production on this front has practically remained stagnant. Orissa still continues to be a one-crop economy, and during the current Plan period the increase in the farm productivity rate has gone down to 1.3 per cent from 2.1 per cent in the second Plan. Mr. Mehta urged the State's planners to realise that their effort to start more and more industries was probably all right, but the industrial structure must have a strong base which alone a prosperous agriculture can provide. He pointed out that despite the general economy drive, the Union Finance Minister was willing to make liberal grants for subsidiary agricultural projects, projects which could raise more milk, fish, poultry and other articles of food value. But Orissa has not a single project of this nature to merit Central assistance in the next Plan.

★★

The jute industry, whose affairs were reviewed in these columns a few weeks ago, has moved the Government of India to come to its help in fighting unfair competition from Pakistan. Pakistani competition has particularly affected India's sacking exports. For instance, the overall jute goods exports of this country during 1963-64 were higher than in the previous year largely because of the expansion in India's hessian markets, but the figure for sacking showed a very substantial drop. Pakistan cut into India's sacking markets in Asia and Africa in a big way, not only because such natural advantages as that country has, but largely on account of the "bonus voucher scheme" which in effect amounts to a subsidy for the exporters from the Government in contravention of GATT principles. India can meet Pakistani competition only on the latter's own ground, that is, by offering some sort of a subsidy itself. This idea the Government has so far resisted, but the industry, it is reported has thought up a scheme which it will operate without embarrassing the Government in any way. This is to sell jute goods in the domestic market at a higher price by levying a cess and subsidise sacking exporters out of the proceeds. In a Press note issued last week, the Indian Jute Mills Association has made no mention of any such scheme, but it has emphasised the urgency of Governmental assistance to this industry if India's sacking markets are to be won back. It calls for a boldly conceived plan of assistance to the Indian jute mills who earn 20 per cent of the country's export income. Pointing out how rapidly the Pakistani jute industry has grown because of the natural advantages and sustained official encouragement, the IJMA says that the natural advantages enjoyed by the Pakistani industry are well known, but today they are not so formidable, as the advantages bestowed by direct Government assistance in that country. Again, the fact that the Pakistani Government is ready to pay an additional subsidy of about 10 per cent even under existing conditions of prosperity can only be seen as a measure of its resolve to expand at the cost of the Indian industry.

Earlier, speaking at the annual meeting of the Calcutta Jute Fabrica Shippers Association, Mr. D. Duncan-Smith,

Chairman, stressed the dangers of Pakistani competition and urged immediate measures to meet the situation. Some of the measures he suggested include improvement of raw jute quality through research and development work, simplification of remittance regulations by the Reserve Bank, simplification of the procedure for the shipper to obtain the bond qualifying him from the exemption of excise duty, and, if necessary, a maximum price for raw jute and jute goods for export. A delegation sponsored by the industry, will soon be going to New Delhi to press the case for urgent official help. It is worth mentioning here that the jute goods stocks with mills at the end of July rose sharply and this could well be a warning signal.

★★

Assam is going to have its first jute mill at last. This will be a co-operative mill with a capacity sufficient to meet the State's requirement of jute goods estimated at 3,900 tons of sacking and 950 tons of hessian per year. In the present context of surplus sacking production of existing Indian jute mills, the wisdom of starting an altogether new unit in Assam is doubtful, but apparently, the State Government is taking the step under the pressure of major local gunny consumers like the Assam Co-operative Sugar Mill, the State Warehousing Corporation and the Apex Marketing Society, to name only three. The fact that there are going to be cement and fertiliser factories in the State must have weighed with the Government also. The jute growers of Assam, too, nurse a

★★

Additional details about the Orissa Government's loan have now become available. The value of the total loan is placed at Rs. 8 crores. Subscriptions will be received from August 24, 1964 to August 29, 1964, both days inclusive. While the subscriptions may be in the form of cash or cheque, they will be closed without notice as soon as it appears that the total subscription amounts approximately to Rs. 8 crores. In any case, the subscriptions will not be extended beyond the close of business on August 29, 1964. The Government has also reserved the right to retain subscriptions received upto 10 per cent in excess of the stipulated sum of Rs. 8 crores. It means if the total subscriptions exceeded the sum of Rs. 8.8 crores, partial allotment would be made. In the latter case, the balance of the sum paid at the time of applications would be refunded as soon as possible after allotment. No interest will be paid on the amounts which are refunded. Applications for the loan must be for Rs. 100 or for a multiple of that sum. The loan will bear interest at the rate of 4½ per cent per annum from August 24, 1964. Interest will be payable half yearly on the 24th February, and 24th August, subject to tax under Income-tax Act, 1961.

Experts to Decide Steel Plant Location

From Our Correspondent

MADRAS:

THE CONFUSION created by Mr. N. Sanjeeva Reddy's statement regarding the location of a steel plant in the South has raised doubts about the Salem steel project being taken up at an early date. It had been assumed that it would be necessary to erect two or three steel plants in Andhra Pradesh, Madras and Mysore States in order to complete the target of 18 million tonnes of steel ingots at the end of the fourth Plan. Even with the expansion of all the major steel units and the completion of the Bokaro project, it is feared there would be a shortfall of nearly 3 million tonnes of ingots which could be made good only by the construction of entirely new units. On this reasoning, it was taken for granted that the Salem steel plant would come into being especially as considerable preliminary work had already been completed. The report of the technical consultants has been submitted only a few days back and there is no basis for the presumption that the project is not feasible or that the required quantities of lignite are not available. It is true that available lignite resources can be used for generation of electricity and that, with the lack of other mineral resources in this part of the country, there is need for making the best use of available lignite. The Neyveli authorities, however, have been pointing out that total reserves are more than 2,000 million tonnes even though the overburden in some areas is very heavy and lignite can be found only at greater depths. There will naturally be an increase in the cost of mining but with the experience gained in mining operations in the past few years, it is emphasised that future operations could be conducted more economically especially if more efficient mining machinery can be secured.

In any case, there is no basis for the presumption that lignite reserves will not be adequate for power generation as well as steel making, especially as the initial capacity of the plant is not expected to be more than 500,000 tonnes and after extension over a period the capacity is estimated to be only 1.5 million tonnes. It is also sought to be suggested that

Salem ore is inferior in ferrous content and that the cost of steel making will be high. Here again, it has been clearly proved that, after beneficiation, the ferrous content can be raised to over 60 per cent and that with the advantage of availability of lignite and limestone from nearby sources, the Salem steel project has all the advantages of any project in the north. The raw materials, of course, are inferior in quality but the advantage accruing on account of the saving in freight costs will be more than enough to take care of any marginal increase in production costs.

The Madras Government is, therefore, upset over the suggestion that there should be a conference of Chief Ministers of the three States in order to decide which of the steel plants should be taken up first on the basis of the recommendations of technical experts. In the case of the other two projects which are proposed to be located in the Vizag-Bailadilla area and the Goa-Hospet area, no details are available though it is generally agreed that ample ore reserves are available. Indeed, the ore that can be had in the Hospet area is of greater purity and large quantities are already being exported through Madras and other ports to foreign countries. But the main problem will relate to the import of coal for steel smelting. In the case of Goa, foreign exchange would be involved if it were decided that coal could not be brought round the coast from the West Bengal-Bihar coalfields. In the case of Visakhapatnam, too, Singareni coal supplies may not be adequate nor completely satisfactory and if it were necessary to bring coal from the same sources as in Goa, the cost of steel making may not be very much lower than in the case of Salem. Besides, the problem of transporting ore will involve heavy outlay in terms of railway facilities. If all the aspects have to be considered and a technical report drawn up it may be two or three years before a decision could be taken on the feasibility or the desirability of these two projects. The Madras Government, therefore, is of the feeling that there is no point in suggesting that a decision should be taken on the location of the steel plant in the South only after the technical reports of the other two projects have

been drawn up. Indeed, it is claimed that the outlay on the Salem project will be modest being not more than Rs. 100 crores and that the pig iron produced will be ideally suited for manufacturing malleable castings and for producing also alloy steel. It is only to be hoped that the controversy over the location of a new steel project would not lead to misunderstanding among the three Southern States which have friendly relations. The question at issue is only the determination of the required priorities. For, the base of the industry has to be broadened in order to be able to step up the output easily in the subsequent plan periods. With the changing techniques of steel making and the availability of large quantities of iron ore it should be possible to devise a procedure by which the three steel plants are taken up as and when the technical reports have been drawn up and the financial resources have been arranged.

★

The sincere effort made by Dr. K. L. Rao to resolve the differences among Maharashtra, Mysore and Andhra Pradesh, regarding the allocation of the waters of Krishna and Godavari, will, it is generally believed, bear fruit. It is true that the discussions between the Chief Ministers of the three States under the Chairmanship of Dr. K. L. Rao, held in New Delhi recently, were inconclusive and further discussions will have to take place before any definite decisions are reached. It is, however, expected that the approach would be to make the best use of available resources and derive the maximum benefit in terms of power generated and additional acreage irrigated. The Maharashtra and Mysore States are, of course, anxious that the waters of Godavari and Krishna, as they flow through their territories, should be exploited in such a way that the backward areas in these States are greatly benefited. The Koyna Project has already vitalised the region around it while it is expected that the Upper Krishna Project in Mysore will be greatly helpful in developing the arid tracts in the northern districts of the State. The Andhra Pradesh Government has, of course, been pointing out that the scope for generating power from the Godavari particularly, as it flows from Maharashtra, should be fully exploited before the large volume of water is used for irrigation purposes in the lower regions. The argument was till recently put forward that the Maharashtra Government was not in a position to generate equally large quantities of power by diverting the river waters westward. Besides, there was the likelihood of a large waste as the waters may not be useful for irrigation purposes before flowing into the Arabian Sea.

It has been latterly examined how additional acreage can be brought under irrigation in the areas concerned and there would seem to be confidence that waste can be avoided to a considerable extent. Mysore also has been adopting a similar attitude and the true position will emerge only after the various proposals have been carefully analysed and their efficacy determined. Considerations of regional development will naturally conflict with the overall approach. But there will have to be some intelligent compromise as the objective should be to maximise power generation and agricultural production. Viewed from this angle, Andhra Pradesh is probably better placed than the other two riparian States. There may not, however, be cause for mutual recrimination and distrust because the Gulhati Commission's appraisal would seem to have given rise to the impression that the total water resources are in excess of earlier estimates and that, in any case, the difficulties will arise only after three or four decades when the various projects have been completed.

It would probably be advisable to proceed with the implementation of projects which can be taken up immediately and without much difficulty in a manner that conferred large benefits on the country in a relatively short period. This can

be achieved to a great extent by asking all the three States to embark on projects in their areas so that there will be a proper division of labour and no undue concentration on any single major scheme. The difficulties in the way of executing huge multi-purpose projects will be appreciated, if it is remembered that the Nagarjunasagar Project in Andhra Pradesh has taken a number of years even to be partly completed and it is not expected that the early benefits will be derived before the early years of the fourth Plan. While a decision to implement huge projects under the guidance of the Centre, and with its financial assistance, might expedite the construction of this project, it would enable planned exploitation of the two mighty rivers if an effort were made to calculate with some precision the outlay that will have to be made if available resources have to be fully harnessed. The present opportunity should be utilised to obtain a clear picture of the progress that can be made in the next two or three years. If need be, a central authority can be created with suitable representation for the three States in order to solve the various problems that might be encountered when executing the different projects.

As regards Andhra Pradesh, the Chief Minister, Mr. K. Brahmananda Reddi, has pointed out that any delay in arriving at an amicable settlement will not impede the progress of the projects under construction or those under contemplation like Srisailem and Pochampad. These projects are vital for the development of the economy of the State in the coming years and it is expected that the execution of the Nagarjunasagar Project particularly would be expedited with the provision of large resources by the Centre. Some method of co-ordination will, of course, have to be devised when it has been decided that the Centre should provide fully the resources required for implementing this project according to the revised schedule.

★★

The importance of planned and intelligent exploitation of natural resources will be readily appreciated if it is pointed out that the power shortage now being experienced in Andhra Pradesh is due to inadequate outlay on hydel and thermal projects in the first two Plan periods. Only during the third Plan, the allocation for this purpose has been raised significantly. Even so, the target of 500 MW. is not expected to be reached before the second year of the fourth Plan. Dr. K. L. Rao has recognised the need for the creation of additional hydel and thermal capacity in a short period as it will not only help the State to get over its immediate difficulties but also benefit the neighbouring States by exporting power. There was some delay in finalising the thermal projects at Ramagundam and Kothagudem. But construction work is now progressing satisfactorily and it is anticipated that, after two or three years, these two stations would be able to account for a generating capacity of 180 MW. At the end of the third Plan, the installed capacity is expected to be 432 MW. but at present there is a capacity of only 213 MW. of which the dependable capacity is a bare 104 MW. As many large industrial units are under construction and there is also an ambitious programme of rural electrification, it should be ensured that the different schemes are completed as early as possible.

In the present context, Dr. Dharma Teja's offer to construct a thermal project at Ramagundam with a capacity of 200 MW. on a turn-key basis, has special significance. The Cabinet Sub-Committee is reported to have recommended this project to the Centre and a decision in this regard is expected at an early date. The main problem would appear to relate to the finding of foreign exchange to repay the loan over 15 years even though the payments will start only after the plant has been handed over and will be in operation. The cost of construction is expected to be around Rs. 17 crores

and the credit will bear a reasonable rate of interest. The merit of the scheme lies in the fact that an independent agency will be in charge of construction of the project and that the Government can concentrate its attention on the completion of other schemes so that a big addition to power availability can be effected in the next three years. Dr. Teja has offered to complete the scheme in thirty months from the date of signing of the agreement.

Meanwhile, Andhra Pradesh's Chief Engineer for Electricity Projects, who is also the Secretary of the Regional Electricity Board, has emphasised the need for constructing super thermal stations at Kothagudem and Ramagundam. The coal reserves in these two regions have great potentialities and it is asserted that in both these places the thermal stations should have a capacity of 1,000 MW. each. As the hydel potential of this State is 3 million KW. it is argued that the region's requirements can be more than adequately met if only transmission lines of the desired capacity could be constructed and the zonal grid was fully formed at an early date. The Srisailem project alone will have a capacity of 770 MW. while the Lower Sileru will have a capacity of 300 MW. in the first stage. These potentialities only bring out the need for proper planning and effective exploitation. The future outlook for Andhra Pradesh is, therefore, bright though so far only a fraction of nature's bountiful resources have been exploited and there is at present an acute bottleneck in respect of power availability.

Rice Situation

The rice situation is causing considerable anxiety in Madras and Kerala. The traders have been finding it difficult to transact business at or below the maximum prices fixed for the different categories after the announcement by the Central Government sometime back. As has been already indicated, the maximum prices are 10 to 15 per cent below the cost of acquisition of rice by the merchants and stocks have gone underground. Even when the attention of traders has been drawn to the fixation of maximum prices, retailers have been unwilling to part with their stocks except at prices which yielded them a small profit or at least prevented a loss. It is argued, therefore, that, in the absence of control over prices for paddy, it would not be possible for the traders to acquire paddy and convert it into rice for being sold at or below the maximum prices. The exact situation in regard to availability of stocks in Andhra Pradesh and Madras is not clear. The Andhra Government would appear to be worried over the large-scale movement of rice to Madras, Kerala and other States legally or otherwise. But curiously enough the traders in Madras and Kerala have been complaining about the non-receipt of supplies in adequate quantities from Andhra. The Kerala Chief Minister has even appealed to his counterparts in Andhra Pradesh and Madras to persuade merchants to send liberal quantities to Kerala in order to get over the difficult predicament.

A vigorous search is being carried out in Kerala to un-

earth hoarded stocks but the search has so far been futile and it is apprehended that the situation will get out of control if large supplies were not made available by the Centre. The latter for its part has been responsive and imports from Pakistan and Burma are being directly diverted to Cochin. It is expected that about 80,000 tonnes of rice will be available to Kerala in this manner and the stocks already in the possession of the State and the Centre could also be used. The difficult period between now and the end of December should somehow be got over. The success of the present experiment, however, is dependent on the effective use of available stocks in Madras and Andhra Pradesh. The outlook for the current crop is considered quite good as the recent rains have been very helpful. But the deficit of Mysore and Kerala is so large that the whole situation will have to be carefully watched if prices are to be prevented from getting out of control. The impression still persists that the rice problem is not so intractable as wheat. Indeed, it has been urged that a liberalisation of sales of wheat in these areas will reduce the pressure on rice and also the switch-over from coarse cereals to rice in the absence of availability of the former.

★★

The Madras Stock Market has been active in the past few days in sympathy with higher advices from Bombay and Calcutta. The quiet buying by the Unit Trust of select scrips like Mettur Chemicals, Aluminium Industries, Madura Mills and others have led to a firming up of prices and there is an acute shortage of floating stocks. Following the satisfactory settlement in regard to the payment of bonus with plantation workers and helpful rains in the tea and coffee growing areas, it is felt that the prospects for plantation industries have considerably improved. The outlook for the textile industry has also brightened as there is a good offtake of cloth and yarn and several units have large expansion plans. Corporate news has been encouraging and the publication of satisfactory results by Mettur Chemical and Industrial Corporation, Aluminium Industries, India Cements and Dhrangadhra has had a stimulating effect. Ashok Leyland will shortly engage itself in the implementation of a huge expansion programme and it is expected that additional capital in equity shares will be raised shortly. Standard Motor Products of India too will soon be deriving benefit out of the expansion programme now under implementation. Prices for select counters have not, however, risen abruptly in this centre as in Dalal Street and Lyons Range. There has no doubt been a gradual increase in the rates for scrips like Mettur Chemicals and Aluminium Industries. Even so, the average yield on many scrips is fairly satisfactory and investors are unwilling to part with their holdings even at the higher levels. If only the shares of new companies which are quoting still at a heavy discount recorded handsome gains there could be a speedier recovery. In this connection, there is anxiety to know whether the Central Government would announce measures which would be definitely helpful to the paper, tyre, rayon and other industries and in which a large number of new units are experiencing difficulty in operating on a profitable basis.

Dear Money and Investment Policy

From our Correspondent

BOMBAY:

THIS WEEK, thirteen State Governments entered the capital market to borrow Rs. 100 crores. The terms on which these loans are invited are not identical, some offering them at par and some at discount, the discount too not being the same in every case. Nor is the amount to be borrowed uniform, inasmuch as it ranges from a low of Rs. 3 crores as in the case of Assam to a high of Rs. 15 crores as in the case of Maha-

rashtra. So far as the duration of the loan and the rate of interest are concerned, however, there is uniformity in that all are twelve-year loans offering the same 4½ per cent rate of interest.

It was expected that the States would enter the market independently this year, unlike last year. As a matter of fact, the desirability of such a course was urged in these columns. This would appear to be more important today than ever

before, what with the universally accepted criticism of the States' failure to raise resources, while all the time they have been busy presenting ambitious schemes of development in their respective areas for Central assistance.

It is rather surprising that, whereas there is general agreement on the desirability of the States being asked to raise the loans on their own, there is no such unanimity of view as to the desirability of having a uniform pattern of State loans. To be precise, why should one State loan be offered at par and another at a discount? Again, why should there be a difference in the quantum of discount offered by two State Governments? Do these not put some State loans at a disadvantage vis-a-vis other State loans? If we really look at the question dispassionately, there should be no such distinction, notwithstanding the varying degrees of economic development from State to State, which is always offered as the justification. In the ultimate analysis, the State Government of the day has to meet the obligation from its own resources, if it can, or from assistance supplemented by the Centre, if necessary — more often the latter lately. It is perhaps worthwhile making a start in developing a spirit of national integration from the monetary field.

The rate of interest offered by the State Governments is naturally higher. Although the rate of interest in every case is 4.75 per cent, the yield varies from 4.75 per cent to 4.81 per cent. The higher rate of interest offered (not the varying yields from one State to another) is in conformity with the prevailing pattern of interest rates. It would have been unrealistic to offer lower rates after the recent changes effected by the banks in respect of their rates of interest on advances and deposits alike. After all, was it not the Reserve Bank itself which, not long ago, advised banks to reinforce their efforts to mobilise deposits in every possible way, including a re-examination of the pattern of interest rates offered by them on deposits?

Credit Squeeze

Higher interest rates are also warranted when there is felt a need to curtail credit, provided, of course, the objective of such credit curtailment is made clear. But what is the philosophy underlying the Government's present policy of higher interest rates? Is it to apply a brake on economic development? Or is it to counter inflationary trends, especially those stemming from the so-called speculative transactions? Are the selective credit controls, as they are being applied today, achieving their purpose? There seems to be scope for genuine differences of opinion here. For, while Dr. P. S. Lokanathan has recommended this course, at a meeting of bankers, economists and industrialists convened by Mr. G. L. Nanda, the Union Home Minister, last week, it was pointed out, by reference to published official data, that the Reserve Bank figures of bank advances did not provide any conclusive proof that hoarding of foodgrains had been the outcome of such advances. These are all questions that deserve detailed and careful examination by students of monetary policy.

It is well known that, in any comprehensive examination of monetary policy, one should be clear about the incentive effect of the rate of interest on saving as distinct from that on investment. Dr. Madan stated recently, in an address to the fifth SEANZA Central Banking Course held at Karachi, that "the balance between saving and investment in a situation where investment outruns saving is brought about mainly through a decline in investment in response to higher interest rates and only partly to an increase in savings." It would be interesting to know from him the precise effect of the rate of interest in a situation in which both the rate of saving and the rate of investment are woefully low as in our country. Would it be right, for instance, to infer that as savings have

failed to come up to expectations, a deliberate attempt is now being made in India to boost investment by the creation of a series of financial intermediaries? The question becomes pertinent perhaps, as the Government has so far been unable to revive the traditional capital market. Take, for example, the Unit Trust which is in a position to offer competition-free investible funds. The Unit Trust is, of course, a very desirable institution, but so are the Investment Trusts, and to deny tax concessions to the latter despite repeated representations to the Union Finance Minister year after year, while bestowing all manner of concessions on the former, is clearly invidious, however justified it may be ideologically. Take, again, the Development Bank of India. Can one honestly say that all the applications that are being addressed to it today are of a type that should go to the lender in the last resort?

Now, from the prevailing conditions in the capital market, it is permissible to draw two inferences. One is that it has become the avowed policy of the Government to bring a steadily increasing segment of investment within the purview of the organised credit structure. And the other is that this trend may be either deliberate, or may have been forced upon a Government which realises that its taxation and monetary policies have led to the present impasse and that it has no other alternative but this so long as it finds itself unable to reverse its policies due to political pressure.

★ ★
The loans floated by the States received a favourable response on the opening day (August 24) when no less than 5 of them were fully subscribed. It shows that the loans have been well-timed as they have taken due advantage of the seasonal easiness in the money market. The total subscriptions of all the State loans on the first day were valued at about Rs. 40 crores. The loans of two of the States, namely, Uttar Pradesh (Rs. 10 crores) and Bihar (Rs. 4 crores) were over-subscribed. The loans of Gujarat (Rs. 7 crores), West Bengal (Rs. 7 crores) and Assam (Rs. 3 crores) were fully subscribed. The Gujarat State loan was the first in the race and had to be closed within a few hours of the opening of the subscription. Even though it was believed that the total State loans of Rs. 100 crores were on the high side, yet it is now felt that almost all of them will be subscribed before the close of the week.

★ ★
The Textile Commissioner has announced free licensing of Bengal Deshi cotton for export for the 1964-65 season. This step has been welcomed by the business circles because it will enable smoother exports of Deshi cotton; these exports will take place on shipping bills accompanied by the usual certificate from the Appeal Committee. The shippers are required to register their sales with the Joint Chief Controller of Exports and Imports, Bombay. The Commissioner has also directed the mills to purchase hundred per cent quota of Indian cotton which is equivalent to their consumption during the current season. The fact that the mills have been permitted to purchase all their requirements before the end of July, 1965 is deemed to be a favourable factor because it will insure that production will not be restricted because of shortage of cotton. The only condition which has been attached is that the mills must purchase Cambodia A and/or B cotton to the extent of 7½ per cent of the consumption of Indian cotton during the 1963-64 season. This stipulation, however, does not attach to mills which have not been using this variety of cotton during the last three cotton seasons ending August 31, 1964. It is stipulated, however, that the mills must purchase the entire quantity of Indian cotton allowed under the latest circular as early as possible but not later than July 31, 1965. The mills have been asked to furnish monthly statements showing purchases of Cambodia A and/or Indian cotton in the same manner as in the past. Market circles believe that up to 275,000 bales of cotton may be exported under the new scheme. The forecasts regarding the new crop are described to be satisfactory.

The moving finger writes

THE PRIME Minister's letter to Mr. Bhupesh Gupta surely utters some of the most sensible ideas that have ever been heard in this country on economic planning. I like particularly his firm assertion that there has to be some kind of a balance between outlays on heavy industries and outlays on measures which bring immediate benefit to the common man. I have always held the view that history has been unkind to that generation of Indians who are now past middle age. Their young years were blighted by the worst economic depression the world had ever seen. Then came the demands which the Independence struggle made on the idealism and patriotism of people in various walks of life — demands which we most splendidly responded to by those who might be considered, in pharisaical terms, to have been least able to make the sacrifice asked of them. There were also the stresses and strains of a most destructive world war and they were followed by the depredation of inflation and the exactions of the five-year Plans. I am, therefore, all in favour of some consideration being shown to the India of today even if it might mean a little less jam for the India of tomorrow.

It is for this reason that I am far less enthusiastic over Mr. Asoka Mehta's revelation that the Perspective Planning Division of the Planning Commission expects the country to be "in a somewhat comfortable position" in 1973 or 1974 than I am over Mr. C. Subramaniam's reassuring statement in Calcutta on August 22 that the worst of the food difficulties was now behind us and that the food position in many areas of the country had improved considerably already and would improve further rapidly in the coming weeks.

Incidentally, among the local daily papers only "The Statesman" deemed it necessary to give space on the front page to Mr. Subramaniam's statement. "The Times of India" which did have a news story on Mr. Subramaniam's Calcutta visit on its front page failed most oddly to report this observation of the Minister. "The Hindustan Times" had a report on page 9, while "The Indian Express" and "The Patriot" had ignored the statement altogether. "The Patriot", of course, could be expected to be not too keen on drawing the public's attention to any improvement in the food situation. Mr. Subramaniam had to go to the P.T.I. in the Capital before the Dailies would take proper notice of his views on their front pages. It is a pity that while the Press is only too liberal with banner headlines in reporting police raids on grain godowns, it should be found to be so lacking in sound judgment when it comes to the question of giving proper publicity to a statement by the Food and Agriculture Minister on the improvement in the food situation.

Mr. H. V. R. Iengar's article on 'Double Standard of Justice' in "The Indian Express" of August 20 is a stimulating dissertation on some of the current ills of our body politic. So much so that I am provoked into sharing with my readers some reflections of my own. Mr. Iengar rightly denounces the venality of politicians as revealed in the Das Commission Report, but has not that document also brought out the ready vulnerability of civil servants? Surely, one of the more important morals to be drawn from the findings of the Commission is that without the subservience, if not the connivance and collusion of high government officials of easy virtue, the attempts of politicians in power or the people around them to feather their own nests would not have had or be having the success that is theirs. I believe that men of the stature of Mr. H. V. R. Iengar, who had held high positions in the administration,

might profitably give some thought also to the culpability of government officials. Especially when it is borne in mind that some of the most blameworthy officials have often been those whose tenures and terms of service have been given the strongest protection in law and practice, the readiness with which they have been yielding to the persuasion or pressures of their political bosses suggests that the politician is not the only ailing limb of a sick society.

★ ★
The following passage is from Mr. Nandan B. Kagal's column in "The Times of India" of August 20:

"As I stand here today under the Indian tricolour, I am oppressed with a feeling of shame — shame that after 17 years of independence the strong united nation we dreamed about is a chequer-board of disintegrating States hostile to one another... Each year found us more and more engrossed in the fulfilment of petty selfish interests rather than in the wider interests of the nation. Gradually State boundaries have assumed the importance of national boundaries and the people of one State are moving away from those of another... I am afraid, unless this picture can be changed, we shall go down in history as a people who were among the great orators — who gave the world a great religion and a great philosophy — but who had to look to the world for the fulfilment of their personal needs. I would hate to think of such a fate for this beloved country of ours... How long will the hungry and disappointed men and women listen to the reasons that are offered for the failures? These are harsh words but they have the merit of honesty and we must be grateful to Mrs. Vijayalakshmi Pandit for having spoken them at an Independence Day ceremony in Bombay the other day."

I do not agree with Mr. Kagal that "we must be grateful to Mrs. Vijayalakshmi Pandit for having spoken" as she did — because I rather doubt that the Governor of Maharashtra would have been so candidly critical of national or government achievements at an Independence Day ceremony had her lamented brother been still the Prime Minister of India.

★ ★
The offer made by Orissa's Chief Minister, Mr. Biren Mitra, to make over the entire assets and liabilities of himself and his wife to anyone who cares to pay a rupee for them has expectedly brought on an avalanche of acceptances. I am watching with interest how Mr. Biren Mitra proposes to carry the transaction through. As there are more than one taker, there will obviously have to be some kind of a lottery to determine the lucky winner. Meanwhile, his offer is pulling in money far faster than the Nehru Memorial Fund and at this rate the present transaction may well turn out to be Mr. Mitra's slickest business deal ever.

★ ★
Jawaharlal Nehru died full of years, fulfilment and glory. There was therefore no warrant, surely, for the mawkish sentimentality of the first bit in the "New Delhi Notebook" of "The Statesman" of August 24. That was a description of villagers and school children visiting "Teen Murti", on the eve of Rakhi. The worst part of it all was the macabre caption "Rakhi without a Wrst". It sounded like the title of some horror story from Ambrose Bierce or Alfred Hitchcock. I read somewhere the other day that the Emperor of Ethiopia had prescribed severe penalties for professional mourners and breast-beaters at obsequies. New Delhi could learn from Addis Ababa.

CAPITAL'S PRICE COMMITTEE

THE PRICE Fixation Committee of Delhi Administration has done a piecemeal job by fixing the margin of profit for the retail sale of some varieties of pulses. Announcing the decision of the Committee at a press conference, the Chief Commissioner, Mr. Dharam Vira, remarked that he was unable to control the prices of foodgrains coming into Delhi as it was not a producing centre. It was for the Central Government, he added, to consider the matter on an all-India basis. Perhaps it was for this reason that the Capital's Price Fixation Committee felt satisfied only with the reduction of profit margins of five varieties of pulses — Arhar, Malka Massor, Masoor Ki Dal and Moong, washed and unwashed — from the present margin of 10 to 19 per cent to 7.5 per cent. The Committee arrived at the conclusion that the margin on the retail sale of wheat, rice and Urad (a kind of pulse) were reasonable and that, therefore, there was no point in disturbing them. In order to ensure that the dealers will charge prices according to the fixed margins, the wholesalers have decided to set up a vigilance committee. This committee will look into the complaints against the traders charging higher prices. The wholesalers have also decided to set up a committee to supervise the publicity of foodgrains prices at producing centres, expenses incurred in bringing the foodgrains from these centres to the Capital and the margins of profit allowed. This committee will supply to newspapers, every evening, the rates for the following day and will also display them at six important places on notice boards. The names of the members of the vigilance committee to whom the complaints should be made, will also be notified.

The wholesalers have given an assurance to the Price Fixation Committee that they will do their best to increase the supplies of foodgrains to the Capital. They have also volunteered to manage about 100 fair price shops in various parts of the Capital where wheat, rice and pulses will be available at prices fixed by the Committee. The Chief Commissioner, however, intends to keep a constant watch on the trend of prices in the markets instead of relying blindly on the assurances given by the wholesalers. The Delhi Administration has with it 62 inspectors and six chief inspectors, covering 3,000 licensed traders and about an equal number of unlicensed traders.

As regards the retail shops, dealing in foodgrains, being asked to display the fixed prices, the Chief Commissioner is of the opinion that it should not be difficult for the consumers to calculate the prices they have to pay on the basis of margins of profits fixed by the Committee vis-a-vis the rates prevalent in the wholesale market. According to Mr. B. R. Gupta, the General Secretary of the All-India Food Grains Dealers' Association, Delhi, the decisions of the Price Committee will be effective for about two months i.e., till the new crop is harvested and comes in the market.

A fall in the prices of foodgrains may be expected in the near future in view of the bright prospects of the coming Kharif crop coupled with the US foodgrains shipments to India at the rate of 4,00,000 tons per month. The Federation of All-India Food Grains Dealers' Associations has asked its constituents to clear all food grain stocks before the arrival of new crops. The Federation feels that after the new arrivals, food grains prices will fall sharply. The traders are, therefore, being advised that in order to avoid losses they should clear their stocks as quickly as possible. According to the Federation, the early crops of Moong, Urad and Lobia from Khandesh are expected in the market in 10 days. The maize crops from Bihar and Andhra Pradesh are expected to arrive in the market within three weeks; Jowar and Bajra

from Rajasthan and Punjab in about six weeks, and from Madhya Pradesh and other places in 10 weeks. The rice crops of Punjab, Bihar, West Bengal and Chhatisgarh are expected to arrive in the market in about a month. The crops everywhere are generally encouraging. The groundnut and Til seed crops from Punjab, U.P., Madras and Khandesh are also expected in the market in about a month's time. The Federation has assured traders that in view of the good prospects of sugarcane crop, ample supply of gur and khandasari will be available from U.P. in about two months.

LEIPZIG FAIR

With the theme of "Success Through High Quality Products", the German Democratic Republic's famous Leipzig Autumn Fair will be held from September 6 to 13, 1964. About 6,500 exhibitors from 57 countries are expected to take part in this year's fair. Visitors from nearly 80 countries are likely to participate. The biggest overseas exhibitors will be India and Tunisia. Twenty-one countries of Western Europe, including Great Britain, Belgium, France, Italy, Austria, Spain, Turkey, Sweden and Switzerland, most of the Socialist countries including Cuba, nine countries of North, Central and South America, nine countries of Africa, and seven countries of Asia, including Indonesia, Japan and Pakistan will be participating in the fair. India being the biggest overseas trading partner of the G.D.R. outside the socialist group, will display a wide range of products in a pavilion comprising an area of 600 square metres. This country has enlarged its floor space by about 40 per cent as compared to the 1963 autumn fair, while the products to be displayed include textiles, jute manufactures, shoes and other leather goods, and electrical appliances besides such traditional items as tea, coffee, cashewnuts, pepper and other spices, de-oiled cakes and m.c.a. At the 1963 autumn fair, Indian exhibitors had concluded contracts worth Rs. 3.9 crores with the foreign trade organisations of the G.D.R. In addition, contracts worth millions of rupees were signed with buyers coming from more than 80 countries of the world.

At the fair, 'Leipziger Messeamt und Deutsches Amt fuer Messwesen und Warenpruefung' will award diplomas and gold medals for the best products. It may be recalled that at the 1963 Leipzig Autumn Fair M/s. Jay Shree Tea Gardens, a Birla concern, was awarded a gold medal for the outstanding quality of its tea.

The first long-term trade and payments agreement between India and the G.D.R. was signed in December, 1959 covering the period 1960-62. The agreement of 1959 was extended twice, for 1963 and 1964. During the course of this long-term agreement, the Indo-GDR trade developed to the advance of both the countries, the turnover increasing from Rs. 11.2 crores in 1959 to Rs. 23.2 crores in 1963. The turnover in 1964 is likely to increase further to about Rs. 35 crores. A twelve-member trade delegation from G.D.R., led by Mr. Kurt Epperlein, Deputy Minister of Foreign Trade, is currently in India, negotiating a new long-term trade and payments agreement which is expected to be signed in New Delhi before the end of September, 1964. Mr. Hans-Joachim Lemnitzer, Commercial Counsellor and Trade Representative of G.D.R. in India, while addressing a press conference in New Delhi recently said that if India established a trade representation in his country, it would be in a position to sell more of its non-traditional goods.

TOBACCO DELEGATION

A four-man delegation, led by Mr. S. Hamid, Joint Secretary, Union Ministry of Commerce, has left on a three-week tour of East European countries for exploring markets for Indian tobacco. The delegation, which consists of Mr. M. J. Oza, Joint Divisional Manager of the State Trading Corporation, Mr. K. Ramakrishnamurthy and Mr. B. Subbarao, tobacco

exporters of Guntur, will visit the USSR, Poland, German Democratic Republic, Hungary, Czechoslovakia and Yugoslavia. It will hold talks with the authorities in these countries about the sale of the accumulated stocks in Andhra Pradesh of about 25 million pounds of high grade virginia tobacco. Of the total crop of 225 million pounds, the bulk has already been sold and only a stock of 25 million pounds is left. The delegation will also explore possibilities in these countries for larger markets of Indian tobacco of all grades on the basis of long-term trade contracts. A delegation had recently visited West European countries to explore larger markets for Indian tobacco. Another delegation on the same mission is to go to Africa in the near future.

JAPAN'S SHIPPING INDUSTRY

Japan's shipping industry is making a new start after 18 years of post-war doldrums. Before the war, Japan ranked third in the world in shipping, after the United States and the United Kingdom. Japan's mercantile fleet, which had totalled 4,090,000 tons in 1935, was reduced to approximately 1,000,000 tons by the end of the World War II in 1945. Till 1949, the occupation forces prohibited Japan from constructing large-type vessels. Coupled with the belated start in the reconstruction of the shipping industry, the Special Measures Law on War Compensation, passed in 1946, cut Government compensation to shipping firms which had lost ships during the war. The volume of ships to be built by Government funds under the planned programme of shipbuilding was limited, and due to the increased amount of interest which the industry had to pay for funds borrowed from banks, shipping firms were plunged into a critical financial crisis. On the other hand, shipping continued to be bearish after the war due to the world-wide surplus of ships. Notwithstanding this unfavourable situation, Japan's merchant marine fleet regained its pre-war tonnage in 1958 and now in 1964, the volume is approximately double that of the pre-war years.

At the beginning of 1963, the Japanese Government decided to help the deficit ridden shipbuilding industry by encouraging the shipping firms to merge for more efficient operation. As a result, a total of 94 shipping firms possessing ships with a total capacity of 9.4 million DWT (ranking fifth in the world after the USA, the UK, Norway and Liberia), were reorganized into the following six groups in April, 1964:

Name of the Group	Capital (in million)	No. of firms	No. of Ships	Capacity in '000 DWT
Osaka Shosen-				
Mitsui Senpaku	13,100	31	200	2,329
Nippon Yusen	14,600	16	156	2,278
Kawasaki Kisen	9,000	17	105	1,566
Yamashita-Shin				
Nippon Kisen	5,270	15	85	1,113
Japan Line	11,800	6	69	1,072
Showa Kaiun	4,500	9	54	1,016

As a result of this reorganization, the Osaka Shosen-Mitsui Senpaku group has become the second largest owner of ships in the world after Peninsular and Oriental Steam Navigation Company, (P & O Line). Nippon Yusen ranks third in the world, Kawasaki fifth and Yamashita-Shin Nippon Kisen tenth.

The Japanese Transportation Ministry is planning to expand the country's mercantile fleet during the coming years in an effort to solve the perennial deficit in the invisible trade balance which is one of the biggest problems facing the Japanese economy today. Japan's maritime deficit in the fiscal year 1963 was \$212 million. This was largely due to the fact that the Japanese ships carried less than 50 per cent of Japan's total imports, which are 10 times the volume of Japan's exports.

Japan is importing increasing quantities of such goods as iron ore, oil and other raw materials as requisites for the continuing expansion of her heavy industries. At the same time, Japan is exporting more machinery and chemical products than before. In 1962, the volume of Japanese exports weighed 13,189,000 tons but her imports registered 120,673,000 tons. According to estimates made by the Transportation Ministry of Japan, if the present plan of constructing 800,000 tons of new ships a year is continued without any alteration, the increase in trade volume will result in a deficit of \$650 million a year in the maritime freight balance in 1967. The Ministry, in an attempt to eliminate the deficit in the freight balance, has prepared a plan to construct 1,800,000 tons of new ships a year.

FOOTWEAR EXPORTS

The State Trading Corporation has decided to enter the footwear export trade in a big way. Its plan is to achieve, by 1970, an export target of two million pairs of footwear annually, earning Rs. 4.5 crores in foreign exchange. During the current year the STC hopes to export seven lakh pairs, mostly to East European countries. The STC also proposes to take over the footwear production and designing departments from the National Small Industries Corporation. This will enable the STC to export footwear of desired specifications and thus meet the requirements of the importers. The STC, however, has no plans to take to the manufacture of footwear for export. It will continue to buy footwear from the existing manufacturer-exporters who will be required to make shoes according to STC specifications.

LAND REFORM STUDY

A three-year study project on land reform, to be conducted by Prof. M. L. Dantwala of Bombay University, will be financed by a grant of Rs. 236,500 from the U.S. rupee-fund generated by the Food for Peace Programme in India. The proposed study will evaluate the impact of land reforms in the Western region of India, on the structure of land holdings and farm production potential. It will involve the study of the principal social and economic issues, of the impact on responses of farmers in regard to long-term investment and adoption of improved farming techniques.

PEAK EXPORTS OF HANDICRAFTS

As against exports worth Rs. 19.3 crores in 1961-62 and Rs. 21.5 crores in 1962-63, handicrafts worth Rs. 30.7 crores were exported during 1963-64. The main items of export were jewellery (Rs. 12.89 crores); carpets (Rs. 5.16 crore.); art brassware (Rs. 1.78 crores) and hand-printed textiles (Rs. 1.19 crores). The United Kingdom, the USA, the USSR, Canada, West Germany and Australia were the main countries to which these goods were exported.

ATLAS COPCO

Mr. Finn Andresen, General Sales Manager, Atlas Copco (Great Britain), has been appointed as Managing Director of the Atlas Copco (India) Pvt. Ltd., which has, on the Bombay-Poona Road, a medium-sized, modern factory manufacturing compressed air equipment for construction, mining and manufacturing industries. The equipment being supplied by Atlas Copco includes: stationary compressors, air tools, air hoists, winches, air motors, spray painting equipment, vacuum pumps, high and low pressure compressors; portable compressors (rotary screw and reciprocating), skid mounted compressors, jeep and tractor mounted compressors, rock drills, wagon drills, sandvik coromant drill steels and extension drill steel equipment, benchers, concrete breakers, tie tampers, hammers, grinders and sump pumps; and rock drills, trac rigs, wagon drills, loaders, grinders, winches, sandvik coromant integral drill steels and extension equipment.

Acid-resistant lacquer for prawns? No!

To keep prawns eatable, cans must be coated with a sulphur-resistant lacquer. It's plum cans which need one that is acid-resistant. Anyone can tell you that—anyone at the Metal Box Research Division.

Scientists attached to this Division help create the *right* package for every product... make certain that the *right* finishes are developed to preserve the contents and protect the package.

Yet it would be wrong to think that Metal Box scientists are concerned only with basic developments in packaging. They work all the time with customers to solve individual packaging problems... help suppliers to develop improved materials.

And their discovery of many indigenous substitutes for imported raw materials helps save valuable foreign exchange. As does the work of the Metal Box Technical Development Division. Metal Box have designed and built in India can-closing and bottle-sealing machinery that used to be imported and cost the country a pretty penny.

Metal Box spend about Rs 10 lakhs every year on Research and Technical Development. That's a lot of money—but it pays rich dividends to the Company as well as the nation. Take just one instance. Enterprising packers in Kerala have won growing export markets for canned prawns in recent years. Metal Box know-how and the world-wide acceptability of Metal Box containers have helped to make this export success possible.

Yes, research is at the root of all progress.

Company Affairs

LARSEN AND TOUBRO

CAREFUL PLANNING, judicious investment and efficient execution of development plans have yielded excellent working results for Larsen and Toubro Ltd. for the year ended March 31, 1964. A new record was set in sales during the year at Rs. 8.21 crores, an increase of more than 40 per cent over the previous year. This was largely due to significant rise in production which has more than trebled in the last three years. During the year under review, the output by the company's workshops at Powai increased by about 62 per cent over the preceding year. All the manufacturing units are working efficiently and they have either reached or exceeded their production targets. The general workshop was fully occupied with fabrication and assembly of plant and equipment for the chemical, pharmaceutical and food processing industries and cooling towers. The switchgear factory increased the production of switchgears, motor starters, control and instrument panels and kerbside petrol dispensing and metering pumps. Production of switchgear equipment exceeded the target and the factory needs a further expansion to meet the rising demand.

The company's subsidiaries are also making satisfactory progress. Alu Capsules L'd., a wholly owned subsidiary, which initially manufactured bottle capsules from aluminium foil, has extended its activities and is currently manufacturing press tools, jigs, fixtures, plastic and bakelite moulds and dies in collaboration with Interfonda Ltd., Switzerland. Christensen-Longyear (India) Ltd. — another subsidiary of the company — is manufacturing drilling equipment and diamond drill bits in collaboration with E.J. Longyear Company, USA and Christensen Diamond Products Company, USA. The Engineering Construction Corporation Ltd. and Indian Crown Cork Company Ltd. — the other two subsidiaries of the company — recorded substantial improvements in their respective lines of business. The associate companies are also progressing according to expectations.

The expansion activities of the company, during the three-year period ended 1963-64, has resulted in more than doubling of the company's equity capital from Rs. 80 lakhs to Rs. 165 lakhs, whereas production, sales and profits before tax have almost trebled. The forecast of production and sales for the following three years also shows an encouraging rise. To meet the financial requirements, the company has prepared a comprehensive three year plan. A beginning has already been made by the proposed issue of 660,000 equity shares of Rs. 10 each at a premium of Rs. 2 a share which will fetch a sum of Rs. 79.20 lakhs.

The profit for the year before providing for depreciation, development rebate and taxation amounted to Rs. 1.11 crores as compared to Rs. 0.66 crore in the preceding year. Appropriations include Rs. 18.46 lakhs for depreciation (Rs. 14.64 lakhs), Rs. 4.46 lakhs for development rebate reserve (Rs. 3.23 lakhs), Rs. 9.08 lakhs for general reserve (Rs. 4.06 lakhs), Rs. 25.73 lakhs for dividend reserve (Rs. 20.23 lakhs), Rs. 3.00 lakhs for dividend equalisation reserve (Rs. 1.00 lakh) and Rs. 50.50 lakhs (Rs. 24.40 lakhs) for taxation.

CIMMCO

The Central India Machinery Manufacturing Co. Ltd. has done exceedingly well during the year ended March 31, 1964. Thanks to the encouraging rise in earnings and profits, the directors have stepped up the dividend from 7.5 per cent taxable to 10 per cent taxable. The turnover has risen sharply from Rs. 3.42 crores to Rs. 4.94 crores. The Cimmco-Sakamoto automatic looms manufactured by the company in collaboration with Enshu Ltd. of Japan are well received in the market and they compare very favourably with the imported looms. But the demand has fallen short of expectations owing to

stringency of funds with textile mills and due to the continued restrictions imposed by the Government on the installation of automatic looms. The production capacity of the Gwalior factory is, therefore, being under-utilized and this has adversely affected the profits of the Gwalior Unit.

The order position in respect of plain looms is also discouraging on account of the restrictive policy followed by the Government. The progress, however, is encouraging in the case of the calender bowl plant at Gwalior, and the shuttle factory at Bombay. The output by the Wagon and Structural Shop Division at Bharatpur is maintained at a satisfactory level. The high speed winding machines manufactured by the company in collaboration with a reputed German firm continues to find a ready market. The construction work of the steel casting factory is progressing well and production is expected to commence some time during the current year.

The gross profits, before providing for depreciation showed a substantial improvement from Rs. 35.60 lakhs to Rs. 64.12 lakhs. Appropriations include Rs. 21.66 lakhs for depreciation (Rs. 16.67 lakhs), Rs. 2.94 lakhs for development rebate reserve (Rs. 5.37 lakhs), Rs. 18 lakhs for general reserve (Rs. 17.50 lakhs), Rs. 15 lakhs for dividend reserve (Rs. 15.50 lakhs) and Rs. 6.50 (nil) for taxation.

KESORAM INDUSTRIES

The efficient working by the various units of the Kesoram Industries and Cotton Mills Ltd. has resulted in a substantial improvement in the working results of the company for the year ended March 31, 1964. The modernisation and expansion of the textile unit are proceeding according to schedule. A sum of Rs. 11.23 lakhs has been spent for adding a number of modern processing machines. The company proposes to expand its installed capacity to the extent of 7½ per cent in respect of spindles and 10 per cent in terms of looms by setting up a separate unit. The new unit is to be located at Budge Budge near Calcutta.

Despite a sharp rise in electricity rates, excise duty, and frequent power failures, both units of the rayon plant have made steady progress. The transparent paper plant has also shown slightly better results but continues to experience difficulties in competing with the similar products manufactured by other processes which enjoy a lower excise duty. Moisture-proof printing and bag making plants have started working recently and sales are expected to rise further when these plants start full production.

A factory to manufacture spun pipes and fittings is being constructed at Bansberia, near Calcutta. More than 50 per cent of the imported machinery has already arrived at the factory site and the balance is expected shortly.

The trading profit has recorded a smart improvement from Rs. 1.98 crores to Rs. 2.53 crores while sales showed a handsome rise from 14.41 crores to Rs. 15.77 crores. Appropriations include Rs. 95.28 lakhs for depreciation (Rs. 82.49 lakhs), Rs. 11.81 lakhs for managing agents' commission (Rs. 8.39 lakhs), Rs. 53 lakhs for taxation (Rs. 3 lakhs), Rs. 4.78 lakhs for development rebate reserve (Rs. 39.21 lakhs), Rs. 55 lakhs for general reserve (Rs. 22 lakhs) and Rs. 37.50 lakhs (Rs. 40 lakhs) for dividend reserve.

CAPITAL ISSUES

Five companies have been authorised by the Controller of Capital Issues to raise fresh capital exceeding Rs. 15.45 crores. The consent is valid for 12 months in all cases.

Tata Oil Mills Company Limited, Bombay, is to issue Rs. 35,03,750 bonus capital in 1,40,150 equity shares of Rs. 25 each, to be issued as bonus shares on capitalisation of share premium account. The bonus shares will be issued in the proportion of one for every 3 equity shares held.

National Organic Chemical Industries Limited, Bombay,

is to issue share capital of Rs. 10 crores in equity shares of Rs. 100 each for cash at par. Of this, shares of the value of Rs. 3.34 crores will be subscribed in Sterling by Shell International Chemical Company Limited, UK and out of the balance, Rs. 3.40 crores approximately will be subscribed by the Mafatlal group, their friends and associates and the balance of Rs. 3.26 crores will be offered to the public by prospectus.

Polyolefins Industries Limited, Bombay, will be issuing capital of Rs. 3.60 crores in equity shares of Rs. 100. All the shares will be issued for cash at par and Rs. 1.20 crores will be subscribed in DM Currency by Farbwerke Hoechst A.G. West Germany; Rs. 1,17,60,000 will be offered to the public by prospectus and the balance Rs. 1,22,40,000 will be subscribed privately.

Chowgule Steamships Limited, Goa, is to issue further capital of Rs. 1 crore divided into 1,00,000 equity shares of Rs. 100 each to be issued privately for cash at par. The capital will be utilised in meeting the company's commitments in acquiring ships.

Tractors and Bulldozers Limited, Baroda (a private company converted into public one on January 19, 1964), engaged in the manufacture of Zetor Diesel Agricultural Tractors, is to issue further capital of Rs. 50,00,000 in equity shares of Rs. 100 each, for cash at par. Out of this issue, approximately Rs. 35 lakhs will be offered to the public by prospectus.

LICENCES ISSUED

The following licences were issued under the Industries (Development and Regulation) Act 1951 during the week ended 8th August, 1964. The list contains the names and addresses of the licensees, the items of manufacture and annual installed capacity.

ELECTRICAL MOTORS

Jay Engineering Works Ltd., P.O. Box No. 2185, Calcutta (Sanatnagar, Andhra Pradesh) — Universal 230 volts, 1/20 HP Motors for export. Shifting from Bansdroni (West Bengal) to Sanatnagar, Andhra Pradesh.

AUTOMOBILES

Guest, Keen, Williams Ltd., Sankey Division, Wakefield House, Sprott Road, Ballard Estate, Bombay-1 (Mysore) — Filter inserts 1,50,000 sets per annum; Pneumatic Governor diaphragms — 24,000 sets per annum. (Shifting from Maharashtra to Mysore).

MACHINE TOOLS

Shri M. Basavarajappa, Ravi Metalloids, H.M.T. Estate, Jalahalli Post Office, Bangalore-13 (Bengalore, Mysore) — Universal Drilling and Boring Machine, Milling and Drilling Machines — 240 Nos. per annum.

DRUGS AND PHARMACEUTICALS

Alembic Chemicals Works Co. Ltd., Baroda-3 (Gujarat) — Kanamycin Sulphate injections 18,750 vials — 1 gm. base; 37,500 vials — 0.5 gm. base; Kanamycin Sulphate Capsules 46,875 bottles of 4 capsules each. Kanamycin Sulphate Syrup 48,750 bottles of 10 million each; Kanamycin + Tetracycline Capsules — 16,875 bottles of 4 capsules each containing Kanamycin and tetracycline hydrochloride 0.125 gm. each. 16,875 bottles of 4 capsules each containing Kanamycin base 0.125 gm. and tetracycline hydrochloride 0.195 gm.; Kanamycin + Chloramphenicol Capsules 33,750 bottles of 4 capsules each.

SYNTHETIC ARTIFICIAL FIBRES

Central Weaving & Manufacturing Co., Swastik Mills' Compound, Ferguson Road, Lower Parel, Bombay-13. (Bombay, Maharashtra) — Art silk fabrics — 40 power looms after expansion.

LETTERS OF INTENT

The following is the statement showing letters of intent issued during the week ending 8th August, 1964, to parties who have applied for licences under the Industries (Development

and Regulation) Act, 1951.

Shri Gobinddeo Glass Works Limited, 9, Ezra Street, Calcutta-1 (West Bengal) — Various items of Ceramic machines — worth Rs. 106.36 lakhs per annum. M/s. Ciba of India Ltd., Royal Insurance Building, 14, J. Tata Road, Bombay-1 (Maharashtra) — Lynestrenol — 199.2 kgs. per annum. Mestrenol — 6 kgs. per annum. Sandoz (India) Ltd., 3, Wittet Road, Ballard Estate, Bombay-1 (Maharashtra) — Digoxin B.P. — capacity to be fixed. M/s. Textile Machinery Corporation Ltd., Belgharia, 24, Parganas, Distt. (West Bengal) — Ring Spinning Frames 1,080 per annum. Carding Engines 450 per annum. M/s. Indeng Corporation (P) Ltd., 29, Mahakali Chawl, Pydhonie, Bombay-3. (Maharashtra) — Various items of Ceramic Machinery, 1st year Rs. 70 lakh worth; 2nd year Rs. 155 lakh worth; 3rd year Rs. 250 lakh worth. M/s. Shalimar Industries (P) Ltd., 25, Ganesh Chandra Avenue, Calcutta-13. (Shalimar, Howrah, West Bengal) — Grooved insertmail eyes 120 lakh pieces per annum. Shri R. N. Bose, 228, Jor Bagh, New Delhi-3. (Thana, Maharashtra) — Taps and dies 360,000 nos. per annum; Chasers — 144,000 nos. per annum; Milling cutters — 36,000 nos. per annum. M/s. The Indian Aluminium Co. Ltd., 31, Chowringhee Road, Calcutta-16 (Mysore) — Aluminium smelter — 30,000 tonnes per annum (N.U.). M/s. The Indian Aluminium Co. Ltd., 31, Chowringhee Road, Calcutta (Maharashtra) — Aluminium rolling mill 13,000 tonnes per annum (N.U.). M/s. Bharat Steel Tubes Ltd., 14-15F, Connaught Place, New Delhi-1 (Punjab) — Steel strips 40,000 tonnes per annum. M/s. Universal Cables Limited, Satna (Madhya Pradesh) — Signalling Cables 300 miles per annum. M/s. N. K. Kerr & Co., 82, Hastings Street, 3rd Floor, Calcutta-1 (Orissa) — Paper and pulp 25,000 tonnes per annum. M/s. Hind Construction and Engineering Co. Ltd., 9, Brabourne Road, Calcutta-1 (Dehra Dun, U.P.) — Portland cement 200,000 tonnes per annum. M/s. India Paper Pu'p Co. Ltd., 8, Clive Row, Calcutta-1 (Hazinagar, Naihati, West Bengal) — Paper and pulp 4,000 tonnes per annum. M/s. E. I. D. Parry Limited, Dare House, P.O. Box No. 12, Madras-1 — Soda ash, Ammonium chloride. M/s. Elpro International Ltd., 20, Graham Road, Ballard Estate, Bombay-1 (Maharashtra) — X-Ray equipment Rs. 30 lakhs worth per annum. M/s. Godrej & Boyce Mfg. Co. (P) Ltd., Lalbaug, Parel, Bombay-12 (Maharashtra) — Standard Typewriters. M/s. Apeejay Structurals Ltd., 47, Hide Road, Calcutta 27 (Rajbandh, Burdwan Distt. West Bengal) — Wharf cranes (capacity to be determined). M/s. Escort Ltd., 11, Scindia House, Connaught Circus, New Delhi-1 (Punjab) — X-Ray equipments — 400 units per annum. Shri H. K. Nathani, 11, Circus Market Place, Calcutta-17. (Orissa) — Rolls on cast iron and cast steel base — 5,040 tons per annum.

CHANGE IN NAMES (Owners or Undertakings)

During the week ended August 8, 1964.

(Information pertains to particular licences).

From M/s. North Bihar Rolling Mills Ltd., Bihta, Distt. Patna (Bihar) to M/s. South Behar Sugar Mills Ltd., Bihta, Distt. Patna (Bihar); From M/s. Gujarat Electrodes Private Ltd., Baroda to M/s. Cema Private Ltd., Baroda; From M/s. Frick India Ltd., New Delhi to M/s. Frick India (Private) Ltd., New Delhi; From M/s. Geo Salter India Ltd., Calcutta to M/s. George Salter India Ltd., Calcutta; From M/s. New Era Hindustan Woollen Mills, Ludhiana to M/s. Himachal Shoddy Mills Ltd., Paonta; From Mrs. Parvathi Arjunan, Pallayakottai P.O. to M/s. Mallikeswari Textiles Private Ltd., Pallayakottai P.O.

LICENCES REVOKED OR SURRENDERED

During the week ended August 8, 1964.

(Information pertains to particular licences).

Mr. Satya Paul, Julundur — Water meters; M/s. Tekhatpur Powerloom Weavers' Co-operative Society Ltd., P.O. Bari-pada, Distt. Mayurbhanj, Orissa — Cotton yarn; M/s. Berhanpur Powerloom Weaver's Co-operative Society Ltd., Berhanpur, Distt. Ganjam, Orissa — Cotton yarn.

More for everybody

In thousands of villages today, Co-operatives are doing what no individual could do before. Behind them, a pillar of strength, the State Bank of India.

Every year, through over 1600 branches, the State Bank of India and its subsidiaries extend financial and other assistance not only to the co-operative banks but also directly to the co-operatives themselves, such as marketing and processing societies, sugar factories, industrial co-operatives, consumer wholesale stores, etc. It is a happy circle. We help them. They help the nation. That helps us. There is consequently more for everybody.

STATE BANK OF INDIA

NOW-A NEW VEE-BELT
WITH 40% INCREASED
HORSE POWER RATING
DUNLOP
introduces
MAXRATE

Maxrate is one more major development by Dunlop in the field of industrial rubber products in India. This premium rated belt will bring economy of drive space, weight and cost. How? Read on.

The basic factor in assessing the utility of any vee-belt is its horse-power carrying capacity. More hp means more profitability. Maxrate is developed to do exactly this. Besides, it is backed by the technical know-how and expertise of Dunlop and manufactured from the finest materials for top performance.

Here's why Maxrate 40% higher hp capacity means more economy than normal vee-belts.

1. Higher hp capacity results in compact drives.
2. Compact drives mean savings in space, weight and cost.
3. No increase in price; thus increased value for your money.

Maxrate is manufactured by Dunlop in a wide range to suit every requirement. See your nearest Dunlop dealer for details or write to:

THE DUNLOP RUBBER CO. (INDIA) LIMITED
Industrial Products Division, 57B, Free School Street, Calcutta-16.

Readers' Roundtable

HIGH PRICES—A CRISIS OF CONFIDENCE

Sir, — According to the Government estimate the total crop for 1963-64 is 77.8 million tons. Another 5 million tons were available from imports, thus making a total of 82.8 million tons.

Even if we take the Government figure to be inflated by, say, 10 per cent and also permitting 7.5 per cent for wastage in handling and storing, there remains available for distribution 70 million tons of food grains which are enough to provide 1 lb. of food grains per day for 45 crores of population. This population includes children, women and aged and also people living in urban areas. All these consume less, therefore leaving a larger quantity for the population living in the rural areas. Thus enough food grains are available.

If we look at the cost index figures we find that the index of cereals in January 1963 was 103 and it started rising from April 1963 and in May 1964 went up to 128 — a rise of nearly 25 per cent in about 14 months. The same has been the trend in pulses. From an index of 104 in January 1963 it went up to 136 in May 1964 which is a rise of nearly 32 per cent. In oilseeds again there was a steep rise with the result that the price of edible oil has shown a rise of 25 per cent during this period. Against this, the prices of meat, fish and eggs have not risen to the same extent. There is only a sympathetic rise of about 10 per cent in these products. The rise in the price of milk and milk products has again been to the tune of 17½ per cent because of the higher cost of feeding the cattle. Thus, it seems that there was some reason during this period to inflate the prices to this extent in spite of the fact that there was enough food to go round for the whole of the population.

We have to consider therefore what happened to all these food grains. In spite of the raids in Delhi, Calcutta and all other places, not much stock has been found with the traders, whether wholesalers or retailers. It therefore appears that the grains are still lying in large quantities with the farmers who are the primary producers. The farmer sells according to his needs. As he needs cloth and other essential commodities, he sells grains. Therefore he has to be induced to sell grains by buying something else so that the shortage may not persist.

Old Days

In the old days he had the alternative of buying gold. Today gold is available but resale of gold has become difficult. The Gold Control Order came into effect on January 9, 1963. Therefore he has lost confidence in gold purchases. If he converts his grain into money then there is the difficulty first, of money being stolen and secondly, currency notes being eaten by white ants. The gold he purchased used to be converted into ornaments which were all the 24 hours either on the body of his wife or in some shape or other on himself. Therefore, he was not afraid of theft and at the time of adversity he could sell it.

It may be worthwhile therefore to re-establish gold as a medium of inducing the farmer to part with the grain or to be given some alternative which will induce him to sell grain and keep the alternative as a safety measure to be used in adversities.

In addition to the loss of confidence which he has undergone in gold, the Government has also through rural credit agencies extended a credit of nearly Rs. 150 to Rs. 175 crores which has further aggravated the position. The more a watch has to be kept on the expansion of rural credit also, so that it may not induce the farmer to hoard grains. It is really speaking a crisis of confidence which has resulted in high prices.

In addition to the hoarding with farmers, there is some amount of hoarding with consumers also. This fact has been stated by the Union Food Minister. To prevent consumer hoarding, action should be taken by the Centre to sell imported grains at selected centres in large quantities to push down the prices so that the consumer may feel confident about the food situation and he may not keep larger stocks. Of course, unproductive expenses should also be curtailed all round.

Simultaneously with the short-term action to be taken for dehoarding and making enough supplies available, action is also necessary for increasing agricultural production.

— A CORRESPONDENT.

BOOKS BRIEFLY

Monetary Semantics

Clarification of the Monetary Standard: By Will E. Mason; The Pennsylvania State University Press; 1963; Pp. xii+253; Price \$7.50.

Reviewed by D. KRISHNASWAMI RAO

THIS BOOK centres round a particular and limited thesis, namely, that the confusion of monetary policies and objectives in our time has been the "inevitable result" of the absence of a precise definition of the "monetary standard," and that "what the 'money muddle' cries out for is a concept of a monetary standard sufficiently precise, reasonable, and realistic to permit isolation of the phenomenon and identification of its species".

In the introductory chapter Professor Mason poses his problem, which is that current monetary problems are not well enough understood because of the "mounting confusion" in the terminology of monetary theory and that the substantive issues in monetary policy cannot be resolved until the terminological obstacles have been eliminated. In the next chapter he makes a minute survey of the literature to examine the various concepts of a monetary standard that have prevailed from time to time and to show how they have little applicability to the monetary arrangements that have figured in contemporary discussions. Much of this chapter is in the nature of a difficult exercise in logic but at some points new light is thrown on recent controversies: for example, when the author points out the basic inconsistency of innovations to secure price stability within the framework of a gold (or silver) standard. It is exceedingly doubtful however whether at the present time monetary analysis is as dominated by the persistence of thinking appropriate to older monetary standards as he makes it out to be.

The next two chapters are devoted to a discussion of the way in which economists continued to apply classical monetary terminology to situations and developments that had outmoded it, and of the reasons for the persistence of a static termino-

logy in the analysis of a monetary system that was constantly changing. Then follows a chapter on the 'Result of the Confusion,' the burden of which is: "Terms for alleged standards have come to mean everything; therefore they mean nothing. Substantive issues have been sucked into the quicksand of a spreading terminological swamp. The swamp must be drained".

While all this reasoning may be good as an intellectual exercise, one might still question whether in any other than the physical sciences terminology has kept pace with changes in phenomena and whether the inaptness of terminology can be such a big bar to the correct analysis of practical situations.

Dr. Mason then presents his own concept of a monetary standard as the criterion "guiding the monetary authorities in their choices among alternative monetary policies for the attainment of social goals". As this is an adjustment of the concept to the fact that money is no longer a commodity with an intrinsic value of its own, he feels that it would resolve terminological obscurities and lay bare the substantive issues in monetary policy. He also claims that if such a concept of a monetary standard had been an accepted doctrine in the first quarter of this century, some of the gross currency muddles of the time could have been avoided. Continuing in this vein, he writes: "Hence, the international financial debacle of 1931-1933 might never have happened. If so, the great depression would have been more moderate, and the world might have been saved from some of its catastrophic consequences".

Such is the theme that Dr. Mason has developed in the 120 pages of the text, supported by 103 pages of Notes in which are cited more than a thousand writings in proof of the argument of the book. There is no doubt that enormous research has gone into its writing. But the theme can only be of interest to a small and esoteric circle of students of monetary theory, as the battle of the monetary standards was for all practical purposes abandoned about twenty-five years ago, and other and more challenging issues have come to the fore in the monetary controversies of the present day.

RECORDS AND STATISTICS

Forecasting Export Trends Till 1970-71

AT A meeting of the Board of Trade held in New Delhi last week, the export targets for the fourth five-year Plan were finalised. The general consensus of opinion was that export earnings of Rs. 5,100 crores for the five years of the fourth

Plan period with the last year of the Plan ending on earnings of Rs. 1,110 crores, were both possible and reasonable. The table below gives figures regarding commodity-wise exports in 1960-61 with targets for 1965-66 and 1970-71:

EXPORTS ESTIMATES FOR THE FOURTH PLAN (Along with Figures of Exports for the Third Plan)

- (A) Exports of bananas are very risky and so far have not been very successful. If present efforts succeed in modernising our plantation, transport and packing, we may be able to achieve more. Along with this, it will also be necessary to cultivate public opinion in favour of exports of bananas which today are falsely described as "poor man's fruit and as such should not be exported".
- (B) Export of coffee at the end of the fourth five-year Plan can reach such a large value only if (a) the plantations are intensely developed and more lands made available and (b) the international coffee agreement is amended to at least double our present quota. Under the present agreement, we are restricted to very small quantity of export of coffee to quota countries. Regarding non-quota countries, which are few, the possibility is that most of these countries may join the agreement, thus making us lose the exports of these outside the present quota.
- (C) The export of iron and steel scrap in the fourth Plan faces great risk. The Ministry of Iron and Steel, which controls this industry, is of the opinion that there will be no substantial quantities of iron and steel scrap in the fourth Plan period because most of it will be consumed by the new coming up scrap smelting furnaces in the country. Unless all efforts are geared to collect as much scrap as possible through suitable policies and incentives and the stipulated quantities are allowed to be exported, we might lose these exports and the Japanese market in future.
- (D) The exports of fabrics of art silk and synthetic fibres could only be possible if present incentive scheme is left undisturbed and the attractive feature of import of synthetic yarn, fibre, rayon, nylon, etc. is continued to be allowed. If, any further major interference is done in the incentive scheme, we might face the risk of losing these exports.
- (E) This will be a new item for machine made carpets. For this we have taken recent decisions to promote some machine carpet units. If we succeed in this venture, we may be able to export about Rs. 5 crores worth of machine-made carpets annually by the end of the fourth Plan. This is a field in which work and experience gained in the fourth Plan may open up a much larger vista of exports in the fifth five-year Plan.
- (F) The exports of prime steel are very promising provided, in the fourth five-year Plan, about 5 lakh tons of prime steel of different categories and product mix are made available for exports every year to countries of South-East Asia, West Asia, Africa and Persian Gulf. Larger inputs specially for production of iron and steel for exports could help us to earn about Rs. 20 crores per year.
- It has not been possible to indicate export estimates for prime steel during the last year of the third Plan and in the duration of the fourth Plan as firm indications of availability for export are not yet available.
- (G) In the year 1961-62, the figures of post parcels were not being tallied comprehensively by the DGCI & S and, therefore, these figures are not reflected in the total exports of 1961-62.

General Note: Item 52 — "Miscellaneous items including re-exports". Out of the miscellaneous items, those individual items whose exports reach an annual figure of Rs. 1 crore and more are continuously brought up as separate individual items and the balance of small items having their individual exports of less than Rs. 1 crore are classified under this head — Item 52 "Miscellaneous Items including re-exports"

To Parliament with Confidence

BY NEXT Monday, when the monsoon session of Parliament meets, the monsoon itself would have virtually run its course. The clouds of political controversies, however, will be crowding into the skies over Parliament House. Over the past some weeks, opposition groups of various hues and views had been trying to keep alive a clamorous agitation over food prices. Unfortunately, they had been aided and abetted in their campaigns by the Government itself, which had quite needlessly thrown itself into a panic. There was never at any time any danger of food famines in any part of the country, apart of course from the scarcity conditions seen in the desert districts of Rajasthan last summer — which, curiously enough, seemed to attract but little political or public attention at that time. There was and there is certainly a lean period until the *kharif* harvests begin to arrive. But the problems of this phase could and should have been anticipated through a proper scheduling of food imports and their deployment.

There was in all this a certain element of miscalculation in that Mr. Swaran Singh, as Minister for Food and Agriculture, had been quite generous in releasing stocks of imported grain to State Governments, but had omitted to take steps simultaneously for restocking. Shipments from the United States under PL 480 could have been stepped up as well as speeded up in anticipation of difficulties rather than, as now, in alleviation of them. In any case, it certainly reflected no credit on Mr. Subramaniam's predecessors in the Food portfolio that the bottleneck in grain handling at the ports was never seriously dealt with, so much so it became an urgent responsibility of the present Minister for Food and Agriculture to resolve this difficulty at a time when the internal food situation had been blown up into a problem of monstrous proportions. That the Government has been made to pay for all this fecklessness is true enough. It was surely the guilty thought that, despite bold talk of buffer stocks on the part of its spokesmen from time to time, it had allowed official grain holdings or reserves to dwindle to meagre quantities which prompted the Government to indulge in as well as encourage rumours of large-scale hoarding, thereby demoralizing the public, dislocating the trade and lending false substance to the slogans of the opposition. Fortunately, the Government appears to have seen the error of its ways and realized the need for keeping its head rather than seeing red. Hence perhaps Mr. Subramaniam's emphatic statements last week that the worst phase of the food difficulties was over and that the public might expect supplies to ease in the coming weeks. This reassurance has come not a day too soon and must certainly strengthen the hands of the Government in dealing with opposition groups which may be expected to exploit fully their parliamentary opportunities for intensifying their agitation over food.

This is not to say that there is no food problem at all. While there is certainly no serious overall shortage of food in the country, the fact remains that food prices have gone up. This is essentially due to a very definite emergence of inflationary pressures in the economy. These pressures have sent up not only food prices but also most other prices. What is distinctive about the increase in food prices is that a substantial part of it has occurred abruptly whereas other prices have been rising more gradually and, therefore, less obtrusively. If the national economy is to be properly managed in the future it is important that the Government should squarely face up to this challenge of inflation. That it is preparing to do

so need not be denied. The cut intended in government expenditure — about Rs. 70 crores on Central Government account and about Rs. 50 crores perhaps on account of State Governments—is no doubt in the nature of a token, but it is still significant as an admission that ingrained attitudes are at last being revised. We hope that the Government has really been converted to the view that the mere level of public spending is not an index, and certainly no guarantee, of development.

The course of the convert, however, is not likely to run smooth. There are, for instance, quite a few academic economists who seem to have persuaded themselves that in the case of development expenditure what matters is not quality but quantity. Their uncritical readiness to equate investment with growth could lead to misleading advice being given to those in the Planning Commission or the Government. While, however, theirs might only be a role of unwisdom, there are others whose motives must surely be suspect. Voices have already been raised in the Communist Party in denunciation of the Government's alleged retreat from big industrialization in general and the rapid promotion of heavy industries in the public sector, in particular. With targets for the fourth Plan currently under discussion, it is to be expected that this particular debate will be kept going not only by Communist onslaughts but also by the ideological fervour of "Keep Left" Congressmen. In the circumstances it is, indeed, most heartening to find the Prime Minister having taken a clear and considered view of rational priorities in planning and development. In an admirable rejoinder to Mr. Bhupesh Gupta, Mr. Lal Bahadur has exposed the absurdity of the contention that there could be any contradiction between an immediate programme of strengthening the social and economic base of the community by providing for the greater production of the essentials of life and the objective of promoting heavy industries and thereby advancing the industrialization of the country. Both Communists and arm-chair economists would do well to remember that a nation does not become rich or strong merely by putting up a large number of imposing plants producing heavy machinery and the like. The essence of mother industries is that they must, in fact, mother other industries and it follows that unless investments in capital goods industries are integrated with the larger economic and industrial activity around, they could become nearly as irrelevant to the economic development of the country as the pyramids were to food and farming in the Nile Valley.

Paying Guests

IN TOURISM, as in much else, this country is in the position of a poor relation at a rich man's table. The year 1963 was a good year for the international tourist trade. Tourist traffic, according to the International Union of Official Travel Organizations, was some 13 per cent more than in 1962 with the number of tourist

We, therefore, unhesitatingly applaud the Prime Minister for the rare courage of his down-to-earth statement that "what India needs is socialism in action". In a message to the *Congress Forum*, official organ of the Congress Forum for Socialist Action, Mr. Lal Bahadur has further said: "What we do to our masses to make them self-sufficient in regard to their food, clothing, shelter, medical aid and employment is the real essential. The more we can do to bring these to our people the nearer would we be to the goal of socialism. The standard of living of the common man must be raised." It may be confidently predicted that, in the coming session of Parliament, the sound position taken by the Prime Minister would be assailed, both openly and obliquely, not only from the opposition benches but even from his own side of the House. The Government, however, may rest assured that responsible and enlightened public opinion in the country will support solidly an enlightened approach to economic development as affirmed in the Prime Minister's recent statements.

A new approach, realistic and resilient, to old problems will certainly be even more warmly welcomed in friendly foreign countries which have been contributing considerably in men, money, machines and materials to the industrialization and economic development of this country for the last 15 years or more. While it should be duly noted that assisting governments and institutions have been careful to avoid creating an impression that they want to guide or influence our domestic economic policies, it still remains true that their willingness to continue to provide assistance will depend on the visible results of its utilization by and in this country. The recent visit, brief sojourn, official consultations and public statements of the President of the World Bank, a man who, both as an individual and by virtue of his office, has been taking a large-hearted — but hard-headed — interest in this country's five-year Plans, is evidence enough of a keen international desire to continue to give support and sustenance to India's development programmes until its lop-sided economy assumes a reasonably rounded shape. At the same time, it would be imprudent on our part either to take for granted foreign assistance of the order that may be needed for some time to come or to be lulled into a false sense of security that what we cannot justify by performance we could still manage to wangle through alibis, arguments or excuses. It is surely of no little significance that the Prime Minister's emphasis on pragmatism and prompt results has been greeted abroad with an enthusiasm amounting to excitement.

arrivals rising from 81.3 million to 91 million. The improvement in tourist receipts from \$8,114 million in 1962 to \$9,250 million in 1963 was even slightly better at 14 per cent. Indian statistics, however, show only marginal gains, with tourist arrivals showing an increase of 6,461 and foreign exchange

earnings going up by about a crore of rupees to about Rs. 22 crores. How far behind India is in tapping the potentialities of international tourism is brought out forcefully by the spectacular advances scored elsewhere. Spain, for instance, had 11 million foreign visitors in 1963 as against 8.5 million in 1962 and, in the current year, is geared to playing host profitably to an even larger number anticipated to be about 13 million. Currently, about 42 per cent of the foreign exchange receipts of Spain are earned through tourism. Incidentally, it is not certainly a coincidence that Spain's tourist boom has come at a time when foreign investment interest in Spain's business opportunities is running strong. In the course of 1963, the value of those investments increased by 73 per cent, American companies being foremost in this investment activity.

It seems to us that, although tourism is described as a by-product of affluence and is essentially an exercise in pleasurable travel and sight-seeing, it is also becoming a concomitant of the international traffic in trade, industry and finance. The current tendency, in other words, seems to be to combine business with pleasure (and *vice versa*). It follows that India could hope to attract more and more of the international tourist traffic as it succeeds in offering more and more business opportunities for foreign investors and entrepreneurs. Thus, any step taken to promote the inflow of foreign capital and know-how could be expected to build up India's tourist trade and earnings. In the same manner, any increase in international tourist interest in India could also have the effect of bringing to the knowledge of foreign investors and business men opportunities for doing business with or in this country. These are some of the points which the Government of India will do well to bear in mind as weighing in favour of progressively liberalizing the climate for foreign investments in this country.

It would be useful, again, to know that tourism is to some extent a two-way traffic. More people are apt to visit our country if more of us were to be seen and heard abroad. Advertisement posters alone are not good enough. Live contacts are also needed. While it is true that scarcity of foreign exchange must limit foreign travel for the citizens of this country, it would still be possible for the Finance Ministry to allow itself some prudent liberality in the matter of 'P' forms.

Tourism needs to be promoted and pampered. It must, in fact, be offered the world at its feet. Interesting places to visit or historic monuments to see are of course a prime condition. Of key significance too are the existence of modern amenities. The tourist is out to enjoy himself and no country may hope to see much of him so long as it has not equipped itself to take the most tender care of his right to a good time. This country and its Government have long been blamed for their neglect of tourists as well as tourism. It is, however, only fair to say that there has been a progressive im-

provement in attitudes. Procedures for landing permits, visas and customs clearance have been liberalized; baggage restrictions have been waived to some extent and concessions with regard to import duty have been made; local liquor laws have been modified to the advantage of tourists from abroad. More important still, the Government itself is putting forth a big effort to expand modern hotel facilities. At present the country has a total of 11,750 hotel beds of international standard. Another 1,500 beds would be added over the next 18 months. This, however, would still leave hotel facilities far short of the needs of the tourist trade. It has therefore been decided to set up a hotel corporation in the public sector with a programme for the construction of about 35 new hotels dispersed over centres of tourist interest, currently ill-served in the matter of hotel facilities.

Next to good hotel facilities comes travel, not merely comfortable but pleasurable, in winning tourist goodwill. Travel is of particular importance in this country where the climate is far from hospitable during the greater part of the year. India, again, is a vast and sprawling land with places of tourist attraction separated often by hundreds of miles from one another. Hence the great importance of modes of travel which are quick, comfortable and inexpensive. Currently much of the international tourist traffic is air-bound and air transport, consequently, is of special relevance to tourism. It follows that there must be a constant search for new ways and means of extending or improving the services of the Indian Airlines Corporation, particularly on flights and routes serving tourist traffic. The rail services too must play their part and here again both imagination and ingenuity should be pressed into service for continually adding to tourist comforts and attractions. The special tourist train service which is proposed to be run between Delhi and Agra provides an instance of the kind of enterprise which the railways should not hesitate to go in for in a big way. It is also worth examining whether the railways and the Indian Airlines Corporation could not offer, separately or jointly, package travel deals for tourists at concessional rates of fares. It is possible that there will have to be an element of government subsidy on travel, accommodation or other services or amenities for foreign tourists, but expenditure of this kind might well be regarded as an investment. It has been estimated that if tourism is properly developed it might earn for this country in foreign exchange more than Rs. 60 crores annually in about 10 years' time. Prospects of this order should surely justify bold and forward planning — and investment.

Highlights of the Week

BONUS OR WAGE INCREASE?

THE DECISION of the Union Government to accept, with some modifications, the recommendations of the Bonus Commission, has satisfied neither the employers nor the union leaders. The employers feel that the provision for the payment of a minimum bonus — irrespective of the fact whether a unit had a profit or a loss — amounted to a straight increase in wages which, in fact, is the rightful jurisdiction of the Wage Boards appointed for the various industries. The union leaders are furious because the Government has "tampered with" the recommendations of the Bonus Commission which, they say, they would not "take lying down". An objective appraisal of the recommendations as accepted by the Government would indicate that there is a definite improvement over the recommendations of the Commission, though "bonus" has been robbed of its true meaning as a share in profits and has become a compulsory charge.

The Bonus Commission had recommended that 60 per cent of the "available surplus" should be distributed as bonus subject to a minimum equivalent of 4 per cent of the annual basic wages and dearness allowance or Rs. 40 whichever was higher and a maximum equivalent of 20 per cent of the annual basic wages and dearness allowance. The Commission's formula for computing the "available surplus" was to deduct from the gross profits the following prior charges:

- Depreciation as admissible under the Income-Tax Act.
- Income-tax and Super-tax, and
- Return at the actual rate payable on the preference share capital at 7 per cent on ordinary capital and at 4 per cent on reserves.

The Commission had also recommended that the payment of bonus should be made in cash. Where the amount allocatable as bonus exceeded the maximum of 20 per cent of the earnings, the excess up to a further limit of 20 per cent was recommended to be carried forward to be "set on" in the succeeding years upto a period of the following four years. Similarly, where there was no "available surplus" or the amount of the "available surplus" allocatable as bonus was a sum less than 4 per cent of the annual earnings, the whole of the quantum of 4 per cent or the amount necessary to make up 4 per cent was to be carried forward and "set off" in the succeeding years up to a period of four years.

The Government has made three major changes in the recommendations of the Commission. In the first place, in computing the "available surplus" all direct taxes for the time being in force will be deducted as prior charges. Tax concessions given to industry to provide resources for development will also be accepted as prior charges. This is the additional deduction allowed by the Government which was to be excluded according to the Commission's recommendations. Steps are also to be taken to ensure by law that the amounts involved for such concessions are used for the purposes for which they are meant. The second modification relates to the rate of return on capital to be allowed as a prior charge. Amongst the deductions to be made before calculating available surplus are: (a) the actual rate payable on preference share capital; (b) 8.5 per cent taxable on paid-up equity capital but in the case of banks, 7.5 per cent only, and (c) 6 per cent on reserves and in the case of banks 5 per cent only. It is clear that the Government has taken a realistic line in allowing deductions for computation of rate of return on capital and the Bonus Commission's formula for computing the available surplus has been shorn of its sting. Lastly, the Government has stipulated that payment beyond a certain maximum of bonus should be paid in the form of securities or investments instead of being paid in cash. The

level beyond which the bonus should be paid in securities will be decided by negotiations with the parties concerned.

The Government has also announced that suitable legislation to give effect to these proposals will be presented to Parliament shortly.

The recommendations as accepted by the Government will apply in all cases to the calendar year 1963. In those cases where any retrospection has been settled through agreement or by a decision having been given, the matter would not be re-opened. In disputed cases, it will be related to the accounting year ending on any date in the calendar year 1962.

It may be stated that the public sector units have not escaped the clutches of these new proposals. The new bonus formula will apply to all those public sector undertakings which are not run departmentally and which compete with the establishments in the private sector. Competition with the private sector will be measured in terms of that portion of the sales which competes with the sales or services in the private sector. If 20 per cent or more of the gross aggregate sale or turnover of a public sector undertaking competes with the sales or turnover of units in the private sector, it will be deemed as competing with the private sector and will be liable to payment of bonus according to the new regulations. The formula will not, however, apply to new concerns until they have recovered all earlier losses including all arrears of normal depreciation admissible under the Income Tax Act subject to a time limit of six years.

GOODWILL GALORE

THE MINISTER for External Affairs, Mr. Swaran Singh, has taken his new assignment in a serious manner and has embarked upon what might be described as a series of goodwill visits to our neighbouring countries. He has made a start with Kathmandu and Kabul where, during the past week, he strengthened India's bonds of friendship through personal discussions relating to problems of mutual interest. Both Nepal and Afghanistan share much in common not only politically but in their present state of economic development. While, as Mr. Swaran Singh reiterated both at Kathmandu and Kabul, India stands for non-alignment and peaceful coexistence and respects the sovereignty of the two countries, it would certainly like to lend a hand, in however limited a manner, in their economic development.

While this country has enjoyed an impeccable record of friendship with Afghanistan, there had appeared, for some time, an unfortunate cloud of suspicion and misunderstanding on the horizon of friendship between this country and Nepal. That phase, however, was transient and Mr. Lal Bahadur's visit to Kathmandu in March last year proved effective in eliminating misunderstandings. Mr. Swaran Singh's visit has further consolidated these good-neighbourly relations. This country has been taking keen interest in Nepal's economic progress since 1952, and it has so far pledged to that country aid amounting to Rs. 39 crores, nearly half of which has already been spent. Among the landmarks may be counted the Tribhuvan Raj Path, the first modern highway in the kingdom, and the Rs. 52-crore Gandak barrage project, work on which started in May last. The major outcome of the visit of the Minister for External Affairs was the signing of the agreement for the execution by this country of the Rs. 9.11-crore Sonauli-Pokhra road project. But keeping in view India's own defence and development requirements, the raising of Nepal's yearly steel quota by 40 per cent, and increasing the monthly supply of trucks from five to 20, are not insignificant gestures of the goodwill and sincerity that India has for that country. This country fully appreciates Nepal's anxiety for the rapid implementation of India-aided projects, and the new agreement between the two countries that these projects should be

periodically reviewed to remove bottlenecks might well be viewed in that perspective. Mr. Swaran Singh has also promised that the Government of India will do its best to encourage Indian industrialists to set up plants in Nepal. That India has no intention of standing in the way of a diversification of Nepalese trade is evident from the fact that the two countries have agreed to review the transit facilities for Nepal's trade with other countries, especially with Pakistan.

The Kabul visit of the Minister for External Affairs has been equally fruitful. India and Afghanistan have been very good trading partners, and it is only because of Pakistan's recent restrictions on transit facilities to Afghanistan that, being limited to air transport, the volume of trade between the two countries has been substantially reduced. Mr. Swaran Singh could not naturally explore avenues of improving the Indo-Afghanistan trade relations. India, however, has offered to collaborate with Afghanistan in her economic development, especially in the fields of agriculture, small-scale industries and training facilities.

The next two countries on Mr. Swaran Singh's itinerary are Ceylon and Burma. The tasks that Mr. Swaran Singh will be facing there are somewhat difficult. The question of compensation to the evacuees from Burma will be discussed in Rangoon, and in Colombo a solution to the problem of 700,000 Indian nationals will have to be hammered out in a manner which should satisfy not only both the countries, but also the Indian nationals whose future is involved. With the abundance of goodwill which exists in these countries towards India, amicable solutions will not be difficult to find.

A MILD LEAP

THE QUICK estimates of national income for 1963-64 released last week by the Central Statistical Organisation indicated that for the first time since the third Plan commenced, a reasonable rate of growth of 4.3 per cent. over the preceding year, was attained. The rates of rise in the first two years of the Plan were 2.6 per cent and 2.4 per cent respectively, taking the total rise in the three years to 9.5 per cent as against the total targeted rise of more than 30 per cent in

the five years of the Plan. It means if the target in the third Plan is to be realised, the increase which must be recorded in the remaining two years of the Plan is a little more than 20 per cent which, for obvious reasons, is beyond reasonable expectations unless the agricultural production of the country shows a fortuitous increase as in the years 1952-53 to 1954-55. The table below sets out national income and per capita income for 1950-51, 1955-56, 1960-61 and for the first three years of the third Plan at 1948-49 prices. It shows that at constant prices, the per capita income has just crossed the Rs. 300-mark. It highlights the fact that per capita income has been almost stagnant for the three years 1960-61 to 1962-63 and a moderate jump has been recorded in the year under reference.

Year	National income at 1948-49 prices (Rs. 100 crores)	Per capita income (in Rs. at 1948-49 prices based on 1941, 1951 and 1961 population census figures)
1950-51	88.5	247.5
1955-56	104.8	267.8
1960-61	127.3	293.2
1961-62	130.6	294.3
1962-63	133.7	294.7
1963-64	139.4	300.4

Out of the total rise of 4.3 per cent, the increase through agriculture is 0.5 per cent only. The fastest moving sector in the economy has been "mining and factory establishments" which recorded a rise of 9.1 per cent in 1963-64 over 1962-63 and made a contribution of 0.9 per cent — the highest by any single sector — to the total contribution of 4.3 per cent. While the official communique has stated that the improved performance is due to the larger growth in the agricultural sector, the figures indicate that the credit for this happy performance goes "to mining and factory establishments" alone.

Profitability of British Capital Abroad

ANALYST

NOTWITHSTANDING the growing interest shown by US industrialists in investments in this country, the United Kingdom, which accounts for the bulk of foreign investments in India is likely to continue its commanding position at least for some years to come. It would, therefore, be of interest to analyse the structure and profitability of British investments overseas in recent times from the statistical data contained in the UK Board of Trade Journal of November 1963. The statistical data excludes oil, insurance and banking business in so far as the value of net assets of overseas investments is concerned, and oil and insurance business in so far as the profitability of investment is concerned. The inclusion of the banks "would probably have added little to the global total because banks' direct investments abroad tend to be in branches whose net asset values are likely to be small".

The value of United Kingdom companies' private investment abroad in 1962 covering 80 per cent of the earnings of United Kingdom companies abroad may be seen in Table I. It will be seen that of the total net investment of £2853 million, India accounts for £171 million only. It is in Canada that the UK has the largest stake having over one-fifth of the total investments. This is followed by Australia and the United States which have about a seventh and a tenth of the total investment respectively. India's share of £171 million forms only 6 per cent of the total investment abroad of the UK. It would be further seen from the table that in Canada British investments in fixed assets exceed investments in current assets, suggesting that British investments are larger in capital intensive industries there. In Australia investments in fixed and current assets are almost equal, whereas in the United States, South Africa and India investments in current assets are greater than in fixed assets. Another important fact that emerges from the table is that British companies in India have current liabilities to the tune of £105 million,

compared to only £163 million in Canada, although British investment in fixed assets in Canada is four times that of India. British companies in India have financed their assets to a greater extent from current liabilities in India, compared to the other countries, wherein they have greater volume of fixed asset investment, such as Canada, Australia, United States and South Africa. A comparison of columns (3) and (4) of Table I would indicate that whereas in Canada, current liabilities formed only slightly more than a fourth of British investment, in India it formed more than a half. Not only is British investment in fixed asset requiring industries lower in India, but the amount of short-term borrowings is also relatively higher. It would be interesting to see whether this kind of operations secured higher earnings for the UK.

Profitability

Table II shows the earnings of British investments other than in oil and insurance in 1962 in the five countries in which it had substantial investments.

A comparison of column (8) of Table I and column (5) of Table II would show that the rate of earnings of the UK investments in India is much higher than in Canada, Australia and the United States which had earning rates of 3 per cent, 7 per cent and 7 per cent respectively. The rate of earnings on Indian investments of 9 per cent was exceeded only by South Africa which had a rate of 13 per cent. It can also be seen in Table II that although in 1962 the rate of earnings in South Africa was higher than in India, during 1959 to 1961, the margin of difference between the rate of earnings in South Africa and in India was lower than in 1962.

In view of the higher rate of earnings in India than in Canada or the United States, it may be expected that the increase in British investments would be higher in India. Table III

TABLE I.
U.K. INVESTMENTS ABROAD: 1962

Country	Overseas subsidiaries and branches of U.K.					Value of trade investments in associated companies overseas	Total net asset value of direct investment overseas
	Fixed assets after provision for depreciation	Current assets	Current liabilities	Total net assets (1+2)-(3)	Value of net assets of overseas companies which are attributable to non-U.K. shareholders	Total net assets of U.K. companies (4)-(5)	(6)+(7)

shows the increase of British investments in total and also for five leading countries separately. This increase includes unremitted profits of subsidiaries, net acquisitions of share and loan capital, change in branch indebtedness and change in inter-company accounts.

TABLE II.
EARNINGS OF U.K. INVESTMENTS 1959-62
(£ million)

Country	1959	1960	1961	1962	Total
(1)	(2)	(3)	(4)	(5)	(6)
Canada	20.7	18.2	18.4	18.3	75.6
Australia	28.6	32.4	24.8	28.5	114.3
United States	19.9	18.0	18.0	20.1	76.0
South Africa	21.1	26.3	25.0	28.7	101.1
India	17.1	19.3	20.2	16.1	72.7
Total (including others)	225.3	247.9	235.2	221.1	929.5

*Under 'Earnings' are included both remitted dividends and retained profits.

A comparison of Table III with Table II would show whether the increase in the UK investments has been more or less than their earnings abroad. It would be observed that during 1959-62 in Canada and Australia, the increase in British direct investment exceeded the earnings in these countries; whereas in the United States, South Africa and India, it fell short of the earned profits. Thus the net outflow of British capital to India, South Africa and the United States was negative although the rate of earnings in these countries was

much higher than in Canada, which had a net increase in the flow of British capital. Thus, in spite of the fact that British investments in India are earning a higher rate of profit and are also able to secure a larger amount of current liabilities, there has been, of late, a net outflow of British capital from India. This contrasts strangely with Canada wherein the rate of earnings on British investment is only about one-third of that in India and there has been an increase in the flow of British investments there. Since our need for foreign capital is greater than that of Canada and Britain is an important country on whom we have to rely for capital, this raises an important question as to what other steps must we take to increase the flow of British capital to India since the higher rate of profit by itself does not seem to be an adequate incentive.

TABLE III.
INCREASE OF U.K. INVESTMENTS 1959-62
(£ million)

WINDOW ON THE WORLD

An Outsider's Look at Britain

PAUL BAREAU

ECONOMIC JUDGMENTS in Britain are in these days so immersed in and often distorted by political considerations that an objective outsider's view is doubly welcome. The general election is approaching fast and there can be no doubt that in the present mood of the electorate, economic issues will be paramount in the coming battle. In the circumstances there must be a natural and understandable predisposition on the part of the Opposition to paint the situation in as dark colours as they can muster and thereby explaining and justifying in advance the unpleasant measures they may have to take when they are called upon to exercise responsibility and to discover all the skeletons in the cupboards handed to them. Conversely, spokesmen for the Government are inevitably compelled to argue that all is for the best in the best of all possible worlds, to suggest that economic expansion has now been brought back to a rate that can be sustained, to define the present undeniable prosperity as something that can be maintained and thus to exhort the electors in a phrase which is becoming familiar in Conservative propaganda but has a decidedly non-upper class ring "Don't Chuck it Away".

In the circumstances it is refreshing to have the experts of the Organisation for Economic Co-operation and Development in Paris focussing their unbiased microscope and telescope on the economy of the United Kingdom. They are at one and the same time complimentary and apprehensive. They heap a great deal of praise for the reappraisal of economic policy making which has been under way in the United Kingdom, and in particular for the arrangements that have been made through the National Economic Development Council, representing both sides of industry, to adopt a growth target. The evocation of a target does not in itself achieve anything but the work of NEDC has brought into sharp focus certain obstacles to faster growth and has provided a spur to the search for means of overcoming them.

Upswing in Economy

This reappraisal played its part in unleashing the sharp upswing of the economy during the year 1963. By the beginning of 1964 the rate of expansion had, according to this OECD survey, reached the giddy figure of six per cent per annum. This was made impossible without dire inflationary consequences because there was a good deal of slack in the economy. When this was taken up the rate of expansion could not be sustained and it is now being brought back. The question is whether it is being reduced sufficiently for safety. There are some developments in the economic situation which suggest that it is not. One of them is the deterioration in the balance of payments. Another, obviously allied phenomenon, is the strain on sterling and the loss of gold which, albeit modest, persists. Yet another is the evidence of real strain on certain industries, notably in building where both skilled labour and materials are in cryingly short supply.

The OECD experts share these doubts. They question whether the modestly deflationary budget and the rise in Bank rate from 4 to 5 per cent earlier this year, are adequate counters and they suggest to the authorities that they should be prepared, if necessary, to make prompt use of the weapons it has at its disposal in order to decrease the level of demand.

Political considerations make it very unlikely that this advice will be followed in the immediate future. In fact, there is at the moment little call for it. The economy has recently shown signs of coming off the boil. One reason for this is the approach of the General Election and the uncertainties which this conjures up. It follows that when the election is over the

need for remedial action may be all the greater. It certainly would be in the event — at present unlikely — of a Conservative victory, since this would unleash an inevitable Stock Exchange and private investment boom. Paradoxically, remedial measures might also have to be applied in the more likely event of a Labour victory, since this would in all probability be followed by a run on sterling and either an appreciable loss of reserves or recourse to borrowing from other central banks or from the International Monetary Fund. The present position, therefore, is one of an economy which is at virtually full stretch, which is prevented from drifting into open inflationary waters by the election uncertainties, but which, failing other measures, would almost certainly move into such waters once that uncertainty was resolved and whatever the result of the election.

The OECD survey in its advice and criticism goes far deeper than a mere discussion of these relatively short term problems. It points to the fact that British industry has lost some of its competitive virtues and it finds the explanation of this in the measure of protection which all too many segments of British trade and industry now receive. For many years prices over a large range of consumer goods have been controlled and maintained by producers and retailers. That fortunately is on the way out with the enactment of the legislation outlawing resale price maintenance. Large parts of British industry are now protected by tariffs and the OECD survey points by way of emulation to the fact that "in a number of Continental countries, a useful shock tactic for bringing pressure to bear on producers in sectors where it is felt that prices are rising unduly or where competition is inadequate, has been selective reductions in import tariffs, either temporarily or on a permanent basis. There have been no examples of similar cuts in the United Kingdom".

Equally fundamental is the OECD's criticism of the re-

Eastern Economist 20 Years Ago

SEPTEMBER 1, 1944

THE DECISION of the Bretton Woods Conference to exclude India's sterling balances from the scope of the Monetary Fund was hardly conducive to inspire confidence in dependent people's that the foundation was being laid for an equitable international economic order. But the slender hope of a reasonable deal on the sterling assets based on the British Chancellor's promise of orderly liquidation and Lord Keynes' assurance of non-repudiation is being effectively dispelled by the first-hand evidence of the returned non-official delegates of this country. The essence of India's claim in regard to sterling assets is not only that they should be available, but they should be available in the five or ten years immediately after the war when they will be urgently needed to meet worn-out and stunted demands and at a rate equal to her needs. The second joint statement issued by Sir R. K. Shanmukham and Mr. A. D. Shroff makes it clear beyond doubt, and their interpretation has the authority of the British delegation, that precisely in those years, viz., the years of 'transition' mentioned in the Fund, sterling will not be multilaterally convertible. We are surprised that the delegates had reserved to the last this bitter pill for public consumption.

presentation of unions and employers in wage negotiations. The employers are represented by three different groups which overlap and impede one another. The trade unions are divided in a multiplicity of organisations which leads not only to ruinous demarcation disputes between them but chaos in industrial wage negotiations where employers in one industry have on occasion to deal with twelve or more different unions.

The plea which this OECD survey makes is, therefore, aimed at improving the flexibility of the British economy. It

is a plea which is based not only out of regard for Britain itself but for the sake of other countries. This is how the OECD experts put it: "It is important, in particular for countries in the sterling area, which are among Britain's major suppliers of imports, that the economy of the UK should be expanded. A period of sustained growth should help to strengthen the economy and thus permit an increase in capital exports." Let us hope, for the sake of all concerned, that the good advice provided by the OECD will be heeded and followed.

The Case of the Missing Exports

As Told by Dr. Watson to
JOSSLEYN HENNESSY

LONDON:

HOLMES AND I were in our rooms in Baker Street. My friend had had no case of interest for several minutes and he had just given himself his sixth injection of cocaine, strychnine, and Vitamin B — his usual recipe against boredom — when a ring at the front door bell awoke me from a snooze and caused Holmes to leap to his feet. His nostrils quivered like a war horse scenting whatever it is that makes war horses' nostrils quiver.

"Ah! The Prime Minister", he murmured.

"Holmes!" I cried. "How did you know?"

"You know my methods, my dear Watson", he retorted. "Whenever the front door bell rings I look out of the window to see who is there."

Mrs. Hudson opened the door. The P.M. rushed in.

"Mr. Holmes, thank God!" the PM. said. "I've come to ask you to trace —"

"The missing £500 million in the 1964 balance of payments," Holmes put in keenly. (I could see that he was interested because he had allowed all but one of the half dozen pipes, four cigarettes, and three cigars, that he had lit on the P.M.'s entrance, to go out).

"How did you know?" gasped the P.M.

"I read the financial press," Holmes said. "Pray give me the facts."

Mopping the perspiration from his brow, the P.M. sank into a chair. This was his story.

National Institute Estimate

On August 19, the National Institute of Economic Research (a private body) said that, contrary to widespread expectations that the Chancellor's budget restrictions had been insufficient to prevent the economy from over-heating, it was back on the four per cent growth rate, which was the government's aim. Unfortunately, however, this was because exports had been rising too slowly. The slower domestic growth rate had been at the expense of a balance of payments deficit, which the Institute estimated would reach £500 million by the end of 1964 and would be over £300 million in 1965. This meant that by the end of 1965, the U.K. would have used a credit as large as the gold reserve and would have nothing in hand to repay it. That, at least, was the National Institute's estimate.

On August 20, the Board of Trade announced that the trade gap in July was £87 million against £114 million in June, but this was due to a fall in imports, not to a rise in exports. For the past eight months UK exports have been stationary, whereas world trade has been growing at 10 per cent, and German, USA, and Japanese exports have risen around 20 per cent.

"In short", concluded the P.M., "we want you to find out what has happened to British exports."

"Have Scotland Yard or the FBI any theory?" Holmes asked.

"The FBI distrust the official figures," replied the P.M. "The FBI says that they are inconsistent with their own recent surveys and with actual business activity."

"What do the financial commentators say?" asked Holmes, handing the distraught P.M. a stiff lemonade and coca-cola.

"One group hints at a floating £, import controls —"

"Ha!" interposed Holmes swiftly. "We can eliminate that group. This country lives by exports. Import controls would ultimately end in foreign retaliation on our exports. A floating £? If the UK is exporting enough to pay for her imports and other overseas expenditure, she does not need a floating rate, and if she is not exporting enough to pay her way, a floating £ — given the £'s position in world trade and the interdependence of the main world currencies — would undermine confidence in all currencies and collapse the structure of exchange rates."

Holmes looked at the P.M. "What else?", he asked

"Other commentators say that the statistics mean that in some markets for some products — many important ones — the UK's competitive power is weak. One reason is that UK prices are too high (as in Australia when we compete with Japan) or yield so small margins of profits that there is no incentive to promote sales. Besides all this, the UK has clung to the manufacture of too many traditional or obsolescent types and has not switched to technologically advanced manufactures, for which world demand is expanding."

"That states the facts. It does not explain them," interrupted Holmes. "Why should our manufactures stick to traditional products instead of launching out into new ones?"

"Holmes, you're marvellous!" cried the P.M. You've put your finger on the key to the mystery. What is the answer?"

Holmes smiled sardonically. "Neither you, nor large numbers of the electorate, will like it," he warned. "Can you face the truth?"

"What is it?" the P.M. asked hoarsely.

"Nationalisation, 'reasonable' profits, and cost-push inflation caused by yielding to all wage demands irrespective of productivity. Between 1948-53 as much as £6,827 million, no less than 26 per cent of total investment were sunk in the nationalised industries, whose products were, until recently sold at artificially low prices, lest market prices stir up political hornets' nests. Investment yield in the nationalised industries has been derisory. Low prices financed by issuing government stock every year has added to inflation. Next, the government spends huge sums, and employs many of the UK's managers and technicians on aircraft, nuclear power, and unsalable defence weapons, which yield trifling returns. You deflect scarce capital and skills

Here are the remarkable features of the

CONVEYOR BELTING WITH A COTTON/NYLON CARCASS

Read about

DUNLOP STARLON

Starlon's cotton/nylon carcass is a major break-through in conveyor belting development in India. These details tell you how Starlon will bring increased pay-offs!

Intensive tests have proved that conveyor belts with a cotton/nylon carcass are far more successful for heavy duty material handling service. Starlon is the result of these tests. It is backed by the world-wide technical know-how and experience of Dunlop and is specially constructed for extra heavy conveyor jobs.

Here's why Starlon means a much more profitable investment!

- | | |
|--|--|
| 1. Improved flexibility—better troughing, smaller pulleys. | 5. Higher impact strength. |
| 2. Less horse-power required. | 6. Greater tear resistance. |
| 3. Increased flex life. | 7. Better fastener holding properties. |
| 4. Reduced number of plies—higher and thinner. | 8. Higher belt web strength. |
| | 9. Lower capital cost; lower cost per ton carried. |

Starlon Belting, 17240 metres long and 1524 mm wide, will shortly be supplied to the Neyveli Lignite Corporation for their mine expansion scheme. This is the largest single order for conveyor belting and yet another Dunlop achievement.

For complete details on Starlon, contact the nearest Dunlop office or write to:

from productive enterprise. Finally, nobody undertakes the risks of investment in untried technologies for the sake of a moderate profit. In 1961, seven leading German companies averaged net profits of 17 per cent, whereas eight leading UK companies averaged 5 per cent."

The Prime Minister raised clenched fists.

"Holmes," he cried, "if I publicised what you've just revealed to me, I'd lose the election."

Holmes smiled. "Don't worry. You won't," he said.

Tariff Cuts to Assist Developing Nations

GUY SIMS FITCH

WASHINGTON:

THE MOST immediate promise for the large-scale reduction of tariffs and other barriers to the trade of less developed countries lies in successful prosecution of Kennedy Round negotiations under the General Agreement on Tariffs and Trade (GATT). This Round, on which work is already under way, envisions special advantages for developing nations, chief among them the prospect that these nations will not have to grant full reciprocity to the developed nations in the exchange of concessions. It is well to remember, however, that this by no means marks the beginning of GATT concentration on this subject. Outside the context of the Kennedy Round 'per se', there have been important GATT activities relating to the special trade problems of developing countries. In fact, the principle that developed countries should make every effort to reduce their barriers to developing nations' trade without expectation of receiving equivalent concessions is basic to GATT operations in general.

Elimination of Barriers

In addition, in May, 1963, a meeting of Ministers of GATT nations, in response to a proposal by 20 less developed countries, adopted a comprehensive action programme to expand the trade of developing nations. The United States and other developed nations in GATT have committed themselves to implement this programme in their national policies. While the six-nation European Economic Community (EEC), or Common Market, did not agree to the programme, members of the group declared themselves ready to contribute to it. In general, the programme calls for a standstill on tariff and non-tariff barriers, particularly those of a discriminatory nature, against products of less developed countries. Beyond that, it calls for the progressive reduction and eventual elimination of such barriers, and for urgent consideration of other appropriate measures which help developing lands diversify their economies, strengthen their export capacity and increase their earnings from overseas sales.

To foster and co-ordinate implementation of this programme, a special Working Committee was set up in GATT in September 1963. One year is a rather short time in which to judge the effectiveness of such a far-ranging programme. Nevertheless, it is clear that progress is being made. There has been substantial adherence to the principle of no new restrictions against developing nations' trade, and the number

of restrictions in effect has been decreasing. Those that remain are to be found for the most part in Western Europe, which has a generally higher level of restrictions against developing countries exports than does the United States. Opportunities for the United States to implement the programme on a large scale outside the Kennedy Round are few, in view of the low level of US restrictions against products important to less developed countries. Most of these products already enter the United States duty free or are assessed at very low rates. Only a very few are subject to quantitative restrictions, and special internal charges against developing countries' products are non-existent.

The bulk of the US effort in pursuing the objectives of the GATT action programme for less developed countries thus centres on preparations for the Kennedy Round. In this Round, the United States neither asks for nor expects full reciprocity from the less developed countries; it hopes rather, to use the Round to make major tariff cuts and reduce non tariff barriers. In addition to the goals of its action programme, GATT has been working on the export problems of less developed countries generally. For example, new GATT provisions on special trade problems of less developed nations are being studied; countrywise development plans and export market potentials are being analyzed; and trade information and promotion advisory services have been set up. While some notable concrete achievements have been realized under the programme, there admittedly is still much to be done. If results to date are not all that developing countries and other free nations hope for, it should be remembered that much of this work is still in its early stages, and the fruits of that Kennedy Round are yet to be fully tasted.

Also, it is in the nature of this action programme and the many complex problems it faces that there should be a sense of impatience with the scope and pace of the progress made — an impatience the United States shares. It should be recognized, however, that the dismantling of trade restrictions is always a difficult and time-consuming task, and cannot be accomplished overnight. The United States has been a strong supporter of the action programme and its objectives, and has done much to urge other industrial countries in that direction. This is in keeping with the support the United States historically has given the aspirations of less developed countries, in aid as well as in trade, in the building of a secure and more prosperous community of nations.

Kamarajed Ministers: No Return to Office?

By Our Special Correspondent

NEW DELHI:

WHAT WAS significant about the resolution which Mr. Trikamdas Jamunadas Patel moved at the session of the All-India Congress Committee held over the week-end demanding the withdrawal of the Kamaraj Plan was not that it was ultimately withdrawn by the mover but that it had effectively served its purpose of raising a debate in the course of which quite a few home truths were freely expressed or exchanged. It has been suggested that the real purpose of the debate was to bring pressure on the Congress High Command to restore certain Kamarajed Ministers to office at the Centre or in the States. If that were so, those who sponsored or sympathized with the resolution were certainly being over-optimistic. It is unlikely that either Congress President or the Prime Minister will yield to such tactics. If the purpose was, as was more likely, to give voice to a certain amount of genuine dissatisfaction which does exist in Congress circles with failures so far of the Central leadership to create real unity or an atmosphere of unreserved co-operation among top leaders, whether in or out of office, the debate certainly helped in that aim being effectively realized. Mr. Kamaraj and Mr. Lal Bahadur have indeed been given notice that eternal vigilance would be the price the "syndicate" must pay for its monopoly of political power.

★★

A certain diplomat in New Delhi is reported to have gone to pieces over the mere possibility of Mr. Barry Goldwater at the White House. Whether the story is true or not, it is obvious enough that the Johnson-Humphrey ticket is certainly a very popular one in the capital. Mr. Hubert Humphrey's nomination as candidate for the Vice-Presidency has been warmly welcomed since his record as a progressive and liberal senator is known and appreciated in political circles here. In contrast, his Republican counterpart, Mr. William E. Miller, is a little known quantity in the Indian capital — with the added point that the great deal that is undoubtedly known of the views of the leader of the Republican ticket in the areas of foreign affairs or international economic assistance or co-operation has most definitely not been reassuring.

★★

Mr. George Woods, President of the World Bank, who was on a brief visit to New Delhi while on his way to Fund-Bank meeting in Tokyo, had some meaningful talks with the Prime Minister, the Finance Minister, the Deputy Chairman of the Planning Commission and other officials. In these talks he discussed the various problems created by economic development in India and assured continued assistance by the World Bank and 'Aid-India' Consortium of which he is the Chairman. He agreed that India had made perceptible progress and had also built up considerable know-how but indicated that the extent of progress made was not appreciated abroad. He was of the opinion that private investors in Western countries had to be induced to invest in India in preference to other developing countries. Mr. T. T. Krishnamachari explained to the World Bank Chief the significance of foreign exchange shortage which was the most serious hurdle in the way of a faster rate of growth. He is understood to have indicated that an increase in the overall assistance from the member countries of the 'Aid-India' Consortium and a larger share of non-project aid will considerably increase the tempo of industrialization.

Mr. Woods confirmed that a number of World Bank

experts would be visiting India during the next nine months to study the state of the economy and gather information on the fourth Plan. The result of these studies would be made available to all nations interested in further development of this country, apart from the members of the Consortium. The leader of the Bank team, along with some of his associates, would be arriving here in the third week of September. Mr. Woods indicated that Mr. Krishnamachari and Mr. Asoka Mehta had welcomed the idea of the Bank team. The study would include subjects like utilisation of foreign aid, foreign exchange requirements for the fourth Plan and problems of the private sector. He denied reports that the amendments to the Companies Act relating to the conversion of Government loans into equity shares of recipient companies has dampened the Bank's enthusiasm to help such parties. The Bank, on the contrary, he stated, was discussing the grant of further loans to private sector steel companies and he was confident that talks would prove successful.

Mr. Woods indicated that the World Bank meeting at Tokyo will consider a proposal to the effect that \$50 million should be given by the Bank as a grant to the International Development Association. This would enlarge the funds at the disposal of the IDA which was giving loans on comparatively easy terms — no interest but only a service charge of one per cent and repayment spread over 50 years — to underdeveloped and developing countries for economic progress. He hoped that the giving of such grants by the Bank to the IDA would become an annual feature. He added that some "far reaching and significant" proposals which would involve additional subscription to the capital of the International Monetary Fund would also be considered at Tokyo by the Board of Governors of the Fund.

★★

Mr. C. Subramaniam, Union Minister for Food and Agriculture, while inaugurating the Conference on Agricultural Development and Economic Progress organized by the Federation of Indian Chambers of Commerce and Industry, tried to clarify some of the controversial points regarding the present state of food and agriculture. Whereas he admitted that the failure of Indian agriculture was mainly due to shortfalls in the implementation of official policies and programmes and the agricultural administration was responsible for this, he strongly refuted the plea that traders had been blamed unjustifiably for the present rise and that it was the producer who had acquired a substantial holding power due to large amounts of co-operative credits.

While the Union Food and Agriculture Minister condemned the attitude of the foodgrain traders at this Conference, he rejected the demand for a complete take over of trading in foodgrains by the State, made at the All-India Congress Committee meeting he'd last week. He put up a strong defence of the policy of the strategic control over the foodgrains trade to be vested in the proposed State Trading Corporation, which is to be a realistic via-media between the two extremes. In this manner, he blunted an attack from the extremists, like Mr. N. V. Gadgil and Mr. K. D. Malaviya, who demanded that the State should take over the entire foodgrain distribution system. He remarked that the organisation of the State Trading Corporation for foodgrains had to be built up step by step. He wanted to organise the Corporation into an efficient and

4¾% Bonds 1976

**PAYMENT OF INTEREST & REPAYMENT OF PRINCIPAL
GUARANTEED BY THE GOVERNMENT OF INDIA**

Amount of issue: Rs. 6,00,00,000

Issue Price Rs. 99.25 Per Cent

Redeemable at par on the 15th September 1976

The Bonds are approved securities under the Indian Trusts Act, the Insurance Act and the Banking Companies Act and are also eligible for grant of advances to scheduled Banks by the Reserve Bank of India. They are on the approved list of securities of the State Bank of India.

Subscriptions will be received in cash or by cheques at the branches of the Reserve Bank of India at Bombay, Calcutta, Madras, New Delhi, Nagpur and Bangalore from Tuesday, the 15th September, 1964 but the list will be closed without notice as soon as the total subscriptions amount to Rs. 6 crores and in any case not later than the close of business on Monday, the 21st September, 1964. The Corporation reserves the right to retain subscriptions received up to 10% in excess of the sum of Rs. 6 crores.

Copies of the prospectus and application forms can be had from the offices of the Reserve Bank of India as also from the Head Office of the Corporation at Reserve Bank Building, 6, Parliament Street, New Delhi and its Branches at Liberty Building, 8, Marine Lines, Bombay-1, 23, Rajendranath Mukherjee Road, Calcutta-1 and Keshav Bagh, 38, Whites Road, Royapettah, Madras-14.

Arrangements will be made for listing of these Bonds at the Bombay, Calcutta and Madras Stock Exchanges.

Brokerage will be paid at the rate of 6 Paise per Rs. 100/- to recognised banks and brokers on allotments made in respect of applications for the Bonds bearing their stamp.

modern business machine to handle purchase and movement of stocks with speed and foresight. He did not think proper that it should be run by the bureaucratic personnels.

Mr. Subramaniam rejected the suggestion that zonal restrictions should be removed immediately. This would lead to a dislocation of the other arrangements. Surplus production of foodgrains, he indicated, should not be regarded by the surplus States as a special privilege for themselves as the deficit States were also contributing to the country's development through cash crops. There has to be a national policy with regard to foodgrains and not a series of State policies. He indicated, however, that the zonal restrictions on movement of wheat will go after the next harvest.

At the Conference organised by the Federation, the Food Minister urged the organised sector of industry to play a substantial part in energising agricultural production. No administration, even if it may be run by best business brains, could be equal to the task of a centralised management of the total foodgrains trade from the producers to the consumers in every part of the country. "It would be foolhardy to expect that any movement for modernising Indian agriculture on the 60 million farms can be handled exclusively by the Government". He believed that there was a need for mass movement in which all agencies of the Government and the public attempted to achieve the desired objective. If this was not done, Mr. Subramaniam warned, Indian agriculture would never get into a self-sustained stage.

Earlier, in his address welcoming the Minister and other delegates, Mr. S. L. Kirloskar, Vice-President of the Federation, indicated that agriculture had not been given that careful and critical importance it deserved. It was time for purposive policies that would secure without conflict the short as well as the long-term objectives. Mr. Kirloskar was of the opinion that the present rise in foodgrain prices was unrelated to the stock with the trade. The supplies in the market were not adequate and the question of holding stocks beyond the permitted levels, therefore, did not arise.

★★

A high-power delegation of the Railway Board will leave for Washington next month to negotiate a loan of \$60 million with the World Bank. Mr. S. K. Patil, Minister for Railways, indicated at his press conference last week that the World Bank has shown its willingness to extend this loan to the Indian railways for the purchase of components of diesel and electric locomotives and other rolling stocks of special steels. The World Bank, it may be noted, has already given the railways three loans totalling \$187.5 million. The railways have also received assistance from the USAID and Export-Import Bank.

The Railway Minister also pointed out that the 130-mile Hassan-Mangalore link has been sanctioned by the Railway Board which has been a controversial project, as doubt was expressed on its utility in the immediate future. It has now been decided that it will be a metre gauge track and will be completed along with the expansion of the Mangalore port for handling exports of iron and manganese ore from Mysore. The project is estimated to cost Rs. 23 crores and preliminary work has already started.

It was indicated by the Minister that 62 new passenger trains will be introduced in various sections of the Indian railways from October 1. Since April last a number of new trains have been introduced and together with the proposed additions the total number of new trains introduced will be 163. It has been possible to increase the passenger trains as a result of a comparative fall in freight traffic in recent

months. The Railway Minister claimed that owing to inadequate demand for goods train capacity there has been a substantial number of unutilised wagons which on an average came to 20,000 on the broad gauge and 3,000 on the metre-gauge every day. The railways created an additional capacity of 17.3 million tonnes during the current year but the traffic offering has not been up to the expectations. In fact during the first four months of the current year there has been a fall of 3.24 million tonnes in the movement of coal and steel plant traffic as compared to the corresponding period of last year. There has, however, been a significant increase in iron ore traffic even though it is slightly less than the target of increase.

Included in the new trains to be started from this October is the proposed 'Taj-Express' between Delhi and Agra intended mainly for tourists, and will take 3 hours and 10 minutes and will halt at Mathura. Other important new trains would be the Assam Mail between Delhi and Barauni; the Cochin-

Bangalore Express; the Brindaban Express between Bangalore and Madras; and Chandigarh Express between Ferozepur and Kalka. The frequency of the present Southern Express between New Delhi and Madras will be increased to five days in the week. New trains will be introduced also on Saharanpur-Moradabad and Asansol-Dhanbad Sections. The Railway Minister also referred to the programme of modernisation which included automatic train control which provides the driver with audio-visual information on track conditions in such a way that there is automatic application of breaks to stop the train even if a danger signal is ignored by the driver.

★★

The Ministry of Commerce sent a trade delegation under the leadership of Mr. G. J. Malik, Regional Director of Foreign Trade, to explore the possibilities of exports to Latin America. It has just returned with the impression that there are considerable possibilities of a larger trade although this area is remote both for reasons of distance and language. The delegation, that visited Brazil, Argentina, Chile, Peru, Bolivia, Colombia and Venezuela, is of the opinion that the commodities that can be exported are jute textiles, handicrafts, sports goods, super fine textiles, domestic electrical appliances and fruit concentrates. In fact these countries are buying large quantities of Indian goods re-exported from other countries. For instance Colombia imports Indian spices from Argentina which in turn imports them from England. Similarly Bolivia buys Indian jute bags from Japan and West Germany. India, again, is handicapped in the furtherance of export of light engineering goods because workshops and representatives are necessary to follow up the after-sale service. The leader of the delegation indicated that some of these countries were interested in acquiring machinery and capital goods from India and wanted to study the techniques of jute textiles, cotton textiles and tea production. He was of the opinion that this opportunity should not be missed because otherwise it would be utilised by others.

The delegation also looked into the question of imports from these countries and found that India could meet a part of her requirements of non-ferrous metals from these countries, especially Bolivia and Peru. But the hindrance in the way of proper imports from this area is the language. The delegation found that only at three places — Brazil, Argentina and Chile — had our representatives established their offices but even at these places no commercial counsellors existed. To meet the demand of people to operate in this area the Indian Institute of Foreign Trade has undertaken a programme of teaching Spanish to as many people as possible.

★★

The Planning Commission is understood to have favoured concentration of governmental activities in the fourth Plan on basic industries necessary for building the infra-structure of the economy. At the same time it has considered it necessary to allow private initiative and enterprise a greater free play than hitherto in industries other than those set apart for governmental operation. These views were expressed by the Planning Commission in a discussion with a group of M.P.s belonging to various shades of political opinion. In a brief introduction, the Deputy Chairman of the Planning Commission, Mr. Asoka Mehta, indicated that tentative thinking on industrial development in the fourth Plan was to provide for an investment of Rs. 7,500 crores in public and private sectors. The public sector outlay for the industry and minerals has been placed at Rs. 4,000 crores and this estimate does not provide adequately for any significant price increase in the case of capital goods. It is also believed that unless a very substantial support by way of institutional finance is available for the private sector, it may not be possible to raise an investment programme at a level higher than that of about Rs.

1,700 crores for the programmes under organised industry in the private sector.

The Planning Commission is believed to have accorded top priority to armaments, atomic energy, fertilisers and other needs of agricultural development, steel, non-ferrous metals, heavy machinery manufacturing industry and heavy and intermediate chemicals, particularly petro-chemicals. In addition, it has proposed crash programmes for the public sector for the development of power, irrigation, transport, road-building and technical education.

The fourth Plan targets for various industries came up for discussion in the context of the probable shape of industrial expansion towards 1970-71. Aluminium was considered to be the only non-ferrous metal for the manufacture of which adequate raw material resources were available in India. The target of capacity and production by the end of the third Plan was placed at 87,500 tonnes and 80,000 tonnes respectively. Apart from the present 53,000 tonnes capacity (Hirakud 20,000 tonnes; Rihand 20,000 tonnes; J.K. 7,500 tonnes; Alwaye 5,600 tonnes), the remaining period of the third Plan will see the completion of Mettur unit of 10,000 tonnes and the Alwaye expansion of 10,000 tonnes. The Hindustan Aluminium unit at Rihand is expected to raise its capacity from 20,000 tonnes to 60,000 tonnes and a part of it may be achieved by 1965-66. To the extent this is achieved, the capacity in operation as well as production may be higher than the target for 1965-66.

Tentative targets for production and capacity for 1970-71 were placed by the Working Group at 280,000 tonnes and 240,000 tonnes respectively. In their latest assessment, however, the Working Group for non-ferrous metals, only a few days ago, placed the demand, including 20,000 tonnes for export, at about 230,000 tonnes and the capacity to meet it at 250,000 tonnes. Taking into account the recovery from scrap to the extent of 20,000 tonnes, actual production to be secured by 1970-71 will work out to around 210,000 tonnes.

The proposed expansion scheme of additional 40,000 tonnes at Rihand, the Koyna project of 25,000 tonnes and the expansion of Mettur Works by 10,000 tonnes will add another 75,000 tonnes to the present total of 73,000 tonnes capacity. A unit to be established at Sharavathy with 30,000 tonnes capacity by the Indian Aluminium Company and a public sector unit to be set up at Korba in M.P. with 25,000 tonnes capacity will add another 55,000 tonnes. The capacity for aluminium in the fourth Plan, therefore, will go beyond 200,000 tonnes.

It was indicated that units of less than 25,000 tonnes capacity could not secure economic production of aluminium. The J.K. unit of 7,500 tonnes at Asansol, therefore has been pro-

posed to be expanded by 5,000 tonnes. They have also come up with a proposal to put up a new unit of 25,000 tonnes in Kerala which is still to be considered after further information regarding sources of bauxite is received.

The Koyna unit is expected to start with 25,000 tonnes capacity and it is proposed to be expanded to 50,000 tonnes, taking advantage of bulk power available from Koyna as well as resources of bauxite in that area. It is also understood that the Hindustan Aluminium has proposed to step up its capacity from 60,000 tonnes to 120,000 tonnes. This proposal is likely to be considered on merit in due course as it ensures

Enough Jute to Go Round

From Our Correspondent

CALCUTTA:

THE DEVELOPMENTS in the jute industry and trade have been so rapid over the past few weeks that it is necessary to return to the subject once again. Alarmed by the sharp fall in sacking exports and the rise in mill stocks of gunnies at the end of July, the industry made an urgent appeal for official help; the Government, considering the current adverse developments as well as the appeal for aid, promptly announced the appointment of two important official bodies — the 12-member Jute Textiles Consultative Board with the Union Minister and Deputy Minister of Commerce as its chairman and vice-chairman respectively, and with the Jute Commissioner as member-secretary; and the Jute Export Promotion Advisory Committee with the Jute Commissioner as chairman, and with all sections of the jute industry and trade duly represented — which the industry has greatly welcomed. The Jute Textiles Consultative Board will also look after the industry's export promotion problems, but its functions will be much wider in scope in the overall context of improving the economic basis of jute mills' operations. A particular point of satisfaction for the industry is that hereafter it will have full opportunity of making its voice heard promptly and effectively. In the meanwhile, a sudden spurt in raw jute prices (from Rs. 30 per maund to Rs. 47 per maund) gave the industry a violent jolt, and but for the timely and effective intervention of the Jute Commissioner to stabilise raw jute prices, it would have been continuing to be the industry's main headache.

Panicky Buying

The rise in the jute fibre market was the least expected. The crop in India during the current year is good, estimated at about 7.2 million bales. There is, therefore, no reason why any one should resort to panicky buying so early in the jute year (June-July). The average quality of the fibre too is reported to have improved. With the carryover from the previous season with the mills and a sizable buffer stock, the Indian mills need have no fear of a shortage developing later this year. But the recent floods in Assam and reports (mostly unsubstantiated) of a serious fall in the Pakistani crop have apparently done the trick. Speculators used these rumours to push up fibre prices high, and many mills, it is reported, made heavy purchases without exercising better judgment. As prices kept rising from day to day, the industry moved the Government to intervene, and New Delhi, with unaccustomed promptness, asked the Jute Commissioner to take firmest possible measures to bring down fibre prices and maintain a reasonable measure of stability in the market.

This the Jute Commissioner did through a series of measures. He released the entire buffer stock with the mills amounting to some 7.75 million maunds and according to an

considerable economy through reduction in costs.

It may be observed that investment for the establishment of nearly 140,000 tonnes of aluminium capacity will be required during the fourth Plan period. In fact in order to provide for another 30,000 tonnes capacity, arrangements may have to be made for a capacity of 170,000 tonnes during the fourth Plan period which would require an investment of nearly Rs. 170 crores. On the basis of maximum utilisation of indigenous equipment, it appears that nearly 40 per cent of the investment or nearly Rs. 65 to 70 crores would be required in the form of foreign exchange for plant and equipment.

IJMA source, the released quantity will not be replaced in November but in February next year. Fibre arrivals in Calcutta too have now steadied around 100,000 maunds daily and mill purchases during the past three months have been satisfactory. The Jute Commissioner has now asked the mills not to buy jute in the speculative market, and he is reported to be considering measures to fix purchase quota for each month for them. The steep margin fixed by the East India Jute and Hessian Exchange on futures transactions has also helped; it discouraged buyers from entering into transactions. As a result of all these measures, raw jute prices have fallen to Rs. 38 per maund and the market has become so dull that further falls are on the cards.

Talking to Pressmen the other day about the present conditions in the raw jute market, the Jute Commissioner, Mr. Joneja, gave some interesting information. The speculative rise in the fibre market apparently originated at a cocktail party where some jute traders from Pakistan (who had slipped into Calcutta on a different pretext) circulated the rumour that there was a serious fall in Pakistani raw jute crop, and on account of this, the fibre price in that country's market had risen to Rs. 56 per maund. The increasing political tension in the world also contributed to the rise. He then proceeded to analyse that country's raw jute production statistics. Assuming a lower figure of 5.5 million bales this year, Mr. Joneja argued, the total stocks of raw jute in Pakistan should, with last year's carryover, be not less than 6.6 million bales. Pakistan's own consumption is not more than 2.2 million bales, and this would leave 4.4 million bales for export. Last year, that country exported only 3.8 million bales to various countries including India, yet it had no upsetting effect on Indian fibre prices. This is sound argument. Even if the Pakistani crop eventually turns out to be lower than what Mr. Joneja conservatively estimates, Indian mills need not really worry on that account, for this country's dependence on Pakistan for raw jute is indeed marginal, confined to a few superior grades and cuttings. The danger now is not that Pakistani fibre prices may remain high throughout the year — they have already started falling just as fast as they had risen a few weeks ago — but that sizable quantities of Indian jute may be smuggled across the border, if this has not started already. In fact, there were persistent reports recently that smuggling had started on a big scale and the Jute Commissioner had to approach the authorities concerned to take steps against it.

Keeping in mind the possibility of large smuggling of jute after the monsoon, the Jute Commissioner may indeed have to fix ceiling prices for fibre this season, rather than worry about fixing a minimum as he had to do last year. It may be argued that fixing a ceiling price may actually encourage smuggling, but it is not from this point of view that a ceiling price will be necessary. Its function would be to curb excessive specula-

tion in the Indian market, leaving the border police to take care of the smugglers when they are detected. But when maximum prices are fixed, the authorities necessarily have the obligation to ensure adequate supplies. There is, fortunately, no likelihood of a serious dislocation on that account if the prices are realistically fixed. Since millions of farmers and middle men are engaged in raw jute production and trade, and the stock position with the mills is going to remain comfortable, large-scale cornering operations will not prove profitable. State trading may appear as an attractive alternative, but considering the huge sum (something like Rs. 120 crores) involved and the diffused character of the raw jute market, State trading or even buying through the ill-organised co-operatives will be found seriously wanting for the task. Therefore, the key to stabilising prices would lie in an intelligent and imaginative regulation of the market. As for determining a minimum, which is necessary as an incentive for the farmer, the Jute Commissioner should take into account not only the farmer's need, but also the economics of the jute manufacturing industry which is peculiarly vulnerable to international competition. It will be interesting to see how the two new official bodies approach this question when they meet in Calcutta on September 9.

♦♦

On the occasion of the formal opening of the new Head Office building of the United Commercial Bank, Mr. G. D. Birla announced his retirement from the Chairmanship of the Bank. He said that during the past 21 years of his association with the Bank, it had taken rapid strides and had at present no less than 200 branches, including one in London. It also owned eight buildings, including the one at New Delhi. Its working capital was Rs. 13 crores. Investment in buildings alone was to the tune of Rs. two crores.

Talking about banking in the country, Mr. Birla said that it was not a mere money-lending business; it was much more sacred than that. The banking institutions, he said, should have service and security as their motto. There can be no security without service and no service without security. They must also look to the interests of the society. Mr. Birla also stated that the banks occupied a much bigger position than industry in the economy of a country. "Industry does produce but it can produce only with the help of the banks. Therefore, banks occupied a much bigger position than industry itself", he declared.

While discussing his retirement from the Chairmanship of the Bank, Mr. Birla said that in India there was a tendency among the people to stick to their jobs and when they were no more on the scene, they left the jobs in a mess. He was of the opinion that old people must leave their jobs at the appropriate time "so that younger people take charge of them and run them efficiently". He expressed the hope that the new management would be more enterprising. Mr. Ishwari Pershad Goenka is the new Chairman of the Bank.

Recalling his own personal experience of banking for the past 21 years, Mr. Birla said that he had been orthodox and conservative in his outlook. May be, it was the right policy for the years which are gone. But, a change must come and the most important thing for the new Board is to look to the interests of the society.

Mr. Birla also referred to the changes which have taken place in India and the world during the last two decades. Just before the Bank started functioning in 1943, he and some other industrialists, including Mr. J. R. D. Tata, had prepared the Bombay Plan which had laid the foundation for future planning in the country. Even at that time, he had seen that the country would surge ahead after the war came to an end. His dream regarding the progress

of the economy had come true and for this, he paid a tribute to the fighters of India's freedom, making a particular mention of Gandhiji, Sardar Patel and Jawaharlal Nehru.

★★

The presidential address of Mr. Sookamal Ghosh, who successfully combines the role of a newspaper editor with that of a business man, at the first quarterly meeting of the Indian Chamber of Commerce last week, provided a comprehensive review of the country's economic outlook. In the context of the current inflationary danger, Mr. Ghosh emphasised the need to give agriculture the importance it deserves in the country's scheme of economic planning. Analysing the nature of the price increase, he pointed out that while food articles index rose by 12.8 per cent between May 1963 and May 1964, the index for manufactures went up by about 2 per cent only in the same period. A moderate increase in prices is usually good for a developing economy, but the sharp rise in food prices is disturbing. The fundamental reason for the current inflation, Mr. Ghosh said, is the failure to grow the food the rising population needed. The population has been increasing at a much faster rate than what had been envisaged at the start of the third Plan, while there has been no corresponding increase in food production. Rice production in 1963-64 has gone up to 36.5 million tons against 32 million in the previous year, but wheat production has fallen to 10.2 million tons from 11 million tons and that of pulses to 11.4 million tons from 11.8 million tons. If the figures for a longer period are examined, it is found that the total production of food has practically stood still at around 80 million tons, the actual output being 81 million tons both in 1960-61 and 1961-62, 78.8 million tons in 1962-63 and 79.1 million tons in 1963-64.

Stagnation in Agriculture

From these, it would be obvious that it is the stagnation in agriculture which is responsible, more than anything else, for the rise in prices. The per capita availability of foodgrains in 1962-63 was only 5.3 ounces per day — the same as in 1953-54. In the meantime, Government expenditure has continued to increase to a very large extent and the pressure of demand has grown while the supply has stagnated. After nearly 15 years of planning the country is not anywhere near self-sufficiency in foodgrains. "It is all right to think in terms of controls or rationing in foodgrains and other commodities which sometimes may become necessary. But controls by themselves are indicative of the failure of Government policies," Mr. Ghosh observed.

If agricultural production is to increase, Mr. Ghosh suggested, the present policies and approach to it must be changed. Agriculture should be treated as an industry, and the farmer must be given the incentive to produce more. There should be no inhibition against large-scale production. At the same time, the emphasis should be to see that he produces not only food but runs a viable unit to supplement his earnings. Secondly, the emphasis on the limitation of land holdings has weakened the farming sector. This has caused a lot of uncertainty and the most progressive and resourceful among farmers do not feel encouraged to improve the basis, or increase the scale, of their operations. In most agricultural commodities, the Indian yield is low, which is affecting the competitive capacity of many export products. Domestically also, the entire price structure of industrial goods is influenced by agricultural output and prices. The fourth Plan must, therefore, be geared mainly to the needs of agriculture, in order to revitalise farming in India, and thereby strengthen the economy in a real way.

★★

The reorganisation of the DVC — dismemberment is perhaps the right word — having already been decided upon by the Union Government, Mr. T. Sivashankar, who has been

appointed as the Special Officer for the purpose, is now engaged in drawing up a suitable scheme for the consideration of the three Governments concerned — the Centre, West Bengal and Bihar. According to the policy announced some time ago by Dr. K. L. Rao, Minister for Irrigation and Power of the Union Government, the future set-up of the Corporation will be mainly as a power generating authority, its other functions of flood control and irrigation being given over to West Bengal, and the residuary assets to Bihar. Later, the West Bengal Government made some suggestions as to how the future earnings and profits of the DVC should be distributed among the

three Governments after the proposed reorganisation has taken place. The suggestions, it is reported, have been accepted in principle by New Delhi. Meanwhile, the DVC authorities are vigorously proceeding with their power production schemes, and the work on the large thermal station at Chandrapura (Bihar) is considerably advanced. The power station is designed to have an ultimate installed capacity of six units of 125 MW each. The first unit will be commissioned in October, and the second some time in 1965. Other units will follow according to plan, but an effort is now being made to complete the power station as a whole as early as possible.

Seeds of Discord

From Our Correspondent

MADRAS :

THE GOOD neighbourly relations that exist between the four Southern States are in danger of being spoiled if immediate steps were not taken to understand in an objective manner the problems confronting the different States and prevent purely parochial considerations from gaining the upper hand. The controversy over the utilisation of the waters of Krishna and Godavari, the location of a new steel plant and the movement of rice from Andhra Pradesh to Madras, Mysore and Kerala might well result in heart-burning if the needs of individual States were not understood properly. In respect of the utilisation of river waters a satisfactory agreement will naturally take time to be reached. But the execution of the projects on hand and those contemplated will not be impeded in any way. As regards the movement of rice from Andhra Pradesh to the other three States in the Southern Zone and from Madras to Kerala, it is needless to say that the best use should be made of available resources and that the Central Government should undertake the responsibility for meeting the deficit of this zone, if any. There is understandably a desire on the part of the surplus States to get the maximum prices for exports and at the same time keep down prices of rice for consumption by the local population. These are necessarily conflicting objectives and some difficulty has been experienced in permitting exports from the principal rice-growing centres particularly in Andhra Pradesh. The cancellation of railway wagon bookings and the insistence on the fulfilment of certain conditions by millers in the delta areas in Andhra Pradesh, before exporting rice to Kerala, has given rise to the feeling that the State Government authorities are not being helpful in meeting the requirements of the deficit States and that the present difficult food situation is being exploited by traders. Actually, it has been complained that there is a wide divergence between the estimates made by the Government and independent sources and the surplus available for export from Andhra Pradesh is much larger than what has been officially indicated.

Cautious Approach

In Madras State, it is accepted that the last crop has been good and the current crop also will be satisfactory and that exports of about 3 lakh tons can be permitted if the needs of Madras and adjoining areas, of Nellore rice amounting to about 75,000 tons annually, can be met by Andhra Pradesh. The problems involved are difficult of solution and with the general discontent about the rising prices of foodgrains and over governmental policies, there is a disposition to err on the cautious side when estimating availability for export purposes. But it must be generally accepted that the needs of the Southern Zone should be taken into consideration as a whole and releases from Central stocks should be effected promptly in order to make a success of the scheme for making available the requirements of rice to the population within the maximum price fixed recently.

It has also been complained that the absence of any price regulation regarding purchases of paddy has had a defeating

effect and traders have been unable to function effectively as prices at origin are out of parity with those at the retail end and no large sales have been effected to the consumers. This question is being examined by the Centre, but there would seem to be some reluctance to proceed hastily in this matter as there is no desire to hurt the interests of growers in the process. The Union Food Minister has to steer clear of many obstacles, and safeguard the interests of growers and consumers alike. Only when the large sales of rice and wheat effected from Central stocks begin to make an impression and the kharif crops also prove to be satisfactory, will it be possible to have a clear picture of the food situation.

For a time, it was feared that the cut in the wheat quota for the rice-eating population would create new problems. However, it has since been announced that the cut in wheat quotas would be restored and wheat supplies would be available more freely. This might relieve to a certain extent pressure of demand on rice. But the whole situation will have to be carefully watched for some week.

Meantime, prices for pulses and gram have been continuously rising and there is an acute shortage of ready stocks. (Only latterly there has been a softening of prices for greengram and blackgram due to the expectations of new crop arrivals from Andhra Pradesh). The ban imposed by the Punjab Government on the movement of pulses and gram from that region and reduced arrivals from the north have encouraged traders in this part of the country to put up prices for these products. The fixed income groups are experiencing considerable hardship on account of the sharp increase in the cost of living in the past few months. There is anxiety to know whether after the next harvest at least there will be a return to more normal conditions.

★★

The rivalry between the States of Mysore, Madras and Andhra Pradesh for locating the fifth steel plant in their respective territories has also been responsible for causing some conflict in thinking between the three States. Madras State is very keen that the Salem steel plant should be erected without delay as the report of the technical consultants has established beyond doubt the technical and economic feasibility of the project. The main details relating to the technical feasibility of the project have been made available and it has been emphasised that the capital cost will compare very favourably with that of the existing steel plants in the public sector and that the most satisfactory feature relates to the availability of raw materials from a compact area. Besides, Neyveli lignite and Salem iron ore will be eminently suitable for the manufacture of alloy steel and pig iron for malleable castings. As there will be a considerable saving in transport costs and in capital expenditure on the creation of new transport facilities, it is urged that the steel plant should be constructed without delay.

Mr. Sanjiva Reddy has, however, been stating that a decision would be taken only after the feasibility studies of the Hospet and Vizag projects had been prepared. Since it

will take two to three years for completing these studies, it is argued that the fifth steel plant in the South cannot be delayed if the decision were to be taken only after the data of the remaining projects had been collected. As there is the prospect of an Anglo-American Consortium lending financial assistance to a fifth steel plant, it would be advisable if the construction of the Salem project were allowed to be taken up at an early date on the basis that a greater proportion of the output would consist of alloy steel. Even now it is presumed that about one-third of the output of half a million tonnes would be alloy and special steels. As the base of the industry has to be considerably broadened and the remaining two projects would, in any case, have to be taken up, there is really no reason for misunderstanding between the three concerned States. The problem will, of course, relate to the availability of resources but if some part of the quota reserved for the alloy steel projects is diverted to the Salem plant, the aspirations of the three States can easily be satisfied without appearing to succumb to parochial considerations.

**

The loans of the four State Governments have been successfully floated. Against the total of Rs. 36 crores asked for applications amounted to Rs. 39.5 crores while the amount accepted was Rs. 37.79 crores. Unlike on previous occasions, the Madras loan got fully subscribed only after the Andhra Pradesh loan had been oversubscribed and the list was closed. The absence of an enthusiastic response for the Madras loan was probably due to its size and the unwillingness of holders of the maturing loan to take advantage of the conversion offer. Conversion applications amounted to only Rs. 1.09 crores while the outstanding amount of the maturing loan was Rs. 5.25 crores. As redemption fell due on August 1 many probably elected to receive payment in cash. Thus, against the notified amount of Rs. 11 crores in the case of Andhra Pradesh, applications were for Rs. 13.31 crores while subscriptions against the Madras loan totalled only Rs. 14.29 crores against the notified amount of Rs. 14 crores. The Mysore loan, too, got only fully subscribed, applications amounting to Rs. 7.01 crores against the loan amount of Rs. 7 crores. Similarly, in the case of Kerala subscriptions were Rs. 4.39 crores against the loan amount of Rs. 4 crores. The rather warm response for Andhra Pradesh loan is significant. It is not known whether the agricultural income groups, which have benefited by higher prices for agricultural products, extended liberal support to this loan. But it can be said that individual investors have been, as usual, keen to dispose of their allotments as it was reported that there were sellers in the market at a discount of 1½ per cent over the issue price. There were sellers also for the Madras loan at a discount of 1 per cent over the issue price. It is known that Government officials were busy collecting subscriptions from individual investors in order to make a success of the loan.

**

With the improvement in general sentiment in Stock Markets and the signs of revival in the capital market, promoters of new companies are busy finalising their schemes for raising the required funds from the open market. Several big new flotations are on the way. The finishing touches are being given to a new shipping company which will be acquiring five bulk carriers having a capacity of about 38,000 tons g.r.t. The new company has been formed by an influential group consisting of industrialists belonging to the India Cement's Group, Mr. A. D. Shroff from Bombay and a well-known British shipping magnate. The British shipping interests, and possibly some other Continental interests, will be participating in the paid-up capital of the new company to the extent of 40 per cent. The issued capital will be Rs. 2 crores in equity shares of Rs. 100 each. The Indian interests will be taking on their account shares for Rs. 50 lakhs while the Madras Industrial Investment Corporation will be subscribing for shares amounting to Rs. 50 lakhs. The foreign participants

will, for their part, take up Rs. 50 lakhs worth of shares while the balance is proposed to be offered for public subscription. The company will be taking advantage of the credit provided by West Germany and build the bulk carriers in a shipyard in that country. The total outlay including interest charges will amount to about Rs. 18 crores and the loan will have to be repaid over a period of 10 years. The new company will be styled South India Shipping Corporation Limited and will be the second new big entrant in the field in the past three years. The promoters feel confident that the ships could be operated on a profitable basis and the assistance provided by the foreign collaborators would be helpful in maintaining a high level of efficiency and securing a satisfactory volume of cargo.

The moving finger writes

ON THE EVE of another session of Parliament there is some speculation about possible additions to the Central Cabinet. Much of the inspiration for this talk stems from a fairly general feeling that the present Cabinet needs to be reinforced for strength and stability. This is the argument, for instance, of those who would like to see Mr. Morarji Desai in. Their number is not inconsiderable, but even in their circles there is a view that the way the Kamaraj Plan was debated during the recent session of the AICC has not been helpful to their cause. Meanwhile, there is an interesting rumour that Mr. Jaya Prakash Narayan is now inclined to consider a position of responsibility in the Central Government. Since the Prime Minister is keeping his own counsel, there are precious few indications whether there will be any wedding bells for our Mr. Barkis. In any case, it is not easy to imagine Mr. Jaya Prakash Narayan being asked to relieve Mr. Swaran Singh at the EA Ministry.

The raids on the lockers, lofts and locked almshouses of some prominent film personalities in Bombay last week is in the nature of a dramatic announcement that the Government's plans for calling unaccounted money to account have now entered the operational stage. It is possible that the men and women whose properties of cash, gold or jewellery were seized in Bombay, could adequately account for their possessions, but the fact that about Rs. 40 lakhs were found to be stored away in currency notes by only three or four people is ample vindication of the programme of search, seizure and scrutiny which the Finance Ministry has now evidently embarked on with the aim of verifying what Mr. T. T. Krishnamachari has described for the benefit of newsmen in Hyderabad as the "iceberg theory" of hidden wealth.

Incidentally, the Bombay raids do not exactly indicate a new policy. This is not the first time that searches of the kind were conducted, nor is it the case that the film world has been brought into them only now. What is of significance about the present investigations is their effectiveness. This is to be attributed to two factors; first, the legal authority recently taken by the Government to search lockers; and, secondly, the offer of liberal rewards for information regarding unaccounted money. It is more or less apparent that investigating officers are now acting on information and not, as before, largely on mere suspicion. Incidentally, while the present practice seems to be to give relatively small amounts to informers, the Government may hereafter offer a fixed percentage of unaccounted money (located or ultimately confiscated) as reward for information leading to its discovery and seizure. The argument is that while it is not possible for any person to come into or be in possession of unaccounted money without some other person or persons being in the know; it is usually the case that the other person or persons have strong reasons of some kind or the other — such as personal loyalties, professional associations or employer-employee relationships — for keeping their own counsel. Their silence, it is said, can only be broken by the golden hammer of a big money reward and the authorities, therefore, should not be chary of wielding that hammer. This may be a cynical view of government, but it is claimed to be a realistic view of human nature.

**

In "The Statesman" of August 26, Dr. Amar'ya Kumar Sen makes an impassioned plea for a new, big and bold pro-

gramme of universal elementary education for the country-side, while discussing the role of the three R's in economic growth generally and agricultural growth in particular. His main recommendation is that the salary of elementary school teachers should be raised "several times" their present level so that men and women with secondary or higher education (of whom we have a large number available for employment) may be tempted to go and work in villages. Now, "several times" is too vague a phrase to serve as a firm pointer to any clear programme. Apart from the fact that the availability of resources (for which there are competing demands) is apt to exercise, whether we like it or not, a fairly rigorous discipline, it is evident that in any reasonable scheme of relating salaries to job requirements or the supply of the relevant skills, there is bound to be a limit to what the State or any other employer may be able to pay or should pay to various categories of workers, professional or other, including elementary school teachers.

This apart, there are bound to be practical difficulties, surely, in offering a higher salary to a teacher in a village school than to his counterpart in the urban areas. If the former could demand to be compensated for the absence or remoteness of urban amenities, such as cinemas or restaurants, the latter could and do plead to be compensated for the higher cost of living or the extra expenditure on keeping up appearances in towns or cities. The argument that the salaries of all elementary school teachers, whether in villages or towns, should be raised to a considerably higher level than at present would not meet this difficulty, since the point which Dr. Sen is attempting to make is that teachers should be attracted to remote areas by offering them a premium for their services there. May I suggest, at this stage, that he may perhaps view the question of "incentives" from a rather different angle? It seems to me that what matters (or ought to matter) is that a school teacher in a village should be paid slightly better than those with comparable qualifications who are employed in what might be regarded as less essential callings. The problem, in other words, is not to draw elementary school teachers away from the urban areas and into the rural areas, but to create an interest in teaching jobs in villages among a large number of men and women with higher secondary and high school education who may now be looking for white collar jobs, often unsuccessfully, in towns or cities. I suggest that this could be done without exactly raising the salaries of teachers "several times" their present level.

Before I leave this subject, I would recall what a senior officer in the West Bengal Secretariat told me recently. Not long ago this man was doing a stint in the districts and one of his responsibilities was elementary education. According to him, although his department was employing a sufficient number of teachers for imparting primary education to every child in the relevant age group in that area and incurring expenses on the teachers' salaries and their school establishments, he found that actually not even a fraction of those children was receiving any regular schooling, for the excellent reason that most of the alleged schools existed not even on paper, but only in the teachers' imagination. When I asked him whether he did or tried to do anything about it, he shrugged his shoulders and said simply that the teachers' jobs were in the patronage of the local political bosses. I should like to have Dr. Sen's comments, if any, on this, because it has a bearing on his advocacy of larger allotments of the tax-payer's money for elementary education in the rural areas.

V.B.

Trade Winds

COAL PRIORITIES

DURING THE last one year, the demand for coal has not picked up in the manner it had been anticipated in the third Plan with the result that the industry's programmes of expansion have been thrown out of gear. Another element which has entered the coal picture is the official view which at least for the remaining two years of the third Plan is for an expansion in the output of non-coking coal of superior variety. A few weeks back, a meeting was held in Calcutta between the representatives of the Union Ministry of Steel and Mines and the coal industry where it was given out that an additional requirement of 9 million tonnes of non-coking coal — mostly of grade 1 — would have to be met during the remaining years of the Plan. This bias towards the higher grades of coal, has been motivated by the immediate exigencies of the situation while the long-term aspect has been completely ignored. The view-point of the Indian Colliery Owners' Association has not received sufficient attention as they had put in a plea for proper allocation to mines of low grades of coal for which there was no dearth in the country. The case made out by the Indian Colliery Owners' Association was that the demand for low-grade coal had not dried up and that, in fact, for any future expansion plans, the low grade coal is likely to occupy a place of pride. To be guided, therefore, by the immediate needs is certainly not in the larger interests of the mining industry. The Government must bear in mind the long-term trends; otherwise the producers of low-grade coal will face hardships resulting in slow extinction, though it seems that the Government has no intention of forcing the low-grade coal mines to be shut down.

Only two years ago, the production of lower grades, namely, III-A and III-B, was not more than 10 per cent of the total production. Coal was in sharp demand and the Government had concentrated all its efforts on increasing the output of this vital commodity, regardless of the quality of coal. This sharp vacillation in the approach to the problem, again, is against the long-term interests of both the industry and the country.

U.S. EXIM BANK CREDIT

A US credit of \$25 million (Rs. 11.9 crores) in favour of India was signed in Washington on August 25, 1964. The credit which is being extended by the US Export-Import Bank will be used to finance the purchase of American capital equipment and services required by the public or private sector engaged in development programmes in India. The loan is repayable over a period of 12 years commencing in 1967, and bears an interest charge of 5½ per cent. Three earlier credits for similar purposes had been authorised by the bank in favour of the Government of India, for a total of \$225 million (Rs. 107 crores). These credits also financed capital goods such as mining and construction equipment, transportation and earth-moving equipment, communications equipment and machinery for the textile, aluminium, chemical and automobile industries. The first line of credit for \$150 million was extended in February 1958, the second for \$50 million in December, 1960, and the third for \$25 million in August, 1962. In addition to these non-project loans, the bank extended credits to a number of Indian enterprises engaged in the manufacture of diesel locomotives, fertilizers, aluminium, rayon, chemicals, plastics and forgings. The US Export-Import Bank credits have been used by Air-India to purchase its all-jet fleet. The total amount of assistance extended by the bank to India now exceeds \$379.3 million (Rs. 180.6 crores). The bank's assis-

tance is a part of the US Government aid programme to India, which now totals \$5,348 million (Rs. 2,547 crores).

TEXTILES COMMITTEE

A 30-member Textiles Committee has been appointed by the Government of India for ensuring the quality of textiles and textile machinery and for allied matters. Mr. R. G. Saraiya will be the Chairman of the Committee while the Textile Commissioner will be its Vice-Chairman. By issuing notifications on August 2, 1964, the Government brought into force the Textiles Committee Act, 1963, and under its provisions, appointed the Textiles Committee to carry out the purposes of the Act. The Textiles Committee Act, 1963, replaces the Cotton Textiles Fund Ordinance of 1944, which provided for the establishment of a Cotton Textiles Fund and the constitution of a Committee to administer the Fund. The Textiles Committee now set up is a body corporate vested with large statutory powers to ensure the quality of all textiles whether made wholly or partly of cotton, wool, silk, artificial silk or fibre. The work of inspection of indigenous textile machinery and stores is also entrusted to the Committee. The Committee will generally function to ensure standard qualities of textiles for internal marketing and export purposes and the manufacture and use of standard type of textile machinery. The Committee may also, among other things, undertake, assist and encourage, scientific, technological and economic research in textile industry and textile machinery; promote export of textiles and textile machinery and carry on propaganda for that purpose. It may also establish, adopt or recognise standard specifications for textiles for the purposes of export and for internal consumption and affix suitable marks on such standardised varieties of textiles; specify the type of quality control or, inspection which will be applied to textiles or textile machinery; and provide for the inspection and examination of textiles and textile machinery at any stage of manufacture and also while it is in use at mill-heads.

The Committee will also have a Fund, to be called the Textiles Fund, to be utilised for carrying out the purposes of the Textiles Committee Act and meeting the pay and allowances of the officers and other employees of the Committee and other administrative expenses of the Committee. Besides the Chairman and the Vice-Chairman, the Committee consists of the Chairman of the Indian Cotton Mills' Federation, the Chairman of the Cotton Textiles Export Promotion Council, the Chairman of each of the Millowners' Associations at Ahmedabad, Bombay, Calcutta, Coimbatore, and Kanpur, the President of the Textile Machinery Manufacturers' Association the President of the Silk and Rayon Textiles Export Promotion Council, the Chairman of the Woollen Development Council, representatives of the indigenous textile machinery manufacturers, exporters of cotton textiles, export trade in silk and rayon textiles, the export trade in woollen textiles, the cotton growers and the handloom industry. The Committee will also include a textile technologist and others having specialised knowledge or practical experience in matters relating to the textile industry and trade or the manufacture of textile machinery.

UTRECHT FAIR

From October 20 to 24, 1964 (both dates inclusive) a new specialised trade fair will be organized jointly by the Royal Netherlands Industries Fair Utrecht, Holland, the VOM (Society for Metal Finishing Techniques) and the Federation of Netherlands Decorating Employers. The Fair will be held in the Irenthal, covering an exhibition area of 70,000 sq. ft. and will present the various modern techniques in the metal finishing field, such as electrodeposition, chemical treatments, hot-dip galvanising, metal spraying, organic and inorganic coatings, anodising and electro-plating, metal colouring, vit-

reous enamelling, shot blasting and further equipment and processes for the finishing of industrial products. It will also cover the products of the paint and varnish industry in the building, maintenance and metalworking branches, and painters' and decorators' requisites, such as spray guns, compressors and lacquering machines.

INDO-YUGOSLAV CO-OPERATION

The economic co-operation between India and Yugoslavia covers a long-term agreement for trade and economic co-operation, protocols with commodity lists, and credit arrangements for the delivery of capital equipment. The commodities imported by Yugoslavia from India include coffee in beans, tea, pepper, oilseed cakes, hides and skins, coconut fibres and yarn, cotton fabrics, synthetic fabrics, "linoleum" floor coverings, iron ore and raw non-alloyed iron. The commodities imported by India from Yugoslavia include cellulose, mercury, calcium carbide, vaccines and various medical drugs, "polyvinyl" plastic materials, aluminium, cement, railway rails, seamless pipes, copper alloy rods, sections, tubing and plate, aluminium rods, wires and sections, steel structures for bridges, horse-shoe nails, hand tools, steel cylinders, steel and iron chains, engines for trucks and buses, ships' diesel engines, wheeled tractors and various other agricultural machinery, machine-tools, metal cutting machines, gantry cranes, stone crushers, bulldozers, self-unloading trucks, electric meters, electric cables for high voltages, electric porcelain, cine-projectors and photographic films.

The credit arrangements for the delivery of Yugoslav Capital equipment to India covers a large number of projects, including building equipment for the Paradeep port, equipment (turbines, generators, etc.) for the Trishuli, Kerala, Jeldhaka, Periyar, Sholazar I and II, Yamuna I and II hydroelectric power plants, hydromechanical equipment for the Matatila hydroelectric power plant and Matatila Dam, equipment for the Kanpur, Kalakot, Kandla, and Barauni thermoelectric power plants, building of steam boilers factories at Basin Bridge and Ramagundam, equipment for the Assam and Cherapunji cement factories, equipment for the filtering of gas for Durgapur project, equipment for the coking plant in Durgapur, overhead travelling cranes for the Panchet Hill and TPS Amarkantak power plants, and equipment for water meters factory.

IMPORT-EXPORT STUDY TEAM

On the recommendation of the Santhanam Committee Report the Ministry of Home Affairs has set up a study team to examine the working of the office of the Chief Controller of Imports and Exports. The idea behind the study is to streamline the administrative procedures by removing loopholes which provide opportunities for corruption. The team, which will submit its first report in about two months' time includes Mr. H. C. Mathur, M.P., Mr. N. J. Kamath, Joint Secretary, Department of Supplies, Mr. N. K. Mukerji, Joint Secretary, Ministry of Home Affairs and Mr. P. Sabanayagan, Chief Controller of Imports and Exports. The recommendations will be sent directly to the departments concerned for immediate action.

EMPLOYMENT TRENDS

According to the quarterly employment review issued by the Directorate-General of Employment and Training, the number of persons employed in non-agricultural activities in the country as a whole increased by 19.5 lakhs during the first three years of the third Plan. This works out to 16.1 per cent increase over the three year period or an annual increase of over 5 per cent. The figures collected are based on about 76,000 returns received from all public and private sector establishments employing 25 or more persons.

Employment in the public sector went up from 70.5 lakhs

in March 1961 to 84.4 lakhs in March, 1964 registering an increase of 19.8 per cent. The increase occurred in all branches of the public sector — 16.4 per cent in the Central Government, 13.6 per cent in State Governments, 41.9 per cent in quasi-Government organisations and 26.9 per cent in local bodies. About half the increase took place as a result of expansion in education, medical and health, and administrative services. Transport and communications, and manufacturing organisations contributed about one-third of the increase. The increase in quasi-Government establishments was mainly due to expansion in industrial undertakings, insurance and banking. In the manufacturing sector, there was a significant increase in iron and steel, chemicals and chemical products, basic metals, machinery manufacture, electronic equipment and motor vehicle repairing and servicing organisations.

Employment in private sector establishments employing 25 or more persons increased from 50.4 lakhs in March, 1961 to 56.0 lakhs in March, 1964 — an increase of 11.1 per cent. Nearly two thirds of this increase took place as a result of expansion in manufacturing establishments, particularly those of cotton, jute and silk textiles, sundry hardware, food processing, tobacco and bricks and tiles.

Employers reported manpower shortages in respect of professional and technical categories of personnel such as engineers, doctors, pharmacists, nurses, accountants, etc., and craftsmen and skilled workers. At the end of March, 1964, nearly 13,000 vacancies remained unfilled in these occupational groups.

Based on the number of persons seeking work at employment exchanges, it has been estimated that non-agricultural unemployment in the country increased from 2.8 million at the beginning of the third Plan to 4.6 million in March, 1964. This is attributed to the large number of new entrants to the labour force as compared with the employment opportunities that could be generated by the Plan.

FOODGRAIN WAREHOUSES

A balloon type plastic warehouse, 66 feet in diameter and 22 feet high, and the first of its type in India, was recently erected and filled with wheat at the Narayana Central Godowns in New Delhi. The plastic warehouse is constructed on the principle of hermetic storage which arrests all biological activity and dispenses with the use of insecticides and fumigants. Another major advantage of the plastic warehouse is that it can be set up in any locality in a port or city area or in the countryside. Capable of holding 500 tons of grain, the plastic warehouse at Narayana Godowns was filled with wheat by means of pneumatic grain-conveying equipment. This warehouse has been loaned to the Union Ministry of Food by the Pest Infestation Laboratory of the Department of Technical Co-operation of the United Kingdom to test its suitability for storing wheat in bulk under the tropical conditions of India. Mr. F. N. Wright of Pest Control Laboratory of U.K. came to India to discuss with food storage technicians in the country the manufacturing process and erection and maintenance of plastic warehouses.

CLOTH AND YARN PRODUCTION

The production of cotton cloth for the six months, January to June, 1964, was 2,262 million metres, showing an increase of 80 million metres over the production during the first six months of 1963. The production of cotton yarn in the period January to June, 1964 was 463 million kgs. compared to 429 million kgs. in the corresponding period of 1963. The production of cotton cloth in June 1964 registered an increase of 18 million metres (at 379 million metres) as compared to the production in June 1963. The production of cotton yarn increased to 72.5 million kgs. in June 1964, as against 69 million kgs in June 1963.

DAGGER BRAND CUTTERS FOR LASTING PRECISION PERFORMANCE

BACKED BY 25 YEARS OF TRADITION and rigid control at every stage of production DAGGER BRAND CUTTERS (available in metric and inch sizes) assure precision performance. They are made of superior quality steel, specially heat-treated to ensure long life, and manufactured in India's biggest and most modern factory for Small Tools.

Company Affairs

POYSHA INDUSTRIAL

WHILE ADDRESSING the shareholders at the annual general meeting held recently Mr. M. R. Ruia, Chairman of the Poysha Industrial Company Ltd., reviewed briefly the performance of the company, its future expansion and modernisation programmes, and the international developments in the field of can manufacturing industry. With all limitations on its resources and existing facilities, the company recorded considerable improvement in production. The output of containers went up by not less than 18 per cent over the preceding year. The profits, even after a steep increase in tax provision from Rs. 2.95 lakhs to Rs. 8.58 lakhs, showed a significant improvement rising from Rs. 2.11 lakhs to Rs. 4.26 lakhs. Better working results are expected during the current year.

The present year and the following, Mr. Ruia stated, will be full of activity for the company involving the construction of four new factories and the installation of up-to-date plant and equipment incorporating the latest American and Continental techniques in each of them. A plot of 33 acres has already been purchased at Thana from the Maharashtra Industrial Development Corporation. Construction is expected to start shortly and the new factory will be ready by the end of 1965. The company is setting up two more new factories one each at Cochin and Ghaziabad and another unit at Anand for the Kaira Can Company, its associate. To finance its ambitious expansion programme, the company intends to raise its capital from Rs. 25 lakhs to Rs. 110 lakhs. Negotiations are in progress with all important financial institutions such as LIC, ICICI, IFC, Kerala State Industrial Development Corporation, U.P. State Industrial Corporation, and banks for securing foreign exchange and rupee loans.

Reviewing the developments in the field of can manufacturing industry, the Chairman stated that to face the formidable challenge from other packing materials like aluminium and plastics, the leading tinplate producers in the world, especially the USA, the UK and Japan, are developing new varieties of tinplate such as thin tinplate and tinplate foils. All tinplate currently produced in the country is hot-dipped which process is outmoded. A beginning is to be made in Rourkela in the manufacture of electrolytic tinplate. Unless the Government takes a long-range view and initiates early steps to manufacture thin tinplates and tinplate foils, the country will be hopelessly outclassed in the not too distant future. He, therefore, urged the Government to incorporate the necessary modifications in the fourth Plan programmes of both the Rourkela and Bokaro Steel plants so as to make an early start in the manufacture of these two new varieties. This will enable the can manufacturing industry to reduce its cost of manufacture of tin cans and will place the industry in a better position to face competition from containers made of other materials.

ASIAN ELECTRONICS

Asian Electronics Ltd. will enter the capital market on September 7 to raise Rs. 15 lakhs from the public. The subscription list will close on September 12 or earlier but not before September 9. The company has an authorised capital of a crore of rupees and an issued subscribed and paid-up capital of Rs. 7.39 lakhs. The present issue is for Rs. 22.62 lakhs, out of which the promoters, directors, their relatives, friends and associates have agreed to subscribe shares worth Rs. 7.62 lakhs. The balance of Rs. 15 lakhs in 15,000 equity shares of Rs. 100 each is now offered for public subscription. The entire public issue has been underwritten.

The company proposes to put up its factory in the Wagle Industrial Estate at Thana, Bombay for which land has already been acquired from the Maharashtra Industrial Development

Corporation. It has entered into a technical collaboration agreement with Messrs. Avtomacija of Ljubljana, Yugoslavia — an associate of the internationally reputed electronic manufacturers ISKRA — for setting up this project. Construction is in progress and production is expected to commence by the middle of 1965. The company will manufacture, in the first phase, basic components such as carbon film resistors, styroflex capacitors, cores etc. and intends to produce various types of electronic instruments in the second phase and ultrasonic instruments in the third phase. Most of the raw materials are indigenously available and dependence on imports for raw materials is hardly 5 to 8 per cent.

The estimated cost of the project is Rs. 50 lakhs. It will be financed by the issued capital of Rs. 30 lakhs, a loan from the Bank of India Ltd. of Rs. 15 lakhs and by short-term loans of Rs. 5 lakhs.

Most of the electronic components are being imported at present and the indigenous production will help the defence instrument manufacturers, radio manufacturers and other instrument manufacturers. Considering the ready market for the products and the easy availability of indigenous raw materials with the latest manufacturing facility, a good response to this issue is assured.

ELECTRIC CONSTRUCTION: RIGHTS ISSUE

Electric Construction & Equipment Co. Ltd., proposes, subject to the sanction of the Controller of Capital Issues, to issue 15,500 redeemable cumulative preference shares of 9.3 per cent of Rs. 100 each at par and 2,55,000 ordinary shares of Rs. 10 each at par. The new preference shares will be offered to the existing preference shareholders in the ratio of one share for every one share held and the new ordinary shares to the existing ordinary shareholders in the ratio of one for every three shares held.

HIND RECTIFIERS

Hind Rectifiers Ltd. reported better working results during the year ended March 31, 1964. A substantial rise in sales was recorded during the year; it rose from Rs. 26.06 lakhs to Rs. 40.08 lakhs. The company expects to maintain satisfactory progress in sales during the current year also. The capacity of the selenium plant is being increased. An import licence under a British credit (K'pping Loan) has been received for the plant required for this purpose.

The company has received an industrial licence for the extension of the range of silicon diodes. Messrs. Westinghouse Brake and Signal Co. Ltd. have agreed in principle to supply the necessary machinery and accept payment in the form of fully paid up equity shares. The company has entered into a technical collaboration agreement with Messrs. English Electric Company Ltd., U.K. for the manufacture of rectifier assemblies required for electric locomotives and suburban trains. This agreement is awaiting the approval of the Government of India.

Gross profit has more than doubled during the year, rising from Rs. 3.10 lakhs to Rs. 7.30 lakhs. Allocations include Rs. 1.65 lakhs for depreciation (Rs. 1.08 lakhs), Rs. 2.56 lakhs for taxation (Rs. 0.55 lakhs) and Rs. 0.70 lakhs (Rs. 0.15 lakhs) for development rebate reserve. Thanks to the better working results the directors have recommended a dividend of 8 per cent on equity shares.

BATALA ENGINEERING

The Batala Engineering Company Ltd., a subsidiary of Mukand Iron and Steel Works Ltd., entered the capital market on August 28 with equity shares of Rs. 7.36 lakhs to finance partially its ambitious expansion programmes. The entire public issue has been underwritten. The company is setting

up a factory on a 60-acre plot at Balabgarh, 23 miles from Delhi, to manufacture open side hydraulic planers and geared-head lathes. The total cost of the expansion scheme is estimated at Rs. 162 lakhs and it is to be met by the present issue of Rs. 7.36 lakhs, further issue of capital of Rs. 22.64 lakhs, a loan from NIDC of Rs. 15 lakhs, another loan from IFC of Rs. 45 lakhs, bank borrowings of Rs. 38 lakhs and retained earnings and temporary loans of Rs. 34 lakhs.

CAPITAL ISSUES

Six companies have been authorised to raise fresh capital aggregating Rs. 5.13 crores. The consent of the Controller of Capital Issues is valid for 12 months in all cases. The following are the details:

Chowgule & Company Limited, Mormugao Harbour, is to issue further capital of Rs. 2 crores divided into 2,00,000 equity shares of Rs. 100 each to be issued for cash at par. The money will be utilised for the payment of advances made by the directors.

Tata Engineering & Locomotive Company Ltd., Bombay, is to issue 2,00,000 equity shares of Rs. 100 each for cash at a premium of Rs. 30 per share. The shares will be offered to the existing equity shareholders of the company in the proportion of one for every five equity shares held. The capital will be utilised on the expansion programme in the manufacture of diesel vehicles.

Tata Mills Ltd., Bombay, is to issue Rs. 81,85,950 capital — Rs. 60 lakhs in 5 per cent 1966 — 71 debenture stock, and Rs. 21,85,950 in equity shares of Rs. 25 each. The money will be utilised for modernisation and renovation programme of the company.

Madanapalle Spg. Mills Ltd., a company incorporated in the State of Andhra Pradesh, will be issuing capital of Rs. 30 lakhs divided into 4,000 equity shares of Rs. 50 each and 10,000 redeemable preference shares of Rs. 100 each, to be issued for cash at par. Of this issue, such number of shares of each kind as would qualify for listing on recognised Stock Exchanges would be offered for public subscription by prospectus. This is in supersession of an earlier consent dated July 26, 1963.

The Gauhati Bank Ltd., Gauhati (Assam) is to issue further capital of Rs. 6,38,100 divided into 1,27,620 shares of Rs. 5 each for cash at par.

Kasturi & Sons Ltd., Madras, is to issue debentures of Rs. 15 lakhs carrying interest at 7 per cent per annum which will rank paripasu to the existing First Mortgage debentures of Rs. 30 lakhs. The capital will be utilised for the purchase of additional rotary printing machine and for working capital.

LICENCES ISSUED

The following licences were issued under the Industries (Development and Regulation) Act, 1951 during the week ended 15th August, 1964. The list contains the names and the addresses of the licensees, articles of manufacture and annual installed capacity.

HOUSEHOLD APPLIANCES

Harbans Lal Malhotra and Sons Private Ltd., Delite Cinema Building, D.A.G., Extension, New Delhi (Calcutta, West Bengal) — Electric Shavers — One million Nos. per annum.

AUTOMOBILES

Ex-Cell-O India Ltd., 78-B, Dr. Annie Besant Road, Bombay-18 (Maharashtra) — Propeller shafts — 2,00,000 Nos. per annum after expansion.

COTTON TEXTILES

The Pioneer Textiles, Peelamedu, P.O., Coimbatore-4 (Coimbatore, Madras) — 12,784 spindles; The Coimbatore Pioneer Mills Ltd., ("B" Mills, Periyanaickenpalayan), P.B. No. 829, Peelamedu P.O., Coimbatore-4 (Coimbatore, Madras)

— 12,680 spindles; Chandra Textiles Pvt. Ltd., Peelamedu P.O., Coimbatore 4 (Coimbatore, Madras) — 12,680 spindles. Sree Saraswathi Mills Ltd., Post Box No. 34, Madurai-2 (Madurai, Madras) — 12,904 spindles; Sree V. Salakshi Mills Ltd., P.B. No. 21, Tallakulam P.O. Madurai-2 (Madurai, Madras) — 4,360 spindles; Selvaraja Mills Pvt. Ltd., Odderpalayam, Ondiputhur Post, Coimbatore (Coimbatore, Madras) — 12,680 spindles. V. Jayeswari Textiles Ltd., Fulampatti (Via) Pailachi, Coimbatore Distt. (Coimbatore, Madras) — 12,820 spindles; Pulliccar Mills Ltd., Tiruchengodu, Salem Distt. (Salem, Madras) — 9,364 spindles; Om Parasakshi Mills Ltd., Krishnarayapuram, Gannapathy Post, Coimbatore-6 (Coimbatore, Madras) — 12,826 spindles; The Radhika Mills Ltd., 5/179, Uppilipalayam P.O. Coimbatore-5 (Coimbatore, Madras) — 12,904 spindles; Indra Cotton Mills Pvt. Ltd., Jagampet Gardens, Caromepet, Chingleput Distt. (Chingleput Distt. Madras — 1,000 spindles.

VEGETABLE OILS

Dulichand Omrao Lal Oil Mills, Hindusthan Buildings, 4, Chittaranjan Avenue, Calcutta-13 (Calcutta, West Bengal) — Vegetable oils — 75 tons per day.

MISCELLANEOUS

Vibhuti Glass Factory, P.O. Ramnagar, Varanasi (Varanasi, Uttar Pradesh) — Glass Shells — 2.4 million pieces per annum.

LETTERS OF INTENT

The following statement shows the letters of intent issued during the week ended 15th August, 1964, to parties who have applied for licences under the Industries (Development and Regulation) Act, 1951.

M/s. The Modi Spg. & Wv. Mills Ltd., Modinagar (Modinagar, U.P.) — Nylon yarn; M/s. National Steel & General Mills, Patel Marg, Ghazabad (Uttar Pradesh) — Steel forgings 6,720 tons per annum; Shri Indrasan Rai, C/o Krimog International P-7, Mission Rao Extension, Calcutta-1 (Calcutta, West Bengal-1) — Steel forgings 6,000 tons per annum; M/s. Hindustan Dowidat Tools Ltd., New Asiatic Building, H Block, Connaught Circus, New Delhi (Punjab) — Steel forgings and stampings 1,800 tons per annum; M/s. Bhartia Electric Steel Co. Ltd., 8, Suinhoe Street, Ballygunge, Calcutta (West Bengal) — Steel forgings 6,000 tons per annum; M/s. Deepak Industries Ltd., 62, Hazra Road, Calcutta-19 (Calcutta, West Bengal) — Speed regulating pulleys 3,000 Nos. (worth Rs. 9 lakhs) per annum. M/s. Asiatic Oxygen Ltd., 8, Dalhousie Square East, Calcutta-1 (Howrah, West Bengal) — Gas welding and cutting equipment 33,350 Nos. (after expansion 50,000 Nos.); M/s. Hindustan Sugar Mills Ltd., 51, Mahatma Gandhi Road, Bombay — Industrial Alcohol (from 15,35,000 gallons to 33,00,000 gallons); M/s. Godrej & Boyce Mfg. Co. (P) Ltd., Lalbaugh, Parel, Bombay (Maharashtra) — Industrial Boilers: (1) Vertical Multi-tubular conventional as well as package type - 120 Nos., (2) Horizontal package oil coal and Gas Fired — 120 Nos.; M/s. Veegal Engines and Engineering Ltd., 31, Chittaranjan Avenue, Calcutta-12 (West Bengal) — Ignition Units — 12,000 Nos. per annum.

CHANGE IN NAMES (Owners or Undertakings)

During the week ended 15th August, 1964.

(Information pertains to particular licences only)

From M/s. Assam Conductors and Tubes Industries, Gauhati to M/s. Assam Conductors and Tubes Private Limited Gauhati; From M/s. Asbestos Magnesite and Friction Materials Ltd., Bombay to M/s. Hindustan Ferrodo Ltd., Bombay.

LICENCES REVOKED OR SURRENDERED

During the week ended 15th August, 1964.

(Information pertains to particular licences only)

(Name of the licensee) Shri Prayag Dutt Sharma, Meerut. (Name of the undertaking) M/s. Bharat Engineering Industries, Ghaziabad — Taps and Reamers; M/s. Surrendra Overseas Limited, New Delhi — Cement.

ANNOUNCEMENT REGARDING THE PROPOSED ISSUE OF DEBENTURES

This is NOT a Prospectus. Persons interested in full details may obtain copies of the Prospectus from the Registered Office of the Company or from the Bankers, Underwriters and Brokers named hereinafter.

THE BIRLA JUTE MANUFACTURING CO., LTD.

(Incorporated on 25th August, 1919 under the Indian Companies Act, 1913)

Registered Office: 15, India Exchange Place, CALCUTTA - 1.

EXISTING AND PROPOSED ACTIVITIES OF THE COMPANY

The main activities of the Company consist of the production of Jute goods (including hessian goods, sackings, carpets and carpet backing cloth), Staple Fibre Yarn and the manufacture of Calcium Carbide, Cement, Oxygen Gas and Dissolved Acetylene Gas. The Company commenced its activities with the production of the Jute goods; it commenced production of Staple Fibre Yarn in 1957, Calcium Carbide in 1954 and Cement in 1959. The Oxygen and Dissolved Acetylene Gas Plants of the Company were put into commission in August 1964. In order to increase its production of Cement the Company has taken steps to set up its second Cement Plant in Rajasthan.

LOCATION OF THE FACTORIES

The Company's Jute Mills, Calcium Carbide Factory, Staple Fibre Spinning Plant and Oxygen and Dissolved Acetylene Gas Plants are all situate at Birlapur, Budge Budge, in West Bengal, about 17 miles south of Calcutta. The existing Cement Plant of the Company is located at Satna in Madhya Pradesh.

The Company is setting up its second Cement Plant at Chittorgarh in Rajasthan, where sufficient land for this purpose has been acquired on 99 years' lease from the Rajasthan Government. The construction work of the Plant is in progress and it is expected that this Plant will be put into commission by March, 1966.

*1,00,000 7.86% Redeemable Cumulative Second Preference Shares of Rs. 100 each fully paid up in cash	Rs. 1,00,00,000 Rs. 2,83,20,410
Add: Forfeited Shares (amount originally paid-up)	Rs. 1,03,850 Rs. 2,84,24,260

*NOTE: Redeemable Cumulative Second Preference Shares are redeemable at par on the expiry of 12 years from the date of issue, or earlier as may be decided by the Directors on giving six calendar months' notice.

PRESENT ISSUE FOR CASH AT PAR:

20,000 Registered DEBENTURES (1975-77) of Rs. 1,000 each, bearing interest at the rate of 7% per annum and payable in full on application (to be secured by a Trust Deed) Rs. 2,00,00,000

TRUSTEES FOR THE DEBENTURES:

1. **Shri K. R. Srinivasan**, Executive Director (Investment), Life Insurance Corporation of India, "Yogakshema", Foreshore Road, Bombay-1.
2. **State Bank of India**, 1, Strand Road, Calcutta-1.

AUDITORS:

Messrs. H. P. Khandelwal & Co., Chartered Accountants, 1/B, Old Post Office Street, Calcutta-1.

BANKERS:

1. **State Bank of India**, 3, Strand Road, Calcutta-1.
2. **The United Commercial Bank Ltd.**, 10, Brabourne Road, Calcutta-1.
3. **The Bank of India Ltd.**, 23B, Netaji Subhas Road, Calcutta-1.

COMPANY MEETING

POYSHA INDUSTRIAL COMPANY LIMITED

Speech of the Chairman, Shri M. R. Ruia

The following is the address of the Chairman, Shri M. R. Ruia, delivered at the 7th Annual General Meeting of the Company held on Monday, the 24th August, 1964.

I AM glad to report that the year 1963-64 has been a satisfactory year in most respects. Even in the existing factory at Bombay, with all its limitations, we have been able to show a distinct improvement in production, by increased efficiency and a certain amount of rationalisation. Our production of containers increased by no less than 18 per cent over last year's and a substantial proportion of it was open top sanitary cans used mostly in the food preservation industry, the balance being general line cans for various industries like oils, paints, vanaspati, confectionery, etc. This performance must be regarded as quite satisfactory in relation to our resources. The very fact that, even after providing, among other things, Rs. 8.58 lakhs for taxation as against Rs. 2.95 lakhs in 1962-63, the profits for 1963-64 amounted to Rs. 4.26 lakhs as against Rs. 2.11 lakhs in the preceding year, is a measure of our striking improvement. The staff reorganisation already initiated has begun to produce results, and I am sure the performance during the current year will be even more satisfactory. I may mention that this will probably be the last year in which we shall function throughout the year in the present factory in Bombay, as we expect to move into the new modern factory near Thana before the end of 1965.

We have not been idle regarding our expansion programme. We have now acquired a total area of 33 acres of valuable land for our factory near Thana from the Maharashtra Industrial Development Corporation. Tenders are being invited for the construction of the new factory buildings on the basis of plans and lay-outs prepared by our architects. We hope to begin construction soon after the monsoon, and shall complete it as speedily as possible.

The land for the Cochin factory, comprising about ten acres, has also been bought at Mamala near Ernakulam, and we are now studying the plans for the factory buildings and installing of the plant. The site is a good one, about a mile, as the crow flies, from the new O.I. Refinery complex.

The actual site for the new factory at Ghaziabad has also been selected, after personal inspection of the Uttar Pradesh Industrial Estates and we are now negotiating the detailed terms of the purchase.

I may also mention that the requirements of our Associate, Kaira Can Company which has been created solely to meet the needs of the Kaira District Co-operative Milk Producers' Union at Anand, have been receiving full attention. As there were difficulties in the procurement of land for this Company through the State Government, our Associate carried on private negotiations and has succeeded in selecting a suitable site (about 10 acres) near Anand. The plans for the factory buildings are also under preparation.

As regards the plant, a modern automatic printing plant has already been imported for our Bombay factory and is now awaiting installation at the new factory at Thana. I am also glad to report that we have at last succeeded in getting permission from the Government of India for a second automatic bodymaker line for our Bombay factory, the absence of which has been a bottleneck in production there. The new equipment will enable quick changeovers from one can diameter to another, without appreciable loss of time, and we shall also be in a position to manufacture containers of larger diameters. The Government have also agreed to the importation of all the

plant and machinery we had selected for the factories at Cochin and Ghaziabad, and we expect the import licences to be issued shortly.

The Kaira Can Company has already placed orders with American suppliers for the machinery required, and we expect the equipment to reach India some time before the end of this year.

The present year and the next will, therefore, be a very active year for our Company, involving the construction of four new factories for ourselves and our Associate, and the installation of up-to-date plant in each of them. When they start production, we shall get rid of our present strategic disadvantage in having only one important manufacturing centre at Bombay, and having to bear the handicap of long transport and high packing costs to various markets in distant parts of India. We shall, like the major producer of cans in this country, be in the happy position of catering for regional markets from the regional plants.

I mentioned in my last review the new developments regarding receipt of orders for various types of cylinders, etc., from the Defence Departments. We have made much progress in this respect, and were able to secure substantial orders, a considerable part of which has already been executed.

Our share in the present export drive has continued to expand, and I am glad to report that during 1963-64 about Rs. 20 lakhs worth of goods were exported in our containers. The beginning of the present year has already shown further remarkable progress in this direction, and new export markets have been created.

I must mention one point in connection with the availability of our present raw material, namely tinplate. While on the whole we had a slightly better, though still not an adequate supply of tinplate for our manufacturing requirements, the disturbing feature has been that arrivals have not been following any regular pattern. We get very large quantities of tinplate in some months, followed by a lean period, including some months with no arrivals at all. This absence of a proper phasing militates against any sensible planning of our whole manufacture throughout the year, and causes our customers considerable inconvenience. I do not know what the Government can do in the present circumstances to help us out of this condition of a relatively hand-to-mouth existence; but any long-range programme by them, involving the proper staggering of indigenous production, as well as of imports, would be a real boon to us.

You will be interested to see from the relevant Balance Sheet and Profit and Loss Account annexed to this report that our wholly-owned subsidiary, Colrige, has also had a successful year. The sales in 1963-64 exceeded Rs. 6 lakhs, and the previous loss has been converted into a sizable profit.

A word regarding our future activities. You will observe from the Directors' Report that the capital is going to be increased from Rs. 25 lakhs to Rs. 110 lakhs. We have carried on detailed negotiations with important financing agencies like the Industrial Credit and Investment Corporation of India, Kerala State Industrial Development Corporation, Industrial Finance Corporation, Life Insurance Corporation, the U.P. State Industrial Corporation, and certain Banks, for foreign

exchange or rupee loans, or underwriting facilities. I am confident that these negotiations will soon fructify and that we shall shortly be fully armed at every point to embark on our scheme of modernisation and expansion, at the end of which we and our Associate will have four modern plants, combining the latest Continental and American techniques, and located at strategic centres, to enable us to cater for the greater part of India, besides contributing our tangble share to Indian exports.

All this has been possible as the result of combined teamwork at all levels. Our staff have fully co-operated, and our relations with labour continued to be harmonious. I am happy to convey my thanks to them on your behalf.

Finally, I feel I should take the opportunity to refer to a topic which will be of paramount importance to the Can manufacturing industry in this country within a decade or two. As you are well aware, tinplate has been facing increasing competition from other materials like aluminium, paper, plastics, etc., and has had to adapt itself to meet this competition. The enormous impact of aluminium as a package material on the American beer can manufacture industry first made American tinplate producers seriously think of a modified tinplate to meet this formidable challenge; and "thin tinplate," otherwise known as "double cold reduced tinplate" was expressly created to meet the challenge. A survey of current tinplate manufacture in the United States reveals that this particular variety of tinplate is now developing very rapidly and that almost all producers, including the "Big Three," have now started large-scale manufacture of this type. Another recent development is tinplate "foil" which has a paper-thin gauge of two-thousands of an inch. We, in this country, cannot afford to stand still while all these modifications are going

on in the largest tinplate producing country in the world, whose practices and methods are bound to have a controlling effect on tinplate manufacture elsewhere. Many other countries outside America (e.g., U.K. and Japan) have also taken up the manufacture of thin tinplate and are likely to take up the manufacture of tinplate foil also. All of India's tinplate production at present is hot-dipped, which is already outmoded (less than 3 per cent of the total manufacture of tinplate in the U.S.A. is of this variety today), and I note that a beginning is to be made in Rourkela in the manufacture of electrolytic tinplate. This is good so far as it goes. Unless, however, the Government take a long-range view, and modify the Rourkela programme in the fourth Plan and take steps now for the manufacture of at least a certain percentage of thin tinplate and tinplate foil, I am afraid we will be hopelessly outclassed in the not too distant future. The same consideration applies to the proposed new plant at Bokaro. I would earnestly request the Government to give this matter serious thought and arrange for a progressive increase in the manufacture of these two new varieties which have a great bearing on reducing the cost of tin cans and will enable our industry to face competition from containers made of other materials, not only in India but as regards exports also. An ancillary suggestion I would also make is that during the period in which this manufacture is being started in this country, imports should be allowed of tangible quantities of these two new varieties of tinplate to enable us to try them out on our plants and get ready in time to cope with full-scale production when the need arises. This need, I repeat, will be on us within possibly a decade.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

ASSOCIATION MEETING

INDIAN INSURANCE COMPANIES' ASSOCIATION

Mr. P. A. Advani Surveys Current Problems

AN APPEAL to the Government to revise the Statutory Limits on the General Insurers' Expenses of Management, in the light of the increases in their cost of operation since 1950, when the limits were originally fixed, was made by the Chairman of the Indian Insurance Companies' Association, Mr. P. A. Advani, in the course of his speech at the Thirty-sixth Annual General Meeting of the Association held in Bombay on August 25.

Prefacing his address with a brief review of the Indian economic situation, Mr. Advani pointed out how there had been a steep rise in prices and living costs, superimposed on a built-in inflationary bias of forced development, excessive money supply and growth of population. He urged Government to trim the doctrinaire overtones of its economic policies and create a climate conducive to the growth of both the Public and Private Sectors. "If either Sector falters or lags behind, the economy will suffer", he averred.

"The most significant development for General Insurers during the year was the Life Insurance Corporation's entry into the field of General Insurance", Mr. Advani said. He recalled how the Association had told the Government that if the decision was irrevocable, it was essential in the larger interests of the Industry that the Corporation should conform to the discipline and regulations required of other Insurers. He regretted that Government had refused this justifiable request and had allowed the Corporation to operate on a non-tariff basis. "Time alone will prove the effect of the Govern-

ment's decision on the Private Sector", he said.

However, Mr. Advani felt gratified that the Corporation had commenced its General Insurance business on a tariff basis and had also appreciated the need for harmony and goodwill in the Industry. He added: "An immense insurance potential exists in this country and it is only through the collective efforts of both the Sectors that such a task could be achieved successfully".

Mr. Advani felt there was a marked willingness on the part of the Insurers to comply with the Code of Conduct and to co-operate with the Administrative Machinery. He paid a tribute to the Executive Committee of the General Insurance Council which, he observed, had been doing very useful work. He added: "It will be realised that in the final analysis the success of the Executive Committee to place General Insurance in India on a healthier and sounder footing is vitally dependent upon the support which the Insurers extend to the various measures designed by it". He, therefore, appealed to the Industry to give the Committee its unstinted support.

Continuing, Mr. Advani referred to the unjustifiable stand by the income-tax authorities in disallowing expenditure in excess of the limits prescribed under the Insurance Act even when it was incurred for normal business purposes. He hoped the authorities would set the position right. Another cause for concern was that unlike other Companies including Banks, Insurers were not allowed rebate of Super-tax on inter-corporate dividends. He hoped that a just solution to this problem too would be found.

BOOKS BRIEFLY

The Indian Prospect: Two Views

Is There A Contemporary Indian Civilisation?: By Mulk Raj Anand; Asia Publishing House; Price 18s.

Behind Mud Walls: 1930 - 1960: By William and Charlotte Wiser; Camb. Univ. Press for Univ. of California Press; Price 40s. (Also paper back 17s).

Reviewed by JOSSLEYN HENNESSY.

MR. MULK RAJ ANAND's book calls for sympathetic understanding rather than critical assessment, because its 200 pages amount to the cries of anguish of a generous man with his eyes fixed on the sufferings, to the exclusion of all else, of India's millions. Mr. Anand is pessimistic about independent India and, indeed, about the whole world. Both are dominated by the "greed, selfishness, and lack of values" promoted by the "ferocious, man-eating profit system," in which "football sweeps, Hollywood films, and crime stories" are the "conveyor belt on man's substitutes" for spiritual values. In both, Socialism, mankind's one hope, has petered out. In the U.K., the "surplus money of British Imperialism has corrupted the lower middle classes and given them a limited stake in the profit system". In India, the politicians, bureaucrats, soldiers, and C.I.D. men, who are the heirs of British rule, indulge "in large-scale bribery to win over the intelligentsia to conform with middle class western values".

Only in one country has Socialism "broken from the orbit of national capitalist Imperialism" to establish the USSR "under the leadership of a Socialist intelligentsia in league with the workers". Alas, the USSR, like the rest of us, is threatened by the cold war, which Mr. Anand blames on the "highly armed nations of the West, governed by monopoly capitalists". Why these criminals are keener "to engulf the world in a final total war" than to indulge in the (to me) more obvious pleasures of jolling about drinking pink champagne with naked women is not clear.

One of the few good points about India is her "policy" of "dynamic non-alignment", which is not "a mere feeble neutrality", but the expression of India's desire to have friendly relations with all countries. Unfortunately, it emerges from Mr. Anand's postscript that China has pulled the carpet from under this. Defending India against "outsiders", who now absurdly accuse her of inconsistency because she re-arms to defend herself, Mr. Anand quotes Mr. Khrushchev with approval for asserting that if one tries to mollify a robber by giving him one's purse, he will become increasingly insolent. "It is necessary to curb the highway man to prevent jungle law from governing relations between civilised states". Quite. One had known that Mr. Khrushchev was in the cold war, but it is puzzling to find that Mr. Anand has now joined him there.

Is there a contemporary Indian civilisation? My impression from listening to Mr. Anand's diverse cries is that there is not, but that if the rare Indians "who are struggling to keep a few lamps of the human spirit alight in the enveloping darkness of our time" have their way, the "filthy, money-grubbing possessiveness of the upper and middle classes" will be liquidated and the state will wither away, so that "wealth can be distributed all round". By how much that will raise India's per capita income Mr. Anand does not reveal.

"Behind Mud Walls" is a human, dispassionate study of a North Indian village. It avoids the classic mistake of criticising villagers for failing to approach their problems with the intellectual resources of university graduates and to solve them with the initiative of a self-confident elite. Indian villagers are pervaded by fears of forces beyond their control. Thus, we are told that in 1930 farmers listened with interest to explanations of a new seed, but would not risk trying it unless the leader of their particular protective group had sanctioned it, because if they presumed to outshine their leader socially or economically, they were brought forcibly to their proper station. Having resettled in her village after thirty years, Mrs. Wiser (now a widow) reports on changes. The village leaders are as important as ever but they are more alive to experiment. Mrs. Wiser describes their innovations but does not adequately explain how the leaders became receptive to new ideas. On this, her report may be compared with Tara Krishna Basu's "Bengal Peasant". However, whereas Mr. Anand, from his professor's chair in the Punjab University, leaves us in an apocalyptic gloom over India's future, Mrs. Wiser, from her village, suggests that progress is inching its way forward.

JAPANESE ECONOMY

Japan Economic Year Book 1964: Published by The Oriental Economist, 1-4, Hongokucho, Nihonbashi, Chuoku, Tokyo; Pp. 308; Price \$10.00 or £3-12-0d.

BESIDES THE usual features of a Year Book, this publication includes some highly competent analytical material on the performance of the Japanese economy in its various sectors and in the context of world economic situations and trends. The statistical coverage is ample throughout and every feature of the Japanese economy has received generous treatment in this respect. Of particular interest to the business world is a directory of major companies in Japan, spread over 53 pages and served by a convenient index.

COTTON INDUSTRY

Bombay Cotton Annual, 1962-63: Published by The East India Cotton Association Ltd., Cotton Exchange, Marwari Bazar, Bombay-2; Pages 411; Price Rs. 7.50.

THIS IS the forty-second annual report of the East India Cotton Association for the year ended August 31, 1963. The first half of the publication, which begins with a review of the 1962-63 season, contains three long chapters running into more than 200 pages. There is a chapter on "Acts and Rules — Amendments during the Year 1962-63"; it deals with such legislative measures as Bombay Cotton Control Acts, 1942 and 1962, Cotton Control Order, 1955, Saurashtra Cotton Act, 1955, Cotton Transport Act, 1923, Destructive Insects and Pests Act, 1914, etc. Another chapter deals with enactments and amendments to by-laws and gives the list of cotton pressing factories as well as the protected areas under Cotton Transport Act, a note on stamp duty on cotton, a summary of import and export duties on raw cotton, etc. The second half of the book consists of statistical tables relating to prices, exports, imports, consumption, stocks, freightage, spindles and looms, production, crops, acreage and yield, including world production, consumption and stocks of cotton. It is, indeed, a useful compendium of facts relating to various aspects of the cotton industry and trade.

RECORDS AND STATISTICS

A Story of Imbalances

THE RESERVE Bank of India's Report on Currency and Finance for 1963-64 is a factual review of economic and financial developments in the economy during the financial year. It highlights the basic cause of the pressure on the price level which was the result of a yawning gap between "aggregate demand and supply". Relevant portions of the review are reproduced below :

The outstanding feature of the Indian economy in 1963-64 was the strong and persistent pressure on the price level, the increase in the index of wholesale prices being larger than in any year since the commencement of the five-year Plans in 1951, except in 1955-56. On the one hand, for the third year in succession, there was a virtual stagnation in agricultural output. On the other, there was a rapid expansion in money supply, springing not only from larger bank credit extended to the Government sector to meet the combined needs of defence and development, and more recently of rehabilitation, but also from a greater volume of bank credit extended to the private sector, particularly in the second half of the year, when the seasonal expansion in scheduled bank credit touched an all-time record. The 1963-64 budget made a bold effort to meet the steep rise in outlays on defence and development and to contain inflationary pressures, but the unprecedented increase in taxation, and particularly the introduction of the Super Profits Tax, intensified, on the stock exchanges, the bearish tendency which had already been in evidence since the Chinese invasion. The bright spots in an otherwise overcast economic horizon were the accelerated tempo of industrial activity from the second quarter of the year, and, on external account, a relatively better performance of exports and increased utilisation of external assistance which assisted the foreign exchange reserves substantially during the year.

Emergency Wears Away

Early in the year, as the threat of a fresh Chinese aggression receded, the sense of Emergency which had gripped the nation in the last quarter of 1962, began to wear away. The all round co-operation to hold the price line, assured in those critical months, was not in evidence in adequate measure later on.

The accentuation of inflationary pressures during the year, notwithstanding the tax efforts of the Centre and the States and other measures to restrict consumption, was basically the outcome of the widening of the gap between aggregate demand and supply. The substantially larger outlays on defence and development, higher level of industrial activity, increase in incomes and employment as well as growth of population and in urbanisation tended to swell aggregate demand. On the supply side, agricultural production during the 1962-63 crop year suffered a visible setback, the decline being particularly conspicuous under foodgrains, and the position for 1963-64, on the basis of available data, shows a slight improvement. In fact, agricultural output, which exercises a crucial influence on the general price level through its direct impact on the prices of food articles and agricultural raw materials and its indirect effect on the prices of manufactured articles by influencing movements in the prices of wage-goods and raw materials, failed to register any material improvement during the first three years of the third Plan; and this inadequate performance of agriculture imparted an upward thrust to prices. A closer scrutiny of the seasonal trends in prices from about the beginning of the second Plan period shows that in each year, except during 1961-62, the post-harvest

decline in prices failed to wipe out the preceding lean period rise. This was an inevitable consequence of the continuing growth in demand outstripping the growth in supplies. There has thus been a 'ratcheting' effect on prices so that, once having risen, prices are prevented from returning to their starting position. In turn, the rise in prices of agricultural commodities spreads both to other commodities and the cost of living. The larger the seasonal increase the greater, therefore, is the annual rate of increase in prices and in the cost of living.

Again, although the tempo of industrial activity quickened after June 1963, the rise in output was largely confined to capital goods and basic and intermediate supplies, the expansion in consumer goods being comparatively small. Total supplies, inclusive of imports, failed to keep pace with the growth in demand. It is significant that the sharp deterioration in the price situation was largely the result of the pronounced rise in food articles such as rice, wheat, coarse grains, pulses, edible oils, gur, etc.

Price and Output

The marked and disturbing deterioration in the price situation during 1963-64 is amply borne out by the movement in the index of wholesale prices. This index, which had shown some measure of stability between March 1961 and March 1963 (the decline of 3.7 per cent in 1961-62 following the robust expansion in agricultural output in 1960-61 had been wiped out by a rise of 3.7 per cent in 1962-63), advanced sharply by 9.3 per cent during 1963-64. The average of the weekly indices for the year showed a similar comparative picture, namely, a rise of 5.8 per cent in 1963-64 as against one of 2.2 per cent in 1962-63 (Table I).

The pressure on the price level, though wide-spread, covering all the major groups and sub-groups, was concentrated on 'food articles' where the per capita availability of supplies was lower than in the previous year. The index of food articles advanced over the year by 14.6 per cent as against a much smaller rise of 4.3 per cent last year, and contributed to nearly four-fifths of the increase in the general index. Among food articles, the price rise was more pronounced in wheat (36.9 per cent), jowar (26.2 per cent), bajra (26.7 per cent), pulses (33.9 per cent), gur (13.8 per cent) and rice (9.7 per cent) (Table II).

Industrial Raw Materials

Prices of industrial raw materials, which were comparatively stable during 1962-63 with an easy undertone during most of the year, registered a sizable rise of 8.0 per cent during 1963-64, the increase occurring mainly under oilseeds (10.5 per cent with groundnut alone rising by 12.9 per cent), minerals (12.0 per cent) and cotton (2.0 per cent) (Table III). The upward bias in groundnut prices was attributable to a drop, though marginal, in the output of oilseeds during 1962-63 in the face of rising demand. There were, in addition, general fears in the early part of the marketing season that the 1963-64 crop would not show any material improvement. Although these fears were subsequently discounted, and output of groundnuts is now placed at 53 lakh tonnes as against 48 lakh tonnes in 1962-63, market arrivals were not in keeping with the increased output.

The impact of rising raw material prices, fuel, power and transport charges and food prices, through their impact on wages and salaries, was, to some extent, felt on manufactures, the prices of which registered a moderate rise of 2.7 per cent

over the year, made up of a rise of 2.0 per cent under finished products and a somewhat larger rise of 6.7 per cent under intermediate products. Under intermediate products, price increases were noticed mainly in cotton yarn (3.5 per cent), rayon yarn (8.6 per cent) and metals (6.8 per cent).

The growth of industrial output which had shown a sudden spurt in the wake of the Emergency tended to stagnate at the higher level in the first half of 1963 partly because of the wearing away of the sense of Emergency, mentioned earlier, and partly owing to the fall in sugar output and the slack in textiles, and partly because of bottlenecks in capacity in certain industries. In the second half of the year, however, the growth rate once again picked up rather swiftly. The seasonally adjusted index of industrial output which had fluctuated between 159 and 163 during January-June 1963 advanced steadily to 174 in December. For the year as a whole, the index averaged 164.9 as against 149.8 in 1962 and 139.3 in 1961, thus showing a distinctly higher rate of growth (10.1 per cent) than in the preceding two years (7-7.5 per cent). Rail transport was no longer a bottleneck; railway transport capacity was reportedly running ahead of consumer demand in principal sectors like coal, steel and raw materials. This together with increased availability of power and basic materials like, coal, steel, cement, etc. (which rendered possible a more effective utilisation of existing capacity), measures to step up output in defence-oriented industries as well as substantial additions to capacity in a number of industries, were important factors facilitating a more rapid growth of output during 1963. Fiscal incentives and price increases for the priority industries, the liberalisation of credit policy and the measures taken to improve industrial efficiency also contributed to the higher rate of output.

Price Policy

Since the deterioration in the price situation was the outcome of shortages in basic supplies and a rapid growth in money supply and bank credit, a wide range of measures on the monetary front as well as relating to the supply, pricing and distribution of commodities were pressed into service.

Emphasis in budgetary policy was placed on limiting the scale of deficit financing and on restricting consumption; even so, the budget for 1963-64 avoided large increases in indirect taxation on items of mass consumption which were produced domestically. With the same object in view, the budget for 1964-65 avoided any material increase in indirect taxation on commodities. To give relief to the lower income groups, the

Compulsory Deposit Scheme was withdrawn in September 1963 in respect of non-income tax payers. Personal taxation has been remodelled in 1964-65 budget to provide larger 'take home pay' to the assessee in the lower income brackets. Social security benefits for the Government employees such as, pension and family pension schemes, were liberalised, in addition to compensation for the rise in living costs, through enhanced dearness allowance.

On the commodity front, official action was focussed on securing a greater control over the prices of rice, wheat, sugar and gur and other articles of mass consumption through augmenting domestic supplies, larger releases from official stocks, widening and streamlining of the network for distribution and by a tightening of control over private trade. Imports of foodgrains into the country during 1963-64 totalled 47 lakh tonnes, as against 39 lakh tonnes in 1962-63.

Internal Procurement

Internal procurement was also stepped up. Purchases of rice on behalf of the Central Government during the 1963-64 season (up to mid-May 1964) totalled 5.3 lakh tonnes. In addition 2.4 lakh tonnes of rice (and/or paddy in terms of rice) were purchased by State Governments on their own account. It was expected that procurement of rice by the Central and State Governments in 1963-64 would be about one million tonnes as compared to nearly 700,000 tonnes in the preceding year. The network of the machinery of distribution of food supplies from the official stocks was enlarged during the year particularly in scarcity areas. Fair price shops operating in the country at the end of March 1964 numbered over 77,000 as against about 51,000 a year before. Total issues from Central Government stocks during 1963-64 amounted to 5.95 million tonnes as compared to 4.22 million tonnes in 1962-63. Wholesale dealers in foodgrains were licensed in many States and steps were also taken to curb profiteering by traders by prescribing margins of profits.

In the context of the steep rise in sugar prices, Government reimposed price and distribution controls on this commodity in April 1963 and stipulated the ex-factory prices of sugar and quotas for the various States. Later, control was also extended to gur and inter-State movement of gur and khandsari was prohibited except under permits.

Early in March 1964, the Government announced a six-point programme to combat the price increase in the current lean period. The programme envisaged the fixation of maximum prices for foodgrains, a review of the procurement prices, effective regulation of the wholesale trade, the progressive

taking over of the management of rice mills, increasing the procurement of rice to over a million tons, additional imports of both wheat and rice and tightening the credit control to check hoarding and profiteering more effectively. In respect of wheat, the zonal system was reintroduced (the country being divided into 9 wheat zones) largely with a view to conserving supplies of wheat in important consuming areas and concentrating on areas of shortage in which the Government would distribute supplies of imported wheat from Central stocks.

Side by side with the measures for regulating prices and distribution, attention was also focussed on long-term measures to stimulate the production of agricultural commodities. The policy of price support for agricultural commodities was reviewed during 1963-64 and suitable upward adjustments were made in the support prices for wheat, and in the procurement prices for rice and in the minimum prices for cotton and sugarcane. Price support and buffer stock operations in the case of jute were intensified. The policy of support was also extended in May 1963 to jowar and it now applies to major foodgrain and commercial crops. In order to stimulate the output of crystal sugar, besides increasing the minimum cane prices, mills were also granted a rebate of basic excise duty on additional production over the 1961-62 level.

Central Assistance

Central assistance to States' agricultural programmes for 1963-64 was raised mid-year and additional financial resources were allocated to such programmes as are expected to yield quicker results in agricultural production. Financial outlays on agricultural programmes during 1964-65 have been stepped up. A programme for intensification of production of rice in 40 selected districts, on the 'Package' approach has been initiated. A dry farming programme for increasing production of millets and pulses has also been taken up. The 'Package' approach has been extended to intensify the production of cotton and oilseeds, and a Production Commissioner (Commercial Crops) has been appointed at the Centre to directly supervise the execution of such programmes for commercial crops. Special schemes for increasing the production of vegetables have been taken up in order to cope with the requirements of defence forces and for holding the price line. Programmes for intensive production of milk, meat, eggs and short-term crops have also been recommended to the States for implementation.

At the administrative level, measures have been taken to

ensure close co-ordination of administrative activities connected with agricultural production. An Agricultural Production Board has been constituted with the Minister for Food and Agriculture as Chairman and Ministers of Agriculture, Food, Planning, Irrigation and Power and Community Development and Co-operation and a Member of Planning Commission, as members, with a view to ensuring an integrated high level approach in matters of agricultural policies and programmes on behalf of the Central Government. In the States, on the suggestions made by the Central Government, Agricultural Production Committees have been constituted at the Cabinet and Secretariat levels to co-ordinate and streamline the efforts of the different departments and to ensure expeditious decisions on activities having a bearing on the development of agricultural production.

In regard to industrial commodities, there was a growing recognition of the fact that while a measure of control over basic items in short supply was necessary in a planned economy, it is equally important to ensure that basic industries secure returns adequate to finance expansion and to attract capital which would otherwise go into non-priority industries. During the year, controls on prices and distribution of a number of commodities were reviewed to ensure that they were consistent with the need for expansion in priority fields and that distribution controls adequately served the purpose for which they were imposed. In keeping with these considerations, price and distribution controls on 16 items, viz., rayon, yarn, staple fibre, caustic soda, soda ash, hydrochloric acid, chlorine, calcium carbide, bleaching powder, chilean nitrate, muriate of potash, sulphate of potash, washing soap, tyres and tubes, sheet glass, paper board and natural rubber were removed in December 1963; this was followed later in March 1964 by the withdrawal of controls on certain types of steel and steel products. Price incentives to coal and cement industries were also granted, while the question of revision of electricity tariffs was under consideration of the Government at the year-end. The budget proposals for 1964-65 embody substantial tax concessions to priority industries in order to facilitate a more rapid expansion of these industries.

A distinguishing feature of the economic scene during 1963-64 was the impressive growth in liquidity in the organised sector of the economy. Money supply, which broadly represents the monetary demand in this sector, expanded at a distinctly faster rate than in the previous year, the increase being Rs. 439 crores or 13.3 per cent as compared to Rs. 264

crores or 8.7 per cent during 1962-63. The expansion in money supply more than kept pace with the growth in aggregate output, thus inevitably giving an upward thrust to the price level. A striking feature of the monetary situation this year was increase in money supply in the slack season also. Normally, during the slack season, money supply contracts sizably as the combined result of the return flow of funds to the banking system and subscriptions to new Central and State loan floatations; in the 1963 slack season, however, there was an unusual, though small, expansion in money supply even though there was a substantial contraction in bank credit. In the 1963-64 busy season that followed, the expansion in money supply was of a noticeably large order than in 1962-63 busy season.

An analysis of the factors contributing to the increase in money supply shows that the rate of increase in net bank credit to the private sector (mainly private trade and industry) rose substantially during the year. The rate of increase in net bank credit to government (which represents the combined lending of the Reserve Bank and the rest of the banking system) was lower during the year; however, net bank credit to government continued, as in the past several years, to be the major factor stimulating expansion in money supply.

Credit Policy

Against the background of the prevailing inflationary conditions in the economy, the emphasis of the Reserve Bank's credit policy continued to be placed on overall restraint designed to check the use of bank finance for speculative purposes

and to ensure that interest rates in the organised markets take account of the scarcity of capital while enabling a larger flow of resources into productive investment.

Reference has already been made to the unusually large contraction in bank credit during the 1963 slack season and the sluggishness in industrial activity in the first half of 1963. In view of these developments, credit policy was geared to stimulate industrial activity, and on the eve of the 1963-64 busy season (October 30, 1963) modifications were made in the slab rate system of lendings by the Reserve Bank, the object being to reduce marginally the cost of borrowing and to raise the quantum of finance available on relatively easy terms from the Bank. The permissible quota for borrowings by scheduled banks from the Reserve Bank both against bills and Government securities was raised from 100 per cent to 150 per cent of their average statutory reserves. Moreover, banks could borrow half of their quota (i.e. 75 per cent of their average statutory reserves, as against 50 per cent till then), at the Bank rate, viz. 4½ per cent and an equal amount at 6 per cent. Borrowing beyond this limit was in the nature of special accommodation granted by the Bank on an overall assessment of the borrowing bank's position, at an interest rate of 6 per cent as against 6½ per cent till then.

Cautious Approach

In the 1963-64 busy season, the unusually rapid pace of credit creation by banks, financed to a larger extent than in the past by recourse to Reserve Bank credit, called for caution in further credit extension, particularly in the context of the supply situation of agricultural commodities which early in March appeared to be less favourable than anticipated. The Bank, therefore, on March 11 tightened its credit policy by restoring the borrowing quotas and the lending rates to the levels prevailing till the end of October 1963, and also called upon banks to reinforce their efforts to mobilise deposit resources so as to be in a position to meet the increasing rate of economic expansion, and at the same time to conform to the higher liquidity requirements that will come into force in September 1964.

Selective credit controls were continued to be operated flexibly in accordance with the changing supply and demand position of individual commodities in question. The control on bank advances against shares, which was introduced in January 1962 in the context of a speculative boom in share values and the rising trend of bank advances against shares, became no longer necessary in the radically altered conditions in 1963, when the market remained depressed and bank advances

against shares remained stable; trading in the market was also regulated by the more stringent margin requirements adopted in June 1963. Consequently, margin requirements on credit limits on bank advances against shares were withdrawn in October 1963. Later, in the 1963-64 busy season selective credit controls on paddy and rice were tightened and those on wheat and groundnut were reimposed. Bank advances against these commodities were growing in the context of tight supply position in the market and rising prices, indicating thereby that bank finance was aiding speculative holding of stocks. At the same time, banks were exhorted to avoid utilisation of credit for hoarding of commodities in short supply and to review their clean advances to parties other than industrial borrowers.

Gilt Edged and Equities

While commodity prices were continuously on the uptrend, the market for industrial securities and new issues presented a subdued trend during the major part of the year. The uncertainty engendered by the Emergency and later the heavy dose of additional taxation introduced in the 1963-64 budget, including the levy of the Super Profits Tax on the corporate sector, had caused a severe set-back to the activity in industrial securities and the market remained depressed for a prolonged spell of nearly a year. Reflecting this trend, the price index of variable dividend industrial securities slumped heavily from 188.0 on September 1, 1962 to 160.0* on August 3, 1963. Thereafter, there was a gradual revival of confidence in the market and the index of share values advanced by stages to 176.2 by mid-November 1963. The change in market sentiment was aided by a chain of factors, and the more important among them were (i) the fading away of the threat of a fresh Chinese attack, (ii) the lifting of the ban on forward trading in shares in June 1963 in view of the comfortable technical position of the markets, although it was accompanied by the imposition of stringent margin regulations, (iii) the reassessment of the economic situation and the outlook for industrial profits by the market following the flow of encouraging corporate news and (iv) the announcement of several fiscal and monetary incentives to invigorate the economy such as the liberalisation of credit policy (including the withdrawal of selective credit control on bank advances against shares) and the relaxation of control on capital issues. For the next three months or so till end-February, the market tended to be somewhat hesitant on the usual pre-budget uncertainties. The budget proposals for 1964-65, particularly the levy of a capital gains tax on issues of bonus shares, the dividend tax and the enhanced rates of estate duty and wealth tax depressed the market, which had, in fact, been anticipating substantial tax relief to the corporate sector and the index receded rather sharply to 167.6 by March 28.

Foreign Investment Policy

In recent years, private foreign capital has been moving into India at a steadily increasing rate. Much of the increased interest in investing in India is attributable, on the one hand, to a generally more favourable investment climate resulting from continued economic progress and, on the other, to a more receptive attitude towards foreign private capital. This improvement is manifested not only in the increased inflow but also in the progressively growing number of new joint venture companies; the growing association of private foreign enterprise with public sector undertakings is yet another indication of this improvement. The Chinese aggression and the high level of taxation imposed to meet the demands of defence had to some extent affected the foreign investment climate during 1962 and early 1963 but this phase proved to be temporary. The renewal of foreign investor interest is evident from the upward trend in the number of collaboration agreements approved by the Government since July 1963. Approvals for such arrangements numbered 153 in the second half of 1963

*In fact the index touched the nadir at 158.1 on June 29, 1963.

as against 145 in the first half of 1963 and 99 in the period July-December 1962.

Various steps have been taken during the year to encourage foreign investment. The scope of activities of the Indian Investment Centre has progressively widened and the Centre has undertaken a new programme of preparing analytical studies regarding the scope for investment in particular industrial fields based on priorities and specific case studies of joint ventures. The Centre has also initiated a programme under which meetings would be arranged with industrial and business leaders of prime industrial cities of the world. The Centre also proposes to open an office in Europe to establish liaison with the EEC countries.

As part of the general measures designed to improve the investment climate in the country, Government are reviewing the existing screening procedures for giving initial approvals to cases involving foreign investment or collaboration, so that such approvals in future can be given expeditiously. The 1964-65 budget also seeks through various concessions, to further encourage the flow of foreign equity capital and technical know-how in the priority industries. With this in view, reliefs have been offered, for instance, in the shape of exemption of inter-corporate dividends from super-tax, reduction of the tax rate on engineering services, exemption to non-residents from tax on income from approved securities and exemption of foreign investors from tax on income derived from loans given by them to Indian companies with Government's approval.

The growing interest evinced by foreign investors in the last few years is broadly borne out by consents given by the Controller of Capital Issues for issue of capital to non-residents. The total capital involved in such consents (inclusive of loans) aggregated Rs. 130.5 crores in 1963 as against Rs. 56.7 crores in 1962 and Rs. 34.8 crores in 1961.

MORE ALUMINIUM for the industry

HINDALCO

The Rs. 200 million-Birla-Kaiser Aluminium Project has, since December, 1962, attained the present target capacity of 20,000 tonnes of virgin aluminium per annum. HINDALCO products now include commercial grade ingots, electric conductor grade ingots, high purity ingots, wire-bars, billets and re-draw rods of a very high quality. Fabrication facilities to manufacture sheets, plates, circles, and extrusions are being undertaken, to keep the fast growing national industries on their march to progress and prosperity.

UCO Bank Building, P. Box 34,
Parliament Street, New Delhi-1.

Clearing the Decks

WE ARE glad that the Central Family Planning Board which met in Bombay last month had steered clear of sterile controversies over targets and techniques and adopted a constructive and comprehensive strategy for the control of population. The Board recommended that the production of contraceptives should be started in the public sector so as to facilitate their free or inexpensive availability to the mass of the people. It approved of increased resources and facilities being made available for mass sterilization programmes. On the question of liberalization of abortion law as a measure of family planning, the Board decided to set up a committee of representatives of the medical and legal professions as well as family planning and social welfare workers to go into all aspects of this proposition. It is to be hoped that the positive lead given by the Board will help to set at rest unrealistic wrangles over the relative advantages or disadvantages of different techniques for the limitation of families. In this field it is neither possible nor necessary to prescribe one universal or even a single dominant formula. It would in fact be unwise to insist on any one method to the exclusion of others. As science and technology advance, further discoveries and inventions will continue to be made and people with different temperaments or in different situations would, no doubt, settle for whatever is particularly suitable to them.

In such a context, when the State has assumed responsibility for a national family planning programme, its policy must obviously be to disseminate knowledge of the various techniques and provide facilities for their spread among the people. At the same time, where the resources are limited and there is an urgency of more having to be achieved in less time, some concentration of effort becomes unavoidable. It is in this sense that a certain priority has been pleaded and provided for programmes of mass sterilization. There has been some dispute over how many sterilization operations will have to be performed over a period in order to achieve a given reduction in the fertility rate. We suggest that this struggle with statistics is largely beside the point. A simple and sufficient answer could be that we cannot expect more operations to be performed, nor should we be willing to accept less, than may be achieved within the twin limitations of 'motivation' and 'medical personnel'. These limitations are of course neither inflexible nor enduring and there must certainly be a constant endeavour both to extend educational propaganda for voluntary sterilization and for building up medical personnel, facilities and equipment.

There has also been some argument about the economics of sterilization. Some very ingenious arithmetic has been adduced to show that the condom is cheaper than vasectomy. Apart from the obvious incompleteness and speculative nature of such calculations, the fact remains that sterilization is specially and specifically advocated for precisely those millions of our population who may not reasonably be expected to be in a position to use contraceptive devices regularly. It has to be unreservedly conceded that a completely foolproof technique of permanent family limitation is a necessity by a very large number of married couples in this country who already have three (or even two) or more living children. It is in this large area where the national family planning programme has its primary obligations that mass sterilization seems to have but few satisfactory alternatives. It does not, therefore, need a debate in Parliament or in the panchayats to legitimise mass sterilization programmes. On the contrary, the Central Health Ministry, with the backing of the entire Central Government, should act firmly and continuously to keep up the momentum of mass sterilization campaigns at State levels. It might be said in fairness to a few State Governments that they

already have excellent records of effort and achievement in this field. They need no prodding, but they are entitled to, and must receive, generous facilities and encouragement from the Centre. In contrast, there are other State Governments which do not seem to have been even aware of their responsibilities for population control. We suggest that the Chief Ministers and the Ministers of Finance and Health in those States should be called to the Capital for some frank speaking and that the Central Health Minister should ask for and secure the active association of the Central Finance Minister and the Prime Minister with such a conference. This, in our view, is the next positive step which the Government of India ought to take in giving the national family planning programme another push forward.

Finally, the legalization of abortion is no doubt a tricky issue; and the wisdom of circumspection could be easily appreciated. It is however possible to clear the air of some needless confusion. It is often claimed that our people will never accept the idea of legalized abortion because of its religious or ethical implication. This may be so, but the assertion still makes no point. The proposal is not that abortion should be made compulsory but that those who desire to have an abortion for the purpose of family limitation should not be deterred by law, but, on the contrary, should be provided with access to proper medical facilities. It follows that only those who have no ethical or religious objection to that course will take advantage of the law. We see no reason why they should not be allowed the freedom of their intellectual or moral convictions, but be penalized for other people's beliefs or prejudices which they may

not care to share.

Incidentally, we may refer here to certain surveys that claim to have revealed resistance among people to the idea of legalizing abortions. We believe that the very concept of such surveys is false. After all, it is stupid to expect people not themselves currently confronted by the problems of unwanted pregnancies to say in cold blood that they approve of legalizing abortion. What matters is how relief could be provided to those who are actually dreading a further addition to their families. It is possible that a respectable minority among such people may well welcome the idea of open and proper medical facilities for inducing abortions. Legalization of abortions is advocated only for the benefit of such harassed and helpless minorities. It must also be borne in mind that whether the law allows it or not, a certain number of abortions does take place and because of the clandestine manner in which they are compelled to be carried out, they are burdened with avoidable hazards to health or life. From a civilized point of view, there is, therefore, everything to be said for legalizing abortions under controlled conditions. This is precisely what those who advocate the legalization of abortions for the purpose of family planning have in mind. The argument here is that abortion should be permitted only where there are at least three children living and the couple concerned accept surgical sterilization for the permanent avoidance of further pregnancies. It is in these terms that the Committee concerned should examine the case for legalizing abortions.

Sharing the Cake

COMPROMISES seldom satisfy, but are often unavoidable. The decisions of the Central Government on the recommendations of the Bonus Commission are clearly in the nature of a compromise. In the area of industrial relations the Government generally tries to assume the position of a third party. But it is becoming more and more the case that the Government finds itself increasingly deeply and directly involved. This has been particularly so in the matter of the Bonus Commission's report. The Government's interests are twofold. In the first place, the Bonus Commission's recommendations have a bearing on the Government's economic policies generally and its fiscal policies directed towards encouraging capital formation, in particular. Secondly, with the expansion and diversification of the public sector, the Government's stake as well as responsibilities as an employer has grown considerably. As a result, the Government has found it necessary to modify the Bonus Commission's recommendations in a manner advantageous to employers. This is not to say that the modifications have been made with the object of benefiting them. The benefit is incidental. The purpose is to ensure reasonable conservation of corporate earnings for the benefit of the national economy.

This problem of conservation arose because the

Bonus Commission had given insufficient attention to the requirements of investment and capital formation. Its formula for arriving at the surplus available for distribution to labour in the form of bonus was far too liberal. A member of the Commission in a dissenting note had pleaded for a more strict definition of 'the available surplus'. His reasoning was sound and it has convinced the Government. As a result, the latter has allowed increases in the rates of returns on capital and reserves proposed by the Bonus Commission as deductible prior charges on the available surplus. The Commission, again, was only prepared to allow income tax and super tax liabilities as other prior charges. The Government has amplified this allowance to cover all direct taxes. The result of the amendments is that the available surplus would be lower. This has naturally moved Labour leaders to protest. Even an agitation has been threatened. But it is unlikely that the trade union organisations would, or could, organize any effective unrest over this issue so as to compel the Government to go back on its decision. What should matter after all is whether substantial gains to employees will be forthcoming even under the modified formula or not. This is a matter for detailed calculations, industry-wise or even company-wise and until it could be shown in con-

crete terms that the formula decided upon by the Government has unjustly deprived a large section of workers of reasonable benefits, it would certainly be difficult for any section of the Labour leadership to stir up genuine discontent. From this point of view the Government may certainly be commended on having bought for the nation a fair chance of industrial peace at what may not be an unreasonable price.
