Associated Cement Companies Limited, Bombay, which was given consent on 8 April, 1964, to the capitalisation of Share Premium not exceeding Rs 1,19,21,800 and issue bonus shares has now been permitted to capitalise Rs 1,27,16,600 from the Share Premium Account and issue bonus shares to the existing shareholders.

★

BALANCE-SHEET REVIEWS

Greaves Cotton—Record Sales

Greaves Cotton & Company has produced excellent working results for the year ended 31 March 1964, sales having crossed the Rs 10-crore mark and touched Rs 10.93 crores against Rs 7.84 crores and the gross profit having risen to Rs 63.64 lakhs from Rs 57.50 lakhs.

After providing a sum of Rs 3.16 lakhs (Rs 3.06 lakhs), there is a pre-tax profit of Rs 60.48 lakhs against Rs 54.53 lakhs. The tax liability is estimated at Rs 28.50 lakhs against Rs 23 lakhs. Adding to the pre-tax profit, the previous surplus of Rs 0.21 lakh (Rs 0.13 lakh) and excess provisions amounting to Rs 1.67 lakhs (Rs 1.48 lakhs), there is an available sum of Rs 61.56 lakhs against Rs 56.01 lakhs.

The directors have proposed to allocate Rs 20,000 (Rs 80,000) to Development Rebate Reserve and Rs 61.25 lakhs (Rs 54.50 lakhs) to the General Reserve out of which the tax liability and the proposed dividends on equity and preference shares will be met. The dividend on the Ordinary share is maintained at 12 per cent for the second year in succession.

The company's subsidiary and associated companies have shown satisfactory results with turnover and profit showing considerable improvement over the previous year. The company's own manufacturing divisions have shown substantial improvement contributing significantly to the company's turnover and profitability. The working of the company, during the current year so far, is satisfactory.

Polychem's Fast Growth

Polychem Limited is now in a position to manufacture, on a large scale, finished products, because the required raw materials can be had from its own sources. As a result of the implementation of the various schemes, it is now possible to have a flexible production programme and increase the output simultaneously of general purpose as well as high impact grades of polystyrene.

The company has reported a sharp increase in sales from Rs 198.93 lakhs to Rs 269.79 lakhs for the ended 31 March 1964. It is expected that there will be a further substantial rise in sales during the current year. The net profit, before providing for depreciation and taxation, has jumped to Rs 88.11 lakhs from Rs 38.43 lakhs in the preceding year.

The provision for Depreciation is raised to Rs 56.47 lakhs from Rs 6.30 lakhs and Development Rebate to Rs 27.33 lakhs from Rs 2.44 lakhs. There is no liability towards taxation against Rs 17 lakhs. The dividend on the equity shares is maintained at 15 per cent, subject to tax. This distribution will be helped by a transfer of Rs 6 lakhs from Dividend Equalisation Reserve and other transfer amounting to Rs 2.06 lakhs. In the previous year, there was an allocation of Rs 2 lakhs to Dividend Equalisation Reserve.

The expenditure on the expansion plans has been incurred

mainly by borrowing from the company's bankers and by further utilisation of the loan from the IFC. In view of the increased capacity for earning profits, the directors have decided to capitalise the amount standing to the credit of the Share Premium Account and the existing shareholders will receive three bonus shares for every seven equity shares held.

Maiden Dividend from Sandvik Asia

Sandvik Asia Limited has reported a sharp rise in sales from Rs 65.60 lakhs to Rs 1.04 crores for the year ended 31 March 1964, thanks to increased output. The net profit, before depreciation, has risen to Rs 25.88 lakhs from Rs 15.62 lakhs.

The provision for Depreciation is higher at Rs 12.09 lakhs against Rs 7.27 lakhs, while General Reserve gets Rs 1.25 lakhs against nil. Development Rebate Reserve is, however, lowered to Rs 4.50 lakhs from Rs 6.06 lakhs. The directors have proposed a maiden dividend of 6 per cent on the equity capital. The debit balance of Rs 4.12 lakhs brought in from the previous account is wiped out after writing off Rs 28,883 for preliminary expenses. A credit balance of Rs 3.512 is being carried forward.

As there is now scope for increasing the output of all products, the Government has asked the company to expand its capacity. An application for substantial expansion has been approved by the Government, subject to the requirement of imported capital equipment being supplied to the satisfaction of the Government.

Mettur Industries Pay Less

The working of Mettur Industries Limited has resulted in a slightly higher net profit of Rs 30.18 lakhs for the year ended 31 March 1964 as against Rs 29.31 lakhs for the previous year, the profit being arrived at before providing for depreciation and taxation.

In respect of allocations, Depreciation is reduced to Rs 1.83 lakhs from Rs 1.98 lakhs; Taxation to Rs 13.20 lakhs from Rs 13.45 lakhs and Development Rebate Reserve to Rs 17,000 from Rs 20,925. The allocation for bonus to staff, including the amount relating to previous years, is Rs 5.53 lakhs against Rs 4.55 lakhs. The Gratuity Fund is maintained at Rs 54,000, while General Reserve gets Rs 1.00 lakh against nil. The dividend on the equity capital is reduced from 20 to 15 per cent, subject to tax.

Development Rebate Reserve is reduced to Rs 3.94 lakhs from Rs 4.83 lakhs, while General Reserve is raised to Rs 13.00 lakhs from Rs 6.00 lakhs. No provision is made for Investment Depreciation Reserve against Rs 4.50 lakhs. The directors have proposed to pay a final dividend of 10 per cent, making a total of twenty per cent, taxable, same as in the previous year. They state that, in the wide loom section of the mill, there are now 124 looms installed manufacturing wide jute-backing for the tufted carpet industry. They add that, with the prices for the raw material having

Midland Rubber Repeats

The Midland Rubber and Produce Company Limited has reported a net profit, before taxation and after depreciation, of as much as Rs 9.94 lakhs for the year ended

31 March 1964 as against only Rs 2.98 lakhs for 1962-63.

The provision for Taxation is higher at Rs 4.50 lakhs against Rs 90,000 and Reserves at Rs 27,182 against Rs 2,000. The dividend on the equity capital has been maintained at 10 per cent, taxable. The distribution for the previous year was made possible by a transfer of Rs 3.65 lakhs from the Dividend Equalisation Reserve.

Calcutta Tramways Pays More

The preliminary working results, released by the Calcutta Tramways Company Limited for the year ended 31 December 1963, show that the revenue, after transferring £100,000 to Renewals and Replacement Reserve, amounts to £193,195. Of this, the company has set apart £118,000 for Indian Income-Tax and £18,826 for debenture interest, leaving a balance of £56,359, which is to be credited to the shareholders account in terms of the 1951 agreement with the West Bengal Government.

Of the balance, the company has appropriated £9,652 to the Debenture Stock Redemption Fund, while the preference dividend less tax absorb £7,656 and the Ordinary dividend, free of tax, will absorb £42,000. A sum of £2,945 has been written back to the shareholders' account to cover the deficit. The directors have proposed to step up the ordinary dividend from 5 to 6 per cent.

Macneill & Barry Jute Group Results

In Macneill and Barry jute group, Gourepore Company Limited has reported a decline in gunny sales from Rs 618.51 lakhs to Rs 601.11 lakhs for the year ended 31st March 1964. The net profit, after providing for depreciation but before taxation, is, therefore, lower at Rs 65.24 lakhs against Rs 74.10 lakhs for the previous year. Depreciation is raised to Rs 21.81 lakhs from Rs 14.75 lakhs. As the provision for taxation is lowered to Rs 36.25 lakhs against Rs 74.10 lakhs the profit, after tax, is higher at Rs 28.99 lakhs against Rs 27.00 lakhs.

Development Rebate Reserve is reduced to Rs 3.94 lakhs from Rs 4.83 lakhs, while General Reserve is raised to Rs 13.00 lakhs from Rs 6.00 lakhs. No provision is made for Investment Depreciation Reserve against Rs 4.50 lakhs. The directors have proposed to pay a final dividend of 10 per cent, making a total of twenty per cent, taxable, same as in the previous year. They state that, in the wide loom section of the mill, there are now 124 looms installed manufacturing wide jute-backing for the tufted carpet industry. They add that, with the prices for the raw material having

a tendency to rise, the ability to earn profits has been greatly diminished and the prospects for the current year are not so encouraging as they were a year ago. Transfer books will remain closed from the 13 to 26 August, 1964.

The Nuddea Mills Company Limited has also reported a decline in sales from Rs 348.17 lakhs to Rs 309.66 lakhs for the same year. The net profit, after depreciation but before taxation, amounts to only Rs 20.45 lakhs against Rs 39.44 lakhs for the previous year. Depreciation is raised to Rs 10.35 lakhs from Rs 8.49 lakhs. Despite the fact that the provision for taxation is lowered to Rs 10.40 lakhs from Rs 17.90 lakhs, the net profit after tax amounts to Rs 10.05 lakhs against as much as Rs 21.54 lakhs.

General Reserve is reduced to Rs 2.50 lakhs from Rs 7.25 lakhs and Development Rebate Reserve to Rs 79,920 from Rs 4.93 lakhs. No provisions are made for Investment Depreciation Reserve and Building Replacement Reserve against Rs 50,000 and Rs 6.73 lakhs respectively in 1962-63. In the preceding year, the appropriations were possible by the transfer of Rs 3.65 lakhs from Development Rebate Reserve and Rs 38,375 from Doubtful Debts Reserve. The directors have, however, proposed to pay a final dividend of 60 paise, making a total of one rupee per share, taxable, same as in the previous year.

Aditya Mills

Aditya Mills Limited has commenced production in March 1963 and thereafter went on gradually increasing the spindles. Out of 25,000 spindles licensed for to the company, 19,000 spindles had been commissioned up to 31st December 1963. Since then, further 4,000 spindles have been commissioned. The total number of spindles thus working on date is 23,000. As soon as the essential spare parts of ring frames are received, the balance 2,000 spindles will also be commissioned.

Meanwhile, the company has released results for the eighteen months ended 31st December 1963. Without making provision for depreciation, the accounts, for the period under review, reveal a profit of Rs 23,234. After adjusting this against the debit balance of Rs 23,910 brought forward from previous year, there remains still a debit balance of Rs 676, which is carried forward to next year.

Arcuttipore Tea Pays 7½% Against 6%

The satisfactory working of the garden and the standard of manufacture being fully maintained, are reflected in the working results of the Arcuttipore Tea Company for the year 1963. The net profit, after providing for depreciation but before taxation, is slight-

ly higher at Rs 91,589 as against Rs 91,246.

Depreciation is reduced to Rs 2,721 from Rs 2,845 and General Reserve to Rs 15,000 from Rs 70,000 while Taxation is increased to Rs 55,600 from Rs 5,000. The directors have proposed to raise the dividend from 6 to 7½ per cent, subject to tax. The crop outturn is shown higher at 167,721 kg against 139,861 kg.

Karanpura Collieries Pay 12% Against 10%

Thanks to the rise in sales from Rs 60.66 lakhs to Rs 74.21 lakhs, Karanpura Collieries Limited has been able to report to higher net profit, after providing for depreciation and taxation, of Rs 8.21 lakhs for the year ended 29 February 1964 as against Rs 4.82 lakhs for the previous year.

All allocations have been raised. Depreciation from Rs 2.22 lakhs to Rs 2.35 lakhs; Taxation from Rs 6.73 lakhs to Rs 9.25 lakhs; Statutory Development Rebate Reserve from Rs 50,000 to Rs 1.29 lakhs and General Reserve from Rs 2.10 lakhs to Rs 4.15 lakhs.

Even after these increased allocations, the directors have found it possible to raise the ordinary dividend from 10 to 12 per cent, subject to tax, for the year.

Both raisings and despatches are higher at 320,683 tonnes and 315,956 tonnes against 265,945 tonnes and 276,844 tonnes respectively. Annual general meeting will be held on the 28 August.

★

INVESTMENT BRIEFS

National Insulated Cable Company of India Limited has announced a taxable dividend of Rs 2.00 per share on 13,50,000 ordinary shares for the year ended 31 March 1964. This compares with only a taxable dividend of Rs 1.80 per share paid previously. The dividend, when recommended, will be payable on or after 8 October. Transfer books will remain closed from 11 to 24 September, 1964.

Raghuvanshi Mills Limited has maintained the dividend at Rs 12 per share, subject to tax, for the year ended 31 March, 1964.

★

STOCK EXCHANGES

Equities Look Up Further

STOCK markets have continued to exhibit a cheerful sentiment. Although profit-taking is noticed at bulges, it is easily absorbed. There is, however, a general disposition to restrict commitments owing to economic and political uncertainties.

Lyons Range gave an encouraging performance, although activity was mainly confined to the speculative issues.

Equities on Dalal Street showed goods signs of improvement.

An irregular teend of prices characterised trading on the Madras Stock Exchange.

Equities on the Ahmedabad Stock Exchange looked up further.

Although tensions had lessened, the foreign situation did not yet appear sufficiently stable to spur trader demand; and Wall Street remained moored within a largely fractional range.

★

CALCUTTA

EXCEPT for a mild flutter noticed at the lag-end of the week, conditions in the local stock market ruled generally steady. Operators were, however, restrained by economic and political uncertainties.

A welcome feature of the week's trading was the absence of worthwhile selling pressure though the turnover still left much to be desired. Sentiment seemed to have been aided by the pragmatic approach shown by the Prime Minister as evidenced by his suggestions to postpone some of the projects in the field of heavy industry and calling for fresh assessment of all projects and programmes. Prospects of suitable modifications in some of the controversial recommendations of the Bonus Commission also served as an additional stimulant.

Turnover, however, continued to remain restricted as operators took a cautious view of the present situation. Food crisis, growing labour unrest, reports of increasing prices of industrial raw materials and the shortage of investible funds—all these factors compelled the professional operators not to lend sustained support to the market. With the result, prices often slipped back on profit-taking.

Gilt-edged securities ruled quietly steady. Turnover was small as the investors seemed to be conserving funds for subscribing to the forthcoming State Government loans. The interruption of work in banks was also partly responsible for the lack of institutional support. 3 per cent 1986 Conversion Loan was nominally quoted at Rs 63.55.

Bank shares remained practically unchanged. Punjab National hovered narrowly around Rs 20.

In the Jute section, there was a considerable shrinkage in the volume of business due to the growing concern about the rising prices of raw jute especially when the overseas demand for jute goods remained poor. The only bright feature were Birlas, which, after being pushed up to Rs 38.62 from Rs 36.69, finished the week at Rs 37.44. Howrah met with business at Rs 16 to Rs 16.19 and New Central at Rs 10.87 to Rs 11.

Coal shares continued to be a neglected counter. Burrakur

changed hands at Rs 15.69 to Rs 16 with Central India moving narrowly between Rs 8.06 and Rs 8.25.

There was only limited turnover in the Tea section where attention was mostly centred on the shares of the Assam and Doon gardens. Brooke Bond changed hands at Rs 10.44 to Rs 10.56 with Tezpur quoting around Rs 13.69.

Sugar shares continued to remain depressed. Champaran were on offer at Rs 10.53 against Rs 10.81, while Darbhanga were enquired up to Rs 8.25.

Textile shares came in for selective support on the prospect that there would be a more abundant supply of raw cotton during the current year. Elgin Mills were supported up to Rs 19.87 from Rs 19.44 and Bowreah up to Rs 23.25 from Rs 23.06. Jaya Shree were a steady feature at Rs 13.25.

After ruling generally steady, Engineering shares firmed up towards the close under the lead of Indian Irons, thanks to the excellent working results released by the company, optimistic note struck by the Chairman and the proposal made by him to declare interim dividends in future. After opening at Rs 24.46 and slipping down to Rs 24.40, the scrip was gradually pushed up to Rs 25.22 at the close. In sympathy, TEXMACO moved up to Rs 26.95 from Rs 25.70 and G. K. Williams to Rs 23.50 from Rs 23.00. Jessop met with business at Rs 20.87 to Rs 21 and J. K. Steel at Rs 15.37 to Rs 15.56. Calcutta Steel were rather quiet at Rs 13 against Rs 13.25 with Dalmia Iron well maintained at Rs 11.25.

Miscellaneous issues moved in sympathy with the general trend of the market. Dunlop Rubber changed hands at Rs 33.37 to Rs 33.94 (Rs 33.94); Hindustan Motor at Rs 17.69 to Rs 17.91 c.d. (Rs 17.37 xd); Indian Aluminium at Rs 30.94 to Rs 31.36 (Rs 31.56); Indian Copper at Rs 3.29 to Rs 3.33 (Rs 3.26 xd); Kesoram at Rs 25.87 to Rs 26.50 (Rs 26.50) Orient Paper at Rs 34.10 to Rs 34.65 c.d. (Rs 33.55 xd); Rohtas at Rs 11.11 to Rs 11.37 (Rs 11.37) and Shree Gopal at Rs 24.75 (Rs 24.75) Figures within brackets were the week's closing dates.

The cash section was practically neglected. Aluminium Corporation came in for business at Rs 11.47 to Rs 11.75 x.rts; Benga Paper at Rs 26.06 to Rs 26.25; Sirpur Paper at Rs 11.06 to Rs 11.19; BIC at Rs 9.65 to Rs 10.25; Hindustan Aluminium at Rs 12.1 to Rs 12.31; Phillips Carbon at Rs 12.19 to Rs 12.31 and Chemical Fibre at Rs 13.12 to Rs 13.3 India Steamship were on offer at Rs 6.37 against Rs 6.50 following the dividend being skipped for the fourth year in succession. Universal Cable were better at Rs 10.06 against Rs 9.87.

Multi-Pronged War on Corruption

By Gulzarilal Nanda

This year's batch of special articles released by the Press Information Bureau, in respect of Independence Day, is rather more interesting than is the norm. Indian Finance therefore prints here the choice three from the batch, as also one on rising prices which, we may emphasise, is not Government-inspired; quite, as readers will find, to the contrary.

Pride of place is of course given to Mr Gulzarilal Nanda's remarks on corruption, and what Government is doing about it. In the light of public experience, of countless palms needing to be crossed with the modern day equivalent of silver before anything can be got done with officialdom, there has naturally been the tendency to scoff at the official attempts to eradicate, or at the least to minimise, corruption. However, the reader in perusing Mr Nanda's article will be compelled to admit that Government is trying its best.

As the Home Minister of India I made a solemn declaration on November 30, 1963 that "in the sphere in which I act, i.e., the Central sphere, within a period of two years if I fail to produce a striking impression and to make a substantial difference in regard to prevalence of corruption, I would give up my present position and not regard myself worthy of holding any such office".

It is not of such great significance that an individual remains or ceases to be in office. But the thing is that the administration, my own party and in a real sense the entire people of India are now involved in this commitment. I have, therefore, incurred a heavy responsibility. If the pledge fails, the faith of the people in themselves and in the administration and the confidence of the Government in marching ahead with programme for rapid economic development and social justice will suffer deep injury.

In the initial stages the solemn declaration I made was not taken seriously by many. There were not a few who scoffed and smiled. Well-wishers and friends reproached me for the hasty step I had taken and they became apprehensive about my reputation and political survival. The first steps were slow and it took some time to establish a firm start.

It is only as a movement that the attack on the evil of corruption can bring about substantial improvement rapidly. It has to

be a multi-pronged fullscale war on corruption. The battle has to be fought at various levels—political, administrative, economic, social and moral. Accordingly, moves have now been made in several directions. Something like a campaign has developed and it is gathering momentum. It has generated hope and expectation and the people's interest in this movement is growing.

For dealing with corruption in the Administration, several steps have been taken. A Central Vigilance Commission has been set up under a former Chief Justice of the Mysore High Court. This new institution is designed to ensure that complaints of corruption or lack of integrity on the part of Government servants are given prompt and effective attention and that the offenders are brought to book without fear or favour. The terms and conditions of the appointments to Commission are such that the Commission can become an effective deterrent to any attempt at suppressing action in cases of corruption brought to light.

If the Commission's advice is not accepted by Government, the fact will be reported in the Commission's annual report which would be open to debate in Parliament. In this respect the Central Vigilance Commission's relation with Government is similar to that of the Union Public Service Commission.

The concept of the Vigilance Commission has been accepted by several State Governments and Andhra Pradesh, Gujarat and Madhya Pradesh have already set up organisations on the Central model. Eight more States have decided to set up Vigilance Commissions. These are Kerala, Mysore, Maharashtra, Rajasthan, Assam, Nagaland, Jammu & Kashmir and Orissa. While Madras, Bihar and Uttar Pradesh have also decided to set up organisations to deal with corruption, though not on the Central model, two States, West Bengal and Punjab, are still considering the matter.

Among other factors, delays in disposal of cases, inefficiency and misuse of discretionary powers provide a breeding ground for corrupt practices. The Union Home Ministry has created a Department of Administrative Reforms to assist in the effective implementation of measures for improvement of administration in the interest of efficiency, economy and integrity. In consultation with the Ministries concerned, teams have been set up to review the procedures of the departments of

Supply, Technical Development, Import-Export Control and CPWD. The review is intended to spot out and rectify points of corruption, minimise delay and facilitate quick and efficient disposal of business for public convenience. The departments selected are amongst the main spending departments of consequence to economic growth and public convenience.

In an effort to rid the administration of corruption and to arm the authorities with powers for taking strong action against corrupt officers, it is proposed shortly to amend the Conduct Rules and the Discipline and Appeal Rules. It is also proposed to amend the law and procedure relating to corruption in the Indian Penal Code of Criminal Procedure, Prevention of Corruption Act, Imports and Exports (Control) Act, 1947, Essential Commodities Act, Central Excise and Salt Act, 1944 and Article 311 of the Constitution. If things proceed according to the time schedule laid down, it should be possible to introduce in the next session of Parliament necessary Bills for carrying out most of these amendments.

Government have to ensure that only those officers whose integrity is above board should be selected for high administrative posts and officers whose integrity is not certified, should not be granted extension of service or re-employment. Moreover senior officers are being instructed to keep a close vigil over the integrity of their subordinates and a special provision is being made for keeping notes of suspicious acts by officers of doubtful integrity.

Besides strengthening the institutional set up and the framework of laws and rules, intensive action has been initiated in three specific fields. Firstly, the Special Police Establishment have started a new drive by concentrating their resources, turn by turn, on a particular department to locate corrupt officers and to start prosecutions wherever the evidence so warrants. Departmental proceedings would be initiated in cases where there is not enough material for prosecution but departmental action is indicated. Three Ministries have already been taken up; others would be taken up, one by one.

Secondly, as mentioned above, four departments have been selected for a quick review of their procedures. These are among the departments in which the Santhanam Committee had recommended intensive anti-corruption work.

Thirdly, as an area operation intensive anti-corruption work has been started in the Union Territory of Delhi, including the Delhi Municipal Corporation. Here the vigilance set up has been strengthened by new machinery for receiving complaints and grievances created and official and non-

INDEPENDENCE DAY FEATURES

official effort organised and dovetailed to deal with this problem.

Our officers are flooded with complaints and petitions of all sorts. Generally they bring to our notice cases of delays, discriminatory treatment, injustice and some allegations of corrupt practices. The people's discontent has been mounting because of the feeling that their representations do not receive prompt and adequate attention. Their impression is that their papers are merely sent down to the persons against whom the complaints have been made and it is only rarely that relief can be obtained except for those who can manage to bring to bear on the authorities some influence or pressure in their favour. These are exaggerated notions but this sense of grievance is not altogether without substance.

Taking the view that delays and administrative lapses may not unoften be linked with corrupt practices, the Santhanam Committee recommended that this aspect might also be dealt with by the Vigilance Commission. However, on practical considerations regarding the heavy work that may thus be entailed Government decided that the Vigilance Commission should be entrusted with the task of dealing with corruption only. A system which is now being experimented, on premises to furnish an answer to this problem, having regard to the special needs and circumstances of India, brings into the picture the Samyukta Sadachar Samiti which has come into being recently as a purely non-official agency built by the voluntary effort of the people. One of the functions assumed by the Samiti is to assist in the redress of people's grievances relating to corruption and kindred matters. Arrangements have been made by the Samiti in Delhi with the help of voluntary workers for registering complaints, screening them and passing them on to the Departments concerned through the officials of the Home Ministry. It has been decided that these officials and the representatives of the Samiti will together review the progress of action on the complaints which have been taken up. Only a small proportion of these complaints relate to corruption but efforts to secure speedy redress of other grievances of the people will strengthen the hands of the Samiti and the administration in combating the evil of corruption also. The great merit of this new approach is that the collaboration between the people and the authorities in this sphere will produce incomparably better results than in the past.

INDEPENDENCE DAY FEATURES

The Samiti will also be in a position to use and develop new sources of information about anti-social activities.

The principal activity of the Sadachar Samiti as set out in the constitution of the body is that corruption has to be tackled at the roots. The obsession with material gain at all costs has to be countered. Efforts have to be made to develop a consciousness of moral and social responsibility and an appreciation of the place of moral values in the life of an individual and the country. This endeavour may not yield tangible fruit immediately but in course of time an enduring change will thus be brought about in the outlook of the people and new traditions of rectitude and integrity will grow in the public and private conduct of the citizen wherever he is placed. It will then be possible also to arouse and harness a strong and dynamic public opinion in support of any campaign for eradication of corruption and social action against the anti-social elements. The moral and social sanctions which can thus be generated will far outweigh the corrective and deterrent influence of punitive action by the State.

I may also deal here with some misconception about the anti-corruption activity. Some say that there is too much talk about corruption and it may demoralise the officials and create a bad image of the people. This may be so if it is just talk and no action. When we speak about corruption as a part of a programme of concerted action against this evil, the confidence of the people should grow. My day-to-day contact with the people leaves no room for doubt that this is happening now. There is a definite upsurge of enthusiasm among the people.

It is being whispered that this activity is affecting the morale of the services. It is not so. What Government servants are worried about is that if vague allegations emanating from anonymous sources are taken up, they are placed in an embarrassing position even though ultimately they may be completely absolved. The lines on which the Sadachar Samiti is to function completely precludes this risk. When complaints can be taken in a normal way through an agency like the Samiti, there will be no need or room for entertaining anonymous complaints.

I wish to ensure that anyone can come forward with facts with an assurance of protection. Those who bring up false or malicious complaints can be exposed and

action taken against them. It is the responsibility of the Government to create a sense of security among Government servants that there will be no witch-hunting or victimization and the greatest care will be taken that no innocent person is subjected to any harassment. I am convinced that the new movement will ensure that for the sins of a few the whole class of Government servants does not come under the shadow of suspicion of corruption.

What will be the ultimate measure of the success of this organised action on the part of the Government and the Samiti, it may not be easy to forecast. The events of the last few months have given me confidence that the pledge is capable of fulfilment and will not fail. It is not the concern of an individual only. It is now a promise of the whole administration of the country. It is a Nation's undertaking. It must come to fruition.

Oil in India

By Humayun Kabir

Mr Malaviya, no longer the Minister for Oil, would have us now scuttle plans for a refinery at Haldia; he thinks, as he stated recently, that our concentration should be on the development of oil exploration. No doubt, he is right—but only partly so. His fear, that if we set up additional refinery capacity too hastily, we would then be prematurely showing our hand, may be well founded; but he should not have forgotten that to the extent that we import crude oil in place of refined products we automatically come by some savings in foreign exchange. Dr Humayun Kabir, the Minister for Oil, has concisely summed up the state of oil in India in a fascinating article.

The story of oil in India is a fascinating one. It is said that towards the end of the last century, some elephants helped in the discovery of oil when they resorted to a place near Digboi in search of salt. Characteristically enough, the first wells in India were drilled with the help of elephants and for over 60 years, Digboi remained almost the only important source of oil in the country. The impact of two world wars did not change the picture even though everywhere else in the world oil was fast replacing coal as the major source of energy for industry and even domestic use.

One reason for the late development of the oil industry in India may have been the lack of adequate communications. The earliest use of petroleum in the modern world was for lighting and kerosene penetrated into remote villages by the beginning of the present century. The real break-through in the oil industry, however, came with the discovery of the internal combustion engine. The vast spaces of the USA invited travel and the motor car made such travel easy. The result was a rocketing growth in the petroleum industry and for several decades, motor spirits were the mainstay of the oil industry throughout the world. Since India had neither the roads nor the cars, it was perhaps, not surprising that the oil industry in India did not grow com-

mensurately with the industry elsewhere in the world.

Inadequacy of transport and communications was only one reason for the late development of the oil industry in India, but the real reason lay in the fact of India's political bondage and the resulting economic and industrial backwardness. Britain itself lagged behind the United States in the petroleum industry and it was not surprising that India should lag still further behind. The geological surveys and prospecting for oil in those days were half-hearted and casual. Even as late as the middle fifties, British geologists estimated the total remaining reserves of oil in Assam at 5,000,000 tonnes. As for the rest of India, the prospects of oil seemed dreary indeed till the national Government undertook prospecting and exploration of oil seriously.

The Oil and Natural Gas Commission was established in 1956 and with the assistance of experts from many countries, the estimates of oil reserves of India rose rapidly. Soviet experts helped to establish the existence of over 50,000,000 tonnes of oil in the Gujarat area alone. Oil India which was set up as a joint venture by the Government of India and the Burmah Oil Company established the existence of another 50,000,000 tonnes or more in Assam. In addition, the present proved gas reserves amount to about 11,000 cubic metres in Assam.

Since then, Soviet, German, British, American, French, Italian, Yugoslav, Rumanian and other experts have helped and are helping in the search for oil. Already, established reserves are over 100 million tonnes, but there are competent scientists who believe that India's hidden reserves may amount to as much as four thousand million tonnes. One Soviet expert went so far as to say that India should be able to produce about 150 million tonnes a year within twenty years. This requires an immense expansion in the programmes of exploration and production and poses a challenge to Indian geologists and oil technologists. The magnitude of the task can be seen when one remembers that this figure is more than the total proved reserve today.

Production of oil in India has been rising sharply even though the total production is yet far short of our requirements. ONGC's production increased from about 40,000 tonnes in 1961-62 to almost a million tonnes in

1963-64. It is expected that ONGC will produce about 3 million tonnes by 1966 and about 10 million tonnes by 1971.

Oil India has made comparable progress. It is already producing about a million tonnes and will produce about 3 million tonnes a year before the end of the Third Plan. Between them, ONGC and OIL have already saved India about Rs 15 crores in foreign exchange. When their total production reaches ten million tonnes, the annual saving will be of the order of Rs 70 crores.

I have already mentioned that petroleum is increasingly becoming the major source of energy throughout the world. India is also sharing in this movement and it is expected that the annual requirement of crude oil by 1971 will be of the order of 30 million tonnes. As against this, the annual production by ONGC and Oil India, on the basis of their present estimates, will be less than 15 million tonnes. In other words, the indigenous supply of crude oil will meet barely half the requirements of India. That is why we are thinking of going outside the country for oil exploration and production. We have decided to make an application for concessions in the off-shore areas of Iran in partnership with well-known international firms from Italy and USA. Negotiations with Kuwait are also in progress and it is expected that there will be significant developments before the end of the year.

Simultaneously, exploration within India is being accelerated. The ONGC has been reorganised and will now concentrate on exploration and production of oil and leave other activities to independent sister organisations. A whole-time Chairman has been appointed with the specific task of expediting exploration. Greater powers have been delegated to technical staff working in the field. Gujarat and Assam have already yielded results and it is now proposed to push on with the programmes on the eastern coast of India, in the upper and lower gangetic valley, in the foothills of the Himalayas, in the deserts of Rajasthan and in the off-shore areas of Kutch and Cambay. No one can be sure of oil till it has been actually found as a result of drilling, but there are structures in some of these areas which lend hope that the estimates of four thousand million tonnes of reserve may be justified.

While one of our major endeavours is to discover and produce crude oil in India and outside, we cannot forget the paramount importance of expanding refinery capacity within the country. After the establishment of Digboi in the beginning of the century, no progress was made till the fifties, when three refineries were set up in the private sector. Their total capacity was about 4 million tonnes in 1957. By early 1963, this had been raised to over 7 million tonnes. There was not one refinery in the public sector till 1962, when Nummati Refinery was built with Rumanian technical and financial help. It faced many teething troubles, but since November 1963, its work has been established and it is now working almost to full capacity.

The second and third refineries in the public sector are being built at Barauni and Koyali with Soviet technical and financial help. The Barauni refinery will yield one million tonnes of petroleum products in the first instance and have a lubricating plant. It is expected that this refinery will have gone into production by the time this article appears.

The first stage of one million tonnes at Koyali is expected to go into production in the near future. Both will be expanded and reach full production before the end of the Third Plan.

The fourth public sector refinery is being built at Cochin with the co-operation of a well-known American firm and is also expected to go into production before the end of the Third Plan.

Two other refineries are under discussion, one at Madras and another at Haldia. The construction of the Madras refinery will begin before the end of this year while Haldia is to be taken in hand in the second half of 1965.

When all these refineries are in full production, the total refinery capacity of the country will be about 22 million tonnes, of which only about a third will be in the private sector.

During the Fourth Plan there may be some expansion of capacity in the private sector while additional refineries will be set up in the public sector. Together, they are intended to provide refining capacity of over 28 million tonnes, but the proportion between the public and the private sector will remain substantially the same.

The annual estimated saving in foreign exchange as a result of the additional refinery programme in the Fourth Plan is expected to be about Rs 75 crores in 1971.

In order to knit closely the refining and marketing of petroleum products, the Indian Refineries Limited and the Indian Oil Company Limited are being merged to form a new Indian Oil Corporation. There are obvious advantages in such amalgamation and steps have already been taken to bring this new corporation into existence.

With this large growth in exploration, production and refining capacity, it is necessary that India must develop her own design and engineering services. Accordingly a new company has been promoted by the Government of India with the co-operation of one of the best known design organisations in the world. The Indian Engineers Limited will help in designing refineries and also equipment required in all ancillary activities.

Exploration and production of oil as well as refining are capital intensive industries and do not provide any large scope for employment. Distribution of petroleum products opens up possibilities in this direction, but the greatest impact of the oil industry on national economy is expected from the development of petrochemical industries of various types. There is hardly any sphere of economic activity which is not affected by the development of petrochemicals. They supply fertilisers and insecticides for augmenting the country's food supply. Through plastics and

resins of various types, they offer building material which may be used for construction of houses or manufacture of furniture and household utensils. Plastics are increasingly replacing scarce metals in many spheres of domestic life. Synthetic fibres are increasingly meeting the requirements of clothing in both warm and cold climates. Synthetic rubber based on oil has almost unlimited possibilities. Similarly, petrochemical feed-stock is increasingly meeting the requirements of industrial alcohol for a large variety of industries.

Recent experiments suggest that hydrocarbons may be converted to carbohydrates and thus meet the growing demand for food throughout the world. In a word, petrochemical industries are increasingly becoming one of the major sources for sustaining man's economic, social and industrial life. What makes the prospect even more attractive is that many of these secondary and tertiary industries based on petroleum can be developed as small-scale and medium-size industries and thus offer almost unlimited scope for employment.

The discovery of oil and natural gas is one of the major factors for the economic revolution which has made France one of the most prosperous countries of the world in the last decade. A similar economic transformation has taken place in South Italy because of the impact of petrochemical industries. A highly sophisticated and developed economy like that of the United States has shown the largest development and expansion in this field. The Soviet Union has in its recent Plan made petrochemicals the centre and basis of her economic and social aspirations. One may confidently hope that in India also, the growth of petrochemical complexes in different regions—in the west, the south, the east and the north—will bring about an economic transformation and change the present sluggish economy of India with new life and vitality.

Power—The Key to Prosperity

By Dr K. L. Rao

The crucial role of power, as the key to greater prosperity, is described by Dr K. L. Rao, the Union Minister for Irrigation and Power. What has to be done, if we are to advance our plans for industrialisation, appears almost to be an impossible task. There is a limit to hydro-electric potential although, except in Madras, we are nowhere near it; oil we just don't have enough of; our reserves of coal are probably for the time being adequate; but, in the future, it is nuclear power that we must look to.

Power, in one form or another, has always played an important role in the life of nations. But today in a country like ours, trying to make up for a huge backlog of industrial development, Power becomes a crucial factor and almost a sine-qua-non for progress. The advances we have made since Independence are closely linked with the development of Power and if the tempo of progress is to be stepped up in future, again Power provides the main key.

Three-fourths of the electrical energy generated in our country is utilised in mining and manufacturing industries. Hence, there is a constant search for new and more sources of Power. While our power development has been rapid as compared with the pre-independence period, new demands are coming up much faster than the increase in the generating capacity. The total installed capacity rose from 2.3 million kw at the beginning of the First Plan to 3.4 million kw at its end and

again to 5.6 million kw at the end of the Second Plan. About 1.7 million kw have been further added during first three years of the Third Plan, whose end-target is about 12.5 million kw. This means an addition of about 7 million kw during the Third Plan, implying more than doubling the capacity in five years. A similar doubling in five years is likely to be the target for the Fourth Plan.

Taking note of the difficulties experienced during the Second Plan due to the foreign exchange position, practically all the projects during the current Plan have been tied to various foreign aids and loans well in advance. These schemes are progressing satisfactorily and the targets are expected to be achieved by and large.

India has sizeable exploitable reserves of water power and coal—the two principal sources of electrical energy in the world today. Water power resources have been estimated at 41 million kw at 60 per cent load factor (or about 216,000 million kw hours) in about 240 schemes. The present production is only about 12,000 million kw hours. Our coal reserves, estimated at 130,000 million tons may appear large by current production standards of about 65 million tons per year. But these represent a 'wasting asset' which would hardly suffice to sustain a per capita consumption of India's large population at any time approaching the standards of advanced countries for more than a few decades. This is the main reason for the country's interest in nuclear power, utilising reserves of uranium and thorium. Here again our uranium reserves being limited, we have to depend

INDEPENDENCE DAY

FEATURES

mainly on our abundant reserves of thorium.

With our rather limited reserves, it is necessary to assign appropriate roles to the different types of energy generation, namely, hydro, coal, oil and nuclear. As hydro-electric schemes require far less foreign exchange as compared to thermal and nuclear schemes, it is obvious that hydro-power has to be resorted to wherever feasible. About 35 hydro schemes have already been completed and another 30 are in various stages of construction at the moment. A large number of schemes are under investigation and will be taken up in future Plans.

New thermal schemes are to be located near the mine heads and coal washeries because they are to be based mainly on plentiful supplies of poor quality coal and on middlings available there. By-products of oil refineries constitute another important additional resource for thermal generation.

Nuclear power stations are economical in areas which are far away from the coal fields—like the western coast. Punjab-Rajasthan-Delhi region and the southern region. So the first nuclear station of 400 mw is being set up on the western coast at Tarapur. One has been planned at Rana Pratap Sagar and another at Madras. Present exploitation of nuclear resources will also give us the knowledge and experience necessary for utilising nuclear power after the existing hydro and thermal resources have been fully exploited.

A systematic load survey is necessary to anticipate demand and to plan for the supply in advance. With a dynamic industrial policy and fast changing pattern of economic growth, this load assessment has also to be a continuous process. The Electric Power Survey Committee of India, set up by the Govt. of India in December 1962, carried out and finalised the First Annual Power Survey in July 1963 and published a report. The Second Annual Survey was done by the Committee during the current year. These reports seek to provide a broad picture of the country's power requirements for the next few years and will be helpful in future planning.

The planning and development of Power in our country has so far been on State-basis. While this arrangement has been adequate in the past when power development was in its early stages, a broader approach has now become essential in view of the broadening of the industrial base and the consequent acceleration of activity in the Power sector. The

INDEPENDENCE DAY

FEATURES

Power plans for the future therefore have to be formulated for a number of contiguous States constituting a region and not related merely to the resources and requirements of any single State. This is essential because all the States are not self-sufficient in Power resources. For example, Madras has no coal resources except for some lignite and has practically exhausted its hydro resources and has to depend on the hydro potentials available in the neighbouring States of Kerala and Mysore. The power resources of States like Kerala and Mysore have to be developed at an accelerated pace to enable utilisation in the neighbouring states. The pattern of hydro-electric development in any State will be further influenced greatly by the need for coordinated operation with thermal or nuclear power stations in the adjacent States. As such, a stage has now been reached when the available natural resources should be exploited in the most economical manner for the benefit of a region as a whole. Taking into account the view of the State Governments, the proximity of transmission systems and joint power schemes between the States, the entire country has been divided into five regions, namely—

Northern region—Jammu & Kashmir, Himachal Pradesh, Punjab, Delhi, Rajasthan and Uttar Pradesh.

Southern region—Andhra Pradesh, Madras, Mysore and Kerala.

Eastern region—West Bengal, Bihar and Orissa.

North-Eastern region—Assam, Manipur, Tripura, Naga and Nagaland.

Western region—Gujarat, Maharashtra, and Madhya Pradesh.

Regional power agencies in all these regions are being formed.

The trend in advanced countries, with regard to power development, has been to interconnect the neighbouring power systems and to operate them on an integrated basis. Coordinated operation of hydro, thermal and nuclear plants is thus ensured resulting in optimum utilisation of all power resources, reduction in stand-by generating capacity in the region as a whole, and in the cutting down of the peak demand of the integrated system, owing to the diversity in the time of peak demand in the different parts of the region. Also, by interconnecting the systems, it is possible to create additional load carrying capacity in a much shorter time and at much less cost without establishing new generating sta-

tions. Moreover, security of power supply to key points in times of emergency is ensured.

A beginning in this direction has already been made and inter-State links in the various regions are under construction. By the integrated operation of various regional grids, it is estimated that at the end of the Third Plan, there will be a saving of about 600 mw in installed capacity, and of Rs 50 crores in the capital outlay and annual running charges, after allowing for capital and running expenses for the construction of the inter-State links and the associated grid sub-stations. Benefits by the end of the Fourth Plan are expected to be of the order of 1,200 mw and Rs 100 crores respectively.

Finally, one of the most important aspects of our future power planning is rural electrification. Out of over half a million villages, only about 45,000 or 8 per cent are expected to be electrified by the end of the Third Plan. The limited requirements of power in these areas, lower utilisation factors and the large expenditure involved in laying out the necessary supply mains for a given quantum of power sales as compared to urban areas, have been among the main difficulties in the way of stepping up the tempo of rural electrification. But there is no doubt that these impediments have to be overcome and every effort should be made to stimulate rural economic development and to step up agricultural production.

In this context it is interesting to recall the experiences of the Rural Electrification Administration set up in the USA during the depression in 1935 to stimulate employment and provide useful public service. A recent survey, covering a third of its beneficiaries, indicated that during the year 1961 these electrification schemes had made possible 402 industrial and commercial projects with an employment potential of 52,000. The REA succeeded admirably in reducing construction costs, first by effecting economies through improved designs and then by adopting mass construction methods. Thus, the cost on rural lines, which was about \$2,000 per mile during the early days was reduced to \$500 within a decade. These activities and progressive loan policies have been primarily responsible for the great success of rural electrification in the USA.

In our country also, efforts are being made to effect economies in rural construction by slightly lowering the standards of the designs consistent with safety, by bulk procurement of materials, etc. It is proposed to take up the electrification of about one lakh villages in the Fourth Plan.

Rural electrification would ultimately constitute a sizeable load on our power systems in view of the magnitude of the task. In Madras, a State which leads the

rest of the country in this field, it is estimated that rural loads, constituted mainly by irrigation pumps and village industries like ginning, spinning and weaving mills, workshops, etc., form about

The Problem of Rising Prices

By S. Thirumalai

Last of all, the subject that is agitatingly to the fore: the problem of prices. Mr S. Thirumalai, Director of Purshottamdas Thakurdas Research Centre, has made a study of the subject; and some at least of the conclusions we would endorse. It may be noted that there is criticism of the present strategy in planning. The point, however, that Mr Thirumalai has failed to deal with is this: given the kind of exchange regulations we have in the world,—and Thirumalai mentions that "1963 has been a period of rising prices throughout the world"—then we shall obviously be losing heavily if there were price stability in India alone: for, the goods that we buy from abroad, in such a situation, would cost us more in rupee equivalent; and the goods we export, in terms of foreign exchange, would remain static.

The rising trend in prices is receiving particular attention at the moment, but this problem has been with us almost since the end of the Second Plan period. The wholesale prices increased by 35 per cent in 1960-61 in comparison with 1955-56. A mild caution was also administered by the then Governor of Reserve Bank of India, and prominent economists, abroad and India, on the impact of this rate of rise in prices, on the tempo of development and Consumer Standards. However, Government thinking, then was in the direction of constraining this price increase in the Second Five-Year Plan as a corrective to the undue fall in prices that had previously taken place. This is just to indicate the complacency with which the rising trend in prices was viewed even three years ago. Since then, there has been this phenomenal spurt in prices, of 8.4 per cent in 1963, and of about 13.7 per cent since the Third Plan started.

There is also a belief that the official index does not reflect the real rate of rise which may be higher by about 5 per cent. In any case, even on official basis, compared to the last year of the First Plan, there has been an average rise of 5.8 per cent per annum, and food articles have risen at a faster pace of 7.2 per cent per annum. The domestic purchasing power of the Rupee has gone down by more than 45 per cent since the commencement of the Second

Plan and for food articles, the fall in purchasing power would be more than 58 per cent. The most important point for examination is, what is the reasonable rate of rise in prices that may be permitted in a developing economy, with a large majority of the population at or below the subsistence standard of living.

Generally, a price change of 2 to 3 per cent is now considered as consistent with a sufficiently high degree of price stability. Obviously, even on this standard, we have crossed the limits as far back as 1961. It must, therefore, be conceded that the rise in prices has set in motion the inflationary pressures in the economy, particularly in the productive sectors. This has affected the cost structure, more so in the absence of an adequate increase being recorded in output, in the primary industry of agriculture. An all-round increase in prices of basic items would naturally switch off a secondary series of price inflation. This is what we are witnessing. The high level of prices would not really matter if there is the cushion of a rising level of supplies of consumer goods or wage goods.

It is here that the strategy and the scheme of priorities under planning assume importance. We have adopted a strategy of imbalance with heavy investment in production industries as the basis for acceleration of the rate of growth in the economy. The experience of working this strategy has clearly revealed that even in respect of agricultural production, the targets laid down could not be reached in spite of the increased inputs that have gone into that sector. Apart from that there has been a wide fluctuation from year to year in agricultural production levels. We are yet to reach that degree of agricultural stability which is necessary as the basic minimum for an assured rate of growth in other sectors.

The target of food production at 100 (to 105) million tons for the Third Plan was itself considered inadequate to meet the needs of development. The team of the Ford Foundation significantly brought out this point and stated that the target at this level would allow for some improvement in the light of the fact that we are now at a subsistence level, it would not provide a safety margin for adverse weather nor for reserve stocks needed to stabilise prices and to meet other unforeseen emergencies. A target of 110 million tons was considered as reasonable to allow for these contingencies. I am emphasising this point

because we have to examine whether the persistent rise in prices is due to the inadequacy in commodity production or to the insufficient response of the distributive mechanism. It is on the second aspect of the problem attention is focussed today.

On the distribution side, the crucial factor is the quantum of marketed surplus of agricultural commodities that is available in the economy. It is very important to note that the marketable surplus in the staple is 31 per cent for Rice and 37 per cent for Wheat; it is 44 per cent for Gram, and between 84 and 90 per cent for the Cash crops. Assuming a marginal rise in incomes of the rural population, since the Second Plan period, the tendency is for the small holders to retain the increase in production for self-consumption.

It is only the owners of large holdings say above 20 acres, who are mainly responsible for the marketable surplus. Relating this trend to agricultural production, it is revealed that, on the whole, there has been an average rate of annual increase of 2.8 per cent in the First Plan and 4 per cent in the Second Plan. In foodgrains, production has increased by 2.6 per cent per annum in the First Plan and 3.5 per cent in the Second Plan. For non-food crops, the average annual increase has been 3.3 per cent in the First Plan and 4.8 per cent in the Second Plan. In 1962-63, there has been a fall in agricultural production, the overall index declining by 3.5 points. In foodgrains, the decline is by 4.6 points.

On an assessment of the situation over the plan period, we find that no doubt, there has been an increase in agricultural production. There has also been an increase in productivity, both in Rice and Wheat, by 7.8 per cent and 2.5 per cent in the First and Second Plan periods respectively for Rice and 0.6 per cent and 3.6 per cent respectively for Wheat. Case studies on the trend in marketable surplus also show that with increase in production, marketable surplus has tended to increase. In the important wheat growing district of Punjab (Ferozepore), the quantity marketed was nearly 2½ times the rate of increase in production. These assembled facts would show that there has been an increase in production. There has been a slight increase in productivity too. There has also been an increase in the marketed surplus. In spite of these, there has been a persisting trend of rise in agricultural prices, and in turn the wholesale price level. Relating these to the rate of population growth at 2.3 per cent, as currently estimated, the main cause of this price rise appears to be inadequate commodity production and other consumer goods to match the rate of planning. Growing population, and enlargement of the investment programme (rise in money incomes), all have contributed to a substantial addition to the demand for essential consumption goods.

Let us now examine the demand side. The statistical data are quite unreliable and inadequate. Yet the Mahalanobis Committee states that private consumption has increased by only 36 per cent in 10 years as against a rise of 44 per cent in income. Seventy-seven per cent of this

additional income was absorbed by the rising population. Only about 28 per cent or almost a quarter of the additional income was available for net increase in per capita consumption. The Committee also observes, that there has been increase in inequality of incomes in urban areas and reduction of inequalities in rural areas and the large section of agricultural labour has not shared in the growth of income. It is only the mining and factory labour that has kept pace with the growth in income. Assuming this to be the trend, the demand for the essential foodgrains and other consumer goods has largely emanated from the urban population. This is a basic fact which is often ignored in the examination of our price problem.

The problem is not in feeding the population of 400 and odd millions of people, but that part of the people who do not have enough of it and the inhabitants of big cities, the skilled workers, the shopkeepers and the artisans, service personnel, pensioners, etc and others who lived in the rural areas, but who had not enough employment rewards.

The problem of prices should be viewed from the more practical angle of the share that the farming population should have in the growth of income in the economy. It appears that incomes in agricultural pursuits have not kept pace with the general rate of increase.

Here, the very intriguing point no doubt is what is the producers' share in the consumers price for foodgrains of other agricultural commodities? Is the producer deprived of his share by the distributive mechanism that is operating? The data available show in the pre-war period, the producer's share accounted for only about 60 to 70 per cent on the consumer's price, but with the general improvement in the marketing of agricultural commodities resulting from the introduction of various regulations by Government, the producer's share ranges today between 80 and 90 per cent of the consumer's price. It is also revealed in certain crops where co-operatives have handled the distribution, the distributors' share was lower by 7 to 10 per cent compared to the share received through normal trade channels. Thus there is steady improvement though slow, in the benefits that are accruing to the farmer. But basically the agricultural sector is not strengthened to produce a surplus of the size that is necessary for meeting the needs of our expanding economy. The rural demand primarily determines the supplies to the urban consumers. There is an increasing holding capacity among the farmers with holdings of large size. The distributive mechanism cannot thus to any significant extent affect the marketable surplus, or the marketed surplus. It must be recognised that where we have subsistence agriculturists, their surroundings, values, attitudes, motives and socio-economic behaviour—are all outside organised control. Production, consumption, marketing, capital accumulation are all an integral operation for them. Unless this is broken, and the farmers produce not only for subsistence, but for a surplus and for the market, it is difficult to make

an impression on the overall supply position of essential agricultural commodities, particularly foodgrains. Our Plan strategy is to be geared to this objective, and measures taken in the scheme of priorities to transform our subsistence agriculture into a surplus agriculture.

Our taxation policy and monetary policy have a great relevance in accentuating the inflationary trends built into the economy, consequent on the emerging real scarcities in wage goods. It is enough here to note that taxation has not proved anti-inflationary. Additional doses of taxation or selective credit controls have not had any satisfactory effect in arresting the wholesale price level. Therefore, it is only possible to suggest as the minimum requirement at the present stage, that if we admit of creeping inflation in the economy, there must be no increase in expenditures beyond the automatic growth in revenue resulting from the built-in flexibility of the tax system. In other words, a balanced budget in the sense of an equilibrium between over-all public expenditure and over-all revenue has to be maintained. Since we have a prolonged and persistent rise in prices, the rise in expenditure has to be restricted to a level which can be financed without deficit financing, in the future.

be postponed, wherever, and to the extent. In any case, expenditures have to tent to which this is feasible. If in comparison with budgetary estimates, some new or additional expenditures become inevitable, as in defence, they should be financed out of the growth in tax yields automatically accruing during the fiscal year, pruning other items of expenditure outside the plan.

Coming to the practical measures that can be suggested for the interim period, until an adequate size of commodity production is built up, it is now thought necessary that State Trading should be introduced so that the marginal shortages in certain commodities may not be magnified by the operation of the distributive mechanism and the scope for withholding of stocks may be reduced. It is a matter for examination objectively, as to whether even if the State undertakes trading operations either at retail or wholesale level, it can avoid the trade margins representing the cost of distribution. It is hinted that the State may even subsidise the State trading operations. Will this not imply an additional burden on the community? The community has to bear this expense on the administration and other charges involved in the procurement and distribution of foodgrains and other commodities. Here the past experience alone in the World War II period and subsequently should be our guide. It appears that the normal trade channels at the wholesale level are functioning on a margin of 1½ to 2 per cent and at retail level at 5 to 6 per cent. Looking to the vastness of the country, the need for processing facilities, communications, etc, will it be possible for the State to set up the necessary Organisational Complex for undertaking the huge task of distribution, and at what cost? Case studies have been conducted on the profit margins of

INDEPENDENCE DAY FEATURES

wholesale trade and retail trade and the general indication is that the margins are very high only in deficit States and districts and these must be related to the existing regulations on distribution and the zonal arrangements as also the State procurement arrangements. Any hasty step in the direction of State Trading should not distract the already precarious supply position for the consumers in the urban areas. The other more important fact is the displacement of over 2 million persons depending in retail trade in one kind or another. Besides, there are sufficient safeguards for regulating retail trade, grading and standardization of agricultural produce, fixation of different market charges paid to the functionaries for services rendered, etc, which if effectively implemented should ensure the lowering of the cost of distribution. Regarding the holding of stocks at wholesale or retail level, the trends already show that this cannot last long; the speculative tendency would persist so long as the inflationary pressures are further accentuated. The only alternative for forcing the farmer to part with his produce is physical control. Is this consistent with the democratic framework and the concept of a mixed economy adopted by our country?

Ultimately, a pre-condition of industrialisation, in an economy with a large proportion of working force, 71 per cent in agricultural sector, is that productivity of labour in agriculture should increase at a very high rate to feed a higher per capita level.

We must recognise, it is only an agricultural revolution that can bring about any noticeable change in the aggregate rate of growth in real terms and in prices. If in the Fourth Plan, without pre-occupying ourselves with targets of investments and a pattern of resource mobilisation which will fit into the target of Rs 20 or 22 thousand crores, we consolidate our position and concentrate on giving top priority to the building up of our agricultural base and such industries which are ancillary to it, it would lay a firm foundation for stability with growth. Our pre-occupation with a large machine-building base, has easily and rapidly, led to an imbalance between the few advanced production sectors and under-developed agriculture. It is this imbalance that has manifested itself in the rise in prices; in the under-utilisation of capacities in consumer and ancillary industries and the continuous population pressure on land.

In this, the experience of the richest among the industrialised countries in the world, the USA, has a particular relevance to India. Although there was a marked trend in the periods of growth of that country, to increase the relative share in production of producers' goods, equipment and machines, emphasis has been increasingly placed on the great expansion of consumer goods. The USA with its huge domestic

INDEPENDENCE DAY FEATURES

market has used the new technology to transform not only the standard of life of all its inhabitants, but also their whole pattern of daily living. The consumer is deliberately placed at the centre of the industrial complex. The resulting affluence is a deep contrast with the grim facts of poverty in countries like India which opts for a compelling puritan philosophy of restraints and sacrifices, based on investment for investment's sake.

Apart from this basic change in strategy that is called for, it must be admitted that at the level of the organisation of our agriculture, there is need for more co-ordination and integration of the institutions at non-official level. This lacuna has been mainly responsible for the State in projecting itself. In a modern economy, institutional changes are very vital; but these changes should be at the level of the people concerned with the activities in which they are engaged. The rural sector has to become vocal. Therefore, the organisation of Agricultural Chambers at non-official level may be considered. This would require the initiative and drive of leaders in the rural areas and outside. Similarly, at the level of distribution, there should be associations of retail traders so that

Government could deal with this section as organised units. If there could be a liaison between the Agricultural Chambers, representing both the producers and distributors, and Government, it should not be difficult to locate the areas of friction in the agricultural sector which affect the price structure.

In conclusion, we should examine whether we should take an alarmist note of this rise in prices, if we are determined to probe into the causes and take appropriate steps at production level to correct the situation. In fact, 1963, has been a period of rising prices throughout the world. In Western Europe, the wholesale prices and the cost of living have increased by 3 to 5 per cent. It is only USA which has enjoyed a virtual monopoly in price stability. The price rise in UK also is nominal and in these two countries, we should note, agriculture is well groomed and looked after. There are also a few inflation-ridden economies which have experienced sharp increases in the cost of living, viz, Indonesia 90 per cent, Brazil 70 per cent, Chile 44 per cent and Argentina 24 per cent. The lesson for us is that our creeping inflation, or even if it be run-away inflation, should not be allowed to gallop and reach the level of these countries. At the same time, there is no need for being perturbed over the phenomenon and experiment with drastic measures. The problem of prices is a highly sensitive one, and it is particularly necessary that the facts are set out and analysed carefully and faced squarely.

News from Industry

News from AEI

One of the world's most advanced process computers will soon be manufactured in the UK by Associated Electrical Industries (AEI), the Commonwealth's largest electrical manufacturer. The GE/PAC-4000 Computer, presently being made in the US by General Electric Company of America (GE), has been added to the existing range of computers being manufactured by AEI.

According to a licensing agreement with GE, AEI will have access not only to all current GE designs of process computers and their wide range of associated peripheral equipment and programming information but also to designs developed by GE in the future.

The availability of British-built GE/PAC Computer Systems, coupled with AEI's resources for handling entire automation schemes, means that a single British manufacturer (AEI) can now offer Indian and world industry the best in British and American automation know-how and engineering.

British engineers have just developed a new closed-circuit television system which is now being marketed at an unusually low cost of only Rs 6,600. Associated Electrical Industries (AEI), the Commonwealth's largest electrical manufacturer, has introduced a fully transistorised and portable equipment which can be run from two 12-volt car batteries. The rugged and weather-proof camera is 10½ inches long and weighs 4 lbs while the 14-inch television set weighs 30 lbs. The TV screen may be up to 50g yards from the camera.

The two simple units in the new AEI-developed system—a camera and control monitor—contain the minimum circuitry necessary for high definition. Transistors and printed circuit boards have been used to ensure reliability and eliminate the need for constant servicing. This, in turn, allows the equipment to be sited in the most inaccessible places without the need for continual removal. One of the most interesting features of the AEI-developed system is its automatic sensitivity control. This control automatically retains constant picture quality in changing light conditions.

Closed-circuit television has already begun to prove its worth in education, industry, commerce and entertainment. Increasingly, it is being used to reduce costs of surveillance, operation control and communication. In educational institutions, banks and industrial plants; in prisons, parks and post offices, closed circuit TV is becoming a vital aid. The new system

just developed by AEI is designed for simple installation and yet flexible enough to be extended for multi-channel work.

News from Ashok Leyland

The Government of Gujarat has, by a recent notification, permitted increased laden weights for two-axle vehicles and three-axle articulated combinations.

The relaxation permits the operation of two-axle vehicles of a g.v.w. of 33,000 lbs and three-axle articulated units of a g.v.w. of 50,000 lbs. Over 104 roads and highways connecting many important cities and places of business in Gujarat have been declared fit for operation of heavy trucks of the Comet class and tractor-trailer units.

Deliveries of Comet goods and tractor-trailer combinations in Gujarat have shown an upward trend, the increase in deliveries being as high as 260 per cent in the first six months of the current year over the corresponding period last year.

The Assam State Transport Department has placed a contract for delivery of 30 Comet ALCOPI 203 inch wheelbase bus chassis valued at over Rs 12 lakhs. With the completion of this order, Assam State Transport will have a fleet of 70 Comet buses.

Assam, the country's frontier State is developing in all directions and as the Director of Assam State Transport remarked recently, the development required all-round attention to operational activities of the Transport Undertaking which has plans to provide better and economical transport in the years to come.

Road Transport Corporation, Calcutta, one of the biggest fleet owners in Eastern India with branches all over the country are replacing their fleet with Comet trucks. Associated Indian Enterprises Private Ltd., Calcutta, main dealers of Ashok Leyland Ltd for West Bengal and Bihar, report that the Corporation's order for their fifth Comet 176 inch wheelbase truck has been placed with them. So satisfactory has been the performance of their first Comet truck that their fleet additions, thereafter, have been exclusively Comets.

To cope with the increasing passenger traffic between Jalpaiguri and Siliguri in West Bengal—a distance of about 35 miles—The Jalpaiguri-Siliguri Bus Syndicate will operate their first Comet long wheelbase bus, an order for which has been placed on Associated Indian Enterprises Private Ltd, Calcutta.

JETTING AHEAD WITH EXPERIENCE

IAC is eleven years old. Graduating from faithful Dakotas through Viscounts and Friendships to fast Caravelles, the airline has earned more than a million hours of flying experience. Linking 70 stations on a 32,000 kilometre

network, it offers speedy travel throughout India.

Eleven years of steady growth pointing to a brighter future ahead. IAC owes it to the people of India—for it is not only an airline but a public service as well.

How to measure Growth

All things grow in age—but only *some* grow in size and stature. A young sapling shoots up—sprouts new leaves and branches. But how does one measure the growth of a bank? Take the Bank of Baroda, for instance.

One way would be to compare figures. The Bank of Baroda began in 1908 with a single office in Baroda. Now it has as many as 210 branches in India and abroad. And deposits exceed Rs. 140 crores.

A strong and progressive institution with 55 years of experience, the Bank of Baroda has had a successful programme of branch expansion. It has also aimed at an ever-widening pattern of service. Indeed the Bank's chief goal has been to widen the range and scope of its banking services for the convenience of its customers.

THE BANK OF BARODA LTD.

(Estd. 1908) Head Office: Baroda

THE project report of Messrs Dastur & Co on the proposed steel plant at Salem contains such heartening revelations and such revolutionary proposals that it may be said that they may well change the steel outlook in this country, once they pass through the fire of competent, though probably unfriendly, critics. In the minds of the public, and even the Government, in South India, the Salem Steel Project has during all these years evoked such a mixture of variegated feelings that it has become less an industrial venture to be judged in a dispassionate spirit than the symbol of all their hopes of industrialisation, the lodestar of their hopes and a sort of battle cry with which to rouse them to fight those who might try to prevent its inclusion in the Plan. This intrusion of passion is the unfortunate result of the sentiment of economic regionalism which, besides being fostered by certain unwise sections, has also been helped by the manner in which similar big projects have in the past been included in the Plan and taken up for active execution. As in the case of Neyveli, so in the case of the Salem Steel Plant too, there has been a cluster of technical problems the indubitable settlement of which was a necessary preliminary for its active pursuit as an economic project. It is fortunate that in spite of the forbidding appearance of most of these problems, the Madras Government had over a long period pushed forward the kind of spade work that could raise these problems above the sphere of ignorant or interested dogma or prejudice into one in which they admitted of, and invited, rational judgment. Our South Indian Correspondent has pointed out the basic facts relating to Salem ore and the steps by which an organisation specially constituted for the purpose by the Madras Government has energetically pushed forward the hard work of preliminary exploitation, analysis and research both at home and in laboratories abroad. Considering the diligence and care with which the examination of the technical aspects has been carried on over the years, it should have been possible for ministers and political leaders to lift the question of the Salem project out of the fog of political sentiment, to avoid the raising of premature hopes, even to stress the need for further technical examination if the project is to be included in the Plan. But that was not the case. One can recall many an instance in which a report of analysis of ore in East Germany or some other country was given out to the public as dispelling the last vestige

of doubt about the economic character of Salem steel. In every such case, the event proved the shout to have been far too premature.

Such experiences of the past prompt a similar caution in regard to the Dastur report as well. But what distinguishes the Dastur report is that it not only puts together all the investigations of the past, but points to certain facts and makes certain proposals which now invest Salem steel with positive economic advantages over the existing steel units. Those who have been pleading for the project need no longer be apologetic about its costs and call political sentiment or regional considerations to their aid to fight their battle. The Salem Steel Project will have the great advantage that, unlike any other, it will call for no new railway lines to be laid, while Durgapur and Rourkela and Bhilai accounted for strain on railway transport in spite of new additions to it. Secondly, it is estimated that only 159 ton km of raw materials will have to be moved for producing a ton of steel ingots at the Salem plant, while the figures for Visakhapatnam, Hospet and Bokaro are 3,090, 3,298 and 842 respectively. The comparable figures for the existing units, TISCO, IISCO and Rourkela, Durgapur and Bhilai are 592, 724, 880, 881 and 1,617 respectively. The technological innovations suggested by the Indian consultants are also calculated to enhance the economic character of the productive processes. As against the low shaft furnace employed in East Germany for the use of lignite for steel making, Messrs Dastur and Co have suggested the introduction of electric furnace for iron making. Pellets from beneficiated Salem ore together with carbonised lignite will be pre-reduced in kiln before smelting in an electric furnace. Power consumption is expected to be reduced to 1,000 KWH per ton of iron ore which is 40 per cent of the consumption in conventional electric smelting. In spite of its low iron content of 34 per cent, Salem ore is deemed to be superior to that of Hospet because of its being magnesite; and the employment of magnetic separation is expected to upgrade the iron ore. The use of pipes is suggested for the supply of iron ore to the steel plant and provision is also made for the introduction of LD process for steel making. Another distinguishing feature will be the continuous casting method in which liquid steel is poured directly into a slab or billet, thus eliminating the blooming and slabbing processes.

The innovations suggested by the consultants are so numerous and radical that the scheme as drawn up now is almost sure to face the gauntlet of much expert criticism. But if laymen can venture to form any tentative ideas at all, it would seem that the basically economic character of the Salem Steel Project has been vastly enhanced by the manner in which Messrs Dastur and Co have worked up the project and that its soundness will be established beyond cavil, though it may have to undergo some minor changes in some respects. Thanks to their work, such circumstances as South India's needs of steel, the distance from the coal and steel centres, the strain on transport and the consequent saving in costs are now reduced to the position of additional arguments for the speedy implementation, instead of being the more weighty considerations for utilising Salem Ore and Neyveli lignite for making steel. It would be difficult for those who would like to see the Salem Steel assigned a low priority to establish their case. And, if for any reason of its own, Government fails to speed up the project after necessary amendments or alterations, it will find it hard to convince the public of the justice of the course.

The imperative need to maximise steel production and accelerate the rate of increase as much as possible is now inescapable. The reduction of the small scale industries, which are important to the big industries as well as the economic life of the ordinary people, to a position in which they can work to only a third of their capacity shows that we cannot possibly lose time in the establishment of the new steel units. The way to the Fourth Plan target of 17.5 million tons of steel is littered with all kinds of obstacles. Bokaro has not had a smooth course ever since its conception; and even if Russia has not made any inconvenient demands about supervision and control, its implementation is sure to be delayed. Tatas are reported to have informed the

Government that their expansion programme will not be completed before the end of the Fourth Plan period. And if the projects now on hand were to proceed according to schedule, a shortfall of more than half a million tons of steel is apprehended. In these circumstances, the wisdom of pushing forward the Salem Steel Project without dilatory scrutiny by rival experts appears obvious. It is an inestimable advantage that the Salem steel unit is capable, according to present plans, of being expanded to a capacity of over 3 million tons. It is regrettable that Mr Sanjeeva Reddy chose the eve of the submission of the Dastur Report to cast grave and unreasonable doubts about the Government's readiness to consider Salem Steel for the Fourth Plan. This ran so directly against the statements of his predecessor that the public in South India had to apprehend a radical change of attitude in New Delhi. In point of preparation of the project and completion of the preliminary work, Hospet and Visakhapatnam can hardly compare with Salem. Since this is the point which the Minister for Mines intended to stress and since the Dastur report more than satisfies this condition, it is to be hoped that South India will no more be subjected to this tormenting tantalisation.

Record Year for Jute Goods, But...

AGAINST the background of a plethora of unhit Third Plan targets and the stagnation of industrial production in general, the performance of the jute goods industry during the past three years presents a refreshing contrast in that the targets set for it have

either already been or are in process of being hit far ahead of the scheduled date. In jute year 1963-64 (July-June) which roughly corresponds to the third year of the Third Plan, the industry touched new highs both in respect of production and exports. As against its Third Plan production and export targets of 1.3 million tons and 900,000 tons respectively, it has achieved a production of 1,229,600 tons in the jute year 1963-64 while exports have surpassed the target to stand at 963,000 tons. In the jute year 1960-61, production of all categories of jute goods stood at 1,006,300 tons and since then the trend has been steadily upward. A detailed analysis of the pattern of production over the past four years will yield some significant points.

Of the principal categories of goods manufactured by the industry in the jute year 1960-61, sacking accounted for more than fifty per cent of the output with hessian coming next with about 35 per cent. But in subsequent years, the share of hessian in total production steadily increased to stand at 52.5,200 tons in the jute year 1963-64 while that of sacking fluctuated but always keeping below the level attained in the jute year 1960-61. During the jute year 1963-64, sacking production has declined rather sharply to be placed at 487,800 tons as against the previous year's level of 523,400 tons. The last three years have also witnessed significant developments in respect of the output of categories other than the two principal ones. The most striking of them is the sharp increase in the production of carpet backing. From only 25,200 tons in the jute year 1960-61, the output of carpet backing has increased in the jute year 1963-64 to 93,800 tons. This of course reflects the good demand for carpet backing from the US. The Indian industry has not been slow to take advantage of the growing demand for this type of jute goods.

	PRODUCTION (In '000 Tons)			
	1961.	1962.	1963	1964.
Hessian	366.0	407.9	506.7	525.2
Sacking	524.3	500.3	523.4	487.8
Carpet Backing	25.2	31.8	63.0	93.8
Cotton Bagging	36.0	44.0	40.7	48.5
Others	54.8	68.0	64.3	74.3
Total	1,006.3	1,052.2	1,198.9	1,229.6

The export performance of the industry has been equally encouraging. From 764,300 tons in the jute year 1960-61, total exports have gone up to 963,300 tons in the jute year 1963-64. The improvement has been largely brought about by the higher offtake of hessian. From only 382,400 tons in the jute year 1960-61 exports of hessian have been steadily going up over the past four years to stand at 599,400 tons in the jute year 1963-64. This is also borne out by the fact that, till last year, the share of other goods had been more or less constant (the figures for the three jute years 1960-61 to 1962-63 being 73,700 tons, 76,400 tons and 73,100 tons). There has, however, been a marked rise in the exports of other goods in the jute year 1963-64 to 103,400 tons and this is to be attributed to the good sales of carpet backing. In marked contrast to hessian, sacking is having a difficult time on the export front.

Over the past four jute years, there has been a decline of about 15 per cent in exports of this category of goods. From 308,200 tons in the jute year 1960-61, exports of sacking

have successively declined to 279,300 tons, 267,900 tons and 260,500 tons.

As is to be expected, with the development of industry and agriculture in the country, internal consumption of jute goods has also been showing an uptrend during this period. But the rise has not been uniform. From 274,100 tons in the jute year 1960-61, internal consumption increased to 282,800 tons in the next year; but, in the jute year 1962-63, there was a spurt to 314,400 tons. The rate of growth of internal consumption during the jute year 1963-64, however, has again slowed down as the total offtake amounted to 327,500 tons.

The improved performance of the jute goods industry in the past three years would not have been possible had it not been for the fact that raw jute production has been uniformly good. The last three seasons have witnessed bumper crops so that the problem has been one of ensuring that the farmer does not lose interest in his crop on account of uneconomic prices for his produce. Although total production in the jute year 1963-64 was slightly lower at 7.7 million bales as against 8 million bales in the previous season, the total availability of fibre increased somewhat because of the large carry-over from the previous season. The advent of the Jute Buffer Stock Association has been an important landmark during the Third Plan period as this, as its name itself indicates, will serve as a suitable mechanism to cope with both a surplus as well as a shortfall in production. Other devices that have been adopted to stabilise output have been the issuance of compulsory purchase quotas and the fixation of minimum operational price for raw jute.

From the foregoing, it would appear that the jute goods industry has little to worry about. Unfortunately, this is not true. For, although its performance during the past three years or so is quite commendable, its achievement viewed against the background of the considerable expansion in world consumption of jute goods that has occurred in the last fifteen years, will appear to be extremely modest. Since 1950, world consumption of jute goods has gone up by more than 75 per cent and India has been able to capture only 10 per cent of this additional demand. As has been noted above, our industry has been losing ground in the export of sacking, and this disturbing trend can be ignored only at the risk of gravely jeopardising its fortunes in coming years, for the simple reason that even now sacking output forms a considerable portion of the total production and should necessarily continue to be so in view of the fact that a good part of the raw jute grown in the country is not of a high quality. The serious setback to our sacking exports stems from the rapid growth of the Pakistani industry in the past few years. Aided by considerably cheaper raw material, cheap labour and more efficient machines, the Pakistani industry has been able to quote lower prices for its manufactures in world markets. As though these advantages are not enough, the Government of Pakistan has instituted an ingenious scheme known as the bonus voucher in respect of exports which has placed the Pakistani exporter of jute goods in a commanding position over his rivals in India. The result has been that the Pakistani price is always lower than what India can possibly specify and it is no wonder that the foreign buyer prefers Pakistani goods. The position for some time now is that India is able to sell its sacking goods

overseas only whenever Pakistan is not in a position to meet the demand. The serious erosion to our sacking exports will be evident from the fact that what were once considered to be good markets for Indian sacking have all drastically reduced their offtake from India. Australia, which imported from India 59,600 tons as recently as in the jute year 1960-61, has taken only 33,300 tons in the jute year 1963-64. The African countries have taken only 54,300 tons in the jute year 1963-64, as against 80,000 tons in the previous year. So also, the Far Eastern countries whose share has dropped from 63,100 tons in the jute year 1960-61 to 46,600 tons the next year and again to 30,800 tons in the jute year 1962-63. There has, however, been a slight improvement in the jute year 1963-64 to 37,400 tons.

It is idle to expect that Pakistan will rest content with what it has already usurped from India for the simple reason that it will have increasingly larger production to be disposed of. Already its production amounts to about 25 per cent of Indian output and before long this will be further increased by about 20 per cent. This is not all. It has ambitious plans to expand its industry to such an extent as to consume all the raw jute produced in the country. An indication of its future plans of conquest of new markets can be had from the speech of the Chairman of the Pakistan Jute Mills Association at its last annual meeting. He has pointed out that the industry should start planning for entering the more remunerative hessian markets now that it has already consolidated its position in the sacking markets of the world. Despite the repeated plea for some suitable action to neutralise the unfair advantages that the Pakistani industry is now enjoying over our industry, Government has not seen fit to initiate any step in this regard. Meanwhile, the situation is daily getting difficult for our sacking exports as will be evident from the high level of sacking stocks the industry is carrying month after month. At the end of July 1964, stocks of jute goods with IJMA mills have increased by as much as 9,800 tons, the bulk of which is accounted for by sacking. Referring to this large increase in stocks, the Indian Jute Mills Association has pointed out in a press note last week that the situation if left unremedied may seriously jeopardise efforts at maximising our exports. After all, it is not to be forgotten that the jute goods industry still plays a vital role in earning foreign exchange for the country. Its contribution last year to the total earnings is about 20 per cent. The country has not yet reached a stage where it can rely on the new lines of export for the bulk of its foreign exchange earnings. As a matter of fact, about half a dozen traditional export items—and among these jute goods are by far the most important—are the mainstay of our export hopes. It follows therefore that any setback to jute goods exports cannot but adversely affect our export earnings as a whole. As the IJMA has very rightly emphasised, the continued erosion of sacking markets and the growing dominance of the Pakistani jute goods industry in world markets have already placed the Indian industry in an unenviable position. While it cannot be gainsaid that concerted efforts are being made in various directions, in stepping up the production of raw jute, improving its quality, increasing the yield per acre as well as in modernising the industry, improving the quality of manufactures by means of quality control, diversifying production to meet the changing requirements

of overseas consumers and finding new uses for jute by research, the fact remains that since our jute goods industry is predominantly an export industry—the bulk of its output has necessarily to find outlets abroad—it has to derive its strength from its ability to sell increasing quantities of goods in overseas markets. With the advent of Pakistan which seems to be bent on expanding its exports no matter what international trade practices it violates in the process, the Indian industry is confronted with a problem which is not in its power to solve.

Coal Targets

AS the round of preliminary discussions in the Planning Commission on the assumptions and magnitudes of the Fourth Plan is nearing its end, it would be useful to have more detailed information, than has been made available so far, on the different aspects of the programme for coal production. According to some reports, a tentative target of 130 million tonnes has been approved and this has given a handle to controversy regarding its feasibility, in which free use has been made of the views attributed to the World Bank Team which investigated the problem of coal production and transport.

The controversy about the target of production will become meaningful only when the aggregate target is broken down into gradewise and field-wise targets and related to the assessments of the demands which they are expected to meet. That is the only basis on which it will be possible to make a realistic assessment of feasibility. Discussions will be more fruitful if they are concerned less with the target itself than with how it is made up.

That the pattern of production should be related to the anticipated demand may appear too obvious to need any special emphasis in this context. But disregard of this elementary consideration in planning the production of coal in the past has resulted in wasteful use of scarce resources and created gratuitous difficulties in regard to supply and transport and may do so again, unless meticulous care is taken to dovetail the production programmes with the pattern of demand that is envisaged, as well as to provide adequate transport facilities to carry the coal from pitheads to points of consumption.

Another important consideration that has relevance both to the programme of production and pattern of utilisation is the spatial and gradewise distribution of available resources. Numerous committees set up by Government have drawn attention to the urgent need for taking steps to conserve limited supplies of coking coal and it may be assumed that their recommendations carry weight with the Government and the Planning Commission. And, it is not merely coking coal that is in short supply. Reserves of higher grades of non-coking coals, which may be used for blending with coking coals, are also limited in extent, so that their use has to be restricted. According to the latest assessment, out of the estimated deposits of 51,312 million tons up to a depth of 4,000 feet, Selected Grades form only two per cent, the medium grades consisting of Grades I and II, (coking and non-coking) seven per cent, and the lower grades as much as 91 per cent.

Compared to the position of reserves, the present pattern of consumption shows a striking and depressing contrast. Selected Grades account for as much as 26 per cent of

ONE-MAN CRUSADE

Mr Nanda has received a rebuke that he surely did not deserve. It is all very well to say that the road to hell is paved with good intentions, but if we did not have at the present day the sense of idealism that moves Mr Nanda we should indeed be in a sorry plight. For reasons best known to the Congress high command, it has been decided that there shall be no official status given to the Committee that Mr Nanda has sponsored for investigation of every species of corruption in Government. An objection that had been anticipated, was that such a system of internal "audit" of integrity would lead to demoralisation of the whole Government administrative machinery. We dare say there is force in the argument, but one doesn't let down one's friends in public.

So, it may be that Mr Nanda, so anxious was he to launch his crusade against corruption, bothered little about consultations or discussions with his colleagues either in Government or in the party. But is that any reason why he should now be left to drift in the doldrums? It is his head which, in terms of the ultimatum he has set himself, will roll; are his colleagues to speed that day?

That in all walks of life, at all ranks of officialdom, corruption is rife, we would

be the last to deny; but there can also be such a thing as being so preoccupied with the merely corrective endeavour of weeding out corruption, that we shall lose all opportunity of pushing forward with achievements. Thus, in a democracy even corruption has a place, and all that we can—or should—do is to guard against its reaching overweening proportions.

Moreover, let us bear in mind the fact that it takes two to commit an act of corruption. Would the bribe-taker exist, were it not for the ubiquitous presence of the one who offers it? Who, then, shall cast the first stone? Surely, the individual who has greased a palm in passing, with a view to the achievement of his own ends, is as guilty as he who held out his hand.

In the final analysis, therefore, there is no short-cut to the solution of the problem of corruption. It is a fault in the national character that has to be remedied. The trouble is, that so long as we live in times of shortages and high taxes, the incentive or at least the inclination to find an easy way out is always there.

Thus it is that the fact of Mr Nanda having been left alone, in his efforts at rooting out corruption, fills us with disquietude.

The policy that is ultimately adopted in regard to these allocations is also of relevance to Fourth Plan targets. If the Fourth Plan programmes are drawn up with a view to making the best use of our natural resources, the emphasis should be on the production and use of lower grades and on the conservation of coking coal and coal of higher grades. Coal mining is not an activity which can be stopped or started at short notice; the tempo of production of the different grades will have to be kept up, if the requirements of the Fourth Plan are to be met in a satisfactory manner.

WHETHER it was due to indecision and weaving, or mere equivocation that comes of inadvertence or indifference to clarify, the recent statements of Mr Sanjeeva Reddy have left Madras wondering whether the prospects of a steel unit in Salem have again been

Here is an account of what has been done already. "A large modern power drill unit was set up on the northern flank and deep drill holes, two vertical and four angular, have been bored into the ore bed. A similar deep investigation will be undertaken from the southern flank. The deposit has been

In recent years, the pressure for increasing the power of the Union Government to take fuller control of the nation's water resources has been felt in an increasing measure, what with the disputes between every two States in the South including Maharashtra, and some triangular and multi-angular disputes as well. This time, the pressure promises to come from a demand for water for drinking purposes and not as has been usual hitherto for power and/or irrigation. The efforts of the Corporation of Madras to augment its water supply date back to a long time ago; and though the efforts have sometimes borne fruit, the increase in needs is out of all proportion to the gains. During the last few years, it is generally agreed that Madras will have to face a serious shortage, unless it obtains water from a really big source of supply regardless of distance from the city. It is as a result of this that some apparently forbidding projects have been considered in all seriousness. The plea for getting water from the Krishna has been strengthened by the fact that it can be worked up as part of a bigger scheme for a fuller utilisation of the waters of that river. But some sections of opinion have been ada-

*Mr Bell is the Administrator, US Agency for International Development.

The essential concept of the Alliance for Progress draws on the best of our experience in helping others. It is conceived as a true alliance with the Latin American countries mobilizing their own resources to the maximum extent and the United States adding a margin of external resources. The Alliance rests on the commitment of the Latin Americans to undertake strong self-help measures; to mobilize their own resources, and to face the hard and painful decisions that must be faced if they are to overcome their problems.

The successes of the past and the performance of the present, however, offer significant hope that the countries we seek to help can succeed. In the last analysis it is their battle to win or lose, but our help is crucial to their effort.

*Mr Bell is the Administrator, US Agency for International Development.

World of Finance

INTEREST RATES

Banks "Borrow" at 6 per cent

Since early this week, banks have been blazoning forth the message, that interest as high as 6 per cent can be got on Deposits (depending upon the period). Now, we nothing doubt that much thought was paid to the whole question of interest rates, before the Indian Banks' Association in fact decided upon certain revisions which, however, in their cumulative effect will mean that the burden of interest paid will in the future be a rather heavier burden for the banking system.

We might as well also concede that the garnering in of time money is to that extent an anti-inflationary device. Moreover, the ownership of time Deposits does enable banks in their turn to extend medium-term Advances to industry.

But what has not been proven, a point on which we continue to remain totally unconvinced, is that an increase in Deposit rates automatically results in the enticing in of fresh Deposit resources. We repeat: money destined for the banking system can hardly find sanctuary elsewhere; and, whatever the inducement of interest rate offered, funds intended for investment in equities or the like will never be tempted to opt for Deposit in a bank instead.

We suppose banks have to learn the lesson the hard way. The erosion of profits, on the score of the cost of interest, is a phenomenon bound to be in evidence in the second half of 1964. If banks hope to recoup, through adjustments in interest rates, let them remember that though the cost of bank finance may be infinitesimal as far as industry is concerned, it does figure substantially in the cost of goods to the consumer—since the commodities have probably suffered the higher interest rate at least three points: raw material, industry and trader.

BANK RETURNS

Giltedged Still in Keen Demand

Though the next week's opening of subscription lists for the State Government loans will undoubtedly involve some element of strain for the banking system, it is still abundantly clear that the 1964 slack season is arming banks with a plethora of resources, both by way of increase in Deposits and contraction in Advances; evidence to this effect is available in the latest banking returns.

The second week in August has, according to the returns of the Reserve Bank for 14 August, witnessed a return to slack season conditions with evidence of currency contraction. Active Note circulation has been marked down by Rs 5.97 crores to Rs 2,452.97 crores, and inflow of Rupee Coin is placed at Rs 0.22 crore. Foreign Securities are again unaltered at Rs 85.46 crores, and there is merely a minor adjustment in Rupee Securities, which are shown

at Rs 2,160.88 crores. So, the Reserve Bank's cash in the till has accordingly benefited and has improved by Rs 6.27 crores to Rs 16.25 crores.

Investments, in the Banking Department, have declined by Rs 26 crores to a shade over Rs 250 crores. This fact, together with the fall of Rs 14.24 crores to Rs 68.80 crores in the Centre's balances, would suggest that ad hoc Treasury Bills have been cancelled before maturity. Another possibility is that the Scheduled Banks should have figured as purchasers of giltedged through the Reserve Bank tap. But, on the contrary, the State Bank is known in the week under review to have disinvested in an amount of Rs 15 crores; and this is faithfully reflected in a rise of Rs 14 crores to Rs 125.32 crores in Treasury Bills purchased and discounted by the Reserve Bank. So, if at all any purchases have been made, it has been by the other Scheduled Banks. We should think that around Rs 15 crores of the decline in Investments would be on account of institution of reverse ad hocs; and that the balance of about Rs 11 crores relates to acquisition of giltedged by Scheduled Banks other than the State Bank.

The States have slightly run down their balances—by Rs 3.36 crores to Rs 23.21 crores—and borrowed slightly more—their indebtedness to the Reserve Bank being marked up by Rs 2.32 crores to Rs 19.20 crores.

Slack season affluence of Scheduled Banks is suggested by the sharp rise of Rs 18.62 crores to Rs 113.46 crores in their Reserve Balances; and no considerable part of this rise is ascribable to the State Bank. Their indebtedness to the Reserve Bank has been cut by Rs 1.52 crores to be placed once again at a nominal figure of Rs 1.89 crores.

Balances Held Abroad have recorded a small improvement of Rs 0.60 crore to Rs 8.80 crores; and so foreign assets in the possession of the Reserve Bank continue to exceed the Rs 90 crore mark.

Despite an accrual to Deposits amounting to Rs 3.56 crores, raising the relevant figure to Rs 652.82 crores, the State Bank has, according to its return for 14 August, disinvested in giltedged for Rs 15 crores, reducing holdings to Rs 275.10 crores. This is accompanied by a fall of Rs 8 crores to Rs 16.74 crores in Other Liabilities; and so some part at least of the giltedged recently acquired was no more than a temporary

investment. Contrary to the progress of the slack season, the State Bank's Advances have risen by Rs 1.39 crores to Rs 346.22 crores. The result is that cash balances, including money at call and short notice, are marked up by Rs 5.99 crores at Rs 34.06 crores.

Beginning of the month disbursements notwithstanding, the statutory statement of Scheduled Banks for 7 August shows that the banking system continues to be comfortably placed. The total of Advances, it is true, has expanded by Rs 6.95 crores to Rs 1,745.16 crores. But this is more than fully covered by the inflow of new resources. Net Time Deposits are substantially higher by Rs 5.44 crores at Rs 1,388.02 crores, while net Demand Deposits have also risen by Rs 2.12 crores to Rs 1,249.90 crores. Incidentally, the share of the rise in Deposits ascribable to the State Bank is just around half a crore. Giltedged holdings are marked up by Rs 2.85 crores to Rs 764.21 crores, but this is on account of purchases in the main by the State Bank. Debt to the State Bank is more or less unchanged at Rs 23.63 crores, but borrowings from the Reserve Bank are higher by Rs 2.03 crores at Rs 4.03 crores. Consequently, cash balances, including money at call and short notice, are exactly Rs 1 crore higher at Rs 249.48 crores.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 18 August 1964. Total amount offered was Rs 4,00,00,000. Tenders at Rs 99.400 per cent were allotted 50 per cent. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2,400 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at Kanpur upto the close of business on Saturday, 29 August 1964 and at other centres (Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi) upto the close of business on Monday 31 August 1964. Successful tenderers should make payment on Friday, 4 September 1964 at all centres. Other conditions are as usual.

During the week ended 14 August 1964 Government of India Treasury Bills for Rs 84,55,00,000 were sold in favour of Reserve Bank of India.

Plea for Tax Reduction

At a time when inflationary tendencies are getting out of grips an endeavour to indentify the contributory factors will be a rewarding exercise. Speaking at the sixth annual general meeting of the Indian Cotton Mills' Federation held in Bombay recently

Mr Ramnath A. Poddar drew attention to the adverse effects of direct and indirect taxation on the country's economy. As Mr Poddar stated it is illusory to think that any augmentation of taxes would spawn a slump in demand. For 'experience has shown that where consumption is on the subsistence level, the increase in prices resulting from higher taxation does not inhibit demand, but creates pressures for increasing incomes, in an effort to maintain the standard of living. No part of the tax gets absorbed in price; on the other hand, the price gets inflated by the amount of the tax plus: firstly, interest on the additional finance needed and secondly, additional profit margin to maintain the manufacturer's and trader's real income intact. The primary producers try to obtain higher prices for their necessities. The wage-earner also obtains higher money income to ensure that his real wages do not fall. In the meanwhile, Government which garners bigger revenue, actually collects less in terms of real value and has, therefore to pump more money in the system to buy the same amount of goods and services they had budgeted or planned to buy. Increased indirect taxation thus becomes a self-defeating measure in economies like ours.'

It is obvious that what is true of indirect taxes is equally true of direct taxes, though in a slightly different manner. The taxpayers, it is to be admitted, will be willing to pay direct taxes ungrudgingly up to a certain level. Once this limit is pierced and taxes begin to weigh heavily on incomes, a tendency will naturally develop among the tax payers to evade taxes and create unaccounted money in the system which more often than not streams into speculative channels instead of being utilised for productive purposes. It is an established fact that coloured money is the greatest bugbear of the country's economy thwarting all the fiscal, monetary and credit squeeze measures of Government and the Reserve Bank of India.

There is no gainsaying that unless this vicious circle is shattered all our economic calculations will tend to go awry and our economy will be in the woods for a long time to come. This objective can be achieved if the prevailing taxes are adequately scaled down. As Mr Poddar indicates if this measure is applied judiciously it is likely to result in strengthening Government revenues in terms of real value and greater investment in the economy with less

supply of money will be possible. There are, gratifyingly enough, already indications that the tax effort of the Government in the next Plan will be less severe but it will be immature to venture to make any forecast into the extent of the concessions that will be made every budget year. But one would wish that the authorities will adopt a lenient attitude in lessening the tax burden and provide adequate concessions to keep our economy on the move.

CEMENT CAPACITY Fair Share to Private Sector

Although the cement industry has made considerable progress during the past few years, there is an unrelieved shortage of this essential building material for a long time now. And it would appear that there is no possibility of an early sizable improvement in the supply position. For indications are that the actual achievement of the industry during

the current Plan will fall far short of the targets both as to capacity and output. Speaking at the annual meeting of the Cement Manufacturers' Association, Mr Dharamsey M. Khatau, has said that according to present estimates the actual capacity and production at the close of the Third Plan will be 11.5 million tonnes and 11 million tonnes respectively, representing 77 per cent and 85 per cent of the respective targets. The unsatisfactory performance of the industry stems from the fact that Government has been following an unrealistic policy with regard to its expansion. With a view, evidently, to encourage new comers into the field licences for additional capacity were denied to the established units. But what has been ignored in granting licences to new comers most of whom had no experience in the cement industry, is that it is a capital intensive industry. It is not surprising therefore that the return from the industry being what it is, the majority of the licenses have not been utilised at all, leaving no other alternative to Government but to revoke them.

There is however no indication that in drawing up plans for the future development of the industry Government will adopt a more realistic approach. For there are reports that in a bid to step up cement production and increase its near term supply, Government is likely to import five new units and 500,000 tonnes of cement. It is also said that Government is considering a proposal to establish a cement corporation to set up 31 new units in the public sector, and to assist the existing plants in expanding their capacity. It is inconceivable how large scale expenditure of foreign exchange on the import of new units can be considered at a time when many an industry has to keep part of its capacity idle for want of adequate imported raw materials and spare parts. The cement industry itself is not getting its full requirements of foreign exchange to import maintenance equipment and spares. Perhaps exhortations to conserve foreign exchange have no relevance when Government spending is concerned. As has been pointed out by Mr Khatau, if only the private sector companies had been given encouragement and the necessary quantity of waste blast furnace slag had been made available to them, cement production would have increased by 1,000,000 tonnes and the foreign exchange that may be expended on the import of 500,000 tonnes of cement could have been saved.

While all efforts at stepping up cement production should be well-considered, it is also necessary to make sure that the expansion plans for the industry satisfy the needs of maximum economy. In this view, it is incumbent on Government

to consider whether in the long run it would be cheaper to allow the expansion of existing units than to put up the additional capacity in the public sector.

SMALL INDUSTRIES A Better Deal Wanted

The two-day deliberations of the Small-Scale Industries Board held in New Delhi focussed attention on the urgency for revitalising the small-scale sector for equipping it to play its vital role in the industrialisation of the

country. It is to be admitted that the units in the small-scale sector have recorded phenomenal growth in number and output during these years and have demonstrated their capacity to undertake manufacture of even complicated items, especially in the metal working and machinery industries and their contribution to the economy was sizable, in addition to providing gainful employment to a large number of people. These apart, as Mr H. C. Dasappa, Union Minister for Industry and Supply, stated while inaugurating the meeting of the Board the small-scale sector had taken a step in

another direction. It is remarkable that the small units have made significant headway in non-engineering industries such as chemicals, particularly paints, plastics, pesticides etc. Furthermore, as Mr Manubhai Shah reminded the Board, the small scale undertakings will have to enter into our export promotion programme in a big way.

The question which one should naturally ask is: will the small scale units be able to make the requisite contribution? If past performance is any guide, the answer will be in the affirmative provided they receive raw mate-

ACCOSET-50

— ACC High Temperature Refractory Cement —
for strong firebrick linings and joints

Composed of finely ground plastic clays, high alumina burnt refractory materials and special chemicals, **ACCOSET-50** gives good bonding strength and high heat resistance. Once it is dried and burnt **ACCOSET-50** becomes one with the bricks.

YOU CAN USE ACCOSET-50 ■ for jointing, repairing and patching ■ for bonding and laying firebricks of any shape ■ for protective wash for furnace walls and floors ■ for monolithic and rammed linings, gunning etc.

rials in adequate quantum and other facilities which are essential pre-requisites for sustained progress. It will be recalled, in this connection, that after 1962, when heavy pressure was exerted on our foreign exchange and other resources consequent upon the Chinese invasion, the progress of the small scale sector was considerably slackened and a good percentage of its capacity was rendered idle. As Mr Dasappa pointed out the present improvement in the foreign exchange availability will be of some relief to this sector. Though further improvement in this direction is anticipated in future, the requirement of the small scale units will not be adequately met for a considerably long period to come. The promise displayed by the small units to venture into even sophisticated spheres of production and their usefulness for fostering a

new middle-class entrepreneurship in the country augur well for greater patronage by the authorities in future.

* CORPORATE PROFITS Heavy Incidence of Tax

It is now generally accepted that the revival of the capital market cannot ensue without initiating measures that will result in increasing the disposable profits of the corporate sector and individual savings. During the past three or four years, the incidence of taxation has become so heavy that companies are finding it increasingly difficult even to maintain their dividends, despite an increase in production. It is not surprising therefore that new capital formation has suffered a setback.

A study published in the July issue of the Reserve Bank Bulletin covering the working results of 1233 selected medium and large public limited companies with a paid capital of over Rs 5 lakhs, for the year 1962-63 reveals that the steep rise in tax provision has adversely affected the net profits of these companies. The proportion of tax provision to pre tax profits of these companies which had risen from 38.3 per cent in 1960-61 to 42.3 per cent in 1961-62, rose further to 50.6 per cent in 1962-63. It is to be noted that for a majority of individual industries, the proportion was above this overall average. With their disposable profits thus drastically reduced, the companies were left with no other alternative but to cut their dividends. Dividends declined during the year by Rs 3.8 crores as against a rise of Rs 2.8 crores in the previous year.

The working results for the year however show a modest recovery from the setback suffered in 1961-62. Both sales and gross profits were higher. The rate of increase in gross and pre-tax profits improved from 8 per cent to 10 per cent. The improved results were due to the prevalence of conditions conducive to an expansion of industrial activity. With the declaration of the Emergency in October 1962, industrial activity got a fillip and increased production was achieved by the fuller utilisation of capacity.

The increase in gross profits did not bring any benefit to shareholders. This is because the increase in profits proved inadequate to absorb the greater rise in the tax provision and as a result, net profits (profits after tax) showed a decline for the second year in succession. Thus the fall in net profits by Rs 5.7 crores during the year was greater than that of Rs 1.5 crores in the previous year and its impact was felt more on dividends than on retained profits. The average dividend rate fell from 10.9 per cent to 9.9 per cent on paid-up capital.

* COCHIN PORT Deficit of Rs 4.29 Lakhs

Despite a 3.38 per cent increase in the volume of trade handled, working of the Cochin port during 1962-63 resulted in a deficit of Rs 4.29 lakhs as contrasted with the anticipated deficit of Rs 15.4 lakhs. As the administration report of the port for 1962-63 shows the fall in the estimated deficit by a shade over Rs 11 lakhs can be ascribed to an increase of Rs 3.84 lakhs in the receipts from lands and buildings port department and debt charges. This was offset to the tune of Rs 11.79 lakhs by the increase in expenditure under general charges and fall in receipts under wet dock and wharves and other items. The percentage of working expenses of the port (excluding debt charges and special expenditure) to income under the general account smartly moved up to 70 from 60 in the preceding year. The outstanding debt of the port at the end of the fiscal year stood at Rs 3.49 crores of which Rs 2.90 crores was due to the Government of India and the balance to the State Government.

There has been a progressive increase in the volume of trade which in the year under review totalled 2,362,657 tonnes. Foreign trade during the year went up by 86 lakh tonnes. Similarly, there was a rise in imports in the coastal trade but exports are slightly nipped lower owing to the decline in the export of manure, vegetable oils, coconuts and copra.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as
the wind
To blow on whom I please"
—As You Like It

A POINT well taken, by one of the State Chief Ministers, is that the son of one such is not automatically disbarred from work or business. I would go one step further: In instances where there are issues of employable age, failure to be so occupied should count as a black mark. A friend reports an ex-Chief Minister as having gone another step further. Where is the son he asked, who did not try to put to advantageous use the good name of his father? So, it is the person who is asked to do something who has to be on guard: a legitimate request or deal should not obviously be refused; but where delicate questions of patronage come in, his duty would be to say nay. In turn, the father whose son has been rebuffed has to be careful that he does not take any such refusal to be a personal affront to himself. I admit, in a country like India, in not a few cases what in practice has happened is undue trading upon the name of one's illustrious forebear. Obviously, however, for that reason to suggest that no son of an official in power should seek a high position is altogether wrong. We are poor enough in talent, to need to avoid any such wholesale disqualification of certain kinds of men.

An offer (facetiously made, I wonder?) has promptly evoked quite a few bids (facetiously made also, I hope). There are few indeed who would dare transfer or "sell" the whole of their wealth (both assets and liabilities) for a nominal sum of one rupee. There are few working men, whose net wealth does not amount to something. When a man's income falls short of his expenditure, he does resort to borrowings—provided he can find a lender; but to back him up there are almost always some possessions. It is companies alone that for years together can carry forward losses quite uncovered by assets. Individuals become bad risks rather earlier, and so thereafter it is a question of somehow or other discharging debt and getting again on the right side of the ledger. Will Orissa's Chief Minister keep to his word? Or will he now explain that, as so often happens when a politician opens his mouth, he has been grossly misrepresented and misreported? Two journalists are among those who have signified themselves to be prepared to take up the offer, and journalists, I might warn Mr Mitra, are a tenacious breed.

It was, in Delhi, the wettest Independence Day on record; and it would appear that, in other parts of the country also, enthusiasm was somewhat dampened. Are we as a people getting blasé about celebrating such anniversaries? Or is it that, hemmed in as we are by difficulty in just subsisting, we feel we have little to be cheerful about? The trouble, it seems to me, is that there are in the year too many days which we have to observe, apart from, particularly in West Bengal, the Pujas. Next November, I presume that there will be added to the list of national holidays Nehru's birth anniversary. Now, I am not arguing that we have little need to honour our heroes; but two days on which to celebrate our nationhood, and three days more set apart for paying homage to the memory of departed leaders, are a bit much to be superimposed upon all our other legitimate excuses for desisting from work. Perhaps it were best that a Commission was appointed, to go into the question of the extent to which we may pamper ourselves with holidays. Otherwise, as for example happens when we have twice to remind ourselves that we are Indians—in January and again in August—it could well happen that we shall become wholly indifferent to the reasons underlying national holidays. In any event, more work and less leisure is what is needed to advance our efforts at industrialisation.

Both the underdogs, in England and in America, appear to be gaining strength. Reports have it that the Tories are now running neck and neck with Labour. So, it looks as if Sir Alec Douglas-Home's decision to have the election as late as possible was the right one. I dislike even to suggest it, but the unpalatable fact seems to be that a change in Johnson's foreign policy—as well as the almost immeasurable improvement in Senator Goldwater's chances—could be held responsible for the swing away from Labour. Unfortunately for Labour, all the issues of which capital could have been made are now more or less dead horses that just won't respond to flogging. Whether it is the Profumo excess or the excessive profits of Ferranti, both are topics that have comprehensively been dealt with. So, Labour urgently needs another scandal, before it can be

confident of wresting power from the Conservatives a few weeks hence. Meantime, President Johnson, it is true, has stolen the Senator's thunder by his prompt action in Viet-Nam. But an outbreak of Negro violence in the industrial cities of the east could mean a consolidation of votes against Johnson. The Democrats next week are to nominate their candidates for the Presidential elections; the only interest in the Convention concerns the person who is to be Mr Johnson's running mate. I read in one of the American weeklies, that the Democrats have taken the unprecedented step of themselves printing "counterfeit" tickets, with which to fill up the hall, because of their fear that many an invitee will choose to stay away. I am afraid I must record my view, that we will not be able to write off Senator Goldwater until, in November, the votes are actually counted.

A few years ago, a friend in Madras wanted me to explore the possibilities of starting a financial weekly in that city, we did go into the question, and had almost reached a decision, when Southern Economist made its appearance from Bangalore. So the proposition was dropped. I am glad that we did, because Mrs Susheela Subrahmanya, who is both editor

and publisher, has very carefully indeed tended to the infant, who now appears to be in robust health. The journal has brought out a special number on the occasion of Independence Day, and the subjects, dealt with competently, adequately cover the range of the Indian economy. Surely, however, it deserves more support from South Indian industrialists than it is now getting?

Collectively, as it were, the Gazette of India is a fascinating document. Various postings, transfers, etc., are of course gazetted. So, too, for that matter are the awards of industrial tribunals; patent applications and vital statistics (as regards health) are also published. But by far the most readable is that portion of the Gazette dealing with the cuts that our Censors effect upon films. For, there is always a graphic description of the footage (or is it metreage?) that is to be excised. A recent classic, appertaining to a deletion, was that shots showing a soldier embracing Catherine and holding her behind were to be scissored out. The very staidness of the language often renders it obscene. There are, I think, publishers in Paris who would not hesitate to commission works from the authors of the censors' cuts.

Olympus - A Letter from Delhi

FICCI on Monopolies

In a memorandum submitted to the Monopolies Commission, the Federation of Indian Chambers of Commerce and Industry, has pointed out that an objective analysis of the conditions under which industries in the private sector are operating will lead to the conclusion that even the prevailing legal and administrative regulations cannot give rise to restrictive practices or monopolies, but have on the other hand rendered economic power of entrepreneurs ineffective, let alone permit any concentration. In certain industries the number of producers may not be large but this merely reflects the state of development in the light of licensing policy, plan targets and similar factors. And this position is bound to change when further development will necessarily bring in more producers by the very assertion of the forces of individual enterprises.

Assuming that the object of the Commission is to find a legal basis to ascertain the degree of economic monopoly, the FICCI is of the view that a definition of monopoly can be arrived at drawing from the experience of other countries in this regard. Accordingly, a monopoly can be said to exist when the

supply controlled by the largest seller exceeds one third of the total supply in the market. In this view, the proportion of output controlled by the largest firm or the largest group of firms in India is less than one third to give effective basis for monopoly power. There are no doubt few industries such as cement and matches in which the percentage of share of topmost unit in total production is more than one third. But since these units do not have freedom to charge any price, adopt any process of manufacture, or regulate the level of investment and growth, there is no possibility of these units growing into monopolies. Further there are certain peculiar features which apply almost invariably to all industries in India and which make it impossible for any firm or group of firms to achieve monopoly power to be able to regulate prices, production, distribution or investment. These features were imparted to the general economic framework when the process of expansion became cumulative after the implementation of planning. The extent of these regulatory measures is so comprehensive and their application so unmistakable that development of industry of all forms and at all levels has been just what Government had planned or desired. When the State has such

effective powers, it would be idle to talk about monopoly or concentration of economic power in private industries.

The growth of monopoly is already effectively arrested by the large number of State regulations. As a matter of fact the various regulations on industry have grown to such an extent as to seriously retard the development in many important directions. The memorandum points out that this is so has even been officially conceded. Speaking in the Lok Sabha last December Mr. T. T. Krishnamachari has admitted that controls in their actual implementation often impede increased production and Government has come to the conclusion that gradual relaxation of controls will stimulate economic growth.

Apart from exercising indirect control, Government have through nationalisation or with the establishment of new ventures, secured direct control over a number of industries like ship-building, air transport, iron and steel, fertilizers, coal, drugs, cables, machine tools, newsprint, etc. and services like electricity, insurance, exports, and imports. The total ownership of reproducible tangible wealth of the nation by Government increased substantially from 17 per cent in 1950 to over 25 per cent in 1961. As compared to 1950-51, by the end of the Third Plan it is expected, the contribution of the public sector will increase from less than 2 per cent to nearly 25 per cent in organised manufacturing industries and from less than 10 per cent to nearly 33 per cent in mineral production. After pointing out that since the implementation of planning, development of industry is also made to conform to the pattern envisaged by the Planners, the memorandum goes on to point out that the development of Indian industry is also affected by the shortage of foreign exchange because the implementation of any important industrial project involves a large foreign exchange component.

There was general consensus of opinion that, taking into consideration the export possibilities in the various agricultural and industrial sectors and the economic conditions prevailing, it would be reasonable to set a target of Rs 5,100 crores for the five years of the Fourth Plan with the export earnings in the last year of the Fourth Plan at Rs 1100 crores.

The Board felt that the achievement of the target would call for the adoption of an integrated and co-ordinated policy designed to ensure that the required quantities of commodities for export become available even if this might involve a certain measure of restraint on domestic consumption or a certain amount of discipline. Further, a high degree of co-ordination among the different Ministries of the Government of India as also between the Government of India and the State Governments would be required so that an integrated policy could be evolved and carried out without interruptions and breaks. It was also felt that in the achievement of the export targets the various public sector undertakings should play a definite role.

The Board was concerned to observe that the inflationary pressures that were developing in the economy might come in the way of larger exports. It suggested, therefore, that energetic measures should be taken to achieve some degree of price stabilisation with a view to reducing costs and making Indian exports competitive in the world markets.

★

Four US Loans to India

US Ambassador Chester Bowles announced on 7 August the authorisation of four long-term, low-interest loans totalling \$62.3 million (Rs 29.7 crores) to the Government of India to promote India's economic growth.

The largest of the loans is \$50 million for financing the import of commodities. The second loan, for \$7.2 million, is for the purchase of 25 broad gauge diesel locomotives, while the third credit, for \$3.1 million, will meet the foreign exchange costs of adding an 89,100-kilowatt generator to the Sharavathi Hydroelectric Pro-

ject in Mysore State. The last loan for \$2 million will finance the costs of obtaining the consulting services of US firms and individuals for government and private sector projects.

The \$50 million (Rs 23.8 crores) non-project loan will be used by the Government of India to finance the import of a broad variety of commodities needed to expand industrial production.

"This type of assistance," said Ambassador Bowles, "which is not tied to any specific project is particularly valuable to India's developing economy." Presently, shortage of raw materials and spare parts prevents many industries from operating at full capacity. The new loan will finance an increased flow of these supplies. Fuller utilisation of capacity will lower production costs and increase India's ability to expand its exports and earn foreign exchange which it can utilise to purchase the goods it requires from any country it chooses. "I would like to stress once again that the principal aim of our foreign aid programme to India is to help her create a self-sustaining viable economy," said Mr Bowles.

"Aid in the form of a commodity loan makes available some of the sinew and muscle which permits India to increase its industrial strength and production. It is 'non-project' in the sense that it is not designated by the Government of India for one or more specific industrial plants but is distributed through much of the total industrial capacity of the country—providing either components or semifinished and raw materials to some phase of India's production of adding special construction materials and new machinery necessary to plant expansion and the creation of new productive capacity."

With this announcement, the total of US non-project financing the Third Five Year Plan amounts to \$735 million (Rs 350 crores).

The new loan covers the import of steel, lubricants, machinery and machinery parts, sulphur, rubber, tyre cord, carbon black, caustic soda, insecticides, chemicals and a wide range of components and materials. Within these categories, the Government of India is free to set the amounts of imports according to the needs of the economy.

The \$7.2 million (Rs 3.4 crores) loan to the Indian railways is the sixth extended by USAID. It will finance the purchase of 25 broad gauge locomotives to be used in the Dhond-Manmad and Dhond-Sholapur-Wadi sections of the Central Railway in Maharashtra. These 2,600 horse power locomotives will be among the most powerful engines of their kind operating in India.

Because general goods traffic has grown so rapidly during the Third Plan, the Indian railways have

increased the target of diesel locomotives to be commissioned by the end of the plan from 299 to 407. Of these 407, earlier US loans are financing the supply of 299. With assistance provided by the US Export-Import Bank, the Varanasi Diesel Locomotive Factory is expected to produce 83 locomotives during the plan period. The remaining 25 of the 407 are financed by this latest loan. The Dhond-Manmad and the Dhond-Sholapur-Wadi sections have been selected by the Indian railways for dieselization because steam locomotives, which are slower than diesels, cannot move all the anticipated traffic in these steeply graded sections. Also, scarcity of water in the area during months makes steam operation difficult.

Rail traffic is increasing in the region because of greater movement of imports received through Bombay port, particularly food-grains, and a rise in demand for petroleum products in the Deccan

area.

The \$3.1 million (Rs 1.5 crore) loan to the Sharavathi Hydroelectric Project will meet the foreign exchange cost of installing a 89,100-kilowatt generator, the eighth to be commissioned in this vast undertaking, the largest producer of hydroelectric energy in Asia. The ultimate capacity of this entire project will exceed 1 million kilowatts. Earlier US credits, totalling Rs 47.3 crores, are financing the major costs of this project, which is expected to commence initial operation late this year.

The \$2 million (Rs 1 crore) loan to finance the services of American consulting firms and individual experts to provide assistance to agencies of the Government of India private firm; is the first such loan extended to India by the USAID.

With the growth and diversification of the Indian economy, there is an increasing need for obtaining the services of consult-

ing firms and experts for doing preliminary investigation work, for preparation of blueprints, and for general supervision and technical advice during construction of vitally needed projects. Increasingly, there is need for forward planning in a number of sectors so as to meet the developmental needs of the economy over a longer period. The services financed by this loan may be utilised in a wide variety of fields, including irrigation and power programmes, mining and industrial projects, communication facilities and transportation.

All the four loans have been extended by the US Agency for International Development. They are repayable in dollars over a 40-year period, with no repayments called for during the first ten-year grace period. They all carry interest at three quarters of one per cent annum during the grace period and two per cent per annum for the remaining 30 years.

Market NEWS and Trends

JUTE Pak Competition

BUOYANT conditions continued to prevail in the jute markets most of the time last week despite the imposition of margin restrictions on futures trading. This was because the restrictions on hedge trading only diverted speculative elements to the other jute markets where they were free to manipulate the prices according to their whims and fancies. However, this loophole has also been plugged by the East Indian Jute & Hessian Exchange by imposing margin restrictions on trading in TSD contracts in raw jute and jute goods with effect from 14 August. Heavy margins have been made applicable in raw jute basis Assam bottoms, Hessian 40" x 10 oz. and B Twills whenever the prices touch or exceed Rs 37.50, Rs 52.00 and Rs 133.00 respectively. Price limits at or beyond which margins will become payable have been specified

for other categories of goods and raw jute also. These stern measures had the desired effect of halting the speculative spree in the spot markets also. A contributory cause has been the reports of a declining trend in jute markets in Pakistan. Toward close of the week, prices again tended to firm up on vague rumours regarding some steps that might be taken to avert the situation created by the rising trend of stocks of jute goods with mills.

In the meantime, the Indian Jute Mills Association has drawn pointed attention to the need for taking urgent action to stem the growing competition of Pakistan if the Indian industry is to continue to fulfill its export targets. In a press note on the subject the IJMA says that the inherent advantages enjoyed by the Pakistani industry over its Indian counterpart are considerable. And these are made formidable by other advantages bestowed by direct Government assistance in the coun-

try. In the past few years, the Pakistani industry has grown rapidly and according to the IJMA it has at present a production capacity of 325,000 tons annually, or about 25 per cent of India's production. And the Pakistani industry continues to expand and it is expected that in the next eighteen months, production will increase by a further 20 per cent. The industry has plans for a much greater increase in output over the next three or four years. The fact that the Pakistani industry has been enjoying uninterrupted prosperity has enabled it to embark upon expansion programmes in quick succession. That the Government of Pakistan is giving all encouragement to its industry to expand and capture more and more markets is clear from the fact that it is prepared to pay an additional subsidy of about 10 per cent. It is imperative therefore that effective action should be taken to prevent further annexation of India's export markets by Pakistan. Already much valuable time has been lost and further delay will do irreparable damage to the cause of Indian jute goods exports. The IJMA therefore has urged the Government to devise a boldly conceived plan of assistance to the Indian Industry so that it can make concerted efforts to win back lost markets and obtain a fair share of any rising world demand.

The need for vigilance and continuing effort to popularise our jute goods in overseas markets is also underlined by the recent trend in hessian exports. For the time being hessian is doing quite well on the export front. In the year 1963-64, total exports of hessian increased to 609,000 tonnes from the previous year's level of 547,900 tonnes. A detailed analysis of exports countrywise however shows that Indian hessian's principal customer has begun to take diminishing interest. In 1960-61 the US imported 179,000 tonnes but the quantity increased smartly to 206,800 tonnes the next year and 248,200 tonnes in 1962-63. But in 1963-64 the quantity imported shows only a moderate increase at 257,700 tonnes. If despite the small increase in the off-take by US, the total exports have been considerably higher, it is because of increased buying by Russia, Canada, Argentina, and West European countries. The higher Canadian and Russian off-take may be attributed to the wheat deals between the two countries and hence it cannot be taken for granted that such high off-takes will be annual features. Any sizable decline in burlap consumption in US therefore cannot but cause concern. During the first seven months of the Calendar year 1964, consumption has declined by as much as 31.4 million yards as compared to the corresponding period of last year. At the end of July stocks of burlap in that

	(1,06.2)	(1,03.1)	(98.9)

sia, Canada, Argentina, and West European countries. The higher Canadian and Russian off-take may be attributed to the wheat deals between the two countries and hence it cannot be taken for granted that such high off-takes will be annual features. Any sizable decline in burlap consumption in US therefore cannot but cause concern. During the first seven months of the Calendar year 1964, consumption has declined by as much as 31.4 million yards as compared to the corresponding period of last year. At the end of July stocks of burlap in that

country have risen to 300 million yards. For some months now US buying of Indian hessian has only been on a modest scale. It is believed that the lower burlap consumption this year may be due to a swing to the use of substitutes. The recent sharp rise in prices of jute goods therefore does not augur well for increased off-take by consumers overseas and especially the US.

COTTON Bullish Trend

The upswing in the Jarilla August contract gathered further momentum during the past week and the contract registered substantial gains. The March contract, on the contrary, was subjected to violent fluctuations but maintained a generally firm trend. The tussle between the bulls and bears in the market was in full swing which resulted in the enhancement of the total volume of transactions. However, as the week drew its close, the buyers and sellers managed to make a settlement in respect of 1 lakh bale of cotton and thus limiting the outstandings against the maturing contract, obviously owing to the apprehension of the imposition of some drastic official measures. The bulls, however, continued to hold their sway in the market throughout the week. They derived inspiration from the unexpectedly low lenders received against the maturing contract despite the best endeavours of the bear syndicate to tender sizable quantities.

The August contract opened the week on an optimistic note and on account of hectic short-covering it crossed the permissible limit thereby attracting the special margin of Rs 75 per bale on the bulls. As the week progressed, news congenial to bulls start-flowing in. Survey results were strict and only tenders for 1,000 bales were issued on Thursday, taking the total for the week to 4,100 bales. Total tenders issued against the contract amounted to 14,850 bales.

The new contract met with good attention during the week under review. Reports of unpropitious rainfall and waterlogging in some of the cotton growing tracts of the country aided the contract to rule firm. After commencing the week at Rs 731.50 per three quintals the new contract moved up to Rs 734.50 before winding the week at Rs 731.75 on account of bull liquidation.

The spot market at Sewri witnessed only restricted activity during the week. Spinner interest was noticed in stray lots of domestic growth, especially CO 2, consequent upon the fears of serious damage to the crop on account of the heavy down pour in the cotton growing centres. Activity in the spot market is likely to remain insipid for another month due to understandable reasons.

Cotton interests in the country are anxiously awaiting the new season's export policy particularly due to the Export Advisory Committee's meeting scheduled to be convened by the middle of next month. It is probable that the trade might request the authorities to follow a liberal policy. However the most significant trade plea would be that for the abolition of export duty and sales tax on cotton and the reduction of rail freight in order to make Indian cotton more competitive in the international markets.

Export registrations as on 11 Aug. totalled 227,857 bales. This is considered to be a good performance and the trade is optimistic of promoting exports further if Government allow certain concessions as is done in Pakistan.

PIECEGOODS

Listless conditions prevailed in the cotton piecegoods marked during the week primarily because of the stringent conditions in the monetary market. Demand was

generally restricted and the off-take was a mere trickle.

The export section too was devoid of any brisk activity. Demand from the UK was limited to grey sheetings, satins and furnishing cloth and that destination accounted for a moderate quantum of these goods. Encouraging enquiries emanated from Singapore for bleached voiles, mulls and dorais while demand from East Africa was at a low ebb.

TEA Crop Output Improves

ACCORDING to the figures released by the Indian Tea Association, production of tea in North-East India, at 98.11 million pounds, has exceeded the output in the corresponding month of last year by 6.35 million pounds. During the current season, up to the end of July 1964, total production amounts to 226.58 million pounds.

showing a rise of 30.95 million pounds, over that for the corresponding period of last year.

Since the output in North India has so far been larger than that in the corresponding period of 1963, there is a growing feeling that there will be an adequate supply of Common teas. The drop in production in South India does not seem to have influenced the buyers, who have been cautious in taking poor grades. They have tended to restrict their purchases to meet only their immediate requirements as far as these grades are concerned.

Meanwhile, exports of North-East Indian tea have increased to 31.97 million pounds in July from 24.79 million pounds in the corresponding month of last year. Shipments to the UK, the largest buyer, rose from 17.3 million pounds in July 1963 to 24.59 million pounds in the month under review. Among the outmarkets, supplies to Russia rose by 430,000 pounds to 1.67 million pounds, whereas those to the USA were practically unchanged at 1.32 million pounds.

It's transparently clear—
HPG sheet glass
is the finest in India

You can be sure that HPG sheet glass is flawless, because it is thoroughly tested for quality at every stage of manufacture. Only HPG sheet glass is manufactured by the exclusive PPG process. ■ This ensures a really smooth surface and minimum distortion of light passing through it. HPG sheet glass is manufactured in full technical collaboration with Pilkington Brothers of UK—people who have been making glass for more than a century. ■ Always specify HPG sheet glass for your home or office!

When you buy HPG you buy
Quality and Reliability

JWTHP 1836

In the Export Sale held in Calcutta this week, offerings consisted of 66,000 packages of Leaf grades. There was quite a good but irregular demand although the general tone of the market was not quite as strong as last week. The best CTC teas were again sought after; but others were a little irregular with prices tending in buyers' favour. Legg-cut varieties also showed an easier tendency. Orthodox BOPs and OFs were easier with buyers following quality; but the better Assam Broken and Fannings grades were sold readily at about last rates. Plain varieties tended easier.

Whole Leaf grades came to a fair market; but prices were often below last week's levels especially for the higher-priced sorts. Darjeelings were readily absorbed at around last rates. Following rates (per kilo) were quoted:—Clean Plain Pekoe Rs 5.10 to Rs 5.50; Plain BP Rs 4.25 to Rs 4.50; Plain Fannings Rs 4.10 to Rs 4.30; Medium Assam CTC BP Rs 5.90 to Rs 6.50; Medium Assam CTC Fannings Rs 5.80 to Rs 6.30; Best Assam CTC BP Rs 6.80 to Rs 7.80 and Best Assam CTC Fannings Rs 6.80 to Rs 7.80.

In the Internal sale, offerings consisted of 30,644 packages of Dusts. Demand was good, but less general and prices again ruled easier. All clean CTC teas continued the decline of the previous week and were often 30p, and sometimes further, below valuations. Plain orthodox teas were a little easier; but bright liquoring Assam descriptions were sold well. Legg-cuts were a strong feature of the sale and may be quoted dearer. Following rates (per kg) were quoted:—Plain Orthodox Dust Rs 4.20 to Rs 4.40; Medium Assam Dust Rs 4.90 to Rs 5.70; Legg-cut Dust Rs 5.00 to Rs 5.30; Medium Assam CTC Dust Rs 5.10 to Rs 5.70 and Good Assam CTC Dust Rs 6.20 to Rs 6.60.

In the sale held at Cochin last week, offerings totalled 3.21 lakh kgs of dusts for internal consumption. The market opened with a strong general demand, which continued throughout the sale. Mediums were well-supported and were irregularly firm to dearer. Highgrowns met with keen competition and were sold at much dearer rates. Clean black grainy descriptions also shared in the general trend of the market. The best orthodox descriptions were strong and dearer, while others were fully firm. The poorer kinds in this category, however, did not receive the same support.

In the sale held this week, a quantity of 680,000 kg of Leaf tea was offered for export. Quality was similar to the last sale with the Nilgiris showing a slight improvement. The market met with useful demand. Following rates were quoted:—Low Mediums Rs 4.00 to Rs 4.20 (Rs 4.00 to Rs 4.30); Mediums Rs 4.20 to Rs 4.50 (Rs 4.20 to Rs 4.55); Good Mediums Rs 4.55 to Rs 5.20 (Rs 4.50 to Rs 5.40) and Nilgiri BOP Rs 4.60 to Rs 7.30 (Rs 4.90 to Rs 8.10). Figures within brackets were for the corresponding week of last year.

In London auction, Ceylon and South Indian tea offerings totalled

33,195 packages and 7,380 packages respectively. For Ceylonese teas, a strong demand at very firm to occasionally dearer prices prevailed for all grades except the thin liquoring and plainest mediums which were irregularly easier. Lowgrown BOPs were firm; but BOP Fannings were barely steady. Among the South Indian teas, few best liquoring teas were sold well at firm rates; but the poorer descriptions were generally lower and often neglected. The next sale for the North Indian and other miscellaneous teas will be held on 24 August.

Tea stocks in London, as on 7 August, were lower at 114.44 million pounds as against 117.21 million pounds in the preceding week. The total quantity, to be landed on the same date, was 13.60 million pounds. Total afloat was 19.25 million pounds including from Calcutta 8.31 million pounds; from Chittagong nil; from Cochin 2.39 million pounds; from Ceylon 7.91 million pounds and from other Ports 663,860 pounds.

Firmness in Non-Ferrous Metals

IN the Bombay market, prices of all Non-Ferrous Metals have continued to display a firmer tendency. The main contributory factors are the reported shortage of stocks, paucity of fresh supplies, higher advices from upcountry centres and prospects of smaller receipts from foreign countries. Copper Coil is quoted at Rs 419 to Rs 421; Blister at Rs 370 to Rs 370; Zinc at Rs 339 to Rs 345; Lead at Rs 285 to Rs 295 and Tin at Rs 297 to Rs 308.

On the London Metal Exchange, the main centre of attention has been Copper and the concern over supplies has lifted the prices to an eight-year high of £379½ per ton. At one point, the market was clearly worried at the turn of events in Rhodesia where the producers were forced to declare "force majeure" after a railway strike had interfered with supplies reaching the market.

In the case of Zinc, only routine business is reported and the metal is reported to be spending most of the time in the shadow of copper. Lead has had an even week though falling slightly from its higher point. Tin has been showing a steady rise, mostly due to reported cessation of mining in the Manono area of the Congo and the absence of further cash selling from the influential quarter with smelter associations.

RUBBER Supply Declines

According to the figures released by the Rubber Board, the total supply of natural rubber in the country, during May, fell to 21,052 metric tons (including an opening stock of 16,129 metric tons and the imports of 1,898 metric tons) from

21,131 metric tons in the preceding month.

On the other hand, consumption of natural rubber at 4,840 metric tons in May is also lower than the previous month's intake by 162 metric tons. As the shortfall in demand was greater than the contraction in the total supply, stocks of natural rubber with estates, dealers and manufacturers were larger at 16,212 metric tons as against 16,129 metric tons at the end of April.

Besides, synthetic rubber stocks, at the end of May, amounted to 3,470 metric tons as against 2,832 tons at the end of the previous month. Thus, total stocks, at the end of May, amounted to as much as 19,682 metric tons as against only 15,369 metric tons at the end of May, 1963.

COFFEE Receipts and Releases

The figures, released by the Coffee Board, reveal that, up to the end of July 1964, the receipts of the 1963-64 crop in the Pool were higher at 67,989 tonnes (54,964) made up of 28,398 tonnes (24,312) of Plantation variety; 10,394 tonnes (9,121) of Arabica Cherry and 29,197 tonnes (21,501) of Robusta. Figures shown within brackets indicate the corresponding receipts into the Pool last year.

During July 1964, a total quantity of 3,079 tonnes (2,873), comprising 1,020 tonnes of Plantation; 467 tonnes of Arabica Cherry and 1,592 tonnes of Robusta were released in the internal market, bringing the total for the period January/July 1964 to 19,320 tonnes as against 19,231 tonnes in the corresponding period of last year.

Including the quantity sold at the export auction on 12 August, a total quantity of 24,057 tonnes out of the 1963-64 were sold for export. A quantity of 1,503 tonnes—200 tonnes of Plantation, 358 tonnes of Arabica Cherry and 945 tonnes of Robusta—will be put up at the export auction, to be held on 27 August.

DYES AND CHEMICALS Steady Conditions

Prices in the Bombay Dyes and Chemicals markets remained generally steady. In the Chemicals section, Soda Ash and Sodium hydro sulphite presented a steadier tendency on sustained consumer interest in the face of tight supply position. Supplies from the producers as well as imports are reported to have dwindled to some extent.

Camphor has strengthened further, thanks to sustained enquiries from South India. Supplies and stocks are reported to be insufficient. Mercury and Menthols are well maintained.

In the Dyes section, price movements were confined to narrow limits. Naphthols have continued to be firmly held due to tight supply position and inadequate arrivals from the manufacturers.

OILS AND OILSEEDS

Spot Section Weak

Trading in the Bombay Oilseeds market was generally dull. Although the price fall in futures was not noticeable as such the current levels barely attracted dealers to expand their commitments. There was a distinct fall in spot groundnut prices.

Trading in Castorseed was not possible as the September contract had pierced the ceiling set by the authorities. Only stray buying was reported in the spot section where the bold variety was quoted at Rs 39.25 per 50 kg. No enquiry from overseas buyers was reported for castor oil.

Apart from sporadic enquiries from the speculators, Linseed futures were not much in demand. Prices in the spot section remained, however, unchanged.

In the Madras market, the volume of business continued to remain restricted. Arrivals were about 25 tons a day and these were taken up by small crushers. The rate for the summer crop was quoted at Rs 110 per bag of 80 kgs, while Coromandel variety was quoted at Rs 116. Arrivals in the South and North Arcot districts were 250 to 300 tons a day and there were absorbed by local crushers.

In the Groundnut Oil section, vanaspati interests continued to indicate a level of Rs 429 per quintal. This rate was not workable to the sellers and therefore business was not possible. There was very little offering from the crushers in the South, as the entire production of oil was absorbed by the retail sellers.

SILK

Prices of the Government filatures silk in the Mysore State maintained a steady market. Kisan silk ruled firm at Rs 108.00 per kg; whereas Cottage basin silk declined both in the minimum and maximum to range between Rs 77.16 and Rs 90.39 per kg.

A downward trend was observed in the prices of Charka raw silk. Superfine, 1st, 2nd, 3rd qualities and Dupion (Charka) had a fall to rule between Rs 82.67 and Rs 87.07; Rs 72.75 and Rs 77.16; Rs 69.45 and Rs 72.45; Rs 67.25 and Rs 68.31 and between Rs 22.05 and Rs 35.27 per kg respectively.

Prices of Spun silk yarn remained unchanged.

As regards the reeling cocoons, the Siddaghatta market had a fall both in the minimum and maximum to range between Rs 3.50 and Rs 6.00 per kg; whereas the Mugur market had a rise only in the minimum to rule between Rs 3.00 and Rs 4.25 per kg. The Channapattina variety was in demand between Rs 2.00 and Rs 3.75 per kg.

In the case of seed cocoons, the foreign variety had a rise only in the minimum to rule between Rs 5.00 and Rs 12.00 per thousand; whereas the Mysore variety had a fall only in the minimum to rule between Rs 4.25 and Rs 6.50 per thousand.

Chemicals & Fibres:—(1

In the Export Sale held in Calcutta this week, offerings consisted of 66,000 packages of Leaf grades. There was quite a good but irregular demand although the general tone of the market was not quite as strong as last week. The best CTC teas were again sought after; but others were a little irregular with prices tending in buyers' favour. Legg-cut varieties also showed an easier tendency. Orthodox BOPs and OFs were easier with buyers following quality; but the better Assam Broken and Fannings grades were sold readily at about last rates. Plainer varieties tended easier.

Whole Leaf grades came to a fair market; but prices were often below last week's levels especially for the higher-priced sorts. Darjeelings were readily absorbed at around last rates. Following rates (per kilo) were quoted:—Clean Plain Pekoe Rs 5.10 to Rs 5.50; Plain BP Rs 4.25 to Rs 4.50; Plain Fannings Rs 4.10 to Rs 4.30; Medium Assam CTC BP Rs 5.90 to Rs 6.50; Medium Assam CTC Fannings Rs 5.80 to Rs 6.30; Best Assam CTC BP Rs 6.80 to Rs 7.80 and Best Assam CTC Fannings Rs 6.80 to Rs 7.80.

In the Internal sale, offerings consisted of 30,644 packages of Dusts. Demand was good, but less general and prices again ruled easier. All clean CTC teas continued the decline of the previous week and were often 30p. and sometimes further, below valuations. Plain orthodox teas were a little easier; but bright liquoring Assam descriptions were sold well. Legg-cuts were a strong feature of the sale and may be quoted dearer. Following rates (per kg) were quoted:—Plain Orthodox Dust Rs 4.20 to Rs 4.40; Medium Assam Dust Rs 4.90 to Rs 5.70; Legg-cut Dust Rs 5.00 to Rs 5.50; Medium Assam CTC Dust Rs 5.40 to Rs 5.70 and Good Assam CTC Dust Rs 6.20 to Rs 6.60.

In the sale held at Cochin last week, offerings totalled 3.21 lakh kgs of dusts for internal consumption. The market opened with a strong general demand, which continued throughout the sale. Mediums were well-supported and were irregularly firm to dearer. Highgrowns met with keen competition and were sold at much dearer rates. Clean black grainy descriptions also shared in the general trend of the market. The best orthodox descriptions were strong and dearer, while others were fully firm. The poorer kinds in this category, however, did not receive the same support.

In the sale held this week, a quantity of 680,000 kg of Leaf tea was offered for export. Quality was similar to the last sale with the Nilgiris showing a slight improvement. The market met with useful demand. Following rates were quoted:—Low Mediums Rs 4.00 to Rs 4.20 (Rs 4.00 to Rs 4.30); Mediums Rs 4.20 to Rs 4.50 (Rs 4.20 to Rs 4.55); Good Mediums Rs 4.55 to Rs 5.20 (Rs 4.50 to Rs 5.40) and Nilgiri BOP Rs 4.60 to Rs 7.30 (Rs 4.90 to Rs 8.10). Figures within brackets were for the corresponding week of last year.

In London auction, Ceylon and South Indian tea offerings totalled

33,195 packages and 7,380 packages respectively. For Ceylonese teas, a strong demand at very firm to occasionally dearer prices prevailed for all grades except the thin liquoring and plainer mediums which were irregularly easier. Lowgrown BOPs were firm; but BOP Fannings were barely steady. Among the South Indian teas, few best liquoring teas were sold well at firm rates; but the poorer descriptions were generally lower and often neglected. The next sale for the North Indian and other miscellaneous teas will be held on 24 August.

Tea stocks in London, as on 7 August, were lower at 114.44 million pounds as against 117.21 million pounds in the preceding week. The total quantity, to be landed on the same date, was 13.60 million pounds. Total afloat was 19.25 million pounds including from Calcutta 8.31 million pounds; from Chittagong nil; from Cochin 2.39 million pounds; from Ceylon 7.91 million pounds and from other Ports 663,860 pounds.

Firmness in Non-Ferrous Metals

IN the Bombay market, prices of all Non-Ferrous Metals have continued to display a firmer tendency. The main contributory factors are the reported shortage of stocks, paucity of fresh supplies, higher advices from upcountry centres and prospects of smaller receipts from foreign countries. Copper Coil is quoted at Rs 319 to Rs 321; Blister at 363 to Rs 370; Zinc at Rs 339 to Rs 345; Lead at Rs 285 to Rs 295 and Tin at Rs 297 to Rs 308.

On the London Metal Exchange, the main centre of attention has been Copper and the concern over supplies has lifted the prices to an eight-year high of £379½ per ton. At one point, the market was clearly worried at the turn of events in Rhodesia where the producers were forced to declare "force majeure" after a railway strike had interfered with supplies reaching the market.

In the case of Zinc, only routine business is reported and the metal is reported to be spending most of the time in the shadow of copper. Lead has had an even week though falling slightly from its higher point. Tin has been showing a steady rise, mostly due to reported cessation of mining in the Manono area of the Congo and the absence of further cash selling from the influential quarter with smelter associations.

RUBBER Supply Declines

According to the figures released by the Rubber Board, the total supply of natural rubber in the country, during May, fell to 21,052 metric tons (including an opening stock of 16,129 metric tons and the imports of 1,898 metric tons) from

21,131 metric tons in the preceding month.

On the other hand, consumption of natural rubber at 4,810 metric tons in May is also lower than the previous month's offtake by 162 metric tons. As the shortfall in demand was greater than the contraction in the total supply, stocks of natural rubber with estates, dealers and manufacturers were larger at 16,212 metric tons as against 16,129 metric tons at the end of April.

Besides, synthetic rubber stocks, at the end of May, amounted to 3,470 metric tons as against 2,832 tons at the end of the previous month. Thus, total stocks, at the end of May, amounted to as much as 19,682 metric tons as against only 15,369 metric tons at the end of May, 1963.

COFFEE Receipts and Releases

The figures, released by the Coffee Board, reveal that, up to the end of July 1964, the receipts of the 1963-64 crop in the Pool were higher at 67,989 tonnes (54,964), made up of 28,398 tonnes (24,312) of Plantation variety; 10,394 tonnes (9,121) of Arabica Cherry and 29,197 tonnes (21,501) of Robusta. Figures shown within brackets indicate the corresponding receipts into the Pool last year.

During July 1964, a total quantity of 3,079 tonnes (2,873), comprising 1,020 tonnes of Plantation; 467 tonnes of Arabica Cherry and 1,592 tonnes of Robusta were released in the internal market, bringing the total for the period January/July 1964 to 19,320 tonnes as against 19,231 tonnes in the corresponding period of last year.

Including the quantity sold at the export auction on 12 August, a total quantity of 24,057 tonnes out of the 1963-64 were sold for export. A quantity of 1,503 tonnes—200 tonnes of Plantation, 358 tonnes of Arabica Cherry and 945 tonnes of Robusta—will be put up at the export auction, to be held on 27 August.

DYES AND CHEMICALS Steady Conditions

Prices in the Bombay Dyes and Chemicals markets remained generally steady. In the Chemicals section, Soda Ash and Sodium hydro sulphite presented a steadier tendency on sustained consumer interest in the face of tight supply position. Supplies from the producers as well as imports are reported to have dwindled to some extent.

Camphor has strengthened further, thanks to sustained enquiries from South India. Supplies and stocks are reported to be insufficient. Mercury and Menthols are well maintained.

In the Dyes section, price movements were confined to narrow limits. Naphthols have continued to be firmly held due to tight supply position and inadequate arrivals from the manufacturers.

OILS AND OILSEEDS

Spot Section Weak

Trading in the Bombay Oilseeds market was generally dull. Although the price fall in futures was not noticeable as such the current levels barely attracted dealers to expand their commitments. There was a distinct fall in spot groundnut prices.

Trading in Castorseed was not possible as the September contract had pierced the ceiling set by the authorities. Only stray buying was reported in the spot section where the bold variety was quoted at Rs 39.25 per 50 kg. No enquiry from overseas buyers was reported for castor oil.

Apart from sporadic enquiries from the speculators, Linseed futures were not much in demand. Prices in the spot section remained, however, unchanged.

In the Madras market, the volume of business continued to remain restricted. Arrivals were about 25 tons a day and these were taken up by small crushers. The rate for the summer crop was quoted at Rs 110 per bag of 80 kgs, while Coromandel variety was quoted at Rs 116. Arrivals in the South and North Arcot districts were 250 to 300 tons a day and there were absorbed by local crushers.

In the Groundnut Oil section, vanaspati interests continued to indicate a level of Rs 429 per quintal. This rate was not workable to the sellers and therefore business was not possible. There was very little offering from the crushers in the South, as the entire production of oil was absorbed by the retail sellers.

SILK

Prices of the Government filatures silk in the Mysore State maintained a steady market. Kisan silk ruled firm at Rs 108.00 per kg; whereas Cottage basin silk declined both in the minimum and maximum to range between Rs 77.16 and Rs 90.39 per kg.

A downward trend was observed in the prices of Charka raw silk. Superfine, 1st, 2nd, 3rd qualities and Dupion (Charka) had a fall to rule between Rs 82.67 and Rs 87.07; Rs 72.75 and Rs 77.16, Rs 69.45 and Rs 72.45; Rs 67.25 and Rs 68.31 and between Rs 22.05 and Rs 35.27 per kg respectively.

Prices of Spun silk yarn remained unchanged.

As regards the reeling cocoons, the Siddaghatta market had a fall both in the minimum and maximum to range between Rs 3.50 and Rs 6.00 per kg; whereas the Mugur market had a rise only in the minimum to rule between Rs 3.00 and Rs 4.25 per kg. The Channapattana variety was in demand between Rs 2.00 and Rs 3.75 per kg.

In the case of seed cocoons, the foreign variety had a rise only in the minimum to rule between Rs 5.00 and Rs 12.00 per thousand; whereas the Mysore variety had a fall only in the minimum to rule between Rs 4.25 and Rs 6.50 per thousand.

For the INVESTOR

INVESTMENT GOSSIP

Need for Caution

THE improved sentiment prevailing in the stock market for the past few days seems to be mainly due to a belief that before long steps will be taken by the Government to revive the capital market. There have also been contributory factors such as the bright prospects for expansion of the steel plants in the private sector, encouraging corporate news, and the excellent response for the Unit scheme. The fact that the Unit Trust has announced that the sale price of the units of Rs 10 each will be Rs 10.35 each, representing a premium of 3.5 per cent has imparted fresh strength to the market. According to a press note issued by the Trust the sale price will be determined and announced daily. Up to 3 August the Trust has received 75,000 applications for the purchase of the units and there has been a steady flow of applications thereafter. Since the bulk of the applications range from Rs 100 to Rs 1,000, it is evident that the response to the scheme has been mainly from small and middle income investors. With large funds at its disposal it is only to be expected that the Trust will make substantial investment in equities.

Even so, the fact that the improvement in values is mainly confined to the more speculative issues indicates that genuine investors are keeping to the sidelines. This is not surprising because there are still too many uncertainties in the investment situation. In the first place, although concerted action is being taken, the food supply position continues to be far from satisfactory. The steep rise in prices of most essential commodities has already given rise to demands for higher wages all over the country. There is also the persistent demand of labour for the early implementation of the Bonus Award. Higher wage and bonus liability will increase the cost of production of industry and the inevitable result will be a further reduction in corporate profits.

INVESTMENT SPECIAL

Everest Refrigerants

EVEREST Refrigerants Limited will be in the market with a public issue of Rs 25 lakhs, comprising 1,90,000 equity shares of Rs 10 each at par and 6,000—9.3 per cent cumulative redeemable preference shares of Rs

100 each at par. The directors and their friends have already subscribed for a capital of Rs 25 lakhs—Rs 19 lakhs in equity and Rs 6 lakhs in preference. The foreign collaborators, Technical Enterprises Inc., will subscribe for Rs 10 lakhs in 1,00,000 equity shares. The subscription list will open on 24 August and close on 29 August, but not before 27 August.

The Company will undertake the manufacture and sale of fluorochloromethane gas like Freon, hydrofluoric acid, carbon tetrachloride, aluminium fluoride and aerosol composition. The factory will be situated at Andheri. The project is to be financed from share capital of Rs 60 lakhs and a loan of Rs 60 lakhs approved by the United States of America acting through the Agency for International Development (Cooley fund).

The plant is expected to go into production by the middle of 1965. The company hopes to attain full production in three years. As for aerosol, the company will attain 50 per cent production in the first year, 75 per cent in the second year and 100 per cent in the third year. In regard to other gases, it will be 75 per cent in the first year, 87.5 per cent in the second year and 100 per cent in the third year. When in full production, the company hopes to attain a turnover of Rs 2 crores.

Import licences for capital goods have been obtained and shipments of capital goods have commenced. The project is essentially for the manufacture of new items which are so far not manufactured in India. Of the two units licensed for the manufacture of similar chemicals, this is the first plant which has taken effective steps to implement the project. As equity partners, the foreign collaborators will be helping on a continued basis in the working of the project.

With the commencement of production of this new industrial undertaking, substantial reduction in imports of refrigerants like Freon and industrial and other propellants like Aerosol compositions can be confidently expected.

NEW ISSUE NOTES

CIMMCO

Sutlej Cotton Mills Limited, Amritsar, is offering for sale 27,000—8.57 per cent cumulative redeemable preference shares of Rs 100 each full-paid in Central India Machinery Manufacturing Company

Limited at Rs 92 a share (ex-dividend for the year ended 31 March, 1964). The offer will be open from 24 to 28 August. The said shares will be redeemed at par on 31 March, 1976, if not redeemed earlier. The entire shares offered have been underwritten.

Glass Carboys

Glass Carboys and Pressedwares Limited is offering for public subscription Rs 17.50 lakhs consisting of 1,25,000 equity shares of Rs 10 each and 50,000—9.5 per cent redeemable cumulative preference shares of Rs 10 each, both issued at par. The subscription list will open on 20 August and close on 31 August or earlier, but not before 22 August. The authorised capital is Rs 50 lakhs and the issued capital is Rs 25 lakhs.

The entire public issue has been underwritten. The directors and their friends have taken up 75,000 equity shares. The company has obtained an industrial licence for setting a factory for the manufacture of 4,200 tons per annum of glass carboys and glass pressedwares such as glass bricks, tiles and electrical fittings. The actual output planned is 3,600 tons a year on the basis of 80 per cent efficiency. The factory will be situated at Ambernath, near Bombay. The total cost of the project is estimated at Rs 45.56 lakhs.

NOCI

National Organic Chemical Industries Limited, Bombay, is to issue share capital of Rs 10 crores in equity shares of Rs 100 each for cash, at par. Of this, shares of the value of Rs 3.34 crores will be subscribed in sterling by Shell International Chemical Company Limited, UK. Out of the balance, Rs 3.40 crores approximately will be subscribed by the Mafatlal group, their friends and associates and the balance of Rs 3.26 crores will be offered to the public. The capital will be utilised in establishing a naptha cracker unit and the manufacture of organic and inorganic chemicals at Thana-Belapur area of Maharashtra.

Polyolefins

Polyolefins Industries Limited, Bombay, will be issuing capital of Rs 3.60 crores in equity shares of Rs 100 each. All the shares will be issued for cash at par and Rs 1.20 crores will be subscribed in DM currency

by Farbwerke Hoechst AG, West Germany; Rs 1,17,60,000 will be offered to the public by prospectus and the balance of Rs 1,22,40,000 will be subscribed privately. The money will be utilised in the manufacture of high density polyethylene, polyethylene products and Ziegler Catalysts.

Chowgule Steamships

Chowgule Steamships Limited, Goa, is to issue further capital of Rs 1 crore, divided into 1,00,000 equity shares of Rs 100 each, to be issued privately for cash at par. The capital will be utilised in meeting the company's commitments in acquiring ships.

Tractors & Bulldozers

Tractors & Bulldozers Limited, Baroda (a private company converted to public one on 19 January, 1964), engaged in the manufacture of Zetor Diesel Agricultural Tractors, is to issue further capital of Rs 50 lakhs in equity shares of Rs 100 each, for cash, at par. Out of this issue, approximately Rs 35 lakhs will be offered to the public by prospectus. The capital will be utilised for financing expansion of the existing activities of the company.

ECEC

The Electric Construction and Equipment Company, Limited has decided to approach the Government for a further issue of 15,500—9.3 per cent Redeemable Cumulative Preference shares of Rs 100 each, to be issued at par, to the existing preference shareholders in the ratio of one for one and 2,55,000 equity shares of Rs 10 each, to be issued at par, to the existing equity shareholders in the ratio of one for every three equity shares, as may be decided by the Controller of Capital Issues. Application has been made in this respect.

BONUS ISSUE NOTES
TOMCO

The Tata Oil Mills Company Limited, Bombay, is to issue Rs 35,03,750 bonus capital in 1,40,150 equity shares of Rs 25 each, to be issued as bonus shares on capitalisation of Share Premium Account. The bonus shares will be issued in the proportion of one for every three equity shares held.

4½ PER CENT
WEST BENGAL LOAN, 1976

Issue Price Rs. 99.75

Opens on August 24, 1964

The loan will be closed without notice as soon as total subscriptions amount approximately to Rs. 7 crores and in any case not later than the close of business on the 29th August, 1964.

The loan will be issued in the form of—

- (1) Stock, the applicants for which will be given Stock Certificates, or
- (2) Promissory Notes, which will be issued in denominations of Rs. 100, Rs. 500, Rs. 1,000 Rs. 5,000, Rs. 10,000, Rs. 25,000, Rs. 50,000 and Rs. 1,00,000.

Applications for the loan must be for Rs. 100 or for a multiple of that sum.

Subscriptions may be in the form of cash/cheque or Securities of 4½ per cent West Bengal Loan, 1964.

Securities of the 4 per cent West Bengal Loan, 1964 will be accepted at par in payment of subscription to the 4½ per cent West Bengal Loan, 1976.

Applications will be received at—

- (a) The offices of the Reserve Bank of India, Bangalore, Bombay, (Fort and Byculla), Calcutta, Madras, Nagpur and New Delhi;
- (b) The branch of the State Bank of India at Patna;
- (c) The branch of the State Bank of Hyderabad at Hyderabad; and
- (d) The branches of the State Bank of India within the State of West Bengal except in Calcutta.

Full particulars and application forms are available from any of the offices mentioned above.

W.B. (P) ADV-D 3983/64, dt. 4-8-64

INVESTMENT NOTES

Indo-Berolina

A new construction and engineering company under the name and style Indo-Berolina Industries Private Limited will be registered in Bombay shortly to provide an integrated facility in all phases of engineering and construction of modern plants such as petroleum, chemicals, petrochemicals and other industrial plants. The company is being floated in collaboration with a well-known US firm on a 50 per cent capital participation.

AP Paper Mills

It is expected that the Andhra Pradesh Paper Mills Limited, which is being promoted as a joint venture by the Andhra Pradesh Government and West Coast Paper Mills, will be coming on the market towards the end of this year with a public issue of Rs 1.16 crores consisting of preference capital for Rs 50 lakhs and equity capital for Rs 66 lakhs. The issued capital will actually be Rs 3 crores. The Andhra Pradesh Government will take up equity shares for Rs 55 lakhs and preference shares for an equal amount.

The investment of West Coast Paper Mills will be for a substantial amount in equity shares. The expanded capacity of the Rajahmundry plant will be 70 tonnes daily; but it is the intention to raise the capacity to 100 tonnes a day as adequate supplies of bamboo will be available from nearby sources. The cost of the project is estimated at Rs 7 crores. Over and above the issued capital, an amount of Rs 4 crores is expected to be secured through loans and deferred credit.

Southern Structurals

The directors of Southern Structurals Limited have proposed the conversion of 2,00,000—7.5 cumulative preference shares of Rs 10 each remaining unissued into 9.3 per cent redeemable cumulative preference shares with the option to convert them into equity shares after 1 January, 1968, but before the end of the year. These preference shares will be offered to the existing equity shareholders in the proportion of one share for every four shares held. The unconverted shares will be redeemable from 1970.

BALANCE-SHEET REVIEWS

Aluminium Corporation Does Well

In J. K. group, the Aluminium Corporation of India Limited has done well during the year ended 31 March 1964. According to the preliminary report released by the company, the profit for the year is higher at Rs 63.38 lakhs as against Rs 46.78 lakhs for the previous year.

In respect of allocations, a sum of Rs 23.70 lakhs (Rs 16.20 lakhs) is set apart for Depreciation; Rs 12.71 lakhs (Rs 12.39 lakhs) for Development Rebate Reserve and Rs 1.27 lakhs (Rs 2.27 lakhs) for taxation in respect of previous years. A sum of Rs 13.00 lakhs from the

profit and loss account and Rs 12.39 lakhs from Development Rebate account making a total of Rs 25.39 lakhs is added to General Reserves against Rs 17.00 lakhs previously. The directors have proposed to recommend a taxable dividend of 9 per cent taxable, on the equity shares. This compares with a taxable dividend of only five per cent paid previously. Transfer books will remain closed from 12 to 21 September 1964.

Ganges Jute Earns Less

In the same managing agency group, the Ganges Jute Manufacturing Company Limited has, however, reported a lower profit of Rs 63.80 lakhs for the year ended 31 March 1964 as against Rs 90.84 lakhs for 1962-63. After adding Rs 6.50 lakhs (nil) being excess provision for taxation in previous years written back, Rs 12.23 lakhs (Rs 6.61 lakhs) is provided for depreciation; Rs 18.50 lakhs (Rs 51.00 lakhs) for Taxation and Rs 7.11 lakhs (Rs 3.28 lakhs) for Development Rebate Reserve. A sum of Rs 16.03 lakhs from the profit and loss account, Rs 3.28 lakhs from Development Rebate Fund and Rs 26,180 from Dividend Reserve making a total of Rs 19.57 lakhs is transferred to General Reserve against Rs 13.92 lakhs previously. The amount carried forward to next year is higher at Rs 43,666 against Rs 16,267 brought in. The directors have proposed to maintain the dividend on the ordinary shares at 20 per cent, subject to tax.

Jardine Henderson Pays Same

According to a preliminary report issued by Jardine Henderson Limited for the year ended 31 March 1964, the profit and loss account reveals a balance profit of Rs 44.78 lakhs as against Rs 41.88 lakhs for the preceding year. Adding Rs 3.91 lakhs being profit on realisation of investments, there is an available sum of Rs 48.69 lakhs.

The following appropriations are made: — Rs 17.24 lakhs for Taxation; Rs 2,750 for Development Rebate Reserve; Rs 13.24 lakhs for General Reserve and Rs 1.68 lakhs against Goodwill written off, leaving a balance of Rs 16.50 lakhs. The directors have proposed to repeat the dividend on the ordinary shares at 7 per cent, subject to tax, payable to those shareholders registered as on 29 September 1964. Transbooks will remain closed from 16 to 29 September.

More from Frank Ross

Thanks to the rise in sales from Rs 49.71 lakhs to Rs 57.06 lakhs, Frank Ross & Company Limited has reported a net profit after providing for Depreciation and taxation, of Rs 47,957 for the year ended 29 February 1964 as against Rs 43,101 for the preceding year.

Depreciation is raised to Rs 21,21 from Rs 20,589 and Taxation to Rs 1.22 lakhs from Rs 43,000, while Development Rebate Reserve is lowered to Rs 994 from Rs 1,371. The directors have proposed to raise the dividend on the equity shares from 4.16 per cent to 5.00 per cent, subject to tax. Annual general meeting will be held on the 31 August.

STOCK EXCHANGES
Initial Buoyancy :
Subsequent Profit-Taking

INDUSTRIAL shares on various stock exchanges have disclosed remarkable buoyancy. Despite profit-taking sales and lack of support at higher levels, the undertone remains fully steady.

Wide fluctuations in prices characterised the week's trading on Lyons Range.

The rally on Dalal Street made further progress; but the higher levels attracted realising pressure.

The Madras Stock Exchange remained fairly active.

After a smart recovery early in the week, industrials on the Ahmedabad Stock Exchange suffered a mild setback at the close.

Turnover on the Delhi Stock Exchange was good and the undertone was fully steady.

Most of the leaders on the London Stock Exchange managed to recover part of their recent losses and the undertone at the close was quite firm.

Wall Street was still awaiting developments in auto-industry contract negotiations, and the stock market remained confined to a large fractional range.

The persistent flow of encouraging corporate news, sustained hopes of some suitable modifications in the fiscal policy and the prospects of some liberalisation in imports of essential raw materials continued to be the main stimulating factors.

Even investors were inclined to be optimistic, as the feeling was gaining ground that the budget for the coming year might contain some constructive features. At the same time, the good response to the units of the Unit Trust and the decision to increase the prices of the units seemed to have been bullishly interpreted. It was thought that, with a bigger flow of funds into the units, the Unit Trust would take greater interest in industrial equities.

However, operators were reluctant to go in for big commitments, especially when the bulk of trading was confined to the forward list and the volume of business in the cash section was still far from normal. The disquieting military situation

in South East Asia was also another factor which restrained follow-through buying.

The market for Gilt-edged securities remained generally dull, as investors seemed to have conserved their funds to subscribe to the State Government loans.

Bank shares were a steady feature. In the Jute section, there was a marked contraction in turnover. There was a growing concern about the rising trends of raw jute prices and the poor demand for jute goods from overseas buyers, especially for sackings.

In sympathy with the general trend of the market, Coal shares displayed a hardening tendency. Burakur met with business at Rs 16.50 to Rs 16.69.

There was little doing in the Tea section.

Sugar shares came in for selective enquiry.

Textile shares came in for selective support on the prospect that there would be more abundant supply of raw cotton during the current year.

The lead to the buoyancy in the market was mainly given by Steel shares. The prospect of the expansion plans of the steel companies being completed on a satisfactory basis and the expectation that the Government might adopt a helpful policy in regard to financing of these schemes were responsible for the buoyancy in Indian Irons which, after recording a new high of Rs 26.52 from Rs 25.28, finished the week at the former level due to sustained profit-taking. In sympathy, G. K. Williams moved up to Rs 25.06 from Rs 23.44 (Rs 24.25); TEXMACO up to Rs 27.65 from Rs 27 (Rs 27.05); Jay Engineering up to Rs 17.69 from Rs 16.94 (Rs 17.65); Jessop up to Rs 21.31 from Rs 20.87 (Rs 21.12) and Burn up to Rs 288 from Rs 264 (Rs 284). Figures shown within brackets were the week's closing rates.

Miscellaneous issues moved in sympathy with the general trend of the market. Following were the price trends of a few selected shares:

	As on Week's Closing		
	14 Aug.	High	Close

Foreign News

BRITAIN

TWENTIETH CENTURY OIL
RUSH

The great oil rush is on in Britain, or rather off the coast of Britain. The floating rigs are swinging into position as some 25 industrial giants smartly clocked in the week ended 21 July for production licences to explore for oil or gas, or both under Britain's continental shelf in the North Sea.

It is a multi-million pound sterling gamble, this world-wide scramble for oil in 100-square-mile blocks under the North Sea. Whoever wins from it—and companies and consortia are sinking millions in their beliefs that deposits exist in Britain's 100,000-square-mile shelf—the UK is not likely to be the loser.

A big find could transform the entire economy of the country, for oil and petrol imports into Britain last year totalled £561 million. It would also make Britain independent of the politically unstable Middle East, including Iraq and Kuwait where British companies hold stakes in oil.

First of the Middle East countries to nationalise oil was Iran, and never to this day has the country regained its position as top area producer. They were the first country in the Middle East to discover oil, thanks to British enterprise, and the economy of the country now floats on oil. But it has its stormy passages as the political pendulum swings right and left, with prime minister succeeding prime minister to support the rocking peacock throne of the Shah of Persia.

What is the cost of staking a claim for oil off Britain's coast? For a start an exploration licence costs £1,000 a year and £25 per square kilometre for a production licence lasting six years. The British Government will take 12½ per cent royalties of any oil or gas produced.

But this is peanuts to what it will actually cost to search for oil or gas. BP alone (they have prospected for oil in all corners of the earth) is spending £5½ million on test drilling.

Most of the other companies are not going it alone. Britain's chemical giant, ICI, sixth on the list as one of the 50 largest companies in Europe, has joined with Burmah Oil and the Murphy Corporation of the US, while rival Courtaulds, (synthetic fibres and furnishings), are in a syndicate including Phillips of the US, Petrofina of Belgium, and AGIP of Italy. Additionally there is a French oil group, a consortium of three American firms with one German.

HOVERING ON AIR CUSHION

While the oilmen are sinking their millions below the waters of the North Sea, transport pioneers are seeking ways of moving around—above the waters.

Mr. J. H. Russell, director of a new £100 company, Airway Transport, Ltd., wants to float cars on a cushion of air above some of Britain's disused inland waterways.

Projected is a £7 million scheme for 80-mile-an-hour hovercars between Paddington, in London, and the international airport 16 miles outside the capital. The hovercars, travelling at 40-second intervals, would link the two places in 20 minutes flat. They would ride on concrete tracks laid on the bed of the Grand junction Canal which, say the sponsors, is losing £250,000 a year anyway.

Meanwhile advocates of the monorail or suspended railway—the third dimension to travel—contend their system is the answer to the traffic problem. All this behind-the-scenes enterprise now going on in Britain can only be for the good of all.

THE TOBACCO COMPANIES

Diversification in Britain's tobacco industry has taken another step forward with the announcement by Imperial Tobacco of its setting up of a teaching machine company, Educational and Scientific Developments. In September Imperial Tobacco will open a teaching establishment for industrial education.

Apart from many interests in companies closely allied to the tobacco industry like engineering and paper making, Imperial took a step into a completely different field when in 1960 it bought a controlling interest in the Golden Wonder Crisp Company.

British-American Tobacco Company, Ltd., has £24½ million invested outside the tobacco industry. The biggest slice of this is invested in the paper giant Wiggins Teape, but the company also has interests in a German manufacturer of fruit juices and a pastoral company in Australia.

The declared policy of British-American is that although tobacco will remain its principal interest the company will continue to look for outside projects and they have now taken in ice cream.

MOTOR CYCLING BOOM

Motor cyclists and scooter enthusiasts in Britain are likely this year to top the two million mark for the first time. So popular has the motor cycle and scooter become that in the last ten years the number of riders has increased from 1,037,000 in 1953 to 1,847,000 last year.

AUSTRALIA

POINTERS TO PROSPERITY

Most company reports released in Australia in June show increased earnings, which reflect the nation's current prosperity trends.

On the business front, a continuing rise in advances by the trading banks indicates that industry is using more funds for development and expansion. Advances rose £24,800,000 to £1,152,800,000 during May. Fixed deposits showed a record rise of £44,700,000 to £739,200,000 during the month.

As a result of the growth and development of the short-term money market, the Reserve Bank has removed the limits on the funds which accredited dealers may hold in the future. In its five years of life the market has become a vital force in finance and investment. In the week to June 17, the market held £1,58,300,000 and a loss of £4,700,000 over the previous week was ascribed to a diversion of funds for tax payments, usual at this time of the financial year.

The sound state of the agricultural industry was responsible for higher profits by implement-makers like New Holland (Asia) Pty. Ltd., and the Massey-Ferguson group.

Tractor and grain-sowing equipment sales in all States have been well ahead of 1963 figures and show that farmers are enjoying increased incomes.

Among the primary industries, sugar is enjoying a boom. The commercial editor of the MELBOURNE HERALD pointed out that the value of the annual sugar production had more than doubled in the last 10 years, having risen from £55,000,000 to more than £110,000,000.

Profits of the nine publicly-listed companies operating in the sugar industry have risen sharply. Six of them made bonus issues to shareholders in the latest year.

Developments are coming fast in the minerals industry. The general drive for new deposits of base metals, prospecting on the vast iron ore fields of Western Australia, and competition by bauxite processors for rights on the bauxite deposits of the Gove peninsula in the Northern Territory are features of the most important era in the minerals industry in modern times.

BASIC WAGE INCREASE

A judgment by the Federal Conciliation and Arbitration Commission in June increased the Australian basic wage by £1 a week and is expected eventually to benefit 3,200,000 wage earners. The new basic wage rates for the different capital cities are: Melbourne, £15 7s.; Sydney, £15 15s.; Brisbane, £14 10s.; Adelaide, £15 3s.; Hobart, £15 14s.; and Perth, £15 8s. The President of

The boom in Britain has resulted in grater export earnings, and motor cycle exports from the UK, together with components, are now nearly £1 million up for the first five months of this year compared with the same period two years ago.

The world-wide demand for the high-powered motor cycles for which Britain is famous is reflected in the export earnings of £3,338,368 for January to May. In 1963 in the same period export earnings were just over £2½ million.

AID FOR DEVELOPING
COUNTRIES

Financed by donations from British industry and also a grant from the Ford Foundation, Britain's Overseas Development Institute reported recently on the study of development problems in the "new" countries.

"The need for assistance for speedy development is one of the imperatives of this age," says the report. The process of assisting that development is not one for governments alone, and there have been attempts to make a reappraisal of the role played by free-enterprise industries.

"It is clear," says the report "that external assistance of development is not purely a government-to-government matter. Private investment in developing countries (which in Britain's case runs as high as the official aid programmes) is of crucial importance."

THREE-MILLION-YEAR
PROCESS NOW TAKES DAYS

British industry has perfected a method of producing quartz crystals in 21 days compared with the natural process of of three million years. The new production technique is the result of 18 months' continuous research and brings Britain to the fore as the only country in Europe capable of producing quartz on a commercial basis. Small quartz crystals are placed on frames in a steel cylinder, which is then filled with caustic soda and minute quartz chips. The temperature in the cylinder is increased to 400 degree Centigrade and the pressure brought up to 24,000-30,000 pounds a square inch. Convection currents cause the crystals on frames to grow like a stalactite as the chips, now dissolved in the caustic soda, wash against them.

After 21 days of this treatment the crystal has grown to about a pound in weight. Standard Telephones and Cables, of Harlow, Essex, the originators of the system, produce quartz crystals for use in radio transmitters and export throughout Europe. "This new method," explained William McMillan, a spokesman for the company, "is cheaper than buying the quartz from Brazil."

the Associated Chamber of Commerce of Australia, Mr R. V. Allison, estimated that the decision would add more than £120,000,000 to production costs.

The Commission, however, stated that it had concluded that the economy was buoyant in all its aspects. The Commission did not think it would be fixing a just and reasonable basic wage if it did not act on the present state of the economy, which was expanding and buoyant and with no positive signs of inflation.

The wage increases come at a time when employment is at a high level. Figures for unemployment fell by 4631 to 49,783 during May—the largest fall for this month in 17 years. The unemployment figure is equal to 1.1 per cent of the work force.

SHORT TERM MONEY MARKET FREE OF LIMITS

The Reserve Bank of Australia has removed the limits on the total of loans that may be accepted by the nine dealers on the short-term money market.

The Bank stated that the limits were mainly precautionary measures designed to ensure that development and growth of the market had no undesirable effects on the Government securities market, and that growth was not at too fast a rate.

It had always been intended that, subject to observance of appropriate financial standards as defined by the Bank, the market would in due course be allowed to find its own level.

From time to time, limits had been raised, and the market had now developed to a stage where the scale of operations could be determined by market considerations.

The rise in funds held is an indication of the growth of the market in five years of operations. At the end of June 1959, the market held about £50,000,000. This rose each year to £130,000,000 in June 1963. The highest recorded level reached by loans was £174,700,000 in March this year.

It is believed, however, that funds have touched the £180,000,000 limit on some trading days.

WORLD SHORTAGE OF BASE METALS

Known world reserves of lead, zinc, copper, tin and other base metals would not last the century out, according to Dr. John A. Dunn, one of Australia's leading mineral economists.

People had not realised that there was a shortage looming because in the past there had always been an ample supply of metals, said Dr. Dunn. But since World War II the world had consumed as much base metal as was used in the whole of its previous history. By the end of the cen-

tury consumption would have doubled and the world's reserves would not last that long.

There was already a shortage of tin, and stockpiles of this metal, built up in the United States of America in the last decade, were now being called upon. If it had not been for these stockpiles there would have been serious problems. Mineral groups would find new deposits, but would face enormous exploration costs.

Earlier, Dr Dunn had told members of the Australian Shareholders' Association in Melbourne that world tin production could not be expected to rise to an adequate level to meet demand for the next two or three years. The high price level was stimulating development of many tin deposits in Australia. Local production this year might reach 3,000 tons, which would still be below the annual consumption of 5500 tons.

1963-64, A GOOD YEAR FOR AUSTRALIA

The 1963-64 financial year brought some substantial economic achievements in Australia. Exports were a record at £1,383,900,000 and the expanding economy and rising standards of living pushed imports to a new peak of £1,186,400,000.

Increased overseas buying of Australian wool, sugar, oil, coal, dried and canned fruits, dairy produce and meat all contributed to the record export total. Increase in imports occurred in most classes of commodities, including food-stuffs, oils, metals, metal goods and machinery, and chemicals.

In only one month did the value of imports exceed that of exports: there was a deficit of £1,000,000 in August.

It was a good year for Government finance. Total loan raisings at £317,700,000 were the highest Australia has raised. Increased individual income tax payments were a major factor in reversing the Federal Government's estimate from a deficit to a surplus. The increase of about £30,000,000 in these payments reflected the buoyant state of business and employment.

The share market responded to the general expansion, with base metals recording the greatest appreciation. Industries more closely related to the domestic scene, such as the automotive group, transport and building, showed substantial rises. Of the leading group indices, automobiles rose by 39.9 per cent and transport by 38.2 per cent. The various textile groups were the only ones that did not respond to the general rise.

Returns from wool seem certain to be at the highest level since 1950-51. It is expected that when the figures are released they will show earnings of more than £480,000,000, about £100,000,000 more than 1959-60.

Among the companies, General Motors-Holden's Pty. Ltd., announced the highest profit ever recorded by an Australian public company—£19,200,000. This eclipsed the previous peak figure of £16,300,000 by Broken Hill Pty. Co. Ltd. Others in the automotive group, like Ford and Volkswagen, which incurred heavy expenditure on expansion, did not do so well. But both of these companies are engaged in projects which should result in increased earnings on a continually expanding market.

Another notable company profit was that of Imperial Chemical Industries of Australia and New Zealand Ltd., which earned £2,527,000 for six months' trading.

The value of all new buildings approved during the year will be easily a new record. This is indicated by the fact that for the 11 months ended May the value of approved buildings exceeded by £44,730,000 the record of £658,175,000 approved during the 1962-63 financial year.

STRONG SHARE MARKET

The end of the financial year in Australia brought a strong recovery of share market values. In Sydney, the various groups, with the exception of textiles, recorded appreciable rises for the year. Base metals were up 57 per cent, the automotive group 39.9 per cent, transport 38.2 per cent, building 22.8 per cent, and food and drink 19.8 per cent. Fuel and light, electrical, retailers, and banks are others which showed noticeable increases. "All ordinaries" were up by 15.9 per cent and industrial by 17.9 per cent.

In Melbourne, the market closed for the year on a bright note, with a strong showing by market leaders. On the last day turnover increased from 465,000 shares on the previous day to 591,000. The value of industrial turnover rose from £370,080 to £476,000.

MOTOR INDUSTRY EXPANSION

Recent annual reports by the leading car manufacturers in Australia show that the industry is at present spending £160,000,000 on expansion. The current year will see allocation of about £40,000,000 of this sum.

General Motors-Holden's Pty. Ltd., Ford and Volkswagen, are among the leaders in these moves. Their programmes will lift production capacity in the trade by over 30 per cent in the next two or three years. Local content of the various vehicles will also be increased considerably.

General Motors-Holden's plants at Fishermen's Bend and Dandenong, in the State of Victoria, and at Woodville and Elizabeth, in the State of South Australia, and plants in the States of Queensland and New South Wales, are all being enlarged. The company's rated manufacturing capacity will

increase to 160,000. Holden cars annually, plus 2000 other makes. Progressive increases will bring production to 175,000 Holdens by 1966.

Ford's rated capacity of about 280 Falcons and Cortinas a day will rise to about 400 units by the end of this year.

Volkswagen expects to spend about £14,000,000 from now to the end of 1967. Local content of the vehicle will be increased and rated capacity will move up from about 3000 units a month to about 3800 by the end of 1967.

Chrysler and British Motor Corporation (Aust.) Pty. Ltd. are others spending big sums to increase output.

MODERN PAPER MACHINES

Associated Pulp and Paper Mills Ltd., is planning to instal two machines to increase quality production of its paper at its expanded mill at Ballarat, in the State of Victoria. A paper coating unit will impart a high glaze to the coated paper manufactured, and a new cutting machine will be installed. This will not only cut the paper into sheets, but at the same time, by a method of electronic scanning, inspect it for any faults that might cause damage to printing presses.

BANK ADVANCES AND DEPOSITS

Trading bank advances in Australia continued to rise strongly in June when they increased sharply by £13,800,000 to a record £1,166,600,000, indicating that business and industry are using more funds for expansion and development. During 1963-64 advances by the major banks rose by £65,400,000. Deposits also rose by £265,700,000.

The director of the Australian Bankers' Association Research Directorate, Mr R. B. Cameron, said the latest rise in deposits contrasted with a rise of only £99,200,000 in 1962-63. The latest year's rise in the deposits included an increase of £135,800,000 in bank fixed deposits.

BIG RETURNS FROM WOOL

Australian wool sales returned £447,282,637 for the 1963-64 season, one of the highest annual returns in recent years. Last year the clip was valued at £359,695,646. Demand for wool, so important to the Australian economy, showed on signs of falling.

In the season just ended the average price for greasy wool was 69.70d, compared with last year's 58.96d. The last mentioned price had risen from 54.13d in the previous year.

The Australian Wool Board has recommended to the Wool Industry Conference the introduction of a reserve price scheme within the existing system of marketing by auctions. It proposed establish-

ment of a new authority, with a fund of about £80,000,000 to buy any wool which failed to attract bids above a specified price.

SHIPBUILDING ACTIVITY

Ships worth at least £10,000,000 will be built in Australia during the next 12 months, the Chairman of the Australian Shipbuilding Board, Mr C. V. Gray, stated in July. At December 1963 Australia had 148 vessels of 793,590 tons deadweight in its trading fleet.

Among the ships being built are two bulk carriers, each of 21,400 tons deadweight, at the shipyards of the Broken Hill Pty. Co. Ltd., (BHP) at Whyalla, South Australia.

The Australian National Line, which operates 16 bulk ships of modern design, has called tenders for four bulk carriers, and two vehicular type ferries, and there is much activity in the Australian shipbuilding industry generally.

The Queensland State Government has decided to contribute more than £500,000 to the expansion programme of Evans Deakin's Brisbane shipyards. Modernisation and expansion of these yards will enable the company to construct ships up to 50,000 tons.

NEW IRON ORE PROJECT

The Colonial Sugar Refining Co. Ltd., (CSR) is joining the big American Metals Climax (Inc) of the United States in a £50,000,000 project to develop huge iron ore deposits in the north-west of Western Australia. The two companies are negotiating an agreement with the Western Australian State Government over the deposits, which are about 240 miles south of Port Hedland and 1400 miles north of Perth, the State capital.

The Australian company is taking a 45 per cent interest in the venture. The American interests estimate that it will cost more than £50,000,000 to develop the deposits and to build a 260 mile standard gauge railway and new port facilities near Port Hedland. Through a wholly-owned subsidiary, Mount Newman Iron Ore Ltd., it has been carrying out an intensive proving and feasibility programme since late last year.

PLAN TO EXPORT CAR PLANTS

An Australian company is planning to export complete car manufacturing plants to developing Asian countries. It hopes to tap a rapidly expanding market with a locally made car, which is inexpensive to purchase and to run.

The firm is Lightburn and Co. Ltd., of Camden, South Australia, and its vehicle is the Zeta, a fibre-glass runabout which is already in production in Camden and marketed in Australia.

The company said that the cost of a package deal car plant for export would be about £250,000. The price covered the cost of putting up the building and supplying technicians to get a production line under way. Where an existing building was available the cost would be £150,000.

A survey of the Asian market had shown that there was a growing market for a low-priced car, particularly among workers in the £15 to £20 a week class.

COTTON TEXTILE TRADE

Conditions in the Australian cotton textile industry were improving, according to the AUSTRALIAN FINANCIAL REVIEW, which recently drew attention to a 23 per cent increase in cotton yarn production in May 1964 compared with the figures for that month in 1963.

There was also an 18 per cent rise in output of woven cloth (including cotton towelling). While woven rayon output continued to rise, production of synthetic fibre showed a decline.

Increased production of cotton yarn did not necessarily go hand in hand with higher profits. This was because many companies had been compelled to instal new plant to hold their profit margins.

EEC

TAX REFORM

The executive Commission of the Common Market has submitted a modified version of its plan prepared in 1962 for the harmonization of the turnover tax system applicable in the six partner countries, and has thus initiated the second phase in a round of discussions aiming at the elimination of tax borders inside the Common Market.

These tax borders have emerged ever more detrimentally with the progress of the process eliminating traditional trade barriers—internal tariffs have been reduced by 60 per cent, quotas have been eliminated entirely. In internal Community trade price differences between goods have arisen that are produced at the same production cost rate, mainly only due to the differences in indirect taxation, i.e., taxes levied on imports and tax refunds granted on exports.

The adaptation of these tax rates, according to the proposal of the EEC Commission, is to be attained by the introduction of the added-value tax system. This system—which in the past was only applied in France—as compared with what is known as the multiphase or all-phase tax system—has the following advantage: The usual turnover tax is charged on sales value in a form of an identical percentage on every production or trade stage. As,

however, the ratio of sales value and actual profit is highly different, this tax will burden enterprises with unequal burdens. Large companies, for example, will have a relatively smaller turnover tax burden to bear, than small and specialized suppliers working as subcontractors of large organizations.

The added-value tax, however, will be flexibly adapted to the given operation of the enterprise: the tax will be lower, if the total profit is lower; and it will be higher, if the total profit is higher. The differences in the tax burden of large companies and small enterprises will therefore, be reduced. This advantage is referred to by the term "competitive neutrality" in the respective discussions.

Basically the EEC has agreed on the introduction of the added-value tax; the Council of Ministers will deal with the tax of the Commission before this year is out. The Commission at present is charged with drafting regulations for the application of the tax reform. It will announce a detailed draft of these regulations before the end of March, 1965. The Commission is of the view that the turnover tax reform laws will be resolved by the EEC Council, and will be accepted by the Parliament of the Six by the end of 1967, and will finally enter into force on 1 January, 1970.

SWEDEN

INDUSTRIAL OUTPUT

Sweden's industrial production in May was 6 per cent higher than in the same month of 1963, according to the Central Bureau of Statistics. The production index was registered at 352 points (1935=100) as against 333 in May last year. The seasonally adjusted index figure was 332 compared with 322 in April this year.

5 PER CENT RISE IN CAR SALES

Sales of new cars in Sweden in the first six months of this year were 5 per cent larger than in January-June 1963, rising from 113,523 to 119,290 units. Most-selling model is the Volvo 120 Amazon, up from 14,575 to 17,027, followed by Volkswagen 1200 whose sales dropped from 14,542 to 12,713. Saab, in third place, was down from 12,226 to 11,584, while Opel Rekord dropped from 12,332 to 9,207.

DEPOSITS IN COMMERCIAL BANKS

Deposits in Sweden's commercial banks decreased by Kr 151 million to Kr. 24,259 million (\$4,850,000,000) during the first six months of 1964 while advances showed an increase of Kr 1,150 million to Kr 20,498 million. This

compares with an increase during the same time last year of Kr 395 million and Kr 2,186 million respectively.

COMPANY RESULTS

The sales of Swedish companies rose by 7 per cent in 1963 as compared with only 4 per cent at current prices in 1962, according to a survey published in the latest issue of the Skandinaviska Banken Quarterly Review. The study is based on an analysis of the annual reports of 100 major joint-stock companies.

Of the companies under review, department stores showed the largest increase in turnover last year, 18 per cent. Next followed forest-industry companies with 9 per cent as against a decline of 4 per cent in the preceding year. For the engineering industry the rise was 8 per cent compared with 6 per cent in 1962. The steel works and the shipyards suffered from the depressed market situation which continued into 1963, their sales increase being a mere 3 per cent after a 2 per cent rise in 1962.

Total employment was down 2.3 per cent. The total wage bill, including pensions, rose by 5.5 per cent after an increase of 10.5 per cent in 1962.

Earnings before depreciation, taxes and profit allocations showed a slight upward trend after heavy decline in 1962. In relation to turnover, however, earnings amounted to only 13 per cent, as against 13.7 per cent in 1962 and 15.9 per cent in 1961.

The companies' gross savings—earnings minus dividends and taxes—remained their principal source of new capital for maintaining and developing capacity. For 1962 and 1963 gross savings accounted for 54 per cent of the supply of additional capital. Including the net value of dividends received and other extraordinary income, the degree of self-financing of the companies may be estimated at 65 per cent, while— in spite of the brisk activity on the capital market in the last few years—only about 30 per cent of the requirements of new capital was covered by loans or share issues.

PAPER OUTPUT

Sweden's production of paper and board showed an increase of 11 per cent in 1963 according to recently published official figures for the full year. Overall output was 2,672,000 tons as against 2,405,000 tons in 1962.

The largest increase, 150,000 tons, was noted for kraft paper and kraftliner which reached a total of 940,000 tons. Production of newsprint increased by 13,000 tons to 642,000 tons, sulphite paper by 19,000 to 187,000 tons, grease-proof and pergamin by 1,000 to 37,000 tons, writings by 5,000 to 159,000 tons.

Development of Small Scale Industries

The Union Minister for Industry and Supply, Mr H. C. Dasappa, called for a new approach for the development of small-scale industries in the country.

Opening a two-day meeting of the Small-Scale Industries Board in New Delhi, Mr Dasappa put forth a four-point programme for re-orientation of future growth of small-scale industrial sector in the country viz., devising ways and means for utilising the production capacities already created in different lines, after a careful expert assessment; examination of the capacities available in different industry groups to see whether it is not possible to divert them to the production of end-products of a higher national priority; exploration of the possibilities of producing defence requirements and participation in the export drive, so that they might earn their own foreign exchange.

The Minister said that, in future, the growth of those small-scale industries which depended upon scarce raw materials would have to be on a regulated selective basis. Only this way would it be possible to ensure that available foreign exchange was put to maximum advantage and that new entrepreneurs were not put to difficulties in procuring raw materials.

SCREENING COMMITTEES

Mr Dasappa said that while he did not envisage any rigid system of licensing for small-scale units, it would be necessary to have Screening Committees at the State or Central levels which would scrutinise applications for setting up units dependent on scarce raw materials. The Minister said that once such schemes were approved by these committees, the unit should be assured of supply of raw materials for one-shift working, in the same way as units in the Scheduled Sector.

Mr Dasappa said that from this it would not, however, be correct to form any impression that this meant the future development of small scale sector would be seriously restricted. The growth of small-scale industries using non-scarce raw materials, he said, would continue to be free. The area of this activity was very large and would go on increasing.

NEWS CLASS

Tracing the rapid growth of small-scale industries in the country over the last one decade, the Minister said that the programme of development had been initiated by Mr T. T. Krishnamachari, who had injected into it his characteristic zeal and drive. Mr Krishnamachari, he said, had boldly fore-

seen that by this means the capital and human resources, which were lying dormant at the middle levels could be pressed into service and small scale sector developed. The programme had caught the imagination of the people and a new entrepreneurial class drawn from the middle and lower levels of society had come into being. As a result, there had now emerged in this country a new and growing body or progressive, self-reliant entrepreneurs, playing a vital role in industrial development.

Reviewing the growth of small-scale units during the last ten years, Mr Dasappa said that there were at present over 57,000 small scale units registered with the various State Directorates of Industries. The number of non-registered small scale factories which availed of facilities from Central Small Industries Organisation had been estimated at about 2 to 2.5 lakhs. Even the limited data available on the production and employment potential of this sector showed that the gross value of output in the small-scale sector was about Rs 1,400 crores or about 31 per cent of total output in the industrial sector. Significant as this was, the Minister said, the actual contribution of the small-scale sector was much higher.

The Minister said that beginning with the comparatively simple items of manufacture, the small-scale sector had now showed its capacity to handle more complex items, particularly in the metal working and machinery industries. In 1960, the metal working and machinery units had a total output of Rs 281 crores. In fabricated metal products, small-scale units produced over 60 per cent of the total output and in non-electrical machinery their contribution was over 46 per cent of total output.

During the last three or four years, Mr Dasappa said, the small scale sector had taken a step in another important new direction. Significant progress had been made in non-engineering industries like chemicals, particularly paints, pesticides, plastics etc. As the indigenous production of intermediates and raw materials for these industries increased, there would be further sizeable growth in these lines.

SHORTAGE OF MATERIALS

Referring to the shortage of raw materials as one of the most acute problems facing the small scale sector, the Minister said that this was the natural result of the vigorous development of this sector. For the current year, he said, the foreign exchange alloca-

tion had been improved and would be of the order of Rs 14 crores. For the future, while he was hopeful of some further increase, basically foreign exchange for the small scale sector would continue to fall short of its requirements.

Referring to steel-based industries, the Minister pointed out that dispatches of steel to small scale industries had been on the increase. He would endeavour further to raise the allocation to secure an improvement of the position.

The small scale industries, he said, were participating in a big way in Government's Stores Purchase Programme. Over 13,000 units had so far been enlisted under this programme and that the purchase of the DGS&D from these venturers had almost been doubling every year during the last four years. Nineteen public sector undertakings were now participating in this programme and efforts were being made continuously to induce more and more public sector undertakings to participate in this programme. Small scale units were also being introduced to the DGS&D for supply of defence requirements.

Referring to the machinery hire-purchase operations of the National Small Industries Corporation, the Minister said that the Corporation had now again started accepting fresh applications for import of machinery. Efforts were being made, he said, to allocate further funds to the Corporation, so that they could accept applications for imported machines of the order of Rs 2 crores every year.

INDUSTRIAL ESTATES

The industrial estate programme, he said, was progressing reasonably well. Certain defects and shortcomings in the working of this programme had been looked into and corrective action taken. The Minister said that efforts were being made to find additional sources. The Life In-

surance Corporation of India had agreed to advance long term loans to co-operative societies or joint stock companies constructing industrial estates. Necessary formalities in this regard had been completed and nine industrial estates had so far been recommended for assistance by the respective State Governments.

A number of industrial estates were also being set up in the co-operative sector. Of these, twenty had started functioning and five were under construction. The 'functional industrial estate', he said, was becoming popular and six States were constructing such estates.

The Minister referred to the important need of development of ancillaries and said that measures should be devised to induce each large scale undertaking, both in private and public sectors, to examine their production and purchases programme so as to farm out components to competent small-scale units.

The Minister disclosed that as a measure of further assistance to development of industries in the rural areas an amount of Rs 40 lakhs in foreign exchange had recently been earmarked. Another Rs 25 lakhs in foreign exchange had been earmarked for the import of steel for use in such areas.

Concluding, the Minister said that the experience of Small Scale Industry's development during the last decade had unmistakably proved that units in this sector, given a certain amount of initial assistance, could become viable and self-reliant. They showed promise of vigorous growth and if afforded the benefits flowing from modern technology, the sector had the ability to take advantage of the scope for further development in sophisticated fields. The small scale movement had demonstrated in a significant way that a new middle class entrepreneurship could be brought in, in continuously increasing measure, both in numbers and quality.

ESIC

Symbol of Social Security

V. N. Rajan

The objective of "Social Security" is to alleviate, through the endeavours of the community, as a whole, physical or economic distress occasioned to any individual member—physical distress due to illness or disablement and economic distress due to the reduction or the loss of earnings because of sickness, maternity, disablement or death.

The objective can be achieved by a self-balancing scheme of social insurance or by public assistance (i.e., out of public revenues) or a combination of the two me-

tions of the population, availability of material and human resources etc.

In India, February 24, 1952 may well be regarded as the beginning of a planned social security system. On that day, the Employees' State Insurance Scheme was inaugurated in Kanpur by the late Prime Minister Jawaharlal Nehru; simultaneously, the Scheme was also introduced in Delhi. About 1,50,000 workers were covered in the two centres.

The Employees' State Insurance Act has since been extended from time to time in various industrial centres all over the country except in Gujarat, where it is expected to be enforced later this year. At present, there are over 27 lakhs insured workers served by the Employees' State Insurance Corporation (popularly known as ESIC) in over 200 centres. Under the scheme, medical care is being provided not only to the workers but also, in most centres, to members of their families; about 97 lakhs men, women and children are so benefited.

FIVE BENEFITS

The ESI Scheme affords five benefits (referred to as "Panch Deep" or five lights)—four in cash (against sickness, disablement, maternity and death) and the fifth, medical care, in kind. Cash benefits under the scheme are disbursed directly by ESIC through about 340 local and pay offices. The administration of medical benefit is the statutory responsibility of State Governments, ESIC paying seven-eighths of the cost, where families are also given medical care, and three-fourth of the cost, where such facilities are provided only to insured persons. In Delhi, however, ESIC has assumed the responsibility of medical care to insured persons and their families.

Sickness benefit is paid at a rate equivalent to about 7/12 of the daily wage rate for a maximum period of 56 days during any continuous period of 365 days, subject to fulfilment of certain contributory conditions. In case of certain specified diseases of a protracted character, like tuberculosis and leprosy, the benefit is further extended for 309 days. Maternity benefit is payable for a period of 12 weeks, at a rate double the sickness benefit rate ordinarily this is a little more than the full daily wages of the insured woman.

Disablement benefit and dependants' benefit are also cash payments for accidents or death originating from injury while at work. There are no contributory conditions and no limit on their duration—the risks starting from the moment of entry into insurable employment. The benefit rate for temporary disablement (temporary incapacity requiring medical treatment) is 7/12 of the normal wage of an insured person

and for permanent disablement (permanent loss of earning capacity), at a percentage of the temporary disablement rate, proportionate to the degree of loss of earning capacity suffered.

Dependants' benefit is payable to the eligible dependants of an insured person, who dies as a result of 'employment injury'.

MEDICAL ASSISTANCE

Medical benefit is, by far, the most important of the activities of the Corporation. No contribution is called for getting medical benefit—a person is entitled to it from the time he is insured by the ESI Scheme. Members of his family become eligible three months thereafter.

Insured persons are entitled to full medical care, including hospitalization. While the objective of ESIC is to afford full medical care to families of the insured this target must depend on the workers also, the fulfilment of construction and commissioning of several Dispensaries and Hospitals, which have been planned. In some of the States, only restricted (but-door) medical care is provided. In several States, however, it has been possible to arrange 'expanded' medical care, which accords all facilities short of hospitalization (e.g. laboratory investigations, radiological examinations, specialists' consultations, ambulance services).

It is hoped that before the end of the Third Five-Year Plan, full medical care will be available to families of the workers in several industrial centres.

Some measures of rehabilitation, though on a modest scale, have also recently been provided by the ESIC. These include provision of artificial limbs to insured workers, supply of tri-cycles, provision of artificial dentures, spectacles and hearing aids, wherever necessary. Free remittance of cash benefits by money order, reimbursement of conveyance charges for visiting specialists' centres or appearing before medical boards are also allowed.

ESIC derives its resources from contributions from employers and employees. Employers pay 2½ per cent of the wage-roll in areas where the scheme is implemented and ¾ per cent in other areas; employees pay varying amounts according to their wage-group, the average incidence being a little less than 2½ per cent of wages.

The budget for 1964-65 envisages a revenue of Rs 1723 lakhs. The main expenditure relates to cash benefits and payments to State Governments as ESIC's share of medical care.

During 1963-64, ESIC spent about Rs 540 lakhs on cash benefits and about Rs 550 lakhs on medical care. During 1964-65, the figures are expected to rise to Rs 618 lakhs and Rs 700 lakhs respectively.

Aviation

TWA

Trans World Airlines ordered 20 Douglas DC-9 Twin-Engine Jets with an option for 20 more. The signing ceremony at the Douglas Aircraft Company Plant at Long Beach California by TWA President, Charles C. Tillinghast, Jr, Donald W. Douglas, Sr, Chairman of Douglas and Donald W. Douglas Jr, President, signaled the largest order to date for the short-range Jetliner. Mr Tillinghast said delivery of the short-range Jets will commence early in 1966 with all 20 in operation by early 1967.

Total Cost of the 20-plane program including spare engines, maintenance equipment, flight simulator and personnel training will total \$6.2 million dollars he said. The program will be financed through bank borrowing and retained earnings he added. The first DC-9 is scheduled for roll-out next February and start of flight testing in March. It is designed for swift economical service over short-route segments and operation into smaller airports.

Powered by two Pratt and Whitney JT8D-5 Turbofan Engines, the aircraft will develop up to 24,000 pounds of thrust on take-off and operate from airports having runway lengths of only 5,000 feet.

It will cruise at 560 MPH, fly at altitudes up to 30,000 feet and operate most economically over distances ranging from 56 in all-first class configuration up to 83 in all-coach seating arrangement.

This airplane will enable TWA to offer travellers the same features of speed and comfort on short hauls as we offer with our large trans-continental and trans-atlantic Jets, said Mr Tillinghast. We are taking this action a full year earlier than initially planned and it may mean that TWA will be the first major airline to offer its passengers an All-Jet service. We expect to retire the last of our Piston-Powered Aircraft, four-engine constellations from passenger service within two years.

Distinctive features of the DC-9 include the aft mounting of the two engines one on either side of the fuselage and its high-level horizontal stabilizer, tail wing, mounted atop the rudder assembly. Its wingspan is 87 feet, 8 feet shorter than the venerable DC-3 which TWA helped to develop in the early 1930s.

Douglas Aircraft says its production schedule calls for turning out four planes a month by March 1966 with 22 Aircraft ready for delivery at that time and production of eight units monthly by the end of the year.

The 20 DC-9s are part of a 33-Plane purchase program announced by TWA last month, the largest single equipment expansion program in TWA history. Included are six additional starstream boeing 707-331BS, six additional Boeing 727 TRI-JETS and an additional convair 880.

TWA today operates a Fleet of 88 Jets including the World's largest boeing fleet. By the end of this year the TWA JET fleet will total 99.

TWA serves some 70 US cities coast to coast and links them with 17 major centers in Europe, Africa and Asia.

British Overseas Business Investment

The most recent valuation of direct investment in India by British companies puts the figure at £256,000,000. This figure is given in an article in the latest issue of the Board of Trade Journal published in London.

India is high in the list of Sterling Area countries benefiting from British investment, and is surpassed only by Australia (£522,000,000) and South Africa (£269,000,000). Total British private business investment in the Sterling Area is given as £1,946 million. The figures quoted exclude investments in oil, insurance, and banking. Britain's direct investment in India in 1962 (the most recent quoted) was £13,100,000, the same as in 1961.

Also included in the Journal is the latest valuation of the direct investments overseas of British companies which illustrates the extensive scale on which these firms have rebuilt their overseas investments in the post-war years.

Total direct investment (i.e., in factories plant and building) by British companies overseas in 1963 amounted to £223,000,000, compared with £209,000,000 in 1962. Although total investment figures are available for 1963, 1962 is the latest year for which a regional breakdown can be given, and this shows the overseas Sterling Area (including all Commonwealth countries excepting Canada) as by far the largest recipient of British capital, accounting for 59 per cent in 1962, compared with 55 per cent in 1961.

LARGEST RECIPIENTS

Within this group, Australia was again the chief recipient, its share of the Sterling Area total in 1962 amounting to 40 per cent (£44,900,000). The next largest recipients were India (£13,100,000), South Africa (£12,900,000) and New Zealand (£7,400,000).

The other distinctive feature of the flow of British companies' direct investments in 1962 was the increased share going to Western Europe. This amounted to 24 per cent compared with 18 per cent in 1961. Most of this increase went to countries of the European Free Trade Association, but there was also on balance a further increase in investment in countries of the European Economic Community, notably West Germany, the Netherlands, and Belgium.

Latest estimates of the book value of British companies' direct investments abroad (excluding oil, insurance and banking) at end-1962 have been revised upwards to £3,600 million. This is a rather nominal valuation, since in cases current market values are much higher, and the figure excludes oil, banking and insurance, in which British companies have made very large investments overseas.

BINNY fabrics do not wear a mask You buy what you see and feel

NO STARCH By tradition Binny
fabrics are not starched or given
any other form of temporary finish.
Every cloth is left literally to speak
for itself.

NO OVER-BLEACH Binny
fabrics are not over-bleached.
Bleaching weakens the fabric and
reduces its life. The avoidance of
extreme whiteness by over-bleach-
ing is one reason why Binny fabrics
have a world-wide reputation for
durability.

FAST DYES The use of only the
world's fastest dyes and a large
experienced staff of highly qualified
research chemists—this is the un-
failing formula that guarantees the
colour fastness of every Binny
fabric.

Exports—Tasks and Targets

REPORTS of the deliberations of the four-
teenth meeting of the Board of Trade have
highlighted the unanimity of views regarding
the magnitude of the Fourth Plan export
target. The meeting is reported to have
agreed that it would be reasonable to set a
target of Rs 5,100 crores for the five years of
the Fourth Plan, with the export earnings in
1970-71 at Rs 1,100 crores. The agreement on
the actual figure has been preceded by an
unreal controversy, between the Planning
Commission and the Ministry of International
Trade regarding the size of the export target,
which has served to keep it in the news. The
Planning Commission's approach to the subject
was conditioned by the foreign exchange
requirements of the Fourth Plan programmes,
while the Ministry was naturally more keenly
aware of the impediments in the way of
building up exports in conditions of all round
shortage. That the controversy has been
resolved should be a matter for satisfaction, if
there is also widespread understanding of
what the target which has been agreed upon
involves by way of the extra effort required
to increase production while keeping a tight
rein on domestic consumption.

The Board of Trade has underlined the
need for adoption of an integrated and
coordinated policy designed to ensure that the
required quantities of exportable commodities
become available, even if this might involve
a certain measure of restraint on domestic
consumption. Coordinating the various ingre-
dients of such an integrated policy may be
depended upon to tax all the resources of the
different branches of the Administration. The
task will be lightened to the extent that the
public are enabled to appreciate the import-
ance of exports for maintaining the tempo of
planned development, as well as the implica-
tions of a large export programme. The
circumstances in which export of groundnut
oil, which reached a record level last year,
had to be banned, underline the need for
advance action to forestall the sort of difficul-
ties that are likely to crop up.

The strain on the economy caused by the
export programme, let there be no misunder-
standing about it, will be more severe than
anything experienced so far. Exports during
the Third Plan are reported to have increased
from Rs 660 crores in 1960-61 to Rs 763 crores
in 1963-64 and are expected to reach Rs 870
crores in the last year of the Plan. After
allowing for improvements in statistical cove-

rage (this now includes exports of precious
stones and semiprecious stones by parcel post,
as well as exports by land to Nepal) the net
increase in the figure of annual exports during
the five year period is estimated at Rs 183
crores, which works out to an annual rate of
increase of Rs 36 crores. As against this
figure, attainment of the Fourth Plan target
will call for a rate of increase of Rs 50 crores
per annum.

The task of expanding exports at a steady
rate to reach that level is complicated by the
preponderance of agricultural commodities
and of agriculture-based manufactures in our
export trade which makes it vulnerable to
seasonal hazards. It will be necessary to
devise, and implement, suitable measures to
insulate the export sectors from the effects of
seasonal fluctuations in production and the
pressures of increasing domestic demand, if
the Board of Trade's injunction to ensure
continuity of supplies for the export markets
is to be carried out. Failure to do so will
mean not only loss of exports for the season,
but loss of markets as well.

The outlook will be radically altered if it
is found possible to shift the emphasis from
exports of agricultural products, processed and
unprocessed, to other types of commodities,
say minerals, metal manufactures and chemi-
cals. But, in this respect, it is not merely a
question of ensuring supplies but of develop-
ing new markets. As cost of production for
many items is high compared to the level of
international prices, exports of manufactured
commodities will involve a correspondingly
large element of subsidy.

Studies that have been undertaken about
the prospects of increasing exports of individual
commodities which have an established market
underline the need for advance action to
ensure that the essential facilities are avail-
able in time. For instance, an integrated
programme of mining, transportation and
port development will have to be implemented
with vigour, if exports of iron ore are to be
built up to the level of 25 million tons that
is presently envisaged. Scope for increasing
exports of marine products depends on com-
pletion of the necessary oceanic surveys and
provision of mechanical and refrigeration
equipment. Likewise, it will be necessary to
undertake a systematic programme for plant-
ing cashewnut trees in all regions where the
climate is suitable, in order to ensure adequate

supplies of nuts for export. About two-thirds of the supply of raw nuts at present processed in India are imported from countries in East Africa. As it is only a question of time before these countries set up their own processing establishments, a very large increase in indigenous production is essential even to maintain the present level of exports, not to speak of their expansion. Prospects of increasing export of jute manufactures depend on the success of efforts to improve the productivity of jute and the quality of the fibre, a point which was stressed by the President of the Associated Chambers of Commerce as well as by the Chairman of the Indian Jute Mills Association. If such a vast and far-flung programme is to be successfully implemented, there is need for recognition at all levels of Administration of the primacy of exports and readiness to act in the light of that recognition. And exporters are entitled to an assurance that they will not be left high and dry by the sudden withdrawal of the incentives on the basis of which they have built up their exports.

The Population Problem

IT is difficult to make out the practical significance of the report that the Planning Commission is gravely concerned over the present rate of population growth in this country. Like the need for securing economy in public expenditure, or reasonable yields on the investments in the public sector, or increase in our exports, the need to check population growth and bring it down to the level of our capacity to provide the necessities of life for all has always been of the pressing kind. But by some strange mental processes, all these questions have been relegated to the back ground over nearly three plan periods. If today these have been allowed to figure in the newspaper reports, one is at a loss to know to what extent these needs will be allowed to weigh with the Planning Commission in the drawing up of the Fourth Plan. The manner in which vital needs are now allowed to come to the fore in current discussions after having been virtually denied in the past one decade and a half would be a subject of interesting study, if it could be conducted in a factual manner. If foreign trade got nothing more than a casual mention in the first and second plans and only a target figure in the third, without any hint of re-orientation of policies towards this end, it can only be attributed to the persistence of the old fond notion that this country could afford to have a closed economy. Likewise, the public sector might have been thought to function under economic laws peculiar to itself, while extravagance in public expenditure was regarded as a way of befriending the poor at the expense of the rich.

In the case of population trends, one can recall the fact that in the initial stages of his Premiership, the late Mr Nehru often showed in his speeches the influence on his thinking of the Communist claptrap that over population was a mere bogey, a capitalist creation meant to persuade the masses that their poverty was inexorable. Whether it was due to Mr Nehru's ideas on the subject or to any other factor, the fact remains that population control was not one of the planks of the

Planning Commission's programme. It was not till it was found at a late stage of the Second Plan that the rate of population growth was higher than the one assumed by the planners that the need for restricting population growth was recognised. The prospect of the per capita income keeping glued to a low level in the face of sizable increase in national income spurred the Government to some feeble and half-hearted efforts at what has been with a needless euphemism, been termed "family planning."

The question that may now be raised is whether the grave concern which is now said to be felt by the planners at the rate of population growth will induce them to adopt measures of such a nature that their results in limiting population can be relied on without their being merely problematical. The practical measures adopted in the past were nothing more than a sprinkling of birth control clinics, the distribution of pamphlets, perhaps, on the use of contraceptives and, lately, the offer of special inducements for taking the surgical operation for sterilisation. All these measures, even if they were effective to the full extent of their application, would have been no better than a drop in the ocean. But the fact is that sterilisations is said to have produced noticeable results in the city of Madras which is the only place in which it has been tried with any zeal or energy. While this success has prompted larger allotments for family planning in recent years, no one can claim that the population problem can be solved by mere persistence in the present course of dangling a cash prize of Rs 30 for voluntary sterilisation. Nor can it be supposed, as it used to be formerly, that the birth rate can be brought down by a rise in the standard of living, if only because the present growth rate will make it impossible to achieve a rise to the level at which it can be deemed capable of limiting the size of the individual family.

Apart from this, faith in the power of a high standard of living to limit population growth rests only on a slender basis of narrow empiricism. It is not as well recognised in this country as it should be that the immediate effect of an improvement in the standard of living of the common people is an increase in the birth rate and that a fall does not come about till the standard has risen to a level which, the individuals concerned would be afraid, might fall without attempts to restrict the size of the family. In India, while we may be sure that the former phenomenon will be experienced, there is no certainty that the latter, too, would occur at a later stage. But, even if we could credit the people with more discretion and prudence than experience would justify, our projections of national and per capita income do not warrant the assumption that the rise in the standard of living will ever become sufficient to act as an adequate check on population growth. The danger of increase of population keeping down the standard of living and upsetting the five year plans is thus perpetual.

In dealing with this danger, it is more than doubtful if modern demography would be of much use. Projections of current trends of population growth, allowances for possible changes in the birth rate and death rate, estimates of national income and per capita income at different points of time in the future, these academic exercises may interest theoreticians, but will leave unaffected the practical problem of limiting the population growth and keeping it within the limits of our resources for attaining reasonably high

standard of living for the whole population. What matters at the present time is not the gap between aims and attainments at each stage of planned development under certain assumptions about the growth in population and the increase in the national income, but what we are going to do to bring about a check on population growth which can be relied on for the calculations of planning and which, in relation to our aspirations of rising standards of living, would be adequate. It is true that drastic measures for arresting the birth rate can conceivably create some problems through the changes in the proportion of the different age groups to the total population. But those problems are nothing compared to the dangers portended by an unrestricted growth. It is said, for instance, that half the population now consists of children under fourteen years of age and the resulting magnitude of the problem of educating them and finding employment for them when they come of age can be easily imagined.

One cannot therefore question the wisdom of adopting drastic measures if thereby we can keep down the birthrate and population growth. If Japan is the only country which has restricted the birth rate successfully, then we in India have to overcome old prejudices and see to what extent we can follow their example. Social customs in respect of marriage age and the like have changed sufficiently and do not leave much scope for reform. The use of contraceptives can be neither widespread nor dependable. The legislation of abortion may still be disliked by many. But there is no reason why compulsory sterilization after the third or fourth child should be viewed askance when the need to limit population growth is unquestionable. There is also the question whether in the matter of inducing people to agree to sterilization, penalties for refusal are not as important as rewards for acceptance. Is there anything wrong in the State refusing to accord free education to children when improvident maternity exceeds all bounds? Are there not other privileges which can be justly denied to an over grown family? But these questions apart, it is time that the public was educated to a fair appreciation of the importance of family planning, so that compulsory sterilization when it becomes necessary will be accepted as a necessity for national survival.

South Indian Notes

THE schemes and projects of the State Governments for the Fourth Plan have far greater interest and significance today than in any of the earlier five year periods. Not only have the States a better understanding of the economic conditions in their areas and more experience of the formulation and working of different schemes, they are also obliged now to be more realistic in the preparation of their plans for the people under their jurisdiction. On the former occasions, every State thought only of comparing itself with other States and making their proposals only with a view to maximising the facilities and benefits from central grants and loans and from the Centre's outlay on plan expenditure. The more important requirement of intensive study of the conditions in the State and formulation of schemes which would exactly meet the problems posed by those

conditions were only too often neglected. There was also, of course, the evil of inter-State jealousies and the danger of aggravating them by proposals which were based on unnecessary comparisons with neighbouring States and implications of individual treatment of the States by the Government at the Centre.

All these were perhaps inevitable in the initial stages of the planning era, inevitable because of the difficulty of forming objectively a synoptic view of the States' economy. Doubtless, these difficulties still persist in some measure. Personally, we are still reluctant to admit the correctness of the compilations of State income and per capita income in each State and the validity of inter-State comparison on the basis of such compilations. But it is no good being a stickler to statistical accuracy in these matters, especially when such accuracy can be attained only by stages and over a period as a result of uniform and accurate figures are good enough for forming a broad picture of economic conditions in the State. And now that the position of public finance in this country is such as to put a bit into the mouth of the planners, the outlines of the State plan which the Andhra Government has drawn up are a good basis for discussion. At the present stage, they are more valuable for the delineation of the State economy as a whole and for throwing into relief the more pressing problems of Andhra Pradesh.

Contrary to the general impression, at least among the people in Madras where the relative plentitude of rice in the neighbouring State definitely colours their outlook, Andhra Pradesh has to make a lot of leeway before its figures of per capita income can come up to the all-India level. While all-India per capita income is expected to go up from Rs 300 at the end of the Second Plan to Rs 368 at the end of the Third, the Andhra Pradesh figure will have risen during this period to the level of Rs 333, which is a trifle above the all India figure at the end of the Second Plan. The backwardness of Andhra Pradesh is thus unquestionable, though it would be wrong to be dogmatic about its exact extent. The reasons for this are not far to seek. According to the planners in that State, it is the low share of Andhra Pradesh in the Centre's total outlay on central projects, a mere Rs 40 crores in the Second and Rs 49 crores in the Third Plan. The outlay in the private sector is even worse, since the power supply is far short of demand and special steps are also needed to attract private entrepreneurs. The rate of population growth in the State, though less than the all-India rate, is more than the rate of increase in the income of the State. The problem for the planners therefore is to draw up a programme which will enable the State to get over the present difference between Andhra Pradesh and the rest of India and keep abreast of it in the future. This calls for an aggregate investment of Rs 1,493 crores in the Central, State and private sectors, of which the brunt of the burden will have to be borne by the Centre. The demand is not unreasonable, considering that Central projects in Andhra Pradesh have been consistently on the low side and even in respect of the Nagarjunasagar project, the Centre has been slow to step in. Nagarjunasagar has in fact been a stumbling block to the progress of Andhra Pradesh, since it has been absorbing all the resources of the State Government and incapacitating

it for taking up other projects, while yielding no immediate return. It would be to the good of all concerned, if Nagarjunasagar is taken up as a Central project and the State's investments therein up to now returned to the State Government. Something on these lines is bound to be done sooner or later. The State Government must be free to develop its agricultural production and promote the cultivation of the commercial crops also.

As regards industrial development, increase of power supply undoubtedly holds the key to it. And here Andhra Pradesh is better placed than the other South Indian States which, strangely enough, are ahead of it power generation. It has abundance of low grade coal with sources of water supply very near to the coal fields. And big thermal stations which will be independent of the vagaries of the monsoon and can feed the southern grid are possible. Power demand in the State is expected to rise to 432 MW by the end of the Third Plan from 180 MW at the end of the Second. The installed capacity can afford a firm supply of only 104 MW. Allotments for power programmes have been raised during these three plan periods from Rs 28.5 crores to Rs 38.5 crores and thence to Rs 64.9 crores. The Union Minister for Irrigation and Power pointed out during a recent visit to Hyderabad that, by a proper combination of hydel and thermal power, Andhra Pradesh could build up for itself an "electricity empire", but he was not optimistic about the State reaching the Third Plan target by the end of the period. It is interesting in this context that according to some reports the Government of India has accepted the offer of Dr Teja to set up three units of 66 MW at Ramagundam at a cost of a little over Rs 17 crores. This is strange, considering the treatment of a similar offer of private industry to set up a 300 MW station at Ennore and the recent assurance that the Government would make up for the disappointment by proceeding with the project as an official one.

DEVELOPING ECONOMY

Role of Foreign Capital

By Virendra Agarwala

THE Finance Minister has developed a rational approach to make full use of private capital resources in the world largely with an object to augment the external aid. No country in the world has ever succeeded to achieve a higher rate of growth without the generous technical and financial assistance from the developed nations and any argument advanced against is largely based either on suspicion or political ideology. Even the Soviet Union had received financial assistance to the tune of \$11 billion from the United States for defence purposes in 1941. It is being gradually realised that defences of peace are to be built up in the minds of men. The solidarity of human minds which needs to be developed presupposes mutual understanding. But international aid for economic development to underdeveloped countries has become the pivot on which the edifice of international understanding and mutual knowledge is being built up and which can adequately ensure peace in the world. The modern age with so developed techniques hardly leaves any scope for any

politician to ignore the national interest and to talk so glibly against foreign capital entirely on ideological grounds. Poverty and illiteracy are a menace to the entire human race and the non-violent war can be waged successfully only when we break such barriers—political or geographical.

The primary object of national plans formulated in different parts of the world is expansion of large employment opportunities. Democratic Socialism here is being interpreted as an 'economy of abundance' which necessarily implies that the basic essentials of life must be made available to the people at reasonable prices within a period of ten years. Time is the scarcest commodity and the people are not in a mood to wait till 1982. It is often argued that Socialism is the inevitable outcome of democracy. But no genuine socialist can permit his ideas and programmes to retard the tempo of industrial development in the country. Socialist forces need not be merely concerned with the distribution aspect of the national economy and to lay undue emphasis on concentration of economic power. The Finance Minister has rightly announced that if the national income is to be raised at the rate of 6 per cent per annum then the industrial production must increase at least at the rate of 16 per cent per annum. Economic growth has become as important as to worship God and any attempt to lower the production rate is bound to have an adverse effect on economic growth.

The Fourth Plan is being formulated and a serious study is being undertaken at various levels. The experience of three Plans and the large social and economic changes that have already taken place have brought a conviction that India can look forward with assurance to sustained economic progress. It is true that the pace of economic growth has been very slow in the first half of the Third Plan but the national income increased by 42 per cent in the first decade of planning. At present about 25 per cent of the net national investment is financed by foreign aid.

India received Rs 205.55 crores as foreign aid for the Third Plan and we utilised Rs 896.58 crores and had a balance of Rs 1158.97 crores to be utilised till February 1964. It is obvious that only 44 per cent of the foreign aid has been utilised. No doubt the rate of utilisation in the third year of the Plan has been much higher than in the first two years but here is considerable leeway to be made up. The Rao Committee feels convinced that procedural delays, non-availability of balancing equipment and resources from indigenous sources, the restraint flowing from tied assistance and inadequate project planning have obstructed speedier utilisation. It has recommended the streamlining of procedure relating to the authorisation and disbursement of aid, liberalisation of imports of equipment and components which are not available indigenously and increasing the proportion of untied assistance by obtaining the consent of the lending countries for utilising 10 per cent of their assistance for purchases in the aid countries. The Rao Committee has laid emphasis on adequate project planning and periodical publication of statistics of ordering against available assistance in addition to data regarding disbursement. At present we have received aid from 19 countries besides the World Bank and its subsidiaries. India's request for nearly \$1400 million from the Aid India Consortium to meet the foreign exchange requirements of the fourth year of the Third

Plan is likely to be met in full and New Delhi hopes that 50 per cent of the aid to be committed would be non-project assistance. It is widely recognised that the aid should primarily be utilised for capital goods imports and foreign exchange in no case should be permitted to be squandered any longer.

Total imports are expected to rise from Rs 11,200 million in 1960-61 to Rs 13,650 million in 1970-71 and Rs 16,100 million in 1975-76. Exports are planned to be increased from the 1960-61 level of Rs 6,000 million to Rs 12,200 million by 1970-71 and Rs 16,200 million by 1975-76. Up to 1956 India largely imported consumer goods but main shift in the pattern of imports is now visible in raw material and capital goods equipment. It is estimated that the demand for capital goods will be of the order of Rs 10,500 million in 1965-66, Rs 18,900 million in 1970-71 and Rs 27,900 million in 1975-76. At this stage, it appears to be impossible to increase exports from Rs 850 crores to Rs 1200 crores during the Fourth Plan period. The foreign exchange requirements may not be less than Rs 3200 crores as against Rs 2600 crores in the Third Plan largely because of the increasing volume of debt servicing charges and maintenance of imports. According to the Finance Ministry's estimate the foreign debt of the Central Government has increased from Rs 50 crores in 1950-51 to Rs 1379 crores in 1962-63. It is expected to be doubled in the subsequent 2 years and reach the level of Rs 2439 crores by the end of the current financial year. The Ministry has rejected the view that public debt constitutes a burden on the community but still it is true that whenever a certain limit is crossed in this respect then it does have an adverse political repercussion apart from being a constant drag on Indian economy. It is true that our exports have not remained stagnant but in no case they are likely to meet the imports requirements when the public debt is shooting up at an enormous pace.

It is being gradually realised in Government circles that both direct and indirect taxation have reached the saturation point while deficit financing and inflation have been largely responsible for rising price spiral to the extent of 37 per cent. No other country in the world is burdened with taxes of so many varieties as India has at present. It is true that there are limits beyond which sacrifices cannot be asked for. It is generally agreed that if we are to continue as an orderly and free society our rate of growth must be raised to a minimum of 6 per cent per annum. The Planning Commission is considering to have Rs 20,000 crores Fourth Plan which necessarily implies that for another period of 5 years this generation would be called upon to make further efforts and sacrifice in order to secure the ground work for the future. The first estimate of additional taxation during the Fourth Plan period is of the order of Rs 100 crores per year. It is bound to defeat the objective we are pursuing to attract foreign equity capital as well as the slow process of capital formation within the country.

The role played by the International Investment in the promotion and advancement of world economic growth has long been recognised as of vital significance. In the last century, foreign capital played a major role in the 'take off' state of development in the economies of the USA, Russia, Sweden, and Canada. Practically all the countries of South East Asia and Middle East are now struggling

hard to banish poverty from their countries and they naturally depend on financial assistance from the developed countries. There is nothing like 'limitless' capital available in any one country, therefore, it is somewhat natural for it to flow into those regions where the profitability remains the maximum. The Prime Minister has repeatedly asserted that our national savings are not enough for the rapid development of the country on the scale envisaged and technical knowledge and modern capital equipment can best be secured through foreign capital. It is widely known that political stability, a reasonable rate of return on the capital put into new enterprises and the prospects of capital appreciation are the principal requirements of the intending investor. The Government has repeatedly advanced the view that India offers as attractive a return on industrial development as any other comparable economy. But the fact remains that the tremendous rise in tax structure and other burdens in the past had made the situation so complicated that the Government has now been forced to develop a rational approach in respect of certain concessions and relief measures to such foreign equity capital.

The development of key industries is woefully inadequate and what is more, it depends far too much on aid from other nations. Broad purposes have been constantly elaborated but still it is a moot question whether we have achieved all what we promised to the people. It is often argued that a Rs 20,000 crores Fourth Plan, should usher in a nation-wide upsurge of prosperity and complete self-sufficiency by 1975-76. But such optimism may have little impact in view of the fact that since the Third Plan has been launched, the rate of growth has been only about 2½ per cent a year. In spite of the shortfalls in the Third Plan, we can formulate that Fourth Plan not only of Rs 20,000 crores but of much higher outlay provided it is made certain that the Government will not raise all what it needs through higher taxation and deficit financing. This is possible only when the Government attracts foreign equity capital to participate in Indian industries. An American Team of experts recently visited India and explored the possibility to make further investments in India. Its leader, Mr Roosevelt had rightly remarked that at the base of his country's progress lay the history of 'our free enterprise economy'. A rational allocation of the roles of public and private enterprise is at the heart of problem of attracting sufficient risk capital to India. It is the primary responsibility of the Government to dispel such dangers which are inherent in nationalising such key institutions having the best prospects of foreign participation. We need to be absolutely clear in our minds that the corporate sector in spite of all its deficiencies has to play a vital role in a mixed economy. Mr Roosevelt remarked that the development needs of India far exceeds the possibilities of Government to Government aid and there is a large room for private investment, private management, and private technical know-how to accelerate the growth of India.

In 1961 the Government policy was further clarified along with an illustrative list of industries in which foreign capital will ordinarily be welcomed. The field in which foreign capital ordinarily is not needed has also been listed and these include banking, insurance, trading and commercial activities and plantations. The Government has fur-

ther clarified that there would be no need for foreign equity capital in consumer industries like sugar, textiles and cement. The Finance Minister has asserted the Government's desire to enlist the foreign capital in several engineering industries including heavy electricals equipment. The demand for machine tools alone would be of the order of Rs 100 crores per annum by the end of the Fourth Plan. The selective approach has been adopted by the Government in encouraging foreign private investment. The Finance Minister has announced several tax concessions available to new industries which are uniformly applicable to industries whether foreign or joint. This included a tax holiday on profits upto 6 per cent of the capital employed, development rebate equal to 20 per cent of the cost of the plant and machinery which is allowed as a deduction from the taxable income (the development rate was reduced from 25 per cent to 20 per cent in the case of machinery or plant installed after 31 March 1961). A series of double tax agreements have been concluded with a number of countries to ensure that the benefit of tax concessions is actually retained by the foreign investor and not taken away by his own Government. At present inter-corporate dividends bear income tax at the rate of 25 per cent and super profits tax at varying rates depending on when the company was formed and whether it is an Indian company and is a subsidiary or not. The Finance Minister has abolished these fine distinctions and exempted all inter-corporate dividends from super-tax. The Budget (1964-65) has also allowed resident assessee who are not citizens of India a rebate of income-tax and super tax on a sum of Rs 2,000 per child under 21 years of age receiving education outside India. Another latest concession is the tax exemption available for three years provided approval is obtained within one year of the arrival of the technician in India.

Economic growth is primarily a national enterprise. Mr W. W. Rostow has rightly asserted that the aid from outside the country can only be helpful to its development to the extent that the Government and people of a nation organise their own resources. But it seems that it is not sufficiently appreciated that ultimately the flow of foreign capital coming to India will depend on the climate prevailing within the country for the growth of indigenous capital and the treatment which is meted out to it. If the policy of Government continues to be harsh and unsympathetic towards the growth of indigenous capital it will hardly be possible to create a climate suitable for the flow of foreign capital into the country. There is willingness on the part of many friendly countries increasingly to participate in our industrial development. What we need is to create a congenial atmosphere in our own country through our fiscal and monetary policies so that foreign investor can be interested in bringing equity capital and well established organisations cooperate in the industrialisation of the country. We need experience, machinery and most important of all know-how which we can adequately receive from all parts of the world provided we develop a receptive attitude towards indigenous capital as well as equity capital from foreign lands. This is the only answer which can solve most of our problems concerning economic development. This is the field in which we can continue developing better relations with the people of other parts of the world and the foundations of peace can be laid on a firm basis.

Britain's Pursuit of Economic Growth

By Paul Bareau*

Britain's experiment in planning economic growth in a free society is now well in its third year. It was in 1962 that there was set up the National Economic Development Council (NEDC), familiarly known as Neddy. The objective which it set before the country was a rate of expansion of 4 per cent per annum, to be secured for the five years 1962 to 1966 inclusive.

In the early stages of this five-year span progress was well below the target figure. In 1962 the national output was barely 1½ per cent higher than in the previous year. Since then, however, much more satisfactory progress has been made. Over the year 1963 as a whole the British economy was in fact growing at a rate slightly greater than the 4 per cent figure, and in the early months of 1964 the rate of expansion rose to the relatively high level of 6 per cent per annum.

BANK RATE INCREASE

This was becoming excessive for the health of the economy, and in order to reduce it to a figure that could be sustained, various measures were introduced, including an increase in Bank rate from 4 to 5 per cent, and an addition, in the Budget in April, of £100,000,000 to the burden of taxation, borne by the consumers. These measures soon appeared to be yielding results, and there was a perceptible diminution in the rate of advance, though it remained satisfactory, with the economy approximately on target.

This satisfactory state of affairs is not the result of "planning". It would be heaping too much credit on NEDC to make it responsible for the commendable rate of expansion of the British economy. NEDC adopted the 4 per cent growth target and examined its implications. NEDC planning has no doubt played its part, but it has been a subsidiary one.

The main credit for the satisfactory behaviour of the British economy in recent times must be given to the broad measures of economic policy introduced by the Government, aiming at the maintenance of a high level of demand. Fiscal and credit policies have, whether by luck or good management, provided the right stimuli or deterrents to the economy. In addition, conditions in the rest of the world have proved conducive to expansion in Britain. Export markets in the United States and in Europe, not least in the European Free Trade Association (EFTA) countries, have provided opportunities of which British industry and commerce have made good use.

To say this, however, is not to deny that the launching of NEDC has played its part in this favourable development and promises well for the future. This British approach to planning in a free society is based on a partnership between the government, management and the trade unions with the object of securing agreement on the broad objective, and in this way securing a sense of common responsibility in achieving targets.

"WE WILL" BASIS

Sir Robert Shone, the Director-General of NEDC, explaining the character of British planning and comparing it with that of other countries, put it as follows: "Where a planning body is purely advisory to the Government, as it is in some countries, its suggestions take the form of

*Mr Bareau is Editor of The Statist.

you should'. Where the planning is government-dominated, and this is particularly the case in the Eastern bloc countries, the planning takes the form of 'you must'. The UK approach is based on the declaration 'we will'.

The British method of planning has been called 'purposive'. It rests on voluntary co-operation. Its main virtue lies in the fact that it has succeeded in ranging round a single table with the Chancellor of the Exchequer in the chair, the representatives of the government and of the two sides of industry. They are all in favour of securing the highest feasible rate of economic expansion. They are provided by the permanent staff of NEDC with all the implications of this rate of expansion both for the economy as a whole and for individual industries. From this they must all draw the necessary conclusions regarding such matters as the monetary and wages policies, the need to retain profits, and many other incidental conclusions.

The men sitting round that table are people of intelligence and goodwill. They may interpret some of the facts before them differently, but most of the conclusions to be derived from their discussions are not subject to dispute. They must therefore accept the facts that are placed before them and endeavour, in so far as lies in their power, to convey them and the policies that derive from them, to the interests they represent, whether they be the owners, managers or the employees of industry.

GOVERNMENT'S POSITION

It would, however, be wrong to conclude from this that economic planning in Britain is wholly voluntary. In the first place the Government has a dominant, if not complete, control over what is called the "public sector" of the economy. These are the activities for which the Government itself, the local authorities and the nationalised industries are responsible. All told, they represent just over 40 per cent of the gross national product. Once, therefore, the Government accepts the broad objectives, its appropriate decisions can be made effective over this very large range of the economy.

The Government also has some control over the private sector of the economy, not only through the general instruments of tax and credit policy, but also by the considerable powers it wields in order to locate new industrial developments where it wishes them to occur. By the grant of building permission and even by providing cheap sources of credit, the Government can bring considerable influence to bear on the location of new industrial development.

It has used those powers in order to take work to the workers, to induce private firms to site their extension in those parts of the country where there is a margin of available labour. This power to provide credit must not, however, be exaggerated and regarded as one of the sanctions which the Government can exercise in order to force British firms to conform with its wishes. There is no parallel in Britain to the situation in France, where the capital market is so undeveloped that long-term finance for industrial projects is in large part satisfied by official or semi-official institutions whose facilities are not made available for projects which do not fit into the French plan.

COUNCILS FOR SEPARATE INDUSTRIES

How then is British industry made aware of what is required from it, and how is influence brought to bear on it to meet those requirements? In the main, by the dissemination of information from "Neddy" to various industries. A start was made by considering in very broad terms a rate of growth for the economy that would represent some improvement on what had been achieved in the past and was nonetheless realistic and achievable. This is how the 4 per cent rate was born. This exercise was carried out in consultation with Government Departments and with no less

than 17 industries representing a broad cross-section of the economy.

A crucial feature of these consultations was that the industries were asked to work out for themselves the expected impact of the growth of the economy in their markets and to study the manpower, investment and other charges that would be needed to achieve their own estimated output. In the production of these estimates in each industry a great deal of information was secured and distributed as to what individual firms in an industry were going to do. As a result, firms must have been influenced in their proposed development plans by their knowledge of the plans of others.

This devolution of the work of NEDC is now being carried through by setting up "little Neddys", separate councils for separate industries. In this way the exercise of planning is undergoing a healthy process of delegation and fragmentation, though the work done within each segment is always related to the overall target of a 4 per cent growth of the economy as a whole. But even within these sectors of the economy, the process remains wholly voluntary and is based on the readiness to collaborate to exchange information, to avoid duplication, while at the same time keeping all the advantages of a competitive system.

The most powerful effect which planning through NEDC has had on individual decisions of private firms, is that by declaring a target of growth and by securing for this the consent of the main sectors of the economy, a greater feeling of confidence is being created in the prospect of sustained expansion. Individual firms today are less haunted by fears of "stop-go" policies than they have been in the past. They are more confident, therefore, in planning expansion. For this NEDC can claim a considerable part of the credit.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Saving in the form of Bank Deposits provides resources for the National Plan.

BANK RETURNS

Further Rise in Deposits

The State Loans have all succeeded in being fully subscribed, though as we had pointed out over-subscriptions have not been many. Little strain was involved for the money market, and call money is again quoting at low levels. However, it is possible that early September might, with tax payments due and with the usual beginning of the month disbursements, again witness some temporary stringency.

Meantime, there continues to be accretion to banks' Deposits.

According to the returns of the Reserve Bank for 21 August, there has been a sharp decline of Rs 29.15 crores to Rs 2,423.82 crores in Active Note circulation, and inflow of Rupee Coin is placed at Rs 1.66 crores. With Foreign Securities unchanged at Rs 85.46 crores, currency has been contracted for Rs 25 crores against Rupee Securities by transfer to the Banking Department.

The transfer to the Banking Department is not reflected in Investments, which are actually lower by Rs 3 crores at Rs 247.28 crores. Thus, the inference may be drawn that considerable sales of gilt-edged were put through by the Reserve Bank. The State Bank alone is known to have purchased gilt-edged for Rs 15 crores, and it is possible that other Scheduled Banks also bought around Rs 10 crores' worth.

The Centre has been in receipt of payments from the States, in as much as its balances have improved by Rs 9.44 crores to Rs 78.24 crores, whereas Deposits of State Governments are lower by Rs 10.12 crores at Rs 13.09 crores on top of an increase of Rs 6.57 crores to Rs 25.77 crores in their ways and means borrowings from the Reserve Bank.

Scheduled Banks continue to be comfortably placed: their Reserve Balances are higher by Rs 8.70 crores at Rs 122.16 crores, and half of the rise is attributable perhaps to the State Bank; their borrowings are still at a nominal Rs 1.94 crores.

Balances Held Abroad, no doubt owing to receipt of untied foreign aid, are marked up by Rs 4.20 crores at Rs 13.00 crores; and thus foreign assets in the possession of the Reserve Bank have once again improved to very near the Rs 100 crore mark.

The return of the State Bank for 21 August records a very substantial increase of Rs 18.20 crores to Rs 671.02 crores in Deposits; side by side there has been a fall of Rs 6.72 crores to Rs 339.50 crores in Advances. This two-way release and acquisition of resources has prompted the State Bank to add Rs 15 crores to its gilt-edged portfolio, which now stands at Rs 290.13 crores; in another month, the State Bank's gilt-edged holdings should be in excess of its Advances. The fact that Other Assets

have been marked up by Rs 5 crores would indicate that more purchase of gilt-edged is in prospect. The net result is an improvement of Rs 4.26 crores to Rs 38.32 crores in cash balances, including money at call and short notice.

The statutory statement of Scheduled Banks for 14 August shows that net Demand Deposits are higher by Rs 4.65 crores at Rs 1,254.55 crores and net Time Deposits by Rs 2.98 crores at Rs 1,391.00 crores; the State Bank accounted for about half of the rise in resources. The spillover into the second week of the demand for funds occasioned by month-early disbursements has meant that bank credit has inched up by Rs 0.66 crore to Rs 1,745.83 crores—but this is to be attributed to the State Bank. The gilt-edged portfolio is lower by Rs 9 crores at Rs 754.88 crores; but with the State Bank known to have disinvested in that week for Rs 15 crores, it is obvious that other Scheduled Banks added to their holdings by about Rs 6 crores. Debt to the State Bank is marked up by Rs 0.93 crore at Rs 24.56 crores, but borrowings from the Reserve Bank have been cut by Rs 1.66 crores to Rs 2.37 crores. In consequence, cash balances, including money at call and short notice, are better by Rs 9.35 crores at Rs 258.83 crores—with the State Bank accounting for a little over Rs 5 crores of the rise.

National and Grindlays

The Directors of National and Grindlays Bank Limited have declared an interim dividend for the current year of 7 per cent less income tax at 7 shillings 9 pence in the pound, payable on 9 October 1964.

Treasury Bills

During the week ended 21 August 1964 Government of India Treasury Bills for Rs 87,25,50,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills sold from 19 August 1964 to 22 August 1964 amounted to Rs 12,90,00,000.

Insurance of Cooperative Deposits

By S. D. Derashri

THE insurance of Bank Deposits was first introduced in USA following large scale failure of Banks during the great depression of the thirties. In India the failure of two Scheduled Banks in 1960, its adverse effect on Bank

Deposits and vesting wide powers in the Reserve Bank for the elimination of inefficient units through reconstruction and amalgamation provided the background for the establishment of the Deposit Insurance Corporation in 1962 as one of the several measures to strengthen the country's banking system. The Corporation has an authorised capital of Rs 1 crore fully paid up by the Reserve Bank and is managed by a Board of Directors, of which the Governor of the Reserve Bank is the Chairman. The main objective of the Corporation is to protect the depositors, in particular the small depositors, from the risk of loss of their savings in the event of a bank being unable to meet its liabilities. The scheme extends to all Commercial Banks so as to make the Corporation viable and self-supporting. The Corporation provides cover up to Rs 1500/- in respect of each depositor in each bank in the same capacity and in the same right. It charges .05 P per annum for every Rs 100/- of deposits. It has been estimated that the scheme covers about 80 per cent of the depositors and 24 per cent of the total value of deposits of our Commercial Banking System.

NEED FOR INSURANCE OF COOPERATIVE DEPOSITS

Ever since the establishment of the Deposit Insurance Corporation for insuring the deposit of Commercial Banks many cooperators have been demanding the establishment of some scheme of guarantee or insurance of cooperative deposits. Cooperation has been accepted as the basis of organization of economic life in our country, particularly in the field of Agriculture and Small Industries. During the last few years the operations of Cooperative Banks have been growing in size and importance. As the Chairman of the Standing Advisory Committee on Agricultural Credit pointed out at its 23rd meeting held on 14 March 1963, "Cooperative deposits had increased from 7.5 per cent of the total deposits of the Indian Banking System in 1951 to 9.5 per cent in 1961." The relative share of the Cooperative Banks in the total advances of the banking system had improved from 10 per cent to 25 per cent during this period. Advances of Cooperative Banks against certain agricultural commodities made in a couple of important producing States represented one-half of the total advances made by the Banks. The size and share of transfer of funds done for and through the Cooperatives were also increasing. Thus, in their size as well as variety, operations of Cooperative Banks were now comparable to those of other banks and as in other spheres of our national economy, so also in that of banking, a flourishing Cooperative Sector had come to occupy an important place.

While the operations of the Cooperative Banks have grown in size and importance, an analysis of the working capital of the Cooperative Banks shows that the proportion of deposits in the working capital has fallen from 67.0

per cent in 1950-51 to 36.8 per cent in 1960-61. As against it the borrowings of the Cooperative Banks from the Reserve Bank have been increasing both absolutely and relatively to owned funds as well as deposits. It has been argued that in view of the relatively small importance of deposits in the working capital of Cooperative Banks there is no need to insure the cooperative deposits. But should cooperative banks continue to depend increasingly upon borrowings from the Central Bank? Few Cooperative are happy about this trend. If the Cooperative Banks have to become self-reliant and not merely purveyors of credit provided by the Central Bank it is essential that their owned funds as well as deposits should grow. The Government and the Central Bank should at least see that they are not placed at a disadvantage as a result of arrangements sponsored by them so far as mobilisation of deposits is concerned. When depositors in the Commercial Banks are protected by a statutory body up to a prescribed limit the same degree of protection should in some form or other be given to Cooperative Banks also, if they are not to be adversely placed vis-a-vis Commercial Banks at a time when they have to face keen competition in mobilising deposits, not only from the Commercial Banks but also from Small Savings and other Compulsory Savings campaigns sponsored by the Government.

It has been also argued that in view of State participation in the share capital of Cooperatives and guarantee of deposits in some States what the Cooperative Banks require is better supervision rather than insurance. No doubt the best way to attract depositors consists in the quality of service and the rate of interest offered, but ideas about security and goodwill also play an important part. Faced with a choice between two alternative depositaries, one carrying supervision and insurance, viz. Commercial Banks and the other carrying some supervision and no insurance, viz. Cooperative Banks, a would-be depositor would naturally prefer the former. Moreover, State partnership in Cooperative Institutions is a passing phase and depositors do not attach much importance to it. Further the Urban Cooperative Banks neither have the benefit of State's participation, nor are they financed by the Apex or Central Cooperative Banks. On the other hand, they have to compete directly with the well-established and protected Commercial Banks. It is, therefore, necessary that some scheme of insurance or guarantee for the Cooperative Deposits must be evolved.

Moreover the insuring institution besides protecting the cooperative deposits will also be able to provide better supervision of the cooperative banks than at present.

'COVERAGE'

In regard to the coverage of any scheme of insurance of cooperative deposits it should be remembered that when the Deposit Insurance Corporation was established in order to enable it to pay its way the scheme had to be made compulsory for all Commercial Banks and even the State Bank of India and its subsidiaries had to be brought within its scope, though, unlike other banks, the latter are State-partnered and cannot be liquidated except by the Government of India. Similarly in order that the agency set up for insurance of cooperative deposits may substantially pay its way it is essential that all Central Cooperative Banks and Apex Banks and all Urban Cooperative Banks will have to be brought

under the scheme. It is debatable whether the primary Agricultural Credit Societies should also be covered. However if these societies are excluded their prestige will suffer and they will not succeed in the task of mobilizing rural savings. It is, therefore, essential that an attempt should be made to bring in all cooperative banking institutions from the Apex Bank at the top to the primaries at the bottom under any scheme of insurance of cooperative deposits. However in view of lower amount of average deposit per depositor with the primaries cover needs to be extended only to a smaller amount and a small nominal charge be made from the primaries.

'AGENCY'

An important question that arises is concerning the agency which should be entrusted with the task of insuring the deposits of the cooperative movement. In this connection it should be borne in mind that an important feature of the Deposit Insurance Corporation is its close and intimate relation with the Reserve Bank which has extensive and statutory powers of licensing, inspection, amalgamation and liquidation of the Commercial Banks. Any agency which is entrusted with the task of insuring cooperative deposits will have to be given similar powers over these institutions.

Some eminent authorities are of the view that cooperation is a State subject and all regulatory powers in relation to cooperative institutions vest in the Registrar and the State Government. It is the State Government which may, therefore, be expected to take initiative for making arrangements for protecting the deposits of cooperative institutions working in the State. No doubt the Reserve Bank is the principal financier of the cooperative movement and it also conducts inspection of the cooperative banks on the voluntary basis. But the bank does not have those powers over the cooperative banks which it enjoys over the Commercial Banks. It was, therefore, suggested in the Agenda Note prepared for the consideration of the 21st meeting of the Standing Advisory Committee on cooperative credit that "the appropriate agency for offering adequate guarantee to cooperative deposits would appear to be the State Government concerned acting through a suitable state level Agency" (Page 34). This point of view has also been supported by Professor Karve and Professor Gadgil.

It has also been pointed out that some of the State Governments have already started guaranteeing cooperative deposits. For instance the Madras Government has guaranteed three year term deposits carrying 5 per cent interest

per annum with Central Cooperative Banks and Apex Banks up to Rs 30,000/- and Rs 135,000/- respectively.

In regard to the Constitutional difficulty arising out of cooperation being State subject it may be pointed out that expert opinion is that the Union Government can introduce or participate in any scheme of guarantee or insurance of cooperative deposits without the necessity of bringing cooperation from the State List to the Concurrent List. Has not the Central Government been already doing much for developing the cooperative movement, though cooperation continues to be a State subject? In view of the recognition of cooperation as an important instrument for economic development in rural areas and the interest of the Central Bank in the growth of the cooperative banking along with other banking on sound lines the Reserve Bank and Union Government cannot relieve themselves of their responsibility to take suitable steps to ensure that the cooperative banks are not placed in a handicapped position from the point of view of attracting public deposits.

Moreover, in view of the different levels of organisational and financial soundness and strength of cooperative banks in the different parts of the Country it is certain that all State Governments would not show sufficient interest in initiating and maintaining such schemes. It is only under an all India arrangement that richer and better placed cooperative banks would go to help the poorer and less developed ones in the matter insurance of cooperative deposits. It may also be difficult to handle the problem on the State basis.

It is, however, necessary that any organisation that may be set up for the purpose of insuring cooperative deposits will have to be given powers to inspect and issue directives to the cooperative institutions as the Deposit Insurance Corporation has with regard to the Commercial Banks. Under the circumstances until an All India Cooperative Bank is established the best possible solution seems to be to give all necessary powers to the Reserve Bank of India in regard to the cooperative institutions also. The Reserve Bank possesses the experience and organisation needed for proper inspection and direction of cooperative banking. Perhaps the work is not being properly performed by Cooperative Department in many States. However the State Government cannot escape the responsibility of sharing in the strengthening of the cooperative institutions. The best thing, therefore, seems to be to set up an All India Organisation under the direct supervision of the Reserve Bank, to which contributions could be made by the State Governments and Cooperative Banks.

TRADE Exports up

The recent meeting of the Board of Trade in Delhi has helped to focus attention on the export performance in general and, particularly, on the sharp increase in exports to East European countries. Trade with this group of countries accounts for nearly Rs 10 crores out of the total increase of Rs 20 crores reported in preliminary statistics for the period April to June 1964. Trade with East Europe is regulated by agreements which provide for balanced, bilateral trade and for annual reviews, at which trade plans are drawn up. Too much, therefore, should not be read into the increase of Rs 10 crores in the value of exports during the first quarter of 1964-65.

This increase may be due to adventitious circumstances and cannot be expected to continue at the same level, for the total volume of exports for the year is fixed by prior agreement. Nevertheless, trends over the last few years show a steady and hearten-

ing increase. These have been reinforced by recent trade agreements which provide, in most cases, for doubling of trade both ways.

To take one instance, exports to Soviet Russia increased from Rs 35 crores in 1962 to about Rs 50 crores last year, while the figures for the first half of the current year, that is, January to June 1964, indicate that the trade plan provision of Rs 30 crores for trade each way is likely to be exceeded. This conclusion is further strengthened by what is known of the purchases by Soviet agencies in India and the import licences issued by the Government of India for imports from the USSR.

The half yearly review of trade between the two countries indicates that it is nearly balanced, with exports from India at Rs 33 crores against imports of Rs 22 crores. On the other hand, during the corresponding period of last year, when exports stood at Rs 20 crores, there was an adverse balance of Rs 7 crores against India.

mental assistance is bound to run up a trade deficit and there is no cause for alarm on this account, for the deficit is the measure of the extent to which the economy has been able to absorb external assistance.

Aid promised to India by members of the World Bank Consortium during the last three years has been of the order of one thousand million dollars, or five hundred crores of rupees, per annum. If all the aid promised had been fully utilised, and without delay, trade statistics are bound to show an annual trade gap of about the same amount, reduced by repayment and servicing charges on old loans and expenditure on other 'invisibles'. Allowing about Rs 100 crores on this account, the yearly trade gap could be as large as Rs 400 crores. A narrowing of the gap is an indication of a corresponding slowing down in the pace of utilisation of foreign aid. This could be embarrassing when it comes on the eve of talks on further aid for the Third Plan.

Since there is no accretion to the foreign exchange reserves, (Sterling Balances as at the end of the first week of August stood at Rs 53 crores, which is definitely on the low side) it is evident that export earnings, as well as any non-project aid that has been made available, have been fully used up. Therefore, it will not be reasonable to urge the Government to relax import restrictions or issue import licences with a free hand for the large variety of commodities of which the country is starved. The hold up is evidently in respect of aid which is earmarked for specific projects or in converting committed aid into loan agreements.

EXPORTS Dynamic Policy Needed

Speaking at the annual general meeting of the Indian Council of Foreign Trade, Mr Morarji J. Vaidya, the outgoing President, has pointed out that if the economy is to become self-reliant and self-sustaining by the Fifth Plan, the export target for the Fourth Plan should be set at a consider-

ably higher level than in the current plan. In this view by 1970-71 the annual level of export will have to rise to about Rs 1300 to Rs 1400 crores (at its recent meeting the Board of Trade has approved a target of Rs 1,100 crores in the last year of the Fourth Plan and a total of Rs 5100 crores for the Fourth Plan as a whole). Deprecating the controversy over the export target for the Fourth Plan, Mr Vaidya has said that the question of export target had been settled three years ago and that is final if some desired objective is to be attained at a particular time. What is now needed is a determination to achieve the targets laid down. There may be temporary setbacks but these should not lead to downward revisions. The outlook, however, has changed for the better since 1963-64 in which year exports have far exceeded expectations. Mr Vaidya therefore thinks that it will be only proper now that the outlook has improved to stick to the original figure of Rs 840 crores for 1965-66.

While approving a level of exports of Rs 1100 crores for the last year of the Fourth Plan, the Board of Trade has made it clear that hitting such a high target will not be easy. It will not only need a considerable increase in production both in industry and agriculture but will also necessitate a certain measure of restraint on domestic consumption. Mr Vaidya, however, thinks that even the still higher level of exports envisaged by him will be within our capacity to achieve provided a dynamic policy of export promotion through increased production is adopted. This will require in the first instance a correlation between the export targets and productions targets. It is also important, he has further pointed out, that the targets of production of various industries and foreign exchange allocation for them are based on their prospects of export promotion.

COIR EXPORTS Bright Outlook

Exports of coir and coir products from India during 1963-64 amounted to 77,724 tonnes worth Rs 12

crores against 78,233 tonnes valued at Rs 12.15 crores in the preceding year. Though exports were slightly lower, as Mr M. P. Alexander, Chairman of the Coir Board, stated the downward drift appears to have been arrested and the current trends augur well for better performance. And it is anticipated that exports of coir and coir products would aggregate about Rs 14 crores by the end of the current plan. There was a steep decline in the exports of coir fibre by 367 tonnes in quantum and Rs 5.09 lakhs in value to 891 tonnes and worth Rs 11.08 lakhs. This was primarily due to the lower offtake by Italy and East Germany of coir fibre in the year under review. However, this was partly offset by a modest improvement in the exports of coir fibre to Yugoslavia by Rs 35 tonnes valued at Rs 46,000. Exports of coir yarn to East European countries were placed higher at nearly 11,700 tonnes worth Rs 169 lakhs, an increase of 46 per cent and 36 per cent respectively. Exports to the US, Bulgaria and Austria also recorded an upturn during the year. Exports of coir products were marked higher by 2,375 tonnes at 19,200 tonnes raising the earnings therefrom by Rs 49.58 lakhs to Rs 384.16 lakhs. This was largely due to the increased imports by UK, the US, Canada, Italy, Denmark, Australia, West Germany, the USSR and France.

It is significant to note that the coir industry is purely an export-oriented industry and, for that matter, its future is primarily dependent on the demand in foreign countries. Any violent fluctuation in overseas demand will seriously affect our coir industry which is essentially a cottage industry providing employment for over 700,000 people and playing a pivotal role in the economy of Kerala. With the rapid mechanisation of extraction of coir fibre, remarkable progress in production is expected apart from reducing the manufacturing cost. Diversification of production by the industry with better finish to suit the consumer preference in world markets will be of enormous help to enhance the export prospects of coir and coir products.

LAC Emphasis on Research

The steady trend noticeable in the shellac market in Calcutta in the past few weeks should not be taken to mean that the outlook for the shellac industry has suddenly undergone a marked improvement. For the rise in prices has stemmed from the apprehension that supplies will fall short of demand in view of the sharp reduction in the production of lac

in this country in 1963-64 from the average annual normal production of 63,000 tonnes to only 28,000 tonnes. Though adverse weather conditions have been partly responsible for the setback in lac production last year, the fact that overall demand for the product has been at a meagre level for some years now has made lac growing an extremely unprofitable occupation. Lac may well be considered a versatile natural resin, but its indigenous utilisation has not expanded to any marked extent with the result that the industry continues to be predominantly export oriented. And in recent years exports have been continuously falling because of lack of overseas demand. The emergence of synthetic resins coupled with the growing competition from the new producers have placed our industry in an unenviable position. With progressive development of the lac industry in Thailand and Burma, world supplies of lac are increasing

while demand is static if not diminishing as a consequence of the advent of synthetics. The extent of the setback to the Indian shellac industry will be evident from the fact that as against Rs 15 crores at one time, export earnings from shellac are placed at only Rs 4.62 crores in 1963-64.

The decline of this industry cannot but cause concern to the Government if only because of the large number of people engaged in it. There are an estimated four million lac growers in the country and already their economic condition has been made quite precarious owing to the poor return per unit on lac. While efforts will have to be made to regain our lost position in world lac markets, it would appear that a lasting solution to the industry's ills is to be sought in fostering the indigenous utilisation of lac. As has been pointed out by Mr G. C. L. Joneja, Chairman of the Shellac Export Promotion Council, there appears to be considerable scope

for using shellac in the manufacture of paints and varnishes. Other profitable uses can also be found. But all this will depend on sustained research.

POYSHA INDUSTRIAL Good Results

Despite the disturbing raw material supply position, Poyscha Industrial Company Limited has registered good progress during 1963-64. Speaking at the seventh annual general meeting of the company held in Bombay, Mr M. R. Ruia, the Chairman, drew attention to the improvement in can production, which went up by 18 per cent over the previous year, consequent upon increased efficiency and a certain amount of rationalisation and shed much light on the shape of things to come. Naturally enough, profits of the company during the year more than doubled to Rs 4.26

lakhs from Rs 2.11 lakhs in the preceding year. This apart, it is a matter for gratification that the company's expansion programme is making good headway. An area of 33 acres has been acquired near the Thana factory and construction of the new factory buildings will commence immediately after the monsoon. Similarly, about ten acres of land at Mamala near Ernakulam have been purchased for the installation of the new factory. The site for the Ghaziabad factory has been selected and negotiations are under way for the procurement of land. A modern automatic printing plant for the Bombay factory has been imported and Government has approved the import of a second automatic bodymarker line for boosting can manufacture. The company has earned foreign exchange worth Rs 20 lakhs by exporting its products. Its Capital will be augmented to Rs 110 lakhs from Rs 25 lakhs for which negotiations are being carried out with some of the leading financial ins-

tutions. If these efforts bear fruit, the company will be able to step up production for catering greatly to the domestic requirements and expanding exports. It will, however, be erroneous to consider that the operations of the company were trouble-free. Supply of raw materials, especially tinplates, has been inadequate and uneven which more often than not disrupted the company's production schedule. As Mr Ruia indicated, in stead of reporting to ad hoc coping, Government should initiate long-term measures such as manufacturing sufficient quantities of thin tinplate and tinplate foil indigenously. It is particularly to this aspect that Government has to bestow special attention for helping the can manufacturing units to maximise their production. As suggested by Mr Ruia, manufacture of at least a certain percentage of thin tinplate and tinplate foil in the Rourkela steel plant and the proposed Bokaro plant will be of enormous help.

COOPERATION Vested Interests

According to Mr Sriman Narayan, Member of the Planning Commission, a vital role awaits the cooperative movement in coming years. For, both the Government and the Planning commission are determined to extend the cooperative sector not only to the whole of agricultural field but to a major part of the industrial and commercial sector as well. In this view, the sector will be progressively expanded so as to replace the public sector corporations and in the process the present private sector economy will get transformed into one based fully on cooperatives. For achieving this, the Planning Commission intends to increase the resource allocation to co-operatives from Rs 80 crores in the third year of the Third Plan to Rs 200 crores by the end of the Fourth Plan.

The question however arises whether the cooperative move-

ment will be able to shoulder the big responsibility that is proposed to be assigned to it. If past performance is any guide, the movement despite its considerable expansion during the past few years, has not brought much benefit to the section which it is intended mainly to serve. Mr Sriman Narayan himself has admitted that the amounts spent so far through the cooperatives has gone only to help the upper strata of the population. It is also significant to note that Mr D. S. Desai, Home Minister of Maharashtra, has recently urged a review of the trend of the cooperative movement with a view to determining which section of the population it has benefited most. He has pointed out that the co-operative institutions are meant for the uplifting of the economically weaker sections of society and hence their existence cannot be defended if the results disclose a different picture.

That Government too is not quite satisfied with the present trend in the movement is evident from the fact that it has just set up a high power committee to review the existing cooperative laws, rules and practices with a view to locating the loopholes which enabled vested interests to entrench themselves in cooperative institutions. The committee has been asked to recommend measures for the elimination of such vested interests. Another task of the committee will be to examine the factors inhibiting self-reliance and self-regulation in the cooperative movement and suggest remedies.

WOOL Growing Idle Capacity

The main handicap of the woollen industry is its chronic idle capacity. This of course stems directly from the fact that for many years now the country has been obliged to be extremely stringent in spending foreign exchange for the simple reason that its availability has all along been far short of demand. The continuing shortage of foreign exchange has placed many an industry depending on imports for raw materials in a difficult position. In the case of the woollen industry the position is acute because its dependence on imports is almost total. For, although indigenous raw wool production is about 72 million lbs per annum, only about 8 million lbs of this quantity is usable in the woollen mills and that too for the manufacture of coarse fabrics. About 30 million lbs are exported while the balance is used for carpet making. But the allocation of foreign exchange for wool import is so meagre that the bulk of the installed capacity is remaining idle. The utilisation of capacity in 1963-64 when in-

ported raw material worth only Rs 6.50 crores was made available has been estimated at 14.3 per cent in spinning and 18.5 per cent in weaving. There has been no improvement in the raw material supply position in the current year and it is feared that in the second half of the year many mills would be left with no other alternative but to close down for want of raw material. The Government however does not seem to pay heed to the repeated plea of the industry for increased allocation of raw materials so as to enable it to make a fuller use of its capacity. Instead it has already issued licenses for the establishment of three new units with a total of 12,800 spindles. The inevitable result when these new units come into operation will be a further increase in idle capacity which is already very high. In a memorandum to the Union Government, the Indian Woollen Mills' Federation has rightly questioned the need for increasing capacity at a time when existing mills themselves are not getting adequate raw materials. As has been pointed out by the Federation, the needed additional capacity could easily have been obtained by enabling the existing mills to modernise their machinery, as modernisation will increase their efficiency by 50 per cent.

STEEL Bids for New Plants

In a recent speech which has attracted a good deal of critical attention in the South, the Minister for Steel and Mines is reported to have suggested that the Chief Ministers of Andhra Pradesh, Mysore and Madras should sit round a table and decide which would be the most suitable site for the fifth steel plant. Evidently he had in mind only the claims of these three States. It is, however, learnt that Orissa has now entered the field with a powerful bid for the fifth steel plant.

A memorandum prepared by the Government of Orissa makes out a strong case that the most suitable location for an integrated steel plant, considered from any angle—economy of operations, scope for future expansion, nearness to sources of raw materials like iron ore, limestone and dolomite, transport facilities by road and rail, and availability of land, water and power—would be somewhere in Orissa.

The Memorandum discusses the comparative merits of three possible locations: (1) A Coastal Plant at Paradeep; (2) Inland Plant in the Bonai region of Sundergarh district; and (3) Inland plant in the Nayagarh region of Keonjhar district.

The economics of the coastal steel plant located at Paradeep it is claimed, would compare favourably with any coastal plant

located in other areas, because of the comparatively shorter haul of high grade iron ore.

The economics of the inland sites at the two places mentioned above will be even better. Both will have to use coking coal brought from the Bengal-Bihar coal fields, or, if it is found more economical or necessary in the interests of conserving indigenous supplies, imported coke. The possibility of using wagons carrying ore for export from the mines in the vicinity to bring coal on their return journey, should make for economic haulage. There is also the possibility of utilising high grade, low-ash Talcher coals for blending with coking coal, or, after optimum carbonisation treatment in blast furnaces of sizes restricted to 800 tons.

Both the inland sites are near forests, in the vicinity of perennial rivers. The memorandum points out that considerable areas could be reclaimed and provided with irrigation facilities and utilised for the resettlement and rehabilitation of persons displaced by the construction of the steel plant.

★ INDO-UK TRADE Deficit of £1.7 Million

Exports from India to Britain during the first half of the current year recorded a decline of a shade over £4 million as compared to the relative figures for the corresponding half in the previous year. Exports of almost all the major items are marked down except those of textile yarns, fabrics, made-up articles which increased by £4.5 million to £16.2 million; textile fibres and their waste which moved up by £1.8 million to £3.1 million and leather, leather manufactures and dressed fur skins which showed a marginal rise of £0.3 million to £5.4 million.

There has been a steep decline in exports of tea by £6.4 million to £19.7 million and a decline of £1.0 million in the exports of tobacco and manufactures.

Imports into India are also marked lower by £1.5 million at £67.0 million during the period under review, accounted largely by a step decrease in the imports of machinery other than electric by £3 million to £21.8 million. But this decline has been offset by increases in imports of Iron and Steel which went up by £1.5 million to £6.5 million and Transport Equipment which are marked higher by £1.5 million at £7.3 million.

It is evident that despite the slight decline in imports in the first half of this year, the notable decrease in exports has resulted in a trade deficit of £1.7 million in contrast to a favourable balance of trade to the tune of £0.9 million in the same period in 1963.

GLEANINGS

The Problem of Wage Drift

The following is an extract from INDEX, Economic Review, Svenska Handiesbanken. The problem that Sweden faces in regard to wage increases exceeding improvements in productivity is one shared by India. The article, will, therefore, be of some useful lessons for us.]

During the last ten years, considerably more than half of the total rise in industrial wages in Sweden has been through wage drift, i.e. over and above the contractual rise. As the development of industrial wages sets the pace for wages and salaries in all sectors, the wage drift has become a strategic factor in economic balance. The total rise in wages has for many years exceeded that of productivity, and has thus been incompatible with a stable value of money.

The wage drift is closely linked with the general business trends. The wage drift has been relatively modest during both the recession periods 1953—1954 and 1958—1959, but more pronounced during the booms of 1955—1956 and 1961—1962. However, it is also clear that the business cycle has had an even greater effect on contractual increases. During years with relatively sluggish business activity it has been possible to hold these back much more drastically than the wage drift. It would seem that the latter has an institutionally fixed core which is not affected by moderate fluctuations in business activity.

The connection between the business cycle and the development of wages has been investigated in

several statistical studies the most recent being the OEEC report 'The Problem of Rising Prices'. Knowledge of the nature of wage drift, gained by investigations of this type, makes it easier to understand its significance and forecast its range, but provides no solutions of the problems it creates. If economic policy is aimed at reducing employment in order to check wage drift the price may be a rate of unemployment that is greater than that acceptable to a modern society. It is obvious that the solution of the wage drift problem demands a more restrictive economic policy than that applied in Sweden during most of the postwar years.

An attempt to analyse the wage drift soon shows that it is a collective term covering many widely varying elements. Part of the wage drift is due to the transition of people from lower wage groups to higher. Even if per capita earnings in each individual group do not rise, the result of such a transition is that the average level of earnings rises. This is merely a sign that we are living in a dynamic and progressive society and is not a matter for concern. In the same way, it is natural that the speeding up of pace at piece work shows in increased earnings

during the agreement period. On the other hand, a case of undesirable wage drift occurs if earnings rise as a result of inadequate basis for the fixing of piece work rates poor follow-up of revised methods of production, etc. A wage drift that is beyond the control of the management makes additional adjustments of wages necessary in order to restore a normal wage structure.

The wage statistics that form the basis for the central negotiations between the Swedish Employers Confederation and the Confederation of Swedish Trade Unions show considerable divergences in wage drift between different groups. It is higher for men than for women, and higher for piece rate than for time rate wages. For a number of years, the negotiating parties have aimed at distributing the contractual rises so that these divergences are eliminated. The result has

been a uniform development of men's and women's wages. However, following a special women's wage agreement in 1960, there has been a slightly more accentuated rise in women's wages in recent years.

Noticeable changes have occurred in the relative wage level in different fields of employment. Since the middle of the Fifties, the home market industries have had the most rapid wage development, mainly due to a stronger wage drift than in export industries, which have felt the pressure of gradually growing competition in foreign markets. During the immediately preceding period, which included the Korea inflation, the situation was quite the reverse. Between 1949 and 1956, wages rose much more rapidly in the typical export industries such as the forest industries and also in the steel works than, for instance, in the building industry.

From the company point of view, wage drift is primarily a problem of controlling wage costs. The management should be able to control the development of wage costs of the company within fairly narrow limits. This, is, of course, a problem only when the piece work system is used. It is in the nature of this system that the worker should be able to increase his earnings by increasing his output.

The difficulty lies in preventing the wage increases from exceeding the growth of productivity. A number of intricate problems arise in this connection. It is impossible to have absolute control of piece work, and hardly even desirable. Experience during the last few decades indicates that the control achieved through an efficient work study system may be sufficient to keep the development of wages within satisfactory limits. When a company has a good MTM

system, uncontrolled wage drift is limited to about one per cent a year.

The absence of a wage drift does not necessarily mean that a company has the development of wages well under control. It may be a sign of inefficient production and an intentional or unintentional limit applied by the workers to piece work output. Such a situation is often not very obvious but can actually be more expensive for the company than an extensive wage drift.

During recent years the total rise in wages has been about as high in Sweden as in the leading industrial countries on the European continent. As the Swedish wage drift has been considerably higher, this means that the contractual increases have been lower. It is possible that the negotiating parties' awareness of the wage drift has contributed to the long line of peaceful wage settlements in Sweden. On the other hand, it is obvious that a large and unevenly distributed wage drift creates special problems when it comes to keeping the overall development of wages at a non-inflationary level.

Experience shows that an overall wage drift of 3 per cent under normal business conditions makes it necessary to adjust women's wages and time rates—in order to restore their relation to men's wages and piece rates—by more than one-half per cent of total wages. The wage drift and its repercussions on collective agreements have then swallowed any margin a normal rise in productivity could be expected to create. In addition, there is usually an increase in the expenditure for social welfare imposed by the Government on employers.

If the wage system is to function properly in the future, not only during periods of international inflation but also when prices are stable and competition is keen, certain changes are necessary. The Government must base social security contributions on more thorough investigations of what possible results these contributions can have for the financial position of companies and for their ability to compete with industries in other countries. Companies and their organizations must intensify their efforts to improve wage control by more extensive use of work studies and wage systems that do not encourage wage drift. Without such efforts the Swedish wage system may not be able to withstand the strain imposed on it by a harsher international economic climate. It is not correct to maintain that the problem of wage drift never can be solved unless the Government makes sure that the labour markets organizations can operate in a well-balanced economy. The wage drift is not only a result but also a cause of inflationary pressures.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as
the wind
To blow on whom I please"
—As You Like It

AS a bolt from the blue the Enforcement authorities struck in Bombay; the haul, though mainly in the form of Indian currency, has been very substantial indeed. Some lockers have still to be opened up, and until their contents are known, we cannot make a computation of the so very much that has been recovered from so few. The reports, of what a cachet in a particular bathroom or what a bank vault yielded up, have consistently been front page news. As yet, however, I have seen little to suggest that the implication of the raids is being sought to be interpreted. Personally, I would think that, to find out why the raids were carried out, we have to go back a bit. The starting point is Mr T. T. Krishnamachari's known concern about the havoc that unaccounted money was wreaking upon the price situation. He was convinced—and I dare say he is right—that inflationary tendencies got not a little encouragement from the cash premiums that many a purchaser offered on transactions with provisos attached to them. A plot of land realised rather more, if the seller were willing to accept a moiety of the sale price in the form of cash. At one stage, it appeared as if the Finance Minister was considering demonetisation as a means of rendering sterile the currency in the parallel money market. But, as I had written at that stage, this was an impossible undertaking, since the replacement of notes in legitimate circulation would alone take perhaps ten years of round the clock printing at Nasik. The Finance Minister then took suitable powers for search, etc., so as to be able to ferret out hidden caches. Thus, though it is the Enforcement branch which has had nominal charge and responsibility for the last week's raids, I would say that the authorities are after Indian currency rather than foreign exchange secreted away. Which brings me to the next point: why has there been so much fanfare attending not merely the raids but also the discoveries? I think it is significant that a few top-line film actors and actresses were accorded the honour of being chosen for the first series of raids: since there is mass interest in the film world, the most extensive publicity in the press was assured. So, the fact has been broadcast that Government will not hesitate to use its mighty powers to unearth tax-evaded moneys. The next logical step,

which I expect within the next two weeks, would be an announcement of some amnesty scheme whereunder the possessors of such money would be given a time limit for owning up to their peccadilloes of the past: tax would of course be payable, but it might not be as stringent as the rates now in force plus the penalties. How good will the response be? When the Gold bonds were introduced, their failure to mobilise gold hoards was entirely predictable because the conditions attendant made of it an unattractive scheme. I trust that the Finance Minister will take care to avoid a similar pitfall. At the same time, I am sure that wry note will have been taken of the unerring and uncanny manner in which the safe in the bathroom of one of the film actresses was quickly traced: this means, of course, that the monetary authorities are confident getting "inside dope" from informers. Therefore, I dare say that an amnesty scheme properly formulated could indeed succeed.

The question may be asked, why any inducement at all for known tax evaders? The answer is, there are two kinds of benefits flowing from the legitimisation of black money. On the one hand, it will no longer be free to disrupt the normal behaviour of prices. On the other, funds will in turn be licitly available for corporate investment. For their part, the owners of unaccounted money would possibly feel relieved that they no longer have to watch out for informers and thieves and raids and harassment. However, the mobilisation and alchemic transformation of black money can be no more than the first step. Of itself it will not succeed in controlling price behaviour. Prices will return to normal, only when the availability of goods matches up with demand. Hence, I would suggest that Government policy has fundamentally to change. The planned disbursements are releasing vast (and mass) purchasing power that can be "satisfied" only if there is simultaneously an increase in the supplies of consumer goods. True, the basic and heavy industries are central to planned progress: but let it be recognised that there is need side by side to improve the availability of consumer goods. If this is not done, once again the scarcity conditions obtaining in one sector of the economy or the other

will be found just right for a new series of grey or black market deals.

would have been put through at extortionate prices.

How easily such a thing could happen, I learnt last week. A friend said that the jute goods industry would grind to a halt within ten days. I asked why, there is really no shortage of raw jute. (It was amusing to read Mr Joneja, the Jute Commissioner, asserting that panic rumours about the current jute crop were given their first whisperings by certain gentlemen from Pakistan at, of all places, a cocktail party in Calcutta). He replied that the shortage was in the realm of jute baling hoops. For some reason (technical in nature) it appeared that India's only manufacturer of the hoops in question had been compelled to stop production, because the raw material that it got was not of the right size. I made inquiries at the Iron and Steel Controller's interrupting a meeting that was concerned precisely with the solution of this problem. Later in the afternoon, I was told that the looming crisis had been averted. Fortunately, there were few who knew of the impending famine in jute baling hoops; and so panic had not set in, and no grey or black market emerged. But given just a few days more of inaction, I am sure that some transactions at least (at the second or third-hand)

Well, the waiting is over, and what little suspense there was about the Democratic Convention has ended. President Johnson, whose nomination was a certainty, has chosen Senator Humphrey to be his running mate at next November's Presidential elections. As things stand, the Democrats are the favourites, but as I have recently been hinting, the election could be closer than most political pundits might think. The South will most likely be solid for the Republicans rather than for the Democrats. But Mr Johnson should get a considerable boost from two Kennedy men standing for election. I refer to Bobby Kennedy's decision to run for Senator from New York, and to Pierre Salinger's similar seeking of elective office from California. That both will benefit from their association with the magic Kennedy name, we need not at all doubt; automatically, the Democratic ticket in these two mighty States (the biggest two, from the standpoint of electoral vote) stands to benefit. Thus, we are in prospect of having in the next Senate as many as three men identified with Kennedy: the two brothers, Bobby and Teddy, and bluff ole Pierre.

EAVESDROPPER.

"ARE YOU KIDDING?— DO YOU REALLY EXPECT ME TO SAVE?"

We agree, it is not easy these days to save. But consider it this way: COULD YOU AFFORD NOT TO SAVE? Could you, without any savings, meet unexpected expenses? What about your children's education, their careers, their welfare? And, of course, provision for your own retirement?

The proper way is to put aside in a Savings Bank Account with The Bank of India Ltd., say, 10% of the income and limit the expenses to the remainder.

lympus - A Letter from Delhi

Productivity in Cement Industry

THE low level of productivity of labour in the cement industry in India, as compared with what has been achieved elsewhere, is highlighted in a recent report prepared by a Study Group which was appointed by the National Productivity Council to study the problems of productivity in this industry. The cement industry was one of the five industries — the other four are Jute, Rayon, Bicycles and Electrical Motors and Transformers — chosen by the NPC for intensive study of productivity problems. The twelve man Study Group for the cement industry, comprising executives, technical specialists, and representatives of Labour and Government was headed by Mr R. V. Raman, Joint Secretary of the Ministry of Industry and Supply.

Productivity of the worker in the Indian Cement industry as compared with his counterpart in Western countries, says the report of the Study Group, is 'depressingly low'. The man hours required for producing one tonne of cement is 1.50 in the United States, 1.51 in Belgium, 1.75 in Japan, 1.82 in the United Kingdom and 2.20 in Germany. The corresponding figure for India is as high as 10.15.

The report, however, makes it clear that, though the indices are based on labour, they do not measure merely labour efficiency. Actually they afford a measure of industrial efficiency in general, reckoned in terms of one specific factor. Any factor affecting the output of labour may have an influence on labour productivity. What is measured is the combined effect of the different factors which influence productivity of the industry.

Discussing the reasons for the low productivity of labour in the Indian cement industry, the Report mentions that the machinery installed in Indian factories is in no way inferior to the machinery in other countries. But workers here labour under a peculiar conventional disability. A person doing a particular job will not turn his hand to any other work even if he has plenty of spare time. The oiler will not do the cleaning, the cleaner will not do the oiling, and a machineman will not do either of these jobs. The principle of division of labour, says the Report, is carried to ridiculous extremes, with the result that there are many persons unnecessarily hanging round each piece of machinery.

The Report also points out that the range of disparity in the productivity of different factories in the country is greater than the difference between the average for India and the corresponding figures for other countries quoted above. The man hours per tonne of cement in the different factories in India varies from 4.47 to 20.12. While this shows the difference in standard of equipment, age of plant, etc, it also indicates the scope for improvement in productivity through better layout, better methods of material handling, preventive maintenance, statistical quality control, and incentive wages, which are recommended for the purpose. Regarding the effect on productivity of adoption of a system of incentive wages, the findings of the Study Group are not clearly defined.

It was brought to the notice of the Study Group that it would be possible to introduce the system of incentive wages only in a few departments like packing, or manually operated limestone quarries. One or two factories tried to introduce the system in

some other departments but with negative results. The payment of extra wages to some of the employees engaged in production created resentment among the others who were not benefited by the incentive system, and the experiment had to be given up. Even in the case of manually operated limestone quarries and packing departments, where most factories have a system of incentive wages, it has not been working satisfactorily. The workers are reluctant to give more output for fear that the minimum workload may be later increased on the basis of the increased output. One cement factory, the Report says, has an agreement with the Workers' Union, linking bonus with production. The agreement has been working satisfactorily and it has been suggested that other cement factories may consider adoption of this system.

The Report recognises that higher productivity may, in the short run, mean some redundancy, especially in the older, overstaffed plants. Some cement factories have entered into agreements with their workers that vacancies caused by natural wastage, that is, death or retirement, will not be filled. This procedure has been recommended for adoption by other factories also, so that, their productivity could be progressively brought up to a reasonable level.

The study group has noted that shortage of spare parts has been responsible for substantial loss of production and has accordingly recommended increased foreign exchange allocation for importing essential spares as well as for rehabilitation of old plants. The Report also recommends standardisation of machinery and size and design of plant. It has been suggested that kiln size should be standardised at 550/600 tonnes per day that, for the next five years the optimum size of a cement factory would be 1800 tonnes a day capacity. This size has been recommended because it is felt that a plant with initial capacity of 550/600 tonnes a day could be economically duplicated and triplicated to reach the optimum level. A larger size, it is felt, would not be economical for, in present conditions, it would lead to difficulties

in regard to fuel and transport of raw materials and finished products.

The Study Group found that production has suffered in the past on account of inadequate supplies of coal and continues to suffer because of the inferior quality of the coal that is supplied. It has, therefore, recommended that cement factories should be given priority for supply of good quality coal. The Study Group has examined in some detail the use of alternative fuel like furnace oil. Two years back, when there was a severe shortage of coal supplies at consuming centres brought about by shortage of transport, the Ministry of Steel and Heavy Engineering had encouraged cement factories, in West India and in the South, to switch over to the use of furnace oil by offering extra incentives. With the improvement in the availability and resumption of normal supplies, the incentive has been withdrawn. The Study Group has estimated that the cost of production will go up by ten per cent if coal is replaced by furnace oil. Railways may also find difficulty in coping with the demand for tankwagons if all factories switch over to furnace oil. It is also pointed out that, in case of complete conversion to furnace oil, revision of retention prices will be inevitable. Supplementing coal with furnace oil is considered more advisable than complete conversion to the use of oil fuel.

In regard to transport, the Report recommends greater use of roads for transport of cement from factories to consuming centres. It is suggested that despatch of cement by road will increase to an appreciable extent, if the State Trading Corporation will bear lorry freight up to a radius of 120 miles from each cement factory.

Other recommendations relate to the introduction of statistical quality control, mechanisation of limestone quarries, introduction of preventive maintenance schedules, improvement of working conditions, and amendment of Employees State Insurance Rules with a view to reducing labour absenteeism.

Conversion of Mysore Iron & Steel Limited

An agreement between the Governments of West Germany and India, covering credit of D.M. 60 million for the conversion of Mysore Iron & Steel Limited into a special steel and alloys plant is expected to be signed very shortly. All the preliminaries, it is learnt, have been finalised and orders for equipment will be placed immediately after the agreement is signed.

The project is estimated to cost Rs 107.5 million with a foreign exchange content of about Rs 70 million. Messrs Bohler and Company of Austria, one of the most reputed producers of special steels in Europe, are providing the technical assistance and know-how. The collaboration agreement signed in November, is for ten years.

After conversion the annual capacity of MISL will be 77,000 tonnes of high speed steel, high alloy steel, free cutting, spring steels and constructional steels. The MISL at present produces pig iron, steel and ferro-alloys in addition to other products like C.I. castings, steel castings and C.I. pipes. The present pig iron capacity of the unit is 80,000 tonnes.

Foreign Aid

Mr George Woods, President of the World Bank, stopped over for three days in Delhi on his way to Tokyo for the Fund Bank meeting. During these three days he had a round of discussions with the Finance Minister, the Dy Chairman and members of the Planning Commission and officials of the Government of India, regarding the present state of the economy and the contours of the Fourth Plan which is now under preparation. India's requirements of foreign exchange for implementation of plan projects and for meeting repayment obligations during the fourth plan period figured prominently in the discussions with the Finance Minister. It was agreed that a World Bank team should come shortly to study the different aspects of the economy while the Fourth Plan was still in the formative stage and make an assessment of the foreign exchange requirements in time for the next consortium meeting.

Mr Woods stated at his press conference that the team would be coming out next month and be in this country for about nine months to a year, reviewing the progress of the Plan projects, the utilisation of foreign aid in the public and private sectors, and problems relating to investment in private sector such as rate of return, governmental procedures etc. Another team will make a detailed study of projects and programmes.

Earlier when he visited the Indian Investment Centre, Mr

Woods is understood to have indicated that a proposal would come up for approval at the Tokyo meeting which would enable the Bank to make funds available to the International Finance Corporation for loans to private undertakings. He told the press conference that IDA could also expect similar substantial allocations from the Bank's earnings for making loans to developing countries on soft terms and he hoped that such transfer of funds would be an annual feature.

In the course of his discussions with the Planning Commission, Mr Woods is understood to have expressed the view, that though India had made perceptible progress and built up know how, private investors in western countries had to be induced to invest in India in preference to other developing countries.

Seminar on Prices

The dimensions of the increase that has occurred in the last few

months had brought about a qualitative change in the inflationary situation against which the conventional measures of regulation were ineffective. Therefore, it has become necessary to think seriously about concerting integrated measures which transcend the "conventional wisdom" of credit and other regulations. This was the view put forward by Mr C. Subramaniam at the Seminar on prices called by the Bharat Sevak Samaj, which was inaugurated here by the Deputy Chairman of the Planning Commission. Both Mr Asoka Mehta and Mr Gulzarilal Nanda, who addressed the Seminar, on the opening day, had drawn attention to the implications of the programme of development and had emphasised the need for bringing about a change in popular attitudes to savings and personal expenditure. And both firmly rejected the Swatantra prescription of suspension of planning as the remedy for the current ills of the economy. The Swatantra

view put forward in a paper by Mr Lobo Prabhu, who correlated statistics of Production and Prices with Taxes and Controls to establish the connexion between Planning and price increase.

Mr Subramaniam who addressed the concluding session did not spell out the comprehensive measures that would be required to weep inflation under control. He confined himself to the problem of food prices. The major problem in regard to food grains, he said, was to find out ways and means whereby this burden could be eased and, while securing a reduction in the general price-level, to ensure that the producer's share in the price was increased. He also gave a sufficiently clear indication that efforts of Government would be directed to achieving this end by reducing the cost of distribution through rationalisation of the existing system. The steps that have recently been taken by the Government, he claimed, show that this process of

rationalisation "has not only begun, but has assumed a definite shape".

The point of view of the Trade, which inevitably finds itself in the dock during any discussion on prices, was effectively put across in a paper presented by Mr Bhani Ram Gupta, Hony. General Secretary of the Federation of All India Food Grain Dealers Association. Mr Nanda conceded his point that dealers should not be charged with hoarding, just because they held stocks for sale to consumers. Mr Gupta also referred to the recent police raids on the godowns of food grain dealers, and declared that hoarding has not been proved in any part of the country. In Delhi the entire stock with the trade during the police raid was found enough only for about ten or fifteen days for the population of 28 lakhs. Not a single wholesaler was found in possession of any unaccounted stock in his godown. The charge of profiteering, according to the spokesman of the Trade, is also without justification. The rates at which the wholesalers sell their stocks are determined by the rates prevailing in the producing mandis. The agriculturist naturally demands a higher price for his produce when he has to pay high prices for all the necessities of life. The dealer cannot sell the

grain at a lower price than he paid to the producer. The problem of high prices, said Mr Gupta, is linked with the high prices of all other essential commodities, and it cannot be eased or solved by making uncalled for accusations against the trade.

FICC's Views on Police Action

The Committee of the Federation of Indian Chambers of Commerce which met on Tuesday last, was highly critical of police action in various cities and threats of action under DIR against the supposed hoarders. The Committee has underlined the point that the raids have not disclosed any major discrepancy or malpractice and has appealed to the Government of India to advise the various State authorities to desist from creating an impression in the public mind that the trading community is malevolent or anti-social.

Governmental action, the Committee feels, can do much to distort or help correct the image. The demonstration effect of police power, it is pointed out, will help nobody, except place a large number of honest traders and citizens in a mortifying and helpless position. It is important that no sec-

tion of the trading class should be exposed to arbitrary action and exactions by the police. If the Civil Supplies Department wish to check stocks with the traders under the Foodgrains Licensing Orders, they could do so with their own officers in a normal and civilised fashion.

In regard to the food situation, the regrettable truth, the Committee point out, is that supplies in relation to demand are not adequate. In this context the Committee urged that "the co-operative effort of all concerned must be welded in a voluntary and cohesive form, instead of resorting to clumsy and extraordinary procedures like police action which is inconsistent with the immediate objectives or accepted political ideas." The Committee has also urged the establishment of Advisory Councils of the interests concerned, at the Centre and in the States. The Committee met under the Chairmanship of the Vice-President, Mr S. L. Kirlskar in the absence abroad of the President Mr K. P. Goenka.

Critical Shortfalls

The meeting also provided the opportunity for discussion of current economic problems with the Deputy Chairman of the Planning Commission who attended by spe-

cial invitation. One of the problems discussed related to the reported shortfalls in critical sectors like alloy, tool and special steels, castings, pig iron, machine tools, cement, paper etc for which the private sector is supposed to be responsible. The Committee referred to the causes such as delayed permission to private sector to enter an area earmarked for the public sector, price restraints, delays in licensing and foreign exchange clearance, inadequate power supply, shortage of raw materials, unrealistic policy in regard to certain basic industries, such as, pig iron, and like. In his reply Mr Asoka Mehta is understood to have emphasised the need for detailed planning for arriving at viable targets and affirmed the need to give up old postures and help whoever had the vitality to move forward in the interests of the country.

The Government of India is of the view that the pace of agricultural production would be considerably accelerated if some organisation were set up in the public sector to manufacture and supply the needs of the agriculturists by way of tools, implements and equipment. In view of this, Government proposes to encourage the setting up of agro-industrial corporations by the State Governments in the public sector.

Market NEWS and Trends

JUTE Happy Augury

WITH the appointment this week of the two advisory committees, all important problems pertaining to the jute industry and trade will have the benefit of constant high-level review. This is as it should be. For, apart from the fact that a very large number of people derive their livelihood from it, it is of vital importance to the nation especially at the present juncture as it is responsible for a fifth of the foreign exchange earnings of the country as a whole. That the Board of Trade, at its recent meeting, has estimated the earnings from jute goods exports at Rs 180 crores annually during the Fourth Plan is a clear indication of the continued importance that will be attached to our traditional exports such as jute goods. The point to note however is that while our jute goods industry is capable of delivering the goods, its effort at maximising exports are beset with difficulties over some of which it has no control. For instance, the industry has long been obliged to look on helplessly while

Pakistan has been steadily eroding its sackings markets overseas. Over the period of last few years, our sacking exports have declined sharply and knowledgeable circles are of the view that unless our Government takes some remedial measures expeditiously to stem the tide of Pakistani competition, our sacking exports before long will disappear altogether. It is therefore gratifying that a committee has now been appointed to advise the Government on measures to step up the exports of jute goods with particular reference to the growing Pakistani competition. The main objective of this committee which will have the Jute Commissioner as its Chairman, is to ensure that the Fourth Plan export targets for jute goods are hit as scheduled. It has been pointed out that the committee will act as a channel of communication between the Central Government and the jute industry and exporting interests so as to facilitate the discussion of the problems confronting the industry from time to time. It will make recommendations regarding the best means and methods of expand-

ing the export of jute goods to both traditional and non-traditional areas. It will promote interest among the manufacturers of jute goods in the expansion of sales overseas and advise the Government on measures of export promotion assistance and the working out of the export promotion schemes and the implementation of such schemes with a view to stepping up exports. The committee will also effect coordination in the matter of export over the entire range and types of jute goods; enforce quality control in co-operation with the industry and shippers and render such other assistance to exporters as may be considered necessary.

The other committee which is styled the Jute Textile Consultative Board will deal with a much wider field: production, distribution and export of jute goods as well as import and export of raw jute, procurement of raw materials, machinery and accessories required for the industry and all other matters relating to development and research. The 12-Member Board will be headed by the Union Minister for Commerce and members will be drawn from the Indian Jute Mills Association, the Calcutta Jute Fabric Shippers' Association, labour, and the concerned Central Ministries. The Jute Commissioner will be the member-Secretary. The Board will advise the Government on steps to be taken to develop the jute industry in all its aspects.

It may be recalled that early in July, Government set up a Central Committee for Jute Development, replacing the Central Supervisory Body for Jute. The main function of this committee has been specified as the scrutiny of the development programmes formulated by the State Governments in respect of jute and allied fibres with a view to reviewing the progress of jute development in the context of targets laid down and recommending measures for accelerating the tempo of development programmes. The Special Secretary in the Ministry of Food and Agriculture and Vice-President of the ICAR is Chairman of this 25-Member Committee.

★

Although there had been a marked decline in speculative activity following the imposition of margin restrictions on TSD contracts, prices very soon resumed their uptrend under revived bullish fervour. At one time raw jute Assam Bottoms was quoted upto

Rs 47. Since then there has been a reaction presumably on apprehensions of further severe curb measures but by close on Wednesday the bullish trend appears to have reasserted itself as Assam Bottoms gained on that day a rupee to be placed finally at Rs 44 per maund. This time, the incentive seems to have been derived from the jute goods section where prices were pushed up on Wednesday following reports of an Argentine order and a fresh Government of India tender.

As is to be expected such runaway rise in prices is viewed with considerable concern both by the industry and Government because if the unwarranted spur in prices is allowed to continue for any length of time irreparable damage will be done to our export effort as foreign consumers will turn to bulk handling and substitutes. Once this happens it will be extremely difficult to attract them back to the use of jute products, and in the case of bulk handling, the change-over will mean permanent loss of those markets for the simple reason consumers adopting bulk handling which will involve considerable capital cost will not be able to return to the use of jute even if they want. It is therefore gratifying that Government has decided to take the firmest possible steps to restore stability to the jute markets. Addressing a press conference in Calcutta on Wednesday Mr G. C. L. Joneja, the Jute Commissioner, pointed out that Government would stop at nothing in order to restore normalcy to the markets because stabilization of jute and jute goods prices was vital to the country's economy. That the apprehension that there will be a shortage of jute in the current season is exaggerated will be evident from the following statistics pertaining to jute supply in India and Pakistan. According to Mr Joneja, mills' current stocks of raw jute are of the order of 2.8 million bales and the season's crop is estimated at 7.2 million bales. Therefore, the total supply will be quite sufficient to meet the raw material requirements of the industry. He also questioned the validity of the contention that jute supply in Pakistan had declined sharply and hence the quantity available

More for everybody

In thousands of villages today, Co-operatives are doing what no individual could do before. Behind them, a pillar of strength, the State Bank of India.

Every year, through over 1600 branches, the State Bank of India and its subsidiaries extend financial and other assistance not only to the co-operative banks but also directly to the co-operatives themselves, such as marketing and processing societies, sugar factories, industrial co-operatives, consumer wholesale stores, etc. It is a happy circle. We help them. They help the nation. That helps us. There is consequently more for everybody.

STATE BANK OF INDIA

SYNDICATE BANK

The Bank that banks should be

It considers no man too small for a bank account and thus claims over 5,60,000 deposit accounts.

Has pioneered small savings schemes like the Pigmy and helped in extending the savings habit to the smallest man.

Has extended banking habit to women by opening All-Womens' Branches at Bangalore Seshadripuram, Trivandrum, Puthenchenthai, Madras Thyagarayanagar and Hyderabad Chikkadapalli and Womens' counters at several of its important branches like Bangalore Gandhinagar, Mysore, Mangalore, Bombay and a number of other places.

Has adopted a progressive policy in the employment of women on its staff and now employs at the Head Office and branches over 500 ladies, some of them holding very responsible positions.

Has concentrated its efforts to build up India by opening its branches from earliest times in rural areas and has now over half of its branches in rural and semi-urban areas.

Has encouraged banking habit among children even at a young age and claims over 40,000 childrens' accounts.

Has continuously extended credit facilities to an ever-growing clientele—big or small and has over 1,50,000 borrowing accounts.

Has special schemes for financing industries, agriculture and other productive enterprises—big or small.

Has special schemes for financing technical education within the country as well as overseas. It has financed technical education within the country through a Loan Scholarship Fund to which it has donated Rs. 75,000/- and has granted facilities to over 200 scholars for advanced technical education abroad.

Has financed small enterprises and trade under special schemes of personal advances and has also developed an Agricultural Finance Department for giving technical advice and financial assistance to farmers for increasing production.

Has produced free literature to popularise the banking habit and done intensive work in rural areas in making the people bank-minded.

Has a clientele growing at the rate of 1 lakh per year and gives everyone the same courtesy, attention and efficient service irrespective of the size of the account.

Has developed every Modern Department and gives around services including Industrial Finance, Foreign Exchange, Executor and Trustee, Safe Custody, Agency, Management of Share Issues and a host of other services.

Has advanced over Rs. 2 crores to small scale industries under 3000 accounts and has endeavoured to give them every financial assistance under special schemes.

7 lakhs of people cannot be wrong. Bank with the Syndicate Bank and join these 7 lakhs of well satisfied customers.

would be much less than in last year. In support of his view he pointed out that even if jute production in East Pakistan was taken to be 5.5 million bales, the total stocks of raw jute should, with last year's carry-over, not be less than 6.6 million bales. Since Pakistan mills could not consume more than 2.2 million bales, there should be a surplus of 4.4 million bales, which would be sold on the international market. This quantity is much more than what Pakistan exported (3.8 million bales) last year. However, with a view to restoring confidence in the market, the Government has already released the entire buffer stock of jute. Jute mills have been advised not to make purchases in the speculative market. Other steps contemplated include the issuance of a price control order for raw jute and the fixing of maximum purchase quotas for mills every month.

*

TEA

Prospects for 1964-65 Season

ACCORDING to the Food and Agricultural Organisation of the UN, the prospects for the 1964-65 Tea season are much brighter than might have been anticipated a year ago. The last study on tea by the FAO suggested an excess supply of 80 million pounds to 100 million pounds by 1965, placing the commodity with the same problems that have beset cocoa and coffee. However, now, it seems that the surplus this year will be much smaller.

One of the principal dangers that has failed to materialise is a growth of exports from China. But of more importance has been the steady decline during most of the period since 1961 in the crop of the largest single producing region — Northern India. Against this, there have been compensating increases in tea production in the three next largest growing areas — Ceylon, South India and East Africa. The result has been a degree of stability unforeseen a few years ago.

The Indian Tea Association (London), the South Indian Association in London and the Pakistan Tea Association (London) have issued the following crop figures showing the tea crops of the major producing countries to-date (figures in million pounds):—

Country	1964 Total	1963 Total
North India	226.6*	195.6*
South India	70.2†	82.1†
Pakistan	24.9*	19.7
Ceylon	267.7†	269.4†
Indonesia	25.0‡	20.3‡
Malawai	20.8†	18.9†
Kenya, Uganda and Tanganyika	39.5†	34.3†
Portuguese East Africa	16.3†	14.6†
Total	691.0	654.9

*April to July. †January to May.
‡January to June.
§January to March.

Meanwhile, in the Export Sale held in Calcutta this week, offerings consisted of 63,377 packages of Leaf grades. There was a good general demand, which eased as the sale progressed. The few best Assam CTC teas on offer were sold well; but where quality showed a decline, prices eased by up to 40P per kilo. Any orthodox Assam BOPs with bright liquors received strong support; but for the remaining offerings in this category, buyers followed quality closely and prices were irregularly easier.

Medium Doosars BOPs received much less support and came to a lower market. Low medium and plain offerings were irregular and generally slightly easier with the exception of a few black-leaved Fannings which, at times, realis-

ed higher prices. Legg-cut teas were about 20P easier.

Whole Leaf grades also received much less support, especially the more stylish kinds. There was a fair support for the Darjeeling offerings. While selected kinds were sold at about last rates, the majority were easier. Following rates were quoted:—Clean Plain Pekoe Rs 5 to Rs 5.40; Plain BP Rs 4.10 to Rs 4.40; Plain Fannings Rs 4.10 to Rs 4.30; Medium Assam CTC BP Rs 5.70 to Rs 6.20; Medium Assam CTC Fannings Rs 5.60 to Rs 6.10; Best Assam CTC BP Rs 6.60 to Rs 7.50 and Best Assam CTC Fannings Rs 6.60 to Rs 7.50.

The International Development Association, an affiliate of the World Bank, has given a credit \$2.8 million to Kenya for the expan-

sion of tea production by African smallholders. The project provides for the production and processing of 14,400 acres of tea and the construction of 10 additional tea factories. As a result of the project, the smaller tea cultivation will total over 25,000 acres, with the participation of 15,000 farmers.

Tea production has recently become one of the most important agricultural industries in Kenya, now ranking with sisal as the largest earner of export income after coffee. Over 54,000 acres are planted with tea with over four-fifths in large estates operated by companies.

Tea stocks in London, as on 14 August, were almost maintained at 114.9 million pounds as against

Acid-resistant lacquer for prawns? No!

To keep prawns eatable, cans must be coated with a sulphur-resistant lacquer. It's plum cans which need one that is acid-resistant. Anyone can tell you that—anyone at the Metal Box Research Division.

Scientists attached to this Division help create the right package for every product... make certain that the right finishes are developed to preserve the contents and protect the package.

Yet, it would be wrong to think that Metal Box scientists are concerned only with basic developments in packaging. They work all the time with customers to solve individual packaging problems... help suppliers to develop improved materials.

And their discovery of many indigenous substitutes for imported raw materials helps save valuable foreign exchange. As does the work of the Metal Box Technical Development Division. Metal Box have designed and built in India can-closing and bottle-sealing machinery that used to be imported and cost the country a pretty penny.

Metal Box spend about Rs 10 lakhs every year on Research and Technical Development. That's a lot of money—but it pays rich dividends to the Company as well as the nation. Take just one instance. Enterprising packers in Kerala have won growing export markets for canned prawns in recent years. Metal Box know-how and the world-wide acceptability of Metal Box containers have helped to make this export success possible.

Yes, research is at the root of all progress.

METAL BOX
protective packaging

114.4 million pounds in the previous week. The total quality to be landed on the same date were 19.39 million pounds. Total afloat was 15.87 million pounds including from Calcutta 2.62 million pounds; for Chittagong 5.15; from Cebu 3.64 million pounds; from Ceylon 9.92 million pounds and from other Ports 835,000 pounds.

* COTTON Payment Crisis; But Trading Resumed

TRADING in the cotton futures market came to a standstill on Wednesday last on account of the reluctance of the traders to make any commitments due to the payment crisis that developed consequent upon the inability of a prominent bear to meet his commitments. It should, however, be noted that the crisis could have been averted if those in charge of supervising the trading would have exercised a little bit of foresight. It is particularly distressing that the crisis developed immediately after the efforts of the Forward Markets Commission to curb the speculative operations of non-member clients.

In the first two days of the week, the August contract demonstrated a firm trend and for the second week in succession crossed the weekly stipulated level. As the payment crisis developed the traders became panicky and efforts to arrive at a compromise formula for bringing normalcy in the market proved abortive. Trading resumed on Monday when the contract was quoted at around Rs 792.00 in unofficial dealings.

The distant contract also moved in sympathy with the maturing contract and improved to Rs 734.25 per three quintals before finally closing at Rs 732.50.

Activity in the spot market at Sewri was affected by the setback in the futures market. Spinner enquiries were restricted to selected growths of CO 2, Digvijay and Surti. In the foreign section BP 52 was in good demand.

*
The decision of the Government to permit free licensing of Bengal Deshi cotton for export during the 1964-65 season is to be welcomed. The policy provides for the simplification of registration and totally eliminates all the vexatious procedures that were inherent in the current policy. But oddly enough, the authorities were silent on the question of abolition or reduction of the export levy on this growth for which the trade was pressing with a view to make it competitive in the export market. It is, however, significant that the mills are given a hundred per cent quota to make purchase of indigenous cotton equivalent of their consumption during the current season. But this permission, as the press note issued in this context

states, is subject to the condition that in case any cotton mill, which has mill-rod Cambodia "A" and/or "E" cotton pay 6000 during the last three years ending 31 August, 1964, should during the 1964-65 season pay at least a quantum equivalent to 7.5 per cent of the annual consumption of this growth during the current season.

The announcement will have to be explained primarily on two counts: first, it seeks to guarantee order and easy flow of Bengal Deshi cotton for exports and secondly, the liberal allocation of quotas for Indian cotton is aimed at helping the cotton textile industry to stimulate cloth output.

*
The International Federation of Cotton and Textile By-products Industries has recorded a vehement protest against the restrictive steps imposed by the Government of UAR on the sale of Egyptian cotton. The UAR has temporarily stopped sales of 1964-65 season cotton and has insisted on purchasers opening irrevocable credit covering the total of their purchases in the season. The protest of the Federation, made on behalf of the leading Egyptian cotton importing countries such as India, Japan, the US and Western Europe, will be handed over to Mr Abdel Monem el Kaissouny, the Vice-Premier and Economics Minister. It should be noted, in this connection, that these measures adopted by the UAR generated a rush for Egyptian growth since the sales commenced on 8 July. According to reliable sources, Indian and European buyers of this cotton are reported to have made commitments for approximately 2.5 million metric cantars within a short period.

*
Consumption of cotton by the mills in India from 1 September, 1963 to 30 April, 1964 smartly improved to 4,082,600 bales from 3,739,794 bales in the relevant period in 1962-63. The increase in cotton consumption is solely on account of the spurt in consumption of Indian cotton which went up to 3,667,963 bales from 3,072,047 bales and Egyptian cotton which is marked higher at 102,622 bales from 76,292 bales. This rise was, however, partly offset by decline in consumption of imported growths like Pakistan, American (including Peruvians) Sudan, East African and other sorts.

Description	1 Sept. '62 to 30 April '63	1 Sept. '63 to 30 April '64
Indian	3,072,047	3,667,963
Pakistan	102,695	5,452
American (Incl. Peruvians)	268,809	190,567
Egyptian	76,292	102,622
Sudan	157,977	84,307
East African	52,122	27,566
Others	9,852	4,123
Total	3,739,794	4,082,600

There has been a slight decline in imports of cotton into India from 1 September, 1963 to 1 August, 1964 to 602,762 bales from 784,140 bales in the corresponding period in the previous season.

Description	1 Sept. '62 to 1 Aug. '63	1 Sept. '63 to 1 Aug. '64
American	376,622	243,691
Sudan	150,910	120,106
Egyptian	128,762	157,026
East African	61,277	71,008
Pakistan	51,912	4
Other Sorts	14,657	10,927
Total	784,140	602,762

Exports of cotton from India during the period under review slipped down to 239,728 bales from 301,424 bales in the preceding season.

Countries	1 Sept. '62 to 1 Aug. '63	1 Sept. '63 to 1 Aug. '64
UK	4,476	5,566
Continent	25,861	27,306
Hongkong	9,881	9,534
Japan	246,524	177,368
USA	13,465	17,882
Other Countries	1,217	2,072
Total	301,424	239,728

Exports of Peruvian Cotton

Exports of cotton from Peru during the first nine months of the current season are expected to total 346,000 bales of 480 lbs each as against 368,000 bales exported in the same period in the preceding season. Total exports during this season are expected to aggregate 550,000 bales against 590,000 bales in the previous season.

The present estimates indicate that there will be a slight decrease in the 1964-65 Peruvian crop, particularly Karnak and Pima, on account of inadequate water supply. The US Department of Agriculture puts it roughly at 625,000 bales, 7 per cent lower than the production in 1963-64 season.

* Shellac Losing Ground in World Market

ONCE a virtual monopoly, Indian Shellac has been gradually losing ground in the world market. This is because of the advent of the widely-published synthetic resin industry and the progressive development of rival producers of lac such as Thailand and Burma.

For instance, exports of lac from India, until 1956-57, were to the tune of Rs 10 crores, while the figure for the 1963-64 season stands only at Rs 4.62 crores. Against the average normal production of 63,000 tonnes of raw shellac during the past few years, only 28,000 tonnes were produced in 1963-64. While synthetic resin and foreign competition are responsible for less export, the production suffered also

because the cultivators were not very keen owing to want of assured market at reasonable prices.

To stabilise and expand the Indian lac industry, sustained research is essential to explore the possibilities of new developments and to exploit the known ones. In India, consumption of lac is very hazy and efforts should be made to avail of the diversified use of a versatile material like lac. In this connection, the Chairman of the Advisory Board, Indian Lac Cess Committee, has stated that, instead of exporting seedlac, the country should export processed lac which will ensure remunerative price to the producers.

The recent conference on shellac in paints and varnishes has urged the Government that an incentive in the form of concession in excise duty on paints prepared from shellac should be given. It is also felt that adequate arrangements should be made to carry the results of researches of the Indian Lac Research Institute to the industry and consumers.

* COFFEE ICC's Decision

According to a report released from London, the International Coffee Council has approved three resolutions. First, it approved a programme of promoting the consumption of coffee, amounting to \$5.3 million for the coffee year 1964-65. Secondly, the Council approved an administrative budget amounting in \$700,000. Thirdly, the Council approved rules for the deduction of export excesses over authorised exports. The Council has still to tackle its most important task, that of fixing annual and quarterly export quotas for the 1964-65 coffee year.

World trade in coffee, which has been sagging for some months, is felt in London to be on the brink of new activity. Although traders see relatively few statistical factors to cheer them, they put a good deal of weight on signs of co-operation among the main producers and consumers, likely at least to end the slide and stabilise prices.

Commenting on London market prospects, traders cite the possibility that roasters are now working briskly through their previously generous stocks. A number of brokers point to revived roaster interest in the market this month.

Meanwhile, the India Coffee Board has released a quantity of 2,031 tonnes of coffee for export to any destination from the 1963-64 crop, consisting of 164.1 tonnes of Plantation variety; 25.2 tonnes of Plantation "B"; 59.1 tonnes of Arabica Cherry and 1,158.7 tonnes of Robusta. The export auction will take place on 3 September.

* PEPPER Falling Trend in Prices

In the absence of any export demand, there has been a persistent trend for black Pepper prices to

seek lower levels. In the Cochin market, the rate for the ready position is presently quoted at Rs 338 per quintal as against Rs 352 quoted a few weeks ago.

Contrary to expectations that American interest in Indian pepper will manifest, indications are that the US buyers will not enter the Indian market as long as they continue to get their supplies from Indonesia and Singapore as at present. It is stated that American buyers are able to satisfy their requirements from "afloat" shipments of pepper from Indonesia.

In the New York market conditions remained generally dull with little buying interest. Users seemed to be holding adequate supplies and continue to resist the current price levels even though the heavier consumption season is approaching. The rate September delivery is quoted at 32.25 cents per pound.

* CAMPHOR New Peak in Prices

In the Bombay market, Camphor prices have continued to scale fresh peaks. The price of the imported material is quoting firm at Rs 45 to Rs 47 a kg and of the Indian product around Rs 39. This is mainly due to the fact that demand has broadened considerably during the past few weeks owing to the current festive season. It is expected to expand further due to the ensuing Dashera and Diwali festivals.

It is stated that the market is finding it difficult to provide the supplies adequately to meet the keen demand, as the floating stocks have dwindled and the available supply is held by only a few. Moreover, imports have been extremely insufficient as a result of foreign exchange stringency.

Although there have been reports that the State Trading Corporation proposes to import large quantities, it is not known when and how much is intended to be imported. Besides, there has been a long-standing complaint from the trade that the existing arrangements for the distribution of the imported products leave many loopholes. The imported goods make their way to inappropriate channels and give rise to malpractices.

* YARN Spurt in Art Silk Licence Premium

There are strong rumours that the Government has decided to allow utilisation of art silk yarn licences to the extent of 40 per cent for the import of stainless steel although official circles have contradicted the same. The premium on the import licence has shot up from 165 to 180 per cent. Some circles feel that the reason for the strident advance in the premium is due to a broadening of enquiries in view of the availability of sub-standard synthetic fibres in certain parts of the world.

The spurt in the licence premium is also partly attributed to the fact that, as the exports of rayon fabrics during the past few months

have been on a reduced scale, a scarcity of licences is likely to develop as the licences are issued only against the exports.

In respect of rayon yarn, the spinners are hopeful of a relief in the excise levy. While more optimistic quarters expect a withdrawal of the special excise duty of 53.13 per cent, there is a general belief that the spinners will be extended a partial relief with a view to helping them to tide over the present difficulties created by the accumulation of stock and the persistently easy trend in rayon yarn prices.

In fact, a concession has already been granted to the spinners in the form of the withdrawal of their obligation to sell rayon yarn at concessional rates to the exporters of rayon fabrics. But, as they are required to deliver the goods against past exports, the relief has failed to help the spinners in facing the current adverse market conditions.

* SILK Steady Market

Prices of the Government filatures silk in the Mysore State maintained a steady market during the week under review. Kisan silk had shown a downward trend to rule between Rs 106.00 and Rs 108.00 per kg. Cottage basin silk had a rise only in the maximum to range between Rs 77.16 and Rs 92.59 kg.

A mixed trend was observed in the prices of Charka raw silk. Superfine, 1st and 2nd qualities had a rise both in the minimum and maximum to range between Rs 85.98 and Rs 90.39, Rs 74.96 and Rs 79.38 and between Rs 70.65 and Rs 74.96 per kg respectively; whereas the 3rd quality had a rise only in the maximum to rule between Rs 67.25 and 70.55 per kg. Dupion (Charka) had a steady market.

The prices of the Spun silk yarn remained unchanged.

As regards the reeling cocoons, the Siddaghatta market had a rise only in the maximum to range between Rs 3.50 and Rs 6.50 per kg. Channapatna market had a rise both in the minimum and maximum to rule between Rs 4.25 and Rs 5.50 per kg; whereas the the Mugur market had a fall both in the minimum and maximum and was quoted between Rs 2.00 and Rs 4.00 per kg.

In the case of seed cocoons, both the varieties had shown an upward trend to range between Rs 6.00 and Rs 13.00 and between Rs 5.50 and Rs 9.00 per thousand, respectively.

Prices at the Bhagalpur silk market have not been indicated in the review due to non-receipt of reports.

In the Malda silk market. Cottage basin silk (White) had a rise both in the minimum and maximum to range between Rs 105.00 and Rs 120.00 per kg; whereas the Charka raw silk had a fall only in the maximum to rule between Rs 74.00 and Rs 89.00 per kg. Reeling cocoons, pierced cocoons, silk waste and Matka yarn had a steady market.

Prices in the Assam silk market remained steady during the week.

The f.o.b. prices and landed cost of Japanese raw silk of 20/22 Dr. '2A' were Rs 57.45 and Rs 92.13 per kg, respectively during the month of March, 1964.

* OILS AND OILSEEDS Margins Imposed

In the Bombay Oilseeds market, trading in Linseed and Castorseed March contracts, which started on Monday this week, was subjected to special margins and limits on the weekly rise in prices. A margin at the rate of Rs 20 per 250 kg during the non-delivery period and Rs 50 per 250 kg during the delivery period of the castorseed contract is payable if the price on every day exceeds Rs 196 per 250 kg. If the price rules above Rs 196, trading in the contract will be prohibited at a price which is higher by more than Rs 4 per 250 kg than the closing price on the last trading day of the previous week. If the closing price at the end of any week is at or below Rs 192, trading will be prohibited during the following week at a price above Rs 196. If the closing price is between Rs 192 and Rs 196, trading will be prohibited at a price which is higher by more than Rs 4 than the closing price in the previous week.

For Linseed, the margin will be payable at the rate of Rs 5 per 50 kg when the contract exceeds Rs 48 per 50 kg on any day. During the delivery period, the margin will be Rs 12.50 per 50 kg. The free limit, like castorseed, is 300 tonnes. When the price on any day rules above Rs 48, trading will be prohibited at a price which is higher by more than Rs 1 per 50 kg than the closing price on the last trading day of the previous week. If the closing price at the end of any week is at or below Rs 47, trading will be prohibited during the following week above Rs 48. If the closing price at the end of any week is between Rs 47 and Rs 48 per 50 kg, trading will be prohibited during the following week at a price which is higher by more than Rs 1 than the closing in the previous week.

Trading in the new contracts was, in fact, quite promising. The enthusiasm stemmed mainly from the fact that the new contracts, unlike the current ones, were free from the restriction of maximum prices. Operators were not influenced by the margins, as they were applicable only at substantially higher rates.

The position in the spot section was easy. Bihar castorseed was sold at Rs 38.37 and commercial oil at Rs 17.50. Because of the uncertainty of the shipments of castor oil to labour trouble in the docks, the demand for the commodity from shippers slowed down. Ready Linseed was quoted at Rs 47.60 and Linseed Oil at Rs 19.75.

In respect of hedge trading in groundnut and groundnut oil, the trade representatives from Saurashtra are understood to have been told that they should wait till the Gujarat Government lifts the ban on the movement of these commodities.

The official view seems to be that hedge trading in the commodities, subjected to price and movement curbs, is not advisable. It is, however, felt that the curbs imposed by the Gujarat Government will be removed as soon as a clear picture regarding the new crop becomes available.

Hedge trading even in Bombay is expected to be allowed only after a proper assessment of the new crop in the country. Unless free supply of the commodities is assured both by Gujarat and Uttar Pradesh Governments, the possibility for the commencement of trading in the new contracts in Bombay is remote. Meanwhile, Groundnut Bold ready is quoted at Rs 66.40 and Groundnut Oil at Rs 24.80.

* Index Number of Wholesale Prices

The official wholesale price index (with the year ended March 1953 as 100) worked out to 154.3 during the week ended 8 August 1964 as against 154.2 for the earlier week. The index was higher by 2.7 and 14.0 per cent respectively when compared with the corresponding week of the previous month and that of a year ago.

The prices of rice at Kakinada and at Trivandrum (—5 per cent), milk, meat and black pepper (—3 per cent each), jowar, mustard oil and cardamoms (—2 per cent each) and urad, groundnut oil, gingelly oil and coconuts oil (—1 per cent each) moved down, while those of rice at Nizamabad (+8 per cent) and at Newganga (+6 per cent), Bajra at Agia (+5 per cent), Turmeric (+4 per cent), miize, mung, eggs and tea (+2 per cent each) and wheat, ragi, arhar, masur, potatoes, cashewnuts, gur and salt (+1 per cent each) showed advances and the index for 'Food Articles' stood at 164.5 as against 164.7 for the previous week.

The index for 'Tobacco' remained stationary at its earlier week's level of 121.5.

Higher prices of lac (+12 per cent), raw jute (+3 per cent) and castorseed (+2 per cent) raised the index for 'Industrial Raw Materials' by 0.2 per cent to 163.5 although the prices of raw silk (—3 per cent) and groundnuts, linseed and gingelly seed (—1 per cent each) witnessed a decline.

The index for 'Intermediate Productss' rose by 0.2 per cent to 150.2 as compared with 149.9 (revised) for the earlier week due to increases in the prices of zinc and brass (+3 per cent each) and aluminium, copper and lead (+1 per cent each); the prices of coir yarn (—2 per cent), however, showed a fall.

A rise in the prices of jute manufactures (+3 per cent) and handloom cloth (+1 per cent) was responsible for an increase of 0.4 per cent to 132.3 in the index for 'Finished Products'. The prices of oil cakes and glass (—1 per cent each), however, moved down.

For the INVESTOR

INVESTMENT GOSSIP Cheerful Mood

The continued steadiness of the stock market stems from the fact that there have been a number of favourable developments during the past few days. The main incentive for the upturn has however been derived from the belief that Government policies will be oriented toward fostering the rapid growth of industries in all sectors of the economy. Operators seem to have been impressed by the assurance reported to have been given by Mr George Woods, President of the World Bank, that India's Fourth Plan can rely on the fullest possible financial assistance from the Bank. Earlier reports had it that the Bank was likely to be critical of India's developmental effort so far and would apply more stringent norms than hitherto to arrive at the quantum of financial assistance for coming Plan periods. The report that the US is favourably disposed to a proposal for utilising the Cooley Fund toward underwriting industrial enterprises in the private sector has been a further source of encouragement to the market. Other factors that have aided the steady trend in equity values are the uniformly good corporate news and the substantial buying of equities both by the Unit Trust and the LIC. It is believed that with the steady accumulation of funds from the sale of Units to the public, the Unit Trust will perforce have to invest a sizable portion of them in industrial equities. The possibility of a bonus issue by Telco has been yet another encouraging factor. It would appear that the decision of the Central Government to accept the Bonus Commission's Award with some modifications has not unduly disturbed the prevailing constructive mood. For the modifications are significant in that it has been decided by Government that in calculating available surplus, all direct taxes and tax concessions provided to industry specifically for fostering development will be allowed to be deducted as prior charges. However the Government decision seems to have satisfied fully neither labour nor employers. While the employers point out that the acceptance of the recommendation for a minimum bonus will be detrimental to the interests of weaker units, labour has already characterised Government's decision as one favouring the employers. So it is too early to say that the Bonus question will not demand further Government attention.

NEW ISSUE NOTES Asian Electronics

Asian Electronics Limited, a new company which proposes to manufacture a wide range of electronic instruments, will enter the capital market on 7 September to raise Rs 15 lakhs from the public. The subscription list will close on 12 September or earlier, but not before 9 September. The company has an authorised capital of Rs 1 crore. Its issued capital is Rs 30 lakhs in equity shares of Rs 100 each, of which shares of Rs 7.39 lakhs have been subscribed and paid-up. The directors, promoters, their friends and relatives have agreed to subscribe shares of Rs 7.61 lakhs. The balance of Rs 15 lakhs in 15,000 equity shares of Rs 100 each is now being offered. The entire issue to the public has been underwritten.

The company proposes to set up a factory in Thana, Maharashtra State. It has entered into a technical collaboration agreement with a Yugoslavian firm. The construction of the factory is likely to be completed by the end of the current year and production is expected to commence by the middle of next year. The project is estimated to cost Rs 50 lakhs and will be financed by the issued capital of Rs 30 lakhs, a long-term loan of Rs 15 lakhs from the Bank of India Limited and short-term loan of 5 lakhs.

Kerala Spinners

Kerala Spinners Limited has obtained the consent of the Controller of Capital Issues for an equity issue of Rs 40 lakhs. The company is expected to enter the market some time before the close of this year. The company has been registered in Kerala for setting up a spinning mill with a licensed capacity of 25,000 spindles. The Kerala Government and the Kerala State Industrial Development Corporation are actively participating in the venture.

Negotiations are under way for the import of capital machinery from Japan and orders will soon be placed.

TELCO

The Tata Engineering & Locomotive Company Limited, Bombay, is to issue 2,00,000 equity shares of Rs 100 each for cash at a premium of Rs 30 per share. The shares will be offered to the existing equity shareholders of the company in the proportion of one for every five equity shares held. The capital will be utilised on the expansion programme in the manufacture of Diesel vehicles.

Tata Mills

Tata Mills Limited, Bombay, is to issue Rs 81,85,950—Rs 21,85,959 in equity shares of Rs 25 each and Rs 60 lakhs in 5 per cent 1966-71 Debenture stock. The money will be utilised for modernisation and renovation programme of the company.

Madanapalle Spinning

The Madanapalle Spinning Mills Limited, a company incorporated in Andhra Pradesh, will be issuing capital of Rs 30 lakhs, divided into 40,000 equity shares of Rs 50 each and 10,000 redeemable preference shares of Rs 100 each, to be issued for cash, at par. Of this issue, such number of shares of each kind as would qualify for listing on recognised stock exchanges will be offered for public subscription by prospectus. The capital will be used for financing the setting up of a new spinning mill at Madanapalle in Andhra Pradesh. This is in supersession of an earlier consent dated 26 July 1963.

Gauhati Bank

The Gauhati Bank Limited, Gauhati (Assam), is to issue further capital of Rs 6,38,100, divided into 1,27,620 shares of Rs 5 each for cash, at par.

Kadori

Kadori and Sons Limited, Madras, is to issue Debentures of Rs 15 lakhs, carrying interest at 7 per cent per annum, which will rank pari passu with the existing first mortgage debentures of Rs 30 lakhs. The capital will be utilised for the purchase of additional rotary printing machine and for working capital.

Ashok Paper

Regarding the recent issue of 1,50,000 equity shares and 25,000 9.3 per cent redeemable preference shares, the Ashok Paper Mills Limited has decided to extend the closing date for a further period of 15 days from 15 August 1964.

INVESTMENT NOTES

Hind Cycles

The uncertainty regarding the future of Hind Cycles Limited is expected to end shortly if the company's new scheme is approved by the shareholders at the extraordinary general meeting to be held on 7 September. The directors of Hind Cycles propose to lease out the undertaking of the company for a period of three years to CIMMCO and to transfer its stock of stores, spares, raw materials, goods in progress and finished goods for an annual rent or compensation of Rs 25 lakhs.

The directors state that the working of the company has not resulted in sufficient profits. With the result, it has not been possible to pay dividend on the preference shares. They are of the view that it is in the interest of the shareholders that the factory is utilised profitably.

KCP

The K. C. P. Limited, Madras, has entered into an agreement with the Orissa Industrial Development Corporation for the supply and erection of a cement plant with a capacity for manufacturing 1,200 tons of at Bargarh. The K. C. P. has reported notable headway in the production and despatch of major part of requisite machinery. It needs special mention that the indigenous component of the equipment will approximate two-thirds, the balance being imported from France. Out of this, nearly 1,100 tons of machinery has already arrived in Madras this week. The fabrication of the balance of domestic machinery is being carried out expeditiously in the K. C. P. workshops in Madras. The Bargarh factory is expected to go into steam toward the end of next year.

INVESTMENT BRIEFS

Indian Steel & Wire Products Limited has maintained the dividend at Rs 1.80 per share on the fully-paid ordinary shares and 18 paise per share on the partly-paid shares, subject to tax, for the year ended 31 March 1964. This will be payable from Dividend Reserve on or after

INDIA STEAMSHIP COMPANY LIMITED

NOTICE OF THE ANNUAL GENERAL MEETING TO THE SHAREHOLDERS.

NOTICE is hereby given that the Annual General Meeting of the Members of the India Steamship Co. Ltd., will be held at the Registered Office of the Company, "India Steamship House", 21, Old Court House Street, Calcutta, on Thursday, the 24th September, 1964, at 4 p.m. in order to transact the following business:—

Lionel Edwards, (Private) Ltd., the Managing Agents of the Company and thereby an associate of the Managing Agents, be and is hereby re-appointed a Director of the Company.

- To appoint a Director in place of the Rt. Hon'ble Lord Sinha of Raipur, who retires by rotation and is eligible for re-appointment and to consider and if thought fit to pass the following resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, The Rt. Hon'ble Lord Sinha of Raipur who has attained the age of 77 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him.

- To elect Maharaja Sir Pratap Chandra Bhanj Deo Bahadur of Mayurbhanj, G.C.I.E., a Director of the Company, who

8 October to those shareholders registered as on 29 September, 1964.

In Bangur Brothers jute group, Hastings Mill Limited has repeated the dividend at Rs 6.00 per share, subject to tax, for the year ended 31 March 1964. Fort William Com-

pany Limited has proposed a taxable dividend of Rs 1.50 per share as compared with Rs 2.00 per share paid previously.

Estrela Batteries Limited has raised the dividend from 11 per cent (including 1 per cent bonus) to 12

per cent (including 2 per cent special silver jubilee bonus) for the year ended 31 March 1964. The new shares rank for proportionate dividend.

Laxmi Starch Factory has raised the dividend from Rs 10 to Rs 12

ORIENT PAPER MILLS LIMITED

NOTICE is hereby given that the Annual General Meeting of the Shareholders of the ORIENT PAPER MILLS LIMITED will be held at the registered office of the Company at Brajrajnagar in the district of Sambalpur (Orissa) on Wednesday, the 30th September, 1964 at 3.30 P.M. for the following purposes:—

(a) To receive and consider the report of the directors and to adopt the audited accounts of the Company for the year ended 31st March, 1964.

(b) To declare dividends on Preference and Ordinary Shares.

(c) To elect directors in place of Shri J. P. Poddar and Shri R. K. Somany who retire by rotation.

Shri R. K. Somany is an associate of the Managing Agents and has been on the Board of Directors since almost the inception of the Company. It is considered desirable to avail of his valuable advice by retaining him as a director of the Company. The Company has received the requisite special notice from a Shareholder and accordingly the special notice is hereby given to the Shareholders for passing the following special resolution under Section 261 of the Companies Act, 1956 for re-appointment of Shri R. K. Somany, as a director of the Company.

“RESOLVED that Shri R. K. Somany, an associate of the Managing Agents, be and is hereby re-elected as a director of the Company.”

(d) To appoint Auditors for the current year and to fix their remuneration.

AS SPECIAL BUSINESS:—

To consider and, if thought fit, to pass with or without modification the following resolutions:

AS SPECIAL RESOLUTIONS:

e(i) “RESOLVED that the regulations contained in the Draft Articles of Association submitted to the Meeting and for the purpose of identification initialled by the Chairman be and are hereby adopted as the Articles of Association of the Company and shall come into force with immediate effect in substitution for and to the exclusion of the existing Articles of Association thereof.”

e(ii) “WHEREAS the East Indian Produce Co. Ltd., an associate of Messrs. Birla Brothers Private Ltd., the

Managing Agents of the Company, maintain an office in London in the United Kingdom and WHEREAS the said Company carry on business inter alia of acting as agents in the United Kingdom, the Continent and other countries for purchase and sale of goods including stores, plant and machinery etc. and also have dealings and business connections with parties all over the United Kingdom, the Continent and other countries are on a very large scale and WHEREAS their expenses of maintaining their office, amount approximately to £1,25,000 per annum and WHEREAS expenses which can be attributed to the work to be done for and on behalf of the Company, would depend on the value of purchases effected through the said Company in relation to their total turnover in each year, and WHEREAS the said East Indian Produce Co. Ltd., have been acting as buying agents for and on behalf of the Company in the United Kingdom, the Continent and other countries. NOW it is hereby Resolved that the East Indian Produce Co. Ltd., continue to act as buying agents of the Company for purchase of stores, plant and machinery in the United Kingdom, the Continent and other countries for a period of 3 years with effect from 1st July, 1965 and that they be paid a commission @ 2½% of the invoice price thereof.

Provided that if anything to be done in pursuance of the above arrangement requires the permission of the Central Government or the Reserve Bank of India, as the case may be, the same will be done in accordance with such permission.”

e(iii) “WHEREAS Messrs. American East India Corporation, an associate of Messrs. Birla Brothers Private Ltd., the Managing Agents of the Company, maintain an office in New York in the United States of America and WHEREAS the said Company carry on business inter alia of acting as agents in the United States of America and other countries for purchase and sale of goods including stores, plant and machinery etc. and also have dealings and business connection with

parties all over the United States of America and other countries and their operations are on a very large scale and WHEREAS their expenses of maintaining their office amount approximately to \$2,00,000 per annum and WHEREAS expenses which can be attributed to the work to be done for and on behalf of the Company, would depend on the value of purchases effected through the said Company in relation to their total turnover in each year, and WHEREAS the said Messrs. American East India Corporation have been acting as buying agents for and on behalf of the Company in the United States of America. NOW it is hereby Resolved that Messrs. American East India Corporation continue to act as buying agents of the Company for purchase of stores, plant and machinery in the United States of America and other countries for a period of three years with effect from 1st July, 1965 and that they be paid a commission @ 2½% of the invoice thereof.

Provided that if anything to be done in pursuance of the above arrangement requires the permission of the Central Government or the Reserve Bank of India, as the case may be, the same will be done in accordance with such permission.”

By Order of the Board,
Per Pro. BIRLA BROTHERS
PRIVATE LIMITED
G. D. MAKHARIA,
Managing Agents,
15, India Exchange Place,
Calcutta, the 24th August, 1964.

N.B.:—

(i) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(ii) The Registers of Member's and Share Transfer Books of the Company will remain closed from the 1st September, 1964, to the 15th September, 1964, both days inclusive as already notified.

(iii) The dividends when declared, will be payable to registered shareholders as on the 15th September, 1964 or to their mandates on or after the 19th October, 1964.

(iv) The Explanatory Statement as required under Section 173 of the Companies Act, 1956 is being forwarded to the members of the Company along with the Notice of the meeting.

per share for the year ended 31 March 1964.

Hind Rectifiers Limited has raised the dividend from 5 to 8 per cent for the same year.

In the Bombay textile group, both Dawn Mills Company Limited and Bradbury Mills Limited have maintained the dividend at Rs 15 per share, for the year ended 31 March 1964.

Mysore Tobacco Company Limited has raised the dividend from 10 to 11 per cent for the year 1963-64.

Travancore Sugars & Chemicals Limited has raised the dividend from 5 to 7½ per cent, for the year ended March 1964.

General Papers Limited has maintained the dividend at 12½ per cent for the year 1963-64.

Talayar Tea Company Limited has halved the dividend to 5 per cent for the year 1963-64.

Amalgamated Coffee Estates Limited has doubled the dividend to 10 per cent for the year ended 31 March 1964.

Woodland Estates Limited has maintained the ordinary dividend at 5 per cent for the year 1963-64.

★

BALANCE-SHEET REVIEWS

India Paper Pulp's Expansion

INDIA Paper Pulp Company Limited has submitted an application to the Government to increase the mill's capacity by renovating and modifying mills Nos. 1 and 2 paper-making machines. It is expected that these modifications will enable the mill to manufacture specialty papers, which are at present in short supply.

The cost of this scheme for the expansion of the company's mill is estimated at Rs 160 lakhs about half of which will be met out of the company's resources assisted, if necessary, by temporary borrowings, leaving a balance of Rs 80 lakhs for which additional finance will be required.

It was already decided to issue Debentures for Rs 40 lakhs. In view of the continued increase in plant costs, it has been decided that the whole of the Debenture loan will be used for development and that the credit facilities with the ICICI will not be relinquished. It is also proposed to obtain further credit facilities from ICICI to cover the foreign currency, which will be required for the purchase of part of the imported plant and machinery for the mill's expansion schemes.

Meanwhile, the company's sales for the year ended 31 March 1964 have risen to Rs 3.05 crores from Rs 2.84 crores, while the net profit, after providing for depreciation and taxation, amounts to Rs 20.11 lakhs as against Rs 18.65 lakhs for the previous year.

In respect of allocations, Depreciation is reduced to Rs 13.50 lakhs from Rs 13.87 lakhs and Development Rebate Reserve to Rs 73.252 from Rs 2.85 lakhs, while Taxation is raised to Rs 22.40 lakhs from Rs 22.00 lakhs and General Reserve to Rs 6.00 lakhs from Rs 2.75 lakhs. The directors have proposed to pay a final divi-

dend of Rs 1.00 making a total of Rs 1.50 per share, subject to tax, same as previously. Transfer books will remain closed from the 28 August to 10 September.

The company's paper production has increased by 995 tonnes to 16,636 tonnes, thanks to modifications to No. 3 paper-making machine. There is also a further increase in pulp production as a result of the installation of the Forced Circulation Plant.

After the commissioning of the jute sticks pulp plant, the total pulping capacity of the mill will be about 23,000 tonnes a year. The company has received a licence to raise its paper-making capacity to 19,000 tonnes by speeding up No. 3 paper-making machine.

Jiyajeerao Cotton Pays More

Jiyajeerao Cotton Mills Limited has produced excellent working results for the year ended 31 March 1964. According to the preliminary report issued by the company, the gross profit for the year is substantially higher at Rs 288.15 lakhs as against Rs 145.57 lakhs for previous year. After deducting Rs 10.00 lakhs (Rs 6.33 lakhs) for managing agents' commission; providing Rs 101.15 lakhs (Rs 48.73 lakhs) for depreciation; Rs 13.96 lakhs (Rs 3.36 lakhs) for Development Rebate Reserve and Rs 73.25 lakhs (Rs 38.50 lakhs) for Taxation, the net profit amounts to as much as Rs 89.79 lakhs against Rs 48.64 lakhs.

Adding the balance brought forward from previous year of Rs 55.400 (Rs 1.87 lakhs), there is an available sum of Rs 90.34 lakhs (Rs 50.51 lakhs). From this, a sum of Rs of Rs 26.50 lakhs (Rs 12.50 lakhs) is set apart for Preference Share Capital Redemption Reserve; Rs 55.00 lakhs (Rs 29.00 lakhs) for Dividend Reserve and Rs 8.45 lakhs (same) for paying dividend on the preference shares, leaving a balance of Rs 39.203 (Rs 55.400) to be carried forward to next year. The directors have proposed to recommend a taxable dividend of one rupee per share on the Ordinary shares, payable from the Dividend Reserve. This compares with a taxable dividend of only 60 paise paid previously.

Kesoram Results Impress

Kesoram Industries and Cotton Mills Limited has produced excellent working results for the year ended 31 March 1964, thanks to a substantial improvement in the working of the various units of the company. The gross profit for the year is substantially higher at Rs 269.99 lakhs as against Rs 201.01 lakhs, for the preceding year, reflecting a rise in the total sales from Rs 14.41 crores to Rs 15.77 crores.

After providing Rs 11.81 lakhs (Rs 8.39 lakhs) for managing agents' commission, Rs 95.28 lakhs (Rs 82.49 lakhs) for Depreciation, Rs 27.610 (Rs 29.676) for tax liability against earlier years, Rs 53.00 lakhs (Rs 8.00 lakhs) for Taxation and Rs 4.79 lakhs (Rs 39.21 lakhs) for Development Rebate Reserve, there is a net profit of Rs 92.38

lakhs against only Rs 59.91 lakhs for 1962-63.

From the above, the directors have provided Rs 55.00 lakhs (Rs 22.00 lakhs) for General Reserve and Rs 37.50 lakhs (Rs 40.00 lakhs) for Dividend Reserve. After paying the dividend on the preference shares, the directors have proposed to raise the dividend on the Ordinary shares from 13 to 15 per cent, subject to tax, payable from the Dividend Reserve. Application is being made to the Income-Tax Department the quantum of profit of the year under review, which is exempt under Sections 85 and 101 (2) of the Income-Tax Act 1961. If the decision is available in time, deduction of tax from the dividends will be made accordingly.

According to the directors report, the modernisation of the company's textile unit is going on as planned. The company has undertaken an expansion of its installed capacity to the extent of 7½ per cent in respect of spindleage and 10 per cent in the number of looms by establishing a separate unit. Necessary applications have been made, in this respect, to the appropriate authorities for permission to install the new unit at Budge-Budge.

Despite increased production costs and frequent power shortages, both units of the Rayon plant have made steady progress. The Transparent Paper plant has also shown slightly better results and sales are expected to increase after the moisture-proofing, printing and bag-making plants achieve their full production.

Installation of the Second Casting machine has been taken in hand and it may be put into operation during the current year.

The construction work of the factory to manufacture spun pipes and fittings is going on satisfactorily at Bansberia. Out of the total machineries to be imported, more than 50 per cent have already arrived at the factory site and the balance are expected shortly, not to speak of the fact that care has been taken to reduce the imports to the minimum. It is expected that the plant will be ready go to into production within the next few months. Regarding the Steel-Tube project, the directors state that, in spite of all efforts, import licence for the requisite machinery has not been available so far. They hope that, in the light of the satisfactory working of the various units, the shareholders can expect a reasonably bright future for the company.

Hindustan Wires Repeat

In spite of the fact that some of the plant and machinery could go into production only in the latter part of the year, Hindustan Wires Limited was able to achieve a larger production and sales during the year ended 31 March 1964. Sales have reached a new high level of Rs 100.08 lakhs as against Rs 87.16 lakhs, while the net profit, after providing for depreciation and taxation, amounts to Rs 10.82 lakhs as against Rs 11.16 lakhs for the previous year

although the latter figure includes Rs 1.00 lakh being development rebate reserve written back.

In regard to allocations, Depreciation is raised to Rs 2.45 lakhs from Rs 1.45 lakhs and General Reserve to Rs 5.00 lakhs from Rs 4.00 lakhs, apart from providing Rs 5,000 for Taxation. The provision for Development Rebate Reserve is, however, lower at Rs 3.00 lakhs against Rs 3.93 lakhs. The dividend is maintained at sixty paise per share and no tax will be deducted therefrom under section 84 of the Income-tax Act 1961.

For additional plant and machinery required, the company has already received an import licence. Shipments have already started and the expansion programme of the company, including the manufacture of tyre-bead wire, will be completed during the current year. On completion of the project, the company's sales and profitability, the directors say, will increase considerably. Transfer books will remain closed from 16 to 29 September 1964.

Shree Luchminarain Jute Skips

Despite a rise in sales from Rs 176.65 lakhs to Rs 184.61 lakhs, Shree Luchminarain Jute Manufacturing Company Limited has reported a net profit, after providing for depreciation, of only Rs 6.17 lakhs for the year 1963 as against Rs 17.71 lakhs for the previous year. Depreciation is lowered to Rs 1.48 lakhs from Rs 1.63 lakhs. The present profit is adjusted against the previous year's brought forward of Rs 15.75 lakhs, leaving still a debit balance of Rs 9.58 lakhs, to be carried forward to next year.

Namburnadi Tea Pays 10% Against 7%

The Namburnadi Tea Company has made a higher net profit of made a higher net profit of Rs 2.04 Rs 2.04 lakhs (including Rs 74,029 adjustment of stock) for the year ended 31 December 1963 as against Rs 1.6 lakhs for the previous year. In respect of allocations, Depreciation is reduced to Rs 1.10 lakhs from Rs 1.11 lakhs, while Taxation is raised to Rs 1.85 lakhs from Rs 1.66 lakhs. No provision is, however, made for General Reserve against Rs 60,000. The directors have proposed a final dividend of 5 per cent making a total of 10 per cent, taxable, as against only 7 per cent, taxable, paid previously.

Indian Dyestuff Repeats

The full benefit out of the large capital expenditure incurred in recent years is yet to be derived by Indian Dyestuff Industries Ltd. Actually, during the year ended 31 March 1964, there was a decline in the net profit, before providing for depreciation and taxation, from Rs 48.60 lakhs to Rs 42.73 lakhs in spite of the fact that sales rose to Rs 2.53 crores from Rs 2.29 crores.

Fresh capital expenditure has been incurred in 1963/64 and there is an increase in the gross block to Rs 396.21 lakhs from Rs 254.76 lakhs. The provision for Depreciation is very much higher at Rs 32.76 lakhs (Rs 16.18 lakhs), though the claim on account of Development Rebate is lower at Rs 9.97 lakhs against Rs 20.62 lakhs. This must be presumably due to inadequacy of profits.

There is no liability towards Taxation against Rs 4.30 lakhs. The appropriations have been completed with transfers from reserves amounting to Rs 17.41 lakhs (Rs 8.00 lakhs). The dividend on the equity capital is maintained at 7 per cent, taxable. It has been necessary, however, to find larger amount of Rs 14.63 lakhs against Rs 13.07 lakhs on account of a larger capital ranking for this purpose.

★

IN BRIEFS

Jay Engineering Works Limited has reduced the dividend from 10 to 8 per cent, subject to tax, for the year ended 31 March, 1964. Transfer books will remain closed from the 9 to 23 September, 1964.

Gopalpur Tea has reduced the dividend from Rs 2.50 to Rs 1.00 per share, taxable, for 1963. Transfer books will remain closed from 21 August to 10 September, 1964.

Kashuri Mills Limited has raised the dividend from 6 to 8 per cent, taxable, for the year ended 31 March, 1964.

Sarvaraya Textiles Limited has proposed to increase the dividend from 8 to 9 per cent, taxable, for the same year.

Nilgiri Estates Limited has proposed to increase the dividend from 5 to 7½ per cent, taxable, for the year ended 31 March, 1964.

Rajendra Coffee Limited has repeated the dividend at 25 per cent for the year ended 31 March, 1964.

Periakaramalai Tea & Produce Company Limited has proposed 13½ per cent for the year ended 31 March, 1964 as against 15 per cent previously.

Central Scientific Supplies Company Limited has raised the dividend by ½ per cent to 12½ per cent for the year ended 31 March, 1964.

Madras Machine Tool Manufacturers Limited has maintained the dividend at 5 per cent for the year ended 31 March, 1964.

★

STOCK EXCHANGES Bullish Phase Continues

DESPITE intermittent profit-taking at higher levels, the rally in stock markets has made further progress with some shares recording sizable gains on fresh bull support. The markets seem to be in a constructive mood.

Firm conditions continued to prevail on Lyons Range with a few speculative issues making further headway.

Dalal Street finished the week on a mixed note as the higher levels attracted bull liquidation.

After initial rise, equities on the Ahmedabad Stock Exchange suffered a mild setback towards the close due to some profit-taking.

The Madras Stock Exchange maintained a firm front.

Steady conditions prevailed on the Delhi Stock Exchange.

The better trend, established on the London Stock Exchange, was maintained and the week ended on a much brighter note.

Trading on Wall Street remained curtailed and the market gave ground slowly developing a small net loss at the close.

★

CALCUTTA

EXCEPT for a slight setback noticed in mid-week owing to lack of fresh support, sentiment on the local stock exchange continued to remain cheerful. Selected shares in the forward list made a further headway, while the cash section was comparatively neglected.

On the whole, the market continued to be in the grip of the bulls. Apart from the flow of encouraging corporate news, sentiment seemed to have been aided by the reports that the Planning Commission was in general agreement to modify some of the recommendations of the Bonus Commission. The excellent response to the sale of units by the Trust, the anxiety of the Union Finance Minister to tone up the capital market, the US proposal to allow the India Government to use a part of the PL 480 funds for underwriting new capital issues, the possibility of a cut in civil and defence expenditures and rumours of an early reduction in the excise duty on rayon—all these factors were also responsible for the bullish phase.

Above all, the statement made by the President of the World Bank, that he would consider a move which would enable the International Finance Corporation to expand its financing operations to the private sector, was interpreted bullishly. The buying was, therefore, aggressive, but at the same time very selective.

In fact, the improvement in prices was not shared by the Cash section where business was still far from normal. This was mainly due to the indifferent attitude of investors who showed anxiety with regard to the international political situation. Apprehensions, that a scheme might be implemented to mop up black money, also created a cautious feeling among the speculators. Even then, the volume of business was satisfactory and there was good resistance at the lower levels.

The market for Gilt-edged securities continued to rule dull and prices, particularly for the long-dated loans, tended to drop. Obviously, some of the institutions were trying to raise funds by the sale of the existing loans to applying for the new State Loans. The new State Loans, which were floated on Monday, met

with good response. 3 per cent 1986 Conversion loan moved narrowly between Rs 63.20 and Rs 63.30.

Bank shares were well maintained with Punjab National having support up to 20.44 from Rs 20 and United Commercial quoted around Rs 70.

Except for selective support, trading in the Jute section was generally cautious due to various factors. First, the rising trend in the prices of jute goods induced overseas buyers to suspend their purchases. Secondly, the jute mills were not benefitted from the rising trend in view of the corresponding rise in fibre prices. Finally, the accumulation of stocks of jute goods especially of sackings caused a good deal of concern as a large part of the overseas market had already been lost to the Pakistani mills. Birlas, after changing hands at Rs 37.50 to Rs 38.62, turned ex-dividend at Rs 36.25. Anglo-India had good support up to Rs 203 from Rs 199, while Ganges met with business at Rs 14.56 to Rs 14.75 and New Central at Rs 11.19 to Rs 11.31.

Despite limited interest, Coal shares displayed a slightly hardening tendency in sympathy with the rakur changed hands up to Rs 17.12 general trend of the market. Bur- from Rs 16.94 and Western Bengal up to Rs 9.37 from Rs 8.94. Bengal secured another Rs 4 at Rs 247.

Tea shares were traded cautiously in view of the poor marketing outlook for the commodity. Whatever enquiry there was, was mostly confined to the shares of the Assam and Dooars gardens.

Textile shares were selectively bought. J. K. Cotton were marked up to Rs 11.50 from Rs 11.12; Bharat Commerce up to Rs 21.44 from Rs 20.87 and Cawtex up to Rs 6.75 from Rs 6.62. Elgins were almost maintained at Rs 20.06.

There were only scattered enquiries in the Sugar section.

COMMODITY PRICES

Review for May, 1964

Wholesale prices as measured by the official index (with the year ended March 1953 as 100) witnessed a further rise of 2.3 per cent to 143.1 during the month of May, 1964 when compared with 139.9 (revised) for April, 1964.

During the month under review, 'Food Articles' advanced by 3.7 per cent to 147.8, Industrial Raw Materials' by 1.8 per cent to 149.7 and 'Manufactures' by 0.5 per cent to 133.3 while 'Tobacco' declined by 2.0 per cent to 114.0 and Fuel, Power, Light and Lubricants' by 0.1 per cent to 141.7.

FOOD ARTICLES

Higher prices of all the cereals, except wheat which recorded a fall, raised the index for 'Cereals' by 3.7 per cent to 126.7. At this level, the index for cereals was higher by 15.3 per cent when compared with the level of the corresponding month of

the Engineering section, price movements were mostly irregular owing to alternate buying and selling. After opening at Rs 26.40, Indian Irons slipped down at one time to Rs 26.20 at which level renewed bull support pushed up the scrip again to Rs 26.84 before closing finally at Rs 26.62. TEXMACO were taken up to Rs 27.45 from Rs 27.10 (Rs 27.15); Jessop up to Rs 21.37 from Rs 21.19 (Rs 21.31); J. K. Steel up to Rs 16.25 from Rs 15.94 (Rs 16.25) and I. S. Wagon up to Rs 38.25 from Rs 37.50 (Rs 38.25). Figures shown within brackets were the closing rates for the week.

Miscellaneous issues moved in sympathy with the general trend of the market. Following were the price trends of a few selected shares:—

	As on Week's Week's

the previous year. The sub-group index for 'Pulses' went up by 3.6 per cent to 135.8 due to advances in the prices of Gram, mung, masur and urad; the price of Arhar, however, exhibited a slight fall.

As a result of a rise in the prices of oranges, bananas and cashewnuts, the index for 'Fruits and Vegetables' rose by 1.4 per cent to 173.8, although the prices of potatoes and onions witnessed declines. Increased prices of both milk and ghee pushed up the index for 'Milk and Ghee' by 2.2 per cent to 139.7.

The sub-group index for 'Edible oils' moved up by 4.4 per cent to 174.3 owing to an increase in the prices of all the oils, except that of coconut oil which registered a fall. As a consequence of a rise in the prices of eggs and meat, the sub-group index for 'Fish, Eggs and Meat' went up by 2.0 per cent to 156.6 despite a fall in the prices of

fish. Higher prices of both sugar and gur raised the index for 'Sugar and Gur' by 8.3 per cent to 183.6. The sub-group index for 'Other Food Articles' recorded a rise of 2.2 per cent to 178.0 due to an advance in the prices of Coffee, black pepper, chillies, turmeric, cardamoms and betelnuts; the price of salt, however, exhibited a fall.

TOBACCO

Lower prices of raw tobacco brought down the index for 'Tobacco' by 2.0 per cent to 114.0.

FUEL, POWER, LIGHT & LUBRI-

CANTS

A fall of 0.1 per cent to 141.7 in the index for this group was caused by a decline in the prices of castor oil.

INDUSTRIAL RAW MATERIALS

Lower prices of raw jute and raw silk brought down the index for 'Fibres' by 0.7 per cent to 135.6, although the price of raw cotton moved up. Increased prices of ground-nuts, linseed, castorseed, gingelly-seed, rapeseed and cottonseed raised the index for 'Oilseeds' by 4.0 per cent to 175.5. There was, however, a fall in the price of Copra.

'Minerals' worked out to 103.2 as against 102.4 in the previous month. The sub-group index for 'Other Industrial Raw Materials' moved up by 0.9 per cent to 130.8 due to an advance in the prices of raw hides, raw skins, tanning materials and lac; the price of bamboos, however, came down.

INTERMEDIATE PRODUCTS

Higher prices of linseed oil, coal yarn, zinc, brass, copper and lead raised the index for 'Intermediate Products' by 0.7 per cent to 146.9, despite a fall in the prices of cotton yarn, rayon yarn and tin.

FINISHED PRODUCTS

The sub-group index for 'Textiles' witnessed a rise of 0.2 per cent to 127.9 due to an increase in the prices of woollen manufactures (+2.3 per cent to 166.2), jute manufactures and silk and rayon manufactures (+0.3 per cent each to 98.9 and 141.9 respectively) and cotton manufactures (+0.2 per cent to 137.7). Among cotton manufactures, mill-made cloth showed a rise while handloom cloth witnessed a fall.

Higher prices of Iron and steel manufactures raised the sub-group index for 'Metal Products' by 0.6 per cent to 168.9. A fall of 0.8 per cent to 119.3 in the index for 'Chemicals' was caused by a decline in the prices of general chemicals and dyeing materials, although the prices of paints exhibited a rise. 'Cakes' registered a rise of 5.0 per cent to 184.1. Price of machinery moved up while those of cycles came down and the index for 'Machinery and Transport Equipment' rose by 0.2 per cent to 126.1. Lower prices of lime brought down the index for 'Other Finished Products' by 0.2 per cent to 127.5. On the whole, the index for Finished Products exhibited a rise of 0.3 per cent to 131.0 during the month under review.

FICCI's Memorandum on Monopolies

[We reproduce the Memorandum submitted by the Federation of Indian Chambers of Commerce & Industry to the Monopolies Enquiry Commission]

I

THE proposal to set up the Monopolies Commission was made by the Finance Minister, Shri T. T. Krishnamachari, in his Budget speech on 29 February, 1964. The necessity for the appointment of the Commission was justified on the basis that the development of industry should not result in any concentration of economic power or the growth of monopolies. "The question we have to consider", Shri T. T. Krishnamachari, however, said, "is how we are to achieve this objective consistently with our concern to see that genuine and desirable development is not stifled." Before undertaking any legislation in this respect it was therefore thought that a statutory body should make "an impartial and objective enquiry so as to bring the relevant data out into the open."

Since the commission has been appointed, the Committee of the Federation do not propose to discuss whether the appointment was necessary even on the basis of the information that has been made available by the Committee on Distribution of Income and Levels of Living in Part I of their Report. The Federation's reactions to the Report are spelt out in the attached brochure entitled "FICCI on Mahalanobis Committee Report". According to the analysis of the Federation the development of the economy in the first two Plans has secured a better distribution of income, a greater participation by the general public in industrial development, a more democratic form of industrial organisation and a balanced development of small and large industries. In this Memorandum the Federation Committee will discuss the issues arising out of the following terms of reference to the Commission.

Terms of Reference

(a) To enquire into the extent and effect of concentration of economic power in private hands and the prevalence of monopolistic and restrictive practices in important sectors of economic activity other than agriculture with special reference to (i) the factors responsible for such concentration and monopolistic and restrictive practices; and (ii) their social and economic consequences and the extent to which they might work to the common detriment; and

(b) To suggest such legislative and other measures that might be considered necessary

in the light of such enquiries, including, in particular, any new legislation to protect essentially public interest and the procedures and agency for the enforcement of such legislation.

II

The Problem and the Perspective

The Committee of the Federation believe that the enquiry could be appropriately made in the context of the structural aspects of the Indian economy.

According to the Committee the more important among these are the following:

(a) The Indian economy is in a developmental stage. As such, industry produces only a small part of the national income. In 1962-63 the net output produced by factory establishments was only about 11 per cent of the total national income generated in the economy. In the industrial sector itself more than a half of the industrial production consists of textiles, jute, sugar and food. The number of firms in these industries is so large that any firm or group of firms controls only a small part of the total production. This point is amplified in the Brochure 'FICCI on Mahalanobis Committee Report', and in later paragraphs in this Memorandum.

(b) Our industrial development is regulated by planning priorities, and therefore regulations. In the allocation of resources, financial as well as physical, the choice is determined not so much by the market forces of demand and supply, but by planned targets. The number of products in any industry does not therefore reflect fully the operation of individual enterprise.

(c) Under the Plans, economic activity is shared by public and private sectors. The field of public sector is larger in terms of investment. In the first two Plans nearly 52 per cent of the total investment was undertaken by the public sector. The management of this investment is different industries has often been under single control and has given rise to monopoly situations. Moreover in life insurance, telephones, Railways, aircraft, DDT, etc. the State is the exclusive operator, while in others like steel, machine tools, some types of cables, newsprint, heavy electrical equipment, fertilizers, etc. the State controls a substantial

portion of production to be able to have a dominating position.

(d) Our planning effort is obviously to widen the area of production by undertaking the manufacture of new commodities and application of new processes of production. This has to be accelerated. But there are limitations imposed by shortages of foreign exchange, power etc. Consequently, in the transitional stage, the number of producers in the new industries is not likely to be large. Further under the present conditions of technology it will be a waste to opt for a larger number of units with smaller capacity, in many industries.

(e) The company form of organisation has become common, and industry to-day is owned by a large number of shareholders who have the right to elect their representatives to the Board of Directors.

(f) Industrialisation, as a process, commenced only after independence, in our country. Concurrently, legislation and regulation which affect industrial operations have got imposed. And these measures, whether they pertain to investment, production or distribution, or employer-employee relations, are not only of a kind which obtain in advanced industrial countries, but in most cases exceed them. It is pertinent to recall that in other countries industrialisation was already apace before the restraining influence of legislation came into operation. In our country, however, legislation of the most elaborate type has preceded industrial development. So much so, controls in detail have, in effect impaired the free and dynamic forces of growth. The issue really is how pervasive control exercised by authority over industry should be reduced rather than think in terms of adding to the existing body of restrictive law.

These distinctive features have to be kept in mind while considering whether there is monopolistic element in Indian industry or concentration of economic power in private hands. The latter issue was examined at length by the Committee on 'Distribution of Income and Levels of Living' in Part I of their Report. (Also see 'FICCI on Mahalanobis Committee Report').

It is therefore, not attempted here to survey once again the meaning and implications or make an assessment of the degree of concentration of economic power in private hands. The argument is mainly confined to examine whether under the prevailing conditions it would be possible to secure a monopoly position in any industry.

industry as a whole. It has to take account of the functional aspect in the context of pervasive Governmental regulations. If anything, these regulations seem to exceed their purpose and thereby affect the running of industry on proper lines.

In the succeeding paragraphs the structural and organisational aspects have been analysed. These clearly suggest that there is little scope for any concentration of economic power in few hands or the exercise of monopoly control over the supply of any commodity. In arriving at these conclusions the Memorandum examines in the first place the concepts of monopoly and concentration of economic power and the means by which these have to be ascertained. It is also attempted to elucidate factors which limit the number of producers in any industry and how, in the main, these factors are beyond the control of industry. A reference is made to restrictive practices, the conditions in which they are likely to be found and whether they obtain in our country. Concentration of economic power and monopoly are manifestations of the same basic forces; and a review of the legal and administrative regulations makes it obvious that these forces have been checked or eliminated. The various regulations like Industries (Development and Regulation) Act, Capital Issues Control, Import Licensing, etc., apart from the overall controls imposed by planning, have limited the freedom of individual enterprise and made it conform to the standards set by Government. As such it is not relevant to speak about the existence of monopoly and concentration of economic power. Rather attention should be focussed on how the pervasive restrictions could be reduced so as to stimulate effort in the economic field.

III

Concentration and Monopoly

The terms of reference to the Commission include not only an enquiry into monopolistic and restrictive practices but also into the extent and effect of concentration of economic power in private hands. The latter issue was examined at length by the Committee on 'Distribution of Income and Levels of Living' in Part I of their Report. (Also see 'FICCI on Mahalanobis Committee Report'). It is therefore, not attempted here to survey once again the meaning and implications or make an assessment of the degree of concentration of economic power in private hands. The argument is mainly confined to examine whether under the prevailing conditions it would be possible to secure a monopoly position in any industry.

How to identify Monopoly

The object of the Monopolies Enquiry Commission, it would

appear, is to find a legal basis to ascertain the degree of economic monopoly. Monopoly may be interpreted in the orthodox sense, meaning exclusive control over supply, or by reference to the dominating position in the market. The purpose must be to find a basis for ascertaining whether a seller is really in a dominating position. In so doing, of necessity, account must be taken of the variable economic and other conditions in which industry has to function. The Committee of the Federation are convinced after study that taken all in all the sellers in India cannot be deemed to have unrestrained power which can be described either as monopoly or concentration of power.

(a) The Number of Sellers:

The larger the number of sellers the smaller becomes the monopoly power of any single seller. It would appear from the experience in other countries that monopoly ceases to be effective when the supply controlled by the largest seller is less than one third of the total supply in the market. This can however only be a working hypothesis, and is based on the assumption that the commodity does not have any near substitute. Table I gives the production controlled by the largest firm or the largest group of firms in some of the important industries.*

TABLE I

Industry	Year	(a)
Cotton textiles	.. 1958	4.10
Sugar	.. 1958-59	2.36
Coal	.. 1959	11.09
Caustic Soda	.. 1958	14.76
Matches	.. 1960	60.00
Jute textiles	.. 1958	12.29
Ceramics	.. 1957	17.29
Paints & Varnishes	1957	11.40
Hydrogenated oils	.. 1958	14.01
Superphosphate	.. 1958	14.76
Soap	.. 1957	30.75
Cement	.. 1960	45.00
Bicycles	.. 1959	20.20
Paper & paper board	1958	23.50

(a) Percentage share of topmost unit/group in total production/capacity.

In most cases it would appear that the proportion of output controlled by the largest firm or the largest group of firms is less than one third to give effective basis for monopoly power. There are, no doubt, some industries where the output controlled by the largest firm or the largest group of firms is more than one third. But whether such control is adequate to give rise to monopoly power will depend on other considerations. For, monopoly power implies freedom to charge any price, adopt any process of manufacture, regulate the level of investment and growth, etc. If the industrial sector and the general policy framework are such that this

freedom is purposively curtailed, or the conditions of demand are such that this freedom becomes inoperative, then even complete control of production cannot be identified with monopoly power.

(b) Opportunity for competitors:

Monopoly in any industry will not perpetuate if the conditions of production are profitable and if entry into the market is not restricted. In India the implementation of an industrial project is regulated by the Industries (Development and Regulation) Act. The establishment of new units by an existing company or the expansion of existing units, has to be acceptable to Government. To this extent the capacity to retain monopoly power is eliminated.

(c) Control of prices:

A situation cannot be identified as monopoly if it cannot be associated with power to influence prices, supply or cost. Where prices are controlled by Government, monopoly will be rendered ineffective. Price controls at present include a variety of commodities like paper, textiles, fertilisers, cement, etc. In such industries monopoly is per se excluded.

(d) Rate of Growth of Industry:

It is generally observed that an industry with a monopolistic organisation is apt to grow at a smaller rate than it does under competition. This happens because the advantage of growing demand is like to be used to increase prices rather than output. The Indian industry however has shown rapid growth almost in all fields of industrial production in the last decade, particularly in these areas of production in which the number of firms had been small. For example, the production of iron and steel, aluminium, sewing machines, electric lamps, electric fans, paper, bicycles, cement, industrial machinery, automobiles, fertilisers, plastics, rayon and staple fibre, etc., has increased faster than the general growth of industry. This is one aspect of the operation of competitive forces.

(e) Excess capacity:

There is likely to be persistent excess capacity over long periods of time in monopoly industries because restricting output would prove profitable than utilising the capacity to its fullest extent. This by itself cannot, however, be taken to be a manifestation of monopoly power. There are other factors, particularly in a developing country like India, which in some cases may limit the full utilisation of installed capacity. For example, production which is dependent on the import of raw materials, spares and components, and machinery will automatically be subject to the availability of

requisite foreign exchange. In the past few years this has been the major cause of preventing the full utilisation of installed capacity.

(f) Price discrimination:

Under conditions of monopoly there is a tendency to charge different prices in different markets. In the case of exports it is accepted as an exception in monopoly practices in most of the countries which have adopted monopoly legislation. However, in India even in export trade there is such severe undercutting that the system actually suffers from the drawbacks of excessive competition.

Restrictive Practices

Monopoly implies a dominating position. Even smaller manufacturers can attain a substantial control over the market by agreeing to fix inter se prices, supply, distribution, etc., of a commodity. These agreements may be entered into between sellers alone or between sellers and buyers. They have been referred to as restrictive practices because they limit the freedom to compete. While in some cases such agreements may be entered into with the deliberate intent to earn higher profits, there can be instances in which such agreements merely reflect the risks of excessive competition. Particularly when competitors are fairly large and the market is saturated, fluctuations in prices or output are bound to be wide and cause great damage to the whole industry. Producers in the circumstances are apt to accept a definite rule of behaviour so that competition may not get out of hand. Restrictive practices therefore arise when the sellers find it difficult to sell their products individually under perfectly free competition. Usually such agreements are concluded when economic activity is depressed and the sellers are faced with a falling demand on the one hand, and excess capacity on the other.

Restrictive practices have not been adopted in India because the economic condition is characterised by shortages rather than glut. In fact the problem is one of expanding production and securing a higher rate of growth. As such, there has not arisen in any industry need to insulate against the risks of 'cut-throat' competition. Nor can limitation to output be an effective instrument for increasing profits. Also in industries like steel, fertilisers, cement, sugar, etc., the whole process of distribution is regulated by Government, while in others like paper, cotton textile, jute, coal or petroleum and petroleum products the controls on profits and prices exclude any opportunity to restrict supply or trade. Further, such restrictions would be unworkable because in most consumer industries which constitute the bulk of output, producers are too small and too

many, while in many producer goods industries, the State controls a substantial portion of output. Thus the economic forces and the regulatory measures make it unprofitable and impossible to establish agreements designed to restrict production and increase prices.

IV

Propensity to monopolize

It may appear that monopoly or restrictive practices reflect a deliberate attempt to secure advantage from the elimination of competitors and acquire control on supply in the market. But there are circumstances in which the economic forces themselves initiate a certain restriction on competition if the industry is to survive at all. These forces relate both to demand as well as supply. When the market is such that even a substantial decrease in prices will not lead to any substantial increase in demand, that is to say, when the elasticity of demand for a commodity is small, it will be in the interest of the industry to have a fewer number of sellers. On the other hand, when the conditions of supply are such that a large increase in production may not lead to any substantial decrease in cost, that is to say, when the elasticity of supply is high, it will be in the interest of the industry to have fewer producers. In other words 'cut-throat' competition will be un-economic and impracticable when the elasticity of demand is small and the elasticity of supply is high. From these considerations it would follow that in heavy non-consumer industries the number of producers is likely to be smaller than in consumer industries. This criterion indicates the optimum market structure for different industries, any violation of which will tend to have adverse repercussions on industrial growth.

V

Why is Indian economy not susceptible to monopolization

There are certain peculiar features which apply almost invariably to all industries in India and which make it impossible for any firm or group of firms to achieve monopoly power to be able to regulate prices, production, distribution or investment. These features were imparted to the general economic framework when the process of expansion became cumulative after the implementation of planning. The extent of these regulatory measures is so comprehensive and their application so unmistakable that development of industry in all forms and at all levels has been just what Government had planned or desired. When the State has such effective powers, it would be idle to talk about monopoly or concentration of economic power in private industries. In the following para-

graphs an attempt is made to give an idea about the pervasiveness of legislation and administrative regulations which limit the growth, form, ownership, control, etc., of private industries. For this purpose a brief historical perspective is outlined which will give the norms in terms of which these various measures have to be judged.

Historical Perspective

The existing position must be considered in the perspective of the historical development of industry and the conditions in which it has taken place. Organised industry in India started only in the second half of the nineteenth century. But before the First World War, the only major industries included cotton textiles, jute and coal mining. A significant beginning was made in the production of steel. The total level of development in relation to demand as well as potentialities was, however, very much limited. The policy of discriminating protection introduced in 1924 gave some impetus to industrial progress and new industries like sugar, cement, paper etc. came to be established. Development was engineered by entrepreneurs with great capacity, who, in spite of the unsympathetic attitude of the then Government, and foreign competition, took upon themselves the responsibility, not as an opportunity to profit but as a mission to make the country economically independent. The War years saw some industrial development but not on an organised long term basis. It was only after independence and particularly since the implementation of planning that industry expanded favoured partly by the protective policies adopted by Government and partly by the inherent forces of individual enterprise.

Looking at the process and the pace of development in the last thirteen years it would appear that industry would not have developed to the present level if business houses which had already given the lead in the pre-independence era had not gone into the production of new and technically advanced commodities and capital goods. The production of automobiles, machinery, aluminium, ball and roller bearing, agricultural implements like power driven pumps and tractors, fertilizers, refractories, etc. would not have been possible without the continuing efforts of industrialists who had long experience of industry and trade. This itself created need for new industrialists and entrepreneurs.

In the period of the Second Plan a large number of new items were manufactured for the first time which saved a considerable amount of foreign exchange and which will inspire the future progress of the economy. Industrial growth is essentially a matter of

enterprise and innovation. If effort in any field is checked it will perforce keep idle individual capacity which would have promoted development and lifted the economy to a higher level of production and consumption. Looking at the problem from this angle it would appear that the growth of even large business houses would be in public interest, provided they strive, as they have, to innovate, bear risk, and venture into new lines of manufacture.

Ownership of Industry

The company form of organisation of private industry has made it possible for the general public to participate in industrial investment and income. The pattern of subscription to issues in the past indicates that people with comparatively small means have invested in an increasing number in the share capital of companies in the private sector. Table II gives the distribution of shares according to the size of holding. It is based on a survey by the Reserve Bank of the ownership of shares at the end of December, 1958 for a sample of 70 companies. The number of accounts is taken on the basis:

TABLE II			
Size of holding Rs.	All categories of shareholders.		Value (per cent)
	Accounts	Value	
1-1000	64.17	7.28	
1001-5000	27.85	15.35	
5001-10000	4.48	7.44	
10001-25000	2.35	8.44	
25001-50000	0.63	5.03	
50001 and above	0.51	56.45	
Total	100	100	

Size of holding Rs.	Individual shareholders.		Value (per cent)
	Accounts	Value	
1-1000	64.64	13.92	
1001-5000	27.88	29.12	
5001-10000	4.41	13.88	
10001-25000	2.23	15.12	
25001-50000	0.54	8.22	
50001 and above	0.31	19.74	
Total	100	100	

It will appear that the distribution of shareholding among individuals is more broad-based than among all categories of shareholders. What is more important is that among individual shareholders nearly 3/4th of the shares were owned by individuals holding total shares of the value of less than Rs 25,000. "What is not often realised", Shri T. T. Krishnamachari mentioned in his Budget speech, "is that even the biggest industrial plants in the country to-day belong in terms of ownership, much more to the people at large than to the original founders with whose names they are popularly associated". This democratic form of ownership of industry can be the only sustained basis for progress consistent with the socio-economic objectives adopted in the Constitution.

Constraints on industry

Almost every industry in India to-day works within certain constraints peculiar to itself or which it shares along with other industries. In fact, the total weight of the various regulations on industry has increased to such an extent, in recent years, that it has almost prohibited the development in many important directions. It would be difficult to deny, and it appears even to be officially accepted, that many controls have a generally prejudicial effect on industrial development. In a Statement to the Lok Sabha on December, 16, 1963, the Finance Minister Shri T. T. Krishnamachari said, "Controls in their actual implementation often impede the operation of those very forces which might make for the elimination of the shortages and introduce some degree of competition. It is for this reason that we have been reviewing the operation of controls over a number of sectors in the economy for some time now, and we have come to the conclusion that gradual and orderly relaxation of some of the controls would be in the interest of stimulating economic growth".

There are, a number of measures like Industries (Development and Regulation) Act, Essential Commodities Act, Capital Issues Control, etc. which ensure that development will run along proper lines and will not take any undesirable form. However these instruments of control have been applied with such rigour that the results have not always been in the public interest. In particular, many of these regulations have tended to postpone the implementation of schemes because of administrative delays at various levels. In the processing of applications for industrial licensing, or the import of capital goods, or the approval of foreign collaboration agreements, or revision of prices, there have been inordinately long delays which have generally tended to slow down the process of industrial expansion.

Price Controls

The Industries (Development and Regulation) Act enables Government to control prices in respect of scheduled industries besides requiring entrepreneurs to secure a licence for the establishment of new industries or production of new commodities. Together with the Essential Commodities Act and other administrative regulations, prices of a number of commodities. Together with the Essential Commodities Act and other administrative regulations, prices of a number of commodities are subjected to Governmental control. These commodities include:

Steel,
Pig-iron,
Sugar,
Zinc,

Cement,
Fertilisers,
Coal,
Paper (including newsprint),
Cotton and woollen textiles,
Vanaspatti,
Petroleum and petroleum products,
Raw Cotton,
Jute,
Drugs.

Control on investment and management

Restrictions are also exercised on diversification and expansion of productive facilities. Location of new undertaking which is generally the result of entrepreneur's own individual choice is governed more by Government's decisions regarding development from the regional angle rather than economic considerations. Government's permission is necessary if a company makes investment in the shares of another company beyond certain prescribed limits. Diversification into unconnected lines of business is regulated under the Capital Issues Control. The legislative measures pertaining to labour have placed a number of limitations on the extent of economic power that can be exercised by the employers. Regulations on management and operation of companies are exercised through the stringent provisions contained in the Company Act. Two significant amendments to Company and Banking Law were adopted in November, 1963 which give power to Government to control even the day-to-day working of a company or a bank. The amendments enable Government to remove any director or chief executive of a company and also appoint a public trustee to exercise the voting power vested in a Trust which has share holding in any company. Similarly the Reserve Bank of India is empowered to remove any director or chief executive in a bank and appoint a substitute and in addition appoint five more directors. The Reserve Bank of India has also powers to examine and control the credit operations of scheduled banks.

Stringent legislation has been adopted to curtail economic power of managing agents. The approval of Central Government is now required for appointment or re-appointment of managing agents even in case of private companies. The tenure of office has been fixed at ten years in the case of first appointment and five years in the case of re-appointment. Similarly by introducing a sliding scale, progressive reduction in the remuneration of managing agency has been achieved. Substantial restrictions are also imposed under Section 325A, 346 and 360. The number of companies that can be managed by managing agents is now limited to ten. Thus almost in all aspects the powers of managing agents

*Estimates made by National Council of Applied Economic Research.

have been drastically curtailed. The repercussions of this can be seen in the persistent decline in the number of new companies managed by managing agents. In the seven year period ending March, 1963 new managing agencies were approved only in 236 cases as against 9150 new companies registered during the period. The total number of companies managed by managing agents at the end of March, 1963 was not more than 1450 (as compared to about 5,000 in 1954-55) out of the total number of nearly 26,000 companies. This means that only about 5.5 per cent of the total number of companies are now managed by managing agents. In other words, nearly 75 per cent of the companies managed by managing agents in 1954-55 have changed over to other forms of management.

Financial controls

With the growth of taxation, private industry, both large and small, has been compelled to secure funds from a number of Governmental agencies like IFCI, State Finance Corporations, ICICI, Re-finance Corporation, NIDC, etc. Government have also set up Development Bank and Unit Trust, both of which have started functioning. All these together with other large monetary institutions like the State Bank of India, LIC, etc., will own a large part of capital investment in private industry. This is significant from the point of ownership and control.

State entry into industry and trade

Apart from exercising indirect control, Government have through nationalisation or with the establishment of new ventures secured direct control over a number of industries like ship-building, air transport, iron and steel, fertilisers, coal, drugs, cables, machine tools, newsprint, etc. and services like electricity, insurance, exports and imports. The total ownership of reproducible tangible wealth of the nation by Government increased substantially from 17 per cent in 1950 to over 25 per cent in 1961. As compared to 1950-51, by the end of the Third Plan it is expected, the contribution of the public sector will increase from less than 2 per cent to nearly 25 per cent in organised manufacturing industries and from less than 10 per cent to nearly 33 per cent in mineral production.

Plan Targets and Allocations

Since the implementation of planning, development of industry is also made to conform to the pattern envisaged by the planners. This puts restrictions not only on the growth of any specific industry but also on the size of units, the number of manufacturers, types of commodities, processes

of manufacture, etc., all of which are important for determining the market structure. The Plan allocations are fixed in the perspective of the general growth of the economy and the necessity of development in particular branches. In the period of the last thirteen years, it was obviously difficult to ensure that besides achieving adequate development of different industries, industrial growth will, at the same time, universally conform to the objective of securing a high degree of competition with a sufficient number of producers. For, the growth of certain industries would only permit the establishment of a small number of units, considering the total size of production and the economic scale of output. In the history of a nation, thirteen years is a small period of time. Legislation cannot be based on limited experience. It determines the whole trend of future events and must take account of the long term view about the basic forces affecting economic activity.

Size of industry and Plan targets

In a large number of cases where development is to be initiated in the private sector, new entrepreneurs and small industrialists may not be in a position to give the lead, especially when the industry is large and investment necessitates co-operation from many agencies. Particularly when foreign collaboration in the nature of loan or participation in share capital is involved, or when the rupee investment is of a fairly large size, development can be more easily initiated by established business houses. In these circumstances, development has necessarily to be engineered by those who are already in the field and who from experience are able to judge the situation, take speedy decisions, create confidence in the investing public, organise investment and production and achieve the Plan targets within the time schedule.

Allocation of Foreign Exchange

The development of Indian industry is also affected by the shortage of foreign exchange because the implementation of any important industrial project involves a large foreign exchange component. It is relevant to point out in this connection that industry has to obtain Government's sanction in respect of the foreign exchange component of investment, which gives additional power to Government to regulate the flow of investment in different industries or to different firms and entrepreneurs.

The Impact of Regulations

All the various legislative measures and administrative regulations mentioned above had a singular impact on the flow of investment in different industries,

the extent of control by the existing business houses, the number of producers in various industries, etc. In a Statement made to Parliament on 23 April, 1963, the late Prime Minister mentioned that of the total number of 4,211 industrial licences issued in the three years ending 31 March 1963, the number of licences that had gone to leading industrial houses in the country was only 182, or about 4.3 per cent of the total licences issued. This shows the extent of new activity that will be undertaken by large business houses in the next few years. Similarly, other factors like management of companies, financing of investment, etc. which constitute the basic elements of monopoly and concentration of economic power are made the subject of Governmental decision or regulation. In effect, the economic power of entrepreneurs has been shifted on to Government. There is not only no opportunity to take and implement independent decisions but on the contrary, there is frequent interference by the authorities which hampers the smooth running of industry, and sometimes even makes it uneconomic.

IV

Conclusion

In the preceding sections, an attempt has been made to review the growth of industries in India, the conditions under which the growth has been, and is taking place, and to portray, with empirical references, a general picture of industrial organisation, as also the compulsive factors—planning, legislation and others—that govern the opportunities to, and place restraints on, management. Looked at from any angle, the basic question is how to strengthen the internal management of organisations without undue interference by external authority. It must be clearly borne in mind that all organisations, if they are to be successfully run, must be efficiently managed. The organisation might be quite simple, or very complex, depending upon the nature of business activity, the size of the firm and the technology employed. Management and organisation have to be considered in terms of the imperative need to ensure that industrial growth is accelerated. Once that is attempted through suitable adjustments in the regulatory measures, adjustments by way of liberalisation, it is inevitable that development should become more broad-based than now.

As stated earlier, neither the present organisational set-up, nor the form it is likely to take, if industries are allowed to operate efficiently, would call for further regulations as was made necessary in advanced industrial countries. The basic conditions under which industries are operating in India are entirely different. An objec-

tive analysis will lead to the conclusion that even the prevailing legal and administrative regulations cannot give rise to restrictive practices or to monopolistic control, but have on the other hand rendered economic power of entrepreneurs ineffective, let alone permit any concentration. If in certain industries to-day the number of producers is not large it merely reflects the state of development in the light of licensing policy, plan targets and similar factors. Further development will necessarily bring in more producers by the very assertion of the forces of individual enterprise. Any additional restrictions on the present system will curb effort and postpone development itself, both undesirable in the interests of the nation. And today if there is scarcity in some sectors, even including agriculture, it is not a reflection of monopoly or restrictive practices but of imbalance between the state of progress and the size of emerging demand.

New Companies Eastern Region

89 new limited Companies including one Guarantee Company with a total authorised capital of Rs 8,70,70,000 were incorporated in the Eastern Region comprising the States of West Bengal, Bihar, Orissa and Assam during the quarter ending 30 June, 1964. 11 Companies with a total paid-up capital of Rs 11,83,000 went into liquidation and the names of 16 Companies with a total paid-up capital of Rs 4,14,000 were finally struck off under Section 560(5) of the Companies Act, 1956 during the same period.

The following are the details of the Statewise review:—

WEST BENGAL

76 Companies with a total authorised capital of Rs 7,67,25,000 were registered in the State of West Bengal during the quarter ended 30 June, 1964; of these 13 were Public Limited Companies having total authorised capital of Rs 5,35,00,000; 63 Private Companies with a total authorised capital of Rs 2,32,25,000. The new Companies included 3 giant Public Companies having the total authorised capital of Rs 3,50,00,000. 10 Companies having total paid up capital of Rs 11,81,000 went into liquidation, while 10 Companies with a total paid up capital of Rs 74,000 were finally struck off under Section 560(5) of the Companies Act, 1956. 16 Companies including 2 Guarantee Companies with a total paid up capital of Rs 23,37,806 were finally dissolved during the period under review.

Prospectuses of 6 Companies were issued during the quarter.

In 336 cases prosecutions were launched against 77 Companies as well as their management, under various provisions of the Companies Act. Most of them related to the Commission of defaults in respect of non-filing of Annual Returns, Balance

sheets and not holding the General Meetings. Out of the cases disposed of, (out of the above and those pending at the beginning of the quarter) in 524 cases the accused were convicted and fined by the Magistrates.

BIHAR

In Bihar 6 Companies with a total authorised capital of Rs 38,00,000 were registered during the quarter ended 30 June, 1964; of these 1 was public Limited Company and 4 were private limited companies having total authorised capital of Rs 25,00,000 and Rs 13,00,000 respectively. 1 Company limited by Guarantee was also registered during the quarter. 3 Companies with a total paid up capital of Rs 3,12,000 were finally struck off under Section 560 of the Companies Act, 1956.

17 Prosecutions cases were launched against some companies and their managements under the Act. Of the cases disposed of (out of the above and those pending at the beginning of the quarter) in 15 cases the accused were convicted and fined.

ORISSA

In Orissa 3 Private Companies with an authorised capital of Rs 9,95,000 were registered during the quarter under review. One company with a total paid up capital of Rs 2,000 went into liquidation, while 3 companies with a total paid up capital of Rs 28,000 were finally struck off under Section 560 of the Companies Act, 1956.

54 prosecutions cases were instituted against certain companies and their management under the Act during the quarter. Of the case disposed of (out of the above and those pending at the beginning of the quarter) in 34 cases, the accused were convicted and fined.

ASSAM

In Assam one Public Company and 3 Private Companies with an authorised capital of Rs 25,50,000 and Rs 30,00,000 respectively, were registered during the quarter ended 30 June, 1964.

23 Prosecution cases were instituted against certain companies and their management under the Act. Of these cases and those pending at the beginning of the quarter, in 5 cases the accused were convicted and fined.

GENERAL

During this quarter, the Government constituted the Monopoly Commission under Section 3 of the Commission's of Inquiry Act, 1952 (60 of 1952) with Mr K. C. Dasgupta, Judge, Supreme Court of India—as Chairman and Messrs G. R. Rajagopal, K. R. P. Aiyangar, R. C. Dutt and Dr I. G. Patel as members.

The Tribunal under Section 10A(1) of the Companies Act, 1956 as amended in 1963 has also been constituted with Mr B. N. Gokhale as Chairman and Mr G. Mathias as Member.

The Commission will have its head quarters at 25, Curzon Road, New Delhi.

News from Industry

Coromandel Fertilisers

Mr John Quincy Cope and Mr Charles Stuart Dennison, two directors of Coromandel Fertilisers, Limited, arrived in Secunderabad from the USA at the weekend to sanction the expenditure of approximately Rs 32½ crores on the company — the largest venture of its kind in the private sector, not only in Andhra Pradesh, but in the whole of India.

Mr Cope and Mr Dennison are the Vice-President and Director of California Chemical Company, and Vice President of International Minerals and Chemical Corporation, respectively, both companies being American promoters of Coromandel Fertilisers Limited.

Mr Cope and Mr Dennison were met by Mr Luther Powell, the Managing Director of Coromandel Fertilisers.

One of the decisions taken at the Coromandel Board Meeting held earlier in the day was the appointment of Mr Peter Davies as the deputy Managing Director of Coromandel Fertilisers. Mr Davies brings to this project a broad background in administrative experience, particularly in establishing new programmes and projects, in addition to his wide experience in agricultural techniques, agronomy and agricultural economics. His most recent job before joining Coromandel was working as Chief of Private Enterprises, Agency for International Development (AID), US Department of State. He also served in the US Government in several capacities, most recently as Consultant to the Special Assistant to the President of the United States of America. Mr Davies was Vice President of Business International between 1959 and 1961, and before that worked for the McGraw-Hill Publishing Company.

The appointment of The Lummus Company—India, and The Lummus Company of the United States as the prime constructors of the plant has also been under negotiation for some time, and has been generally agreed upon; and it is contemplated that the Board of Directors and the various agencies in the Government will approve this shortly.

The Board has approved and endorsed the undertaking of building the Rs 32½ crore Coromandel Fertiliser complex in Andhra Pradesh. This includes the construction of the plant at Visakhapatnam and the creation of an organisation to sell and transport some 1,200 tonnes of the fertiliser per day to a market which would be receptive to and capable of absorbing this vast quantity of fertiliser by the time the plant

comes into production at the end of 1966. The Board of Directors has approved expenditures of approximately Rs 4 crores and commitments of expenditures approximating Rs 8 crores during the next eight months upto 31 March 1965.

The majority of these expenditures are, of course, concerned with the engineering construction of the plant to be built at Visakhapatnam. Roughly Rs 2 crores out of the Rs 4 crores approved will be spent on engineering and construction, as will approximately Rs 7 crores of the commitment of Rs 8 crores.

The Coromandel fertiliser plant is expected to commence production during the fourth quarter of 1966. It is envisaged that the major portion of the Company's production will be marketed in the State of Andhra Pradesh, the balance being marketed in neighbouring states. On the basis of application rates recommended by Central Government agronomists, it has been estimated that current acreages devoted only to four of the major crops produced in Andhra Pradesh, namely, sugarcane, paddy, tobacco and chillies would alone require the output of two plants of the size of the Company's proposed plant.

The rapid increase in India's production of food and of other commercial crops is one of the main objects of the Government of India's Third Five-Year Plan. It is recognised that the proper and increased use in India of chemical fertilisers is vitally essential to the achievement of this object and will continue thereafter to play an ever-increasing role in the attainment of the country's future increased requirements of agricultural produce. Whilst modern agronomy provides many tools which can assist in increased production per unit of land under cultivation, such as better, new, and more vigorous plants, rotation of crops and improved methods of cultivation, yet in the application of the science of agronomy the proper use of fertiliser is basic and universal.

Coromandel, through its partnership combination of technical know-how, knowledge of scientific agriculture and wide experience in marketing of agricultural chemicals and fertilisers, means more and better food for India. The Coromandel plant, from initial construction through to actual production, will be in the hands of engineers and technicians with a long history of successful operation. The plant will have an annual production capacity of some 365,000 metric tonnes of ammonium phosphate and 16,500 metric tonnes of urea prills fertiliser—materials vital to the na-

tion's need for increased crop production. These products will be sold under the brand name of GROMOR fertilisers. GROMOR has a unique feature: the granules of ammonium phosphate are specially coated so that immediately they are spread on the soil, they disintegrate, merge with the soil, and start work immediately, as opposed to other varieties of fertiliser which stay on the surface in granular form for a long time.

The setting up of the Coromandel plant will achieve three main objectives: to further the economic development of Andhra Pradesh primarily, and India secondarily, by increasing crop production; to bring new industry to India; and to produce fertilisers for India in India. It will also provide increased employment—employing about 700 people, and training many of them in technical and management skills. The construction of the plant alone will require a labour force averaging about 3,500 and up to 6,500 at peak stages, during a two year period.

Unfortunately, it is not yet widely accepted among farmers in India that what is taken out of the soil, must be replaced. Yet the fact is that the southern part of India, including Andhra Pradesh, consumes about 40 per cent of the total amount of fertiliser used in India, and the reasons for this development have often been the subject of enquiry. The plantation and tobacco companies have actively propagated the use of fertilisers, and by their own requirements, encouraged the development of the trade, and private companies have employed propagandists and demonstrators to familiarise the growers with the benefits from application of fertilisers.

The fact that in Andhra Pradesh the demand has been higher than in other states is important, because even if the fertiliser consumption target for the country is not achieved, the development in Andhra Pradesh is likely to reach, and even exceed, the estimates in the Third Five-Year Plan.

Of paramount importance before the Visakhapatnam plant goes on streams, is the Seeding Programme which Coromandel has been carrying out since August 1962 in the State of Andhra Pradesh.

Compound fertilisers of which Ammonium Phosphate is one of the most important, had not, hitherto, been extensively used in India. With the Visakhapatnam plant scheduled to come into production in late 1966, it was considered imperative for a definite demand for Annonium Phosphate to be built up in Andhra Pradesh in the interim.

The rated capacity of the plant will be in the region of 81,000

tonnes of Nitrogen a year, and 73,000 tonnes P2O5, or 365,000 tonnes in terms of 20N: 20 P2O5 Ammonium Phosphate. It is fully anticipated that the factory will be producing its rated capacity from the start, which will mean that very large quantities of Ammonium Phosphate will be on the market in Andhra Pradesh from the year 1967 onwards.

With this in mind, the development of a market for this product was considered vital and an import programme for Ammonium Phosphate was drawn up, gradually accelerating month by month. In 1962/63, Coromandel introduced about 16,000 tonnes; from 1963 to September 1964 in the region of 40,000 tonnes; for the year 1964/65, Coromandel has asked for 70,000 tonnes, and awaits Government sanction of this figure.

A semblance of the basis imported raw materials could possibly be manufactured in India, but it would not be financially worthwhile. Even so, by importing raw materials and manufacturing this fertiliser in India, Coromandel will be helping the Government to effect a saving of over Rs 11 crores of foreign exchange a year. This year Coromandel has asked the State Government to recommend to the State Government that 70,000 tonnes of material should be imported, to be indented by September, and supplies arranged to be shipped from October to November so that the material arrives prior to the fertilisation period from July to September. Coromandel has requested the Central and State Governments to bring all supplies into the Visakhapatnam port, and to give delivery of these stocks direct to Coromandel, i.e. Visakhapatnam. Coromandel has intimated to the Visakhapatnam Port Trust that it

would welcome its business, and the berthing of ships so that they will not spend idle time waiting out in the stream. Coromandel has also indicated to the Ministry of Food that it will need help in obtaining warehouse storage godowns in Visakhapatnam and Kakinada. As many as 15 godowns would be needed in Visakhapatnam and a slightly lesser number in Kakinada. Coromandel will also need godowns in its major distribution areas—probably to the extent of 4 or 5 godowns, depending on size, in each of 3 centres. Both the State and Central governments have assured Coromandel that they were most sympathetic to these needs and that their full co-operation could be expected.

Indian Machine Tool

Indian Machine Tool Manufacturers' Association reports that the total approximate production of various machine tools by its 32 leading member-firms during June 1964, was as under:

Description	Quantity (Nos.)	Value (Rs.) 000
Lathes	474	6583
Milling Machines	53	2758
Radial Drills	27	960
Grinding Machines	20	846
Planing Machines	11	829
Portable Elec. Tools	2,690	738
Shaping Machines	50	723
Furnaces	9	572
Power Presses	20	512
Pneumatic Power Hammers	4	324
Capstan Lathes	9	315
Drilling Machines	48	313
Regulators	1,894	264
Blowpipes	1,113	233
Welding Machines	45	229
Turret Lathes	4	221
Slotting Machines	9	211
Miscellaneous	1,494	211
Lathe Chucks	922	169
Boring Machines	1	150
Drop Stamp Mallets	1	148
Hacksaw Machines	25	120
Cutter and Tool Grinders	5	107
Cutting Machines	58	75
Press Brakes	1	52
Drill Chucks	1,011	28
Automatic Lathes	2	26
Plate Bending Machines	1	17
Tumbling Barrel	1	14
Sand Mill	1	13
Shearing Machines	1	8
Total	9,983	17775

PRODUCTION

Hindustan Steel May Make Profit

The Union Minister of Steel and Mines, Mr N. Sanjiva Reddy, was informed that there were prospects of a clean profit for the Hindustan Steel Ltd. during 1964-65 even after meeting about Rs 50 crores depreciation and interest on capital loan by Government.

The Minister was told that for the month of July 1964 the total saleable steel production was 101 per cent of the capacity. It was also expected to be maintained during August.

Mr Reddy said that stress should now be laid on improving the quality of production and increasing the yield by eliminating the rejections. Apart from commercial considerations, Mr Reddy said, it was also the responsibility of plants of the Hindustan Steel Ltd to meet the defence and other special requirements as were

Coal Production in May

Coal production in May was 5.2 million tonnes, against 5.4 million tonnes in the previous month. Of the 5.2 million tonnes was non-coking coal.

During the month, 4.7 million tonnes of coal were despatched against 4.8 million tonnes in the previous month. The daily average loading for June was 5233 wagons. The pit-head stocks at collieries in May was 5.1 million tonnes.

NEDC Production in July

The production of coal from the collieries of the National Coal Development Corporation totalled 631,760 tonnes during the month of July 1964, as against 664,802 tonnes in June. The pit-head stocks amounted to 662,710 tonnes at the end of the month under review.

Of the total coal production, Bihar accounted for 473,219 tonnes, followed by Madhya Pradesh and Orissa producing 92,512 and 61,029 tonnes respectively.

firms which are jointly developing the Concord.)

The test, starting at the end of August, will last about three months.

INDIA A MAJOR BUYER OF BRITISH AERONAUTICAL EQUIPMENT

India bought aircraft, aero-engines and spare parts valued at £1,644,999 from Britain during the first six months of this year.

The Board of Trade said in London recently that the British aircraft industry's exports in June totalled £6,308,373. Of this amount, India's purchases of aero-engines and parts accounted for £260,062. Italy was the biggest buyer, making purchases to the value of £489,455. After India came the United States (£251,261) and West Germany (£237,800).

Aviation experts predict that exports of British aeronautical equipment will increase next year when the new generation of jet airliners (notably the BAC 1-11) are delivered to overseas customers.

BRITISH JET AIRLINER FOR EXECUTIVE USE

Two of the 65 BAC 1-11 short-haul jet airliners now on order will go to executive users, it was announced on 12 August by the manufacturers, the British Aircraft Corporation.

One of the aircraft is for a "large industrial undertaking in the United States", and the other is for the German chainstore company Heintz Horten. Together with spares, the 65 BAC 1-11 represent orders worth just over £65,000,000. The 1-11, which is fitted with two rear-mounted Rolls-Royce Spey jet engines, cruises at about 540 mph.

CLEARING HOUSE RETURNS

"CUPPACHA?"

For the first time the Indian word for tea, the U.K. in the month of March 1964 alone, also took Rs. 1.04 crores worth of tea. The rest of the world took Rs. 4.89 crores worth. A year's export of tea will earn enough foreign exchange to finance a project twice as large as the nuclear power plant at Tarapur. That's how important tea exports are—how important exports are to India.

The demand for Indian goods is growing everywhere. We know. We are practically everywhere ourselves. We can provide you with expert banking assistance where it counts: on the spot. Around the world.

THE Government's attitude to the erroneous land reforms is very much like that of the newspaper editor who would not correct the mistaken report of a man's death except by putting in his name in the births column. Governments all the world over are reluctant to own their errors; and in India, there is no pressure of informed public opinion, nor has the party in power any fear that persistence in mistaken policies may yield decisive advantages to its rivals in the opposition. The result is that the Congress ministries are able to continue to assert their faith in the reforms, while making half-hearted admissions of the possibility of adverse effects on agricultural production. There can however be no doubt at present that the complexity of the food problem is attributable to a large extent to the impact of land reforms on the present agricultural set up. Not only is agriculture less responsive to developmental measures, but current agricultural production can conceivably have been better, if the agricultural organisation had not been loosened by the changes in the title to ownership of land and to a share in the produce. An even more serious consequence is that the producers of foodgrains, big and small alike, have been enabled to hold their stocks off the market for an unconscionably long time, thus increasing the shortages and accelerating the rise in price. These circumstances together with the uncoordinated conflicting policies of the Central and the State Governments have created a situation which is not easily tackled by the ministries which have to ensure food supplies to the common people.

The impact of land reforms on the food situation is two fold. Firstly, it affects food production and the rate of increase therein. Secondly, it facilitates the holding back of food grains by innumerable small tenants who are in a position to divert the advances for further production to the antisocial purpose of holding back their stocks. The cumulative effect of these is very great indeed.

In these conditions, it is clearly the duty of the Government to make a thorough enquiry into the whole question, to examine every link in the chain that leads from the splitting up of land to the realisation of the harvest and the distribution of grains to the consumers and to determine, if only for its own edification the value of these reforms to the Socialist order it has in mind or to the programme of agricultural development which it has to work up in the national interest. No one would be dogmatic about the wisdom

or the practicability of retracing all the fumbling steps that have been taken on the path of these reforms. Nor would one hastily deny the possibility that, at some time in the future, the Government may be able through co-operatives and quasi-official organisations of various kinds to impart a high degree of efficiency to agricultural production. Nevertheless, when we are faced with the problem of achieving self sufficiency in food or something near it in the short space of a few years, it is necessary to know for certain whether progress would not be surer and faster, if fair sized land lords had been allowed to function as in the old days, with just those difference in tenancy conditions, wages and taxation than a modern democratic Welfare State would feel impelled to impose.

It is the shirking of this kind of enquiry and the absence of an open mind in regard to reforms which have not worked well that a harassed public must feel most aggrieved about. But the signs of restiveness must nevertheless be welcomed. First and foremost is the reference of the present Food Minister to the place of what he termed "the producer trade axis" in the holding of stocks from the market and the consequent creation of scarcity. Formerly, the Government always treated the trade as a handy scapegoat for anything that went wrong in its handling of the food problem. The producer was a poor victim of exploitation by the trader and the landlord. This theory has had to be abandoned because of very simple facts, such as the rise in food grain prices which enables the producer to get enough to live on by disposing of only part of his produce, the steady flow of credit and other facilities for production from various agencies and the highly unsatisfactory rate of repayment of such credit. Evidence in support of the producer's complicity in the creation of scarcity has accumulated and is incontrovertible.

A more convincing sign of change in the Government's ideas on this subject is the announcement of Mr Sriman Narayan of standstill in regard to land reforms. What this would mean in practice is by no means clear. Mr Ashoka Mehta in fact claims that the Planning Commission's views were more clear cut than ever before. He has referred to the Committee set up by the National Development Council to expedite land reform and to the decisions taken on the recommendations of the Land Reforms Commission which he contrasts with the reports prepared by some experts after a cursory study of a few

THERE CAN BE
NO REAL STRENGTH
WITHOUT DEVELOPMENT

LIGHT OF HOPE

Countless problems facing the manufacturer, industrialist, financier and businessman in general, are daily solved by the Allahabad Bank's specially trained and experienced personnel. As a trusted partner in the country's industrial upsurge, the Bank's contribution in keeping the light of hope alive in the great future of India, is indeed considerable.

Nearing a century of service to the country the Bank's 93 offices are daily adding to the record of progress.

THE Government's attitude to the erroneous land reforms is very much like that of the newspaper editor who would not correct the mistaken report of a man's death except by putting in his name in the births column. Governments all the world over are reluctant to own their errors; and in India, there is no pressure of informed public opinion, nor has the party in power any fear that persistence in mistaken policies may yield decisive advantages to its rivals in the opposition. The result is that the Congress ministries are able to continue to assert their faith in the reforms, while making half-hearted admissions of the possibility of adverse effects on agricultural production. There can however be no doubt at present that the complexity of the food problem is attributable to a large extent to the impact of land reforms on the present agricultural set up. Not only is agriculture less responsive to developmental measures, but current agricultural production can conceivably have been better, if the agricultural organisation had not been loosened by the changes in the title to ownership of land and to a share in the produce. An even more serious consequence is that the producers of foodgrains, big and small alike, have been enabled to hold their stocks off the market for an unconscionably long time, thus increasing the shortages and accelerating the rise in price. These circumstances together with the uncoordinated conflicting policies of the Central and the State Governments have created a situation which is not easily tackled by the ministries which have to ensure food supplies to the common people.

The impact of land reforms on the food situation is two fold. Firstly, it affects food production and the rate of increase therein. Secondly, it facilitates the holding back of food grains by innumerable small tenants who are in a position to divert the advances for further production to the antisocial purpose of holding back their stocks. The cumulative effect of these is very great indeed.

In these conditions, it is clearly the duty of the Government to make a thorough enquiry into the whole question, to examine every link in the chain that leads from the splitting up of land to the realisation of the harvest and the distribution of grains to the consumers and to determine, if only for its own edification the value of these reforms to the Socialist order it has in mind or to the programme of agricultural development which it has to work up in the national interest. No one would be dogmatic about the wisdom

or the practicability of retracing all the fumbling steps that have been taken on the path of these reforms. Nor would one hastily deny the possibility that, at some time in the future, the Government may be able through co-operatives and quasi-official organisations of various kinds to impart a high degree of efficiency to agricultural production. Nevertheless, when we are faced with the problem of achieving self sufficiency in food or something near it in the short space of a few years, it is necessary to know for certain whether progress would not be surer and faster, if fair-sized land lords had been allowed to function as in the old days, with just those differences in tenancy conditions, wages and taxation that a modern democratic Welfare State would feel impelled to impose.

It is the shirking of this kind of enquiry and the absence of an open mind in regard to reforms which have not worked well that a harassed public must feel most aggrieved about. But the signs of restiveness must nevertheless be welcomed. First and foremost is the reference of the present Food Minister to the place of what he termed "the producer-trade axis" in the holding of stocks from the market and the consequent creation of scarcity. Formerly, the Government always treated the trade as a handy scapegoat for anything that went wrong in its handling of the food problem. The producer was a poor victim of exploitation by the trader and the landlord! This theory has had to be abandoned because of very simple facts, such as the rise in food-grain prices which enables the producer to get enough to live on by disposing of only a part of his produce, the steady flow of credit and other facilities for production from various agencies and the highly unsatisfactory rate of repayment of such credit. Evidence in support of the producer's complicity in the creation of scarcity has accumulated and is incontestable.

A more convincing sign of change in the Government's ideas on this subject is the announcement of Mr Sriman Narayan of a standstill in regard to land reforms. What this would mean in practice is by no means clear. Mr Ashoka Mehta in fact claims that the Planning Commission's views were more clear cut than ever before. He has referred to the Committee set up by the National Development Council to expedite land reforms, and to the decisions taken on the recommendations of the Land Reforms Commission, which he contrasts with the reports prepared by some experts after a cursory study of a few

districts. This last remark would seem to be justified by the controversy aroused in the South by the report on conditions in Tanjavur by such experts. The very data on which the findings have been made have been questioned both by the Government and by knowledgeable sections of the public.

But these circumstances do not affect the question, whether certain modifications of land reforms are not necessary in the interest of speeding up the pace to food self-sufficiency. A mere standstill or moratorium would most probably mean a continuance of present defects and shortcomings. The basic assumption that land must be treated differently from all other forms of capital in regard to title of ownership certainly needs to be modified, if not abandoned. Society has a more incontestable title to the ownership of land than any other form of capital because of the unalterable limits to it. And land is neither capitalistic nor socialistic if it is merely partitioned into fragments and handed over to individuals whom it will take us years to turn into dependable agents of maximum production.

South Indian Notes

THE plantations industry in the South has made such a cast iron case for a thorough review of the fiscal policies of the Centre and the States concerned that the Government has to be extraordinarily impervious not to heed to it. So far it has had one effect, namely, the appointment by the Commerce Ministry of a Special Committee on Tea finance. But the position of the other two principal plantation products, coffee and rubber, is not very different. According to Mr Chacko, who has contributed an extremely lucid and well-reasoned article on the subject to "The Hindu", all the three classes of plantations have devoted more capital per acre, raised the yield, and increased the realisations per acre, but have to be content with lower profits per acre after tax, lower dividends, and, what is more important now from the national point of view, diminished resources for the further development which the country assuredly needs. The position of coffee and rubber needs as much looking into as that of tea. And in all these cases, the redress of the wrongs under which the plantations are suffering is not a simple matter, since the wrong-doers are distinct and independent authorities, each keen on carrying out its own plans of taxation and recognising little or no obligation to consider the cumulative effect of a wide variety of taxes levied on the backs of the poor plantations.

In a sense, the lot of the plantations industry today serves to throw into relief the cumbersome and, from the point of view of economic development, altogether ill thought out, nature of our system of federal finance. To the defects of this system and the evils it is bound to give rise to have to be added the evils that flow from a misconceived zeal for equitable distribution of wealth and reduction of economic inequalities. When there are different levies imposed by different authorities, the rates being inspired in each case by excess of egalitarian ideal, the effects can be easily imagined. While the past is replete with such injustices, the outlook for the future is further darkened by the report that for the Fourth Plan, the total outlay on which is sure to be in the vicinity of Rs 20,000 crores, the quota for additional taxation is said to be as much

as Rs 2,500 crores. It is also said that as Central taxation leaves no scope for increases—a remarkable under-statement of the necessity for reduction!—the additional taxation has to be levied by the State Governments.

The question naturally occurs as to the possible scope for additional taxation. A State budget today is made up so largely of the State's receipts from the Centre under the divisible heads and the revenues from the sales tax with which the central excises overlap that it is believed that agricultural income tax may be selected for bearing the additional burden. It is not known how far this is consistent with the policy of supporting the agriculturists through thick and thin. But it must be said that, if agriculture is to bear additional tax burdens, the agriculturist might well ask for a rationalisation of all taxes on incomes such as would ensure for agriculture the same treatment in regard to income tax as is afforded to industry or trade. The difference in treatment in the past was attributable to some notions about all land belonging to the State and the need for assessing land revenue with an eye to the vagaries of the monsoons. But today factories belong to the State no less than land, and all incomes belong to the people!

Theory apart, without some correctives to outmoded ideas of the difference between agricultural and non-agricultural income and between State and Central tax heads, the plantations industry is extremely unlikely to have a fair deal. Plantations are both agriculture and industry, in fact more of the latter than of the former, if the distinction must be preserved. They thus get the worst of both worlds. And the best illustration of this is furnished by the coffee plantations in Mysore where land re-assessment has been carried out on a basis which completely ignores the other levies which the plantations are called upon to pay. It is said that in some districts the new rate is 38 times the prevailing rates. Only the gross value of the produce is taken into account, without any allowances for depreciation or other taxes paid on the produce. The differences between one plantation product and another are as notable as between one State and another. The excise duty on tea is non-refundable for exports, while coffee exports are free of the burden. Depreciation for rubber is allowed in Madras and Kerala, but not for tea and coffee. Now that a target of over Rs 5000 crores has been set for exports under the Fourth Plan, is it not necessary to see that the industry—or is it agriculture?—is given the same facility to develop itself as far as possible out of its own resources?

Madras city has still to get on with little of wheat products and none of boiled rice. The Central allotment for Madras is said to have been increased from 50 to 60 per cent and 75 per cent is promised from the next quarter. But unlike wheat, boiled rice is the staple food of the people particularly of the poorer classes. All that we hear now is official exhortations to the trade to rush boiled rice to the city from Thanjavur and explanations from Andhra Pradesh, as to why rice is not flowing into Madras State. It is poor comfort to learn that there is no paucity of stocks there, but that traders have not complied with conditions laid down by the Government for export to Madras. Traders for their part point out that payment for supply of rice to the Government is slow and that it is not easy for them to satisfy the conditions. What a picture of administrative efficiency does all this make!

Socialism and Growth

By Virendra Agarwala

ADDRESSING the All India Socialist Workers' Convention, Mr Ashoka Mehta, Deputy Chairman of the Planning Commission, has confessed that the mass of the people in India have not been won over to socialism. Instead of analysing its reasons, he asserted that those who work to modernise traditional society and those who dream of socialist transformation must know that the forces of conservatism and obscurantism could passively pull them back all the time. It is true that Socialists are facing a very challenging decade largely because they prefer to remain dogmatic in their thinking and programme and hardly bother to appreciate the creative genius of the Indian soil. The politicians prefer to translate socialism as being that political structure preached and practised in countries like China and Russia where all means of production are owned by the State. They do not appear to be in a mood even to learn from Soviet Premier Khrushchev who has repeatedly declared that the Communist countries must make full use of the rational and economic methods that capitalists have. Another Communist leader, an Italian, made it absolutely clear that nationalisation of public utilities is not sought by any one. He appeared to be convinced about the co-existence of nationalised utilities with the vaster zone of private enterprise. It is obvious that their constructive analysis can hardly be described as either conservative or reactionary and particularly so if it helps in realising our objective, namely, to wage a non-violent struggle against hunger, disease and illiteracy.

Mr Ashoka Mehta has rightly declared that the Socialist revolution cannot be achieved either through coup d'etat or by nationalisation of the existing economic structure. Violent upheavals do not achieve a revolution, a transformation of life, work and culture from one level to another, sophisticated and modern. Mr Mehta has also predicted that by 1975-76 nearly two thirds of produced tangible wealth would be owned by the public or state sector. There can hardly be any objection to the expansion of the State sector to this dimension, but Mr Mehta complains that only a few recognise the need to accept burdens to that end. It is widely appreciated that the burdens imposed by the State have crossed the saturation point though the public sector has remained unproductive. It would be useful if Mr Mehta explains how long he expects the people to make sacrifices while it is widely known that his Soviet styled socialism has not either paid dividends or made such items of basic consumption available at reasonable prices. We have already reached a stage when people no longer believe in making sacrifices for the future. The common man of the present generation is so poor that he is more concerned about himself than about posterity. We need to read in between the lines when the Prime Minister recently advised the Planning Commission to arouse enthusiasm in the common man and to make him participate in the development programmes. It is possible only when the State guarantees basic necessities rather than imposition of socialism of the "tightening belts" variety at every stage. It is widely known that the

public sector has been financed largely by public debt, heavy taxation and deficit financing.

A broad analysis of the Central Government's public debt may enable us to judge how far our much trumpeted scheme of economic development is proving beneficial or otherwise to the majority of our countrymen and whether we could go along the lines chalked out in the past and continue to adopt the methods we have chosen till now. The Central Government's public debt consists of internal debt, that is, Rupee liabilities created in India and foreign debt, i.e., foreign obligations repayable to foreigners in foreign currencies. In 1939, the total debt of the undivided Government of India amounted to Rs 1,180 crores. This increased in 1951-52, the first year of the First Plan, to Rs 2,773 crores; and, in 1962-63, the total debt of the Union Government was estimated at Rs 7,996 crores. In other words, the public debt increased by nearly seven times between 1939 and 1962. It has risen further to the figure of Rs 9,364 crores at the end of March 1964. It is somewhat worrying that the short-term borrowing in the form of Treasury Bills etc., of the Central Government constitutes a high 40 per cent of the total market borrowings. The total debt obligations of the Central Government at the end of the Third Plan would be of the order of Rs 13,600 crores, a figure which for the first time will exceed the national income of the country. It is widely complained that the pace at which the public debt of our nation is increasing is something which must cause great anxiety to all politically conscious people.

The national income has risen by 46 per cent in a period of ten years from 1951-52 to 1961-62 but the public debt has gone by 160 per cent in the same period. It is not at all the path of prudent public finance to allow the national debt to run at such a faster speed as compared with the pace at which the national production in goods and services goes up year after year. It is equally perturbing to note the growing gap between the interest bearing obligations of the Central Government and the interest yielding assets. At the rate at which we are expanding the State sector, it is quite likely that the gap would finally widen to Rs 2,500 crores at the end of the Third Plan period. In 1951 the provision for interest charges on debt amounted to about Rs 67 crores. This increased to Rs 103 crores in 1956-57 and in 1963-64 it is of the high order of Rs 257 crores. Looking from another angle, in 1951 the interest charges on debts accounted for about 13 per cent of the total revenues of the Government of India; in 1956 the ratio was 17 per cent and today the interest charges account for nearly 19 per cent of the total revenue, although revenue estimates for 1963-64 have increased to the higher figure of more than Rs 2,000 crores. It may be interesting to point out that at the time of India's Independence in 1947 we had amassed a huge foreign balance of the order of Rs 1,800 crores, which has now been transformed to a foreign debt of Rs 2,500 crores. It is widely known that a substantial part of the foreign exchange has been used in current consumption, wasteful expenditure and unproductive projects. Repayments of these obligations should remain uppermost in our mind when we define socialism as expansion of public sector in India.

In the Third Plan, the five-year target of additional taxation to be undertaken at the Centre was indicated at Rs 1,100 crores. The measures implemented in the first year yielded

a little over Rs 85 crores in that year, the yield over the plan period being estimated at roughly Rs 510 crores. In the second year again the tax effort was of substantial order, the yield over the Plan period from the measures introduced in that year being roughly Rs 500 crores. The aggregate yield over the plan period from the current year's measures, including changes in railway freight and fares and postal rates, may be roughly Rs 900 crores. On this basis the aggregate yield over the Plan period from the taxation measures introduced so far at the Centre may come to a little over Rs 1,900 crores. The proportion of total tax receipts to national income in the last year of the Plan (1965-66) should be over 13 per cent as compared to 11.4 per cent indicated in the Third Plan. It has been repeatedly emphasised that a higher rate of savings and investment must be achieved if we are keen to modernise the economic base but a tax structure which takes away 88 per cent or more of personal incomes and 60 to 75 per cent of corporate earnings is not at all consistent with whatever we pronounce at public platforms. If Wealth Tax is also taken into consideration then the total amount of taxation on individuals exceeds 120 per cent. The Finance Minister is reported to have confirmed that there are more than 25 assesseees who are paying more than 119 per cent. No other country in the world is burdened with taxes of so many varieties as India has at present. In trying to copy one tax from one country, another tax from another country, and so on, we have gone on adding to the number of tax legislations in India. The Finance Minister claimed that his Budget had helped in simplifying the tax structure, but the fact remains that the economy of the country, which received a great jolt as a result of the Union Budget for 1963-64, has yet shown no signs of recovery. The Finance Minister must devise certain measures to translate his sound economic principles into a reality. It is widely recognised that so long as taxation on individuals remains at the present level, the whole process of saving and investment cannot make any impact on growth. During recent years in many socialist countries the thinking in matters of fiscal policy has been changing and it is realised that a lower level of taxation is essential to expand the economy and attract larger tax revenues for the State. It may be interesting to point out that a socialist country like Sweden has imposed a ceiling on the total incidence of taxes on individuals at 30 per cent. But here the Planning Commission still prefers to remain unrealistic in its assessment of the situation. Any further dose of taxation to finance the Rs 20,000 crores Fourth Plan would mean that Socialism is no longer committed to democracy. Its main function is to deprive the people of their claims on their reasonably-earned income and to squander it on such sector which has guaranteed distribution of poverty among the people.

In the first two years of the Plan the aggregate resources raised by way of deficit financing came to Rs 339 crores. The Budget for the current year involves a deficit of Rs 241 crores. Since Planning started in 1951, deficit financing has exceeded Rs 1,800 crores. The economy has not been able to absorb this massive dose, resulting in soaring prices. The situation has been recognised as 'critical' by the authorities and it is rather difficult for the common man to make both ends meet, but the Planning Commission still expects him to share the responsibility to build the state

sector which has hardly brought any relief either to the consumer or the tax-payer. Deficit financing may not be considered as an undesirable source for raising funds, if it is so instituted as to yield a corresponding return in the shape of higher production of goods and services.

The Finance Minister has been found most rational when he announced that the future growth of the public sector in India largely depends on the return on investment already made in the public sector. Many of the public sector projects are lagging behind the schedule of their construction and what is more disappointing is that their contribution to our resources is nowhere near the plan estimates. It is of the utmost importance for our economy that enterprises in the public sector should not only make profits but should make good profits. Considering the actual pace of implementation in different sectors, it is reckoned that over the five-year period as a whole, the allocation in the public sector might be close to Rs 8,000 crores; with outlay up to 1963-64 being of the order of Rs 4,200 crores, this would leave roughly Rs 3,800 crores for the last two years. It was assumed that the State Undertakings would yield a surplus over the plan period of Rs 450 crores for financing their own expansion. Taking all the Central Government enterprises, including the Post and Telegraphs Departments, their contributions to the plan in the first three years have not exceeded Rs 70 crores. There are a few socialists who believe that the public sector should work on no profits or low profits. Such an approach is wholly unsound in any society. History reveals that socialism neither means nationalisation of the existing industries nor the expansion of the public sector, but that it is a method to move in a direction to establish a 'Sarvodaya' Society for which Gandhiji lived and died. No planning can make an impact on the people if socialism continues to mean limitless suffering by way of a punitive tax structure and soaring prices. Socialism actually means economic prosperity for all, which now depends on efficiency, higher profitability and better management on the part of the public sector rather than exploration of the people by the State. What we aim at is to raise the standard of living at the lowest levels rather than to make efforts to bring down the standards of those who are known to be a little better off.

A higher rate of economic growth sustained over a sufficiently long period an essential condition to any economic planning and no genuine socialist can permit his thinking and programme to retard economic growth. If we are not able to secure a higher rate of growth during the last decade in spite of all possible sacrifices on the part of the people, it is largely so because of our doctrinaire thinking. We have reached such a crucial state in our national life that we must pause a little and ponder over the problem before we plunge into an ocean of financial bankruptcy. The existing pattern of planning needs many adjustments, particularly in respect of investments which must shift from heavy industry in the public sector to agriculture and consumer goods industries in the corporate sector. The Planning Commission may still take some time to appreciate that its pronouncements merely help in scaring away the potential investor to participate in planned economic development rather than in socialisation of every person. If we are convinced that socialism is deeply and unalterably committed to democracy then the creative energies of the people cannot be permitted to be curbed on any count.

USA

The Country Keeps Moving

By Douglas Dillon*

WHEN the Kennedy Administration took office, the great challenge was to find a new way to promote more rapid and steadier economic growth at home, and at the same time restore confidence in the dollar by whittling down and eventually eliminating our balance of payments deficit.

The situation that confronted us in 1961—and still continues—ruled out the use of extremely low interest rates. We simply could not permit short-term interest rates to drop to the levels of earlier postwar recessions without courting a massive outflow of short-term capital. In short, the very dangers in our balance of payments situation necessarily limited the freedom of monetary policy and gave it a new challenge—to facilitate investment at home without provoking an outflow of capital abroad.

In the early days of the Administration, therefore, and without hesitation, we decided to employ fiscal policy—and, more specifically, tax policy—to expand the role of the private sector of our economy as the primary force in achieving our national economic goals. We promptly undertook two major moves to improve the climate for business investment—moves that could be instituted without any excessive loss of revenue. They were the Revenue Act of 1962, with its central provision of a 7 per cent investment tax credit, and the administrative liberalization of depreciation—both landmarks of progress in our drive to spur the modernization of our capital equipment.

Although these were major achievements, they were merely first steps in our integrated, longrange programme to stimulate the private sector of the economy. The biggest impediment to a more robust private sector still remained—the high individual and corporate income tax rates, born out of wartime inflation, that continually prevented the economy from reaching and maintaining its full potential. The Revenue Act of 1964 substantially embodies the tax programme we proposed to break the grip of these high tax rates upon our economy.

The timing of the overall tax programme has been important in sustaining the present expansion, and delightfully so, but that should not be taken to mean that we have succeeded in developing a new and effective counter-cyclical tool.

There remain, in my opinion, great obstacles to the use of tax policy for purely counter-cyclical purposes. The chief of these obstacles is the fact that, within our constitutional system, a long lag typically intervenes between a request for a change in tax rates and legislative approval. Unless and until some method is worked out—acceptable to the Congress and consistent with its prerogatives—whereby tax rates can be varied without undue delay, the purely counter-cyclical function of tax policy will remain outside our arsenal of economic tools.

It is, of course, far too early to reach any final judgment on the results of this year's

*Mr Dillon is the US Secretary of the Treasury.

\$11.5 billion reduction in personal and corporate taxes. We can, however, take a reading of the cumulative effects of our earlier actions, including the 1962 investment credit and depreciation reform. So far as our domestic economy is concerned, the current expansion is now in its 40th month—the longest peacetime expansion in this century except for the half-hearted recovery from the depths of the great depression of the thirties. Gross National Product in real terms has already increased by 17 per cent since the beginning of recovery in March of 1961. This far exceeds the record of the two previous recoveries. And prospects are favourable for continued expansion for many more record-breaking months to come.

While still too high, the unemployment rate has begun to diminish perceptibly, moving down to 5.1 per cent in May 1964, compared with the 5.7 per cent average of 1963. More striking has been the decline in the jobless rate for married men, which at 2.6 per cent in May is now lower than at any time since July of 1957—seven years ago.

Recent gains in total employment have been impressive: In the year ending last month, jobs rose by about 2 million to 70.8 million—more than twice as much as the 800,000 gain during the preceding 12-month period. Increased employment and better use of our productive facilities have been accompanied by better-than-average productivity gains, reflected both in higher personal incomes and higher profits. With tax liabilities in the first quarter already reflecting the new reduced corporate tax rates, corporate profits after taxes ran at the rate of \$31,100 million—more than twenty per cent higher than in the same quarter of last year and more than sixty per cent higher than in the first quarter of 1961.

At the same time, the recovery has witnessed a large and steady rise in real take-home pay for labour—as evidenced by the fact that, after taxes and adjustment for price increases, the average weekly take-home pay for a wage-earner with three dependents is today ten per cent larger than it was in early 1961.

It is highly significant that all of these economic gains have been accomplished in an environment of price stability. Average wholesale prices are no higher today than they were six years ago. This price stability has been of critical importance to our balance of payments, and is now beginning to pay off in terms of increased competitiveness in our export industries.

Overall, our balance of payments deficit has declined sharply since the middle of last year. Since then, the annual rate of deficit on regular transactions, which averaged more than \$3500 million for the past six years, and last year amounted to \$3300 million has been cut in half. This has enabled us to staunch the heavy drains on our gold stock.

As of 31 May 1964, our overall holdings of gold were slightly above those at the end of last July—ten months with no net loss at all, compared with a loss of \$1700 million in the single year 1960.

Evidence is accumulating that we have “turned the corner” in our balance of payments, which, like the domestic economy, is beginning to show the favourable effects of the more active fiscal and tax policies, complemented by appropriate monetary policies, that have characterized the past three years.

These effects are quite apparent in investment spending—the key area in terms of both our domestic growth and our balance of pay-

ments. Plant and equipment outlays levelled off and even declined after mid-1962, following the break in stock prices and reflecting widespread business uncertainty. But, by the second quarter of last year, less than a year after the new depreciation rules and the tax credit became effective, they were rising strongly and are now running almost one-sixth higher than in the first quarter of 1963. Further sizeable increases are in sight through the rest of this year. It seems clear that these successive increases in planned expenditures largely reflect the widening recognition of the new incentives implicit in the recent tax measures—including not only the 1962 measures, but this year's two-stage reduction in corporate tax rates to 48 per cent.

A recent study by George Terborgh of the Machinery and Allied Products Institute emphasizes that, in order to have achieved effects upon after-tax returns of capital comparable to those of the 1962 and 1964 measures, it would have been necessary to either:

Cut corporate tax rates from 52 per cent to 34 or 39 per cent, depending upon the assumed proportion of equity to total capital, or to have allowed an initial depreciation of from 53 to 57 per cent of asset cost, or to have reduced the cost of new capital equipment by 16 per cent.

It is hardly surprising that investment activity is responding to incentives of this magnitude—even though it will be some time before the cumulative impact is fully realized—and that investment spending is now spearheading the recovery.

The ready availability of credit has also had a favourable influence on the growing strength of domestic investment, but we have found ways of making this credit available without driving short-term interest rates sharply lower. Instead, with the economy expanding vigorously at home, monetary policy has been able to discharge its full share of the task of defending the dollar. Our short-term rate structure has been brought into better alignment with those prevailing overseas, and our monetary authorities are now in a flexible position, prepared to meet whatever further contingencies may arise in the balance of payments.

In the relatively short span, therefore, of less than three and one-half years, both American economic policy and practice have taken new and dramatic turns for the better. Our economy is no longer on the wane—but surely and strongly on the rise. And we can now look forward, in all sober confidence, to the continuation of a peacetime economic recovery of greater durability and strength than in any comparable period in this century.

Equally important, the past three and one-half years constitute a significant watershed in the development of American economic policy. For they have borne witness to the emergence, first of all, of a new national determination to use fiscal policy as a dynamic and affirmative agent in fostering economic growth. Those years have also demonstrated, not in theory, but in actual practice, how our different instruments of economic policy—expenditure, tax, debt management and monetary policies—can be tuned in concert toward achieving different, even disparate, economic goals. In short, those years have encompassed perhaps our most significant advance in decades in the task of forging flexible economic policy techniques capable of meeting the needs of our rapidly changing economic scene.

World of Finance

MONEY MARKET

A Change in Attitudes?

Statements of policy, in the monetary sphere, are as much the responsibility of the Governor of the Reserve Bank as of the Finance Minister; but in the past it has usually happened that the attitudes of the Reserve Bank themselves are made to conform to and reflect the viewpoints of the Governor. Thus, it is the Reserve Bank publications which implicitly rather than explicitly give expression to subtle changes in official monetary thinking. Mr H. V. R. Iengar, when he was Governor, chose to utilise the many opportunities that he had of public speaking to nitpick a philosophy, as it were, for the central banking institution. The present incumbent, Mr P. C. Bhattacharyya, had so far been contenting himself with gentle suasive tactics in personal talks.

We find, therefore, that Mr Bhattacharyya's address of last week to Bombay Bankers at their dinner of more than just ordinary interest. There is here (the full text of his speech is reproduced elsewhere in this issue) a studied attempt to answer recent criticism of the Reserve Bank, to explain monetary policy of the past few months and to chalk out a few do's and don'ts for the banking community. It is a useful exercise to analyse the speech in detail.

Undoubtedly, the topic that he touched on of greatest bearing on the banking situation today is the question of interest rates. It may be recalled that, not so long ago, there appeared an appeal from the Reserve Bank, in its publications, for realistic interest rates on Deposits. Since, soon thereafter, the Reserve Bank hiked the maximum rate at which banks could borrow, the implication seemed to be that the central banking institution considered desirable an upward realignment of interest rates with a view to more vigorous mobilisation of Deposit resources. Indian Finance had steadfastly opposed any such move, though we granted that there might be a case for increase in rates payable on genuine term money. We had also emphasised that what the country actually needed was a re-ordering of the interest rate structure. Lastly, we have always maintained that money destined to find sanctuary with banks would so lodge; and not any rate of interest practically would succeed in enticing away money meant for investment in equities, etc.

Refreshingly, the Reserve Bank Governor now appears to be convinced, largely, about the views that have consistently been advanced in these columns. We urge readers particularly carefully to read the relevant passage in Mr Bhattacharyya's speech. The question, however, that we have to find an answer for is this: Do Mr Bhattacharyya's views presage

a direction to banks to revise downward the interest rates they pay on Deposits?

We hope it does, and that the banking system will take the hint. For, it is now clear enough that the 1964 slack season is likely to witness both an increase in Deposits and a decline in Advances of record magnitudes. Hence though the banks were able to put their resources to most profitable use in the first half of the year—a fact that stemmed from the steep increase in Advances during the busy season, and which contributed to most satisfactory earnings—it is almost certain that the experience of the banks will be greatly reduced net earnings during the second half. It is tragic that at just such a juncture banks will also have to conform to the new liquidity requirements; about which, incidentally, Mr Bhattacharyya pointedly hoped that banks would not only attain them, but also maintain them. The banking situation, then, is confounded as a result of the new maxima that are now in force for certain kinds of Deposits.

The alternative to revision of the interest rate structure would lie in a further hiking of rates charged for Advances. On previous occasions any such increase has been sought to be justified on the score that, since bank finance forms so small a proportion of the cost of production, no inflationary pressure would thereby be released. We wish to stress that what matters is not merely the cost of production; but what really counts is the cost of goods to the consumer. There is distinctly a multiplier effect upon prices as such, when bank credit gets to be dearer. For, at least at three stages costs are swelled, even if by fractional amounts. First of all, the raw material costs more to industry; secondly, industry itself is obliged to pass on the higher charges it pays on the accommodation it obtains from banks; then the wholesaler or trader does his little bit in pushing up the ultimate price to the consumer.

Thus, we would call upon the Indian Banks' Association to set up a Committee to examine the whole question of interest rates and to suggest how one set of rates may be linked with and bear a relation to another. We would point out, in this regard, that any such chore undertaken is fraught with difficulties; the main hurdle is constituted by the multiple-tier bank Rate in force. On what basis are the bankers to arrive at a logical and orderly set of interest rates, if the primary rate itself is on a sliding scale? If, therefore, Mr Bhattacharyya is anxious to aid in the process of setting up “greater orderliness in the rate structure”, he had best seriously consider scrapping the system of multiple-tier bank Rate.

There is, next, the point made by Mr Bhattacharyya that banks which have given term loans to industry should prevail upon such borrowers to issue debentures in order to liquidate the bank debt. We concede that

this is indeed the proper mode of financing, since banks are normally expected only to provide short-term accommodation for working capital. However, it has happened since 1956, that industry in order to put through expansion programmes has been compelled, because sufficient resources were not forthcoming from the capital market, to rely upon the banking system for at least part of their requirements. Very properly, the Refinance Corporation for Industry was set up, and banks were able to replenish their resources to some extent. But the Reserve Bank Governor would now imply that banks no longer need to extend medium-term finance to industry; is he confident that other sources are now available? Furthermore, banks by seeking time Deposits act as an anti-inflationary instrument; why shouldn't they be now allowed to extend Advances for specific periods, against resources which they can count on? Then again, industrial units may not have been in favour of creating a mortgage debt; or it may be that they have already raised such finance perhaps from the Industrial Finance Corporation; how can they now be asked—or forced—to issue debentures?

BANK RETURNS

Rs 40 Crores Rise in Bank Resources

The latest banking returns show that resources continue to accrue with the banking system in extremely substantial magnitude.

According to the returns of the Reserve Bank for 28 August, Active Note Circulation has receded sharply by Rs 33.69 crores to Rs 2,390.12 crores; and inflow of Rupee Coin has also been heavy at Rs 1.92 crores. With Foreign Securities unchanged at Rs 85.46 crores, currency has been contracted against Rupee Securities. In the event Rupee Securities are marked down by Rs 20 crores at Rs 2,115.88 crores, and the Reserve Bank's cash in the till is better by Rs 15.61 crores at Rs 37.67 crores.

The Reserve Bank's profit for the year to 30 June 1964 has obviously been made over to the Reserve Bank; but it is possible that not the whole of the profit has been so transferred. For, Other Deposits are shown lower only by Rs 27.24 crores at Rs 160.66 crores, and the Reserve Bank profit payable to the Centre should have been much higher.

Reflecting the receipt of the profit, the Centre's balances are better by Rs 17.97 crores at Rs 96.21 crores. It is possible that the States should also have been in receipt of some payments from the Centre, since their Deposits have been marked up by Rs 6.38

crores at Rs 19.44 crores, on top of a reduction of Rs 3.84 crores to Rs 21.93 crores in their borrowings from the Reserve Bank.

Investments in the Banking Department are seen to be lower by Rs 56 crores at Rs 191.67 crores; and this is a fact that has to be taken into consideration with the fall of Rs 15 crores in Rupee Securities in the Issue Department. On the face of it, it would appear that recourse to reverse ad hocs has exceeded Rs 70 crores during the week under review. But we must remember, firstly, that this is the week during which the Reserve Bank profit has been received by the Centre and, secondly, that fair purchases of gilt-edged have been made from the Reserve Bank tap. We would suggest that tap sales of gilt-edged are probably around Rs 30 crores during the week under review and that the Centre has besides been able to cancel ad hoc Treasury Bills before their maturity in a fair amount.

Scheduled Banks have sharply drawn down their Reserve Balances by Rs 30.25 crores to Rs 91.91 crores; and their borrowings are a shade higher at Rs 2.06 crores. These are, we may be sure, changes consequent upon purchases of gilt-edged through the Reserve Bank tap.

The rise of Rs 20 crores to Rs 152.84 crores in Treasury Bills purchased and discounted by the Reserve Bank is probably linked with replenishment of their resources by the State Governments.

It remains to add that Balances Held abroad are lower by Rs 2.85 crores at Rs 10.15 crores.

The return of the State Bank for 28 August is largely featureless, though in the week under review the Institution has been a large purchaser of gilt-edged. Deposit resources are better by Rs 0.95 crore at Rs 671.97 crores, but this is counter balanced by a rise of Rs 0.97 crore to Rs 340.47 crores in the total of Advances. Thus, the purchase of gilt-edged has been financed by (a) the rise of Rs 4 crores in Other Liabilities; (b) the decline of Rs 3 crores under Other Assets; and (c) the drawing down of cash balances, including money at call and short notice, by Rs 6.75 crores to Rs 31.54 crores.

Another sharp increase in Deposit resources is reported by the Scheduled Banks during the week ended 21 August. Net Demand Deposits have improved by Rs 12.03 crores to Rs 1,266.58 crores, and net Time Deposits by Rs 11.54 crores to Rs 1,402.54 crores. It needs to be added, however, that the State Bank accounted for the bulk of the Deposit accretion. In the second place, the total of Advances contracted by Rs 16.25 crores to Rs 1,729.52 crores—but about Rs 10 crores of this fall is due to Scheduled Banks other than the State Bank. Gilt-edged has been acquired for Rs 20 crores, raising holdings to Rs 775.11 crores,

and three-quarters of the acquisition is attributable to the State Bank. Debt to the State Bank has gone up by Rs 432 crores to Rs 28.88 crores, while borrowings from the Reserve Bank are marked down a shade by Rs 0.59 crore at Rs 1.78 crores. The end result is that cash balances, including money at call and short notice, are shown higher by Rs 9.35 crores at Rs 268.18 crores.

Th Chartered Bank

The Manager, The Chartered Bank, Calcutta, has received the following cabled information from his Head Office in London:

"Directors have declared interim dividend of 7½ per cent actual subject to deduction of income-tax at 7/9 in the pound payable on Friday, 25 September, 1964".

Development Bank Takes over Refinance Corporation

The Industrial Development Bank of India which was established on 1 July 1964 in terms of the Industrial Development Bank of India Act, 1964 has taken over the entire undertaking of the Refinance Corporation for Industries Ltd with effect from 1 September 1964 as notified by the Government of India. As the functions of the Development Bank covered those of the Refinance Corporation, there was no particular advantage in the Refinance Corporation continuing to function as a separate institution after the establishment of the Development Bank and the merger has been effected as a corollary to its function of co-ordination of the activities of various financial institutions engaged in providing term finance to industries. As compensation, the Development Bank has paid to the Refinance Corporation an amount equal to its paid-up capital of Rs 2.50 crores for distribution to the shareholders as provided in the Act.

During its existence of over six years, the Refinance Corporation had fulfilled its role effectively and had not only utilised the entire initial allocation of Rs 26 crores out of the Public Law 480 funds for relending to private enterprise through specified credit institutions, but had also drawn a further sum of Rs 7.50 crores from out of Rs 10 crores subsequently allotted to it. The Corporation had also actively associated itself with the various proposals for providing rupee finance to the private sector collieries in order to help them utilise the World Bank foreign exchange loan of \$35 million for importing equipment, etc. to step up output.

As from 1 September 1964, the facilities extended by the Refinance Corporation will

be continued by the Development Bank. The present limit of refinance of Rs 50 lakhs for any one industrial concern has been raised to Rs 100 lakhs and the limit will be related not to sanction but outstanding balance in a refinanced loan account. Further, the upper limit of Rs 50 lakhs in respect of refinance for medium term export credits has been altogether removed.

RBI

Restrictions on Foodgrains Advances

The Reserve Bank of India issued on 17 August, 1964 a directive tightening the control on bank advances against foodgrains. By the latest directive the Bank has amended the provisions of its earlier directives of 3 February, 1964 and 21 April, 1964 regulating scheduled banks' advances against foodgrains.

The existing controls on these advances against paddy and rice, wheat and other foodgrains have been tightened in view of the sharp rise in prices of foodgrains during the last few months and with a view to checking further possible speculative hoarding of stocks with the help of bank advances. Accordingly, under the amending directive, the minimum margins required to be maintained by banks on advances against the security of foodgrains have been raised from 35 per cent to 50 per cent with immediate effect. The minimum margins on advances against warehouse receipts covering foodgrains are also raised from 25 to 40 per cent.

Further, in order to check the continuous rise in advances against 'other foodgrains', the ceiling limits in respect of advances against 'other foodgrains' (i.e. other than paddy and rice and wheat) have been reduced and the banks are now required to maintain, during each two-month period commencing from September-October 1964, an average aggregate level of credit against the security of 'other foodgrains' which shall not exceed 90 per cent of such level of credit actually maintained in the corresponding two-month period of 1963. Earlier, these ceiling limits were fixed at 100 per cent of the 1963 level.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 1 September, 1964. Total amount offered was Rs 4,00,00,000. Tenders at Rs 99.400 per cent were allotted 50 per cent. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2,400 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday, 7 September, 1964. Successful tenderers should make payment on Friday, 11 September, 1964 at all centres. Other conditions are as usual.

During the week ended 28 August, 1964, Government of India Treasury Bills for Rs 53,31,25,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 2 September, 1964 to 5 September, 1964 at Rs 99.416 per cent. Sales can be stopped at any time without notice if Government think it necessary.

Land Reforms

The Conference on Agricultural Development which was organised by the Federation of Indian Chambers of Commerce and Industry in Delhi, last week, should help to focus attention on the impact of land reforms on agricultural production. The driving force behind land reform legislation, beginning with abolition of Zamindaris, has been the endless quest for social justice. But considerable emphasis was also laid on the economic benefits that were expected to flow out of the re-ordering of proprietary rights in the land. In fact, the Third Plan gives priority to the economic aspect when it points out, in the chapter on Land Reforms that the first specific object of land reforms 'is to remove such impediments to increased production as arise from the ancient structure inherited from the past.' Therefore, it is reasonable to insist, as the Conference has done, that the 'touch-stone of the entire policy of land reform should be sustained increase in production based on steady and continuous rise in productivity.'

The objective of social justice is also ill-served when the trend of much land reform legislation is to deprive the land-owner of the substance of his investment. The land-owner, faced with the prospect of expropriation, is forced into subterfuges whose ultimate effect is to nullify the benefits that are sought to be conferred on the tiller.

It is not necessary to dispute the theoretical basis on which the claim is erected, that conferment of ownership rights on the tenant is necessary for increased production in order to point out that, in practice, something always intervenes to frustrate the working of the theory. Any radical change is bound to cause dislocation and, more so, when the structure that is sought to be changed is an ancient one, based on a balancing of rights and obligations which have been established by custom and tradition. The adverse consequences are aggravated when the scheme of reform, as has invariably happened, fails to provide

for the performance of essential functions, such as maintenance of irrigation works and other common facilities.

The theory that the sense of ownership will give a new edge to tenant enterprise will work, only if the cultivator who has gained ownership of his holding remains a cultivator. Nothing will be gained if the result of the reform is to substitute one class of non-cultivating owners by another of the same category. The excessive emphasis on ownership obscures the fact that what the agriculturist requires, above everything else, is a feeling of security. That alone will induce him to invest his meagre resources in this hazardous occupation, whose hazards no insurance organisation in this country is prepared to underwrite. The net result of much recent land ceilings legislation, and of the Seventeenth Amendment to the Constitution, is to undermine the feeling of security in the minds of all classes of agriculturists, the owners, tenants and sharecroppers. This leads to conditions of anarchy in agrarian relations, in which the brave plans to help the weaker sections of society are irretrievably lost.

RAILWAYS More Trains

Reviewing the improvements effected in the service provided by the Railways, Mr S. K. Patil has told a recent news conference about the new trains that are proposed to be introduced along with the new time-table which comes into force from the 1 October. Sixty-two new trains will be put on the rails, bringing the numbers of new trains introduced since April 1964 to 163. This substantial expansion in passenger train capacity is the highest to be effected in any one time-table during the past ten years, and should result in a corresponding improvement in the conditions of travel and, especially, a reduction of over-crowding in the unreserved compartments.

From the details available about the new services, it appears that the improvements practically stop

short at Madras Central. Those who have to travel to destinations beyond Madras cannot look forward to any relief to speak of. The frequency of the present Southern Express between Delhi and Madras will be increased to five a week. This is welcome recognition of the vast increase in the volume of traffic on this route, which far exceeds the capacity of the G. T. and the Janata. But the Railway authorities cannot be unaware that most of the passengers who travel by these trains to Madras do not stop there, but have to travel further to reach their destinations. For those who have to travel to stations on the metre gauge, break of journey at Madras is an unavoidable hardship they have to endure. But there is no reason why those who proceed to destinations on the Broad Gauge line to the West Coast, or to Trichinopoly (via Erode), should be subjected to this needless travail. It should be possible to extend the run of the Southern Express up to Cochin, Mangalore and Tiruchi, for at least three days in the week, so that there will be one through train service every week, from Delhi to these destinations.

This increased facility, it is evident from the Map, will serve the three States of Madras, Kerala and Mysore. The demand for booking seats in the through service coaches that are proposed to be introduced between Delhi and Cochin/Mangalore will show that extension of the Southern Express to possible destinations beyond Madras will be an economic proposition. While recording the new services, Railway authorities might also consider whether it would not be practicable to route the trains on some days of the week so as to touch Hyderabad.

COTTON TEXTILES A Panel for Quality Control

In the context of the current stagnation of exports of cloth from the country, the constitution by Government of the Textiles Committee with Mr R. G. Saraiya as the Chairman will have to be

acclaimed. It is a well known fact that exports of cotton textiles during the past three years have been in the environs of 550 million yards and there is little chance for reaching the Third Plan export target of 850 million yards. Therefore the suggestion of the Planning Group on textiles to the Planning Commission not to make any upward revision in the export target in the next Plan is unsurprising. A host of reasons like the fierce competition in world markets from countries like Japan and Hongkong, the imposition of import quotas by some of the industrially advanced countries of the West, the starting of textile mills in many of the importing countries and the competition from artificial fibres can be attributed for the disturbing trend in cloth exports. The need for exercising strict quality control for enlarging our exports thus becomes inescapable. It is, therefore, only in fitness of things that Government has appointed the Saraiya committee clothing it with wide statutory powers. The important functions of the com-

mittee will include the stimulation of research in the textile industry, expansion of cotton textile exports, keeping a close watch on production of textile machinery and see that only quality fabrics are manufactured in the country.

Side by side with the introduction of these measures, the expeditious modernisation and rationalisation of the textile industry will have to be carried out. For, a majority of the existing mills are having outmoded machinery and equipment which considerably enhance production cost and result in the deterioration of the quality of the goods they produce. Even the indigenous textile machinery industry will have to be better equipped for helping the textile industry for the rapid completion of modernisation programme. Both from the point of view of cost and quality domestic machinery has to make considerable leeway. It is a tragic commentary on our planning that despite the rapid progress of the industry little attention was bestowed on these factors. The Saraiya committee is called upon to play a vital role in resuscitating the domestic cotton textile industry from its present morass of stagnation but its success will largely depend on the manner in which how some of the intricate problems plaguing the industry is tackled.

SHIPPING Equal Opportunity

There is a consensus among shipowners that a shipping target of 4 million GRT should be aimed at during the Fourth Plan. Addressing the National Shipping Board early this week Prime Minister Lal Bahadur Shastri has pointed out that a level of upto 5 million GRT may be found to be necessary if we have to realise our cherished ambition of carrying 50 per cent of our overseas trade in Indian ships. In the context of the long strides that our shipping has been taking during the past three years a target as big as 4 to 5 million GRT is not over ambitious. For it is expected that by the end of the Third Plan we will be having an operative tonnage of about 1.5 million GRT. If all firm orders placed for new constructions are also included the total will come to 2.4 million GRT. That the pace of new acquisition has considerably quickened in recent years will be evident from the fact that while the total increase in tonnage which was only 466,000 GRT in the decade 1951-61, during the Third Plan the increase will be about 600,000 GRT. Such rapid progress has been made possible by the unstinted effort put forth both by the private and public sectors. Government policy has of course paved the way for large

acquisitions despite the fact that Third Plan allocation for shipping has been at the meagre level of Rs 51 crores. In the fourth and fifth plans however the allocations for shipping should necessarily be much bigger than in the Third Plan because larger instalments will become due on account of the orders placed during previous plan periods.

An important prerequisite for the continued rapid growth of tonnage is complete harmony between the private and public sectors. Although both the sectors have made equally commendable progress so far, there is need for reassurance that there will be no discrimination in future. For, while there seems to be feeling among shipowners that Government is meting out preferential treatment to the public sector, there is also the impression that expansion of shipping in the public sector has been slow compared with the private sector. It is gratifying therefore that the Prime Minister has made it clear that if our shipping is to expand as fast as envisaged there should be close coordination between the two sectors. The National Shipping Board is also of the view that the private and public sectors should play an equally important role in the expansion of national shipping for which equal opportunity should be provided.

ICC Concern at Slow Economic Growth

The various ills which are plaguing our economy were catalogued in a compendious manner by Mr Sookamal Ghose, President of the Indian Chamber of Commerce, in his speech at its first quarterly general meeting held in Calcutta last week. Mr Ghose drew particular attention at the stagnation in our economic development and the alarming price spiral which have been viewed with discontent. Though in a developing economy price inflation is unavoidable, it should be realised that the failure to step up production and the explosive population growth are two significant factors which have accelerated the upswing in prices. This trend will have to be effectively arrested before it slips out of control and generates country-wide protest. Moreover, Government's efforts at controlling distribution of food articles will be of little consequence if the agricultural production in the country continues at its present level. But as Mr Ghose stated agriculture should be treated as an industry for lifting it from the quagmire of stagnation into which it has plunged. The dependence on the vagaries of monsoon, the nature of the land holdings, general economic conditions of the farmers and a multitude of other factors

will have to be tackled to make agriculture a strong segment of our economy. Therefore, the Fourth Plan will have to be shaped in such a manner as to accord top priority for revitalising the agricultural sector.

Though the performance in the industrial sector was better prospects for attaining the envisaged rise in production are remote. Aside from meeting the basic requirements of the people, defence requirements also necessitates a progressive spurt in industrial output. But as Mr Ghose indicated the tax policy of Government has slowed down the pace of industrial growth. Taxes on individuals and companies have been increasing steadily and India is at present one of the heavily taxed countries in the world. Though the 1964-65 Budget provided a few concessions to foreign capital and some relief in regard to inter-corporate investment, the overall effect did not change materially. The investing public prefers to confine itself within the protective shell as is evidenced by poor response to new issues. This is a matter for concern and the authorities will have to introduce requisite measures with a view to evoking good public response. The mere setting up of financial institutions such as the Development Bank and the Unit Trust will not go too far in mobilising savings on a large scale due to the heavy dose of taxation. Even the foreign investors are chary as they consider the present climate in the country not quite encouraging. Mr Ghose, therefore, suggests that this can be avoided if 'the fiscal policy takes care of the needs of an expanding economy and there is less emphasis on immediate fiscal gains and ideology.

Mr Ghose also highlighted the danger of the speedy expansion of the public sector and relegating the private sector to an insignificant place. For, the public sector has not so far started in general to produce adequate returns on the investment and its contribution to the financial resources of Government has been comparatively meagre. On the other hand, due to the imposition of excessive taxation, irritating controls and administrative delays, the private sector was incapacitated to put its best efforts for accelerating the pace of industrial growth. As Mr Ghose suggested a realistic policy should be adopted in order to maximise the industry's contribution to our economy.

While appreciating the efforts of West Bengal Government at speeding up the State's economic development, Mr Ghose highlighted the need for effecting drastic improvement in the present conditions in Calcutta. The seminar to be convened by the Chamber will be doing Calcutta a great service if it attracts atten-

tion of Government on the urgency for bettering conditions in the city which will pave the way for the rapid industrial advancement of the State.

SUGAR Flexibility Needed

The news that the Sugar Commission's final report will be ready early next year augurs well for the framing of a long-term policy for sugar from the season 1965-66. Important changes are expected to be announced within a few weeks on the basis of the interim report of the Commission. In view of the sizable increase in production of sugar in the current season, the problem of ensuring an equitable sugar supply to the population at large will be somewhat simplified. Moreover the prospects for the next season which commences from November are considered to be satisfactory as the cane crop is good. It is generally estimated that sugar production in the next season will reach a level of 3 million tons. The ability of the sugar factories to increase production will however depend on an adequate supply of cane to them. While the prospects of a good crop in the next season may ensure equitable distribution of cane to the three main types of consumers the fact that there is practically no control on the khandasari and gur manufacturers while the sugar industry is subjected to control as to the price it can pay for cane and the price at which it can sell sugar, places the sugar industry at a disadvantage in the procurement of cane. In a memorandum submitted to the Sugar Commission, the Indian Sugar Manufacturers' Association has emphasised that if sugar production is to be increased to the desired extent, sugar factories must also be assured of the same degree of freedom as enjoyed by gur and khandasari manufacturers. Under present dispensation, whenever there is cane shortage, gur and khandasari manufacturers are able to divert large quantities of cane from factories by paying higher prices, while the sugar factories can operate only within the stipulated limits.

The ISMA memorandum has also called for a new price formula which will not only compensate the all-round increase in the cost of production that has occurred since the cost schedule recommended by the Tariff Commission in 1958, but will also take into account the various requirements of the industry in regard to rehabilitation, modernisation and expansion. The present price structure has left the industry in an extremely weakened state financially. This is brought out clearly in the latest Reserve Bank study of the finance of Indian joint stock companies. Accord-

to this study in the sugar industry the profits before tax have progressively declined in the past two or three years and in 1962-63, the deterioration has been such that there is a large deficit.

GENERAL INSURANCE Uncertainty

With the steady improvement in the standard of living of the people and the progress of industrialisation, the scope for general insurance business is also progressively expanding in our country. But general insurers especially in the private sector do not seem to derive much enthusiasm from this prospect because of the various uncertainties governing their future. Besides the persistent demand for nationalisation of general insurance, there is the situation created by the entry of the Life Insurance Corporation in the field. It is true that the experience of the past few months has largely belied earlier fears for the LIC has commenced business only on tariff basis and indications are that it is also mindful of the need for harmony and goodwill in the industry as a whole. But the fact remains that the LIC is allowed to operate on a non-tariff basis, and there is no knowing whether the LIC will continue the present policy or will be obliged to offer a cut in tariff rates. When this giant organisation emerges as a competitor, the private general insurers will have little chance of survival. As a matter of fact, even now Government is not making things easy for them to get more business. For as Mr P. A. Advani, Chairman of the Indian Insurance Companies' Association, has pointed out there is a growing tendency on the part of the Government authorities to direct general insurance business to the Indian Insurance Companies' Association Pool so that the public sector companies can secure a major share of such business. While perhaps Government will be justified in directing insurance to the Pool in respect of property over which it has full ownership, it cannot possibly claim the same right in respect of transactions about the insurance of which it is not even remotely interested. As a result of the undue interest evinced by Government in directing insurance in respect of all kinds of transactions, a situation has been created in which many a constituent who has anything to do with Government will place his insurance with the Pool rather than go to the general insurer for fear of non-acceptance of his policy. General insurers are also handicapped by the present unrealistic limits of expenses. These limits were fixed some fourteen years ago and since then the cost of servicing has considerably gone up. According to Mr Advani during the last 12 years the cost of

an insurer in servicing Rs 100 premium had increased by at least 30 per cent. There is therefore need for an appropriate upward revision of the limits of expenses, because it cannot be denied that today's costs are much higher than those even some couple of years ago. The fact that the income-tax authorities disallow expenditure in excess of the prescribed limits has brought about great strain on the slender finances of the insurers. Moreover, despite repeated representation a rebate of super tax on inter-corporate dividends is not made available to the general insurers though a similar rebate is allowed to other companies including banking companies.

DYESTUFF INDUSTRY Continuance of Protection

Although the Indian dyestuff industry has taken big strides during the past decade, it has still a long way to go to attain self sufficiency. In 1954, the organised sector consisted of only 8 units but it now comprises 21 units. A sizable capacity has also been built up in the small scale sector which has now 126 units. The total capacity of the industry has increased from 2,622 tonnes in 1954 to 21,306 tonnes in 1964. The shares of the protected sector and the non-protected sector in the total capacity are 12,496 tonnes and 8,810 tonnes respectively. In the past one decade, the small scale sector units have received considerable encouragement and this explains their rapid growth. Ten years ago, almost the entire capacity of the industry was contributed by the organised sector but in recent years the small units have come into prominence with their installed capacity even exceeding that of the organised sector as will be evident from the following figures. Capacity of the small units in 1954 was negligible and by 1962 they had built up a capacity of 3,979 tonnes. There has since been a spurt in installed capacity with the total reaching 11,722 tonnes in 1964.

The installed capacity of the industry is expected to go up further in the coming years. A target of about 29,000 tonnes is envisaged for the Fourth Plan, and this is proposed to be achieved largely through extension of existing units. Expansion licences had already been granted to existing units in the organised sector for a total capacity of 6,022 tonnes. Besides, four units with total capacity of 602 tonnes will be licensed in this sector. The additional capacity granted to the small scale sector is 1,266 tonnes.

With the increase in capacity, production has also gone up. Thus production in the organised sector which was placed at only 674 tonnes in 1953 rose to 5,634 tonnes in 1963 and in the small sector

output rose sharply from almost nil to 3,655 tonnes during the same period. There is however sizable underutilisation of installed capacity in both the sectors; only about 60 p.c. is productive in the organised sector while in the case of the small scale sector only 26 per cent of capacity is in use.

As has been pointed out by Mr M. P. Pai, Chairman of the Tariff Commission while opening the public inquiry into the question of continuance of protection to the industry beyond December 1964, for its further development, the industry should concentrate among other things, on the production of intermediates. A basic weakness of the industry is that even after a decade of growth it is yet to commence the manufacture in sufficient quantities most of the intermediates. Many varieties of dyes also continue to be imported. The inordinate delay in

commissioning the Hindustan Organic Chemicals, a public sector project, which was originally expected to manufacture about 47 intermediates, is the main impediment in the way of reaching self-sufficiency in dyes. It is essential therefore that Hindustan Organic Chemicals should be commissioned at an early date. In the meantime, efforts should also be made to increase the supply of imported intermediates. In this connection, it is worth considering whether it will be feasible to reduce the quantum of imported finished dyes and divert the foreign exchange that will be thus saved to the import of essential intermediates. In this view, it will be necessary, as has been pointed out by Dr R. Balakrishnan, Member of the Tariff Commission, to protect not only finished products but also the major intermediates.

INTEREST RATES

“Plead... for a Re-appraisal”

Is the Reserve Bank having second thoughts about interest rates on Deposits? About medium-term financing by banks? A hint in these regards is given in the speech delivered by Mr P. C. Bhattacharyya, Governor, Reserve Bank of India, at the annual dinner of the Bombay Bankers held in Bombay on 31 August, 1964.

Let me at the outset thank you for your gracious invitation to be with you this evening. Such occasions provide an excellent opportunity for us in the banking community to get together and exchange notes on the problems that are common to us. There are a number of major issues that are facing us in the banking and monetary spheres at the moment. Even though, therefore, the present occasion is mainly a social one, I am encouraged by the presence here, of the leading representatives of bankers in this part of the country, to do some thinking aloud on a few of these problems.

A year has gone by since I had the pleasure of addressing you last. This has been a year of stress and strain for the national economy. There has been a persistent pressure on the price level. The rising outlays on defence superimposed on stretching the resources of our economy to the full, especially in the face of more than one poor harvest. The impact of investment both in the public and private sectors has resulted in a large increase in overall liquidity in the economy. Prices have been rising on the one hand. On the other, this liquidity has not imparted any buoyancy to the capital and stock markets. At some point during the year there were indications that the tempo of industrial growth and investment was slowing down. Bank credit levels were being augmented.

For the banking system too it has been an eventful period. This is no formal description for we have rarely had a year in recent times when the banking industry has witnessed such wide seasonal swings in credit operations. If the slack season of 1963 was the slackest on record, this

was no more than a prelude to what turned out to be the busiest of busy seasons. Credit, as you are aware, expanded in the 1963-64 season by a record figure of Rs 376 crores—not much less than twice the earlier seasonal expansion. Over the year as a whole, i.e., till the end of June, credit totals have risen by Rs 245 crores to a level 16 per cent higher than a year earlier. Even making allowance for the price increase in the intervening period, this is an impressive expansion. Deposits too have risen by as much as Rs 276 crores. This is a faster rate of expansion than what was witnessed last year. Even so the much larger credit demands on the system have not left much room for manoeuvre and have placed the banks in a tight resources position.

The growth of banking business is a reflection not only of the higher level at which the economy is operating, but of a widening and deepening of the banking structure to subserve the growing needs of a developing economy. The number of banks' offices has gone up by over four hundred in the past year. This is by no means a mean achievement. In this they have helped not only themselves, but indeed the national economy by spreading the process of institutionalising savings and credit.

The year has also been significant in respect of the credit policy of the Reserve Bank of India. As the slack season of 1963 drew to a close, the indications of a slackening in general economic activity led to a certain loosening of the credit reins. A marginal liberalisation was effected in the credit policy in October 1963 to impart some stimulus to the economy. You are familiar with the subsequent turn of events. A larger increase in bank credit than had

occurred in any previous season was in fact anticipated; but with a downward revision of crop estimates and the serious price situation not obtaining any relief in the post-harvest period, a brake was applied by the Reserve Bank of India in March this year on unrestricted credit expansion.

I am not unaware that this re-charting of the course of monetary policy by the Reserve Bank of India came in for not a little comment. The Bank was charged with a reversal of policy in the middle of the busy season. I venture to say, however, that this criticism has to be viewed against the objectives and methods of monetary policy in the short run. Monetary policy in this sense has to be viewed as an adjustment of the cost and availability of credit in relation to the emerging situation. Early diagnosis of changes in the economic conjuncture and an alert and purposive response to such changes are of its essence. In few areas of policy the timing is so crucial and flexibility so important. There is no doubt that credit policy in India has to be attuned to the needs of development and the attempt of the Reserve Bank has been, over a longer term, to build up the credit structure to service a growing economy. This promotional aspect is, however, not inconsistent with a concern at any point of time with current credit levels and a watchfulness to see that credit expansion in the short run does not outstrip the productive needs of the economy or is diverted into speculative channels. It is in this context that the accent on restriction that has marked credit policy, both general and selective in the last few years has to be seen. The accent has, of course, varied in intensity at various times. In October 1963, the situation called for, as I said a little while ago, some loosening of the reins. Equally it cannot be denied that the picture, as it emerged in March, 1964, indicated the need for some pulling back of the reins.

I might also refer to another point raised in the context of the change in policy in March—that it put the banks in an embarrassing position in that they had entered into credit commitments on the basis of earlier liberalised policy and the change in policy had the effect of pulling the rug from under their feet. This, I believe, is not a tenable proposition. It was not the intention of policy to restrict legitimate credit needs. In fact, in nearly every case the earlier quotas were restored on the Reserve Bank being convinced of the genuineness of the credit need. Fresh advances made by the Reserve Bank in each of the two full months after the change in policy, viz. April and May far exceeded Rs 100 crores and were not much below the level of fresh advances made in January or February, 1964, i.e., before the change in policy. The fact that despite more rigorous scrutiny banks continued to obtain this order of finance from the Reserve Bank bespeaks the flexible operation of policy, whose basic objective was and continues to be to make finance available for essential production. Not unnaturally one result of the policy change was

that the periods for which funds were borrowed were reduced as the cost of Reserve Bank credit became higher and this induced a more economic use of resources. In the manner in which it operated the new policy made credit dearer rather than tighter and from this point of view it should have been no embarrassment in the sense of banks not being able to keep their commitments entered into already. Of course, the policy change might have led bankers to think twice before increasing their credit commitments but I would not regard this as an unwelcome development under the circumstances.

I would, in this context, wish to stress one point. Easy credit is not the providential power that can solve the difficulties of industrial growth. The limitations to a more rapid expansion in this sphere are real rather than monetary. Factors such as raw material difficulties, foreign exchange shortages and various physical bottlenecks such as transport and power cannot be cured by easy credit. On the other hand, excessive credit under these circumstances does only more harm than good. There is no doubt that the imbalance between overall supplies and demand is clearly the underlying factor in the recent deterioration of the price situation. I am aware that the increase in credit levels by banks is only one of the major factors in the overall monetary expansion, the other important influence being the impact of fiscal operations. The imperatives of defence and the equally urgent need for Plan investment, however, set a floor to Government expenditure. Economies are no doubt possible in non-essential outlays. The recent statement of the Finance Minister that he intended to reduce public expenditure at the Centre by Rs 70 crores is to be viewed, in this context, as an earnest of the determination of the Government not to add to the pressures of aggregate monetary demand. The Banking System has also to play a role in this matter.

Policy measures such as monetary tightness or fiscal restraint which are designed to correct the price situation, will in the ultimate analysis succeed only to the extent to which they help to mop up some of the excess liquidity in the economy. In the short-run this might appear to pose problems to the banks in that it would place difficulties for them in their efforts at mobilisation of additional deposit resources. The relative ease with which banks have obtained such resources in recent years should not obscure them to the reality of the problem. There may be a temptation at times to take the easy way out and assume that in a phase of monetary expansion, banks need not exert themselves unduly to gather in more deposits. But this complacent view does less than justice to the perspicacity one has come to associate with bankers. For there is still scope for further structural improvements and a rethinking of some of the policies. The success of banks' efforts at mobilising deposits is linked on the one hand with the rate of economic growth and income expansion and its distribution and on the other with institutional factors

such as the expansion of branches and the improvement of banking services. Measures to impart strength to the banking system such as deposit insurance and the various statutory provisions of regulation no doubt help to inspire greater confidence among the public in the viability and soundness of the system. The role of banking education which would feed the system with a growing cadre of qualified bankmen is no less important and it is heartening to see increasing attention being paid by banks to this aspect of their organisation.

While on the subject of deposit mobilisation, I would plead once again for a reappraisal by bankers of the role of interest rates as one of the factors in attracting more deposits into the system. I venture to say that some more rethinking than what has been done in this context on the present pattern of deposit rates is called for. It has been apparent for some time that the spread between the short end and the long end of deposit rates is narrow, somewhat unnaturally so. This suggests the need for greater orderliness in the rate structure without necessarily increasing the total interest cost to the banks. With the rates of interest prevalent on call money I have no doubt that the banks are paying more than what is needed for retaining the money which would in any case remain with the banking system. On the other hand, with the present spread there is not surprisingly the result that the genuine saver tends to turn away from the banks and seeks other repositories for the placement of his funds.

The problem of resource mobilisation has become urgent for with the increasing diversification of our economy and the growth of industries with a non-agricultural base, we are witnessing a secular increase in credit needs which would place further demands on banks' resources. There is also the requirement of the statute in terms of which, very shortly, banks would be required to maintain higher liquidity ratios. The progress made by some banks in working up to the higher ratios has not been satisfactory and I would like to take this occasion to impress upon you that the Reserve Bank attaches the highest importance to the attainment and the subsequent maintenance by banks of the enhanced liquidity requirements. The real test for this would be in the ensuing busy season and it is in the interest of banks themselves, if they are to meet not only the requirements of the law, but also the legitimate needs of trade and industry for credit, that they should spare no efforts at securing more deposits.

There is another matter to which I feel I should draw the attention of the bankers present here. The large increase in credit granted by banks during the last busy season included a substantial increase in clean advances granted by banks. A study of these advances has revealed that a substantial part of this has been granted to industry which were in urgent need of finance for projects which they had taken in hand hoping that they would be in a position to raise funds from the market in due

course. This expectation did not materialise and naturally they had to approach their bankers and the banks very commendably took care of the situation. There is, however, another side to the picture. The banking system can ill-afford to lock up a large order of its resources in financing long-term investments. This affects the liquidity of the system. It also makes it difficult for the system to meet the needs of working capital for industry and trade for which their resources are primarily intended. The sooner therefore the banking system can reduce this burden on them the better it would be for all concerned. I am not unaware that the market conditions are not such that industry can secure long-term finance to repay these advances to banks by raising capital in the market. There is, however, no reason why existing industrial undertakings who have borrowed from banks should not consider the replacement of such borrowing by the issue of public debentures. Other things being satisfactory and the industry being a dividend-paying one, one could expect that the Unit Trust of India, which has very recently come into the picture, would be a source from which a good support to the issue of such debentures could be expected. The Minister of Finance in his speech on the inauguration of the Industrial Development Bank announced that he has issued suitable instructions to the Controller of Capital Issues that more flexibility should be introduced in the matter of the observance of a reasonable debt equity ratio for financing expansion projects. I feel, therefore, that if banks were to advise their customers to long-term seriously this new access to long-term capital and release their funds, it would ease the burden on the banks investment structure.

Indian banks have displayed commendable initiative in moving away from the traditionally commerce-oriented character of their operations and in financing in increasing measure the expanding needs of the industry. At the same time they have been enlarging the scope of their term lending and underwriting functions. There is, however, a point beyond which the banking system cannot go in this matter of provision of long-term finance. It is in appreciation of this position that the two institutions, viz. the Industrial Development Bank and the Unit Trust of India have been launched. These institutions would not only supplement the role of the banks in the field of long-term finance, but will also, I hope, ease their burden to a considerable extent. I have no doubt that banks would extend to these institutions the same responsive co-operation that has characterised their relations with other specialised financial institutions already in the field. To be effective partners in planned progress, banks, no less than any other sector of the economy, would need to search constantly for new ideas and new methods. They have to be more venturesome without sacrificing prudence. In all these matters they can count on the willing support and encouragement of the Reserve Bank.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as
the wind
To blow on whom I please"
—As You Like It

United Commercial Bank Limited has fittingly celebrated its coming of age; the head office has moved into a spanking new building—I wouldn't exactly call it a skyscraper—that is wholly functional, wholly modern. There may be some who might not find pleasing to their eye the mural that embellishes the facade; I for one, colour-blind though I apparently am, did think that the yellow was—well, a bit too yellow. But I gather that the artist who was commissioned to do the work insisted; and so UCB has what it has. For the rest, it is truly magnificent: vast halls open out as you get off the lifts; the furniture, the decor have been carefully chosen. There was, naturally a function to "inaugurate" the building, and this was followed by a cocktail party; both were eminently successful. A hint of winds of change blowing was available when the first to speak was Mr I. P. Goenka: he perforce dealt with the progress of the Bank in the short twenty-one years it has been in existence. The architects of the Bank may be said to be three in number. There was, first, Mr B. T. Thakur; sheer drive and vigour marked the years of infancy. Mr Thakur's genius more-over lay in his ability to pick out the men he wanted to man the Bank with. Quickly, Mr Sadasivan and Mr Shah were recruited; and it is no coincidence at all that they should have succeeded Mr Thakur as General Manager, the one after the other. When, therefore, Mr Thakur retired, he had laid the foundations for swift expansion. What could not have been anticipated was the spectacular nature of the progress that was achieved during Mr S. T. Sadasivan's stewardship of the affairs of the Bank. True, banking as a whole was enjoying prosperous times; but Mr Sadasivan's scholarship in banking ensured both prudence and phenomenal progress. Profits earned were colossal during his regime, and transfers to reserve massive. The edifice built up, the new head office almost ready for occupation, Mr Sadasivan gave way to Mr Shah. I seem to be suggesting, in a sense, that today's General Manager can sort of sit back and wait for automatic expansion. On the contrary, the tasks and res-

possibilities of Mr Shah are as for progress in its real sense, the utilisation of more consumer goods by more people. I think I agree entirely with him. This complex, of all the time exhorting the people to tighten their belts, has taken hold of our leaders, and the sooner they stop asking for sacrifices, the more sure can we be of sure progress. We have had rather more than a decade of paying today for tomorrow's progress, and it is high time that we had at least some small element of re-ward. Austerity, in other words, has in Mr Birla's reckoning—and in mine, too—become a bad word.

Those in the know knew that Mr G. D. Birla, who has been Chairman ever since the establishment of the Bank, intended to retire this year. But with Mr Sadasivan stepping out of the General Managership and on to the Board, it appeared possible that Mr Birla would continue, at least for a year. Mr Birla, however, chose to remain only till the Bank had been newly housed; and, indeed, when the building was being formally inaugurated (at it; I don't like the word, but can't think of any other) Mr Birla was no longer Chairman, since he had earlier that day handed over, as it were, to his successor. Not unexpectedly, his speech at the function was nostalgic, as he recalled the past. Older men had no right, he seemed to be saying, to continue staying in office; they had to make way for younger men, with modern outlooks and attitudes. Then, suddenly, Mr Birla began to give direction to what the future should be like. A building is easy enough to build—once you get the sanction for the plan, acquire the licences for cement and steel, appoint the architects, and so on. Much more important, however, was to maintain it. He called upon the "new management" (as he called it) to fill the beautiful building with pictures and works of art. And he seemed to imply that bank staff should be properly dressed; perhaps a special allowance will be given to Head Office staff!

Then, Mr Birla decried our pre-occupation with austerity. What, he wanted to know, did austerity mean to a people who were already merely existing at subsistence levels? He called instead

progress in its real sense, the utilisation of more consumer goods by more people. I think I agree entirely with him. This complex, of all the time exhorting the people to tighten their belts, has taken hold of our leaders, and the sooner they stop asking for sacrifices, the more sure can we be of sure progress. We have had rather more than a decade of paying today for tomorrow's progress, and it is high time that we had at least some small element of re-ward. Austerity, in other words, has in Mr Birla's reckoning—and in mine, too—become a bad word.

As of last Saturday, Mr I. P. Goenka is the Chairman of UCB Bank. I know of few people who would better fit that position. The most remarkable attribute about Mr Goenka is what I would term is his total accessibility. It does not matter how busy he may be, he will still find the time to listen to any one with a problem and, what is more, help to find the solution. Of course, it is a moot point whether the Chairman of a bank should be so accessible, but then, as I have remarked earlier, the personal touch is once more not merely in vogue but essential in banking operations. He typifies the modern outlook that Mr

Birla obviously wanted in his successor and I should like to take this opportunity to extend all good wishes to him.

At the cocktail party, apart from murmurs of appreciation of the building, gossip was—need I say it?—the Bombay raids. What is not known is that the swoop on the film stars was just the most publicised of the raids. As I had suggested at the time, if the intention of the raids is really to put the fear of God into the possessors of unaccounted money, then it may be a good thing. It will be better still, if thereby psychologically the ground is being prepared for an "amnesty" scheme. However, for such announcement we have now to wait for the Finance Minister's return from the World Bank conference. Meanwhile, it is somewhat disquieting to hear, as I did, that another batch of raids—in the eastern capital, this time—has been planned. Disquieting, because there can be such an animal as having overplayed your hand. Not too many forays, please, before an amnesty scheme. A post script: cash counters on the Stock Exchanges are attracting much more attention; inflow of unaccounted money?

Olympus - A Letter from Delhi

National Shipping Board

THE National Shipping Board, which met here on Tuesday after the lapse of more than one year, was inaugurated by the Prime Minister. It was characteristic of the Prime Minister to brush aside the compliments paid by earlier speakers to his contributions to the development of Indian shipping with the remark that he felt he had not been able to achieve much. Despite this modest disclaimer, the record is there to show, that the expansion of Indian shipping in recent years owes not a little to the sustained interest taken by the Prime Minister while he was Minister for Transport and Communications. As Mr Raj Bahadur Minister for Transport, reminded the meeting, most of the crucial steps for the development of the Industry were taken during the stewardship of Mr Lal Bahadur Shastri. These include the bold programme for the acquisition of ships on deferred payment, on basis of self financing, provision of credit for acquisition of ships on low rates of interest, the decision to allow a higher rate of development rebate for Shipping, the establishment of a vigorous public sector in the shipping industry, consolidation of the law relating to Merchant Shipping and the formation of the National Shipping Board as a statutory policy-making body in 1959.

The Prime Minister emphasised the need for stepping up the pace of expansion to enable Indian Shipping to secure an adequate share of the country's overseas trade, especially in view of the target of Rs 5,100 crores proposed for exports and the need for large imports of food grains, petroleum products etc. He said that the Fourth Plan target for shipping should be fixed between three to 3.5 million tons.

Referring to the need for development of port facilities and the difficulties caused by the hold-up of food ships, the Prime Minister stressed the need for closer co-ordination among the different ministries concerned, particularly Shipping, Food and Petroleum and Chemicals. It was not sufficient if the officials were content to deal

efficiently with situations as they arose. They should be alert to the difficulties that are likely to arise and be in a position to take action to forestall them in time.

Both the Prime Minister and the Minister for Shipping and Transport, paid tributes to the important role played by the private sector in the growth of Indian Shipping which, they expected, it will continue to play in the future. Mr Raj Bahadur referred to the feeling in some quarters that the respective areas of the public and private sector had not been properly demarcated. This feeling, it may be noted in passing, has led to a marked change in the profile of the Shipping Board. The Minister assured the Board that there was no ground for misgiving on this account. He was confident that the National Shipping Board, under the Chairmanship of its new Chairman, Mr Raghunath Singh, could be depended upon to function as an effective and independent custodian of the interests of the shipping industry.

Mr Raj Bahadur also referred to the growth of tonnage to 1.3 million tons, to which the private sector had, so far, made a larger contribution than the public sector. He expected that the total tonnage as the end of the Third Plan would reach 2.4 million. India's share in the country's overseas trade has also increased from 9 to 15 per cent. The Prime Minister urged that the aim should be to raise the figure to fifty per cent. This will require not only additional tonnage, but acquisition of tankers and bulk carriers. In this connexion Dr A. Ramaswami Mudaliar told the meeting of the progress that it had been possible to make in regard to India's share of the traffic on the India-UK run. By agreement with the different lines, the share of Indian shipping had been raised to 41 per cent, with provision of escalation of one per cent per annum till the share was raised to fifty per cent.

More Talk on Food

If the country is still suffering from shortage of food grains one may at least take consolation from the fact that there is no dearth of informed and uninhibited discus-

sion on the subject. The various aspects of the problem were discussed threadbare at a conference convened by the Federation of Indian Chambers of Commerce and Industry. The Union Minister for Food and Agriculture inaugurated the Conference which met under the Chairmanship of Mr S. L. Kiroloskar, Vice-President of the Federation who maintained a tight grip over the two days' proceedings.

Apart from representatives of the constituents of the Federation, the Conference was attended by invitees from many national and international organisations—Ministries of Food and Agriculture and Community Development and Co-operation; Planning Commission, Reserve Bank of India, F.A.O., Ford Foundation, U.S.A.I.D., Rockefeller Foundation, Bharat Krishak Samaj, and specialised institutions such as the Indian Council of Agricultural Research, Agricultural Universities and Colleges.

Critical remarks made in the course of some speeches about Government's policies in regard to production and prices and their implementation, are likely to give a misleading impression of the Conference's approach to the subject. It is, therefore, necessary to put the record straight by pointing out that the general consensus was that the achievement in the agricultural sector should not be minimised. The Conference thought that the total picture should be borne in mind, so that there was no blurring of the overall perspective. The Conference was acutely aware of the need to take urgent steps to control population and to gear up the administrative machinery to its tasks. The Conference stressed that the requirements of economic development, as well as the fulfilment of the social goals in a democratic society, demanded a serious drive at the level of implementation. Policy, it was stressed, should aim at improving, not hindering, productive effort and encouraging management of agricultural land on commercial lines, as also distribution of commodities like fertilisers, etc., on the same basis. It was also the opinion of the Conference that Industry should be constantly alive to problems of agriculture

and also take direct and constructive interest in its development. The various ways in which Industry could help by organising production of the various materials required by agriculturists were described by Mr C. Subramaniam in his inaugural speech.

AICC on Food and . . .

The food problem was also discussed by the special session of the AICC which devoted the opening day to an uninhibited discussion of the subject. After a full day's discussion the AICC adopted the Working Committee's resolution which was moved from the dais by Dr Ram Subhag Singh, but not before it had the opportunity of listening with obvious enjoyment to pungent speeches from the floor by Jone stalwarts like N. V. Gadgil and Hanumanthayya. These, however, provided the opportunity for a very effective intervention by the Prime Minister and a lucid exposition of the Government's policy, and the measures that were being taken, by Mr Subramaniam, which finally carried the day.

The Kamaraj Plan

The special session had been called to discuss non-official resolutions which had been held over from the last meeting in Bombay. But actually, only one resolution was discussed, namely, the resolution which wanted an affirmation that the Kamaraj Plan failed and should therefore be withdrawn. Even the most starry-eyed admirer of the Congress and Congressmen will hesitate to claim that the AICC covered itself with glory when it debated the Kamaraj Plan. It is by no means clear what the sponsors of this resolution sought to achieve or whether they realised its implications. Opinions about the Kamaraj Plan, its aims and its implementation, differ and will continue to differ. The only point made clear by the debate was that those who are disgruntled with the Kamaraj Plan, and would like to have it exorcised do not measure up to the idealistic assumptions on which the Plan was erected. As few persons in the Congress or outside had any illusions on this point, was it really necessary to proclaim it from house tops?

Monopoly Commission

The Monopoly Inquiry Commission has started recording evidence of trade associations, chambers of commerce and leading economists on the subject of the inquiry. Those examined in the last fortnight included representatives of the Indian Chamber of Commerce, Calcutta led by Mr K. K. Birla, the Bharat Chamber of Commerce, led by Mr Lakshmi Pat Singhania, and the Engineering Association of India, led by Mr Gulab Chand. In addition Dr P. S. Lokanathan, Director of General of the National Council of Applied Economic Research, was examined.

Trustee for Trusts

It has been announced that Mr M. N. Kaul retiring Secretary of the Lok Sabha has been appointed Public Trustee under the Companies Act 1956, as amended in 1963, with effect from the first of September 1964. Government has also framed rules laying down the time within which a person holding shares in or debentures of a company in trust should make a declaration and the form in which it should be made. It has also been notified that the powers of the Public Trustee regarding the exercise of voting rights in respect of shares held in trust will come into force on 1 December, 1964.

It has been clarified that no declaration by a trustee is necessary in respect of a trust where the trust is not created by an instrument in writing. Even where the trust is created by an instrument in writing, no declaration is necessary in cases where the value of the shares in or debentures of a company held in trust does not exceed Rs 1 lakh or exceeds Rs 1 lakh but does not exceed either Rs 5 lakhs of 25 per cent of the paid up capital of the company whichever is less.

According to a review of the activities of the Handicrafts Board for 1963-64, there has been a smart improvement of Rs 8.55 crores in the exports of handicrafts as compared to the previous year. In the year under review, exports of handicrafts amounted to a shade over Rs 30 crores, the highest on record. Similarly, there has been a rise in the sales of these goods within the country, which is estimated to have spurred to a new peak of Rs 3 crores.

An outlay of Rs 136 crores as against the anticipated expenditure of Rs 50 crores in the current Plan period has been proposed to extend a forestation to meet additional requirements of industrial and fuel wood during the Fourth Plan period. A provision of Rs 22 crores has also been made for improving forest communication. These allocations were proposed at a meeting of the Planning Commission held early this week.

Indian Shipping

Indian Shipping has made rapid progress during the Third Plan. To acquire international recognition, it had to reach the target of one million GRT. Our national shipping crossed this mark about a couple of years ago, and if orders already placed for construction or acquisition of more vessels are taken into account, even the 1.5 million GRT mark has been crossed.

It has now been decided to embark upon a higher target of 2.4 million GRT, inclusive of orders placed for new constructions or acquisitions.

Taking into consideration that during the decade 1951-61 the total increase in our tonnage was only 466,000 GRT (from 391,000 GRT to 857,000 GRT) the increase of about 600,000 GRT during the Third Plan with prospects of a further increase of nearly 900,000 GRT by the time all the Third Plan orders materialise, should be regarded as a development of considerable significance.

INITIAL TARGET RAISED

The initial tonnage target fixed for the end of the Third Plan was 1.1 million GRT and the rupee allotment for its acquisition was Rs 51 crores.

However, due to the very rapid progress made during the first two years of the Plan, this target was raised to 1.3 million GRT without increasing the rupee allotment.

On a recent re-assessment of the position, it has been found that we have reached a figure of 1.3 million GRT and, with the orders already placed and expected deliveries during the rest of the Plan period, we shall have an operative tonnage of about 1.5 million GRT by the end of the Third Plan; while in the meantime several more orders would have been placed for delivery during the course of the Fourth Plan.

It has, therefore, been decided to have two sets of targets, i.e., one relating only to operative tonnage and another including firm orders placed for new constructions. These two targets are at present 1.5 million GRT and 2.4 million GRT respectively. These targets have been fixed without increasing the allotment of Rs 51 crores for the Third Plan for acquisition of ships. However, owing to deferred payment arrangements it will be necessary to make provision in the fourth and fifth Plans for payment for ships acquired during the Third Plan period.

BALANCED FLEET

An important development in recent years has been the acquisition of the latest type of bulk carriers, large size super-tankers and modern fast liner ships, to make our national fleet balanced.

so important in the context of the country's growing international trade.

The decision to set up a second shipyard at Cochin and to double the production at the Hindustan Shipyard Ltd are significant steps in achieving self-sufficiency in shipbuilding in the years to come.

Shipping and ship-building always look up as trade grows. The tonnage increases and more foreign exchange is earned or saved yielding greater prosperity for the country. Before 1947 we had no right to carry our foreign trade, and, as late as only three years ago, only nine per cent of it was handled by Indian ships. But today about 18 per cent of cargo is being moved in Indian vessels, earning considerably more in terms of foreign exchange.

NATIONAL SHIPPING BOARD

In this endeavour, the advice of the National Shipping Board, established by an Act of Parliament,

namely, the Merchant Shipping Act, 1958, is very valuable. The Board consists of 21 members. Of these, six are from Central Government, three are shipowners and three represent seamen. The Board need not wait for reference from Government since giving advice, when such advice is sought by Government, is only a secondary function of the Board. The Board can initiate suggestions.

The Board has set up sub-committees on fixing national target for the Indian Merchant Fleet up to 1975; coastal shipping; introduction of general coastal cargo services with small vessels; problems of personnel; utilisation of surplus capacity of the Mazagon Dock and the Garden Reach Workshop; Government policy in regard to the public sector vis-a-vis the private sector; and on freight policy in regard to the import of foodgrains from the USA. The reports of these sub-committees are awaited.

THE BANK WITH SERVICE PLUS

POYSHA INDUSTRIAL COMPANY LIMITED

Speech of the Chairman, Shri M. R. Ruia

The following is the address of the Chairman, Shri M. R. Ruia, delivered at the 7th Annual General Meeting of the company held on Monday the 24th August 1964.

I am glad to report that the year 1963-64 has been a satisfactory year in most respects. Even in the existing factory at Bombay, with all its limitations, we have been able to show a distinct improvement in production, by increased efficiency and a certain amount of rationalisation. Our production of containers increased by no less than 18% over last year's, and a substantial proportion of it was open top sanitary cans used mostly in the food preservation industry, the balance being general line cans for various industries like oils, paints, vanaspati, confectionery, etc. This performance must be regarded as quite satisfactory in relation to our resources. The very fact that, even after providing, among other things, Rs. 8.58 lakhs for taxation as against Rs. 2.95 lakhs in 1962-63, the profits for 1963-64 amounted to Rs. 4.26 lakhs as against Rs. 2.11 lakhs in the preceding year, is a measure of our striking improvement. The staff reorganisation already initiated has begun to produce results, and I am sure the performance during the current year will be even more satisfactory. I may mention that this will probably be the last year in which we shall function throughout the year in the present factory in Bombay, as we expect to move into the new modern factory near Thana before the end of 1965.

We have not been idle regarding our expansion programme. We have now acquired a total area of 33 acres of valuable land for our factory near Thana from the Maharashtra Industrial Development Corporation. Tenders are being invited for the construction of the new factory buildings on the basis of plans and lay-outs prepared by our architects. We hope to begin construction soon after the monsoon, and shall complete it as speedily as possible.

The land for the Cochin factory, comprising about ten acres, has also been bought at Mamala near Ernakulam, and we are now studying the plans for the factory building and installation of the plant. The site is a good one, about a mile, as the crow flies, from the new Oil Refinery complex.

The actual site for the new factory at Ghaziabad has also been selected, after personal inspection of the Uttar Pradesh Industrial Estate, and we are now negotiating the detailed terms of the purchase.

I may also mention that the requirements of our Associate Kaira Can Company, which has been created solely to meet the needs of the Kaira District Co-operative Milk Producers' Union at Anand, have been receiving full attention. As there were difficulties in the procurement of land for this Com-

pany through the State Government, our Associate carried on private negotiations and has succeeded in selecting a suitable site (about 10 acres) near Anand. The plans for the factory buildings are also under preparation.

As regards the plant, a modern automatic printing plant has already been imported for our Bombay factory and is now awaiting installation at the new factory at Thana. I am also glad to report that we have at last succeeded in getting permission from the Government of India for a second automatic bodymaker line for our Bombay factory, the absence of which has been a bottleneck in production there. The new equipment will enable quick changeovers from one can diameter to another, without appreciable loss of time, and we shall also be in a position to manufacture containers of larger diameters. The Government have also agreed to the importation of all the plant and machinery we had selected for the factories at Cochin and Ghaziabad, and we expect the import licences to be issued shortly.

The Kaira Can Company has already placed orders with American suppliers for the machinery required, and we expect the equipment to reach India some time before the end of this year.

The present year and the next will, therefore, be a very active year for our Company, involving the construction of four new factories for ourselves and our Associate, and the installation of up-to-date plant in each of them. When they start production, we shall get rid of our present strategic disadvantage in having only one important manufacturing centre at Bombay, and having to bear the handicap of long transport and high packing costs to various markets in distant parts of India. We shall, like the major producer of cans in this country, be in the happy position of catering for regional markets from the regional plants.

I mentioned in my last review the new developments regarding receipt of orders for various types of cylinders, etc., from the Defence Departments. We have made much progress in this respect, and were able to secure substantial orders, a considerable part of which has already been executed.

Our share in the present export drive has continued to expand, and I am glad to report that during 1963-64 about Rs. 20 lakhs worth of goods were exported in our containers. The beginning of the present year has already shown further remarkable progress in this direction, and new export markets have been created.

I must mention one point in connection with the availability of our present raw material, namely tinplate. While on the whole we

had a slightly better, though still not an adequate supply of tinplate for our manufacturing requirements, the disturbing feature has been that arrivals have not been following any regular pattern. We get very large quantities of tinplate in some months, followed by a lean period, including some months with no arrivals at all. This absence of a proper phasing militates against any sensible planning of our whole manufacture through out the year, and causes our customers considerable inconvenience. I do not know what the Government can do in the present circumstances to help us out of this condition of a relatively hand-to-mouth existence; but any long-range programme by them involving the proper staggering of indigenous production, as well as of imports, would be a real boon to us.

You will be interested to see from the relevant Balance Sheet and Profit and Loss Account annexed to this report that our wholly-owned subsidiary, Cobrige, has also had a successful year. The sales in 1963-64 exceeded Rs. 6 lakhs, and the previous loss has been converted into a sizeable profit.

A word regarding our future activities. You will observe from the Directors' Report that the capital is going to be increased from Rs. 25 lakhs to Rs. 110 lakhs. We have carried on detailed negotiations with important financing agencies like the Industrial Credit and Investment Corporation of India, Kerala State Industrial Development Corporation, Industrial Finance Corporation, Life Insurance Corporation, the U.P. State Industrial Corporation, and certain Banks, for foreign exchange or rupee loans, or underwriting facilities. I am confident that these negotiations will soon fructify and that we shall shortly be fully armed at every point to embark on our scheme of modernisation and expansion, at the end of which we and our Associate will have four modern plants, combining the latest Continental and American techniques, and located at strategic centres, to enable us to cater for the greater part of India, besides contributing our tangible share to Indian exports.

All this has been possible as the result of combined team-work at all levels. Our staff have fully co-operated, and our relations with labour continued to be harmonious. I am happy to convey my thanks to them on your behalf.

Finally, I feel I should take the opportunity to refer to a topic which will be of paramount importance to the Can manufacturing industry in this country within a decade or two. As you are well aware, tinplate has been facing increasing competition from other materials like aluminium, paper, plastics, etc., and has had to adapt

itself to meet this competition. The enormous impact of aluminium as a package material on the American beer can manufacture industry first made American tinplate producers seriously think of a modified tinplate to meet this formidable challenge; and "thin tinplate", otherwise known as "double cold reduced tinplate" was expressly created to meet the challenge. A survey of current tinplate manufacture in the United States reveals that this particular variety of tinplate is now developing very rapidly and that almost all producers, including the "Big Three", have now started large-scale manufacture of this type. Another recent development is tinplate "foil" which has a paper-thin gauge of two thousandths of an inch. We, in this country, cannot afford to stand still while all these modifications are going on in the largest tinplate producing country in the world, whose practices and methods are bound to have a controlling effect on tinplate manufacture elsewhere. Many other countries outside America (e.g., the U.K. and Japan) have also taken up the manufacture of thin tinplate and are likely to take up the manufacture of tinplate foil also. All of India's tinplate production at present is hot-dipped, which is already outmoded (less than 3% of the total manufacture of tinplate in the U.S.A. is of this variety today), and I note that a beginning is to be made in Rourkela in the manufacture of electrolytic tinplate. This is good so far as it goes. Unless, however, the Government take a long range view, and modify the Rourkela programme in the Fourth Plan and take steps now for the manufacture of at least a certain percentage of thin tinplate and tinplate foil, I am afraid we will be hopelessly outclassed in the not too distant future. The same consideration applies to the proposed new plant at Bokaro. I would earnestly request the Government to give this matter serious thought and arrange for a progressive increase in the manufacture of these two new varieties which have a great bearing on reducing the cost of tin cans and will enable our industry to face competition from containers made of the materials, not only in India but as regards exports also. An ancillary suggestion I would also make is that during the period in which this manufacture is being started in this country, imports should be allowed of tangible quantities of these two new varieties of tinplate to enable us to try them out on our plants and get ready in time to cope with full-scale production when the need arises. This need, I repeat, will be on us within possibly a decade.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

Market NEWS and Trends

JUTE

Subdued Trend

THE jute markets witnessed hectic activity in earlier dealings owing largely to still persistent reports of a decline in production of jute both in India and Pakistan notwithstanding authoritative indications that supplies would be quite adequate. The fact of the matter is that speculators had utilised the opportunity offered by the temporary decline in arrivals to create a psychology of shortage thereby to earn quick profits. In this they were quite successful for some time but with the drastic action taken by the East India Jute and Hessian Exchange and the warning given by the Jute Commissioner that Government would not hesitate to take whatever action was deemed necessary in order to bring about stability to the jute markets have had a sobering effect. That the speculative tendency had by no means been completely curbed was demonstrated last week when in earlier dealings prices once again began to move up. Thanks to the decision of the EIJE to fix depo-

sits for jute purchases, an effective check has been put on purely speculative transactions. In the meantime, the fact that conditions in the jute markets in Pakistan have begun to show signs of a return to normalcy has been a helpful influence. Reports from Pakistan indicate that even there, the belief about a decline in raw jute production is also grossly exaggerated. And it is evident that the shortage scare has been raised by interested parties. It would also appear that the apprehension that because of the shortage scare and the consequent high price of raw jute in Pakistan, India would not be able to buy her requirements of cuttings from that country has been belied. For reports show that already Indian buying of new crop jute from Pakistan has exceeded last year's purchases. With the meeting of the recently constituted high level bodies scheduled to take place next week, bull operators in general are naturally subdued because it is almost certain that a continued state of instability in the jute markets will invite further drastic action from these

bodies one of which will be presided over by Mr Manubhai Shah, Union Minister of Commerce.

The jute goods market commenced the week on a firm note largely in sympathy with the raw jute market where rates moved up sharply. The fluctuations were purely of a speculative nature as actual business passing in the absence of overseas enquiries was negligible. Indicative of the highly speculative character of transactions was the sharp fall in rates the very next day. B Twills fell by Rs 2 and over while hessian prices were also similarly marked down. The sudden reactionary tendency had evidently been touched off by the report that prices in Pakistani markets had developed a soft trend. The quiet trend persisted on Saturday also when in the futures market prices sizably declined. Although the opening on Monday was again quiet, sentiment slightly improved by close following revival of buying interest at the lower levels. The renewed buying was evidently due to the fact that there had been Government business to the tune of 4000 bales B Twills for delivery by the middle of the current month. The revival turned into a firm trend on Tuesday following reports of further Government business in B Twills to the extent of another 6000 bales and some overseas business in hessian. A steady trend continued to characterise trading on Wednesday though fluctuations especially in the futures market were rather wide.

In the raw jute market, Assam Bottoms was done up to Rs 44 per maund on the opening day but in subsequent days prices developed a sagging tendency following reports of easier conditions in the Pakistani markets. There is a growing belief that the report about a decline in jute production in Pakistan is grossly exaggerated. Additionally the news that notwithstanding the shortage scare, Indian buying of Pakistani jute this season has not been adversely affected as feared earlier has also been a damper. The fact that jute mills in Pakistan seem to be in no hurry to augment their supplies is interpreted to mean that this year's production is not as low as earlier made out. With the levy by the EIJE of deposits on purchases of raw jute, the speculative hold loosened and prices steadily moved back to Rs 40 per maund.

But on Wednesday there has however been a rise of one rupee in the quotation to Rs 41 and this is attributed to a rise in prices in the agencies.

TEA

Increasing World Output

ACCORDING to a warning issued by the US Department of Agriculture. Washington, the expanding world tea production may lead to over-supply. Tea production in recent years has been setting record after record and this year, with the output set at a new high of over 2,300 million pounds, will be no exception. Thus far, exports and internal consumption have gained sufficiently to absorb the mounting production; but the long-time threat of an oversupply still lingers. The big question now is, can the large 1964 harvest and future bumper crops be easily marketed or will stocks begin to pile up as has been the case with coffee?

The Department adds that another major problem is the production of low-to-medium quality teas. India and Ceylon, the first and second largest tea exporters, are most concerned with the problem, since they account for over three-fourths of the annual \$600 million world tea trade. But, higher yields in those countries as well as in Indonesia, China, Taiwan and Japan plus rapid expansion in Africa and South America account for the ever-increasing world output. The growth in the tea industry is especially pronounced in the African countries.

Until now, the exporting countries managed to avoid an unmanageable surplus. With the result, tea prices were stable and supplies were only slightly ahead of consumption. But while consumption is rising, tea is facing intense competition from coffee, cocoa and soft drinks.

Finally, the Department states that Britain can be of no help in expanding consumption since consumption there last year was nearly 10 pounds per person and was considered near the saturation point. The USA is in a little better position to help consumption, as consumption in that

country is on the uptrend largely due to the introduction of 'instant' tea.

Meanwhile, in the Export Sale held in Calcutta this week, offerings consisted of 60,982 packages of Leaf grades. There was a stronger general demand. The best CTC teas, although well-absorbed, came to an easier market with selected lines selling at around last prices. There was an improved demand for the medium CTC teas. While the Broken were generally sold at firm levels, the cleaner Fannings were firm to dearer following competition. Liquoring fibrous CTCs were sold well, while the remainder were 10 paise to 20 paise per kilo easier.

Useful support was forthcoming for the bright Assam orthodox teas, which were sold well. Others under this category were irregular and easier. There was more demand for Fannings and Orange Fannings, particularly those possessing bright liquors. Legg-cut teas were slightly easier with the exception of a few selected lines.

Whole Leaf grades met with an improved demand, but at slightly lower rates. Darjeeling teas were sold well, but at irregular levels following quality. Following rates were quoted:—Clean Plain Pekoe Rs 5 to Rs 5.40; Plain BP Rs 4.10 to Rs 4.40; Plain Fannings Rs 4.30 to Rs 4.60; Medium Assam CTC BP Rs 5.80 to Rs 6.30; Medium Assam CTC Fannings Rs 5.80 to Rs 6.30; Best Assam CTC BP Rs 6.60 to Rs 7.00 and Best Assam CTC Fannings Rs 6.60 to Rs 7.20.

Production of tea in South India is estimated higher at 13.8 million pounds in July as against 13.5 million pounds in the corresponding month of last year. In the first seven months of the year, however, production in South India, at 95.5 million pounds, shows a fall of 20.9 million pounds and 18.1 million pounds as compared to the figures for the similar periods in 1963 and 1962 respectively.

With shipments of 6.53 million pounds in June 1964, total exports of tea from the Cochin Port declined to 17.32 million pounds in the quarter ended June 1964 from 25.61 million pounds in the corresponding quarter of last year. Exports to the UK, the largest buyer of South Indian tea, fell from 14.36 million pounds in April/June 1963 to 8.63 million pounds in the period under review, while those to Russia and the USA rose from 2.9 million and 869,310 pounds to 3.25 million and 1.07 million pounds respectively.

In the Colombo market, offerings were 5,857,185 pounds. There was a good market for high and medium-grown teas from Western districts and prices were fully firm to slightly dearer for better liquoring teas. BOP Fannings were a very strong feature of the sale and prices were often sub-

stantially higher. Uva descriptions were also sold well although some select best liquoring teas were much lower.

Tea production in Pakistan, during the period April to July this year, went up by nearly 5 million pounds as compared to the corresponding period of last year. Total production, during the period, amounted to 23.64 million pounds as against 18.91 million pounds. According to the figures released by the Pakistan Tea Board, 9,563,052 pounds of tea were sold at the internal auction at Chittagong against 6,977,164 pounds in the corresponding period of last year.

In the auction held at London this week, offerings were 27,189 packages of North Indian and other miscellaneous teas. Demand was strong and general for good liquoring new season's Assam teas with buyers following quality and prices often moving in sellers' favour. Prices for Dooars teas remained generally firm. Bright liquoring African teas were sold well.

COTTON End of a Colourful Contract

After a colourful career, the Jarilla August contract went off the Board of the East India Cotton Association on Tuesday, 25 August at Rs 784.00 per three quintals. But for the heavy tenders offered on the closing day, the price would have been stepped up further. Nevertheless, the contract was quoted higher in unofficial deals. The contract was characterised by unique features like a large volume of turnover, a fierce tussle between the bull and the bear and payment crisis.

On the whole 36,350 bales were tendered against the contract, a record in the past decade. The outstandings against the contract a few days prior to the commencement of the delivery period approximated 300,000 bales. It was this unique phenomenon that compelled the Forward Markets Commission, on the eve of the commencement of the delivery period, to levy a margin on the outstanding positions. But in the second week of its career the contract crossed the permissible limit which naturally attracted punitive steps. Adverse survey results also aided the bulls to tighten their grip over the contract. The pace of cotton tendered against the August contract was more or less determined by the survey and assessment results.

Toward the fag end of its career, payment crisis developed owing to a prominent bear becoming a defaulter which cast its shadow on a few prominent brokers and resulting in a loss of nearly Rs 10 lakhs.

After entering the board on 13 April, at Rs 732.25 per three quintals, the August contract was pushed down to its lowest level of Rs 716.00 in May because of encouraging cotton supply position but smartly moved up to Rs 749.25 in the last week of July. From this period onward it became buoyant and was taken up to Rs 794.00 in unofficial deals before it made its exit at Rs 784.00.

The Jarilla March contract depicted a steady trend during the week. After fluctuating in a narrow groove between Rs 735.50 and Rs 732.50 on account of alternate bull support and bear covering, the contract finished the week at Rs 734.75 against the previous week's close of Rs 732.50.

Trading in the spot market at Sewri was bereft of any development and demand continued to be discouraging. South Indian spinners were active in the market for CO 2. Popular varieties such as Laxmi, Khandesh and Kalyan also met with scattered mill interest. In the export section Bengal Deshi firmed up on account of good foreign demand. In the import section Sudan and Egyptian growths met with some mill enquiry.

31 August marked the end of the 1963-64 cotton season, which was by and large a reasonably good one (barring the payment crisis). The cotton textile mills did not face any difficulty in covering their requirements, though the price they had to pay hovered around the official ceiling. Official intervention was reduced to the minimum and the trade and industry almost enjoyed complete freedom. Even the cotton growers can look upon the season with delight as they secured fair returns for their produce.

EXPORT DUTY ON BENGAL DESHI ABOLISHED

Government's decision to abolish export duty on Bengal Deshi with immediate effect is to be welcomed as it makes this growth more competitive in the export markets and it will serve as a fillip to step up the output of Bengal Deshi in the country. It will be recalled in this connection, that the export duty of Rs 25 per bale has been in force since 16 November 1958 and the trade has been persistently pleading for its reduction, if not its removal. But the total abolition was necessitated by the Pakistan Government's decision to reduce export duty on this growth and give some concessions in rail freight etc.

Despite the heavy down pour, the cotton crop in general is reported to have made good pro-

gress. Areas under Bengal Deshi cotton and Punjab varieties were lucky in having congenial weather conditions. But pest attack in some tracts are reported.

On the contrary, the growth cotton in Broach and Surat was stunted on account of the existence of weeds and excessive dampness. But if the present conditions are followed by a protracted sunny period, there is no need for taking an alarmistic view.

YARN AND CLOTH OUTPUT IN JULY

The production of cotton yarn and cloth by the domestic textile industry in July is provisionally put at 82 million kilograms and 415 million metres respectively. According to a press note released by the Textile Commissioner, the estimated stock of cloth with the composite mills at the end of July, 1964 amounted to 0.93 lakh metric bales as unsold and 1.55 lakh metric bales sold but unfitted.

PIECEGOODS

The cotton piecegoods market in Bombay continued to exhibit sluggish trend during the past week also and strangely enough even the proximity of festive season failed to generate the anticipated revival in demand. Demand during the week continued to be at a low ebb and enquiries from some centres petered off. The mills, however, were unruffled by the slump in demand and they were adamant in their stand on prices. In the meantime, interested quarters are anxiously awaiting the new price policy.

Barring Punjab and Kashmir, the upcountry centres evinced symptoms of waning enthusiasm. Even the seasonal goods failed to evoke interest either from the local and distant purchasers. The initial spurt in demand in shirting gave way to apathy on the part of the buyers. Consequently the prices moved down a bit. Long-cloth was rather dull while grey goods remained subdued during the whole week. The powerloom section was almost deserted.

Export front presented better conditions during the week, particularly after the European holidays. As usual the UK figured prominently in the market and accounted for a good quantum of sheetings, furnishings and other usual items. Singapore was satisfied with a moderate quality of long cloth, sheetings and furnishings. The US bought a sizable quantum of sheetings while Canada's fancy concentrated on canvas. European countries evinced interest in a host of piecegoods but owing to the disparity in prices only limited business was transacted. Other destinations remained inactive during the week.

Sugar Prospects

THE total Sugar production in India is expected to be just over 25½ lakhs tonnes. According to official figures, the production, up to 22 August, was 25.06 lakh tonnes. A few sugar factories in the South will be continuing crushing till the end of this year's season (end of October) and they are expected to give another half a lakh tonnes.

Thanks to the recent beneficial rains, prospects for sugar crops in Europe are also considered to be bright. This may probably be the reason that prices in the world sugar have suffered a further decline. According to a report released from London, the entry of Italy as a buyer of raw and refined sugar for import this year has been anticipated for some weeks. It is stated that France and Belgium are endeavouring to persuade the Italian authorities to consider the purchase of 250,000 to 300,000 tons of these countries' surplus sugar at a price above the world market, but at a preferential rate of duty applicable to that imposed on imports from the EEC countries.

The duty structure of EEC and outside sugar is not yet determined. It is thought by some that Italy will not differentiate between EEC and outside regions despite the fact that duty exemption is authorised only until the end of September, while Italy's tender terms to-day provide for raw sugar arrivals up to the end of the year.

In the Hapur market, prices of sugar have continued to rule steady as there is no improvement in the supply position, which continues to be tight. In the open market, the rate is quoted at Rs 172 to Rs 175 per quintal as against the controlled prices of Rs 127 to 136 per quintal.

THE TITAGHUR PAPER MILLS COMPANY LIMITED.

Dividends for the year ended 31st March, 1964.

At a Meeting of the Directors held on Saturday, the 29th August, 1964, the following Dividends were recommended for payment subject to deduction of Tax under Section 194 of the Indian Income-tax Act, 1961.

On First Cumulative Preference Shares	... at 10.4% p.a.
On Second Cumulative Preference Shares	... at 5.85% p.a.
On Preferred Ordinary Shares	... at 13% p.a.
On 'A' and 'B' Ordinary Shares	... at 2.5% per fully paid up share p.a.

Chartered Bank Buildings,
Calcutta-1, the 29th August 1964.

GUR & KHANDSARI Sharp Fall in Prices

In the Hapur market, khandsari prices have eased by Rs 10 per quintal in the open market due to selling pressure from stockists, as stocks with the trade had been damaged following the rains, not to speak of the fact that new khandsari production for the next season will commence by the end of November. Moreover, the Uttar Pradesh Government has released a part of the frozen khandsari stocks. In the open market, rates are moving between Rs 125 to Rs 160 per quintal, according to quality against the controlled prices of frozen stocks at Rs 109.83 per quintal.

The market for Gur also remains depressed on slack buying from the consuming areas. Dry stocks with the trade are reported to be small while stockists are anxious sellers of wet stocks.

Cane crops are reported to have further improved owing to heavy rains although water-logging in some areas has resulted in damage to the crops. New sugar production is expected to commence by the end of next month.

CARDAMOM Export Prices Unchanged

For some time past, Cardamom exporters in Bombay were worried over the continued silence on the part of the Government about their plea for an early clarification regarding the currency of the present minimum and maximum export prices. As a matter of fact, fears were entertained in some quarters about entering into long-term commitments with foreign buyers.

It is now reported that the Government is going to keep the minimum and maximum export prices unchanged, at least until August 1965. Even after this date, in spite of other changes which may be effected, these export prices will remain unchanged. It is stated that the Government is keen that no unnecessary hindrances are placed in the way of exporters from concluding long-term commitments with overseas buyers.

DYES AND CHEMICALS Listless Conditions

Listless conditions continued to prevail in the Bombay market for Chemicals and Dyes. The seizure of large amounts of money by the Enforcement Directorate from the film stars in Bombay created suspense in trade circles. With the result, there was a perceptible fall in the volume of trade although selective support pushed up the prices of certain items.

Thanks to good demand from Delhi, Hydrosulphite of Soda was slightly better. Sodium Nitrite, which moved on acute shortage of supplies, lost ground at the close due to lack of demand at the higher levels. There was sustained demand from tablet manufacturers for Camphor.

YARN Cotton Yarn Better

Except for a smart rally in the prices of Cotton yarns, all other sections in the Bombay yarn market remained dull. The smart increase in cotton yarn prices, particularly in beams and prims, was attributed to the introduction of a quota system. A leading mill was reported to have put up the price of a popular variety from Rs 51 to Rs 60 per pound.

Indian Art Silk yarns failed to attract any buying interest. As a matter of fact, some varieties of imported synthetic yarns were quoted even lower than the current costs.

The market for Staple-Fibre yarns remained dull. Even the prospects of resumption of forward trading within the next few weeks have failed to cheer up sentiment. The easy tendency is attributed to a general slackness in demand, which has persisted in the rayon yarn market for the last several weeks.

OILS AND OILSEEDS Smart Recovery in Groundnut

Thanks to the paucity of ready supplies, a halt has been cried to the recent downward in Groundnut prices in the Bombay market. Although upcountry reports indicate a substantially larger crop, the immediate supply position remains very tight. Ready rates have improved by Re 1 to Rs 2 per 50 kg with Khandesh quality quoting Rs 65.75 and Madras variety Rs 66. The improvement is mainly attributed to the continued ban on the movement of the commodity from Gujarat—an important source of supply.

Groundnut Oil prices have also moved up, as the receipt in Bombay is reported to be barely half the quantity of the present requirements. There is a growing feeling that, if the supply is not assured for the next month, prices are likely to move up further since local crop will be available only in October.

Prices displayed a steadier tendency in the Madras market, where arrivals were small at 15 to 20 tons a day. Small crushers were reported to be taking up these to meet their day-to-day requirements. Summer variety is quoted at Rs 107 and Coromandel at Rs 110 per bag of 80 kgs.

In the Oil section, buyers continued to be reserved and prices declined by around Rs 2 to Rs 251 for the ready position. Calcutta and local bazar interests were the main buyers.

In the Castorseed section, price movements were confined to narrow limits although trading in Castor Oil reflected steadier conditions. The rate for commercial quality oil has risen to Rs 17.65 from Rs 17.50 in view of the support from shippers. Although enquiries from abroad are stated to be picking up, no reliable indi-

cation about the business is available.

The Linseed section displayed uncertain conditions. The dominating influence was the behaviour of the North Indian operators, who were inspired mainly by the trend of rapeseed and mustard prices in Delhi and other markets. The demand for linseed oil is large enough to absorb the inflow.

HUKUMCHAND JUTE MILLS LIMITED

Notice to Shareholders

Notice is hereby given that the next Annual General Meeting of the Shareholders will be held at the Registered Office of the Company, 9, Brabourne Road, Calcutta, on Tuesday, the 29th September, 1964 at 4.00 P.M. for the following purposes:—

- (1) To receive and pass the Directors' Report and Audited Accounts for the year ended 31st March, 1964.
- (2) To declare dividends.
- (3) To elect Directors in place of those retiring.
- (4) To appoint Auditors and to fix their remuneration.
- (5) As special business to consider and if thought fit to pass with or without modification the following:—

As Special Resolutions:—

- RESOLVED that all the Directors together be entitled to receive by way of remuneration a commission at the rate of 1% of the Net Profits of the Company over and above the sum of Rs 100/- for each Director for each Meeting of the Directors, attended by him.
- RESOLVED that the Company do hereby consent to its Managing Agents Messrs, Ramdutt Ramkissendass to carry on its own a similar business as that carried on by the Company whether such business directly or indirectly competes with that of the Company.

Dividends, if declared, will be paid to Registered Shareholders only.

The Share Transfer Register of the Company will be closed from the 19th September, 1964 to 29th September, 1964 both days inclusive.

By Order of the Board
RAMDUTT RAMKISSENDASS
Managing Agents.
9, Brabourne Road,
Calcutta-1,
The 27th August, 1964.

A member entitled to attend and vote at the above Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

Explanatory statements in connection with the special business will be sent to the individual Shareholders.

THE TITAGHUR PAPER MILLS COMPANY LIMITED

Notice of Meeting

Notice is hereby given that an Annual General Meeting of The Titaghur Paper Mills Company Limited will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta-1, on Wednesday, the 30th day of September, 1964, at 3.30 p.m. for the following purposes:

- To consider the Profit and Loss Account of the Company for the year ended 31st March, 1964, the Balance Sheet as at that date and the Directors' and Auditors' Reports thereon.
- To declare Dividends recommended by the Directors.
- To appoint Auditors and fix their remuneration.
- (a) To appoint a Director in place of a retiring Director.

SPECIAL BUSINESS

- (b) To appoint Mr. N. Dandekar, a Director, who retires at this meeting, and in this connection to consider and, if thought fit, to pass the following resolution of which prescribed notice has been received by the Company, the candidate having filed with the Company his consent to act as a Director, if appointed: "That Mr. N. Dandekar be and is hereby appointed a Director of the Company, whose period of office will be liable to determination by retirement of Directors by rotation."

The Share Transfer Registers of the Company will be closed from the 14th to 30th September, 1964, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO.
(PRIVATE) LIMITED
Managing Agents.

Registered Office:
Chartered Bank Buildings,
Calcutta-1,
29th August, 1964.

NOTES:—

- A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.
- The Dividends, if declared, will be paid on or after the 28th October, 1964, to those shareholders so entitled whose names appear in the Company's books on the 30th September, 1964, or to their mandatories. No application for Dividend Warrants will be necessary.

The Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 is being sent to the Members.

British Firm Gets Further Indian Rail Contract

A further contract, this time for the supply and erection of 25-kilovolt AC overhead equipment at the new Nimpura through yard, west of Calcutta, has been awarded by the Indian Railways Board to British Insulated Callender's Cables Ltd.

A spokesman for the British firm said that the contract also covered modifications to a 25-kv feeder line and the erection of a new feeding station at Kharida. Work on the new contract will begin immediately and is expected to be completed by the middle of next year.

The new order follows closely upon the £1,000,000 contract, announced in July, for overhead traction equipment in the Calcutta area.

Since the inception of the AC railway electrification programme in India in 1958, BICC has been awarded 14 contracts valued at over £9,000,000 and covering more than 1,600 track miles—much of it in the Calcutta area.

Telephone Targets to be Exceeded

The P and T will exceed its Five-Year Plan targets in certain spheres including the installation of new telephones, new telephone exchanges and the provision of trunk circuits.

Under the Third Five-Year Plan, the Department had to provide 300,000 new telephone connections. Up to April this year, the department had succeeded in giving more than 2,07,000 new telephone connections. In the same period, as against a target figure of 1,200 new telephone exchanges in the country, the Department had put up 758 telephone exchanges.

Stores and equipment for these works were imported against International Development Association credit of \$42 million (about Rs 20 crores).

The Post and Telegraph Department has so far placed orders for cables, equipment and other accessories costing over Rs 16 crores in foreign currency. These orders include Railway Electrification, local subscriber and coaxial cables, cross-bar type equipment for 48,000 local lines and 6,500 trunk exchange lines, microwave equipment and equipment for Telecommunication Research Centre. These items are being purchased to complete various projects of the Department's Rs 164.6 crore Third Five Year Plan.

For the INVESTOR

INVESTMENT GOSSIP

Steady Trend

A significant development in trading on the stock markets in the past one or two weeks is that transactions are no longer confined to speculative business. There has been broadening of interest in the cash section where prominent shares are in demand at increasing rates. All this would indicate growing confidence in the future of industrial equities. There is however no mistaking the caution that still characterises the approach of the genuine investor. While it is true that there is a growing belief that fiscal policies hereafter will be favourable to the corporate sector, the investor is still chary of extending commitments on hopes alone. That he would require concrete evidence that his investment would yield reasonable return will be evident from the fact that he is not over-enthusiastic about the spate of excellent corporate news. Corporate news has been uniformly good for some time now and yet the investor is extremely choosy. This is because increased working and larger gross profits do not automatically mean increased distribution to the shareholders. As a matter of fact, far from being allowed to participate in the increased prosperity of his company, the shareholder is asked to be content, in most cases, with a smaller return. Another reason for his caution is the continuing inflationary pressures in the economy and their impact on industrial costs. For instance the acceptance of the Bonus Commission's recommendation with regard to minimum bonus is characterised as a revision of wages. This is certainly going to result in an increase in costs, for all kinds of industrial enterprises while the marginal units will find this additional burden unbearable. For the time being the constructive mood is sustained by hopes of continued sizable purchases of equities by institutional investors. The fact that there has been another small increase in the price of Units has also been an encouraging influence. Both operators and investors have also not failed to note the increasing evidence of a pragmatic approach to problems in Government policies. In this connection Prime Minister Lal Bahadur Shastri's observation this week that for the rapid development of Indian shipping, there should be close cooperation between the two sectors of the industry is considered significant.

NEW ISSUE NOTES

Birla Jute

THE Birla Jute Manufacturing Company Limited has decided to issue Rs 2 crores Debentures (1975-77), divided into 20,000 Debentures of Rs 1,000 each, bearing interest at the rate of 7 per cent per annum, issued at par and payable in full on application. The full amount of the present issue has been underwritten by underwriters. The subscription list will open on 9 September and will close on 15 September or earlier, but not before 11 September 1964.

The purpose of this issue is to provide part of the finance required for the Cement Plant at Chittorgarh and the Oxygen and Acetylene Gas plant at Birlapur and to reduce the company's indebtedness to its bankers. The supply of almost machinery and equipment, required for the Cement plant at Chittorgarh and the co-ordination and setting up of the same, has been entrusted to the F. L. Smith group of companies. Orders for the balance of imported component of the machinery and equipment under the DLF Aid Programme will be placed shortly as soon as the formalities of giving notice to US business are completed.

Sutlej Cotton

The offer by Sutlej Cotton Mills Limited for sale to the public of preference shares in the Central India Machinery Manufacturing Company Limited has been over-subscribed.

INVESTMENT NOTES

IISCO

According to the figures released by the Indian Iron and Steel Company Limited, the output of Pig Iron has shown a substantial rise to 91,003 metric tons in August from 74,440 metric tons in August preceding month and Steel Ingots to 70,333 metric tons from 67,295 metric tons, while that of Saleable Steel has declined to 53,526 metric tons from 63,222 metric tons. Despatches of saleable steel are only slight lower at 57,975 metric tons against 58,947 metric tons.

SKR Mills

Sri Krishnarajendra Mills, Bangalore, has been giving disappointing performance during the past few years. The company has skipped the dividend for the years 1962-63

and 1963-64, the last dividend paid being 11 per cent for the year ended March 1962. It is now learnt that Rankumar Kerial and Company of Calcutta has acquired the controlling interest of the mills through negotiations with the present management for the purchase of a large block of shares. A new board of directors has taken over the management of the mills. The mill is also said to have embarked upon an expansion programme. Whether the company will turn the corner and return to the dividend list consequent on the change in management remains to be seen.

Citric India

Citric India Limited is understood to have got over the difficulties caused by earlier miscalculations and there is now the prospect of citric acid being regularly manufactured out of sugarcane molasses in the next few weeks. In order to meet the additional expenditure, there was a further issue of equity shares for Rs 10 lakhs and preference shares for Rs 20 lakhs. A medium-term loan for Rs 25 lakhs was obtained from a bank while foreign exchange to the extent of Rs 7.30 lakhs was secured with a loan from the ICIC. The installation of plant and machinery is reported to be nearing completion and trial operations in some of the sections have already started.

Jute Dividends

Except Lansdowne which has proposed a dividend of Rs 12.50 per share after a long period and Lawrence repeating the dividend at Rs 10.00 per share, all the other jute mills in Bird-Hellers group have announced disappointing dividends for the year ended 31 March 1964. Dalhousie has proposed Rs 7.50 (Rs 25.00); Auckland Rs 12.50 (Rs 15.00); Union Rs 10.00 (Rs 20.00); Kinnison 5.00 (Rs 10.00) and Northbrook Rs 2.50 (Rs 3.50). All dividends are subject to tax, payable on or after 10 October to those shareholders registered on 30 September 1964. Transfer books will remain closed from 16 to 30 September.

IN BRIEFS

CALCUTTA

The Indian Steel and Wire Products Limited has maintained the dividend at Rs 1.80 per share on the fully-paid ordinary shares of Rs 10 each and at 18 paise per

share on the partly-paid ordinary shares (Rs 1 paid-up). If the dividend is sanctioned at the forthcoming meeting, to be held on the 28 September, it will be payable from the Dividend Reserve on or after 8 October to those shareholders registered as on the 29 September.

The directors of the Bengal Coal Company Limited have started that the drawing in connection with the redemption of Rs 5 lakhs Debentures will take place on the 30 September in accordance with the conditions of the issue. The debentures will be paid on 11 October.

Perhaps for the first time in the history of the company, Martin Burn Limited has proposed to pay an interim dividend of one rupee per share, subject to tax, for the year ended 30 September 1964, payable on or after 1 October to those shareholders registered as on 30 September. Transfer books will remain closed from 16 to 30 September. In the previous year, a total dividend of Rs 2.50 per share, taxable, was paid.

Birla Cotton Spinning and Weaving Mills Limited has proposed to maintain the dividend at Rs 2.00 per share, subject to tax, for the year ended 31 March 1964.

Kharcha Company Limited (Anderson Wright jute group) has maintained the ordinary dividend at 12.5 per cent, taxable, for the year ended 31 March 1964. Transfer books will remain closed from the 15 to 28 September.

Hukumchand Jute Mills Limited has repeated the dividend on the equity shares at Rs 2.00 per share, taxable, for the year ended 31 March 1964.

Dehri-Rohas Light Railway Company Limited (Sahu Jain group) has maintained the dividend at 10 per cent, subject to tax, for the year ended 31 March 1964. Transfer books will be closed from 22 to 29 September, 1964.

Huldibari Tea Association Limited has reduced the dividend from 11 to 5 per cent for the year ended 29 Feb. 1964.

Fort Gloster Industries Limited has proposed a taxable dividend of 15 per cent on the ordinary shares for the year ended 31 March 1964 and Rs 7.50 per share

in the new ordinary partly-paid shares. These compare with a taxable dividend of 20 per cent and previously. Transfer books will remain closed from the 15 to 29 September, 1964.

Tide Water Oil Company Limited has proposed an interim dividend of 70 paise per share, taxable, for the year ended 31 October 1964. Transfer books will be closed from the 15 to 21 September 1964.

OMBAY
Bombay Cycles & Motor Agency Ltd has stepped up the dividend to 12.5 to 15 per cent for the year ended 31 March 1964.

Kohinoor Mills Company Limited has maintained the ad-interim dividend at Rs 7 per share, taxable, on the equity capital for the year ended 31 December 1964.

Bajaj Auto Ltd. has not taken any decision about the quantum of dividend for the year ended 1 March 1964. A decision in this regard will be taken in the near future and the dividend, that may be decided upon, will be paid out of General Reserve.

Kemp and Company Limited has maintained the ordinary dividend at Rs 20 per share, taxable, for the year ended 31 March 1964.

ADRAS
Binny and Company (Madras) Limited has proposed to raise the interim dividend from 3 to 10 per cent for the year 1964.

Cannanore Spinning and Weaving Mills Limited has repeated the dividend at 8 per cent for the year ended 31 March 1964.

Korchermala Plantations Limited has proposed a dividend of 5 per cent (nil) for the year ended 1 March 1964.

Mlamally Tea Estates Limited has again passed over the dividend for the year 1963-64.

Cottanad Plantations Limited has repeated the dividend at 10 per cent for 1963-64.

Tirupati Cotton Mills Limited has proposed to raise the dividend on the preference shares from 8.93 to 9.5 per cent.

Kalpetta Estates Limited has raised the dividend from 11½ to 12½ per cent for the year ended 1 April 1964.

Balmadies Plantation Limited has doubled the ordinary dividend to 10 per cent for the year ended 31 May 1964.

Om Parasakthi Mills Limited has maintained the ordinary dividend at 10 per cent for 1963-64.

Vayitri Plantations Limited has posted the dividend at 6 per cent for the year ended 31 March 64.

Rene (Madras) Limited has raised the dividend from 15 to 12 per cent for the year ended 31 March 1964.

Alageshwar Estates Limited has maintained the ordinary dividend at 16 per cent for the year 1963-64.

Mysore Chemical Manufacturers Limited has repeated the dividend at 15 per cent for 1963-64.

Mysore Lamp Works Limited has reduced the dividend from 3 to 5 per cent for the year 1963-64.

★

BALANCE-SHEET REVIEWS

Hindustan Motor

Fares Well

Despite frequent interruption in the working of the plant due to non-availability of requisite licences for raw materials and components in time and the fact that the company had to stop production of cars for the period July to September 1963, Hindustan Motors Limited has produced excellent working results for the year ended 31st March 1964.

In spite of the fall in production costs, turnover has exceeded, partly due to increase in production in the Heavy Engineering Division and partly on account of the increase in the levy of taxes. While sales are shown higher at Rs 32.56 crores against Rs 29.29 crores, the net profit, after providing for depreciation and taxation, amounts to as much as Rs 148.89 lakhs against Rs 127.50 lakhs for the previous year.

Apart from providing Rs 93.09 lakhs for Dividend Reserve and maintaining General Reserve at Rs 25.00 lakhs, Depreciation is raised to Rs 106.25 lakhs from Rs 71.50 lakhs and Development Rebate Reserve to Rs 30.00 lakhs from Rs 9.75 lakhs. Taxation provision is, however, lower at Rs 113.00 lakhs against Rs 222.50 lakhs. The dividend is maintained at Rs 1.15 per share, subject to tax. Annual general meeting will be held on the 29 September.

During the year, the company has been making steady progress in increasing the indigenous content of its Ambassador car and Bedford trucks. On installation of machinery, which is being imported against various loans, the company will be able to reach the target of 90 per cent. When the installation of machinery will be completed by the end of this year, the company will be able to produce practically all the parts it plans to produce. The company has applied to the Agency for International Development, USA, for a loan of foreign exchange to the extent of 23 million dollars to cover the import of plant and machinery required for the manufacture of Bedford engines as also to increase the truck production capacity to 15,000 a year. Recently, this loan has been sanctioned and necessary steps are being taken to enter into an agreement with AID, USA. Negotiations are proceeding for securing a further loan for the said purpose from the General Currency Area.

The company has also applied for sanction of foreign exchange

for the import of capital goods for the manufacture of Cranes and for the expansion of the Steel Structural Shop of the Heavy Engineering division. The Government has sanctioned the import of some of the capital goods required for the manufacture of cranes. As regards the balance requirement of capital goods, the Government has agreed, in principle, to allow the company to import them, provided the company can secure a loan to that extent from certain countries. The erection of a Foundry Shop has also started and is progressing satisfactorily. Arrangements are being made to take up the manufacture of certain types of Machine Tools. A proposal to this effect, submitted to the Government, has been approved. The company is working forward to entering into foreign collaboration agreements for the manufacture of these machine tools.

Jaipur Udyog Repeats

Despite substantial decline in earnings, Jaipur Udyog Limited has proposed to maintain the dividend on the ordinary shares at 10 per cent, subject to tax, for the year ended 31st March 1964. According to the preliminary report, the net profit, after providing for Depreciation, is shown at only Rs 68.72 lakhs against Rs 87.12 lakhs for the preceding year.

A sum of Rs 2.90 lakhs (Rs 2.25 lakhs) is set apart for development Rebate Reserve; Rs 15.60 lakhs (nil) for Contingency Reserve and Rs 23.00 lakhs (Rs 62.37 lakhs) for General Reserve. Tax liability, as and when determined, will be made out of the Contingency Reserve. Transfer books will be closed from the 24 to 30 September 1964.

Aluminium Corporation's Expansion

In the latest annual report released by the Aluminium Corporation of India Limited for the year ended 31st March 1964, the directors state that the expansion programme of the company's integrated plant has reached the final stages. During the year under review, expansion of Alumina plant was completed. These new additions were commissioned in April 1964 and these have trebled the capacity of the alumina plant. The cable plant for the manufacture of ACSR and AAC (conductors) and the new rolling mills have since been commissioned. The foil plant is under completion and is expected to start shortly.

Meanwhile, the company's sales have reached a new high of Rs 345.15 lakhs against Rs 233.82 lakhs for the preceding year, while the gross profit has also touched a new high of Rs 63.37 lakhs against Rs 46.78 lakhs. The directors have proposed to raise the dividend from five to nine per cent, subject to tax.

India Steamship Does Better

After a series of losses in the trading results during the last few years, the unfavourable trend has

been halted during the year ended 31 March 1964. The net profit, after providing for depreciation, is substantially higher at Rs 9.57 lakhs as against Rs 1.40 lakhs for the previous year, thanks to the rise in freight income from Rs 8.00 crores to Rs 8.28 crores. In this connection, the directors state that, in spite of increased cost in every item of operation, it has been possible to obtain a favourable balance in the net trading result, as the management followed a policy of rationalisation with a close watch on the expenditures under all heads.

Apart from providing Rs 7.95 lakhs (nil), Depreciation is raised to Rs 128.64 lakhs from Rs 120.96 lakhs. Although the dividend on the ordinary shares is skipped for the fourth year in succession, the directors have proposed to pay the preference dividend which, when recommended, is payable to those preference shareholders registered as on the 25 September.

Imperial Tobacco Pays Less

Despite a rise in sales from Rs 50.03 crores to Rs 55.13 crores, the Imperial Tobacco Company of India Limited has reported a substantial decline in the net profit, after providing for depreciation and taxation, from Rs 180.21 lakhs to Rs 99.25 lakhs for the year ended 31 March 1964, mainly due to the increase in customs and excise duties from Rs 21.61 crores to Rs 26.50 crores.

Depreciation is reduced to Rs 42.88 lakhs from Rs 48.16 lakhs and Taxation to Rs 189.97 lakhs from Rs 206.06 lakhs. After transferring Rs 2.50 lakhs from General Reserve, a sum of Rs 1.37 lakhs (Rs 61.205) is provided for Capital Reserve and Rs 133 lakhs (Rs 2.61 lakhs) for Development Rebate Reserve. No provisions are possible for Fixed Assets and Replacement Reserve (Rs 42.00 lakhs) and General Reserve (Rs 35.00 lakhs). The directors have proposed to pay a final dividend of 2½ per cent on the ordinary shares, making a total of 6½ per cent for the year as against 8 per cent paid previously.

Maiden Dividend from

Lynx Machinery

Lynx Machinery Limited has recommended a maiden dividend of 25 paise per share of Rs 10 for the year ended 31 March 1964. The working for the year has resulted in a surplus of Rs 8.17 lakhs before providing for depreciation, development rebate reserve and taxation. The net profit for the previous 16 months ended 31 March 1963 was only Rs 3.38 lakhs. Sales are substantially higher at Rs 73.72 lakhs against Rs 37.95 lakhs.

Out of the profit, a sum of Rs 87.575 is provided for depreciation; Rs 1.50 lakhs for Development Rebate Reserve and Rs 72,000 for Taxation, leaving a balance of Rs 5.07 lakhs. After adjusting with the loss brought forward from the previous year of Rs 3.20 lakhs, there is an available balance of Rs 1.87 lakhs from which the dividend is recommended.

The depreciation previously provided in excess, amounting to Rs 2.72 lakhs, has been transferred to General Reserve. The dividend amount absorbs Rs 1.50 lakhs, leaving Rs 36,884 which is carried forward to next year.

Same from MP Industries

Madhya Pradesh Industries Limited has maintained the dividend on the equity shares at 10 per cent for the year ended 31 March, 1964. The equity profits are covered more than twice. The results for the year are encouraging. The company has been able to increase its sales by over 15 per cent, being Rs 18,14,712/- as against Rs 15,59,018/- in the previous year. The company has also earned higher additional income from its investments, being Rs 4,12,274/- as against Rs 2,91,411/- in the last year. Correspondingly, there has been an increase in the profits which has gone up to Rs 6,06,810/- as against Rs 4,64,365/-.

A sum of Rs 20,188/- has been provided for Depreciation against Rs 22,553/- while Development Rebate Reserve takes away Rs 499/- against Rs 1,734/-. Taxation for previous years takes away Rs 62,041/- against nil last year, while Rs 2,00,000/- have been provided for Taxation against Rs 1,75,000. A sum of Rs 1,00,000/- has been transferred to General Reserve against Rs 1,51,000/-.

The circumstances under which the manganese trade had to operate during the year were difficult and unfavourable. The selling price of manganese ore slumped by further about 10 per cent, whereas there was an increase in the wage rates and costs all round. The internal consumption of manganese ore has increased due to the emergence of ferro-manganese industry and a further rise is expected with the increase in the production of ferro-manganese consequent to increase in steel production in India. The Company is catering this internal demand.

Orissa Textile Incurs Loss

The Orissa Textile Mills Limited has incurred a loss, after providing for depreciation, of Rs 8.59 lakhs for the year ended 31st March 1964 as against a loss of Rs 3.23 lakhs for 1962-64 despite the fact that sales are higher at Rs 390.92 lakhs against Rs 347.52 lakhs.

The Depreciation amount is higher at Rs 9.41 lakhs against Rs 9.18 lakhs. The present loss, when added to the previous year's loss of Rs 19.09 lakhs, makes a total debit balance of Rs 27.68 lakhs, which is carried forward to next year.

In this connection, the directors state that the working of the mill has been bad with low efficiencies, damage and wastage, and the majority of the problems responsible for this have been purely technical. They add that vigorous steps are being taken to remedy these defects and to put the company on sound and profit-earning basis. It may be added that the company has paid no return to its shareholders over the past thirteen years.

Central India Coal Pays More

Despite a decline in sales from Rs 82.63 lakhs to Rs 75.15 lakhs, the Central India Coalfields Limited has been able to report a marked rise in earnings for the year ended 31 March 1964. The net profit, after providing for depreciation and taxation, amounts to Rs 6.90 lakhs as against Rs 3.15 lakhs for the previous year. Depreciation is raised to Rs 3.46 lakhs from Rs 3.11 lakhs, while a sum of Rs 3.00 lakhs is provided for Taxation against Rs 3.40 lakhs for Taxation Reserve.

After adding the excess of Rs 96,580 (nil) being Development Rebate Reserve written back, Rs 65,000 (nil) is set apart for Taxation in respect of previous year and transferred Rs 2.12 lakhs (Rs 2.25 lakhs) to Development Rebate Reserve. In the preceding year a sum of Rs 4.60 lakhs was provided for Dividend Reserve from which the dividend was paid.

The directors have proposed to pay a taxable dividend of Re 1 per share as against 90 paise paid previously. The dividend, when sanctioned, will be payable to those shareholders registered as on 24 September. Raising are shown at 339,540 tonnes and despatches at 316,245 tonnes. Transfer books will remain closed from the 11 to 24 September.

East Indian Coal Earns More

The East Indian Coal Company, in Jardine Henderson group, has reported a rise in earnings for the year ended 30 April 1964 although the dividend is reduced from Rs 2.75 to Rs 2.00 per share, subject to Indian income-tax and super-tax at the prescribed rates absorb ing £57,600 pounds.

According to the preliminary report, the year's working has resulted in a profit of £160,962 (£149,174) after providing £85,533 for Depreciation and £64,329 for Taxation. To the profit is added the surplus of £33,699 on Development Rebate Reserve written back, making a total of £194,661. Out of this, there has been provided for Taxation for previous year of £3,171 and transferred £57,994 to Development Rebate Reserve and £75,896 to General Reserve, leaving a balance at disposal of £57,600. This amount is distributed as dividend, which is payable on and after 30 October to those shareholders registered as on 23 October, 1964.

Bhulanbararee Coal

Incurs Loss

The preliminary report released by the Bhulanbararee Coal Company Limited reveals that the profit and loss account, after providing Rs 1.35 lakhs for depreciation, shows a loss of Rs 1.63 lakhs. In the preceding year, too, there was a loss of Rs 5.81 lakhs.

Adding the debit balance brought forward from previous year of Rs 13.18 lakhs and Rs 1,253 being adjustments relating to

previous years, there is a total debit balance of Rs 14.81 lakhs, which is carried forward to next account.

Teesta Valley Tea Earns More

Despite a decline in the crop outturn from 203,428 kgs to 180,890 kgs, the Teesta Valley Tea Company Limited has made a higher net profit, after providing for depreciation and taxation, of Rs 44,183 for the year ended 29th February 1964 as against only Rs 18,750 for the previous year, thanks to the higher average price realised of Rs 8.06 against Rs 6.16 per kg.

Depreciation is lowered to Rs 84,678 from Rs 88,444, while Taxation is increased to Rs 30,000 from Rs 17,300 and Development Rebate Reserve to Rs 1,270 from Rs 616, apart providing Rs 10,000 for General Reserve. The dividend is, however, maintained at 10 per cent, subject to tax.

★

STOCK EXCHANGES Cash Shares in Demand

THE price pattern in various stock markets still remains unsettled owing to a reluctance to enlarge commitments and a general tendency to book profits at bugs. A relieving feature of the week's trading is the fact that the cash list has responded handsomely to selective buying.

After initial steadiness, the speculative issues on Lyons Range were subject to heavy profit-taking. Cash shares, however, received good support.

Equity prices on Dalal Street showed a mixed trend.

After three days of cheerful trading the Madras Stock Exchange turned dull towards the close.

The final list on the Ahmedabad Stock Exchange showed small gains on balance.

After opening higher, speculative issues declined on the Delhi Stock Exchange owing to sustained profit-taking.

On Wall Street, however, top industrials moved up, being influenced by good business news and dividend increases.

★

CALCUTTA

THE local stock market disclosed a mixed pattern of trading during the week under review. While the cleared list remained sluggish, shares in the cash section responded well to selective buying.

In general, fresh support remained hesitant, as operators seemed to be worried over the un-economic conditions in the country, not to speak of the reports of the Chinese intrusion into Sikkim. It was also feared that the minor concessions in the Bonus Commission's recommendations were unlikely to be of much help. In this

regard, the exclusion of rehabilitation allowance from the permissible deductions as prior charge gave rise to a feeling that it would harm programmes of modernisation and industrial rehabilitation.

Sentiment was also affected by the rumours of raids by the Enforcement Directorate officials in private residences at some centres. There were, therefore, apprehensions in certain quarters that a scheme might be implemented even to mop up unaccounted money, resulting in a cautious feeling among the speculators. As a matter of fact, there were rumours that the unaccounted money was slowly coming into the stock markets for investments rather than keeping it at home. This may probably be the reason that there has been a sudden burst of activity in the cash section, resulting in prices developing a hardening tendency during the past few days.

The Giltedged section remained generally steady although the turnover continued to remain small. 3 per cent 1986 Conversion Loan moved up to Rs 63.60 from

THE DEHRI-ROHTAS LIGHT RAILWAY COMPANY LIMITED.

Registered Office:
DALMIANAGAR (BIHAR)

NOTICE

The Annual General Meeting of the Company will be held on Tuesday, the 29th September, 1964 at 11.30 A.M. at the Registered Office of the Company at Dalmianagar to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Accounts of the Company for the year ended 31st March, 1964.
2. To declare dividend.
3. To appoint a Director in place of Shri U. S. Bajoria who retires by rotation, but being eligible, offers himself for re-election.
4. To appoint Auditors for the current year and to fix their remuneration. Messrs. Lovelock & Lewes, retiring Auditors, being eligible, offer themselves for re-appointment.

The Share Transfer Books of the Company will remain closed from 22nd September, 1964 to 29th September, 1964 both days inclusive.

By Order of the Board
for SAHU JAIN LTD.
A. K. JAIN
Director
Managing Agents.

Calcutta,
26th August, 1964.

N.B.—A member entitled to attend and vote at the meeting of the company is entitled to appoint another person as his proxy to attend and vote instead of himself and the proxy need not be a member.

Rs 63.30 quoted at the previous week-end.

Except for selective support, trading in the Jute section was generally cautious in view of the firmer tendency in raw jute prices and the accumulation of sucking stocks with the mills. Birlas, after being marked up to Rs 36.87 from Rs 35.50, receded at the close to Rs 35.50. Howrah were almost maintained at Rs 16.31. New Central fluctuated between Rs 11 and Rs 11.31 and Ganges between Rs 14.69 and Rs 14.87.

Coal shares came in for selective enquiry.

There was little business in the Tea section. Banarhat changed hands at Rs 172 to Rs 174 x.r. against Rs 186. c.r. Hasimara had some buyers up to Rs 13.75 from Rs 13.50 and Haldibari up to Rs 11.62 from Rs 11.50.

Sugar shares met with scattered enquiry.

Despite intermittent profit-taking, Textile issues ruled generally steady. Cawtex were done at Rs 6.62 to Rs 6.87; Elgins at Rs 20.25 to Rs 20.50 and Jaya Shree at Rs 13.62 to Rs 14.31.

In the Engineering section, price movements were mostly irregular due to alternate buying and selling. After opening lower at Rs 26.12, Indian Irons improved at one time to Rs 26.64 before reacting towards the close to Rs 26.02. In sympathy, TEXMACO moved down to Rs 26.80 from a high of Rs 27; G. K. Williams to Rs 24.44 from Rs 24.87 and Binani Metal to Rs 12.81 from Rs 13.06. Jessop met with business at Rs 21.19 to Rs 21.31 and J. K. Steel at Rs 16.75 to Rs 17.37.

In the Miscellaneous section, there was considerable activity in cash shares, while the speculative issues were practically neglected. Rohtas were a weak feture and came in for offer at 11.06 after touching a high of Rs 11.69 following the news of the dividend being reduced from 9 to 8 per cent. Following were the price trends of a few selected shares:—

INCOME TAX EXEMPTION

Foreign Teachers and Research Workers

The Finance Ministry has outlined the conditions under which foreign professors, teachers and research workers are eligible for exemption from Income Tax permissible under the Finance Act, 1964. It has also clarified the benefits available to them under this provision of the Act.

To be eligible for the exemption, a professor or a teacher employed in a University or an educational institution in India must not be a citizen of India and he should not have been resident in this country in any of the four financial years immediately preceding the financial year in which he arrived in this country.

Further, his contract of service must be approved by the Government of India before or within one year of the commencement of his service.

In the case of professors and teachers whose service started before 1 April 1964, the Central Government's approval must be obtained before 1 October 1964.

Exemption in the case of research workers will be subject to two conditions, namely (i) the Central Government's approval to the research scheme is obtained before the 1st October of the relevant assessment year, i.e. before October 1, 1964 for the current assessment year 1964-65, and (ii) the emoluments for undertaking the research work is payable or paid directly or indirectly by a foreign government or any institution or association or other body established outside India.

According to the benefits provided under the Finance Act, a professor or a teacher will not be required to pay tax on the remuneration received by him or due to him during the 36 months commencing from the date of his arrival in India.

When he continues to remain in employment in India after the expiry of this period and the tax on his income chargeable under the head 'salaries' is paid by the University or the educational institution concerned to the Central Government, the tax so paid for a period not exceeding 24 months will also not be treated as his taxable income.

A foreign research worker will not be required to pay tax on any sum due to or received by him during the 24 months commencing from the date of his arrival in India for undertaking the research work.

Requests for the Central Government's approval of the contract of service in the case of professors and teachers, and for the Central Government's approval to the research scheme in the case of research workers should be addressed to the Secretary to the

Central Revenue Collections for June 1964

The revenue realised from items on which duties are levied and collected by the Central Government in the first three months of the financial year 1964-65 amounted to Rs 328.06 crores. Of this, Rs 124.59 crores were collected during June 1964.

The corresponding figures for the first three months of the financial year 1963-64 and for the month of June, 1963 were Rs 297.82 crores and Rs 106.03 crores respectively.

Following are the details of the revenue realised under various heads:

Revenue head	(In lakhs of rupees)			
	June 1964	June 1963	April to June 1964-65	196-64
1. Customs	3,059	2,226	9,856	7,594

†Provisional

Government of India, Ministry of Education, New Delhi.

The Ministry of Education have prescribed a proforma for this purpose and applications seeking Government's approval should be made in that proforma. Copies of the proforma are available from the Ministry of Education.

Requests for approval should be made sufficiently in advance so that the Government's decision may be communicated before the due date.

Iron Ore Production During May, 1964

The production of iron ore in India (including Goa) during the month of May, 1964, was 1,595,000 tonnes according to the Indian Bureau of Mines.

This brings the total output during January-May, 1964 to 8,612,000 tonnes which is 5 per cent lower relative to the corresponding period of the last year.

Orissa was the leading producing State during May, 1964, contributing 440,000 tonnes followed by the Union Territory of Goa (415,000 tonnes). Bihar (380,000 tonnes) Madhya Pradesh (222,000 tonnes) and Mysore (197,000 tonnes). The States of Andhra Pradesh, Maharashtra and Rajasthan jointly contributed to the remaining 41,000 tonnes of the all-India output.

£3.6 Million Sinter Plant of Durgapur

A £3,600,000 order for a sinter plant for the Durgapur steelworks has been placed in Britain. The plant is to be built by member-companies of the Simon Engineering Ltd group whose headquarters are at Cheadle Heath, Stockport, Cheshire. It will incorporate two sinter machines,

each 8ft wide with a grate area of 1,536 sq ft. Output will be 5,000 tons per day of fully-fluxed sinter. Limestone and coke crushing plants are included.

The order was placed by Hindustan Steel Ltd. Process and all detailed engineering will be the responsibility of Huntington, Heberlein & Co. Ltd, another British company.

Simon-Carves India Ltd will undertake the supply of all Indian-manufactured parts and the building of the plant, including all civil engineering.

The foreign exchange needed for buying the sinter plant is being provided from the £22,000,000 loan made by the British Government for the extension of the Durgapur steelworks.

Durgapur Steel Plant

In July 1964, production targets were exceeded in six units of the Durgapur Steel Plant, viz. Blast Furnaces, Pig Casting Machines, Steel Melting Shop, Blooming Mill, Billet Mill and Section Mill.

Two new records were set up in the assembly and despatch of roller bearing wheel sets. 1,770 Roller bearing wheel sets were assembled during the month as against the previous best of 1,543 sets in May 1964. 1,710 Roller bearing wheel sets were despatched during the month against the previous best of 1,492 in May 1964.

The principal statistics for the month are as follows:

	(Tonnes)
Coke	124,601
Hot metal production	112,594
Steel Melting Shop	85,223
Pig Casting Machine output	41,455
Despatch of saleable iron and steel products	102,501
Total despatch	112,814

Administrators and Agricultural Development

[The following is the text of the Speech delivered by Mr C. Subramaniam, Union Minister for Food and Agriculture, at the Indian Institute of Public Administration (Reflective Training Course) on the Problems of Agricultural Development.]

The serious food situation in the country has focussed attention as never before on the problems of agricultural production. The queues in the fair price shops have dramatically drawn the attention of every one to the importance of increasing food production in the country. Put in a nutshell, the main reason for the present crisis is that the rate of growth of production of cereals in the country has been out-paced by that of the population. Added to this is the fact that the investment programmes we have undertaken have pumped in large amounts of purchasing power into the country. A poor man uses his income first for increasing his consumption of food, and any growth of income in a poor country therefore naturally leads to increased pressure on available supplies of food. With all the generosity of friendly countries like the USA which has enabled fairly sizeable imports, the total availability of food in the country has not kept pace either with the growth of population or with the increased purchasing power. The result has been a crisis on the price front.

Strictly speaking, in the short run, the total availability of food in the country inclusive of imports in the current year has been higher than was the position last year. Even so local shortages in strategic areas like urban centres of Bombay have magnified the pressures on supplies and resulted in a rising spiral of prices. This is a phenomenon familiar to economists, the marginal tail wagging the totality.

The balance of demand and supply of food in our country has always been a delicate one. With only a little over one-fifth of the total cultivated area being irrigated, food production has always been subject to the vagaries of the monsoon, and recurrent food crises have become a most unfortunate part of the structure of life in our country. Since the balance is delicate, any marginal deficits arising in bad years have had to be countered by stepping up imports. Experience has also taught us to pay proper attention to removing blocks in the distribution such as holding of stocks in excessive quantities by the producers or distributors—which could lead to, and have in the past led to, disproportionate magnification of the effects of any shortfalls. This is all the more relevant when we consider the fact that the requirements for the 10 million persons added every year to our population is about 2 million tonnes of foodgrains every year. The bal-

ance between production and requirement therefore becomes more precarious every year. While therefore we pay urgent attention to the problem of ensuring an equitable distribution of the available food, we should not lose sight of the fact that what we are carrying out are the short-range tactics for coping with the immediate problem. Like all short-range tactics they can be fully effective and meaningful only in relation to the long range strategy. In this case the increase in agricultural production.

The long term solution for any scarcity lies in increased availability. Increased availability can come about in a country like ours only on the basis of increased production. The importance of stepping up agricultural production is therefore thrown into sharp focus by the gravity of the current situation.

The details of the agricultural programme are relatively pedestrian; it is indeed unfair to expect that a problem that has been with us for so long would have been left unanalysed or that one could come up with a magic formula which would enable its solution over night. The battle for agriculture has to be waged in the millions of farms in India; it has to be fought by well-known methods of better cultivation practices, increased fertiliser inputs, improved incentives, better application of pesticides and necessary structural changes. One may very well say that unlike in other areas, knowledge of the difficulties is not half the battle won in agriculture; knowledge of deficiencies is barely a first, though essential step. Detailed implementation is much more difficult.

Through the First, Second and Third Plans, the Government and the people have been fully aware of many of the problems in this sphere. For instance, it has been well known that the yield per acre of food grains in the country, or of commercial crops for that matter, has been less than that in other countries of the world. A recent study has pointed out how the per acre production of rice in India ranges at about 1/3 the figure in Japan. Even inside the country, there are wide variations betwixt one region and another. For instance, the Southern States produce a much higher per acre yield than the Gangetic plains. This difference has always promoted a question as to why farmers all over India should not improve their practices and attain equally good yields. The answer to this

is again the well known fact of low utilisation of plant nutrient per acre in India compared to what is used in other countries of the world. Some part of the difficulty also arises from the fact that we have not produced strains of paddy which will be able to stand a higher dosage of fertilisers. Better utilisation of water, better quality seeds and pesticides can also increase substantially the yield from our lands. All this is known, but still Indian peasantry continues its traditional practices which bring us way down in the international scale. The same story is repeated in wheat, sugarcane, cotton or, for that matter, any other crop.

Why is there a "block" to the improved practices being utilised in the country? It is not merely the non-availability of the necessary inputs. In some States in India, one is surprised by the phenomenon that fertilisers are not moving as quickly as they should. Throughout the world and in India, it is known that a tonne of ammonium sulphate, for instance, enables the production of two tonnes of rice additionally. The input is obviously well worthwhile. Even so, there is resistance. It cannot be merely because of the non-availability of fertilisers. The conservatism of the Indian peasant is of a piece with the conservatism of the peasantry in the world. But are we not entitled to ask what the present administrative machinery in the country has done to remove this?

The scientific use of water resources is another problem which has administrative and political overtones. When we design irrigation projects, we design them so as to spread the water over as large an area as possible. Results of experiments show that it is much more important to use the water carefully and intensively over a reasonable area. Available surpluses of water could be better used in an intensive fashion. If this is done, it is said it should be possible to get a much higher crop yield for the same investment of resources and water. There is also the problem that even where we get sufficient water, the good effects are being offset by insufficient drainage and water-logging. Administrative vigilance should ensure that these errors are removed. Remedies are well known to us; but why have we not taken these up?

An equally pressing problem is that of soil conservation. Most of our plan schemes emphasise the provision of more water and more fertilisers—all designed mainly to cater to the wet cropping pattern. The dry crops which cover the major portion of the land in the country are left severely alone in most of these programmes. An integrated programme of soil conservation would do a lot of good in these dry lands. If we conserve the moisture in the land and en-

able increased production of coarse grains, we will remove the shortage of a crucial component in the total food availability in the country. Here again, our progress has been at a limping pace.

I have narrated a few of the sectors of agricultural production to show the large potential for administrative action. In my view, the difficulties arise mainly from the failure of agricultural administration to get across the message of improved practices to the cultivator who after all is at the cutting edge of the machinery of production. The basic problem in this respect arises because our administrative system, designed as it is for a law and order State, is not geared to the rapidly changing needs of the present who might want loans to-day, fertilisers tomorrow and pesticides the day after. The administrative system believes in protecting itself against a possible objection from audit or a query by the Public Accounts Committee and takes care to protect itself rather than to protect the farm. This defect can be traced particularly to the system of checks and balances which penalise initiative and reward the evader and the buck-passer. But a more fundamental fact is that historically the status symbol in our country has been related to the prestige that arises from the collection of taxes and administration of law and order. For instance, the Indian Administrative Service officer is considered to belong to a higher echelon of 'administration' than the Engineer, the Scientist and the agricultural administrator who might, for all practical purposes, be much more useful to the country. It is symptomatic of the low priority that we give to agricultural problems that the Indian administrator spends a lot of his training time in the study of settlement of land revenues and very little time, if at all, to learn about the minutiae of agricultural practices and the problems of agriculturists. For understandable reasons, he is put in positions of responsibility in the District and State Administrative systems where he not only dispenses law and order but is the final arbiter on all agricultural problems. This is not a correct way of dealing with agriculture. The administrative problem could be tackled in one of two ways: one would be to give a higher status to the agricultural administrator and rely on him for final administrative advice on agriculture. Another would be to make the Indian Administrators go through specific and intensive training programmes in agriculture.

The question of generalist versus specialist is a vexed one and very often arises from a semantic muddle. One concedes that there is a broad complex of administrative skills which is applicable in various fields. It is at the same

time clear that these are necessary, but not sufficient in themselves for administration in any particular field. The real question is whether in any particular field it is more expedient to develop the general skills in persons already having the requisite technical skills or to develop the technical skills in the generalist. The answer may vary from field to field. On the whole I think (though you, as general administrators, may dispute the point) that it is more expedient to inject administrative skills into the technically skilled personnel. This is particularly true since in rising up the echelons of a technical organisation, people are required to, and do, develop administrative skills. However, I do not wish to go further into this now.

As a matter of fact, today, the top direction of agricultural administration rests largely with generalist administrators. I consider it essential therefore that their training either at the initial or at inter-mediate stage should include an adequate amount of training in certain technical disciplines relating to agriculture.

Let me now turn to the extension services. The primary object of the extension service is to 'transfer' to the agriculturist the fruits of research and the new knowledge that will enable better agricultural practices. We have today a very extensive extension service covering almost every nook and corner of the country, but it is a sad fact that the village agriculturist does not make use of the extension agency to the extent he should for his agricultural practices. He looks on the village level worker with almost amused disrespect. The traditional administrative and social systems of the country and the village level worker have not yet come to terms with each other. The respect with which the villager looks up to the administrative system per se is not evident so far as the village level worker is concerned. Nor is there a friendly atmosphere 'including' learning from the village level worker. This is partly because we have not chosen properly our village level workers, with this objective in view. It is also because we have not trained them adequately to deal with the problems of agriculture. I have been of the view that if the new knowledge has to be transmitted to the agriculturist, the village level worker has to take a very important part in its transmission. It might be necessary to have a careful look into the whole system of recruitment and training of village level workers. May be, we may even have to experiment with a new agency in the form of progressive farmers of the locality who have established good practices and attained good yields in their lands. We could perhaps give them sufficient monetary incentives by ma-

king them sales agents for fertilisers, pesticides etc. in the village. Let me turn to another aspect of the Indian agricultural problem. In my opinion, the history of other countries has shown that the sanctions of authority have limited validity in the sphere of increasing agricultural production. Collectivisation, 'communes' and elimination of Kulaks have proved to be relative failures as tools for developing agriculture.

Intensive farming based on modern science and technology, as distinct from subsistence farming, requires various inputs and investments which in turn need relatively large resources. If a farmer is to be content with living from hand to mouth, then an approach which ignores the monetary incentive may not do much harm. But if there is to be the right attitude on the part of the farmers towards investment in agriculture which is needed if we are to bring about adequate agricultural development, a strong financial incentive is a basic prerequisite. This incentive has to take the form of assuring sufficient returns to investments in agriculture in the same way as we do in industry. The paradox is that in a country which is basically dependent on agriculture, we have no agency to assure an incentive price to agriculture. We have a National Productivity Council which concentrates on problems of productivity for industry; there is none for agriculture. We have a Tariff Commission which sees to it that industry gets a return to cover incentives over and above costs and a system of taxation which takes care of the need for incentives to invest in the industrial sector, and there is a Press to take up their cause if these norms are not observed. But there is no effective fiscal or other incentive for investments in agriculture.

We have to reverse this. If we have to make a break-through in agriculture, we must place it in the centre of our economic activity. We must revise the system of rewards and incentives for the agriculturist. First priority therefore attaches to a system of incentive pricing which will not only take care to see that in a situation of excess supply, the agriculturist gets a minimum support price but also that he will at all times get a price adequate to cover the risks that he takes and the costs of credit for the investments which he makes. It is with this view that Government have now decided to set up an Agricultural Prices Commission which will look into the various costs of inputs which go into agriculture and on that basis work out a set of prices to form an adequate incentive for increased production, by adopting the new techniques.

Equally important—though from a slightly different point of view—would be the revision of

scales of pay and status of the agricultural scientist and the agricultural administrator. The distortion of our priorities is seen in the fact that even in the scale of salaries we are willing to pay an Engineer, a Doctor and Administrator far higher than the agricultural scientist who has to play a most crucial role in the rural transformation that we have to achieve. It is only through a combination of incentives in the agricultural sector that it will be possible to draw the cream of the youth of India into agriculture in the farm, the agricultural colleges and other related institutions so that in the coming years we will have a reservoir of talent to devote itself to the problems of Indian agriculture.

Most of you have administered districts and know the problems of the Indian agricultural society. I myself come from an agriculturist family. Taking only the problem of credit, I know that even today the agriculturist prefers to go to the non-governmental institution for his credit and for his facilities. Why is it that the Indian Government which is supported and sustained by the agriculturist, has not made itself popular as a credit agency with the agriculturist? Take for instance, the cooperative credit institutions; many of our village cooperative institutions are the preserve of the privileged few. They are a closed society into which entry is difficult and even if entry is permitted, influence is restricted. The farmer whose needs are urgent knows that he can get it quicker from a non-cooperative source than from the cooperative credit institution. The money-lender thrives on a situation such as this in which the cooperative agency regards the rituals of form-filling as more sacrosanct than the urgency of credit needs. I have been thinking seriously about allowing the entry and co-existence of a competitive agency to dispense credit for agriculture. Commercial Banks may for instance set up branches in rural areas to give credit without going through the red-tape which now characterises other agencies. The winds of competition may well induce the necessary changes in cooperative credit also.

The pattern of District administration has undergone a subtle change in the last few years, due to the movement for democratic decentralisation. The agencies of decentralised democracy were originally intended to be more efficient instruments of agricultural development—to the extent they have a closer liaison with the people. I am a convinced believer in the ultimate efficiency of such grass-root democracy. But I wonder whether there is anything in the general impression that the agencies of Panchayati Raj have tended to be over-awed and over-impressed by the fasci-

nation of social services—water supply, health and education in preference to agriculture. If there is some truth in this, how are we to create a nexus between agriculture which is essential and social services which are attractive? One way of doing this may be to set village-wise targets of agricultural production and relate certain parts of incentive grants for social infrastructure services—such as wells, health and roads—to the excess achieved over the targets. Such an incentive bonus scheme for agricultural production may be selectively tried in certain package districts to begin with.

You are now going on tour to some of the most important developed countries of the world. The history of the world shows that industrialisation has stood on the shoulders, so to say, of agricultural development. The massive development in the US has been based on agricultural production in that country. Equally, Japan has for instance become self-sufficient in food production during the last 20 years or so after the last world war. It is, therefore, my suggestion that some of you might concentrate on the manner in which these countries have geared their administration and economic institutions for development of agriculture. On the development of agriculture depends the future development of the country. The reorganisation of the administrative system to meet the needs of agriculture is therefore of the greatest importance. Any suggestions and ideas in this regard will therefore be of great help in our national endeavour.

This brief analysis of some of the problems of agricultural development which I have made brings out the fact that careful re-organisation in a variety of areas of activity is necessary for the success of our plans of agricultural development. A new dynamism is needed in our approach to agriculture if agriculture is to be shaken out of its present phase of stagnation. This has to come about through a re-orientation of our attitudes and focus of our plans on the farmer. One has to remember, however, that there can be no push-button solutions to the problems of agricultural stagnation. A dramatic solution, for which we unconsistently search, is a result of our dramatising the present shortages. May be, in the search for a dramatic solution, we have forgotten the role that a patient and well ordered approach to the farmer can play. A long-term plan for agriculture, built round the farmer as the nucleus and implemented with imagination, efficiency and sympathy is the only way in which we can produce the much needed transformation in the countryside. To these tasks, the country must devote its wholehearted attention.

INDUSTRIAL PRODUCTION

INVESTOR'S SUPPLEMENT

Cheerful Trend in August

After a hesitant start, equity values hardened during August with prices showing sizable gains by close. The initial reaction was mainly due to apprehensions about a deterioration in the world political situation following the retaliatory measures taken by the US Government in North Vietnam. Within the country also, there was the fear that labour unrest might take a serious turn in view of the spiralling of the prices of most essential commodities. With no further serious incidents in South East Asia, speculative interest revived and though generally the forward scrip were in demand, towards the close even genuine investors began to show growing interest in industrial equities. The internal price situation however continued to cause concern but the fact that Government had taken concerted steps seemed to have inspired the hope that it would be brought under control before long. The confident undertone that had replaced the earlier depression was the outcome of several favourable developments in the investment situation. In the first place, the Prime Minister's suggestion that stricter standards of priorities should be followed in providing financial allocations to projects and programmes was interpreted bullishly. Evidently, Mr Lal Bahadur Shastri's observation was taken to mean that future policy would reflect a pragmatic approach to problems. In the meantime, steel shares began to receive a good deal

of attention based on the optimistic appraisal of the future of IISCO made by the company's chairman in his statement to the shareholders. Apart from the information vouchsafed by him regarding the commendable progress already made by the company in respect of its expansion programme, there were also encouraging references to what the shareholders might expect in the shape of return on their investments. The Chairman had made it clear that but for the present high incidence of tax on bonus issues the company would have capitalised a part of the large reserves and issued bonus shares. He had also indicated that beginning from the current year, the company would declare an interim dividend. With the steel shares in the lime light, the forward shares in general gained increasing attention from the speculative fraternity. Meanwhile the excellent response to the Unit Scheme and the announcement from the Unit Trust that the price of Units would be increased by 3.5 per cent provided additional incentive for the onward movement of equity prices. The general expectation naturally was that with more and more money coming into its hands, the Unit Trust would perforce have to invest a considerable portion of it in industrial equities. As a matter of fact during the latter part of the month, the Trust did make sizable pur-

chases of first class equities. In later dealings, the market was quite cheerful with trading not monopolised by operators as before: quite a few investors were found to take sustained interest in selected shares, though there was nothing like a buying spree. The speculative elements however found ever increasing indications of a prosperous future. Of these, perhaps the most significant was the report that Mr George Woods, President of the World Bank had assured the Indian Government that the Bank would do its best to help it undertake the Fourth Plan programmes in the confidence that adequate foreign aid would be made available. As it was earlier widely apprehended in the country that the World Bank was likely to apply stricter criteria than hitherto for financial aid, the reported assurance naturally revived confidence. Another persistent report was also responsible for keeping up the bullish fervour. It was reported that the United States Government was giving favourable consideration to a proposal that a part of PL 480 Fund should be utilized toward underwriting industrial enterprises in the private sector. The acceptance of the proposal would greatly strengthen the capital market which had been in decline for a considerable time. The fact that the Government had made some highly significant modifications to the

Bonus Award had caused some relief though Government's decision to accept the recommendation for a minimum bonus was considered to be tantamount to a rise in wages. Sectionwise, despite the hectic rise in the prices of jute goods interest was selective in jute shares. This was because it was apprehended that the unwarranted rise in prices of raw jute and consequently of jute goods would only result in a steep fall in foreign business. Since the jute goods industry is predominantly export oriented, any sizable fall in exports would have disastrous effect on the industry's financial position. Moreover, the foreign consumers are no longer solely dependent on jute goods for their packaging needs. There are paper and other substitutes which are ever ready to fill the gap in the market. Perhaps the most serious competitor of them all is bulk handling which once it is adopted will never again concede ground to jute goods. Apart from the danger of decline in exports of all categories of jute goods as a result of the steep rise in their prices over the few weeks, there was reason for concern over the accumulation of stocks of sacking with the industry. The IJMA had also drawn the attention of the Government to the unsatisfactory state of affairs as regards sacking stocks and had entered a fervent plea for early action to neutralise the advantages now enjoyed by Pakistan in overseas markets.

PNB offers a complete range of domestic as well as international Banking Services through its over 441 offices in India & correspondent Banks throughout the world.

The Oldest Name in Modern Indian Banking

JWT PNB-3175 C

Countless problems facing the manufacturer, industrialist, financier and businessman in general, are daily solved by the Allahabad Bank's specially trained and experienced personnel. As a trusted partner in the country's industrial upsurge, the Bank's contribution in keeping the light of hope alive in the great future of India, is indeed considerable.

Nearing a century of service to the country the Bank's 99 offices are daily adding to the record of progress.

THE inauguration of the Tariff Revision Committee, last week, by the Union Minister of Commerce, marks the first step in the essential task of revision of the Indian Tariff Classification which was long overdue. The need for reform had been indicated from time to time by various Commissions and Committees set up by the Government of India, the most recent among them being the Import and Export Policy Committee which reported early in 1962. The decision to set up a committee to carry out a comprehensive enquiry into the Indian tariff structure and to recommend how it should be modified to suit the country's needs, was taken on March 17, 1964. But it was not till five months later that Government has found it possible to announce its personnel. In view of the complexity of the highly technical task that has been assigned to this Committee, one can only hope that this delay is not an advance indication of the pace at which the Committee will be able to get on with its work.

The existing structure of tariff classifications, which is modelled on the League of Nations Customs Nomenclature, was adopted thirty years ago in entirely different circumstances in regard to both political status and economic development of the country. That in itself is sufficient reason for revision, so that it is not necessary to resurrect the memory of ancient wrongs, real or fancied, to find justification for this necessary exercise.

The main purpose of tariff classification, as then conceived, was to facilitate speedy clearance of consignments through Customs without loss of State revenues. The radical changes in the pattern of foreign trade and the requirements of the economy that have taken place in the last thirty years have led to considerable divergence between the tariff schedule and the purposes it is intended to serve. For instance, many items which are classified in great detail have ceased to have significance in the country's external trade. On the other hand, many items of growing importance are lumped together under the head "miscellaneous", which accounts for about 12 per cent of the total revenue derived from import duties. The introduction of Import Control has also brought up the need for revision of the tariff classification so as to bring it in line with the pattern of the country's external trade. The Import and Export Policy Committee had drawn attention to the difficulties experienced by the trade in clearing goods through the Customs on account

of the differences between the Import Trade Control and Indian Customs Tariff classification. The Committee had also suggested that the adoption of the Standard International Tariff Classification would go far to remove these difficulties.

By its terms of reference the Tariff Revision Committee has been asked to examine the present structure of the Indian Customs Tariff Schedule and, having regard to the international developments and the changed pattern of trade, to recommend whether the Customs Tariff Schedule should be based on the "Brussels Tariff Nomenclature" or other international nomenclature, or whether India may continue to have its separate tariff schedule after making necessary improvement.

The Brussels Tariff Nomenclature was prepared by the European Customs Union Study Group, 1955. It is claimed for this system that it has taken into account the latest technological and commercial developments as well as the common features of the tariff nomenclatures of the seventeen European countries which constituted the Group. For obvious reasons, few in India are familiar with this system of nomenclature, and it is doubtful whether the organisations and individuals who will be called upon to answer the questionnaire which the Committee will be issuing in due course, will be able to assist the Committee by expressing a view on the desirability of adopting this system. The Standard International Trade Classification was prepared by the United Nations Organisation for compilation of national trade statistics on a uniform basis and is in international usage. When undertaking the revision of the Indian Tariff Classification, it will be decidedly advantageous if the new structure conforms, to the extent possible, with the system in vogue among India's major trading partners. The practical course, it appears, would be to take the existing structure as the basis and to modify it, incorporating the necessary changes.

The Minister of Commerce has stressed in his address to the first meeting of the Tariff Revision Committee that the new tariff structure should be designed so as to facilitate the achievement of the goals of economic development which the country has set before itself. The level of duty applicable under the Customs Tariff and the rates applicable to individual items and different groups of products are relevant in this context. The Committee is precluded, by its terms of reference, from the classification of items will itself make a

going into these matters. But the revision of difference in the incidence of Customs duty, and this fact lends point to the Minister's exhortation.

The revision of the Customs Tariff Schedule, as the Minister has explained at great length, is also directly relevant to the expansion of the country's exports. India shares with other developing countries their disabilities in the field of International Trade. In so far as these relate to our trade with countries having free market economies, efforts have to be pursued to remove these handicaps through adjustments of tariff policies. The task of the Indian delegation to the Kennedy Round of tariff talks will be facilitated if it could take up negotiations on the basis of a modern system of tariff classification, tailored to suit the country's requirements at the present stage of economic development.

South Indian Notes

IT is strange that Madras is more or less unruffled by the categorical statement of Mr Sanjeeva Reddy, the Union Minister for Steel and Mines, that the decision on Salem Plant will be taken only by July next. There is nothing strange of course in the Government taking more time than people think necessary for making decisions. But the reasons given for this dilatoriness are really astonishing. It is not long ago that Mr Sanjeeva Reddy said that the location of the steel unit and the choice from among the three places which aspire to it would be made purely on merits and that the manner in which the projects have been worked up in each case would govern the choice. By those tests, Salem can hardly be said to have a rival in Hospet or Vishakapatnam as little or no preliminary investigation has been carried out in the last two cases while Salem has gone to a state of actual blueprint. In the light of these facts, if the Union Minister is anxious to put Salem on a par with the other two centres, it can hardly be said to be the mark of an open mind. Rather, he may be said to ask Salem to mark time while its rivals are given time to come limping behind it to catch up with it. Madras has had a see-saw of fear and confidence about the prospects of Salem Steel being adopted as a Plan project. But the latest of the dampers is the worst. If Madras is not perturbed, it is probably relying on the indubitable merits of the project as worked up by Messrs Dastur and Company.

The food situation shows some signs of deterioration. Mofussil cities have in the past suffered less from shortages than metropolitan if only because of their location in the midst of an agricultural area and the relatively small size of the demand. But that circumstance does not appear to have availed them much. The reasons are difficult to spot. For one who has a horror of dogmatic assertions without sufficient warrant in ascertained facts, it is hardly possible to state any reasons for the present position in any precise terms. Yet one cannot overlook the fact that hardly any one is inclined to admit any paucity of stocks. In fact, most people are positive that stocks are not lacking but that price fixing and the vigorous steps taken to apprehend and punish those who sell at higher than stipulated price would mean unsupportable losses. And it is no use—let alone the injustice of it—to expect

such people to part with their goods on these terms. Perhaps, provision for a short period of transition with suitably higher prices might have prevented the freezing of stocks that appears to have occurred. The agriculturists themselves must be unaffected. In fact, it is said that most of them are on velvet, so much indeed that some of them not only hold on to their stocks but are indifferent to raising a second crop!

Nationalisation by State Governments—which is an anomaly because no one State in India can constitute the whole nation—makes for an uneven performance which is a great drawback. The results of State Transport in Andhra Pradesh which have been recently published compare poorly with those of its opposite number in the neighbouring State of Madras. That by itself is a grave enough indictment, because State Transport in Madras has balanced its budget at the expense of the domestic budgets of countless individual families in the city. But it has to its credit a fine service of long distance runs from various corners of the state. It is so successful that the Southern Railway has thought it necessary to run diesel coaches to protect itself from a too serious deprivation of passenger traffic. The General Manager made pointed references to this in a recent press conference and apparently contemplates further development on the same lines. But in Andhra Pradesh, the State Transport has an inadequate and perhaps overaged fleet service, which causes inconvenience to the public and pecuniary losses to the State. The record of the TVS in Madras shows that handpicked licensees can succeed.

Kerala has again proved a headache to the party in power at the Centre. In the past, the Congress leaders had proved equal to the different situations which the Kerala politicians created at different times. They even gave a trial to a Communist Government in the State, a democratic front to prevent its recurrence, various subterfuges to put troublesome men out of their way. The situation was never quite out of hand. But now all the efforts of the leaders have been of no avail to keep the dissident Congress members from voting with the opposition on the no-confidence motion. Their expulsion from the Congress for six years was the least that could be done, consistently with the prestige of the great organisation. But the final and abiding solution lies in the ability of the Congress to win the next elections and beat all its rivals out of the field. Can the Congress do it? It would be foolish to try to frame an answer, because a new general election is just the kind of catalyst that aggravates and quickens the changes in miscellaneous political groupings. The basic fact about Kerala, viz., the enormous pressure of population on the slender means of subsistence, is indeed the most powerful factor. And Congress is no nearer altering that fact favourably than any other party.

INDIA-MALAYSIA

Economic Cooperation

EARLY start of top level talks on economic relations between India and Malaysia has been forecast by Mr T. T. Krishnamachari, in a luncheon speech to the Selangor Indian Chamber of Commerce. In this context the

Finance Minister has also referred to the existence of factors which provide a favourable basis for the development of economic relations to mutual advantage. As Mr Krishnamachari has pointed out, Malaysia has a large population of Indian origin. But a similar situation in other neighbouring countries has, however, not been exactly helpful in fostering closer economic ties. On the contrary it has provided opportunities for friction and misunderstanding which the Government of India has tried to resolve by turning a blind eye on the hardships of Indian nationals abroad. The distinctive feature about Malaysia, which encourages hope for the future, is the political structure which has enabled people of Indian origin to become part of the new nation. The President of the Chamber of Commerce has borne testimony to the fair and equitable treatment accorded to people of Indian origin.

Apart from the common political ideals which inspire the people in authority in the two countries, similarity of the problems they have to face should bring them closer together in the search for solutions. In working out a democratic system of Government in a multi-racial society, Malaysia is entitled to the unreserved support of all those who hope for progress and prosperity in this part of the world. There is, therefore, reason to feel gratified that the Government of India was represented at the Malaysian Day celebrations by Mr T. T. Krishnamachari who could be depended upon to give expression to the friendly feelings that the Indian people have for Malaysia, without being inhibited by considerations of diplomatic strategy.

While the circumstances are thus favourable for the initiation of talks, it should be remembered that trade cannot be built up merely on the basis of friendly sentiments. Despite the favourable factors briefly indicated above, and the long history of trade and cultural contact extending over two thousand years, India comes very low in the list of Malaysia's trading partners, far below Indonesia. India's trade has ranged between two and three per cent of Malaysia's total trade as compared with Indonesia, which, in 1962 supplied 12 per cent of the imports into Malaya and as much as 19 per cent of imports into Singapore.

The economic unification of the territories comprising Malaysia will have far reaching consequences for the economy of the region including its trade with India. The Agreement which ushered in Malaysia provides for the progressive establishment of a Common Market with a common external tariff. According to the recommendations of a World Bank Mission which was requested by the Governments of Malaya and Singapore to report on the Malaysian Common Market arrangements, Singapore will continue to be a free port for the next twelve years, with varying degrees of restrictions coming into effect five years after the formation of Malaysia. The entrepot trade, presumably, will be preserved beyond that date by the formation of free trade zones. But Penang and Lebuan cease to be free ports. A Tariff Advisory Board has also been set up to advise to Federal Government on the extension of protective tariffs, introduction of new tariffs, changes in existing rates, and other related matters.

Despite its happy foreign exchange position, it is felt that Malaysia may have to exercise greater control over imports as part of development plants and the direction of the trade will naturally be influenced by the sources from which assistance is available for indus-

trialisation. The problem of India's economic relations with Malaysia were reviewed at a recent Seminar held in Madras which was inaugurated by Mr S. V. Ramaswamy, Union Deputy Minister for Commerce, on 23 July. One of the suggestions that emerged out of the discussions was to the effect that India should consider entering into a long term trade agreement with Malaysia, indicating the level of trade to be attained between the two countries during the successive years of the trade agreement, with payment arrangements to be settled either in Malayan dollars or in blocked sterling account.

For the establishment of economic relations on a firm basis, it will be necessary to look beyond the narrow confines of trade policies. The different constituent units of Malaysia have drawn up development plans for the diversification of the economy and to reduce the dependence on a few vulnerable exports. There is need for a comprehensive economic cooperation agreement covering, besides trade, questions of technical and industrial collaboration and joint ventures. There are several ways in which India, despite its handicaps, could assist in the industrialisation of Malaysia, such as, for instance, in providing 'in-plant' training and educational facilities, technical assistance in the establishment of industries, particularly in the small scale sector, and through collaboration in joint ventures. But the primary requisite will be the provision of the institutional basis for economic cooperation. The formation of an Indo-Malaysian Development Corporation on the model of the South East Asia Development Corporation has been suggested, and may be considered in the forthcoming talks. The impact of present tariffs and trade policy of Malaysia on Indian exports may also be usefully examined in this context.

Aluminium Industry

THE need for bringing about a rapid development of the aluminium industry gains special significance in India in view of the country's meagre resources of non-ferrous minerals. Even otherwise, the demand for the versatile metal is increasing fast because of its many and varied industrial and other uses. Latterly, it is much in demand as import substitution has become necessary in the context of continued stringency of foreign exchange. Considering the fact that commercial exploitation of aluminium elsewhere in the world is comparatively of recent origin—world production amounted to only about 850,000 tonnes in 1945—the progress of the industry in India so far must be considered to be quite impressive. Production of aluminium as late as 1951 was less than 4,000 tonnes but since then output has been rising steadily with the pace quickening since 1959 when output more than doubled. Development of the industry has been quite rapid during the past few years as the installed capacity has increased to 53,800 tonnes in 1963 from 17,800 tonnes in 1960. Production during the same period increased from 19,247 tonnes to 55,223 tonnes. There are three units manufacturing primary aluminium now in the country. There are 11 manufacturers of semis including 2 primary producers and their aggregate installed capacity has increased from 19,000 tonnes in 1960 to 26,200 tonnes in 1963.

Production of sheets and circles has risen from 15,788 tonnes to 21,350 tonnes. Besides these there is one unit manufacturing foils and container sheets and this unit has increased its capacity from 2000 tonnes to 3000 tonnes. Production of foils increased from 2,426 tonnes in 1960 to 2,578 tonnes in 1962. There has however been a small decline last year to 2,420 tonnes. Within the next two years further sizable capacity will accrue around since licenses have already been granted for additional capacity of 60,000 tonnes ingots, 22,860 tonnes rolled products and 4,200 tonnes foils.

Even with the additional capacity that may accrue in the next few years, domestic production will still lag behind demand. For according to the estimates of the Directorate General of Technical Development demand will go up to 115,000 tonnes in 1964, 125,000 tonnes in 1965, 145,000 tonnes in 1966 and 170,000 tonnes in 1967. It will be evident therefore that unless the industry is enabled to take further big strides in the coming years, the goal of self-sufficiency will elude us even after the Fourth Five Year Plan which is bound to push up the demand for the metal considerably what with its intensified programmes of economic development of the country. It is however gratifying that the Union Ministry of Steel and Mines is taking active steps not only to increase the production of the metal in the short term but also to attain self-sufficiency by the end of the Fourth Plan. The short-term programme envisages the expansion of capacity in two of the existing units and the setting up of three additional plants. These three units are Koyana Aluminium Corporation (25,000 tonnes), Mysore Aluminium project (30,000 tonnes), and the Korba project (30,000 tonnes). The Ministry is said to be aiming at a production of 300,000 tonnes by the end of the Fourth Plan so as to have a surplus for export as the anticipated internal demand by 1970-71 is placed at 260,000 tonnes. An idea of the potential demand for aluminium in a developing country like ours can be had from a comparison of India's present per capita consumption of the metal with that of other industrially advanced countries. As against India's per capita consumption of 0.09 kg, US has a per capita consumption of 12.2 kg with the UK's at 6.9 kg. Most European countries have a per capita consumption ranging from 2 to 6 kg.

If the industry had been able to make commendable headway so far it is largely because it has been enjoying tariff protection for the past 15 years. The current term of protection is due to expire on 31 December 1964 and the industry has represented to the Tariff Commission which is currently enquiring into the question of continuance of protection to the industry beyond 31 December 1964, that it will continue to need the concession in view of the fact that it is still in a developing state. In the first place, cost of production of aluminium in India is much higher (30 to 40 per cent) than in the competing countries, mainly because of two factors. For the aluminium industry electric power is more a raw material rather than a facility because of the enormous quantities of power consumed in the process of its manufacture. Unless power is available at a reduced cost final cost of production will inevitably be high. But the aluminium industry in our country has to pay a high price for power as compared to manufacturers elsewhere in the world and moreover, there is no uniformity in power rates in different States. It is essential that cost of power should be cheap and also uniform throughout the coun-

try so as to avoid distortion in the cost of production of different producers. But the prospects for uniform power rates do not seem to be bright as there are obvious difficulties which have been detailed by the Tariff Commission during the course of the public enquiry. For one thing, the State Electricity Boards are independent entities and are unlikely to agree to charge concessional rates for a particular industry and for another the cost of power generation varies from State to State. The suggestion that power for the aluminium industry should be subsidised did not find favour with the Commission. The second important factor that goes to inflate domestic cost of production of aluminium is the uneconomic size of the plants in India. In other countries plants of 100,000 tonnes are common and this enables the industry in those countries reap in full the economies of scale. The problem has now received due recognition and during the public enquiry the representatives of the DGTd have indicated that the optimum size of a plant is around 25,000 tonnes.

According to the producers, the profitability of the industry depends to a considerable extent on the fabricating capacity that is allowed to primary producers. Under present dispensation the main producers are allowed to fabricate only 30 to 40 per cent of their production. It has been pointed out that there should be no such restriction. But this is strongly opposed by small re-rollers who want the producers to confine their activity to the production of ingots only, leaving fabrication to the re-rollers. In this regard the All India Non-ferrous Metal Industries Association has complained that the present scarcity of ingots is largely due to the fact that the primary manufacturers have been given large fabrication facilities and has suggested that the interests of existing fabricators who are not producing the prime metal should be duly safeguarded in any future scheme of protection to the aluminium industry.

Other problems confronting the industry concern raw materials and freight. The Railway Board has already effected a 10 per cent reduction in the freight rate on alumina but the producers are of the opinion that the freight should be the same as on other industrial raw materials such as pig iron. According to the manufacturers, the present concessional duty on imports of alumina should be continued beyond December 1964 as imports of alumina are unavoidable because there is a time lag between the commissioning of smelter capacity and alumina plants. This view is also reinforced by the opinion of the DGTd representative who has pointed out that it will be cheaper to import alumina than to finish aluminium in the country. On the question of prospecting rights for bauxite, the main raw material for the industry, the manufacturers have entered a plea for better facilities for them. At present, the granting of prospecting rights vests with the States who reserve the right to themselves or lease them out to others not concerned with the aluminium industry. In regard to the supply of other raw materials such as caustic soda, and petroleum coke also the industry is not placed in a comfortable position. The consumption of caustic soda is steadily increasing not only because of higher production but also due to the low-grade bauxite and the high silica content in it. As regards petroleum coke, it is partly being imported and the manufacturers have suggested that its production should be taken up at the petroleum refinery to be set up in Madras.

World of Finance

BANK RETURNS

Sharp Rise in Centre's Balances

TAX payments due in early September, combined with the demand for funds owing to month-early disbursements, have made their full impact felt upon the latest banking returns.

According to the returns of the Reserve Bank for 4 September Active Note circulation has risen by Rs 17.37 crores to Rs 2,407.49 crores, and there has also been outflow of Rupee Coin in the considerable amount of Rs 2.36 crores. Foreign Securities are unchanged at Rs 85.46 crores, and with minor adjustments Rupee Securities are shown at Rs 2,115.93 crores. The result is that the Reserve Bank's cash in the till has been drawn down by Rs 19.68 crores to a shade under Rs 18 crores.

Tax receipts obviously in the main account for the rise of Rs 38.44 crores to Rs 134.65 crores in the Centre's balances; and it is possible, furthermore, that the Centre instituted reverse ad hocs—that is, cancellation of ad hoc Treasury Bills before their maturity—for about Rs 14 crores, this being the magnitude of the decline in Investments, now at Rs 177.34 crores. Another source for the Centre's large receipts during the week under review may have been the American Embassy, which may have made over Rs 17 crores of Public Law 480 counterpart funds; this is suggested by the decline of similar size in Other Deposits.

Drawals on bank Deposits by constituents are reflected in the fact that Scheduled Banks have borrowed Rs 3.17 crores more from the Reserve Bank at Rs 5.23 crores; this, however, is offset by the rise of Rs 3.25 crores to Rs 95.16 crores in their Reserve Balances. But since the Reserve Bank's portfolio of Treasury Bills purchased and discounted is marked up substantially by Rs 42 crores at Rs 195.02 crores, we must have regard for the possibility of Scheduled Banks in this wise

replenishing their resources: the State Bank in fact has disinvested for Rs 8 crores during the week under review.

Balances Held Abroad have improved by Rs 2.19 crores to Rs 12.34 crores—due no doubt to further receipt of untied foreign aid.

The impact of tax payments is abundantly clear in the return of the State Bank for 4 September. Deposits have been marked down by Rs 13.07 crores to Rs 658.90 crores, and the total of Advances has crept up by Rs 2.87 crores to Rs 343.34 crores. Of course, it needs to be added that part of the pressure upon resources would have stemmed from the demand for money occasioned by beginning of the month disbursements. The State Bank has perforce disinvested, its giltedged portfolio being marked down by Rs 8 crores at Rs 297.14 crores. As a consequence, cash balances, including money at call and short notice, are lower by Rs 2.94 crores at Rs 28.60 crores.

The statutory statement of Scheduled Bank for 28 August again records an inflow of new resources. Net Demand Deposits have improved by Rs 4.85 crores to Rs 1,271.43 crores, and net Time Deposits by Rs 3.77 crores to Rs 1,406.31 crores; of the accretion of Rs 8.62 crores, an element of a little less than Rs 1 crore is attributable to the State Bank. The total of Advances is slightly higher by Rs 4.88 crores at Rs 1,734.45 crores, and here, too, the share of the State Bank is a little less than Rs 1 crore. Giltedged investments have been added to by the very considerable amount of Rs 28½ crores to be placed at Rs 803.68 crores, and a little more than half, in this case, is the share of the State Bank. Borrowings from the State Bank are up by Rs 3.14 crores at Rs 32.02 crores, and indebtedness to the Reserve Bank is slightly higher, by Rs 0.13 crore, at Rs 1.91 crores. As a consequence, cash balances, including money at call and short notice, have been steeply drawn down by Rs 21.04 crores to be shown at Rs 217.14 crores, and the State Bank's share in this regard is a little less than one-third of the decline.

UNIT TRUST

Further Clarification

Enquiries are being made by unit holders regarding the issue of unit certificates by the Unit Trust of India. The position in this regard needs clarification for general information.

The number of applications for units received by the Trust from 1 July to 14 August 1964 has exceeded 100,000. The work of classification and registration of the applications and issuance of unit certificates to unit holders has been taken in hand. Some of these processes have been mechanised. Every effort is being made to speed up the work and it is expected that the mailing of the unit certificates will commence after about a month and all applicants who have purchased units in the initial sale period will be in receipt of the certificates in about two months from now. Till the unit certificates, which will be sent by the Trust by registered post direct, are received, unit holders are advised to preserve the acknowledgments issued to them by the banks.

It may also be stated for general information that the sale price of units which is determined daily and announced by the Trust is publicised through the Daily Commercial News Bulletins broadcast over Bombay, Calcutta and Madras stations of the All-India Radio. By arrangements made with the Press Trust of India, the prices are also being published daily in the leading newspapers all over the country. The Trust is seeking further co-operation of all the newspapers in ensuring a wider dissemination of the sale price of units.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 8 September, 1964. Total amount offered was Rs 4,00,00,000. Tenders at Rs 99.400 per cent were allotted 50 per cent. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2,400 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday, 14 September, 1964. Successful tenderers should make payment on Friday, 18 September, 1964 at all centres. Other conditions are as usual.

During the week ended 4 September, 1964, Government of India Treasury Bills for Rs 18,41,00,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 9 September, 1964 to 12 September, 1964 at Rs 99.416 per cent. Sales can be stopped at any time without notice if Government think it

Notes of the week

WEDNESDAY

THURSDAY

LAND REFORM

Orthodoxy Reaffirmed

The Planning Commission, apparently, has found it expedient to clarify its position regarding land reforms. The remarks reported to have been made by Mr Shriman Narayan at the recent FICCI conference on Agricultural Development had roused premature hopes among spokesmen of landowners of a moratorium on land legislation for a period of ten years, an idea which was enthusiastically endorsed by speakers at the conference. The enthusiasm evoked by a misunderstanding of what Mr Shriman Narayan wanted to convey has evidently caused some uneasiness in the Planning Commission which, hitherto, has functioned as cheerleader for land reforms. The Commission has also, at regular intervals, deplored the slow progress in the implementation of reforms which most States had enacted under its instigation.

IMPORT POLICY

Strategic Imports

It will not be realistic to look forward to any radical changes in import policy following the meeting of the EXIMP Council scheduled for the week-end. The outlines of the policy have become fairly firmly established in the course of the last few years of continuing foreign exchange shortage. Despite increased exports, the position of the foreign exchange reserves offers little encouragement to hopes about a more liberal policy during the coming half-yearly licensing period. Nevertheless, it should be evident to those in authority that the level of production and, as a result, the level of export earnings, could be jacked up by greater attention to what may be described as 'strategic' imports. The need to provide foreign exchange for larger imports of fertilisers has been recognised by the Government, though rather late in the day. The completion of large irrigation projects, which are equally important for increasing the agricultural production potential, could be speeded up if some means could be found to make the necessary supplies of cement available in time. The projects should not have to wait until cement units in the public sector, under the proposed cement corporation, go into production.

What we could reasonably expect as a result of the deliberations of the EXIMP Council are some minor adjustments of import quotas to suit the changing patterns of production and, possibly, removal of procedural bottlenecks. Government has already announced its decision on the Swaminathan Com-

mittee's recommendations on procedural changes. A start with regard to implementation is overdue. Industry will also greatly appreciate the change, if annual licences for import of raw materials like non-ferrous metals are issued at the beginning of the licensing period when the prices of such commodities in foreign markets are most favourable.

RUPEE LICENCES

Too Costly

A review of the A. C. licences issued for import of industrial materials and machinery from East European Countries against rupee payment will also be in order. It has been the experience of many manufacturers, particularly in the engineering industries, that, though it is comparatively easy to secure licences for import of items like steel plates, stainless steel sheets, etc., from East European countries, to secure the goods is a far more difficult proposition. In most cases licences are infructuous as the countries concerned are not in a position to supply the goods required. This involves considerable delay and consequent loss of production, as the manufacturer has to go through the drill for securing a licence for importing the commodities from other sources.

The difficulties of the Tea companies merit special attention in this context. Nothing is achieved, except waste of time, by asking Tea companies to secure their requirements of machinery from East European countries. The companies naturally prefer to get their requirements from the sources from which they used to get them in the past. The machinery from East European countries is often found unsuitable for tea gardens and there are also no arrangements for after sales service. The companies are obliged to waste considerable time, investigating prospects of supplies from East European countries, before their applications for licences from the normal sources become eligible for consideration. The least that an important export earner like the Tea Industry is entitled to is an assurance that its efforts to step up production and export earnings will not be neutralised by unnecessary delays in getting the required plant and equipment.

COTTON TEXTILES

Rise in Exports

The latest official figures indicate that there has been a notable increase in exports of cotton textiles during the first seven months of this year. While the quantum of exports is estimated to have surged to 357.29 million yards from 309.85 million yards in the relevant period in the preceding year, the price realised has smartly jumped up to Rs 31.15 crores from Rs 23.47 crores. The spectacular spurt in foreign exchange earned through cotton textile exports can be ascribed mainly to the general buoyancy in the world markets and the diversification of our exports. Similarly, the upswing in exports during the period under review can be attributed partly to the stepped up shipments of cloth to the UK in April and May.

A region-wise break up shows that Europe has accounted for nearly half of the piecegoods exported from India. Its share of offtake almost doubled to 172 million yards from 98.25 million yards during the first seven months of the current year. The price reali-

sation did not appreciate on a commensurate level as it is provisionally placed at Rs 11.51 crores against Rs 8.17 crores in the corresponding period of the preceding year. Furthermore, it is shown that European countries provide a larger market for grey piecegoods and non-grey fabrics. It is significant to mention in this connection that nearly 42 per cent of our non-grey cloth exports is absorbed by Asia and Europe.

A close scrutiny of the trend in exports discloses that markets in Europe offer enormous opportunities for expanding exports of finished and processed goods. The setting up of the Saraya Committee to introduce strict quality control in cotton textiles and to formulate ways and means for enlarging exports of cloth from India is a happy augury for stimulating our exports to these destinations.

NON-FERROUS METALS Need for Stable Policy

With the progress of industrialisation, the non-ferrous metals industry will be called upon to play an increasingly important role as a supplier of basic raw materials for various industries. Already it has built up considerable capacity and it is estimated that the value of its annual production is around Rs 125 crores. Further progress of the industry is however conditioned by the availability of the base metals such as aluminium, copper, zinc and lead. But present production of these metals in the country is inadequate and large scale imports are becoming increasingly untenable on account of the persistent shortage of foreign exchange. Another difficulty is that except in the case of aluminium, the scope for indigenous production of base metals is limited by the paucity of much proven deposits. The problem is now being tackled by intensifying the search for new deposits by expediting the working of proven deposits and by substitution. The fact that there are extensive bauxite deposits in the country offers a partial solution to the problem as aluminium can be substituted for other base metals in quite a large number of cases. With a large supply of aluminium, use of such scarce non-ferrous metals as copper and zinc can be restricted to only very exceptional cases, where substitution by aluminium is impracticable. But the fact of the matter is that aluminium supply is far from adequate and the hope that the availability of this versatile metal will sizably increase during the current plan period is receding on account of

Exports Up by 13.7 Per Cent in 1st Quarter of 1964-65

Exports during the first quarter of 1964-65 have recorded a rise of Rs 24.51 crores as contrasted with the relative figures for the relevant period of the previous year. Exports of almost every Section have moved up with the only exception of Animal and Vegetable oils and fats, which are placed lower by Rs 2.91 crores at Rs 2.98 crores.

Smart improvements are indicated by the following:

Food, higher by Rs 5.27 crores at Rs 53.47 crores, thanks mainly to higher exports of fruits and vegetables which accounted for earning Rs 8.82 crores against Rs 6.93 crores, increased exports of coffee, tea, cocoa, spices and manufactures thereof to Rs 20.68 crores from Rs 18.91 crores and a step up in exports of feeding stuff for animals (not including unmilled cereals) to Rs 8.94 crores from Rs 7.89 crores.

Crude Materials, inedible,

except fuels, drawn higher by Rs 2.57 crores, benefited by an increase of Rs 2.26 crores to Rs 13.70 crores from metalliferous ores and metal scrap.

Finally, Manufactured Goods classified chiefly by material, up by Rs 15.27 crores; responsible for this striking surge is an improvement of Rs 11.00 crores to Rs 72.22 crores in the earnings of textile yarn, fabrics, made-up articles and related products.

We have indicated in our issue dated 22 August (page 353) that imports in the first quarter of 1964-65 were marked lower, as compared with the preceding year, by Rs 37.79 crores at Rs 272.38 crores against Rs 310.17 crores. With the rise in exports besides, the balance of trade deficit in the first quarter of 1964-65 stands sizably reduced at Rs 68.79 crores against the gap of Rs 131.09 crores in the same quarter in 1963-64.

EXPORTS	(In Rs Crores)		
	April to June 1964	1963	Change
Section 0—Food	53.47	48.20	+ 5.27
Section 1—Beverages and Tobacco ...	10.46	8.60	+ 1.86
Section 2—Crude Materials inedible, except fuels	34.71	32.14	+ 2.57
Section 3—Mineral Fuels, Lubricants and related materials	3.48	2.71	+ 0.77
Section 4—Animal and Vegetable oils and fats	2.98	5.89	- 2.91
Section 5—Chemicals	2.10	1.76	+ 0.34
Section 6—Manufactured Goods classified chiefly by materials	88.77	73.50	+15.27
Section 7—Machinery and Transport equipment	1.91	1.35	+ 0.56
Section 8—Miscellaneous Manufactured articles	4.37	3.99	+ 0.38
Section 9—Miscellaneous Transactions and Commodities, NES	1.34	0.94	+ 0.40
Total ALL SECTIONS	203.59	179.08	+24.51

the poor progress so far made in augmenting the indigenous production of aluminium. The shortage of aluminium is adversely affecting the rollers and other fabricating units.

The importance of the non-ferrous metals industry also springs from the fact that it is showing good promise as a foreign exchange earner. According to Mr H. K. Shah, president of the All India Non-ferrous Metals Industries Asso-

ciation, though belated, is to be welcomed as it will be able to bring in better coordination in the production and distribution of oil in the public sector and is expected to reduce operational cost to a considerable extent. Even though the Estimate Committee has recommended "one organisation at the top to coordinate the activities both of production and distribution, as in the case of some well known concerns like ENI, the state owned oil organisation in Italy", the merger has been delayed obviously due to procedural difficulties and allied factors.

The newly created Indian Oil Corporation will have two divisions—the Marketing Division and the Refineries Division. The Marketing Division, which will handle the entire output of public sector refineries and also the products from Cochin refinery which is now under construction, will have its headquarters in Bombay. Aside from this, the Marketing Division will also continue to carry out the distribution of imported petroleum products and mobil lubricants. The Refineries Division, with its headquarters at New Delhi, will manage the public sector refineries at Gauhati, Barauni and Koyali. This apart, the Division will be in charge of the product pipeline project which has been initiated with a view to effecting economic and smooth movement of petroleum products from the refineries to the far-flung consuming centres.

The Corporation is expected to effect considerable economy by eliminating duplicate taxes, improving general efficiency and the like. But viewed in the context of the general complaints about the working of public sector undertakings there is little room for taking a complacent attitude in this regard.

INSTRUMENTS Bright Future

A bright future awaits the instruments industry but its pace of growth will largely be governed by its ability to meet not only the increasing domestic demand but also the changing requirements of consumers. As yet the annual value of production of instruments in the country is around only Rs 12 crores as against an estimated demand of over Rs 70 crores by the end of the current plan and Rs 120 crores by 1970-71. The main obstacle in the way of a rapid development of the industry is the peculiar pattern of demand it has to cater to, which while being large is spread over a number of items, the demand for most being small. As a result large scale units have become untenable and the industry has inevitably to be made up of a number of small scale units. Since they have to manufacture a wide variety of instruments which also undergo frequent modifications in keeping with the latest developments in science and technology, the small units which have necessarily limited facilities for research cannot be expected to make much

headway singly. A way out of the difficulty is to follow the example of similar manufacturers in other countries where they have built up common facilities for research. This practice can be emulated with profit in our country especially since the nascent instruments industry has already demonstrated that given adequate facilities it can take rapid strides toward making the country self-sufficient in instruments. The fact that already it is making a contribution, though small, to the export earnings of the country points to the widening scope of the industry. Apart from exports to neighbouring countries, markets for our instruments, specially those of a simple type, can be developed even in the developed countries because they seem to confine their attention to the manufacture of complicated instrument. But as Mr Manubhai Shah has pointed out the other day while inaugurating the export organisation for the instruments manufacturers and dealers successful export effort will require careful selection of products meant for export and rigorous quality control.

PAKISTAN Rs 5200 Crore Third Plan

The outline of Pakistan's Third Plan released last week envisages a gross development expenditure of Rs 5,200 crores; Rs 3,400 crores in the public sector and Rs 1,800 crores in the private sector. The proposed outlay is thus more than twice as in the Second Plan which had an outlay of Rs 2500 crores. A significant feature of the Third Plan is that it is the first to be formulated within the framework of a long term strategy covering the twenty year Prospective Plan 1965-85. The main objectives of the Prospective Plan are doubling of the per capita income by 1985, attainment of full employment during the next 20 years, complete elimination of disparities in per capita income between East and West Pakistan, achievement of universal education up to the lower secondary level and the elimination of the dependence on foreign assistance and the attainment of a self generating economy.

Over the five year period from 1964-65 to 1969-70, a minimum increase of 30 per cent in national income is envisaged. It is however indicated that it may be revised upward before the Plan is finalised. Such optimism stems from the fact that the rate of growth of national income during the Second Plan has been faster than earlier estimated. In the first four years of the Second Plan, national income increased by about 22 per cent or over 5 per cent per annum. The target of increase of national income in the Second Plan is 24 per cent and it can be safely concluded that for the full

plan period, this target will be exceeded because a minimum increase of 26 per cent is considered almost certain. Another salient feature of the Third Plan is its emphasis on the fullest exploitation of resources with a view progressively to reduce the dependence on foreign assistance. According to present estimates total resources are placed at Rs 4550 crores including additional taxation of Rs 300 crores and deficit financing to the tune of Rs 150 crores. The absolute level of foreign assistance is expected to increase from Rs 50 crores per annum at present to roughly Rs 60 crores per annum. Even so, that dependence on foreign assistance will be reduced will be evident from the fact that the proportion of foreign financing will decrease to approximately 36 per cent in the Third Plan from 42 per cent in the Second Plan. Such a reduction in external resources has been made possible by the satisfactory growth in exports.

Export earnings during the Second Plan averaged a rate of growth of 6 per cent. This is to be raised to 7.5 per cent during the Third Plan. Together with import substitution, the increase in export earnings envisaged is expected to account for the 6 per cent reduction in internal resources.

The leading sector continues to be industry with a share of 29 per cent in the total outlay and this is considered inevitable because of the need to ensure high growth rates and a reduction of dependence on foreign assistance. But this does not mean that agriculture has been given secondary importance. For, the plan proposes to increase foodgrains production by about 25 per cent compared to an estimated increase of 14 per cent in population. An important objective of the Third Plan is the reduction of regional disparities. It is with this view that East Pakistan has been allocated 53

per cent of the Government financed programmes and 52 per cent of the total outlay. As is to be expected the Plan has also laid emphasis on increasing employment opportunities. It aims to create 4.5 million new jobs as against an expected addition of 4.2 million to the labour force.

The confidence that a Rs 5,200 crore Plan can be undertaken has evidently stemmed from the resounding success that has attended endeavours during the Second Plan period. It is expected that many of the Second Plan targets will be overfulfilled. Some of the striking achievements of the Second Plan are the increase in the average growth rate of GNP to 4.8 per cent from 2.5 per cent in the past, an average rate of growth of 6 per cent in exports which is twice the Plan target, an average growth rate of 3 per cent in agriculture as compared with 1 per cent in preceding years and the fast growth of the industrial sector.

YOU CAN COOL
A WHOLE
FLOOR
OR AN ENTIRE
BUILDING

WITH BLUE STAR-
WORTHINGTON
PACKAGED
AIR CONDITIONERS
5, 7½, 10 TONS

Give yourself a package deal. Buy comfort with Blue Star-Worthington Packaged Air Conditioners.

These versatile units may be used free standing or with ductwork. Individually they can cool from 1500 to 3000 sq. ft. of floor space; in multiples they form large tonnage central systems to cool a whole floor or an entire building effectively, economically, efficiently.

They offer you the added advantage of flexibility—you can add more units with minimum alterations, as your needs increase.

Blue Star-Worthington Packaged Air Conditioners are ideal for offices, banks, restaurants, canteens, clubs, showrooms, shops, stores... For your next air conditioning job, call in Blue Star.

IMF

IBRD

IDA

Annual Reports for 1963-64

Annual Reports for 1963-64 of the World Bank and its affiliates, International Development Association (IDA) and the International Finance Corporation (IFC), has been presented this week at the Annual Meeting of the Board of Governors in Tokyo, Japan by Mr George D. Woods, President of the three institutions. The record of Bank and IDA operations is contained in a joint publication, while those of IFC are reported separately.

For the second year in the Bank's history, economic development commitments were made in excess of \$1,000 million in loans, credits and investments. The total comprised \$810 million in Bank loans, \$283 million in IDA credits and \$21 million in IFC loans and equity commitments.

Two developments were reported which foreshadowed higher levels of activity by IDA and IFC. Formalities have been completed for the replenishment of IDA's resources through new contributions from 18 of the wealthier nations to aggregate more than \$753 million. The new funds will be payable to the Association over a period of three years instead of five, as in the case of the original subscriptions.

In a report to the Governors on the allocation of net income, which totaled \$97 million for the year, the Executive Directors found that only \$47 million was required for reserves and that amount has been applied to the Supplemental Reserve, increasing it to \$605 million. They proposed that the balance of \$50 million which otherwise would be available for distribution as a dividend, instead be transferred to IDA in the form of a grant.

By the time the replenishment of IDA's resources became effective toward the close of the fiscal year, the Association had committed all of the funds available to it up to that time, totaling \$782 million. As the Annual Report indicates that figure will rise to \$1,540 million when all replenishment contributions have been made.

The Governors also had before them a proposal to amend the Articles of Agreement of the Bank and IFC to make it possible for the Bank to lend to the Corporation for relending to private industry in the less developed countries. Bank itself is not authorized to lend directly to private companies except with a guarantee by the host government, which private entrepreneurs often hesitate to seek or accept and governments are often reluctant to grant. IFC neither seeks nor accepts government guarantees. If the proposal is approved, IFC's potential for the stimulation and

support of private enterprise development will be substantially expanded, since IFC would be empowered to borrow from the Bank not more than four times its capital and surplus. IFC would thus have access to additional resources to increase its present activities, to make loans with no equity features when appropriate, and to enter into larger commitments than its present resources permit.

WORLD BANK AND IDA REPORT

The Annual Report for the World Bank and IDA lists 27 Bank loans and 18 IDA credits in 34 countries. As in other recent years, the heaviest volume of lending was in Asia and the Middle East, which accounted for more than \$527 million. Total loans and credits in the Western Hemisphere were approximately \$269 million, in Europe \$145 million, in Africa \$111 million and in Australasia \$40 million. Most European lending was in Portugal, Spain, Yugoslavia, and in three Scandinavian countries.

The Bank's 37 loans included its first loans in eight countries: China, Liberia, Malta, Mauritius, New Zealand, Portugal, Spain and Tunisia. IDA had four new borrowers during the year: Ecuador, Niger, Syria and Tanganyika.

Transportation again took the largest amount in both Bank loans and IDA credits, for a combined total of more than \$420 million, but electric power was a close second with \$375 million, followed by industry with \$163 million, water supply \$55 million, agriculture \$42 million, telecommunications \$19 million and education \$18 million.

Disbursements on Bank loans to borrowers totalled \$559 million \$61 million less than in the previous years, while IDA's disbursements were up by \$68 million, to \$124 million.

The Report lists 17 new members of the Bank and also of IDA, raising the Bank's total membership to 102 and IDA's to 93. Sixteen of the new Bank members are in Africa.

The Bank and IDA Report reflects an active year for both organizations in action to carry out major new lines of policy which were forecast by Mr Woods at the Annual Meetings last year in Washington. One of these is heavier emphasis upon agricultural and educational projects. To help governments in identifying and preparing such projects for financing by the Bank or IDA and to help in their appraisal, the Bank worked out co-operative agreements during the year with the Food and Agriculture Organization

and the United Nations Educational, Scientific and Cultural Organization. The agreement with Unesco had already been ratified by both sides by the close of the fiscal year, while the arrangement with FAO was being carried out informally pending action by the FAO Council at its annual meeting in October.

IDA made its first loan of a new type during the year. It was not for a specific project, but to make it possible for major capital goods producing industries in India to import components and materials essential to the full-scale operation of existing plants. The Executive Directors also confirmed the principle that the Bank or IDA should be prepared to finance part of the local currency cost of high-priority projects if lending for direct imports alone would provide adequate support.

The Annual Report records action in several cases to lengthen the grace period and extend the term of Bank loans. Other major steps affecting financial policy during the year were a decision to discontinue the automatic allocation of 1 per cent per annum of charges on disbursed and outstanding Bank loans to a Special Reserve, in the form of a commission, and to reduce the commitment charge on the undisbursed portion of Bank loans from ¾ per cent to ½ per cent per year. These decisions do not affect the Bank's interest rate, which remained at 5½ per cent throughout the year.

The year saw the final disposition of the last of the Bank's holdings of its first and largest loan, one of \$250 million made to France in 1947. During the fiscal year, the Bank sold the last \$58.6 million of its holdings to the Credit National of France.

No new money was raised by the Bank during the year and its funded debt was reduced for the second year in a row, by \$27.4 million. One refunding issue was placed during the year, consisting of \$100 million of Two-Year 4 per cent US dollar bonds; it was placed entirely outside the United States, with central banks and governmental accounts in 29 countries.

The Bank's Executive Directors and staff continued work throughout the year on a proposal to establish a center for the conciliation or arbitration of investment disputes arising between foreign investors and governments. A preliminary draft convention incorporating the proposal was considered at four regional consultative meetings attended by legal experts designed by 86 governments. Under a proposal pending before the Board of Governors, the Executive Directors would be asked to work out a final draft with the advice of a legal committee representing interested governments, and to submit the convention to governments in 1965.

The Report reflects greatly expanded activities in the field of technical assistance, with particular emphasis on the problems of project identification and preparation and in the conduct of sector studies and general economic surveys. Altogether, the Bank has financed or is helping to finance 14 project and sector studies in 12 member countries. The Bank also continued to act as Executing Agency for project and sector studies financed by the United Nations Special Fund. Bank missions were concerned with advice on national development programmes in 10 countries; the Bank was helping to carry on a score of studies designed to further the development of particular economic sectors or to advance the planning of specific projects; and help was being given in a growing number of special assignments.

The Economic Development Institute, a senior staff college maintained by the Bank for officials of the less developed member countries, continued to expand its teaching programme. To the end of the fiscal year, 317 officials from 84 countries had participated in EDI's courses.

THE IFC REPORT

The Eighth Annual Report of the International Finance Corporation records more commitments in more countries than in any previous year. IFC's investment commitments for the year amounted to \$20.8 million and its all-time total passed a milestone, reaching \$111 million, or more than the total of the Corporation's subscribed capital.

IFC made its first commitments in five countries—Honduras, Malaysia, Nigeria, the Sudan and Turkey—widening the geographic diversification of its portfolio to include investments for projects in 29 countries on six continents.

All but two of the year's 18 commitments included or consisted entirely of subscriptions to shares. One of the exceptions was a loan which carried rights to purchase shares, while the other was a loan which was part of a capital reorganization in which IFC received shares for notes it had previously held.

IFC continued to invest in industrial finance companies, making seven commitments to such enterprises in as many countries. The Bank also made loans to three of the seven companies, and two of IFC's investments were in companies which already had received loans from the Bank and IDA.

Five countries joined IFC during the year, raising its membership to 78. The Corporation's net income for the year was \$2.9 million. This amount, together with \$0.3 million net profit on portfolio sales, was added to IFC reserves, which reached \$20.2 million.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as
the wind
To blow on whom I please"
—As You Like It

I rather liked the cartoon in Hindustan Standard dealing with the recent casualties among Chief Ministers. It was appropriately enough published in the Sports Page, for it showed Messrs Shanker and Mitra in running shorts, with Mr Shanker racing to pass on the Olympic "torch" carrying the emblem "resignation" to friend Mitra.

There is, after all, something about the trinity. For, in the post-Nehru era, this is the third time (Kairon was the first) that a Chief Minister has vacated office. Whether this phenomenon is something for which "Nandaism" can take credit, I don't know. But I must say that I find disquieting the rumours in Clive Street that two more Chief Ministers are heading for the axe. The foul murder in Delhi serves merely to complicate the issue, for there is still a raging debate whether it was political assassination or no. The fact remains, after all is said and done, that we have in recent months been much too preoccupied with talking of corruption. That itself leads to a sapping of confidence; and the raids have further demoralised what I might call business sentiment. How about, for a change, emphasising the favourable developments? Why should the good be allowed to be interred?

So, naturally Dame Rumour has it that the Home Minister is on his way out. There is, further, talk that the Shastri Cabinet should not possibly be able to survive, in the face of three Chief Ministers having had to quit. I would like to ask this, have we really so far given a chance to the Shastri Government to show what it is capable of? The Shastri three are really left-overs from the previous Administration; and if anything the present Government is to be congratulated on the spring cleaning it has accomplished. The one black mark, the foodgrains and price situation, was just an unfortunate and most untimely, as well as a wholly fortuitous, happening. Here, too, we should take note of the swift remedial measures instituted. The other is not quite a black mark: the raids, if they have a purpose behind them, are a good thing. The purpose should be, as I have stressed on previous occasions, the mobilisation of the unaccounted money. So, if the raids are in the nature of grooming the market for the announcement of an amnesty scheme, I welcome them; and if the amnesty scheme is followed up by two-fold measures to reduce the

attractiveness of black-marketing, so much the better. But, for all this, we surely have to wait.

We have to defer judgement on the Shastri Government till, I suggest, next February. For, it is only at Budget-time that we will be able to see the beginnings of constructive action. The need to restore balance in planning as between heavy industry and agriculture; to encourage, in the private sector, production of consumer goods such as can satisfy the purchasing power released by planned expenditures; to foster industrial growth by ensuring individual incentive—these are not all matters about which a quick or hasty set of actions can be implemented. Which is why, I repeat, it is premature to draw up a list of the shortcomings of the present Government. To put it bluntly, the intentions of the Shastri Government can—and doubtless will—be made known only when the Budget for 1965-66 is presented. For, it will then be crystal clear whether the fiscal policies retain their status quo, or whether they have been revised in the light of new objectives. I myself have not concealed the hope I nurture, that TTK will see fit next February to be positive in his beliefs. His Budget this year had the negative good point, that it did not seek much by way of new revenues. Next year, he must make sure that, for example the harassment of the annuity deposit (which itself no more than replaced the compulsory deposit) is done away with for good. I repeat what this journal has long been pointing out: incentive for industry cannot be considered in isolation; and in fact it is fruitless unless there is at the same time incentive for the individual.

Some weeks ago, Mrs Indira Gandhi, upon being asked what she thought of the topless, retorted it was nothing new to India: among other places, it had been traditionally fashionable in Malabar. Certainly, Kerala appears to like the topless, for its assembly has seen fit to topple its Government. Certainly, also, Kerala is an amazing State. Here, for the first time in the world, a Communist Government was democratically voted into favour; and here, too, the electorate had it overthrown. The birthplace of the topless now has achieved fame, in that members of the party in power, quite possibly for the

first time in the world and undoubtedly for the first time in India, ganged up with the opposition to throw the Government out. An interim period of President's rule will be followed by the elections next February. But it is doubtful if that State in the foreseeable future can achieve political stability. For, save the Congress, no party can hope to have an absolute majority elected; and Congress itself, in the light of what happened last week, can scarcely be counted upon to have such success in the elections. It looks as if the combination of high literacy and industrial backwardness can only spell political instability.

All evidence, and there is plenty of it, goes to show that the Bombay Gas Company has for some many years now been at the receiving end of a raw deal. From 1926, the company was selling its "product" at Rs 4 per 1,000 cubic feet. From 1939, the price has been controlled, and the only revision we have had in these past twenty-five years was in 1949—when there was a reduction of one anna. I need hardly point out that all prices have risen substantially over this period; but Bombay Gas alone is not permitted to charge more. On what grounds, may I ask? Is the company to be compelled to continue operations, the while suffering losses? The trouble

seems to be, that it is no good being, as it were, a "monopoly" producer who at the same time is at the mercy of Government. Whether for steel or cement, periodic reviews are officially undertaken of costs of production, and periodic increases are approved. Surely, it is wholly unfair to Bombay Gas, that the price it can charge is pegged at Rs 3.94 while the effective rate in Calcutta (which has the double benefit of being nearer to the coalfields and of securing gas piped in from Durgapur) is around Rs 7? And it is very odd indeed, that the Report of a Committee to study prices in Bombay, although submitted to Government, is being withheld. The publication of the Report should not be delayed; and I would suggest a Tariff Commission enquiry to fix a fair and reasonable price for Bombay Gas's gas. It is possible that the State Government has been refusing to act in this matter, because it has intentions of nationalising the enterprise; but then, in that event, there would without the shadow of a doubt thereafter be a price increase. Is the Company meant to continue losing shareholders' money? And even if there were to be nationalisation, how are the shareholders to be compensated for the loss that the company has been compelled to experience? I hope long over-due justice will be done to Bombay Gas—and soon.

Olympus - A Letter from Delhi

Industrial Production Trends

In the current preoccupation with the food problem—the monsoon session of Lok Sabha has started with a food debate scheduled to last three days—other important sectors of the economy are apt to be ignored; or, what is worse, popular appreciation of developments is apt to be heavily coloured by the sombre prospects on the food front. Otherwise, it is difficult to understand how the idea got round that industrial production had slowed down during the current year. The facts disclosed by Mr. Darappa, Minister for Industry and Supply, at a press conference last week, should go far to correct this misleading impression. In fact, a number of industries have been doing very well during the current year. During the first five months of 1964, substantial increase in production has been registered in a number of important industries. The rise in output was 18 per cent in power transformers, 24 per cent in machine tools, 30 per cent in automobiles, 33 per cent in rail wagons, 23 per cent in sulphuric acid, 26 per cent in caustic soda, 19 per cent in rayon yarn, 23 per cent in bicycles and 18 per cent in electricity.

It is however, true that all industries have not participated in the increase to the same extent, and, in some industries, production has actually decreased as compared with the corresponding period of the previous year, and this is a matter which deserves serious consideration. Special reasons might have operated to depress production in particular industries; for instance, the strike at Sindri was responsible for the fall in the output of ammonium sulphate. Other industries which show decline in production are Coal, Tea, Cement, Electric Motors, Electric Fans and Sewing Machines.

The overall rate of increase in industrial production during the first five months of 1964, over the corresponding period last year, was 6.9 per cent as against the corresponding rate of increase of 8.2 per cent for the period January to May 1963. But the significance

of this falling off in the rate of growth could be exaggerated. As the Minister pointed out, there was a perceptible spurt in production during the first half of last year as a result of the special efforts made in the wake of the emergency and this impetus could not be expected to continue indefinitely. Moreover, in important industries like Steel, or Aluminium, production had reached the level of rated capacity last year, and further increase could not be expected till additional capacity was established, which would not be before the end of the Third Plan. Nevertheless, the cases where there was actual decline in production need to be looked into.

The shortfall in cement, the Minister indicated, was the result of the failure of parties to implement the licences given to them. This is expected to be taken care of by the Cement Corporation which will be registered in a few weeks. The entry of the public sector in cement manufacture had become necessary in order to make up for these shortfalls as well as to achieve the targets of the Fourth Plan. The production target of 23 to 24 tonnes which had been proposed would require installed capacity of 26 million tonnes.

The Minister also indicated that Government was drawing up a programme for the development of Electronics industry, and was considering establishment of plants outside the defence sector. The only unit at present in production is Bharat Electronics Ltd. which is under the Defence Ministry. The Minister also indicated that there was no bar to the participation of the private sector in this area of development; in fact, there was good scope for small scale units.

Indian Oil Corporation

The Indian Oil Company had already made a dent in the distribution of petroleum products and handled about ten per cent of the trade, i.e. about 1.2 to 1.3 million tonnes, said Mr. Humayun Kabir, Minister for Petroleum Chemicals, at his first press conference since taking over charge of this Ministry. The aim was that the public sector undertaking should handle

fifty per cent of the trade by 1971. This would involve a ten-fold increase in the operations of the company, as the total trade by the end of the Fourth Plan was estimated to be about 23 million tonnes. The Minister was confident that this target could be achieved and referred, in this connection, to the formation of the Indian Oil Corporation by the merger of the Indian Oil Company and the Indian Refineries Ltd., which was intended to rationalise the petrol business.

The new Company, as already announced is headed by Mr. P. A. Gopalakrishnan, formerly Chairman of the Indian Oil Company. The Managing Directors are Mr. P. A. Gopalakrishnan and Mr. N. N. Kashyap, formerly joint Secretary in the Ministry of Petroleum and Chemicals. The Company will have nine directors on its Board of management.

Initially the new company will operate the public sector refineries at Gauhati, Barauni and also construct and operate product pipelines. It is also intended to transfer the Gujarat Refinery to the integrated company in due course. The Indian Oil Corporation will have an authorised capital of Rs 75 crores.

The Minister indicated at his press conference that the Fourth Plan target for petrochemicals—it was proposed to set up a petrochemical complex attached to each refinery—would cost from Rs 600 crores to Rs 800 crores, half of it in foreign exchange. He was trying to secure foreign exchange for the projects outside the consortium aid.

During his recent visit to Moscow he had been assured that Soviet assistance to the extent of about fifty to sixty crores would be available for the exploration programme which was proposed to be stepped up. He was confident that it would be possible to improve upon the target of 14 million tonnes proposed for the Fourth Plan. Apart from exploration in India, efforts were also being made to obtain concessions in Iran, whose results would be known before the end of the year. Government, he said, was determined to establish its own supplies from abroad.

The Minister also disclosed that exploration in the last seven months had indicated prospects of substantial reserves in two of three new areas. If these were proved, the present production potential of six million tonnes would be doubled and only an additional two million tonnes would be required to reach the Fourth Plan target.

Reviewing the progress in setting up new refineries, Mr. Kabir said that a decision regarding the Madras refinery would be taken before the end of this month, and about Haldia before the end of the current financial year. It was also proposed to set up one other refinery in the Fourth Plan, but the site had not yet been selected. The question of permitting expansion of private sector refineries may be considered after the refineries at Madras and in the Haldia area were established.

Outlining the general policy regarding refineries and petrochemical complexes, the Minister declared that all new refineries would be in the public sector. As regards petrochemicals, the manufacture of basic elements and intermediates would also be in the public sector to the extent possible. The manufacture of end products will be in the private sector, but items of strategic importance or which were exceptionally profitable would be taken up in the public sector.

Fifth Steel Plant

A decision on the location of the fifth steel plant would be taken after the project reports for Hospet and Vishakhapatnam areas were ready. These will be considered along with the detailed project report for Salem which had already been received. Mr. N. Sanjiva Reddy Minister for Steel and Mines, who gave this indication in the course of an informal chat with newsmen last week, said that cost of production would be the main factor determining the choice of site. He was happy that there were no regional issues involved as all the three sites under consideration were in the South. The preference of the foreign collaborators, who would provide the technical and financial assistance for the project, would

also be an important factor determining the choice of site.

Asked whether the Salem Steel plant could be put in the same category as the other two plants, the Minister said that the main point for consideration was where it would be possible to produce steel at the lowest cost. The special features of the Salem plant would also be taken into consideration in arriving at a decision.

The Minister also referred to the need to step up production of non-ferrous metals like copper and aluminium and endorsed the view that it would be advantageous to import copper concentrates to supplement local resources of ore, instead of importing metal.

The Ministry of Steel and Mines has drawn up a programme, of expansion of existing units and setting up of new units, for reaching a total capacity of 300,000 tonnes of Aluminium by the end of the fourth plan. The demand for aluminium by the end of the Fourth Plan is estimated at about 260,000 tonnes.

Under the proposed programme, three schemes for producing 85,000 tonnes have already been finalised. These are: Koyna Aluminium Corporation, Maharashtra (25,000 tonnes—Mysore Aluminium and the Korba Project in Madhya Pradesh, (30,000 tonnes) Pradesh, (30,000 tonnes).

Expansion of two existing units have also been finalised. These are: Alwaye, Kerala (10,000 tonnes) and Hindustan Aluminium Corporation, Rihand (40,000 tonnes). These are likely to increase the installed capacity of these units from 62,500 tonnes to 1,13,000 tonnes.

Proposals for the expansion of other existing units are expected to be finalised shortly. According to Ministry sources, largescale production of the metal will have to be undertaken in the public sector, in order to reach the target, particularly in view of the fact that progress in the implementation of the licences already issued had been behind schedule.

ISO General Assembly

The International Standardisation Organisation, which will be holding its Sixth Triennial General Assembly in New Delhi from November 8 to 21, 1964, is expected to consider many subjects of primary interest to India, such as food products like spices, condiments and stimulant foods; steel; rubber; vetiver oil; screw threads; bolts and nuts etc. Dr. Lal C. Verman, Director of Indian Standards Institution, who disclosed this at a press conference last week, said that this was the first time that the ISO was meeting outside Europe or America, since its establishment in 1946 as the suc-

cessor to the International Federation of National Standardisation Associations.

Explaining the importance of standardisation for industrial progress and export promotion, Dr. Verman said that the task in the international sphere was a complex and slow process, as different industrial traditions had to be brought together. Sometimes progress was blocked by questions of national prestige. Exports of engineering goods, as well as other products, would be considerably facilitated by standardisation. Indicative of the quality of the work done in India by ISI was the fact that several Latin American countries had adopted Indian Standards for steel.

India has been called upon to shoulder a good deal of the administrative burden of the organisation. Indian Standards Institution has been continuously elected member of the Governing body of the ISO ever since its start, except for one year. ISI Direc-

tor, Dr. Lal C. Verman was elected as the ISO Vice-President for two consecutive terms spreading over six years. He is currently the Chairman of the ISO Planning Committee and member of certain other administrative groups. Besides, India also holds secretariats for three of the ISO technical Committees, viz., Lac, Mica, and Pictorial Markings for handling of goods, and of four sub-committees and six working groups.

Brno Fair

Interesting details about the Indian participation in the Brno International Fair (September 6 to 20) were given by Mr. V. Marneck, Deputy Trade Representative and Commercial Attache of the Czechoslovak Socialist Republic, at a press conference, here, last week. According to latest reports a total of 620 exhibitors from 35 countries will be participating in the Fair, and of these 21 will be Indian firms. For the first time in the history of the Fair, official stands will be open-

ed in the Pavilion of Nations by India, Nigeria and Monaco.

In addition to the Socialist countries, Western Nations like Great Britain and the German Federal Republic are participating in a big way in the BRNO Fair, which has won the reputation of being a trading centre in which it is possible to secure profitable trade contracts. Exchange of technical knowledge is facilitated by a programme of scientific and technical symposia. Three International Symposia will be held—on the problems of development and production of refractory metals—on information processing machines—on speeding up methods in spinning.

The Indian exhibits cover a wide range of products including cutting tools, lathes, drilling machines, electric motors, textile machinery and textile bleaching equipment, process control instruments, refrigerators, sewing machines, fans, cashew nuts, cigars and cigarettes, and minerals and chemicals.

Yes, it's safe—because it's in a tamperproof container

The diaphragm you see here is one of the most reliable means of making sure that the product you buy has not been tampered with or contaminated on its way from the factory to the shop.

The foil diaphragm is a widely used pilfer-proofing technique. Others that you are familiar with are Roll Seal closures on bottled drugs and foods, laminated strip packs for tablets, sealed cans for processed foods, tear-off seals on pharmaceutical phials.

Pilferproofing methods, combined with indelible printing of trade marks and brand names on packages, introduced and promoted in India by Metal Box, are doing a good job in protecting public health and life.

Metal Box currently supply packages to more than 1,500 manufacturers who pack

over Rs 120 crores worth of consumer products—all of them kept safe and pure in protective packages.

These figures are impressive—but they are not big enough. Adulteration of foodstuffs and racketeering in spurious drugs continue to be major evils in our public life. Strong, concerted action by Government and Industry alone can help to wipe them out. And Metal Box hope to play a major part in getting this good work done.

Market NEWS and Trends

JUTE

Regulated Purchases

Despite the various steps taken by the authorities, the uptrend in prices in the jute markets reasserted itself with renewed vigour and on Monday this week even as the Jute Commissioner was detailing another important step that is calculated to restore stability to the market, prices were pushed up further. The new measure announced by Mr G. C. L. Joneja is the fixation of maximum permissible quota of raw jute purchases by mills during the current week. The maximum quantity of jute that the mills can buy this week is fixed at 100,000 bales. Also mills will not be allowed to hold stocks beyond specified levels. The new step, Mr Joneja has explained, is calculated to ensure an equitable distribution of available supplies to all the units in the industry. In the present situation in which ideas of scarcity seem to be still holding sway, there is need for guarding against the tendency on the part of those with more buying power to accumulate more than they may normally need. That the latest step has not been hastily taken will be evident from the fact initially margins were imposed on forward trading and on TSD con-

tracts. A third step has been the fixation of a marginal deposit on each transaction in raw jute in the futures market. Already this has yielded over a crore of rupees and yet the price continues to rise. Mr Joneja characterised the behaviour of the market as disquieting because even after a steady improvement in arrivals panicky buying has continued. This is because despite appeals to them to stop panicky purchases, some mills have continued to buy at increasing prices. According to him there is no cause for the alarm that supplies will not be adequate because latest indication is that the crop will be about 7.2 million bales and this with the carryover will be quite sufficient to meet the requirements of mills in full. Mr Joneja is hopeful that the latest measure will have the desired effect as the quotas are fixed on the basis of market arrivals. The maximum quota will be reviewed every week before fixing individual quotas for the mills. Mr Joneja has however made it clear that if even this step proved ineffective, there will be other measures.

JUTE SUPPLY PROSPECTS ICJCS ANALYSIS

Given well-planned mill buying, there is nothing to prevent the jute prices finding a more realistic level, according to the latest issue of the

Jute Bulletin released by the Indian Central Jute Committee.

With the release of the buffer stock, the bulletin said, there should be enough fibre to go round till about the end of October this year.

It was fortunate, the Bulletin added, that the users of jute goods did not panick to follow the rise of the Calcutta gunny market. This was so because paper bags now-a-days provided a strong hedge against over-priced jute goods. Besides, mills could well afford to avoid a scramble for new crop jute.

The fact, however, remained that jute prices could not be expected to travel back to last year's levels for, as the Jute Bulletin argued, the grower had felt the pinch as much as any other section of the population of the inflationary rise in prices in recent months.

"The present tremor" in the world jute industry has, according to the bulletin, "East Pakistan for its epicentre."

"Nobody pretends that the fears of jute shortage in Pakistan are unfounded. When anything goes wrong with the Pakistan crop or, for that matter, with the Indian, operators everywhere take a global view of supply. As the principal exporter of raw jute and having internally to feed the world's second largest jute industry Pakistan needs to produce annually a minimum of 7 million bales, but the crop this year is estimated to be at least 1.5 million bales short.

"World consumption of jute (excluding Mainland China and Brazil) is running around 15 million bales a year, with the Indian industry accounting for 8 million bales, its Pakistani counterpart for over 2 million bales and the rest of the jute manufacturing centres elsewhere, which largely operate on imported Pakistani fibre, for roughly 4 million bales. On this basis, world production of jute and mesta should be at least 16 million bales. To provide for mills' normal stocking requirements, the annual outturn of these two fibres ought, in fact, to be another 2 million bales more. No estimate of the 1964 Pakistan crop and carry-over seems to leave much of a safety margin, and for the mills in Pakistan and those outside India there would thus appear to be no alternative to a very much dearer jute.

"Now the question is whether the Pakistan situation should have influenced sentiment in India to the extent it has. Unfortunately,

as events in Calcutta have once again emphasized, the local industry's dependence on imported jute, though marginal, remains strategically significant. It is therefore unrealistic to believe that the jute price movements in this country could in the fore-seable future be completely insulated from the influence of the Pakistan jute markets.

"The psychology of shortage that has gripped Pakistani balers and shippers has found an Indian parallel in the situation created by a combination of late crop and unfavourable weather. The slowness of new crop arrivals has imported an element of panic into market proceedings, which is tending to confuse the crop outlook. Considerations that this may be due to seasonal factors such as delayed harvesting and retting, difficulty in drying fibre and poor conditions of village roads do not, in the prevailing uncertainty, make much sense to those of the mills who need to buy jute immediately to make up their deficiency in certain grades and qualities against firm commitments in jute goods. Jute holdings of few mills are really balanced in their quality composition and total industry-wise forbearance at any time in the purchase of the fibre is, therefore, out of the question."

The bulletin, however, warned that hoarding would not pay as the supply position had already started easing.

"The arrival figure for July is reassuring. The quantity of Indian fibre received in Calcutta and mill stations was as high as 326,000 bales against only 203,000 bales in July 1963. The big difference cannot be explained away pleading that the bulk of the imports consisted

STOCKS OF JUTE GOODS AT THE END OF AUGUST, 1964

	(000 Tonnes/Tons)		
	31 Aug. 1964	31 July 1964	Difference
Hessian Cloth and Bag ...	45.7 (45.0)	46.0 (45.2)	-0.3 (-0.2)
Sacking Cloth and Bag ...	49.7 (49.0)	53.4 (52.6)	-3.7 (-3.6)
Carpet Backing	23.3 (22.9)	22.4 (22.0)	+0.9 (+0.9)
Others ...	13.4 (13.2)	14.0 (13.8)	-0.6 (-0.6)
Grand Total	132.1 (130.1)	135.8 (133.6)	-3.7 (-3.5)

of old crop fibre. That would be over-simplifying the market situation.

"Now the floods are receding and the weather has definitely improved rural communications should also be better. The cutting of Tossa jute, which has already commenced, will get into full swing in September. These factors, plus the consideration that cultivators will badly need ready money for the Puja season, favour larger arrivals of jute in the coming weeks."

NEW ARRANGEMENTS FOR BRITISH JUTE GOODS IMPORTS

Revised arrangements for jute goods at present imported into Britain by the Jute Control were announced in London on 1 September by Mr Edward Heath, Secretary of State for Industry, Trade and Regional Development and President of the Board of Trade.

Goods which are of the greatest long-term interest to the Scottish industry, and which now represent a substantial part of its cloth production, will be subject to a fixed mark-up of 45 per cent. Earlier Government proposals envisaged a diminishing mark-up for these goods.

A further range of goods will be subject to a mark-up, including both a fixed and a variable element, which will be based on 45 per cent for the first year. The variable rate will be reduced annually.

A range of cloth, which forms a substantial amount of British imports but represents only a limited part of Dundee's production, will be protected against imports from India and Pakistan and will be returned to private trade.

The Board of Trade said the Government would review the effects of this in 1967, with the special object of examining the need for continuing the variable mark-up.

The jute industry is protected against competition from India and Pakistan in the interests of employment in Dundee. The Jute Control is Britain's sole importer, and it sells most of its imports at enhanced prices.

The variable element embodied in the arrangement represents the gap between the prices for raw jute and for imported jute goods on a selected base date. The basic percentage will be 10 per cent, and this will be subject to change, as necessary, according to movements in raw jute and imported jute goods prices.

The Board of Trade said that last Tuesday's announcement would "provide a stable basis on which the Scottish jute industry can plan its future".

Mr Heath announced the new arrangements after consulting the Secretary of State for Scotland, Mr Michael Noble, and after considering the report of an inquiry representing both sides of the jute industry, merchants and officials.

The Board of Trade said that the report of the inquiry would not be published.

TEA

Good Demand for CTC Types

IN the Export Sale held in Calcutta this week, offerings consisted of 65,965 packages of Leaf grades. There was a good demand which was, however, less general than in the previous week. Good CTCs were well supported and, except for a few of the very best kinds, others were irregular and generally easier. Clean medium CTCs came to a strong market and, following competition, were sold at generally dearer rates. There was more demand for the fibrous CTC Fannings which were dearer especially those with bright liquors. Plain CTC were well competed for at firm rates.

Plain orthodox descriptions found useful support and were readily taken up at around last levels with Fannings often dearer. Medium orthodox teas were sold at irregular and slightly easier rates. Good Assam orthodox BOPs received less support and were irregular and often appreciably lower following quality. Orange Fannings, however, especially those with bright liquors, were sold well. Good Assam BPs and more so PFs were well supported at firm to dearer rates. The limited amount of leg-cut teas, on offer, met with a fair demand.

Whole Leaf grades were an irregular feature and generally easier except for the cheapest kinds which were sold well. There was a fair demand for Darjeeling teas and buyers followed quality closely. Tippy teas were sold at generally easier rates. Following rates (per kg) were quoted:—Clean Plain Pekoe Rs 5.20 to Rs 5.40; Plain Orthodox BP Rs 4.10 to Rs 4.30; Plain Orthodox Fannings Rs 4.30 to Rs 4.60; Plain CTC BP Rs 5.20 to Rs 5.40; Plain CTC Fannings Rs 4.90 to Rs 5.10; Medium CTC BP Rs 6.00 to Rs 6.20; Medium CTC Fannings Rs 5.90 to Rs 6.10; Good Assam CTC BP Rs 6.80 to Rs 8.00 and Good Assam CTC Fannings Rs 6.80 to Rs 7.20.

In the internal sale, offerings consisted of 35,333 packages of Dusts. There was a strong and general demand. Medium CTC teas were sold at fully firm to dearer rates, while good CTCs were also very readily absorbed. Plain orthodox teas came to a good market and the brighter Assam descriptions fully maintained their values. The better leg-cuts were sold very strongly, while the plainer sorts were about firm. Following rates were quoted:—Plain Orthodox Dust Rs 4.20 to Rs 4.60; Medium Assam Dust Rs 4.90 to Rs 5.60; Legg-cut Dust Rs 4.90 to Rs 5.40; Medium Assam CTC Dust Rs 5.40 to Rs 5.70 and Good Assam CTC Dust Rs 6.20 to Rs 6.50.

The Union Government has decided upon export of packaged tea under bond. Therefore, the exporters of packaged tea will no longer have to pay initially the additionally excise duty and wait for refund, which usually takes a long time. The highlevel Committee, appointed to enquire into

the financial position of the tea industry, will meet in Calcutta shortly and thrash out the various financial matters, which will be of help both for replantation and expansion.

Meanwhile, reports from Delhi indicate that new vista for the exports of tea and coffee to Australia has been opened by suspension of duties on these commodities by the Australian Government. The Australian authorities have informed the Executive Secretary of the GATT that customs duty for coffee (roasted) and for tea has been suspended. This concession is understood to have been extended for exports by the less-developed countries.

In the sale held at Cochin this week, offerings were 5.9 lakh kilograms of Leaf grades. Quality in general was fairly maintained; but there were a few bright liquoring Nilgiri teas on offer. The market met with a good demand with more emphasis on Fannings. Among the plain and low medium categories, poorer Broken's inclined easier. Other types and their fannings, were firm to dearer. Good Mediums were well supported and realised higher prices, particularly the Fannings. High-grown's met with a good support. Clean Black Leaf descriptions continued to be strong. Whole Leaf grades also were well supported with Orange Pekoes being the strongest feature of the sale. Teas of unorthodox manufacture received useful enquiry and shared in the general upward trend of the market.

In the Cochin market, a quantity of 2.76 lakh kilograms of dusts was offered for internal consumption. Against a good general demand, plainer mediums were barely steady and sometimes easier, while others met with good support and were around last week's rates. Coloury mediums inclined easier. There was a strong demand for high-grown's, which were dearer. Clean black grainy sorts were the strongest feature of the sale and these realised useful prices. Best CTCs were about steady, while others were irregular, sometimes selling at dearer rates.

In the Coonoor market, offerings were 107,976 kilograms. The general standard of quality showed very little change from that of the last sale. The demand for teas in general was limited. Good Nilgiri dusts received good support and were steady and dearer. Other Nilgiri dusts eased by 10 to 15 paise per kilo. Nilgiri Broken's had less support and registered a slight decline in prices. Nilgiri-Wynaads, although readily sold, shared in the easier trend of the market. Whole Leaf grades also inclined easier.

In London auction held this week, offerings were 25,487 packages, including 20,526 packages from Northern India. There was an extremely strong market for all descriptions, particularly the best CTC Assam and Doars CTC for which prices were well in excess of brokers' valuations. Medium Assam Doars and orthodox teas were all good demand at dearer rates.

Tea stocks in London, as on 28 August, were lower at 107.31

million pounds as against 110.26 million pounds in the preceding week. The total quantity to be landed on the same date was 23.07 million pounds. Total allot was 25.62 million pounds including from Calcutta 10.53 million pounds; from Chittagong nil; from Ceylon 11.85 million pounds and from other Ports 1.24 million pounds.

★

COTTON

Bright Outlook

The 1964-65 cotton season got off to a flying start aided by a large carry-over of about 27.60 lakh bales and the estimated record crop of approximately 62 lakh bales in the 1963-64 season. While taking into account a normal import of 7.50 lakh bales the aggregate available supplies will be in the environs of 97 lakh bales. Domestic cotton consumption during the season is roughly placed at 64 lakh bales, leaving a comfortable carry-over at the close of the season.

It may be recalled, in this context, that the remarkable spurt in cotton output in the season that has just ended was the result of a combination of various factors. True, the weather during the whole season continued to be quite congenial. But this should not put to the background the efforts of Government to step up production. The price incentives to the farmers, credit facilities, and encouragement to adopt intensive modes of cultivation under the expert guidance of the Indian Central Cotton Committee figure as the prominent factors which contributed to the enhanced crop. It also requires special mention that despite the bumper crop the prices continued to forge ahead which necessitated Government intervention.

It is significant that consumption of domestic cotton by the indigenous cotton textile industry maintained a high rate throughout the season. This can be attributed to the apprehensions regarding the import of foreign cotton owing to foreign exchange difficulties. Total cotton consumption by the mills is estimated at 60 lakh bales comprising 54 lakh bales of Indian cotton and 6 lakh bales of foreign growth.

★

The Jarilla March contract, sustained set-back during the week on account of the optimistic outlook for the new season and lost Rs 7.00 per three quintals. After commencing the week at Rs 734.75, the contract slipped down to 728.50 because of encouraging weather reports from the cotton growing tracts. Toward the mid-week the contract firmed up thanks to support from Rajasthan and UP dealers. But this phase was of a short duration and the contract was pushed down to Rs 726.50 before finally finishing at Rs 727.75 per three quintals.

★

Business in the spot market at Sewri continued to be limited during the week. Only selected varieties met with spinner interest.

ROHTAS INDUSTRIES LIMITED.

Registered Office:
Dabnianagar (Bihar)

NOTICE

The Thirty-first Annual General Meeting of the Shareholders of Rohtas Industries Ltd. will be held at the Registered Office of the Company at Dabnianagar on Wednesday, the 30th September, 1964 at 11 a.m. to transact the following business:

1. To receive and adopt the Directors' Report and the Audited Accounts for the financial year ended 31st March, 1964.
2. To declare dividends.
3. To elect a Director in place of Shri Nand Lal Poddar, who retires by rotation and is eligible for re-appointment.
4. To appoint Auditors and fix their remuneration. The retiring Auditors Messrs. K. N. Gutgutia & Co., Chartered Accountants, are eligible for re-appointment.

Share Transfer Books and Members' Register of the Company will remain closed from 24th September, 1964 to 30th September, 1964, both days inclusive.

By Order of the Board,
For SAHU JAIN LTD.,
A. K. JAIN
Director,
Managing Agents.

Calcutta,
5th September, '64.

N.B.—A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. Such proxy need not be a member.

Adm. Office:
MANGALORE

The export section acclaimed Government's decision to abolish the export duty of Rs 25.00 per bale on Bengal Deshi cotton. Consequently December delivery contract of Bengal moved up slightly.

In the import section scattered mill enquiry was reported in Sudan and East African cotton.

The delay in issuing the letters of credit by the Reserve Bank of India has made difficult the conclusion of any deals in Egyptian stockpile cotton by the cotton importers in Bombay with the US sellers. Oddly enough, the importers enquiry at the bank met with little response. The quantity involved is roughly placed at 3,000 bales.

It is reported that the rupee agreement between India and the UAR has been concluded. The importers will be enabled to open letters of credit in rupee currency.

US EXTRA-LONG STAPLE COTTON

According to the United States Department of Agriculture, the US is having a record surplus of extra-long staple cotton of 4.3 lakh bales. This includes the estimated 1964 US cotton output, the carry-over of imports and indigenous growths and imports permitted under quota. The surplus extra-long staple cotton is being offered for shipment on a competitive bid effectively from August. In the inventory of the Commodity Credit Corporation there are about 1.3 lakh bales. With a view to preventing disruption of the markets, bids are restricted to 5,000 bales in a month. The price will also compare with that of similar cotton in the international markets.

Consequent on the general upswing in the trend of cotton consumption in most of the countries, the surplus stock from the United States will be made available for

India, Japan, Western Europe etc. This is significant as the UAR and Sudan, the traditional suppliers of this growth, are left with little surplus for export.

The US is having on hand a stockpile of Sudanese and Egyptian extra-long staple cotton which is estimated at 1 lakh bales. The monthly sales are confined to 15,000 bales.

PIECEGOODS

Trading in the cotton piecegoods market turned out to be restricted during the past week as demanded continued to be minimal. Nevertheless, there was little variation in the price level. The proximity of the festive season failed to perk up demand from upcountry dealers.

Dealers from North Indian centres were contented with moderate quantities of goods for their immediate requirements. Those from the South showed interest in a variety of goods but the offtake was limited. Despite the poor flow of demand, the mills were obstinate in sticking on to the existing price level. The cumulative effect is that the stocks with the mills and the trade are piling up.

The export front presented better conditions. Shippers are reported to have bought sizable quantities of selected varieties in anticipation of substantial business in 1965 under the new licensing policy. Prices of furnishings firmed up thanks to the encouraging overseas demand.

Sudan accounted for a moderate quantum of voiles and sheetings while Singapore bought substantial quantities of long cloth and printed furnishings. Other destinations remained inactive during the week under review.

Cashew Exports in July—a Record

ACCORDING to the figures released from Ernakulam, exports of Cashew kernels amounted to over 5,820 tonnes valued at Rs 3 crores in July—a record for any month. Exports during July last year realised only Rs 2.48 crores. Exports, during the first seven months of the current year totalled 30,800 tonnes valued at Rs 14.74 crores as compared with 31,500 tonnes worth Rs 12.69 crores during the corresponding period last year.

The rise in export earnings was due to the higher price realised for the commodity. The USA, the Soviet Union, East Germany, the UK, Australia and Canada were the main importing countries.

Exports of cashewnut shell liquid during January/July 1964 amounted to 7,400 tonnes valued at Rs 1.08 crores against 3,996 tonnes valued at Rs 48 lakhs during January/July 1963. Cashew has been included as one of the items in the schedule of exports from India under the trade agreements, now in force, with East European countries like East Germany, Poland, Bulgaria, Yugoslavia and the USSR.

Meanwhile, the unprecedented boom conditions in Western

Europe have provided an excellent opportunity for introducing, in a big way, a generally acceptable edible nut like cashew. If India wants to get a foothold in the West European market and earn substantial foreign exchange for her cashew, which is still a most unknown product for a large number of Europeans, then it is necessary to launch a special campaign for Indian cashew in Europe. Other countries should not be allowed to steal a march over India.

It is stated that certain firms in Italy and France are ready to collaborate with Indian exporters for distribution of Indian brand consumer packets. The Cashew Trade Mission, which recently toured Italy and France, has suggested that, to start with, four or five select Indian firms, sponsored by the Cashew Export Promotion Council, may be given all facilities to introduce their brands, at least for the first three years, assisted by the State Trading Corporation.

PEPPER**Bleak Prospects**

The recent spurt in black Pepper prices, in the wake of speculative buying both at Cochin and Bombay, has adversely affected the export prospects in the commodity. As a matter of fact, the export section continues to remain dull. In view of the higher prices at which the Indian commodity is being offered, the foreign demand has petered out. Both America and the Communist countries are present showing no interest in Indian pepper. There is feeling that, so long as the Indian shippers offer black pepper at as high as 39 cents against the world price of 34 cents a pound, there is no scope for any export in the immediate future.

Meanwhile, reports have come to the effect that a consignment of 3,000 tons of pepper is on its way to America from Indonesia. In frantic effort to step up its exports to America, Indonesia has presumably despatched this sizable quantity and the goods are likely to be disposed of at a firmly attractive rate. Against the current rate of 31.5 cents a pound, the American buyers are expected to pay only 30 cents.

In the circumstances, there are no chances for exports of Indian black pepper, which is priced out by as much as 7 to 8 cents a pound. It is also stated that, apart from the afloat shipments from Indonesia, Singapore, too, supplies pepper to America at a considerably lower rate. The latest report from Singapore indicate that it is in a position to offer the commodity at around 34 cents.

The American buyers feel, however, that Singapore is a dependable source of supply although Indonesia is expected to harvest a sizable crop this season.

Exports of black pepper from India, for the period November 1963 to July 1964, amounted to 14,820 tonnes, representing a de-

cline of about 1,216 tonnes against the total for the corresponding period of last season. The gap is expected to widen further in the remaining period of the season. The shortfall in exports is due to the continued absence of American demand and this can be made up only by stepping exports to the Communist countries. In view of the rupee agreement with these countries, they have at their disposal a sizable fund to utilise.

SUGAR**Output Up**

According to the figures released by the Indian Sugar Mills Association, total sugar output in July amounted to about 9,000 tonnes as against 5,000 tonnes in the corresponding month of last year. This brings the total production till 31 July 1964 to 2,512,000 tonnes as against 2,098,000 tonnes during the corresponding period last year.

The offtake from factories during July was 198,000 tonnes against 240,000 tonnes in July last year. Total despatches during the first

three months of the 1963-64 season were lower at 1,973,000 tonnes against 2,353,000 tonnes in the same period last year. The closing stock, as on 31st July, was also lower at 600,000 tonnes against 731,000 tonnes on the corresponding date last year.

The President of the West UP branch of the ISMA has stated that the sugar industry in Uttar Pradesh is facing a crisis. He adds that the setting up of new sugar factories and the expansion of old ones in the South have pushed Uttar Pradesh into the background as it is more profitable to run a sugar mill in the South than in the North.

He has also stated that, to increase production, the Government has enforced certain laws under the Defence of India Rules, governing the supply of cane to the factories. The requisite amount of cane cannot be made available by forcing producers of cane through legislation. Supplies of cane can be ensured only by paying competitive prices. This can be possible if all users of cane are put on par and if sugar is decontrolled.

NON-FERROUS METALS**Firmness Continues**

Despite profit-taking at bulges, prices in the Bombay Non-Ferrous Metals market have continued to display a firmer tendency. Tin is quoted at Rs 325 per 10 kg; Copper Conductor at Rs 445 per 50 kg; wirebar at Rs 323; Blister at Rs 375; Zinc at Rs 350 per 100 kg and Lead at Rs 300 per 100 kg.

There is a growing feeling among trade circles that the present gap between supply and demand for all the metals is bound to remain very big even by the end of the next Plan period. This feeling is based on the fact that, with the increasing pace of industrialisation in the country, the demand for the metals will continue to expand fast. Although efforts are still being made to tap internal resources, these will be inadequate to meet Indian needs fully. Imports are also expected to be restricted due to stringent foreign exchange position. The scarcities of supplies are, it is stated, further aggravated by the delays in the administrative procedure.

DYES AND CHEMICALS**Listless Conditions**

Listless conditions have continued to prevail in the Bombay market for Dyes and Chemicals. In the absence of fresh developments of immediate interest to the market, dealers are inclined to remain aloof from covering their needs as also to part with their stocks. The offtake, however, is not commensurate with offerings, because of tight money supply conditions and the general inclination to lighten holdings and commitments as a result of the talks about some changes in the Government's industrial and fiscal policies.

The cumulative result has been an appreciable fall in the volume

of trade. While supplies have begun to reach the market from upcountry centres, stockists and manufacturers, buyers are few and far between. Whatever business is done, is being confined to immediate requirements.

OILS AND OILSEEDS
Setback in Prices

Trading in the Bombay Oilseeds market was generally dull and quiet with prices showing an easier tendency. Although there was no futures trading in Groundnut, the trend in the spot section was fully steady, thanks to the tight supply position and the inflow being short of requirements. With the uncertain outlook regarding movement controls, crushers and vanaspati manufacturers are obliged to cover their needs.

In the absence of any encouraging news from the export front, conditions in the Castorseed section were also dull. Despite periodical enquiries from abroad, the actual export trade remained very subdued. The UK and the Continent seemed to be marking time and there was little mention of demand from the East European countries.

Meanwhile, the accumulation of castor oil stocks, following the prolonged strike by the tank cleaners in the Bombay Port, has perturbed the shippers. Due to non-shipments, more than 10,000 tons of oil are reported to be lying idle with the shippers. As the crushing season has started in full swing, the oil flow is expected to continue

uninterrupted against past commitments.

In the Linseed section, trading was featured by a marked weakness in the new crop contract on fears of a substantially larger crop.

In Madras, too, the Groundnut market continued to depict an easier tone although the oil section ruled comparatively firm. Arrivals of seed averaged 20 to 30 tons a day and local small crushers were taking up these stocks. The rate for summer peanut was quoted at Rs 103, showing a drop of Rs 4 over the week. In the Oil section, vanaspati interests were reported to have taken up sizable quantities for ready delivery. The rate was quoted at Rs 244 to Rs 250 per quintal.

FORGING PRESS PLANT FROM BRITAIN

A £120,000 forging press plant has been ordered from a British firm by Mahindra Ugine Steel Co., of Bombay. It is expected to be completed and delivered by the middle of next year.

The equipment consists of a 1,200-ton, single-cylinder forging press with three-position tool-change gear and associated equipment, and will be used mainly for the cogging of alloy steel ingots prior to rolling.

The manufacturers, Davy and United Engineering Co. Ltd.,—a member of the Davy-Ashmore Group—were a member of the consortium of British firms which built the Durgapur steelworks. The firm is currently supplying equipment for the extensions to the steelworks.

Registration of New Companies—1963-64

According to the monthly returns received from the Registrars of Companies in the various States, there were 1,227 new companies registered in the country during 1963-64 as against 1,497 new companies formed in 1962-63. The total authorised capital of all the newly registered companies of 1963-64 amounted to Rs 340.4 crores as against the total authorised capital of Rs 257.5 crores during the previous year. Thus the total authorised capital of the new companies registered during the year under review recorded an increase of Rs 82.9 crores over the preceding year even though the number declined by 270 companies. This sharp increase in the authorised capital was due to the registration of Bokaro Steel Ltd., with an authorised capital of Rs 100 crores in January 1964. During the six months ended March 1964, 670 new companies were registered with a total authorised capital of Rs 227 crores as against 557 new companies formed with total authorised capital of Rs 113 crores during the preceding six months ended September 1963. There was thus a substantial improvement in new registration during the second half of 1963-64 over the preceding six months in that the number of new registrations rose by 113 and their total authorised capital doubled itself. The total number of companies registered during the six months period October 1962 to March 1963 was 690 companies having a total authorised capital of Rs 134 crores as compared to 807 companies incorporated during April to September 1962 with an aggregate authorised capital of Rs 123 crores.

The turning point in new company registrations, which followed a downward course from August 1962 and became more pronounced from April 1963, synchronised with the Finance Minister's policy statement that Government were set on following a positive policy of economic growth which was intended to lift the economy from the low pitch at which it then stood. With every subsequent policy announcement of the Finance Minister, corporate activity as exhibited by new company formations has improved. The important point is that, notwithstanding

market reactions to the Budget proposals made in February 1964, the sentiment of the entrepreneurs as disclosed by the new company registrations has not been affected. The available data show that, in March, new registrations stood at 120 as against 83 in the preceding month and out of the total of 120 companies newly formed 18 were public companies as against 12 in the preceding month.

The total number of 1,227 new companies formed during the year 1963-64 was reported to comprise 155 Public Companies and 1,072 Private Companies accounting for total authorised capital of Rs 148 crores and Rs 192 crores respectively, as against 227 Public Companies and 1,270 Private Companies registered with a total authorised capital of Rs 175 crores and Rs 82 crores respectively in 1962-63.

A study of the industrial pattern of the 1,227 companies registered during 1963-64 discloses that, as in previous years, the highest number of 624 companies were registered for purposes of processing and manufacturing food stuffs, textiles, leather, metals, chemicals and other goods with a total authorised capital of Rs 2,84.11 lakhs of which Bokaro Steel Ltd., a Government company registered in January 1964, alone accounted for an authorised capital of Rs 100 crores. Thus more than half of the total number of new companies was registered for manufacturing various kinds of articles accounting for more than 80 per cent of the total authorised capital of all new registrations of the period under review.

In the second important industrial group, Commerce-Trade and Finance, 368 companies were registered with an aggregate authorised capital of Rs 197 lakhs. The number of companies registered in the Community and Business Services came to 56, and the authorised capital amounted to Rs 379 lakhs, and in the Transport and Communication Group, the number of newly registered companies stood at 64 with an authorised capital of Rs 611 lakhs.

During the last quarter of 1963-64, 317 new companies were formed as against 353 new companies registered during the third quarter, October-December 1963.

285 new companies registered during the second quarter July to September 1963 and 272 companies registered during the first quarter of this year. The number of new companies registered during the last quarter of 1955-56 was larger than the number of new companies registered during the corresponding quarter of any year during the last nine years. The total number of new companies registered during the last quarter January-March 1956 was 455 while the total number of new companies formed during the corresponding quarter of other years ranged between 211 and 401.

Total	227	1270	1497	155	1072	1227

A study of regionwise distribution of new companies reveals that the Eastern Region which ranked first in recording the largest number of new registration in the earlier years yielded its pride of place to the Western Region in which was registered the largest number of new companies in 1963-64, the number being 340. But the Eastern Region was relegated to the third place with 294 new registrations, the second place being occupied by the Northern Region which accounted for 335 new registrations. The number of new companies registered in the Southern Region was the lowest at 258. The Northern Region registered the lowest number of companies in earlier years. The largest number of 340 companies was registered in the Western Region (comprising Gujarat, Maharashtra, Madhya Pradesh and Goa). Next came the Northern Region (comprising Delhi, Punjab, Himachal Pradesh, Rajasthan and Uttar Pradesh) with 335 new registrations followed by the Eastern Re-

The total number of new registrations during the year under review was highest in the State of Maharashtra, the number being 243. West Bengal, in which the largest number of companies used to be registered in earlier years was relegated to the second position in 1963-64 with 238 new registrations followed by the Union Territory of Delhi (223) and the State of Madras (158). These four major states together accounted for 852 new registrations or 70 per cent of the total. The number of companies registered in the Union Territory of Goa was 10.

gion (comprising West Bengal, Bihar, Orissa, Assam, Mainpur and Tripura), and the Southern Region (comprising Madras, Andhra Pradesh, Mysore and Kerala) which registered 294 and 258 companies respectively.

During 1963-64, 19 Government companies were set up in the country with an aggregate authorised capital of Rs 169 crores of which Bokaro Steel Ltd., alone accounted for an authorised capital of Rs 100 crores as against 8 Government companies registered with an authorised capital of Rs 20.5 crores during 1962-63. Of the 19 Government companies registered during 1963-64, 7 were public limited companies having a total authorised capital of Rs 35 crores and 12 were private limited companies having a total authorised capital of Rs 134 crores. The share of Government companies in the total authorised capital of all the 1,227 new companies registered during 1963-64 came to 49 per cent.

Big Expansion Planned at Ashok Leyland

Large expansion schemes are planned at the Ashok Leyland factory at Ennore, near Madras.

Helping to bring the schemes to fruition is a Commonwealth Development Finance Co. (CDFC) loan, announced in London on Tuesday, 27 August, of £450,000 to Ashok Leyland towards the cost of installing plant and machinery for the production of camshafts, timing gears and differentials.

Ashok Leyland aims to produce 5,000 seven-ton commercial vehicles and 1,500 industrial engines a year—a 35 per cent increase over current production.

Ninety per cent of the company's products will be indigenous.

For the INVESTOR

INVESTMENT GOSSIP
Threat of more Curbs

Apart from the general reluctance to extend commitments following the fall of the Congress Ministry in Kerala and reports of increased Chinese military activity on the northern borders of the country, stock market sentiment has been adversely affected by the reported decision of the Central Government to take more powers to regulate the Stock Exchanges in the country. It is said that the new move has stemmed from an anxiety on the part of the Government to prevent unhealthy speculation in view of the increasing public stake in industry. The number of companies in the private sector is increasing fast and moreover the quantum of investments in private sector companies by Government sponsored institutions such as the Industrial Development Bank and the Unit Trust is steadily going up. It is said that since the existing Security Control Act does not give the Government any powers of control, it will be necessary to assume powers so that Government can exercise effective control over stock exchanges. In this connection it has been pointed out that according to Government, of all the recognised stock exchanges in the country, only the Bombay Stock Exchange is well-organised. It has been indicated that the new measures will be based on the studies made on the working of stock exchanges both in India and abroad. Two American experts are expected to visit India toward the end of this year with a view to studying the working of the Indian stock exchanges, while the Chairman of the Company Law Board will visit the United Kingdom and the United States to study the working of stock exchanges in those countries.

While it is generally agreed that the stock exchanges should be made safe for the genuine investor, it is rather difficult to understand why Government should be anxious to take more powers at this juncture. Existing powers are quite adequate to ensure that stock markets in the country are free from the influence of speculators. In the present context of lack of enthusiasm for investments in industrial equities largely because of the heavy incidence of taxation, threats of further regulations on the working of stock markets will only result in scaring away potential investors.

NEW ISSUE NOTES
Sundaram-Clayton

Sundaram-Clayton Limited, a public company, is to issue privately a further capital of Rs 35,47,700, divided into 35,477 equity shares of Rs 100 each for cash, at a premium of Rs 7 per share. Of the issue, 17,477 equity shares will be offered to Adwest Engineering Limited, England, for cash in sterling to be utilised, for the purchase of plant and machinery and the balance shares of the value of Rs 18 lakhs will be subscribed by T. V. Sundaram Iyengar and Sons Private Limited and their associates. The money will be expended for implementing the company's steering-gear manufacturing project.

Hub Bolts & Nuts

Hub Bolts and Nuts India Limited, a public company, proposed to be incorporated in Gujarat, is to issue capital of Rs 40 lakhs for cash, at par, divided into 27,000 shares and 13,000 preference shares of Rs 100 each. The money will be utilised for financing the manufacture of starter gear rings, wheel bolts, nuts, etc.

Bharat Collieries

Bharat Collieries Limited Calcutta, is to issue 29,853-6½ per cent unsecured perpetual Debentures of Rs 100 each, at par, to the preference shareholders in lieu of their 5½ per cent cumulative preference shares of Rs 100 each, in accordance with the Calcutta High Court's Order dated 29 January 1963.

BONUS ISSUE NOTES

Polychem

Polychem Limited, Bombay, is to issue Rs 24 lakhs bonus capital in 48,000 equity shares of Rs 50 each on capitalisation of the share premium account to a like extent. The bonus shares will be offered to the existing equity shareholders of the company in the proportion of 3 bonus shares for every 7 equity shares held.

Deccan Sugar

The Deccan Sugar and Abkhari Company Limited, Madras, is to issue shares of the value of Rs 6.64 lakhs on capitalisation of the share premium account. The

bonus shares will be issued in the ratio of one bonus share for every six shares held now.

Alcock Ashdown

Alcock Ashdown and Company Limited, Bombay, is to issue Rs 3,47,000 bonus capital in shares of Rs 100 each, on capitalisation of the share premium account to a like extent. The bonus shares will be allotted to the existing equity shareholders in the proportion of one bonus share for every fifteen shares held.

production before the end of the current financial year.

National Engineering Does Better

National Engineering Industries Limited, in Birla Gwalior Private Limited group, has proposed a dividend of 20 paise per share on the ordinary shares, subject to tax, for the year ended 31 March 1964.

According to the preliminary report, the net profit, after providing Rs 21.36 lakhs for Depreciation; Rs 4.93 lakhs for Development Rebate Reserve; Rs 14.50 lakhs for Taxation; transferring Rs 75.00 lakhs to General Reserve; Rs 1.50 lakhs to Dividend Equalisation Reserve; Rs 3.00 lakhs to Contingencies Reserve and taking into account Rs 16,638 being the balance brought forward from previous year, amounts to Rs 4,15,871 as against Rs 3,99,438 for the preceding year.

NICCO Pays More

Thanks to a marked rise in sales from Rs 4.01 crores to Rs 4.50 crores, the National Insulated Cable Company of India Limited has produced excellent working results for the year ended 31st March 1964. The net profit, after providing for depreciation and taxation (including short provisions), amounts to as much as Rs 37.56 lakhs as against only Rs 23.43 lakhs for the previous year.

Apart from providing Rs 6.00 lakhs for General Reserve, Rs 2.00 lakhs for Dividend Equalisation Reserve and Rs 2.00 lakhs for Bad and Doubtful Debts Reserve, Depreciation is raised to Rs 10.24 lakhs from Rs 8.82 lakhs and Taxation to Rs 61.25 lakhs from Rs 38.90 lakhs. Development Rebate Reserve is, however, lowered to Rs 36.900 from Rs 1.75 lakhs. The directors have proposed to raise the dividend on the ordinary shares from Rs 1.80 to Rs 2.00 per share, subject to tax, payable to those shareholders registered as on 24th September.

The directors have stated that three main factors have contributed to increased profits. First, the company obtained the benefit of the old stocks of raw materials purchased earlier at lower prices. This enabled the company to present an advantageous position. Secondly, the company concentrated, to a large extent, on more remunerative types of production to ensure better margin. Finally, fabrication work for other parties helped the company in securing better trading position.

Finally, the directors add that the increase in the prices of raw materials will be reflected in the working of the current and subsequent years and it may be difficult to maintain this year's higher profit ratio. Annual general meeting will take place on the 24th

September. Transfer books will remain closed from 11th to 24th September, 1964.

Dishergarh Power Maintains

Thanks to a general improvement in supplies of power, the Dishergarh Power supply Company Limited has been able to report encouraging working results for the year ended 31st March 1964. Sales of energy are higher at Rs 125.17 lakhs against Rs 104.92 lakhs, reflecting the rise in the units sold from 150 million to 157 million. The net profit, after providing for depreciation and taxation, amounts to Rs 13.88 lakhs as against Rs 9.97 lakhs although the latter figure includes Rs 1.62 lakhs being transferred from contingency reserve as approved by the West Bengal Government.

Apart from providing Rs 24,200 for Tariff and Dividends Control Reserve and reducing General Reserve to Rs 6.00 lakhs from Rs 7.25 lakhs, all other allocations have been increased.—Depreciation from Rs 2.93 lakhs to Rs 3.13 lakhs; Taxation from Rs 5.73 lakhs to 12.92 lakhs; Development Rebate Reserve from Rs 15,491 to Rs 77,211 and Contingency Reserve from Rs 28,999 to Rs 60,128. The directors have proposed to maintain the ordinary dividend at 10 rupees per share, subject to tax. Annual general meeting will take place on the 25th September.

ISW Products Repeat

The Indian Steel & Wire Products Limited has reported an increase in sales from Rs 376.80 lakhs to Rs 423.98 lakhs for the year ended 31 March 1964. In this connection, the directors state that, although the turnover shows a rise, the production and sales are below the remunerative levels due to unavoidable impediments arising out of the erection of the new Wire Rod Mill. However, the new mill is now picking up production whose impact will be felt in the working for the current year.

After providing Rs 48.93 lakhs (Rs 23.27 lakhs) for Depreciation and Rs 20.73 lakhs (Rs 43.41 lakhs) for Development Rebate Reserve, the accounts reveal an adverse balance of Rs 3.17 lakhs. After transferring Rs 21.90 lakhs from General Reserve, the directors have adjusted the adverse balance and transferred Rs 17.40 lakhs (Rs 17.50 lakhs) to Dividend Reserve and provided Rs 1.31 lakhs (nil) against dividend tax. It is, however, proposed to maintain the dividends at Rs 1.80 on the fully-paid and 18 paise per share on the partly-paid ordinary shares, payable on or after 8 October to those shareholders registered as on 29 September, 1964. Annual general meeting will be held on the 29 September.

Saran Engineering Earns Less

The Saran Engineering Company Limited has reported a decline in sales from Rs 36.40 lakhs to Rs 29.39 lakhs for the year ended 31 March 1964, reflecting the unsatisfactory trading conditions in the sales of sugar machineries with which the activities of the company are essentially linked, not to speak of the existence of keener competition.

The net profit, after providing for depreciation and taxation, is lower at Rs 99,608 as against Rs 2.14 lakhs for the preceding year. Apart from providing Rs 3,986 for Development Rebate Reserve, Depreciation is raised to Rs 1.31 lakhs from Rs 1.15 lakhs, while Taxation is lowered to Rs 1.00 lakh from Rs 3.00 lakhs.

After adding the balance brought forward of Rs 13,304 (Rs 11,859), Rs 17,488 (Rs 24,970) being gratuity provision no longer required, Rs 25,000 (nil) being Bad and Doubtful Debts Reserve written back and Rs 1,346 (nil) being tax refund, the following appropriations are made:—expenses relating to previous year Rs 6,231 (Rs 3,001) and General Reserve Rs 85,000 (Rs 25,000). No provision is made for Rehabilitation Reserve against Rs 1.50 lakhs.

The directors have, however, proposed to maintain the dividend 40 paise per share, taxable. They add that, with a view to utilise the available capacity and to maintain production, as far as possible, they consider it advisable to manufacture certain articles in anticipation of orders.

The company has received an industrial licence for the manufacture of Beche pneumatic hammers and negotiations are now in progress with the foreign collaborators. Attempts are being made to raise necessary finances.

Same from Jardine Henderson

Despite the fact that increasing difficulties for many of the trading departments caused disappointing results, Jardine Henderson Limited has been able to report a marginal increase in the working results for the year ended 31 March 1964. Although sales are shown at only Rs 563.11 lakhs against Rs 624.18 lakhs, the net profit, after providing for depreciation and taxation, amounts to as much as Rs 31.45 lakhs as against Rs 24.70 lakhs for the previous year although the former figure includes Rs 3.91 lakhs being the profit on realisation of investments.

Apart from writing off Rs 1.68 lakhs against Goodwill Depreciation is raised to Rs 2.32 lakhs from Rs 2.22 lakhs; Taxation to Rs 17.24 lakhs from Rs 17.12 lakhs and General Reserve to Rs 13.24 lakhs from Rs 12.68 lakhs. The provi-

sion for Development Rebate Reserve is slightly lower at Rs 2,750 against Rs 2,830. The directors have proposed to repeat the dividend on the ordinary shares at 7 per cent, subject to tax.

Mysore Paper's Expansion Scheme

Mysore Paper Mills Limited can expect to derive the full benefits out of the expansion scheme now being implemented after the erection and installation of the pulp plant and modern soda recovery plant have been completed. The boilers, paper machine, transformers and other equipment have been installed and commissioned, while other facilities also have been got ready. The expenditure on the expansion programme, up to the end of 1963-64, was Rs 2.78 crores, the actual amount spent in the last accounting period being Rs 1.28 crores. An expenditure of Rs 1.50 crores had been incurred up to the end of 1962-63.

During the year ended 31 March 1964, there was a slightly higher level of output and sales. While output rose by 8 per cent, sales improved to Rs 130.31 lakhs from Rs 122.99 lakhs. However, on account of higher costs of production, there was actually a slight decline in the net profit, before providing for depreciation and taxation, to Rs 15.69 lakhs from Rs 18.40 lakhs. The provision for Depreciation is Rs 5.76 lakhs against Rs 6.04 lakhs. As there is need for providing a large amount towards Development Rebate, there is no assessable income. No provision has, therefore, been made towards taxation against Rs 6 lakhs formerly.

The transfer of Rs 21.51 lakhs (Rs 22,800) to Development Rebate Reserve has been made with the help of the transfer of a similar amount (nil) from General Reserve. Even though the dividend on equity capital has been reduced to 9 per cent from 12 per cent, taxable, the amount required is very much higher at Rs 10.52 lakhs (Rs 6.75 lakhs) on account of a larger capital ranking for this purpose and a sum of Rs 1.23 lakhs is being transferred from the Dividend Equalisation Reserve. There was a transfer of Rs 4.50 lakhs to General Reserve previously.

Kalpetta Estates Earn More

The working of the Kalpetta Estates Limited has resulted in a net profit, after providing for depreciation but before taxation, of as much as Rs 5.29 lakhs for the year ended 31 March 1964 as against only Rs 3.56 lakhs for the previous year.

The provision for Taxation is higher at Rs 2.65 lakhs (Rs 1.75 lakhs), while the transfer to Reserve amounts to Rs 1.06 lakhs (Rs 42,500). The dividend on the equity shares is raised from 11½ to 12½ per cent, subject to tax.

Brooke Bond Tea Pays Less

Brooke Bond Estates India Limited has reduced the dividend from 7½ to 5 per cent, subject to tax, for the year ended 30 June 1964 following a decline in net earnings. According to the preliminary report issued by the company, the net profit, before providing for taxation, is shown at only Rs 8.03 lakhs as against Rs 9.52 lakhs for the previous year. The provision for taxation is lower at Rs 4.45 lakhs against Rs 5.40 lakhs. The profit, after tax, works out to Rs 3.63 lakhs against Rs 4.12 lakhs.

Adding the balance brought forward from previous year of Rs 7,816 (Rs 2.43 lakhs), provision for staff and labour bonus withdrawn Rs 34,070 (Rs 93,500), excess provision for taxation in respect of past years withdrawn nil (Rs 50,000) and General Reserve withdrawn Rs 26,000 (nil), there is an available sum of Rs 4.31 lakhs against Rs 7.93 lakhs.

From this, Rs 34,070 (Rs 71,455) is provided for bonus to staff and labour; Rs 5,090 (Rs 7,244) transferred to Capital Reserve and Rs 18,764 (Rs 1,200) transferred to Development Rebate Reserve. No provision is made for General Reserve against Rs 2.50 lakhs. There is a balance of Rs 3.73 lakhs (Rs 4.68 lakhs) from which the directors have proposed the dividend referred to above. Transfer books of the company will be closed from 6th November to 1st December 1964.

IN BRIEFS CALCUTTA

French Motor Car Company Limited has repeated the dividend at 20 per cent, subject to tax, for the year ended 31 March 1964.

Ashok Cement Company Limited has maintained the dividend at 7 per cent for the year ended 31 March 1964.

National Iron and Steel Company Limited has proposed a taxable dividend of 62 paise per share for the year ended 31 March 1964, (nil previously). The last dividend was 75 paise per share, paid for the year ended 31 March 1953.

BOMBAY

Nepa Mills Limited has proposed a maiden dividend of 68 paise per share on the equity capital for the year ended 31 March 1964.

The Century Spinning and Manufacturing Company Limited has proposed to raise the interim dividend to Rs 14 per share for the year 1964 from Rs 12 per share paid for the previous year.

Amalgamated Electricity Company Limited has maintained the ordinary dividend at 90 paise per share for the year ended 31 March 1964.

MADRAS

The Buckingham and Carnatic Company Limited has recommend-

ed an interim dividend of 8 per cent on the equity capital for the year 1964.

Teekoy Rubbers (India) Limited has maintained the ordinary dividend at 6 per cent for the year ended 31 March 1964.

United Breweries Limited has raised the equity dividend from 8 to 8 per cent for the year 1963-64.

Forest Industries (Travancore) Limited has raised the dividend from 12 to 15 per cent for the same year.

Emerald Valley Estates Limited has maintained the dividend at 20 per cent for the year 1963-64.

The Madras Safe Deposit Company Limited has repeated the dividend at 6 per cent on the equity capital for the year ended 30 June 1964.

Mysore Amalgamated Coffee Estates Limited has doubled the ordinary dividend to 10 per cent for the year 1963-64.

* STOCK EXCHANGES Stock Markets Irregular

PRICE movements in stock markets have been generally irregular on alternate bouts of buying and selling. Lack of buying interest stems from political uncertainties and rumours regarding the likelihood of fresh regulations relating to trading in stock exchanges.

Dull and quiet conditions conditions continued to prevail on Lyons Rance.

Although Dalal Street remained closed during most part of the week, a better feeling was noticed in Kerb trading.

The tendency of equity prices on the Madras Stock Exchange was barely steady.

The Ahmedabad Stock Exchange remained closed from 7 to 10 September.

Trading on the Delhi Stock Exchange was generally dull and featureless.

Quiet conditions persisted on the London Stock Exchange and prices, for the most part, moved within narrow limits.

* CALCUTTA

THE local stock exchange suffered a further setback during the week owing to renewed offerings, being influenced by certain adverse factors. Even cash shares, which had been giving an encouraging performance during the past few weeks, turned rather quiet on lack of fresh support. Turnover was therefore, restricted and the undertone remained cautious.

In general, the downward trend in prices, that was noticed in the previous week, gathered further momentum. The main contributory factor was the news of the Government move to enforce measures for regulating the work-

ing of stock exchanges more effectively due to periodical outbursts of speculative activities, especially when various financial institutions like the LIC, Unit Trust, etc., had invested their funds into industrial shares.

Sentiment in the market was also disturbed by the reports of increased activity of Chinese troops in the northern border, the aggressive behaviour of Pakistan and the political uncertainties following the ousting of the Congress Ministry in Kerala. The implications of the adoption of the Eonus Commission's recommendations were also bearishly interpreted.

For obvious reasons, equity prices developed a softening tendency owing to bull liquidation. Bears were also awaiting an opportunity to hammer down prices knowing fully well that the basis on which their counterparts had built up their hopes might not be sustained for long. Some resistance was, however, noticed at the lower levels. This was influenced by a hope entertained in some circles that the Government might adopt practical policies and the various industries would be helped to increase production on a reasonably profitable basis.

The gilt-edged market ruled quiet with business reduced to a small scale. Price changes were few. 3 per cent 1986 Conversion ruled unchanged at Rs 63.75.

Except for Punjab National which changed hands on the ex-dividend basis at Rs 20 to Rs 20.12, not much interest was shown in the Banking section.

Except for selective support, trading in the Jute section was generally cautious in view of the uncertain outlook for the industry. The dis-appointment over the dividends declared by the Bird group of jute mills also did a considerable damage to the investors' interest. Birlas were depressed further to Rs 35.44 from Rs 36.75, while New Central were on offer at Rs 10.69 against Rs 11 and Ganges at Rs 14.50 against Rs 14.81.

Coal shares were dormant except a few like Central India and Western Bengal, which met with some enquiries upto Rs 9.53 and Rs 9.50 respectively. Equitable were on offer at Rs 21.06 against Rs 21.50.

In the Tea section, there was selective buying of shares of the Assam and Dooars gardens. Hasimara were supported up to Rs 13.62 from Rs 13.44 and Brooke Bond up to Rs 10.75 from Rs 10.56.

Sugar shares were practically neglected. The only bright spot were Dyer Meakins which were in demand up to Rs 27.06 from Rs 24.25 following the excellent results released by the company.

Textile shares were generally quiet. Cawtex moved narrowly between Rs 6.72 and Rs 6.81 and Elgins between Rs 19.94 and Rs 20.06. Bowreah were a steady feature at Rs 24.37.

After initial steadiness, Engineering shares displayed some weakness towards the close due to sustained profit-taking. After opening at Rs 26.02 and improving at one time to

Rs 26.16, Indian Irons slipped down to Rs 25.44 before finishing the week at Rs 25.62. In sympathy, TEXMACO moved down to Rs 26 from Rs 26.60; G. K. Williams to Rs 23.50 from Rs Rs 23.87 and Jessop to Rs 20.81 from Rs 21.12. Jay Engineering, however, had good support up to Rs 18.94 from Rs 18.50 and so also Binani Metal up to Rs 13.50 from Rs 12.87.

Miscellaneous issues moved in sympathy with the general trend of the market. Dunlop Rubber came in for offer at Rs 32.50 against Rs 33.06; Hindustan Motor at Rs 17.37 against Rs 17.69; Indian Aluminium at Rs 31.56 against Rs 32.37; Indian Copper at Rs 3.40 against Rs 3.47; Kesoram at Rs 26.19 against Rs 27; Orient Paper at Rs 32.60 against Rs 33.65; Orissa Cement at Rs 11.25 against Rs 11.69 and Rohtas at Rs 10.31 cd against Rs 11.00xd. Jaipur Udyog were nearly maintained at Rs 11.19.

Even cash shares, which had been giving good performance, turned quiet on lack of support. Alkali Chemicals met with business at Rs 29 to Rs 29.50; Chemical Fibre at Rs 15.19 to Rs 15.44; Goodyear at Rs 22.87 to Rs 23.75; Hindustan Aluminium at Rs 13.37 to Rs 13.81; India Steamship at Rs 6.44 to Rs 6.44 to Rs 6.69; J. K. Synthetics at Rs 12.94 to Rs 13.37; Universal Cable at Rs 11.25 to 11.62 and Union Carbide at Rs 32.94 to Rs 33.50. English Electric were a firm feature at Rs 15 and so also British Paints at Rs 23.12

Machine Tools Production

Indian Machine Tool Manufacturers' Association report that the total approximate production of various machine tools by their 35 leading member-firms during the month of July 1964, was as under:

Description of Machine Tool Manufactured	July, 1964	
	Quantity Nos.	Value Rs (000)
Lathes ...	434	56.99
Milling Machines ...	56	30.76
Radial Drills ...	33	10.98
Grinding Machines ...	27	10.70
Presses ...	41	6.07
Portable Elec. Tools ...	2249	6.48
Drilling Machines ...	189	5.64
Furnaces ...	10	5.08
Capstan Lathes ...	13	4.64
Shaping Machines ...	60	4.90
Planing Machines ...	10	4.12
Regulators ...	2147	2.80
Lathe Chucks ...	874	2.58
Welding Machines ...	68	2.36
Blowpipes ...	1031	2.21
Turret Lathes ...	3	1.65
Cutter and Tool Grinder ...	8	1.56
Boring Machines ...	1	1.10
Pneumatic Power Hammer ...	1	1.01
Shearing Machines ...	5	91
Cutting Machines ...	50	91
Hacksaw/Bandsaw Machines ...	23	1.83
Miscellaneous ...	1125	73
Drill Chucks ...	937	40
Blowers ...	23	39
Burners ...	101	30

Slotting Machines ...	1	12.00
Total ...	9523	1,67.64

GOVERNMENT AND BUSINESS

A Partnership for Dynamic Growth and Increasing Social Justice

Following is the text of Ambassador Bowles' address before the All India Management Association Seminar on "Business and Society" prepared for delivery in Calcutta on 3 September:

I speak to you today in a dual capacity; both as a former businessman who learned what it was to meet a goodsized payroll during the depressed 1930s and as a government administrator and student of government.

As I look at the problem of economic development in Asia, Africa and Latin America I am struck with a paradox. To meet national goals of rapid growth, new governments badly need the capital, technology and management skills of responsible modern business organization, and business urgently needs the good will, understanding and support of government.

Yet government and business in newly independent nations often appear to be engaged in a kind of Cold War, each suspecting and fearing the other, and each diffusing or even blocking the contributions of the other to the general welfare.

If developing nations are to achieve the necessary rate of economic growth this crisis in confidence must be overcome, this in turn requires both parties clearly to identify their own real interests.

The costly gulf between business and government in many newly-independent developing nations has deep historical roots. The twin legacy of 19th century Europe was a philosophy of social justice and economic exploitation and social abuse on the other.

While the philosophers of Europe were developing exciting new concepts of political freedom, financial and manufacturing interests were creating an economic structure which belied the promise of democracy for all but the rich and privileged.

By the end of the nineteenth century the economic evils prevailing in Europe had been exported to the Asian and African colonies, India among them.

When new national governments in Asia and Africa threw off colonial rule in the name of democracy they were understandably determined to rid their countries of the economic abuses which they looked upon as vestiges of old regimes.

In the years following independence they too often saw shoddy or adulterated goods produced by their own citizens appearing in the markets, capital moving into unproductive speculation rather than into creative enterprises

which contribute more jobs and better products, and some businessmen profiteering on government contracts.

As a result the task of rooting out the anti-social business practices left from colonial days was added to the already monumental tasks of governing people unaccustomed to independence and of speeding economic development with inadequate capital and management skills.

If business is to understand government and vice versa, it is essential that business leaders recognize that the deep public distrust which had grown up during these early years was not without some basis in fact.

II

What is needed now is a fresh perspective and fresh start. With far sighted leadership on both sides the basis for a dynamic partnership can be created which will reconcile the needs and the promise of industrialization with the fundamental requirement of social justice in a free society.

In Japan as in the Western democracies this reconciliation has in fact occurred, and the result is not only the rapid growth of industrial and farm output in free enterprise economies but the sharing of that output among the people generally. In a recent conversation, a high Indian government official summed up this development in my country in a single sentence: "In the development of a welfare state based squarely on private enterprise, America" he said, "has disproved the basic assumptions of Marxism."

As every outsider to the United States knows full well, mass production, high wages, and comprehensive social legislation have resulted in unparalleled prosperity for the large majority of American citizens, and the generally equitable distribution of wealth through democratic means. By and large, business not only in America but throughout the western democracies has become a national resource, a partner in raising living standards and the primary dynamic force of national growth.

The revolutionary development was no accident. It was fought for, step by step, by dedicated people in business, the labour movement, the universities and in government. In the United States most of it has occurred during my adult lifetime; indeed I believe I can personally qualify as a battle scarred veteran of the struggle.

A brief review of how the battle was fought may be helpful in underscoring the nature of the

challenge which both business and government in democratic developing nations face today.

Around the turn of this century, American business took the first hesitant steps toward large-scale creative enterprise. Henry Ford is the most famous among a relatively small number of American entrepreneurs who pioneered the fundamental concepts of American business and production as it is today.

Most of you are aware of Ford's introduction in 1908 of the assembly line as a means of permitting mass production of automobiles and reducing factory costs. Far more significant, however, was Ford's recognition of the interdependence between the economic health of the society as a whole and the profitability of his business. Unless he could count on a rapidly expanding market he knew that his improved methods of production would be useless.

He therefore set out to develop an automobile so inexpensive that the masses of Americans could afford to own one and tough enough to suit the needs of a still predominantly rural nation. At the same time he provided the higher wages for his employees, knowing that this would contribute to the increasing national purchasing power which he saw as a basic requirement for a rapidly expanding economy and for his own prosperity.

Marx was the 19th century revolutionary who most aptly described the sordid economic injustice created by the industrial revolution; but Ford was the 20th century revolutionary who demonstrated that these injustices could be overcome by transforming the 'toiling proletariat' into self-respecting wage earners and increasingly prosperous consumers.

But we soon discovered that as our earnings grew, imbalances and distortions in our economy also grew, and that in a complex modern society there was a role that only government could play, i.e. the protection of the general public against abuses which were now beyond the power of the individual to control.

Although the United States had slowly acquired a wide range of legislation which protected the public against specific abuses such as the adulteration of food and drugs, it was not until the Depression of the 1930s that we gave our government direct responsibility for the protection of our economy.

When Franklin D. Roosevelt became President in 1932 one third of the American labour force was unemployed and food was rotting in the fields as incomes dropped so low that the public could no longer purchase their basic requirements.

With overwhelming Congressional support Roosevelt acted vigorously to provide minimum incomes

to the unemployed, to the retired, and to others who had lost their source of livelihood. His administration guaranteed a living wage to the workers, assured farmers fair prices for their crops and provided low interest loans that enabled them to keep their lands.

This bold democratic action guaranteed a more equitable distribution of the national output. It was good for all producers, including business and farmers because it meant that people could continue to be consumers.

But Roosevelt did more than simply build a floor under the American economy. He also secured legislation guaranteeing labour the right to organize and to bargain collectively with their employers for improved wages and working conditions.

Collective bargaining has several advantages. First, it meant that industrial disputes, which previously would have resulted in bitter and often violent strikes, could be settled through peaceful negotiation before they reached the boiling point.

Second, collective bargaining had the effect of raising wages to reflect the true economic contribution of labour. Through the bargaining process labour and management have each been able to achieve a more realistic view of the other's needs.

As a result wages have been significantly higher than they would have been without collective bargaining, but they are not so high that management cannot turn a profit. The workers get a just price for their labour, and their increased incomes mean that management enjoys a much wider market for its products.

The chief impact of our economic legislation during the thirties was not so much the reorganization of our economy as the reorganization of it to provide a viable balance between the investors, the labourers, the farmers and the consumers. The result was the creation of a welfare state in which free enterprise could flourish while the common man found a much greater measure of dignity and security.

Although great gains were made we soon discovered that our objectives were only partially achieved. By 1940 a major degree of economic justice had been assured but our economy was still operating well below its capacity. This was dramatized immediately following America's entry into the war when, in January 1942 President Roosevelt called for the building of 50,000 airplanes and five million tons of shipping each year. It was a staggering objective and most Americans were sceptical that it could be achieved. But the sceptics proved to be wrong. Once unleashed from the restrictions of inadequate purchasing power our economy

outdid itself. Within 18 months our industries had tripled many of the President's war production goals.

By 1943 our farms, with 10 per cent fewer workers, were producing thirty per cent more food. In 1942, 1943 and 1944 we produced more civilian goods than in any previous year in addition to our fantastic production for war, and with 12 million of our ablest young men in the armed forces.

The War years taught us that American industry and agriculture was capable of producing far more, of paying higher wages, and of selling more goods than it ever thought possible. The explosive benefits of Ford's theory of mass production and high wages coupled with a steadily expanding mass market were made clear to most thoughtful Americans.

In the post-war period enlightened social legislation, which had been enacted during the thirties over the bitter protest of many businessmen, became an accepted way of life. Thoughtful industrial leaders have now begun to seize the initiative in developing mutually beneficial relations with society, and business planning has begun to take account of social welfare as well as of profit and loss.

Enlightened business institutions offer financial assistance to education at all levels. Many encourage their executives to take paid leave to attend university courses, not only on management but on public affairs as well. The value of strong, responsible labour unions which relieve management of many administrative responsibilities is recognized. Businessmen take an ever more active role in politics, and many like Secretary of Defence McNamara, serve the government in top posts.

What all this means is that a large part of the American business community has come to recognize that its interests are the same as those of society as a whole. Entrepreneurs now know that they can succeed only if the purchasing power and opportunities of the individual worker, farmer and consumer continue to expand as production expands.

III

Although the situation in the developing new nations is different in many respects, the American experience suggests that a mutually beneficial relationship between business and society in a democracy is not only possible but profitable. It suggests that the mistrust which exists between the entrepreneur and the government can be overcome once the long-range interests and needs of each are clearly recognized.

Speaking as a friendly foreign observer, it seems to me that there are four areas in which attitudes and practices must be

changed in democratic countries on the threshold of rapid development if business and government are to become genuine partners in the establishment of a free and dynamic society.

The first is the relationship between the factory and the farm. I have frequently heard Indian businessmen complain of the amount of government funds which is spent in developing the rural areas. Cultivators, they assert, will not change their ways even if given the opportunity; the best solution is to leave them alone and to get on with industrial development.

In a society where 80 per cent of the people—and not all poor ones—live in the rural areas, this impresses me as incredibly shortsighted. In the first place no nation can survive as a democracy if four-fifths of the people are to be considered inferior citizens; that in itself is a travesty on freedom. Each individual has a dignity of his own and if this fact is ignored there can be no freedom for anyone.

Moreover, even in the crudest material sense, this outlook is self-defeating. Every step that tends to improve the lot of the rural citizen broadens the market for manufactured goods.

Every new village electrified means more demand for pumps, for fans, for light bulbs, and eventually for other electrical tools and appliances. Every new mile of rural roads means more sales of trucks, tires and petrol. And every person made literate means one new reader whose horizons are wide enough to demand more goods.

As I have toured through Indian villages I have been impressed with the fact that so few entrepreneurs are taking advantage of the market that already exists in the rural areas. It is true that the number of new bicycles and sewing machines in the villages is steadily increasing and that cloth and pots continue to sell well.

But these are all standard goods, invested generations ago. The only new designs one sees are agricultural implements developed by government extension agents. Where are the low-cost building materials and the metal stove pipe? Where are the fertilizers and insecticides? Where are the thirty rupee transistor radios?

India already has a vast rural market waiting to be tapped by any manufacturer with a product which is relevant to any of a hundred of rural needs, provided that it is well made and is fairly priced.

Another aspect of farm-factory relations which must not be overlooked is the fact that until rural India begins to produce sufficient food to feed the nation, foreign exchange which is desperately needed by your industries will be required for food imports.

America to be sure provides India with vast amounts of food grains in exchange for rupees. But food purchases in most other countries can only be made with hard currencies which must be subtracted from the amounts available for industrial development. Moreover when food production lags, prices rise and factory workers require higher wages.

The second set of attitudes and practices which I believe must change concerns investments and profits. When a country is struggling through the first stages of economic modernization, there is a natural tendency among investors to put their money into short term schemes which promise a quick return.

Opportunities for long-range ventures are usually restricted by inadequately developed basic services like rails and power. Sometimes the prospects of the nation itself are not clear and a gamble for a quick profit seems safer than a gamble on an indefinite national future.

Moreover in developing economies there are always a few people who can afford to spend a great deal, even though the masses can afford to spend almost nothing, and it is frequently profitable to cater to the wants of the rich at high prices.

One of the most common forms of such short-range investment in developing countries is speculation in urban real estate. From such investment the country as a whole gains nothing. The investor simply holds real estate while the inflationary forces generated by an expanding economy drive up the prices. Speculating and hoarding of scarce raw materials is equally destructive.

This is precisely the sort of unproductive investment which gives rise to the public mistrust of the business community which I described in the beginning. Government feels it is not getting the responsible support it requires from business to make its plans work, and the public knows that it is paying high prices not for high quality but to line the pockets of a privileged few. Under such circumstances it is hardly surprising that responsible governments consider vigorous regulation essential.

Moreover, these speculative investments do not even serve the best interests of those who make them. In countries like India, where the economy is now beginning to show definite signs of growth and vitality, the businessman who does not begin to think in terms of long-range investments in solid productive capacity will be missing a major opportunity to expand his operations and his profit.

Now, when the competition is still not severe, is the time to begin to build up customer confi-

dence by manufacturing and distributing quality products at reasonable prices. This is the time to begin to develop new products which will suit the needs of customers who for the first time are in the market for more than the basic necessities. It is my conviction that here in India such enterprise is now appearing.

The third pattern of negative attitudes and practices which I believe must be overcome if India is to achieve an adequate rate of economic growth is on the government side. While it is true that business practices in developing nations leave much to be desired, it is also true that many new governments have been attempting to regulate business activity too minutely.

In an effort to outlaw specific abuses, new governments frequently create a web of regulations which drives the entrepreneurs off the highways and onto the byways of developmental investment. In extreme cases such minute regulation generates a demoralizing atmosphere in which the entrepreneur feels he must break the law if he is to survive.

Excessive regulation also has the effect of interfering with the free play of the market, which is a sensitive and effective instrument for economic decision making.

Every government must, of course, set standards of performance that protect the public against deceptive practices such as mislabeling and adulteration of products. Where basic materials are in short supply and services like transport and power are over-taxed, governments also have a responsibility to ensure that these scarce items are used to serve the cause of national development.

Frequently such regulations are best imposed through fiscal incentives to productive enterprise rather than through administration, for experience indicates that most governments are neither equipped nor sufficiently flexible to handle the multitude of small choices which are the lubricant of any complex modern economy. Governments in new nations must be constantly alert to the danger that their licensing procedures will become cumbersome, that their allocation procedures do not simply create costly black markets, and that their regulatory legislation does not invite evasion, corruption, and a general deterioration of business morality.

Finally, I would like to suggest that the relations between the private entrepreneur and government can never be mutually satisfactory until the government is clear about its own entrepreneurial role and business is clear about the need for government direction and planning.

In any well governed developing nation the public sector is

bound to be substantial. Many basic industries such as power, transport, mining and some heavy manufacturing demand investments of capital and management which are beyond the immediate capacity of the private sector to supply. India's private sector would indeed be primitive today if the government had not foreseen the need for a rapid expansion of electric power, transport and steel production.

There are, however, practical limits to the resources a young government can devote to the public sector. Administrative experience is rarely adequate even for sound needs such as education, transportation, health, rural development and basic industrial needs. Technological skills are also limited. And the amount of capital that can be raised by taxation or government borrowing from the underprivileged majority, and even from the well-to-do minority, is limited.

Consequently there are clear practical restrictions on the amount of public sector enterprise that any new democratic government can expect to operate efficiently. This in turn suggests that government should limit itself to those spheres where private resources are inadequate for the task at hand or where for some other reasons the needs of the society are not being met by private means.

It also suggests that government cannot afford to resort to public ownership as a means of regulating enterprises which can operate effectively with private capital and management. The national interest is far better served by private enterprise operating in an atmosphere of encouragement and responsible regulation, in partnership with a well-run public sector.

IV

The advantageous balance between entrepreneurial freedom and the social needs of a free nation is a delicate one. Nor can the techniques which one country uses to achieve the balance be applied in another where the circumstances are different.

Yet the experience of the last twenty years indicates that the advantages of achieving some kind of balance are enormous. I have used the examples of the United States because it is the country with which I am most familiar. Our present annual growth rate of nearly five per cent at constant prices coupled with our expanding social services and rising wages is convincing proof that we have learned how to make our economy serve the interests of our people. Our annual increase in national output is nearly 10,000 crores.

Other examples would, however, be equally relevant. For instance, the dramatic recovery of West Germany after World War II can

be ascribed in large part to a co-operative relationship between government and the entrepreneur. West Germany had the advantage of a skilled work force, but its capital resources had been largely destroyed. The German government therefore invested heavily in an extensive public sector which provided the essential ingredients for the recovery of private enterprise.

As the private sector gathered momentum, the German government was only too happy to relieve itself of extensive administrative responsibilities by gradually selling its public sector enterprises — among them the famous Volkswagen company—to responsible private interests. As a result of this cooperation the economy of West Germany has had a sustained growth rate of seven per cent per year.

Japan with a sustained annual growth rate of ten per cent provides another useful example particularly relevant to the interests of developing countries in Africa, Asia and Latin America. There the explosion of productivity has been largely due to the government-aided integration of the industrial and rural economies. Japan's sweeping post war land reform gave every cultivator an average of slightly less than three acres of land. The government provided technical assistance and credit which permitted these small plots to become prosperous family farms.

Seventy-five per cent of these small, independent Japanese farmers now supplement their modest agricultural incomes with earnings from part-time jobs in modern rural industries which the government has also encouraged.

The resultant mass purchasing power means that Japanese manufacturers now enjoy a prosperous national market for their goods. Japanese farmers till their fields with small power tools, they own motor scooters, almost half of them have television sets, and many households even have washing machines. It is this vigorous domestic economy in which the entire nation participates that has enabled Japan to become a brilliantly successful competitor in the world market.

I could go on to discuss several other countries such as Mexico and Greece, with sustained growth rates of six per cent per year, or France which has maintained a steady rate of five per cent.

However, all of these democratic countries have one basic ingredient in common: they have managed to distribute the benefits of modern industrial production equitably through the society without crushing private economic initiative.

This human initiative, the yeast which makes wealth grow, must be present. Recognition of this fact seems recently to have grown

even in the Soviet Union which has announced its intention to study the incentives capitalist countries offer managers and workers alike for increased production.

The evidence before us suggests one over-riding conclusion: the full benefits of modern industrialization can be achieved most effectively where human beings are free to seek more efficient methods and to initiate, but only when they serve the canons of social justice which is the primary objective of all free people.

Any government of a developing nation that discourages and discredits private initiative will fail in its objective of rapid economic growth. Any private business that ignores the rights of its workers, the interests of its customers, and the responsibility of its government for the national welfare will remain a road block to progress.

Business needs enlightened liberal government and government needs enlightened private enterprise. Neither can do without the other.

*

Aviation

British Executive Aircraft

A British executive aircraft, the Beagle B. 206, is to tour India on demonstration flights in November, it was announced in London.

The demonstration aircraft is due to arrive in Delhi on 4 November and to stay there until 7 November, when it will leave for Colombo, with a one-day stopover in Bombay. From there it will go to Calcutta on 10 November, leaving two days later for Bangkok.

The Beagle B. 206 can also be used as a trainer aircraft with accommodation for two pilots, an instructor and two trainee navigators with full working desks and instruments.

As an aircraft for the "flying doctor" service, the Beagle B.206 can be used as an ambulance aircraft providing long-range and high-performance potential. Its wide fuselage and easy cabin accessibility, together with its ability to operate from any reasonable landing strip, are important factors in its favour.

Standard accommodation in the aircraft allows seating for seven people. In the "Pullman" version there is luxury accommodation for four passengers in a private cabin and a separate two-crew compartment. In the ambulance version there is accommodation for a crew of two, a flight attendant, and two stretcher cases.

An initial production line of 50 Beagles has been laid down, and the first large customer is the Royal Air Force, which has ordered 22. The company aims to reach a production rate of one aircraft a week by the end of next year.

EX-IM BANK

Loan to MACC

The Export-Import Bank of Washington has authorized a \$2.1 million loan to the Mysore Acetate and Chemical Company of Bangalore, India, to purchase American equipment and services for the construction of a cellulose plant.

The proposed \$8.7 million plant, to be located near raw material sources of cotton, acetic acid, and anhydride at Mandya near Bangalore, is expected to produce India's first cellulose acetate at an annual rate of some 3,000 metric tons. The product is used in film manufacture and as a moulding compound.

Export-Import Bank Vice-President Walter C. Saver signed for the Bank in the absence of President Harold F. Linder. Mr. Venugopal Naidu, General Manager of Mysore Acetate and Chemical Company, signed for the company, which is internationally owned by the Mysore Sugar Company and American and Swedish firms with proven experience in plant construction and operation.

The loan carries an interest rate of 5½ per cent over a period of eight years.

The Export-Import Bank announced a \$6,825,000 loan to Central Pulp Mills, in Poona to assist in the establishment of a bamboo pulp mill at Fort Songad, 150 miles north of Bombay.

Central Pulp Mills was created in 1960 by five of India's older and more successful paper makers. Initial capacity of the new bamboo pulp mill will be 24,800 tons annually, to be increased to 33,000 tons in the seventh year of operations.

The new mill will supply the long fibre essential to newsprint manufacturers for blending with their main short-fibre raw material. It will also be used in manufacturing writing paper. The mill will employ more than 400. This does not include any labour required for the procurement of bamboo in the forests.

Chief contractor for the new project will be Sandy Mill Corporation of Hudson Falls, New York, which will manufacture some of the required equipment and act as purchasing agent for other components. Sandwell International of Portland, Oregon, has been selected by the Indian firm as consultant engineers.

In addition to this loan covering American goods and services, the five sponsoring firms will raise in India an approximately equal amount to cover costs. These five firms which formed central pulp mills are Paper and Pulp Conversions, Ltd., Gujarat Paper Mills (Pvt) Ltd., and Western India Match Company.

Central Pulp Mills will repay the Bank loan over eight years beginning in 1967. The interest rate will be 5½ per cent.

Bonus Commission's Report

Central Government's Decisions

Mr R. K. Malviya, Union Deputy Minister of Labour and Employment this week placed a copy of the following resolution announcing Government's decisions on the report of the Bonus Commission, on the Table of Lok Sabha.

"The Government of India appointed a Commission with the following composition and terms of reference, to study the question of bonus to workers in industrial employments and make suitable recommendations:—

COMPOSITION

Chairman:
Shri M. R. Meher

Independent members:

- (i) Dr. B. N. Ganguli, Director, Delhi School of Economics
- (ii) Shri M. Govinda Reddy M.P.

Workers' representatives:

- (i) Shri S. R. Vasavada
- (ii) Shri S. A. Dange

Employers' representatives:

- (i) Shri N. Dandekar
- (ii) Shri D. Sandilya

Consequent on the resignation of Shri D. Sandilya, Shri K. B. Mathur was appointed as member of the Commission on 4 January 1963.

Terms of Reference: (i) To define the concept of bonus and to consider in relation to industrial employments, the question of payment of bonus based on profits and recommend principles for computation of such bonus and methods of payment. The term "industrial employments" will include employment in the private sector and in establishments in the public sector not departmentally run and which compete with establishments in the private sector.

(ii) To determine the extent to which quantum of bonus should be influenced by the prevailing level of remuneration.

(iii) (a) To determine what the prior charges should be in different circumstances and how they should be calculated.

(b) To determine conditions under which bonus payments should be made unit wise, industry wise and industry-cum-region wise.

(iv) To consider whether the bonus due to workers, beyond a specified amount, should be paid in the form of national savings certificates or in any other form.

(v) To consider whether there should be lower limits irrespective of losses in particular establishments, and upper limits for distribution in one year and, if so, the manner of carrying forward profits and losses over a prescribed period.

(vi) To suggest an appropriate machinery and method for the settlement of bonus disputes.

(vii) To make such other recommendations regarding matters concerning bonus that might be placed before the Commission on an agreed basis by the employers' (including the public sector) and the workers' representatives.

The Commission's report was received by Government on 24 January 1964. Copies have been placed on sale to public through the Manager of Publications, Delhi, in the usual manner.

GOVERNMENT'S DECISIONS

Government have carefully considered the recommendations made in the Commission's report and minute of dissent appended thereto by one of the two members representing the employers on the Commission. Government have decided to accept the Commission's recommendations subject to the following:—

(i) All direct taxes for the time being in force should be deducted as prior charges in the calculation of "available surplus" for purposes of bonus.

(ii) In addition, tax concessions given to industry to provide resources for future development

should not be utilised for payment of larger bonuses to employees; on the other hand, it should be ensured by law if the existing tax law and regulations do not sufficiently safeguard this, that amounts involved in such tax concessions are in fact used only for the purposes for which the tax concessions are given. Further subsidies paid by Government to certain concerns like the Hindustan Shipyard should not be taken into account in working out the gross profits for the purpose of payment of bonus.

(iii) As regards return on capital that would be deductible as prior charge before calculating "available surplus" for purposes of bonus, the actual rate payable on preferential share capital, 8.5 per cent (taxable) on paid up equity capital and 6 per cent (taxable) on reserves should be allowed in respect of establishments other than banks; in the case of banks, corresponding rates to be allowed should be the actual rate payable on preferential share capital, 7.5 per cent (taxable) on paid-up equity capital and 5 per cent (taxable) on reserves.

(iv) As regards the retrospective effect of the recommendations of the Bonus Commission as amended by the foregoing decisions, they should apply to all bonus matters, other than those cases in which settlements have been reached or decisions have been given already, relating to

the accounting year ending on any day in the calendar year 1962, in respect of which dispute is pending.

SAVING CERTIFICATES

Government consider it desirable that bonus beyond a certain level should be paid in the form of saving certificates or other suitable investments. It is accordingly proposed to convene a meeting with the representatives of the parties concerned so as to reach agreement on the level beyond which bonus payment in cash would not be desirable and the various forms of savings in which bonus beyond that level might be invested.

LEGISLATION PROPOSED

In the light of above decisions, Government propose to undertake legislation to embody the principles which tribunals or other judicial bodies should be guided if and when disputes relating to bonus come up before them.

Government, however, expect that the parties would voluntarily give effect to the above decisions in settling the question of bonus till the proposed legislation is enacted.

The Government of India wish to express their appreciation on the work done by the Commission.

This information was given in reply to a question by Shri Dinan Bhattacharya and 29 others.

FERROUS SCRAP

Export and Domestic Consumption

The Metals Scrap Trade Corporation, a joint enterprise, with the Government-owned Minerals and Metals Trading Corporation, the ferrous scrap collecting and exporting interests, and the domestic users of scrap (indigenous melting furnace owners) holding equal shares, was constituted and registered as a public limited company under the Indian Companies Act in Calcutta this week. Mr Manubhai Shah, Union Minister of Commerce, was present at the signing ceremony.

The Corporation will undertake, through a country-wide network of agencies and by the provision of equipment facilities, the collection and processing of ferrous scrap, both for domestic furnace as well as for export. All ferrous scrap exports will be canalised through the Corporation in order to end the uncertainties resulting from disorganised efforts and unhealthy trade practices as also for serving the best interests of the country by negotiating long-term contracts with overseas parties for the export of scrap at favourable international prices.

The authorised capital of the Corporation is Rs 2 crores, and the issued capital will be Rs 30 lakhs. The Corporation is expected to deal with an annual turn over of Rs 10 crores, consisting largely of exports.

The registration and functioning of the Metals Scrap Trade Corporation marks a new and welcome development in the collection, processing, domestic use and export of ferrous scrap. The trade in this sensitive commodity has hitherto been affected by quantitative and qualitative uncertainties, price fluctuations and disorganisation both on the domestic and export fronts. While scrap exporters have been facing problems concerning availability, proper pricing and shipping for export the indigenous furnace owners have also been experiencing difficulties in keeping their melting furnaces going. On the whole, these circumstances have led to slackness in the collection of scrap from all over the country on an organised mass scale.

It is, therefore, of great significance that the divergent interests in this trade have become partners, along with the Government-owned Minerals and Metals Trading Corporation in a joint enterprise aimed at not only augmenting the indigenous production of steel castings and re-rolled material, but also of furthering the exports of scrap on a long-term export contract basis on the lines of the export contracts for iron ore.

The main problem in this field is the intensified collection on a mass scale of ferrous scrap the sources for which are the enginee-

ring factories and the disused capital scrap (discarded iron and steel articles, vehicles, rails and worn-out machinery) scattered all over the country. Whether for domestic use or for export, such scrap often needs processing in various forms like skull cracking, baling, brickquetting and detinning. The Corporation will undertake the collection and processing of such scrap.

With the rapidly rising indigenous production of prime steel and its fabrication in engineering factories by processes like punching, shearing and machining and the increasing rate of obsolescence of iron and steel manufactured articles, larger quantities of various types of scrap will be available in the future. These supplies should amply meet the requirements of furnace owners for such scrap. After fully satisfying the domestic needs the balance could be exported.

The presence of the Minerals and Metals Trading Corporation as one of the three partners in this new Corporation would assure it of Government's continued and coordinated attention to the problems of the other two sectors.

WORLD ECONOMY

Commonwealth Finance Ministers' Review Trends

The following is the full text of the communique issued by the Commonwealth Finance Ministers on 2 September at the end of their two-day meeting in Kuala Lumpur.

A meeting of the Commonwealth Economic Consultative Council was held at the Parliament House, Kuala Lumpur, on September 1 and 2 under the Chairmanship of the Hon. Mr. Tan Siew Sin, Finance Minister of Malaysia. All 18 independent countries of the Commonwealth were represented. There were also representatives from Mauritius, Malta and Hong Kong.

The Council reviewed trends in world trade and payments, and noted the improvement in the world economic situation and the continuing strength of the balance-of-payments position of the Sterling Area as a whole. The Ministers referred to the economic prospects for their respective countries and the problems which they faced, in particular the need to step up the rate of growth in the developing countries. While there had been an improvement in the trading position of the Sterling Area as a whole, this had been unevenly spread, and the basic weakness of many primary commodities pointed to the need for new approaches to the problem.

The Council recognized the importance of the United Nations Conference on Trade and Development. It was noted that the results of the conference were valuable only as a first step, and that much remained to be done in following up the work of the

conference. The need was also stressed for facilitating to a greater extent the access of manufactured goods from developing countries to the markets of the industrialized countries as well as devising means to ensure stable and reasonable commodity prices. The Council expressed the hope that the "Kennedy round" of trade and tariff negotiations in the GATT would achieve positive results of benefit for all members of the Commonwealth.

In a discussion on the importance of maintaining adequate international liquidity and strengthening the international monetary system, Ministers expressed the hope that the meeting of the International Monetary Fund in Tokyo would be able to reach agreement on the need to increase the resources and extend the facilities of the Fund, to whose position in international monetary matters they attached the highest importance. They stressed that due regard should be paid to the interests and problems of the developing countries.

The Council welcomed recent developments in the World Bank and the International Development Association in extending their activities to new fields and making the Bank's terms of lending more flexible. Particular mention was made of their support for education and agriculture and the supply of technical assistance, all of which are of great importance in promoting development. Ministers noted with satisfaction the increased readiness of the Bank and the IDA to finance not only foreign-exchange costs but also local-currency costs of development projects.

The Council stressed the need for a continuing increase in the amount of aid to developing countries. It expressed appreciation for the measures which had already been taken by certain donor countries towards making aid available on favourable terms. The view was expressed that, in the light of the increasing burden of the debt-servicing obligations and other financial problems of the developing countries, the developed countries should give consideration to the need for providing a higher proportion of their aid on more liberal terms.

In pursuance of their decision at their meeting in September 1960 to review annually the progress achieved under the Special Commonwealth African Assistance Plan, the Council examined with interest a report on the Plan presented by the Chairman of the Commonwealth Economic Committee.

Ministers reviewed possible new initiatives for Commonwealth co-operation in technical assistance and other fields, which were approved in principle by the Commonwealth Prime Ministers at their recent meeting. They welcomed the progress which had

been made on the study of these initiatives, and agreed that they would be carried forward speedily. Ministers took note of a study which is now taking place as a result of a proposal made at their meeting in September 1963 for a collation of the economic and trade prospects of individual countries and of their development plans.

The Finance Minister of Jamaica, on behalf of his Government, offered to arrange for the next meeting of Commonwealth Finance Ministers to be held in Jamaica.

DURGAPUR

Steel Output in August '64

Productions in Durgapur Steel Plant in August 1964 were generally lower than usual mainly due to labour unrest and also to flooding resulting from heavy monsoon rains in the third week of the month.

Output of pig iron for sale to foundries was again at a high level. New shift and day records were established in two sections in the Merchant Mill. The Wheel and Axle Plant had its highest monthly output and despatch figures.

The principal statistics for the month are as follows:

	(Tonnes)
Coke production	123,076
Pig iron production	102,313
Pig Casting Machine output	41,752
Steel production	73,743
Blooming Mill (Charge weight)	75,438
Section Mill production	18,746
Merchant Mill production	15,878
Sleeper Plant production	5,417
Despatch of saleable iron and steel products	102,531
Billet Mill production	41,083
Total despatches	111,861

BHILAI

Production during Aug. '64

The Bhilai Steel Plant rolled 97,263 tonnes of saleable steel including 35,693 tonnes of rails and heavy structural and 26,520 tonnes of merchant products in August 1964. Production of billets during the month was 35,050 tonnes. The Blooming Mill produced 70,557 tonnes of blooms and slabs.

Production of ingot steel in August was 95,100 tonnes, which was 12 per cent more than the monthly rated capacity of the Steel Melting Shop.

Production of iron (hot metal) during the month totalled 1,14,224 tonnes, thereby exceeding the monthly rated capacity by over 21 per cent.

The Bhilai Steel Works established two records in the Coke Oven Department during the month. On 21 August, 264 ovens were pushed, producing 3,210 tonnes of Blast Furnace coke in one day.

A new production record was set up by the Rail and Structural Mill on 29 August, when 1,046 tonnes of 300 x 40 mm beams were produced in a single day.

NOTE: Annual figures are averages of months; those of sugar relate to crop years.

*Data of Matches, Hurricane Lanterns, Sewing Machines and Bicycles from January 1963 onwards and those of Footwear (leather) from April 1963 relate to units having fixed assets of Rs 5 lakhs and more.

†Data in respect of certain units are not included from January to May 1963.

(1) Monthly figures are exclusive of production in Punjab (Kangra) and Himachal Pradesh.

(2) Relating to the production by mills in the membership of Indian Jute Mills' Association and to one non-member mill.

(3) Includes canvas.

(4) Figures relate to stable variety only from June 1962.

(5) Including figures for Jammu and Kashmir.

(6) Figures relate to production of organised factories.

(7) Boxes are of 80 sticks each upto February 1961 and thereafter of 50 sticks each.

(8) Total of viscose yarn, staple fibre, acetate yarn and cellophane.

*From January except in the case of sugar where the figures are progressive from November of the preceding year, the crop year being November—October.

*Provisional.

Driving on wet, slippery roads is as dangerous as stepping on a banana peel. Avoid skidding by taking these simple precautions.

- See that your tyres are in good condition and always at correct pressure.
- Drive more slowly and smoothly on wet and slippery surfaces.
- Don't brake, accelerate or turn sharply.

Never brake sharply in a skid. Leave the clutch engaged for better control of your car through the engine.

If however your car does skid, here are a few points to help you control it.

REAR WHEEL SKID. Remove your foot from the accelerator and turn front wheels into the skid. e.g. If the rear of the car swings to the left, steer left. Then steer in the desired direction, and gently accelerate.

FRONT WHEEL SKID. Remove foot from accelerator. Straighten the front wheels.

FOUR WHEEL SKID. Release brakes at once to allow free rolling of wheels. Then apply brakes gently, gradually increasing pressure, to avoid wheels locking again.

Road Safety
is a matter of life...and death
Issued in the interest of Road Safety
by Burmah-Shell.

**Monsoon roads
are banana peels**

Cashed in a Minute!

And that is precisely what we mean. It takes no longer than a minute to cash your cheque at any PNB office with the Teller System.

The streamlined Teller System eliminates tokens, queues, all tedious and unnecessary waiting and delay.

PNB was the first bank to have introduced the Teller System as far back as 1954. Today, PNB has 90 branches operating this system and plans to introduce this on-the-spot service in 60 more branches throughout the country.

Shared Crisis

A SENSE of crisis duly shared by Government and people is a wholesome and heartening circumstance. Its creative potentialities are great, because it obviates special efforts for mutual understanding between the leaders and the people and ensures the sympathy necessary for cooperative effort in overcoming the crisis. Britain is noted throughout its history for this remarkable trait though recognition of crisis has often been obtained at the cost of much blunder and not a little suffering. Other nations too have revealed the same feature, though in less marked degrees. But in India, it is often conspicuous by its absence, if only because we are too young as an independent nation to develop the necessary character and understanding. It is easy to mistake a propensity to panic for a realistic sense of crisis. The Government can by no means be sure that an admission of gravity will not be distorted by the opposition as a confession of inefficiency and failure and thus turned to the disadvantage not only of the party in power but also the nation. But such pitfalls apart, the judgment required to sense a crisis while it is yet brewing, to issue warnings without occasioning alarm and inspire movement without causing a stampede, is not easily found. Only too often is it the case that complacency, even more than protective party instincts, has accounted for continued bungling or tinkering along the lines of rutted routine till the crisis takes all alike by surprise. Official complacency and public indifference to the way vital national problems are tackled or shelved are the principal dangers that have to be combated at this critical stage of our development.

The question must be asked, how much of a crisis have we now and in how many different national fronts? The present sense of crisis, in so far as there is one, pertains not only to our economic but also our political and even our social affairs. Emotional integration has suffered a setback, as witness the recent communal disturbances and our inability to put the treatment of the backward classes on a more satisfactory and permanent basis. Politically, we have at home no evidence of the constructive efforts which the Kamaraj Plan was conceived to promote. The opposition parties are still no part of the governance of this country. Abroad, we have been losing friends; and our standing among the Afrikan nations has suffered through our over confidence at one stage and premature

panic at another. We are still non-aligned without being recognised as such by many who belong to the same category. Economically, the food situation is admitted on all hands to be critical. Our foreign exchange resources are fated to fall short of needs even in the most favourable circumstances. The steel programme is a haze. Industrial production is lacking in skilful dovetailing of its different parts and over nearly all the industries hangs the cloud of inadequate maintenance imports. In public finance, the need for immediate economy is recognised; but judicious axing in this jungle of plan expenditure is a virtual impossibility. Ideas about the relative contribution of different source heads to the total outlay on the next plan are still as tradition-ridden as ever before, though no one denies that the weight of the total burden is flattening out production as well as consumption. The size of the next plan is still indeterminate, and the uncertainty does not pertain to foreign aid alone.

The crisis is thus pervasive, not confined to any one aspect of national life. It is a crisis in a biological sense, and not in the sense that a serious danger has actually overtaken us and hold us in its unrelenting grip. But it is a situation that calls for planned effort, on the basis of understanding between the different elements in our national life, a genuine sense of priorities and an ordering of affairs to ensure smooth progress out of the woods. This is the time when the public should ask whether such planned efforts will or will not be forthcoming and whether those concerned are willing to provide the necessary conditions. About the structure of the Fourth Plan itself or the allocation, it is too early to say. But there can be no confidence about the provision of the necessary conditions, if the Government does not show itself willingly to make useful modification of its attitude and ideas and policies in matters of crucial importance. There can be no question that it is the imperfections of certain basic policies in regard to land and industry and taxation and distribution that have caused stagnation and setback at various points in the stream of the nation's economic life. It may be that basic policies in these respects are dear to the Government for more than one reason. But today the cause of immediate gains for national development are far more important and modifications cannot be grudging.

From this point of view, what are the improvements that can hopefully be recorded at this stage? A standstill in land reforms has been announced. But the announcement has been followed by much prevarication. The Bonus Commission's recommendations have been revised before acceptance. But the basic principles regarding the estimation of bonuses and the claims thereto remain the same. Central taxation, it is admitted, leaves no scope for additional levies. They are, however, called forth, as with a wave of the wand, from the much poorer resources of the States. A higher level of maintenance imports for the export industries is accepted as necessary for realising the export target of over Rs 5,000 crores for the next five year plan. But little is heard of steps to ensure the basic competitive strength of the export industries themselves. A vigorous start was made in tackling the food situation with freedom of movement within each zone. But that freedom has been whittled down in practice. A national price pattern has been promised. But price fixing has already led to a freezing of stocks. And about the prospect of increased food production, there are still no reassuring signs as satisfaction of the needs of higher output or import of fertilizers is still problematical. For the kind of crisis we are passing through, the integration of policies in different spheres is of far greater importance: and of this, there seems to be but little recognition.

Significance of Key Imports

THE tone and content of the discussions at the last meeting of the Export and Import Advisory Council afford ample justification, if any justification were needed, of the decision to combine the two bodies into a single Council. The merger has brought into clear focus the link that exists between imports and exports, and appreciation of this interrelation is reflected in the quality of the debate. The discussions have been marked throughout by a constructive approach and by an earnest desire to view the sectoral problems within the framework of larger national interests. There is a gratifying measure of agreement on the practicability of the export targets proposed for the Fourth Plan, though doubts may persist whether targets suggested for individual commodities do not need further examination. Assessment of the foreign exchange requirements of the Fourth Plan leave no room for argument about the need for a massive step up in export earnings. Assuming that development imports would be taken care of by aid funds, export earnings of Rs 5,100 crores will be the minimum required to pay for the maintenance imports during the five years of the Fourth Plan period.

The pattern of imports has been stabilised during the last few years of stringent import restrictions, with capital goods and industrial raw materials accounting for over 75 per cent of total imports and consumer goods, other than food grains, for less than seven per cent. There is little room for further reduction of imports; in fact, it would be reasonable to expect a larger import bill because of the larger requirements of raw materials and capital goods for industrial expansion. But, as Mr Manubhai Shah has made it clear, it will be necessary to undertake policies of import priorities will have to be constantly

reviewed, so as to meet the needs of a changing economy and the large increase in exports that is necessary to sustain the programme of planned development.

The priorities have been indicated by the Minister in terms which will command general acceptance. While defence, agriculture, and export oriented and basic industries will continue to have priority, the Minister has also promised special consideration for small scale industries and the requirements of the textile industries, Cotton and Jute, for modernisation. Export-oriented industries can also derive the benefit of the scheme for an Import Export Stabilisation Fund recommended by the Mudaliar Committee, which Government has approved with some modifications. The Minister has mentioned, in this connexion, lines of credit in foreign exchange secured through Indian and foreign banks which will be made available on a revolving basis, to manufacturer-exporters for importing raw materials, components and spares for manufacturing goods for the export market. This scheme should help to improve the availability of industrial materials and lead to fuller utilisation of existing capacity.

The Minister has also stressed, in his comprehensive address, the need for forging "a long term inter-relationship between our expanding imports and our paramount need to increase exports." This inter-relationship can be viewed from different angles. A correct appreciation, however, would involve recognition of the mutuality of imports and exports, a fact which should be kept prominently in view in our future trade plans and while considering measures to rationalise import policy. If the aim is to develop the full potential of the country's exports, and on an enduring basis, it will be necessary to be on guard against adopting too narrow and austere a view regarding what constitute essential imports. The essentiality of an item which enters into the manufacture of exportable goods, or helps to increase the level of production, will be readily conceded and there will be no dispute about the priority that should be accorded to such items. But the importance of making provision for import of certain types of consumer goods, or materials entering in the manufacture of articles of domestic consumption, and which may be called "key imports", because they help to open new markets for Indian goods abroad, is not always appreciated.

There are reasons to believe that our efforts to increase exports of Indian goods to, say, Australia or New Zealand, would meet with greater success, if there were a corresponding readiness on our part to import larger quantities of milk powder of which these countries have an embarrassing surplus. Even otherwise, there is justification for increasing the allocation for import of milk powder in order to improve the levels of nutrition of school going children, as well as of children in the pre-school age group, which according to nutrition experts is the critical age when protein deficiency can cause irreparable damage. It should not be beyond the ingenuity of the enterprising Minister of Commerce to arrange for import of milk powder against additional export of Indian goods on some mutually advantageous basis. There is now complete silence on the banana front which was very much in the news some months ago. Have any investigations been made about the prospects of exporting bananas from the East Coast to Australia and New Zealand?

"Key Imports", are of even greater importance for our trade with developing countries,

especially, the new nations of Africa. Fortunately, India is favourably placed to implement a comparatively liberal policy in the matter of imports from Africa. Though we have an adverse balance in our trade with the continent as a whole, we have small favourable balance with a number of African countries. These countries are naturally anxious that their external trade should be balanced, and our exports can be increased only to the extent that they do not create payment difficulties for our trading partners. We are already importing industrial raw materials from these countries. It would be worthwhile to explore possibilities of concluding trade and payments agreements for further expansion of trade on a balanced basis. Apart from industrial materials like cotton, rock phosphate, metals and metallic ores, it will be mutually advantageous if these agreements also provide for import of items like vegetable oils—palm oil, olive oil—cocoa etc, which are of great importance to the economies of these countries and which could go some way to relieve domestic shortages in India.

DEVELOPING COUNTRIES

UK's Technical Assistance

By Eric Hanrott

TWO great developments of the last two decades have been the political enfranchisement of Asia and Africa and the enormous advances throughout the world in science and technology. These two developments have interacted.

The attainment of independence has stimulated the demand of the new countries for higher standards of living and for educational and social progress. The poorer countries have daunting difficulties to overcome; many of them suffer from the physical handicaps of a tropical environment, from poor soils, a trying climate and the presence of endemic diseases. Many too, are short of educated men and women, lack commercial and technical expertise, have a low agricultural efficiency and have insufficient basic utilities.

The richer countries are in a better position to apply modern scientific discoveries and techniques; while population increases in many of the poorer countries reduce, and sometimes even eliminate, the advances made through development. So the gap between rich and poor widens and the trend can be checked and reversed only by aid from the advanced countries.

Because of her history and her Commonwealth association, Britain is well placed to understand the needs of the developing countries and to give effective help. With the ending of her colonial responsibilities she has adapted the kind of help that she gave as an imperial power to the new requirements of the age.

Capital aid is one form of aid and is given generously. But the investment of money can achieve nothing unless a country can produce from among its own citizens skilled and instructed men and women to operate the programmes that the money finances.

In every developing country education is accepted as the key to progress, and not only education in the narrower sense but training of all kinds. The essence of technical assistance, as it is rather misleadingly called, is help from one country to another in educating and

training its people—by scholarships and training grants to the universities and colleges of the donor country; even more important by helping to build up educational and training institutions in the receiving country.

Hence Britain is supplying teachers and teaching equipment to universities, technical and vocational institutions, secondary schools and teacher-training colleges. Until the receiving country has enough specialities in all aspects of public activity, technical assistance must include the supply of experts in such fields as economic development, agriculture and transport. Their job is not only to run the services in which they specialise but to train successors to themselves from local people. The value of this kind of help cannot be measured by any yardstick.

Britain's special responsibility towards the newly-independent countries was acknowledged by the creation, in 1961, of the Department of Technical Co-operation which deals with the provision of technical assistance to all developing countries, both in and outside the Commonwealth.

The new Department, since its foundation, has evolved new techniques for meeting the needs of the poorer half of the world. Its yearly budget is about £33,000,000. Nearly half of this covers the cost of the Overseas Service Aid Scheme which pays for British civil servants, mainly in Africa, who are still needed by newly-independent countries or by countries that are still dependent on Britain.

Another large item is constituted by the main regional programmes under which Britain provides experts and consultancies, mapping surveys, training in Britain and teaching and scientific equipment. In this category are the Colombo Plan programme, the Special Commonwealth African Assistance Programme, the Central Treaty Organisation programme, and smaller but growing programmes for the Middle East, the West Indies, non-Commonwealth Africa and Latin America.

Another substantial item is the many-sided contribution to Commonwealth educational co-operation. In all, Britain is spending £12,000,000 a year on this form of aid.

Then there are also the overseas research programmes, directed mainly at Africa, and the important contributions to United Nations technical assistance programmes. Finally, there are the overseas students in Britain—there were 50,000 from developing countries attending British Universities and colleges in 1963.

There are important variations in the needs of different countries and consequently in the type of aid supplied. India, for example, is well supplied with experienced administrators, professional men, scientists, businessmen and teachers. Here British technical assistance concentrates on highly skilled specialists in the industrial field. Besides providing capital aid on a large scale for the Durgapur Steel Works, Britain has provided high-level and skilled management staff and has trained a large number of Indian engineers and technicians to operate it.

The new African countries, on the other hand, are gravely short of highly-educated and trained men and women in government, in business and in the professions. They are short of doctors, engineers, agriculturists, research workers and above all, teachers at all levels. It is to these countries that Britain is supplying not only expert advisers, specialists and research scientists, but large numbers of teachers and also people to help man key posts

in the civil services until sufficient local people can be trained.

In all, there are some 19,000 British men and women serving in the developing countries, and there is a steady stream of recruitment by the Department of Technical Co-operation, the British Council and the Crown Agents. This is supplemented by the scheme for recruiting young volunteers for service overseas, which is largely financed by the British Government but is operated by voluntary societies.

In the past, British people went to work in these countries as a lifetime career but now the demand is for those willing to serve overseas, not as a career but for a few years at a time. This has the effect that more and more varied individuals in Britain have the enriching experience of working overseas, both in the Commonwealth and elsewhere.

Recruitment for this kind of service is increasingly a national effort. The Department of Technical Co-operation relies on Government departments like the Post Office, on the British Council, nationalised industries, private firms, the co-operative movement, professional societies, hospital boards, universities, technical colleges, schools and local authorities. For example, recruitment for universities in developing countries is undertaken by the Inter-University Council, a body made up of representatives of many British universities.

The Council for Technical Education and Training for Overseas Countries has members drawn from business, from the technical education profession and from Government.

For engineering recruitment, the Department of Technical Co-operation has discussions with Government departments, local authorities, nationalised industries, the engineering institutions and private firms.

Similar consultations take place with representatives of medicine, agriculture, geology and mining and other professions.

So the developing countries are given the skilled help they need, and so more and more professions and employers are coming to regard a period of service overseas as a normal and fruitful part of a home-based career.

US ECONOMY

Headed For Soild Expansion

THE United States is headed for further solid economic expansion through the rest of 1964 and the first part of 1965, Walter H. Heller, chairman of President Johnson's Council of Economic Advisers, believes.

"The combined momentum of investment and consumer expansion—resulting in fuller utilization of our resources—is likely to carry us pretty strongly into the first half of 1965," Mr Heller said in a recent copyrighted interview with the "US News and World Report" magazine.

"I am not prepared to go beyond that," he added, "not because I expect a downturn later in 1965, but because I get beyond the bounds of my crystal ball."

The presidential adviser pointed out that investment by businessmen in plant and equipment is scheduled to rise 12 per cent in 1964 over that of 1963—nearly a \$5,000 million rise. Much of this is yet to materialize, but the acceleration is already evident. A favourable sign is that machine tool orders are running

about 65 per cent above those of 1963, he added.

Consumer spending 1964, spurred by the recent tax cut, is also expected to be almost \$30,000 million more than in 1963, he said.

Noting that the United States has passed its 40th month of economic expansion, he said it is still a vital, vigorous and young-acting trend even though it is "old in months and years."

"I don't think recessions are a thing of the past," he explained. But, he added, there are "weapons to head off some recessions and to keep others short and shallow and to prevent them from developing into depressions."

Recalling that many things have changed, both in private and public policy over the 35 years since the last depression struck in 1929, he cited a whole range of "automatic stabilizers," many of which did not exist then: government expenditures, now at much higher levels than in 1929, remain steady or rise in a recession; meanwhile tax collections fall, so that a larger share of income is left in private hands; under collective bargaining between labor and management wages are not cut in a slump; corporations strive to maintain dividend payments; bank failures are rare; and payments from social security, unemployment compensation and public assistance increase in time of economic trouble.

He noted that the United States has had "the most remarkable record of price stability" in the past six years of any advanced country in the world. This applied particularly to wholesale prices, he said.

He conceded that unemployment is still a problem but noted that it is at its lowest point in more than four years.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

65-1-64

World of Finance

RESERVE BANK

Appraisal of 1963-64

ONE of the best assessments of the Indian economy—and there are as many as half a dozen in the year—is usually contained in the annual report of the Central Board of the Directors of the Reserve Bank. For, the economic review undertaken by the Finance Minister—at Budget-time—is on the basis of revised estimates and incomplete data for the year sought to be analysed. In similar manner, publications such as *Trend and Progress of Banking* and the *Report on Currency and Finance* suffer from some drawback or the other. Moreover, it might be suggested that the recital of the Finance Minister has one objective, that of justifying the fiscal levies that, in Part B of his speech, he would be proposing. What distinguishes the Report of the Central Board is that, over and above a narrative of economic conditions as they obtained during the year under review, it also contains an assessment of monetary and fiscal needs as well.

The latest such publication, relating to the Reserve Bank's working in the year to 30 June 1964, first of all catches the eye, because the format and size have been changed. Its reviews are more detailed, and the range covered more comprehensive. Its broad conclusion is indicated in the introductory paragraph itself, when the Report observes that "the overall economic situation which was already a difficult one has become even more so." What was worrisome about 1963-64 was the price situation. Was it the "rapid expansion in liquidity" that contributed to the inflationary pressures? Or is the villain of the piece a shortfall in agricultural production? Yet another possible factor could be constituted by the shortage of certain essential raw materials for industry; or, for that matter, the inadequacy of foreign exchange for importing as much of maintenance imports as we need. But it really does not matter where we are able to pin the blame; it may be, and this is our view, a combination of factors that was responsible—nor, in this regard, should we omit the impact of both fiscal policy and the plan expenditures.

We have instead to concentrate on finding a way out of the parlous price situation. One need, certainly, has been aptly summed up in the Report: "A co-ordinated wage and incomes policy geared to productivity remains a vital desideratum." How, in this light, are we to reconcile ourselves to a Government which in effect accepts a Bonus Commission recommendation to the effect that whether or no an industrial unit suffers a loss it shall be liable to pay bonus to its labour?

Again, fiscal policy, if industrialisation is to be encouraged, has to embrace incentives for stimulating production. Such tax reliefs in the short run may be said to be inflationary in nature. But this is to overlook the only

answer to inflation, in the ultimate analysis. We refer to the fact that there cannot be a substitute for augmenting supplies such that demand is met in full. We have therefore to persevere with encouraging production in every field of activity. We have besides to root out the evil of the parallel money market, the unaccounted money therein being akin to an alternative source for speculative withhold-of stocks. But merely to bring out the existing hoards of unaccounted money will be unavailing, if such attempts are not accompanied by action taken to reduce the incentive in tax-evasion. Unless the individual rates of taxation are brought out, black money will continue to be generated; so long as the parallel money market continues to flourish, monetary control in the organised sector can have but little success; and the parallel money market will itself become less powerful, only when there is more balance between the demand for and the supply of a given commodity or article.

BANK RETURNS

Impact of Tax Payments

The latest banking returns reflect the impact upon resources of the tax payments made by constituents in the first week of September.

According to the returns of the Reserve Bank for 11 September, Active Note circulation, with spillover of demand into the second week, has further risen by Rs 13.67 crores to Rs 2,421.17 crores, and there has also been outflow of Rupee Coin, though in the nominal amount of Rs 0.42 crore. With Foreign Securities unchanged at Rs 85.46 crores, currency has been expanded against Rupee Securities for Rs 25 crores, raising holdings to Rs 2,149.93 crores, by transfer from the Banking Department. As such, the Reserve Bank's cash in the till has marked an improvement of Rs 10.91 crores to Rs 29.90 crores.

Tax payments, which had helped swell the Centre's balances, have now enabled the Government to cancel ad hoc Treasury Bills before their maturity. Investments in the Banking Department are lower by Rs 54 crores at Rs 123.66 crores, and this is the first fact we have to take into account for purposes of estimating the quantum of reverse ad hocs. Secondly, the Centre's balances are sharply lower by Rs 47.33 crores at Rs 87.32 crores. Thirdly, the State Bank is known to have disinvested in gilt-edged for 31 crores. Fourthly, there is a net improvement in the position of State Governments to the extent of nearly Rs 14 crores. Lastly, it is to be noted that the Reserve Bank's holdings of Treasury Bills purchased and discounted have further risen by Rs 11½ crores to Rs 206.54 crores. It is, thus, obvious that the States have been in receipt of payments from the Centre, with their balances rising by 11.26 crores to Rs 26.86

crores and their indebtedness to the Reserve Bank for ways and means advances marked down by Rs 2.41 crores to Rs 15.83 crores. It is also obvious that the rise in the Reserve Bank's portfolio of Treasury Bills reflects the disinvestment by the State Bank. Hence, we would place the magnitude of reverse ad hocs at around Rs 30 crores.

Scheduled Banks by the second week in September had already somewhat recovered from the strain to which they had earlier been subjected as a result of tax payments. Thus, their Reserve Balances have marked a rise of Rs 3.74 crores to Rs 98.90 crores, and their borrowings from the Reserve Bank have been reduced by Rs 3.19 crores to Rs 2.04 crores—with the State Bank in the relevant week reporting an increase in borrowings of Rs 0.43 crore.

Lastly, as far as concerns the Reserve Bank returns, Balances Held Abroad have been drained to the extent of Rs 1.28 crores to be placed at Rs 11.06 crores; but it must be conceded that in the slack season for exports so far, the foreign assets in the possession of the Reserve Bank have held remarkably steady.

The return of the State Bank for 11 September records a number of unusual changes. There is, on the one hand, a fall of Rs 9½ crores to Rs 18.22 crores in Other Liabilities; and, on the other, Other Assets have risen by Rs 11 crores to Rs 38.58 crores. Thus, it is these two changes which made it necessary for the State Bank to disinvest on a very large scale, holdings of Government securities being marked down by Rs 31 crores at Rs 266.11 crores. For the rest, Deposits are slightly lower by Rs 2.69 crores at Rs 656.21 crores; the total of Advances has receded by Rs 1.08 crores to Rs 342.26 crores; and cash balances, including money at call and short notice, are better by Rs 6.90 crores at Rs 35.50 crores.

Tax payments have involved considerable strain for Scheduled Banks; and this fact is attested to by their statutory statement for 1 September. Firstly, net Deposits have been marked down by nearly Rs 21 crores—net Demand Deposits being lower by Rs 14.71 crores at Rs 1,256.72 crores and net Time Deposits declining by Rs 6.27 crores to Rs 1,400.04 crores. Secondly, the total of Advances has expanded by Rs 12.75 crores to Rs 1,747.20 crores. It may be noted that of the fall in Deposits the State Bank accounted for about Rs 13 crores; and of the expansion in Advances, the State Bank's share was just about Rs 3 crores. In the face of such demand upon their resources, the Scheduled Banks inevitably had to replenish their resources as best they could. Thus, there has been disinvestment in gilt-edged for Rs 12½ crores (the State Bank's share being Rs 8 crores), reducing the portfolio to Rs 791.17 crores. Secondly, borrowings from the Reserve Bank are marked up by Rs 2.91 crores at Rs 4.83 crores, though indebtedness to the State Bank has been cut by Rs 1.16 crores to Rs 30.86 crores.

RBI

Need for Price and Incomes Policy

(The following is the press communique released relating to the Report of the Central Board of Directors of the Reserve Bank of India on the accounts to the year ended 30 June 1964.)

THE Annual Report of the Reserve Bank of India for the year July 1963 to June 1964, published last week, provides an appraisal of the major economic problems in general and of monetary and credit trends in particular during the period.

Economic developments during the year are viewed as an aftermath to the emergency which had dominated events in the preceding year generating pressures superimposed on those arising from the developmental programmes. More recently, the pressures have increased as the economy has had to meet substantial expenditure on relief and rehabilitation of refugees. In the result, the already difficult economic situation has become even more so.

There has been a rapid expansion in liquidity stemming from the large magnitude of total bank credit extended not only to the Government sector but also the private sector. The inflationary pressures emanating from greater liquidity were accentuated by the virtual stagnation in agricultural output. It is significant that the resulting gap between aggregate demand and aggregate supply persists, despite the unprecedented taxation measures in the previous year's budget and the other corrective measures taken since then. There has been a strong and persistent increase in wholesale commodity prices which has also been transmitted to the cost of living. The increase in the index of wholesale prices during the year was larger than in any previous year, except 1955-56, since the commencement of the Five Year Plans in 1951. The magnitude of the recent increase in prices associated with the failure of the post-harvest decline in prices to wipe out the increase in the preceding lean period has imposed considerable hardship on sections of the community.

The general level of prices showed a significant rise during the year (July 1963-June 1964) mainly on account of agricultural commodities such as foodgrains, oilseeds and vegetable oils, sugar, gur, etc., and except for a small short-lived seasonal decline during September to November 1963, it moved up continuously, the upsurge being pronounced in the second half of the year. Over the year, the rise in prices (9.4 per cent) was double that in the previous year. The deterioration in commodity prices which was marked in articles of mass consumption, was also reflected in the All-India Consumer Price Index for working class (base: 1949=100) which rose continuously from 134 in June 1963 to 150 in June 1964, and affected all centres. The consumer price index advanced over the year by 11.9 per cent as against a rise of only 3.1 per cent in 1962-63. The problem of shortage in foodgrains appears to have been aggravated by restrictions on inter-State movement, the delay in unloading at the docks, and the system of compulsory levy together with the increase in the holding capacity of the big farmers and speculative activity by the trade. The shortfall in agricultural production in conjunction with the abovementioned factors

has created a psychology of scarcity, raising prices beyond the level justified by the basic supply and demand position.

Compared with the rise in prices of agricultural commodities, the rise in prices of manufactured products was modest (at 2.5 per cent). Industrial output expanded at a faster rate (9.1 per cent) during the financial year 1963-64 than in the preceding two years (7.9 per cent in 1962-63 and 6.4 per cent in 1961-62). However, the rate is still below the Third Plan's annual target of 11 per cent. The output of basic industries increased at a faster rate than that of many of the consumer goods, which reflects the success of the investment strategy pursued over the past few years. The future prospects of industrial production will depend both on the availability of foreign exchange for development as well as maintenance imports and the success achieved in preventing bottlenecks in strategic sectors like power and transport. The position in regard to financial resources for new investment is somewhat indeterminate. The cost structure of industry has already been strained by the increases in prices of raw materials, stemming from increases granted by way of incentives to producers and increases in indirect taxation, and, to the extent they are linked to costs of living, by the increases in wages. Bids for further increases in wages by organised labour, if successful, are likely to increase industrial costs. A co-ordinated wage and incomes policy geared to productivity remains a vital desideratum.

In the field of price policy, the Report recounts the more important steps, both short-term and long-term, taken to hold the price line as well as to step up production, but observes that in spite of these measures the price level remains a highly disturbing factor in the economy, and, further, that the all-round co-operation to hold the price line, which looked so assured in the critical months after the Emergency, has not been much in evidence subsequently.

The Report stresses that the stabilisation of prices must be a major objective of policy, in order that defence and development may be secured while strengthening the balance of payments. A purposive and positive price policy presents indeed the greatest challenge to economic statesmanship. Such a policy has to take into account both the short-term aspects and the longer term strategy required to prevent the recurrence of currently experienced difficulties. The short-term measures like planned imports, distributional arrangements, etc. should be designed so as to be meshed into a long-term strategy. While the short-term measures would have to deal with hoarding, profiteering, etc., the aim should be to tackle the primary causes behind the price increase. In the long run, the highest priority must be given to the increase in agricultural output. A price policy offering a reasonable return to the cultivator coupled with buffer stock operations should considerably help in stimulating agricultural output as well as contributing significantly to price stability.

Simultaneously with the adoption of measures on the supply side, it is essential to pay close attention to the factors operating on aggregate demand. To the rising outlays for development have been added the heavy burden of expenditure on defence and, more recently, for rehabilitation of refugees from Pakistan and persons of Indian origin coming from abroad. Because of a shortage of financial resources, these have been financed by increasing recourse to bank credit, giving rise in the process to the price problem which has been further accentuated by the pressure of

money outside the banking system. From the purely monetary angle, an important factor contributing to deterioration in prices was the rapid increase in liquidity, which outstripped the sluggish growth of output in the economy. Money supply, i.e. the monetary demand in the economy, expanded by Rs 447 crores (or by 13.3 per cent) during the accounting year 1963-64 as against Rs 310 crores (or 10.2 per cent) during the previous year. The faster rate of growth in money supply was mainly induced by the more rapid credit creation by the banking system for private trade and industry, the expansionary impact of this factor being Rs 183 crores or two and a half times that in 1962-63. Governmental indebtedness to the banking system also continued, as in the preceding two years, to be the dominant expansionary factor, although its impact was smaller (Rs 281 crores) than in 1962-63 (Rs 316 crores) and in 1961-62 (Rs 327 crores).

An inflationary situation necessitates a Government budgetary surplus. But, notwithstanding a substantial stepping up of taxation at the Centre and in the States from 1960-61 (April-March) onwards, the budgetary position, especially of the States, has deteriorated. According to the revised estimates for 1963-64 (April-March), the budgetary deficit of the Centre works out to Rs 153 crores which is slightly smaller than in 1962-63 viz., Rs 168 crores. The overall deficit of the Centre during 1964-65 (B.E.) is estimated to be of the order of Rs 86 crores. The overall budgetary position of the States worsened from a surplus of Rs 37 crores in 1962-63 (Accounts) to a deficit of Rs 18 crores in 1963-64 (R.E.). Although the market loans evoked a subdued response, there was an exceptional out-turn in small savings.

According to the Report, as defence has a certain priority, the onus of adjustment falls on other sectors. A good deal of such adjustment has been made through altering the structure and rates of taxation, but it is important to bear in mind the unsettling effects of frequent changes in taxation on the climate of investment. It points to the importance of a strict scrutiny of and economy in Government expenditure which even if it results in temporarily slowing down developmental activity in some areas, may, in the long run, prove beneficial.

The unusually large credit contraction in 1963 slack season focussed attention on the need to give a fillip to productive activity. Coupled with the anticipated larger requirements of crop finance, it underlined the need for some relaxation in credit policy. Accordingly, on 30 October 1963, the Reserve Bank modified its system of lending rates and borrowing quotas to enable banks to satisfy all credit demands for productive purposes. In the busy season that followed, credit expansion attained record dimensions, the main underlying factors being a larger credit demand for marketing of crops, especially commercial crops like cotton, raw jute and groundnuts, the higher level of prices and the higher tempo of industrial activity. As compared to the previous busy season, there were larger increases in seasonal and non-seasonal as well as unsecured advances, though their respective shares in the total varied. Seasonal credit accounted for somewhat over half the expansion in the 1963-64 busy season as against over-two-thirds in the 1962-63 busy season.

The supply position of agricultural commodities which seemed good at the commencement of the marketing season, turned less

favourable as the season advanced; at the same time, there was renewed pressure on commodity prices. In view of this as well as the rapid expansion in bank credit financed by increased recourse to the Reserve Bank, the Bank reduced on 11 March 1964, the borrowing quotas and lending rates to levels prevailing before the end of October 1963. In view of the sharp increase in clean advances, which had risen by 30 per cent in the year ended February 1964, banks were requested to review their portfolio of clean advances and bring down such advances. As regards selective credit controls, the main developments were the (i) relaxation of the control on advances against shares, (ii) tightening up of the control on advances against paddy and rice and groundnuts and (iii) reimposition of the control on advances against wheat. The last two measures were taken in the face of shortages of supplies in relation to demand and the prevailing higher level of prices of the commodities concerned.

While selective credit controls have had salutary effects in regulating bank credit for the commodities concerned, equally, they have their limitations, especially in an environment of overall monetary expansion, which makes it possible for operators to resort to non-banking finance. This underlines the necessity of maintaining harmony between monetary and fiscal policy. Thus, while credit policy, in its long-term aspect, continued basically to be attuned to the needs of development, with preferential treatment to special sectors like small-scale industries, co-operatives and exports, the short-term adjustments in the cost and availability of credit were made to suit the emerging situation. The impact of credit policy on the price line is conditioned by the availability and cost of alternative sources of finance for hoarding. In this context, the impact of fiscal operations on the overall monetary expansion has to be borne in mind, especially in a period of large outlay. Further, since short-term adjustments in credit policy on the price situation rely on the amount and quality of information available regarding such factors as the outturn of crops, the trends in industrial production and so on, improvements in the present situation in regard to the availability, coverage and accuracy of such information should help to enhance the effectiveness of such policy.

In contrast to the commodity markets the capital markets have been in a state of quiescence and still show the bearishness which first set in the wake of Emergency. Consequently, the flow of resources to the private sector from the open market remained restricted during 1963-64 (July-June), with the

result that reliance was increasingly placed on the existing financial institutions for loan assistance as well as for underwriting support. Loans sanctioned by the term-lending institutions amounted to Rs 70 crores in the financial year 1963-64 as against Rs 54 crores in 1962-63. To meet the rising credit demands the term lending institutions had to reinforce their resources through loans, issue of bonds, acceptance of fixed and call deposits, etc.

As in the past, the availability of foreign exchange continued to be a severe constraint on the development programme, despite an encouraging performance in exports and a sizeable inflow of external assistance. The foreign exchange reserves which had risen by Rs 48 crores in 1962-63 (July-June), fell by Rs 10 crores in 1963-64 to Rs 279 crores at end-June 1964. The draft on the foreign exchange reserves during the year is mainly attributable to the repayment of Rs 24 crores of the outstanding indebtedness to the International Monetary Fund, which together with the enhanced payments for imports more than offset the considerable increase in receipts under exports and foreign aid. The most heartening development in the balance of payments field during the financial year 1963-64 was the substantial rise in exports which touched a level of Rs 802 crores. This was largely due to the generally buoyant conditions which prevailed in the world economy, world trade in 1963 registering a growth rate of about 8 per cent. Imports which had risen by Rs 85 crores in 1962-63, rose even faster during the year. At Rs 1,231 crores they were higher by Rs 139 crores than in 1962-63. The whole of the increase was due to larger payments on Government account for developmental as well as non-developmental items. Imports of capital equipment for Government projects increased by Rs 86 crores and Government food imports by Rs 31 crores.

The Report draws pointed attention to the need for an all-round export drive not only to meet current imports, both developmental and maintenance, but also the growing burden of external debt, the servicing of which is an important determinant of the country's external credit. Further even with the most hopeful assumptions regarding foreign assistance, the bulk of the indispensable import content of the country's developmental programme has necessarily to be met from export earnings.

Finally the Report emphasises that the ability of the economy to withstand stresses and strains like those into which it has run by the middle of the Third Five-Year Plan is very much dependent on the progress it is able to achieve in agriculture and exports. But, even

with the utmost optimism in regard to agricultural production and the availability of foreign exchange, the resources budget of the nation may well remain strained. The size as also the content of the developmental effort have to be carefully considered from this angle and a solution worked out which will enable development to take place in an environment of stability, so that the benefits of development are passed on in the right measure to the masses. This in its turn points to the need of formulating policies which would have to comprehend not only monetary, fiscal and physical controls but also a coordinated price and incomes policy.

In Sections II, III and IV, the Report gives details of the institutional developments and the progress made during the year with a view to strengthening the banking system—commercial, industrial and co-operative—and promoting its growth on sound lines. Section II reviews the progress made in the sphere of (i) strengthening of the commercial banking structure through periodic inspections, amalgamations and mergers of banking companies and control over branch expansion, (ii) amendment of banking laws as a part of the structural reform, and (iii) build-up of the industrial finance structure through the establishment of Unit Trust and the Industrial Development Bank. Efforts made by the Reserve Bank in coordination with the Central and State Governments, to bring about an improvement in the structure and working of the co-operative institutions at different levels and to stimulate an increase in their own resources in the form of share capital and deposits are reviewed in Section III. It is of significant interest from this point of view that, during the year, an action programme for the reorganisation and development of co-operative credit was drawn up on the basis of discussions held between representatives of the Bank, the concerned Union Ministries and the Planning Commission, and was thereafter circulated by the Government of India to State Governments for implementation in districts selected for the Intensive Agricultural Areas Programme. As in the past, the Bank continued to take an active part in the promotion of efficient techniques and procedures and the improvement of the quality and standards of banking personnel, and the developments in this sphere have been discussed in Section IV.

Section V deals with accounts and other matters. During the accounting year 1963-64, the Bank's income, after making statutory and other provisions which were of a substantially larger order, aggregated Rs 52.22 crores, as against Rs 56.05 crores in the previous year. A new feature under appropriations was the setting aside of a sum of Rs 10 crores for the creation of the National Industrial Credit (Long-term Operations) Fund in terms of Section 46C of the Reserve Bank of India Act. Thus, mainly because of the larger appropriations, the net profits available for transfer to the Central Government were somewhat lower at Rs 40 crores as compared to Rs 44.5 crores in 1962-63.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills were opened on Tuesday, the 15 September 1964. Total amount offered was Rs 3,04,00,000. Tenders at Rs 99.405 per cent and above were accepted in full and those at Rs 99.400 per cent were allotted 53 per cent. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.386 per cent per annum.

COOP. MARKETING

Not Much Headway

What exactly is the practical significance of the Government's decision to support the establishment of a Price Fluctuation Fund for co-operative marketing societies? Obviously the scheme has been designed to provide the necessary support to the co-operative marketing societies so that they could expand their operations without getting out of their depth. A committee that examined the working of these societies had reported that, except in certain limited areas, the marketing societies have not been able to make headway and could not be expected to attain the targets set for them, unless they were enabled to meet the competition of private traders on an equal footing.

The marketing societies have been handicapped by their inability to undertake the risks involved in making outright purchases in a fluctuating market. The extent of business that they could transport on a consignment basis on behalf of the producers was necessarily limited, especially when the latter could sell their produce for cash, or even against advance payments, to private traders. The Conference of State Ministers of Cooperation had, in 1961, recommended the creation of a Special Marketing Fund to underwrite the losses that may be incurred by the co-operative societies that went in for outright purchases. This recommendation was reiterated in 1963.

Government, it has been announced, has now finalised the scheme which will be introduced in the State Sector, with 200 selected societies to start with. It may be extended to another 300 societies next year. The marketing co-operative societies will be contributing ten per cent of their net profit every year to the Fund, while the Government contribution, which will be shared equally by the Centre and the States, will be at the rate of 2 per cent of the value of the outright purchases of agricultural produce made in the previous year, subject to prescribed ceilings. It has also been made clear that the scheme will not be applicable to purchases made on behalf of the Government, or Government agencies like the STC. Similarly it has been announced that the scheme will not be applicable to commodities like sugar-

cane, for which Government has fixed maximum or minimum prices. Since the Union Ministry of Food and Agriculture has already taken the decision to fix minimum and maximum prices for foodgrains, it is difficult to identify the categories of commodities, handled by co-operative societies, to which the scheme will actually apply.

★

CLOTH EXPORTS

Heartening Trend

Exports of cotton textiles during 1963 and in the first half of the current year have, encouragingly enough, been on the uptrend. Exports of cloth in 1963 moved up to 531.15 million yards valued at Rs 110.22 million from 508.36 million yards worth Rs 399.56 million in the previous year. On the contrary, the average value realised per unit of cloth in 1963 slipped down by 2 nP to 77 partly on account of the operation of the obligatory scheme. This should not, however, belittle our performance during 1963, which showed an improvement of 4.5 per cent, against an 8 per cent decline in international trade. As Mr Neville N. Wadia told the tenth annual general meeting of the Cotton Textiles Export Promotion Council the rise in piecegoods exports is primarily owing to improved shipments to European countries, especially the UK, France, West Germany, Belgium and the USSR and partly due to higher offtake by the USA, Ceylon, Burma, Malaya, Persian Gulf countries and East Africa.

The pattern of cloth exports in the first half of the current year includes some features from which it is possible to derive some gratification. Not only the quantum of exports smartly moved up to 315 million yards from 268 million yards in the corresponding period of 1963, there has been a striking step up in price realisation to a new high of 92 paise, thanks mainly to the efforts at diversification of trade to new spheres of production. Mr Wadia's suggestion to lay more emphasis on exporting quality products instead of enlarging the quantum is significant in this context as there will be a corresponding increase in foreign exchange earnings and there will be less resentment from the exporting countries.

Future programmes for the cotton textile industry will have to

take into account the change in the direction as well as the composition of textile exports. The scope for expanding exports to the under-developed countries is progressively shrinking as they are fast developing their own cotton textile industry. Therefore, our efforts should be to enhance exports to the markets in Europe and the United States. But the lack of enthusiasm on the part of the principal architects of the Long Term International Agreement on Cotton Textiles, which is designed to facilitate expansion of exports to developed countries, to implement it properly is an impediment of a serious nature thwarting our efforts at promoting exports. As Mr Wadia stressed, unless the advanced countries adopt a positive approach in the implementation of this agreement there is little room for stimulating our exports owing to the high manufacturing cost and the limited spheres of production. Therefore, concerted efforts are necessary to make our cloth competitive in both cost and quality if our cotton textiles are to retain foothold in existing markets and also for capturing new ones.

★

SMALL INDUSTRIES

Special Aid

The importance of the small scale industries to the economy stems primarily from the fact that they are capable of creating employment on a large scale with comparatively small capital cost. And in the present context of continuing stringency of foreign exchange, they can also play a useful role in the country's export drive as there is good demand in foreign countries for their products. Government's decision to constitute a standing committee which will systematically explore possibilities of exporting the products of the small industries sector, therefore, is a move in the right direction. As Mr H. C. Dasappa, Union Ministry of Industry and Supply has told the other day the All India Small Scale Industries conference in Bombay, small industries will have to be given special assistance in this regard. For such special assistance, they however need not depend entirely on outside agencies. According to Mr Dasappa, while Government and semi-Government agencies may provide marketing research and

intelligence and kindred services, the small industries themselves can very well organise on a co-operative basis common facilities such as the establishment of export houses, publicity and the like.

But the main problem facing this sector is the persistent shortage of raw materials. In the allocation of foreign exchange small scale industries have not been given a fair deal and this will be evident from the large proportion of idle capacity in this sector. It has been estimated that on an average only about 60 per cent of capacity is in use as a result of shortage of raw materials. It stands to reason therefore that before talking about export promotion for this sector, efforts should be made to make a fuller use of its capacity. It is to be hoped that a satisfactory solution will soon emerge as the problem is now under study by an expert committee. In the meantime Government has done well to ensure that as far as possible no new units requiring scarce raw materials are put up.

Apart from necessary facilities such as adequate raw materials, power and transport, the develop-

ment of small scale industries also depends on the cooperation of large scale industries. A feature of the industrial scene in the developed countries is that the large scale and small scale sectors in industry play a complementary role. That is to say that as far as possible the large industries get their work done by the small industries. It is this co-ordination that has paved the way for the rapid development of ancillary industries elsewhere in the world. As Mr Dasappa has pointed out, it is only in recent years that small industries in India have proved their ability to undertake the manufacture of complex industrial goods. Even so, it cannot be maintained that our large industries are doing much to foster the growth of small units.

HOUSING More Funds

That the housing problem in the country remains almost as intractable as before will be unsurprising, as there has been inadequate enthusiasm on the part of the Centre and State Governments to implement the various housing schemes. Insufficient allocation, diversion of funds for other purposes and infructuous expenditure and the like are the main factors for their poor progress. Disturbingly enough, even the available resources are not put into proper use and the lack of coordination between the Centre and the States is also partly accountable for the limping progress in housing programmes.

The Union Ministry of Works and Housing has made an allocation of Rs 11.50 crores to twelve States for advancing loans under different housing schemes during the current year. This amount, which has been earmarked out of the Life Insurance Corporation funds, takes the total advanced by the Corporation during the current Plan to Rs 41.50 crores. The amount allotted will, as usual, be in the nature of a package allocation, and the States will have absolute liberty for allotting funds for individual schemes according to the requirements. The loans advanced by the LIC to the States will be carrying a uniform rate of interest of 5½ per cent per annum so long as the bank rate remains at 4½ per cent.

The State-wise allocation of this amount is: Andhra Pradesh Rs 125 lakhs; Assam Rs 30 lakhs; Bihar Rs 70 lakhs; Kerala Rs 40 lakhs; Madras Rs 125 lakhs; Maharashtra Rs 150 lakhs; Mysore Rs 100 lakhs; UP Rs 100 lakhs; West Bengal Rs 150 lakhs; Orissa Rs 60 lakhs; Punjab Rs 150 and Rajasthan Rs 50 lakhs.

The loans to the State Governments are to be repaid in 25 annual equated instalments of principal and interest in all cases, including the loans under the Rental Housing, Village Housing Projects and Land Acquisition and Development Schemes. The first equated instalment is repayable after a year the loan is drawn.

It is encouraging that the State Governments have been asked to

draw their allotted funds by 10 October, which is designed for the expeditious utilisation of the funds. But as experience has shown the first flush of enthusiasm on the part of many of the State Governments is apt to wane with the result that the progress housing programmes is impeded. With the rapid increase in population and the growing pressure on the available accommodation facilities the need for quickening the pace of housing schemes is imperative. The minimum what is required of the States is to put the available resources for the maximum use which will certainly go a long way in solving this fundamental human problem.

ROAD TRANSPORT Speedy Development Needed

The need for adopting a realistic attitude toward road development while formulating the estimates of the Fourth Plan has been stressed by Mr B. P. Poddar, Chairman of the Indian Roads and Transport Development Association, Calcutta Branch, last week while presiding over the annual general meeting of the Association. He has pointed out that development of road transport has gained importance in view of the fact that the demand for transport is outstripping availability as a result of augmented development programmes and the exigencies of defence. Out of the estimated originating goods traffic of about 375 million tons during the Third Plan, the railway can only account for 260 million tons and therefore the balance of about 115 million tons will fall to the share of road transport. Unless measures are initiated expeditiously for development of roads and for augmenting the availability of vehicles, among other things, road transport will not be able to fulfil such a great responsibility. Already the transport industry is being adversely affected by the slow progress of the automobile industry in increasing its output. As against a target of 60,000 commercial vehicles in the Third Plan, production is expected to touch a level of only 42,000. The main reason for the disappointing level of production of commercial vehicles is that the automobile industry is bedevilled by shortage of imported raw materials and components. While it is true that continued stringency of foreign exchange has necessitated a strict control on imports, it stands to reason that in view of the importance of road transport to the economy as a whole, preferential treatment should be given to the automobile industry in the matter of allocation of foreign exchange.

Another big impediment in the way of a speedy development of road transport is the crippling taxation that it has been obliged to bear. It has been calculated that every ton of goods carried by road transport has to bear a tax which is equivalent to the average

freight on the same quantity of goods carried by rail. Road transport operators also find the variety of taxes that they have to pay is hindering expansion of their services. In this regard, Mr Poddar has suggested the adoption of some coordinated policy whereby all state taxes payable by road transport are collected at one point. It is gratifying that a beginning has already been made in this regard by the Government of West Bengal by entering into agreements with nine States for the operation of goods transport service by road, most of which are based on the principle of single-point taxation.

LABOUR Outmoded Policies

Addressing the annual meeting of the Employers Federation of India, Mr Naval H. Tata has drawn pointed attention to the need for a more rational and realistic labour policy. For existing legislation is outmoded and hence cannot be expected to make much of a contribution toward accelerating the pace of economic development of the country. The Industrial Truce Resolution which was adopted in the wake of the national emergency is no longer effective and strikes have once again begun to cost the nation heavily in the shape of loss of much needed production. The reason for the setback is not far to seek and that is the continuous rise in the prices of essential commodities. But it is to be admitted that even otherwise industrial relations have not been what they should be. While it is unexceptionable that Government should be vigilant in ensuring the security of employment for labour, it should also be equally mindful in relating the rise in wages to a corresponding increase in productivity. Failure to do so will inevitably result in increased cost of industrial production and consequent setback in exports which at the present juncture play a vital role in the economy.

An important point dwelt upon by Mr Tata refers to the Govt.'s way of treating all strikes alike. One can understand genuine industrial strikes arising out of disputes. But where do political strikes come in the industrial field? Political strikes have been responsible for entailing huge national loss. There has been no indication so far that Government is in anyway disturbed by such unwarranted strikes. Perhaps it may wake up to the magnitude of the damage done by political strikes if as Mr Tata has suggested the Planning Commission makes a computation of the loss from these strikes.

That Government is not quite clear in its mind about all the repercussions of the various changes in policy which it wants the employers to carry out from time to time is shown by the latest

directive that employers should deal with unrecognised unions also. Under the Code of discipline, progressive recognition of unions with the object of determining the ultimate sole bargaining agents is advocated. But now even establishments where there is already a well-functioning union, are asked to "recognise" unrecognised unions and to support this argument Government is quoting the Industrial Truce Resolution, a document which has practically been nullified by innumerable unauthorised work stoppages which have nothing to do with any pending wage dispute. Mr Tata has pointed out that such misapplication and misinterpretation of the resolution has made employers lose faith in the Truce. One implication of the move to give recognition to the unrecognised unions is that discipline will not have even the present weak curbs to deter it.

MSTC A Welcome Measure

The registration in Calcutta last of the Metals Scrap Trade Corporation, a joint venture of the ferrous scrap collecting and exporting interests in the country, is to be welcomed as it is designed to fulfil a long-felt need. The Corporation will undertake, through a country-wide net work of agencies and by the provision of equipment, condition and processing of ferrous scrap for domestic consumption and exports. This is a measure in the right direction for, on account of the absence of incentives and lack of long-term export policies a large quantum of scrap is currently lying uncollected. As Mr Manubhai Shah, Union Minister for Commerce, has stated at the occasion all ferrous scrap exports will be canalised through the Corporation for doing away with the uncertainties resulting from the uncoordinated efforts and unwholesome trade practice.

The Corporation will therefore, do well to accord more importance to the mode of collection of the ferrous scrap from different parts of the country. For, only an efficient system of collection can make the supply position comfortable both in terms of quantum and quantity. It should be mentioned in this connection that despite Government's acceptance a few years ago of the recommendations of the Banerjee Committee for strengthening the collection machinery little was done for the maintenance of exports and for catering to the needs of indigenous furnaces. The new fangled Corporation should expedite measures for compensating the apathy of the Government in this regard and for ensuring that the domestic and export needs are adequately met.

"I must have liberty
Withal, as large a charter as
the wind
To blow on whom I please"
—As You Like It

I only hope that the five giant fertilizer factories, that are under negotiation between an American corporation (itself representing a consortium) and the Indian Government, do not get Bokaroed.

The project, according to press reports, involve in the aggregate a round half a billion dollars. American hustle is suggested by the indication that the factories would apparently go into production within 2½ years of "the go-ahead signal from the Government of India". If the project goes through, it will in one important respect be the first of its kind: the shareholders in the company would be three entities: US capital, the Indian public sector, and participation by the Indian investor. The willingness of the American negotiators and the anxiety (apparent) of Indian Government officials both indicate how central to the Fourth Plan the production of fertilisers is likely to be. The American Ambassador, when he made the announcement of his country's generous rescue efforts in the summer by quickening deliveries as well as sending us more foodgrains under Public Law 480, made quite clear his own conviction that our food plans will go awry unless there is simultaneously more attention paid to fertiliser output. I am glad at any rate to find that the Finance Minister, though in his intervention in the debate on the censure motion he did stress that projects in the Fourth Plan for heavy industry were not being jettisoned, has taken cognisance of the fact that emphasis needs to be placed on the fertilisers industry, if we are not to suffer a debacle on the food front. Also heartening is the realisation that consumer goods output has to be stepped up; for, how else is the mass purchasing power, released by plan disbursements, to be satisfied? But I am not altogether sure that the best way of increasing supplies in this sphere lies in the State emerging as a producer thereof. Surely Government has—or should have—its hands full with its heavy and basic projects; and it would be more than enough if encouragement were given to the private sector, to step up production in this regard. I should suggest that the small-scale industrialists should receive especial

incentives to embark on production of consumer goods.

Some time ago, the views of two authorities on tea coincided: both maintained that the time was not far off, when the world would be faced with over-production. This naturally induced some sense of caution in tea interests in this country, and the result was reluctance either to increase output or to extend acreage. It was Mr A. S. Bam, Chairman of Tea Board, who was talking to me in his cosily comfortable room. (The building, I know, is air-conditioned—except for the ninth floor, which originally had been intended to be residential quarters; but apparently Mr Bam does not like it, for the windows were wide open overlooking Brabourne Road). The real check to exports, for generally internal consumption is steadily on the increase and the surplus available for export can increase only with a rise in production. However, it was interesting to hear Mr Bam's reason for the phenomenon of a fall in internal consumption in the last two years: he suggests it could be tied in with the shortage of sugar, as well as its high price: for, who would drink tea if it were not sufficiently sweetened? When I sought clarification, of the recurrent charge that East Africa was stealing the markets for Indian teas, he confirmed what this journal has long believed: that, in any case, our own exportable surplus of the quality of tea that East Africa grows is likely to diminish, because more tea of such kind is being drunk within the country. We could well be on the way to a record year in tea exports—always, at least for some time, excepting 1956 when, owing to the Suez crisis, every tea-drinking country under the sun indulged in panic and stock-piling purchases. Mr Bam is not at all anxious to encourage tea drinking in India for as it is spread of the habit bids fair to cut into the surplus for exports. Hence, as against the not inconsiderable propaganda efforts some years ago, we today have little or nothing by way of Tea Board publicity in the Indian press. (The only exceptions seem to be the myriad

of souvenirs that get published these days). Export promotion is what the Tea Board is vitally interested in; and so I shall follow closely the success—or otherwise—of its efforts to popularise tea in what is now virtually virgin country—the United States of America.

Not so many years ago, the American tourist used ruefully to gaze at walls which contained the exhortation, "Yankee Go Home." Today, it is the turn of the Indian. He is the unwanted man in Pakistan, Burma and Ceylon. Not all the reassurances of Mr Swaran Singh can convince us that Indians can hope peacefully to lead the lives they were living in these countries. When in 1942, war drove Indians from Burma, they had no choice but to take the notorious black road. To the evacuees then, no food was available and starvation rather than snipers' bullets or brigands' daggers was responsible for fatalities. But such of them as did get through were at least able to bring with them the portable wealth they had. That was a little over a generation ago. The plight of the evacuees from Burma at the present day is in a sense more pathetic. Even personal belongings

are being confiscated; a bare Rs 15 or so is allowed to be taken away. True, there are ways and means of repatriating money or the equivalent of one's chattels: but the "exchange" rate is one Indian rupee for four Burmese kyats, whereas officially the two currencies are supposed to be on par; and there is always the risk that the person in Burma to whom you had entrusted such a transfer deal coolly forgets to inform his counterpart in India. Now, the reason for the expropriatory acts is that the Indian abroad was a successful businessman; but back in this country he does not have the resources to start afresh. I don't think that so far there has been any official thought paid to how the Burma evacuees can be helped. It seems to me that the best form of assistance could be through the National Small Industries Corporation; the only deviation from the present rules could be that the evacuees need not make a down payment. I am confident that, if help of this sort were to be extended, the repatriate from Burma, as happened with regard to the refugees from West Pakistan, would swiftly thrive, prosper and make a living for himself and his family.

Olympus - A Letter from Delhi

Export-Import Council

THE two-day session of the Export-Import Advisory Council was inaugurated here, last Saturday, by the Union Minister of Commerce, with a masterly survey of trade trends which ended on the confident note that trade and industry would extend their maximum cooperation in winning the battle for exports. The general trend of the two-day discussions made it clear that this confidence was not misplaced. The export targets proposed for the fourth plan met with a heartening measure of approval. Mr A. D. Ogilvie, President of the Associated Chambers, observed that he was impressed by the high quality of the investigations on the basis of which the various targets had

been proposed. All reasonable persons, he said, were agreed that the targets were attainable.

At the same time, there was general appreciation of what these targets would involve by way of added effort. The position in this regard was clearly set out in the address of Mr K. P. Goenka, President of the Federation of Indian Chambers of Commerce and Industry, who emphasised that particular note should be taken of the inflationary pressures that had been developing and the extent to which they might come in the way of larger exports. The achievement of the target, said Mr Goenka, would call for a measure of economic, social and political discipline which he felt "does not probably exist in the country to the extent desired". For the achievement of the targets, the country as a whole, he said, includ-

ing, particularly the administration, must be geared to following an action-oriented approach.

Role of State Governments

The importance of involving the State Governments in the task of export promotion was stressed by a number of speakers. The ball was set rolling by Sir A. Ramaswami Mudaliar who felt that the State Governments were not doing all they could to help the Tea industry to achieve its plan targets, a point which was further embroidered by Mr B. C. Ghose.

The lack of export consciousness at different levels of Government, particularly at State level, was also referred to by Mr Bharat Ram who endorsed a suggestion made by Mr K. P. Goenka, that representatives of the State Governments should be invited to attend meetings of the Council, so that they could have a proper appreciation of the importance of exports. The Minister for Commerce, however, did not consider that such limited participation would go very far in the achievement of the object in view, and said that various other measures were being taken to enlist the State Governments in the export drive and added that the question would be taken up at the next meeting of the National Development Council.

The NDC, which will be meeting toward the end of October, will also consider the policy implications of the export targets suggested for the Fourth Plan. Dr V.K.R.V. Rao Member, Planning commission told the Council that he had discussed these questions with the Prime Minister and he expected that a Cabinet decision would be taken after the NDC meeting.

Dr Rao's 7-Point Programme

Failure to achieve the export target, Dr Rao declared would slow down the pace of development. A programme of education, directed to the leaders of opinion in all spheres of national life, would, therefore, be necessary to create a favourable climate for export pro-

motion. Special attention has to be given to the inhibiting factors which were present in the economy, as a result of prevalent shortages and consequent rise in prices. Dr Rao said that restraint of domestic consumption was a necessary plank in the programme of export promotion. In this connection he emphasised the importance of the following seven points for the achievement of the export targets.

(1) Readiness on the part of the country to forego some of the increased production resulting from planned development for the sake of building up exports.

(2) Continuity of export supplies should be ensured by building up stocks if necessary. This, Dr Rao pointed out, is particularly important, as most of our exports are agriculture-based and subject to the seasonal fluctuations in agricultural production.

(3) The investment pattern should be definitely oriented, both in the industrial and the agricultural sectors, to secure the necessary increase in supplies for export. The requirements of imported materials needed for this purpose must be fully met.

(4) Export units, equipped with up-to-date machinery should be set up to manufacture goods exclusively for export. Such units, Dr Rao felt, would be necessary to ensure competitiveness of our exports, as a general reduction of costs may not be feasible. He preferred that these units should be in the public sector. (Mr R. G. Saraiya was, however, of the view that such specialised units would be costly, and may not be viable as they would not be able to export all their products. In this connection it is interesting to note that Dr B. N. Ganguli who spoke on the second day of the session, suggested that the scope for State undertakings in the export

sector, particularly in the field of plantations, should be explored.)

(5) The pattern of export incentives should remain undisturbed for the duration of the Fourth Plan. Continuity of policy in these matters was essential.

(6) Foreign exchange for sales promotion abroad should be allowed on a liberal scale. While a lump sum provision for this purpose should be included in the Fourth Plan, Dr Rao felt that its disbursement should be the responsibility of the Ministry of Commerce.

(7) Finally, Dr Rao emphasised that Export should have the same importance as, say, agriculture or machine building, in the programme of planned development.

The provision of the facilities to exporters, which are necessary for implementation of the export programme, Dr Rao pointed out, would call for considerable Rupee outlay, and he posed the question whether the import sector, that is, industries which derived the benefit of import licences should not, under some suitable arrangement, bear a part of the burden.

This suggestion understandably evokes mixed reaction. Mr Wadia jocularly referred to the Government's ingenuity in devising new imposts and pleaded that they should not "kill the goose that laid the golden eggs." But, on the other hand, Mr A. G. Shah agreed with Dr Rao that the rupee outlay for the provision of export facilities would have to come from imports. He also made the point that Merchant Exporters should have the same facilities as manufacturer-exporters, if Established Importers are to follow the Minister's advice and become Established Exporters.

Export Oriented Import Policy

In his concluding address Mr Manubhai Shah, Union Minister of Commerce, made it clear that, while restraint on imports will have to continue, the policy itself will be export oriented. Any industry showing vigour in export will have priority in the matter of imports.

The way to increased exports, the Minister said, was diversification. Welcoming the trends toward export of higher priced textiles, to which attention was drawn by Mr Bharat Ram as well as by Mr Wadia, the Minister said that efforts should be concentrated on increasing the unit value of exports. The future pattern of incentives, he said, will depend on the unit value of the exports.

Mr Manubhai Shah strongly en-

dorsed the view put forward by several speakers, including Mr Bharat Ram, Dr Ganguli, Mr D. C. Sharma and Mr K. K. Shah, that the public sector undertakings should participate in the export programme.

Mr Shah also indicated Government's readiness to accept the suggestion made by Mr Ogilvie, that consignments of components and spares imported by air in order to meet urgent requirements, should be assessed on the basis of C & F costs as if they were imported by sea.

Ancillary Export Corporation

The Minister agreed to examine the suggestion made by Mr T. S. Santhanam, that part of the IDA loan for import of components and spares for the automobile industry should be made available for maintenance of the vehicles, which are already on the roads in good repair. In this connexion Mr Santhanam had made the point that keeping old vehicles on the road was as important as adding to their number and that it was more economic to repair an

existing vehicle than to scrap it and go in for a new one.

The Minister, however, coupled his willingness to consider this suggestion with an exhortation to the automobile ancillary industries to go all out to step up exports to the level of Rs 5 crores. The foreign exchange earned would all come back to the industry which could be used for the import of spares and components which they needed. In this connexion he suggested that an Ancillary Export Corporation be set up and promised all necessary help for the organisation.

Market NEWS and Trends

JUTE Need to End Undue Competition

IN his inaugural address to the newly constituted Jute Textile Consultative Board, Mr Manubhai Shah, Union Minister of Commerce, has rightly pointed out that a rate war between India and Pakistan is no solution to the problem of expanding exports. For both the countries, the jute industry is a major foreign exchange earner and undue competition in the long run will only entail loss to all the exports. As a matter of fact, as Mr Shah has noted, there is much to be gained in cooperative endeavour. World demand for jute goods is expanding and both the principal producers can have their due share of the world market. This view has also been endorsed by Mr R. H. Morrison, Chairman of the Indian Jute Mills Association, who has said that problems of the industry can no longer be considered in isolation and that it is "driven inevitably to seek solutions in cooperation with other countries". But unfortunately Pakistan seems to be interested in only short term gains.

Otherwise it is hard to explain its policy of usurping India's traditional sacking markets by gaining unfair advantages through the mechanism of an export bonus. If past experience is any guide it is unlikely that the latest appeal from India for mutual cooperation in export promotion will have any effect. And therefore there will be need for finding a solution to the problem of continued erosion of our sacking markets. That the matter cannot brook delay will be evident from the fact that during the past two or three years India had almost completely lost some of its overseas markets and the overall exports of sacking have dwindled considerably during this period.

Mr Shah however is quite optimistic of the future of the jute industry. In his view there is no need for being unduly concerned about substitutes, because being a versatile fibre, jute is bound to maintain its popularity. In this connection, he has suggested that the industry with the help of research should evolve new products and not confine its attention to conventional categories. Moreover, the Indian industry is taking measures to ensure that buyers get quality goods when they buy from

India. From January next statutory quality control and pre-shipment inspection of jute goods will be introduced. The confidence that our jute goods will thus inspire will go a long way toward making them popular with buyers.

★

Prices in the jute markets generally declined in earlier dealings during the past week largely because of an easier trend in the raw jute section. Partly on account of the compulsory maximum quotas fixed for mills and partly on account of a marked improvement in arrivals, sellers have latterly become eager for business even at discounted rates. This has resulted in raw jute prices being marked down from day to day during the past few days. From a level of Rs 11 per maund Assam Bottoms has been placed at Rs 38.50 at close on Wednesday. Indications are that provided arrivals show a marked improvement there is every reason to think they should as imports of Danee and Tossa have commenced there should be a further decline in the price level.

There is however the possibility that notwithstanding increased arrivals of raw jute, prices will be maintained at the present levels or even marked up. For already conditions in the goods section are firming up after a brief period during which prices moved down in sympathy with the easier trend in the raw jute market. B Twills September which was quoted at Rs 141.75 on Tuesday has spurted to close at Rs 144.15 on Wednesday. Hessian however shows only a modest gain. The sudden reversal of the trend is attributed to speculative buying presumably sparked by the belief that in view of the reported inability of the Pakistani mills to entertain orders with delivery dates within the next six months or so, foreign consumers have perforce to look to Indian mills for their requirements atleast during this period. Moreover, it is expected there will be a steady stream of tenders from the Government of India combined with increased local consumption. As for hessian, the outlook cannot be said to have markedly improved as yet but the fact that burlap consumption in US during August has shown a sharp increase over the previous month at 81 million yards with a reduction of about 20 million yards in stocks augurs well for a revival of buying interest from the US.

PRODUCTION OF JUTE GOODS: AUGUST, 1964

	(000 tonnes & tons)		
	Aug. 1964	July 1964	Aug. 1963
Hessian	47.0 (46.2)	49.1 (46.4)	45.7 (44.9)
Sacking	45.1 (44.4)	46.4 (45.7)	42.7 (42.0)
Carpet	8.1 (8.0)	8.2 (8.0)	8.4 (8.3)

TEA Rise in Crop Output

ACCORDING to the figures released by the Indian Tea Association, the output of the North Indian tea crop has shown a decline to 101 million pounds in August 1964 from 105.2 million pounds in August 1963. Total crop up to the end of August is, however, higher at 327.6 million pounds as against 300.8 million pounds in the corresponding period of last year.

An encouraging factor is that the increased crop is being steadily absorbed though at declining prices. The average sale price up to date is reported to have fallen from Rs 5.93 to Rs 5.20 per kg as compared with that of the 1963-64 season. Leaf sales, up to the end of August, are nearly 5.2 million kgs ahead of those for the corresponding period of last year, while Dust sales show an increase of about 2.6 million kgs.

In the export sale held in Calcutta, offerings were 71,858 packages of Leaf grades. There was a good general demand. Plain orthodox teas were well supported and sold readily at around last prices with exportable fannings a strong feature at dearer rates. Good Assam orthodox brokens received less enquiry and were often appreciably lower, particularly when warranted by a falling away in quality. The better liquoring Dooars and Medium Assams followed the lower trend of the market and sold at irregular and easier levels.

Last week's support for good CTCs continued; but prices were irregular with selected lines selling at enhanced prices. Clean fan-

nings with good liquors were sought after and often realised higher prices. Medium CTCs were sold well, but were very irregular. Whole Leaf grades were lower except for the plainer sorts which were readily absorbed at fully firm to dearer rates.

Darjeeling teas continued to be well absorbed at generally lower rates. Following rates (per kg) were quoted:—Clean Plain Pekoe Rs 5.30 to Rs 5.50; Plain Orthodox BP Rs 4.10 to Rs 4.30; Plain Orthodox Fannings Rs 4.40 to Rs 4.70; Plain CTC BP Rs 5.10 to Rs 5.50; Plain CTC Fannings Rs 4.90 to Rs 5.10; Medium CTC BP Rs 5.80 to Rs 6.40; Medium CTC Fannings Rs 5.80 to Rs 6.40; Good Assam CTC BP Rs 6.60 to Rs 7.10 and Good Assam CTC Fannings Rs 6.80 to Rs 7.30.

In the internal sale, offerings consisted of 34,538 packages of dusts. There was a good general demand, which weakened somewhat towards the close. Medium CTC descriptions opened at about 20 paise below last rates; but declined further as the sale progressed. The selected lines in this category, however maintained their value. Good CTC types were sold readily and can be quoted as firm.

Bright liquoring Assam orthodox teas opened on a strong note; but towards the close they were lower by up to 30 paise. Plain orthodox dusts were readily absorbed at a small discount. Legg-cut teas continued to sell well. Following rates (per kilo) were quoted:—Plain Orthodox Dust Rs 4.20 to Rs 4.60; Medium Assam Dust Rs 4.90 to Rs 5.50; Legg-cut Dust Rs 5.00 to Rs 5.40; Medium Assam CTC Dust Rs 5.30 to Rs 5.60 and Good Assam CTC Dust Rs 6.20 to Rs 6.50.

The Low-country Products Association of Ceylon has urged the Government to persuade India to join Ceylon in pressing for an international commodity agreement in respect of tea. The Association has stated that, as the major tea producers are India and Ceylon, it is essential that the proposal should be jointly initiated by both countries.

India had been sympathetic towards the idea on the last occasion but has since changed her views. It is important that India should be persuaded to reconsider the matter and join with Ceylon in pressing for a commodity agreement. It is said that disagreement over this issue, which is of major importance to the economy of Ceylon, will strain relations between Ceylon and India.

In the Cochin market, a quantity of 5.90 lakh kg of leaf tea was offered for exports. The quality, in general, was fairly maintained; but there were a few brighter liquoring Nilgiri teas on offer. The market met with a good demand with more emphasis on fannings. Among plain and low medium categories, poor brokens inclined easier, while other types and their fannings were firm to dearer. Good mediums were well supported and

realised high prices, particularly fannings. Highgrowns met with a good support. Brokens were irregularly firm to dear, while fannings sometimes realised useful prices. Clean black leaf descriptions continued to be strong. Whole Leaf grades also were well supported with Orange Pekoes being the strong feature of the sale.

In the auction held at London this week, 5,759 packages of Ceylonese tea were withdrawn from the quantity originally advertised for sale, leaving 26,803 packages

for disposal. Demand was strong and active and better quality Uvas were sold at substantially higher prices. The feature of the market was demand for brighter liquoring medium qualities, which advanced by 3d to 4d per pound. Low-growns were a penny to two pence dearer. There was again an improved demand for the 7,146 packages of South Indian growth. Except for a few of the poorer liquoring Fannings, prices generally showed advances of one penny to three pence per pound.

Tea stocks in London, as 4 September, were lower at 104.70 million pounds as against 107.31 million pounds. The total quantity to be landed on the same was 26.36 million pounds. Total afloat was 16.32 million pounds, including from Calcutta 5.39 million pounds; from Chittagong nil; from Cochin 1.92 million pounds and from other Ports 54,000 pounds. The average price realised at the auction was 59.79d per pound as against 55.26d in the previous week and 55.46d a year ago.

COOL COMFORTABLE LIVING

BINNY'S CONSUL & DOUBLE DIAMOND

Buy your requirements of BINNY fabrics at controlled rates from authorised BINNY Stockists who display this sign board.

COTTON Firm Trend

Trading in cotton futures market in Bombay displayed a firm tendency during last week and fluctuations were restricted to a narrow groove. The turnover in the market, however, was meagre as operators were reluctant to make any commitments till a clear crop picture emerges.

After commencing the week on a firm tone at Rs 732.50 per three quintals, the Jarilla March contract crept to Rs 732.75 on the opening day itself. In subsequent deals, however, the contract moved between Rs 732.75 and Rs 728.75 on account of scattered support and bear covering at some stages and profit taking at other stages. Fresh support for the contract was conspicuously absent.

Brisk activity was reported in the spot market at Sewri, thanks to good mill enquiry. Growths such as CO 2, L 147, 197/3, Kalyan, surti, Digvijay and Laxmi met with good spinner interest. The new crop Baramati also evoked some mill interest.

In the export section, Bengal Deshi did not attract any significant interest from oversea traders even after the abolition of export duty. The slump in foreign interest is ascribed to the fact the Pakistani Deshi is available at cheaper rates.

The import section exhibited some interest in new crop East African cotton. The trade is anxiously waiting for the outcome of

the visit of the official delegation from the UAR. If the negotiations between the delegation and their counterparts in the country succeeds, the special rupee payments agreements would come into operation.

WORLD COTTON PRODUCTION

The August review of the world cotton situation released by the Secretariat of the International Cotton Advisory Committee puts the world cotton output during the current season roughly at the peak level of the previous season's crop.

According to the report cotton production in the United States is expected to be in the environs of 11.8 million bales, slightly less than the previous season's crop. The decline in cotton output in the US and countries such as Spain, Greece and Pakistan was more than offset by the upswing in production in other cotton growing countries excluding the Soviet Union and the Mainland China for which estimates are lacking.

The stable production trend, particularly at this period, is encouraging for the consumption trend is also taking an upward curve. It also needs special mention that on a global basis, any foreseeable downtrend in cotton production would be more than offset by the improvement in the opening carryover of approximately 2 million bales.

PIECEGOODS

Contrary to the sluggish conditions which prevailed in the cloth

market in Bombay, symptoms of an immediate revival of demand from upcountry centres are gradually emerging. Though a sudden spurt in demand was blocked by the uncertainty that shrouds the new pattern of prices, encouraging enquiry from Bihar, Punjab and South Indian States were reported during the week under review. Demand from foreign countries also flowed on an encouraging level.

In the domestic sector, seasonal goods attracted attention from purchasers from Bihar, Punjab and South India. The prevailing high prices, however, restricted the offtake to their immediate requirements. The lethargy of the traders from W. Bengal, despite the proximity of the Puja festival, is unaccountable, though they are expected to enter the market in a big way very shortly.

Flannelletes and gadlapat ruled firm during the week but there was a slight downtrend in the prices of long cloth. Poplins and superfine dark coloured coatings were almost deserted. Saris and grey dhoties, on the other hand, turned distinctly easy.

On the export front brisk trading was done with the UK in sheetings and furnishings presumably due to the expectation of expansion in business next year. This apart, there was a bulk movement of grey bark weave grey sheetings and calendered goods. The prevailing prices in the market are reported to be slightly higher than those ruling the UK. The United States evinced keen interest in categorised and other items but the offtake was a mere trickle owing to disparity in prices. Russia accounted for a substantial quantum of screen printed bark weave cloth. Sudan was satisfied with a moderate quantity of bleached and dyed superfine voiles and bleached dhoties. West German fancy focussed on the usual varieties. Other destinations were dormant during the week review.

Non-Ferrous Metals Buoyant

ON the London Metal Exchange, all non-ferrous metals have continued to remain buoyant, thanks to the rising demand. Tin price has reached a 13-year peak of £141½ per ton and Copper £410—an eight-year high. Zinc and Lead are also ruling firm in sympathy, quoting around £122 and £109½ respectively.

The £1,400 mark has not been achieved by tin in such a dramatic fashion and is touched for the first time in the 1960s as a result of the crisis between Malaysia and Indonesia—two of the leading producers. This has brought about a strong demand especially in view of the persisting, if not strengthening industrial demand; because consumers had allowed stocks to fall to low levels during the summer. At the same time, there is a growing confidence that there will be no more than 20,000

tons of tin available from the US stockpile this year, which will be scarcely sufficient to meet the production deficit. With a further demand peak expected in the autumn proper, prices can move higher still.

It cannot be denied that tin is now in a remarkably strong position. World consumption of the metal is at present substantially in excess of production. The deficit has been estimated at 20,000 tons per annum; but this is almost certainly a conservative figure. It may be 10,000 tons more. Moreover, the steel manufacturers, who earlier this year were obtaining almost all their requirements from the stockpile, have now re-started buying on a substantial scale in the open market to ensure that they are not caught short.

Although the underlying position, in the case of copper, is not nearly so strong, demand for the metal has been considerably boosted by heavy re-stocking by consumers. Strictly speaking, there is no real shortage of the metal, as the world production capacity is capable of taking care of the current world consumption. But, there are reports of labour and political difficulties in the producing areas and these are preventing production reaching its maximum level. In fact, there is a growing fear that the shortage of supplies and the ruling high prices will lead more consumers to switch over to aluminium. Naturally, in sympathy, Lead and Zinc are booming and their prices are now quoted substantially higher than a year ago.

In India prices are showing a mixed trend. In the Bombay market, prices have not shown any departure from its position over the week owing to a lack of interest and limited amount of business. Copper prices are ruling steady, thanks to increased enquiry following higher advices from abroad. Owing to a tight stock position and smaller availability, the undertone remains firm. Zinc is also ruling firm although trading in Lead remains listless.

SHELLAC Sharp Decline in Crop

According to the Indian Lac Committee, the final estimate of Baisakhi lac crop for 1964 puts the total production at 13.96 tonnes. Final estimates of the crop for 1962 and 1963 were 21,390 and 30,600 tonnes respectively, while the average production in the ten years preceding 1964 was 26,900 tonnes.

The Committee has attributed the marked drop in production during 1964 to the declining interest of cultivators in lac production due to the low prices prevailing in the past four years.

There has also been some damage to the crop caused by drought due to absence of rain in the period from mid-May to mid-June. The Committee says that, last year, prices of Baisakhi lac touched the rock bottom, resulting in a poor Katki crop as well. The effect of this was shortage of brood lac for the 1964 Baisakhi crop.

The 1964 State-wise production is (in metric tons):—Bihar 7,577; Madhya Pradesh 2,800; West Bengal 1,904; Maharashtra 373. Uttar Pradesh 1,157; Orissa 75; Gujarat 37 and other States 37.

About 300 tonnes of Jethwi (Kusmi) lac had also been produced this year against 1,190 tonnes in 1963 and 1,120 tonnes in 1962. The average Jethwi lac crop in the ten years preceding 1963 was 1,210 tonnes.

SUGAR Prices Steady

Sugar prices have continued to rule steady, as supplies to bulk consumers are curtailed further. In the Muzaffarnagar market, rates are quoted at Rs 170 to Rs 172 per quintal as against the controlled prices of Rs 127.39 to Rs 140.19.

In the khandsari section, however, conditions have remained depressed. Stockists are reported to be keen sellers fearing damage to stocks owing to damp climate, while there is scarcity of buyers. Prices have, therefore, recorded a considerable fall. Superior variety is presently quoted at Rs 99 as against Rs 105 per 40 kg.

The Bihar Sugar Development Committee, appointed by the Government to suggest ways and means for developing the sugar industry in the State, has recommended enactment of legislation to realise cane price and cess from factories. The Committee has suggested reservation of cane areas in accordance with the factories' production targets and provision of adequate subsidy, grants and loans to factories by the Union Government for modernisation and expansion of the existing cane-crushing plants.

Expressing concern over the low rate of sugar recovery in the State the Committee has expressed the view that only surplus sugarcane should be allowed to be used by producers of khandsari and gur. Meanwhile, the State Government, has launched an intensive cultivation scheme for stepping up sugarcane production in four selected areas.

PEPPER Plea for Incentive

It is reported that a section of the shippers has requested for the provision of an incentive towards the export of black Pepper. Those who have asked for the incentive,

have pointed out that, if the Government allows 15 per cent of the foreign exchange earned through pepper exports, the shippers will be able to complete more effectively with exporters in Indonesia.

Although it is true that latterly exports of pepper have not been picking up on account of the absence of buying interest from America, some quarters think that the suggestion made by the shippers as far-fetched, especially when shippers, to compensate the loss of the American market, have been able to do some business with the Communist countries.

CASHEW Revival of Activity

Thanks to the revival of Russian buying, the export of Cashewnut has again become active. Although Russia's purchases amount to not more than 200 tonnes, they are expected to expand gradually in the near future. Although no firm deals with the American buyers are reported, many of them are reported to have evinced interest at 67 cents a pound for prompt shipments. For the November/December position, the rate is quoted at 65 cents and for January February at 63 cents.

Shippers expect that active American buying will manifest only after the impact of the new crop is fully seen in prices. The current price of exportable variety at 67 cents a pound is only 3 cents lower than the ten years' record level touched some time back. As the stocks there are said to be quite comfortable, significant purchases from America can be expected only in November by which time the African crop, estimated at 175,000 tonnes, will start to move in the markets.

COFFEE Pool Receipts

According to the figures released by the India Coffee Board, receipts of Coffee, up to 31 August 1964, into the 1963-64 Pool amounted to 68,123 tonnes as against 55,176 tonnes in the corresponding period of last year. Of the 1963-64 crop, 26,915 tonnes were sold for export till 3 September 1964. A quantity of 1,712 tonnes will be released for the export open auction on 23 September.

The releases for the internal market, during August, amounted to 2,962 (2,947), bringing the total for January/August 1964 to 22,342 tonnes as against 22,178 tonnes for the corresponding period of last year.

Long-terms loans totalling Rs 62,550 were sanctioned to 7 applications during August 1964, raising the total sanctioned to-date to Rs 47.89 lakhs to 666 applicants up to 31 August 1964.

SILK Steady

Prices of the Government filatures silk in the Mysore, State maintained a steady market during the week under review. Kisan and Cottage basin silk had shown an upward trend to rule between Rs 107.00 and Rs 108.00 and between Rs 81.57 and Rs 99.20 per kg, respectively.

A mixed trend was observed in the prices of Charka raw silk. Superfine had a rise only in the minimum to range between Rs 85.98 and Rs 90.39 per kg. 1st and 2nd qualities had a rise both in the minimum and maximum to range between Rs 72.75 and Rs 78.26 and between Rs 68.34 and Rs 72.75 per kg, respectively, whereas the 3rd quality had a rise only in maximum and was quoted between Rs 68.34 and Rs 72.75 per kg.

The prices of Spun Silk yarn remained unchanged.

As regards the reeling cocoons, the Channapatna and Mugur markets had a rise both in the minimum and maximum to range between Rs 5.00 and Rs 8.00 and between Rs 3.50 and Rs 5.70 per kg, respectively; whereas the Sidlaghatta market had a rise only in the minimum to rule between Rs 5.00 and Rs 7.50 per kg.

In the case of seed cocoons, the Foreign variety had a fall only in the minimum to range between Rs 3.00 and Rs 13.00 per thousand; whereas the Mysore variety had a rise both in the minimum and maximum to range between Rs 5.25 and Rs 7.75 per thousand.

The prices of tasar raw silk at the Bhagalpur silk market remained stationary. Silkwaste, Eri cocoons and Eri yarn were available between Rs 21.50 and Rs 32.28, Rs 4.00 and Rs 8.00 and between Rs 16.00 and Rs 28.00 per kg, respectively.

Cottage basin silk (White) has a steady market. Charka raw silk had a fall both in the minimum and maximum to rule between Rs 73.00 and Rs 90.00. Pierced cocoons Matka yarn and silkwaste were in demand between Rs 10.00 and Rs 13.50, Rs 26.00 and Rs 39.00 and between Rs 1.50 and Rs 2.25 per kg, respectively.

OILS AND OILSEEDS Ban on Forward Trading Goes

A number of representations were already made to the Government to the effect that the next season's groundnut crop was expected to be very large, in fact, higher than last year's and the orderly marketing of the crop might be very difficult in the absence of hedging facilities. It was also urged that, if the forward markets were permitted to function again, the farmers might

also realise a good price for their produce. The Forward Markets Commission has, therefore, decided to remove the ban on forward trading with immediate effect in new crop groundnut, subject to such safeguards as may be imposed.

Ever before the above announcement, the oilseeds market was buoyant, being influenced by several factors. As against the usual average offtake of 100 tonnes in Bombay arrivals of groundnut oil only dribbled, averaging hardly 35 tonnes a day. The ban on exports by the Gujarat Government, the major supplier of oilseeds to Bombay, fast deteriorating stocks and the reports of further restrictions imposed by Gujarat regarding supplies of oil in Ahmedabad and Baroda created a scare among millers, dealers and operators. Against this background, vanaspati manufacturers remained anxious buyers. Thus, ready Groundnut shot up by Rs 4 to Rs 75.50—a new peak level. Ever at this level, offerings were reported to be mild.

The firmness in groundnut had a bullish impact on other sections of the market. The overall tendency in Castorseed was clearly upward as the market continued to face a shortage of ready supplies. Reports that some of the shippers had made fresh sales of 500 tons of castor oil to East European buyers, tended to aid the upward trend.

The supply position in respect of linseed and linseed oil was also tight, as the inflow from upcountry centres remained consistently smaller than the local demand. Active North Indian support and higher upcountry advices also helped the advance in prices.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

Notice is hereby given that the Board of Directors of this Company have decided to recommend to stockholders at the forthcoming Annual General Meeting that a Final Dividend for the year ended 31st March 1964 on the Company's Ordinary Stock at the rate of £4 per cent net (Tax applicable at 7s. 6d. in the £) be paid on the 27th October, 1964 to those stockholders whose names are registered in the Company's Stock Register on the 12th October, 1964.

Applications for transfers received in this office before 12 O'clock noon on Monday, the 12th October, 1964, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above Dividend.

By Order of the Board
C. A. GUNTHER
Actg. AGENT.

Victoria House,
Calcutta, 17th September, 1964.

For the INVESTOR

INVESTMENT GOSSIP Renewed Hopes

AN irregular trend has been characterising trading on the stock market during this week but there has been no undue selling pressure. Operators are however reluctant to extend commitments in view of the proximity of the Puja holidays and the continuing uncertainties in the investment situation. Although Government's resolution on the Eonus Commission's recommendations initially has been well received by the market, second thoughts are evidently having an adverse effect on sentiment. For bonus under the new dispensation will absorb a large portion of companies' profits leaving little for plough-back. And there is no guarantee even after so much concession that the bonus question will not revive further disputes and agitation. For as Mr Naval H. Tata has pointed out in his presidential address to the Employers Federation of India, the linkage of basic wage and dearness allowance in computing the minimum bonus will undoubtedly result in a perpetual demand on the part of the workers for a higher dearness allowance to jack up the quantum of bonus to an indefinite amount. Moreover, it is not at all certain that labour will feel satisfied with what it has got. Already there are reports that Government is thinking of modifying its own resolution to accommodate labour's demand.

Despite these adverse developments, the stock market seems to believe that Government will before long initiate fresh measures to bring about an improvement in the investment climate. Such a hope has evidently stemmed from this week's meeting between a FICCI delegation and Mr T. T. Krishnamachari. The delegation is reported to have impressed on the Union Finance Minister that in view of the continued depression in the capital market, it was time Government thought of removing the obstacles in the way of revival of investment activity. The delegation is said to have pointed out that there is urgent need for a reconsideration of the fiscal measures introduced in the last budget particularly the surtax and the dividend tax. It has been pointed out that the cumulative effect

of the taxes on the individual has been to dry up investible funds in the hands of middle and upper middle classes. With savings thus absorbed by heavy taxation, fresh capital issues in the private sector have received a serious setback and the few issues that have been placed on the market have had to rely heavily on the support of financial institutions.

NEW ISSUE NOTES Lakshmi Machine

Lakshmi Machine Works Limited, Madras, is to issue Debentures of Rs 165.70 lakhs, to be issued in five series, in favour of the International Finance Corporation of the USA, Industrial Credit & Investment Corporation of India and the scheduled banks. The loan capital is required for the establishment of a plant for the manufacture of textile machinery.

Bank of Rajasthan

The Bank of Rajasthan Limited, Jaipur, is to issue further capital of Rs 1,81,800, divided into 1,813 shares of Rs 100 each, for cash at par.

Indian Air Gases

Indian Air Gases Limited, a new company having its registered office at Kishori Niwas, Kanpur, is to issue capital of Rs 29.49 lakhs divided into 2,04,900 equity shares of Rs 10 each and 9,000-9½ per cent Cumulative Redeemable Preference shares of Rs 100 each, all for cash at par. The capital will be utilised for financing implementation of the industrial licence for the manufacture of oxygen and acetylene gases.

Sivananda Steels

Sivananda Steels Limited, Coimbatore, will be issuing capital of Rs 30 lakhs in 30,000 equity shares of Rs 100 each, for cash at par. The capital is required for establishing a plant for the manufacture of steel castings of a capacity of 3,000 tonnes per annum.

Mazagon Dock

Mazagon Dock Limited, a Government company, is to issue capital of Rs 10 lakhs, divided into 10,000 equity shares of Rs 100 each, to be issued privately. The money will be utilised for financing its expansion programme.

Renusagar Power

Renusagar Power Company Limited, a new public company, registered at Ranukoot, Mirzapur district (Uttar Pradesh), is to issue capital of Rs 250 lakhs in equity shares of Rs 100 each, to be subscribed wholly by Hindustan Aluminium Corporation Limited, for cash at par. The money will be utilised for financing the setting up of a captive power plant, capable of producing 125 MW.

BONUS ISSUE NOTES Mysore Stonewares

Mysore Stoneware Pipes and Potteries Limited has decided to issue bonus shares to the existing shareholders in the proportion of one share for every 10 equity shares held. An application has been made to the Government for approval.

IN BRIEFS

CALCUTTA

Associated Karanpura Collieries Limited has proposed a dividend of 10 per cent, subject to tax, for the year ended 31 March 1964. Transfer books will remain closed from 19 to 30 September.

Associated Laikdihi Collieries Limited has proposed a taxable dividend of 7½ per cent for the same year. Transfer books will remain closed from 19 to 30 September 1964.

BOMBAY

The shareholders of Larsen and Toubro Limited can expect a gift of bonus shares from the company within a year. This will be made before the next annual general meeting.

NEPA has recommended a modest maiden dividend of 6 per cent for the year ended 31 March 1964.

MADRAS

Canara Workshops Limited has repeated the dividend at 20 per cent, subject to tax, for the year 1963-64.

Karaikkal Electric Supply has maintained the dividend on the ordinary shares at 10 per cent for 1963-64.

Salem-Erode Electricity has reduced the dividend from 12 to 10 per cent for 1963-64.

BALANCE-SHEET REVIEWS Fort Gloster's Expansion Scheme

IN the latest annual report released by Fort Gloster Industries Limited for the year ended 31 March 1964, the directors state that the scheme for expansion has now been finalised. Orders for machinery have been placed in consultation with the technical collaborators, BICC, London, and it is expected that the PVC section of the expanded plant will come into production by the middle of next year.

In terms of the application made to the Government for its second stage expansion, the company has received a Letter of Intent to facilitate negotiations with its technical collaborators and financial institutions. For the purpose of the Cable Factory's expansion, International Finance Corporation of Washington, USA, has agreed to give the company a loan of \$812,000 (equivalent to Rs 38.55 lakhs) of which \$58,000, being the first instalment, was received by the company in July this year. The ICIC has agreed to give a loan of \$788,000 (equivalent to Rs 37.50 lakhs) and a rupee loan of Rs 22 lakhs.

A mid-term of Rs 50 lakhs is also arranged with the Bank of Baroda under the Refinance scheme of the Refinance Corporation for Industry Limited for financing the broad loom project and the further modernisation of the company's jute mills.

In terms of the agreement for the loan above-mentioned, the company has agreed to make available for subscription by International Finance Corporation of 10,000 new ordinary shares of the company of the par value of Rs 100 each, at a price of Rs 190 per share. The shares will, however not be entitled to dividends, if any, declared by the company for the fiscal years ending 31 March 1964 and 1965.

Meanwhile, a downward trend in jute goods prices and a strike in the cable factory lasting for more than three months are reflected in the working results for the year. While sales have declined to Rs 756.99 lakhs from Rs 789.79 lakhs, the net profit, after providing for depreciation and

taxation, amounts to only Rs 28.75 lakhs as against Rs 36.40 lakhs for the preceding year.

Depreciation is raised to Rs 31.09 lakhs from Rs 22.46 lakhs. After transferring Rs 2,100 (Rs 14.35 lakhs) from the Dividend Reserve account, a sum of Rs 16.50 lakhs (Rs 51.60 lakhs) is set apart for Taxation; Rs 6.12 lakhs (Rs 4.40 lakhs) for Development Rebate Reserve; Rs 1.75 lakhs (same) for Debenture Sinking Fund and Rs 7.25 lakhs (Rs 16.00 lakhs) for General Reserve.

The directors have proposed a taxable dividend of Rs 15 per share on the increased ordinary capital as against Rs 20 per share on the old capital. They have also proposed a taxable dividend of Rs 7.50 on the new ordinary shares. Annual general meeting takes place on the 29 September.

Titagur Paper Does Better

Though still far from satisfactory, the working results of the Titagur Paper Mills Company Limited are better for the year ended 31 March 1964 than in the preceding year. The results would have been much better, but for the closing down of each paper-making machine in order to carry out extensive renovations.

The No. 1 mill contributed to the company's profit and continues to operate satisfactorily. The No. 2 mill experienced serious turbine trouble, resulting in production being affected. The No. 3 mill continues to run at a loss.

Thanks to the sales having risen from Rs 10.47 crores to Rs 11.74 crores, the net profit for the year, after providing for depreciation, works out to Rs 13.65 lakhs as against a loss of Rs 20,620 incurred in 1962-63. Depreciation is raised to Rs 46.82 lakhs from Rs 35.55 lakhs.

From the profit, a sum of Rs 3.04 lakhs is transferred to Capital Reserve and Rs 10 lakhs to Debenture Redemption Sinking Fund. No provision is made for Taxation on account of unabsorbed tax depreciation. After transferring Rs 9.00 lakhs from General Reserve, the directors have been able to pay the dividends on the ordinary and preference shares. They propose to pay 2½ per cent on the 'A' and 'B' ordinary shares on the capital increased by the issue of bonus shares as against 10 per cent paid on the old capital previously. The dividend on the Preferred Ordinary shares is however repeated at 13 per cent. The dividends will be payable on or after 28 October to those shareholders registered as on 30 September, 1964.

Metal Corporation Skips Again

The Metal Corporation of India Limited has reported a higher net profit, after providing for depreciation, of Rs 5.76 lakhs for the

year ended 31 March 1964 as against Rs 4.11 lakhs for 1962-63, thanks to the rise in sales from Rs 121.30 lakhs to Rs 143.11 lakhs.

Depreciation is raised to Rs 4.36 lakhs from Rs 4.13 lakhs and General Reserve to Rs 5.75 lakhs from Rs 5.00 lakhs, while Development Rebate Reserve is lowered to Rs 3,172 from Rs 56,082. No provision is made for Taxation against Rs 1.60 lakhs. The dividend is again skipped.

The directors state that, at Zawar, mines' exploration has progressed further. The expansion in the capacity of the existing mill as an interim measure, from its current capacity of 500 tons per day to 100 tons per day is progressing. The expanded mill is expected to come into operation by the end of the current year.

Renovations, additions and alterations to the Lead Smelter at Tundoo are nearly completion. The plant is expected to be ready by the time the expanded mill at mines comes into operation.

The total cost of the project undertaken was originally estimated at about Rs 7 crores. But the cumulative effect of all material changes in the project has resulted in an overall increase in the final estimate to the extent of about Rs 4 crores to complete the scheme undertaken. Besides this, an increase to the extent of about Rs 75 lakhs in the foreign exchange requirement has been estimated, which is expected to be obtained as a deferred payment term loan.

An application has already been made to the Government for financial help to the extent of the additional rupee finance required for the completion of the project. A final decision in this respect is expected to be taken soon. Annual meeting will be held on the 29 September.

Dyer Meakin's Excellent Results

Thanks to satisfactory working of various units, Dyer Meakin Breweries Limited has produced excellent working results for the year ended 31 March 1964. While sales have shown a substantial rise to Rs 657.58 lakhs from Rs 540.81 lakhs, the net profit, after providing for depreciation and taxation, amounts to as much as Rs 60.45 lakhs against Rs 45.99 lakhs for the preceding year.

In respect of allocations, Depreciation is raised to Rs 20.85 lakhs from Rs 15.91 lakhs; Taxation to Rs 90.00 lakhs from Rs 62 lakhs and General Reserve to Rs 46.00 lakhs from Rs 30.36 lakhs while Development Rebate Reserve is reduced to Rs 2.46 lakhs from Rs 5.12 lakhs and Dividend Equalisation Reserve to Rs 40,000 from Rs 10,31 lakhs. The directors have proposed a dividend of 21 per cent, subject to tax, as against 18 per cent, taxable, previously. The dividend for the pre-

vious year was paid out of Dividend Equalisation Reserve.

With regard to the Glass Project, the directors state that the entire foreign component of the plant, machinery, and equipment has been received. It is hoped that, if all goes on well, the factory will go into production before the end of the current financial year. Annual general meeting will be held on 20 September.

Rohtas Pays Less

The increase in depreciation provision, settlement of raw sugar claim, and the general rise in the costs of production without a corresponding increase in selling prices—all these factors are reflected in the working results of Rohtas Industries Limited for the year ended 31 March 1964. Although sales have shown a rise to Rs 18.73 crores from Rs 18.12 crores, the net profit, after providing for depreciation but before taxation, works out to only Rs 76.94 lakhs as against Rs 122.07 lakhs for 1962-63. Tax liability is estimated at Rs 33.50 lakhs.

After transferring Rs 9.20 lakhs from General Reserve No. 1, Development Rebate Reserve is lowered to Rs 5.95 lakhs from Rs 6.60 lakhs; Contingency Reserve to Rs 33.50 lakhs from Rs 56.00 lakhs and Dividend Reserve to Rs 46.72 lakhs from Rs 51.92 lakhs. No provision is made for General Reserve No. 1 against Rs 12.59 lakhs. The dividend on the Ordinary shares is reduced from 9 to 8 per cent, subject to tax, payable to those shareholders registered as on 30 September 1964.

The directors have, in their report, stated that the ICICI has sanctioned a loan of Rs 15 lakhs lakhs in foreign exchange for modernisation of the Soda Recovery Plant towards increasing both its capacity and efficiency. In view of the non-issue of necessary import licences, the company has not been able to implement the expansion programme of its pulp and paper units. The vulcanised fibre plant continues to operate below capacity due to the inadequacy of imported base paper.

Gillanders Arbuthnot— Decline in Profits

Gillanders Arbuthnot and Company Limited has reported declines in sales, net earnings, commission and allowances and in income from investments for the year ended 31 March 1964. While sales are shown at Rs 205.74 lakhs against Rs 209.24 lakhs, the net profit, after providing for depreciation and taxation, amounts to only Rs 12.15 lakhs as against Rs 17.84 lakhs for the previous year. Commissions and Allowances show a decline of over Rs 5 lakhs, mainly due to the reduced commission earnings from the tea companies. Income from Investments is less by Rs 5.99 lakhs at Rs 15.36 lakhs

owing to a general reduction in the dividends received from managed and associated companies.

For obvious reasons, all allocations have been reduced:—Depreciation from Rs 2.27 lakhs to Rs 2.13 lakhs; Taxation from Rs 12.68 lakhs to Rs 8.67 lakhs; General Reserve from Rs 5.00 lakhs to Rs 3.25 lakhs and Development Rebate Reserve from Rs 6,284 to Rs 2,556. No provisions are possible for Capital Reserve and Contingency Reserve against Rs 5,000 and Rs 3.00 lakhs respectively in 1962-63. The directors have proposed a tax-free dividend of 9.6 per cent against taxfree 11 per cent; but the dividend is subject to deduction of additional tax for non-resident shareholders. Annual meeting takes place on 29 September.

NISCO Resumes Dividend

Thanks to a rise in sales from 208.55 lakhs to Rs 237.62 lakhs, the National Iron and Steel Company Limited has been able to report a higher net profit, after providing for depreciation but before taxation, of Rs 17.97 lakhs for the year ended 31 March 1964 as against Rs 16.64 lakhs for the preceding year.

In respect of allocations, a sum of Rs 6.26 lakhs (Rs 6.14 lakhs) is set apart for Depreciation; Rs 6.43 lakhs (Rs 69,857) for Taxation including short-provisions for previous years and Rs 6.00 lakhs (nil) for Dividend Equalisation Reserve. No provision is made for General Reserve (Rs 4.72 lakhs), while Development Rebate Reserve is lowered to Rs 84,987 from Rs 4.28 lakhs.

The directors have proposed a taxable dividend of 62 paise per share against nil. The last dividend was 75 paise per share, paid for the year ended 31 March 1959.

The directors state that, if the supply position improves with regard to power, coal, raw materials, etc., still better results can be expected in future. Annual general meeting takes place on 29 September.

Nil from Britannia Building

The working of the Britannia Building and Iron Co., Ltd., has resulted in a slightly higher net profit, after providing for depreciation, of Rs 2.32 lakhs for the year ended 31 March 1964 as against Rs 1.05 lakhs for 1962-63, though sales are lower at Rs 60.95 lakhs against Rs 63.95 lakhs.

Depreciation is raised to Rs 1.89 lakhs from Rs 1.74 lakhs. The directors have proposed only arrears of dividends on the preference shares for the years 1960-61 and 1961-62, absorbing Rs 1.29 lakhs. The balance of profit is adjusted against the previous year's brought forward loss, leaving still a debit balance of Rs 4.05 lakhs, to

be carried forward to next year. Annual general meeting takes place on the 29 September.

Bally Jute Pays Rs 20 Against Rs 25

The recession in the prices of jute goods is reflected in the working results of the Bally Jute Company Limited for the year ended 31 March 1964. While sales are only slightly lower at Rs 262.43 lakhs against Rs 265.94 lakhs, the net profit, before providing for depreciation and taxation, works out to Rs 26.28 lakhs against Rs 38.19 lakhs for the previous year. After transferring Rs 1.00 lakh from General Reserve, the following appropriations are made:—Depreciation Rs 10.48 lakhs (Rs 6.39 lakhs); Taxation Rs 4.00 lakhs (Rs 19.70 lakhs) and Development Rebate Reserve Rs 6.95 lakhs (Rs 80.409 lakhs). No provision is made for General Reserve against Rs 4.50 lakhs. The directors have proposed to pay a taxable dividend of Rs 20 per share on the ordinary shares as against Rs 25 paid previously, payable to those shareholders registered as on 28 September.

The directors state that the company has installed 50 broad looms during the year and started production of carpet backing. It is proposed to raise the number of such looms to 75 in the current year, provided the market demand justifies it.

For financing the expansion programme, the company has to depend on large borrowings. As the present paid-up capital of the company does not bear a correct relation to the activities and assets of the company, the directors have proposed to offer ordinary capital of Rs 20 lakhs, at par, as right shares to the existing shareholders on the basis of one new share for each old share held.

East Anglia Plastics—Token Profit

East Anglia Plastics (India) Ltd. has made a token profit, after providing for depreciation, of Rs 6.50 lakhs for the year ended 31 March 1964 as against a loss of Rs 1.06 incurred in 1962-63. Depreciation amount is slightly lower at Rs 2.21 lakhs against Rs 2.26 lakhs. Even the small profit will, after wiping off the previous loss of Rs 4.03 lakhs and transferring Rs 2.00 lakhs to General Reserve, leave a balance of Rs 31,292 to be carried forward. A sum of Rs 10,750 is provided for Development Rebate Reserve.

For the first time, the company has received an actual user licence on its own name for the import of raw materials. It is stated that the effect of this additional import will be reflected in better results during the current year and also increase the activities of the company, especially when the output during the five months

of the current year, has already exceeded that of the previous year. It is also stated that it is likely that the total production this year will nearly equal the installed capacity.

The construction of the factory for the manufacture of Phthalate Plasticisers is nearing completion at Dum Dum, while steps are being taken to raise the capacity of production of Plasticisers required for the PVC operation.

The directors add that the installation of the Pulp Unit, perhaps during the current year, will mark the beginning of complex and integrated chemical and plastic industry over a long-range perspective.

Although the company has got permission to make a further issue of equity shares to meet capital expenditure and investment programme, the directors feel that this can be deferred for sometime. It is, however, decided to issue preference shares in order to distribute a part of the company's current earnings from the Compounding Unit amongst the existing shareholders and necessary steps to this end are being taken.

New possibilities for further backward integration and diversification of the company's activities are also under study. The company has approached the Government for an industrial licence to install an industrial alcohol distillation plant at Visakhapatnam to ensure steady supply of Ethyl Alcohol—the most important raw material for the integrated cellulose industry.

★ STOCK EXCHANGES Mild Recovery

ALTHOUGH the overall pattern of trading remains cautious, stock markets have presented a distinctly better appearance towards the close of this week. A feeling is gaining ground that the Government may take some steps to improve the sagging investment climate as a result of the FICC's representation.

An improved trend was discernible on Lyons Range where equity prices recorded minor gains on balance.

A slightly better sentiment was noticed on Dalal Street, reflecting the optimism about the Finance Minister's speech in the Lok Sabha.

The Ahmedabad Stock Exchange finished the week on a steady note after an early mild setback.

On the Madras Stock Exchange, selected Plantings were active and maintained a firm tone.

After ruling initially quiet, the Delhi Stock Exchange staged a mild recovery towards the close.

The London Stock Exchange gave an uncertain performance, as the coming election continued to restrain buyers.

Efforts to revive the forward price drive lacked sufficient follow-through demand and this caused Wall Street to develop a small net loss this week.

★ **CALCUTTA**
THE local stock market disclosed no special feature during the week's trading. Prices in most cases moved within narrow limits. There was a general disposition to restrict commitments.

On the whole, the general feeling among the operators was one of cautiousness. The gradual decline in the volume of business indicated the lack of sustained buying interest from both the professional and investment circles. This was mainly due to the uncertainty created by reports that the Government was reviewing its earlier decision on recommendations of the Bonus Commission. Anxiety was also expressed over the growing labour unrest following the steep rise in the cost of living.

But the slight improvement in sentiment, that was noticed during the closing days of the week, was influenced by the reports that the Finance Minister had promised a sympathetic consideration of the representations made by the delegation of industrialists about the need for reviewing some of the fiscal measures with a view to revive confidence in stock markets. The announcement of the import policy for the period October 1964 to March 1965 was also bullishly interpreted.

The Gilt-edged section ruled, on the whole, steady. Despite enquiries in short and medium-dated stocks, turnover was small due to the shortage of sellers. Some institutional support was reported to have extended to the new State Loans, since most of them were quoted at a slight discount, 3 per cent 1966 Conversion Loan hovered narrowly around Rs 63.75.

In the Banking section, Punjab National remained very steady at Rs 20.

Trading in the Jute section continued to be cautious in view of the discouraging outlook for the profit of jute mills during the current year. The present price of fibre was considered to be too high in relation to that of manufactured goods. Birlas, after being marked down to a new low of Rs 35.87, recovered smartly to Rs 36.75 while Howrah fluctuated narrowly between Rs 16.06 and Rs 16.19. Anglo-India were supported up to Rs 190 from Rs 188, while New Central were on offer at Rs 10.62 against Rs 10.87.

Only scattered business was done in the Coal section. Burra-kur were nominally quoted at Rs 17.06, while Western Bengal were quiet at Rs 9.34 and so also Karan-pura at Rs Rs 13.25. The possibility of fixing a high production target during the fourth Five

Year Plan seemed to have not impressed the operators.

The drop in the average prices realised during the current season and the obscure outlook for the industry were reflected in the Tea section where trading continued to be cautious. Brooke Bond were on offer at as low as Rs 10.19 against Rs 10.60 following the reduction in dividend, while Dufflaghur met with business at Rs 23.37 to Rs 23.62; Gohpur at Rs 12.94 to Rs 13.06 and Sugma at Rs 12.06 to Rs 12.31.

Sugar shares came in for restricted enquiry in the absence of any incentive. Carew were enquired up to Rs 12.31 from Rs 12.12 and so also Champaran up to Rs 11.50 from 11.31. Dyer Meakins were subjected to modest profit-taking at the recent high level, being quoted at Rs 26 against Rs 27.06. SKG were a steady feature at Rs 8.62.

Textile issues ruled quietly steady.

Engineering shares were fairly steady under the lead of Indian Irons, thanks to better advices from Bombay. After opening at Rs 25.66 and receding at one time to Rs 25.52, Indian Irons recovered fully towards the close to Rs 25.78. In sympathy, TEXMACO were taken up to Rs 26.80 from Rs 26.15; G. K. Williams up to Rs 23.81 from Rs 23.62; Britannia up to Rs 9.75 from Rs 9.15 and Braithwaite up to Rs 32.87; Binani Metal were well maintained at Rs 13.56.

Miscellaneous issues moved in sympathy with the general trend of the market. Dunlop Rubber changed hands at Rs 32.50 to Rs 32.94; Hindustan Motor at Rs 17.31 to Rs 17.56; Indian Aluminium at Rs 31.90 to Rs 32.31; nium at Rs 35.75 to Rs 36.25; Indian Copper at Rs 3.39 to Rs 3.44; Jaipur Udyog at Rs 10.75 to Rs 10.81; Kesoram at Rs 26.31 to Rs 26.87; Orissa Cement at Rs 11.25 to Rs 11.50; Rohtas at Rs 10.25 to Rs 10.44; and Shree Gopal at Rs 25.37 to Rs 25.87.

The Cash section provided a few firm spots. Prominent amongst these were Chemicals & Fibres, which were in keen demand up to Rs 16.12 from Rs 15.37. Goodyear to met with persistent support up to Rs 23.87 from Rs 23.56; India Steamship up to Rs 6.97 from Rs 6.53; Metal Box up to Rs 31.75 from Rs 31.19; East Anglia Plastics up to Rs 8.06 from Rs 7.75 and J. K. Synthetics up to Rs 13.56 from Rs 13.31 and Usha Martin up to Rs 15.25 from Rs 14.50. Universal Cable fluctuated between Rs 11.19 and Rs 11.37 and Hindustan Aluminium between Rs 13.50 and Rs 13.75. Sirpur Paper were, however, on offer at Rs 12.09 to Rs 12.19, while Titaghur Paper improved to Rs 12.44 from the recent low of Rs 11.81. Alkali Chemicals were almost maintained at Rs 29.

AID

£14.5 Million from the UK

Seven loan agreements were signed by Mr P. Govindan Nair, Additional Secretary, Department of Economic Affairs, Ministry of Finance and the British High Commissioner, Sir Paul Gore-Booth.

All are being made under Section 3 of the Export Guarantee Act, 1949 and will have a maturity of 25 years including a seven years grace period on repayment of principal, and a waiver of interest during the first seven years.

These loans total £14½ million and are part of the £30 million aid programme for India in 1964-65 pledged by Britain at the Aid India Consortium meeting held in Washington on 26 May this year. They will benefit India's oil, heavy electrical, coal-mining and power-generating industries. They will also assist certain Indian private sector industries at present running below full capacity for lack of foreign exchange to purchase vitally needed maintenance and spares items.

The balance of the £30 million Aid Programme for 1964-65 is being given mainly in the form of special arrangements of have £10 million has already been signed), from which the Government of India may among other purposes allocate funds for down payments on cargo ships to be built in British dockyards.

In the context of the General Purpose Loans given within the Consortium pledge for 1964-65, special arrangements have been made for certain types of steels. The Government of India, in agreement with the British Government, will authorise orders up to £2 million for the purchase of high speed and tool steels (comprising carbon tool steels alloy steels and high speed tool steels); steel castings; and alloy, stainless and heat-resisting steels in any form of products.

India has been an important traditional market for British suppliers of these types of steel, who have at present a substantial surplus capacity. Purchases by India against this allocation from British aid will be additional to such purchases of steel of these and other categories as may be made from Britain from India's own exchange resources.

The loans signed today include £4 million to be used for improving the operating efficiency of manufacturers in India who traditionally look to Britain for their supplies and who are experiencing difficulties because of India's tight exchange situation.

For large components such as transformers and switch-gears required by Heavy Electricals

(India) Ltd, at Bhopal there will be £2 million. Aid previously given by British for the new colliery at Singareni in Andhra Pradesh and West Bengal will benefit from a loan of £3.225 million for turbines. For oil exploration and development equipment required by Oil India £1.5 million is being provided. For the private sector there will be a loan of £1.525 million for capital goods and £1 million for components for British orientated industries.

The £30 million programme is additional to aid already announced for the Durgapur Steelworks.

Speaking at the Ceremony, the British High Commissioner, Sir Gore-Booth, said:

"I believe I have remarked on previous and similar occasions to this one, that I regard these loan signing ceremonies as one of the very agreeable aspects of my duties as High Commissioner. I do come to the Ministry of Finance, of course, from time to time for other reasons, but the business of signing a credit provides a pleasant sense of something tangible achieved; a job well done; and, for us in the High Commission, a feeling of great personal satisfaction that we have been able to do something worthwhile for our friends.

We have signed here today no less than seven separate agreements. This in itself is enough to give any civil servant some cause for satisfaction. But on top of this we also feel rather pleased that the conclusion of the agreements means that it has taken only sixteen weeks to implement almost the whole of the £30 million pledge we made at the Washington Consortium Meeting in May. You will recall that we signed a £10 million General Purpose Loan in August; the series of credits just agreed cover a wide variety of purposes and adds up to £14½ million. Along with the £5½ million credits still to be concluded, and which we hope to sign in the autumn, this means our total aid contribution so far to your Third Five-Year Plan is £155 million, or Rs 206 crores.

I think it speaks well for the good relations and mutual understanding that exists between us that it has been possible to achieve agreement on so many issues in such a short space of time. We do our best to tailor our credits to meet your requirements and priorities as you see them. At the same time we need to bear in mind the current situation in British industry and to have regard to those things which we are best able to undertake in the immediate future. I believe our two sides have been singularly successful in marrying those objec-

tives and considerations in this year's Consortium package.

The package itself is highly variegated. Last year's experiment of a loan for the purchase of goods and services by Indian industries which normally look to Britain for their supplies is being repeated; and no doubt like its predecessor will be known between us as a Kipping loan, from the name of Sir Norman Kipping, its inventor. In the public sector, one credit will be used for the purchase of drilling and other equipment to help Oil India in their development of India's own oil deposits. Another will provide for the further expansion of Heavy Electricals at Bhopal; this important project has figures annually in our credits for some time, and it is one in which British technical expertise and equipment are closely associated.

Power stations in Madhya Pradesh and Bengal will benefit by a credit to cover the purchase of British turbines.

In addition to the Kipping Loan, the Indian private sector will benefit from credits for the purchase of capital goods and components. There is a further credit for the Singareni Collieries project with which also we have been associated for some time.

We hope this group of credits will play its part in helping to further your economic progress.

Thanking the High Commissioner, Mr Govindan Nair said:

It is some gratification to us to note that you look upon these loan signing ceremonies as one of the more pleasant aspects of your duties as High Commissioner. I feel, therefore, rather guilty in presenting to you as many as seven loan agreements at one and the same time instead of spreading some of them out for a later occasion. On the other hand, as you have observed, the fact that we are signing today no less than seven agreements is a matter of satisfaction. If I may say so, it is a matter of satisfaction not only to civil servants like my colleagues and myself but to all of us. As you are aware, one of the problems that we are continuously facing in the Government is how best we can speed up the utilisation of the assistance that we receive for our developmental plans from various institutions and countries, for the progress of these developmental plans depend not only on our securing the foreign assistance required for them; this depends as much on effective and speedy use of the same. This problem formed the subject matter of a special study by a Committee some time ago and one initial handicap in this respect, to which the Committee has drawn attention is the time-lag that so often takes place between the actual pledging of the assistance and its effective translation into practice. For the settlement of the details

which finally take the concrete shape of different loan agreements is often a difficult and time-consuming process. It is a matter of congratulation, therefore, that we have been able to transform the British pledge for this year into effective agreements in this short time and we would like to say how grateful we are to you and to your colleagues in the High Commission for having made this possible.

The range and diversity of the sectors covered by today's loan agreements is also worthy of note. You have mentioned the various purposes for which these loans are to be used. These include power stations, a coal mine, drilling for oil and both the public and private sectors of industry. I am gratified that we could reach agreement on so many matters in so short a time. This is undoubtedly due in great measure, to your willingness to suit your credits to our needs. We are happy that, in doing so, we are also able to let British industry derive optimum advantage from your aid. I agree with you that this is the outcome of our good relations and mutual understanding.

I would like also to draw attention to the large proportion of non-project aid in your total package. Of the total amount of loans signed this year till now, just 2/3rds represent non-project aid. When we have covered the whole of this year's pledges by loan agreements over 70 per cent will be in the non-project form. The importance of this form of aid has been repeatedly stressed by us and, indeed, has been accepted by all our friends. I am glad that we have been able to preserve this feature and at the same time reach speedy agreement on the purposes to which your aid would be devoted.

May I once again offer to you Mr High Commissioner and to the British Government and the British people our thanks.

[The announcement made today puts into effect understandings reached by Britain and India on the purposes to which India will apply Britain's £30 million Aid to India Pledge for 1964-65. On Durgapur an announcement was made on 31 July of the British Government's agreement to provide aid for the external cost up to a total of £7 million, of the construction of a fifth blast furnace, and associated installations, and of the British Government's readiness to discuss terms and conditions for aid in respect of a further large expansion (that is, Stage III) of Durgapur. This further expansion would be a large project and will double the capacity of Durgapur when the current Stage II expansion is complete. It is not yet possible to name a figure of the aid required for Stage III but it may be assumed that it will be a large sum.]

Movement of Commodity Prices

Review for July, 1964

Wholesale prices as measured by the official index (with the year ended March 1953 as 100) recorded a further rise of 2.6 per cent to 150.5 during the month of July, 1964 when compared with 146.7 (revised) for June, 1964.

During the month under review, 'Food Articles' advanced by 3.8 per cent to 159.3, 'Tobacco' by 1.8 per cent to 120.8, 'Fuel, Power, Light and Lubricants' by 0.4 per cent to 143.0, 'Industrial Raw Materials' by 3.1 per cent to 158.7 and 'Manufactures' by 0.4 per cent to 133.7.

FOOD ARTICLES

Higher prices of all the cereals raised the index for 'Cereals' by 3.6 per cent to 137.3. The index at this level was higher by 19.4 per cent when compared with the level of the corresponding month of the earlier year. As a result of a rise in the prices of gram, arhar, mung and masur, the sub-group index for 'Pulses' went up by 4.1 per cent to 147.6. There was, however, a fall in the price of urad. A rise of 4.4 per cent to 187.0 in the index for 'Fruits and Vegetables' was caused by higher prices of potatoes, onions and cashewnuts. The price of oranges, however, registered a fall. Increased prices of both milk and ghee pushed up the index for 'Milk and Ghee' by 5.6 per cent to 150.8. There was a general rise in the prices of all edible oils as a result of which the index for 'Edible Oils' moved up by 7.2 per cent to 199.0. Higher prices of fish, eggs and meat raised the index for 'Fish, Eggs and Meat' by 7.2 per cent to 173.1. As a consequence of a fall in the prices of gur the sub-group index for 'Sugar and Gur' declined by 1.8 per cent to 191.2. Prices of coffee, chillies, turmeric, cardamoms and betelnuts moved up while those of tea, pepper (black) and salt came down and the index for 'Other Food Articles' registered a rise of 2.7 per cent to 183.1.

TOBACCO

Higher prices of tobacco raw raised the index for 'Tobacco' by 1.8 per cent to 120.8.

FUEL POWER, LIGHT AND LUBRICANTS

A rise of 0.4 per cent to 143.0 in the index for this group was caused by an increased in the prices of castor oil.

INDUSTRIAL RAW MATERIALS

Increased prices of cotton (raw), jute (raw) and wool (raw) pushed up the index for 'Fibres' by 0.9 per cent to 135.2; the price of silk (raw), however, witnessed a fall. The sub-group index for 'Oilseeds' advanced by 6.2 per cent to 199.9 due to a rise in the prices

of groundnuts, linseed, castorseed, gingellyseed, rapeseed and cottonseed. The index for 'Minerals' stood unchanged at its earlier month's level of 103.7. Lower prices of skins (raw), tanning materials and lac brought down the index for 'Other Industrial Raw Materials' by 0.4 per cent to 129.17. The prices of hides (raw), however, moved up.

INTERMEDIATE PRODUCTS

As a consequence of a rise in the prices of linseed oil, cotton yarn, aluminium, zinc and tin, the index for 'Intermediate Products' went up by 1.0 per cent to 148.1 although the prices of rayon yarn, coir yarn, brass, copper and lead witnessed declines.

FINISHED PRODUCTS

An increase (+1.5 per cent to 99.8) in the prices of jute manufactures was responsible for raising the sub-group index for 'Text-

iles' by 0.2 per cent to 127.7 despite a fall in the prices of woollen and silk and rayon manufactures (—0.3 per cent each to 169.2 and 139.0 respectively) and cotton manufactures (—0.1 per cent to 135.4). Among cotton manufactures, handloom cloth registered a decline while mill-made cloth did not record any change. 'Metal Products' registered a rise of 0.2 per cent to 169.0. The sub-group index for 'Chemicals' drifted lower by 0.4 per cent to 118.5 due to a fall in the prices of general chemicals and drugs and medicines although prices of soap moved up. 'Oil-cakes' registered a rise of 2.0 per cent to 191.1. The sub-group index for 'Machinery and Transport Equipment' remained unchanged at its earlier month's level of 126.9 despite a fall in the prices of cycles. Higher prices of cement and pottery goods raised the index for 'Other Finished Products' by 0.2 per cent to 127.7; the prices of glass, however, witnessed a fall. On the whole the index for 'Finished Products' rose by 0.2 by per cent to 131.3 during the month under review.

Promise of Life-Saving Drugs

By Pritamlal

Two years ago, in September 1962, a project of paramount importance, the Synthetic Drugs Project, was initiated at Sanatnagar near Hyderabad. The project, which will cost about Rs 9 crores, is being built in the public sector with Soviet aid, under the Indo-Soviet Agreement of 29 May, 1959.

The plant, which is expected to go into production by the end of the next year, is expected to produce at its full capacity, synthetic drugs and intermediates (chemicals) worth Rs 6.5 crores. The construction work is presently going on at a brisk pace.

The production of synthetic drugs calls for the application of up-to-date technological advances in the field of pharmaceuticals and this will be ensured at Sanatnagar. Indicative of this is the fact that the synthetic drugs project will employ a large number of specialists, some of whom are already undergoing advanced training in the USSR.

Besides, its eight blocks, which are being established to produce 850 tons of synthetic drugs—about one-fourth of the total production of the plant—and about 2,500 tons of intermediates (chemicals), the plant will have a Central Research Laboratory to check the quality of incoming raw materials and of outgoing finished products. Another important function of the Laboratory would be to carry out research work connected with the development of methods of manufacturing synthetic drugs.

The auxiliary services being set up at the plant include mechanical repair workshops, refrigeration station, compressor installations inter-gas installation, etc. The plant will require annually 120 different kinds of basic and auxiliary raw materials of the total weight of 30,000 tons.

The plant will produce four types of finished drugs: (1) sulphadiazine, sulphadimidine, sulphaguanidine, sulphacetamide sodium and sulphamonomide — which are used in the treatment of widespread diseases like dysentery, diarrhoea, cold, sore throat etc., (2) anti-tubercular drugs like isonicotin acid hydrazide (INH), (3) vitamins like B1, B2 and folic acid; (4) analgesics and antipyretics like phenacetin, amidopyrine and metamizol, which are used for relieving pain and reducing fevers.

Some of these drugs will be produced for the first time in the country. The plant will enable the country save a lot of foreign exchange, by making it self-sufficient in regard to many drugs.

The production of intermediate (chemicals) will give a big further fillip to the pharmaceutical industry of the country. The intermediates produced at Sanatnagar will also be used as basic chemical in many other industries.

The Synthetic Drug Project will go a long way in bringing many life-saving drugs within the reach of the people.

\$60 Million Japanese Credit to India

The following is the text of the joint Press Release issued in Tokyo on 3 September:

Discussions were held in Tokyo at the Ministry of Foreign Affairs from August 17, 1964 between the representatives of the Government of Japan and of the Government of India regarding Japan's Fourth Yen Credit of 21.6 billion yen (60 million US dollars) to India for the Third Five Year Plan which was announced by the Government of Japan at the Consortium meeting held on May 26, 1964.

As a result of these discussions an understanding has been reached today to the effect that the Export-Import Bank of Japan together with private Japanese Banks will make available to the Government of India a credit of 21.6 billion yen for India's Third Five Year Plan to assist in the financing of purchases from Japan as was the case with the previous credits.

The credit will be used for further financing of Gorakhpur Fertilizer Factory, Gujarat State Fertilizer Factory and Durgapur Alloy and Tool Steel Plant as well as for other projects and for purchases from Japan of plants, machinery and commodities required for the economic development of India.

Out of the total credit, 14.4 billion yen (40 million US dollars) will be repayable in 15 years including a grace period of 5 years, the remaining 7.2 billion yen (20 million US dollars) being payable in 18 years including a grace period of 5 years. The procedures for utilisation of the credit will be similar to those followed in the previous yen credits. The details of the procedures have been discussed and agreed upon and a loan agreement has been signed between the Government of India and the Export Import Bank of Japan and the Japanese Banks concerned.

On the conclusion of the discussions the representatives of the Government of Japan and of the Government of India expressed their mutual hope and confidence that the traditional friendship which happily exists between the two countries would be further enhanced and promoted by the ever-increasing economic cooperation between Japan and India as evidenced by the extension of this credit and of the previous Yen credits amounting to 75.6 billion yen (210 million US dollars).

MP Medical Conference To Be Held

The 15th Madhya Pradesh State Medical Conference will be held at Philai on 20 November, 1964: Mr H. V. Pataskar, Governor of Madhya Pradesh will inaugurate the conference.

NOTE: Annual figures are averages of months; those of sugar relate to crop years.

†Data of Matches, Hurricane Lanterns, Sewing Machines and Bicycles from January 1963 onwards and those of Footwear (leather) from April 1963 relate to units having fixed assets of Rs 5 lakhs and more.

‡Data in respect of certain units are not included from January to May 1963.

(1) Monthly figures are exclusive of production in Punjab (Kangra) and Himachal Pradesh.

(2) Relating to the production by mills in the membership of Indian Jute Mills' Association and to one non-member mill.

(3) Includes canvas.

(4) Figures relate to stable variety only from June 1962.

(5) Including figures for Jammu and Kashmir.

(6) Figures relate to production of organised factories.

THE BANK OF INDIA LTD.

T. D. KANSARA, General Manager

With the longest tyre manufacturing experience in India behind them, Dunlop have developed the Highway truck and bus tyre to give you the maximum mileage on long heavy hauls. In addition to the high initial tread mileage, the excellent casing of the Highway tyre can take a greater number of retreads and assures the lowest cost per mile of operation.

Win the battle of international trade

There is a rich market
for Indian goods abroad.

But as an exporter, you cannot sell sub-standard
goods. You have to bear the brunt of the
battle against powerful western rivals in the
world market.

You can win this battle of International
trade only on quality, competitive prices and
service facilities. The export market can
be a source of continuous earning power,
provided you exercise strict quality control in the
manufacture of goods, adopt modern techniques
in production and adhere to high standard
of specifications.

Thus you can help the country tide over her
foreign exchange crisis and also maintain her
prestige in the world.

We are here to guide and assist you in
promoting your export.

Powerloom Report

THE Powerloom Enquiry Committee, to judge by its recommendations, has been profoundly impressed by the potentiality of the powerloom as an instrument of techno-social change. The report speaks eloquently of the "deep economic urges of millions of people to break through the coils of poverty", and of the "sweating, toiling, human mass, menaced by a grim struggle for existence in search of an anchor, a stand-by which would help in escaping the drift to hunger and distress. Not surprisingly, the recommendations of the Committee are strongly coloured by this concept which overshadows valid considerations, like the efficiency of the powerloom as an instrument of production, and so is not exactly helpful in an assessment of their economic implications.

Pointed attention has been drawn, in the dissenting minute of Mr A. R. Bhat, to the shortcomings in the collection of data on which the report is based. Mr Bhat, who certainly cannot be accused of lack of sympathy for the small scale sector,—he is the President of the Federation of Small Scale Industries of India—has pointed out that the data presented in the report is "erratic" and, at best, could be treated as illustrative and that no valid inference could be drawn from them. Those who go through the report will be more than half inclined to agree with this conclusion.

Mr Bhat has referred to these defects to make the point that the Committee's estimate of the handicaps suffered the powerlooms vis a vis composite mills is on the low side and could not be taken as the basis for determining the pattern of excise duty. It will not, however, be unreasonable to presume that the validity of the general conclusions of the report, with which Mr Bhat apparently agrees, is also affected by the inadequacy of the data on which they are based.

The most controversial recommendation of the Committee, apart, of course, from those relating to the scheme of rationalisation of differential excise duties, is the proposal that the entire additional cloth production in the Fourth Plan should be ear-marked for the decentralised sector. On the basis of availability of cotton, the Committee has estimated total cloth production at the end of the Fourth Plan at 10,100 million yards; and, recognising that the existing handlooms may

not be able to fulfil the extra quota, has recommended a phased, replacement programme for installation of 1,10,000 powerlooms in the handloom sector, both cotton and manmade fibre. The programme of conversion of handlooms to powerlooms could be regarded as a healthy development, if, as a result, the decentralised sector of the industry is able to make its way without the help of governmental subsidies, which involve imposing handicaps on the mill industry on the one hand, and extra payment by the consumer on the other. But such a state of affairs is not envisaged by the Committee.

The case for special assistance to the decentralised sector consisting increasingly of powerlooms will not be as readily acceptable as the claim of the handlooms for similar assistance. Apart from human considerations, there is also economic justification for the help extended to the handlooms at the present stage of development of the country, for it helps to make fullest use of existing skills and equipment for the production of the cloth required by the community, and without involving additional investment. Apart from the fact that these advantages cannot be claimed for the powerloom, there is the additional disadvantage that, unlike the handloom which turns the muscular energy of the operative into salable goods, the powerloom will make demands on electric or other motive power of which we do not have an abundance.

The case for conversion of handlooms to powerlooms and for reservation of production to the decentralised sector, would have been more strongly based, if the Committee had cared to support its recommendations with comparative data for the three sectors,—Mills, Handlooms and Powerlooms, regarding productivity, employment and earnings, to show that, on the balance, the advantage was with the powerlooms.

To judge by the facts presented in the report, the powerloom has neither the special merits of the handloom, which has enabled the latter to survive in this modern technological age and find markets for its products in Western Europe and the USA, nor the strong points of the composite mills, but has the drawbacks of both. The Committee itself has drawn attention to some of the less pleasing aspects of the powerloom industry—the into-

lerable congestion in the areas where the powerlooms are established, the long hours of work and the exploitive economic relationships which arise from the growth of the industry. From the point of view of the strain on the workers, it has been noted that work on the powerloom "involves continuous and constant attention, in contrast with the less hurried and constrained pace which can be maintained in occupations like the handloom." The hope that powerloom will bring technological change to the rural areas is also not firmly based. For, the Committee has come to the conclusion that the scope for setting up powerlooms in rural areas is limited because of lack of the necessary facilities. The tendency is to set up powerlooms in and around urban areas, and any attempt to disperse the powerlooms in rural areas, the Committee fears, would drive them to a position of great disadvantage and possible extinction.

Historically, the powerloom industry in this country is the byproduct of the disintegration of individual composite mills. Availability, at very low prices, of looms discarded by the mills, following closure or modernisation, had enabled the industry to achieve a measure of viability in the few centres where it had established itself. It is doubtful if the handloom workers who, under the conversion scheme, would have to pay the current market price for new looms would find it an economic proposition. Grafting of powerlooms would only prolong the agony of the handloom weavers.

DEVELOPING COUNTRIES

Increasing Foreign Trade

By Harlan Cleveland

[Excerpts from Mr Cleveland's address before the United Nations Economic and Social Council (ECOSOC) in Geneva on 23 July 1964.]

THE United Nations has created the political environment within which those who give and those who take, those who lend and those who borrow, those who advise and those who use or reject the advice, can come together in dignity and equality to promote that social progress and those better standards of life in larger freedom which are the promise of the Charter of the United Nations.

An improvement required in the United Nations' capacity "to promote social progress and better standards of life in larger freedom," is the need to institutionalize United Nations' concern with international trade in relation to development.

The UN Conference on Trade and Development (UNCTAD) has recommended a big Conference on this subject at least once every three years, a 55-member Trade and Development Board meeting twice a year, and a Secretary-General and staff serving the new institutions within the UN Secretariat.

The aim of this machinery is to provide a forum for a deep and continuing analysis of obstacles to the expansion of trade of the developing countries—obstacles that may lie in the policies of industrialized countries or in the practices of the developing countries themselves.

This will require a new and important dialogue—mainly between developed and developing

countries—about their respective national policies, such as trade and investment policies, which may affect the rate and character of development.

We are glad to see this machinery invented, and think it is wise to build it, as the UN Trade Conference proposed to build it, as an integral part of the United Nations.

The UN Conference on Trade and Development is so fresh in our minds that it may be useful to reflect for a moment on its outcome—and its future.

The nations already in an advanced stage of industrialization do, of course, account for most of world trade. It is a simple fact of economic life that the more highly industrialized nations have a greater capacity to buy and sell and therefore to develop a high level of mutually beneficial trade among themselves.

It is also a plain fact of history that the dominant natural impulse to stimulate trade where it already was profitable has had an effect on the production pattern of all trade countries.

This has quite understandably influenced many developing countries to concentrate their production in relatively few export products. This may have tended to discourage structural changes in these economies—more diversification of their production—which in the long run would be to their advantage.

We not only wish for an increase in the foreign trade of developing countries but would particularly hope that in its expansion sound ways and means can be found to stimulate a wider range of their exports in the interest of more effectively balanced economic development.

There are many reasons why we would welcome a healthy rise in trade between the industrialized and developing countries.

First, we are committed morally and politically—and as a matter of plain common sense—to contribute our full share in the global war against poverty in working partnership with those prepared to do as much themselves.

Second, we have committed vast resources, during nearly two decades of sustained support, for economic and social development around the world. This burden will be upon us, in one form or another, for as long as the problem of poverty exists on a major scale in this world. We carry it with good will as a necessary contribution to international peace.

Third, in addition to aid, trade is one of the most important factors in the process of growth. The sooner a developing country can earn its own way in a competitive world, the better it is for everybody.

Under the circumstances, then, if my government were to follow any other course than one designed to reduce the barriers to the trade of the developing countries, and to promote the diversification of their economies, we would be guilty of the idiocy of giving with one hand and taking away with the other.

This is why my government looks forward to the establishment of practical UN machinery in the field of international trade.

Let us now examine what this "machinery" is supposed to produce as an end-product. We like the Secretary General's definition, in his address to this Council on 16 July. He called on all of us them to think of the United Nations as "an instrument for reconciling differences of opinions and not only as a framework in which they can manifest themselves."

"Differences of opinions" about what? The rub is here. For when you consider trade in relation to development, you are talking about matters which cut deep into the domestic politics of every country on earth.

In the developing countries, the obstacles to development and to the growth of national trade are certainly in essence "internal affairs."

Land reform is often the key to agricultural development; tax systems and budget controls

are keys to development. The government's policies about investment, the government's attitudes toward private enterprise, the government's willingness to build development institutions and put them in charge of well-trained technicians rather than political favourites—all these are essentially "domestic" decisions.

In a curiously similar way, obstacles to more imports and better export markets for the developing countries, which appear to them as "external" matters, are regarded as "internal affairs" in the industrialized countries. In several important elections in our history, the tariff issue was the main bone of contention between our two political parties. Aid policy is also a sensitive "internal" problem in every developed country.

The UNCTAD machinery will presumably be designed to promote a dialogue between the developing and the industrialized countries. But the content of that dialogue is not, for the most part, international affairs—it is, rather, each country's national policies.

The effectiveness of the new machinery will be measured by whether the dialogue it organizes does, in fact, result in our modifying each others' national policies.

If we tell you that you must get one with tax reform in your own country because we think you should, you are likely to resent the suggestion and not do anything about the revenue system. Only if we can persuade you that tax reform is in the interest of your own economic growth will we have any effect on your national policy.

In just the same way, if you tell us that our tariffs are too high, we are not likely to make any change just because you think we should. Only if you can persuade us that change will serve the national interests of our country—which is served, of course, by expanding world trade and the development of the less developed areas of the world—is your argument likely to have any effect on our national policies.

Nor will it help if large majorities pass resolutions recommending changes in the commercial policies of nations not part of the majority.

The problem here was perceptively stated at the UNCTAD Conference by the delegate from a developing country. "It is an obvious fact," he said, "that on the basis of simple majority, the developing nations can outvote the developed nations at any time. Yet, what will it avail this Conference to reach decisions by simple majority if the defeated minority includes the very countries from whom concessions are expected?"

There is, I believe, a real danger that the coining of the United Nations will be debased by premature votes on one-sided propositions. A better approach would be a dialogue in which we settle down to the task of achieving a reasonable consensus about just what we all need to do to raise the levels of trade of the developing countries as a contribution to their economic growth and their social progress.

We will not do this by voting, but by striking bargains in which both the developing and the developed countries agree to try to change their own national policies for mutual benefit.

So let us join in applying our impatience to the problem of development, rather than to each other. International co-operation for development will not work if it is conceived as a battleground, and set up as an adversary proceeding, a game of "I win—you lose" between "haves" and "have-nots."

We can dare hope that a world too long torn by dissension—and paralyzed by sterile confrontation—may be entering a period of healing and fruitful co-operation.

But these hopes must be cautiously conditioned: they depend upon the dominance in world affairs of a will to co-operate, to work together, and to approach our tasks with a reasonable capacity to take account of each other's problems and viewpoints.

Anti-Monopoly Laws in a Free Market

By Adolf A. Berle, Jr.

(Dr Berle's understanding of the interaction of economics and law is profound. He has attracted steadily growing attention with the publication of his 14 books, of which "The American Economic Republic," published in 1963, is the latest. He is Professor of Corporation Law, Columbia University.)

Editor's Note:—During the 19th century, there was an explosive development in leading nations in production, transportation, and communication. As a consequence, markets became national in scope and economic organizations grew to unprecedented size. Accompanying the industrial and technological changes were two important legal developments.

The first was the emergence of the corporation in its modern form. The second was the discovery of ways to combine the economic strength of different enterprises.

One of these legal devices was the so-called "voting trust" giving a single trustee or group of trustees control of the stock shares of a number of corporations. This served effectively to centralize the operations of these corporations and to eliminate competition between them. By this means, large concentrations of economic power were built up and these became popularly known as "trusts."

In the latter half of the 19th century, the United States found that state laws were inadequate to cope with the growing power of the great trusts. Public sentiment demanded an effective national "anti-trust" law. As the term "trust" in this sense meant essentially what we mean today by monopoly, so the term "anti-trust" means essentially "anti-monopoly."

By the latter part of the century, such sentiment was sufficiently widespread and powerful to secure results. In 1890, the US Congress passed the Sherman Act, which remains the basic antitrust statute in America.

THE American economic republic has dealt with the ancient conception of the "free market" on a realistic basis. Here, probably, economic theory is evolving more rapidly than in any other single respect.

In the 19th century, a free market was somehow assumed to be a basis for human freedom. French physiocrats like Quesnay believed (as did Proudhon in later life) that a man could not be free unless he had some piece of property with which he could produce—else he was a mere plaything of a dictatorial state. Adam Smith, writing before the French Revolution (his great work, "The Wealth of Nations," came out the same year the United States declared its independence of Great Britain), followed that theory.

This was natural. Continental Europe only began to emerge from absolutist monarchies when the Bourbon dynasty fell in 1789. The absolute sovereign who controlled the persons, property and economic activities of his subjects continued throughout much of Europe until the Revolution of 1848. Naturally, perhaps, 19th century economists proposed the

theory of the "free market" as antithesis to feudal or state-monarchist economic systems prevailing when the 18th century drew to a close.

This idea—that of the "classical economists" represented by the Austrian Ludwig von Mises and in America by his disciple, Friedrich von Hayek—is rapidly losing ground. Modern theory is not that a free market makes free men. Rather free men make a free market—and take it or leave it. Limit, modify or reject it.

In the United States at present a large sector of economic production and distribution is carried on under the free market system. But the free market has become (perhaps always was) subject to considerable State influence.

Classical economics taught that all useful economic activity would be motivated and brought into existence by the desire to make profits; also that in a free market the aggregate of economic activity thus sparked by hope of gain would best allocate the resources of the nation—would allocate part of production to "capital" and part to "consumption"; would set up prices for goods so that the supply would be best allocated to need and want.

Under this spur, production would seek those areas where buyers most wanted the product. Labor was considered a commodity. In a free, that is, a competitive, market, the best available equation between the price of labor and the employment requirements would be struck.

There is, nevertheless, difficulty with this classic theory—as the United States has discovered. The most notable is that the free market will not stay free unless some outside power—the State, in fact—compels it to remain so.

Left to themselves, enterprises in the free market will not indefinitely compete with one another. They will combine, and set up monopolies or cartels. Or, the strongest, by his competition, will bankrupt the weaker and emerge as a monopoly.

Something very like this, indeed, did occur in the United States at the close of the 19th Century—as also occurred in great parts of Europe, possibly continuing even to this day.

This led the United States in 1890 to pass the Sherman Antitrust Act and, after a decade of waiting, to commence its vigorous enforcement. It has since been reinforced by other laws, notably the Clayton Antitrust Act, by creation of the Federal Trade Commission and the setting up of an active unit in the Department of Justice to enforce these acts.

In combination, these amount to powerful intervention by the State—for the purpose of maintaining the free market—within certain limits. Withdraw these State activities, and the free market in the United States in all major lines would probably disappear in a few years.

Again the free market, as Americans see it, has a number of useful attributes.

It can maintain a degree of competition. This means that the corporations, competing with each other, keep their prices within reason. Monopoly being prohibited, no one corporation can oppress a customer by refusing to supply him; he can go to another supplier.

The free market does mean that many private enterprises are constantly seeking new outlets for their organizational ability and their capital. This means a high degree of

innovation—new ideas, new processes, new services and an economic system seeking primarily to satisfy the wants of a large population, testing itself by what the population does want—rather than by what someone in a commissariat thinks the population ought to want.

The difficulty lies in the waste, even the frivolity, of some free market activities. Much of this current criticism is true. It is not always easy to defend a system which rewards the creator of a new mouthwash as highly as it does the publisher of first-rate books or the producer of first-rate plays. The free market sometimes seems to satisfy—or even debase—cultural levels rather than to raise them.

The American economic republic, nevertheless, has always been cautious at this point. It rarely tries to tell its population what they must consume, considering that control of a man's consumption comes perilously close to being control of his life. The assumption is that Americans must choose their own ways of life, and consequently what they will consume.

This, some argue, makes for a "bad civilization." Possibly. Certainly it is plain that in the next few decades the greatest problems in the United States lie not in the field of production or even distribution but in the field of education and cultural advance: in taste, in esthetics.

The American reliance on the free market system for a substantial part of its production is certainly not ideal. Yet it is considered better than reliance on some Orwellian Big Brother (Communist dictator), with a hierarchy of police, imposing his will by economic pressure.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Saving in the form of Bank Deposits provides resources for the National Plan.

United Bank of India Ltd.

World of Finance

BANK RATE

Era of the Five Percenters

The increase in bank Rate to 5 per cent has been expectedly unexpected. That is to say, it has been clear for some time that Government would be compelled to institute various kinds of measures in an attempt to stem the rising price trend, and in this regard an increase in bank Rate could not be ruled out. But it is unexpected in the sense that the remedy will cause the patient rather more grievously to suffer. For, while rise in bank Rate may limitedly be of value in restraining bank credit generally, there are two other disturbing implications. Firstly, there is the fact that the cost of goods to the consumer will rise considerably. This is because an increase in banks' lending rate touches at three points in the journey of a commodity from a raw material to a marketable article: once as a raw material itself, once when industry is compelled to borrow and finally when the trader secures bank finance. Secondly, there is the fact that rise in bank Rate is a phenomenon that almost without fail is accompanied by a less enthusiastic response to Government's market borrowings, since it causes the existing gilt-edged loans so to depreciate in market quotations as to bring their yields into conformity with the new pattern of interest rates postulated by hiking of the bank Rate.

We can only hope that the straight increase in bank Rate will mean the repeal of the multiple-tier bank Rate system we have had for these many years. If this were to take place, then we can at least for that reason welcome the change in monetary policy. An inference in this regard is probably available in the indication by the Finance Minister that he simultaneously seeks an orderly structure of interest rates, such that genuine time money earns higher interest. We have long been calling for action being taken by the Indian Banks' Association to bring about a realignment of interest rates. It may be recalled that we had warned that in the absence of such action by the IBA, the Reserve Bank would probably step in. Such indeed has been the case, but we trust that when the central banking institution sets about this task it will make it a point to indicate that the various interest rates are to be linked with the primary rate, that is, the bank Rate. Otherwise we fear that the interest rate structure will continue to be confounded by chaos.

Let us realise that whatever the cost of credit, whether from the banking system to constituents or from the central banking institution to the banking system, there will be no scarcity of borrowers. Thus, it may well

be that the only effects of the increase in bank Rate will be:

- depreciation in value of existing Government loans;
- resistance to new Government borrowings;
- rise in prices of consumer goods; and
- possibly a depression in stock exchange values, since a higher bank Rate also postulates higher yields on debentures, preference shares and equities.

MONEY MARKET Miscellany

IT is some considerable time since, in these columns, changes in the monetary and other statistics published in the Reserve Bank of India Bulletin have been analysed, and we can profitably undertake that exercise. The first point to note concerns the position of all Scheduled Banks. As at the end of July, as compared with the relevant figure for the last Friday in December 1963, aggregate Deposits have risen by Rs 184 crores to a level of Rs 2,437 crores; of this, Rs 109 crores are by way of accretions to Demand Deposits and the balance to Time Deposits (Inter-bank Deposits, other Deposits and Borrowings from banks are excluded from the total of Deposit liabilities to arrive at the figure of net Deposits). Thus, the trend of recent years, when the rise in Time Deposits tended to be pronounced, has apparently been reversed. However, we should remember that new categorisations of Deposit money have been responsible for a good deal of Deposits which earlier were included under Time Liabilities to be transferred to the head of Demand Liabilities. Incidentally, it may be noted that another table gives the figure relating to aggregate Deposits of Scheduled Banks excluding PL 480 and PL 665 Deposits: and this, as at the end of July, is shown to be Rs 2,415 crores. The inference, therefore, is that counterpart funds still lodged with Scheduled Banks are of the order of Rs 22 crores. Not all of such funds is necessarily with the State Bank, since a portion of them is lodged, it is known, with Exchange Banks. Next, it bears mention that aggregate Deposits of Exchange Banks improved over the period under review by Rs 26 crores; but here the bulk of the increase—Rs 24 crores—has taken place under the head of Time Deposits. The likely explanation is to be found in Table No. 10, which shows that Savings Deposits with Scheduled Banks have risen spectacularly by Rs 61 crores in the first seven months of 1964; the increase in the case of Foreign Banks works out, at just over Rs 4 crores, to nearly 10 per cent. It would thus appear that the exchange banks are campaigning vigorously for Savings Bank Deposits. The credit ratio of exchange banks has not, during the last thirteen months,

reached below the 90 per cent mark. For six consecutive months, commencing from November 1963, the ratio had exceeded 100 per cent. The number of non-scheduled banks reporting had fallen in the first five months of 1964 from 193 to 167; and aggregate Deposits fell by a little over Rs 3 crores to Rs 25.12 crores.

BANK RETURNS

Sharp Fall in Active Notes

The third Friday in September has witnessed a full return to the progress of the 1964 slack season.

According to the returns of the Reserve Bank for 18 September, Active Note Circulation receded sharply by Rs 31.35 crores to Rs 2,389.81 crores. Return of Rupee Coin from circulation is also hefty at Rs 2.4 crores. Currency has been contracted against Rupee Securities for Rs 45 crores, with holdings in this regard in the Issue Department accordingly shown lower by such magnitude at Rs 2,095.93 crores. With Foreign Securities unchanged at Rs 85.16 crores, the Reserve Bank's cash in the till has been drawn down by Rs 11.70 crores to Rs 17.30 crores.

Investments in the Banking Department are lower by Rs 19 crores at Rs 101.22 crores; and this could straightaway be linked with purchases of gilt-edged in the relevant week by the State Bank. So, it would appear on the face of it that the Centre has been able to cancel ad hoc Treasury Bills before their maturity in an amount of around Rs 45 crores.

But this is to overlook important changes in the position of the State Governments. These have, on the one hand, nearly halved their Deposits with the Reserve Bank to a level of Rs 13.68 crores; and on the other, they have borrowed Rs 2.52 crores more at Rs 18.35 crores from the Reserve Bank. Prima facie, therefore, repayment of loans by the States to the Centre would have been of the order of Rs 16 crores. This, together with the fall in the Centre's balances of Rs 16.63 crores to Rs 60.68 crores, probably represents the quantum of reverse ad hocs instituted by the Centre during the week. It would, therefore, be logical to assume that purchases of gilt-edged by Scheduled Banks other than the State Bank were in the environs of Rs 10 crores; and of this we should have confirmation next week.

There is again considerable improvement in the position of Scheduled Banks vis-a-vis the Reserve Bank. They have added to their Reserve Balances by Rs 7.60 crores to a level of Rs 106.50 crores, and this increase is mostly on account of institutions other than the State Bank. Again, they have cut indebted-

ness to the Reserve Bank by Rs 1.11 crores to a nominal Rs 0.93 crore.

Finally as far as concerns the Reserve Bank returns, Balances Held Abroad have registered an improvement of Rs 2.35 crores to Rs 13.41 crores, and this means that foreign assets in the possession of the Reserve Bank are once again knocking at the Rs 100 crore mark.

+

There has been a magical improvement in the position of the State Bank as at 19 September, as disclosed in the return as at that date of the institution. Deposit resources have been marked higher by Rs 9.75 crores at Rs 655.96 crores. Secondly, the contraction in the total of Advances is of a size with this figure, the decline being one of Rs 9.86 crores to Rs 332.40 crores. These new found and newly released resources have been fully utilised in the acquisition of gilt-edged, the portfolio being marked up by Rs 21 crores at Rs 287.16 crores. But Other Assets, in rising by Rs 2 crores during the week, are still unusually high at Rs 40.33 crores. The inference is that further purchase of Government securities through the Reserve Bank tap is almost certain in the coming weeks. The end result is that cash balances, including money at call and short notice, are marked up by Rs 0.72 crore at Rs 36.22 crores.

+

It has been a comfortable week for Scheduled Banks as shown in their statutory statement for 11 September. Net Demand Deposits are, it is true, lower by Rs 3.59 crores at Rs 1,253.67 crores, but this fall is more than offset by the rise of Rs 6.38 crores to Rs 1,406.42 crores in net Time Deposits. It is noteworthy that in the relevant week the State Bank reported a loss of Rs 2.69 crores in Deposits, for this means that the accretions to other Scheduled Banks exceeded Rs 6 crores. There is a small decline of Rs 2.78 crores to Rs 1,744.42 crores in the total of Advances, with the State Bank's share of the decline placed at a little over Rs 1 crore. We may be sure that the fall would have been more pronounced, but for some spill-over of demand for beginning of the month disbursements into the second week. There is a steep decline of Rs 29 crores to a shade under Rs 762 crores in the gilt-edged investments of Scheduled Banks, but this is wholly to be attributed to the State Bank. Scheduled Banks' borrowings from the State Bank are higher by Rs 2.31 crores at Rs 33.17 crores, but against this is the fact that indebtedness to the Reserve Bank has been cut by Rs 2.88 crores to Rs 1.95 crores. It remains to add that cash balances, including money at call short notice, have in consequence risen by Rs 7.42 crores to Rs 245.29 crores; but this, too, is attributable to the State Bank. If the return of the State Bank for 18 September is any guide, Scheduled Banks in that week should be reporting a sharp accretion to Deposits as well as a substantial contraction in Advances. The 1964 slack season has, it is clear, been most satisfactory for the banking system from the view-point of improvement in resources.

+

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 22 September, 1964. Total amount offered was Rs 2,10,00,000. Tenders at Rs 99.405 per

cent were accepted in full and those at Rs 99.400 per cent were allotted 95 per cent. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.399 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday, 28 September, 1964. Successful tenders should make payment on Thursday, 1 October, 1964 at all centres. Other conditions are as usual.

During the week ended 18 September, 1964, Government of India Treasury Bills for Rs 66,35,00,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 23 September, 1964 to 26 September, 1964 at Rs 99.416 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 16 September 1964 to 19 September 1964 amounted to Rs 7,97,50,000.

+

Working of Banks in 1963

The Statistical Tables relating to Banks in India, 1963, issued recently by the Reserve Bank of India, contains detailed information on the working of banks in India during 1963. The data are presented in two sections. The first section gives a consolidated picture of the various component units of the Indian banking system viz., scheduled, non-scheduled and co-operative banks. The second section contains detailed information on the various items of assets and liabilities as well as profits of individual scheduled and non-scheduled banks based on their balance sheets and profit and loss accounts. This publication is intended to serve as a statistical supplement to the Report on the Trend and Progress of Banking in India, 1963, published in May last, which reviewed credit policy and banking trends and developments in banking legislation and organisation during the year.

During 1963, banks' operations showed further expansion in resources, credit and investments. Deposit mobilisation by scheduled banks was higher than in the previous year, amounting to Rs 245.9 crores as against Rs 186.2 crores in 1962. Paid up capital and reserves continued to increase and reserves exceeded paid-up capital for the first time (Table 1). Scheduled Banks' credit went up by Rs 182.8 crores and investments by Rs 73.3

crores in 1963, as compared to Rs 162.6 crores and Rs 91.4 crores, respectively in 1962. Non-scheduled banks, however, recorded a further decline in their deposits, credit etc., mainly because of transfer of assets and liabilities of some non-scheduled banks to scheduled banks.

Profits before tax of Indian and foreign scheduled banks registered an increase of Rs 2.6 crores during 1963 as against a decline by Rs 0.1 crore in 1962. The current operating earnings of Indian scheduled banks rose by Rs 13.7 crores and their current operating expenses by Rs 13.1 crores in 1963, whereas in 1962 these two items had recorded increases of Rs 16.9 crores and Rs 16.7 crores respectively. (Table 8). The profits of Indian scheduled banks increased by Rs 1.4 crores as against a nominal decline in 1962. This was mainly due to smaller increases in interest paid on deposits as well as in establishment expenses than in 1962. In the case of foreign scheduled banks, the current operating earnings rose by Rs 3.3 crores and their operating expenses by Rs 2.2 crores, while in 1962 both the items had shown an equal rise (Rs 1.5 crores). Their profits before tax rose by Rs 1.2 crores in 1963.

The number of offices of scheduled banks in the Indian Union increased by 396 (to 5004) in 1963 as compared to 215 in 1962. The State Bank of India opened 67 offices as compared to 56 in 1962. Part of the increase in the number of offices of scheduled banks was due to the taking over of business of some non-scheduled banks. It may be noted that nearly half of the new offices established by scheduled banks were located in places with population of less than 25,000. The total number of offices of commercial and co-operative banks (comprising State, Central and Urban co-operatives, banking unions and industrial cooperatives) together increased by 517 (to 7,855) during 1963 (Table 17). As a result, the average number of persons served by a banking office was 56,000 in 1963 as compared to 60,000 a year before.

The publication also contains the usual appendices giving information on the offices of commercial banks in India as well as their offices and correspondents abroad, members and sub-members of clearing houses, etc.

The publication can be obtained from the Administrative Officer, Economic Department, Reserve Bank of India, Post Box No. 1036, Bombay-1, or from the Manager of the nearest office of the Reserve Bank of India at Rs 15.00 per copy (postage extra). An abridged edition containing only the Appendices referred to above is being printed and will be available at Rs 3.00 per copy (postage extra) by the end of September 1964.

1964

FOREIGN EXCHANGE AND PARRYS

FOREIGN EXCHANGE*— the most important factor in the country's economy today—is also the most important factor in the E.I.D.—Parry Group's plans for brighter and better tomorrows.

The production of fertilisers provides a good example of the E.I.D.—Parry Group's contribution towards increased food production and towards conserving foreign exchange by reducing the volume of fertiliser imports. In 1963/64 the Government have set aside no less than Rs. 40

crores for the import of fertilisers to meet the deficiency between indigenous production and total demand. During the same period the E.I.D.—Parry Group will produce and distribute about 250,000 tons of fertilisers, which figure will be further increased by expansion programmes during the Third Plan period.

Other manufactures of this Group of nine companies of substance include sugar, confectionery, sanitaryware, acids, chemicals, carbonic acid gas and industrial and potable alcohol.

THE E.I.D.—PARRY GROUP, MADRAS

* The Foreign Exchange Bill for The Third Five-Year Plan is more than Rs. 1,900 crores.

AID

Improved Utilisation

Credit has been taken in some recent statements, attributed to what are described as authoritative quarters, for a decided improvement in the pace of utilisation of external assistance. The first step in the utilisation of aid, which often is the longest step, is the conversion of aid pledged at Consortium meetings into loan agreements. The other steps leading to disbursement, like placing of orders etc., can, normally, be taken only after the loan agreements are signed. The covenants of the US AID loan agreements explicitly provide that no goods or services may be financed by the Loan which arise out of orders or contracts firmly placed or entered into prior to the date mentioned in the loan agreement. The Rao Committee which reported in March last on the Utilisation of External Assistance had pointed out that the procedures of negotiation of loan agreements could be time consuming. For instance, some of the loan agreements for commitments made at the Consortium Conference of June 1961, were concluded after a delay of one year or more. There is, however, evidence of improvement, if the batch of loan agreements which were signed during the first two weeks of this month were taken as a representative sample.

The seven agreements with the U.K., for loans of £14.5 million, which were signed on 9 September raise to £24.5 million the total of loans against the sum of £30 million pledged by the Government of UK at the Consortium meeting of 26 May. The British Contribution so far, to the Third Plan amounts to £155 million (Rs. 206 crores). An agreement for a general purpose loan of £10 million was signed on 28 July. Agreements covering the balance of £5.5 million are expected to be completed before December. Sir Paul Gore-Booth who signed the agreement has drawn attention to the fact that it has taken only 16 weeks to implement almost the entire pledge

of £30 million. This variegated package contains a gratifyingly high proportion (about 70 per cent) of non-project aid, including a "Kipping Loan" of four million pounds which British-oriented industries could draw upon to pay for goods and services from their usual sources of supply.

Aid commitments made by West Germany and Japan have also been followed by loan agreements without loss of time. An agreement was signed in Tokyo on September 3, regarding the Fourth Yen Credit amounting to fifty million US dollars pledged at the last Consortium meeting, bringing the total assistance extended by Japan to 210 million US dollars. And, finally, an agreement for a West German credit of Rs 45.24 crores (D.M. 300 million) was signed in Delhi on 15 September, bringing the total West German assistance for India's development programme to Rs 405.90 crores. The latest loan agreement includes, besides project assistance, Rs 2.98 crores (MD 25 million) for ICIC, the Industrial Finance Corporation of India and, the National Small Industries Corporation, for loans to medium and small undertakings, suppliers' credit of Rs 13.10 crores (Rs 9.76 crores for purchase of new ships, and Rs 3.34 crores for other goods and services) and a general purpose loan of Rs 6.55 crores as commodity aid for the purchase of goods and services in Germany.

In regard to the utilisation of the last item, it is stipulated that the requirements of Indo-German enterprises in India will be taken into consideration. The idea behind the Kipping Loan is evidently finding wider application. Or, it may be the other way about, the Kipping Loan merely formalising prevalent practice in regard to general purpose loans from other sources.

In sharp contrast to the speedy execution of loan agreements with the United Kingdom, Japan, and West Germany, not much progress has been made in regard to loan agreements with the United States which has pledged nearly half the total amount of the consortium aid for 1964-65. According to information given in the Lok Sabha

last week, so far, loans totalling 25,025 million US dollars have been approved against 435 million dollars pledged by the United States. Apparently, the drill that has to be gone through before US assistance becomes available for use is more complicated and time-consuming than is the case with aid from other countries.

*

TEXTILE MACHINERY

Fourth Plan Outlook

The textile machinery industry in the country has recorded remarkable progress during these years, though it was not sufficient enough in meeting the country's requirements. There is, however, a progressive narrowing of the gap between demand and output and by the end of the Fourth Plan period it is expected to be reduced to Rs 75 crores. Total requirements of textile machinery during the next Plan period is estimated at Rs 347 crores and indigenous output is to amount to Rs 272 crores. As Mr T. N. Singh, Union Minister for Heavy Engineering, has stated while inaugurating the Development Council for textile machinery in New Delhi, the existing capacity was not fully utilised obviously due to the inadequate availability of raw materials such as pig-iron, steel alloys and insufficient finance. Encouragingly enough, Government is of late showing greater awareness to these matters. For, Mr Singh pointed out that the ministry would take up with the steel authorities the question of supply of quality pig iron to the industry in adequate quantities. This apart, the question of meeting the financial requirements of the industry is being looked after by credit agencies like the ICICI and other development institutions. These are certainly heartening measures designed for stepping up production of textile machinery in the country. However, progress made in the sphere of technology is not commensurate with our needs and as Mr Singh indicated there is a strong case for setting up of a central and development organi-

sation with a view to keeping constant vigil on the technological development in the industrially advanced nations of the world.

Aside from catering to the requirements of the indigenous cotton textile industry, the scope for exporting textile machinery appears to be bright. Mr Manubhai Shah who spoke at the occasion made it clear that there is nothing wrong if we exported machinery while at the same time importing them as even industrially advanced countries are resorting to such practices. In the circumstances, the setting up of cotton textile mills by Indian industrialists in Asia and Africa assumes special significance.

But, both in quality and cost, the industry has to make rapid strides to compete with the products of other exporting countries. Instances of complaints about the quality of our products from Indian consumers are not entirely lacking. It is particularly to these aspects the research and development efforts have to be directed.

ARC Poor Response

One of the principal reasons for the disappointing performance on the agricultural front is the deplorable lack of interest in this vital sector on the part of the State Governments. This is also borne out by the scant attention paid by them to opportunities offered by the Agricultural Finance Corporation for the development of agriculture. Speaking at the first annual general meeting of the shareholders of the Corporation, Mr M. R. Bhide, the Chairman, referred to the poor response from the State Governments in sending worthwhile schemes to the Corporation with a view to obtaining financial assistance. Dur-

ing the last year only four schemes were approved. Mr Bhide has rightly pointed out that while the Corporation can help the State Governments in the preparation of sound schemes, the initiative should come from them. The Corporation has been set up with the express purpose of fulfilling a pressing demand from the State Governments, financing institutions, etc to augment the available medium-term and long-term resources for financing schemes of agricultural development. It is primarily a refinancing agency intended to provide long term financial accommodation for those major developments which cannot be financed by the existing credit agencies either on account of the volume of funds involved or the terms and conditions of repayment

or because the projects are such as cannot be brought within the normal rules of business under which the land mortgage banks are functioning. Refinance facilities from the Corporation are available for financing the following purposes: reclamation and preparation of land so that facilities for irrigation, in particular, are fully utilised, development of special crops such as arecanut, coconut, cashewnut, cardamom, coffee, tea, etc.; development of mechanised farming, use of electricity for tube-wells, pump sets etc.; and development of animal husbandry, dairy farming, pisciculture (including cooperative fisheries) and poultry farming.

On its part the Corporation is trying hard to minimise the difficulties in availing the facilities

offered by it. For instance, with commendable speed, it has decided to finance medium and long-term loans of scheduled banks to the plantation industry without the guarantee of the State Governments as also entertain all schemes of a composite nature covering almost all long-term requirements of the plantation industry, including financing of workers' housing. The Corporation will also extend credit under certain conditions to repay old loans provided such loans were incurred for development. Even these changes will benefit those planters who are able to obtain refinance facilities through scheduled banks and since these banks are unlikely to come to the aid of small planters, the Corporation proposes to make a study of

small plantations and their problems with a view to meeting their financial needs, long term as well as short term.

In the present context of the urgent need for bringing about a break-through in agriculture, it is strange that the large facilities offered by an institution such as the Agricultural Refinance Corporation are not utilised to the maximum possible extent.

The four schemes that have already been approved and the fifth awaiting sanction will go some way toward increasing agricultural production in their respective regions. It is incumbent on State Governments to expedite the drawing up of similar suitable projects because there will necessarily be a time lag between the submission of a scheme and its approval as the Corporation will have to satisfy itself about its feasibility before sanctioning it.

MARINE PRODUCTS Master Plan For Exports

The deliberations of the three-day seminar organised by the Indian Institute of Foreign Trade in collaboration with Marine products Export Promotion Council at Ernakulam have served to focus attention on the urgency for formulating a master plan for exports of marine products with a view to achieving the export target of Rs 20 crores in the Fourth Plan period. Naturally, the seminar has suggested the setting up of a board of experts under the Council comprising representatives of the industry the concerned ministries of the Union Government and the directors of fisheries of states to prepare the master plan which would provide the blue-print of schemes and furnish guide-lines for future action. Such a measure is to be welcomed as it will greatly facilitate the utilisation of available resources for expanding the industry on planned lines.

The seminar also constituted a committee for the preparation of outlines of requirements of the oceanographic survey for stock appraisal of the marine products, with particular reference to export potential. Another important decision taken at the seminar is the recommendation for creating a separate department of fisheries in the Ministry of Food and Agriculture for ensuring greater co-ordination of the various works undertaken by the different states which would go a long way in the development of fisheries and marine products.

Inaugurating the seminar Mr H. D. Shourie, Director General of the Indian Institute of Foreign Trade, highlighted the supreme importance of organising an exhibi-

tion of all sea products in order to apprise the Indian exporters and officials of variety of products which are available for exports. Besides, this will also afford an opportunity for devoting more attention to the need for greater development and research with a view to determining the ways and means for catering to the different tastes of consumers abroad. Side by side with these measures, quality control and pre-shipment inspection should be introduced to ensure that no sub-standard products find their way to the international markets.

The seminar has also rightly suggested the advisability for conducting productivity studies for the effective utilisation of machinery and equipment and also for streamlining the processing operations. There is however, a dearth of trained men for manning these operations and the existing training opportunities are meagre. This is particularly disturbing as the Government has plans to rapidly

mechanise the fishing and allied operations to the maximum extent in the next Plan. It is true that there cannot be a sudden improvement of the situation overnight but the paramount significance of tackling this problem should not be ignored.

POWERLOOMS Bright Future

Although the Asoka Mehta Committee on Powerlooms has made a number of constructive suggestions especially with regard to the decentralised sector of the cotton textile industry, it has not made out a convincing case for one of its recommendations that there should be no further expansion of the mill sector during the Fourth Plan. The Committee has proposed that during the current plan period itself 10,000 powerloom should be introduced in the handloom sector with Government

assistance thereby reviving the scheme of conversion of handlooms into power-looms discontinued in 1961. In order to meet the additional cloth production during the Fourth Plan, the Committee has proposed the installation of a further 60,000 power-looms in the cotton sector and an additional 40,000 power-looms in the man-made fibre sector. The allocation of the additional one lakh power-looms should be made on the basis of the number of handlooms registered in different States. Some of the other important recommendations are that the production of dhoties and sarees by mills should be pegged at the 1963 level and that the production of coloured sarees should be exclusively reserved for the handlooms. According to the Committee the entry of the decentralised sector in a big way in the supply of cloth during the Fourth Plan will serve to exert a healthy influence to the advantage of the consumers.

Indian Refineries Ltd. merge with Indian Oil Co. Ltd. to form **INDIAN OIL CORPORATION LIMITED**

The Indian Refineries Limited and Indian Oil Company Limited have merged to form the Indian Oil Corporation Limited. With an authorised capital of Rs. 75 crores, the Corporation will rank among the 10 biggest companies of the country, judged from the capital investment.

The Corporation has two divisions—Refineries Division and Marketing Division. The Refineries Division will manage the public sector refineries and the Marketing Division will distribute not only the entire production of public sector refineries but also the deficit

products imported from abroad. Spurred by the increased tempo of industrialisation, mechanisation and growing defence requirements, India's demand for petroleum products is bound to grow and INDIANOIL will contribute its share towards meeting the nation's needs.

The Corporation will ensure that only such quantities and qualities of products as preferred by the market would be produced by the refineries. Better co-ordination and greater efficiency will result in economical operation and better service to consumers.

INDIANOIL—A National Trust For Economic Prosperity

Indian Oil Corporation Limited

Over 100 Years of Banking in India

NATIONAL AND GRINDLAYS BANK LIMITED

(Amalgamating National Bank of India Limited, Grindlays Bank Limited, and the Eastern Branches of Lloyds Bank Limited)

Registered in London under the Companies Act of 1862 on the 23rd March, 1866. The Liability of Members is Limited.

Bankers to the Government in Aden, Kenya, Uganda and Zanzibar.

ISSUED CAPITAL AND RESERVES OVER £ 11 MILLIONS

HEAD OFFICE: 26, BISHOPSGATE, LONDON, E.C.2.

London Branch:

13, ST. JAMES'S SQUARE, S.W.1.

Branches throughout Aden, Ceylon, India, Kenya, Pakistan, Northern and Southern Rhodesia, Somalia, Tanganyika, Uganda and Zanzibar.

The Bank conducts all classes of Banking and Exchange Business throughout the world.

Calcutta Branches:

19, Netaji Subhas Road; 29, Netaji Subhas Road, (Lloyds Branch); 31, Chowringhee Road; 41, Chowringhee Road, (Lloyds Branch); 6, Church Lane; 17, Brabourne Road; 18, Convent Road, Entally; 175/A, Nalini Ranjan Avenue, New Alipore (Safe Deposit Lockers); 163, Rash Behary Avenue, Ballygunge; 139C, Bidhan Sarani, Shambazar.

NGB/46C

While there can be no possible objection to the continued orderly growth of the decentralised sector especially since it has shown a sizeable increase in output during the current plan period, the juggling of production of cotton mills at the present level cannot be justified. It cannot be argued that the mill sector has failed to record much improvement in production because despite persistent request by mills Government has all along been extremely hesitant in sanctioning additional capacity. Moreover, in assigning the entire additional production to the decentralised sector, the changing tastes of the consumer has been completely ignored. Also the powerloom sector will adversely affect employment in the rural sector. A very powerful argument in favour of the handloom is that it plays a vital role in providing livelihood to a large number of people in the rural areas. Under the scheme of conversion of handlooms to powerlooms, there will be a radical change as the Committee itself has admitted that the scope for setting up powerlooms in rural areas with a view to providing rural employment and improving the economic conditions of the rural population, is at present rather limited.

CEMENT Continuing Shortage

Shortage of cement has almost become chronic in the country

largely because the installation of additional capacity during the current plan period is not proceeding according to schedule. The gap between supply and demand which was of the tune of 0.97 million tonnes in 1961-62, increased to 1.19 million tonnes in 1962-63 and to 2.33 million tonnes in 1963-64. It is now expected that the Third Plan target for cement of 15.2 million tonnes per annum of capacity and 13.2 million tonnes per annum of production can only be achieved by the end of the first year of the Fourth Plan. Despite the disappointing progress of the industry, a production target of 23 million tonnes has been proposed for the Fourth Plan. In other words cement production is sought to be doubled in the next five year plan period. This is a stupendous task and will require massive expansion of capacity. However, Government seems to be confident that the target will be hit in view of the advance action that is being taken from now on. The proposed Cement Corporation of India is expected to play a leading role in augmenting production as it is given wide functions. The Corporation will have three principal functions of surveying, prospecting and proving of limestone deposits in the country, of setting up of capacity for manufacturing cement, and of undertaking ancillary and supporting activities to build the industry. One of the principal reason for

the slow growth of the industry has been the lack of adequate limestone resources. Even all available resources could not be utilised in full for cement production because of the need for reserving all high grade limestones for steel production. It is gratifying therefore that the Cement Corporation will give priority for prospecting and proving of limestone deposits in the country.

Mr Dasappa, Union Minister for Industry and Supply recently informed the Consultative Committee of Parliament, that with a view to increasing the domestic production of cement fresh enterprise both from the private and public sectors would be necessary. Already three State governments are in the field and five other States are proposing to put up cement factories in the public sector. Besides these, Hindustan Steel will be setting up a slag plant at Bhilai and the fertiliser factory at Always proposes to set up a unit based on the use of calcium carbonate sludge.

TRADE Exports to Australia

The impact of the display of Indian Engineering products at the recent International Engineering and Industrial Exhibition at Sidney should be known when the Indian Trade Delegation, led by Mr D. K. Srinivasachar, Joint Secretary Ministry of Commerce, returns after third round of talks

with representatives of the Government of Australia. The first two rounds of talks were held in New Delhi in November 1963 and March 1964. The main object of the delegation should be to see how far the pattern of India's exports to Australia could be diversified leading to further expansion of the trade between of the two countries.

Presently, India's exports are made up, mostly, of what are called traditional items, such as jute and coir manufactures, tea, cotton piecegoods, vegetable oils. Motor spirit has also come into the picture in recent years; otherwise, the products of India's newer Industries hardly figure in the list of exports. Imports from Australia include non-ferrous metals (Zinc, Lead and Lead alloys) milk products, wheat and wool. India could do with more of these imports, provided the additional cost were to be met out of larger export earnings.

Australian businessmen, it was reported, were very favourably impressed by the machinery and other products displayed in the Indian pavilion and some of them even went to the extent of paying that they would welcome the opportunity to buy from India in preference to other countries. This gesture of good will encourages hope that Indo-Australian trade could be raised to higher levels, provided there is a timely and adequate response from the Indian side.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as
the wind
To blow on whom I please"
—As You Like It

In his first trip to Calcutta, Mr Lal Bahadur Shastri, the Prime Minister, took the city by storm. His is a meek but engaging personality; and Calcutta which so often in the past had produced massive throngs to attend Nehru's public addresses on the maidan did Mr Shastri proud. There was of course curiosity to find out what sort of presence Mr Shastri had. One of his major engagements was that concerning Jessop's 175th birthday. There are in this respect three points worth noting. In the first place, I notice that there have been attempts to appropriate for the new management set up almost all credit for the achievements of the past decade; this, I would suggest, is being less than fair to Mundhra. After all is said and done, it is hard to deny that the fallen entrepreneur it was who put Jessops on the way to expansion. In the second place, there have been hints not so veiled that since Jessops are suppliers to and contractors for the public sector in a big way, thought is being paid to making it a wholly government-owned entity. If this line of argument is allowed to prevail, we shall soon reach a stage where many an important private sector unit on similar grounds could become the object of "back-door" nationalisation. I do not hold with the State in such manner trying to assume greater and greater responsibility for industrial production not in basic spheres of activity. So far, it is true that there has been the need for the public sector to take up lines of production which were beyond the competence, financially and otherwise, of the private sector. But let us recognise that equally there are segments of the economy which, managerially and otherwise are beyond the competence of the public sector. India's mixed economy is one in which the private and public sectors have co-operatively rather than competitively to co-exist. I trust, therefore, that Jessops will continue to be the pre-eminent institution in the private sector that it has been for the last 175 years. In the third place, there is the phenomenon of his audience's response to Mr Shastri's speech. His appeal, that Friday should not be

observed as an hartal, apparently struck a responding chord, for there were immediately voiced assertions that labour on that day would not desist from work. I admit, when I read the press reports in this regard, I was none too hopeful that Calcutta would be able to shrug off its engrafted habit of fatalistically acquiescing in calls for observing a strike. But, as I write this, on Friday morning, I am gratified to find that possibly for the first time an hartal in Calcutta has almost totally failed.

*

I wonder what we are to make of Mr S. K. Patil's reference to unaccounted money, in a speech and at a forum that had nothing to do with the searches and raids some weeks ago in Bombay. He said, to put it shortly, that in Belgium an amnesty to "the sinners of that country" had succeeded in mobilising resources for building and construction. An integral part of the scheme doubtless was that no questions would be asked about the sources of funds for new construction; and that, consequently, such moneys did not get taxed. Mr Patil made the further point that unaccounted money in Belgium had been brought into the organised sector without benefit of raids and searches. Was he insinuating that we in this country would have been better off, if we had been spared the harassments of raids? If that was his intention, I am afraid it amounts to interference with a portfolio that is by no means his. If, on the other hand, this is one further step toward grooming the market for the announcement of an amnesty scheme, it is indeed a very clever move by Government and the Cabinet. I myself lean to the second hypothesis, for the kind of black money that has so far been uncovered is, in relation to estimated hoards, pitifully small. It is noteworthy that, though there have been no spectacular raids since the Bombay film world got its rude shock, the press is daily filled with reports, from one part of the country or another, about further fresh searches. So, I am presuming that in fact an amnesty scheme is being got ready, and if there is disa-

greement in the Cabinet it can only be in regard to details. Demonetisation, as a means of compelling black money into the open, has been emphatically ruled out. At the same time, it is patently clear that the Finance Minister is very much concerned indeed about the havoc wreaked by unaccounted money. It would follow, therefore, that he does have it in mind to institute a set of measures to curb the activities of the parallel market. Is it possible that such a scheme will find a place in the Budget next February?

*

Some news reports that have gone almost unnoticed in the last week: The whole-sale price index, after relentlessly moving up week by week, actually fell (though only nominally) in the week ended 5 September. This was despite the index for food articles once again advancing. If, as Mr Shastri has asserted, we shall soon have a plenitude of foodgrains (what with the vast imports under Public Law 480 from America and with the indications that the current crop promises to be a satisfactory one), then there is distinct ground for hoping that the price situation will soon gradually recede from its present status of

being a crisis to one of merely being a problem.

*

Tax-payers, who get a house rent allowance, will greatly benefit from the concession recently announced that up to a limit of Rs 300 a month such allowance will not be taxed in the hands of the recipient. Is this evidence, last that the middle-classes, with fixed salaries, are being looked upon with sympathy and compassion? I certainly hope so, and equally surely they deserve even more reliefs next February.

*

Relief of another sort, to payers in Calcutta did get last week. It has been announced that the Income-tax Department West Bengal disposed of 5.3 cases of refund claims in a period of six working days; and the amount for which refund order was issued is reported to have exceeded Rs 1 crore. This extraordinary circumstance was due to the observance of a "Refund week" in West Bengal; of course utopia would be with us today, if income-tax officers were found dead with refund claims as expeditiously as they chase after tax demands.

Olympus - A Letter from Delhi

Company Law Amendment

After the debates on the food situation and the no-confidence motion had run through their appointed courses, the Lok Sabha settled down last Monday to legislative business and passed the Company Law Amendment Bill which seeks to replace the Ordinance promulgated by the President on July 5, 1964. The amendment of the law has been considered necessary to facilitate investigation of Company affairs. The Bill seeks to give temporary protection against victimisation to employees furnishing factual information to Government Inspectors investigating a company's affairs. The Bill introduces a new section (635 B) which provides that no company can discharge or take any other action against any of its employees during the investigation of its affairs and true ownership, etc., by Inspectors or during the pendency of proceedings against any of its managerial personnel before the Tribunal, unless it has given previous intimation to the Company Law Board of the proposed action against the employees and the Company Law Board has not raised any objection to such action. Companies which are dissatisfied with any objection raised by the Company Law Board may prefer an appeal to the Tribunal within thirty days of receipt of the notice of objection. The decision of the Tribunal would be final.

The discussion on the Bill centred round the adequacy of the protection afforded by the amendment. Many members felt that the protection for the period of investigations would not be sufficient, as the employees would not be protected after the investigation was over. Replying to the debate, Mr Bhagat, who piloted the Bill, said that there were difficulties in the way of giving permanent protection, but he would consult legal opinion whether this could be done.

A more comprehensive amendment of the company law, which will enable implementation of the recommendations of the Vivian Bose Commission, also introduced

on the same day. Apart from procedural simplifications, the Bill seeks to strengthen the provisions relating to investigation into the affairs of companies and to provide for more effective audit in dealing with cases of dishonesty and fraud in the corporate sector.

Share Prices

Government's views about the reasons for the slump in the share market were indicated by Finance Minister in a written reply to a question in Lok Sabha last week. The decline in prices, it was pointed out, had been gradual and not in the nature of an unusual slump. There was an initial decline when the Budget proposals were announced in Parliament, but the decline was sustained on account of unfavourable political and corporate news. Among these, were mentioned: the disturbed Indo-Pakistan relations; delay in the announcement of working results and dividends by some leading companies; postponement by a number of companies of bonus issues; diversion of investible funds to some of the new issues, especially in the context of acute stringency in the money markets; endorsement by the All India Congress Committee of the Dhebar Report on implementation of the Bhubaneswar Resolution on democratic socialism; and the sudden illness and passing away of Jawaharlal Nehru. Agitation by opposition parties against the rising commodity prices and fears of drastic Government action to hold the price line, it was stated, were also further factors for the depression of the share market.

Regarding the steps taken to encourage investment, attention was drawn to the establishment of the Unit Trust and the Industrial Development Bank, the relaxation of the debt-equity ratio and the Budget provisions to encourage corporate savings.

Share prices have declined during the first three and a half months of the fiscal year. The Reserve Bank's Index of Variable Dividend Industrial Securities which stood at 174.3 at the end of February, declined to 161.4 by 20 May 1964, and there was a further

decline up to 13 June to 160.9. Thereafter the index has shown a rise and as on 29 August it stood at 168.4.

Sethusamudram Project

The Sethusamudram Project, which has been talked about for over a decade and a half, is now being considered by the Government for inclusion in the Fourth Plan. The cost estimates have been revised a number of times. The latest estimate places the cost at Rs 21.72 crores. This was indicated in a written answer to a question by Mr P. C. Borooah, Mr Ramanathan Chettiar and Mr Muthiah.

The Sethusamudram Project Committee, presided over by Mr A. Ramaswami Mudaliar, had reported that the project was feasible and that the cost of the project would be Rs 9.98 crores, including Rs 1.62 crores for developing facilities at Tuticorin Port. The Tuticorin Project has since been taken up separately. The Government of India considered the estimates of the Committee for the ship-canal project to be on the low side. The Development Adviser, Ministry of Transport, estimated the cost at about Rs 26 crores. The services of a navigational expert, Capt. J. R. Davies, were obtained to advise on the navigational requirements connected with the project, with particular reference to reducing the estimated cost of the project. Capt. Davies suggested some change in the alignment and reduction in the navigational aids. A provision of Rs 22.14 lakhs was made in the Third Five Year Plan for further technical investigations relating to the project. After completing the studies, the Government of Madras submitted a revised estimate in May 1963. According to it, the cost of a canal which could take ships of 26 feet draft would be Rs 15.50 crores. In August 1963, the Government of Madras submitted a fresh report to meet the requirements of ships of 30 feet draft. The cost was estimated at Rs 21.72 crores. The foreign exchange content was estimated at Rs 4.50 lakhs. The

project prepared by the Madras Government is under examination by a high level technical committee.

New Steel Plant

The choice of site for location of the fifth steel plant will depend on the views of the Anglo-American Consortium which has shown interest in setting up steel plants in India. This was indicated by Mr N. Sanjiva Reddy, Minister for Steel & Mines, when he met the members of the Informal Consultative Committee of Parliament last Monday. The main problem of the Government, he is understood to have told the Committee, was to find financial resources to cover the foreign exchange component of the expenditure. The possibility of setting up of steel plants at all the three sites—Salem, Goa-Hospet and Bailadila-Vishakhapatnam—would be discussed with the representatives of the Anglo-American Consortium who are expected in India early next month. He made it clear that there was no question of by-passing any project.

The Minister is also understood to have told the Committee that he was calling a meeting of the licencees to whom licences had been given for setting up pig iron plants, to review the situation regarding pig iron supplies.

Answering questions in Lok Sabha on September 11, the Minister had stated that the annual demand for pig iron by 1965-66 was now estimated at about two million tonnes against the estimate of 1.5 million tonnes at the time when the Third Plan was formulated. Against this level of demand, the current production, mainly from the integrated steel works, was about 1.2 to 1.3 million tonnes. The shortfall was of the order of 0.7 million tonnes. An important reason for the shortfall was the poor progress in the implementation of licences granted to units in the private sector. Apart from arranging for imports to the extent of 100,000 tonnes immediately to tide over the present shortage, steps had been taken in hand to ensure greater availability of pig iron during the early years of the Fourth Plan.

Motor Vehicles Taxation

The question of appointing a high-powered body, to examine the present incidence of taxation on motor vehicles and to report whether it was a disincentive to the growth of the road transport industry, is now under the consideration of the Government. Mr Raj Bahadur, Minister for Transport, who is understood to have made a reference to this at the meeting of the Informal Consultative Committee of Parliament, told the members that a tentative provision in the Fourth Plan period of Rs 1,150 crores for Roads had been approved by the Transport Development Council.

Regarding port development, the Minister is understood to have told the Committee that work on the Faradcep Port was progressing and was expected to be completed as scheduled by 1969. As for Haldia, an application for a loan to cover the foreign exchange component of the project was being considered by the World Bank, which had asked for further data.

Textile Machinery

The need for continuous exploration of the export possibilities in the field of textile machinery was stressed by the Minister of commerce at the first meeting of the Development Council for Textile Machinery, which was inaugurated here, last Saturday, by Mr T. N. Singh, Minister for Heavy Engineering. Mr Manubhai Shah told the Council that there was nothing wrong if we exported some textile machinery while at the same time porting them. This was a feature of even developed countries like Japan.

Referring to the difficulties faced by the industry, to which attention was drawn by Mr Prabhu Mehta, Chairman of the Council, Mr H. C. Dasappa, Union Minister for Industry and Supply, suggested that the textile machinery manufacturers and the textile mill owners should sit together and discuss ways and means of getting over the handicaps posed by the problems of finance, quality, supply schedule etc.

The Chairman told the Council that, in order to achieve per capita consumption of 16.8 metres of cloth, the Textile Industry will require approximately 18 to 19 million spindles and 2.5 lakh looms by the end of the Fourth Plan and 21 to 22 million spindles and 3 lakh looms by the end of the Fifth Plan. The present installed capacity of the industry is about 14 million spindles and 2 lakh looms.

The Minister of Heavy Engineering told the Council that, during the Fourth Plan, as against requirements estimated at Rs 347 crores for the five-year period, indigenous production was expected to be about Rs 272 crores, leaving a gap of Rs 75 crores.

Fertilisers

Prof. Humayun Kabir, Union Minister for Petroleum and Minerals, is understood to have assured members of the Informal Consultative Committee of Parliament that Government was keen that the private sector should succeed in setting up fertiliser plants. His Ministry was doing everything to encourage private parties to enter into collaboration with foreign concerns for obtaining foreign exchange and technical know-how. However, each party would be expected to make a certain progress within a stipulated period. If it failed to do so, Government would have to make other arrangements.

The Minister is also understood to have told the Committee that Government was discussing a crash programme for establishment of additional capacity of one

million tonnes of fertilisers by 1968 and, in this connexion, had agreed to a feasibility study being undertaken by the Bechtel Corporation of USA on behalf of a possible American consortium. The study, which was expected to be completed by the end of this year, would touch on various aspects including locations, raw materials, financing, pattern, marketing and distribution arrangements etc. The fertiliser plants to be set up would be of modern design, of larger capacity than at present and naphtha-based, thus making possible lower cost of production. He was hopeful that the picture of fertiliser production would change considerably for the better in the next three years or so.

Oils & Oilseed Terrific Imbalance

Dr P. S. Lokanathan, who spoke on the second day of the Council

session, drew attention to what he described as a 'terrific imbalance' in the demand and supply of oils and oil seeds which was likely to develop by 1971, as revealed by a recent survey undertaken by NCAE. There are enormous export possibilities and all that we can do to place our domestic consumption could be exported. In this situation, export targets for oils and oil seeds are irrelevant, he said. The main thing that needed attention was to concentrate on increased production. He indicated a number of measures to cut out waste in manufacture and urged a change in the pattern of domestic consumption of oils so as to retain larger quantities of exportable oils. He also suggested fixing of floor prices for groundnut and castor seed, as well as the establishment of Marketing Board for Oils and Oilseeds which, he said, would be able to take a larger view of the problems involved.

PARTICULAR SERVICING FOR PARTICULAR PEOPLE

It means more life, more mileage if your Jeep is serviced by Jeep Dealers. It is oiled, cleaned, tuned and adjusted by people who know each nut and bolt of the Jeep. They have been trained to give you factory specialised servicing. There are over a 100 dealers spread throughout the country with a complete range of equipment.

Trust your Jeep to a JEEP DEALER for reliable, efficient servicing.

INDIA STEAMSHIP COMPANY LIMITED

*

Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon.), the Chairman on the Hardships and Handicaps in Indian Shipping

The following is the speech of Sir, A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon.), Chairman, India Steamship Co. Ltd. at the Annual General Meeting of the Shareholders of the Company held on the 24th September 1964:—

Gentlemen,

The Audited Accounts and Director's Report for the period ending March 1964 have been in your possession for some time and with your permission I shall take them as read.

At the outset I would like to refer to the great loss that the nation has sustained in the passing away of Prime Minister Shri Jawaharlal Nehru in May of this year. For over 16 years since the attainment of Independence by India, Shri Nehru guided the destinies of the nation and steered the country clear through many dangers and pitfalls, both external and internal. His outstanding contribution to the nation has been the great impetus that he gave to the industrial and social development of the country. His broad vision, great insight and deep appreciation of modern advances in science and technology enabled him to guide the industrial progress of the country. More than that, his vision of a society broad-based on social justice and affording equal opportunities for all citizens, led to his determination to prevent the nation from falling back into archaic and superstitious ways of thought and life and saved the country at a time when the tendency was to enshrine all the past as glorious, irrespective of merits and demerits of the traditions we inherited. Whatever reservations some may have regarding Shri Jawaharlal Nehru's stewardship of the nation, none can gainsay the invaluable worth and value of the two distinctive assets which he has left to the nation. I trust that no corroding influences will destroy these precious assets.

For some time, it was a hackneyed question in India and elsewhere: "After Nehru, Who?" Some believed with faith in providence that "the hour will find the man". It is a matter of supreme thanksgiving that the nation, in its saddest and most critical hour, was destined to find in Shri Lal Bahadur Shastri the right person to be Prime Minister and leader of the nation. I can testify from my own experience how the unanimous choice of Shri Lal Bahadur Shastri was received with great relief and with equal admiration by the many nations of the world as it was received by the Indian public. Shri Lal Bahadur Shastri, without being personally known to many abroad, had somehow impressed his character and integrity, his modesty and sense of fair dealing as much on the people

abroad as on his own countrymen. His leadership of the nation and the guidance that he will give to the country in the solution of its many perplexing problems, both internal and external will be safe, prudent and practical. We join with others of our countrymen in wishing him all success in the great task and willingly offer our full co-operation in the work that lies ahead.

We, who are connected with Indian shipping, have reason particularly to welcome his Prime Ministership as he has been the architect of modern Indian shipping development. It was during his Ministership of the Transport Department that Indian shipping got a special impetus for expansion, development and courageous progress. His sympathy and understanding of the needs of Indian shipping, both in the public and private sectors, was responsible for the turn that Indian shipping took in its expansionist activities since 1954. I feel certain that his beneficent influence will be felt by Indian shipping.

PROGRESS:

In my speech at the last meeting, I indicated that it was inevitable that the freight rates from East to West would be increased and that it was generally recognised both by shippers and Government that this increase was justified in the circumstances in which shipping lines were working on the India-U.K.-Continent route. I had stated that the Conference had increased the rate by 12½% while the Indian lines had pressed for an increase of only 10%. The percentage proposed by the Conference was justified on the ground that, with the many exceptions that were made, with reference to commodities which were called sensitive and could bear only a lower percentage of increase, the effective rate would only be a total increase of 10%. The increase proposed was not approved by the Maritime Freight Commission and by the shippers, and the Indian lines, at a later meeting of the Conference induced their colleagues to accept the lower figure of 10%. This increase was effective from 1st October 1963 so that, as the Directors' Report points out, the effect of this increase was felt only for three months of the year under review through the completed voyages that took place after 1st October.

The year resulted in a net profit of a little over Rs. 9 lakhs after setting aside Rs. One crore & 28 lakhs for depreciation and after deducting all other charges. As you are aware, the result of the working of the company last year showed a loss of nearly Rs. 30 lakhs. I trust that the continued loss over the last few years has been definitely arrested and that a period

of profit making has begun. Even so, I cannot feel happy or satisfied any more than the shareholders, of the small profit that has been made this year.

PROBLEMS OF INDIAN SHIPPING:

It is unfortunate that, inspite of repeated statements of Chairmen of Indian shipping companies about the handicaps that they are seized with, there has been little achieved in solving these problems or mitigating the hardships and handicaps that face shipping and particularly Indian shipping. The delays in Indian ports have been referred to more than once and it has been pointed out how Indian shipping loses by the number of days it is held up unnecessarily at loading and unloading ports in India. Except for one or two ports, delays have continued to the same extent in the major ports of Calcutta and Bombay. Owing to berthing delays your Shipping Company lost 132 days in the year out of which 300 days were in Indian ports alone; rain and inclement weather has resulted in a further delay of 76 days. These artificial and natural handicaps have been aggravated by lightening strikes and labour troubles of various kinds which resulted in a further delay of 25 days. The slow arrival of cargoes to some of the ports, necessitating the holding up of ships which were ready to sail has contributed a further delay of 54 days. Thus, through avoidable causes except for rain and inclement weather, the days lost by your Shipping Company apart from the normal holidays was over 500 days. It must be admitted with appreciation that there was considerable improvement over the situation last year only at the port of Madras. The piece-rate system, which has not been accepted so far as Calcutta port is concerned, has further added to the delay in the turnaround of ships. The rate of discharge or loading is only a third of what it is in the port of Bombay where the piece-rate system prevails. When it is realised that more than half the trade of India moves through the port of Calcutta and that it serves a vast hinterland, the importance of energetic action being taken in Calcutta at various levels for remedying this acute state of affairs becomes obvious. Plans are no doubt under way for execution of long-range solutions of these difficulties; but the immediate present is of more concern to all shipping lines and particularly the Indian shipping lines.

To the delays in ports in India has been added in recent months similar delays encountered in some of the western ports owing to labour strikes and even go-slow tactics. The delays in western ports, though

comparatively shorter, are of considerable significance because the harbour and port charges and other incidentals of ships' delays in western ports are very much higher than similar charges in eastern ports. It is under these condition which prevailed during the year that the earning capacity of shipping lines in the U.K. Continent India trade has to be judged.

EXTRANEANUS FACTORS:

There are certain extraneous factors which are having an increased impact on the consideration of freight rates and on normal profits particularly for Indian shipping lines. The problem of earning foreign exchange and the consequential question of balance of payments has necessarily loomed large in recent times. India particularly and the less developed nations are seeking to meet their requirement of foreign exchange for imported plant and machinery and raw materials for their industrial development and must therefore, to a reasonable extent, concentrate on increasing their exports to various markets of the world. There have been many incentives considered in this connection for promoting exports. While I agree with this policy, I must reiterate that some shippers at least are taking advantage of the anxiety of the Government to increase exports and are constantly clamouring for a decrease in freight rates and objecting to even small increases. Shipping is as much an industry as any other industry and while land-based industries can cope with increasing cost of production due to a rise in labour cost or raw materials by an increase in the prices of the articles they produce, it is considered by some that shipping, in spite of the fact that all these increases affect them equally, could not adjust its freight rates suitably. It is essential that a more realistic attitude towards shipping should be taken by both shippers and ultimately by Governments and I feel certain that better results, even from the point of view of foreign exchange, will accrue from this altered attitude towards shipping lines.

The facilities that are available at ports in India are so poor in other directions also that they form a severe handicap to Indian shipping lines. It has been a matter of great concern that the dry docking and repair facilities in Indian ports leave very much to be desired. If, with this factor, Indian shipping lines are compelled to do the dry-docking and shipping repairs only at Indian ports as is often the case, not merely the resulting cost, but even more the resulting delay in carrying out this work, seriously affects the earning of these companies. During the year under review, your ships had to spend on an

average 15 days for facilities for dry docking and special survey. If this was done in a foreign port to which the ship had to go for discharge or loading, the average number of days would have been about 5. The cumulative effect of all the factors I have referred to above makes it difficult for Indian shipping, whether coastal or overseas, to make a reasonable profit unless one of two things occurs: either the freight rates are fairly increased or the amenities and conveniences at Indian ports are radically improved.

I feel that the time has come when the Committee in charge of national harbours is reconstituted with defined aims and objectives consistent with the needs of the times and their recommendations are not only seriously considered but given prompt effect to so that apart from long-term suggestions, immediate improvement may be made in the directions mentioned above.

I have referred to this long catalogue of grievances and deficiencies merely to explain the financial position of the Company. I feel

confident, as I said, that we have turned the corner and that a more favourable balance-sheet may be presented in the succeeding years. But shipping companies must be assured of fair conditions of working in Indian waters and in overseas ports. When I find as a result of the year's working in the Liner trade that your ships spent 3,379 days in port and 2,301 days at sea and that on the coastal trade they spent 993 days in port and 282 days at sea, that is, nearly 60 per cent in port in the Liner trade and 77 per cent in the coastal trade, I must confess that there is something radically wrong in the manner in which Indian shipping companies generally were obliged to work. The loss is as much to the nation as to individual shipping companies.

EXPANSION OF SHIPPING:

The need to expand Indian shipping is obvious and it is in this direction that some additional earning of foreign exchange may be expected. But the immediate increase in foreign exchange earnings of Indian shipping lines can well

be brought about—and comparatively easily—with altered conditions in Indian ports. I have advocated the expansion of Indian shipping but always with the basic idea that they will really increase the cargo carried to and from India. There is need for more tramp shipping, for tankers and for bulk carriers of appropriate size, and if attention could be concentrated by new entrepreneurs or even by established shipping companies on these kinds of ships, it will help the country as much as it will be of help to them. It will be disastrous if shipping companies which have an ambition to enter the Liner trade cut into the existing trades of Indian shipping companies on routes in which they have established themselves after great difficulty and considerable initial loss. They will only be dividing the income which the Indian shipping lines are now earning to the detriment of both themselves and of old-established lines. Given proper guidance by the Ministry of Transport in increasing the tonnage of Indian shipping and in fair and proper utilisation

of such tonnage, there is every reason to believe that Indian shipping can expand on healthy lines.

THANKS:

Our thanks are due to the Minister of Shipping for his continued help and guidance and to the officers of the Ministry, the Secretary, the Director-General of Shipping and his deputies and assistants, who have always given useful advice and timely help.

TRIBUTE:

I should like, on behalf of the Board and myself, to convey our sincere appreciation of the work of the officers and staff, both afloat and ashore. There has been devoted service in the interests of the Company. I should also like to express my thanks to the shippers, brokers and forwarding agents for their firm support and for the confidence they have reposed in us and in the quality of our service.

Note: This does not purport to be the record of the proceedings of the Annual General Meeting.

Aluminium Corporation of India Ltd.

* Shri Lakshmipat Singhania on Problems & Prospects of Aluminium Industry

The following is the Address Delivered by Shri Lakshmipat Singhania, at the Twenty-sixth Annual General Meeting of the company held on Monday, the 21st September 1964:—

Gentlemen,

It is my pleasure to welcome you again to the Twenty-sixth Annual General Meeting of the Corporation. Your Corporation is entering into a new era of development after toiling hard for quarter of a century for establishment of this highly technical industry in this country entirely by local talents and entrepreneurship, which involves competing with big giant companies all over the world having very large resources at their disposal for technical and development research and supported by their national Governments. In India, thinking on the establishment of new industries has been varying from time to time. On political platforms it has always been emphasised that development of national industries was very important but in practice support to those who pioneer basic industries has not been encouraging and preference is being given on other considerations. These types of industries in a country like India, can only be developed with the continued support of the national Government and the nation taking a long range view. The basic factor for development of an industry of this nature is the power rate which is even more important than the physical raw material for the industry, i.e. Bauxite. Until and unless power is made available for this industry at uniform rate and a rate suited

to this industry as is being done all over the world, our problems are not going to be solved. In the normal course, the entrepreneur should be free to establish an industry at a site most suited to the industry. But in view of the great scrutiny in licensing, if I may say so, the economic factors play the least part as against other factors like regional planning and those not connected with the economics of the industry. The new trend of the State to increase the revenue by tapping sources easily available to them irrespective of its effect on the nation as a whole is very disheartening. I have in mind impositions like Excise Duty on still undeveloped industries, Electricity Duty on Power or control on other facilities including mineral rights such as Bauxite from the point of view of individual States only without any consideration of the National interests.

ECONOMIC SIZE OF PLANTS:

Often arguments as to the size of the plant are being advanced and a minimum economic size is being determined and considered. In my opinion, this will depend on the circumstances from time to time. In every country when development of industry takes place, the size increases from small to big in due course and even today if the list of Aluminium Plants existing in the world is looked into, it will be found that plants in the range of 5000 tons also exist economically. Therefore, in view of the existing circumstances, construction of new plants of minimum size only is not always a prudent deci-

sion to be taken by the Government in countries like India. Probably, after some time when our economy has developed, the present minimum size, to us also will become rather small. Further in India today there is a talk about concentration of economic power and monopolies. And if this trend of thinking prevails, it will not be possible for Indian entrepreneurs even to match the Indian capital requirements even if foreign exchange component is available. Further restrictions are being put by limiting semi-fabrication facilities to producers of basic metals in the country thus making the plants uneconomical. It is a known fact that a highly capital intensive industry, as is the case with Aluminium metal or even steel, the cost of the plant upto the metal stage is much costlier per ton of installed capacity than the semi-fabrication plants like Rolling Mills etc. I cannot, therefore, understand the Government's insistence specially in case of Aluminium Industry that the main producers should be allocated restricted amount of semi-fabrication capacity as low as 50% of their ingot capacity. This means that the intensive capital expenditure has to be incurred by the main producers with a very low return and the advantage of higher return for semi-fabrication should be thrown open to small fabricators whose investments are comparatively very little. I may cite the example of steel industry in which most re-rollers exist on scrap and very small availability of billets. All the basic producers of steel plant have their own semi-fabrication facilities to a much larger ex-

tent almost about 85% of their steel making capacity.

DEMAND FOR ALUMINIUM:

The thinking for demand of Aluminium metal in the country seems to be changing every day as more metal is being produced and utilised. The consumption rate is keeping ahead of the metal production and this trend, in my opinion, will continue for some years.

In my speeches in the previous years, I had emphasised that the estimated consumption of Aluminium metal in the country can be in the region of 150,000 tons by the end of the Third Five Year Plan as against earlier thinking of 87,000 tons and later change to 115,000 tons. I am happy to state that the considered opinion now is that by 1966 the demand for Aluminium metal in fact will be 150,000 tons. With present rate of industrial development the consumption of Aluminium metal in all forms should reach about 300,000 tons by 1970. I am sure that this metal is going to play a very important role in Indian economy and it is all the more important for the Government to help this industry to develop at a faster rate.

STATE OWNED PLANTS:

By various announcements from time to time it is learnt the Government has been blocking certain available sites for putting up State owned Aluminium plants. Actually it will be in the interest of the private sector if Government would put up State owned Aluminium Plants as only then they would realise the real difficulties of this industry as has been in the case of State owned steel plants. There are number of other items which are more important and which the Government should handle as compared to putting up these industries which can be developed otherwise. The present economic pro-

gress is more or less stagnant. The rapid growth of economy is more important than anything else in country today. In the recent meeting of the World Bank it was rightly emphasised that all unyielding State investments must be curtailed and only yielding investments by the Governments should be encouraged. I only hope this policy will be rigidly followed by our Government too. The country is suffering because of fixed political ideas and considerations. For instance, the risk capital in India has never been recognised as really a risk capital. Instead of having incentives for real risk capital, the risk capital is penalised. There are instances like your own Company where the shareholders did not get dividend for 18 years. In all new industries of basic nature the shareholders will have to wait for certain number of years for dividends and thus those industries should be considered as national institutions rather than owned by any individual. From this point of view there should be much more incentive to the risk capital and such capital must be allowed to be nursed properly.

LABOUR:

The trend of appeasing the industrial labour followed in the country is very disquieting. There should be equal status for the industry and labour. Both are joining hands to generate economy in

the country. The total industrial employment is hardly 2% of the population. At the cost of the remaining 440 millions, why is this category only being promoted to create a new class for all types of special amenities such as high wages, Provident Fund, Dearness allowance, Bonus, State Insurance and so on. The recent decision of the Government in connection with the Bonus Commission is rather unique. The Bonus Commission was set up for formulating uniform norms for payment of Bonus. The latest decision of the Government has increased the complications further which means that both existing uncertain complicated methods of calculation and the Bonus Commission's formula as accepted by the Government have to be applied and whichever be in favour of the Labour has to be adopted. The Union Labour Minister's recent statement reveals that further burden of Rs. 18 Crores minimum will be added to the consumers notwithstanding spiral of high prices prevalent at the moment. It is to be realised that the extra burden falls on the remaining population of the country. It will be the happiest day for the country when every one can enjoy the benefits of the generation of the economy.

CORPORATION'S AFFAIRS:

I am happy to mention that your Corporation's expansion programmes have been more or less com-

pleted. The Corporation can claim to have one of the unique integrated plants where right from the coal raising, power generation, alumina production, smelting of aluminium metal, rolled products like sheets and circles, extruded products, A.A.C. and A.C.S.R. conductors and foils are produced in one compound in addition to its own Bauxite mining. It is necessary for this size of plant to be integrated for its very existence as without combining all these economies, a plant of this size with many odds like very high power rates and increasing coal prices, will be difficult to exist. The only way to maintain economies of this plant in competition with other bigger plants in India would be on the economies of the semi-fabricated products. I have pleasure in informing you that we are working up with the Government of India for further expansion of the present plant. It is hoped that in due course license will be available to your Company. All the expansion schemes which have just been completed will show full results probably in coming years. For the time being, I have only to refer you to the Balance Sheet as at 31st March 1964, which has been circulated to all of you. We have achieved satisfactory results by increasing our sales by 48% and reaching a new high figure of Rs. 345.15 lacs and also our profit has reached a new figure, although the present profit is far below in

view of the capital invested. The gross block works out to about Rs. 939.84 lacs plus working capital and the earning of Rs. 63.38 lacs as gross without providing for depreciation is rather low earning.

This year the Corporation has further expanded its capital by issuing Preference shares of Rs. 25.00 lacs and Ordinary shares of Rs. 17.81 lacs. After this fresh issue, the paid up capital of the Corporation will be Rs. 2 Crores and I hope the Corporation will be able to service this capital from its new earnings to the satisfaction of the shareholders.

As I have said earlier, these plants are more of national institutions dedicated to the creation and distribution of wealth for the national economy and are to be viewed in this perspective.

Gentlemen, I must congratulate all our workers, officers and the Managing Agents for their untiring zeal with which they have worked to bring this plant to the present status and I am thankful to the shareholders for supporting this Company on all occasions and also to our esteemed customers for their continued patronage.

NOTE:

This does not purport to be a record of the proceedings of the Annual General Meeting.

Market NEWS and Trends

JUTE

Decline in Prices

Conditions in the jute markets seem to be gradually returning to normal. Raw jute prices have been steadily declining all through the week—Assam Bottoms is now quoting at Rs. 37 per maund as against Rs. 38.50 this time last week. The prompt measures taken by the Jute Commissioner and specifically his decision to fix maximum purchase quotas for mills, have gone a long way toward arresting the unwarranted rise in prices. Although there are estimates which put the size of this year's jute crop somewhat below last year's level, the fact remains that during the past few days arrivals have considerably improved. The daily quantum of arrivals is bound to increase further now that the transport position in the growing areas has improved. Moreover, with the progress of the harvest of Tossa and Daisee the pressure of stocks seeking outlet will also steadily build up. Last but not least is the seasonal factor which has already begun to exert pressure. In other words with the proximity of the Puja season cultivators who could wait for better prices till some time ago may not choose to wait for long especially since jute prices have started declining. It would appear that Assam Bottoms will before long stabilise around Rs. 35, the level indicated to be about reasonable by the Jute Commissioner, who has also pointed out that it will be idle to expect jute prices to come back to last year's levels in view of the general rise in the prices of essential commodities.

In contrast to the raw jute market, the goods market has been depicting an irregular trend. Prices developed a weak trend on the opening day of the week mainly in sympathy with the raw jute section. During the next two days however sentiment improved mainly because of speculative interest in heavy goods following reports of fresh Government tender in B Twills. The improvement however proved shortlived as in subsequent trading values once again moved back although there were reports of further Government tender and some business with Australia.

and Mesta, yields have remained at the level of about 2.5 bales per acre, against the Pakistan and Thailand averages of between 3.5 and 4.00 bales per acre. Unless the average yield in India can be brought to the level of at least 3.5 bales per acre, it is going to be difficult for the jute industry to face growing competition in foreign markets and equally difficult for the cultivators of jute to enjoy a rising standard of living. In 1961, in an endeavour to rectify the situation, the Indian Jute Mills Association took up Jute Development Work. This programme is now in its fourth year and has already achieved a considerable measure of success.

The Association, instead of diffusing its energy over wide areas on small plots, took up large compact jute growing areas of between 150 and 300 acres and each and every cultivator on these Blocks was guided to adopt intensive methods of jute and Mesta cultivation. Starting with only nine Intensive Development Blocks in West Bengal during 1961, the work was gradually extended to the other jute growing States and there are now seventeen Blocks in operation.

each Block with implements, improved seed, plant protection chemicals and equipment, and encourages the application of manures and fertilisers by paying the cultivators a small subsidy on the expenditure incurred. To provide improved seed, the Association set up its own Seed Multiplication and Distribution Organisation. The seeds are sold at fixed prices in 1 kg sealed polythene bags and the quality of the seed is guaranteed. The sales price of the seed is subsidised by the Government of India. In addition, new methods of applying nitrogenous fertilisers have been devised. Urea solution is sprayed on the leaves by low volume power sprayers which cost between Rs. 450/- and 650/- each. With such equipment an acre can be covered in about 20 minutes. These sprayers have proved very popular with cultivators as only a small quantity of fertiliser is required and it is very quick to act.

This combined approach to the problem has yielded very good result in a short time. In the Nadia District of West Bengal the average yield of the Intensive Cultivation Block exceeded 5 bales per acre last year against the district average of 3 bales per acre and a

similar yield is expected this year in spite of adverse weather conditions. The Intensive Cultivation Block in Murshidabad District, which is located in poor soil, gave yield between 3.97 and 4.60 bales per acre during the last three years against the district average of only 2.75 bales per acre. Significant increases in other Intensive Cultivation Blocks in West Bengal have also been recorded.

In the Purnea District of Bihar the average yield ranges between 2 and 2.5 bales per acre. After demonstrating intensive cultivation for two years only, the average

INCREASING ACREAGE YIELD

IJMA's efforts Despite the efforts of the Government for the past fourteen years to increase the acreage yield of Jute

yield in the Banmanki Intensive Cultivation Block in this area had been increased to 3.69 bales per acre by 1963.

In the Balajan and Nowgong Intensive Cultivation Blocks of the Goalpara and Nowgong Districts in Assam, yields as high as 4.26 and 3.99 bales per acre respectively were obtained by 1962. Similarly rapid increases have been recorded in the Intensive Cultivation Blocks in Orissa and Uttar Pradesh. Even in Andhra Pradesh where the demonstration of intensive cultivation of Mesta was taken up from 1963 only, in the first year the average yield was increased by 0.7 bales per acre over the State average.

Apart from increasing the acreage yield, the method of approach adopted by the Indian Jute Mills Association has aroused the interest of the cultivators in the 'yield' problem and each Intensive Cultivation Block has become an organic unit for further expansion with the initiative generated by the cultivators themselves. The cultivators of some of the Blocks are now

forming their own Jute Development Committees for propagating the gospel of intensive cultivation amongst their neighbours.

TEA Prices Generally Lower

IN the Export Sale held in Calcutta this week, offerings consisted of 72,574 packages of Leaf grades. There was less demand than last week and prices realised were generally lower. Plain orthodox teas were sold readily at around last prices; but there was less support for the exportable Fannings and particularly Orange Fannings in this category received less enquiry and sometimes eased by up to 40 paise per kilo. Dooars and medium Assams received fair support, but at irregular and lower prices.

Good CTCs were sold readily, but at a discount of up to 40 paise with buyers following quality closely. Medium CTCs with the

exception of a few selected lines, were sold at irregular and lower rates with BPs receiving better support than their corresponding fannings. The price level for plain CTCs was almost maintained. Whole Leaf grades came to an easier market, particularly the better kinds. The few leg cut teas, on offer, were readily absorbed at slightly easier rates.

Darjeeling teas continued to sell well; but prices were easier following quality. Following rates were quoted:—Clean Plain Pekoe Rs 5.20 to 5.40; Plain Orthodox BP Rs 4.10 to Rs 4.30; Plain Orthodox Fannings Rs 4.30 to Rs 4.50; Plain CTC BP Rs 5.00 to Rs 5.40; Plain CTC Fannings Rs 4.80 to Rs 5.00; Medium CTC BP Rs 5.60 to Rs 6.20; Medium CTC Fannings Rs 5.60 to Rs 6.20; Good Assam CTC BP Rs 6.40 to Rs 6.70 and Good Assam CTC Fannings Rs 6.50 to Rs 6.90.

In the internal sale, offerings were 35,387 packages of Dusts. There was a good general demand at lower levels. Medium CTC des-

cription came to a good market; but prices were generally lower. The small and bright liquoring teas, however, were sold well. Good CTC descriptions continued to sell well; but they were sometimes easier. The limited selection of plain orthodox teas were keenly competed for. While Assam dusts came to a weaker market and were easier by 15 paise and sometimes more. Leg cut teas were, once again, sold well; but prices were generally lower. Following rates were quoted: Plain Orthodox Dust Rs 4.20 to Rs 4.60; Medium Assam Dust Rs 4.90 to Rs 5.40; Leg cut Dust Rs 5.00 to Rs 5.30; Plain CTC Rs 5.00 to Rs 5.20; Medium Assam CTC Dust Rs 5.30 to Rs 5.50 and Good Assam CTC Dust Rs 6.20 to Rs 6.50.

According to the latest monthly report released by Messrs J. Thomas and Company, five leaf auctions were held in August and the quantity on offer amounted to as much as 295,287 packages as against 215,600 packages offered in August last year. Quality throughout the month from all districts showed the normal seasonal decline although there were still some useful liquoring invoices on offer. Buyers followed quality closely and these better kinds continued to receive strong support. Where there was a falling away in quality, prices were correspondingly lower.

A feature of the market during August was the better demand for Fannings grades, particularly those of orthodox manufacture, this being due to the entry into the market of the UAR. The North Indian crop Leaf sales to the end of August were about 5.2 million kg ahead of last year, whereas dusts were 2.6 million kg ahead. UK shipments from 1 July to 31 August were about 5.1 million kg higher and the bulk of this increase is probably of tea for London auctions. It will, therefore, be seen that, so far as the Calcutta market is concerned, the crop increase to date is being absorbed.

In the Colombo market, a total of 6,154,560 pounds were offered. There was good demand for high-grown BOPs from western districts; but the majority of better liquoring sorts were 10 to 15 cents per pound lower. Other descriptions and medium BOPs were fully firm to dearer. Ovas teas met with fair demand; but prices were often substantially lower following a decline in quality. Bright liquoring small lowgrown teas were firm but leafy Middle East types were weak.

In the auction held at Cochín towards the end of last week, a quantity of 2.56 lakh kg of dusts was offered for internal consumption. The market opened with a good demand. Plain and residual sorts met with a fair support but sold at lower rates. Other kinds, under the medium category which, though meeting with better enquiry, were only irregularly firm. Highgrown received a good support and were fully firm to dearer. Clean black grainy descriptions were steady, while other types were fully firm and sometimes dearer.

In the auction at London this week, there was a discriminating demand for Assam best liquoring sorts at fully firm rates. Remainders were irregular. Bright liquoring mediums displayed an easier tendency and there were some withdrawals. Dooars CTCs were the strongest feature of the sale and ruled much dearer. Brown Dooars were also dearer. Plain Broken Pekoe was quoted at 35h 1d; Brown Dooars Fannings at 35h 11d and Best CTC types at 65h 3d to 75h 6d per pound.

COTTON Uptrend in Consumption

Consumption of cotton by the domestic mills is progressively improving and, naturally enough, the offtake of Indian cotton has increased considerably. The country's requirements of indigenous cotton at the end of the Fourth Plan period is estimated to be in the environs of 90 lakh bales, on account of the rapid population growth and the expected upswing in the per capita income. Addressing the ninetieth meeting the Indian Central Cotton Committee Mr A. D. Pandit stated that "even this quantity is not very much, considering the present standard of clothing of our people". Therefore, concerted efforts at stepping up cotton production in the country are imperative. The research and development programmes in India are not helpful for increasing cotton output on the requisite level. Mr Pandit was critical of these schemes as they are not "problem-oriented", which is evidenced by the low per acre yield in the country. There has been, however, slight improvement in the per acre yield during the past few years but we have to traverse much ground if we want to step up the productivity to any respectable level. As Mr Pandit observed the location of restricting factors and their expeditious removal alone can make any appreciable improvement in the cotton production in the country.

A generally subdued trend prevailed in the cotton futures market at Bombay during the past week. Consequently, the turnover was a mere trickle and price fluctuations were narrow.

The ruling contract, Jarilla March, moved between Rs 730.25 and Rs 725.25 during week and closed at Rs 725.75 against the previous week's closing of Rs 728.75. The undertone remained subdued.

The spot market at Sewri presented a mixed trend. Domestic sector was devoid of any prominent development. New crop Digvijay, Khandesh, and Berar cotton evoked some mill interest. Ready lots of Laxmi, CO2, and L147 changed hands at lower prices.

Brisk activity was reported in the export section. Business in new crop Bengal Deshi was estimated at 10,000 bales, as usual Japan accounting for the bulk of this quantity.

Registrations of Bengal Deshi from 1 to 16 September amounted to 32,019 bales.

In the import section spinner interest focussed on new crop African cotton and Egyptian growth.

Consumption of cotton by the mills in India from 1 September 1963 to 31 May 1964 showed a smart improvement of 336,710 bales at 1,560,581 bales of 180 kilograms each from the relevant figures in the same period of 1962-63. The spurt in cotton consumption is due to upswing in consumption of indigenous cotton from 3,500,220 bales to 4,099,506 bales and that of Egyptian growth from 90,104 bales to 114,437 bales. This was, however, partly offset by steep decline in consumption of all descriptions particularly of cotton imported from Pakistan, America (including Peruvians) and Sudan.

	1962-63 1 Sept to 31 May	1963-64 1 Sept to 31 May
Indian	3,500,220	4,099,506
Pakistan	105,903	5,648
American	228,467	212,265
Egyptian	90,104	114,437
Sudan	169,726	92,980
East African	59,167	31,232
Others	10,284	4,513
Total	4,223,871	4,560,581

Imports of cotton from 1 September 1963 to 29 August 1964 showed a marked decline by 210,528 bales to 627,364 bales from the relevant figures in the corresponding period of 1962-63. Barring a rise in imports of Egyptian cotton by 23,792 bales to 163,178 bales and a moderate increase in imports of East African cotton there was a general decline in imports of other descriptions.

	1962-63 1 Sept. to 29 August	1963-64 1 Sept. to 29 August
Description	400,992	249,762
American	161,420	126,192
Sudan	139,206	163,178
Egyptian	67,889	76,431
East African	51,913	4
Pakistan	16,472	11,797
Other Sorts	—	—
Total	837,892	627,364

Exports of cotton during the period under review also recorded a fall of 68,003 bales at 266,709 bales from the relevant period in the previous season.

	1962-63 1 Sept to 29 August	1963-64 1 Sept to 29 August
Countries	4,637	5,666
UK	27,366	29,140
Continent	11,014	10,103
Hongkong	277,002	200,902
Japan	14,076	18,515
USA	1,517	2,378
Others	—	—
Total	335,612	266,709

PIECEGOODS

Trading in the cloth market in Bombay remained sluggish during the past week due mainly to the delay in the announcement of the new textile prices, which resulted in limited turnover in the domestic sector and the disparity in prices

which prevented the overseas dealers to enter the market in a big way.

The domestic sector turned to be phlegmatic as the upcountry dealers were hesitant to make any commitments owing to the uncertainties clouding the new pattern of prices. This apart, the stringency in the monetary market was another major factor which resulted in the low upcountry demand. The reported return of some of the upcountry bills unhonoured on account of the failure of some parties also created panic in the piecegoods market.

The cumulative effect of all these factors is that stocks with the mills and the traders is progressively piling up and prices of some of the items hardened.

In the week's trading prices of varieties such as grey marking and prints and seasonal goods like coating declined slightly. Gadlapat was offered at reduced rates but purchasers were conspicuously absent.

Dull conditions prevailed in the powerloom section. Though there were stray enquiries and moderate offtake by buyers from Bihar there was little improvement in general dullness in that section. Even the local purchasers shied away from the market in the initial stages. However, consequent upon the publications of the Mehta Committee's recommendations, demand for powerloom goods started looking up.

As usual, the UK figured prominently as the leading oversea country in the export section. Understandably enough, there was a spurt in demand for a variety of goods from buyers belonging to that destination thanks to the announcement by the British Board of Trade of an additional export quota of 4.16 million square yards for India for the current year. The offtake, however, was restricted on account of the disparity in prices.

Demand from the US focussed on categorised goods while Russian interest centred on furnishings. Encouraging enquiries from East and West Europe were reported though the offtake was infinitesimal. Sudan was satisfied with a moderate quantum of voiles and grey sheetings of lower widths and dories.

Pepper—Crop and Export Prospects

ACCORDING to available indications, the prospects for world black Pepper in 1964-65 are very bright. India is expected to harvest a bumper crop of 28,000 tons as against 24,000 tons. It is stated that the beneficial rain, received towards the end of the monsoon, will help a healthy growth of berries. The earlier fear of damage to the crop, because of the late start of the monsoon, is now allayed. It is, however, expected that the crop may move in the terminal markets in Malabar some-what late.

The crop in Indonesia—another important producing country—is

estimated at 30,000 tonnes reflecting an increase of about 8,000 tons over the previous crop. Although the crop reports from Sarawak and Brazil are still not available, it is felt that both the countries will harvest larger crops than last year's.

Even though the crop prospects are considered to be very encouraging, the future for the export of Indian pepper is not bright. The total export in 1963-64 is not expected to be much more than 16,000 tonnes. America has already covered its entire requirements for 1963-64. It has imported 17,000 tonnes, quite adequate to meet her needs for the season ending September 1964. Meanwhile, in the Cochín market, the rate for the ready position is quoted at Rs 348.50 per quintal.

It is understood that the Pepper and Ginger Merchants' Association, Bombay, has requested the Forward Markets Commission to grant permission to commence hedge trading in the new black pepper crop Posh contract. The permission is likely to be given, subject to the terms and conditions that govern the current Bhadrabad and Ashvin contracts. Trading is expected to commence soon. The price prospects in the new contract are difficult to be assessed, as there is no clear picture regarding the crop.

NON-FERROUS METALS Still Buoyant

Excepting scraps, the Bombay non-ferrous metals market continues to remain buoyant. Prices of tin, copper, zinc and lead have advanced to fresh higher levels on sustained buying from dealers and stockists, while stocks are reported to be not sufficient to meet the offtake. Tin is quoted high at Rs 329 (per 10 kg); Copper Conductor at Rs 440 (per 50 kg); Zinc at Rs 350 (per 100 kg) and Lead at Rs 305 (per 100 kg).

On the London Metal Exchange, Tin has reached a new post-Korean War record of £1,450 per ton. Even the news that the International Tin Council and the USA are going to discuss means of checking current runaway prices has failed to have any effect on the market. Consumers, particularly in countries with heavy tinplate and canning demand, are desperately short of the metal at economic prices. The present behaviour of the market reflects the doubt whether the USA will feel free to increase stockpile releases to world markets in view of the Far Eastern political situation and the domestic boom. It is felt that next month's talks may at best result in no more than rephrasing of releases, leaving the net position largely unchanged. In the meantime, there are reports of a declining output in Malaysia—34,600 tons in the first seven months of this year as against 35,200 tons in 1963. There are also reports of shortfalls from the rundown Indonesian industry. This situation together with doubts about the American stock position has stimulated much needless hoarding and speculation, leading to the current price spiral.

SMALL SCALE INDUSTRIES

SUGAR Hopes

Sugar markets have continued to rule steady. Hopes are now entertained in trade circles that the interim sugar policy, which is to be announced in a few days' time on the basis of the Sen Committee's preliminary report, will be more realistic. These hopes appear to stem from the belief that, if sugar production is to increase under the existing conditions, the industry has to be offered some incentive.

One of the ideas under discussion for some time in this connection suggests partial decontrol or limited control. In other words, production beyond a stimulated quantity will be free from control. The idea was put forward on behalf of the industry some time ago; but did not find favour with the Government then for various reasons. It seems to have been revived now. In this connection, the official publication, "Indian Sugar" has again stressed that, for the ensuing season if complete de-

control is not practicable because of the limited carryover stocks, the factories should at least be allowed limited freedom through adoption of a policy of selective control. This is considered essential for maximising sugar output.

Meanwhile, in the Hapur market, sugar prices are ruling very steady due to limited supplies. Unofficially, the rate is quoted at Rs 172 to Rs 175 per quintal as against the controlled prices of Rs 126 to Rs 136.

The cane crop is reported to be progressing well. The new policy regarding gur, khandari and sugar is expected to be released by the Government before the end of the current month. Trade circles expect that the Government may enforce price control on gur and khandari, whereas part of crystal sugar produced by the mills may be released for sale in the open market.

There are even rumours to the effect that the Government may remove the restrictions imposed on khandari at the beginning of next month. Hence, some of the mer-

chants are unwilling to reduce their stocks to take advantage of higher prices after the removal of restrictions.

SILK Steady Market

Prices of the Government fixtures silk in the Mysore State remained steady during the week under review. Kisan Silk also had a steady market. Cottage basin silk had fall only in the maximum to rule between Rs 81.57 and Rs 97.00 per kg.

A mixed trend was observed in the prices of Charka silk. Superfine had no market. 1st and 3rd qualities had a fall only in the maximum to range between Rs 72.75 and Rs 79.35 and between Rs 66.14 and Rs 68.34 per kg respectively; whereas the 2nd and Dupion Charka had a fall only in the minimum to rule between Rs 68.34 and Rs 72.75 and between Rs 28.66 and Rs 41.69 per kg respectively.

The prices of the Spun Silk yarn remained unchanged.

A downward trend was observed in the prices of Mulberry reeling cocoons. The Sidlaghatta market had fall only in the maximum to rule between Rs 5.50 and Rs 7.25 per kg; whereas the Channapatna and Mugur markets had a fall both in the minimum and maximum to range between Rs 3.00 and Rs 5.20 and between Rs 3.20 and Rs 4.50 per kg respectively.

In the case of seed cocoons, the Foreign variety had a steady market; whereas the Mysore variety had a fall only in the maximum and was quoted between Rs 5.50 and 7.00 per thousand.

The Malda Silk market remained stationary except for Silk waste and Reeling cocoons, which were available between Rs 1.81 and Rs 2.50 and between Rs 4.31 and Rs 4.75 per kg respectively.

Prices in the Assam Silk market remained steady.

The f.o.b. prices and landed cost of Japanese raw silk of 20/22 Dr '2A' were Rs 56.96 and Rs 91.43 per kg respectively during the month of August, 1964.

OILS AND OILSEEDS Spurt in Prices

An important development in the Bombay Oilseeds market is the removal of the ban on forward trading in Groundnut Oil. The sharp rise in the prices of these commodities is caused by a sustained shortage of supplies. While the prospects for arrivals of new Gujarat crop continue to be uncertain, the actual arrivals from other parts of the country remain much below the normal requirements. As such, Karad variety has moved up to Rs 73.50 and Groundnut Oil to Rs 32.50.

In the Castorseed section, too, prices have moved up despite the stalemate on the export front. Trade circles feel that the overall prospects for export oil continue to be bright, as the demand from the Communist countries is rather brisk. In fact, the shippers are reported to have committed deals for a large quantity.

The actual exports of castor oil from the country are estimated at 18,000 tonnes. The commitments for the current month are placed at 18,000 tonnes; for October 7,000 tonnes and for December 6,500 tonnes. This means that, of the estimated 1.50 lakh tonnes of castorseed crop, 95,000 tonnes will move to foreign countries, leaving about 55,000 tonnes for the domestic consumption. Thus, the overall supply position continues to be tight.

In the Madras Groundnut market, buoyant conditions continue to be in evidence although the oil section shows slight weakness. The quotation for the Coromandel variety is marked at Rs 112 per bag of 80 kgs. South Arcot district markets and Pollachi are reported to be commanding good arrivals. Arrivals of the new crop are reported in Salem areas. Despite these good arrivals, the market is ruling very firm, thanks to sustained and steady demand.

Tata Power: — (15th) 1267.50, 1277.50; (16th) 1277.50, 1280.00;

(17th) 1277.50; 1282.50; (18th) 1280.00, 1282.50.

CEMENT:

A. C. C.:—(12th) 164.50, 165.00, 164.50; (14th) 164.50, 164.75, 163.00, 163.75; (15th) 163.50, 164.25, 164.00; (16th) 164.00, 164.25, 163.00, 163.25; (17th) 163/-, 160.75; (18th) 161.00, 160.75, 162.50, 162.25.
Orissa:—(14th) 11.56, 11.68; (15th) 11.60; (16th) 11.60, 11.56; (17th) 11.48, 11.52, 11.44.
Shree Digvijay:—(12th) 182.00, 182.50; (14th) 182.50, 184.90; (15th) 184.00, 183.00; (17th) 183/-, 182.50, 183.00; (18th) 182.50, 182.25, 182.75.

STEEL:

Indian Iron:—(12th) 26.85, 26.95, 26.75, 26.80; (14th) 26.95, 27.05, 26.95, 27.05; (15th) 27.10, 26.90; (16th) 26.95, 26.80; (17th) 26.90, 26.85, 27.00; (18th) 27.00, 26.90, 27.05, 27.00.
Mukund:—(12th) 18.72; (14th) 18.80, 18.68, 18.72; (15th) 18.76, 18.72; (16th) 18.72, 18.56; (17th) 18.52, 18.48; (18th) 18.44, 18.40, 18.52.
Tata Steel Equity:—(12th) 158.75, 159.25, 158.50; (14th) 159.25, 159.75, 159.25, 159.50; (15th) 159.50, 158.50, 158.75; (16th) 159.00, 159.25, 158.25; (17th) 158.75, 158.00, 158.75; (18th) 158.50, 158.75, 158.25, 159.00, 158.75.
Tata Steel (2nd Pref):—(14th) 108.50, 108.75; (15th) 108.75; (16th) 108.75; (16th) 108.50, 109; (17th) 109, 108.75; (18th) 108.50, 108.75.

ENGINEERING:

Alcock:—(12th) 301, 302, 299; (14th) 300, 302; (15th) 302, 303, 299, 300; (17th) 300, 298, 300; (18th) 399, 286, 299.
Cooper:—(12th) 122.50, 123.50; (14th) 123; (15th) 123.50, 123; (16th) 124, 124.50; (18th) 124, 120.
Larsen & Toubro:—(12th) 22.88, 23.04, 22.76, 22.84; (14th) 22.88, 23.00, 22.96; (15th) 23.00, 22.72; (16th) 22.76, 22.92, 22.76; (17th) 22.80, 22.88, 22.76; (18th) 22.64, 22.80.
Tata Eng & Locomotive:—(12th) 276, 276.25, 274; (14th) 276.50, 275.25, 277, 276.50; (15th) 276.50, 274; (16th) 275, 270.50, 271; (17th) 271.50, 270, 272.50; (18th) 271.50, 272.50, 271, 272.
Voltag:—(12th) 271.50, 273, 268.50, 270; (14th) 273, 272, 275; (15th) 275, 272; (16th) 272, 273, 270.50, 271; (17th) 271, 270, 271.50; (18th) 271, 269, 270.
Great Eastern:—(12th) 14.52, 14.48; (14th) 14.44, 14.48; (16th) 14.44.
Scindia:—(12th) 16.52, 16.60, 16.28, 16.32; (14th) 16.36, 16.32, 16.48, 16.44; (15th) 16.44, 16.48, 16.32; (16th) 1

ENGINEERING:

Antifriction Bearing:—(15th) 7.04 6.88; (17th) 7.48.
Associated Bearing:—(12th) 110 (14th) 109.50; 110.50, 108 (15th) 107; (16th) 105 (17th) 105 (18th) 105, 105.50.
Bharat Forge:—(14th) 45.00.
Brady Eng:—(14th) 89.50, 90.00 (15th) 90.50, 30.00.
Chase Bright Steel:—(12th) 7.90, 6.92, 7.00; (14th) 7.00 (15th) 7.00 (16th) 7.94, (17th) 6.88, 7.00.
Elco Eng:—(12th) 97.00, 98.00, (16th) 99.00, (17th) 98.00.
Fit Tight Nuts & Bolts:—(16th) 176, (18th) 176, 175.
Gujarat Steel Tubes:—(14th) 81.00, 80.50 (16th) 80.50, 82.00 (18th) 79.00, 81.00.
Hindustan Elec:—(12th) 106, 108, (15th) 109 (16th) 109.50, 108; (18th) 108.50, 109.
Indequip Eng:—(17th) 72.00, 73.00 (12th) 73.00.
Indian Link Chain:—(16th) 95.00; (17th) 94.00, 96.00, (18th) 98.00.
Invest Machine Tools:—(14th) 88.00; (17th) 88.00.
Jyoti:—(17th) 135 135.50.
Kamini Eng:—(14th) 13.04.
Kilboskar Brothers:—(12th) 40.00.
Kilboskar Cummins:—(12th) 91.50 (14th) 91.00, (15th) 90.50 (18th) 90.50, 91.00.
Lakshminaray Eng:—(12th) 6.12.
Lynnachinery:—(12th) 7.00, 6.96 7.00, (14th) 7.00, 6.84 (15th) 6.64 (16th) 6.40.
Mahindra & Mahindra:—(12th) 17.24, (14th) 17.24; (16th) 17.12 17.24 (17th) 17.16, 17.24, (18th) 17.24.
New Standard Eng (Rs 100):—(14) 133; (15th) 132, 131.50, 132.50 (16th) 131.
New Standard Eng. (Rs 50): (16th) 75.00, 76.00.
Precision Bearing:—(18th) 89.00.
SLM Maneklal:—(12th) 155, (14th) 156, (15th) 156; (16th) 155, 154 (17th) 155, 156; (18th) 156.
Sandvik Asia:—(12th) 174, (17th) 174, (18th) 174.
Sankey Wheels:—(12th) 12.40, 12.52, (14th) 12.36, (15th) 12.12; (16th) 12.24 (17th) 12.24, 12.28.
Star Textile Eng:—(14th) 111, (17th) 111; (18th) 110, 111.
Structural Eng. (Old):—(14th) 85 (15th) 85.50.
Structural Eng (New):—(14th) 81 (15th) 78.00.
T. Maneklal Mfg. (Old):—(12th) 535, (17th) 540; (18th) 540, 550, 545.
T. Maneklal Mfg. (Nek):—(12th) 472.50, (15th) 500.
Tak Machinery:—(12th) 93.50, (14th) 93.00, (15th) 93.00, 92.00; (16th) 92.50, (17th) 91.00, (18th) 91.00, 92.00.
United Wire Ropes:—(12th) 92.50, 92.50, (14th) 94.00, 93.00, (18th) 92.00.
Zenith Steel Pipe:—(12th) 15.24; (15th) 15.44.

CABLES & ELECTRICAL GOODS:

Asian Cables (Old):—(12th) 67.00, (14th) 67.00 (15th) 67.50; (16th) 68.00, (18th) 67.00, 68.00.
Asian Cables (New):—(18th) 65.70
Bharat Biljee: (14th) 137.50, 138.15
Hind Rectifiers:—(14th) 7.24; (17) 7.32.
Elpro International:—(14th) 124; (15th) 123, (17th) 123, 123.25; (18th) 123, 122, 123.
Estrela Batteries:—(17th) 73.00; (18th) 74.50.
Mahendra Electricals:—(12th) 70 (15th) 72.00.
National Ekco Radio:—(18th) 200.
Oriental Power:—(12th) 71 00; (14th) 71.00, 71.50, (18th) 69.50, 70.00.
Standard Batteries:—(14th) 165.
Universal Cables:—(12th) 11.36; (14th) 11.36, (15th) 11.36, (16th) 11.20.
Wandelside National:—(14th) 110, 109; (15th) 110 (16th) 110, 111; (18th) 109.

AUTOMOBILES, CYCLES AND

ACCESSORIES:

Automobile Products:—(14th) 8.12 8.00; (17th) 8.00.
Bajaj Auto:—(12th) 118, 119; (14) 119, 118; (15th) 118, 119 (16th) 119; (17th) 120, 119.
Globe Auto:—(17th) 74.00.
Hind Cycle:—(12th) 81.00, 82.00 (16th) 80.00.

SHIPPING:

Bharat Line:—(14th) 4.32, 4.40; (18th) 4.50.

DYES, CHEMICALS AND PHARMACEUTICALS:

Adarsh Chemicals:—(17th) 71.50.
Alembic Chemicals:—(12th) 161.25 163; (15th) 162.50; (16th) 161.25 162.50, (18th) 161.25, 162.50.
Barax Nararji:—(17th) 64.00.
Chem Pharma:—(14th) 32.00; (16th) 32.25.
Citric India:—(12th) 70.00; (14th) 71.00, 70.00; (15th) 69.00 (16th) 68.00, 67.50 (17th) 68.00.
Colour Chem:—(14th) 325 (15th) 326.25, (16th) 325, 322.50; (17th) 322.50 (18th) 320, 325.
Dharam Chemical:—(12th) 126.25 127.50 (14th) 125 (16th) 122.50.
Dhrangadhra Chemical:—(12th) 130, (14th) 130, 131 (15th) 130 131, (16th) 130, 130.50 (17th) 130 130.50 (18th) 129.50, 130.50.
Pasticides:—(15th) 6.48.
Sardesai Brothers:—(18th) 63.00, 63.50.
Synthetics & Chemicals:—(12th) 84.50, 83.00; (14th) 85.00, 83.00; (15th) 83.00, 81.00; (16th) 83.00, 80.00; (17th) 80.00, 79.00, 80.00; (18th) 80.00, 79.00.
Trav. Electro Chemical:—(15th) 60.00, 59.50.
Ultramarine & Pigments:—(15th) 109, 110; (18th) 109.50, 110.

SUGAR:

E. I. D. Parry:—(16th) 36.40.
Kesar Sugar:—(18th) 85.00, 87.50.
Ravalgaon Sugar:—(17th) 62.00.

FOOD PRODUCTS & VEG. OILS:

Hindustan Lever:—(14th) 31.00, 31.50; (16th) 31.00; (18th) 31.00.

POTTERIES & TILES:

Bombay Potteries:—(14th) 192.50.

RUBBER GOODS & TYRES:

Coal Tyres:—(12th) 92.50; (14th) 93.70; (15th) 93.70; (16th) 93.70, 92.50; (17th) 93.70.
Indian Rubber Regenerating:—(12th) 57.00; (17th) 59.00.
Madras Rubber (Rs 10):—(12th) 10.24; (15th) 10.24; (16th) 10.20, 10.24; (17th) 10.24, 10.04; (18th) 10.04.
Madras Rubber (Rs 5):—(16th) 4.76, 4.88, 4.72; (17th) 4.76, 4.62; (18th) 4.60.
Premier Tyres:—(12th) 80.00, 81.00; (14th) 81.00; (15th) 79.50, 81.00; (16th) 80.00, 81.00; (17th) 79.00, 81.00; (18th) 79.00, 80.00.

OTHER MISCELLANEOUS:

Bombay Burmah (Rs 20):—(14th) 43.00, 43.25; (15th) 43.00, 43.26; (16th) 43.00; (18th) 42.50.
Bombay Oxygen:—(12th) 79.00, 78.00; (14th) 78.00; (15th) 75.00, 76.00; (16th) 76.00, 75.00.
Borosil Glass:—(12th) 12.12, (16th) 12.04, 12.08; (17th) 11.88, 12.00; (18th) 12.12.
B. I. Corp.:—(15th) 10.60; (18th) 10.88, 11.00.
Comphor & Allied:—(14th) 93.60, 94.00; (16th) 93.50, 95.00; (17th) 94.00, 96.50; (18th) 95.00, 96.50.
Chemicals & Fibres:—(12th) 15.40, 15.52; (14th) 15.52, 15.48, 15.58; (15th) 15.60, 15.48, 15.64; (16th) 15.64; (17th) 15.64, 15.88; (18th) 16.00, 16.12.
Chemicoat:—(14th) 100, (16th) 97.00, 98.00; (18th) 98.00.
Escorts Ltd. (Old):—(14th) 16.48, 17.00; (16th) 15.76, 17.24.

Escorts Ltd. (New):—(16th) 15.48.
Fibreglass Pilkington (New):—(12th) 7.32; (17th) 7.28, 7.36.

Gammon India:—(12th) 14.24, 14.36; (14th) 14.40, 14.48; (15th) 14.32; (16th) 14.60, 14.52; (18th) 14.48, 14.44.
Gammon India (New):—(12th) 15.00; (15th) 13.12; (17th) 13.36; (18th) 13.36.

Grayce Cotton:—(16th) 176.25.
Hindustan Oxygen:—(18th) 53.00.
Hindustan Wired Glass:—(17th) 87.50, 85.00, 89.00.

Hingir Rampur Coal:—(16th) 47.00; (17th) 47.00.
Indian Home Pipe:—(14th) 161.00, 161.50.

Killick Industries:—(12th) 101.00; (14th) 100.50, 101.00; (15th) 161; (16th) 101.60; (17th) 101, 101.50.
Luxmi Starch:—(12th) 142.50, 145; (14th) 142.50 150; (15th) 143.75, 147.00; (16th) 143.75.

Ogale Glass Works:—(12th) 4.12.
Paper Products:—(17th) 97.00.

Permanent Magnets:—(12th) 112.50, 116.25; (14th) 115, 113.75; (15th) 108; (16th) 107.50, 105.00; (18th) 105.00.

Phillips Carbon:—(12th) 13.64.
Prabhat Udyog:—(16th) 66.70.

An Armoury in India's Battle Against Disease

By A Correspondent

The antibiotics plant, which is being built with the economic and technical assistance of the Soviet Union, was founded on 2 October 1961, Mahatma Gandhi's birthday, and is shortly going to attain the age of three years. One might profitably review the progress made in these years during which the plant has been taking shape brick by brick.

The 300-ton antibiotics plant is being built under the Indo-Soviet agreement of 29 May 1959, under which the Soviet Union agreed to provide credits and technical assistance for the construction of a number of pharmaceutical enterprises in the public sector. The plant is being built over an area of 900 acres of land at Virbhadra, near Rishikesh, acquired by the Indian Pharmaceuticals Ltd. from the Forest Department of the Uttar Pradesh Government. The selection of the site was determined by such considerations as an abundance of cool, running water from the Ganga River nearby, suitable conditions for fermentation processes and the low dust content in the atmosphere. These have made Virbhadra an ideal site for the plant.

PREPARATORY WORK

Before construction could begin in March, 1962 when the foundation-stone for the Administrative Block of the project was laid, a lot of preparatory work, such as clearing the jungle, levelling and fencing the ground, laying roads, electric lines, etc., had to be carried out.

The construction work, including civil construction work, is being done in accordance with the working drawings prepared by Soviet experts. The drawings for nearly all the main blocks of the plant's buildings have been received, and construction work begun.

The blocks

For the INVESTOR

INVESTMENT GOSSIP

Fresh Apprehensions

STOCK market sentiment which was quite steady in earlier dealings deteriorated markedly with the introduction of the Bill to amend the Companies Act. The amending Bill is mainly based on the recommendations of the Vivian Bose Commission and the Daphtary-Shastri Committee. The new provisions envisage among other reforms added powers for the authorities for investigation into the affairs of companies as well as for stricter supervision over the working of the corporate sector. Although these changes are to be welcomed because their main objective is to safeguard the interests of shareholders, the stock market seems to be worried particularly over two provisions: one which seeks to make it an offence to make applications for shares or their allotment in the name of fictitious persons and the other which contains restriction designed to curb the abuse inherent in the system of blank transfer of shares. Evidently, it is feared by the speculative fraternity that while the second will seriously interfere with the working of stock markets, the first will result in a marked diminution of business.

As far as investment activity is concerned, there is general reluctance to extend commitments despite some important favourable developments. This is presumably due to a tendency to await further developments in economic situation. Though the Prime Minister has admitted that the next two months will be difficult, he is also confident that the Government will be able to tackle the food situation quite satisfactorily. Investors have reason to be optimistic about the outlook for the corporate sector because the working of many a company is already quite encouraging and with improved prospects of maintenance imports, industrial performance should show a marked improvement in coming months. Though Mr T. T. Krishnamachari's assessment of the investment situation is not convincing, reading between the lines some have come to entertain the hope that some ameliorative measures are in the offing. With the Unit Trust continuing to make sizable purchases, equity values will not remain depressed for long, though a revival of activity may not ensue without fresh incentives.

NEW ISSUE NOTES

Birla Jute

THE Birla Jute Manufacturing Company Limited, Calcutta, is to issue further capital of Rs 39,89,060, divided into 3,98,906 ordinary shares of Rs 10 each for cash, at a premium of Rs 7 per share, to be issued to the existing shareholders in the ratio of one share for every four shares held. The money will be utilised for financing renovation and the repayment of certain unsecured loans.

Micro Tools

Micro Tools Limited, Madras, a new company, will be issuing capital of Rs 40 lakhs in equity shares for the manufacture of small and hand tools in the beginning and then of precision tools for cutting, boring and countersunk works. The total capital cost of the scheme is estimated at Rs 75 lakhs, which will be met by the issue of capital of Rs 40 lakhs and by loans from Industrial Credit and Investment Corporation of India etc.

Andhra Steel Corporation

Andhra Steel Corporation Limited, Calcutta, is to issue capital of Rs 30 lakhs, divided into 30,000 equity shares of Rs 100 each for cash, at par. Out of this issue, such number of shares as will enable the scrip to be listed on the recognised stock exchanges will be issued to the public by prospectus. The money will be utilised for the setting up of a steel foundry.

MP State Industries Corporation

The Madhya Pradesh State Industries Corporation Limited, a State Government undertaking, is to issue a further capital of Rs 42.77 lakhs, divided into 42,770 equity shares of Rs 100 each, at par, to the Government of Madhya Pradesh in lieu of assets transferred or to be transferred by the latter.

Prestolite

Prestolite of India Limited, New Delhi, is to issue further capital of Rs 9 lakhs in 9.5 per cent preference shares of Rs 100 each for cash, at par. The capital will be utilised for the manufacture of windscreens wiper motor assembly and distributor assembly.

Speciality Papers

The Speciality Papers Limited, which is putting up a plant at

Morai (South Gujarat) with the technical collaboration of a West German firm for the manufacture of various kinds of speciality papers, will enter the capital market shortly with a public issue of Rs 15 lakhs, comprising of 75,000 equity shares of Rs 10 each and 75,000 9.5 per cent redeemable cumulative preference shares of Rs 10 each.

At present, the management of the company is negotiating with the leading financial institutions to get the entire issue underwritten. The issue is expected to be made in November. Meanwhile, the company has almost completed the construction work of the factory and the commercial production is scheduled to start on 15 October.

Jaipur Metals

Jaipur Metals and Electrics Limited has proposed to raise the share capital by Rs 18 lakhs to Rs 78 lakhs by the issue of preference shares of Rs 100 each. The new 18,000 preference shares will be offered, in the first instance, to the existing shareholders of the company and the shares, which are not taken up by the shareholders, will be offered for public subscription. The company is expected to enter the capital market by the end of October for the public issue. The directors of the company are negotiating with various financial institutions to get the capital issue underwritten.

Ashok Paper

Regarding the recent issue of 1,50,000 equity and 25,000 9.5 per cent cumulative redeemable preference shares, the directors of Ashok Paper Mills Limited have decided to extend the period for submission of applications for right shares up to 31 December 1964. They have also decided to extend the time for submission of request for the issue of split Letter of Rights from 19 August to 31 December 1964.

★

INVESTMENT NOTES

Bombay Oxygen

The directors of Bombay Oxygen Corporation Limited have decided to drop the proposal of purchasing 20 per cent of the paid-up share capital of Permanent Magnets Limited with a view to acquiring the sole selling agency of all the productions of the latter. In view of certain unfounded and unwarranted attacks carried on by a certain section of the shareholders,

the directors have decided not to implement the scheme.

Hindustan Sugar

The Hindustan Sugar Mills Limited, as part of its diversification plan, proposes to set up a chip board factory at Golagokarnath in Uttar Pradesh by utilising its surplus sugarcane bagasse. For the implementation of this project, the company has entered into a technical collaboration with International Design Corporation, a reputed American firm specialised in designing dry-process chipboard plants. The collaboration agreement has been approved by the Government of India.

Wellman Incandescent

The working of Wellman Incandescent India Limited has resulted in a loss of Rs 6.02 lakhs for the year ended 31 March 1963. The directors have decided that this loss, together with the loss of Rs 3.81 lakhs brought forward from the preceding year, should be carried forward. In the statement issued by the company, it is stated that this loss has arisen due to number of factors over which the company has no control, such as the inordinate delay in the issue of import licences for components and the non-availability of bulk power supply at the factory.

It is added that the import licence for components has since been received and orders are being executed on a satisfactory scale. Import licence for the year 1963-66 is also expected to be issued shortly. The company has a full order book and sales for the current year are expected to be considerably higher.

IBP

In line with the indications given by the Chairman of the Indo-Burma Petroleum Company Limited at the last annual general meeting held in May 1964 about the prospects of further investment of the company's surplus funds, the directors have now decided to invest Rs 25 lakhs in the share capital of two new companies—Shama Forge Company Limited and Shama Pistons and Rings Limited.

The investment in Shama Forge Company Limited will be in the form of subscription to one lakh equity shares of Rs 10 each at par and 5,000 9.5 per cent cumulative redeemable preference shares of Rs 100 each at par. The investment in Shama Pistons and Rings

Limited will be made up of 80,000 equity shares of Rs 10 each and 2,000 9.5 per cent cumulative redeemable preference shares of Rs 100 each, both at par.

★

IN BRIEFS

Jam Shri Ranjitsinghji Spinning and Weaving Company Mills Limited has returned to the dividend list after a lapse of two years. The directors have proposed a dividend of 6 per cent for the year ended 30 June 1964. The last dividend paid was 6 per cent for 1960-61.

Gammon India has raised the dividend from 11 to 12 cent for the year ended 31 March 1964.

Khatau Makanji Spinning and Weaving Company Limited has maintained the dividend at 8 per cent for the year ended 30 June 1964.

Hindustan Electric Company Limited has proposed a taxable dividend of 4 per cent for the year ended 30 April 1964 as against nil previously.

★

BALANCE-SHEET REVIEWS

Bird-Heilgers Jute Group Results

Despite the fact that sales in certain cases are higher than in the previous year, almost all the jute mills in Bird-Heilgers group, have produced disappointing results for the year ended 31 March 1964, mainly due to higher provisions for taxation. The only encouraging feature is the fact Lansdowne Jute has proposed a taxable dividend of Rs 12.50 per share as against nil in the preceding few years, while Lawrence has maintained the dividend at Rs 10 per share.

Lansdowne has made a net profit, after providing for depreciation of Rs 11.01 lakhs as against Rs 12.57 lakhs for 1962-63, while Lawrence has earned a higher profit of Rs 4.66 lakhs against Rs 4.46 lakhs. The working of Auckland has resulted in a decline in the net profit, after providing for depreciation and taxation, to Rs 10.86 lakhs from Rs 17.87 lakhs. The dividend is reduced from Rs 15 to Rs 12.50 per share.

Following the sharp fall in the profit from Rs 17.70 lakhs to Rs 6.69 lakhs, Dalhousie has made a substantial reduction in dividend from Rs 25 to Rs 7.50 per share. Similarly, Kinnison has shown a substantial fall in the profit from Rs 31.90 lakhs to Rs 2.85 lakhs although the dividend is only halved to Rs 5 per share. Northbrook as also reduced the dividend from Rs 3.50 to Rs 2.50 per share in view of the decline in the profit from Rs 11.72 lakhs to Rs 8.05 lakhs. Union Jute has halved the dividend from Rs 20 to Rs 10 per share, reflecting the fall in the profit from Rs 11.50 lakhs to Rs 6.61 lakhs.

Lower Profits For Hukumchand Jute

In spite of a rise in sales from Rs 644.13 lakhs to Rs 662.02 lakhs, the Hukumchand Jute Mills Limited has made a profit, after providing for depreciation, of only Rs 57.26 lakhs for the year ended 31 March 1964 as against Rs 85.61 lakhs for the previous year.

Depreciation is raised to Rs 15.60 lakhs from Rs 11.43 lakhs and Development Rebate Reserve to Rs 3.43 lakhs from Rs 3.06 lakhs. No specific provision for Taxation (Rs 2.73 lakhs) is made, which will be appropriated from Contingency Reserve when the liability is determined. Contingency Reserve is lowered to Rs 35.00 lakhs from Rs 57.00 lakhs and General Reserve to Rs 18.85 lakhs from Rs 26.05 lakhs. The dividend is, however, maintained at Rs 2.00 per share, subject to tax.

The directors state that the construction of the Caustic Soda project at Amlai is proceeding in full swing and it is expected to be ready before the year is out. The plant is expected to be commissioned during early next year.

Agarpara Company Pays 10% Against 12%

Despite the rise in sales from Rs 2.62 crores to Rs 3.52 crores, Agarpara Company Limited has reported a profit, after providing for depreciation and taxation and adding profits on various items, of only Rs 8.96 lakhs for the year ended 31 March 1964 as against as much as Rs 15.78 lakhs for 1962-63, mainly due to the rise in manufacturing costs.

Depreciation is raised to Rs 14.99 lakhs from Rs 10.49 lakhs and Development Rebate Reserve to Rs 1.92 lakhs from Rs 1.79 lakhs, while Taxation is reduced to Rs 12.00 lakhs from Rs 18.70 lakhs. No provisions are possible for General Reserve (Rs 6.50 lakhs) and Dividend Reserve (Rs 8.20 lakhs). The dividend on the ordinary shares is reduced from 12 per cent to 10 per cent, subject to tax. Annual meeting will be held on the 30 September.

Hastings Mill

Despite a rise in sales from Rs 418.43 lakhs to Rs 461.54 lakhs, Hastings Mill Limited has reported a decline in the net profit, after providing for depreciation and taxation, from Rs 20.37 lakhs to Rs 17.77 lakhs for the year ended 31 March 1964. In respect of allocations, Depreciation is raised to Rs 18.02 lakhs from Rs 10.93 lakhs and Development Rebate Reserve to Rs 5.70 lakhs from Rs 3.79 lakhs. The provision for Taxation is, however, lower at Rs 10.75 lakhs against Rs 22.50 lakhs and General Reserve at Rs 7.80 lakhs against Rs 13.12 lakhs. The dividend on the Ordinary shares is, however, maintained at Rs 6.00 per share, subject to tax.

The directors state that the Silk division maintains a steady progress. The expansion scheme has necessitated the shifting of the entire unit to Konnager, because of inadequate accommodation in the existing premises. The construction work will be taken up during the current year.

Fort William

The decline in gunny sales from Rs 331.34 lakhs to Rs 316.51 lakhs is reflected in the working results of Fort William Company Limited for the year ended 31 March 1964. The net profit, after providing for depreciation but before taxation, amounts to only Rs 10.07 lakhs as against as much as Rs 33.89 lakhs for the preceding year.

Depreciation is raised to Rs 14.70 lakhs from Rs 6.05 lakhs, while no provision is made for Taxation against Rs 23.25 lakhs. After transferring Rs 70,075 from various Reserves, a sum of Rs 10.80 lakhs (Rs 75,000) is provided for Development Rebate Reserve. In the preceding year, Rs 2.65 lakhs was provided for General Reserve and Rs 7.25 lakhs for Dividend Reserve.

The directors have proposed to pay a taxable dividend of Rs 1.50 per ordinary share on the capital increased by the issue of bonus shares as against Rs 2.00 per share taxable, paid previously on the old capital. The dividend will be paid out of General Reserve.

The directors state that the Steel Wire and Rope Division started functioning from September and is now achieving commercial production. The pattern of demand for engineering wire ropes has necessitated the addition of further machinery, and orders for the same have been placed with the collaborators. The ICICI has sanctioned the requisite foreign exchange.

The company has also obtained a Letter of Intent from the Government for an increase in the annual capacity from 3,000 to 6,000 tonnes. Steps are being taken to obtain an import licence for the additional machinery.

Ashoka Cement Does Better

Thanks to better working of the Foundry division, the working of the Ashoka Cement Limited has resulted in a higher net profit, after providing for depreciation and taxation, of Rs 6.15 lakhs for the year ended 31 March 1964 against Rs 4.98 lakhs thanks to the rise in sales from Rs 205.60 lakhs to Rs 211.19 lakhs.

In respect of allocations, Depreciation is raised to Rs 13.30 lakhs from Rs 10.20 lakhs, while a sum of Rs 1.00 lakh (nil) is set apart for General Reserve. Development Rebate Reserve is lowered to Rs 54,000 from Rs 1.96 lakhs, while no provision is made for Dividend Reserve against Rs 4.20 lakhs. In the preceding year, the allocations were possible by additions of Rs 2,096 as receipts rela-

ting to previous year and Rs 1.12 lakhs being transferred from Development and Rehabilitation Reserve. The dividend is maintained at 7 per cent, subject to tax.

Production of clinker is lower at 159,963 tonnes against 162,036 tonnes; of cement at 167,036 tonnes against 174,851 tonnes and despatches at 166,218 tonnes against 175,504 tonnes.

H. N. Glass Repeats

The Hindusthan National Glass Manufacturing Company Limited has released encouraging working results for the year ended 31 March 1964. While sales are shown higher at Rs 120.90 lakhs against Rs 105.86 lakhs, the net profit, after providing for depreciation and taxation, amounts to as much as Rs 10.28 lakhs against Rs 3.21 lakhs for the previous year.

Depreciation is raised to Rs 10.22 lakhs from Rs 8.12 lakhs and Development Rebate Reserve to Rs 7.90 lakhs from Rs 40,986, while Taxation is lowered to Rs 5.50 lakhs from Rs 6.50 lakhs. After transferring Rs 1.20 lakhs from General Reserve, a sum of Rs 1.00 lakh (nil) is set apart for Preference Shares Sinking Fund. The directors have proposed to maintain the dividend at 40 paise per share, subject to tax, on the capital increased by the issue of bonus shares. Annual general meeting will be held on the 28 September.

Window Glass—Prospects

Window Glass Limited went into production only in November 1963. There are four factories in India, including the company's factory, which began manufacturing wired and figured glass in 1963-64 and three of them went into production almost simultaneously, which resulted in the total output exceeding the demand for the period under review. This gave rise to unstable conditions, having affected the sales of the company's products, which are shown at Rs 24.91 lakhs for the year ended 31st March 1964. The accounts reveal a loss, after providing for depreciation, of Rs 2.26 lakhs.

The directors state that a scheme providing for Government's assistance in promotion of export of Rolled and Sheet Glass has been accepted in principle by the Government. Details of the scheme are being worked out and, if it is successful, the company hopes to make substantial exports of its products. Annual meeting will be held on 30 September.

French Motor—Profit

Halved

The restriction in the supply of vehicles by the manufacturers is reflected in the working results of the French Motor Car Company Limited for the year ended 31 March 1964. Sales have declined to Rs 423.03 lakhs from Rs 530.60

lakhs, while the net profit, after providing for depreciation and taxation, is nearly halved at Rs 2.40 lakhs against Rs 4.81 lakhs for the previous year.

Depreciation is raised to Rs 2.54 lakhs from Rs 1.85 lakhs, while Taxation is reduced to Rs 6.12 lakhs from Rs 7.14 lakhs. In view of lower profits, the directors are compelled to transfer Rs 1.00 lakh from General Reserve to pay a taxable dividend of 20 per cent, same as in the previous year.

The directors now feel that the corner has been turned and outlook for the current year may be favourable. The programme of major expansion for the present has been completed with the commissioning of the company's Gauhati branch. Annual meeting will be held on 31 September.

More From Western Bengal Coal

Despite a fall in sales from Rs 110.55 lakhs to Rs 97.67 lakhs, Western Bengal Coalfields Limited has reported a higher net profit, after providing for depreciation and taxation, of Rs 7.87 lakhs for the year ended 31 March 1964 as against Rs 6.86 lakhs for the previous year.

Depreciation is raised to Rs 4.54 lakhs from Rs 3.91 lakhs; but Taxation is reduced to Rs 3.25 lakhs from Rs 4.50 lakhs. After writing back Rs 1.17 lakhs being Development rebate reserve excess, a sum of Rs 2.83 lakhs (Rs 2.73 lakhs) is set apart for Development Rebate Reserve and Rs 63,000 (nil) against provision for taxation in respect of previous year. No provision is made for Dividend Equalisation Reserve against Rs 50,000. The directors have proposed to pay a taxable dividend of one rupee as against 90 paise per share paid previously.

The company had undertaken certain explorations and prospecting on its property for the expansion schemes. This work has now been completed and steps are being taken to secure further ways and means in order to be ready to fulfil the targets already undertaken in the Third Plan and to be further undertaken for the Fourth Plan. Annual meeting to be held on the 30 September.

Amalgamated Coal Earns More

Thanks to the rise in rasings from 1,094,663 tonnes to 1,127,498 tonnes, in despatches from 1,089,400 tonnes to 1,102,809 tonnes and sales from Rs 246.32 lakhs to Rs 264.83 lakhs, the Amalgamated Coalfields Limited has been able to report a higher net profit, after providing for depreciation taxation and making certain adjustments, of Rs 14.35 lakhs for the year ended 31 March 1964 as against Rs 8.65 lakhs for 1962-63.

Apart from Taxation which is lowered to Rs 10.32 lakhs from

Rs 17.01 lakhs, all other allocations are increased.—Depreciation from Rs 6.27 lakhs to Rs 7.43 lakhs; General Reserve from Rs 4.00 lakhs to Rs 8.00 lakhs and Development Rebate Reserve from Rs 1.68 lakhs to Rs 3.11 lakhs. No provision is, however, made for Capital Reserve against Rs 5,950. The directors have proposed a final dividend of 12½ per cent, making a total of 17½ per cent, taxable, same as in the preceding year.

Pench Valley Coal Earns Less

Although the Pench Valley Coal Company Limited, in the same managing agency group, has nearly maintained sales at Rs 137.20 lakhs, the net profit amounts to only Rs 4.04 lakhs for the year ended 31 March 1964 against Rs 6.16 lakhs for the previous year.

Depreciation is raised to Rs 4.41 lakhs from Rs 3.82 lakhs and Development Rebate Reserve to Rs 1.59 lakhs from Rs 1.42 lakhs, while Taxation is reduced to Rs 2.12 lakhs from Rs 5.84 lakhs and General Reserve to Rs 1.25 lakhs from Rs 2.40 lakhs. The directors have proposed to pay only a total taxable dividend of 7½ per cent against 12½ per cent. Annual meeting will be held on the 29 September.

Associated Karanpura Pays 10%

The rise in sales from Rs 23.45 lakhs to Rs 29.95 lakhs is reflected in the working results of the Associated Karanpura Collieries Limited for the year ended 31 March 1964. The net profit, after depreciation and taxation, amounts to Rs 2.30 lakhs against Rs 1.61 lakhs for 1962-63.

Depreciation is raised to Rs 68,561 from Rs 66,389 and Taxation to Rs 2.60 lakhs from Rs 2.35 lakhs, while Statutory Development Rebate Reserve is lowered to Rs 7,880 from Rs 19,672. The directors have proposed a taxable dividend of one rupee per share as against nil.

Raisings are shown at 125,760 tonnes and despatches at 119,042 tonnes. Annual meeting will be held on the 30th September.

Associated Laikdih Pays More

Associated Laikdih Collieries Limited has also earned a higher net profit of Rs 1.36 lakhs for the same year as against Rs 72,952, reflecting the rise in sales from Rs 13.72 lakhs to Rs 17.07 lakhs. A sum of Rs 70,957 (Rs 99,260) is provided for depreciation; Rs 1.22 lakhs (Rs 1.50 lakhs) for Taxation and Rs 4,433 (Rs 2,404) for Statutory Development Rebate Reserve. The dividend is increased from 50 paise to 75 paise per share subject to tax. Annual meeting will be held on 30th September.

Bisra Stone—Decline in Profit

The Bisra Stone Lime Company Limited (Bird group) has reported a slight decline in the net profit, after providing for depreciation and taxation, to Rs 11.68 lakhs for the year ended 31 March 1964 from Rs 13.51 lakhs for the previous year, reflecting sales being lower at Rs 232.37 lakhs against Rs 247.75 lakhs. In this connection, the directors state that mining and loading operations were at a standstill for some time due to disturbances in March and it took nearly two months for production and despatches to revert to normal.

Depreciation is raised to Rs 13.16 lakhs from Rs 11.72 lakhs and Statutory Development Rebate Reserve to Rs 1.93 lakhs from Rs 1.93 lakhs, while Taxation is reduced to Rs 7.20 lakhs from 10.50 lakhs and General Reserve to Rs 1.25 lakhs from Rs 4.10 lakhs. The directors have proposed a final dividend of 7½ per cent, making a total of 12½ per cent, taxable, same as in the preceding year. Annual general meeting will be held on 29 September.

Publicity Society Pays More

Thanks to the increase from Rs 11.57 lakhs to Rs 13.11 lakhs in income from advertisements and sundry business, the Publicity Society of India Limited has made a higher net profit after providing for depreciation and taxation, of Rs 2.12 lakhs for the year ended 31 March 1964 as against Rs 1.59 lakhs for the previous year.

Depreciation is lowered to Rs 9,146 from Rs 9,248, while Taxation is raised to Rs 3.70 lakhs from Rs 2.85 lakhs. No provision is made for General Reserve against Rs 50,135. The directors have proposed to raise the dividend from Rs 2.00 to Rs 2.50 per share, subject to tax. Annual general meeting will be held on 30 September.

Assam Hardboards Fare Well

Assam Hardboards Limited has reported a net profit, after providing for depreciation and taxation, of Rs 21,697 for the year ended 31 March 1964 as against a loss of Rs 818 incurred in 1962-63. Apart from providing Rs 41,300 for taxation, Depreciation is raised to Rs 25,177 from Rs 16,001. There is still a deficit balance of Rs 11,275, which is carried forward to next year.

In accordance with the collaboration agreement, 43,000 equity shares were allotted to Messrs Columbia Hardboard Company Inc., and, since then, the balance of 56,800 equity shares have also been allotted to them. The directors state that most of the machinery and equipment have been received and the erection

work is progressing satisfactorily. The factory is expected to be commissioned towards the end of the current year. Annual general meeting will be held on 29 September.

Western UP Electric's Results

Although the number of units sold is higher at 12,015,581 against 9,779,960 and the sale of energy at Rs 23.09 lakhs against Rs 19.78 lakhs, the Western UP Electric Power and Supply Company Limited has reported a slight decline in the net profit, after providing for depreciation and taxation, from Rs 2.21 lakhs to Rs 2.01 lakhs for the year ended 31 March 1964.

Depreciation is raised to Rs 1.49 lakhs from Rs 1.34 lakhs, while taxation is reduced to Rs 61,000 from Rs 77,000. After transferring Rs 32,879 from Tariff, and Dividend Control Reserve and adding the brought forward from previous year, a sum of Rs 1.80 lakhs (nil) is set apart for General Reserve; Rs 58,585 (Rs 51,557) for Development Reserve and Rs 25,000 (Rs 22,000) for Contingency Reserve. No provisions are made for Notional Tax Relief Reserve (Rs 10,027); Consumers' Rebate Reserve (Rs 4,836) and Tariff and Dividend Control Reserve (Rs 4,836). The Directors have proposed a taxable dividend of Rs 1.25 per share.

To meet the increased off-take and the growing demand for electricity the company has proposed to instal additional sub-stations and strengthen its existing installations. For this purpose, the company has placed orders for higher capacity equipment, which will require additional capital investment. The capital required for this purpose is proposed to be financed by bank borrowing. Annual general meeting will be held at Delhi on the 30th September.

New Victoria Incurs Loss

The New Victoria Mills Company Limited, Kanpur, has reported a loss, after providing for depreciation, of as much as Rs 64.25 lakhs for the year ended 31 December 1963 as against a loss of only Rs 6.56 lakhs for the preceding year, reflecting the acute shortage of working finance and production being hampered by all-round shortage of raw materials. Depreciation is raised to Rs 9.98 lakhs from Rs 7.85 lakhs. After making sundry adjustments, there is still a debit balance of Rs 68.24 lakhs, to be carried forward to next year.

The directors state that, after making strenuous efforts for financial assistance, they are now successful in obtaining a loan of Rs 50 lakhs from the Chartered Bank and a cash credit limit of Rs 90 lakhs from the Punjab National Bank.

They add that, with the improved finances, the working efficiency

has increased. Judging from the working of the company up to July 1964, results of the current year will show a marked improvement. Annual general meeting will be held on the 30 September.

STOCK EXCHANGES Further Recession in Values

SENTIMENT in stock markets continues to remain subdued. Even a few pivotal scrips have touched new low levels in the current reactionary trend. Apart from the uncertain political and economic situation, the likelihood of further tightening of control over corporate affairs by suitable changes in the Companies Act acted as a main deterrent to fresh speculative activity.

Quieter conditions continued to prevail on Lyons Range where the tendency for equity prices was to sag slowly due to liquidation in the absence of any incentive.

In a market devoid of any interest, even small offerings had an exaggerated effect on Dalal Street.

The Madras Stock Exchange witnessed moderate activity with the tendency steady in Plantings, but irregular in textile and miscellaneous sections.

The Ahmedabad Stock Exchange suffered a heavy setback on persistent selling from nervous bulls.

On the Delhi Stock Exchange, equities eased further owing to lack of any support.

It was, however, a satisfactory week on the London Stock Exchange.

Initial gains on Wall Street were reduced or cancelled at the close.

CALCUTTA

LYONS RANGE disclosed no perceptible change in the pattern of trading during the week when equity prices moved in an indecisive fashion with selling pressure overlapping buying pressure, resulting in a marked contraction in the volume of business.

Although the start for the week was on a steadier note, the market developed a reactionary trend owing to continued liquidation by the speculative bulls, being influenced by various adverse factors. First, anxiety was expressed over the possible developments in Kashmir following the arrest of Bakshi Ghulam Mohammed. The second factor was the suggested move to restrict validity of the blank transfer form for six months. It was generally apprehended that, if this amendment was carried out, it would seriously affect the liquidity of the market. Finally, the Prime Minister's statement that his Government would continue to follow the objectives of democratic socialism seemed to have a sobering effect.

For obvious reasons, operators were generally hesitant, especially when they were eager to lighten their commitments in view of the approaching holidays for the Puja festival. Moreover, earlier expectations of some relief in corporate tax

did not materialise. Again, the Finance Minister's statement ruling out the possibility of any cut either in the defence or development expenditure was also a contributory factor to the cautious attitude adopted by the operators. Naturally, equity prices remained vulnerable owing to a general tendency to press offerings even on small upturns.

The Giltedged section continued to rule quiet. Sellers were in evidence in the State Loans section, and the recently floated new loans, in particular, were marked down further. 3 per cent 1986 Conversion Loan eased off to Rs 63.50 from Rs 63.70.

In the Banking section, Punjab National turned quiet at Rs 19.81 against Rs 20 on lack of fresh support.

The discouraging outlook for the profit of jute mills during the current year and the continued absence of any foreign enquiry induced cautious trading in the Jute section. Birlas were on offer at Rs 35.50 to Rs 35.75 against Rs 36.25 while Howrah were neglected at Rs 16.06 and New Central at Rs 10.69. Megna were, however, a steady feature at Rs 12.62.

Coal shares met with little or no interest. The possibility of fixing a high production target during the Fourth Plan seemed to have no effect on the market. Burrakur were rather sticky at Rs 17.06.

Tea shares continued to remain depressed, reflecting the disappointment over the drop in the average prices realised for the commodity at the auctions during the current season. Dufflaghur met with some enquiry up to Rs 23.50, while Sungma came in for offer at Rs 12.25.

Sugar shares have lately come in for some enquiries and even selective support. This is due to the fact that operators are hopeful that the interim sugar policy, which is to be announced shortly, will be more realistic. Dyer Meakins met with business at Rs 25.62 to Rs 25.81, while SKG were marked up to Rs 8.19.

Tertile issues were rather quiet following the news that the Ashok Mehta Committee, on Powerlooms, had recommended that additional

production of cloth in the Fourth Plan should be exclusively in the decentralised sector. Elgin Mills were on offer at Rs 19.62 to Rs 19.94; Jaya Shree at Rs 13.69 to Rs 13.75 and Cawtex at Rs 6.50 to Rs 6.59. Bowreah were well maintained at Rs 24.75.

After ruling initially steady, Engineering shares developed a weaker tendency due to selling pressure on lower Bombay advices. After opening at Rs 25.62 and improving to Rs 25.66, Indian Irons receded gradually to Rs 25.14 before finishing the week at Rs 25.22. G. K. Williams, in sympathy, moved down to Rs 23.25 from a high of Rs 23.75; TEXMACO to Rs 26.15 from Rs 26.45; Calcutta Steel to Rs 13.69 from Rs 13.94 and Marshalls to Rs 3.40 from Rs 3.62. An exceptional feature was Jessop, which were pushed up to Rs 24 from a low of Rs 23.75 on expectation of encouraging results for the current year, before finishing at Rs 23.69 due to profit-taking. Britannia were in demand up to Rs 10.56 from Rs 9.69, to close finally at Rs 10.31.

Miscellaneous issues moved in sympathy with the general trend of the market. Dunlop Rubber slipped down to Rs 31.50 from a high of Rs 32.87 (Rs 31.50); Hindustan Motor to Rs 16.91 from Rs 17.34 (Rs 17.00); Indian Aluminium to Rs 31.62 from Rs 32.31 (Rs 31.69) Indian Cable to Rs 35.25 from Rs 35.75 (Rs 35.37); Indian Copper to Rs 3.35 from Rs 3.42 (Rs 3.36); Kesoram to Rs 25.81 from Rs 26.56 (Rs 25.87) and Rohtas to Rs 10.31 from Rs 10.44 (Rs 10.34).

In the cash section, activity was restricted and prices displayed a slightly easier tendency on scattered liquidation. Even Chemicals and Fibres, which were gradually pushed up to Rs 17.12 from Rs 16.37, reacted to Rs 16.56 on lack of follow-up support. Sirpur Paper met with business at Rs 12.12 to Rs 12.56; Titaghar Paper at Rs 12.31 to Rs 12.56; Hindustan Aluminium at Rs 13.37 to Rs 13.94; British Paints at Rs 23.62 to Rs 24.94; J. K. Synthetics at Rs 13.06 to Rs 13.25; Universal Cable at Rs 11.12 to Rs 11.25; Usha Martin at Rs 14.62 to Rs 14.75 and BIC at Rs 10.87 to Rs 11.25. Figures given within brackets were the closing rates for the week.

Promise of Self-sufficiency in Surgical Instruments

Apart from two drugs plants, being built in India with economic and technical cooperation of the USSR, a Surgical Instruments Plant is also being set up under the Indo-Soviet Agreement of 29 May 1959. The plant which is in an active stage of construction will go into production very soon. A team of Soviet experts headed by Chief Specialist, Arutunov, came to Madras in the beginning of 1963.

The Surgical Instruments Plant, the Chief Engineer said, would be able to produce 160 types of surgical instruments for use in various spheres of surgery, in general Surgery, Gynecology, Orthopedy, Traumatology, Oncology and in other cases.

chines produced at the Hindustan Machine Tools, Bangalore, have also been installed in this plant, thus symbolising the cooperation of peoples of our two countries.'

Arutunov pointed out that when the first stage of the Surgical Plant would start production more than one thousand people would be employed in its shops. A number of workers were being trained in a new and complicated profession.

'The Soviet specialists', the Chief Engineer declared, 'are doing everything to help their Indian friends. At the plant itself they are sharing technical know-how with them, making them conversant with various complicated technological processes. A number of Indian specialists received practical training in the Soviet Union and now they are passing on their experiences to their other colleagues.'

The Chief Engineer revealed that by the end of October this year all civil construction work and the installation of machinery would be completed for the first stage.

NICKEL

New Casting Alloy

A new casting alloy to meet the growing demand for improved high temperature materials for aircraft gas turbines has been developed by International Nickel.

Known as M22VC, it is a nickel-base alloy melted and cast under vacuum, which possesses outstanding rupture strength at temperatures approaching and in excess of 1000°C. M22VC is now in an advanced stage of development and although not yet in commercial production, it shows considerable promise and is being considered for turbine rotor blading and other high-temperature components.

M22VC is basically a nickel-chromium alloy strengthened by additions of tungsten, molybdenum, aluminium and tantalum. It offers appreciable advantages over existing cast and wrought materials in terms of specific strength at high temperatures. For example, it will withstand a stress of 5.1 ton/in² (8.00 kg/mm²) for 100 hours at 1100°C and 1.6 ton/in² (2.5 kg/mm²) for 1000 hours at 1050°C. Good castability with freedom dispersed micro-porosity is exhibited by the alloy.

The announcement of M22VC comes at a time when designers of gas turbines are critically examining the properties of creep-resisting casting alloys for turbine rotor blading. This is because the scope for further development of wrought nickel-base alloys for service at very high operating temperatures is becoming limited by difficulties in the hot-working of materials which remain strong and tough at temperatures close to their melting points.

Annuity Deposits Rules

In exercise of the powers conferred by section 280-W of the Income-tax Act, 1961 (43 of 1961), the Central Government hereby makes the following scheme, namely:—

1. Short title, commencement and application.—(1) This Scheme may be called the Annuity Deposit Scheme, 1964.

(2) It shall come into force on the 1st day of October, 1964.

(3) It applies to persons to whom the provisions of Chapter XXII-A of the Income-tax Act, 1961 (43 of 1961) apply.

2. Definitions.—(1) In this Scheme, unless the context otherwise requires,—

- (a) "Act" means the Income-tax Act, 1961 (43 of 1961);
- (b) "Annuity Deposit Certificate" means a Ten Year Annuity Deposit Certificate the form of which has been prescribed by the Central Government in the Government of India Ministry of Finance (Department of Economic Affairs) Notification No. G.S.R. 1313, dated the 10th September, 1964 and which is issued as evidence of annuity deposit;
- (c) "deposit office" means—
 - (i) any office of the Reserve Bank of India at Bombay (Fort and Byculla), Calcutta, New Delhi, Madras, Bangalore and Nagpur;
 - (ii) any branch within India of the State Bank of India or any of its subsidiary banks;
 - (iii) any other office authorised by the Central Government to accept annuity deposits;
 - (d) "Public Debt Office" means the office of the Reserve Bank of India on the books of which a Ten Year Annuity Deposit Certificate is registered or may be registered;
- (e) "section" means a section of the Act.

(2) All references to "Forms" in this Scheme shall be construed as reference to the forms set out in the Appendix hereto.

3. Deposit when to be made.—

(1) Any depositor upon whom a notice of demand under section 156 for making an advance deposit has been served in pursuance of an order under section 280-F shall, unless he sends to the Income-tax Officer an estimate under sub-section (1) of section 280-H, deposit the amount specified in the said notice in such instalments on or before such dates as are specified therein.

(2) Any depositor who sends to the Income-tax Officer an estimate

of advance deposit under section 280-H shall deposit such amount as accords with his estimate in such instalments on or before such dates as are referred to in that section.

(3) Any depositor who has deferred the making of advance deposit in respect of part of his adjusted total income under section 280-I shall make such advance deposit on or before the date communicated by him to the Income-tax Officer in that regard.

(4) Where in respect of any assessment year, income-tax is payable by any depositor on the basis of self-assessment under section 140-A, the depositor shall, within thirty days of furnishing the return of income, deposit an amount equal to the amount by which the annuity deposit required to be made by him on the basis of income returned exceeds the amount, if any, of the annuity deposit already made by him in respect of that assessment year.

(5) Any depositor upon whom a notice of demand under section 156 is served, otherwise than in pursuance of an order under section 280-F for making an advance deposit, shall deposit the amount specified in the notice on or before the date specified therein.

(6) Any depositor who has sent to the Income-tax Officer an estimate of annuity deposit to be made by him in respect of the assessment year commencing on the 1st day of April, 1964 under section 280-L shall deposit such amount as accords with his estimate on or before the 31st day of March, 1965.

(7) The Income-tax Officer may, on application by the depositor, extend the date referred to in sub-paragraph (5) or may permit the deposit to be made in instalments, subject to such terms and conditions as he may think fit to impose in the circumstances of the case.

4. Manner of deposit.—(1) Every person required to make annuity deposit shall make such deposit at any deposit office either in cash or by cheque drawn in favour of that deposit office along with an application in Form No. 1, or as near thereto as may be.

(2) Where the depositor is a firm or association of persons [not being a society registered under the Societies Registration Act, 1860 (21 of 1860)] or a body of individuals, the application under sub-paragraph (1) shall be accompanied by a declaration in respect of its constitution in Form No. 3.

(3) Where the depositor is a society registered under the Societies Registration Act, 1860, the application under sub-paragraph

(1) shall be accompanied by the following documents, namely:—

- (a) a true copy of certificate of registration;
- (b) a true copy of the bye-laws, rules and regulations of the depositor; and
- (c) a copy of resolution (certified to be true by its principal officer) specifying the designations and names of the officials who shall be entitled to receive annuity on behalf of the depositor.

(4) The application under sub-paragraph (1) shall be signed—

- (a) in the case of an individual not being a minor, by the individual himself; and where the individual is a minor or is mentally incapacitated from attending to his affairs, by his guardian or by any other person competent to act on his behalf;
- (b) in the case of a Hindu undivided family, by the Karta; and where the Karta is mentally incapacitated from attending to his affairs, by any other adult member of such family;
- (c) in the case of an unregistered firm, by any partner thereof (not being a minor);
- (d) in the case of any other association or body of individuals, by any member or the principal officer of the association or the body, as the case may be; and
- (e) in the case of any other person, by that person or by some person competent to act on his behalf.

(5) On receipt of an application under sub-paragraph (1) together with the amount of deposit, the office shall issue a receipt in Form No. 4 to the depositor specifying the date on or after which the receipt may be surrendered in exchange for Annuity Deposit Certificate.

(6) On the depositor surrendering the receipt duly discharged, the deposit office shall deliver to the depositor the Annuity Deposit Certificate and where the depositor has elected to keep the Annuity Deposit Certificate in the safe custody of the Public Debt Office, the Memorandum of Deposit in respect of the Certificate and the counterfoil thereof.

(7) Where any arrear of annuity deposit has been recovered from any depositor under the provisions of sections 222 to 229, 231 and 232, and the Second and Third Schedules to the Act and the rules made under the Act or where any refund due to any depositor has been set off under section 245 against any annuity deposit required to be made by him, the Income-tax Officer shall send a communication in writing to the depositor concerned in that regard

and advise the deposit office at which the depositor desires to receive the annuity accordingly.

(8) On receipt of the communication referred to in sub-paragraph (7), the depositor may make an application in Form No. 2, or as near thereto as may be, for the issue of Annuity Deposit Certificate for the amount so recovered or so set off along with that communication in original.

(9) The provisions of sub-paragraphs (2), (3), (4) (5) and (6) shall, so far as may be, apply to an application made under sub-paragraph (8) as they apply to an application made under sub-paragraph (1).

5. Intimation regarding annuity deposit.—Every depositor shall send to the Income-tax Officer the counterfoil of each Annuity Deposit Certificate issued to him together with a statement in Form No. 5 within fifteen days of the receipt of the Annuity Deposit Certificate or as the case may be, of the Memorandum of Deposit in respect of the certificate and the counterfoil thereof.

6. Payment of annuity:—(1) The deposit office at which the Annuity Deposit Certificate is enfaced for payment shall pay to the depositor the annuity—

- (a) where the deposit office is an office of the Reserve Bank of India, on the depositor producing the Certificate,
- (b) in any other case, on the depositor producing the Certificate and furnishing a receipt in Form No. 6;

Provided that where any Annuity Deposit Certificate is kept in the safe custody of the Public Debt Office, that Office shall remit the amount of annuity to the depositor at his cost.

(2) The payment of the annuity referred to in sub-paragraph (1) shall commence after the expiry of one year from the date of deposit.

Explanation.—For the purposes of this sub-paragraph, the "date of deposit" means—

- (a) in case where the deposit is made in cash or by cheque, the date on which the cash or cheque along with the application is received by the deposit office;
- (b) in a case where the arrear of annuity deposit is recovered, the date on which the arrear of annuity deposit is so recovered;
- (c) in a case where any refund due to any depositor is set off against the annuity deposit required to be made by him, the date on which the refund is so set off.

(3) The holder of an Annuity Deposit Certificate enfaced for payment at any deposit office may make an application for change of enfacement to the deposit office at which it stands enfaced for payment or to the deposit office

at which the change of enfacement is desired or the Public Debt Office.

(4) In the case of a minor, lunatic or idiot, the annuity or the commuted value thereof shall be payable to his guardian or manager for the benefit of such minor, lunatic or idiot.

(5) In the case of a firm, an association of persons or a body of individuals, the annuity or commuted value thereof may be paid to the firm, association of persons or body of individuals, as the case may be, or to any partner or member thereof.

(6) Annuity Deposit Certificate shall not be transferable.

7. Payment of commuted value of annuity:—(1) The Income-tax Officer exercising jurisdiction under the Act in the case of a person entitled to receive an annuity shall be the authority competent to authorise the payment of the commuted value of such annuity.

(2) Where the Income-tax Officer authorises the payment of the commuted value of any annuity, he shall issue to the person entitled to receive the annuity an order in writing requiring the deposit office concerned to pay him the amount specified therein and shall advise the deposit office accordingly.

(3) On production of the order of the Income-tax Officer by the person concerned and on receipt of the advice from the Income-tax Officer, the deposit office shall make the payment of the amount of such commuted value.

8. Adjustment of excess deposits—(1) Where—

- (a) on making a regular assessment for any assessment year, the Income-tax Officer finds that the amount deposited by a depositor by way of advance deposit or under section 280-J or under section 280-K on the basis of income provisionally assessed under section 141 or under section 280-L is in excess of the annuity deposit required to be made by him for that assessment year, or
- (b) as a result of an order of reassessment or recomputation under Section on 47 or as a result of an order under section 154 or section 155 or section 250 or section 254 or section 260 or 262 or section 264, it is found that the amount already deposited by the depositor for any assessment year is in excess of the annuity deposit required to be made by him for that assessment year,

the depositor shall be entitled to reduce by the amount of such excess the amount of annuity deposit required to be made by him in the financial year in which the regular assessment is made or the order referred to in clause (b) is passed.

(2) Where the excess of annuity deposit cannot be adjusted or fully adjusted under sub-paragraph (1), the annuity or the commuted value of the annuity included in the total income of the depositor assessable for any assessment year shall be reduced by an amount equal to such excess or, as the case may be, that part of such excess as is not adjusted under sub-paragraph (1) and for this purpose the reduction shall first be made from the total income assessable for the assessment year next following the financial year in which the deposit was made and to the extent, if any, the excess is not so adjusted, the reduction shall be made from the total income assessable for the next assessment year, and so on.

9. Deposits made by an unregistered firm assessed under section 183(b):—Where an unregistered firm has made an annuity deposit for an assessment year and the firm is assessed under clause (b) of section 183 for that assessment year, the Income-tax Officer shall make an order authorising the payment of the commuted value of any annuity due to the firm in respect of such deposit. If such annuity or the commuted value of such annuity has been included in the total income of the firm assessable for any subsequent assessment year, the amount of such inclusion, to the extent it does not consist of interest accrued on the annuity deposit made, shall be excluded from the total income assessable for such subsequent assessment year.

10. Re-payment in the case of dissolved firms, associations of persons or bodies of individuals:—Where any firm or association of persons or body of individuals which has made an annuity deposit in respect of any assessment year is dissolved before the receipt of all the yearly instalments in respect of such deposit, the annuity shall be paid to the persons who were its partners or members immediately before its dissolution in such proportion as the Income-tax Officer may, having regard to the proportion in which they were entitled to share the profits in the previous year in which the dissolution took place, direct.

11. Nomination:—(1) A depositor, being an individual, may nominate in Form No. 7, or as near thereto as may be, one or more persons who shall be entitled to receive annuity payable to him in the event of his death before the last yearly instalment becomes payable.

(2) Where any annuity is payable to two or more nominees and either or any of them dies before such payment becomes due, the amount shall be paid to the surviving nominee or nominees.

(3) No nomination shall be made in respect of annuity deposit made on behalf of a minor.

(4) A nomination made by a depositor may be varied by a fresh nomination in Form No. 7, or as near thereto as may be, or may be cancelled by giving notice in writing to the Public Debt Office in Form No. 8.

(5) Every nomination and every cancellation or variation thereof shall be registered at the Public Debt Office and shall be effective from the date of such registration.

(6) If the nominee is a minor, the depositor may appoint any person to receive the amount due in the event of his death during the minority of the nominee.

12. Intimation of exercise of option under sub-section (1) section 280-X to person paying salary

(1) A person who has exercised the option under sub-section (1) of section 280-X not to make any annuity deposit shall, if he derives any income chargeable to income-tax under the head "Salaries", intimate in writing the fact of his having exercised the option to the person responsible for paying him such income within a period of fourteen days of exercising the option and send a copy of such intimation to the Income-tax Officer within the aforesaid period.

2) On receipt of such intimation, the person responsible for paying such income to the optant shall deduct tax from such income in accordance with section 192.

The National Economic Development Council in Britain

The proposal to set up the National Economic Development Council (NEDC) was first outlined in July 1961 by the then Chancellor of the Exchequer. It was designed in consultation with both sides of industry, to improve the machinery for co-ordination of economic plans and forecasts and for the promotion of more rapid and sustained economic growth. Hitherto, such developments had been studied by a number of bodies, including the Economic Planning Board, the National Production Advisory Council on Industry and various other advisory councils. After discussions with employers' associations and with the Trades Union Congress, NEDC was appointed and held its first meeting on 17 March, 1962. It usually meets once a month, but on occasion it has met more frequently.

Functions and Membership of the Council

The functions of the NEDC were defined as follows:

(a) 'to examine the economic performance of the nation with particular concern to plans for the future in both the private and public sectors of industry;

(b) 'to consider together what are the obstacles to quicker growth, what can be done to improve efficiency and whether the best use is being made of resources;

(c) 'to seek agreement upon ways of improving economic performance, competitive power and efficiency—in other words to increase the rate of sound growth.'

The chairman of the NEDC is the Chancellor of the Exchequer, and the President of the Board of Trade and the Minister of Labour are ex officio members. In addition, 17 others have been appointed by the Chancellor to serve in a personal capacity. There are 6 representatives from the management side of private industry; 2

chairmen of nationalised industries; 6 members nominated by the Trades Union Council; 2 independent members and the Director-General of the National Economic Development Office.

The National Economic Development Office

The National Economic Development Office serves the NEDC as a secretariat and as a bureau for technical research and inquiry. It has at present a staff of about 100 under the Director-General, Sir Robert Shone. The office is not part of the ordinary machinery of Government and its staff has been recruited from industry, the universities and the Civil Service; they are, however, subject to security and similar provisions applicable to the regular Civil Service. The Director-General is responsible to the NEDC and the Chancellor of the Exchequer in his capacity as chairman of the NEDC. He and his staff undertake economic studies and research and prepare draft reports for the consideration of the council. The Office also studies particular economic problems including taxation, education, regional policy, management, and exports and imports, in relation to the general work on the growth programme.

The National Economic Development Council reports are not necessarily agreed by the NEDC in detail, nor are they an expression of the views of the Government or individual members of the council, though they have the broad support of the parties to the Council. The Government welcomes them as a contribution to the public discussion and understanding of the issues they raise, which may be important since it is recognised that faster economic growth calls for many changes in established attitudes and practices.

The office is organised in two divisions: the Economic Division, concerned chiefly with broad economic questions, and Industries. There are also special sections

dealing with science and with manpower. To avoid duplication the staff works closely with Government Departments, which supply much of the detailed information required.

NEDC has developed close relations with industry. In addition to informal contacts, Economic Development Committees have been set up to date covering nine industries. On each committee sit representatives of management and trade unions, other members with special knowledge and experience, and representatives of the Government department concerned and of the National Economic Development Office.

The Work of the Council

One of the most important acts of the NEDC was the approval given at a meeting on 6 February, 1963, to the objective of a 4 per cent rate of growth per annum in Britain's gross national product. This policy objective was later adopted by the Government.

The report of the National Economic Development Office which led up to the acceptance by the NEDC of the 4 per cent growth objective, as it is known, was entitled *Growth of the United Kingdom Economy to 1966*. This report, published on 28 February, 1963, studied the general economic implications of faster growth for the main components of the national economy, e.g., for manpower, investment and the balance of payments. It also contained the results of an industrial inquiry undertaken with a cross-section of public and private industry to assess the impact and feasibility of them of an average national growth rate of 4 per cent.

This report was followed in April 1963 by a second entitled *Conditions Favourable to Faster Growth*. Both reports were prepared to meet the NEDC's request for a first assessment of the subject. The second report dealt more extensively with points arising in the first report. Important subjects covered were: education and economic growth; mobility and redundancy; regional questions; balance of payments policies; taxation; the level of demand; prices and incomes; and relation between the Government, management and the trade unions. There have been other reports on particular subjects. *Export Trends* was published in June 1963. It analysed the reasons for the fall in Britain's share in world exports of manufactures and discussed future prospects; in particular, it called for the elimination of the past tendency for British costs and prices to rise faster than those of competitors in overseas markets. A further report, *The Construction Industry*, published in March 1964, provided a study of the growing demands on the construction industry and the extent to which changes were needed

in its structure if it was to fulfil its responsibilities.

As the Chancellor of the Exchequer pointed out in his 1964 Budget speech, the 4 per cent rate of growth envisaged by the NEDC had already been reached—in the preceding twelve months there had been an expansion of at least 5 per cent in total production. A detailed assessment of the way in which the programme was working out and examination of the problems involved were made by the NEDC, and its findings were published in March 1964 in its report *The Growth of the Economy (HMSO 8s.6d)*. This report concludes that there is no reason to revise the view expressed in its first report that sufficient physical capacity should be available to produce the output required to achieve the growth programme. It states that the essential needs for the programme to succeed are a faster rise in productivity and in efficiency generally, a stable level of costs and prices, a more rapid growth in exports, a lower growth in imports through more competition among home producers and economies in stock-holding, more training of skilled workers, and a

greater use of the nation's reserves of manpower in the less prosperous regions. The report also brings up-to-date and extends its industry, the first results of which were set out in the first report of a year earlier. It notes that a number of industries have revised their previous estimates of output, employment, investment and exports for 1966 to bring them more closely into line with the growth programme. It describes in some detail developments in these industries for 1962 and 1963 and, where possible, makes forecasts for 1964 and 1965.

Future Activities

The work of the NEDC in the future will involve preparation for a second plan. Important questions to be determined for such a plan would be appropriate length of the plan, whether a 4 per cent rate of growth is suitable for the late 1960s and the 1970s and decisions on any other objectives which should then be pursued. The Council in its report on the Growth of the Economy stated that it would begin consideration of additional subjects relevant to changes required for faster growth.

As regards exports from India, textiles (both cotton and synthetic fibres and made-up articles) comprise about 38% of our exports to these nine countries, followed by jute manufactures (29%), tea (8%) and cotton yarn (6%). The balance is made up of spices, machinery, a range of engineering goods and various other export items.

Our trade (both ways) in respect of the nine countries during 1963-64 was:—

Country	(In lakhs of rupees)	
	Imports	Exports
Ethiopia	... Neg.	170
Ghana	... 66	147
Nigeria	... 76	378
Rhodesia and Nyasaland	... 340	166
Kenya	... 345	502
Tanganyika	... 498	247
Uganda	... 80	66
Sudan	... 852	784

At present Indian participation in industrial projects in Africa covers Ethiopia, Kenya, Uganda and Nigeria. In Ethiopia, Birla Bros. have already established an Indo-Ethiopian Textile Mill. They are believed to be interested in the expansion of the mill and in participating in an industrial complex that is being planned by the Mill. Malhotra & Sons, Calcutta are setting up a factory for the manufacture of blades in Ethiopia. Mackenzies Ltd., Bombay are considering the establishment of a glass and paint factory there.

In Kenya, Ranchoddas Goculdas of Bombay have already been granted licence by the Kenya authorities for putting up a textile mill and they are now going ahead with the implementation of the project. Morarji Bros., Bombay are examining the possibility of setting up a fertilizer unit, and Jay Engineering Works are engaged in the establishment of a sewing machine and parts manufacturing industry.

In Uganda, Jankidos & Co., proprietors of Atlas Cycle Works, Sonapat, are exploring the possibilities of setting up a bicycle manufacturing plant. An eleven man high-power delegation led by Mr D. S. Joshi, Secretary of the Commerce Ministry is now in Uganda for discussions on the establishment of four sugar plants there. India is also extending assistance to Uganda authorities for starting a handloom industry.

In Nigeria, Indian industrialists are establishing a composite industrial unit for manufacturing light engineering goods (air-conditioners, water coolers, refrigerators, electric fans, bus and truck bodies, etc.). Their project has already been approved by the Government and a company has been floated by the Indian party in collaboration with Nigerian industrialists and Government. Another proposal for setting up a textile mill in Northern Nigeria has also been approved by both the Government of India and the Government of Northern Nigeria. The establishment of jute mills in Northern Nigeria and one cement plant (asbestos) in Nigeria are also under active consideration.

Expansion of Trade and Industrial Collaboration with Africa

The possibilities of further expansion of trade and greater economic and technical collaboration with African countries will be explored by the delegation of leading industrialists which is on a tour of nine African countries. The delegation, led by Mr A. M. M. Murugappa Chettiar, will visit Ethiopia, Ghana, Kenya, Malawi, Nigeria, Northern Rhodesia, Sudan, Tanganyika and Uganda during its 25-day tour.

At a recent meeting the Union Minister of Commerce, Mr Manubhai Shah, had with Mr Murugappa Chettiar and other members of the delegation, all the aspects of expanding trade and economic relations between the countries of Africa and India were considered. It was felt that while fostering goodwill between India and these countries, the delegation should study the scope for expansion and diversification of trade as also of joint industrial ventures. The delegation's tour will also help in establishing and strengthening personal contacts between African and Indian entrepreneurs.

The main industries in which the possibilities of industrial collaboration are to be explored are textiles, sugar, cement, cement products and asbestos cement solvent extraction, toilet requisites and soap, engineering goods of various kinds and chemicals, including fertilizers and sulphuric acid.

The African countries are laying considerable emphasis in their development plans on rapid industrialisation and to this end they envisage a

considerable measure of co-operation from friendly countries like India, who are in a position to offer special skills and technical know-how.

Recognising the mutually beneficial effects of co-operation with African countries in the industrial and other economic fields, an informal association of leading Indian industrialists called the "India-Africa Development Association" was formed last year with the object of exchanging, collecting and disseminating information about the possibilities of industrial collaboration with African countries. It is in pursuance of a recommendation made by this Association that this delegation is now going to Africa.

The delegation has been sponsored by the Federation of Indian Chambers of Commerce and Industry with the active support of the Ministry of Commerce, Government of India.

The nine countries, which the delegation will be visiting, account for about 50% of our total exports of Rs 4633 lakhs to Africa and 45% of our total imports worth Rs 5097 lakhs from Africa. Sudan occupies the first place in this trade followed by Kenya, Tanganyika and Nigeria in that order. One or two items dominate our imports from almost all of these nine countries viz. raw cotton in the case of Sudan, Uganda and Kenya; cashewnuts and copper in respect of Tanganyika; hides and skins in the case of Ethiopia; copper and asbestos from Rhodesia and Nyasaland; palm oil from Nigeria; and manganese ore and cocoa in respect of Ghana.

NOTE: Annual figures are averages of months; those of sugar relate to crop years.

†Data of Matches, Hurricane Lanterns, Sewing Machines and Bicycles from January 1963 onwards and those of Footwear (leather) from April 1963 relate to units having fixed assets of Rs 5 lakhs and more.

‡Data in respect of certain units are not included from January to May 1963.

(1) Monthly figures are exclusive of production in Punjab (Kangra) and Himachal Pradesh.

(2) Relating to the production by mills in the membership of Indian Jute Mills' Association and to one non-member mill.

(3) Includes canvas.

(4) Figures relate to stable variety only from June 1962.

(5) Including figures for Jammu and Kashmir.

(6) Figures relate to production of organised factories.

(7) Boxes are of 60 sticks each upto February 1961 and thereafter of 50 sticks each.

(8) Total of viscose yarn, staple fibre, acetate yarn and cellophane.

*From January except in the case of sugar where the figures are progressive from November of the preceding year, the crop year being November—October.

†Provisional.

</

Blind man at the wheel

Blinded. By the dazzle of oncoming headlights.
In those blind moments a life can be lost.

When driving at night, dip your headlights
for oncoming traffic. Regulate your speed to
pull up within the limit of your lights.

Always light up in good time. When
it's misty or rainy, put your lights on even
during daytime, to let others see you.

You wouldn't drive blind. Why blind others?

Road Safety is a matter of life...and death

THE Finance Minister's replies to questions in the Rajya Sabha suggest that a number of issues regarding the next Plan on which different sections of the public have different misgivings have so far been kept open without the Planning Commission having come to any definite conclusions. With the numerous problems which the unsatisfactory course of the Third Plan has given rise to, such openness of mind at this stage is not a matter to be proud of. On the other hand the lessons which the present critical situation unmistakably points to should by now have been fully learned and the Planning Commission and the Government should have shown some alacrity in adopting the correctives which the proven mistakes of the past have definitely underlined. Doubtless, some differences of opinion about the extent to which such correctives should be applied and not a little reluctance to effect such changes are indeed inevitable. But the time for such difference of opinion and such mental resistance to necessary changes has long gone by. In fact, announcements of modifications of policies which have been discredited by concrete experience are already overdue. While the position could have been conceivably worse if the Finance Minister had stressed a closed mind or the reaching of erroneous conclusions by the Planning Commission, it is difficult to see how the crisis could be got over or how the Fourth Plan can be drawn up on sound lines or implemented successfully, if the decision in favour of a new start should be so tardy and hesitant.

It is not difficult to find the reasons for this mental stalemate in official circles. The unwillingness to open basic issues which affect the national economic life and organisation and the main springs of its progress continues unchanged, while at the same time there is no lack of consciousness of the difficulties into which the old ideas have now landed the Government. The result is the Government is ready to announce changes in policies and methods which are either of a superficial kind or touch on points of detail of no great moment to the bigger issues. The Government sees no harm to its pet ideas in accepting a relatively high target for exports under the Fourth Plan and emphasising its readiness for measures for promotion of the export trades, such as refund of levies on exported articles and subsidies for articles which can only be sold at a loss. But the question of

ensuring competitive strength through soundness of equipment, large output and low costs and economic operation is invariably dodged. In the case of the cotton mill industry, the partiality for the decentralised sector has shown a positive increase. Increase of food production is to be sought along the lines of larger flow of credit to cultivators and further pursuit of land reforms and Mr Shriman Narayan's idea of a standstill has proved still born. Much has been said of the weight of taxation and the need to lighten the load on at least some industries. But the Federation's delegation to the Finance Minister obtained only non-committal replies.

It is only on the question of the size of the Fourth Plan that the Government can be reasonably believed to have exercised some reflection and restraint. The Perspective Planning Division's figure of Rs 30,000 crores has been described by the Finance Minister as astronomical. He is reported to have stuck to the figure of Rs 18,000 crores as against the Rs 22,000 crores of the working groups. These disparities are inevitable when not only resources are not vigorously estimated but they are also thought to be highly elastic. This imaginary elasticity derives from indifference to the impact of taxation on costs and prices and, though perhaps to a slightly lesser extent, to the effect of opportunistic deficit financing in the general price situation. That the differences of opinion about size should have continued so long in the face of incontrovertible facts is only a proof of the anxiety to give the next Plan an impressive size and a determination to persist with old policies in spite of the parlous state of the current Five Year Plan. It is only by putting the total outlay at a very high figure that the embarrassing necessity of preferring one avenue of expenditure to another can be avoided. If the present situation of agriculture, industry and the export trades is such that some projects have to be conceded a high priority, then the resulting danger to pet schemes of social service expenditure and other politically motivated projects can be best warded off by assuming a higher level of resources and raising the figure of total outlay. Once a high figure is fixed and accepted by Government and Parliament, the old train of evils of continued increases in tax rates and extravagance in public expenditure is bound to follow.

It is against this danger that the public must build up as good safeguards as it can. With

the state of the parties in the various legislatures as it is, the task is indeed an uphill one. But it is not impossible. To organise opinion against additional taxation whether in the States or at the Centre should not be difficult, now that the rise in prices has been well nigh continuous for over a decade and even the working class can appreciate the necessity of safeguarding the real income by taking a stand against policies calculated to send prices even higher. If new taxation and deficit financing are thus curbed, the proper size of the Plan can be raised above the sphere of controversy, and the priorities as suggested by the objective situation in the national economy will become indispensable. A five per cent increase in agricultural production, the supply of essential articles to enable each industry to work to full capacity, the development at the proper pace of steel production and the heavy industries to ensure a satisfactory pace of progress in the future, these might take up the larger part of available resources and thus ensure sound, if at first sight somewhat unimpressive, progress.

IFC

A Proud Record

THE full range of the activities of the Industrial Finance Corporation are set out in the annual report for 1963-64 which presents an impressive and attractive record of the achievements of the last sixteen years. Starting as a leading agency to provide rupee loans to medium industries, the Corporation has, in recent years, extended its activities to cover other forms of assistance. These include provision of guarantee for deferred payments and for foreign loans, direct subscriptions to capital issues as well as provision of underwriting facilities. Availability of foreign credits from the USA, West Germany and France has also enabled the Corporation to give loans in foreign currencies to its clients in addition to rupee loans.

It was unfortunate that a decision was taken for the Corporation to enter the tricky field of underwriting when the stock market was nursing the wounds inflicted by the savage budget of 1963-64. The succeeding budget has only aggravated the slump in which the IFC has apparently got stuck up. As at the end of June last, the Industrial Finance Corporation found itself left with shares and debentures to the tune of Rs 7.85 crores as a result of its underwriting operations which included 52 issues involving an aggregate commitment of about Rs 9.48 crores. The sorry experience of the IFC, affords a reliable measure of the debilitation of the money market which is the result of the tax policies pursued by the Government. This may lead to some introspection, but we may not be too sure that it will also lead to a retreat on the tax front, for the Government which has set up the Unit Trust and the Industrial Development Bank as agencies for shoring up the capital market may have other ideas about relieving the IFC of its onerous load.

The record of the IFC in other fields of activity is, however, more encouraging, both in regard to the working of the organisation, as well as for the industrial development of the country. The year's working has yielded a net profit of Rs 125.44 lakhs out of which Rs 106.19 lakhs has been transferred to Reserves which now total Rs 409.19 lakhs as

against a paid up capital of Rs 7 crores. But criteria other than profitability are applicable when judging the record of an institution which has been specifically set up to promote the growth of industry, particularly, in backward regions.

The regional spread of the financial assistance extended by the Corporation is more even than in the case of other credit institutions. Though the four States of Maharashtra, West Bengal, Madras and Andhra Pradesh account for nearly half the total assistance, each of the other States has also received a share, which is by no means negligible, at present, and may be expected to increase in future, with the spread of industry to backward regions. The distribution of the Corporation's assistance, it is clear, will be determined to a large extent by the licensing policy pursued by the Government. If the backward States get only a small percentage of the licences for new undertakings, or for expansion of existing ones, the Corporation cannot be blamed if it is not able to increase the total of loans sanctioned to parties from these States.

Foreign currency loans amounted to Rs 8.04 crores out of a total of Rs 25.12 crores sanctioned during the year under report, and had increased to Rs 16.89 crores by the end of June 1964. As regards utilisation of foreign credits made available to the IFC, it is satisfactory that the West German credit of DM 40 million has been fully committed and about three quarters of the USAID loans for thirty million dollars. The utilisation of the French credit of fifty million francs has, however, been held up by procedural difficulties. The need for loans in foreign currency is bound to increase with the sophistication of the industries seeking assistance from the IFC and the increase in the number of loan applications. It is a happy augury that the Chairman of the Corporation was able to announce at the annual meeting that negotiations with Kredit Anstalt have resulted in the extension of a further line of credit for DM 15 million. There is also reasonable expectation that USAID would be prepared to extend further credit.

The annual report provides convincing evidence of the significant role played by the IFC in the industrial development of the country. The various concerns to which the IFC has extended assistance amounting to Rs 196.78 crores in one form or another account for a total investment of over Rs 550 crores spread over 334 undertakings in the private sector. Out of these 224 are new undertakings which have contributed to the diversification of the country's industrial structure. IFC assistance has helped to create additional capacity in divers industries like paper manufacture, basic industrial chemicals like caustic soda, soda ash and sulphuric acid, cement and refractories industries and, among consumer goods, sugar and cotton textiles. The spread of the assistance over different groups of industries reflects the changes in the priorities of the five year plans. Till 1962 the Sugar industry received the largest quantum of assistance from the Corporation. With the suspension of licensing of sugar factories, the place of sugar in the subsequent two years has been taken by non-ferrous metals and metal products. It remains to be seen whether, with the resumption of licensing, Sugar Co-operatives will again take their place at the head of the queue. Assistance to industrial co-operatives

is a special responsibility of the Corporation and this group of industries, which includes fifty one sugar co-operatives, three co-operative spinning mills, one unit for extraction of vegetable oil, account for about 19 per cent of the total financial assistance sanctioned by the IFC.

With the establishment of the Industrial Development Bank, which has taken over the share holdings of the Government and the Reserve Bank in the IFC along with the power to issue policy directives, it is reasonable to expect a change in the functions of the IFC, as well as in the scale of its operations. The limit of loan assistance by the Corporation has already been lifted and the IFC can also expect to receive financial assistance from the Industrial Development Bank. The Chairman of the IFC has expressed the hope that the formation of the IDB and the consequential changes in the IFC Act will enable the Corporation to play a more fruitful role in industrial development, and that lacunae in the requirements of industry will be filled more easily and large projects which the IFC could not handle alone would be assured of comprehensive attention by a consortium of financial institutions.

South Indian Notes

THE quashing by the Supreme Court of the appointment of 40 candidates to the public services in Mysore is a welcome reminder that, in spite of frequent invasion by the legislatures and executives in this country, the fundamental rights written into the Constitution are a reality. The rights of the candidates who have applied for jobs in reply to an announcement and an offer of selection through a competitive examination to a fair deal at the hands of the authorities should not normally have to be fought out in the courts of law. Nor should they be liable to be whittled down by arbitrary changes in procedure which must inevitably involve invidious treatment. But these are exactly what happened in Mysore. The result was that the candidates fell, as a result of the action of the authorities, into three classes, those who were invited to an examination and a viva voce, those who were kept out of the viva voce and others who received no consideration. It is strange that the disputes arising from this were sought to be settled at one stage by a compromise as if what was involved was not a basic right of a citizen but only some kind of civil claim which lends itself to adjustment in a spirit of accommodation to the other party. The invidiousness of the action of the Government and the Public Services Commission was made patent by the marks obtained by the rival candidates. The right to keep out the better candidates is nowadays denied even to the proprietor of a private business; and Governments cannot expect to exercise it with impunity. It is a matter for gratification that the Supreme Court did not feel deterred by the consequences of unsettlement from quashing the appointment. This judgment reminds one of a similar one some years ago on the action of the Mysore Government in compiling a schedule of backward classes for special treatment which left only a small minority of the total population of the State outside its scope. If such executive action is

possible, appeals to the courts are inevitable. But since the Constitution is no longer an untried one, the thinking sections of the people should devote some thought to the question of removing all chance of governmental orders which may negate the fundamental rights guaranteed by the Constitution. To the extent that provision for special treatment for some classes is at the root of the evil, it would be quite legitimate to ask whether the time to end such special treatment has not arrived.

Mysore's Chief Minister does not appear to be impressed with the results of recent actions to improve the food position in his State; particularly the fixing of grain prices. That the trouble is more with distribution than even with supply and that the problem of distribution has been found to be quite intractable is proved by Mr Nijalingappa's lament that his State has common borders with two such chronically deficit States as Kerala and Maharashtra. Kerala is a thorn on the side of Madras as well where Mr Bhaktavatsalam's complaint is that private traders who have moved rice from the Andhra Pradesh for the consumers in Madras find it more profitable to despatch the grain to Kerala. So far as Mysore is concerned, its Chief Minister looks forward to the time when with the completion of a number of minor projects, the State could achieve genuine self-sufficiency and would not have to ask for a grain of import from outside its borders. That States like Mysore and Madras with only a marginal deficit should find themselves in nearly as much trouble as States which need large-scale imports is a rather grave indictment of the present system of distribution. For Mysore, the problem has a more forbidding look because of the very low proportion (6 per cent!) of irrigated land to total of land under cultivation. And it is not Mysore alone that has suffered from the neglect of minor irrigation schemes, resulting from a not ununderstandable glamour for big multipurpose projects. Of minor irrigation schemes which can yield good and speedy returns, Mysore has a large number. The Kabini, the Suvarnavathi and the Taraka Kabin, the Lakshmanathirtha reservoir are all such. Mr Nijalingappa claims that, if the Centre will only finance these schemes to the extent of Rs 7.2 crores, he would see to it that the present marginal deficit is wiped out and that Mysore won't have to take the bowl round for its requirements of rice. Rs 7 crores is no price to pay for keeping one State above want!

Union—State Financial Relations

By S. D. Derashri & A. C. Angrish

IN a Federal Country like India the problem of the division of functions and the allocation of financial resources in conformity with them is always a ticklish problem. It has assumed a greater significance in the light of new Union-State relations emerging in the context of economic planning. In terms of the generally accepted principles a good system of Federal finance should provide for independence, adequacy and elasticity, and at the same time ensure uniformity, responsibility and efficiency.

Article 280 of our Constitution provides for quinquennial review of the Union-State

financial relations by a Finance Commission to be appointed by the President of India. The appointment of the Fourth Finance Commission at this juncture is very timely. Its recommendations will cover the five-years of the Fourth Five Year Plan and are expected to be available at the time of preparing the Budget for 1966-67, the first year of the Fourth Five Year Plan.

The problem of the allocation of financial resources has become more complex by the working of more than a decade of economic planning. In the planned economic development of our country, the States play an important role and together with the Centre, the responsibilities of the State Governments are also increasing. The budgetary requirements of the States have gone up with the increase in expenditure on development and administrative services. The sources of income have, however, not kept pace with the expanding needs. The States' own resources are inelastic and naturally, therefore, the States have increasingly to depend on the Centre for obtaining the necessary resources. The total amount of resources transferred to the States during the Second Plan period (Rs 2867.9 Crs) was more than double of that during the First Plan Period (Rs 1412.9 Crs.). During the Third Plan period the magnitude of the devolution of resources from the Union to the States is estimated to be even larger.

In view of the limited resources of the States the quantum of devolution from the Centre to the States should be such as would enable the States to meet their needs of administration and development. In doing so consideration would have to be given to the tax efforts of the States and efficiency and economy in implementing the plan projects. Since tax sources of States suffer from relative inelasticity and instability it is necessary to make the sources elastic and stable through increased devolution from the Centre. An important method of increasing the resources of the States is through the provision of shared taxes. In regard to the taxes to be shared between the Union and the States, a sound maxim to adopt would be that all participating governments, more particularly the one responsible for levy and collection should have a significant continuing interest in the yield of the tax.

INCOME-TAX

The Third Finance Commission had raised the share of the States out of the net proceeds of income-tax from 60 to 66 2/3 per cent. But it has not fully compensated the loss to the States as a result of the change in the Income Tax Act introduced by the 1959-60 Budget, according to which Income Tax and Surcharge paid by Companies formerly forming part of receipt under income tax came to be merged with the Corporation tax.

Table I shows that States' share of income-tax as a percentage of total collections of income tax is dwindling since 1962-63 and the States have not been fully compensated for loss of revenue due to the change in income tax law inspite of increased percentage given to them by Third Finance Commission.

It, therefore, seems essential to raise further the share of the States in the divisible pool, if the States are to continue to receive the amounts which they would have received had this change in company taxation not been made. On the basis of income tax revenue for 1960-61 this proportion would work out to near about 85%. In view of the growing resource requirement of the States under the

plans the percentage allotted to the States should be enhanced from 66 2/3 to 75% at least. We do not suggest a larger share of income tax (say 85%) as it would otherwise retard the interest of the Central Government in this tax.

With regard to the basis of distribution of the divisible pool of taxes on incomes among the States, we do not appreciate increased emphasis on the basis of collections recommended by the Third Finance Commission. We feel that the basis of collections either unadjusted or adjusted with reference to residence of tax payers will not by itself secure an equitable distribution among the various States. This criterion might not substantially conform to the relative responsibilities of the various States to provide governmental services to the people. The Commission seems to have recommended this basis largely for the sake of evolving a formula of compromise acceptable to all concerned.

We, therefore, do not favour the criteria of "Collection" nor do we regard "Area" as a suitable basis of distribution of tax revenues. Needs of States would be better reflected by population and density of its distribution taken in conjunction with per capita State income and per capita expenditure on Social Services. Weightage should also be given to the efforts made by the States in mobilising their own resources and the efficiency with which plan programmes are implemented. In the absence of such a scheme the backward States would not come up to the level of advanced States and disparities in levels of development would continue.

UNION EXCISE DUTIES

In a developing economy like India with low income level and large scale evasion of direct taxes the public authorities have to depend on Commodity taxes to a large extent. Table II shows the increasing importance of Commodity taxes and more particularly Union Excise duties in the revenue budget of the Union Government. The yield from Union Excise duties has risen from Rs 67.54 Crores (i.e. 18.9% of the total revenues) in 1950-51 to Rs 700.17 Crores (i.e. 56.1% of the total revenue) in 1963-64.

In view of the expanding budgetary needs of the States and limited possibilities of increasing their resources through sharing of income tax, the States need larger share in the proceeds of Excise duties. The levy of new Union Excise duties or enhancement of existing Excise duties applicable on articles affects the capacity of State Governments to impose Sales tax on new articles or to enhance the rates in respect of articles already liable to Sales tax.

We would, therefore, recommend the inclusion of a few more articles such as Sewing machines, Motor Cycles and Scooters, radios, gramophone records and steel furniture and utensils in the Schedule of articles, the duties on which are to be distributed. We would also plead for an increase of share, say, from 20% to 25% because the existence or increase of Union Excise duties on certain commodities restricts the scope for levying Sales taxes by the States. Moreover, it would give a great deal of psychological satisfaction to the States and remove any suspicion that the Union is pursuing a policy of excessive centralisation of resources.

In view of the fact that the articles subject to Union Excise duties include not merely articles of mass consumption but also intermediate and producers' goods, we would re-

commend the distribution of the States' shares on the same basis as the divisible pool of income tax.

ADDITIONAL DUTIES ON EXCISE

When the additional duties of Excise in lieu of Sales tax were levied the States were guaranteed that the share accruing to each State shall not be less than the revenue realised from the Sales taxes in the Year 1956-57. The Second Finance Commission recommended certain principles governing the distribution of net proceeds of these duties. The Third Finance Commission adopted the scheme of the Second Finance Commission with minor modifications on account of introduction of additional Excise duty on silk fabrics. However, none of these Commissions agreed to revise the guaranteed amount on account of increases in the rates of Sales tax by the States after the base year 1956-57. This has worked very hard on the States which had introduced Sales tax at a late stage and which have developed this source only after 1956-57.

It is reasonable to expect that had the State Governments continued to levy Sales tax on these items their income therefrom might have progressively increased. It is, therefore, justifiable for the States to demand that the net total minimum guaranteed amount from the divisible pool of the additional excises should cover not only the revenue currently collected but prospective revenues also.

The scheme for levy and collection of additional Excise duties in lieu of Sales taxes has been welcomed by the business community and in fact there is an insistent demand for the extension of the scheme by including therein as many articles as possible. There have been consultations between the Centre and the States in regard to the feasibility of extending the scheme but the State Governments have been throughout reluctant to extend the substitution scheme to any more commodities unless some amount of elasticity and flexibility is brought about in the scheme.

We would suggest the adoption of a uniform policy for all the States by revising the ratios of the different States for distributing the excess collections over guaranteed amounts. The Fourth Finance Commission should revise the guaranteed amounts taking into consideration the increased production of these commodities, enhancement of tax

rate and coverage, minimisation of tax evasion etc.

We would not like to go into the arguments being given in favour as well as against the replacement of Sales taxes by Union duties of Excise. However it stands to reason that if the evil effects of Sales taxes such as conflict of jurisdiction, evasion of taxes, high cost of collection etc., are to be minimised, it is essential that some uniform basis of levy and collection of Sales tax must be brought about. If the States are not willing to surrender their autonomy, they should be persuaded to agree to uniform legislation and collection of Sales taxes.

The tax on Railway passenger fares was introduced in the year 1957. In accordance with the recommendations of the Second Finance Commission after deducting one quarter per cent of its proceeds as being attributable to Union territories the rest was to be distributed among the States on the basis of net revenue obtainable from passenger traffic in the territories of different States.

This tax was repealed in 1961 and Union Government decided to make to the States an ad-hoc grant of Rs 12.5 Crores per year for 1961-66 representing the average of the actual collection during the two years 1958-59 and 1959-60. This ad-hoc grant will lapse by 1966. However the need to supplement the resources of the States is as urgent to-day as it was in 1957 when the tax on Railway passenger fares was introduced.

We, therefore, recommend that the States should be given an increased grant taking into consideration the expansion of railway revenues during the period 1957-66 and this grant should be distributed among the States on the basis of the revenues earned by the railways from passenger fares in their respective territories.

GRANT-IN-AID

Under our Constitution the States receive two types of grants, namely those under Article 275(i) and those under Article 282. Since the inception of the economic planning in our country, the relative importance of grants under the latter Article has greatly increased. The Third Finance Commission have recommended that besides the revenue grant, 75% of the revenue component of the Plan should be included in the grants-in-

aid to the States. The Government of India did not accept the majority recommendation of the Commission. In view of the fact that the expenditure on Plan projects is also of a recurring nature and is in the nature of committed expenditure, it is essential that the Fourth Finance Commission at the time of recommending grants should consider not merely the present arrangements regarding grants-in-aid under Article 275(i) of the Constitution but should also consider the overall requirements of the States including those for Plan projects and recommend such grants as will enable the States to have adequate resources to go ahead with their development programmes framed by the Planning Commission.

In regard to the distribution of such grants we would again reiterate the basis of need as determined by population, density, per capita income and expenditure indices.

In the end we would like to mention that although the terms of reference of the Commission do not clearly mention the examination of the needs of the State for implementing the programmes of the Fourth Five Year Plan we hope that like its predecessor the Third Finance Commission, the present Commission would also place a broad interpretation on its terms of reference and examine the revenue resources of the States for the Fourth Plan period not only in view of the requirements of the States to meet the committed expenditure on the maintenance and upkeep of Plan Schemes completed during the Third Plan but also the expenditure likely to be required to complete the development programmes under the Fourth Five Year Plan.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

World of Finance

BANK RATE

5 Per Cent's Implications

It is significant that the Managing Director of the International Monetary Fund has welcomed India's action of last week in raising bank Rate to 5 per cent. For, this would seem to suggest that the immediate provocation for an upward revision of the primary rate has presumably emanated from the international financial agencies, and in particular from the IMF. We suggest such a hypothesis for the simple reason that, were it the Reserve Bank's intention to prevent the speculative utilisation of bank finance, then it could well have resorted as before to measures of selective or qualitative monetary control.

The second point of interest is that a ceiling (of 9 per cent) has been prescribed on the rate that the larger Indian banks and exchange banks may charge on their advances/overdrafts/discounts. The implication of this step is, surely, that the central banking authority is concerned about the possibility of the raising of bank Rate being used as a pretext by banks generally to hike their advance rates. For, if such were allowed to happen, the cost of credit to many productive enterprises could have been pushed up to unconscionable levels.

Again, with its rather categorical indications of the rates of interest that banks may pay on time deposits pertaining to different categories of periods, it would appear that the central banking authority has for the first time assumed the responsibility for supplying the money market with a whole structure of interest rates based in an orderly manner on bank Rate itself. A good deal of current account money masquerading as time money will no longer be able to earn much interest, since such money is, on deposits up to 14 days to be reckoned as on par with current accounts. Studies have shown that banks will generally be paying less for time money up to 90 days. On the other hand, term money will very likely cost more, but it is possible that this higher charge will be offset by the fact of the minimum rate for advances moving up to 7 per cent.

The next point to note is that there is no longer a quantitative curb on borrowings by banks. Instead, the factor of importance will be the borrowing bank's own liquidity position. So long as the total of a bank's cash balances and unencumbered securities amounts to 28 per cent or more of total demand and time liabilities, it will be in a position to secure assistance from the central banking authority at bank Rate. On the other hand, banks which fall short of such minimum liquidity requirements will be compelled to pay penal rates of interest. While penal rates on borrowings by banks with liquidity below the stipulated minimum are intended, we may suggest, to set a maximum credit ratio of around 72 per cent, it should be clear that at the height of the busy season the demand for credit will be such as to compel the banks to borrow at penal interest rates. As such, with the upper limit prescribed on advance rates, it should be clear that the earning capacity of banks will be affected.

Yet, this can by no means be the intention of Government or the Reserve Bank. It is essential that the process of strengthening of the banking

system should be continued steadfastly. So, there is need for improvement in earnings, whether for transfers to published or inner reserve, or for the payment of such dividends as will enable banks successfully to raise sufficient capital from rights issues. Unfortunately, the implication of the indications of interest rates that banks may pay on Deposits may well be that banks' margins of earnings will prove inelastic. However, we would stress that while the Reserve Bank has directed that Deposits up to 14 days be treated as current account money, it has no more than indicated what the other Deposit rates should be. But then it has also been made clear that the monetary authorities intend that term money rates be increased so as to facilitate the mobilisation of Deposits by the banking system.

In these circumstances, we suggest that a study of the manner in which banks' earnings will be affected by the new monetary policy be made without delay by a committee to be appointed by the Indian Banks' Association. Thereafter, the IBA could suitably amend its own inter-Bank agreement on Deposits, so as to ensure that banks' working and profitability do not suffer.

The State Bank has acted swiftly in the wake of the raising of bank Rate. It has announced that, as from 1 October 1964, the rates both on Deposits and Advances are being revised upward. From the point of view of Scheduled Banks, the most significant change is that the institution's Advance rate has been raised by one-quarter of one per cent to 6.25 per cent. Since the State Bank's outstanding Advances to Scheduled Banks have tended to be placed at around Rs 30 crores, it is clear that the improvement in its earnings under this head alone, will work out to about Rs 7½ lakhs.

The revised structure of rates of interest on Deposits is to be:

Term	Rate %
Up to 14 days ...	nil
15 days to 45 days ...	1.25
46 days to 90 days ...	2.50
91 days and over but less than 6 months	4.00
6 months and over, but less than 12 months ...	4.50
12 months and over, but less than 24 months ...	5.00
24 months and over, but less than 36 months ...	5.25
36 months and over, but less than 60 months ...	5.50
60 months and over ...	6.00

As we have indicated earlier in this article, it were best that Scheduled Banks came to a decision on interest rates only after a study of the impact of the new pattern on interest rates on banks' earnings has been undertaken by the Indian Banks' Association.

BANK RETURNS

Sharp Rise Again in Deposits

The slack season accrual to Deposits of Scheduled Banks is this year quite clearly assuming record proportions, as confirmed in the latest statutory statement of Scheduled Banks.

Evidence of the progress of the 1964 slack season is also available in the returns of the Reserve Bank for 25 September. Active Note circulation has contracted substantially by Rs 26.56 crores to Rs 2,363.26 crores, and there has been inflow of Rupee Coin in the large amount of Rs 2.22 crores. With Foreign Securities unchanged at Rs 85.46 crores, currency has been contracted against Rupee Securities, which are lower by Rs 9.80 crores at Rs 2,086.13 crores, by transfer to the Banking Department. As a result, the Reserve Bank's cash in the till has improved sharply by Rs 18.98 crores to a fairly high level of Rs 36.28 crores.

Investments in the Banking Department are shown to be Rs 26 crores lower at Rs 78.35 crores. Thus the net drop in the holdings of Rupee securities by the Reserve Bank amounts to Rs 35 crores during the week under review. Of this, a sum of Rs 9 crores may be attributed to purchases through the tap by the State Bank. We doubt, however, that the balance of the decline, aggregating Rs 26 crores, could represent similar purchases by other Scheduled Banks, whose acquisition during the week could at best be placed around Rs 6 crores. It follows, then, that the Centre was apparently in a position to cancel ad hoc Treasury Bills before their maturity in an amount of about Rs 20 crores. This also suggests that the Centre's receipts continued to be of considerable magnitude, reflecting it is possible late payments of the September instalment of taxes.

The Centre was, it may be assumed, in a position to institute reverse ad hocs because of a comfortable level of cash balances. Its Deposits are in fact shown just a shade higher by Rs 0.65 crore at Rs 61.33 crores. On the other hand, the State Governments continue to be hard pressed as to their finances. Their Deposits, it is true, are better by Rs 1.40 crores at Rs 15.08 crores, but against this is the fact that they had to borrow Rs 7.52 crores more at Rs 25.87 crores in the form of ways and means advances from the Reserve Bank. Furthermore, it is likely that the rise of Rs 5 crores to nearly Rs 210 crores in the Reserve Bank's portfolio of Treasury Bills purchased relates to the States in this wise replenishing their balances. It is apparent that the States will continue to need to have recourse to credit from the Reserve Bank, unless the Centre steps up its loans and advances for plan projects.

There is no significant change in the position of Scheduled Banks vis-a-vis the Reserve Bank. The fall of Rs 5.79 crores to Rs 100.71 crores in their Reserve Balances can be attributed to the State Bank, and their borrowings are a shade lower (by Rs 0.10 crore) at a still nominal Rs 0.83 crore. However, in the next statement, owing both to beginning of the month demand for funds and to Pujā disbursements, it is almost certain that the banking system will need the assistance on a somewhat larger scale of the central banking institution.

It remains to add that Balances Held Abroad, which have been moving erratically in a narrow range over recent weeks, have dipped slightly by Rs 1.23 crores to Rs 12.17 crores; but it is quite clear that we have got over almost the whole of the season during which exports tend to be poor without too much of strain in our foreign exchange position.

For the second successive week, as shown in its return for 25 September, the State Bank re-

ports an increase in Deposits, which have moved up by Rs 4.59 crores to Rs 670.55 crores. At the same time, there has also been a drop, though a small one of Rs 1.25 crores to Rs 331.16 crores, in the total of Advances. Giltedged has been acquired for Rs 9 crores, raising the portfolio to just over Rs 296 crores. The further rise of Rs 5 crores to Rs 43.85 crores in Other Assets suggests that before the end of the current slack season the State Bank intends to make further fairly large purchases of giltedged. The end result is that cash balances, including money at call and short notice, had to be drawn down by Rs 5.46 crores to Rs 30.76 crores.

+

The statutory statement of Scheduled Banks for 18 September records a steep increase of Rs 22.31 crores in net Deposits. On the one hand, net Demand Deposits have moved up by Rs 5.24 crores to Rs 1,258.91 crores; and, on the other, net Time Deposits have been marked up by Rs 17.07 crores to Rs 1,423.49 crores. The State Bank, incidentally, accounted for Rs 9.75 crores of the new accruals. Contraction in bank credit has also been of considerable magnitude, the total of Advances declining by Rs 15.24 crores to Rs 1,729.18 crores; and, of this, a sum of Rs 9.86 crores is to be attributed to the State Bank. Indebtedness to the State Bank is lower by Rs 0.43 crore at Rs 32.74 crores, and to the Reserve Bank by Rs 1.07 crores at Rs 0.88 crores. The giltedged portfolio has risen steeply by Rs 34 crores to Rs 796.22 crores; and in this respect also the State Bank's share, at Rs 21 crores, is substantial. The net result of these changes is that cash balances, including money at call and short notice, are shown better by Rs 2.64 crores at Rs 247.94 crores.

+

RBI Communique on Bank Rate

THE Reserve Bank has, with effect from the close of business on Friday, 25 September 1964, put up the Bank Rate to 5 per cent. This rate had been at a level of 4½ per cent since 2 January 1963. The present increase in the Bank Rate reflects the growing concern of the Reserve Bank with regard to the current price situation.

The expansion in money supply at a rate well ahead of the increase in real output which has marked the first three years of the Third Plan, has been particularly sharp in the last year. The need for continuing the policy of monetary restraint has, therefore, become more imperative. At the same time, with a view to assisting banks in meeting genuine seasonal requirements for credit, the Reserve Bank has decided to withdraw its present scheme whereby the access of scheduled banks to it is regulated through a system of quotas. The Bank has now decided to introduce a system which is intended to ensure economy

in the use of Central Bank rediscount facilities through a higher interest rate structure. A differential interest rate system has been instituted whereby banks will pay a progressively higher rate for their borrowings from the Reserve Bank depending upon the real impairment of their liquidity position. The Bank has announced that as long as a commercial bank's net liquidity position—defined for this purpose as the total of its cash, balances with the Reserve Bank and other banks and investments in Government securities, less its total borrowings from the Reserve Bank and the State Bank of India—is at or above 28 per cent of its total demand and time liabilities as reported weekly, it would obtain credit from the Reserve Bank at the Bank Rate, now put up to 5 per cent. For every decrease of one per cent in the net liquidity ratio, the rate will be stepped up by half per cent. To ensure maximum effectiveness of the differential interest rate instrument, the Reserve Bank has also placed a ceiling of 9 per cent on the rate which the larger Indian banks and foreign banks can charge on their advances/overdrafts/discounts. The present concession with regard to the Rupee Export Bill scheme will continue to be in force.

The Bank has also announced ceiling rates of interest on very short-term deposits. The existing spread between the rates on short-term deposits and longer-term deposits is not sufficiently wide and is not conducive to the process of deposit mobilisation. Accordingly, the Bank has directed that deposits up to 14 days should not be paid more than what current accounts obtain and the maximum the banks can pay for deposits up to 90 days is set at 2.50 per cent. The Bank has also indicated that it regards as fair a rate structure based on a minimum rate of, say, 4 per cent per annum for deposits of 91 days with suitable spreads for deposits of longer maturities.

+

African Development Bank Established

The establishment of the African Development Bank, the first regional financial institution in Africa, was announced by Robert K. A. Gardiner, Executive Secretary of the Economic Commission for Africa (ECA), in Addis Ababa on 15 September.

The announcement was made on behalf of the Secretary-General, who is the Depositary of the Treaty setting up the Bank and Trustee for the funds of the Bank until it actually comes into being.

The Treaty by which 31 African Governments agreed to form the African Development Bank

entered formally into force on 10 September, when the Government of Algeria completed its ratification of the Agreement. Under its provisions, the Treaty was to come into force upon ratification by at least 12 Governments with subscriptions totalling not less than \$137.28 million.

The ratification by Algeria was the twentieth to be deposited with the Secretary-General and brought total subscriptions then to \$150.4 million. The establishment of the Bank marks the culmination of more than three years of effort initiated by ECA in 1961. A special ECA Committee of Nine drafted the Articles of Agreement of the Bank on the basis of extensive consultations carried on by members of the Committee in all African capitals, as well as in most financial centres outside Africa.

The Agreement establishing the African Development Bank was adopted at Khartoum on 4 August by a Conference of African Finance Ministers. The Conference was convened by ECA and had the endorsement of the Addis Ababa Meeting of African Heads of State. All but three of the independent African Governments qualified for membership in the Bank had signed the Agreement by the 31 December, 1963 deadline. Ratifications may be deposited up to 31 July, 1965.

The foremost task of the Bank, under the terms of the Treaty, will be to channel funds into major economic and social development projects and programmes, particularly projects of common concern and those designed to make the economies of African countries increasingly complementary and to bring about an orderly expansion of their foreign trade.

Other functions of the Bank are to mobilize and increase, in and outside Africa, resources for financing such investment projects and programmes; generally to promote investment in Africa of public and private capital in projects relating to economic and social development; and to provide technical assistance required for the study, preparation and execution of development projects and programmes.

The Bank has an authorized capital of \$250 million, of which \$202.1 million has been subscribed by the 31 African Governments which have so far signed the Treaty of Khartoum.

The remainder is available for subscriptions by other African Governments, especially those of new countries coming into existence subsequent to the Khartoum Treaty.

In addition to its share capital, the Bank will be able to borrow local currency from its members up to an amount equal to their subscriptions. The provision is intended not only to increase the Bank's resources, but also to promote the use of African products and services in the carrying out of development projects sponsored by the Bank.

+

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 29 September, 1964. Total amount offered was Rs 4,00,00,000. Tenders at Rs 99.400 per cent were accepted in full and those at Rs 99.400 per cent were allotted 50 per cent. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.400 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at Bangalore and Calcutta upto the close of business on Saturday, 3 October, 1964 and at Bombay, Kanpur, Madras, Nagpur and New Delhi upto the close of business on Monday, 5 October, 1964. Successful tenderers should make payment on Friday, 9 October, 1964 at all centres. Other conditions are as usual.

During the week ended 25 September, 1964, Government of India Treasury Bills for Rs 150,40,00,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills sold from 23 September, 1964 to 26 September, 1964 amounted to Rs 13,35,00,000.

Notes of the week

RESEARCH New Deal Promised

The speech made by Mr C. Subramaniam, Minister for Food and Agriculture, at the Governing Body meeting of ICAR, is calculated to put heart in the ranks of agricultural scientists who have been carrying on their work in frustrating circumstances. Both in respect of pay scales and prospect of advancement, agricultural scientists in our country are not treated on a par with workers in other fields of scientific research. The address shows that the Minister is keenly aware of the handicaps of the research workers in agriculture, and he has stressed the importance of giving them higher status and recognition as well as the need for providing adequate resources for research. The remedy for the present unsatisfactory situation may not entirely lie in his hands, but he should be able to bring about a salutary change in the administration's attitude toward research, at least as far as his own Ministry is concerned.

Criticisms that are sometimes levelled against the agricultural scientists and research institutions, betray a confusion regarding the role and function of research. In the past, agricultural scientists have been taken to task by persons in high places for their lack of success in conveying the results of research to the farmers in the countryside, ignoring that this should properly be the responsibility of the agricultural extension service. While research should have relevance to the day-to-day problems of the farmers, the scientist will not be able to do much research if he has also to function as an extension worker. It is the task of the Administration to organise the extension service as an effective link between the farm and the research institutions.

+

HAL Impressive Record

The progress made by Hindustan Antibiotics Ltd. since it was established ten years ago is impressive whether measured by the financial or technical yardstick. Production and sales have increased by over two and a half times and the surplus before taxes has increased from Rs 34 lakhs in

1957-58 to Rs 144 lakhs in 1963-64. HAL is one of the few public sector undertakings from which the State gets a satisfactory return on its investment and the Company has secured the Presidential Award for the third year in succession. A dividend of ten per cent on the capital of Rs 247 lakhs was announced at the last annual general meeting of the Company held in Delhi on September 26. Apart from dividend, which the company has declared for the last three years, substantial annual contributions to general revenue, amounting in total to Rs 389 lakhs, have accrued by way of taxes. The Company has also been able to find funds for its expansion to the tune of Rs 2.5 crores out of its own surpluses.

All this make impressive showing; but in the case of a public sector undertaking engaged in the manufacture of life saving drugs, profitability cannot be regarded as the sole index of satisfactory performance. It is therefore gratifying to note the steady improvement in the cost of production of penicillin. The cost, no doubt, is still higher than the cost of penicillin imported in bulk, but the landed cost bears little relation to the actual cost of production in the country of origin. Moreover, what is relevant is the cost at which penicillin is available to the consumer and the retail price in India is much lower than the corresponding prices in Western countries.

It is also relevant to mention that the sale price of indigenously produced Streptomycin has been maintained at Rs 175 per kilogram, although the cost of production of this drug is higher. It has been possible to maintain the price at the same level as the price of the imported drug by using part of the profit on penicillin for subsidising the sale of indigenously produced streptomycin. Dr. Kasbekar, the Managing Director of the Company, has also stated at a press conference in Delhi that the cost of production would come down in the next two or three years. With the elimination of the subsidy for streptomycin, the sale price of penicillin may also be expected to come down.

The release for sale of Hamycin, the antifungal discovered in the HAL laboratories, is one of the

highlights of the Company's operations during the year. The company has taken up production of Vitamin C on a process developed by the National Chemical Laboratory, Poona, and Chlorotetracycline, another product whose manufacture has been undertaken by HAL, was released to trade last week by the Union Minister for Petroleum and Chemicals.

+

FERTILIZERS Crash Programme

Among the essential prerequisites needed for achieving a break-through in agricultural production, fertilizers occupy a prominent place. It is gratifying therefore that concerted steps are being taken to augment the supply of fertilizers in the country. Speaking at last week's informal conference of State Agriculture Ministers, Mr C. Subramaniam, Minister for Food and Agriculture, has revealed that not only the US but other countries too have promised to give priority to the export of fertilizers to India. As for increasing domestic production, a crash programme is to be implemented. Under this programme a chain of five units with American collaboration has been proposed. According to Mr Subramaniam, the first of these units will be ready to go into production in about two years with the remaining four going into production in regular succession thereafter.

While the fact that consumption of fertilizers in the current year—consumption is expected to show an increase of 60 per cent over the previous year—is showing a marked upturn is encouraging, the annual rate of consumption must increase much more if the objective of a break-through in agricultural production is to be achieved. In order to bring about a widespread use of fertilizers, it will be necessary to ensure that supplies are made available to the farmer at a low price and where and when he will require them. The need for reducing price seems to be already engaging the attention of Government and indications are that a scheme for subsidising sale of fertilizers will be worked out before long. But price reduction alone will not suffice. It is equally important that the farmer is

enabled to get his supplies in a manner that will be convenient to him. A special committee is already examining the question of distribution, prices and measures necessary to promote the sale of fertilizers. An important aspect of the problem of stepping up the consumption of fertilizers is the determination of the type of fertilizer that will be most suitable for different regions and different crops. In this view a proper countrywide soil survey becomes necessary. Mr Subramaniam has indicated that foreign assistance for undertaking aerial mapping preparatory to a detailed soil survey is likely to be made available to India. What is now needed is that the various studies pertaining to price, distribution etc, are expedited so that corrective action is not unduly delayed.

Poona - Pimpri - Chinchwad complexes are a pretty bunch which an entrepreneur with keen business acumen and prescience can easily overlook. The concessions, which cover a wide ground, include support of the State Government for the application of industrial licences to the Centre, rebate on electricity tariffs, a cash refund on sales tax, exemption of octroi duties and payment of non-agricultural assessment, supply of cement, iron and steel, guarantee to loans, contribution toward cost of feasibility studies and the like.

The State Government's efforts at encouraging the location of industrial units in the hitherto unchartered areas are praise-worthy. For, nearly sixty per cent of the State's industrial activity and forty-four per cent of the aggregate industrial labour force are concentrated in Greater Bombay. But as the Barve Committee pointed out, the congestion in this area is primarily due to the lack of a definite policy regarding location of industries. Though the committee made some suggestions for eliminating this unhealthy trend, Governmental action was conspicuously wanting. It is, however, gratifying that the Government is endeavouring to make good this lapse. Aside from attracting entrepreneurs to set up factories in the far-flung areas of the State, the Government should restrict the location of new undertakings in the already congested areas. There has indeed been a move in this direction consequent on the setting up of the State Industrial Development Corporation. But the Corporation's plan to start factories in backward regions of the State was on the whole unsuccessful. It can reasonably be anticipated that the latest attempt will certainly evoke good response from the industrial class. Apart from accomplishing a balanced industrial development of the State, the new scheme will pave the way for providing gainful employment for a considerable section of the population. Here is an example which is worthy for other States to emulate to much advantage.

PLASTICS

Need for Incentives

Production of plastics has markedly increased in the past few years but the pace of development of the plastics industry has not been as fast as has been envisaged in the Third Plan. As against a target of 74,000 tons capacity by 1965-66, the installed capacity has so far amounted to only 33,000 tons. This is largely because the industry's growth is being retarded by a number of adverse factors. In the first place supply of some essential raw materials which have to be imported still, is lagging far behind demand. In recent years, imports have been progressively reduced with the import cut being as much as 40 per cent in some cases. While imports have thus been drastically reduced, the industry has also to pay high prices

for indigenous raw materials. The heavy excise duty and shortage of power and transport are some of the other difficulties that the industry has to grapple with.

Despite these difficulties, the industry is already playing an increasingly important role in earning foreign exchange for the country. The value of exports which was about Rs 74 lakhs in 1959-60 has gone up to about Rs 264 lakhs in 1963-64. What is perhaps much more significant is that Indian plastic goods are not only exported to nearby countries but are also finding buyers in a number of industrially advanced countries in Europe and America. In a message to the All India Plastic Manufacturers Conference, Mr Manubhai Shah, Minister of Commerce, has rightly pointed out that while the ambitious Fourth Plan target is not difficult to hit what with the prospects of development of a petro-chemical industry and local fabrication of equipment, the rapid progress of the industry will continue to depend on the availability of foreign exchange and technical skill. Mr Shah has made it clear that the industry's current requirements of foreign exchange amounting to about Rs 5 crores are to be earned by itself from increased exports. But the bigger problem of expansion of capacity will still remain especially since a capacity target of 4,00,000 tons is envisaged for the Fourth Plan. For one of the reasons for the slow pace of expansion of capacity is the diminishing interest in joint ventures by foreign collaborators. If the targeted capacity is to be hit, Government will have to take early steps to identify and remove the obstacles in the way of a rapid progress of the industry.

CASHEW EXPORTS

A Welcome Move

The two-day seminar on cashew exports, which concluded in Ernakulam last week, is more than of ordinary interest as it has spotlighted the urgency for stimulating domestic production and expanding exports. The seminar has, understandably enough, recommended the expeditious setting up of a committee under the chairmanship of Mr K. K. Nayar, chairman of Cashew Export Promotion Council, with a view to initiating requisite measures for augmenting the production of cashew indigenously. This is a step in the right direction as out of approximately 2.25 lakh tonnes of raw cashew nuts required for processing by the home industry, internal availability is merely a shade over one-third and the balance is met by imports from Kenya, East Africa and Tanganyika at the cost of considerable foreign exchange. Expansion of domestic production is sought to be accomplished by increasing the acreage of cashew plantation in all the Southern States and Maharashtra and Goa. For the successful implementation of this programme the State Governments are informed to appoint a

separate joint director of agriculture and also advisory committees. As the seminar suggested, a board on the lines of similar statutory boards for commodities such as tea, coffee and rubber should be set up for coordinating activities at different levels and solving vexatious problems that are currently bedevilling the industry.

It will be recalled in this context that an amount of Rs 1.90 lakhs was earmarked in the current Plan for the development of cashew cultivation. But progress in this sphere has been far from encouraging, though the scope for extensive cultivation is immense. The proposed board should therefore bestow special attention on this aspect for making the country self-sufficient in cashew. Besides, there is a strong case for coordinating the various efforts at exports in order to boosting the export prospects of this important foreign exchange earner. The gradual mechanisation of cashew processing will be of enormous help to enhance the competitive ability of Indian cashew. Permission by the Government for importing requisite machinery will be eminently helpful.

ALUMINIUM

Prerequisites for Expansion

Addressing the twenty-sixth annual general meeting of Aluminium Corporation of India Ltd, Mr Lakshipat Singhania has rightly pointed out that industries such as the aluminium industry can only be developed with the continued support of Government. For, in the first place, electric power is properly to be classified with raw materials because of the enormous quantities consumed. But in India power rates are not only not uniform but are also high. Secondly, for the proper growth of the industry, entrepreneurs should be enabled to establish units at sites most suited to the aluminium industry. This is not always the case because factors like regional planning are given undue importance in granting licenses. The third point that has been emphasised by Mr Singhania pertains to the trend of the State Governments to take a narrow view and exercise control over essential facilities including mineral rights such as bauxite. Referring to the controversy over the economic size of aluminium plants, Mr Singhania is of the view that this is a matter that should be decided with reference to prevailing circumstances. The history of the world aluminium industry shows that generally the size increases from small to big in course of time. Even now it is not uncommon to come across small plants of the range of 5000 tons. According to Mr Singhania, therefore, in a developing country such as India undue importance should not be given to the question of size of the aluminium plant. Facility for semi-fabrication for the producers is another point

about which confused ideas till prevail. The semi-fabricators contend that if the producers are allowed fabrication facilities unreservedly, they will be forced to go out of business. But the producers' contention is that the since the aluminium industry is a highly capital intensive industry, the cost of the plant upto the metal stage is much more per ton of installed capacity than for the semi-fabrication plants like Rolling Mills etc. It is therefore only proper that the producer who has incurred high capital expenditure on his main plant is partly compensated by being allowed to derive the advantage accruing from a larger semi-fabrication capacity.

As far as the Aluminium Corporation is concerned its expansion programmes have been more or less completed. During the past year sales have increased by 48 per cent reaching a new high of Rs 345.15 lakhs. The company has this year further expanded its capital by issuing preference shares of Rs 25 lakhs and equity capital for Rs 17.81 lakhs, thereby bringing the paid up capital to Rs 2 crores.

MYSORE PAPER

Rising Costs and Dwindling Profits

The speech delivered by Mr M. D. Shivananjappa, IAS, Chairman and Managing Director of the Mysore Paper Mills Limited, at the company's annual general meeting held in Bangalore this week is of considerable significance as it brings to sharp focus the difficulties under which the paper manufacturing units are currently operating. Their difficulties stem mainly from the mounting production cost and the inadequate price increase allowed by the Government. For, as Mr Shivananjappa stated the upward revision in prices by Rs 60 per tonne in 1962 form only a fraction of the upsurge in manufacturing cost by Rs 270. Naturally enough, despite the increase in sales by Rs 732,009 to Rs 13,030,769, there has been a notable decline in profits earned by the company during the year ended 31 March 1964. In the circumstance, as Mr Shivananjappa pointed out there is an urgency for increasing price for enabling the industry to carry out expansion programmes expeditiously.

It is, however, gratifying that much headway has been made in the company's expansion scheme during the year under review. The new paper machine was serviced in March. Besides, the full range of equipment such as paper machine, stock and chemical preparation plant and other paper machine parts imported from Germany and England have been erected and taken to service. The installation of Black Liquor Recovery Unit is nearing completion. It needs special mention that with the newly installed paper machine and other equipment the company's production will show significant improvement from this year's output of 8,922 tonnes.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as
the wind
To blow on whom I please"
—As You Like It

It is very well for Government to assert that the special advances that were given to the steel producers in the private sector will be recovered. But, when we look at the record of the last 10 years and more, I am afraid the inescapable conclusion will be that Government apparently does not know its own mind. If, at that time, the two private sector steel producers agreed to undertake expansion programmes, when, incidentally, the Government made known its readiness to offer assistance in the form of special advances, it was made abundantly clear that Government was under commitment to provide a special element in the retention price such as would enable the two steel producers in the private sector to make repayment of the loans. At that time, this journal had noted that Government was being less than fair to the private sector steel companies, since the advances were to be made available from the Steel Equalisation Fund—a Fund which it was possible for Government to build up only because the retention price fixed for the private sector steel was absurdly low. Nevertheless, because at that time there was a national enthusiasm for putting in every possible effort to advance industrialisation, I presume that the private sector steel companies agreed to the proposal. What though from time to time representations were made that the promised special element be given in the retention price periodically fixed, Government did nothing about it. Then came the shattering and pernicious amendment of Company Law whereunder Government could if it so chose convert such special advances into equity capital. I wonder whether this amendment was put through with the intention of thus securing an even larger control over the destinies and fortunes of the two private sector steel companies. Be that as it may, it is heartening to note that in this regard, also, Government has thus far been inactive. The issue has again come to a head in the Raja Sabha, where, strange as it may seem, Mr Bhupesh Gupta apparently was accusing Government of making a free gift of the special advances. Mr Sanjiva Reddy, Minister for Steel and Mines, has replied that the question has been referred to the Tariff Commission. I hope I shall be proved wrong, but I needs must point out that,

on previous occasions, the Government has sometimes seen fit to reject some or the other of the recommendations of the Tariff Commission. At least, this time, the suggestions emanating from that august body should be heeded and implemented.

The speech recently delivered by Mr A. Bakshi, Chairman of the Industrial Finance Corporation, is of more than merely ordinary interest. I shall not deal with his review of the working of the Corporation during 1963-64 or, for that matter, since its inception. For, the speech abounds in much else that is of significant import to the student of the Indian economy. For example, Mr Bakshi has disclosed that the underwriting experience of the IFC, as on 30 June 1964, had been none too happy. The IFC's aggregate commitment in regard to 52 issues that were placed on the market was Rs 9.48 crores, and the IFC was left holding the baby, as it were, in respect of shares and debentures worth Rs 7.55 crores. I suggest that this fact needs to be understood for precisely what it signifies. Government policies, fiscal and monetary, have in the recent past had a most deleterious effect upon the capital market. If, therefore, the Government desires the proper growth and expansion of industry in the private sector, then undoubtedly its first chore will be to remove the causes which have thus depressed the capital market. Against this fact, however, I would set various relaxations and liberalisations in the attitude of the IFC. For example, Mr Bakshi has stated that borrower companies do not need to seek prior approval of the IFC for declarations of equity dividends up to a rate of 10 per cent. Similarly, the IFC is to be more selective in exercising its right to appoint nominee Directors on the Boards of borrower companies. A third liberalisation relates to a relaxation of the restriction on the disposal of shareholdings by Directors. I am sure that in the light of such enlightened attitude on the part of the IFC, this will be a credit and financial institution whose facilities will more readily be availed of by industrial enterprises in the country.

For the first time in years, a Finance Minister in India has

talked of reliefs. In the Statement of Objects and Reasons, anent the Direct Taxes (Amendment) Bill, 1964, Mr T. T. Krishnamachari has stated unequivocally that the object of the Bill is to remove "unintended hardship" and provide "relief to assessee in certain cases". True, in the Lok Sabha TTK had, before the Bill was passed, to indulge in some verbal jugglery: he had to make clear that what was intended was not general relief from taxes but merely relief in cases of hardship. Well, I don't much mind that the rose is being called by some other name. But what I do care about is the attitude of Parliament itself, which apparently is making it well-nigh impossible for Government to extend concessions and reliefs obviously necessary in the national interest. Any tax that goes down on the statute book, on this reasoning, is destined to be there for ever. Any attempt at relief is greeted with angry cries and charges that Government is pandering to the capitalist classes—at least from one section of Parliamentarians. When are our legislators going to learn that Budget proposals themselves can be—why, must be—of two kinds? In certain years, and in certain circumstances, the proposals will take the form of new levies; in other years and in different circumstances, reductions in rates

and repeals of taxes will be not merely desirable but even necessary if we are to advance further on the road to industrialisation. The Government must set its face sternly against such criticism as there has been of the reliefs in the Bill; and even disregard the ignorant opposition to such concessions. It is only by so doing, that we can hope to have a realistic Budget next February—one which, if the straws in the wind are any sign, should be based on what needs to be done, by way of reliefs and concessions, to get the country moving again.

It may not be out of place here to put down on paper the expectations of a friend whose views in the past I have placed reliance on. He tells me that reduction in both personal and corporate taxes will almost certainly form part of the concessions that we may anticipate; and he adds that the annuity deposit, like its forebear the compulsory deposit, will prove to be a victim of infant mortality. The ranges of reliefs that he indicated (somewhat) took my breath away. On my questioning him how he could be so confident of such substantial concessions, he replied tersely: the general elections are not far off.

THE MYSORE PAPER MILLS LIMITED

Satisfactory Results Due to Increased Production and Operational Efficiency

Shri M. D. Shivananjappa, I.A.S., Chairman and Managing Director, on the expansion Scheme

The following is the speech delivered by Shri Shivananjappa, I.A.S., Chairman and Managing Director, The Mysore Paper Mills Ltd, at the Twentieth Annual General Meeting of the Company held at Bangalore on Wednesday the 30th September 1964:—

As you are all aware, we are meeting under a shadow of depression due to the sad demise of Pandit Jawaharlal Nehru, our First and Illustrious Prime Minister. India and the World have mourned the irreparable loss. May I request you kindly to stand up in silence for a minute and pay homage to the memory of the Departed Soul.

Ladies and Gentlemen,

I have great pleasure in extending to you a cordial welcome to the Twentieth Annual General Meeting of the Shareholders of the Company and place before you the Report of the Directors and Audited Balance Sheet for the year ended 31st March 1964. These have been circulated already and with your permission I shall take them as read and would proceed to review the salient features of the year's operations.

I am happy to report that your mills have produced 8922 tonnes of paper which exceeds last year's production by 643 tonnes and the rated capacity by 922 tonnes. Sales during the year amount to Rs. 190,30,769/- exceeding the turnover of the previous year by Rs. 7,32,009/-. Curiously enough, production and profits are running in opposite directions and profits are declining year by year. Decline in profits is largely due to the fact that production costs have increased and show no signs of decline, whereas there is a ceiling on the prices of paper. The present satisfactory working results are due mainly to increased production and operational efficiency.

It should be recalled that the Government of India, on the recommendations of the Tariff Commission, fixed prices in 1960 which were disappointing. On the repeated representations of the Industry, Government of India granted an increase of Rs. 60/- per tonne in 1962, as against an increase in cost by Rs. 270/- per tonne. It could be seen that this slight increase did not meet the demand of the situation. The representatives of the Industry have been making repeated requests and appeals to the Government of India and have also presented their case supported by facts and figures. I take this opportunity again to repeat my appeal to the

Government of India immediately to take steps to issue revised lists, lest the incentive for expansion of production in the country should disappear altogether.

Turning to the Balance Sheet, I have to state that depreciation on fixed assets calculated in accordance with the rates allowed for normal depreciation and extra shift allowance as per Income-tax Act amounting to Rs. 5,76,201/- has been provided. No provision is required for taxation as the Company has no assessable income for the year on account of Development Rebate allowance. However, provision has been made towards tax on dividends as per the Finance Act 1964 amounting to Rs. 78,750/-.

Your Directors carefully considered the question of dividend. In this context, I should bring to your notice that dividend was declared and paid on Rs. 25 lakhs (old capital) and proportionate dividend on Rs. 25 lakhs (new capital) absorbing Rs. 5,46,500/- for the year ended 31-3-1962 and Rs. 6,75,000/- for the year ended 31st March 1963 on old Capital of Rs. 25 lakhs and new Capital of Rs. 50 lakhs for the proportionate period, though the new Plant had not gone into production. Having regard to the increased production and turnover, your Directors felt reasonable and fair to recommend declaration of dividend at 9% subject to tax or at the rate of 90 Paise (taxable) per Share on the old capital absorbing Rs. 2,25,000/- and at the same rate on the new Paid-up Capital also for the proportionate period absorbing about Rs. 825,000 for the year ended 31-3-64 the total being Rs. 10,50,000/-. It should be noted that though there is a small cut in the rate of dividend, yet it is paid on an enlarged capital which has not begun to earn.

I am happy to inform you that the Industrial Finance Corporation of India have communicated their approval to our declaration of 9% dividend subject to tax in terms of the Agreement for which I am grateful to them.

I have no doubt that in the light of what I have said, you will not be slow to appreciate and approve the proposals. In regard to the future, I can certainly assure you that increased production and high operational efficiency would be maintained but how far these factors reflect in accounts mainly depends on the attitude and action of the Government of India regarding revision of prices of paper. I should con-

tem myself by reiterating the hope that the Govt. of India would afford the Industry the much needed relief speedily and assuring the share-holders that every endeavour would be made to improve the position.

I am very happy to inform you that the Labour-Management relations continue to be cordial. Your Directors have been pleased to sanction a bonus of 3 months' salary or wages and one more month's salary or wages as ex-gratia for having co-operated with the Management in increasing productivity and the same has been disbursed to all our employees.

I am glad to inform you that the implementation of the scheme of expansion has made very satisfactory progress during the year under review.

Before going into details, I have pleasure to inform you that the new papermachine was serviced during the early part of March 1964 and the complimentary pads in your hands have been made on the fine paper turned out of the new machine. The expenditure on Development work till the end of March 1964 amounted to Rs. 278 lakhs inclusive of Rs. 150 lakhs incurred last year.

The Foreign Currency loan of Rs. 70 lakhs sanctioned by the Commonwealth Development Finance Co., Ltd., London, has been drawn in full, a sum of Rs. 61.97 lakhs against a sanctioned loan of Rs. 70 lakhs has been drawn from the Industrial Credit and Investment Corporation of India, Ltd., Bombay, and a sum of Rs. 55 lakhs against a sanctioned loan of Rs. 60 lakhs from the Industrial Finance Corporation of India, Delhi, in rupee currency upto 31-3-1964 has also been drawn.

I am glad to state that the full range of equipments viz. Paper Machine, Stock and Chemical Preparation Plant and other Paper Machine parts for which orders had been placed with M/s Escher Wyss of Ravensburg, Germany and M/s Millspough of Sheffield, England, and Boiler and Steam Distribution equipment from M/s Babcock and Wilcox have been received, installed and taken to service during the year. The Duplex Super Cutter from M/s Masson Scott is received and erected. The erection of Black liquor Recovery Unit ordered with M/s Babcock and Wilcox is almost completed.

M/s J. M. Voiths of Germany, in execution of the contract for supply of bamboo pulp plant have despatched the entire machinery

which has also been received at site. But there was considerable delay in receiving the three Digesters and other indigenous equipments ordered in the Country. However, I am glad to say that these three Digesters ordered have now been received at site and all the other machinery equipment is also received and erection work is going on in full swing and will be completed by end of November 1964.

The new Papermachine and other equipments now installed would help increase production during the current year by the use of imported and indigenous pulps.

It is a matter of special gratification to all of us that while high level of production and efficiency was maintained during the year, the scheme of expansion is also speedily and successfully being implemented.

Your Directors have contributed a sum of Rs 1000/- to the Swami Vivekananda Centenary celebrations.

On behalf of the Company, I should express my grateful thanks to the authorities of the Commonwealth Development Finance Co., Ltd., London, the Industrial Credit and Investment Corporation of India Ltd., Bombay and the Industrial Finance Corporation of India, Delhi, State Bank of Mysore, State Bank of India, and the Canara Banking Corporation Ltd., for their support and valued assistance in the implementation of the Development Plans.

I would also like to express on behalf of the Directors and Shareholders our grateful thanks to the Central and State Governments for their abiding interest in the progress of the Company.

I am grateful to my colleagues on the Board for their whole-hearted support and valuable guidance.

I wish to express on behalf of the Directors and my own, our warm appreciation of the willing and efficient co-operation of all our employees.

Ladies, and Gentlemen, with these observations, I now move that the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31-3-1964 be APPROVED AND ADOPTED.

N.B.: This does not purport to be a Report of the proceedings of the Shareholders' meeting, a copy of which shall be sent to the Shareholders separately.
